According to the constitution, any *bona-fide* Canadian building trades union will be eligible for affiliation. Under the constitution all the unions represented are to merge their identity in the new organization, the officers of which will be re-elected by a vote of the entire membership.

### Ontario Provincial Conference of the Bricklayers', Masons' and Plasterers' International Union

The twenty-third annual convention of the Ontario Provincial Conference of the Bricklayers, Masons and Plasterers' International Union was held in Niagara Falls, Ont., on February 11-14, with twenty-six delegates present, representing seventeen local unions.

President William Jenoves, who presided

over the convention, reviewed the activities of the executive since the last meeting. He advised the delegates that their organization was "assimilating more mechanics from year to year than to date the building industry has been able to give employment thereto." This, the president stated, applied to the

bricklaying trade in particular. Pleasure was expressed at the appointment by the provincial government of a representative of the Conference on the Apprentice Committee of Ontario. The president made reference to the suit against local union No. 25, Fort William, Ont., in regard to the members refusing to work on a job where bricklaying had been sub-contracted. This, it was stated, was contrary to the constitution.

The report of the secretary-treasurer showed the membership to be 2,214, a gain of 191 during the year. It was also reported that as a result of legislation passed at the last convention, the finances of the conference had been increased approximately \$200.

The finance committee reported that receipts for the year, together with the balance brought forward from last year, amounted to \$3,097, expenditures, \$1,592, leaving a balance on hand of \$1,505.

Among the resolutions adopted were the following:—

That a synopsis of the case of Local No. 25, Fort William, Ont., be published in the *Journal* of the Bricklayers, Masons and Plasterers' International Union;

Endorsing an educational campaign among the members in regard to the five-day week;

Urging uniformity in hours of labour throughout the province, namely eight hours per day, and forty-four hours per week;

That a clause be inserted in the annual agreements providing that all apprentices shall be paid at least half of their board and lodging expenses in addition to their regular wage when working away from home.

The officers elected were: president, William Jenoves, Toronto; first vice-president, J. S. Barker, Hamilton; second vice-president, C. E. Needham, Windsor; third vice-president, James Hill, Woodstock; secretary-treasurer, A. W. Johnson, Kitchener.

It was decided to hold the next convention on the second Monday in February, 1930, in the city of St. Catharines.

### I.F.T.U. Inquiry into Hours of Labour

The International Federation of Trade Unions has published in the February (the second issue) of its official organ, the *International Trade Union Movement*, the results of a special enquiry into the working hours prevailing in various countries during the first week of October, 1928. The inquiry was the outcome of instructions given to the Executive Committee at the I.F.T.U. convention held at Paris in 1927, when the question of the eight hour day was under discussion. The Committee was to communicate with the National trade unions centre every two years, beginning in 1928, with a view to the investigation of weekly working hours, and to the preparation of statistics relating thereto. It is pointed out that the International Labour Office at Geneva, "the best equipped institution in the world for conducting such international statistical enquiries", has not yet published any report dealing with the actual hours of work in the various countries. Accordingly the I.F.T.U. though not so well equipped for the task, undertook to fill the gap. It is admitted that as a first attempt, such a compilation could not be an unqualified success. "Nevertheless it is a beginning, and as such it shows the importance attached in the 'free' trade union movement to statistics of the kind."

The statistics published refer to actual working hours, including the *actual* working hours, including overtime work, and cover also workers on short time. The industries

examined were eight in number, the building, printing, chemical, woodworking, metal, boot and shoe, textile and mining industries. Sixteen national centres participated in the enquiry namely, Austria, Belgium, Czechoslovakia, Denmark, Esthonia, Germany, Holland, Hungary, Latvia, Memel, Palestine, Poland, Southwest Africa, Spain, Sweden and Switzerland. The number of workers covered was 5,424,206, of whom 70.5 per cent belonged to Germany.

The British trade unions were unfortunately unable to conduct the enquiry, partly on account of the large number of organizations, both large and small, into which the trade union movement is split up, and partly because the trade councils lack the necessary machinery.

The Canadian centre stated that in a new country such as Canada, whose organizations cover so vast a territory, it would not be practical to gather information that would be sufficiently reliable to have any actual value.

The enquiry showed that of the total number of workers covered 7.4 per cent were on short time work; 7.9 per cent were working less than 48 hours; 66.6 per cent were working 48 hours; 8.4 per cent were working over 48 hours, but not more than 51 hours; 12.0 per cent were working over 51 hours, but not more than 54 hours; 3.4 per cent were working over 54 hours, but not more than 60 hours; and 0.3 per cent were working over 60 hours.

## Benefits Provided by Trade Unions

A recent bulletin of the United States Bureau of Labour Statistics, entitled "Beneficial Activities of American Trade Unions," presents the results of a detailed study of the functioning of the labour movement in a field that has been greatly extended and developed during recent years. It is pointed out that labour organizations have extended their scope in many cases far beyond the original field of wages, hours and working conditions. This growth of the labour unions from their strictly economic beginnings is outlined as follows:—

"After collective bargaining is gained by the organization the provision of 'benefits' is usually the next step. Then may be undertaken measures intended to improve the workers' economic position, such as the establishment of labour banks, credit unions from which members may obtain loans, building and loan associations, legal aid departments; construction of homes; supply of services or goods by such means as mail-order buying; co-operative stores, etc. Or unions may take social or protective measures, such as the establishment of various kinds of insurance, of definite health services, etc., or educational or recreational activities. Finally, as conditions in the industry become more or less stabilized and the union ceases to have to fight for its existence, union leaders have greater leisure to consider broader problems, those of the industry and even of society in general. At the unemployment conference sponsored by organized labour, which was held in the spring of 1927, one labour representative expressed himself to the effect that 'the time has passed when trade-unions could confine their efforts to strictly organizational matters, and every union should now have its affairs so arranged that its officers will have time to devote to the big economic and industrial issues, such as unemployment.'"

This modern trend towards wider activities is fairly general, but there are still a number of unions which regard all activities aside from collective bargaining for wages, hours and conditions, the payment of strike and lockout benefits, and possibly of death benefits, as being quite subordinate to the real purpose of trade unions. However, the general conclusion is that the more prosperous and progressive the union, the greater its endeavours to extend the field of its service to its members.

Dealing with general welfare activities, the report summarizes the various measures pro-

vided by unions in the form of "benefits." These are common to the great majority of trade unions. Strike or lockout benefits are listed as being the first for which provision is made. Death is the next emergency most often provided for, sickness and disability also being prominent in benefit plans. Outlining other benefit policies developed by trade unions, the report continues as follows:—

"A few unions have even assumed the responsibility of making some provisions for the surviving family after a member's death. Some unions pay cash benefits to members found to be suffering from tuberculosis, or pay for their treatment in a sanatorium; others which do not pay benefits for this disease make regular or occasional contributions to private sanatoriums, with the understanding that their members shall be entitled to treatment if needed. Others pay for certain disablements peculiar or common to the trade. Even those labour organizations which have no regular benefits often have a 'benevolent' or 'relief' fund from which, in special cases, deserving members may receive assistance in times of financial stress. These benefits paid by the international organization are in a great many cases supplemented by similar benefits paid by the locals. A few organizations provide annuities for members who, by reason of advancing age, illness, or disability, are unable to continue at the trade, and several of the larger international unions also maintain homes for their aged members, the superannuated unionist being given a choice between the pension and residence at the home. Only well-financed unions can afford to pay such benefits, however, for the constantly mounting costs make the burden of a pension system prohibitive for all but the largest and most prosperous organizations."

It is stated that the amounts paid during 1927, in benefits and insurance, by 73 international organizations alone, totalled nearly \$25,000,000. "If to this be added the more than \$3,000,000 paid in old-age pensions, some half million dollars for maintenance of union homes for aged, the amounts (not known) paid in unemployment benefits, and the sums paid in benefits by local unions, it is seen that labour organizations are providing a tremendous amount of assistance to their less fortunate members."

The death benefits of individual international unions range in amount from \$20 to \$1,500, and disability benefits from \$50 to

\$800. The weekly benefits payable in case of sickness range in amount from \$4 to \$10, and in time from 7 to 16 weeks per year. Old-age pensions range from \$5 to \$70 per month; in cases where the old-age pension is really a lump-sum benefit, not a continuing annuity, the amount ranges from \$50 to \$800.

Few of the trade-union benefit funds, it is reported, are on an actuarial basis. In the majority of cases a certain amount, estimated as sufficient to cover the expenditure for benefits, is added to the dues; if this proves to be insufficient the assessment is increased. In actual practice many organizations are reported to have accumulated in this way funds that will be sufficient to cover any liabilities for benefits. Others have not been so fortunate, or have failed to take into account the increasing need for money, with the result that they find their funds in a precarious situation as regards future payments. This uncertain stability of benefit funds has led a number of labour organizations either to drastic reorganization of their systems on an actuarial basis, or to the substitution of group or other kinds of insurance.

*Unemployment Insurance.*—A new feature in benefit development is noted in the tendency to shift responsibility for certain conditions on to the employer, this being particularly apparent in connection with the problem of unemployment. Many unions consider

that the industry and not the employees or their organization should bear the burden of unemployment. This responsibility has already been assumed in some industries. The report points out that a system of unemployment insurance, the expense of which is borne entirely by the employer, has been secured in the cap and felt-hat industries of New York city. For the past five years a contributory system borne equally by employers and workers has been in operation in the men's clothing industry of Chicago. Its extension to the Rochester market has been recently incorporated into the new agreement between the clothing manufacturers of that city and the Amalgamated Clothing Workers, while in New York city the provision incorporated into the agreement several years ago now becomes effective and employers' contributions began September 1, 1928. These agreements regarding unemployment insurance were noted in the *LABOUR GAZETTE*, August, 1928, page 319, and October, 1928, page 1041. It is also stated that there are a few cases in the street railway industry in which death or sick benefits, or both are paid by the employer under the terms of a collective agreement between union and employees.

Other aspects of union welfare activities are also surveyed, including provisions for safety and health, recreation and sports, labour banks and other business enterprises, housing schemes, and union-management co-operation.

### Union Fund to check "Sweatshops" in Garment Industry

The International Ladies' Garment Workers' Union is raising a fund of \$250,000 for the purpose of checking the threatened revival of the so-called "padrone system" of sweated labour, which was abolished in 1910, following the strike of the cloak and suit industry in that year. The fund is in the form of a bond issue for three years, paying interest of 5 per cent, and secured by the property of the union.

The "padrone system" was explained by Benjamin Schlesinger, president of the union, in a recent address at New York. "Under this system," he said, "a cloakmaker took four or five helpers into a shop and received the wages for the entire group. He distributed as much or as little as possible among the people who worked for him. The employer in a shop recognized but a few men. These were the 'padrones' or inside contractors who profited by the arrangement. The

helpers had no standing and received no consideration from the employer."

The president reported that the fund was being liberally supported both by the workers in many shops and by members of the general public. He claimed that the growth of the chain store system encouraged "sweating" in industry. "These chain stores," he said, "once former purchasers of cloaks, suits and dresses from manufacturers, now buy cloth, distribute it among the sweat shops and have the garments made up direct. Needless to say, this system leads to the demoralization of the workers, slipshod workmanship, low wages, long hours, loss of business by the legitimate manufacturer, and a further depression of the industry's standards." He pointed out that the "padrone system" does not exist in shops having contractual relations with the union, but are confined to the outlaw shops.

## National Women's Trade Union League of America

The National Women's Trade Union League of America has issued a call for its eleventh (the first triennial) convention, to be held at Washington, D.C., on May 6-11, 1929. Some account of this organization was given in the *LABOUR GAZETTE*, October, 1928, page 1096. The convention call states that "twenty-five years ago the League arose from a desire to 'assist in the organization of women wage workers into trade unions and thereby to help them secure conditions necessary for healthful and efficient work and to obtain a just return for such work.' So reads the first statement of its objective. Complex work relationships had grown apace since the day when woman's intimate household tasks—spinning, weaving, the making of garments—had become mechanized. From the beginning of time she had stayed at home. The machine age, the new ways of work, her new freedom (with its menace as well as its hopes), had called her into the factory. The man worker, out-distancing her with his lead in bargaining power, could not understand how inextricably her economic welfare was bound with his, and with the whole industrial structure. Her social significance and her status

as a worker were as yet unrecognized, and inertia—the inertia of the underpaid and overworked—kept her inarticulate. The Women's Trade Union League became her spokesman, the interpreter of her problems, and out of a consciousness that 'groups cannot be led from the outside, but from within the fellowship of their daily life and labour must their salvation come' envolved its responsibility for the development of a trained leadership from within the ranks of the working women themselves."

The purposes of the League were recently described by its secretary as follows:—

"To encourage self-government in the workshop; to develop leadership among the women workers; to insure the protection of the younger girls in their efforts for better working conditions and a living wage; to secure for girls and women equal opportunity with boys and men in trades and technical training, and pay on the basis of occupation and not on the basis of sex; to secure the representation of women on industrial tribunals and public boards and commissions, and to interpret to the public generally the aims and purposes of the trade union movements."

### Women's Labour Conference in Alberta

A women's conference was held at Edmonton, Alberta, in March, to consider the working conditions of female employees in shops and factories. The conference adopted the following standard budget of a working woman in the province, submitted by the Employed Girl's Council of Regina, as the proper basis for a minimum wage:—

Per week

Board.. . . . .	\$ 8 00
Room.. . . . .	2 50
Washing.. . . . .	1 00
Car fare.. . . . .	75
Insurance.. . . . .	50
Clothes, toilet sundries, marcel, etc. . . . .	3 75
Reading, study, stationery, correspondence.. . . . .	1 00
Loss of time through sickness, holidays, etc. . . . .	1 00
Extra cost of illness, medicine, dentistry.. . . . .	50
Savings for unemployment, old age, etc. . . . .	1 00
	<hr/>
	\$20 00

The conference decided to recommend to the consideration of minimum wage boards in Canada the adoption of the standard hours of labour as laid down by the Women's Bureau of the United States Department of Labour, which includes the following provisions:—eight-hour day; half holiday on Saturdays; one day's rest in seven; time for meals not less than thirty minutes; rest periods, ten minutes in each working period without lessening the working day.

It was stated in the Alberta Legislature on February 19, that candidates for coal miners' certificates in the Province from January 1, 1928, to February, 1, 1928, numbered 3,526, the number of certificates granted being 2,628. The total number of certificates issued up to February 1, was 10,108. The number of certificated miners in employment on January 1, 1929, was 6,491, including 2,695 hand cutters, 530 machine cutters, 2,568 machine loaders, 86 ventilation men, 209 road makers and 403 timbermen. In addition there are 150 men who have been granted provisional overmen's certificates, and who may be working as miners as well as overmen.

## EMPLOYMENT IN THE DOMINION CIVIL SERVICE, 1927-1928

ACCORDING to a report recently issued by the Finance Statistics Branch of the Dominion Bureau of Statistics, the total number of employees in the Civil Service of Canada at the close of the fiscal year 1927-28 was 41,243 (27,406 permanent and 13,837 temporary) an increase of 1,651 over the total of 39,592 at the close of the previous fiscal year.

The total expenditure on salaries for civil servants amounted to \$82,311,447, during the fiscal year. Of this amount, \$46,683,077 was expended on salaries of permanent employees, \$15,291,909 on temporary employees, while \$20,336,460 was paid out for salaries and wages of the non-enumerated classes. Comparing the fiscal year 1927-28 with 1926-27 there was an increase of \$3,183,974 in salaries of permanent employees, an increase of \$1,269,760 in salaries of temporary employees, while the salaries and wages of non-enumerated classes increased by \$1,629,834. The increased expenditure on salaries was attributed as being partly due to the increase of 1,651 employees over the preceding year; to the flat increase of \$120 per annum granted to the greater percentage of civil servants from April 1, 1927, and also to the customary annual increments of salaries throughout the year.

It is explained that the non-enumerated classes consist of employees engaged by several departments in work of a casual nature, and who for various reasons do not come under the operation of the Civil Service Act. The record of their number is not always available though the expenditure on wages and salaries is recorded.

The ten largest departments with their totals of permanent and temporary employees and salary expenditure for March, 1928, are shown in the accompanying table:—

TABLE SHOWING NUMBER OF CIVIL SERVICE EMPLOYEES AND SALARIES FOR MARCH, 1928

Department	Number of employees	*Salaries and wages, March, 1928

### Civil Service Salaries in Lower Grades

In answer to a question in the House of Commons on April 4 as to the number of employees of the Dominion Government in receipt of salaries less than \$85 per month, the Secretary of State intimated that in the Department of National Revenue the number of those receiving \$65 per month and under was 120; 51 received between \$65 and \$75, and 95 received between \$75 and \$85 per month. All these employees are in the lower grades such as junior clerks, junior stenographers, junior typists, messengers, watchmen and labourers.

In the Post Office Department four employees received \$65 or less; one received between \$65 and \$75, and 75 received between

\$75 and \$85. In the Department of the Interior 10 received \$65 or less; four received between \$35 and \$75; and 29 received between \$75 and \$85. In the outside Service of the Department of Public Works there are no employees in Ottawa, Montreal, Toronto, Winnipeg or Vancouver who receive a salary with a maximum which is not greater than \$85 per month, except one messenger at Ottawa who is receiving \$65 per month with a maximum of \$85.

The Minister stated further that the government had received requests from organized bodies of the Civil Service to fix through the Civil Service Act a minimum salary of \$100 per month for employees of the government, but that there was at present no announcement to be made in regard to any action on this proposal.

### Post Office Department

Hon. P. J. Veniot, Postmaster General, replying to a question in the House of Commons by Mr. J. T. Thorson, member for Winnipeg South Centre, regarding proposed increased remuneration for employees of the Post Office Department (including railway mail clerks, letter carriers, postal clerks and mail porters) outlined the action with the Civil Service Commission in respect of his recommendation for further wage increases for these employees. The following extract of Hon. Mr. Veniot's reply is taken from Hansard of April 5:—

With regard to higher compensation to railway mail clerks, this question was taken up last year by the commission and at that time

nothing definite was decided. During the summer vacation I again took the matter up; after consultations here in Ottawa between the executive of the railway mail clerks and the officials of the department a certain agreement with regard to the classification or grading of railway mail clerks was arrived at. That agreement was submitted to the Civil Service Commission for their consideration, and after some considerable discussion the question was finally decided by a system of grading in connection with the railway mail clerks. Under this system the clerks are divided into two classes, class A, and class B, being railway mail clerks in charge of runs, railway mail clerks assisting and so on. The Commission accepted that grading, but excluded a certain number of railway mail clerks, whom they did not grade. There are about 1,300 railway mail clerks, and under the system of grading adopted by the Civil Service Commission I think 242 of these clerks were not included. When that was reported to the Post Office Department I took it up with the Civil Service Commission and asked why these 242 clerks were not graded and why they received no consideration with regard to increased compensation.

In my first letter to the commission I suggested that all railway mail clerks should receive an increase of at least \$60 per annum according to their grading but they gave an increase of forty cents per hundred miles to the higher grade and twenty-five cents to the minor grade instead, and in that way granted what was considered by the executive to be sufficient compensation. When the commission refused the minimum increase of \$60 per annum which I suggested for the 242 clerks mentioned, I proposed that they at least give those 242 men, who were not included in the new classification, an increase of fifteen cents per hundred miles. The Civil Service Commission refused to consent to that. The railway mail clerks who were affected favourably have accepted the decision of the commission, but they are asking that the 242 left out be considered.

### Civil Service Federation of Canada

The *Civil Service Review* for March contained an article by Mr. C. V. Phelan, President of the Civil Service Federation of Canada, describing the progress of that organization since the date of the last annual convention (*LABOUR GAZETTE*, October, 1928, page 1100). The Federation now comprises the following affiliated organizations:—

The Civil Service Association of Ottawa; Dominion Customs and Excise Officers' Association; Dominion Public Works Federation; Quebec Marine Civil Service Association; Nova Scotia Marine Civil Service Association; St. John Marine Civil Service Association;

Association of Marine Department Employees (Prescott Branch); Quebec Marine Labour Association; Marine Signal Mechanics Association of Prescott; Maritime Fisheries Civil Service Association; Immigration Employees' Association of Canada; Quebec Immigration Branch Civil Service Federation; Niagara Falls Immigration Association; Walkerville Immigration Association; Meteorological Civil Service Association; Dominion Civil Servants' Association (Victoria); Dominion Grain Inspectors' Association; Dominion Weighing Department Association; Sault Canal Employees' Association; Dockmasters' Association; Office Cleaners' Association.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Governing Body of the International Labour Office

The Governing Body of the International Labour Office held two sessions during the month of March, the Forty-Third Session meeting on March 11, continuing on the following day, and the Forty-Fourth Session meeting on March 15 and continuing until March 17.

*Proposed Revision of the Eight-Hour Day Convention.*—At the first of these sessions attention was mainly directed to the proposal advanced by the British Government, represented by Sir Arthur Steel-Maitland, Minister of Labour, for the revision of the Eight Hour Day Convention of the International Labour Conference which was adopted in Washington ten years ago. The Ministers of Labour of France and Germany were also in attendance at the Governing Body. The Government of Canada was represented by Dr. W. A. Riddell, Canadian Advisory Officer in Geneva.

The Director of the International Labour Office, in introducing the subject, reminded the Governing Body that the Hours Convention, like all the other Conventions of the International Labour Conference, contains a clause stating that at least once in ten years the Governing Body should submit to the Conference a report on the working of the Convention and should consider the desirability of placing the question of its revision or modification on the agenda of the Conference.

Sir Arthur Steel-Maitland, the British Minister of Labour, observed that the British Government had always been in favour of the principle laid down in this Convention and that British industries, with few exceptions, already conformed to the Convention. Why then did Great Britain not ratify the Washington House Convention? The reason was that it contained points in which ambiguity might arise and which might be interpreted in different ways by the countries which ratified it. Ambiguity in a national law might have a very different effect from ambiguity in an international Convention. The ill effects resulting from ambiguity in a national law could to a large extent be avoided because of the possibility of uniform interpretation. In the case of an international Convention, however, any ambiguity might lead to widely different interpretations. A discussion of the difficulties of interpretation of the Eight-Hour Convention was held in London in 1926. The agreement reached at this conference was no doubt an advance towards a final solution, but the London Conference did not itself produce a final solution, in the first place because the five countries there represented could not arrogate to themselves the right to bind other countries, and any other

country might interpret a point differently and would then have been within its rights in appealing to the Permanent Court of International Justice for a ruling; in the second place, the law officers of the Crown had advised that even if the conclusions reached at London were embodied in an Act of Parliament, Great Britain would not be legally entitled to ratify the Convention. For example, they considered that the five-day week of forty-seven hours which was practised in some industries was not admissible under the Convention. Great Britain desired that the Eight-Hour Convention should be revised in such a way as to ensure that it would be uniformly applied by all countries.

The British Minister of Labour accordingly proposed that the Convention should define more closely the expression "hours of work" so as to ensure that the rules of the Convention were always applied to the same unit of measurement. It should also be made clear whether the expression "week" meant the six working days or the calendar week. He suggested that the Convention itself should give guidance as to the line of demarcation between industry on the one hand and commerce and agriculture on the other, instead of leaving this to the competent authorities of each country. He also asked for greater precision as regards the exceptions in case of accident and *force majeure* and the provisions relating to continuous processes. He further asked that the Conference should consider the special problem which arose in certain countries in connection with small undertakings employing not more than five workers. He thought greater elasticity was desirable in the provisions which allowed the normal forty-eight hours' work to be distributed in other ways in certain cases. The British Government wished it to be possible to distribute the forty-eight hours over five or even four days. It might also be desirable to allow averaging out of hours in the case of seasonal industries and those dependent on climatic conditions. Among other points dealt with in the British revision proposal were the question of continuous processes in which a fifty-six hour week might be worked, the regulation of overtime, making up for time lost, difficulties of application to certain transport undertakings and the article of the Convention which stated that its application could be suspended in any country by order of the Government in case of war or other events endangering national safety.

Sir Arthur Steel-Maitland added: "If at this moment we had an amended Convention in the drafting of which these points had been satisfactorily considered and settled, I would

recommend my Government to-morrow to ratify, and I am sure they would consent." His proposal, he stated was not in any way intended as an ultimatum but was inspired solely by a desire to collaborate with a view to arriving at a clear and intelligible Convention which, so far from diminishing the protection or lowering the standards provided by the Washington Convention, would increase the first and drive home the second.

The workers' representatives on the Governing Body strongly opposed the proposed revision of the Eight-Hours Convention and contended that there was no reason why Great Britain should not ratify the Convention as it stood, as Belgium and certain other countries had already done. Certain countries, however, had made their ratifications conditional on that of Great Britain; on this account the workers would not cease to demand ratification of the Hours Convention, for as industry developed it became more and more necessary to have legal regulation of hours of work guaranteed internationally. It was admitted that the workers' group would not object to incorporating the results of the London Conference in the Convention as a protocol.

The Ministers of Labour of Germany and France supported the suggestion that the resolutions of the London Conference might be treated by Great Britain as a protocol to the Eight-Hours Convention. In company with the Government representatives of Belgium, Italy and Spain, they expressed opposition to the proposal for the revision of the Eight-Hours Convention which had been put forward by the British Minister of Labour.

The proposal of the British Government delegate was supported by the Indian and Swedish Government representatives and by the Employers' delegate from Great Britain. The Polish Government representative, the French Employers' representative and the Indian Employers' delegate favoured the reference of the question of revision to a committee of the International Labour Conference.

A proposal by the Indian Employers' delegate for the immediate opening of the procedure for revision of the Hours Convention, was rejected by 12 votes to 9 (the six votes of the employers' group and those of the Governments of Great Britain, Sweden and India). A proposal of the French employers' delegate for the immediate consultation of all the States Members of the Organization and the setting up of a special committee, was rejected by 13 votes to 7 (the six votes of the employers' group and that of the British Government). The Governing Body rejected by 11 votes to 6 a proposal of the French employers' delegate embodying in another

form his idea for the consultation of Governments. It then rejected successively by 8 votes to 8 and 9 votes to 7, two proposals for the setting up of a Committee which would report to the Governing Body at its May Session, the first of which was submitted by the Minister of Labour of Great Britain, and the second by the Government delegate of Poland.

*Agenda of the 1930 Session of the Conference.*—At its Forty-Fourth Session the Governing Body decided not to place any fresh questions on the agenda of the 1930 Session of the International Labour Conference. This Session will thus be devoted to the second discussion of the questions of forced labour and hours of work of salaried employees, which are to be discussed for the first time by the Conference in 1929.

*Conference on Silicosis.*—The Governing Body decided to arrange for a Conference on Silicosis to be held at Johannesburg in 1930, with the assistance of the Transvaal Chamber of Mines. The agenda of this Conference will include the following items; the medical aspect of silicosis (i.e. the pathological and clinical phenomena of the disease), preventive measures, and compensation.

*Permanent Migration Committee.*—In pursuance of the wishes expressed by the workers' organizations, the Governing Body considered the organization of the Office's work in regard to migration. Owing to the continually increasing interest of the majority of countries in these problems, the Governing Body decided to continue and intensify the Office's efforts in this sphere. For this purpose it decided to substitute for the old migration committee a new Permanent Migration Committee consisting of 12 members of the Governing Body (four members from each group) together with experts.

*Report of the Standing Orders Committee.*—The report of the Standing Orders Committee on the problems concerning the denunciation, revision or modification and amendment of Conventions of the International Labour Conference will be transmitted without modification to the forthcoming Session of the International Labour Conference. It was decided to defer until the May session of the Governing Body the discussion of standard clauses to be inserted in future Conventions.

*International Management Institute.*—The Governing Body decided to guarantee its contribution to the International Management Institute at the same rate as in 1927 for a period of three years as from July 1, 1929. In view of the importance of the study of rationalization to the work of the Economic Organization of the League of Nations, and in view also of the resolutions adopted by the

Economic Conference requesting that certain studies should be undertaken for it on the effects of rationalization, the Governing Body decided to express the hope that the Economic Organization would consider the desirability of collaborating with it in furthering the work of the Institute.

*The Budget, 1930.*—The Governing Body approved the budget estimates for the International Labour Organization for 1930. The British Government representative and the members of the employers' group abstained from voting. The net amount of the budget for 1930 as approved by the Governing Body is 8,405,678 francs.

*Joint Maritime Commission.*—The Governing Body decided that the ninth session of the Joint Maritime Commission should be held between April 15 and 20, 1929, the agenda of this session to include the following questions:—

Consideration of the proposed draft Convention on the protection of workers engaged in loading and unloading ships;

Preparation for the Thirteenth Session of the International Labour Conference;

Director's Report.

*Mixed Advisory Agricultural Committee.*—The Governing Body approved the summoning of a session of the Mixed Advisory Agricultural Committee for July, 1929, on the proposal of the International Institute of Agriculture. The Committee will have to consider, besides the results of the work carried on by the two institutions in collaboration, various questions, including the rural exodus, rural housing, propaganda by means of the cinema, and vocational agricultural education.

*Committee on Social Charges.*—The Governing Body decided to call a meeting of the Committee on Social Charges for May 24 and 25, 1929, to consider the information collected by the Office concerning social charges in the various countries.

*Committee on Conditions of Work in the Textile Industry.*—It was decided that the Committee set up to supervise the Office's enquiry concerning conditions of work in the various branches of the textile industry should meet on June 24 and 25, 1929.

*Date of the Next Session.*—The Forty-Fifth Session of the Governing Body will open at Geneva on May 27, 1929.

### Germany and the Eight-Hour Day Convention

On November 20, 1928, the Federal Minister of Labour of Germany laid before the Reichsrat a government bill for the protection of labour which was subsequently presented also in the Reichstag. During the course of discussion of this measure on Jan-

uary 21, 1929, the minister observed that this bill was in harmony with the provisions of the Washington Convention on the subject of hours of labour, so that once it and a bill concerning work in mines, at present in course of preparation, were adopted, there would be no further obstacle to the ratification by Germany of the Eight-Hour Day Convention. "Thus," the minister stated, "the government intended to ratify the Eight-Hour Day Convention as quickly as possible."

### Ratification of Conventions

The formal ratifications by Spain of three Conventions of the International Labour Conference were registered by the Secretariat of the League of Nations last month. The first of these is the Convention concerning the eight-hour day. The Spanish government has, however, made its enforcement of this measure conditional upon ratification by Germany, France, Great Britain and Italy. Up to the present this Convention has been ratified by fourteen countries. Of these, Belgium, Bulgaria, Chile, Czechoslovakia, Greece, India, Luxemburg, Portugal and Roumania ratified it unconditionally. The ratifications of the other five states, namely, Austria, France, Italy, Latvia, Spain, are subject to certain conditions.

The two other Conventions ratified by Spain are those concerning workmen's compensation for industrial accidents, and concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents. The former of these Conventions has now been ratified by nine States and the latter by twenty-two.

The total number of ratifications now stands at 341, an increase of 6 over the February total.

### Director's Visit to the Far East

Mr. Albert Thomas, Director of the International Labour Office, has returned to Geneva from an extensive tour of the Far East.

During his stay in China, the Director met all the members of the government and the leaders of the Kuomintang, the party at present in power, as well as representatives of employers' and workers' organizations. He endeavoured to prevail on the government to ensure direct and complete representation of China at the Sessions of the International Labour Organization. He also had an opportunity of discussing with the competent authorities the Labour Code which is being drafted by the Chinese government.

In Japan, the Director met the members of the government and the heads of the departments dealing with labour questions. He discussed on the spot with the authorities

concerned the position of Japan as regards International Labour Conventions, examining with them the possibility of further ratifications, and inquiring into the application of the Conventions already ratified by Japan. He also took advantage of his presence in the country to develop the relations of the International Labour Office with the workers' and employers' organizations.

On his way back to Geneva, Mr. Thomas visited French Indo-China and the Dutch East Indies, where he obtained first-hand information on the subject of the enforcement of Article 421 of the Treaty of Peace, which relates to the application of International Labour Conventions to colonies and dependent areas.

The Director's visit to the Far East was an opportune response to invitations from States which constitute a considerable part of the population of the world, and went far to emphasize the world-wide character of the International Labour Organization.

### Principles of a Convention on Employment of Foreign Workers

The *International Labour Review* for March, 1929, publishes the first part of a study of this subject by Louis Varlez, Professor in the University of Ghent, formerly Chief of the Migration Service of the International Labour Office.

Among the essential duties entrusted to the International Labour Organization by the Peace Conference are those of guaranteeing the equitable economic treatment of all workers, national and foreign, lawfully resident in a country, and protecting the interests of workers when employed in countries other than their own. Since the signature of the Treaties of Peace, foreign workers have constantly been the subject of discussion both in the International Labour Office, and among Governments and the persons directly interested. Thousands of contracts of employment, hundreds of laws, and dozens of treaties have been drawn up to fix these conditions; employers and workers, Governments and private organizations, have held meetings without number to examine these problems; and yet it cannot be said that a completely satisfactory solution has so far been reached. The fact is that resolutions have in themselves no executory force, that contracts remain individual, that laws have no force beyond national frontiers, that bilateral treaties establish relations only between the two contracting parties; and that none of these methods can produce that universal agreement which is indispensable for the general acceptance of the solution. It is therefore being more and more often urged that the

International Labour Organization should reinforce the innumerable provisions already to be found in contracts, laws, and treaties by an International Convention establishing the general principles to be applied in this question by common agreement between the Governments, the workers, and the employers, and should replace the existing state of anarchy and uncertainty by an equitable and general system for all foreign workers. To construct a complete corpus of the general law relating to foreign workers will be a tremendous task that cannot possibly be accomplished by a single Convention. But this difficulty, and the consequent limitations, should not be allowed to hamper the preliminary work or research on the general principles of these regulations.

The first part of Professor Varlez's study describes the many important views already expressed by Governments and individuals on this formerly much controverted subject, and shows that the multitude of suggested solutions already display a consensus of opinion on many points. From this comparison of documents and the conclusions to be drawn from them it will be easy for those who are interested in the question, and for those especially to whom it is of considerable practical importance, to push forward their search for the lines on which a satisfactory and possible solution of these weighty problems may be found to-day.

### The Coal Problem

The delegation of the Economic Committee of the League of Nations appointed to investigate the coal problem held a technical and economic consultation with a number of experts representing the workers' point of view from February 27 to March 2, a consultation of experts belonging to employers' circles having taken place from January 8 to 12. At the present stage of its work in connection with the coal situation, the Economic Committee is merely collecting evidence of a statistical and scientific nature. It is not concerned for the moment with the interests at stake, but simply with the facts, particularly facts of an economic character, such as statistics of output and trade, problems of production, commercial policy and prices. In order to obtain scientific knowledge of these facts, the Committee thought it desirable to ask for the assistance of experts chosen by the delegation without neglecting any of the interests involved, whether of producers or consumers, countries or persons, or workers. The experts consulted were chosen by the Economic Committee on the advice of the International Labour Office.

In the course of the discussion, the workers' experts took the position that the world coal

crisis could be cured only through concerted international action. In the opinion of several speakers, the first practical step in this direction would be an effort under the auspices of the International Labour Organization towards the reduction and equalization of hours of work in coal mines, while the ultimate goal

would be the formation of a permanent international coal council for the regulation of production, export quotas, etc., and the progressive standardization of working and social conditions. On this council the governments, owners, workers and consumers would all be represented.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING FEBRUARY

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in February was 6,442, their employees numbering 944,681 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for February was 1,673, having an aggregate

membership of 188,888 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment;

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions:

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### Employment Situation at the beginning of March, 1929, as reported by the Employers

There was a moderate gain in employment at the beginning of March, according to monthly statements furnished to the Dominion Bureau of Statistics by 6,422 of the larger employers of labour throughout Canada. The working forces of these firms aggregated 944,681 persons, as compared with 936,108 in the preceding month. This increase of nearly 8,600 workers caused the index number (based upon the average for 1926 as 100) to rise from 110.5 on February 1, 1929, to 111.4 at the beginning of March, as compared with 102.6, 97.5, 92.6, 88.1, 91.8, 91.0, 82.9 and 89.1 on March 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The largest increases took place in manufacturing, but improvement was also indicated in construction, communications and services, while logging, mining, transportation and trade were seasonally slacker.

#### Employment by Economic Areas

The trend was upward in the Maritime Provinces, Ontario and British Columbia, but in Quebec and the Prairie Provinces contractions were indicated.

*Maritime Provinces.*—There was a large increase in the Maritime Provinces, where 510 employers enlarged their staffs from 69,636 persons on February 1, to 71,348 at the beginning of March. Improvement was registered in manufactures, particularly in food and iron and steel works, and transportation and construction were also busier. Logging and mining, however, recorded seasonal losses. Employment on March 1, 1928, had shown a slight gain, but the index then was many points lower than on the date under review.

*Quebec.*—In spite of the fact that activity declined at the beginning of March, employment in Quebec was at a higher level than in the late winter of any other year of the record. The decrease as compared with the preceding month was due to seasonal curtailment in logging, transportation, trade and construction. Manufacturing, on the other hand, was decidedly brisker, the iron and steel, textile, lumber, leather, food, electric current and electrical appliance divisions showing the largest gains, while pulp and paper and tobacco factories were slacker. State-

## EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year. 1926 as 100.

ments were tabulated from 1,427 firms, whose payrolls aggregated 256,200 employees, as against 259,133 at the beginning of February. The index stood at 104.7, as against 100.9 on March 1, a year ago.

*Ontario.*—Further expansion was registered in Ontario, where the 2,949 co-operating establishments added 5,201 persons to their labour forces, bringing them to 411,589 on March 1. The situation continued to compare favourably with that noted on the same date of the years, 1921 to 1928. Manufacturing, notably of iron and steel products, recorded considerable recovery, and construction, services and communications were also more active than on February 1; logging, mining, transportation and trade, however, were seasonally slacker.

*Prairie Provinces.*—The contractions shown in the Prairie Provinces involved a smaller number of workers than those recorded on the same date in the six preceding years, while the index was higher than on March 1 in any other year of the record. Data were tabulated from 877 firms, with 126,816 employees, compared with 127,631, in their last report. Manufacturing and railway construction registered moderate increases, while mining and transportation reported the greatest declines.

*British Columbia.*—Manufacturing, particularly of lumber products, recorded important

advances in employment, as did logging, mining, transportation and construction, while only small changes were noted in other industries. The working forces of the 658 reporting employers aggregated 78,728 persons, as against 73,320 in the preceding month. Additions to staffs on a smaller scale had been indicated on March 1 of last year, when the index was several points lower; the level of employment was higher on March 1, 1929, than in the early spring in any other year of the record.

#### Employment by Cities

Employment advanced in Montreal, Toronto, Hamilton, Windsor and the adjacent Border Cities and Vancouver, while the trend was unfavourable in Quebec City, Ottawa and Winnipeg.

*Montreal.*—Continued gains were indicated in Montreal, chiefly in the manufactures division, within which iron and steel plants recorded especially important recovery; on the other hand, trade and construction showed seasonal curtailment. Statements were tabulated from 756 firms employing 126,835 workers, as compared with 125,946, in the preceding month. The tendency on March 1, 1928, was also upward, but the index then was several points lower.

Quebec.—Manufacturing afforded more employment, while construction and transportation were slacker. The working forces of the 101 co-operating employers totalled 10,390 per-

sons, compared with 10,565 on February 1, 1929. The index was higher than in the winter of earlier years of the record; larger losses had been noted on the same date in 1928.

NOTE: "Relative Weight" in Tables I, II, III and IV shows the proportion of employees in the indicated area or industry to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS, (AVERAGE 1926=100)

Feb. 1.....	110.5	104.6	105.9	117.0	113.1	96.4
Mar. 1.....	111.4	106.8	104.7	118.4	112.3	103.7
Relative weight of employment by Districts as at Mar. 1, 1929.....	100.0	7.6	27.1	43.6	13.4	8.3

*Toronto.*—Iron and steel and textiles reported a considerable increase, but there was a seasonal falling-off in construction. According to returns received from 853 firms in Toronto, they had enlarged their staffs from 116,740 workers in the preceding month to 117,544 at the beginning of March. Although rather more extensive gains had been indicated on the same date last year, the index then was over ten points lower.

*Ottawa.*—Employment in Ottawa showed a small decline; manufactures were more active, but trade was seasonally dull. The 134 co-operating employers reduced their payrolls by 60 persons, bringing them to 11,192 on the date under review. Activity was greater than on March 1, 1928, when a similar reduction had been noted.

*Hamilton.*—Manufacturing, especially of iron and steel and textile products, afforded heightened employment in Hamilton, where 206 firms employed 36,683 workers, as compared with 35,662 in their last report. Contractions had been received on the same date last year, and the situation then was not so favourable.

*Windsor and The Adjacent Border Cities.*—Further pronounced improvement was indi-

cated in the Border Cities, mainly in automobile factories. Data were received from 127 firms with 20,782 employees, or 1,077 more than on February 1. Employment was at a decidedly higher level than at the beginning of March, 1928, although important gains had then been indicated.

*Winnipeg.*—There was another, but smaller reduction in Winnipeg, where 300 employers reported 30,560 workers, as against 30,692 in the preceding month. The decline was largely in trade, while manufactures were somewhat busier. Employment was much more active than on March 1 of last year, when similar losses were registered.

*Vancouver.*—Manufacturing (especially of lumber and iron and steel products), construction and transportation, recorded increases in Vancouver. Returns were compiled from 262 employers, whose staffs were increased by 1,050 persons to 27,130 at the beginning of March. Gains on a smaller scale had been shown on the same date of a year ago, and the index then was lower than on the date under review.

Index numbers of employment by cities are given in Table II.

### Manufacturing

The trend of employment in this group continued upward, according to statistics furnished by 3,856 manufacturers employing 542,072 operatives, as compared with 527,987 at the beginning of February. The most pronounced recovery took place in iron and steel factories; lumber mills showed seasonal gains which largely exceeded the average increase recorded on March 1, and there were also important advances in textiles, vegetable food, non-ferrous metal and leather works. Pulp and paper and tobacco establishments, however, registered reduced employment. The general improvement in manufactures was greater than on March 1, 1928, when the index number, as in the early spring in other years since 1920, was several points lower than on the date under review.

*Animal Products, Edible.*—Employment in this industry showed a further decline which involved fewer workers than that recorded on the same date last year. The index number stood at 104.7, as compared with 94.6 on March 1, 1928. The working forces of the

167 reporting establishments aggregated 15,946 persons, as compared with 16,071 in the preceding month. The decrease, which took place mainly in Ontario, was most pronounced in meat-packing plants.

*Leather and Products.*—There was continued improvement in employment in this industry at the beginning of March, according to statistics from 174 manufacturers, whose staffs, at 16,479, were greater by 277 workers than on February 1. The largest gains were in boot and shoe factories in Quebec. A rather greater increase had been noted on the same date a year ago, when the index number was higher.

*Lumber and Products.*—Further additions to payrolls on a much larger scale than on March 1, 1928, were made in the lumber group, saw-mill, container, vehicle and furniture establishments reporting heightened activity. Statements were tabulated from 682 employers, whose staffs rose from 43,838 workers on February 1 to 47,510 at the beginning of March. The tendency was favourable in all provinces, but the most noteworthy increases were regis-

tered in British Columbia. The index number was higher than on March 1 in any other year since 1920.

*Plant Products, Edible.*—Considerable gains were recorded in the edible plant product group, particularly in sugar, biscuit and confectionery factories. The firms making returns to the Dominion Bureau of Statistics,

307 in number, had 27,274 workers in their employ, or 939 more than at the beginning of February. This advance (shared in by all provinces except British Columbia) was larger than that indicated at the beginning of March last year, when the index number was lower.

*Pulp and Paper Products.*—In contrast with the increase in employment in this group on

\*The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

March 1, 1928, there was a falling-off on the date under review, chiefly in pulp and paper mills and printing and publishing shops. A combined working force of 62,896 persons was reported by 480 co-operating manufacturers, who had 63,782 employees on February 1. The situation was practically the same as in the early spring of 1928. The largest decline took place in Quebec.

*Rubber Products.*—Little general change in employment was recorded in rubber factories, 38 of which employed 17,592 workers, as against 17,625 in their last report. The index number was higher than on March 1 in any other year of the record. Small gains were made in Ontario, but there was a reduction in Quebec.

*Textile Products.*—Garment and cotton factories registered an increase which involved a much larger number of employees than that reported on March 1, 1928. The level of employment then, as on the same date in earlier years of the record, was lower. The payrolls of the 508 co-operating establishments aggregated 81,868 persons, as compared with 79,511 on February 1. Considerable improvement was registered in Quebec and Ontario, while elsewhere only small changes occurred.

*Tobacco, Distilled and Malt Liquors.*—Losses in employment were noted on March 1 in tobacco factories; the index number, at 121.9, was practically the same as on the same date last year. Data were received from 142 firms employing 15,580 workers, or 696 less than in their last report. The bulk of the decrease was in Quebec.

*Clay, Glass and Stone Products.*—Activity declined slightly in building material plants, in which the situation was better than on the same date in earlier years of the record. Statements were compiled from 129 manufacturers with 10,546 employees, as against 10,776 in the preceding month.

*Electric Current.*—Employment in plants producing electric power advanced moderately, according to the 88 co-operating firms, who employed 14,014 workers, compared with 13,936 on February 1. There were increases in Quebec and Ontario, but declines in the Prairie Provinces. The index number was higher than on March 1 in any other year of the series.

*Electrical Apparatus.*—The trend of employment was upward in electrical appliance factories, 45 of which enlarged their payroll by 106 persons to 13,135 on the date under review; Quebec registered most of the gain. Similar improvement had been indicated at the beginning of March, 1928, when the index number was much lower.

*Iron and Steel Products.*—Continued advances on a larger scale than on the corresponding date last year were reported in the iron and steel industry, in which employment was in greater volume than in the early spring in any other year of the record. Automobile and railway car shops registered the greatest increases, but there was also an upward movement in rolling mills, agricultural implement, heating appliances and structural steel works. Returns were tabulated from 651 establishments having 169,948 persons in their employ, or 7,206 more than in the preceding month. The most noteworthy expansion was in Ontario, but general improvement was noted throughout the Dominion.

*Non-Ferrous Metal Products.*—Smelting and refining and lead, tin, zinc and copper works showed heightened activity, while aluminum plants reported curtailment; 104 firms had 20,206 workers on their payrolls, as against 19,118 at the beginning of February. The additions to staffs were made chiefly in Ontario. The level of employment was considerably higher than on March 1 in any other year of the record.

*Mineral Products, n.e.s.*—Statistics tabulated from 81 employers indicated that they had enlarged their forces from 12,167 workers in the preceding month, to 12,190 at the beginning of March. The situation on the corresponding date a year ago had shown greater improvement, but the index number then was decidedly lower.

### Logging

Marked contractions were noted in logging camps, in many of which the season's operations were almost completed; 246 firms had 42,937 men in their employ, or 2,496 less than in their last report. The decline involved much the same number of workers as that recorded at the beginning of March a year ago, when the index was some eight points lower.

## Mining

*Coal.*—Although a gain was noted in British Columbia, employment in both eastern and prairie coal fields showed a falling-off, which, however, involved the release of fewer workers than that indicated on March 1, 1928; when the index number was over two points lower. Seventy-eight operators reduced their labour forces from 29,185 persons on February 1, to 28,698 at the beginning of March, 1929.

*Metallic Ores.*—In contrast with the advances indicated on the same date last year, there were reductions in employment in this group, mainly in Ontario. Data were received from 70 mines employing 14,402 workers, as against 14,827 at the beginning of February. The situation was rather better than in any other March on record.

## Communications

Additions to staffs were indicated on telegraphs and telephones, which afforded more employment than in the early spring in other years of the record. Returns were received from 185 companies and branches with 27,087 employees, compared with 26,826 in the preceding month. Only slight improvement had been registered on March 1, 1928, when the index was lower.

## Transportation

*Street Railways and Cartage.*—Statistics tabulated from 128 employers in this division showed that they had reduced their payrolls by 372 persons to 21,896 at the beginning of March; this decrease took place mainly in Quebec. Similar losses were noted on the same date in 1928, when employment was not so active.

*Steam Railways.*—Continued and greater reductions were registered in steam railway operation, from which 1,050 workers were released by the 104 co-operating companies and divisional superintendents on whose payrolls were 80,115 persons. A greater loss had been indicated on March 1 last year, when the index number was rather lower. Large declines were noted in Ontario and the Prairie Provinces.

*Shipping and Stevedoring.*—A further decrease occurred in shipping and stevedoring, mainly in Quebec, while in the Maritime Provinces and British Columbia gains were recorded. Employment was not so active as on March 1, 1928, when advances were indicated. On the date under review, 67 employers reported a staff of 10,614 persons, or 593 less than in the preceding month.

## Construction and Maintenance

*Building.*—Contrasting with the decline indicated on the same date last year, there was an increase in employment in building construction at the beginning of March. The 557 contractors furnishing data had 35,519 employees, as against 35,050 on February 1. Quebec and the Prairie Provinces recorded reductions, while elsewhere improvement was shown. The index number was higher than in the early spring of any other year for which data are available.

*Highway.*—Shrinkage in employment involving almost the same number of workers as on the corresponding date in 1928 was indicated in this group on March 1, when 158 employers reported 6,152 workers, as compared with 6,577 on February 1. Most of this contraction took place in Ontario and the Western Provinces. Employment was in smaller volume than on March 1, of a year ago.

*Railways.*—Employment on steam railway construction and maintenance showed an increase, which was much larger than that registered on the same date in 1928, when the index number was lower. Data were received from 39 companies and divisional superintendents employing 32,024 persons, or 590 more than at the beginning of February. The advances were chiefly in the Prairie Provinces.

## Services

Heightened activity was noted in the service group, 201 establishments reporting a staff of 18,728, compared with 18,489 on February 1. Activity was higher than in the same month of earlier years of the record.

## Trade

Retail and wholesale trade continued to release employees; there was a decrease of 1,229 in the personnel of the 668 firms furnishing data, who had 77,039 workers. Employment was in decidedly greater volume than on March 1 of any other year for which statistics are available. The index stood at 117.8, compared with 109.7 at the beginning of March, 1928, the previous maximum for that date.

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date indicated.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS IN CANADA BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Mining	Manufacturing Industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Wood products	Fibres, textiles and textile products	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufactures	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

ductions ranging from 4.4 per cent in Regina to 7 per cent in Edmonton.

The chart which accompanies this article indicates the unemployment trend by months from January, 1923, to date. The projection during February extended slightly upward from that of the preceding month, showing that unemployment was somewhat more prevalent than in January. The curve at the close of February, however, rested at a point slightly lower than in the same month of last year, indicating nominal improvement in conditions during the month under review.

Varying conditions were reported in the manufacturing group of industries during February, resulting in a small net increase in unemployment for the group as a whole when compared with January. Reports were tabulated from 467 unions of workers in the manufacturing industries during February with a combined membership of 54,140 persons, of whom 3,514 were without work at the end of the month, a percentage of 6.5 compared with 5.6 per cent in January. The recessions in employment when compared with January were confined almost entirely to railway carmen in the Province of Quebec, and wood

workers in British Columbia, and these were partially offset by the better situation obtaining for garment workers in Quebec. Reductions in activity were apparent also among glass workers and general labourers, who, however, form a small percentage of the total members reported in the manufacturing industries. In addition to the expansion registered in the garment trades and mentioned above, noteworthy improvement was evident among papermakers, especially in Ontario. In comparing with the returns for February of last year in the manufacturing industries when 7.3 per cent of idleness was reported, a large number of trades shared in the employment advance shown during the month under review, principal among which were the garment trades, the improvement among these tradesmen being augmented by gains in activity for iron, steel and leather workers, cigar makers and printing tradesmen. On the other hand, wood workers and general labourers reported the most outstanding contractions in work available.

Unemployment among unions of coal miners appeared in greater volume during February than in the preceding month, the major part of which was reported from Nova Scotia where an explosion in one of the mine shafts caused a number of persons to be thrown out of work. Alberta and British Columbia unions also shared in the unemployment increase, though to a lesser extent than in Nova Scotia. The February situation was based on the reports received from a total of 47 unions of coal miners with 19,032 members, of whom 5.6 per cent were unemployed on the last day of the month, compared with 1.5 per cent of inactivity in January, and with 4.9 per cent at the close of February, 1928. Alberta and British Columbia unions together accounted for the small recession in employment reported during February over the same month of last year, while in Nova Scotia a slightly larger percentage of members were reported at work. A considerable amount of short time was indicated by coal miners, both in the eastern and western coal areas.

The building and construction trades remained slack during February, the percentage of unemployment showing a nominal increase over that reported in January. Reports for February were tabulated from 207 unions of building tradesmen with 23,871 members, and of these 4,731 or a percentage of 19.8 were idle at the close of the month, contrasted with 19.0 per cent in January. The situation was, however, more favourable than in February of last year when the percentage of idleness stood at 23.2. The heaviest contractions in employ-

ment when compared with January were recorded by bricklayers, masons and plasterers; while among bridge and structural iron workers, plumbers and steamfitters, and hod carriers and building labourers the declines were nominal only. These, however, were largely offset by advances in employment for granite and stonecutters, painters, decorators and paperhangers, tile layers, lathers and roofers, carpenters and joiners and electrical workers. Decided improvement over February, 1928, conditions, was indicated by painters, decorators and paperhangers, tile layers, lathers and roofers, plumbers and steamfitters, and bricklayers, masons and plasterers during the month under review, while bridge and structural iron workers and electrical workers were afforded a slightly greater volume of work. On the other hand, carpenters and joiners suffered the most extensive curtailment in employment, and minor declines in activity were registered by granite and stonecutters and hod carriers and building labourers.

The transportation industries showed practically no change in the situation during February from that of January, the 714 unions of transportation workers from which returns were tabulated at the close of February with 65,809 members reporting 4.5 per cent of unemployment, compared with 4.7 per cent in January. Steam railway employees, whose returns constitute practically 81 per cent of the entire group membership reporting, together with street and electric railway employees and teamsters and chauffeurs, recorded small increases in the volume of work afforded during February, while among navigation workers the trend of employment was slightly unfavourable. Employment in the transportation industries, as a whole, declined slightly from February a year ago when 4.1 per cent of inactivity was registered, steam railway employees and teamsters and chauffeurs reporting minor reductions in activity during the month under review, while among navigation workers a better situation prevailed. Among street and electric railway employees the percentage of unemployment remained the same in both months of the comparison.

Longshore workers, whose returns are tabulated separately each month, registered 10.5 per cent of unemployment among their members during February, as compared with 12.4 per cent in January and with 13.4 per cent in February, 1928. The percentage for February this year was based on the returns received from 15 associations of longshoremen with an aggregate membership of 7,415 persons.

Retail clerks registered a larger percentage of unemployed members than usual during February, the Quebec tradesmen being wholly responsible for this situation. Reports were tabulated at the close of February from a total of 8 unions of these tradesmen with 1,038 members, 8.8 per cent of whom were idle compared with .8 per cent in January. A considerable falling off in employment was also indicated from February last year when 1.2 per cent of the members reported were out of work.

The unemployment percentage indicated by reports tabulated from 66 unions of civic employees with 7,040 members at the close of February was very slight, namely .8 per cent, contrasted with 1.5 per cent of inactivity in January and with 1.9 per cent in February last year.

From unions in the miscellaneous group of trades, 109 reports were received during February, combining a membership of 5,472 persons, 6.3 per cent of whom were idle at the close of the month compared with percentages of 6.2 in January and with 8.0 in February last year. A slight drop in the volume of work available from the January level was indicated by hotel and restaurant employees during February, while among stationary engineers and firemen the reductions were nominal only. On the other hand, theatre and stage employees and barbers reported moderate improvement. Hotel and restaurant employees, barbers and stationary engineers and firemen were all busier during February than in the corresponding month of last year, while theatre and stage employees reflected less favourable conditions.

Adequate work was provided for fishermen during February, as indicated by the reports received from 2 unions of these workmen with 755 members, while in January the percentage of unemployment stood at 6.6, and in February last year 27.5 per cent of idleness was recorded.

Lumber workers and loggers with 2 unions reporting 906 members in February, indicated that 5.5 per cent of the members were without work at the end of the month compared with a fully employed situation in January and also in February of last year.

Table II summarizes the returns by provinces for February of each year from 1919 to 1926 inclusive, and for each month from January, 1927, to date, and Table I shows the percentages of inactivity registered in the different groups of industries for the same months.

### Employment Office Reports for February, 1929

The volume of business transacted by the offices of the Employment Service of Canada during the month of February, 1929, as indicated by the average daily placements effected, showed a decline of 4 per cent from that of the previous month, while an increase of nearly 7 per cent was shown when a comparison was made with February, 1928. Farming was the only group to show a gain of importance over January, while the largest declines occurred in logging, services, and construction and maintenance. In comparison with February a year ago, all groups except logging, farming, and construction and maintenance showed increased placements, the highest gain being in services and the heaviest decline in construction and maintenance.

The accompanying chart shows the trend of employment from January, 1927, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the curve both of vacancies and of placements in relation to applications showed a slight rise during the first half of the month, but declined somewhat during the latter half of the period. The ratio of vacancies to each 100 applications was 70.3 during the first half

and 67.0 during the second half of February, 1929, in contrast with the ratios of 68.2 and 69.1 during the corresponding periods of 1928. The ratios of placements to each 100 applications during the periods under review were 66.0 and 60.7 as compared with 63.4 and 64.9 during the corresponding month of 1928.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during February, 1929, was 913, as compared with 957 during the preceding month and with 844 in February a year ago.

The average number of applications for employment received daily by the offices during the month under review was 1,331, in comparison with 1,475 in January, 1929, and with 1,230 during February last year.

The average number of placements made daily by the offices of the Service during February, 1929, was 841, of which 489 were in regular employment and 352 in work of one week's duration or less, as compared with a total daily average of 877 during the preceding month. Placements in February a year ago averaged 788 daily, consisting of 487 placements in regular and 301 in casual employment.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

During the month of February the offices of the Service referred 21,445 persons to vacancies and effected a total of 20,184 placements. Of these the placements in regular employment were 11,744, of which 8,353 were for men and 3,391 for women, while placements in casual work totalled 8,440. The number of vacancies reported by employers was 13,350 for men and 8,549 for women, a total of 21,899, while applications for work numbered 31,932, of which 21,908 were from men and 10,024 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522

1929 (2 months).....	25,482	17,502	42,984

#### NOVA SCOTIA

There was a decline of nearly 13 per cent in the number of positions offered through employment offices in Nova Scotia during February when compared with the preceding month, but a gain of over 12 per cent in comparison with the corresponding month of last year. Placements were over 9 per cent less than in January, but were 14 per cent higher than during February, 1928. There were fewer placements in the manufacturing industry and trade than during February last year, but these declines were more than offset by gains in logging, transportation, construction and maintenance and services. Industrial divisions, in which most of the placements were effected during the month, were: manufacturing, 40; logging, 73; transportation, 44; construction and maintenance, 61; trade, 44 and services 299, of which 218 were of household workers. There were 130 men and 62 women placed in regular employment during the month.

#### NEW BRUNSWICK

During February orders received at employment offices in New Brunswick called for over 19 per cent less workers than in the preceding month, but showed a gain of nearly 12 per cent when compared with the corresponding month last year. There was a decline of over 16 per cent in placements in comparison with January, but a gain of nearly 16 per cent over February, 1928. All groups except tran-

sportation participated in the gains in placements over February last year, although services was the only division to show any improvement of importance. Placements in this group numbered 442, of which 363 were of household workers. There were 45 placements in the manufacturing industry. During the month regular employment was obtained for 62 men and 57 women.

#### QUEBEC

Orders received at employment offices in the province of Quebec during February called for about the same number of workers as in the preceding month, but showed a gain of over 33 per cent when compared with the corresponding month last year. There was a decline of nearly 3 per cent in placements from January, but a gain of nearly 5 per cent over February, 1928. The manufacturing industry and construction and maintenance were the only groups to show declines of importance in placements in comparison with February last year, and these losses were more than offset by increased placements in logging, services and trade. Industrial groups, in which most of the placements were effected during the month, included: manufacturing, 92; logging, 280; construction and maintenance, 330; trade, 45 and services, 485, of which 399 were of household workers. There were 749 men and 475 women placed in regular employment during the month.

#### ONTARIO

Opportunities for employment, as indicated by orders received at employment offices in Ontario during February, were over 15 per cent less than in the preceding month, but over 9 per cent better than during the corresponding month last year. Placements declined nearly 14 per cent when compared with January, but were over 9 per cent higher than during February, 1928. The most noteworthy increases in placements over February last year were in the manufacturing industry, transportation, services and trade, while logging and construction and maintenance showed the largest declines. Placements by industrial groups included: manufacturing, 1,798; logging, 1,202; farming, 370; mining, 68; transportation, 265; construction and maintenance, 1,721; trade, 598 and services, 3,443, of which 2,021 were of household workers. During the month 4,064 men and 1,415 women were placed in regular employment.

#### MANITOBA

The demand for workers, as indicated by orders received at employment offices in Manitoba during February, was over 17 per cent

less than during the preceding month, and 6 per cent lower than in the corresponding month last year. There were over 18 per cent less placements than in January, and nearly 3 per cent fewer than in February, 1928. Services, transportation and trade were the only groups in which more placements were made during the month under review than

in the corresponding month last year. Construction and maintenance and logging showed the largest reductions under this comparison. Industrial divisions, in which most of the placements were effected during the month, included: manufacturing, 77; logging, 290; farming, 351; construction and maintenance, 131; trade, 158 and services, 1,539, of which 1,324 were of household workers. Placements in regular employment numbered 810 of men and 474 of women.

#### SASKATCHEWAN

Employment opportunities, as indicated by orders received at employment offices in Saskatchewan during February, were 10 per cent less favourable than in the preceding month, and nearly 8 per cent fewer than during the corresponding month last year. Placements also declined, being nearly 11 per cent below January, and over 8 per cent lower than in February, 1928. The manufacturing industry, services and trade were the only groups in which more placements were made than during February last year, and these gains were more than offset by the losses in other divisions. Farm placements showed the largest decline. Placements by industrial divisions included: manufacturing, 58; logging, 62; farming, 315; transportation, 51; construction and maintenance, 141; trade, 134; and services, 853, of which 479 were of household workers. Regular employment was obtained for 550 men and 371 women during the month.

#### ALBERTA

During the month of February positions offered through employment offices in Alberta were nearly 5 per cent more than in the preceding month, but over 12 per cent lower than during the corresponding month last year. Placements also showed approximately the same percentage of change under each comparison. The manufacturing industry, mining and trade were the only groups in which more placements were made during the month under review than during February last year, and in these the gains were small. Logging and construction and maintenance showed the largest reductions in placements. Industrial groups, in which most of the placements were effected during the month, were: manufacturing, 186; logging, 457; farming, 402; mining, 75; construction and maintenance, 207; trade, 79 and services, 599, of which 479 were of household workers. During the month 1,252 men and 263 women were placed in regular employment.

#### BRITISH COLUMBIA

There was a decline of over 8 per cent in the number of positions offered through offices in British Columbia during February when compared with the preceding month, but a nominal gain only when compared with the corresponding month last year. Placements were over 9 per cent less than in January, and less than 1 per cent lower than in February, 1928. Increased placements over February last year were made in manufacturing, farming, mining, transportation, services and trade, but these gains were offset by declines in logging and construction and maintenance. Placements by industrial groups included: manufacturing, 251; logging, 292; farming, 131; mining, 54; transportation, 112; construction and maintenance, 177; trade, 141 and services, 851, of which 503 were of household workers. Regular employment was obtained for 736 men and 274 women during the month.

#### Movement of Labour

During the month of February, 1929, the offices of the Employment Service of Canada effected a total of 11,744 placements in regular employment, 5,550 of which were of persons for whom the employment located was outside the immediate locality of the offices at which they are registered. Of the latter, 980 were granted the Employment Service reduced transportation rate, 819 travelling to centres within the same province as the despatching office and 161 to other provinces. The reduced transportation rate, which is 2.7 cents per mile, with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who wish to travel to distant employment for which no workers are available locally.

Quebec offices granted 35 certificates for reduced transportation during February, all of which were issued to bushmen transferred from Quebec City to employment within the territory covered by that office.

In Ontario 172 persons secured reduced rate certificates during February 169 of whom went to provincial employment, the remainder representing an interprovincial movement. Of the former, 121 were bush workers, the majority going to points in the Port Arthur, Sudbury and Fort William zones and receiving their certificates for transportation at these zone offices. Port Arthur, in addition, transferred 20 construction labourers to Kingston, and 10 to Toronto; Sudbury 1 lumber loader to Ottawa, and Fort William 1 miner within its own zone. From Toronto 10 hydro-electric labourers were conveyed at the

special rate to St. Thomas, 2 iron workers to Kingston, and 1 dairy man to Chatham. The Ottawa office granted certificates to 1 tailor bound for Windsor, and to 1 stonecutter going to Hamilton, while Chatham despatched 1 iron worker to Kingston. Of the three persons travelling outside the province 2 were metal workers and 1 an engineer who were transported from Cobalt to employment in the Quebec zone.

Certificates for reduced transportation granted in Manitoba during February totalled 400, all of which were issued at Winnipeg. Of these 254 were for provincial points and 146 for centres in other provinces. Transfers within the province included 1 farm hand, 17 farm household workers and 7 hotel workers going to Brandon, 2 hotel workers and 1 housekeeper to Dauphin, and 88 farm hands, 73 railway construction labourers, 9 building construction labourers, 42 bush workers, 12 miners, 1 farm housekeeper, and 1 hotel employee to points within the Winnipeg zone. Of those travelling to districts outside the province, the Port Arthur zone was the destination of 76 bush workers, 1 truck driver, 1 farm hand, 2 construction labourers and 2 hotel employees. To the Yorkton zone were transported 20 bush workers, 8 farm hands, and 1 hotel worker; to Regina 13 farm hands, 1 farm domestic, and 3 hotel workers, and to Prince Albert 1 farm hand and 1 bushman. The remainder of the interprovincial movement was of farm hands and farm household workers for the Estevan, North Battleford, Moose Jaw and Weyburn zones.

Persons benefiting by the Employment Service reduced transportation rate from Saskatchewan centres during February were 67 in number, 66 of whom went to employment within the province. Included in this provincial movement were 28 farm hands and 2 farm domestics for various points within the province, the majority of whom travelled from Regina and Saskatoon. From Regina, also, 1 barber, 2 kitchen workers and 1 housekeeper journeyed to Moose Jaw, 2 domestics to Swift Current, 1 housekeeper to Saskatoon, and 1 housekeeper and 1 hotel cook to Estevan, while from Saskatoon, in addition, 2 bushmen were despatched to Prince Albert and 3 gravel pit workers to Yorkton. The remaining transfers within the province were from Prince Albert, which office transferred 1 bushman to Yorkton and 20 bushmen and 1 hotel

cook within its own zone. The 1 worker travelling outside the province was a bushman who was carried at the special rate from Regina to employment in the Dauphin zone.

The movement of labour from Alberta centres during February was entirely provincial, and comprised the transfer of 229 workers. A large proportion of these secured their certificates for reduced transportation at Edmonton, from which centre 6 bush workers travelled to Lethbridge, 1 farm hand to Calgary, and 138 bush workers, 27 farm hands, 1 farm housekeeper, 13 sawmill workers, 4 miners, 1 housekeeper, 2 bridge construction workers, 1 building construction worker, and 3 hotel employees to centres within the Edmonton zone. In addition, the Calgary office was instrumental in transferring 10 lumber mill workers, 2 farm hands, 2 farm domestics, and 9 bush workers to Lethbridge, 2 farm hands to Medicine Hat, 3 farm hands and 1 hotel cook to Drumheller, 1 hospital employee to Edmonton, and 2 farm hands to employment within its own zone.

Business transacted by British Columbia offices in February involved an issue of 77 certificates for reduced transportation, 66 of which were provincial and 11 interprovincial. The latter were granted to farm hands, of whom the Vancouver office transferred 8 to Alberta, 1 to Saskatchewan, and 1 to Manitoba, while Victoria despatched 1 to employment in Saskatchewan. Within the province, Vancouver issued certificates to 1 miner, 2 farm hands, 2 bush workers, 1 hospital employee, and 1 construction line man travelling to Kamloops, 8 power construction labourers to Penticton, 2 miners to Revelstoke, 1 miner, 1 bushman, and 3 engineers to Prince George, and to 3 miners, 2 farm hands, 1 farm housekeeper, 1 hotel worker, 2 power construction workers, 1 sawyer, and 1 domestic going to employment within the Vancouver zone. The balance of the provincial movement consisted of the transfer of 14 bush workers and 1 miner from Nelson, 4 miners and 1 bush man from Prince Rupert, and 13 bush workers from Prince George to employment in their respective zones.

Of the 980 persons who took advantage of the Employment Service reduced transportation rate during February, 638 were carried by the Canadian National Railways, 328 by the Canadian Pacific Railway, 11 by the Pacific Great Eastern Railway, and 3 by the Temiskaming and Northern Ontario Railway.

## Building Permits Issued in Canada during February, 1929

The value of the building permits issued by 61 cities during February, as compiled by the Dominion Bureau of Statistics, was higher by \$2,108,809 or 25.2 per cent than in the preceding month, and by \$155,141 or 1.5 per cent than in February last year: the total stood at \$10,473,479 during February, 1929, as compared with \$8,364,670 in January, 1929, and \$10,318,338 in February, 1928, which had one day more for registration of building projects. The February, 1929, total was the highest for that month in the record for the 61 cities, which goes back to 1920, while building costs continue lower than in most years of the record.

Some 50 cities furnished detailed statistics, showing that they had granted nearly 600 permits for dwellings, valued at over \$2,000,000 and nearly 1,000 permits for other buildings, estimated to cost in excess of \$8,000,000. In January authority was given for the erection of some 400 dwellings and 900 other buildings, estimated at approximately \$2,600,000 and \$5,000,000, respectively.

New Brunswick, Ontario and the four Western Provinces reported increases in the value of the permits issued as compared with January, 1929, while elsewhere comparatively small declines were indicated. The largest gain, of \$1,035,697, took place in Alberta; this was chiefly due to the authorization of an addition to a leading hotel in Calgary.

As compared with February, 1928, Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta registered gains, that of \$1,578,798, or 38 per cent in Ontario being most pronounced. Of the decreases in the remaining provinces, that of 48.1 per cent in British Columbia was greatest.

Of the larger cities, Montreal recorded a reduction in the value of the permits issued as compared with January, 1929, and February, 1928. In Toronto, there was a decline as compared with the preceding month, but the total was higher than in the same month of last year. Winnipeg reported an advance in both comparisons, while in Vancouver the value of the building authorized was greater than in January, 1929, but lower than in February, 1928, when a permit was issued for the construction of a grain elevator valued at \$2,000,000. Of the other cities, the following registered increases in the value of building authorized during February as compared with January, 1929, and February, 1928:—New Glasgow, Sydney, Fredericton, Moncton, Quebec, Belleville, Chatham, Kitchener, London,

Niagara Falls, St. Catharines, St. Thomas, Sarnia, York Townships, Windsor, Riverside,

<sup>1</sup> Includes Point Grey and South Vancouver, formerly given separately.

Walkerville, Regina, Saskatoon, Calgary, Edmonton, Medicine Hat, Kamloops, Nanaimo and Victoria.

*Cumulative Record For First Two Months, 1929.*—The following table gives the value of the building authorized by 61 cities during February, and in the first two months of each year since 1920, as well as the index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in January and February of the same years are also given (1926=100).

The table on page 431 gives the value of the building permits issued by 61 cities in January and February, 1929, and February, 1928. The 35 cities for which records are available since 1910 are indicated by asterisks.

Year	Value of permits issued in February	Value of permits issued in first two months	Indexes of value of permits issued in first two months, (1920=100)	Average indexes of wholesale prices of building materials, in first two months, (1926=100)
	\$	\$		
1929.....	10,473,479	18,338,149	185.2	99.6
1928.....	10,318,338	18,034,925	177.3	96.4

1924.....	4,093,800	8,554,379	84.0	112.3
1923.....	5,679,671	9,819,169	96.5	110.1
1922.....	4,738,105	8,064,642	79.3	108.3
1921.....	3,683,359	6,278,923	61.7	140.5
1920.....	6,156,287	10,173,311	100.0	137.5

The aggregate for the elapsed months of 1929 was higher by 4.5 per cent than the total for the same months of 1928, the previous high level of this record of ten years.

## EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during February. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the March, 1929, issue relates to the situation existing in January, 1929. The employment situation in the United States is further indicated by unemployment percentage based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for January and previous months taken from the March, 1929, issue of the *American Federationist*, the official publication of the organization, are reproduced below.

### Great Britain

Employment during February was adversely affected by the severe weather which set in towards the middle of the month and continued until the end of the first week in March. Dur-

ing the first half of February employment steadily improved, but in the second half there was a heavy increase in the numbers unemployed in the building trade, public works contracting, brick, tile, cement and artificial stone manufacture, canal, river, dock and harbour service, and all branches of the mining group of industries other than coal mining.

On the other hand there was an improvement throughout the month in a large number of industries not affected by the weather.

In coal mining there was a substantial decrease both in the number of persons wholly unemployed and in the numbers temporarily stopped. The other principal industries in which employment improved included pottery, pig-iron manufacture, general and marine engineering, shipbuilding and ship repairing, the textile trades, other than cotton and carpet manufacture, the clothing trades, boot and shoe manufacture, and shipping service.

Among workpeople numbering approximately 11,880,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 25th February, 1929 (including those temporarily stopped as well as those wholly unemployed) was 12.2 as compared with 12.3 at 21st January, 1929, and 10.4 at 20th February, 1928. For males alone the percentage at 25th February, 1929, was 13.9, as compared with 13.8 at 21st January, 1929; for females the corresponding figures were 7.9 and 8.5. The percentage wholly unemployed at

25th February, 1929, was 9.8, the same percentage as at 21st January, 1929. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 25th February, 1929, was approximately 1,430,000, of whom 1,137,000 were men and 218,000 were women, the remainder being boys and girls; at 28th January, 1929, it was 1,434,000, of whom 1,113,000 were men and 236,000 were women; and at 27th February, 1928, it was 1,139,000, of whom 911,000 were men and 158,000 were women.

### United States

Employment in the United States decreased 0.6 per cent in January, 1929, as compared with December, 1928, and pay-roll totals decreased 2.9 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous, mining, public utilities, trade (wholesale and retail) and hotels.

Employment in manufacturing industries decreased 0.3 per cent in January, 1929, as compared with December, 1928, and pay-roll totals decreased 3.3 per cent, as shown by reports made to the Bureau of Labour Statistics by 12,138 establishments in 54 of the principal manufacturing industries of the United States. These establishments in January had nearly 3½ millions of employees whose combined earnings in one week were more than 87½ millions of dollars. These employees represent 51 per cent of all employees in the 54 industries considered and 40 per cent of the total number of employees in all manufacturing industries of the United States.

The Bureau of Labour Statistics' weighted index of employment in manufacturing industries for January, 1929, is 95.2, as compared with 95.5 for December, 1928, 95.4 for November, 1928, and 91.6 for January, 1928; the weighted index of pay-roll totals in January, 1929, is 94.5, as compared with 97.7 for December, 1928, 96.1 for November, 1928, and 89.6 for January, 1928. The monthly average for 1926 equals 100.

Twenty-one of the fifty-four separate industries had more employees in January, 1929, than in December, 1928, the outstanding increases having been 11.5 per cent in steam fittings and 10.1 per cent in automobiles, the increases in both industries having followed a period of several months of declining employment. Millinery and lace goods, shipbuilding, boots and shoes, automobile tires, and agricultural implements also reported notable increases in employment, the increases ranging from 5.6 per cent to 4 per cent, while much

smaller increases were reported in the cotton goods, carpet, women's clothing, iron and steel, foundry and machine shop, hardware, machine tools, millwork, leather, paper and pulp, fertilizer, chewing tobacco, electric-car building, and electrical machinery industries.

Part-time work in January was evidenced by reports for pay-roll totals; only 8 of the 21 industries reporting increased employment showed increased pay-roll totals as well. Moreover, four of these eight industries—steam fittings, automobiles, agricultural implements, and shipbuilding—reported a much smaller percentage of gain in pay-rolls than in employment. Always inventory-taking and repairs during the early part of January, in a large number of industries, have a depressing effect upon the pay-roll totals of such industries, this effect as a rule considerably exceeding the decrease in employment.

The notable decreases in employment and pay-roll totals in January were from 10.1 to 13.5 per cent each in the first item and from 10.9 to 21.1 per cent each in the second item, and were in the confectionery, stove, brick, cigar, and carriage and wagon industries. These decreases were all seasonal.

The East North Central geographic division reported a gain in employment of 2.7 per cent in January, and the East South Central division a gain of 0.8 per cent, while all other changes in geographic divisions, both in employment and pay-roll totals, were decreases, the Pacific division having shown the greatest of these in each item, and the West North Central the smallest; the Middle Atlantic division reported the same decrease in employment as the West North Central division, but with a much greater decrease in pay-roll totals.

*Unemployment percentage.*—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States. The method of compiling as described in the *American Federationist*, March, 1928, is as follows:—

"The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the first of the month or the nearest possible date. From these reports the percentage of unemployed members is calculated for identical unions in the current and the previous month. Thus for every month there are two percentage figures—that is for identical unions in December and January—and for identical unions in January and February, and so on. The

final figure for January, then, is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers."

By the above method the proportion of unemployed members to the total membership of the local unions reporting, is computed. According to the March issue of the *American Federationist*, the most recent unemployed

percentages during the various months in the 23 cities work out as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, MARCH, 1929

### Cost of Living, Prices of Staple Articles and Index Numbers

**T**HE movement in prices during the month was toward somewhat higher levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being slightly higher.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.23 at the beginning of March, as compared with \$11.15 for February; \$10.92 for March, 1928; \$11.05 for March, 1927; \$11.46 for March, 1926; \$10.74 for March, 1925; \$10.58 for March, 1924; \$10.79 for March, 1923; \$10.54 for March, 1922; \$13.23 for March, 1921; \$16.92 for June, 1920 (the peak); \$12.66 for March, 1918; and \$7.68 for March, 1914. The advance was due to slightly higher prices for eggs, butter, beef, veal, fresh pork, beans and evaporated apples. The prices of lard, rice, sugar, tea and coffee were somewhat lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.52 at the beginning of March, as compared with \$21.41 for February; \$21.15 for March, 1928; \$21.29 for March, 1927; \$21.77 for March, 1926; \$21.00 for March, 1925; \$21.00 for March, 1924; \$21.42 for March, 1923; \$20.96 for March, 1922; \$23.87 for March, 1921; \$26.92 for July, 1920 (the peak); \$20.00 for March, 1918; and \$14.35 for March, 1914. Rent was slightly higher due to increases reported from Woodstock and Victoria.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was slightly higher at 96.1 for March, as compared with 95.7 for February; 97.7 for March, 1928; 97.3 for March, 1927; and 101.3 for March, 1926. Eighty-six prices quotations were higher, seventy-six were lower and three hundred and forty were unchanged.

In the grouping according to chief component materials five of the eight main groups advanced, two declined and one was unchanged. The groups which advanced were: the Animals and their Products group, due mainly to higher prices for livestock, meats, fowl, butter and cheese; the Wood, Wood Products and Paper group, due mainly to higher prices for some lines of lumber; the Iron and its Products group, chiefly because of advances in the prices of scrap iron; the Non-Ferrous Metals group, because of increased prices for copper, lead, spelter and silver; and the Chemicals and Allied Products group, due chiefly to higher prices for paint materials. The Vegetable Products group declined, lower prices for grains, millfeed, foreign fruits, sugar, potatoes, rubber, naval stores, and some vegetable oils more than offsetting higher prices for flour, tea, coffee, apples and hay. The Fibres, Textiles and Textile Products group was also lower, higher prices for cotton, silk, flax fibre, hemp, sisal, and manila rope being more than offset by declines in the prices of hessian, jute and wool. The Non-Metallic Minerals and their Products group was unchanged.

In the grouping according to purpose consumers' goods advanced, higher prices for beverages, meats, butter, cheese and cotton fabrics more than offsetting lower prices for fish, foreign fruits, potatoes, sugar and rubbers. Producers' goods were also higher. In this group building and construction materials advanced, mainly because of higher prices for some lines of lumber, paint materials, copper wire, brass sheets and manila rope. Manufacturers' materials showed a slight increase. Materials for the meat packing industries, for the metal working industries, as well as miscellaneous producers' materials advanced, while materials for the milling industries, for the textile and clothing industries, for the leather industries and for the chemical industries declined.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of March of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed

houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quota-

(Continued on page 442)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

tions in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts, extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities

for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps, two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On

#### INDEX NUMBERS OF WHOLESALE PRICES CALCULATED BY THE DOMINION BUREAU OF STATISTICS

Average Prices in 1926=100

the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

CHANGES IN THE COST OF LIVING IN CANADA  
FROM 1913 TO 1929\*  
(Average prices in 1913=100)

Index Numbers of Changes in the  
Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workmen's family expenditure in progress since 1913 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

Cost of Electric Current and Gas for  
Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index

\*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1927 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

#### Retail Prices

Beef prices were again slightly higher, sirloin steak being up from an average of 34.9 cents per pound in February to 35 cents in March; round steak from 29.9 cents per pound in February to 30 cents in March; and shoulder roast from 21.7 cents per pound in February to 21.8 cents in March. Veal was higher in most localities, being up from an average of 24.3 cents per pound in February to 24.9 cents in March. Fresh pork advanced from an average price of 27.5 cents per pound to 28 cents. Bacon and ham showed little change. Lard was down from an average of 22.5 cents per pound in February to 22.2 cents in March.

Eggs advanced, fresh averaging 51.3 cents per dozen in March, as compared with 49.7 cents in February and 60.2 cents in January, and cooking averaging 44.7 cents per dozen in March, 41.4 cents in February and 48.4 cents in January. Prices for the most part were lower in the Maritime Provinces but in Ontario, Quebec and the Western Provinces showed an increase. Milk was unchanged at an average price of 12.5 cents per quart. Butter was slightly higher, dairy averaging 44.5 cents per pound in March, as compared with 44 cents in February, and creamery averaging 49 cents per pound in March and 48.3 cents in February.

Bread, soda biscuits, flour and rolled oats were practically unchanged in the average. Beans rose from an average price of 11.1

cents per pound in February to 11.7 cents in March. Higher prices were reported from most localities. Onions were also higher, averaging 7.8 cents per pound in March, as compared with 7.5 cents in February. Potatoes were unchanged at an average price of \$1.31 per ninety pounds. Higher prices were reported from most localities in the western provinces but these were offset by declines in the eastern provinces. Evaporated apples were slightly higher averaging 21.2 cents per pound. Jam was slightly lower at 71.1 cents per four-pound tin. Granulated sugar was down from an average price of 7.6 cents per pound in February to 7.5 cents in March. Tea and coffee were slightly lower, the former averaging 70.5 cents per pound and the latter 60.3 cents. Coal prices showed little change, anthracite averaging \$16.38 per ton and bituminous \$10.11. Increases in rent were reported from Woodstock and Victoria.

#### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to slightly lower levels. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis averaging \$1.269 per bushel, as compared with \$1.278. The high price for the month was \$1.304, reached on the 12th, and the low \$1.224, reached on the 26th. Coarse grains followed the movement in wheat, western barley being down from 77 $\frac{3}{4}$  cents per bushel to 74 $\frac{3}{4}$  cents; western oats from 73 $\frac{1}{2}$  cents per bushel to 64 $\frac{1}{2}$  cents, rye from \$1.12 $\frac{1}{2}$  per bushel to \$1.09; and American corn from \$1.11 per bushel to \$1.09 $\frac{1}{2}$ . Flaxseed rose from \$2.04 $\frac{3}{4}$  per bushel to \$2.07 $\frac{1}{2}$ . Flour was slightly higher, being up from \$7.50 per barrel to \$7.60. Rolled oats declined from \$4.05 per ninety-pound bag to \$3.85. Bran fell from \$34.25 per ton to \$33.62 and shorts from \$35.50 per ton to \$35.09. Sugar prices continued toward lower levels, raw at New York being down from \$1.96 $\frac{1}{4}$  per hundred to \$1.93 $\frac{3}{4}$  and granulated at Montreal from \$5.32 per hundred to \$5.22 $\frac{1}{2}$ . Coffee at Toronto was slightly higher at 29 $\frac{1}{2}$  cents per pound. Oranges were down from \$4.97 per case to \$4.34. Evaporated apples advanced from 16 $\frac{1}{2}$  cents per pound to 18 cents. The price of potatoes continued toward lower levels, Quebec grades at Montreal being down from 82 cents per ninety pounds to 73 cents and New Brunswick grades at St. John from 85 cents per hundred pounds to 78 $\frac{3}{4}$  cents. Turpentine was down from 91 cents per gallon to 90 $\frac{1}{2}$  cents and rosin from \$14 per barrel to \$12.25. Good steers at Toronto advanced from \$9.27 per hundred

pounds to \$9.40 and at Winnipeg from \$8.20 per hundred pounds to \$8.62. Veal calves rose from \$15.49 per hundred pounds to \$15.97. Hogs at Toronto advanced from \$11.08 per hundred pounds to \$11.79 and at Winnipeg from \$10.07 per hundred pounds to \$10.97. Dressed pork at Toronto advanced from 17 cents per pound to 17½ cents and at Montreal from 18½ cents per pound to 19 cents. In butter prices creamery prints at Montreal advanced from 43.9 cents per pound in February to 45.4 cents in March and at Toronto from 44.7 cents per pound in February to 45.9 cents in March. Fresh eggs at Montreal declined from 49½ cents per dozen to 47½ cents and at Toronto from 47.9 cents per

dozen to 43½ cents. Beef hides were down from 14-15½ cents per pound to 13-14½ cents. Raw cotton at New York advanced from an average price of 20.2 cents per pound in February to 21.2 cents in March. Raw silk at New York rose from \$5.45 per pound to \$5.65. Raw wool declined from 32-34 cents per pound to 30-33 cents. In non-ferrous metals copper rose from \$19.64 per hundred pounds to \$22.93; copper sheets from 31½ cents per pound to 32½ cents; copper wire from 22½ cents per pound to 25½ cents; lead from \$6.58 per hundred pounds to \$7.17½; zinc from \$7.30 per hundred pounds to \$7.37; and silver from 56.2 cents per ounce to 56.35 cents.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1913=100, was 138.4 for February, an advance of 0.1 per cent over January. Food advanced 0.8 per cent with advances in all groups. Industrial materials declined 0.4 per cent, declines in textiles and miscellaneous materials being partly counteracted by advances in metals and minerals.

The *Economist* index number has recently been revised. The new index number is on the base 1927=100, the number of commodities has been increased to 58 and the geometric average is used. The new series has been calculated from January, 1924, and is substituted for the old index number in the accompanying table of index numbers of wholesale prices. The index number for February, on the base 1927=100 was 95.6, a rise of about one per cent, due chiefly to an advance in cereals and meat and also in minerals; on the other hand, textiles and "other foods" declined.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-1877=100, was 120.1 at the end of February, an advance of 2.6 per cent. Foodstuffs rose 3.2 per cent, due largely to seasonal advances. Industrial materials advanced 2.5 per cent with advances in all groups, the most notable being in lead and copper and in timber, leather and olive oil.

**COST OF LIVING.**—The index number of the Ministry of Labour, on the base July, 1914=100, was 166 at March 1, an advance of one point over the previous month. The *Ministry of Labour Gazette* states—"This advance, unusual at this season of the year, was due to the widespread severe frost, which restricted the movement into consumption of some food-stuffs, and resulted in higher average prices of bacon, fish and potatoes, among the articles included in these statistics, and largely delayed the seasonal fall in the prices of eggs." Rent, clothing, fuel and light and sundries were unchanged.

### Austria

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base, prices in gold, first half of 1914=100, was 133 for March as compared with 130 for February. Food advanced 3 points and industrial materials 4 points.

**COST OF LIVING.**—The official index number, on the base, prices in gold, July, 1914=100, was 110 for March, as compared with 111 for February. The decline was due to a fall in food prices. Heat and light advanced and other groups were unchanged.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base 1913=100, was 139.3 for February, an advance of 0.3 per cent for the month. Agricultural products rose 1.7 per cent with advances in all groups, the principal one being in foods of animal origin; provisions advanced one per cent. The group "all raw materials and semi-manufactured goods" rose 0.3 cent. In this

(Continued from page 445)

group, rubber advanced 18·8 per cent, metals other than iron 4·2 per cent, while skins and leather declined 5·3 per cent; other items in this group and manufactured goods showed only slight variations.

**COST OF LIVING.**—The official index number of the cost of living, on the base 1913-1914=100, was 154·4 for February, an advance of 0·8 per cent. Food advanced 1·6 per cent and other groups varied only slightly.

#### Australia

**WHOLESALE PRICES.**—The Melbourne index number, on the base 1911=1000, was 1760 for December, as compared with 1735 for November. There were advances in jute, leather, etc., agricultural products, etc., dairy produce and building materials; declines were noted in groceries and meat; metals and coal were unchanged.

#### New Zealand

**WHOLESALE PRICES.**—The index number of the Government Statistician, on the base 1909-1913=1000, was 1554 for January as compared with 1573 for December. This decline was largely due to a fall of 10·2 per cent in agricultural produce.

#### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 96·7 in February, a decline of

0·5 per cent from January. Farm products, foods, hides and leather products, textile products, fuel and lighting and miscellaneous products all declined, while small advances were noted in metals and metal products, building materials and chemicals and drugs; house-furnishing goods were unchanged.

The *Analyst* index number, on the base 1913=100, was 146·5 for March, showing little change from February. Food products and miscellaneous commodities declined and metals advanced, while other groups varied very little from the previous month.

Bradstreet's index number (showing the cost of a list of 106 commodities) was \$12.-8691 at April 1, a decline of 0·1 per cent from the previous month. The most notable declines were in hides and leather and in miscellaneous commodities, the latter due to lower prices for rubber. Other groups which declined were: breadstuffs, provisions, fruits, textiles, coal and coke, oils and naval stores. Two groups advanced, metals (due to a sharp rise in copper prices) and live stock. Two other groups, building materials and chemicals and drugs showed no change.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 161·0 for February, an advance of 0·1 per cent for the month. Clothing advanced 0·7 per cent; the other groups were practically unchanged.

## ANNUAL EARNINGS OF EMPLOYEES IN INDUSTRIES IN UNITED STATES

### Massachusetts Manufacturing Industries

The average yearly earnings per employee in manufacturing industries in Massachusetts from 1913 to 1927, and the average number of workers employed, are shown in the following figures taken from a recent press release of the Massachusetts Department of Labour and Industries and printed in the *Monthly Labour Review* (U.S. Dept. of Labour), March, 1929.

AVERAGE NUMBER OF EMPLOYEES AND AVERAGE YEARLY EARNINGS, IN MASSACHUSETTS MANUFACTURING INDUSTRIES, 1913 TO 1927

Year	Average number of employees	Average yearly earnings
		\$ cts.
1913	616,927	569 43

**WAGES OF EMPLOYEES ON FARMS IN CANADA, 1925-28**

The Dominion Bureau of Statistics secures each year from its agricultural correspondents throughout Canada information as to the wages of employees on farms in Canada during the year just ended. The figures so secured are published in the *Monthly Bulletin of Agricultural Statistics* for the February of the following year. Tables of these figures have appeared in the reports on Wages and Hours of Labour in Canada issued as supplements to the LABOUR GAZETTE for January, 1925, to 1929, inclusive, the first of these

giving figures back to 1914. The accompanying table includes figures taken from the issue of the Bulletin for February, 1929, for the years 1926, 1927 and 1928, the unweighted figures for 1925 being also included. The averages for these years have been weighted according to the population in each district, whereas for the years prior to 1926 the figures were not so weighted. The weighting has resulted in slight differences in the averages, being a dollar or two dollars per month in some cases.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Fur and Products

**MONTREAL, QUEBEC.**—MONTREAL FUR MANUFACTURERS' PROTECTIVE ASSOCIATION AND THE JOINT BOARD OF THE FURRIERS' UNIONS OF MONTREAL, LOCALS NOS. 66 AND 67 OF THE INTERNATIONAL FUR WORKERS' UNION.

Agreement to be in effect from January 29, 1929, to January 31, 1931. One month before the expiration of the agreement, the conciliation committee is to meet to discuss its renewal or revision.

A permanent conciliation committee to be formed consisting of five representatives (named in the agreement) of each party. Any vacancy on this committee can only be filled by a person who has been engaged as fur manufacturer or fur worker in Montreal continuously for three years.

No discrimination to be shown union employees. Open shop to be maintained.

Hours: 44 per week ending at noon on Saturday.

Overtime: time and one-half employees to receive pay for legal holidays, and if they work on these holidays, they are to receive time and one-half in addition to the regular pay. No overtime to be worked in the months of April to August inclusive. No employee to work overtime in any factory or shop other than the one in which employed during the day.

No work to be done by workers in their homes. No contracting or sub-contracting permitted inside the factory. Employers not to send any work to any place where conditions inferior to those covered by the agreement prevail. The principle of equal division of work to be observed as far as possible.

Wages: no wage schedule is mentioned in the agreement, but it is provided that if at any time the union considers that the working or wage condition in any shop is not equal to the general average of the Association shops, a meeting of the conciliation committee may be called and the Manufacturers' Association side of the committee agree to investigate such

conditions, and if unsatisfactory, to use their influence to endeavour to adjust same.

No strike or lockout to occur during the term of the agreement, but all disputes to be dealt with by the conciliation committee. Employees are not to work on any materials, the property of firms whose employees are on strike.

The maintenance of proper sanitary conditions and the observance of laws relating to fire protection and all other labour laws to be considered a part of the agreement.

No individual agreements to be made with union employees that are in contravention to this agreement, nor shall cash or other form of security be accepted from any union employee.

### Construction: Buildings and Structures

**WINNIPEG, MANITOBA.**—THE ELECTRICAL CONTRACTORS' SECTION OF THE WINNIPEG BUILDERS' EXCHANGE AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 435.

Agreement to be in effect from March 1, 1929, to February 28, 1930.

Wages per hour: job foreman, \$1.20, journey-men wiremen, \$1.10; apprentices: 1st year, 25 to 40 cents, 2nd year, 40 to 50 cents, 3rd year, 50 to 60 cents; 4th years, 70 cents.

A journeyman is one who has had four years or more experience at one or more branches of the trade. A journeyman having charge of four or more men on jobs lasting a week or more shall be considered a job foreman.

An apprentice is one who has had less than four years' experience at the trade. Not more than one apprentice to one journeyman on work connected with all outside jobs.

The other clauses of this agreement are the same as in the agreement previously in force which was summarized in the *LABOUR GAZETTE* for June, 1926.

**WINNIPEG, MANITOBA.**—MASTER PAINTERS' SECTION OF THE WINNIPEG BUILDERS' EXCHANGE AND THE BROTHERHOOD OF PAINTERS AND DECORATORS, PAPERHANGERS AND GLAZIERS, LOCAL No. 739.

Agreement to be in effect from March 1, 1929, to February 28, 1931. Both parties agree to meet during January prior to the expiration of the agreement to formulate a new one.

This agreement is similar to the one previously in force and summarized in the *LABOUR GAZETTE* for September, 1928, with the following exceptions:

Any eight hours may be worked in the twenty-four hour day at the regular rate of wage, such working time to be continuous.

Wages per hour: from March 1, 1929, to March 1, 1930, 90 cents; from March 1, 1930, to March 1, 1931, 95 cents.

**VICTORIA, BRITISH COLUMBIA.**—VICTORIA ELECTRICAL CONTRACTORS' ASSOCIATION AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 230.

Agreement to be in effect from February 1, 1929, until 120 days' notice of termination or

change is given by either party. If either party violates any of the covenants of the agreement, the agreement may be cancelled without notice by either party.

Only union members to be employed, if available, the union agreeing to provide competent journeymen. Union members are not allowed to work with non-union workmen of any craft except under instruction of the executive of the union.

The union covenants and agrees:

"That they will themselves or through their association with other building trades unions, effectively prevent any electrical construction or work being carried out within the jurisdiction of Local No. 230 by anyone who has not signed this agreement.

"That this agreement nor any agreement will be entered into by Local No. 230 with any person, firm or corporation who has not been regularly carrying on an electrical business within the jurisdiction of Local No. 230 as a licensed electrical contractor for a period of six months previous to the date of the agreement."

Hours 8 per day: a 44-hour week. Shift work to be permitted only in cases of necessity; men on night or shift work to be paid for eight hours for working a seven and a half hour night shift.

Overtime: from 5 p.m. to 8 p.m. on first five days of week, time and one-half all other overtime, double time.

Wages of journeymen electrical workers: \$1 per hour, except on jobs already under contract for which tenders are in.

Wages of apprentices: 40 cents per hour for 2nd year, 50 cents for 3rd year, and 62½ cents for 4th year.

Not more than one apprentice to one journeyman. Apprentices to work only under super-

vision of a journeyman. A journeyman is an electrician fully qualified to carry out any electrical work to the satisfaction of the contractor, and shall produce proof of examination for journeyman's card if asked.

For work out of town, fare to be paid by employers. No maintenance man to do construction work.

No stoppage of work by either party until the dispute has been considered and investigated by both parties. If unable to agree, a board of conciliation to be chosen composed of three representatives of each party, to settle the dispute. In the event of a strike of other building trades, the electrical workers will not stop work without giving 48 hours' notice.

### Transportation and Public Utilities: Water Transportation

VANCOUVER, BRITISH COLUMBIA.—THE SHIPPING FEDERATION OF BRITISH COLUMBIA AND THE VANCOUVER AND DISTRICT WATERFRONT WORKERS' ASSOCIATION.

This agreement, which is in effect from December 1, 1924, to December 1, 1929, and which was summarized in the LABOUR GAZETTE for April, 1925, provides that the wage schedule may be revised by a joint committee in any year. This schedule was revised on December 1, 1925, and a summary was published in the LABOUR GAZETTE for February, 1926.

Effective from December 1, 1928, an increase in wages was agreed on as follows:

Dock men from 80 cents to 83 cents per hour straight time, and \$1.20 to \$1.25 per hour overtime; ship men from 84 to 87 cents per hour straight time, and from \$1.26 to \$1.30 per hour overtime.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for

the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless

for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages

as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may

be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

**Contracts Awarded Recently**

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

**DEPARTMENT OF MARINE AND FISHERIES**

*Contracts in Group "A" (Construction, etc.)*

Construction of a twin-screw ice-breaker for service in River St. Lawrence. Name of contractors, St. John Dry Dock and Shipbuilding Co., Ltd., 248 McCord St., Montreal. Date of contract, January 16, 1929. Amount of contract, \$759,000. The General Fair Wages Clause was inserted in the contract.

Construction of a twin-screw ice-breaker for service in Hudson Strait. Name of contractors, Halifax Shipyards, Ltd., Halifax, N.S. Date of contract, November 8, 1928. Amount of contract, \$1,220,000. The General Fair Wages Clause was inserted in the contract.

**DEPARTMENT OF NATIONAL DEFENCE**

*Contracts in Group "A" (Construction, etc.)*

Alterations and additions to R.C.N. Barracks, Halifax, N.S. Name of contractors, The Standard Construction Co., Ltd., Halifax, N.S. Date of contract, March 1, 1929. Amount of contract, \$4,852. The General Fair Wages Clause was inserted in the contract.

**DEPARTMENT OF PUBLIC WORKS**

*Contracts in Group "A" (Construction, etc.)*

Completion of Mooring Tower at Montreal Air Harbour. Name of contractors, Munn & Shea, Ltd., Montreal, P.Q. Date of contract, February, 1929. Amount of contract, \$43,000. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages: Not less than	Hours per day

Construction of two ice-breakers in concrete at Varennes, P.Q. Name of contractors, Joseph Trudeau and J. A. Bourbonnais, Vaudreuil, P.Q. Date of contract, October, 18, 1928. Amount of contract, approximately \$3,131.60. The General Fair Wages Clause was inserted in the contract.

Construction of a protection wall at Varennes, P.Q. Name of contractors, Joseph Trudeau and J. A. Bourbonnais, Vaudreuil, P.Q. Date of contract, October 18, 1928. Amount of contract, approximately \$21,650. The General Fair Wages Clause was inserted in the contract.

Replacement of wharf at Gray Creek, B.C. Name of contractor, Alex. R. McGregor, Nel-

son, B.C. Date of contract, Jan. 25, 1929. Amount of contract, approximately \$6,402.88. The General Fair Wages Clause was inserted in the contract.

Dredging channels in Richelieu River at Sorel and St. Ours, P.Q. Name of contractors, Les Chantiers Manseau, Ltée., Sorel, P.Q. Date of contract, December 11, 1928. Amount of contract, approximately \$96,904.34. The General Fair Wages Clause was inserted in the contract.

Reconstruction of a wharf at Louisville, P.Q. Name of contractors, Farley & Grant, Ottawa, Ont. Date of contract, March, 1929. Amount of contract, \$15,372.26. The General Fair Wages Clause was inserted in the contract.

Dredging at breakwater extension at St. Francis Harbour, N.S. Name of contractors, Beacon Dredging Co., Ltd., Halifax, N.S. Date of contract, March, 1929. Amount of contract, \$10,312.50. The General Fair Wages Clause was inserted in the contract.

Supply and installation of a passenger elevator, Western Departmental Block, Ottawa, Ont. Name of contractors, Otis-Fensom Elevator Co., Ltd., Montreal, P.Q. Date of contract, Feb. 28, 1929. Amount of contract, \$8,330. The General Fair Wages Clause was inserted in the contract.

Construction of a public building at Transcona, Man. Name of contractors, Fraser & MacDonald, Winnipeg, Man. Date of contract, March 7, 1929. Amount of contract, \$20,827. The General Fair Wages Clause was inserted in the contract.

Supply and installation of a passenger elevator in Deer Lodge Hospital, Winnipeg, Man. Name of contractors, Turnbull Elevator Co., Ltd., Toronto, Ont. Date of contract, Feb. 20, 1929. Amount of contract, \$5,815. The General Fair Wages Clause was inserted in the contract.

Supply and installation of electric wiring and fittings in the Hull, P.Q., Post Office. Name of contractors, the Marchand Electrical Co., Ottawa, Ont. Date of contract, March 12, 1929. Amount of contract, \$979. The General Fair Wages Clause was inserted in the contract.

Construction of a public building at Buc-touche, N.B. Name of contractor, Joseph S. Roy, Moncton, N.B. Date of contract, Feb. 11, 1929. Amount of contract, \$24,880. The General Fair Wages Clause was inserted in the contract.

Construction of an horticultural building at the Experimental Farm, Ottawa, Ont. Name of contractors, Arthur W. Clark and Norman O. Cuthbertson, Ottawa, Ont. Date of contract, February, 1929. Amount of contract,

\$33,850. The General Fair Wages Clause was inserted in the contract.

Alterations, renovations and additions to the Agricultural Building at Sackville, N.B. Name of contractor, John S. Parker, Saint John, N.B. Date of contract, Feb. 13, 1929. Amount of contract, \$10,290. The General Fair Wages Clause was inserted in the contract.

*Contracts in Group "B" (Interior Fittings, etc.)*

Fittings in the Customs Examining Warehouse at Oshawa, Ont. Name of contractor, Daniel J. Riordan, Oshawa, Ont. Date of contract, March 8, 1929. Amount of contract, \$2,500. The General Fair Wages Clause was inserted in the contract.

Fittings in Postal Station "B," Montreal, P.Q. Name of contractor, Munn & Shea, Ltd., Montreal, P.Q. Date of contract, March 27, 1929. Amount of contract, \$3,150. The General Fair Wages Clause was inserted in the contract.

Additional fittings in the Armoury, Winnipeg, Man. Name of contractor, Robert N. Wyatt, Winnipeg, Man. Date of contract, January, 1929. Amount of contract, \$12,116.28. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS

*Contracts in Group "A" (Construction, etc.)*

Supply and erection of entire superstructure of a double leaf rolling lift bascule bridge over Welland Ship Canal at C.N.R. main crossing, known as Bridge No. 6, including the approach spans, the signal system both on and off the bridge and the removal of spans of temporary division bridge. Name of contractors, Hamilton Bridge Co., Ltd., Hamilton, Ont. Date of contract, March 4, 1929.

Amount of contract, approximately \$514,572. The General Fair Wages Clause was inserted in the contract.

Delivery and erection of one twin span electric operated turntable, 100 feet long, complete with two tractors, etc., at Edmundston, N.B. Name of contractors, Dominion Bridge Co., Ltd., Montreal, P.Q. Date of contract, March 26, 1928. Amount of contract, \$26,000. The General Fair Wages Clause was inserted in the contract.

Supply and erection of steel works and machinery for new aprons at Point Tupper and Mulgrave Ferry Landings, N.S. Name of contractors, Dominion Bridge Co., Ltd., Montreal, P.Q. Date of contract, March 13, 1929. The General Fair Wages Clause was inserted in the contract.

POST OFFICE DEPARTMENT

Following is a statement of payments made in March, 1929, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount of orders
	\$
Making metal dating stamps and type also other hand stamps and brass crown seals.....	638 48
Making and repairing rubber stamps, daters, etc.....	1,237 83
Making up and supplying letter carriers' uniforms, etc.....	4,484 21
Stamping pads, ink, etc.....	428 76
Bag fittings.....	1,589 69
Scales.....	97 64

**Rural Exodus in Southwestern France**

A report recently presented to the French National Labour Council on the agricultural situation in the South-West of France states that the rural exodus from this area can scarcely be paralleled in Europe. Between 1911 and 1921 the eighteen departments customarily grouped as the south-west region lost 538,000 inhabitants of French nationality. Since the war great efforts have been made at re-settlement, both by bringing French citizens from other parts of France, and by regulating the stream of alien settlers flowing mainly from Spain and Italy.

The movement to resettle nationals has been furthered by the government, who have given grants to cover the cost of moving, in whole or in part. The settlers came from Brittany, where there was an agricultural crisis in 1920;

farms could not be obtained in tenancy, and there was so much pressure of population upon the land that many families contemplated emigrating to Canada. The Minister of Agriculture intervened, with the help of the agricultural organizations, and the result was that by February, 1927, 350 families from Brittany, making up 3,000 persons, had been settled in the Dordogne.

The Ontario Motor League and the Ontario Safety League are offering prizes to school children in Ontario for essays on "What can I do to prevent highway accidents." The contest will close on May 6. Particulars may be had by addressing: Safety Contest, Ontario Safety League, Metropolitan Building, Toronto 2.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Province has Jurisdiction to Regulate Marketing

In the case *Rex versus Chung Chuck* (British Columbia) reported in the *LABOUR GAZETTE*, January, 1929, page 112, the accused subsequently appealed in the British Columbia Court of Appeal from the refusal by Mr. Justice Murphy, of his application for *habeas corpus*, the decision of the lower court being affirmed. The accused had been convicted on the charge of marketing potatoes without having obtained permission to do so from the Mainland Potato Committee of Direction as required by the Produce Marketing Act (Statutes of British Columbia, 1926-7, chapter 54). The judgment of the Court of Appeal was to the effect that a province may, by reason of the powers granted to it under section 92 of the British North America Act to legislate with regard to property and civil rights, regulate the marketing of merchandise within the province and in so doing does not infringe the Dominion's power under section 91 either to regulate trade and commerce, or to legislate with regard to criminal law, and such legislation does not impinge on the ground covered by section 498 of the Criminal Code, as that section only deals with undue and unreasonable restraint of trade. Nor is such legislation invalidated by reason of the fact that it affects the rights of traders without the province in dealing with traders within the province.

Chief Justice Macdonald, in giving judgment said:—

"The question in this appeal depends for its decision upon whether the Produce Marketing Act, 1926-27 (B.C.), c. 54, of the province, which admittedly attempts to regulate trade and commerce in its narrow sense, is an infringement of the Canadian parliament's undoubted power to regulate trade and commerce in its widest sense, viz., the general regulation of trade and commerce affecting the whole Dominion or of inter-provincial trade, as it is called in *Citizens Ins. Co. v. Parsons* (1881), 7 App. Cas. 93.

"Regulation of particular trades or callings by provincial legislation is permitted if it falls short of such infringement, and the question whether it does or does not is, I think, a question of fact, being the question whether or not it *unduly* trenches upon the powers of the Dominion Parliament to regulate trade and commerce in the sense above referred to. It is a question to be determined by the Court in the light of the facts and circumstances of the case.

"It is not in dispute that the marketing of fruits and vegetables in the localities to which the Act applies, was greatly in need of regulating, and that it was to provide for that need that the Act was passed. It established a committee of direction and gave them power in effect to dispose of the grower's produce as in their judgment the circumstances from time to time demand, and at prices fixed from time to time by them. These powers were granted with the evident intention of benefiting the growers by finding and stabilizing markets and preventing serious losses to them. I therefore do not think the Act interferes unduly with the general course of trade throughout the Dominion or goes the length of professing to regulate interprovincial trade. It was intended to be a good marketing Act and was passed with *bona fide* intention of curing bad marketing conditions.

"The transaction complained of in *Rex v. Chung Chuck*, (1928) 4 D.L.R. 659, 50 Can. C.C. 235, was the marketing of produce with a person residing here. Murphy, J., in a very able judgment disposed of that case by affirming the conviction of the accused. He did not deal with marketing outside the province. In the other three cases the goods were marketed in the province of Alberta, and Gregory, J., and Macdonald, J., in *Rex v. Wong Kit* (1928), 50 Can. C.C. 257, affirmed, in the respective cases before each, the acquittal of the accused though not questioning the correctness of the decision in Chung Chuck's case; they held that the legislature did not contemplate the application of the Act to transactions where one of the contractors resided in the province and the other in other parts of the Dominion. It follows from what I have said above that I am of the opinion that the Act was *intra vires*, the grower being here. The accused Chung Chuck was properly convicted."—*Rex versus Chung Chuck (British Columbia)*, 1929, 1 D.L.R. page 756.

### Accident on Way from Work held to be in Course of Employment

The Workmen's Compensation Board of British Columbia, in a decision given during March, awarded compensation to the dependents of a workman who had met his death under peculiar circumstances, which caused uncertainty as to whether or not the fatality arose "out of and in course of employment." The deceased workman was a foreman in charge of rock quarry operations carried on by the Crow's Nest Pass Coal Company at

Michel. Towards the end of a shift he and his gang were returning along the highway on a loaded company truck. When they were approaching a roadside spring the foreman requested the driver to halt in order that he could get a drink of water. As the truck stopped the foreman jumped out on to the highway, and was struck down by an automobile which followed the truck.

A special commissioner heard the evidence on behalf of the Board. The claim for compensation made by the dependants was contested by the coal company on the ground that the deceased, when he sustained the fatal injuries, was not in the course of his employment. The employees testified that they always went to and from this place of work in the company's time. The Board ruled that the deceased had met his death by accident arising out of and in the course of his employment, and awarded compensation to his widow and children.

#### Compensation for Injury when Duties of Workman are not defined

A blacksmith employed by a contractor in connection with railway grading in Saskatchewan received a permanent injury to his right eye while engaged in babbitting axle boxes belonging to machinery used in the construction work, the metal having exploded from an axle-box into which the babbitt was being poured. When the workman claimed compensation the employer claimed that no cause of action existed under the Compensation Act, alleging that the injured workman was employed as a blacksmith "in or about the construction of a railroad," and denying that he had been required under the conditions of his engagement to babbitt or rebabbitt axle boxes. The trial judge dismissed the action, holding that the plaintiff's act, during which the accident occurred, was "unusual, dangerous, and wholly unnecessary," and could not therefore be considered as being within the course of the employment.

From this judgment the plaintiff appealed, the question at issue being whether or not the accident arose out of, and in the course of, the employment. The Saskatchewan Court of Appeal reversed the decision of the trial judge. Mr. Justice Martin, in giving the judgment of the Court of Appeal, said:—

"Both the plaintiff and defendant appear to refer in their evidence rather as to what each of them considered to be the duties of a blacksmith engaged in railway construction work, than as to what the actual contract of hiring was, and, from all the evidence, I think it fair to conclude that the plaintiff's duties were at no time definitely defined. This, I

think, is an important feature in the case, because in order to ascertain what was expected of the plaintiff and whether any particular class of work was or was not within the scope of his employment, it becomes necessary to look at all the evidence, and ascertain what work he did with the sanction, expressed or implied, of the defendant, or the foreman who had charge for the defendant.

"In connection with the work, it was necessary from time to time to perform an operation known as 'babbitting' which consisted of taking old babbitt out of axle-boxes of the graders, melting it, adding new babbitt to it, and, pouring the melted metal into the axle-boxes. That work appears at no time to have been specifically assigned to the plaintiff. The defendant says it was not part of the plaintiff's work, but that it was the work of the man in charge of each grader. The preparation of the axle-boxes, the removal of the old metal, the melting of the metal, and the pouring of it, were all done at the blacksmith shop in which the plaintiff worked, and where there were blacksmith tools; including an anvil and a forge, without the assistance of which the work of babbitting would have been impossible. According to the plaintiff, he did the work himself on eight or ten occasions while at Melfort, and generally in the presence of the foreman, one Byers, to whose orders the defendant admits the plaintiff was bound to conform; he also says that at Foam Lake he had done the work three or four times prior to the occasion on which he received the injury.

"On the day of the accident, an Austin grader, which was in charge of one Gibson, had been brought to the blacksmith's shop for repairs, and was placed ten or twelve feet distant. . . .

"The plaintiff's evidence that he was accustomed to do the babbitting at Melfort, and this to the knowledge of the foreman, and that he had done it three or four times at Foam Lake prior to the accident, is not contradicted; so that we must take it that it was customary for him to do the work and that the foreman, at least impliedly, assented to his doing it, and treated the work as if it were a part of the plaintiff's duty. . . .

"It is contended, however, that when the plaintiff looked into the axle-box to see if sufficient babbitt had been poured he did an unnecessary act, and outside the scope of his employment, and that, by so doing, he added a peril to his employment, and is therefore not entitled to recover. . . .

"The plaintiff, in doing what he did while Gibson was engaged in pouring the metal, in order to ascertain whether or not sufficient

babbit had been poured, did what any reasonable man under the circumstances would have done; he did something 'incident' to his employment—incident to the work in which he was engaged. . . . The accident, in my opinion, arose out of the work in which the plaintiff was employed to do, and it arose in the course of the work which he was employed to do. This being so, the fact that he may have done the particular act which was the cause of the accident negligently, does not, under Section 6 (c) of the Act, affect his right to recover; for once it is found that what the workman was doing at the time of the accident falls within Section 4 of the Act, his right to compensation is not affected merely because he contributed to, or was the sole cause of the injury by reason of his own negligence or misconduct."

Section 6 (c) of the Act, cited in the judgment, provides that an employer shall be liable to pay compensation, whether or not "the workman contributed to, or was the sole

cause of the injury or death by reason of his own negligence or misconduct." Section 4, makes general provision for the payment of compensation for injury by accident "arising out of and in the course of employment".—*Wells versus Morgan, Saskatchewan, (1929) 2 D.L.R. page 155.*

---

In connection with the drowning of five men at Paugan Falls, Quebec, on December 8, 1927, when the boom on which they were standing was prematurely released (LABOUR GAZETTE, February, 1928, page 226), the father of one of the deceased workmen brought an action for damages against the employer, the Fraser-Brace Engineering Company, Limited, in the Superior Court at Hull. The Court, giving judgment on April 12, 1929, found that the company was negligent in not having provided a cable sufficiently strong to hold the boom in the rushing water of the tail-race. The plaintiff was awarded \$1,200.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada showed a decline at the beginning of April, as compared with the previous months, continuing however at a higher level than at the corresponding period in previous years. Returns were tabulated by the Dominion Bureau of Statistics from 6,508 employers of labour, each with a minimum of 15 employees, representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 940,036 persons, as compared with 946,997 in the preceding month. The employment index declined from 111.4 on March 1, to 110.4 at the beginning of April, as compared with 102.3, 97.4, 92.5, 88.3, 90.4, 88.7, 81.8 and 85.1 on April 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The average number of workers employed in 1926 by the reporting firms forms the base, equal to 100, upon which these index numbers are computed. At the beginning of April, 1929, the percentage of unemployment among their members reported by local trade unions stood at 6.0 as compared with percentages of 6.8 at the beginning of March and 6.5 at the beginning of April, 1928. The April percentage was based on the reports received by the Department of Labour from an aggregate of 1,727 local trade unions covering a membership of 194,890 persons. Reports received by the Department of Labour from the offices of the Employment Service of Canada showed an increase in the volume of business transacted by these offices during March when compared both with the business of the preceding month and with that of March, 1928.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.01 at the beginning of April, as compared with \$11.23 for March; \$10.27 for April, 1928; \$10.80 for April, 1927; \$11.36 for April, 1926; \$10.56 for April, 1925; \$10.16 for April, 1924; \$10.64 for April, 1923; \$10.26 for April, 1922; \$12.68 for April, 1921; \$16.92 for May, 1920 (the peak); \$12.57 for April, 1918; and \$7.51 for April, 1914. In wholesale prices the index number

of the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was 94.1 for April, as compared with 96.1 for March; 98.3 for April, 1928; 97.5 for April, 1927; and 101.2 for April, 1926.

The loss in working time caused by industrial disputes in Canada was much greater in April than in the preceding month. Twelve disputes were in existence during the month, involving 2,310 workpeople and resulting in a time loss of 24,201 working days. Corresponding figures for March, 1929, were eleven disputes, 1,363 workpeople and 3,079 working days; and for April, 1928, sixteen disputes, 1,813 workpeople and 22,037 working days.

### Industrial Disputes Investigation Act

Five applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Act were received by the Department of Labour during the month of April. A Board was completed during the month following an application noted in the last issue of the *LABOUR GAZETTE*. Particulars of recent proceeding under the Act are given on page 477.

### Progress of Old Age Pensions in Canada

Two additional provinces, Alberta and Ontario, have now enacted legislation giving effect within their respective territories to the federal Old Age Pensions Act, 1927. The provisions of the Ontario Act are outlined in this issue in the review of the labour legislation enacted at the recent session of the provincial legislature, and the Alberta Act will be outlined in the next issue in a similar review of the legislation in that province. Both these Acts take advantage of the offer of the Dominion to contribute 50 per cent of the amount of the pensions. Under the Ontario Act applications for pensions will be made to local authorities in the different municipalities, the municipalities paying 20 per cent of the cost, and the province paying 30 per cent in addition to the cost of administration. The Alberta Act provides for the appointment of a pension au-

thority to administer the Act, 40 per cent of the amount of the pensions being paid by the province and 10 per cent by the municipalities.

An outline is given on another page of this issue of an interim report prepared by the Commission appointed by the Government of Nova Scotia in August, 1928, to inquire into the subject of old age pensions in that province. This report discusses the special conditions existing in the Maritime Provinces in regard to the problem of making provision for aged destitute persons, due to different constitution of the population as regards age as compared with the western provinces, and gives estimates of the approximate number of pensioners and of the cost to the province of giving effect in Nova Scotia to the provisions of the federal Act.

The quarterly statement showing the number of pensioners, the amount of pensions paid, etc., in the three provinces in which the Act is in operation, is given on page 499 of the present issue.

#### **Fair wages on Quebec provincial government contracts**

An Order in Council was adopted in the province of Quebec on May 1 to provide for the insertion of a "Fair Wage" clause in all contracts let by the provincial Government, requiring the contractors to pay the rates of wages current in the district where the work is to be performed. The provisions of the new order are similar to those contained in the Dominion Fair Wages Order in Council, governing the conditions of employment in connection with Dominion government contracts. The text of the new Order will be given in full in the next issue of the LABOUR GAZETTE. The general principle that current rates of wages should be paid to workmen employed under contracts let by the provincial government was adopted by the Legislature in 1908. The new Order in Council is designed to meet the wishes of organized labour in the province as presented on many occasions by delegations which interviewed the government pointing out the need for more definite provisions.

#### **Combines legislation declared valid**

The Combines Investigation Act and Section 498 of the Criminal Code were declared to be within the powers of the Dominion Parliament, by judgment delivered on April 30, 1929, in the Supreme Court of Canada. The reference for a decision as to the constitutional validity of these two measures, both of which provide against trade or industrial

combinations which operate to the detriment of the public, was made by the Dominion Government. The judgment of the Supreme Court of Canada is printed in full text on the concluding pages of this issue. An article referring to this judgment and including a summary of the provisions of the Combines Investigation Act, together with the text of section 498 of the Criminal Code and a review of certain former Dominion combines legislation, appears elsewhere in this issue.

#### **Salary readjustment of postal workers in Winnipeg strike, 1919**

The House of Commons on May 6 adopted the principle embodied in a resolution submitted by the Government declaring that "it is expedient to provide for the readjustment of the salaries of certain postal employees who were dismissed in 1919 and subsequently re-employed, to give them payment as from the date of their re-employment for services actually performed at the rates of remuneration paid to other employees for similar services." The Postmaster General gave an account of the circumstances in connection with the re-employment of these postal workers, who had taken part in the Winnipeg strike in 1919. "On July 7, 1919," he said, "a special Act was passed authorizing the Civil Service Commission to appoint to the permanent staff any person employed to replace anyone who went out on strike, and in January, 1920, the government agreed to an arrangement whereby employees who had gone on strike would be re-employed, provided: First, that they had the approval of the Governor in Council; secondly, that they gave satisfactory assurance that a repetition of the offence would not occur; thirdly, that they passed the civil service examination; and in the fourth place, that they would begin anew in the service. The age limit was waived in their favour. Now these ninety-six men who were taken on after the strike and reinstated as the agreement here states were demoted to lower positions; that is to say, they came in at the bottom of the ladder or as postal helpers to work their way up. That is what they were supposed to do. But when they did return to employment they were engaged in the same advanced class they had occupied in the service before the strike, although they were paid the wages of employees of a lower grade. By way of comparison, although these figures may not be quite exact, I may put it this way in order to show what I mean. A postal clerk drawing a salary of \$125 or \$135 a month came back into the service as a postal helper

at \$85; he did the work of a postal clerk who would receive \$125 but he himself received a remuneration of \$85 only, or \$90 as the case might be. There was that spread between the two."

Mr. Veniot explained that it was desired to act in this matter in accordance with the principle "that the labourer is worthy of his hire, and that if these men were brought back and engaged in work of a higher class they should have been paid for that class of work."

### Canadians temporarily working in United States

The decision of the United States Supreme Court on the subject of the rights claimed by certain Canadian workers residing in Canada to cross the international border to employment in the United States is outlined on another page, in the reports on "Recent Legal Decisions Affecting Labour." The hearing of this case by the United States Circuit Court of Appeals at New York in March last year was noted in the LABOUR GAZETTE, March, 1928, page 336. The lower court had ruled that workmen were included in the terms of the Jay Treaty of 1794, which granted persons of either nationality the right to transact "business" in the neighbouring country, and for that purpose to enter the other country temporarily without the usual immigration restrictions. The Supreme Court now reverses that decision, holding that the Jay Treaty was abrogated by the war of 1812, and that in any event the phrase "an alien visiting the United States temporarily for business," in the Immigration Act of 1924, does not include aliens entering the United States to labour for hire, since "business" here means intercourse of a commercial character.

The effect of this judgment is to declare valid the provisions of General Order No. 86 of the United States Department of Labour, under which the entry of the Canadian workers was challenged. However, since all the residents in Canada who were crossing the border daily to employment when General Order No. 86 was issued have now complied with its provisions through special arrangements made with the United States Department of State for the issue of immigration visas, the decision of the Supreme Court is not considered as likely to have any material effect on the Canadian border communities. The only persons now entering the United States who will be debarred as a result of the decision are those who have secured court injunctions since December, 1927, permitting their admission.

### Labour code of the province of Quebec

A new compilation of the labour legislation of Quebec was published recently with the approval of the provincial Department of Labour, under the title: "Code of Labour and Industrial laws of the Province of Quebec, and certain Federal laws, with Rules and Regulations concerning their Application, consolidated to Date." The editor is Mr. Gustave Franco, who is now chairman of the Quebec Women's Minimum Wage Commission. The "Labour Code" is a new edition of a publication issued ten years ago under the title "Laws concerning the Inspection of Factories and Public Buildings." The new title is fully justified by the comprehensiveness of the present "Labour Code," which includes practically all the provincial legislation affecting labour, together with the federal Industrial Disputes Investigation Act, the Old Age Pensions Act, and the Dominion Fair Wages Order in Council. The following is a list of the subject matters contained in the Code:—Amusement Tax Act; Conciliation and arbitration; Early closing of stores; Employment bureaus; Exhibition of moving pictures; Fair wages; Hotels, restaurants and lodging houses; Weekly day of rest; Sunday observance; Industrial establishments; Labour accidents; Lightning rods; Minimum wages for women; Municipal Strikes and Lockouts Act; Old age pensions; Public buildings, their safety; Public buildings, Fire Protection Act; Privileges of workmen and other persons; Professional syndicates; Scaffolding; Stationary engineers; Strikes and lockouts.

Mr. Franco, in the Foreword, states the purposes of the Code as follows:—"Quite a number of these statutes make provision for their fuller application by means of orders in council. These orders in council are considered, and from a legal standpoint, form part of the principal statute. Judges, in applying and construing statutes, very often refer to the Orders in Council passed in virtue of the power conferred upon the Department or the Government, to more effectively administer the act passed by Parliament of the Legislature. To properly facilitate the carrying out of these laws, it is essential that they be available to the public and compiled in a manner that is simple, clear, and precise.

"A compilation of this kind does away with the need for consulting or examining numerous documents and statutes, if one wishes to know what the provision of a given law or laws are, particularly as they may affect the

employer in his relations and obligations to his employees and vice versa. That is the object we seek to carry out in publishing The Labour Code of the Province of Quebec, which contains, consolidated to date, not only the legislation governing the relations of capital and labour, but in addition, valuable information useful to the economist, the jurist, the manufacturer and the worker. In this handy and immediately available form, they can without laborious and fatiguing research find ready to hand the desired information. This Code is in a measure an efficient link between the officers charged with the carrying out of the law, and those whom it affects."

### Problems of unemployment insurance

Wolman, of the National Bureau of Economic Research. Unemployment insurance is described as "a method for equitably distributing through the whole of the population some of the costs of industrial progress. The task before those who will undertake to write the unemployment insurance act of this country (that is, the United States) will be to distribute these costs without retarding the progress of industry." Unemployment insurance, in the writer's opinion, encounters its most critical difficulties in connection with the changing employment requirements of industry resulting from the successive disintegration of old crafts and their replacement by new crafts. "Where there is control over industry," he says, "wise social policy and practice would consist in breaking the fall, so to speak, or in prolonging the period of transition so as to give those who suffer from the change the time and the opportunity to adjust themselves to the new state of affairs. But it can readily be seen with what rare insight and acumen and political skill those charged with the administration of such devices must be endowed."

Mr. Wolman considers that the English system of unemployment insurance, although it is "one of the most efficient jobs of administration that it has ever been my good fortune to observe," and although "the fidelity and skill of the personnel associated with it is a tribute to the excellence of the English civil service and to the public spirit of English citizens," nevertheless fails to some extent because the intricate administrative duties and problems in connection with the payment of unemployment benefits are placed on the

employment exchanges, whose primary function should be the discovery of jobs and sending workmen to them.

The writer considers that one of the main risks of a national system is that it might tend to obstruct the free movement of labour by permanently attaching an employee to a particular job. This difficulty explains to some extent the slow progress of the movement in the United States. "Short and slight as has been the American experience with unemployment insurance," he says, "it has already developed characteristic features. It is entirely voluntary and is limited either to single industries or even establishments. It is not part of an elaborate national system of unemployment insurance and covers at this time no more than 250,000 persons." . . . "In the present state of the unemployment problem in the United States, the most pressing need is for a highly co-ordinated chain of public employment exchanges that would be in the position to make the maximum use of all the opportunities for employment there are. Such slight information as we have regarding recent unemployment indicates that the time required to pass from one job to another might be appreciably reduced if the public could be persuaded to assume this function that is so peculiarly its own."

### Measuring unemployment in Queensland

The fifth annual report recently presented to Parliament of Queensland, Australia, on operations under the Unemployed Workers Insurance Acts, 1922 to 1927, describes the method now in effect for measuring employment and unemployment at stated periods. In August, 1927, the Minister of Labour and Industry, with the object of building up a complete record to show the condition of employment and unemployment for all industries in Queensland, and with a view of assisting industry generally, decided to compile essential industrial statistics. It was determined that, in addition to the compilation of the statistics, inquiry should be made in respect of the demand for workers in any particular industry, or the surplus of labour available for industry, also to compile records of what industries were carrying more labour than they could absorb, and what industries could be assisted so that they could employ additional labour. Employers and employees in all callings and industries were specially requested by the Minister to co-operate in the investigation, the main object of which was to stabilize industry by reducing unem-

ployment. Promises of support were readily given in all cases.

After careful examination of the situation and discussion with representative employers and officials of employers' associations, and of unions, it was finally decided to make a statistical survey as on the last day of each quarter. Books of forms were prepared, each book containing forms for each of four quarters. Great care was exercised in the preparation of these books of forms, as it was desired to make the compilation of returns as easy as possible, and at the same time to allow of a record being kept by the employer. In order to ascertain with exactness the number employed, each employer of labour had forwarded to him a book of forms. The form asked for the following information:—

1. The number of workers (male and female) actually employed on the last day of each quarter.

2. The workers employed throughout the quarter—(a) fully employed; (b) partly employed, and period of such employment in days.

The number of unemployed is obtained from labour agents throughout the State and from union officials, as at the last day in each quarter.

The first survey was taken as at the 31st December, 1927, and figures were tabulated and dissected from 20,270 returns received. The second survey was taken as at the 31st March, 1928, 23,260 returns having been received. Further surveys will be taken as at the 30th June and the 30th September.

Many employers stated that the compilation of these returns assisted them considerably, inasmuch as it afforded them not only their employment statistics, but that they were also able, quarter by quarter, to check their sales against sales staff, or production against factory staff and also afforded a check on overhead generally.

The report points out that it has now been recognized that in Australia there is a great need for statistics of this kind, particularly as Australia is principally a primary producing country, and, as a consequence, weather plays a large part in production. Moreover, a survey of trade in previous years shows there have been definite business cycles, the cause of which cannot be definitely determined until some statistical system has been introduced. It has been found, however, that in good seasons the demand for labour has exceeded the supply, and that in bad seasons unemployment has been rife.

### Recording industrial accidents

The Province of Quebec Safety League recently issued in circular form a valuable bulletin (No. 11) advising employers of the necessity of keeping accurate accident statistics. A daily record, it is stated, of all accidents reported, whether grave or minor, should be kept by the medical department, hospital or first aid attendant. Later on, it may happen that even apparently trivial injuries become serious and result in litigation. This daily record should give the name and check number of the victim, cause and nature of injury, the place where accident occurred, the treatment given, and the disposition of the case. Besides that, at the time the injured workman reports for first treatment, the medical department should fill a case record card and make suitable entries thereon from time to time until complete recovery. The safety department must have free access to these records at any time.

Compilation is the next step after a good system has been adopted for recording the facts concerning each accident. Tabulation of data, it is recommended, should be done by a uniform system so that it may be possible to compare one plant and one industry with another. These tables can be compiled by taking into account the standard frequency or gravity rates. The first method is based on the number of "lost-time" accidents per 100,000 hours worked. The second is based on the number of days lost per 1,000 hours worked. These tables must take into consideration all accidents, diseases and injuries arising out of the employment and resulting in death, permanent disability, or in the loss of time of more than half a day. If a man loses two limbs or both eyes, he must be considered as permanently and totally incapacitated. Temporary disabilities are divided into three classes according to the lost time, that is; "over two weeks," "one week or two weeks", and "one week and under."

In regard to the causes of accidents it is pointed out that every accident is practically due to a combination of causes. According to competent authorities, however, all accidents must be ascribed to the proximate or immediate cause so that such condition or circumstances responsible may be eliminated in the future.

### New method for study of causes of accidents

A new way of approaching the study of industrial accident statistics is mentioned with approval in the *Industrial Safety News*, the quarterly publication of the Nova Scotia Accident Prevention Association.

The new method was suggested by a recent paper by Mr. H. W. Heinrich, of the Travellers' Insurance Company, who propounded the theory that "no-injury" accidents would be a more fruitful subject of study than the serious and fatal accidents which are now used as the basis of statistical comparisons. It is pointed out that the study of no-injury accidents gives a larger "exposure to risk" to work with, and therefore shows the accident situation in truer perspective.

"Investigation" it is stated, "has established that the ratio of 10 to 1 between no-injury accidents and those causing injuries is a conservative one. It has also been demonstrated that the ratio between minor and major injuries is 29 to 1. Therefore in the average group of 330 accidents, 300 result in no injuries, 29 in minor injuries, and 1 in a major or loss time case. Accident prevention work has been based largely upon the analyses of the one major injury of every 330 accidents occurring. It records (but seldom analyses) the 29 minor injuries and ignores the 300 other occurrences."

Mr. Heinrich then gives the circumstances of several typical accidents which he states furnish convincing proof of the unsoundness of the theory that serious injury or major accidents should be made the basis of accident prevention work. The new theory is that the causes of minor injuries and of no-injury accidents are substantially the same as the causes of major injuries, and therefore by removing the real causes of either minor injury or no-injury accidents the major injuries are prevented. Since the one major injury in 330 accidents may result from the very first accident or from the last, or from any of those that intervene, the obvious remedy is to attack all accidents. "It is by the taking of this basis for safety work that the problem of industrial accidents will be the most speedily solved, for in this way it is more intimately merged with routine industrial work through the enforcement of supervisory responsibility."

The Nova Scotia Accident Prevention Association recommends this new theory of accident recording to the serious consideration of employers of labour in the province.

#### Vital statistics of Canada for 1926

The Dominion Bureau of Statistics published during April the sixth annual report on vital statistics in Canada, giving the records of population for 1926, with details of births, deaths and marriages. The population of the Dominion in that year is estimated at 9,378,000, distributed as follows: Prince Edward Island, 87,000; Nova Scotia, 540,000;

New Brunswick, 407,000; Quebec, 2,562,000; Ontario, 3,146,000; Manitoba, 639,000; Saskatchewan, 821,000; Alberta, 608,000; British Columbia, 568,000.

The crude rate of living births per 1,000 of the population for 1926 was 24.8. The highest rates among the provinces were 32.1 for Quebec and 25.4 for New Brunswick, and the lowest were 17.7 for British Columbia and 20.1 for Prince Edward Island. It is estimated that 31.5 per cent of the fathers and 28.2 per cent of the mothers were born outside of Canada.

The total number of deaths, all ages, reported in the nine provinces of Canada for the year was 107,454 in an estimated population of 9,378,000, giving a crude death rate of 11.5 per 1,000 population. It is pointed out that the difference between provinces in the crude death rates are, of course, not necessarily the result of better health conditions or a more virile stock in one province than in another, but are largely influenced by the age composition of the respective populations. For Canada as a whole, and indeed for every province, the heaviest death rate was from diseases of the heart, considered as a single cause. This rate was 122 per 100,000 of population. Diseases of early infancy stood next in order with a rate of 106. Pneumonia stood third in order with a rate of 90 per 100,000 and cancer fourth with 81. Tuberculosis of the respiratory system showed a rate of 69, while other forms of tuberculosis were responsible for 15 deaths per 100,000 of population, so that if all forms of tuberculosis were taken together the rate would be 84 per 100,000, slightly greater than cancer.

The total number of marriages reported for the nine provinces of Canada in 1926 was 66,658, giving a rate of 7.1 per 1,000 of population. The highest rate for a province was 7.8 per 1,000 in British Columbia, followed by Ontario with 7.5 per 1,000. The lowest rate was 5.3 per 1,000 in Prince Edward Island and Nova Scotia. The crude marriage rates are considerably affected by the age and sex composition of the population.

The report is in English and French and may be obtained at the price of one dollar.

#### Municipal pensions in Montreal

A proposal to establish a pension fund for municipal employees at Montreal is again before the City Council (A note on existing pension arrangements was given in the LABOUR GAZETTE, March, 1926, page 219). It is proposed that the employees not covered by existing schemes, should be required to contribute 3 per cent of their salaries to a pension fund. Any permanent employee who has

reached the age of 65 years would be entitled to a pension equivalent to one-half his average salary for the last five years. The city also would contribute to the fund. At the present time the city of Montreal pays over \$130,000 a year in pensions which, it is thought, might be put into this fund. No pension exceeding \$2,500 would be granted.

It is stated that there are now 340 employees of the city belonging to the Catholic National Syndicates, who have group insurance of \$1,000 each for which they contribute a certain amount. The firemen and the policemen cannot be included in the city pension fund as they already pay 8 per cent on salaries to their own fund.

### **Fifteen years of minimum wages in California**

The Industrial Welfare Commission was created by the legislature of California in 1912 to investigate wages paid, the hours worked and the conditions of employment of women and miners, to determine the cost of living, and to fix the minimum wage, maximum hours of labour and the proper conditions in industry. The same legislature also submitted to the voters of the state in 1914 the following amendment to the state constitution:

"The legislature may, by appropriate legislation, provide for the establishment of a minimum wage for women and minors and may provide for the comfort, health, safety and general welfare of any and all employees. No provision of this constitution shall be construed as a limitation upon the authority of the legislature to confer upon any commission now or hereafter created such power and authority as the legislature may deem requisite to carry out the provisions of this section."

It may be noted that the effectiveness of the California minimum wage law has not been impaired by the decisions of the United States Supreme Court declaring invalid (1923) the minimum wage law of the District of Columbia, and denying (1928) the constitutionality of the similar Arizona law.

The sixth biennial report of the State Industrial Welfare Commission, for the period 1926-1928, points out that the past fifteen years, during which the Act has been effective, furnish material for forming an estimate of the value of such legislation. "There is no doubt", it is declared, "that the minimum wage law of the State of California has been of tremendous value in protecting women and minor workers from low wages and has resulted in a more contented and efficient force of working women." The various objections raised against minimum legislation have been found to be without foundation. The argument that "the minimum wage will be-

come the maximum wage," is met by the statement that "the per cent of women employed in the mercantile, laundry, and dry cleaning, and manufacturing industries receiving actual weekly earnings in excess of the minimum wage of \$16 a week is constantly increasing, proving this objection to minimum wage to be fallacious."

Another argument advanced against this legislation, that it would result in learners being dismissed when their apprenticeship is completed and in their places being filled by learners at lower wages than those of experienced workers, is met by the record of the past fifteen years, which shows that the percentage of learners or lower paid workers becomes less each year—a proof that learners are not dismissed when completing their apprenticeship but are absorbed normally into the great group of higher paid workers. Other unfavourable anticipations that have not been realized are (1) that there would be evasion of payment of the minimum wage by the substitution of elderly and infirm workers, who may be employed for less than the minimum wage, for minimum wage workers; (2) that the minimum wage legislation, in bringing up the wage of the lowest paid women to the minimum, would reduce the wages of the higher paid women, who by their superior energy and ability have been able to secure for themselves adequate wages; (3) that minimum wage legislation would interfere with industry. This last objection is disproved by the fact that the number of women employed in the State increased over 100 per cent between 1919 and 1927.

### **Group nursing for the indigent sick**

The Toronto Academy of Medicine recently issued a statement as to the existing provisions in Toronto for medical and nursing services to the poor. Last year the Academy proposed to the city authorities that the expenditure of funds for the treatment of the indigent sick should be co-ordinated and supervised on the same principle that other charitable undertakings are organized. It was understood that this proposal was to be considered by a committee representing the hospitals in the city, with the possible addition of representatives of the nurses. A statement issued by the Academy of Medicine and appearing in the press contained the following paragraphs:

"Regarding the nursing problem, it is stated that persons of moderate means cannot afford the services of a registered nurse, and that the fees for the nurses should be reduced. On the other hand, it is pointed out that whereas

at certain seasons of the year the supply of trained nurses is wholly inadequate to meet the demand at other seasons, dozens of nurses although 'on call' are unable to secure employment. As a result, both nurses and patients suffer. In some cases the patient does not require the services of a highly trained nurse, but someone with some nursing experience is needed to minister to him or her.

"It is said that the average income of a registered nurse in Toronto does not exceed \$900 per annum. As a result, many of our most competent nurses are migrating to the United States where they are assured of continuous employment and where they receive \$3 to \$10 per day for eight-hour duty. The registered nurse must possess a preliminary of at least matriculation standing. She spends three years of intensive study of highly technical medical subjects in addition to arduous practical nursing during which time she receives no pecuniary remuneration. The problem requires careful study and the Academy of Medicine has had a special committee investigating every phase of the subject for the past three years endeavouring to arrive at a solution which will assure the nurse of a regular income and provide the patient of moderate means, with nursing care at a moderate rate."

### Hours of work in Great Britain

The position of the British Government in reference to the eight hour day Draft Convention of the International Labour Conference was stated in a recent speech by Sir Arthur Steel Maitland, British Minister of Labour, outlined in the last issue of the *LABOUR GAZETTE* (page 410). The last report of the Chief Inspector of Factories and Workshops may be quoted in this connection to show the actual conditions existing in British industry in regard to working hours:—

"Reports from all parts of the country and from Scotland show that the 48 hour working week remains the basic week, but at a busy season hours of 52 to 54 weekly may be worked. This is not due to any tendency to lengthen hours, but has always been the practice except in times of acute depression. In a few instances even longer hours, up to the legal maximum of 55½ hours in textile and 60 in non-textile works, obtain. The reports indicate that hours in excess of 48 are more frequently found in the Midlands and the South than in the North, where the depression in the textile trades continues and affects adversely other industries catering for textile workers. In trades affected by the vagaries of fashion, there appears to be a

growing tendency to keep stocks as low as possible and to place rush orders necessitating overtime employment, to be followed by short time. It is the irregularity of employment in many trades which operates against steady employment for 48 hours weekly. The practice, well established in the Midland towns, of allowing 1¼ to 1½ hours for midday meal, to allow workers to go home, appears to be extending south. The five day week maintains its popularity and there is a slight increase in the number of factories working on this system."

### Railwaymen compensated for removal of terminals

An Emergency Board was appointed on March 30, 1929, under the United States Railway Labour Act of 1926 (*LABOUR GAZETTE*, May, 1926, page 423) to deal with a dispute between the Texas and Pacific Railway Company and the four chief railway Brotherhoods. The dispute arose out of the removal of the company's terminals from Longview Junction and Marshall to Mineola, Texas, the employees being obliged to move their homes to the new terminals and to readjust their living and working conditions to meet the new situation. The Board ruled that the carrier was under no legal or contractual liability in the matter, that the payment of compensation in such a case was not a policy generally sanctioned by custom, and that the weight of precedent was against it. "But after all", the report continued, "the fact that a thing has not often been done is no reason why it should not be done, if it be sound in principle and necessary to meet the demands of justice and fair dealing. Carriers are public service corporations in the broad meaning of those words. They are subject to governmental regulation and control. The acts of Congress contemplate efficiency of service, fair treatment of employees, and a reasonable return to stockholders. In other words there is a community of interest between the public, the stockholders, and the employees that must not be overlooked.

"The train and engine service employees are in a class by themselves. They must heed the call of the road and move when a terminal is changed, and the character of their employment is such that their opportunities to enter other fields are limited. These men are encouraged to buy their homes. Such ownership strengthens their moral fibre, makes them better citizens, and adds to their efficiency.

"The change from Longview Junction to Mineola and from Marshall to Shreveport will result in a substantial saving for the carrier. It is not fair, we think, that the carrier reap the entire benefit and that the employees be

compelled to bear the entire loss. \* \* \* \*  
Ordinarily, a change made for efficiency is a risk naturally incident to the employment, and in this respect the case for compensation is not so clear. But as before stated, a loss due to a change, made in the interest of economy, should not fall on the employees alone.

"We are therefore constrained to the view that in the circumstances here presented the loss should be borne equally by the carrier and the employees. The loss is the depreciation in the market value of the property involved, due solely to the change of terminal and to no other factor. The measure of depreciation is the difference between the market value of the property just before it became generally known that the terminal would be moved, and the market value immediately after removal.

"In announcing this principle we confine its application to the engineers, firemen, conductors, brakemen, and baggagemen here involved, who are required by the conditions of the service to move their homes. It does not apply to employees who leave or are dismissed from the service. We further confine its application to actual homes of the said classes of employees, of the usual and customary size and character in the town of their location. It does not apply to any lots of unusual size or to any property held or used for mere investment. We are further of the opinion that the claims arising in this case should be settled in conference, or in case of disagreement, by arbitration."

### **Proposed compulsory conciliation in France**

The French Minister of Labour, M. Loucheur, recently introduced in the Chamber of Deputies a bill to provide for compulsory conciliation procedure in industrial disputes. He referred to the unsatisfactory results of the Act of 1892, making provision for optional conciliation. The voluntary plan was considered to have failed in connection with disputes extending to a group of undertakings or to an entire district, and it would probably become increasingly ineffective in consequence of the tendency of industrial disputes to take larger proportions as the feeling of solidarity develops among both workers and employers.

The chief provisions of the new Bill are as follows: In the event of a collective dispute, the parties concerned, or their representatives, must meet together before any cessation of work takes place, provided that either of the parties desires such a meeting. If no agreement is arrived at, the minister of labour or the prefect of the department may require them to meet again before any

stoppage of work occurs. In the event of these two attempts at conciliation being unsuccessful, and a strike or lockout taking place, a further recourse to conciliation may be had at the request of either of the parties or at the suggestion of the minister of labour or the prefect of the department. This meeting will be held in the presence of conciliators chosen by agreement between the two parties, or, in default of such agreement, by the minister or by the prefect, the reason being that once matters have reached this serious stage it is desirable to have present persons who, having no private interest in the dispute, may by invoking the national interest use their influence in favour of moderation and reason.

Should the Minister think fit, in place of naming conciliators he may summon the parties before the Superior Conciliation Commission, made up of an equal number of employers and workers chosen by the Minister from among the members of the National Economic Council.

Should the stoppage of work be prolonged, the minister or the prefect, acting on his own initiative or at the demand of one of the parties, may make renewed efforts to bring about the conciliation of the dispute.

A committee to investigate the possibilities of a national unemployment insurance scheme being established in Canada was appointed at a meeting of the Winnipeg Trades and Labour Council, early in April.

The management of the Canadian National Railways announced recently that no deductions would be made in future from wages of injured workmen on account of allowances awarded to them by workmen's compensation boards.

The Alberta Minimum Wage Board held special sessions during April at the request of the Calgary Hairdressers and Beauty Parlours Association, to consider a proposal to suspend Order No. 4 (LABOUR GAZETTE, August, 1925, page 779), so far as it affects beauty parlours the claim being made that the rate of wages established by the order is too high.

Acting under instructions of the American Federation of Labour Executive Council at its recent meeting in Miami, Florida, President William Green has addressed a letter to state and city central bodies of organized labour soliciting their assistance in a nation-wide survey of industry's attitude towards middle-aged workers and the effect of automatic machinery on employment.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of April was reported by the Superintendents of the Employment Service of Canada to be as follows:—

Farm work in the Province of Nova Scotia was progressing and some farm hands were being sought from the different employment offices. The fishing industry reported fair catches. Building and construction were fairly busy in Halifax, but not very much work had yet opened up in the other districts of the province. The coal mining industry reported normal production. Lumber operations were quiet, and some substantial cuts were awaiting river driving. Manufacturing was normally busy, this report including the iron and steel section of the industry. Trade was showing an improvement. The demand for women domestic workers was rather heavy, being in excess of the supply at Halifax.

Farmers in the province of New Brunswick were engaged on spring activities, and some orders for farm hands were being notified to the offices. The opening of the lobster season toward the close the month had increased activity in the fishing industry. The logging industry was fairly quiet, although vacancies for river drivers were being notified. With a fair program of work in contemplation the volume of activity in the construction industry was on the increase. Manufacturing continued normally active. Trade was fairly good, while transportation was brisk, the only unfavourable feature in this latter industry being the conclusion of the winter port activities at Saint John. Demands for women domestic workers were about as numerous as usual.

From the Province of Quebec it was reported that the spring expansion in the agricultural industry was making itself felt at the employment offices. Log driving was the chief branch of the logging industry to require workers, and many who follow this line were being placed. Generally speaking, the manufacturing industries throughout this province appeared active and some increases in production were reported. Although weather had been holding up building and construction to some extent, increases in the demands for the different classes of tradesmen were reported: particular mention was made of the large number of workers engaged by the City of Montreal on repairs to pavements. Transportation showed increased activity due to the opening of navigation, and orders for long-

shoremen were being received. Trade conditions were satisfactory for the season. The demand for women domestic workers continued to exceed the supply.

Most of the Ontario employment offices reported a pronounced shortage of experienced farm workers, single men being mostly in demand. Factories throughout this province were reported to be steady, with production above the average: mechanics of all kinds were in constant demand, particularly in the metal trades, while Hamilton and Brantford were singled out for special mention as to the briskness of activity at those points. Building operations were commencing with the result that most tradesmen were busy, although one or two points still reported a substantial surplus of workers of different classes. Road construction had also begun in some districts. The usual situation was reported in the mining group in Northern Ontario, namely, production continued at a normal level, but not many additional workers were being engaged. The only activity in the logging industry was the placement of river drivers. The customary shortage of cooks-general was reported.

With seeding becoming practically general in Manitoba the demands for farm workers were fairly numerous, although a sufficient number of suitable workers appeared to be available to cope with requirements. With a total valuation of building permits issued in the City of Winnipeg to date this year of over three million dollars, it would appear that considerable activity would be experienced in the building industry at that point: elsewhere throughout the province railway construction was the chief feature of the construction group and substantial numbers of men were being placed at such employment. Mining activity in the north portion of Manitoba continued and a new rich tin strike was reported. Under manufacturing it was stated that three eastern firms were to establish branches in Winnipeg shortly. The demand for logging workers was practically negligible. The usual shortage of cooks and cooks general was reported. Prior to the end of the month the demands for farm workers notified to the Saskatchewan employment offices were quite numerous, owing to the increased activity incidental to seeding, but toward the end of the month the number of vacancies had decreased. The building and construction group seemed slow in getting underway, and substantial numbers were waiting for employment in these lines. Prince Albert was

the only office reporting any activity in the logging industry, while the demand for casual labour throughout the province was rather fair. There were plenty of applicants to fill all

vacancies. The usual spring shortage of women domestic workers was reported

Unfavourable weather was holding up seeding in the Province of Alberta, and while the

 (6) Figures for four weeks ending April 27, 1929, and corresponding previous periods.  
 (11) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughtering of cattle, sheep, and hogs; storage holdings of butter and cheese.

demand for men was on the increase it was still below normal, with applicants sufficiently plentiful. Highway and railway construction were opening up and numbers of men were being taken on for such employment. Building construction was likewise opening up, and a rather favourable season was in prospect. No activity in the coal mining industry was reported, and mines were not working full time. The demands for women domestic workers were fairly heavy and there was a shortage of suitable applicants.

The logging and lumbering industry in the Province of British Columbia was apparently improving, as several offices reported having supplied workers. The metal mining industry was active and a few workers were being placed in it. Construction work was opened up to some extent, although not many placements were yet being made: railroad construction seemed to be the branch of the industry most active. Conditions in the Province of British Columbia generally speaking, although work was not opening up as briskly as in some other years, appeared to be quite favourable for the season nevertheless.

#### EMPLOYERS' REPORTS

Employment at the beginning of April showed a decline, which was somewhat larger than that noted on April 1, 1928; that this was so, was partly due to a slackening of activity over the Easter holidays, which in the last few years have fallen in the middle of the month, while the unseasonable weather generally prevailing also had an adverse effect upon employment. Despite these factors, the situation continued decidedly better than on April 1 of any other year since 1920. The Dominion Bureau of Statistics tabulated returns from 6,508 firms whose staffs aggregated 940,086 persons, compared with 946,997 in the preceding month. The index number (with the 1926 average as the base equal to 100) stood at 110.4, as compared with 111.4 on March 1, 1929, and with 102.3, 97.4, 92.5, 88.3, 90.4, 88.7, 81.8 and 85.1 on April 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The Maritime and Prairie Provinces and British Columbia reported improvement, while curtailment was registered in Quebec and Ontario. In the Maritime Provinces, there were increases in employment in manufacturing, transportation, construction and trade, but logging was seasonally slack. In Quebec, manufactures showed practically no change; trade and transportation afforded

more employment, but on the other hand logging and construction reported seasonal contractions. In Ontario seasonal losses were shown in logging, while manufactures and construction recorded large increases in employment, and smaller gains were noted in mining, communications, transportation, services and trade. In the Prairie Provinces the advance took place chiefly in trade and construction, and to a smaller extent, in transportation, manufacturing and services, but logging, mining and highway construction were seasonally dull. In British Columbia, the greatest gains were in manufacturing, transportation and construction, while coal mines released some help.

Employment increased in the eight cities for which special tabulations are made, the gains in the Border Cities and Toronto being most noteworthy. In Montreal, iron and steel plants, trade, services and construction recorded heightened activity, but rubber, textile and musical instrument factories were slacker. In Quebec, construction and transportation registered the most outstanding gains, while there were only small changes in other industries. In Toronto, considerable increases were registered in manufacturing, notably of vegetable food and textile products, and in building, services and trade. In Ottawa, there was a small advance, chiefly in manufacturing and trade. In Hamilton, the increase took place mainly in manufacturing, construction and trade, only slight changes occurring in other industries. In Windsor and the adjacent Border Cities, there was pronounced expansion, principally in automobile plants. In Winnipeg, iron and steel plants were more active, as was construction. In Vancouver, the most marked increases were in construction, manufacturing and shipping.

An analysis of the statistics by industrial groups shows further marked improvement in manufacturing, particularly in the iron and steel industry, but also in lumber, food, building material, textile, chemical and electrical apparatus plants. Communications, transportation, building and railway construction, services and trade also reported considerable improvement. On the other hand, there were pronounced seasonal losses in logging, and smaller reductions in coal mines, on highway construction and in factories turning out rubber, leather and non-ferrous metal products and musical instruments.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of April, 1929.

TRADE  
UNION  
REPORTS

Slight improvement in the local trade union situation was indicated during March by the returns tabulated from a total of 1,727 labour organizations covering a membership of 194,890 persons.

Of these, 11,662 or a percentage of 6.0 were idle at the close of the month contrasted with 6.8 per cent of unemployed members in February, and with 6.5 per cent in March last year. Nova Scotia and Saskatchewan unions alone reported reductions in available employment when compared with February, and these were fractional only, while of the increases in activity recorded in the remaining provinces the most noteworthy were indicated by British Columbia and Quebec unions. Considerable improvement was manifest in Nova Scotia during March when comparison is made with the situation prevailing in the same month a year ago, attributable to better conditions existing in the coal mines of the province during March this year than last. Ontario, New Brunswick, Saskatchewan, Alberta and British Columbia unions also reported a higher level of employment than in March a year ago, while small employment recessions were apparent among Quebec and Manitoba unions.

A review in greater detail with tabular statements of the unemployment situation at the close of March as represented by trade unions is printed elsewhere in this issue.

EMPLOYMENT  
OFFICE  
REPORTS.

During the month of March, 1929, references of persons to employment made by the offices of the Employment Service of Canada numbered

26,423, while the placements effected totalled 25,044. Of the latter, the placements in regular employment were 11,885 of men and 3,886 of women, a total of 15,771. Placements in casual work were 9,273. Applications for work reported at the offices numbered 37,104, of which 25,794 were of men and 11,310 were of women workers. Employers notified the Service during the month of 17,124 vacancies for men and 10,571 for women, a total of 27,695. An increase was shown in the volume of business transacted when the above figures were compared, both with those of the preceding month as well as with the corresponding period of last year, the records for February, 1929, showing 21,899 vacancies offered, 31,932 applications made and 20,184 placements effected, while in March, 1928, there were recorded 26,807 vacancies, 36,762 applications for work and 24,730 placements in regular and casual employment. A report in

detail of the work of the offices for the month of March, 1929, and also for the quarterly period January to March may be found elsewhere in this issue.

BUILDING  
PERMITS AND  
CONTRACTS  
AWARDED

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during March, 1929, was \$24,056,656, as compared

with \$10,318,338 in the preceding month and with \$15,128,413 in March, 1929.

The *MacLean Building Review* estimated the total value of construction contracts awarded in Canada in April at \$43,328,200, this figure being an increase of 6 per cent over the total value of awards reported during March. Construction volume for the year to date now stands 12 per cent ahead of that for the corresponding period of 1928. Of the April total, \$16,252,100 was for business buildings; \$14,643,400 was for residential buildings, \$7,328,600 was for engineering undertakings. The apportionment of the contracts awarded during April, 1929, by provinces was as follows: Ontario, \$18,629,600; Quebec, \$10,820,000; New Brunswick, \$743,500; Nova Scotia, \$409,000; Prince Edward Island, \$1,000; British Columbia, \$5,275,900; Alberta, \$2,041,800; Saskatchewan, \$3,369,300; Manitoba, \$2,038,100.

## Production and Trade

INDUSTRIAL  
PRODUCTION

Figures showing the volume of production in certain industries during the recent months and also in the corresponding months in the previous year are given in the table on page 473.

Reflecting in part a high level of operations in March, business activity was greater during the first quarter than in any similar period since the war. The automobile industry produced more units than in any previous period of the same duration, the output in March being in excess of 40,000 trucks. Operations in the iron and steel industry were at a higher level than at any time since the termination of the war, the production of steel in March being more than 137,000 tons. Reflecting in part the expanded building program in Montreal, the value of building permits attained in March the high level of \$24,000,000. Cumulative carloadings from the first of the year to the middle of April were 932,857 cars, exceeding by a slight margin the loadings in the same period of 1928, when the delay in the marketing of a grain crop resulted in an abnormally high level. Accord-

ing to information recently made available, the sum of the value of imports and exports during the fiscal year ended March 31 amounted to \$2,655,000,000, being greater than in any similar period in the history of the Dominion.

**EXTERNAL TRADE.** A summary of Canadian Trade prepared by the Department of National Revenue shows that in March, 1929, the merchandise entered for consumption amounted to \$135,289,621 as compared with \$97,042,055 in the preceding month, and with \$120,418,027 in March, 1928. The chief imports in March, 1929, were: Iron and its products, \$44,255,416; Fibres, textiles and textile products, \$22,522,269; Non-metallic minerals and products, \$13,443,644.

The domestic merchandise exported during March, 1929, amounted to \$114,763,270, as compared with \$82,259,345 in February, 1929, and with \$106,974,564 in March, 1928. The chief exports in March, 1929, were: Agricultural and vegetable products, mainly foods, \$34,134,323; Wood, wood products and paper, \$28,115,139; Non-ferrous metals and their products, \$14,182,886.

In the twelve months ending March, 1929, exports of domestic merchandise totalled \$1,363,611,820, and imports \$1,265,639,894.

### Strikes and Lockouts

The time loss due to industrial disputes in April, 1929, was much greater than in March, a strike of carpenters in Montreal, which involved a large number of men for almost the entire month, accounting for the greater part of the increase. The time loss in man working days was practically the same as during April, 1928, although there were fewer disputes reported. There were in existence during the month twelve disputes, involving 2,310 workpeople, and resulting in a time loss of 24,201 working days, as compared with eleven disputes involving 1,363 workpeople and resulting in a time loss of 3,079 working days in March. In April, 1928, there were on record sixteen disputes, involving 1,813 workpeople, and resulting in a time loss of 22,037 working days. At the end of April there were on record four disputes affecting 1,065 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in

terms of the average retail prices in some sixty cities showed a seasonal decline to \$11.01 for April, as compared with \$11.23 for March; \$10.27 for April, 1928; \$10.80 for April, 1927; \$11.36 for April, 1926; \$10.56 for April, 1925; \$10.16 for April, 1924; \$10.64 for April, 1923; \$10.26 for April, 1922; \$12.68 for April, 1921; \$16.92 for May, 1920 (the peak); \$12.57 for April, 1918; and \$7.51 for April, 1924. The most important change was a seasonal fall in the price of eggs, while slight declines occurred in the prices of veal, mutton, bacon, lard, dairy butter, prunes, sugar and potatoes. The prices of beef, pork, rice, beans and evaporated apples were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$21.30 at the beginning of April, as compared with \$21.52 for March; \$21.11 for April, 1928; \$21.02 for April, 1927; \$21.64 for April, 1926; \$20.82 for April, 1925; \$20.58 for April, 1924; \$21.21 for April, 1923; \$20.66 for April, 1922; \$23.31 for April, 1921; \$26.92 for July, 1920 (the peak); \$20.01 for April, 1918; and \$14.32 for April, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number of the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was substantially lower at 94.1 for April, as compared with 96.1 for March; 98.3 for April, 1928; 97.5 for April, 1927; and 101.2 for April, 1926. In the classification according to chief component materials six of the eight main groups were lower, while two were slightly higher. The groups which declined were: the Vegetables and their Products group, due to lower prices for grains, flour and other milled products, bananas, lemons, vegetable oils, rubber, cocoa beans, potatoes and naval stores, which more than offset higher prices for tea, coffee, oranges, dried fruits and hay; the Animals and their Products group, due to lower prices for milk, eggs and fish, which more than offset higher prices for live-stock, meats, furs, hides and lard; the Fibres, Textile and Textile Products group, because of slightly lower levels for raw cotton, raw wool, raw silk and jute; the Wood, Wood Products and Paper group, due mainly to slight declines in some lines of British Columbia cedar; the Non-Ferrous Metals group, due to general declines in the prices of basic metals; and the Non-Metallic Minerals group, because of lower levels for coal and gasoline, which more than offset advances in the prices of glass, crushed stone, sand and gravel. The Iron and its Products group advanced, mainly because of higher prices for pig iron and steel sheets. The Chemicals and Allied Products group was also higher, due to increases in the prices of white-lead, litharge and cream of tartar.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF APRIL, 1929

**D**URING the month of April five applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour, as follows:—

(1) On behalf of certain employees of the Canadian Marconi Company, Limited, the employees concerned being Canadian Marconi Telegraphers, members of Division No. 59, Commercial Telegraphers' Union of North America. The application stated that the dispute affected approximately 300 employees who were seeking new agreements involving increased wages and improved working conditions. A board was established on April 10, and was constituted as follows:—Mr. Joseph Singer, Toronto, chairman, appointed by the Minister in the absence of a joint recommendation from the other board members; Lieutenant-Colonel Wilfred Bovey, O.B.E., Montreal, company's nominee, and Mr. Thomas Taylor, Toronto, employees' nominee.

(2) On behalf of certain employees of the Ottawa Electric Railway Company being members of the Ottawa Railway Employees' Union. The application stated that the cause of the dispute was the employees' desire to have a system of alternating day and night shifts instituted, still retaining certain privileges for senior men; also the employees' request for wage increases ranging from five to ten cents per hour. The application was under consideration at the close of the month.

(3) On behalf of locomotive firemen and enginemen in the employ of the Canadian National Railways and being members of the Brotherhood of Locomotive Firemen and Enginemen. Failure to reach an agreement with the management concerning certain rules governing the service of the applicants was given as the cause of the dispute, which was stated to directly affect 4,500 employees. A board was established on April 26 and Mr. John M. Godfrey, K.C., Toronto, was appointed a member thereof on the recommendation of the employees concerned. At the close of the month steps were being taken looking to the completion of the board.

(4) On behalf of certain employees of the Ottawa Electric Railway Company, being motormen and conductors, one-man car operators, shopmen, shedmen, trackmen, line-men and warehouse employees, members of

Division No. 279, Amalgamated Association of Street and Electric Railway Employees of America. The application stated that the dispute, which related to wages, affected 320 employees directly and 200 indirectly. A board was established on April 30, and members thereof were appointed as follows:—on the company's recommendation, Mr. Redmond Quain, Ottawa; on the employees' recommendation, Mr. H. J. Burns, Ottawa. Shortly after the close of the month His Honour Judge E. J. Daly, Ottawa, was appointed chairman on the joint recommendation of the other board members.

(5) On behalf of various shipbuilding firms at Vancouver, B.C., namely: the British Columbia Marine Engineers and Shipbuilders, Vancouver Shipyards, Ltd., Burrard Shipyard and Engineering Works, Chappell Bros., Pacific Salvage Company, A. Linton and Co., Eriksen Boatbuilders, Ltd., and Burrard Drydock Co., Ltd., members of the Shipbuilders' Branch of the Canadian Manufacturers' Association, and certain of their employees being ships' caulkers, members of Shipyard Branch No. 2, Amalgamated Carpenters of Canada. The parties concerned in this dispute jointly applied for a board, demands on the part of the employees for increased wages being given as the cause of the dispute. Twenty employees were stated to be directly affected and 150 indirectly. A board was established by the Minister on April 30 and board members were appointed as follows:—on the employers' recommendation, Mr. Ernest F. Cribb, Vancouver; on the employees' recommendation, Mr. Henry Burgess, Vancouver. At the close of the month the board had not been completed by the appointment of a chairman.

### Other Proceedings under the Statute

Reference was made in the April issue of the LABOUR GAZETTE to the establishment of a board to enquire into a dispute between the Canadian National Railways and certain of its employees being locomotive engineers, members of the Brotherhood of Locomotive Engineers. On April 22 the board was completed by the appointment of the Honourable Mr. Justice W. E. Raney, Toronto, as chairman, this appointment being made on the joint recommendation of the other board members, Messrs. J. L. Counsell, K.C., Hamilton, and A. C. Boyce, K.C., Ottawa, the employer's and employees' nominees, respectively.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of Recent Proceedings

FOUR new decisions were recently given by the Canadian Railway Board of Adjustment No. 1. This Board was established by a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Engineers, the Order of Railway Conductors, the Brotherhood of Railway Trainmen, the Order of Telegraphers, and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. Earlier decisions were outlined in the *LABOUR GAZETTE*, January, 1929, and in previous issues. The third report of the proceedings of the Board, covering the decisions rendered from October 1, 1923, to September 30, 1927, was issued as a supplement to the issue of November, 1927.

#### Case No. 343—Canadian National Railways (Atlantic Region) and Brotherhood of Locomotive Engineers.

A locomotive engineer was dismissed on a charge of having been under the influence of liquor when on duty, after the foreman had taken him off duty owing to his alleged condition. The employees contended that the foreman acted on a suspicion arising from certain unusual circumstances which had led to trouble. The company stated that an investigation was held to consider the foreman's action, which was considered to have been fully justified. The Board found that this investigation was not conducted as it should have been, and that while the engineer was responsible for the trouble referred to, the evidence as to his supposed intoxication was contradictory. Under these circumstances the Board sustained the employees' claim for reinstatement of the engineer, but without pay for the time he was out of service.

#### Case No. 345—Canadian National Railways (Western Region) and Order of Railroad Telegraphers.

Since May, 1927, the operator at Prince Albert had been called for Sunday duty to clear a passenger train, being required to remain on duty for 2½ hours until this train is reported into the next station. The train

despatcher claimed that he was entitled to the remuneration he would have received had he been called to perform this service, for all the time since the company first called on the operator instead of the train despatcher to perform it. The company contended that the practice of calling on the operator in such circumstances was quite common, and that the operator in this case did not touch the despatcher's sheets. The Board ruled that the facts did not indicate any violation of the schedule conditions, and denied the employees' claim.

#### Case No. 346—Canadian National Railways (Western Region) and Order of Railroad Telegraphers.

A despatcher failed to give a "slow" order to an extra freight train, and an investigation was held next day with the result that he was demoted. He was not informed of the decision for three weeks, and in the meantime he had obtained employment elsewhere with the Canadian National Commercial Telegraphs, as operator. He held the latter position for about four months, after which time the company reinstated him as despatcher. The employees contended that the telegraphers' schedule provided that an employee should be given a decision within ten days of suspension, or if kept waiting more than ten days for a decision should be paid schedule wages for time in excess of ten days whatever the decision might be. There was no exception made which permitted the company to deduct wages earned during the interval at another occupation.

Accordingly claim was made for wages alleged due to the despatcher for the ten days during which he was awaiting a decision. The company pointed out that the despatcher was reinstated, not because he was proved not guilty of the mistake, but in order to give him another chance; and that in view of the fact that he entered the service of the company in another capacity, earning wages equal to what he would have received as a despatcher, his claim could not be justified.

The Board did not sustain the employees' claim. The decision however pointed out that the telegraphers' agreement provided specifically that pay should be allowed beyond a certain time, pending investigations. In the opinion of the Board the spirit of this rule pre-supposed that there should be no undue delay in rendering decisions following investigations. But in the present case it was held

that delay in rendering the decision had no consequence unfavourable to the employee, who suffered no financial loss.

### Case No. 347—Edmonton, Dunvegan & British Columbia Railway and Order of Railroad Telegraphers.

A lineman who had been in the service of the company for about eleven years met with an accident in the course of his employment on June 3, 1927, both bones being broken in the right leg between the knee and ankle. He immediately came under the British Columbia Workmen's Compensation Board, and received benefit from that Board up to May 20, 1928. On May 1, 1928, a specialist who was in charge of the case reported the injured man to be fit for duty. Accordingly, he reported for duty on May 8, but was told that a report on his case would have to be made by a company physician. This report not having been delivered on May 12, the

man himself secured it from the company doctor and delivered it to the assistant manager. The report of the company doctor suggested that the man should not be required to climb telephone poles for some further time. On May 21 the general manager decided that the man might report for duty on June 1. The employees contended that wages should be paid from May 13 to May 31, less compensation of \$10 received from May 13 to 20. The general manager stated that it had not been thought advisable, for the company's sake and his own, to employ the man until he had made further recovery, pointing out that his condition was such that he was in receipt of workmen's compensation until May 20. The general manager stated further that when the man was employed it was necessary to employ also a relief lineman.

The Board sustained the claim of the employees to the extent of awarding payment for time lost from May 21 to May 31.

## STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1929

THE Number of strikes and lockouts in existence in Canada during April was twelve, as compared with eleven during the previous month. The time loss for the month was very much greater than in March, the difference being caused chiefly by a strike of carpenters in Montreal which involved a large number of workmen for almost the entire month. As compared with April, 1928, there was little difference in time loss although the number involved in April, 1929, was greater.

Four disputes, involving 261 workpeople, were carried over from March, and eight disputes commenced during April. Of these twelve disputes, eight terminated during the month, five being in favour of the workers, two in favour of the employers and one resulting in a compromise. At the end of April, therefore, there were on record four disputes involving strikes or lockouts, as follows: plumbers, Kingston, Ont.; shipwrights, etc., Vancouver, B.C.; shoe factory workers, Toronto, Ont., and carpenters at Montreal, P.Q.

Particulars as to two disputes occurring in March were received too late to be included in the April issue of the LABOUR GAZETTE. One of these involved one hundred employees in a men's clothing factory in Montreal from March 2 to March 6. The strikers demanded that the employer should have work made up only in union contractors' shops, and this was agreed to. The other dispute, as stated in the last issue of the LABOUR GAZETTE, was a strike on March 18 of telegraph operators employed by a firm of stock brokers with offices in both Canada and the United States. Information secured as to this dispute indicates that only eight employees in Canada were effected, located in Montreal and Vancouver, and that these were replaced immediately. The dispute arose because the employer refused to sign an agreement with the union providing that only Morse telegraph operators should operate automatic telegraph printing machines. The employer

Date	Number of disputes	Number of employees involved	Time loss in working days
*Apr., 1929.....	12	2,310	24,201
*Mar., 1929.....	11	1,363	3,079
Apr., 1928.....	16	1,813	22,037

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

reported that the strikers were replaced by operators of such machines.

A dispute between an elevator manufacturing company and its employees was reported in the press as having occurred in Toronto on April 27. The employer having discharged a union member was called upon by the union to dismiss twenty-five non-union members working under permission of the union. This demand was complied with, but the inter-

national officers of the union ordered the reinstatement of these employees. Therefore, no dispute between the employer and the union arose involving a cessation of work and there was no dispute between the employer and the temporarily discharged workmen.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1929

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts Occurring prior to April, 1929.</b>			
<b>CONSTRUCTION—</b>			
<i>Buildings and structures—</i>			
Plumbers, Kingston, Ont.....	9	234	Commenced April 2, 1928, for increase in wages. Terminated.
Painters, Victoria, B.C.....	120	480	Commenced Mar. 25, 1929, for increase in wages. Terminated April 5, 1929, in favour of workers.
<i>Shipbuilding—</i>			
Shipwrights, etc., Vancouver, B.C.....	125	3,000	Commenced Mar. 25, 1929, for increase in wages. Terminated.
<b>SERVICE—</b>			
<i>Recreational—</i>			
Musicians, Ottawa, Ont.....	7	42	Commenced Mar. 25, 1929, to maintain union working conditions. Terminated April 8, 1929, in favour of workers.
<b>(b) Strikes and Lockouts Occurring during April, 1929.</b>			
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>			
Coal miners, New Waterford, N.S.....	50	50	Commenced April 2, 1929, for reinstatement of shot firer. Terminated April 3, 1929, in favour of employer.
<b>MANUFACTURING—</b>			
<i>Boots and Shoes—</i>			
Shoe factory workers, Toronto, Ont.....	33	215	Commenced April 23, 1929, against reduction in wages. Terminated.
<i>Clothing (including knitted goods)—</i>			
Ladies' clothing factory workers, Winnipeg, Man....	25	50	Commenced April 5, 1929, against discharge of employees. Terminated April 8, in favour of workers.
<i>Other Metal Products—</i>			
Metal polishers, Toronto, Ont.	11	80	Commenced April 16, 1929, for increase in wages. Terminated April 25, 1929, in favour of workers.
<i>Non-Metallic Mineral Products—</i>			
Labourers (factory), Toronto, Ont.....	10	15	Commenced April 8, 1929, against dismissal of foreman. Terminated April 10, 1929, in favour of employer.
<b>CONSTRUCTION—</b>			
<i>Buildings and Structures—</i>			
Painters, Montreal, P.Q.....	850	15,000	Commenced April 1, 1929, for increase in wages. Terminated April 25, 1929. Compromise.
Carpenters, cement workers and labourers, Ottawa, Ont..	70	35	Commenced April 19, 1929, to secure protection from falling rivets. Terminated April 20, 1929, in favour of workers.
Carpenters, Montreal, P.Q.....	1,000	5,000	Commenced April 24, 1929, for increase in wages and shorter hours. Terminated.

employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Information is available as to six such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926; bakers, Montreal, P.Q., May 1, 1927; stonecutters, Montreal, P.Q., June 10, 1927; sheet metal workers, Montreal, P.Q., September 21, 1927; fur workers, Toronto, Ont., April 10, 1928, and shoe factory workers, Toronto, Ont., August 13, 1928.

Information has been received as to three disputes which come within the category of "minor disputes." The first involved a number of painters engaged on a building in Toronto who ceased work about April 11 as a protest against the employment of a number of painters who were members of another union. The contractor is reported to have agreed when beginning the work that he would employ members of the International Union only, but later, when a large number of men were needed, some painters who were members of another union were engaged for a time. When the staff was reduced the international union claimed that all the members of the other union should be laid off first. The employer agreed to do this and work was resumed next day. The second dispute of this nature occurred at Carney's Lake, C.B., in the power plant of a coal mine owing to the dismissal of an employee. Four other men ceased work as a protest against this. Officers of the union negotiated with the management, arrangements being made to deal with such grievances, and work was resumed the same day (April 25) the operation of the plant not being affected. The third "minor dispute" was that involving forty-three taxi drivers in London, Ont., who ceased work on April 9, demanding an increase in wage rates, namely thirty per cent of the fares collected and a flat addition of \$5 per week instead of twenty-five per cent of the amount collected. The employer agreed to an increase to thirty per cent of collections but not to the addition of \$5 per week and work was resumed after an hour.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

**PLUMBERS, KINGSTON, ONT.**—At the end of April nine strikers were still reported by the union to be on strike pay and fifteen other strikers were unemployed, while three had secured work with other employers during the month. It is reported that the employers have replaced the strikers with non-union

plumbers, but other building trades have taken the stand that they will not work with non-union plumbers; accordingly work to be done by the latter is not commenced until the other trades have finished their part of the work and further sympathetic strikes are thus avoided.

**PAINTERS, VICTORIA, B.C.**—The master painters' organization having refused to sign an agreement providing for an increase in pay from 75 cents per hour to 85 cents, the painters and decorators ceased work late in the afternoon of March 25. It is reported that a number of non-union men joined the union during the dispute. As the result of negotiations between the parties an agreement was signed to take effect on May 1 providing for the increase demanded from May 1, and work was resumed on May 5. The agreement is summarized elsewhere in this issue.

**SHIPWRIGHTS, ETC., VANCOUVER, B.C.**—The strike of shipwrights, joiners, caulkers and boat builders reported in the last issue of the *LABOUR GAZETTE* as having commenced on March 25 was in part settled on April 23 as the result of mediation by the resident officer of the Department of Labour and the Deputy Minister of Labour for British Columbia. The demand of the shipwrights for an increase in wages from \$6.50 per day to \$7.50 was conceded. The employer, however, would not offer more than \$7.25 per day for caulkers. It was agreed to refer this question to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, and work was resumed on April 23 in the establishments of those employers who were members of the Shipbuilders' Section of the Canadian Manufacturers' Association. Two other firms engaged in "lining" of vessels for grain cargoes refused to pay these rates and their employees did not resume work. The dispute with these firms included also ship carpenters' helpers who also desired certain improvements in working conditions. Upon representations from the representative of the Department of Labour and the Deputy Minister of Labour for British Columbia the officials of these firms agreed to take the matter up early in May upon the return of one of their officials. On April 29 the employees concerned applied for a Board of Conciliation under the Industrial Disputes Investigation Act.

**MUSICIANS, OTTAWA, ONT.**—As stated in the last issue of the *LABOUR GAZETTE*, the strike of musicians employed in a theatre on March 25 was terminated by resumption of work on April 8, the employer having agreed to the conditions in force prior to the strike.

**COAL MINERS, NEW WATERFORD, N.S.**—An official of the colliery, a shot firer, who had been suspended a second time for misconduct, was given a job in the mine, but shortly afterwards, with a number of miners sympathizing with him, he demanded reinstatement in his former position and proceeded to picket the mine, preventing the workmen from entering, and held up operations for a day and a night shift. Employees were driven from the engine room, fan house, the wash house, etc., by missiles, breaking windows, etc. It is estimated that about fifty employees were engaged in this attempt and that 250 other miners were indirectly affected, being prevented from working. Work was resumed the next day. Following this, five men were arrested and sentenced to terms of imprisonment, while two of the ringleaders escaped and were reported to have left the country.

**SHOE FACTORY WORKERS, TORONTO, ONT.**—A number of employees ceased work to prevent a reduction in wages (piece-work rates), alleged to be from ten to thirty per cent. The employer refused to negotiate with the union or the strikers, and at the end of the month no settlement had been reported. A similar dispute occurred in this establishment in August, 1928, the strikers being replaced, and the dispute was recorded as lapsed in November, but the union has not called it off.

**LADIES' CLOTHING FACTORY WORKERS, WINNIPEG, MAN.**—Employees ceased work on April 5, demanding the reinstatement of three pressers who had been discharged. The strikers resumed work on April 8, the employees affected being reinstated.

**METAL POLISHERS, TORONTO, ONT.**—Employees in a metal plating establishment ceased work on April 16 at noon, demanding an increase in wages from 75 cents-85 cents to 90 cents per hour. On April 25 work was resumed, their demands having been granted, 90 cents per hour, with other conditions as before, 44 hours per week, time and one-half for overtime and double time for Sundays and holidays.

**LABOURERS, FACTORY, TORONTO, ONT.**—Employees in an establishment manufacturing counters, and other artificial stone supplies for restaurants, ceased work, demanding the reinstatement of their foreman who had been dismissed. The following day some of the strikers were replaced and others the day after and five or six returned to work, the management refusing to grant the demands of the strikers.

**PAINTERS, MONTREAL, P.Q.**—Workmen to the number of 850 in the employ of certain

master painters and decorators and general contractors ceased work on April 1 to secure an increase in wages from 70 cents per hour to \$1. The union stated that attempts to negotiate a wage scale with the Master Painters' Association prior to the strike had failed. During the strike negotiations between the master painters and the union resulted in an agreement with the union being signed by twenty-two of the master painters. This provided for an increase in the wage rate of 80 cents per hour as from April 1, 1929, and further increases to 85 cents per hour on April 1, 1930, and 90 cents on April 1, 1931. Work was resumed from time to time between April 19 and April 25 when the strike was called off.

**CARPENTERS, CEMENT WORKERS AND LABOURERS, OTTAWA, ONT.**—Carpenters, cement workers and labourers ceased work because they were not being protected by plank flooring from any rivets which might fall from structural iron erection operations carried on above them. The employer of these workers claimed that it was the duty of the sub-contractor on the structural iron work to provide such flooring; arrangements were made to have this done, and work was resumed by the labourers that afternoon and by carpenters the next morning.

**CARPENTERS, MONTREAL, P.Q.**—Carpenters employed by certain contractors in Montreal ceased work on April 24, demanding an increase in wages from 75 cents per hour to 80 cents with a reduction in hours from nine per day to eight. A number of contractors conceded this demand before the strike, and two others were reported to have conceded it on the first day of the strike. The General Contractors' Section of the Builders' Exchange offered to increase the wage rate to 80 cents, provided the hours remained at nine per day. Members of the Builders' Exchange engaged carpenters under these conditions. At the end of the month the union stated that sixteen or seventeen firms had signed the agreement on the terms of the union, and that outside carpenters employed by the other contractors were being taken into the union and going on strike, bringing the total number on strike to one thousand.

An employee of the Harbour Commissioners of Montreal who last year sustained sunstroke in the course of his employment, was awarded \$1,989 damages by Mr. Justice Bond in the Superior Court at Montreal. His Lordship held that sunstroke might be considered as being an "accident" under the provision of the Workmen's Compensation Act.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1929, in the review of Strikes and Lockouts in Canada and Other Countries in 1928. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

### Great Britain

During March, 28 new disputes began and 12 were still in progress from the previous month, making a total of 40 disputes in progress during the month, involving 19,100 workpeople and resulting in a time loss during the month of 133,000 working days. Of the 28 disputes beginning in March, 7 arose out of proposed reductions in wages, 12 on other wages questions, 4 on questions respecting the employment of particular classes or persons, 2 on other questions of working arrangements and 3 on questions of trade union principle. Settlements were made in 23 disputes, of which 7 were in favour of workpeople, 4 in favour of employers, 12 ended in compromises and in one other case, work was resumed pending negotiations.

About 3,800 coal miners ceased work at Seaham Harbour, Durham, on March 2, when they refused to accept reductions in piece-work rates. No settlement had been reported at the end of March.

About 7,000 employees of a motor car factory in Birmingham, went on strike on March 25, against a new system involving reductions in wages. On April 4, work was resumed on the employers' terms, pending negotiations of terms of settlement.

### Australia

It is reported that about 10,000 coal miners in New South Wales have been out of work since March 31, when they refused to accept reductions in wages.

### British India

A strike of 100,000 cotton mill workers at Bombay was reported on April 26. In spite of the efforts of the Governor of Bombay, no settlement had been reached up to May 7.

### Rhodesia

On February 16, a strike began of railway workers in Rhodesia which almost completely tied up traffic for several days, as the strike coincided with the rainy season in which many roads were impassable for motor traffic. The demand of the strikers was for an increase in wages to the scale paid previous to 1922. A settlement was reached on March 6, after which work was resumed, on the understanding that a Court of Inquiry be appointed by the Government to settle the dispute. On April 11, this Court gave its decision to the effect that the present rate of wages was adequate and no increase was recommended.

### Belgium

On February 16, about 3,700 glass workers of the Centre district went on strike for an increase in wages; later a lockout was declared affecting about 6,000 workers. During April a settlement was reached granting the increase in wages demanded and other conditions favourable to workers.

### United States

The number of disputes which began during February was 41, and 50 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 43,010 and the time loss for the month 914,576 working days.

During April, a number of strikes of textile workers occurred in the Southern States. Employees of a rayon factory at Elizabethton, Tennessee, numbering about 3,000, who were out on a short strike in March, again went out on April 15, this time against the discharge of union workers. At various towns in both North and South Carolina, strikes of cotton mill workers began, involving in all about 7,000 workers. In South Carolina, the trouble arose out of the introduction of a new system by which employees were given an increased amount of work to do without a corresponding increase in wages. In some mills the old conditions were restored and work was resumed. But in other mills, as in

Tennessee and North Carolina the strike was still in progress at the end of the month. In North Carolina, the dispute was over the discharge of union employees, but other demands for increased wages and improved working conditions were also made.

During February, two strikes occurred at various anthracite coal mines in Pennsylvania, involving in all about 9,000 miners for from two to three days. In both disputes work was resumed pending adjustment of grievances.

About the middle of February, employees of a textile plant, numbering 1,100, at Newmarket, New Hampshire, demanded increases in wages and other changes. The demands were refused and the employers closed the plant indefinitely on February 19. In April the company served notice to their former employees to vacate the company houses. The majority of the workers involved were French Canadians, and it is reported that a large number of them have returned to Canada.

## LABOUR LEGISLATION IN ONTARIO AND QUEBEC IN 1929

### Ontario

The Ontario Legislature, at the session which opened on January 30 and concluded on March 28, 1929, enacted a considerable body of social and labour legislation, the principal social measure being the Old Age Pension Act making the Federal Act of 1927 effective within the Province. The concluding speech from the Throne stated that "the enactment of the Old Age Pension Law is a recognition of the responsibility of the community to contribute to the comfort and support of those who have not been fortunate enough to accumulate a competence during their years of active work. Hitherto this burden has been borne by local and individual effort, but much more satisfactory results will be rendered possible by public co-operation."

Amendments were made to the Mining Act, being for the most part designed to comply with the recommendations of the commission into the causes of the mining disaster at Hollinger mine at Timmins on February last year, when 39 miners were killed as the result of an explosion underground (LABOUR GAZETTE, November, 1928, page 378 etc.). An act was passed for the prevention of silicosis, arrangements being made for the periodical medical inspection of workmen exposed to silica dust. This disease is now included among the industrial diseases covered by the provincial Workmen's Compensation Act (LABOUR GAZETTE, June, 1926, page 574; May, 1926, page 450 etc.). The Factory, Shop and Office Building Act was amended in various sections, chiefly in connection with the hours of employment of young persons. Definite provision was made by an amendment to the Vocational Education Act for the systematic vocational guidance of children about to leave school.

### Old Age Pensions

The Old Age Pensions Act, 1929, gives effect within the province to the federal Act of 1927, which provides for the payment by the Dominion to the Province quarterly of an amount equal to one-half of the net sum paid out during the preceding quarter by the Province for Old Age Pensions. (The provisions of the federal Act are briefly outlined on page 499).

Applications for old age pensions in Ontario are to be made in the first instance to the local authority, that is, to the municipal Council or to a board or commission appointed by such council for the purpose, the applications being accompanied by the necessary proofs, etc. The local authority will give its decision in writing upon each application, but the granting or refusal of a pension in any case shall be subject to appeal to the Commission, that is the department of the government appointed to administer the Act, and the Commission may disallow, modify or alter any order or ruling of the local authority, the decision of the Commission being final and binding; but the Commission may reconsider any decision and may rescind, alter or amend any order, direction or ruling previously made by it under the authority of this Act.

The pensions and the expenses of administration are to be paid out of special appropriations by the legislature. Orders for the payment of pensions must in all cases name the county, city or separated town or provisional judicial district where the pensioner resides. The municipal authority must receive full notice of the granting of a pension to any individual within its limits.

The actual distribution of pensions is carried out by the municipality, which is to be informed by the Commission of the amount to be contributed by the municipality in each case. Every municipal corporation thus named as a contributor will be required to pay an amount equal to 20 per cent of each pension. Where the pensioner resides in a provisional judicial district (other than a city or town of 10,000 or more population) such local contributions are not required.

Pensions are exempt from provincial and municipal taxes and are not to be subject to garnishment or attachment or seizure or any legal process and are to be unassignable. The payment of pensions is subject to the continuation of the contribution of the Dominion under the federal Act.

The following sections relate to the question of the value of the pensioner's residence as affecting his pension:—

10. (1) Where a pensioner is the owner of an interest in a dwelling house in which he resides and the Commission accepts a transfer to it of such interest, the pension payable to the pensioner shall not be subject to any reduction in respect of the annual value of such interest, but the Commission shall, on the death of the pensioner or upon his ceasing to use such dwelling house as his place of residence, be entitled to sell the pensioner's interest therein and to retain out of the proceeds of such sale the amount of all payments made to the pensioner by way of pensions in excess of the amount he would have received if such interest had not been transferred to the Commission, together with interest on the said payments at the rate of five per centum per annum, compounded annually.

(2) The Commission shall be entitled to recover out of the estate of any deceased pensioner, as a debit due by the pensioner to the Commission, the sum of the pension payments made to such pensioner from time to time, together with interest at the rate of five per centum per annum compounded annually.

No claim shall be made by the Commission for the recovery of such debt directly or indirectly out of any part of the pensioner's estate which passes by will or on an intestacy to any other pensioner or to any person who has, since the grant of such pension or for the last three years during which such pension has continued to be paid, regularly contributed to the support of the pensioner by the payment of money or otherwise to the extent, which having regard to the means of the person so having contributed, is considered by the Commission to be reasonable.

The Commission may direct that the pension may be paid to a trustee in cases where the pensioner is incapable, or is likely to use his pension otherwise than for his own benefit. With the consent of the pensioner, the Commission may assume the management of the pensioner's property, real or personal.

Pensioners as such are not deprived of the right to vote at provincial or municipal elections.

The Lieutenant Governor in Council is authorized to make regulations establishing a commission, with chairman and other officers and assistants, and providing for the payment of salaries to the staff; to appoint boards in a provisional judicial district; to prescribe the form of application for pensions, and the proofs to be required; to determine the procedure of the local authority upon hearing applications and the procedure of appeals to the commission; to fix the times at which pensions are payable, etc.

The Act becomes effective on its proclamation by the Lieutenant-Governor.

### Parents' Maintenance Act

Several amendments were made in this Act, which makes a son or a daughter having sufficient means subject to the obligation to contribute to the support of a parent who by reason of age, disease or infirmity, is unable to maintain himself. Among these amendments is a new provision that proceedings may be taken under the Act by the administrators of the Old Age Pensions Act in the case of a person applying for or in receipt of such pension; the consent in writing of the Crown Attorney not being necessary in such a case.

### Mining Act

Amendments to the Mining Act were made in the interest of the safety working of mines in the provinces. Underground foremen must be able to give and receive orders in the English language and the Inspector of Mines is given authority to suspend any foreman or mine captain who is not familiar with, or does not understand the requirements of the mining regulations.

The existing regulation governing the buildings for thawing explosives, which applied to buildings situated "above ground", was made to apply also to buildings under ground. A new series of rules was added to the existing regulations under section 161 of the Act. These rules are as follows:

All underground buildings or enclosures necessary for the housing and maintenance of machinery or equipment shall be constructed as far as practical of fire-proof material.

All fans except "Booster" fans shall be above ground and shall be reversible and all fans and structures containing the same shall be fire-proof.

Oil and grease kept underground shall be contained in suitable metal receptacles and the amount so kept shall not exceed the requirements for seven days.

There shall be a sufficient number of fire doors at every underground station where practicable so that the shaft can be completely cut off from the rest of the mine.

All inflammable refuse underground shall be removed at least once in every 24 hours, and shall be brought to the surface and there disposed of in a suitable manner.

Every shift boss and mine captain shall certify in writing to the mine manager at least once in every week, that there is no accumulation or inflammable refuse underground in the area under his supervision except as reported by him.

Suitable fire protection systems shall be installed at all underground crushers, tipples and in dry shafts.

Every mine which has a maximum production of 100 tons of ore per day, shall be equipped with the necessary mechanical apparatus so that the stench ethyl mercaptan may be introduced into the air line as a warning signal to underground workmen.

Legible signs showing the way to emergency exits shall be posted in prominent places underground and all workmen shall be instructed as to location of auxiliary exits.

### Prevention of Silicosis

The Silicosis Act, 1929, defines silicosis as a fibroid condition of the lungs caused by the inhalation of silica dust. It is provided that "a person shall not be employed in the cutting, polishing or finishing of granite who is not the holder of a subsisting certificate given by a medical examiner under this Act that such a person is medically fit to be employed in such occupation."

Certificates are to be issued for a definite period, and may be renewed under prescribed conditions. It is provided that the owner, manager, proprietor, or superintendent of any works in which the cutting and polishing of granite is carried on shall provide such masks and other appliances to be used by the persons employed in such works for their protection against silicosis as may be approved from time to time by the Minister of Health. Owners, managers must at all times take such precautions and use such appliances as may be directed by the Factory Inspection Branch of the Department of Labour. Regulations may be made under the Act for the appointment of medical examiners and for the examination of applicants for certificates, etc.

The Minister of Health, with the approval of the Lieutenant Governor in Council may make such regulations from time to time as may be deemed desirable for the better security of workmen employed in cutting, polishing, and finishing granite and for their protection against silicosis or other industrial diseases which may be contracted in pursuing their occupation.

The Minister of Health with the approval of the Lieutenant Governor in Council may extend the operation of the Act so as to include workmen employed in cutting, polishing, finishing or grinding any stone or sub-

stance other than granite, and may extend the application of any regulations to the works in which they are employed.

The Act will become effective upon its proclamation.

### Factory Shop and Office Building Act

Various amendments were made in this Act, including several relating to the employment of young persons. Some of these amendments restored former provisions which had been omitted or altered in the revision of the Statutes in 1927. It was provided that notwithstanding anything in Part 1 of the Act, no child under 14 years of age shall be employed in a factory. The existing provision requiring young persons under 16 to furnish employers with a certificate issued in accordance with the provisions of the Adolescent School Attendance Act was extended so as to include equipment in factories as well as in shops. No person under the age of 18 years is to be allowed to regularly operate or control an elevator in a factory, shop or office building.

The existing provision confining the application of the Act to factories employing five or more workers was rescinded, the Act being now applicable to "any factory in which machinery operated or driven by steam, electric or other motive power is used."

The conditional clause providing that "this section shall not come into force until a day to be named by the Lieutenant Governor in Council", which had been omitted in the consolidation of the Statutes in 1927, was reinserted in the Act in connection with the section prohibiting the employment of white women by Chinese in any factory, restaurant or laundry. This change is retroactive to December 31, 1927.

The following subsection was added to the section of the Act requiring an employer to keep a record of all particulars in connection with the overtime employment of youths, young girls, and women:

In all cases where any child, youth, young girl or woman works beyond the number of hours in any one day or in any one week as provided in this Act, and whether the inspector under this Act, has permitted exemption or not, such child, youth, young girl or woman is entitled to be paid wages for such overtime, and the Minimum Wage Board of Ontario is given the right to establish a rate of wage for all such overtime worked in any one day or in any one week.

The section defining the unlawful and injurious employment of children, youths and women was extended to include the irregular employment of such persons under the ex-

emptions allowed in cases of breakdowns of machinery, etc. Where the Act omits to name a minimum penalty for infractions of its provisions, the minimum is to be not less than one-tenth of the maximum penalty, and in no case less than \$10. The form of notice contained in Schedule B, relating to the Saturday half-holiday was amended so as to refer to "such day of the week as may be arranged."

#### Minimum Wage Act

The Minimum Wage Act was amended so as to enable the Minimum Wage Board to give effect to the new provision of the Factory, Shop and Office Building Act, mentioned in the preceding section, the Board being authorized to establish a wage for all time worked by a child, youth, young girl or woman in excess of the statutory number of hours in any one day or week.

#### Mothers' Allowances

The definition of a mother entitled to an allowance was altered by the substitution of the expression "one of her own legitimate children" for "one of her own children born in lawful wedlock". Another amendment extended the scope of the existing provision giving power to the commission to recommend to the Lieutenant Governor in Council the granting of an allowance under special circumstances to a woman who is not strictly eligible.

#### Steam Boilers

The administration of the Steam Boiler Act was transferred from the Department of Public Works and Highways to the Department of Labour of the Province.

#### Master and Servant Act

In regard to a magistrate's order for the payment of wages in arrear under the Master and Servant Act, it is now provided that such an order is to be enforceable in the manner set forth in section 739 of the Criminal Code.

### Quebec

Little legislation directly concerning labour was enacted at the second session of the Seventeenth Legislature of the Province of Quebec, which opened on January 8, and closed on April 4, 1929. Reference was made in the speech from the Throne to the favourable industrial situation of the Province at the beginning of the year. It was stated that since the Workmen's Compensation Commis-

#### Vocational Education Act

The section of the Vocational Education Act defining the powers of advisory committees was amended by the addition of the following subsection:—

Subject to the approval of the Minister, an advisory committee may appoint one or more officers qualified according to the regulations, to collect and distribute information regarding available occupations and employments, and to offer such counsel to the pupils of the schools under the charge of the advisory committee as will enable them to plan intelligently for their vocational and educational advancement, and every person so appointed shall be subject to the control of the advisory committee.

#### Election Act

Provision was made by amendments to the Election Act for the holding of special voting privileges for mariners, that is "any man or woman who is serving in H. M. Naval forces of Great Britain or Canada, or is serving in any capacity on a mercantile vessel registered at a British port at the time of the issue of a writ for any provincial election." Mariners are entitled to vote by a proxy appointed by him, the proxy to be the wife, husband, parent, brother, sister or child of the mariner, of the full age of twenty-one years and an elector entitled to vote in the electoral district in which the mariner is qualified to vote.

The revising officer is to take evidence on oath as to the right of the mariner to vote, and if approved, he is to cause the name of the voting proxy to be entered on the voters' list after the mariner's name.

#### Municipal Act

The maximum fee to be payable by a transient trader for a license was raised from \$250 to \$500 in a city or town; and that for a township or village was fixed at \$300. The fee must in no municipality be less than \$100. Stricter conditions were laid down in connection with the granting of certificates to transient traders, who are required to furnish a statement in writing of all goods sold under the license.

sion began its sittings last September thousands of cases had been brought before it. "I am glad to be able to inform you," the Speech continued, "that they are being settled rapidly and without expense to the workmen. The law is fully realizing the hopes of the government."

Attention also was called in the opening Speech to the seriousness of the problem

of accidents at railway crossings, the announcement being made that the province would co-operate with the Federal government to bring about gradually the disappearance of level crossings on the main highways and at exposed places. In accordance with this forecast an Act respecting the Level Crossings (chapter 8) was passed during the session, setting aside the sum of \$300,000 for work connected with the elimination of such level crossings, and authorizing the Minister of Roads to enter into contracts for this purpose with the Dominion Government, the Railway Commission, railway companies, municipalities, and others. Amendments were also made (chapter 21) to the Motor Vehicle Act, requiring the drivers of a motor vehicle to halt before passing a level crossing, unless the crossing is in charge of a signal man or equipped with automatic signals.

*Old Age Pensions.*—The legislature approved a statement made by the Government that it was studying the problem of assistance to old age so as to find a satisfactory solution, and expressed confidence "that its appeal to the Federal Government to confer with the Provinces will be heard."

*Fair Wages Clause.*—The following resolution was adopted by the legislature on March 26:—

"*Ordered*, that all the contracts, renewal of contracts and transfers of contracts relating to the exploiting of the forest domain or water-power resources of the Crown, must, hereafter, contain a clause assuring to labourers and tradesmen who may be employed in the bringing into operation or exploiting of such forest domain or such water-powers, payment of wages or salaries not below those generally prevailing in the district where the work is being carried out; and that when a condition in a contract already entered into has not been fulfilled, the Government must avail itself of such failure to insert a similar clause in such contract."

The Professional Syndicates Act (Revised Statutes, 1925, chapter 255) was amended (chapter 70) by the addition of a section stating the conditions governing any change in the name of a syndicate or union, which must not be changed for any unlawful purpose. Permission to change the name must be obtained from the Provincial Secretary.

The Quebec Mining Act was amended (chapter 26) with the object of making more effectual the existing laws relating to the sale of shares and bonds of companies carrying on business in the Province, some of which had been found to have "seriously imperilled

the savings of the people." Among the changes was a new provision that mine owners must include in their annual returns each January a sworn statement as to the total amount of wages and salaries paid during the previous year.

Under an amendment (chapter 35) to the Cities and Towns Act municipal councils are given authority to take out insurance policies on the lives of all officers or employees of the corporation or of any special class of officers or employees which the by-law determines, under the system known as "group insurance" and pay the whole or part of the premium required out of the general funds of the municipality.

The Health Units Act, enacted in 1928 (chapter 69), was amended (chapter 60) by the addition of a provision that in every country possessing a health unit, the medical officer of the unit shall assume the powers of an inspector under the Quebec Public Health Act, enforcing the regulations under this Act.

The Quebec Public Charities Act was amended (chapter 61) in regard to the regulations governing applications made on behalf of indigent persons for admission to public charitable institutions, provision being made that when an application has been refused by the authorities of the institution a petition may be presented to a district magistrate, who shall decide finally as to the applicant's state of indigency.

The sum of \$500,000 was appropriated to education in agriculture, to improving agricultural schools, establishing of new offices for agriculturists and demonstration farms, and to the organizing of short courses in agriculture, etc. The Legislature declared education in agriculture, during and after finishing school under its various forms, to be essential to the development of agriculture.

In the Alberta Legislature on February 12, it was intimated that owing to the additional cost and the administrative difficulties involved it was not the intention of the provincial government "to give immediate effect to the Mothers' Allowance Amendment Act, 1926. The provisions of this Act were outlined in the LABOUR GAZETTE May, 1926 page 448. It would make eligible for an allowance the wife of a husband who is unable to support his family by reason of total disability which may reasonably be expected to continue for at least one year resulting from sickness or accident. The allowance would be conditional upon the husband's residence in the province at the time the sickness or accident occurred.

## WOMEN'S MINIMUM WAGES IN QUEBEC

### Orders governing Boot and Shoe and Leather Trades.

**T**HE Minimum Wage Board of the province of Quebec recently issued Orders Number 7, 7a, and 7b, governing female employment in the boot and shoe and leather industries. The province has been divided into three groups, namely, the City and Island of Montreal; all municipalities of 3,000 population or over; and all municipalities and rural parts of less than 3,000 population, the minimum rates being somewhat lower outside Montreal. This has been done in order to protect the industry in the rural parts of the province, where the cost of living is lower. The accompanying tables show the number of female employees and the average amount of their weekly earnings in various parts of the province.

*Order No. 7.*—Governing female employees in the boot and shoe factories and all other leather trades in the city and island of Montreal and a radius of ten miles around and beyond the island.

*Order No. 7a.*—Covering all municipalities of over 3,000 population, excepting the city and island of Montreal.

*Order No. 7b.*—Covering all municipalities with less than 3,000 population.

(1) *Minimum.*—No wage shall be less per week for the regular recognized working period of the establishment than is set forth in the following table:—

Population Groups	Experienced Workers having over 24 months' experience at the trade	Apprentices with less than 24 months' experience at the trade
City and Island of Montreal	\$12.50	6 months at \$ 7.00 6 " " 8.00 6 " " 9.50 6 " " 11.00
Municipalities of over 3,000 population.	\$10.00	6 months at \$6.00 6 " " 7.00 6 " " 8.00 6 " " 9.00
Municipalities having less than 3,000 population.	\$8.00	6 months at \$5.00 6 " " 5.50 6 " " 6.00 6 " " 7.00

(2) *Maximum of Inexperienced Workers.*—The number of inexperienced workers having less than twenty-four months of apprenticeship shall not exceed one half of the total

female working force. Temporary employees, whose term of employment does not exceed one month, shall not be subject to this rule, nor be included in this calculation.

(3) *Overtime.*—Any female employee doing work in excess of the regular recognized working period of the establishment shall be paid for same at not less than the regular rates, but in all cases according to the prevailing custom of the trade.

(4) *Piece Work.*—The wages paid to each timeworker and to each pieceworker during the first six months' employment in the industry shall conform to this Order. In the case of pieceworkers of more than six months' experience, it is sufficient of at least 80 per cent receive wages conformable to this Order.

(5) *Averaging Piecework Rates.*—The wage rates may be averaged for any pieceworker provided that the average is maintained at each payment. Wages received before this Order became effective, or more than three months before the date of the payment concerned, shall not be considered in any such calculation.

(6) *Deductions for Absence.*—No deduction below the minimum wage line for absence shall exceed the value of the time lost, reckoned proportionately to the regular recognized working period of the establishment.

(7) *Waiting.*—Any employee required to wait on the premises shall be paid for the time thus spent.

(8) *Permits.*—The Board may issue permits for lower wages on behalf of aged or handicapped works. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers and employees are invited to consult the Board regarding any problem which this Order may concern.

(9) *Penalties.*—Any violation of this Order is punishable by fine. (See Section 12 of the Act).

(10) *Posting.*—Each establishment shall keep a copy of this Order posted in a conspicuous place.

(11) This Order is subject to annual revision of the Board.

(12) This Order shall come into force and be effective on July 1, 1929.

GUS. FRANCO, Chairman.  
O. BRUNET,  
C. J. GRIFFIN,  
E. RICHARD.

*Order No. 7.*—Governing female employees in the boot and shoe factories and all other leather trades in the city and island of Montreal and a radius of ten miles around and beyond the island.

**WORKMEN'S COMPENSATION FOR DOMINION GOVERNMENT EMPLOYEES IN 1927-28**

**I**NCLUDED in the annual report of the Department of Railways and Canals for the year ended March 31, 1928, is a review of operations under the Government Employees' Compensation Act. The Act is administered by this department for the entire Government Service, the Canadian Government Railways having the largest number of employees coming under its scope. Payments of compensation to injured workmen, however, are made by the Workmen's Compensation authority in the respective provinces where the accidents have occurred. The Government Employees' Compensation Act, which was enacted in 1918, provides as follows:—

1. (1) An employee in the service of His Majesty who is injured and the dependants of any such employee who is killed, shall be

entitled to the same compensation as the employee, or as the dependant of a deceased employee, of a person other than His Majesty would, under similar circumstances, be entitled to receive under the law of the province in which the accident occurred, and the liability for and the amount of such compensation shall be determined in the same manner and by the same boards, officers or authority as that established by the law of the province for determining compensation in similar cases, or by such other board, officers or authority or by such court as the Governor in Council shall from time to time direct.

(2) Any compensation awarded to any employee or the dependants of any deceased employee of His Majesty by any board, officer or authority, or by any court, under the authority of this Act, shall be paid to such employee or dependant or to such person as the board, officer, or authority or the court may direct, and the said board, officer, authority

and court shall have the same jurisdiction to award costs as in cases between private parties is conferred by the law of the province where the accident occurred.

The Act was amended in 1925 so as to provide that compensation should include medical and hospital expenses, the new section being retroactive in its operation to May 24, 1918.

Since the adoption of the Act, to March 31, 1928, a total of \$2,364,797.24 was expended in compensation, pensions, administration. During the fiscal year ended March, 1928, the total amount of disbursements for all departments was \$351,312.18 while \$20,471.43 was expended on administration. In the same period, a total of 2,914 claims were dealt with. Of this total, 1,882 were claims involving both compensation and medical aid; 809 were medical aid only; and 283 were for pensions. Of the total of 2,914 claims, 2,057 were from the Canadian Government Railways and entailed disbursements amounting to \$226,041.60. The Hudson Bay Railway had 215 claims and \$10,960 in payments. Canals were productive of a total of 173 claims involving an expenditure of \$28,565.05. Claims from the Department of Public Works totalled 148, and were responsible for disbursements amounting to \$21,098.90. The total number of claims from other departments, together with the corre-

sponding disbursements, were as follows: Interior 92 claims and \$13,005.36 in payments; Marine and Fisheries, 75 claims and \$26,013.79 in payments; National Defence, 51 claims and \$13,236.84 in payments.

The following table shows the payments made under the Act from 1918 to March 31, 1928, by provinces:—

Provincial Board	Dominion Expenditure including amounts advanced	Disbursements	
		Compensation, pensions, etc.	Proportion administrative expenses
	\$	\$	\$
Nova Scotia.....	277,203	230,887	35,622
New Brunswick.....	594,436	519,688	59,201

## REPORT OF COMMISSION ON WORKMEN'S COMPENSATION IN SASKATCHEWAN

THE report of the Royal Commission appointed by the government of Saskatchewan early in 1928 to inquire into Workmen's Compensation in the province, was recently published. The appointment of this commission was noted in the LABOUR GAZETTE April, 1928; and its recommendations, upon which the Act passed at the recent session of the legislature was largely based, were given in the issue of February, 1929, page 182. (The new Act was outlined in the issue for April, page 379.) The Commission was composed of the following members:—Messrs. Lachlan D. McTavish, Harry Perry, Francis Mallock Still, Asa W. Heise, and Percy M. Anderson, K.C., chairman. The published report contains a full discussion of the evidence obtained by the commission, and a statement of the reasons leading to their various recommendations. It will be recalled that the commission recommended the adoption of the principle, now embodied in the new legislation, of collective liability, as followed in the acts of Ontario and other provinces of Canada having "state" systems of workmen's compensa-

tion. The following paragraphs, taken from the report, give the opinion of the commissioners on various aspects of the subject of their inquiry.

*Effects of Individual Liability.*—"One of the most vital objections to the individual liability system is the friction, ill-will and even bitter spirit which it creates, develops and maintains. From the very nature of this system this will happen. The injured workman or his dependants must in his Common Law action prove negligence on the part of the employer. As the evidence before us showed that the accident insurance carried by nearly all the employers was only \$3,000 for an individual workman (the rate for full coverage being prohibitively high) a usual verdict of \$12,000 to \$15,000 in fatal accident cases means the employer has to pay \$9,000 to \$12,000 out of his own pocket. Naturally the employer is going to contest the case as strenuously and effectively as he can, trying in self-protection to defeat the claim of the injured workman in his lawsuit, or, in effect, to deprive him of his compensation. In the case of a fatal

accident at the plant of a big corporation one can imagine the bitterness which a widow and her children, her relatives, and the deceased's fellow workers and brotherhood generally feel when they find the company is trying to deprive the unfortunate dependants of what they consider is their rightful compensation. The widow, her children and sympathisers think it is sad enough to have lost the husband, father and friend by accident, but when in addition an attempt is made by a rich corporation to avoid paying compensation and throw them penniless on the world, they feel the acme of cruel selfishness has been reached."

In support of this view the report quotes the opinion of counsel for the Canadian Pacific and the Canadian National Railways, who both stated that the corporations they represented would support a collective liability scheme or system such as Ontario had, not because they thought it would cost their companies less for compensation, in fact on the contrary they were satisfied it would cost them more, but because such a system would prevent friction and misunderstanding that might arise between the men and the company's officials by reason of the Common Law Action, and establish a feeling of goodwill and co-operation between all concerned. "The trend of all modern industry in the larger spheres is undoubtedly toward mutual understanding and good-will and the consequent confidence and co-operation naturally effected by and resulting from such a sympathetic spirit. This was the prevailing view among the representatives of both employers and employees."

"So far as the employers are concerned the act is fundamentally wrong; no amendment or amendments can cure the basic evil of the system, namely the Common Law action. It is the *bête noir* of the system. It is the Common Law action that causes such great uncertainty as to liability and the amount thereof, that causes financial embarrassment when a writ is issued, that causes the large verdicts which may throw the employer into bankruptcy, that makes it impossible to estimate the cost of doing business, that chiefly produces unfair competition and that engenders friction, ill-will and distrust on the part of the employees towards their employers; in fact that causes practically all the objections and complaints that the employers have against the present system...."

"So far as the employees are concerned there is not that perfect unanimity in favour of the collective liability system that prevails among the employers. About one-half

of the railway employees namely, those included in the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, the Brotherhood of Railway Trainmen, the Order of Railway Telegraphers and Maintenance of Way Employees, prefer the present system. However, the other half of the railway employees and all the majority of the workers, are in favour of the collective liability system such as that of Ontario."

*The Collective System.*—The Commissioners state "we are satisfied that the collective liability system is preferable. This latter system is fundamentally a mutual co-operative system, operating at cost. The other system operates for profit. The combined capital of the employers' liability companies runs into many millions of dollars, upon which shareholders expect and demand a reasonable dividend. Not only have these companies to pay a dividend, but their cost of operation is high; there are large costs incurred in conducting lawsuits, in claims' agents' salaries and expenses as well as the general costs of salaries and commissions paid to agents as their representatives. Under the collective liability system there are the administration costs of one board of three for the whole province, whereas if there are fifty or more employers' liability companies, there are the administration of those fifty or more companies. The Board of three for the whole province has all the advantages in economic saving that is hoped to be effected by the large amalgamations of modern industry and finance."

*Costs of Administration.*—"The largest percentage of administration among the provinces of Canada, namely 11.14 per cent of Nova Scotia, is much less than the 40 per cent cost of administration of the employers' liability companies. It is obvious that the greater the pay roll, the smaller the administrative costs in per centum will be. This accounts for the low percentage in Ontario and British Columbia.

"There is one object to the said system that seems to us insurmountable. Under the collective liability system such as in Ontario 95.97 per cent of the money collected for compensation purposes goes to the workman and 4.03 per cent for expenses, while it is admitted that under the employer's liability insurance 60 per cent goes to the workman and 40 per cent for expenses: in other words the administrative costs are as 4.03 per cent is to 40 per cent, or the collective liability system is 35.97 per cent cheaper. It is simply a case

of comparing the costs of administration of one large mutual insurance association operating at cost under one directorate (compensation board) with that of numerous casualty insurance companies with their many directorates and staffs of employees being operated for profit on a total capitalization of many millions. This extra 35.97 per cent has to be paid by somebody and that somebody is the employer. Such extra expenses of the companies must be obtained from the employers through the premiums charged. As the rate charged for partial coverage (\$3,000 for a workman) are higher than the rates for full coverage under the collective liability system, we naturally assume they would be very much higher for full coverage. It was suggested that the companies give greater service. We fail to see how that can be. The service which the insured man or his dependants required is the payment of the compensation money. The payment of compensation could not be made much more quickly than in the systems adopted by any of the compensation boards. Manitoba tried out the compulsory employers' liability insurance plan and found it very unsatisfactory. Subsequently the said province introduced and has since maintained the collective liability system. The general consensus of opinion is that the latter is a decided success.

"Our opinion therefore is that while the compulsory employers' liability insurance scheme is a marked improvement on the system at present in force in Saskatchewan, it is not the best and should not be adopted in lieu of or in addition to the present system."

*Accident Prevention Associations.*—The report notes that as a means of accident prevention the Ontario system makes provision for the formation of associations and committees among the employers whose findings or recommendations may be made effective by the Board. "In our opinion no system of accident prevention can be permanently successful unless there is co-operation between both employers and employees to that end, and therefore the employees, as well as the employers, should be included in any such associations or committees. We further think that it would be advisable if the Board exercised exclusive jurisdiction over the matter of accident prevention."

*Amount of Compensation.*—On the question of the scale of compensation the report says: "Your commissioners think that the compensation should be as generous as is consistent with the practical operation of the system.

In the consideration of accidents in industry and their compensation one might with profit think over two questions, firstly, who pays the human toll; secondly, who pays the money toll. The human toll is paid by the worker. It is his arms, his limbs, his body that are maimed; it is his life that is sacrificed; his is the human suffering. While any compensation scheme is based chiefly on the loss of earning power, still none will deny that no monetary compensation can ever adequately compensate for such loss. The employer is not injured; he does not pay the human toll; nor does he ultimately pay the money toll. His assessments go in as part of the cost of production and the consuming public at large pay the bill and of that consuming public the workers form a very large part. To the extent that the workers purchase a particular kind of manufactured goods, to that extent are the workers themselves paying for the compensation to injured workmen in that industry.

"The trend of compensation has been upward. Most of the provinces began at a lower percentage than they now pay. At the present time the scale of compensation throughout the various provinces of Canada is roughly as follows: Ontario, Quebec, Manitoba and Alberta, 66 $\frac{2}{3}$  per cent of the average wages over a year; British Columbia 61 $\frac{1}{2}$  per cent; Nova Scotia and New Brunswick each 55 per cent. Statistics show that about 99 per cent of all the temporary disability accidents in Saskatchewan are under the present system paid on the 100 per cent basis. . . .

"Taking everything into consideration we think the rate for Saskatchewan should be 66 $\frac{2}{3}$  per cent, but that the rate for widow should be increased from \$40 to \$50 per month, otherwise the Ontario scale should prevail.

"Some of your Commissioners rather favoured the idea of the workers contributing a small sum to the general fund, say 25 or 50 cents per month, a contribution which no workman would really feel. The reason of favouring such a contribution was not so much the financial addition it would make to the fund, but it was thought it would engender on the part of the employees a greater interest in the system and its practical operation. This view was, however, strenuously opposed by other of your Commissioners and the employees generally, who contended that the employees already contributed the difference between 66 $\frac{2}{3}$  per cent and the amount that would have been earned

had the workman not been injured; that the employer get his contribution returned to him in the cost of production but the employee never is reimbursed. In British Columbia and Alberta the employees make a special contribution, in Ontario they do not contribute.

The antagonism which such a contribution might create among the employees would more than offset any financial advantage obtained, so we recommend that as a general principle no special contribution be made by the employees."

## WORKMEN'S COMPENSATION IN NOVA SCOTIA IN 1928

THE annual report of the workmen's Compensation Board of Nova Scotia for 1928 contains a comprehensive account of the activities carried on under the Workmen's Compensation Act during the year, with statistical tables detailing every phase of the Board's operations, the nature of accidents, etc. During the year, the total number of accidents reported to the Board was 8,283 as against 7,424 in the previous year—an increase of 859. The total cost of accidents in 1928, so far as could be estimated, was approximately \$1,287,000, and the amount in disaster reserve fund at the end of the year was \$746,341.

*Summary for Twelve Years.*—During the twelve year period from January 1, 1917 (when the Act became operative) to the end of 1928, accidents to the number of 82,367 in the industries within the jurisdiction of the Board, were reported. During that time 1,160 workmen were fatally injured. The amount actually paid to workmen or their dependants and for medical aid during that period was \$6,934,609.70, and the amount required at the end of 1928 for the purpose of paying life and other pensions and compensation to disabled workmen, and for medical aid, was \$6,118,494.42. The total compensation paid or payable to workmen and their dependants and for medical aid for the twelve years amounts to \$13,053,104.12. That amount does not, however, represent the entire cost of the accidents for the twelve year period, as the administration expense and cost of safety associations are not included. There were 613 widows to whom pensions for life or until remarriage were awarded; while 1,458 children under sixteen years of age were awarded monthly pensions while under that age, and dependent mothers and fathers to the number of 330 were awarded compensation, in addition, 29 members of the family other than widows, children and parents, but who were wholly or partly dependent upon the earnings of the deceased workmen at the time of their respective deaths, received benefits. Life pensions were awarded to 2,836 workmen who were disabled, either wholly or partially, for life.

Prior to January 1, 1920, medical aid was not furnished to injured workmen except in special

cases. Since that date injured workmen have been entitled to free medical aid for thirty days from date of disability and during the nine years that have elapsed the cost of medical aid was \$598,178.81.

*Classification of Accidents.*—The 8,283 accidents reported to the Board for the year 1928 are classified as follows:—

Fatal accidents, dependency established and compensation commenced.. . . .	34
Fatal accidents, burial expenses paid, no dependents.. . . .	5
Fatal accidents, burial expenses paid or provisional payments made, dependency not yet established.. . . .	14
Fatal accidents reported, pending adjustment.. . . .	3
Accidents causing permanent partial disability.. . . .	140
Accidents causing total disability for seven days and over.. . . .	5,570
Accidents where medical aid only has been paid.. . . .	1,569
Claims pending adjustment.. . . .	345
Claims reported, not compensable.. . . .	603
	8,283

*Problem of Deficit.*—In the annual report for the year 1927 the estimated deficit at the end of that year was given as \$113,210.80. Adjustments were made later in regard to assessments and claims, and at December 31, 1928, the operations at the end of the year 1927 showed a deficit of \$169,835.70. For the year 1928 the total income, actual and estimated, amounted to \$1,280,760.32 and the expenditure for the same period amounted to \$1,390,108.76, leaving a deficit for 1928 of \$109,348.44. This, added to the deficit from prior years shows a total deficit at the close of the year 1928 of \$279,184.14. The deficit in\* shipping and navigation alone is \$315,220.42, indicating that other classes taken as a whole show a surplus.

The report states that the question of this deficit had the serious consideration of the Board during the past year, but as yet no defi-

\*During 1926 and 1927 disasters to the fishing fleet accounted chiefly for the heavy compensation expenditure in this group. In 1928, the Workmen's Compensation Act was amended excluding the fishing industry from the operation of Part I, and new provisions for the industry were enacted as Part III (LABOUR GAZETTE, September, 1928, pages 962-963).

nite plan has been worked out as to a solution of the problem. The Board have found it necessary to increase the rates in some of the sub-classes, and the hope is expressed that during the year 1929 employers will exercise greater care in the prevention of accidents, since the increase in rates means a larger payment of assessments from the individual employer, but if employers by active measures will reduce the accident cost, a less amount will be required in the way of assessments.

*Benefit of Act to Workmen and Dependents.*

—During the past year 5,570 workmen, wholly disabled for seven days and upwards, were paid compensation. At the end of the year the persons receiving compensation in the form of monthly pension were as follows: Widows, 450; children under 16, 847; dependent mothers, 68; dependent fathers, 42; other dependants, 27; workmen disabled for life (partially or wholly), 584.

*Income and Expenditure by Classes.*—The income and expenditure of the Board in respect to each class of industry, according to the provisional statement of such to December 31, 1928, were as follows:—

Class	Income	Expenditure
	\$ cts.	\$ cts.
Mining.....	665,865 45	666,407 17
Lumbering and woodworking..	151,786 24	205,295 28
Iron and steel.....	135,548 11	122,318 29
Manufacturing and operating (not otherwise specified)....	59,631 94	49,352 76

<b>Total.....</b>	<b>1,280,760 32</b>	<b>1,390,108 76</b>

## FARM LABOUR IN ONTARIO

THE Ontario Department of Agriculture recently published the fifteenth annual report of the Agricultural and Experimental Union, 1928. The addresses given at the annual meeting of the Union included "Impressions of the Farm Labour Situation," contributed by Mr. G. H. Edwards, B.S.A., of the Economics Department Staff, giving the results of a recent survey of the Province in relation to farm labour. Mr. Edwards pointed out that the shortage of competent farm hands is a serious problem, stating that "it is doubtless the cause to which is attributable the loss of thousands of dollars in potential agricultural wealth through partial damage or total loss of crops." The survey included farms of all sizes in Oxford, Dundas and Wellington Counties. In Wellington County it was demonstrated that only 28 per cent of the farmers had sons with them over 16 years of age, there being 90 sons on these 65 farms. This condition, Mr. Edwards said, has particular importance in the Province of Ontario where over 65 per cent of the farm operators are potential fathers of sons 16 years of age and over.

Excluding the Vimy Ridge boys, the average wage paid for yearly labour was approximately \$325 with board, and is less than \$1 per day. Forty-five farmers employed labour by the month at an average wage of \$33.63 for 5½ months, while 77 farmers hired by the day, an average of 20 days at \$2.25 per day. The women-folk on 152 of these 230 farms spent on the average 1¼ hours each day at farm work and on 15 farms did, in addition, 14 days' work during the busy seasons, making

a total of 49 days in the year, or the equivalent of almost two months' day labour in point of time.

"A further examination of the Oxford and Dundas County farms," it was stated, "indicates that those farm operators, who produce farm incomes above the average within their own size group, do so with better farm management rather than with greater man power. The amount of labour used on the more successful farms is not different from the amount used on the farms where the farm income is below the average. But the distribution of capital is different. The more successful farms have larger capital investments in machinery and in live stock; their crop index and live stock index indicate that they produce better crops and raise better live stock. This means that they get greater production per man in terms of farm income."

The farmer to-day may find available labour in three main sources outside his own family:— (1) Farmers' sons and others within his own community; (2) The unemployed of larger towns and cities; (3) Newly arrived immigrants.

"In past years the farm family played a large part in alleviating the concern of the farmer with his labour problem. This situation appears to have fallen off badly since the opening years of the Great War when farmers' sons, as well as other men's sons of tender years, acquired an extravagant taste for the high wages paid for piece work in munitions factories. The boy of 16 or 17 who has been paid from \$6 to \$10 per day for the work of his two hands does not when the munitions

factories close return to the home farm, which never to his knowledge paid a weekly pay-envelope of any size. Neither does he normally attach value to the board and lodging which his parental home provides. By preference, he remains in the city and usually makes good.

"If this important factor of the farm's labour force is to be retained and improved, it will be necessary to assure the farm boy on the farm a very real interest in that farm business, and an interest, which he may realize upon, when some day the estate is divided. He must be assured of the possibilities for a successful business career, and in addition sufficient present emolument to allow him to retain his associates in a self respecting manner. With him it is largely a social condition.

"The second source, unemployed of the larger towns and cities, frequently contains valuable labour for the farm, especially for seasonal work, but, on the whole cannot be considered as being reliable and requires a high degree of selective judgment on the part of the farmer. This type of labour is inclined to present greater independence and demands a particular management on the part of the farm operator.

"The third source, that of the newly arrived immigrant, is a very important one. If properly handled from origin to destination this source is a very valuable asset to the farmer and to Canadian agriculture in general, especially where this class of available labour is dealt with from a long time point of view."

### Wages

"If farmers will ever enjoy the benefits of an abundance of farm labour force," Mr. Edwards continued, "it will be necessary for agriculture to demonstrate its social and financial attractions in open and successful competition with other industries. From the farm labourer's point of view, he is interested first in a suitable wage, next, in reasonable hours for labour and then in stable employment. The assurance of these conditions will allow him to maintain an active interest in agriculture with the hope of realizing his ambitions to be a farm owner.

"The agricultural industry of Canada is of a character which makes heavy demands upon labour at definite seasons for relatively short periods. This condition, being more pronounced in the Prairie Provinces, makes great inroads upon the labour force of Ontario, particularly in the harvest season. Certainly the labourers are not to be faulted because they leave an Ontario farmer and travel with a harvesters' excursion. It is a perfectly natural trait which they exhibit and one which the

employer himself probably indulged in at an earlier period.

"A curve representing the general tendency of farm wages over the last twenty years shows a rise. This rise was most rapid during the war years, but did not reach its highest point until 1920. From there farm wages gradually came down until 1925, when they had fallen, nearly 26 per cent in Ontario. Since then they have remained fairly constant, a slight rise being experienced. If a curve representing the historical changes in farm wages be superimposed on a curve representing similar changes in prices of farm products a significant condition is illustrated.

"From a base of average prices over the five-year period 1909-1913, prices for farm products at the beginning of the war rose rapidly until the greatest was reached in 1919. From this eminence they fall rapidly until in 1923 are back to the base line of the five-year pre-war period. Fortunately for the Ontario farmer the index rose immediately from 100.7 to 143.3 and has remained fairly level since. The significance is that farm wages will lag behind prices in farm products. This is a favourable situation for the farmer and the labourer in periods when prices are rising. These periods are relatively short, however, and when the decline sets in, the farmer is the long sufferer. Prices may fall quickly but wages persist and must be paid. What then can the farmer do to alleviate his troubles concerning the farm labour situation? His frequent complaints, whether justified or not, are that; he cannot keep his boys upon the farm; he cannot offer yearly engagements to hired men; he cannot pay wages which prospects demand; experienced farm hands are not to be had and that he cannot farm without labour. It would seem that our farmers must take stock of their business condition annually, establish their affairs upon a better business basis and adjust the system of farming to suit the new conditions.

"Here in Ontario our present population is approximately 60 per cent urban and 40 per cent rural. The most prosperous countries of the world have been those where approximately one-third of the population engaging in agriculture provided for themselves and the remaining two-thirds leaving the latter to follow other profitable employment. Perhaps, then, it will be necessary for the Ontario farmer to supplement his lack of man power with that of other forms of power. A better farm layout, allowing more extensive use of modern labour saving implements and motive power will simplify the problem. In other words the problem is one not only of greater production per acre but greater production per man."

## CONSTITUTIONAL VALIDITY OF DOMINION LEGISLATION RESPECTING COMBINES

### Combines Investigation Act and Section 498 of Criminal Code declared *intra vires* by Supreme Court of Canada

ON April 30 the Supreme Court of Canada delivered unanimous judgment to the effect that the Combines Investigation Act and Section 498 of the Criminal Code are *intra vires* the Parliament of Canada. The judgment followed a reference by the Governor General in Council as to the constitutional validity of these enactments, both of which provide against trade or industrial combinations which operate to the detriment of the public. The questions referred to the Supreme Court of Canada for hearing and consideration were whether the Combines Investigation Act, either in whole or in part, and Section 498 of the Criminal Code were outside the powers conferred on the Dominion Parliament by the British North America Act, and if so, in what particular or particulars or to what extent. The reference was approved by an Order in Council of December 6, 1928, which appeared in full text in the LABOUR GAZETTE of January, 1929, page 25. The report of the Minister of Justice to the Committee of the Privy Council of Canada in recommending the test of constitutional validity stated that, while the Minister was not disposed to doubt the validity of the aforesaid combines legislation, it was essential for the enforcement of these measures that questions raised by outside counsel and certain judges of the provincial courts as to the competency of the Dominion Parliament so to enact should be set at rest.

The case was heard in the Supreme Court, at Ottawa, on March 11, 12 and 13. Hon. N. W. Rowell, K.C., and Mr. A. R. McMaster, K.C., addressed the Court for the Attorney-General of Canada; while Messrs. Eugene Lafleur, K.C., and J. C. McRuer appeared for the Proprietary Articles Trade Association, the organization of wholesale and retail druggists and manufacturers which, through an investigation in 1926 (1) and a second investigation in 1927, (1) was found to be a combine within the meaning of the Combines Investigation Act. As the two questions of the reference related to the division of legislative authority between the Parliament of Canada and the Legislatures of the Provinces, the Attorneys-General of Ontario and of Quebec were represented, the former by Mr. E. Bayly, K.C., and the latter by Mr. Aimé Geoffrion, K.C. Two trade associations known as the

Amalgamated Builders Council and the Amalgamated Clothing Industries Council were represented by Mr. W. F. O'Connor, K.C.

#### Combines Investigation Act

The Combines Investigation Act, chapter 26 of the Revised Statutes of Canada, 1927, was passed in 1923, and provides for the investigation of combinations in trade and commerce which are alleged to be operating against the public interest. The complete definition of a combine is quoted from section 2 of the Act in Mr. Justice Duff's reasons for judgment which are contained in the report at the concluding pages of this issue. Preliminary inquiry into an alleged combine is made on application from any six British subjects resident in Canada, or may be made on the initiative of the Registrar of the Act or at the instance of the Minister of Labour, under whom the Act is administered. If the preliminary inquiry discloses sufficient evidence to justify further investigation, this may be conducted by the Registrar or by a Commissioner specially appointed by the Governor in Council. Full authority is given the Registrar and the Commissioner to examine witnesses on oath and compel the production of records and documents.

The remedies provided by the Act are those of publicity and penalty. The proceedings are conducted in private, unless otherwise ordered by the Minister, but the report of any commissioner is required to be published within fifteen days of its receipt by the Minister. Any person who is a party or privy to or knowingly assists in the formation or operation of a combine is guilty of an indictable offence and liable to a penalty not exceeding \$10,000 or to two years' imprisonment; or, if a corporation, to a fine not exceeding \$25,000. Provision is also made in the Act for the reduction or removal of the customs duty on any article of commerce, if a combine exists to promote unduly the advantage of manufacturers or dealers at the expense of the public, and if that disadvantage is facilitated by the customs tariff. Similarly, the Exchequer Court may revoke a patent if there is evidence to show that the holder of such patent has made use of his exclusive rights to limit production or restrict or injure trade unduly.

(1) LABOUR GAZETTE, October, 1926, p. 945; December, 1926, p. 1176.

(1) LABOUR GAZETTE, November, 1927, p. 1165.

Exemptions relating to organizations of employees or workmen are made by section 4 of the Act, which reads as follows:—

"4. Nothing in this Act shall be construed to apply to combinations of workmen or employees for their own reasonable protection as such workmen or employees."

### **Criminal Code, Section 498**

The provisions of section 498 of the Criminal Code were first enacted by the Dominion Parliament, in much their present form, in 1889. The wording of the section has remained unchanged since 1900, and reads in full text as follows:—

"498. Every one is guilty of an indictable offence and liable to a penalty not exceeding four thousand dollars and not less than two hundred dollars, or to two years' imprisonment, or, if a corporation, is liable to a penalty not exceeding ten thousand dollars, and not less than one thousand dollars, who conspires, combines, agrees or arranges with any other person, or with any railway, steamship, steamboat or transportation company—

- (a) to unduly limit the facilities for transporting, producing, manufacturing, supplying, storing or dealing in any article or commodity which may be a subject of trade or commerce; or,
  - (b) to restrain or injure trade or commerce in relation to any such article or commodity; or,
  - (c) to unduly prevent, limit, or lessen the manufacture or production of any such article or commodity, or to unreasonably enhance the price thereof; or,
  - (d) to unduly prevent or lessen competition in the production, manufacture, purchase, barter, sale, transportation or supply of any such article or commodity or in the price of insurance upon person or property.
2. Nothing in this section shall be construed to apply to combinations of workmen or employees for their own reasonable protection as such workmen or employees."

### **Former Combines Legislation**

Earlier Dominion legislation respecting combines includes the Combines Investigation Act, passed in 1910; the Board of Commerce Act, passed in 1919; and the Combines and Fair Prices Act, 1919. These three Acts have since been repealed. The only investigation under the Combines Investigation Act of 1910 related to the United Shoe Machinery Company. The board reported in this case that the Act had been violated by an undue limiting of competition. Publicity was given to its findings, but no further proceedings were taken. This Act was repealed in 1919 when the Combines and Fair Prices Act was passed.

On Nov. 10, 1916 (under authority of the War Measures Act, 1914), an Order in Council (P.C. 2777) was passed designed to com-

bat the increased cost of living. As amended on Nov. 29, 1916, by P.C. 2957, this order provided for the repeal of sec. 498, as far as trade in the necessaries of life was concerned, during the existence of these special regulations. Any combination to restrain trade or lessen competition in or enhance the prices of any necessaries of life was made a criminal offence, the qualifying words "unduly" and "unreasonably" being omitted. Other clauses were designed to prevent hoarding and excessive profits. Investigations were made with respect to several commodities, but no recommendations were submitted for legal action against any combine. Amendments to these regulations were made by the following Orders in Council:—P.C. 2461, of Oct. 4, 1918; P.C. 3069 of Dec. 11, 1918. On Aug. 14, 1919, the latest Order in Council was rescinded by P.C. 1722, and sec. 498 of the Criminal Code was restored to its original status.

In 1919 the Combines and Fair Prices Act (9-10 Geo. V, c. 45) was enacted, to be administered by a Board of Commerce appointed under the Board of Commerce Act (9-10 Geo. V, c. 37). The former statute repealed the Combines Investigation Act of 1910, and provided that prosecutions under sec. 498 of the Criminal Code could be undertaken only with the written consent of the Board of Commerce. A combine was defined as a merger, trust or monopoly, the control of another business, or any agreement, actual or tacit, which limits production, transportation or trade, fixes a common price or a resale price, prevents or lessens competition or otherwise restrains trade, when the operation of such combine is to the detriment of the public. The Board of Commerce was empowered to investigate complaints and to issue orders forbidding acts in pursuance of a combine. Penalties were provided for violation of such orders, and recommendations for prosecution might be forwarded to the Attorney-General of the province concerned. Part I of the Act, as above indicated, dealt with combines. Part II dealt with fair prices and authorized the Board of Commerce to prohibit such practices as the hoarding of staple articles of food, clothing and fuel, all enhancements of the prices of such articles when considered by the Board to be designed as unfair enhancements, and all taking of profits on such articles when declared by the Board to be unfair profits.

A stated case involving the question of the validity of the Combines and Fair Prices Act and the Board of Commerce Act was submitted in 1920 to the Supreme Court of Can-

ada. Two questions were submitted to the Court—(1) whether the Board of Commerce had lawful authority to make an order prohibiting certain retail dealers in the City of Ottawa from charging as profits on sales more than a certain percentage of cost described as a fair profit; (2) whether the Board had lawful authority to require that the order, when issued, should be made a rule of the Supreme Court of Ontario. The judges delivered their opinions on June 1, 1920, but, being equally divided, no judgment was rendered. Appeal was then made to the Judicial Committee of the Privy Council, and judgment was delivered Nov. 11, 1921 (1922, 1 A.C. 191). The Privy Council declared the legislation to be *ultra vires* the Dominion Par-

liament, as interfering with property and civil rights. It was held that the "regulation of trade and commerce" section of the British North America Act, 1867, could not, by itself and in the absence of any general power possessed by the Dominion independently of that section, confer capacity on the Dominion to regulate particular trades and businesses. Reasons for distinguishing between these two Acts of 1919 and the Combines Investigation Act of 1923, with respect to their constitutional validity, are included in the reasons for judgment in the case decided on April 30, 1929.

The full text of the judgment delivered in the Supreme Court of Canada on April 30, and of the reasons for judgment, appears in the concluding pages of this issue of the LABOUR GAZETTE.

## OLD AGE PENSIONS IN CANADA

### Statistics for British Columbia, Manitoba, and Saskatchewan for First Quarter of 1929

THE accompanying tables give particulars of the operations of the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156), during the first three months of the year 1929. Similar tables, covering the three months ending December 31, 1928, were given in the February issue. The text of this Act was given in the LABOUR GAZETTE, April, 1927, page 375. The Act makes provision for the establishment of a Dominion-Provincial pension system to be effective in such provinces as have enacted special legislation for this purpose. The act is now in full operation in the provinces of British Columbia, Manitoba and Saskatchewan. Legislation to give effect to the Act has been enacted also in Ontario and Alberta, but is not yet fully operative.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year, and who has resided in Canada for the 20 years preceding, and also has resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds \$125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments. The Department of Labour of Canada pays quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months.

The federal act became operative in British Columbia in September, 1927; in Saskatchewan in June, 1928; and in Manitoba in September, 1928. The Yukon Council at its session in 1927 passed an ordinance respecting Old Age Pensions, which provided for the participation of Yukon Territory in the scheme, but no payments of pensions within the Territory have

yet been recorded. No payments have yet been made in conformity with the Order in Council making the provisions of the Old Age Pensions Act applicable to the Northwest Territories. The accompanying tables therefore relate to the payment of pensions under the Dominion-Provincial scheme only within the three provinces enumerated above.

### Fishermen's Co-operative Society in British Columbia

A Fishermen's Co-operative Association was organized recently in British Columbia, and is now incorporated under the Co-operative Societies' Act of the province. The new society follows the Rochdale co-operative plan of "one vote, one member." Shares of \$25 each are to be sold to members, and to insure the control of the fishermen, 75 per cent of the stock must be held by *bona-fide* workers engaged in the fishing industry. The shares will be non-assessable, and one share entitles a member to the same privileges as a member having the limit—500—except that each share would participate in the dividends, which can

not be more than 8 per cent per annum. Members purchasing tackle and supplies from the association will participate in the profits derived from the handling of such goods.

The operations of the co-operative may include the catching, curing, canning of fish, and other branches of the fishing industry. A cannery is to be built shortly at Rivers Inlet, and is expected to be running, towards the end of June. Three hundred members have acquired shares, and it is believed that the coming season will find a large proportion of the fishermen doing business for themselves.

## OLD AGE PENSIONS IN NOVA SCOTIA

### Interim Report of Provincial Commission of Inquiry

THE Government of Nova Scotia, on August 13, 1928, appointed Mr. H. E. Mahon, LL.B., as commissioner under the Public Inquiries Act, to investigate the subject of old age pensions, with a view to the question of the participation of the Province in the Dominion Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156). The commissioner was instructed as follows:—

1. To determine the number of persons who—(a) are British subjects or, being widows not being British subjects were such before their marriage, and (b) have attained the age of seventy years, and (c) have resided in Canada for the last twenty years and in the Province of Nova Scotia for the last five years and (d) are not in receipt of an income of as much as \$365 a year.

2. To determine the proportionate cost of providing such persons with a pension as provided by chapter 156 of the Revised Statutes of Canada, 1927.

3. To determine the cost of administration in connection with the payment of any such pensions.

4. To determine what persons, if any, otherwise entitled to a pension under the said Act are in receipt of a pension from any other source.

5. To inquire into and report upon what alternative measures of taxation could be imposed or other means taken to provide the increase in revenue that would be necessitated by the adoption of such scheme.

The commissioner appointed Mr. Arthur L. Neal, B.Sc. (Econ.), to act as secretary, and at once proceeded to secure relevant material from the Federal Department of Labour, from those provinces in which effect had already been given to the Dominion Act, and from a number of the American States having such legislation in force.

It was found impracticable to ascertain the exact number of persons eligible for old age pensions throughout the Province, but in order to form the basis for a computation of the probable cost of the scheme, six counties and the City of Halifax were chosen for investigation as being a sample of prevailing conditions in the province as a whole. The commissioner also examined the public accounts of Nova Scotia and of the various other provinces in order to ascertain what sources of provincial revenue might be available for old age pensions. The results of these investigations are given in an interim report, dated February 22, 1929, a further report being promised when

the survey has been completed in the rural districts.

#### Development of Legislation

An introduction to the report gives an outline of the history of old age pension legislation, commencing with the French Act of 1850 establishing a system of government annuities, which was subsequently followed in other countries. The voluntary method, based on the principle of individual saving, has now been generally abandoned in favour of state pensions, either on a contributory or a non-contributory basis. The commissioner states that a weakness of the compulsory contributory system, originated in Germany in 1899, lies in the fact that it requires a well organized and controlled economic system, a predominating industrial population, as well as some provision for the regular exaction of contributions. The compulsory method of old age pensions is therefore declared not practicable in agricultural countries: "The income of a farmer is a very indeterminate amount, and is not accessible to compulsory exactions by government authority." However, non-contributory pensions have often been adopted as a stepping stone to a contributory system, as in Great Britain, Australia and New Zealand. Non-contributory old age pensions were introduced in Canada by the Act of 1927. The commissioner then gives a detailed account of the provision of this Act (LABOUR GAZETTE, April, 1927, page 375.)

#### Procedure in Inquiry

The commissioner notes the absence of official statistics as to the number of indigent aged persons in Canada. As no investigations had been made in this subject in Nova Scotia it was necessary to make a direct inquiry in order to find a basis for any recommendations as to the applicability of the Federal Act in the province. Accordingly, a questionnaire was prepared upon which all persons 70 years of age or over in the province were to give information as to their condition, financial and otherwise, these forms being circulated with the assistance of the Post Office Department. It was discovered that many elderly people who had left the province to reside with children in other places, would be glad to return if they could get an old age pension. The report points out that the existence of many such cases constitutes a weighty, although indeterminate factor in calculating the cost of pension legislation.

The aged person's own valuation of his personal property was accepted by the commis-

sion, all investments being taken at their market value. The exact definition of income was one of the greatest problems. Income was taken to include:—(a) the yearly value of investments (e.g., houses not personally occupied, stock, bonds, etc.); (b) earnings not arising from investments or property; (c) the benefit of any property personally used or enjoyed, (e.g., homestead, etc., calculated at 5 per cent of its capital value); (d) the yearly value of any other regular or periodic benefit to which the person is legally entitled.

**Aged Population in Nova Scotia**

The commission estimates the number of persons 70 years of age or over in Nova Scotia on June 1, 1928, to be in round numbers 25,500. This estimate was obtained by taking the percentage 4.7 (the percentage in this age group according to the 1921 census) of 543,000, which was the total population for that date as given in the Canada Year Book.

The number of aliens and of Indians in the Province not large enough to affect the commissioner's estimate of the number of pensioners, but if 200 be subtracted on their account from the total estimated number of persons 70 years of age and over, 25,300 is arrived at as the number of persons who, subject to the means and residence qualification, would be eligible for old age pensions in Nova Scotia.

**Estimated Cost of Pensions**

The statistical returns obtained through the questionnaire were not found to afford sufficient data for a reliable estimate of the probable cost of old age pensions in Nova Scotia. As the returns from the City of Halifax were not complete, the Commission felt that it would be unwise to include them in this report for fear of misrepresenting conditions. Nevertheless, it was possible to make a computation on the basis of the Hants County figures, which, within a considerable margin of error, are presented as a forecast of what the complete returns would disclose. The estimate thus obtained is shown in the following table:—

ESTIMATED INCOME DISTRIBUTION IN NOVA SCOTIA

Annual Income	Per cent of British aged population	Total number of persons
\$400 and over.....	17.5	4,427
\$300 to \$399.....	5.3	1,341
\$200 to \$299.....	7.5	1,897
\$100 to \$199.....	13.6	3,441
Less than \$100.....	13.4	3,391
None.....	42.7	10,803
	100.0	25,300

On the basis of this distribution of incomes, the present annual cost of paying pensions to the aged citizens of Nova Scotia was computed as follows:—

No. of Pensioners.	Amount of Pensions
10,803 with no income, at \$240 each.. . . .	\$2,592,720
3,391 with income less than \$100 at \$240 each..	813,840
3,441 with average income \$150, at \$215 each..	739,815
1,897 with average income \$250, at \$115 each..	218,155
872 with average income \$330, at \$35 each..	30,520
Total.. . . . .	\$4,395,050

The total amount payable in pensions according to this computation would be roughly \$4,400,000, of which sum the Federal government would pay half (\$2,200,000) and the Provincial government would be liable for the same amount plus the costs of administration.

The commissioner points out also the additional cost involved in the fact that, under the existing procedure in the administration of old age pensions, the province would be called on to pay the interest charges on the full amount of pensions for one quarter year, the Dominion reimbursing the province at the end of each quarter; and further that, under the reciprocal arrangements between the provinces, Nova Scotia would be called on to pay a large contribution towards the pensions of former Nova Scotians now resident in other provinces. Estimates of the number of pensioners are also subject to "conjectural factors" such as the strictness or looseness of administration.

**Employment and Savings of Aged Persons**

The Commissioner discusses the objection that pensions might discourage the habit of saving, and also might cause old people to give up light employment. "A large proportion of the aged population of Nova Scotia are still gainfully employed in various lighter occupations. If the proposed pension legislation would tend to induce them to give up their employment, the fact would add materially to the cost of Old Age Pensions and would not necessarily promote any greater degree of human happiness. What is true in the case of small earnings is also true of small savings. Persons approaching a pensionable age would feel inclined to spend their small capital accumulations rather than suffer a reduction in their pension when they become eligible."

**Pensions and Poor Relief**

In the Commissioner's opinion the cost of pensions is not likely to be met to any appreciable extent by a resulting relief in the present expenditure on poor relief. "In the

first place, the amounts spent by the municipalities on poor relief is only a fractional part of the estimated cost of old age pensions. In the second place experience has shown in the countries where old age pensions have been in force for a number of years that it has not resulted in any material reduction in the cost of almshouses. This is due to the fact that only a part of the inmates are septuagenarians, and of these many are incapacitated mentally or physically so as to require institutional care. The problem of poverty is inherently complex and is not susceptible to any simple solution.

"One factor in reducing the net cost of pensions is found in the possibility that the province could refuse pensions to those who have children able to support them. This is the policy of British Columbia. At the present time it is difficult to estimate how far such a provision would reduce the cost of the scheme, as the statistical data of the Commission are incomplete, and the experience of British Columbia is not of long enough standing to be of service. The question will be dealt with in the final report."

#### Administration

The commissioner considers that if the administration of pensions were to be in charge of the Workmen's Compensation Board as in British Columbia and Manitoba, the annual administrative cost to the province would be within \$20,000. The cost of administration in British Columbia is about \$14,000, but in Nova Scotia the administrative charges would be much greater, as there would probably be more than twice the number of pensioners.

#### Possible Source of Revenue

The Commission believes that the present sources of revenue cannot be increased sufficiently to produce any considerable part of the sum needed to pay for old age pensions. He suggests however that something could be done by way of increasing the present succession duties. Various new sources of revenue are enumerated, which might be used either singly or in conjunction, namely:—(1) A levy on the municipalities; (2) A provincial poll tax; (3) A provincial income tax; (4) Liquor control; (5) Fees payable by applicant; (6) A further Federal allowance.

#### Share of Municipalities

On the question of the joint responsibility of the municipalities, which now bear the whole cost of poor relief, the Commissioner considers that it would be "not unreasonable" to provide that municipal bodies should bear a part

of the financial burden. "Such a provision would conduce to economy and strict administration." The greatest difficulty, it is thought, would be to determine the responsibility of the municipality in the case of persons who have moved from one place to another.

The report discusses the alternative plan of levying a provincial tax on municipal assessments, pointing out, however, that this policy might be considered as an invasion of municipal rights, and would be difficult to carry out owing to the lack of uniformity in the assessments of the various municipalities. The suggestion of a poll tax as a source of revenue is criticized on the ground of its expense, and also of its regressive character, though the commissioner recognizes that this plan would have the merit of introducing a contributory element which might be salutary.

#### Position of Eastern Provinces

The report concludes by enlarging on the high cost of old age pensions in eastern Canada as compared with the western provinces.

"So far none of the eastern provinces have adopted Old Age Pensions as provided by the Federal Act of 1927. This is a very striking fact, and is certainly not due to chance or to lack of appreciation of the problems of aged dependence, but has its essence in economic fact and unalterable social conditions. The eastern provinces are hesitating to adopt the scheme because, on account of their less favourable age composition, the adoption of the pension scheme would involve a far greater financial burden than is the case in the West."

The British Columbia Safety League conducted a special safety campaign on May 19-21 for the purpose of checking industrial and traffic accidents in the province. References to accident prevention were made in churches and public schools, and various employers made special efforts to advertise methods of safety. The British Columbia Electric Railway Company placed public speakers in their street cars to give short addresses on the subject.

A bulletin on "The Handling of Explosives" published by the Explosives Division, Federal Department of Mines is being distributed by the Province of Quebec Safety League. The purpose of the pamphlet is to call attention to the cardinal principles which should be observed in the handling of explosives and shot-firing from a safety point of view. The conveyance, storing, and employment of explosives are dealt with in detail.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Safety Trophies in Ontario Paper Industry

At the annual meeting of the Ontario Pulp and Paper Association, held at Toronto in April, the McInnis Trophy going to the first aid team in Ontario having the best record under examination, with individual medals to members of the winning team, was presented to the winners, the Howard Smith Paper Mills, Ltd., of Cornwall.

The Association's own trophies, in the form of shields and flags, were also presented, one trophy and one flag going to the winners in each class for the lowest accident record in 1928. The awards were as follows:—

Class A—Winner, Abitibi Power and Paper Company, Ltd., Sturgeon Falls Division, Sturgeon Falls, with a record of 18 non-fatal accidents, involving 181 days lost time, or equal to 243 days lost time per 1,000 hours exposure to hazard; runner-up in this class, Canadian International Paper Company, Ltd., Hawkesbury, with a record of 28 non-fatal accidents, involving 494.5 days lost time, or equal to 385 days lost time per 1,000 hours exposure to hazard.

Class B—Winner, Don Valley Paper Company, Ltd., with a perfect record; runner-up in this class, Provincial Paper, Ltd., Mille Roches, with a record of 10 non-fatal accidents involving 47 days lost time or equal to 122 days lost time per 1,000 hours exposure to hazard.

### Prevention of Lead Poisoning

The prevention of lead poisoning is the subject of a paper in the April issue of the *Industrial Hygiene Bulletin*, published by New York State Department of Labour. It is stated that "no amount of medical supervision can prevent the occurrence of lead poisoning or lead absorption in the absence of proper housing conditions, and proper facilities for the prevention and removal of lead dust. . . . The proper medical supervision of lead workers, however, is invaluable. It has been shown that lead is a progressive and cumulative disease. It does not always manifest itself in the sudden dramatic and acute symptoms commonly associated with it in the minds of many workers and plant managers. Lead absorption may be present over a long period of time without the workers being aware of its existence. The present study has shown that approximately 60 per cent of the workers in the lead industries of the state had signs of lead absorption, either with or without clinical manifestations, and yet they were, for the most part, entirely unaware of the fact.

It must be borne in mind that the presence of lead in the systemic circulation of a worker (lead absorption) makes him not only a potential case of acute lead poisoning, but is believed to act upon his blood vessels and his kidneys in a manner to hasten the onset of a premature old age. At any time such a worker, as a result of an infection, such as pneumonia, for example, or some change in his body metabolism, may suddenly find that large quantities of the lead which he had been harbouring in his bones in inert form have suddenly become mobilized and thrown into his circulation. This may result in a very severe and even fatal attack of lead poisoning. Such a mobilization or lead has been known to occur in workers as many as sixteen years after they had left the lead industries, and exposure to lead had ceased."

### Miners' Welfare Fund of Great Britain

The seventh annual report of the Miners' Welfare Fund and the second annual report of the Selection Committee appointed to administer the Miners' Welfare National Scholarship System, both published by the Mines Department of Great Britain, have been recently received. The Miners' Welfare Fund, which is administered by a committee appointed by the Board of Trade, was established under the British Mining Industry Act to which reference was made in the *LABOUR GAZETTE* of April, 1922, page 376. The period covered by the report on the Welfare Fund is for the year ending December, 31, 1928, while the report on the National Scholarship Scheme covers the period from November, 1927 to October 1928.

The sum paid into the Fund in 1928 from the levy on output was £973,259; the total sum paid out during the year was £837,176. The receipts from the welfare levy on royalties imposed by the Mining Industry Act, 1926, amounted to £160,000; this levy, supplemented by contributions from the general fund, is devoted to pithead baths. Including interest from the Fund as a whole, the total of the baths fund at the end of 1928 was £602,918, from which £208,476 had been allocated for approved schemes.

The total receipts from contributions on "output levy" account i.e., from the proceeds of the penny a ton levy on output—from the initiation of the fund in 1920 to December 31, 1928, were £6,920,882; to which must be added interest to the amount of £579,000, making a total of £7,499,882. Four-fifths of

this (£5,840,613) is earmarked for the respective districts in which the money is raised; the remaining fifth forms the General Fund used for purposes of education and research of value to the industry generally.

The amount credited during the year to the General Fund (devoted mainly to education and research) was £194,652, of which £31,400 was transferred to the pithead baths fund. The total allocations from the fund during the year amounted to £177,419 of which £54,304 was for research, £107,338 for education, and £15,777 for administrative expenses and other miscellaneous services. The number of applications for miners' welfare scholarships for award in 1928 was 625, of which 213 were from working miners and 412 from the children of miners; eleven scholarships were awarded, one of these being for post-graduate work.

### Inspection of Scaffolding at Montreal

The Montreal City Council, recently approved a new by-law concerning the erection and inspection of scaffolding inside or outside buildings and of hoists for building materials. Hereafter every proprietor, builder, or contractor, shall, before erecting or causing to be erected any scaffoldings or lifts, obtain a permit to that effect from the inspector and shall moreover, before the same are used obtain from the said inspector a certificate of inspection of such scaffoldings or lifts.

### Safety Work at British Empire Steel Corporation's Plants

Speaking at the annual banquet of the British Empire Steel Corporation's plant at Sydney, Nova Scotia, Mr. John W. Worgan, safety engineer, outlined the accident prevention record of the Company for the year 1928—a record surpassing all former efforts in the history of the organization. Reference to this record was made in the last issue of the LABOUR GAZETTE page 398. Emphasizing the practical value of safety work and the mind for continued individual vigilance, Mr. Worgan said:

"Systematic safety work is every day showing positive and valuable results in the reduction of industrial accidents and when it is carried on in a whole-hearted and efficient manner, the returns on the investment are large. Accidents can no longer be considered 'all in a day's work.' They break down efficiency, particularly by lowering the morale of the men, and although the actual returns from safety may be somewhat intangible and hard to determine, the fact that the returns are real and valuable is acknowledged by every employer who has given organized safety work a real trial.

"That there is need to carry on organized safety work is evident to all who are engaged in accident prevention, or who have closely observed it. The application of mechanical safeguards is followed by a reduction in the number of accidents, but the mere installation of mechanical guards of this sort will not solve the safety problem satisfactorily and completely. Physical guards are exceedingly important, but you cannot place a mechanical guard about carelessness, and the best safeguards are intelligence and safety education. This means that safety bulletins and safety literature, in connection with active and efficient safety organizations are exceedingly important factors in dealing with the problem."

### "No Accident" Month on Canadian National Railways

The month of May has been set aside by the Canadian National Railways as a "no accident month," and efforts have been made to secure the co-operation of the general public in the campaign. Each year the safety department of the Railway specifies two months, one in the summer, the other in the fall, to make a drive to prevent accidents. Charts drawn of recently by Mr. W. H. Jones, assistant director of the safety branch, indicate the success of these "no accident months" during the year 1928. Last year the months of May and November were set aside over the entire system for prevention of accidents. The records of both months fall far below the other months of the year in the matter of injuries and deaths at crossings, and in shops, while trespassing, etc.

### Benefit of Varied Occupation

The Industrial Fatigue Research Board of Great Britain recently published a report (No. 52) on the "comparative effects of variety and uniformity of work." The conclusion reached in the report is that complete uniformity in manual repetitive work is generally less productive and leads to greater irregularity in the rate of working than a reasonable degree of variety, which is also preferred by the workers, though this effect seems to depend partly on the nature of the process and partly on the individual operative. Furthermore while frequent changes are definitely detrimental to production there is some evidence that the best conditions are attained when the form of activity is changed after 1½ to 2 hours of unvaried work.

The general result of the investigation forming the subject of the present report is to indicate that, in the case of light repetitive work—

(1) Uniformity in the method of procedure is generally less productive and conducive to greater irregularities in the rate of working than are varied forms of work.

(2) The highest output is obtained when the form of activity is changed after  $1\frac{1}{2}$  or 2 hours of unvaried work.

(3) Many changes are detrimental to output because of their interference with the swing of work.

(4) In repetitive work of a fatiguing nature, changes in the form of activity should be relatively more frequent.

(5) A high degree of resemblance between the alternating forms of activity, although subjectively satisfying, is not conducive to increased output.

### Frequency of Disabling Sickness Among Industrial Employees

For some time past the United States Public Health Service has been conducting studies on the frequency of disabling illnesses among industrial employees. In connection with such studies the experiences from a group of 35 industrial sick-benefit associations and company relief departments have been carefully analyzed. Statistics of sickness frequency based upon the claims for sickness benefits of members of industrial mutual associations do not for various reasons actually measure the incidence of disability which lasts more than one week.

Respiratory diseases were reported as the cause of 41.8 per cent of the claims for illness benefits; digestive diseases 13.7 per cent; and external causes (non-industrial accidents), 10 per cent. These three groups, accordingly, accounted for virtually two-thirds of the cases for which sick benefits were paid by associations reporting to the United States Public Health Service.

The incidence rates by years, 1921-1927, showed an upward trend both for the respiratory and non-respiratory group of diseases. Each year since 1922 the frequency of external causes (non-industrial accidents) has been larger than in the preceding year. Influenza and grippe principally accounted for the upward trend in the respiratory incidence rates. Among the non-respiratory diseases digestive diseases and circulatory-uniary group showed the most perceptible increases.

The frequency of cases according to their duration in weeks was ascertained for 1922-1924 and for 1925-1927 in the 15 associations which reported continuously throughout both periods. In 1925-1927 there was a lower rate of cases lasting 8 to 20 days than during the

preceding three years, but a higher rate of cases lasting 8 weeks or longer.

The frequency of 8-hour or longer disabilities was 50 per cent higher among female than among male industrial employees, 1921-1927, although the comparison excluded nearly all diseases which were not common to both sexes.

A low sickness rate was found among employees of the iron and steel industry. The rates were especially low for neurasthenia, the digestive diseases, bronchitis influenza, and grippe among steel workers. The incidence rate of pneumonia, however, was found to be considerably higher in steel than in the other industries represented, and a special study is in progress to determine the causes of pre-disposition to pneumonia in this industry.

### Rules for Safety Work

Mr. W. J. Bennett, general safety supervisor of the Bell Telephone Company of Canada, in a recent address to the Round Table Club of the Province of Quebec Safety League at Montreal, stated that the following rules had been found to be of great service in the company's safety work: "First, the impression on the supervisory forces of their responsibility for making the job a safe one; second, the creation of a definite and effective safety organization; third, the instruction of employees in accident prevention and safety measures; fourth, the developing of a safety code which is largely the work of the employees; and fifth, the putting into operation of an effective system of inspection for the purpose of becoming informed regarding the presence of hazardous conditions in the plant and for the removing of these conditions promptly."

A foremen's congress, under the auspices of the Province of Quebec Safety League with the support of the leading employers of labour, was held at the Montreal Technical School on May 20-21-22-23. Foremen, plant executives, and others of the city and province attended. Lectures on accident prevention were given by qualified speakers, moving pictures of industrial interest were shown, and many novel features, including a safety play, were introduced. The object of the Congress was to enliven the interest of all concerned in safety matters, and to present the incalculable economic value of the care of the "human machine."

## “INDUSTRIAL RELATIONS PROBLEMS IN SMALL PLANTS”

THIS is the title of a book recently published by the National Industrial Conference Board (United States), giving the results of a survey undertaken to ascertain the extent of organized welfare work in the industrial plants of average size. (A note on the various activities of this Board was given in the *LABOUR GAZETTE*, January, 1927, page 9.) The purpose of the book is to assist the smaller industries to reach a solution of some of their staff problems. The term “small plant” is employed as meaning one with a working force of 250 persons or less. Far from being exceptional as to size, such plants form the vast majority of industrial concerns, and are in fact the prevailing type in the United States, employing, however, rather less than half the total number of workers in the country. The present report is based upon material supplied by 4,409 establishments, employing 419,391 workers.

### Various Types of Plans

In a discussion of the various types of welfare undertakings it is stated that “certain phases of industrial relations programs which appear to be nearly as prevalent among small establishments as among large ones are: the giving of supplemental bonuses for special accomplishments such as regularity of attendance, punctuality, long-service or high quality of output; profit sharing plans; group life insurance; vacations with pay for wage earners; first aid and safety committees; informal recreational activities such as picnics, outings and dances; informal employee education and training; and various plant conveniences. All of these activities possess similar characteristics which explain their ready adaptability to small-plant use. They are free from the requirement of special machinery for their administration; they are financed from present resources and require neither capital expenditure nor funding for the future; they all involve a generally fixed cost which is readily ascertainable and includes little overhead expense; and, for the most part, they deal with the individual rather than with the working force as a whole.”

### Plans Not Suitable for Small Plants

Among the undertakings that call for a large capital investment and are therefore unsuitable for small establishments, the report enumerates plant lunch rooms or cafeterias, company housing or home purchase plans, hospitals and clinics, and the more expensive

recreation facilities such as club rooms, club houses, athletic fields, gymnasiums and summer camps. The expense of maintaining a plant physician or a nurse, and of carrying on a formal educational program may also prove prohibitive for a small plant. “Works councils,” it is stated further, “are planned primarily for large working forces and are consequently found less frequently in small plants. The introduction of organized financial relief or insurance plans is also rendered difficult in small plants because of the limited number of employees. Group insurance policies are required to cover at least fifty employees and 75 per cent of the total working force. Employee mutual benefit associations organized to pay sickness and accident insurance benefits are financed largely from dues paid by members. The soundness of such an insurance plan rests upon a distribution of risk sufficiently wide to insure against insolvency in the event of several successive demands upon the benefit fund.”

Attention is called in the report to a recent development “of great significance,” namely the joint establishment by two or more neighbouring plants of lunch rooms, dispensaries, hospitals, optical and dental clinics, foreman training classes, general educational courses, athletic programs and employee stores.

### Cost of Existing Plans

The cost of industrial relations undertakings is estimated as follows:—“The average total cost of the selected activities in 1927 in plants employing 250 or less wage earners was found to be \$26.65 per year for each employee who shared in one or more of the benefits. In the group of plants employing less than fifty workers the average expense was \$49.17; in the group employing between 50 and 100 workers it was \$26.16; and in plants employing from 101 to 250, \$25.31. It is evident from these figures that the cost per employee consistently decreases as the size of the working force increases, and that in the very small plant there is a disproportionately high cost attached to industrial relations work.”

Certain services, again, are carried on by many companies sometimes at a considerable cost. Lunch room or cafeteria facilities cost employers covered in this study approximately \$10 per employee in 1927. Medical service was provided at an average expense of \$3.79 per employee. Mutual benefit association benefits were financed from contributions which averaged \$4.97 from each employee and \$2.66 per employee from the management of

these companies. Group life insurance policies having an average value of \$1,062 were financed by premium payments which averaged \$2.03 from each employee and \$11.35 per employee from management.

### Reasons for Spread of Movement

Several reasons are given for the growth of the "industrial relations" movement in the past few years. "The spread of industrial relations programs into the smaller plants is in line with the general evolution going on within industry. One manifestation of this evolution is the tendency away from haphazard, and toward the organized way of doing things. This attitude has carried over into industrial relations and has resulted in

the setting up of definite practices which have supplanted the method of occasional gifts to employees. The small plants which have accomplished this change now offer their employees certain tangible benefits in place of uncertain advantages. The reasons for this development of organized industrial relations work in small plants may be, in part:—the competition with large plants for competent labour; demonstration of the effect upon productive efficiency of a satisfied working force; and the feeling that in the present era it is the part of enlightened policy to keep in step with prevailing practice. In any event, the small plant is apparently making rapid progress in developing an industrial relations program which will meet its needs."

### Group Insurance Plan of Great Atlantic and Pacific Tea Company

The Great Atlantic and Pacific Tea Company, employing approximately 350 persons in Canada, recently extended life insurance benefits (formerly limited to store managers and supervisory forces) to all of its employees, under a policy of group life insurance placed with an insurance company. Under this arrangement, the employees are insured entirely free of cost to themselves. The former plan, for managers and supervisory staff only, is now discontinued, their old certificates being replaced by certificates of the new policy. Employees are insured against death from any cause and at any age, and against permanent total disability before 60 years of age.

All employees are divided into three groups according to salary range, and each group has its own insurance schedule. In the first group, comprised of store managers, clerks, office and operating department employees, the minimum amount of insurance is \$300 for less than one year's service in the company, and is graded according to length of service up to \$1,000 insurance for five years or more in the company's employ. In group 2 (composed of assistant superintendents, office and operating department chiefs and buyers receiving an annual salary less than \$5,000) the minimum insurance for less than one year's service is \$1,000, while the maximum for five years or over is \$2,000. In group 3, comprising the highest paid officials with annual salaries of \$5,000 and over, the insurance range is from \$2,000 (for less than one year's service) to \$5,000 (for five or more years' service).

Provision is made for an increase in the amount of insurance when an employee passes from one group to another due to promotion in position or increase in annual salary.

Any employee covered for free group insurance may secure extra protection through addi-

tional insurance by filing with the company while actively employed an order authorizing the deduction from his pay of 60 cents per month for each \$1,000 of insurance. The amount of additional insurance which can be procured is determined by annual wages or salary. For instance, an employee receiving less than \$900 per year in salary or wages can only procure \$500 additional insurance, whereas an employee receiving \$5,000 per year or over is entitled to take out \$5,000 additional insurance.

The amount of the insurance is payable in the event of the employee's death from any cause while his insurance is in force to the person or persons named by the employee as beneficiary such as wife, child, parent, or other relative or dependent.

If an employee, while insured and before reaching his sixtieth birthday, becomes wholly disabled by bodily injuries or disease, and will be permanently, continuously and wholly prevented thereby for life from engaging in any occupation or employment for wage or profit, no further premium will be collected and the amount of his insurance will be paid to him in a fixed number of instalments.

If an insured employee should leave the service of the Great Atlantic and Pacific Tea Company or its subsidiaries for any reason whatsoever he may convert the total amount of his free, and additional group insurance, without medical examination (provided he act within 31 days), to any other form of policy, except term insurance, customarily issued to an individual by the insurance company at the rate applicable to his then attained age—that is, to a form of policy containing cash surrender values, paid-up insurance values, extended insurance values, etc.

## NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

### Progress in Saskatchewan and Alberta

THE following information respecting the erection of new technical schools and the general progress of vocational education in the provinces of Saskatchewan and Alberta, appearing in the April issue of the *Industrial Education Magazine*, was submitted by Mr. R. B. Vaughan, principal of the T. J. Trapp Technical School, New Westminster, B.C., and formerly director of Technical Education for the province of Manitoba.

**Alberta.**—Dr. W. G. Carpenter, director of technical education for Alberta, is very optimistic concerning the development in his province. The city of Calgary is building a new technical high school, costing about \$250,000 as an initial outlay. The principal of the school will be J. H. Ross, formerly vice-principal of the Institute of Technology and Art. This school is to be ready for occupation in September this year. A new course of studies having direct outlook into industry is being organized by the Department of Education in which there will be two years of regular high-school English, two years of general mathematics, two years general science two years industrial history and economics, and two years drawing and designing, with optional courses in electricity, metals, wood, internal combustion engines, dressmaking and sewing, and household economics. The details of the third-year course are not being organized immediately. It is hoped that the experience of the work in the first two might be useful in the plans that will be drawn.

The Institute of Technology and Art has had a very encouraging year. There has been added to the farm mechanics and tractor department a wing containing 10,000 square feet in connection with which the hearty co-operation of the tractor distributing houses was secured to the extent of securing from them, on loan, approximately \$100,000 worth of equipment. The enrolment for the year, to date, includes 802 in the day classes, 924 in the evening classes, and 205 in the correspondence courses, bringing the enrolment well over 2,000 as against a total enrolment last year of 1,745.

**Saskatchewan.**—Mr. G. R. Nolan, principal of the Central Collegiate Institute, Regina, states that the Regina School Board is planning a new technical school costing between \$375,000 and \$400,000. "The matter of building a technical school in Regina is one that gives great encouragement to the advocates of technical education throughout Canada. A few years back, when the representatives of

Western Canada were in session, the attitude of the Department of Education for Saskatchewan was that there was not a sufficient demand for industrial education to warrant the adoption of the technical program advocated by the other provinces." The plans are now in fairly good shape for a school with twenty-four classrooms, gymnasium, auditorium 70 feet by 40 feet, and a shop of about 10,000 square feet to be used for motor mechanics, carpentry, electrical work, and gas tractor work. The technical school is situated on seven acres very close to the street-car line, near Regina College, Normal School, and Central Collegiate, as well as the east end where some of the industries are located. At the present time there are four hundred students taking commercial work and one hundred and fifty girls, boys, and adults taking the motor mechanics, machine-shop, and household science courses. Thus, when the plant is available, an enrolment of nearly six hundred is expected. The erection of a technical school will relieve the congestion in the other collegiates. During the past two or three years the Board has found it necessary to provide five new classrooms every year so that the Technical School will take care of three or four years.

### Closing of Evening Technical School— Sydney, N.S.

At the public closing of the evening technical school at Sydney, N.S., on April 9, Mr. E. McKeen, School Commissioner, gave an interesting address wherein he emphasized the value of the evening school during the last twenty-two years since it had been organized. When it first opened there were only 60 or 70 pupils but it had grown steadily until there were now over 300. He stated that the School Board was strongly in favour of technical training and had long considered how the public schools in Sydney could be extended to offer courses which would prepare boys and girls for practical life in the trades and business. The board now plans a forward step, probably during the present year, to establish pre-vocational classes in Sydney and Whitney Pier. When these classes have been duly set in motion, the Board hopes that it will be possible to build a new vocational high school where boys and girls of high school age could get a most effective technical training for the leading occupations in Cape Breton.

Dr. F. H. Sexton, director of technical education for Nova Scotia, also gave an interesting address, and presented the various certificates and diplomas.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Twelfth Session of the International Labour Conference

THE Twelfth Session of the International Labour Conference opens in Geneva on May 30th. The agenda of this Conference consists of the following items:—

I. Prevention of Industrial Accidents (Final Discussion);

II. Protection against Accidents of Workers engaged in Loading or Unloading Ships (Final Discussion);

III. Forced Labour (First Discussion); and

IV. Hours of Work of Salaried Employees (First Discussion).

Besides dealing with these questions, the Conference will also consider a general report on unemployment, which is to be submitted to the Twelfth Session in continuation of the reports on the same subject which were submitted to the 1922 and 1924 Sessions.

The Canadian delegation to the Conference is made up as follows:—

*Government Delegates.*—Dr. W. A. Riddell, Geneva, Switzerland; and Mrs. Mary Ellen Smith, Vancouver, B.C.

*Technical Advisers to Government Delegates.*—Mr. Byron Baker, Ottawa, Ont.; Mr. George Gilbert, Winnipeg, Man.; and Mr. Gerard Tremblay, Montreal, P.Q.

*Employers' Delegate.*—Mr. W. C. Coulter, President, Coulter Copper & Brass Co., Ltd., Toronto, Ont.

*Technical Adviser to Employers' Delegate.*—Mr. Geo. E. Carpenter, Secretary, Prairie Division, Canadian Manufacturers' Association, Winnipeg, Man.

*Workers' Delegate.*—Mr. P. M. Draper, Secretary-Treasurer, Trades and Labour Congress of Canada, Ottawa, Ont.

*Technical Adviser to Workers' Delegate.*—Mr. James Simpson, Vice-President, Trades and Labour Congress of Canada, Toronto, Ont.

### Ratification of Conventions

The total number of ratifications of International Labour Conventions registered with the Secretary-General of the League of Nations on February 25, 1929, was 341, including 8 conditional ratifications.

The number of Conventions of which ratification had been authorized by the competent authority in the country concerned, but at the above date had not yet been registered with the Secretary-General of the League, was 29.

### Annual Reports on Labour Conventions

The Committee of Experts appointed by the Governing Body of the International Labour Office to examine the annual reports submitted by the States Members of the International Labour Organization, in accordance with Article 408 of the Treaty of Peace, on the steps taken by them to apply International Labour Conventions which they have ratified, recently held its third meeting in the Office.

The official information furnished by the Governments of States which have ratified Conventions enables the other contracting parties, delegates to the Conference, employers and workers' organizations and public opinion in general to form an estimate of the extent to which the Conventions are observed. The Committee of Experts examines the information contained in the reports in order to determine the practical application of the Conventions. The Committee may suggest to the Governing Body any changes in the form of the reports which might increase their precision.

The Committee had to examine 223 reports this year as compared with 175 last year. The reports relate to the application of the twenty Conventions which have been in force for over a year.

The Committee noted with satisfaction that, of the 223 reports received, 189 gave rise to no criticism, the States in question having brought their legislation into conformity with the Conventions which they had ratified.

The Report of the Committee will be submitted to the Governing Body, which will bring it before the Twelfth Session of the International Labour Conference, opening in Geneva on May 30th next.

### Legal Decisions on Labour Law

The third volume of the International Survey of Legal Decisions on Labour Law was published recently by the International Labour Office. From 1920 onwards the International Labour Office has published in its Legislative Series the labour legislation adopted in the different countries. But mere knowledge of the clauses of a law gives no adequate idea of its actual effects, and the wish has repeatedly been expressed that information might also be published concerning the application of these laws by the competent authorities, and particularly by the courts which deal with industrial matters. To meet this wish the International Labour Office has, since 1926, supplemented the Legislative Series by an "International Survey of Legal Decisions on Labour Law."

The imperfection of even the best laws often makes it necessary to allow judges wide freedom of interpretation. This has been the case especially in countries where the administration of justice is determined only in part by written law, and for the rest by the law as formulated in legal decisions. Particularly in the field of labour legislation, in which legal decisions have not been compiled as methodically as in other branches of the law, the issue of an international survey of legal decisions meets with several difficulties. In the first place, the Survey cannot cover the legal decisions of all countries, but must be limited to those countries which, in fact, represent the most important legal systems. The survey was accordingly limited from its first appearance to the legal decisions of England, France, Germany and Italy. In the present issue those of the United States are included for the first time. The subsequent inclusion of other countries is also being planned. Another limitation lay in the selection of legal decisions. Reference was made to those concerning questions of legal principle which might facilitate the development of labour legislation in other countries and which are thus of international

importance. The majority are concerned with legal questions which are more or less frequently raised in all countries alike. Others, such as those relating to the legal position of foreign workers, are of direct importance for the settlement of international legal questions. The decisions and opinions of international courts on questions of labour law, and particularly of the Permanent Court of International Justice at The Hague, were included so far as these were available.

The reports for the separate countries are grouped under the following headings: (1) General principles of labour law; (2) Right of association; (3) Participation of workmen in the management of the works (works councils); (4) Individual contracts; (5) Collective agreements; (6) Salaries and wages; (7) Hours of work; (8) Labour disputes; (9) Procedure in labour cases; (10) Protection and special rights of specified occupational groups; (11) Protection of women, young persons and children, and men disabled in war; (12) Placing and unemployment; (13) Inspection of Labour; (14) Social insurance; (15) Miscellaneous.

## Canadian National Railways Annual Report for 1928

The annual report of the Canadian National Railways system for the year ended December 31, 1928, shows that the gross earnings exceeded those of the previous year by \$27,915,546, or 11.2 per cent. "As far as railway operations are concerned," the report states, "the year 1928 was a banner year. The great volume of traffic was to a large extent due to the heavy western crops of the last two years; and to bad weather conditions and a late harvest in 1927 which left a large carry-over of that year's crop for 1928; also to the good weather conditions of last fall and an early harvest which enabled an unusually large proportion of the 1928 crop to be carried to terminal elevators in that year.

The mileages owned by the constituent companies of the system totalled 18,384. The revenue for 1928 amounted to \$276,631,921, of which \$209,439,963 was from freight. The expenses for the same period amounted to \$218,248,344, of which \$107,963,695 was on transportation, \$48,010,559 on maintenance of way and structures, and \$47,918,236 on maintenance of equipment. The railways operating expenses included the following wage payments: station employees, \$14,985,405.84; yardmasters and yard clerks, \$2,808,423.31; yard conductors and brakemen, \$5,436,191.87;

yard switch and signal tenders, \$629,245.72; yard enginemen, \$4,003,199.58; train enginemen, \$10,808,933.52; train motormen, \$82,479.97; trainmen, \$11,757,412.38.

The Alberta Legislature on March 19 rejected a proposed resolution to the effect that the Minimum Wage Board should be asked to reconsider the existing minimum wage scale with a view to an upward revision of the lower classifications. The provincial government opposed the resolution on the ground that the legislature in 1925 had appointed the Board as an independent tribunal free from political interference, and should not interfere with its decisions, thus creating a dangerous precedent.

A resolution urging action toward the granting of allowances to aged persons from public funds was unanimously adopted by the board of managers of the New York Association for Improving the Conditions of the Poor at the board's January meeting. Facts with regard to the uncared-for dependent aged population are sufficiently grave, it was thought, to call for immediate consideration and for action looking towards the establishment of suitable public agencies authorized to grant allowances to aged persons from public funds.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING MARCH

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in March was 6,508, their employees numbering 940,086 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for

March was 1,727, having an aggregate membership of 194,890 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment;

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### Employment Situation at the beginning of April, 1929, as Reported by Employers

Employment at the beginning of April showed a seasonal decline which was somewhat larger than that noted on April 1, 1928; that this was so, was partly due to a slackening of activity over the Easter holidays, which in the last few years have fallen in the middle of the month, while unseasonable weather generally prevailing also had an adverse effect upon employment. Despite these factors, the situation continued decidedly better than on April 1 of any other year since 1920. The Dominion Bureau of Statistics tabulated returns from 6,508 firms whose staffs aggregated 940,086 persons, compared with 946,997 in the preceding month. The index number stood at 110.4, as compared with 111.4 on March 1, and with 102.3, 97.4, 92.5, 88.3, 90.4, 88.7, 81.8 and 85.1 on April 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The most outstanding changes in employment were the heavy seasonal losses in logging, where staffs were reduced by nearly 22,000 workers, and the advances in manufactures, construction and trade. Transportation, services and communications also recorded improvement.

#### Employment by Economic Areas

The Maritime and Prairie Provinces and British Columbia reported heightened activity, while curtailment was registered in Quebec and Ontario.

*Maritime Provinces.*—There was an increase in employment in the Maritime Provinces on April 1, when the 509 co-operating employers enlarged their payrolls by 643 persons to 71,958. Manufacturing, transportation, construction and trade were busier, but logging was seasonally slack. The index, at 107.5, was higher than at the beginning of April in any of the last eight years; similar gains were noted on the same date in 1928.

*Quebec.*—Manufactures showed practically no change, increases in the iron and steel, tobacco and electrical apparatus divisions being offset by losses in rubber and musical instrument factories; trade and transportation afforded more employment, while logging and construction reported contractions, those in the former being especially marked. Statements were received from 1,482 firms, with 249,025 employees, as against 257,569 on March 1. The index was slightly higher than on the same date of last year, when the curtailment indicated was on a smaller scale.

*Ontario.*—The trend of employment was downward in Ontario, where 2,952 employers released 2,995 workers from their staffs, bringing them to 409,020 on April 1. A smaller reduction had been registered by the firms making returns for the same date in 1928, but the index then was over eleven points lower than at the beginning of April of this year. Very pronounced seasonal losses were shown in logging on the date under review, while manufactures and construction recorded

large increases in employment, and smaller gains were noted in mining, communications, transportation, services and trade.

*Prairie Provinces.*—The increase in the Prairie Provinces greatly exceeded that noted on April 1, 1928, while in previous years of the record the movement in the early spring had been unfavourable. Most of the advance this year took place in construction and trade, but transportation, services and manufacturing were also busier, while logging, mining and highway construction were seasonally slack. The working forces of 896 co-operating employers aggregated 129,304 persons, compared with 127,206 on March 1. The index, at 113.9, was twelve points higher than on April 1, 1928; it was also higher than on the same date in any other year since 1920.

### Employment by Cities

Employment increased in the eight cities for which special tabulations are made, the gains in Toronto and the Border Cities being most noteworthy.

*Montreal.*—Further expansion was shown in Montreal, according to 792 firms who reported the addition of 980 persons to their staffs, bringing them to 128,452 on April 1. The situation was considerably better than on the same date last year, when increases had also been indicated. Iron and steel plants, trade, services and construction recorded heightened activity, but rubber, textile and musical instrument factories were slacker.

*Quebec.*—Construction and transportation registered the most outstanding gains in

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

*British Columbia.*—Continued improvement was noted in British Columbia, according to returns tabulated by the Bureau from 669 firms with 80,779 employees, or 1,887 more than in the preceding month. Additions to staffs had also been indicated on April 1 of a year ago, when employment was in smaller volume. The greatest gains at the beginning of April, 1929, were in manufacturing, transportation and construction, while coal mining released some help.

Table I gives index numbers by enonomic areas.

Quebec City, while there were only small changes in other industries. Statements were received from 102 employers with 10,748 workers, as compared with 10,575 in the preceding month. The improvement indicated on April 1, 1928, involved about the same number of persons, but employment was in smaller volume than on the date under review.

*Toronto.*—Further and larger advances were reported in Toronto, where conditions were much better than at the beginning of April, 1928. The working forces of the 857 co-operating firms totalled 120,174 persons, or

NOTE: "Relative Weight" in Tables I, II, III and IV shows the proportion of employees in the indicated area or industry to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS, (AVERAGE 1923=100)

2,332 more than on March 1. Considerable improvement was registered in manufacturing, notably of vegetable food and textile products, and in building, services and trade.

*Ottawa.*—There was an increase in employment in Ottawa, chiefly in manufacturing and trade; an aggregate payroll of 11,384 workers was reported by the 132 employers whose statistics were tabulated, and who had 11,221 in their last report. The index was several points higher than in the spring of 1928, when the trend was also upward.

*Hamilton.*—Manufacturing, construction and trade afforded heightened employment in Hamilton, while only small changes occurred in other industries. Returns were compiled from 206 firms employing 37,447 persons, or 801 more than on March 1. The level of employment was much higher than on the same date of last year, when the gains indicated were rather smaller.

*Windsor and the Adjacent Border Cities.*—There was a further pronounced expansion in employment in the Border Cities on April 1, which resulted in a rather more favourable

situation than in any other month since 1925, when the record for these adjoining cities was commenced. Data were received from 123 firms employing 21,816 workers, as against 20,670 in the preceding month. Automobile plants reported a very large share of the advance, but construction was also busier.

*Winnipeg.*—Employment increased in Winnipeg, where 216 persons were added to the payrolls of the 312 employers furnishing statistics, who reported 31,170 workers. Iron and steel plants were more active, as was construction. On April 1, 1928, a greater gain had been indicated, but the index was several points lower.

*Vancouver.*—Continued improvement was noted in Vancouver, according to 264 firms with 28,098 employees, as compared with 27,360 in the preceding month. The most marked increases were in construction, manufacturing and shipping. Smaller gains had been made at the beginning of April of last year, when the index was considerably lower.

Index numbers by cities are given in Table II.

### Manufacturing

Further improvement was recorded in manufacturing, particularly in the iron and steel industries. Lumber, food, building material, textile, chemical and electrical apparatus plants also afforded increased employment, while rubber, non-ferrous metal, leather and musical instrument works showed curtailment. Statements were received from 3,946 manufacturers, employing 549,201 operatives, as compared with 544,544 in the preceding month. The situation continued better than on the same date of any other year since 1920.

*Animal Products, Edible.*—Improvement was noted in fish-preserving establishments, chiefly in the Maritime Provinces. Statements were tabulated from 176 firms employing 16,343 workers, as against 15,965 at the beginning of March. This increase was rather smaller than that recorded on April 1, 1928, when the index number was several points lower.

*Leather and Products.*—Tanning factories reported reductions in personnel, and minor losses were also noted in the shoe and glove branches of this group. The 177 co-operating employers reduced their payrolls from 16,474 persons in the preceding month, to 16,271 at the beginning of April. A falling-off had also been indicated on April 1 a year ago, but employment then was above its level at the time of writing.

*Lumber and Products.*—Seasonal expansion was indicated in rough and dressed lumber mills, and vehicle works were also busier. The general improvement was not so pronounced as on the same date a year ago, when the index was lower. Statistics were compiled from 689 manufacturers, with 47,928 employees, as compared with 47,654 at the beginning of March. The largest gains were in British Columbia.

*Musical Instruments.*—There was a decrease in musical instrument factories, 42 of which employed 2,840 persons, or 285 less than on March 1. The reduction took place in Quebec

and Ontario. Employment was rather more active than at the beginning of April, 1928, although the losses then indicated were on a smaller scale.

*Plant Products, Edible.*—As on the same date last year, there was an increase in employment in the period under review, chiefly

in sugar and syrup, biscuit, and coffee and spice factories. Returns were tabulated from 315 firms whose payrolls rose from 27,433 persons in the preceding month, to 27,958 at the beginning of April. Ontario reported most of the advance, while curtailment was noted in Quebec. The index was higher than in spring last year.

\*The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

*Pulp and Paper Products.*—The movement in pulp and paper factories was upward, and the paper products group also showed improvement, while there were small decreases in printing and publishing. According to data received from 481 firms, they employed 63,325 workers, as compared with 63,169 in their last report. Slight increases were noted in all provinces except Ontario, where there was practically no general change. Employment was in greater volume than on April 1 in other years of the record; the tendency in the spring of 1928 had been downward.

*Rubber Products.*—Activity in 37 rubber works declined, 709 persons being released from their staffs, which totalled 16,895. Little change had been shown on the same date last year, when the index was some 13 points lower.

*Textile Products.*—There was an increase in employment in textiles at the beginning of April, chiefly in garment and personal furnishing, hosiery and knitting and headwear factories, while cotton mills were slacker. Curtailment had been noted on April 1, 1928, when the situation was not so favourable. Statements were compiled from 552 manufacturers with 83,914 employees, or 518 more than on March 1, 1929. Most of the advance was in Quebec and Ontario.

*Tobacco, Distilled and Malt Liquors.*—Decreases in employment on a smaller scale than at the beginning of April 1 of last year, were recorded in this group, 117 persons being released from the working forces of the 141 co-operating establishments, which employed 15,431 workers on the date under review. The contraction took place chiefly in tobacco works in Ontario, while improvement was shown in Quebec. The index was higher than in the spring of any other year since the record was instituted in 1920.

*Chemicals and Allied Products.*—One hundred and nineteen plants turning out chemical and allied products reported 8,042 employees, as compared with 7,635 in their last return. Ontario registered practically all the gain. Conditions were better than on April 1 in other years for which data are available.

*Clay, Glass and Stone Products.*—Further, general increases in personnel were noted in building material works, 132 of which employed 11,316 persons, as against 10,625 in their last report. This advance involved about the same number of persons as that indicated on the corresponding date in 1928, when the situation was not so favourable. Ontario and the Prairie Provinces shared in the upward movement.

*Electric Current.*—Further improvement was shown in this group, in which 87 plants reported 14,031 workers, or 67 more than at the beginning of March. The Western Provinces registered most of the gain. The level of employment was higher than in the spring of other years of the record.

*Electrical Apparatus.*—Employment in electrical appliance factories again advanced, 353 employees being added to the forces of the 43 co-operating firms, who reported 13,477 on their payrolls. The bulk of the increase was in Quebec and Ontario. Practically no change had been noted on April 1, 1928, when the index was considerably lower.

*Iron and Steel Products.*—Statistics were received from 660 manufacturers in this group, whose staffs were enlarged by 2,950 employees to 172,827 at the beginning of April. There were considerable gains in automobile and other vehicle factories, as well as additions to payroll on a smaller scale in the pipe, foundry and machine shop, sheet metal and other branches of the industry. Improvement was shown in all provinces, that in Ontario being most noteworthy. More marked expansion had been recorded in the same period last year, but the index number then was many points lower than on April 1, 1929.

*Non-ferrous Metal Products.*—Returns tabulated from 104 manufacturers in this group showed that they employed 19,690 persons, as against 20,206 on March 1. Most of the decrease took place in smelting and refining in Ontario. The level of employment was considerably higher than in the spring of the years since 1920.

*Mineral Products.*—Heightened activity was reported in these industries at the beginning of April, 147 workers having been added to the forces of the 81 co-operating establishments, in which 12,353 persons were employed at the beginning of April. Gas, oil and other mineral product works shared in the advance, which was largely made in Quebec. The volume of employment in this group also was greater than in the same period of other years since the record was commenced.

### Logging

Continued and larger seasonal losses were shown in logging camps, 240 of which reduced their payrolls from 42,855 men on March 1 to 21,340 on the date under review. The most extensive decreases were in Quebec and Ontario, although all provinces, except British Columbia, indicated reductions. Rather smaller contractions had been reported on April 1, 1928, and employment then was in somewhat greater volume.

## Mining

*Coal.*—As at the beginning of April last year, there was a falling-off in employment in coal mines during the period being reviewed, mainly in the Western Provinces. Data were received from 79 operators, whose staffs included 26,562 employees, as against 28,698 in their last report. The index was slightly lower than in the spring of last year.

*Metallic Ores.*—Reports were received from 73 firms in this group, employing 14,902 workers, or 487 more than at the beginning of March. Most of the gain was in Ontario. Improvement had also been indicated on the same date in 1928, but the index number then, as in other years of the record, was lower.

*Non-metallic Minerals, other than Coal.*—Continued advances were registered in quarries and other divisions of this group; 63 firms employed 7,719 persons, as compared with 7,304 in the preceding month. Much smaller advances were indicated by the employers furnishing statistics on April 1 last year, when the situation was not so favourable.

## Communications

According to information received from 189 communication companies and branches, they enlarged their staffs by 274 employees to 27,601 on April 1. Conditions continued better than in the spring of other years of the record, in most of which the trend was also upward. Except in Quebec, there were general gains throughout the Dominion, the largest being in Ontario.

## Transportation

Local and steam railway operation and shipping and stevedoring registered considerable advances. Statistics were compiled from 295 employers of 114,766 workers, as compared with 112,493 on March 1. Of the former number, 22,032 persons belonged in the local transportation, 81,206 in the steam railway and 11,528 in the water transportation division. In the land transportation branch, employment was in greater volume than on the same date last year but the index in water transportation was rather lower.

## Construction and Maintenance

*Building.*—Employment in building construction continued at a high level, the index being considerably higher than on April 1, 1928, when the additions to staffs were smaller. Statements were compiled from 557 contractors, with 38,572 persons in their employ, or

3,142 more than in their last report. All provinces except Quebec share in the improvement.

*Highway.*—Further seasonal reductions were noted on highway construction and maintenance; 157 contractors employed 5,784 men, as compared with 6,142 in the preceding month. Quebec and the Prairie Provinces registered a large share of the decline, while gains were noted in British Columbia. Greater losses had been shown on April 1, 1928; the number then reported as engaged in this work was, however, larger than in the period under review.

*Railway.*—There was a substantial increase in employment in the construction departments of the railways in the Western Provinces and Ontario. The working forces of the 40 co-operating contractors and divisional superintendents aggregated 34,350 men, whereas in the preceding month they had 32,039 employees. The index number was higher than in the spring of any other year since 1920.

## Services

This group showed further gains, according to 203 firms with 19,202 employees, compared with 18,723 in the preceding month. Laundries and cleaning establishments and hotels registered the greatest improvement, Quebec, Ontario and the Western Provinces showing considerably increased employment. The trend was also upward at the beginning of April, 1928, but employment then was in less volume than on the date under review.

## Trade

There was a gain of 3,060 persons in the forces of the 666 co-operating wholesale and retail establishments, which employed 80,087 workers on April 1. A smaller increase had been indicated on the same date a year ago; employment then, as at the beginning of April in every other year of the record, was lower than on the date under review. The improvement in retail stores was particularly marked, although the trend was also upward in wholesale houses. There were increases in all provinces except British Columbia.

Index numbers of employment by economic areas, leading cities and industries, respectively, are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

### Unemployment in Trade Unions at the Close of March, 1929

Unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The percentage of unemployment reported by local trade unions at the close of March was rather smaller than that manifest at the

unions the contractions in employment recorded were fractional only. When a comparison is made with the returns for March of last year Nova Scotia unions recorded the greatest expansion during the month under review, due to increased activity in the coal mines of the province followed by lesser gains among Ontario, New Brunswick, Saskatchewan, Alberta and British Columbia unions. The reductions in activity reported from Quebec and Manitoba were small.

A separate tabulation is made each month, showing the unemployment existing among trade union members in the largest city in each province except Prince Edward Island. During March, Regina unions registered the

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

end of the previous month, 6.0 per cent of the members being without work as compared with 6.8 per cent in February. A slight increase in employment was indicated also over March of last year when 6.5 per cent of the members reported were idle. For the month under review returns were tabulated from a total of 1,727 local unions, including 194,890 members, of whom 11,662 were unemployed at the end of the month. All provinces with the exception of Nova Scotia and Saskatchewan recorded a greater volume of employment than in February, conditions in British Columbia and Quebec especially showing improvement. Heightened activity in the manufacturing group of industries accounted for the better situation prevailing in both British Columbia and Quebec during March, particularly among wood workers in the former province and among railway carmen in the latter. From Nova Scotia and Saskatchewan

largest percentage of unemployment of any of the cities used in the comparison, namely 10.1, which percentage was, however, slightly smaller than that recorded in February. Winnipeg followed closely with 9.9 per cent of idleness, also indicative of minor improvement over February. Vancouver, Edmonton, Montreal and Saint John unions, in addition, registered greater activity than in February, Vancouver unions showing the most substantial employment advance of any of the cities. Halifax and Toronto unions, on the other hand, reported nominal declines in activity. In comparing with the returns for March of last year, Edmonton, Vancouver, Saint John, Montreal and Toronto unions all registered moderate increases in available employment during the month under review, while of the contractions in the other cities the most noteworthy was apparent among Regina unions.

Accompanying this article is a chart which illustrates the unemployment trend by months from January, 1923, to date. During the first month of the present year the curve pursued a downward course from that of December last, indicating improvement in conditions, while in February the course followed by the curve was in an opposite direction from that of the previous month, and in March the projection was again downward, showing moderate advances in employment over February. The level of the curve, however, during the first three months of this year was lower than during the corresponding period of 1928, showing that unemployment was in lesser volume during the first quarter this year than last.

An appreciable gain in employment was indicated in the manufacturing industries during March, the 479 unions from which reports were tabulated, with 55,602 members, showing 3.9 per cent of unemployment, as compared with 6.5 per cent in February. A considerable proportion of the advance took place among railway carmen in the Province of Quebec, who reported a much larger number of their members busy than in February and among wood workers, particularly in British Columbia where substantial improvement was noted. Garment workers during March continued in the upward employment movement shown since the beginning of the year, and minor increases in activity were reflected by fur and leather workers and printing tradesmen. On the other hand, pulp and paper makers, especially in Quebec, cigarmakers and glass workers showed important employment recessions. The trend of employment in the manufacturing industries, as a whole during March was also considerably better than in the corresponding month of last year, when 6.1 per cent of the members were reported idle attributable largely to the greater volume of work afforded garment workers and railway carmen, although cigarmakers, leather and wood workers, papermakers, and printing tradesmen also shared in the net increase. Fur workers and bakers, on the other hand, reported small contractions in activity.

From unions of coal miners 45 reports were tabulated in March, which included a membership of 17,553 persons, 919 of whom, or a percentage of 5.2, were idle, compared with 5.6 per cent in February and 9.4 per cent in March last year. Employment for coal miners in Nova Scotia was somewhat brisker than in February, while the improvement in comparison with March of last year in the same province was quite substantial. A less favourable situation was shown among Alberta coal miners during March than in either the pre-

vious month or March a year ago, the change in the latter comparison, however, being very slight. Nominally improved conditions were reported in British Columbia during March when comparison is made with February, although employment showed a slight falling off from March of last year. Quarry workers in Nova Scotia reported a large percentage of their members idle during March compared with a fully engaged situation in February. Conditions, however, showed little change from March of last year, the percentage of inactivity during March this year standing but slightly above that reported in the same month in 1928.

Slight reaction from winter depression was in evidence during March among building and construction workers, the 223 unions reporting

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edward Island.	New Brunswick.	Quebec.	Ontario.	Manitoba.	Saskatchewan.	Alberta.	British Columbia.	Canada.

Mar., 1929.....	6.2	1.4	7.9	4.5	9.2	7.3	4.9	4.8	6.0

at the end of the month with 26,837 members showing 17.9 per cent of unemployment, contrasted with 19.8 per cent in February. Granite and stonecutters and bridge and structural iron workers, who together form but a small part of the total group membership reporting, were much busier than in February, while increases in employment of lesser magnitude when viewed from a percentage basis, though involving a larger proportion of workers, were indicated by carpenters and joiners. From bricklayers, masons and plasterers, painters, decorators and paperhangers and hod carriers and building labourers gains in activity also were recorded. Plumbers and steamfitters, tile layers, lathers and roofers, and electrical workers, on the other hand, were afforded a lesser volume of work. A higher employment level was indicated in the building trades, as a whole, during March than in the same month last year when 19.1 per cent of the members reported were idle, bricklayers, masons and plasterers, bridge and structural iron workers, granite and stonecutters, plumbers and steamfitters, tile layers, lathers and roofers and electrical workers all participating in varying measures to the group expansion. The most extensive curtailment in employment from March a year ago was manifested by painters, decorators and paperhangers, while among hod carriers and building labourers and carpenters and joiners lesser declines were indicated.

The situation in the transportation industries showed little variation during March from either the preceding month or March last year, the 734 unions from which reports were tabulated with 67,939 members indicating 4.3 per cent of unemployment contrasted with 4.5 per cent in February and 4.0 per cent in March last year. Steam railway employees, whose returns constitute about 80 per cent of the entire group membership reporting, showed minor gains in activity during March when compared with February, and among navigation workers also, some improvement was noted. Teamsters and chauffeurs, however, reported some employment curtailment during March, while among street and electric railway employees the same situation prevailed in both months of the comparison. Steam railway employees and teamsters and chauffeurs were less actively engaged during the month under review than in March a year ago, while navigation workers and street and electric railway employees reflected more favourable conditions.

During March reports were received from 14 organizations of longshore workers, whose

returns are tabulated separately each month, embracing a membership of 6,572 persons. Of these 442, or a percentage of 6.7 were idle at the end of month compared with unemployment percentages of 10.5 in February and 18.0 in March of last year.

Retail shop clerks reported 5.5 per cent of unemployed members during March, in contrast with 8.8 per cent in February and .7 per cent in March, 1928. The percentage for March this year was based on the returns tabulated from 8 unions of these workers with a total membership of 1,697 persons.

Reports were received at the end of March from 64 unions of civic employees comprising a membership of 6,872 persons, and of these 70 or a percentage of 1.0 were idle, compared with unemployment percentages of .8 in February and 1.5 in March, 1928.

Employment in the miscellaneous group of trades was on a slightly higher level during March than either the previous month of March last year, as shown by the reports tabulated during March from 119 unions with 5,865 members. Of these 302, or a percentage of 5.1 were unemployed at the end of the month contrasted with 6.3 per cent of idleness in February and 7.0 per cent in March last year. Hotel and restaurant employees, stationery engineers and firemen, and barbers all recorded greater activity than in February while among theatre and stage employees the situation was nominally adverse. When compared with conditions in March a year ago, hotel and restaurant employees, stationary engineers and firemen, and barbers, as in the previous comparison registered employment expansion during the month under review, while fairly substantial declines occurred among theatre and stage employees.

Fishermen reported a very small percentage of unemployment during March, as compared with a fully engaged situation in both the previous month and March of last year.

Reports tabulated at the close of March from 2 unions of lumber workers with 906 members, indicated that 2.8 per cent of the members were idle contrasted with 5.5 per cent of inactivity in February and 3.1 per cent in March, 1928.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1928 inclusive, and also the percentage of unemployment by provinces for March of each year from 1919 to 1926 inclusive, and for each month from January, 1927, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### Employment Office Reports for March, 1929

During the month of March, 1929, the volume of business as indicated by the average daily placements effected by the offices of the Employment Service of Canada showed gains of 19 and 9 per cent respectively, over the transactions of the preceding month and of March, 1928. Logging showed a decline under both comparisons, while farming and mining recorded fewer placements than were made a year ago. In all other groups substantial gains were reported.

The accompanying chart shows the trend of employment since January, 1927, as represented by the ratio of vacancies offered and

applications during the periods under review were 64.8 and 70.2 as compared with 65.4 and 68.8 during the corresponding month of 1928.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during March, 1929, was 1,108 as compared with 913 during the preceding month and with 993 in March, 1928.

The average number of applications for employment received daily by the offices during the month under review was 1,485 in comparison with 1,331 in February, and with 1,362 during March last year.

#### POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and of placements in relation to applications showed a marked upward trend throughout the month and at the close of the period under review, the level attained in each instance was higher than that registered on March 31st a year ago. The ratio of vacancies to each 100 applications was 71.5 and 77.8 during the first and second half of March in contrast with the ratios of 71.5 and 74.1 during the same periods in 1928. The ratios of placements to each 100

The average number of placements made daily by the offices of the Service during March, 1929, was 1,002, of which 631 were in regular employment and 371 in work of one week's duration or less, as compared with a total daily average of 841 during the preceding month. Placements in March a year ago averaged 916 daily, consisting of 579 placements in regular and 337 in casual employment.

During the month of March, 1929, the offices of the Service referred 26,423 persons to vacancies and effected a total of 25,044 placements. Of these the placements in regular employment were 15,771, of which 11,885 were of men

and 3,886 of women, while placements in casual work totalled 9,273. The number of vacancies reported by employers was 17,124 for men and 10,571 for women, a total of 27,695, while applications for work numbered 37,104, of which 25,794 were from men and 11,310 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929 (3 month).....	41,253	26,775	68,028

#### NOVA SCOTIA

During March, orders received at employment offices in Nova Scotia called for nearly 6 per cent less workers than in the preceding month and nearly 9 per cent less than during the corresponding month last year. There was a decline of about 10 per cent in placements under both comparisons. The reduction in placements from March last year was all due to a decrease in the services group, as, although there were also fewer placements in farming and trade, the gains in other divisions, the most noteworthy of which was in transportation, more than balanced the declines in these two divisions. Industrial groups, in which most of the placements were effected during the month, were: manufacturing, 47; logging, 41; transportation, 57; construction and maintenance, 50; trade, 40 and services, 272, of which 224 were of household workers. The placements in regular employment numbered 135 of men and 36 of women.

#### NEW BRUNSWICK

Orders listed at offices in New Brunswick during March called for nearly 15 per cent more workers than in the preceding month, and over 7 per cent more than in the corresponding month last year. There was a gain also in placements of over 12 per cent when compared with February, and of 7 per cent in comparison with March, 1928. Services, construction and maintenance and trade were the only groups in which more placements were made during the month under review than in March last year, but the de-

clines in other divisions were small. Placements by industrial groups included: manufacturing, 30; transportation, 30; construction and maintenance, 47; trade, 31 and services, 486, of which 395 were of household workers. There were 69 men and 62 women placed in regular employment during the month.

#### QUEBEC

Opportunities for employment, as indicated by orders received at employment offices in the province of Quebec during March, were nearly 18 per cent better than in the preceding month and over 46 per cent in excess of the corresponding month last year. There were gains also in placements of 31 per cent over February and of nearly 46 per cent over March, 1928. Construction and maintenance showed the most substantial gains in placements over March last year, and was mainly responsible for the increase under this comparison, although all groups except farming showed improvement. Industrial divisions, in which most of the placements were effected during the month, were: manufacturing, 166; logging, 220; construction and maintenance, 591; trade, 45 and services, 585, of which 418 were of household workers. During the month 1,035 men and 535 women were placed in regular employment.

#### ONTARIO

There was an increase of nearly 14 per cent in the number of positions offered through offices in Ontario during March when compared with the preceding month, and of nearly 12 per cent in comparison with the corresponding month last year. Placements also were over 10 per cent higher than in February and over 11 per cent in excess of March, 1928. Farming, mining and construction and maintenance were the only groups in which fewer placements were made during March of this year than last, and these declines were more than offset by gains in other groups, of which the most noteworthy were in manufacturing, services and trade. Placements by industrial divisions included: manufacturing, 2,139; logging, 996; farming, 602; mining, 77; transportation, 349; construction and maintenance, 1,864; trade, 661 and services 3,767, of which 2,331 were of household workers. There were 4,987 men and 1,427 women placed in regular employment during the month.

#### MANITOBA

Employment opportunities, as indicated by orders listed at offices in Manitoba during March, were over 20 per cent better than in

the preceding month, but over 5 per cent less favourable than during the corresponding month last year. There was an increase of over 18 per cent in placements when compared with February, but a decline of nearly 11 per cent in comparison with March, 1928. Mining transportation and services were the only groups in which more placements were made than during March of last year, and in these the gains were small. Logging showed the largest reduction in placements. Industrial groups, in which most of the placements were affected during the month, included: manufacturing, 77; logging, 45; farming, 836; mining, 31; transportation, 30; construction and maintenance, 118; trade, 187 and services, 1,731, of which 1,429 were of household workers. Regular placements numbered 979 of men and 574 of women.

#### SASKATCHEWAN

During the month of March there were 92 per cent more positions offered through employment offices in Saskatchewan than in the preceding month, but over 3 per cent less than during the corresponding month last year. Placements increased 78 per cent over February, but were nearly 5 per cent less than in March, 1928. The manufacturing industries, transportation, construction and maintenance and trade showed gains in placements over March last year, but these increases were more than offset by declines in other groups, of which farming was the most noteworthy. Placements by industrial divisions included: manufacturing, 110; farming, 1,156; transportation, 84; construction and maintenance, 399; trade, 108 and services, 1,010, of which 714 were of household workers. There were 1,562 men and 571 women placed in regular employment during the month.

#### ALBERTA

There was an increase of 46 per cent in the number of positions offered through employment offices in Alberta during March when compared with the preceding month, but a decline of 20 per cent when compared with the corresponding month last year. Placements were over 41 per cent higher than in February, but 19 per cent less than in March, 1928. Construction and maintenance and trade were the only groups in which more placements were made than in March last year, and these gains were more than offset by declines in other groups. Farming showed the largest reduction in placements under this comparison. Industrial divisions, in which most of the placements were effected during the month, included: manufacturing, 197; logging, 149; farming, 1,153; transportation, 43;

construction and maintenance, 394; trade, 161 and services, 736, of which 609 were of household workers. During the month 1,818 men and 389 women were placed in regular employment.

#### BRITISH COLUMBIA

The demand for workers, as indicated by orders received at offices in British Columbia during March, was 42 per cent higher than in the preceding month and nearly 5 per cent above the corresponding month last year. There was an increase of 44 per cent in placements over February, but a decline of more than 2 per cent when compared with March last year. The manufacturing industries, mining, services and trade were the only groups in which more placements were made than in March of last year, and these gains were more than offset by declines in other groups, of which farming and construction and maintenance were the most noteworthy. Placements by industries included: manufacturing, 449; logging, 215; farming, 304; mining, 110; transportation, 157; construction and maintenance, 504; trade, 145 and services, 1,021, of which 578 were of household workers. Regular employment was found for 1,300 men and 292 women during the month.

#### Movement of Labour

During the month of March, 1929, the offices of the Employment Service of Canada made 15,771 placements in regular employment, of which 7,842 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,403 were granted the Employment Service reduced transportation rate, 1,027 travelling to points within the same province as the dispatching office and 376 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who might desire to travel to distant employment for which no workers are available locally.

In the Province of Quebec 2 certificates for reduced transportation were issued during March, and these to saw mill labourers who travelled from Montreal to employment within the territory covered by the Montreal office.

Workers who took advantage of the Employment Service reduced transportation rate in Ontario during March numbered 300, of whom 252 were destined to provincial employment, the balance representing an interprovincial movement. Within the province 189 of the transfers were of bush workers, the majority

of whom were dispatched from Sudbury and Port Arthur to points within their respective zone. From Port Arthur, also, 4 building construction labourers, 1 engineer and 3 carpenters proceeded to Kingston; 3 carpenters to Sudbury and 10 miners within the Port Arthur zone. From Sudbury, in addition, 1 building construction labourer was sent to Timmins and 9 building construction labourers within its own zone. The Toronto office was instrumental in transferring 10 labourers to St. Thomas, 3 brass workers to Sarnia, 2 cookees to London and 1 iron worker to Kingston. The Ottawa office issued certificates to 1 buffer going to Oshawa, 1 press operator to Brantford and 1 plumber going to St. Catharines. From Pembroke 1 bridge labourer was carried at the special rate to Peterboro and 1 diamond driller to Fort William; while from Cobalt 2 gardeners and 1 cook travelled to Kingston. The remainder of the movement within the province comprised the transfer of 5 miners and 1 labourer from Fort William and 2 mining labourers from Timmins to employment within their respective zones. Of the workers going outside the province 20 were construction labourers for the Winnipeg zone who were granted their certificates for transportation at Port Arthur. The Cobalt office transferred 2 general labourers, one each to the Winnipeg and Montreal zones. From Toronto 15 cement workers travelled at the reduced rate to Quebec; from Sudbury 8 mine labourers went to Winnipeg; and from Ottawa 2 steel workers and 1 riveter were bound for employment in the Hull zone.

In Manitoba 572 certificates for reduced transportation were granted during March, 357 of which were provincial and 215 interprovincial. Of the former Winnipeg issued 296 to persons going to employment within its own zone, including 263 farm workers, 25 railway construction labourers, 4 building construction labourers, 1 carpenter, 2 mine workers and 1 saw mill labourer. To the Brandon zone 27 farm domestics, 2 hotel employees and 2 farm hands were transferred from Winnipeg and the Dauphin zone received 23 waitresses, 1 mine labourer, 1 gardener and 1 hotel employee from the same centre. The remaining provincial certificates were granted at Dauphin to 3 building construction labourers and 1 mining labourer going to employment within its own zone. The movement outside the province originated at Winnipeg, and was largely of farm labourers, 171 farm hands and 7 farm household workers travelling to various Saskatchewan agricultural centres. In addition 3 hotel employees were transported to Yorkton, 1 cook to Prince Albert and 2 tile setters to Regina. The Port Arthur zone was the desti-

nation of 11 bush men, 9 hotel workers, 4 cooks and 2 farm hands. The 5 remaining transfers included 4 farm hands going to Edmonton and 1 to Drumheller.

From Saskatchewan offices 118 persons secured certificates for reduced transportation during March, 115 of whom went to centres within the province. Of these 103 were farm hands and 6 were farm household workers for points principally in the Saskatoon and Moose Jaw zones the majority of these receiving their certificates for reduced transportation at these zone offices. To points in the Swift Current zone Regina sent 2 domestics. The balance of the provincial movement was to the Prince Albert zone which received 1 hotel cook from Saskatoon and 2 carpenters and 1 bush man from Prince Albert. The 3 interprovincial transfers were from Regina, from which centre 1 farm worker travelled to Edmonton, 1 hotel cook to Fort William and 1 farm worker to Winnipeg.

Offices in Alberta effected 206 transfers at the special rate during March—183 to provincial points and 23 to centres outside the province. Provincially the Edmonton office dispatched 2 farm hands to Calgary, 1 farm hand and 1 farm household worker to Drumheller; and 59 farm hands, 30 bush men, 9 building construction labourers, 5 farm domestics, 4 miners, 2 road construction labourers, 1 blacksmith and 1 hotel employee to points within the Edmonton zone. From Calgary 27 farm hands, 8 farm household workers and 3 hotel workers proceeded to Drumheller; 4 farm hands to Edmonton; 2 lumber workers and 1 farm housekeeper to Lethbridge; 1 farm hand to Medicine Hat and 22 farm hands to various points within the Calgary zone. The movement of labour outside the province was entirely of farm workers and took place from Edmonton, 15 farm hands travelling to Saskatoon and vicinity, 5 to Swift Current and 3 to North Battleford.

Business transacted by British Columbia offices during March involved an issue of 205 reduced transportation rate certificates, 118 of which were granted to workers going to provincial situations and 87 to persons journeying to employment in other provinces. Within the province the transfers from Vancouver included 14 miners, 12 carpenters, 1 saw mill labourer and 1 hotel cook going to Nelson; 2 saw mill labourers, 2 farm hands, 1 painter and 1 lumber worker to Prince George; 3 farm hands, 1 bush worker, 1 miner, 1 lumber worker and 1 cook to Penticton; 1 saw mill labourer, 2 loggers, 1 farm hand and 1 farm housekeeper to Kamloops; 4 mining labourers and 1 lumber worker to Cranbrook; 6 miners and 1 saw mill labourer to Revelstoke; and 12 tunnel con-

struction labourers, 7 mine workers, 3 power construction workers, 1 hotel employee, 1 railway construction labourer and 1 store employee to points within the Vancouver zone. From Nelson 16 loggers, 9 miners and 1 farm hand proceeded to employment within the same zone while Prince George transferred 1 logger, and Prince Rupert 6 miners and 1 cook to centres within their respective zones. The Penticton zone, in addition, received 1 farm hand from New Westminster. The interprovincial movement was entirely toward the agricultural centres of the Prairie provinces, Al-

### Building Permits issued in Canada during March, 1929

According to returns tabulated by the Dominion Bureau of Statistics, the value of the building permits issued by 61 cities during March was \$24,056,656; this was an increase of \$13,583,177 or 129.7 per cent over the February total of \$10,473,479, and of \$8,928,243 or 59.0 per cent, as compared with the aggregate of \$15,128,413 reported for the same month in 1928. Last month's total was the highest for March since this record was commenced in 1920. Building costs, as shown by the Bureau's index numbers of wholesale prices of building materials, continued lower than in most years of the record.

Some 50 cities furnished detailed statistics, showing that they had granted nearly 1,200 permits for dwellings valued about \$4,700,000 and some 1,900 permits for other buildings estimated to cost approximately \$18,000,000. In February, authority was given for the erection of some 600 dwellings and nearly 1,000 other buildings, estimated at approximately \$2,000,000 and \$8,000,000 respectively.

All provinces except British Columbia reported increases in the building authorized during March as compared with the preceding month. The greatest gain was that of \$10,453,070 in Quebec.

As compared with March, 1928, New Brunswick, Quebec, Ontario, Saskatchewan and Alberta recorded advances, that of \$7,966,067, or 233.8 per cent, in Quebec being most pronounced. There were decreases in Nova Scotia, Manitoba and British Columbia, the greatest decline of \$369,410 or 20.5 per cent being in British Columbia.

Of the larger cities, Montreal and Toronto registered gains as compared with the preceding month and also as compared with March of last year. In Winnipeg, there was an advance in the former, but a loss in the latter comparison, while Vancouver showed reductions in both comparisons.

Of the smaller centres, Charlottetown, Sydney, Fredericton, Saint John, Shawinigan

berta receiving 47 farm hands and 4 farm household workers, Saskatchewan, 32 farm hands and 2 farm domestics, and Manitoba, 2 farm hands, the Vancouver, New Westminster and Victoria offices effecting all the transfers.

Of the 1,403 persons who profited by the Employment Service reduced transportation rate during March, 564 were conveyed by the Canadian National Railways, 806 by the Canadian Pacific Railway, 26 by the Pacific Great Eastern Railway and 7 by the Timiskaming and Northern Ontario Railway.

Falls, Sherbrooke, Three Rivers, Fort William, Galt, Kitchener, Ottawa, Owen Sound, Peterborough, Stratford, Sault Ste. Marie, York Townships, Ford, Woodstock, Brandon, Regina, Edmonton, Lethbridge, Medicine Hat, New Westminster and North Vancouver reported higher totals than in either February, 1929, or March, 1928.

#### Cumulative Record for First Quarter, 1929.

—The following table gives the value of the building authorized by 61 cities during March, and in the first quarter of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first quarter of the same years are also given (1926=100).

Year	Value of permits issued in March	Value of permits issued in first quarter	Indexes of value of permits issued in first quarter (1920=100)	Average indexes of wholesale prices of building materials in first quarter (1926=100)
	\$	\$		
1929.....	24,056,656	42,894,805	226.8	100.1

The aggregate for the elapsed months of 1929 was higher by 29.3 per cent than the total for the same months of 1928, the previous high level of this record of ten years.

The accompanying table gives the value of the building permits issued by 61 cities in February and March, 1929, and March, 1928. The 35 cities for which records are available since 1910 are indicated by asterisks.

<sup>1</sup> Includes Point Grey and South Vancouver, formerly given separately. From Jan. 1, 1929, when the amalgamation of these cities was effected, the total for the 35 cities includes the "Greater Vancouver" aggregate instead of that of the area formerly known as Vancouver.

<sup>2</sup> Report not received.

## Abolition of Night Work in Japan

In view of the provision of the Japanese Factory Act abolishing the night work of women and young persons, which comes into operation on July 1, 1929, a number of leading cotton factories have already started the abolition of night work and have largely increased the number of their spindles in order to compensate for the decrease in production caused by the shortening of hours of work. Most of these factories have adopted the two-shift system: one shift works from 5 a.m. to 2 p.m. and the other from 2 p.m. to 11 p.m., with one-half interval in each shift.

One of the most difficult problems with which the cotton spinners are faced is the increase in costs of production resulting from the shortening of hours. Under the present system 20 hours a day are worked by two shifts of ten hours each, while after the abolition of night work the day will be reduced to 17 hours by two shifts of 8½ hours each. Thus, the hours worked by each individual worker

will be reduced by 15 per cent. At the same time it is impossible under present conditions to compensate for this reduction by reducing wages. Most of the factories in which night work has already been abolished have announced their intention of raising piece-work rates and maintaining the present rates for workers paid by the day. Keen interest is shown in the question whether manufacturers will be able to check the rise in costs of production by increasing the efficiency of machinery and of the workers.

The question of utilisation of the workers' spare time is also being carefully studied. One of the factories in which night work has been abolished has made arrangements to provide collective recreation or instruction for the workers for two hours daily.

It is expected that there will be a great increase in production when night work is stopped by the cotton factories.

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JANUARY TO MARCH, 1929

THE employment situation as indicated by the work of the Employment Service of Canada during the quarter January to March, 1929, showed a more favourable condition, when a comparison was made with the records of the corresponding period of 1928, as there was a gain of 5 per cent in vacancies offered and of 4 per cent in placements effected. Logging, farming, construction and communication showed declines, both in vacancies and in placements, but these were more than offset by substantial gains in other industrial divisions, especially in manufacturing, services and trade. Mining recorded a nominal gain in vacancies but showed a slight decline in placements. Provincially, Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia reported increased vacancies and placements, while the Prairie Provinces recorded decreases in both instances. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period January to March, 1929.

From the chart on page 524 which accompanies the article on the work of the employment offices for the month of March, it will be seen that the curve representing the ratio of vacancies and of placements to applications has with the exception of a slight decline during the latter half of February, shown a steady upward trend throughout the quarter, and at the close of March the ratio of vacancies was nearly 4 points higher than it was a year ago, while that of placement also attained a slightly higher level. During the period January to March, 1929, there was a

ratio of 69.4 vacancies and 63.4 placements for each 100 applications for employment, as compared with 67.9 vacancies and 62.7 placements during the corresponding period a year ago. The average number of applicants registered daily during the quarter under review was 1,432, of positions offered 993, and of placements effected 908, in contrast with a daily average of 1,354 applications, 919 vacancies and 850 placements in regular and casual employment during the first quarter of 1928.

During the three months January to March, 1929, the offices of the Service reported that they had made 72,106 references of persons to positions, and had effected a total of 68,028 placements, of which 41,253 were in regular employment and 26,775 in casual work. Of the placements in regular employment 30,296 were of men and 10,957 of women, while casual work was found for 14,097 men and 12,678 women. A comparison with the same period of 1928 shows that 65,379 placements were then made, of which 40,820 were in regular employment and 24,559 in casual work. Applications for employment during the period under review were received from 74,387 men and 32,977 women, a total of 107,364, in contrast with a registration of 104,229 during the same period of 1928. Employers notified the Service during the first quarter of 1929 of 74,459 positions, of which 45,834 were for men and 28,625 for women as compared with 70,763 opportunities for work offered during the corresponding period of 1928.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of March, 1929.

## EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during March. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the April, 1929, issue relates to the situation existing in February, 1929. The employment situation in the United States is further indicated by unemployment percentage based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for February and previous months taken from the April, 1929, issue of the *American Federationist*, the official publication of the organization, are reproduced below.

### Great Britain

Employment during March showed a substantial and general improvement. The passing of the severe weather in the first week of the month led at once to a great reduction in the numbers of workpeople unemployed in the industries which had been adversely affected in the previous three or four weeks. In other industries the improvement which was apparent during February continued throughout March. The increase in the number of workpeople in employment was relatively greatest in the building trade and public works contracting, in brick and tile, artificial stone and cement manufacture, and in the mining group of industries. In coal mining there was a further decrease both in the numbers wholly unemployed and in the numbers temporarily stopped.

The other principal industries which shared in the improvement included pottery, iron and steel manufacture (including pig iron), general and marine engineering and the motor vehicle industry, ship-building and ship repairing, the textile trades (except jute manufacture), the clothing trades, and river, dock and harbour service. There was a slight decline in the shipping service.

Among workpeople numbering approximately 11,880,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 25th March, 1929 (including those temporarily stopped as well as those wholly unemployed), was 10.1, as compared with 12.2 at 25th February, 1929, and 9.5 at 26th March, 1928. For males alone the percentage at 25th March, 1929, was 11.4, as compared with 13.9 at 25th February, 1929; for females the corresponding figures were 6.9 and 7.9. The percentage wholly unemployed at 25th March, 1929, was 8.4, as compared with 9.8 at 25th February, 1929. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 25th March, 1929, was approximately 1,168,000, of whom 918,000 were men and 190,000 were women, the remainder being boys and girls; at 25th February, 1929, it was 1,430,000, of whom 1,137,000 were men and 218,000 were women; and at 26th March, 1928, it was 1,063,000, of whom 858,000 were men and 146,000 were women.

### United States

Employment in the United States increased 1.9 per cent in February, 1929, as compared with January, and pay-roll totals increased 6.9 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

Employment in manufacturing industries increased 2.3 per cent in February, 1929, as compared with January, and pay-roll totals increased 7.7 per cent, as shown by reports made to the Bureau of Labour Statistics by 12,143 establishments in 54 of the principal manufacturing industries of the United States. These establishments in February had 3,410,944 employees whose combined earnings in one week were \$95,177,353. These employees represent nearly 53 per cent of all employees in the 54 industries considered and more than 40 per cent of the total number of employees in all manufacturing industries of the United States.

An increase in manufacturing employment in February has been shown each year since the Bureau of Labour Statistics began its expanded report on Volume of Employment in July, 1922, but this increase of 2.3 per cent in February, 1929, is considerably greater than

in any of the 6 complete years preceding.

The Bureau of Labour Statistics' weighted index of employment in manufacturing industries for February, 1929, is 97.4, as compared with 95.2 in January, 1929, 95.5 for December, 1928, and 93.0 for February, 1928; the weighted index for pay-roll totals for February, 1929, is 101.8, as compared with 94.5 for January, 1929, 97.7 for December, 1928, and 93.9 for February, 1928. The monthly average for 1926 equals 100.

Forty-two of the 54 separate industries had more employees in February than in January, and the small decreases in the remaining 12 industries were mostly seasonal. The cigar industry reported a gain of 10.2 per cent in employment, automobiles a gain of 9.4 per cent, and stoves a gain of 9.1 per cent. All industries in the textile group showed increased employment, with the exception of woollen and worsted goods which reported a decrease of 0.7 per cent; the improved condition in men's clothing, women's clothing, and millinery was especially marked. The industries in the iron and steel group all had more employes in February than in January except cast-iron pipe and structural ironwork, but even these two joined the other industries of this group in substantial increases of pay-roll totals.

Only 8 of the 54 industries showed decreased pay-roll totals in February, and the outstanding decreases were in such seasonal industries as slaughtering and meat packing, rubber boots and shoes, and brick.

The increases in pay-roll totals were especially notable, the outstanding ones having been 28.7 per cent in automobiles, 15.5 per cent in stoves, 13.9 per cent in tires, 12.8 per cent in stamped ware, 12.2 per cent in steam fittings, 11.7 per cent in silk goods, and 10.1 per cent in steam-railroad car building and repairing.

The rayon industry was surveyed for this January-February report, for the first time, but as the data for computing relative numbers are not yet available the industry is not included in the indexes. Employment in the rayon industry was 1.5 per cent greater in February than in January, and pay-roll totals were 1.8 per cent higher.

Substantial increases in employment and in pay-roll totals were shown in February in seven of the nine geographic divisions; the Mountain and Pacific divisions both reported fewer employees in February than in January, although the Pacific division showed a gain of 2.6 per cent in pay-roll totals.

*Unemployment percentage.*—Unemployment statistics collected by the American Federation of Labour and appearing each month in the

*American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States. The method of compiling as described in the *American Federationist*, March, 1928, is as follows:—

"The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the first of the month or the nearest possible date. From these reports the percentage of unemployed members is calculated for identical unions in the current and the previous month. Thus for every month there are two percentage figures—that is for identical unions in December and January—and for identical unions in January and February, and so on. The final figure for January, then, is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers."

By the above method the proportion of unemployed members to the total membership of the local unions reporting, is computed. According to the April issue of the *American Federationist*, the most recent unemployed percentages during the various months in the 23 cities work out as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent.

A pension scheme for the Winnipeg City police force has been adopted by the finance committee of the city council, and became effective on April 1. Under this pension system, which replaces the former superannuation plan, members of the force under 33 years contribute 3½ per cent of their salary; those between 33 and 38 years, 4 per cent; between 38 and 42 years, 4½ per cent; and over 42 years, 5 per cent. The age limit of 65 years, in practice in the ordinary city pension scheme, is not to be enforced. Provision is made for repayments to families where more has been contributed by the deceased than he has drawn in pension.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

**A** SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Iron, Steel and Products

**CALGARY, ALBERTA.**—CALGARY ASSOCIATION OF MASTER TINNERS AND THE SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL No. 254.

Agreement to be in effect from March 31, 1929, to March 31, 1930. If notice of change is not given 60 days prior to March 31, 1930, the agreement shall continue in effect subject to 90 days' prior notice.

Hours: 8 per day, 4 on Saturdays.

Overtime: from 6 to 10 p.m., time and one-half; after 10 p.m. and all work on Sundays and holidays, double time. For overtime while out of city but within the jurisdiction of the local union, straight time to be paid.

Wages: \$1.12½ per hour.

For work outside city, time travelling and all expenses to be paid; the maximum travelling time to be 8 hours between 6 p.m. and 6 a.m.

Each party shall have a permanent committee of three members to meet at call and take up matters pertaining to the welfare of the craft.

### Construction: Buildings and Structures

**CALGARY, ALBERTA.**—CERTAIN EMPLOYERS AND THE INTERNATIONAL UNION OF WOOD, WIRE AND METAL LATHERS, LOCAL No. 221.

Agreement to be in effect from April 22, 1929, to May 1, 1930.

Wages: for work in city: 1st class \$1.12½ per hour, 2nd class \$1 per hour, 3rd class 90 cents per hour; for work outside city: 1st class \$1.25 per hour, 2nd class \$1.15 per hour; 3rd class \$1.05 per hour. For wood lath work from \$6 to \$7.25 per M. Ceilings without a turn down 50 cents extra; barrel ceilings \$1.50 extra.

Overtime and work on Sundays and holidays, double time.

Transportation to be paid for work outside city.

Scaffold to be built on all ceilings 12 feet or over and proper scaffold to be supplied on all jobs or time work to be allowed for building scaffold.

**CALGARY, ALBERTA.**—GENERAL CONTRACTORS' ASSOCIATION AND THE BRICKLAYERS, MASONS, MARBLE MASONS AND TILE SETTERS' INTERNATIONAL UNION, LOCAL No. 2.

Agreement to be in effect from April 1, 1929, to April 30, 1930.

This agreement is similar to the one previously in force for the Bricklayers, Masons and Plasterers' Union No. 2, which was summarized in the *LABOUR GAZETTE* for July, 1927, with the following exceptions:

Wages for bricklayers and masons: \$1.45 per hour (the separate agreement for plasterers is summarized below). A heated shed in the winter and a shelter in summer to be provided on all jobs.

**CALGARY, ALBERTA.**—PLASTERING CONTRACTORS' ASSOCIATION AND THE OPERATIVE PLASTERERS' AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION, LOCAL No. 324.

Agreement to be in effect from May 1, 1929, to April 30, 1930. Representatives of each party are to meet in January, 1930, to negotiate a new agreement or renew this one.

Hours: 8 per day, 4 on Saturdays.

Overtime: all overtime, double time; no overtime on new work unless a permit is granted by the union.

Wages for operative plasterers: \$1.40 per hour.

For work outside the city, 10 cents per hour above the minimum rate; fare and travelling time during working hours to be paid.

In case of any dispute, a joint committee consisting of three representatives of each party shall be appointed to settle it, and their decision shall be binding. No strike or lockout until after the decision is rendered.

All scaffolding shall comply with the Alberta Government regulations.

**VICTORIA, BRITISH COLUMBIA.**—MASTER PAINTERS OF VICTORIA AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, LOCAL No. 1119.

Agreement to be in effect from May 1, 1929, to April 30, 1930. If any change is wished by either party, notice to be given 60 days prior to the expiration of the agreement.

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one-half from 5 p.m. until midnight, except on Saturdays. From midnight on other days and from noon on Saturdays, and all work on Sundays and holidays, double time.

Wages: 85 cents per hour.

For work out of town, fare and board to be paid by employers.

A standing committee of three members of each party shall be formed to settle all grievances.

### Transportation and Public Utilities: Water Transportation

MONTREAL, QUEBEC.—VARIOUS SHIPPING COMPANIES AND THE ASSOCIATION OF THE SYNDICATED LONGSHOREMEN OF THE PORT OF MONTREAL.

Agreement to be in effect from April 3, 1929, to December 31, 1929. This agreement is the same as that in force for 1928, which was mentioned in the LABOUR GAZETTE for May, 1928, the main clauses having already been summarized in the issues of June and October, 1927.

MONTREAL, QUEBEC.—VARIOUS SHIPPING COMPANIES AND THE INDEPENDENT ASSOCIATION OF CARPENTERS AND SHIPLINERS OF THE PORT OF MONTREAL.

Agreement to be in effect from April 1, 1929, to March 31, 1930, and from year to year until notice of change is given by either party 30 days prior to March 31 in any year.

This agreement is the same as that in force for 1928 which was mentioned in the LABOUR GAZETTE for May, 1928, the main clauses having already been summarized in the issue of June, 1927.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable

rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed.

The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

#### Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

## DEPARTMENT OF MARINE AND FISHERIES

*Contracts in Group "A" (Construction, etc.)*

Construction of five stone dams at Sorel, P.Q. Name of contractors, Robertson & Janin, Ltd., Montreal, P.Q. Date of contract, September 18, 1928. Amount of contract, approximately \$930,000. The General Fair Wages Clause was inserted in the contract.

Construction of two launches for the Fisheries Service on the West coast. Name of contractors, Hoffer Beaching Shipyards, Ltd., Vancouver, B.C. Date of contract, March 30, 1929. Amount of contracts, \$9,100 and \$8,495. The General Fair Wages Clause was inserted in the contract.

Construction of a combined ice-house and garage at the fish hatchery, Waterton Lakes Park, Alta. Name of contractor, J. S. Buchan, Pincher Creek, Alta. Date of contract, April 15, 1929. Amount of contract, \$1,884. The General Fair Wages Clause was inserted in the contract.

## DEPARTMENT OF NATIONAL DEFENCE

*Contracts in Group "A" (Construction, etc.)*

Construction of a garage and storage building for Army Service Corps at Victoria, B.C. Name of contractor, R. Heatherington, Victoria, B.C. Date of contract, November 28, 1928. Amount of contract, \$2,295. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of labour	Rate of wages: Not less than	Hours per day
	Per day	
Bricklayers.....	\$9 00	8
Plumbers.....	8 00	8
Sheet metal workers.....	8 00	8
Electricians.....	7 20	8
Carpenters.....	7 00	8
Concrete workers.....	4 00	8
Labourers.....	4 00	8

Alterations to Armoury of Royal Highlanders at Montreal, P.Q. Name of contractor, W. Burrige, Montreal, P.Q. Date of contract, December 7, 1928. Amount of contract, \$3,000. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of labour	Rates of wages: Not less than	Hours per day
	Per hour	
Bricklayers.....	\$1 12½	8 and 9
Plasterers.....	1 12½	8
Masons.....	1 12½	8
Marble and tile setters.....	0 80	9
Terrazo layers.....	0 80	9
Structural steel workers.....	0 85	8
Ornamental metal workers.....	0 85	8
Flumbers and steamfitters.....	0 85	8
Carpenters and joiners.....	0 75	9
Sheet metal workers.....	0 75	9
Roofers (felt and gravel).....	1 00	10
Lathers (metal).....	0 70	8
Electricians.....	0 70	9
Painters and glaziers.....	0 75	9
Cement finishers.....	0 35	10
Concrete workers.....	0 35	10
Labourers.....	0 60	10
Driver with 1 horse and cart.....	0 60	10
Driver with team and wagon.....	1 00	10

Repairs to caretaker's quarters, Sherbrooke Regiment Armoury, Sherbrooke, P.Q. Name of contractors, E. Raquette & Sons, Sherbrooke, P.Q. Date of contract, December 1, 1928. Amount of contract, \$2,770. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of labour	Rates of wages: Not less than	Hours per day
	An hour	
Carpenters.....	50c	10
Plumbers.....	55c	10
Plasterers.....	85c	9
Plasterers' helpers.....	35c	9
Electricians.....	50c	9
Paperhangers.....	50c	10
Steamfitters.....	55c	10
Labourers.....	30c	10

## DEPARTMENT OF PUBLIC WORKS

*Contracts in Group "A" (Construction, etc.)*

Supply and installation of an additional pump and motor complete in each of two caissons, Esquimalt Graving Dock, Nanaimo District, B.C. Name of contractors, Babcock-Wilcox & Goldie McCulloch, Ltd., Galt, Ont. Date of contract, March 27, 1929. Amount of contract, \$6,407. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of labour	Rates of wages: Not less than	Hours per day
Foreman machinist.....	\$230 00 per mo.	
Machinists.....	0 68 per hr.	8
Platers.....	0 75 "	8
Electricians.....	0 90 "	8
Electricians' helpers.....	0 50 "	8
Labourers.....	0 45 "	8
Machinists' helpers.....	0 48 "	8

Construction of pile bent and timber decking wharf at Irvine's Landing, Pender Harbour, B.C. Name of contractors, The Vancouver Pile Driving & Contracting Co., Ltd. Vancouver, B.C. Date of contract, April 9, 1929. Amount of contract, approximately \$11,494. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of labour	Rates of wages: Not less than	Hours per day
	Per day	
<i>Clamshell Dredge Crew:</i>		
Runner.....	\$9 00	8
Fireman.....	5 50	8
Mate or winchman.....	5 00	8
Deckhand.....	4 00	8
<i>Dipper Dredge Crew:</i>		
Captain.....	10 00	8
Runner.....	10 00	8
Cranesman.....	8 00	8
Engineer.....	7 50	8
Fireman.....	5 50	8
Mate or winchman.....	5 00	8
Scowman.....	4 40	8
Piledriver foreman.....	10 00	8
Piledriver engineer.....	9 00	8
Fireman.....	5 50	8
Boomman.....	8 00	8
Bridgeman.....	8 00	8
Piledriver man.....	8 00	8
Labourers.....	4 00	8

Construction of interior walls, floors, foundations, drains, etc., in Pyro-Metallurgical Laboratory, Booth St., Ottawa, Ont. Name of contractors, Ed. Brunet & Son, Ottawa, Ont. Date of contract, April 9, 1929. Amount of contract, \$15,490. A fair wage schedule was inserted in the contract as follows:—

Trade or Class of labour	Rates of wages: Not less than	Hours per day
	Per hour	
Concrete workers.....	\$0 45	8
Bricklayers.....	1 20	8
Structural steel workers.....	0 80	8
Carpenters and joiners.....	0 85	8
Painters and glaziers.....	0 65	8
Plumbers and steamfitters.....	0 95	8
Electricians.....	0 80	8
Labourers.....	0 45	8-10
Driver, 1 horse and cart.....	0 70	8-10
Driver, 2 horses and wagon.....	1 00	8-10

Construction of an extension to wharf at Paspébiac, Bonaventure Co., P.Q. Name of contractor, Peter Bourdages, Bonaventure East, P.Q. Date of contract, April 20, 1929. Amount of contract, approximately \$6,300. The General Fair Wages Clause was inserted in the contract.

Construction of a public wharf at Ginols, West Kootenay District, B.C. Name of contractors, L. H. Rawlings and H. P. Leake, Nakusp and Balfour, B.C., respectively. Date

of contract, April 24, 1929. Amount of contract, approximately \$7,689.22. The General Fair Wages Clause was inserted in the contract.

Construction of 3,500 feet of bank protection at Nicomen Island, B.C. Name of contractors, W. R. Jaynes Co., New Westminster, B.C. Date of contract, March, 1929. Amount of contract, \$32,480. The General Fair Wages Clause was inserted in this contract. (It was incorrectly reported in last month's issue that a fair wages schedule was inserted in this contract).

#### DEPARTMENT OF RAILWAYS AND CANALS

##### *Contract in Group "A" (Construction, etc.)*

Construction of a steel tug for service at the Hudson Bay Terminus of the Hudson Bay Railway. Name of contractors, Davie Shipbuilding and Repairing Co., Ltd., Lauzon, Que. Date of contract, April 13, 1929. Amount of contract, \$110,000. The General Fair Wage Clause was inserted in the contract.

#### POST OFFICE DEPARTMENT

Following is a statement of payments made in April, 1929, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment of the workers of fair wages and the performance of the work under proper sanitary conditions:—

Nature of orders	Amount of orders
Making metal dating stamps and type also other hand stamps and brass crown seals.....	\$500 53
Making and repairing rubber stamps, daters, etc.	217 55
Making up and supplying letter carriers' uniforms, etc.....	9,161 08
Stamping pads, ink, etc.....	306 16
Bag fittings.....	6,991 72
Scales.....	317 65

The *Manitoba Gazette*, April 27, 1927, contained a notice that the following regulation of the Workmen's Compensation Board numbered 24 had been approved by the Lieutenant-Governor-in-Council as provided by section 50 of the Workmen's Compensation Act.

No. 24. The Board hereby determines that where a farmer engages labour in lumbering operations in connection with the cutting of timber for lumber, ties, cordwood, pulpwood, etc., on lands owned or occupied by the said farmer, that such operations shall be deemed to be incidental to and for the purpose of the farming industry and therefore shall be and the same are hereby excluded from Part One of the Act.

## CHANGES IN WAGES AND WORKING CONDITIONS ON RAILWAYS IN CANADA

**F**OLLOWING the increases in wages affecting nearly all classes of steam railway employees in Canada, granted in 1927, being approximately five to six per cent (LABOUR GAZETTE, February and August, 1927) further changes for certain classes have been the subject of negotiations between the railway companies and the organizations representing various classes of employees in recent months, resulting in amendments to agreements in some instances while negotiations are still being carried on in regard to other classes.

*Locomotive Engineers and Firemen.*—Disputes involving the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen, representing engine crews on eastern lines of the Canadian Pacific Railway, as to amendments to the tri-partite agreement between the company and the two unions, were referred to two Conciliation Boards under the Industrial Disputes Investigation Act, and the reports of these Boards were published in the issues of the LABOUR GAZETTE for December, 1928, and February, 1929. The Board dealing with the engineers' case had reported that the company and the engineers' union were entitled to amend the agreement in regard to rules affecting mileage rules, the laying off of engineers, and the consequent displacement of firemen according to seniority. The Board dealing with the firemen's case recommended that such changes should not be made until the Department of Labour had an opportunity of attempting to secure a settlement by negotiations between representatives of the two classes of employees. The Minister of Labour accordingly arranged a conference with representatives of the two unions, and no settlement being reached, the company entered into an agreement with representatives of the engineers, making the changes proposed, effective February 1, 1929. Negotiations as to similar changes for engineers on western lines were then carried on with a similar result. A dispute of the same nature then arose between the Canadian National system and its engineers and firemen and two Boards were established to deal with these cases, as recorded on page 477 of this issue.

*Shop Mechanics, etc.*—In April, negotiations between the Railway Association of Canada representing its members, the principal steam railways in Canada, and Division No. 4, Railway Employees' Department of the American Federation of Labour (Federated Shop Crafts), including railway locals of the various unions

of machinists, boilermakers, carpenters, carmen, etc., resulted in an agreement to increase rates of wages above those established January 1, 1927 (LABOUR GAZETTE, February, 1927, page 216). The increases were 5 cents per hour for mechanics, 3½ cents to 5 cents per hour for helpers, 1 cent to 5 cents for apprentices and 2 cents per hour for coach cleaners, making the top rate for mechanics 79 cents per hour, helpers' rates 56 cents to 60 cents. The minimum rate for apprentices now begins at 30 cents per hour, increasing by six month periods to the mechanics' rate. Coach cleaners were increased from 42 cents per hour to 44 cents and also provision was made whereby these might become helpers, etc.

*Clerks, Freight Handlers, etc.*—Wage increases have been requested from the Canadian National Railways by the Canadian Brotherhood of Railway Employees, representing clerks, freight handlers, etc.; also from the Canadian Pacific Railway by the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and at the end of April negotiations were being arranged. In March, the International Brotherhood of Railway and Steamship Clerks, etc., applied for a Board of Conciliation under the Industrial Disputes Investigation Act, 1907, in connection with a dispute with the Dominion Atlantic Railway regarding wages of clerks, freight handlers, etc. (LABOUR GAZETTE, April, 1929). At the end of April negotiations between the parties were still being carried on.

*Maintenance of Way Employees.*—A new agreement between the Railway Association of Canada and the Brotherhood of Maintenance of Way Employees, effective February 1, 1929, has been signed, making slight changes in certain working conditions, chiefly in the nature of embodying the results of understandings and interpretations of the rules in previous agreements.

At a meeting of the Ontario Registered Nurses' Association, held at Kingston in April, a resolution was passed providing that the subject of group nursing be referred to the districts for discussion with hospital governors, laymen and medical staffs at the various meetings, and that at the next annual meeting reports be brought as to their findings by the representatives of the districts. A committee was appointed to consider ways in which the Association might assist in establishing county health units in Canada.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, APRIL, 1929

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was towards somewhat lower levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being slightly lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.01 at the beginning of April, as compared with \$11.23 for March; \$10.27 for April, 1928; \$10.80 for April, 1927; \$11.36 for April, 1926; \$10.56 for April, 1925; \$10.16 for April, 1924; \$10.64 for April, 1923; \$10.26 for April, 1922; \$12.68 for April, 1921; \$16.92 for June, 1920 (the peak); \$12.57 for April, 1918; and \$7.51 for April, 1914. The decline was due chiefly to lower prices for eggs, while slight decreases occurred in the prices of veal, mutton, bacon, lard, butter, potatoes and sugar. Slight increases occurred in the prices of beef, fresh and salt pork, evaporated apples, rice and beans. Including the cost of fuel and rent with that of foods the total budget averaged \$21.30 at the beginning of April, as compared with \$21.52 for March; \$21.11 for April, 1928; \$21.02 for April, 1927; \$21.64 for April, 1926; \$20.82 for April, 1925; \$20.58 for April, 1924; \$21.21 for April, 1923; \$20.66 for April, 1922; \$23.31 for April, 1921; \$26.92 for July, 1920 (the peak); \$20.01 for April, 1918; and \$14.32 for April, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 502 commodities in 1926 as 100, declined to 94.1 for April, as compared with 96.1 for March; 98.3 for April, 1928; 97.5 for April, 1927; and 101.2 for April, 1926. One hundred and nine prices quotations were lower, forty-six were higher and three hundred and forty-seven were unchanged.

In the grouping according to chief component materials six of the eight main groups were lower, while two were slightly higher. The groups which declined were: the Vegetables and their Products group, due to lower prices for grains, flour and other milled products, bananas, lemons, vegetable oils, rubber, cocoa beans, potatoes and naval stores, which more than offset higher prices for tea, coffee, oranges, dried fruits and hay; the Animals and their Products group, due to declines in the prices of milk, eggs and fish, which more than offset advances in the prices of livestock, meats, furs, hides and lard; the Fibres, Textiles and Tex-

tile Products group, due to slightly lower prices for raw cotton, raw wool, raw silk and jute; the Wood, Wood Products and Paper group, due mainly to decline in some lines of British Columbia cedar; the Non-Ferrous Metals group, due to declines in the prices of basic metals, and the Non-Metallic Minerals and their Products group, due to declines in the prices of coal and gasoline, which more than offset advances in the prices of glass, crushed stone, sand and gravel. The Iron and its Products group advanced, chiefly because of higher prices for pig iron and steel sheets. The Chemicals and Allied Products group was slightly higher, due mainly to higher prices for white lead, litharge and cream of tartar.

In the grouping according to purpose consumers' goods declined because of lower prices for flour and other milled products, fish, lemons, bananas, potatoes, eggs, coal and gasoline, which more than offset higher prices for meats, poultry, tea, coffee, oranges and lard. Producers' goods also declined. In this group building and construction materials were lower because of decreases in the prices of paint materials and in British Columbia cedar. In manufacturers' goods materials for the milling industries, for the textile and clothing industries, for the metal working industries, as well as miscellaneous producers' materials, declined, while materials for the fur and leather goods industries and for the meat packing industries were higher.

#### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of April, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers

doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget. with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the

LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

(Continued on page 550)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

Table with 20 columns representing years from 1900 to 1929 and rows for various commodities like Beef, Eggs, Flour, Rice, etc. Each entry includes a quantity and a price.

AVERAGE COST OF STAPLE FOODS BY PROVINCES

Table with 17 columns representing provinces and rows for various staple foods like Coal, Wood, Fuel, and Rent, showing average costs.

† December only. § Kind most sold. \* For electric light and gas see text.

‡ An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent. See text.

(Continued from page 543)

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts, extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made

for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps, two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries.

page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the abovementioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6; 1927, 73.4; 1928, 71.7; 1929, 71.4.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1927 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and

\*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 18%; Sundries 20%.

converted to the base of 1913 as 100, as follows: 1900, 125·8; 1901, 125·8; 1902, 125·8; 1903, 125·2; 1904, 123·9; 1905, 120·1; 1906, 107·5; 1907, 108·8; 1908, 106·9; 1909, 105·7; 1910, 103·8; 1911, 99·4; 1912, 106·6; 1913, 100·0.

### Retail Prices

Beef prices continued toward slightly higher levels, sirloin steak being up from an average of 35 cents per pound in March to 35·4 cents in April, round steak from 30 cents per pound in March to 30·1 cents in April, and shoulder roast from 21·8 cents per pound in March to 21·9 cents in April. Veal was down in the average from 24·9 cents per pound in March to 24·3 cents in April. Mutton was also lower, averaging 30·1 cents per pound in April, as compared with 30·5 cents in March. Both fresh and salt pork advanced, the former from an average of 23 cents per pound to 29 cents, and the latter from 26·5 cents per pound to 26·6 cents. Bacon was slightly lower, averaging 37·6 cents per pound. In fresh fish cod steak and halibut were lower, while white fish was slightly higher. Lard was somewhat lower, averaging 22·1 cents per pound.

Eggs were substantially lower in practically all localities, fresh averaging 40·3 cents per dozen in April, as compared with 51·3 cents in March, and cooking averaging 34·9 cents per dozen in April, as compared with 44·7 cents in March. Milk was unchanged at an average price of 12·5 cents per quart. Dairy butter was slightly lower at 44·3 cents per pound, while creamery was unchanged at an average price of 49 cents per pound.

Bread, flour and soda biscuits were steady. Rice was slightly higher at an average price of 10·5 cents per pound. Canned corn was down from an average price of 16·2 cents per tin to 15·9 cents. Beans were slightly higher at an average price of 11·8 cents per pound. Onions were up from 7·8 cents per pound in March to 8·3 cents in April. Potatoes averaged \$1.27 per ninety pounds in April as compared with \$1.31 in March. Evaporated apples advanced in the average from 21·2 cents per pound to 21·4 cents. Granulated sugar was slightly lower at an average price of 7·4 cents per pound in April, as compared with 7·5 cents in March. Anthracite coal and coke were practically unchanged, the former at an average price of \$16.37 per ton and the latter at \$13 per ton. No changes were reported in rent.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices were again lower, No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaging \$1.227 per bushel, as compared with \$1.269 in March. The high price for the month was \$1.26 $\frac{3}{4}$  reached on the 13th and the low \$1.19 $\frac{1}{4}$  toward the end of the month. The favourable reports as to the progress of the winter wheat crop, improved conditions for seeding in the Canadian west, together with reports of large shipments of Argentine wheat and of the accumulation of wheat at shipping points were said to be the factors contributing to lower prices. Coarse grains followed the trend in wheat, western barley at Winnipeg being down from 74·8 cents per bushel to 71·6 cents; western oats from 64·2 cents per bushel to 57·7 cents, rye from \$1.09 per bushel to 99·8 cents and flax from \$2.07 $\frac{1}{2}$  per bushel to \$2.02. American corn at Toronto was down from \$1.09 $\frac{1}{2}$  per bushel to \$1.03 $\frac{1}{4}$ . Milled products were also lower, flour at Toronto being down from \$7.60 per barrel to \$7.36, oatmeal from \$4.24 per bag to \$4.13, bran from \$33.62 per ton to \$30.16, and shorts from \$35.09 per ton to \$30.16. Oranges at Toronto rose from \$4.34 per case to \$4.94, while bananas declined from 6-6 $\frac{1}{2}$  cents per pound to 5-5 $\frac{1}{2}$  cents. Manitoba potatoes at Winnipeg fell from \$1.35 per hundred pounds to \$1.23 and Nova Scotia grades at Halifax from 90 cents per bag to 65 cents. Santos coffee at Toronto advanced slightly to 30 cents per pound. Raw rubber at New York declined from 24·4 cents per pound to 21·2 cents. Turpentine was down from 90 $\frac{1}{2}$  cents per gallon to 85 $\frac{3}{4}$  cents. Rosin declined from \$12.25 per barrel to \$11.90. Linseed oil was 4 cents per gallon lower at 80 cents. Hay at Toronto rose from \$14-15.50 per ton to \$15-16.50. In livestock good steers at Toronto rose from \$9.40 per hundred pounds to \$10.18 and at Winnipeg from \$8.62 per hundred pounds to \$9.56. Calves at Toronto were down from \$15.97 per hundred pounds to \$14.68 and at Winnipeg from \$12.48 per hundred pounds to \$12.02. Hogs at Toronto advanced from \$11.79 per hundred pounds to \$12.73 and at Winnipeg from \$10.97 per hundred pounds to \$11.82. Meats followed the trend in livestock, beef at Winnipeg advancing from 18 cents per pound to 18 $\frac{1}{2}$  cents and best hogs at Toronto from 17 $\frac{1}{2}$  cents per pound to 19 $\frac{1}{2}$  cents. Lard at Toronto rose from 15 $\frac{1}{2}$  cents per pound to 16 cents. Eggs were substantially lower, fresh at Montreal declining from 45·3 cents per dozen to 34·3 cents and at Toronto from 41·5 cents per dozen to 32 cents. Raw cotton at New York was down from an average price of 21·2 cents per pound in March to 20·3 cents in April. Several grades of raw silk at New York declined, extra being down from \$5.10 per pound

to \$5. Wool at Toronto declined 2 to 3 cents per pound. Jute at Montreal was down from \$9.54 per hundred pounds to \$9.05. Foundry pig iron advanced from \$23.10 per ton to \$24.10. The non-ferrous metal markets were weak, copper declining from \$22.90 per hundred pounds to \$21.60; copper sheets from 32½ cents per pound to 28½ cents; copper wire from 25¼ cents per pound to 24¼ cents; tin

ingots from 51 cents per pound to 47¼ cents; lead from \$7.17½ per hundred pounds to \$7.08; and zinc from \$7.37 per hundred pounds to \$7.23. American anthracite coal at Toronto fell from \$13.52 per ton to \$12.92. Gasoline at Montreal was down from 20½ cents per gallon to 19½ cents and at Vancouver from 22 cents per gallon to 20 cents. White lead was up from \$10.68 per cwt. to \$11.50.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

**T**HE following notes give the latest information available as to movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number on the base of 1913 = 100, was 140.1 for March, an advance of 1.2 per cent over February. Food advanced one per cent due to rises in meat and fish and "other foods," while cereals declined slightly. Industrial materials rose 1.5 per cent, showing advances in iron and steel, other metals and minerals and cotton, while other textiles and miscellaneous commodities declined.

The Economist index number, on the base of 1927 = 100, was 96.1 at the end of March, an advance of 0.5 per cent over the previous month. Both cereals and meat and other foods fell, due chiefly to falls in the prices of mutton, potatoes and wheat. Textiles showed an advance due to a rise in cotton prices, partly counteracted by a decline in wool. Minerals also advanced due to advances in coal and an advance of nearly 35 per cent in copper. Of the miscellaneous products, advances in petrol and petroleum were offset by declines in rubber, creosote and leather.

The Statist index number (in continuation of Sauerbeck's figures) on the base 1867-1877 = 100, was 120.5 at the end of March, an advance of 0.3 per cent over the previous month. This rise is accounted for by the sharp advance in copper and lead. All three of the food groups fell, partly due to seasonal declines in butter and potatoes. Textiles declined slightly and sundries advanced one per cent due to increases in timber and petroleum.

**COST OF LIVING.**—The index number of the Ministry of Labour on the base July, 1914 = 100, was 162 at the beginning of April, a decline of 2.4 per cent for the month. This was due to a decline of 4.5 per cent in the food

group due to seasonal declines in foods, chiefly eggs, butter and milk. Other groups were unchanged from the previous month.

### France

**WHOLESALE PRICES.**—The index number of Statistique Générale, on the base July, 1914 = 100, was 653 for March, a rise of 0.2 per cent over February. The food group as a whole was practically unchanged, advances in vegetable foods being offset by declines in animal and miscellaneous foods. Industrial materials advanced slightly, a considerable rise in minerals and metals being counteracted by a fall in textiles and miscellaneous products.

**COST OF LIVING.**—The official index number of the cost of living, Paris, on the base 1914 = 100, was 547 for the first quarter of 1929, an increase of 3 per cent over the previous quarter. All groups with the exception of rent showed advances.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base 1913 = 100, was 139.6 for March, an advance of 0.2 per cent over the February level. Agricultural products declined 0.1 per cent due to a sharp decline in animal foods; provisions advanced 2.5 per cent; raw material and semi-manufactured goods advanced 0.5 per cent due to an increase of 11.5 per cent in metals other than iron; manufactured goods declined 0.1 per cent.

**COST OF LIVING.**—The official index number on the base 1913-1914 = 100, was 156.5 for March, an advance of 1.4 per cent over February. Food rose 2.3 per cent, heat and light 0.5 per cent, clothing 0.1 per cent, while rent and sundries were unchanged.

### Italy

**WHOLESALE PRICES.**—The index number of the Milan Chamber of Commerce, on the base 1913 = 100, was 498.86 for March, an advance of 0.1 per cent over February. Foods rose

slightly owing to a considerable increase in vegetable foods, which was offset by an almost equal decline in animal foods. Industrial materials also showed a small increase; there were no marked changes in any particular groups.

### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base 1926 = 100, was 97.5 for March, an increase of 0.8 per cent over February. Farm products advanced 1.8 per cent due to higher prices for beef cattle, hogs, sheep, poultry and cotton. Among foods, increases in meats were offset by decreases in the prices of butter and flour. Metals advanced nearly two per cent due chiefly to a marked increase in copper, lead and zinc. Other groups showed only small variations.

The Annalist index number, on the base 1913 = 100, was 147.5 for April, a decline of 0.5 per cent from March. Food products and miscellaneous commodities declined, while

other groups showed only slight variations from March.

Bradstreet's index number (showing the cost of a list of 106 commodities) was \$12.6765 at May 1, a decline of 1.5 per cent from the previous month owing chiefly to a decline in non-ferrous metals (particularly copper), raw textiles and rubber. Four groups advanced: provisions, fruits, hides and leather and naval stores, and eight groups declined: metals, textiles, miscellaneous products, oils, breadstuffs, live-stock, coal and coke and building materials.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base July, 1914 = 100, was 159.8 for March, a decline of 0.7 per cent. The decline extended to all groups with the exception of housing which was slightly higher.

The index number of the Massachusetts Special Commission on the Necessaries of Life, on the base 1913 = 100, was 160.0 for March as compared with 159.0 for February. Food, clothing and fuel and light all advanced while shelter and sundries were unchanged.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1929

**T**HE number of fatal industrial accidents, including such fatalities from industrial diseases as are included with fatal accidents by workmen's compensation boards, etc., which were recorded in the Department as occurring during the first quarter of 1929, was 311, there being 126 in January, 75 in February and 110 in March. In the first quarter of 1928, 321 fatal accidents were recorded. In this report it is the custom to record industrial accidents under the dates of the occurrence of the accidents and fatal industrial diseases under the dates on which they prove fatal.

The supplementary list of fatal accidents occurring in 1928, to be found on page 562, contains 27 fatalities.

Reports were received from the provincial workmen's compensation boards, the Board of Railway Commissioners of Canada and certain other official sources; and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

### Fatalities by Industrial Groups

Classified by groups of industries, the fatalities occurred as follows: agriculture, 15; logging, 57; fishing and trapping, 7; mining, non-ferrous smelting and quarrying, 46; manufacturing, 38; construction, 46; transportation and public utilities, 76; trade, 11; service, 15.

Of the mining accidents 23 were in "metaliferous mining," 15 in "coal mining," 6 in "non-metallic mineral mining and quarrying," and 2 in "structural materials."

Of the accidents in manufacturing, 1 was in the group "vegetable foods, drink and tobacco," 4 in "textiles and clothing," 13 in "saw and planing mill products," 5 in "wood products," 2 in "pulp, paper and paper products," 9 in "iron, steel and products," 1 in "non-metallic mineral products," 2 in "chemical and allied products," and 1 in "miscellaneous products."

In construction there were 30 fatalities in "buildings and structures," 4 in "railway," 6 in "highway and bridge," and 6 in "miscellaneous construction."

In transportation and public utilities, there were 54 fatalities in "steam railways," 2 in "street and electric railways," 3 in "water transportation," 9 in "local transportation," 2 in "storage," 5 in "electricity and gas," and 1 in "telegraphs and telephones."

There were 15 fatalities in service, of which 7 were in "public administration," 2 in "laundering, dyeing and cleaning," 3 in "custom and repair," 2 in "personal and domestic" and 1 in "professional."

In trade there were 5 fatalities in "wholesale," and 6 in "retail."

### Disasters

The most serious disaster during the period under review occurred on March 20, when seven members of the train crews, and five or more passengers, were killed in a collision of two express trains at Drocourt, near Parry Sound, Ontario. The coroner's jury in their verdict held that the collision was due to the neglect of one of the train crews in running past the meeting place where they had orders to stop, and three members of this crew were committed for trial for manslaughter.

On January 19 three members of a train crew were killed when their train was derailed owing to a washout near Belleville, Ontario. A buckled rail causing the derailment of a train at Moore's Siding, Ontario, resulted in three fatalities to the crew.

Two trainmen were killed in a collision of two trains at Lauretta, British Columbia, on January 27 and two members of another train crew were killed in a similar accident near Calgary, Alberta., on the same date. Two members of another train crew were killed near Revelstoke, British Columbia, on January 28, when their engine went over a bridge into a ravine, and two of another crew were killed

when their train was derailed on March 8, at Deschambault, Quebec.

Three mining prospectors perished at Woman Lake, Ontario, when they were trapped in a burning cabin. Another two miners were killed in an explosion at Stewart, British Columbia, caused by drilling into a missed hole. Two oil well drillers near Calgary, Alberta, were killed when struck by drill rods which were forced up by a terrific flow of gas in the well on March 31.

Two labourers engaged in building construction at Brockville, Ontario, were killed when they fell down a shaft when a beam supporting a freight hoist on which they were working gave way on January 23. Two men were killed in Toronto, Ontario, on February 18, when a scaffolding collapsed.

Two fishermen were drowned off Lunenburg, Nova Scotia, from a dory on March 16, when they were setting trawls, and two sailors were drowned near the same locality when their schooner sank after a collision.

Two boatmen were drowned near South Slo-can, British Columbia, on February 23, when their boat drifted into rough water after their engine stalled.

### FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1929

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE AND STOCKRAISING—</b>				
Farmer	Near Prescott, Ont.	Jan. 1	61	Fell from windmill.
Farmer	Samsonton Dist., Alta.	" 14	61	Injured when his wagon overturned. Died Jan. 17.
Farmer	Abee, Alta.	" 17	47	Cut on head by buzz saw when clothing became caught.
Farmer	Near Okotocks, Alta.	" 19	60	Clothing caught in clutch of gasoline engine.
Farmer	Near Sussex, N.B.	Feb. 11		Burned when clothing became ignited while fixing lamp.
Farmer	Moose Creek Dist., Sask.	" 18	65	Frozen.
Farmer	Three Poteaux, Que.	" 25	45	Struck on temple by piece of iron from wood cutting machine.
Farmer	Wetaskiwin, Alta.	About Mar. 1		Cut on chest by a saw which flew off shaft. Died Mar. 17.
Farmer	Agassiz, B.C.	About Mar. 8	55	Thrown from wagon when horses bolted. Died Mar. 15.
Farmer	Pictou County, N.S.	" 10	28	Gored by bull.
Farm hand	Near Pembroke, Ont.	" 14		Kicked by horse. Died Mar. 15.
Farmer's son	Garthby, Que.	About Mar. 20	16	Blood poisoning from pitchfork piercing eye. Died Mar. 22.
Farmer	Earl Grey, Sask.	About Mar. 21		Fell from ladder following heart attack and broke neck.
Indian reserve man	Near Brantford, Ont.	" 24	67	Fell from thresher and broke neck.
Farmer	Wetaskiwin, Alta.	About Mar. 28	28	Burned from explosion by starting fire with kerosene.
<b>LOGGING—</b>				
Logger	Bethune Camp 2, Ont.	Jan. 2	21	Struck on head by falling limb. Died of septicemia Mar. 9.
Labourer	Mile 67, Westgate, Man.	" 5	30	Struck by falling tree. Internal injuries. Died Jan. 13.
Labourer	Great Falls, Man.	" 5	26	Struck by falling tree, fracturing skull. Died Jan. 6.
Sawyer	Cannon Creek, Alta.	" 5	22	Struck by tree.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER  
OF 1929—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—Con.				
Chore boy.....	Near Madawaska, Ont.....	" 6	26	Fell through ice and drowned.
Logger.....	Campbell River, B.C.....	" 7		Killed in logging accident.
Baraman.....	Mile 198, A.C.R., Ont.....	" 8	About	
Logger.....	Township of Regan, Ont....	" 8	50	Fell under horses in stable and trampled on. Jammed between two logs on skids when swamp hook loosened. Fractured skull and neck.
Logger.....	Lumley, B.C.....	" 10		Killed in logging accident.
Logger.....	Near Nanaimo, B.C.....	" 11	36	Struck by sky-line which broke his back.
Faller.....	Near Fort Coulonge, Que....	" 11	42	Struck by limb of tree.
Cook.....	Port Menier, Que.....	" 13	44	Burned arm. Died Feb. 7.
Logger.....	Lake Scotia, Ont.....	" 13	54	Team went through ice. Got feet frozen getting them out. Died Jan. 24.
Hookman.....	Near Ladysmith, B.C.....	" 14	19	Head crushed between log and railroad car.
Labourer.....	Sutton, Que.....	" 15	54	Struck on head by falling branch of tree.
Manager.....	Steelhead, B.C.....	" 15	40	Struck by falling tree. Broken neck.
Logger.....	Grand'Mere, Que.....	" 16	44	Internal injuries from lifting log. Died Jan. 17.
Teamster.....	Kapuskasig, Ont.....	" 18		Knocked under sleigh by log which fell off load and struck him. Fractured skull. Died Jan. 19.
Loader.....	Lake Cowichan, B.C.....	" 22	46	Struck on head by log while loading logs on flat car.
Teamster.....	Nipawin, Sask.....	About		
Tie maker.....	Greenwood, B.C.....	Jan. 25		Sleigh load of logs upset on him.
Teamster.....	Near Ste. Christine, Que....	" 25		Tree fell on him.
Logger.....	Flanders, Ont.....	" 26	17	Fell from load of logs and sleigh ran over his neck.
Logger.....	Near Kitchener, Ont.....	" 28	34	While loading logs on sleigh, log rolled off striking him in abdomen. Died Mar. 3.
Logger.....	Stinson Township, Ont.....	" 29		Shot by hunter while working in bush.
Log maker.....	Stinson Township, Ont.....	" 29	30	Log struck his leg while piling logs. Infection. Died Feb. 11.
Labourer with wood merchants.....	St. Vianney, Que.....	" 29	45	Crushed by falling tree.
Logger.....	Near Woodstock, Ont.....	" 30	30	Struck by falling tree.
Foreman.....	Stupart, Ont.....	" 30		Crushed under logs while unloading logs.
Farmer.....	Near Meaford, Ont.....	" 30	45	Tree fell on him. Died Jan. 30.
Labourer.....	Near Cartier, Ont.....	" 31	32	Log fell on him while loading logs. Broken leg. Died Feb. 1.
Bucker.....	Chemainus, B.C.....	Feb. 1	35	Head crushed between two logs.
Labourer.....	Fossmill, Ont.....	" 2	35	Caught among rolling logs on rollway. Died Feb. 14 following operation.
Manager of logging camp.....	Middlebro, Man.....	" 4	30	Crushed by log while loading logs from skids.
Labourer.....	Patapedia River, Que.....	" 5	19	Tree stump fell on his head from wagon.
Faller.....	Scott Cove, B.C.....	" 5	53	Struck by limb. Fractured skull. Died Feb. 6.
Tractor driver.....	White River, Ont.....	" 8	25	Crushed when sleigh broke loose from tractor on hill.
Labourer.....	Penetang, Ont.....	" 11	39	Cut his heel while cutting logs.
Cook.....	Vallican, B.C.....	" 11	61	Cut hand—poison.
Logger.....	Collins Inlet, Ont.....	" 18	About	
Logger.....	Near Killarney, Ont.....	About	33	Struck by falling tree. Fractured skull.
Logger.....	Cain's River, N.B.....	Feb. 22		Struck on head by falling tree.
Logger.....	Spurfield, Alta.....	" 22		Embolism following fracture of leg in lumber camp.
Logger.....	Pitt Lake, B.C.....	Mar. 2	26	Struck by log in lumber mill.
Rigger.....	Pitt Lake, B.C.....	" 2		Spar tree on which he was working collapsed and he fell 120 feet.
Forest engineer for lumber manufacturers.....	Clericy, Que.....	" 5	36	Accidentally shot while cleaning revolver.
Logger.....	Chemainus, B.C.....	" 8		Crushed by log.
Logger.....	West Arrow Park, B.C.....	" 8	28	Struck by falling tree.
Farmer.....	Black Rock, Kings Co., N.S.....	" 11	62	Struck by falling tree.
Tie maker.....	Near Shebandowan, Ont....	" 11	About	
Logger.....	Englewood, B.C.....	" 12	26	Crushed by falling tree.
Logger.....	Britton River Camp, B.C....	" 12	59	Struck by tree.
Chokerman.....	Mayo, B.C.....	About		Crushed by falling tree.
Logger.....	Price, Que.....	Mar. 13	41	Struck on head by flying cable.
Logger.....	Winfield, B.C.....	" 14	20	Crushed by log while loading logs.
Logger.....	Near North Bay, Ont.....	" 14	25	Struck by tree.
Superintendent.....	Near Chocoutimi, Que.....	" 14	43	Struck on head by gin pole of loading machine.
Farmer.....	Near Chocoutimi, Que.....	About		
Logger.....	Near Powell River, B.C.....	Mar. 17	51	Tree fell on him.
Logger.....	Cowichan Lake, B.C.....	" 19	32	Struck by branch.
Logger.....	Cowichan Lake, B.C.....	" 25	34	Back broken in logging accident.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER  
OF 1929—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>FISHING AND TRAPPING—</b>				
Trapper.....	Bowmanton Dist., Alta.....	Jan. 6	22	Suffocated when earth caved in after he had tunneled into badger den.
Fisherman.....	North of Prince Rupert, B.C.	Feb. 19	24	Washed overboard during heavy storm.
Trapper.....	Cattle Head, P.E.I.....	" 23	20	Killed when gun accidentally discharged.
Fisherman.....	Off Lunenburg, N.S.....	Mar. 16	40	Drowned from dory when they were setting trawls.
Fisherman.....	Off Lunenburg, N.S.....	" 19	40	Drowned when schooner sank after a collision.
Sailor.....	Off Lunenburg, N.S.....	" 22	.....	Drowned when schooner sank after a collision.
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>				
<i>Metalliferous Mining—</i>				
Shaft man.....	Noranda, Que.....	Jan. 3	33	Struck by rock.
Driller.....	Bradley, Ont.....	" 3	33	Dynamite blasting.
Shaft timberman.....	Frood, Ont.....	" 5	29	Fell down 80 feet in shaft.
Miner.....	Britannia Mines, B.C.....	" 11	26	Fell 70 feet.
Miner.....	Montauban les Mines, Que.....	" 12	74	Buried by cave-in in mine.
Deckman.....	South Porcupine, Ont.....	" 19	.....	Silicosis contracted, July 6, 1928.
Miner.....	Red Lake, Ont.....	" 27	30	Struck on head by air hose when connection blew off.
Miner.....	Salmo, B.C.....	" 31	49	Buried in snowslide.
Miner.....	Frood Mine, Ont.....	Feb. 10	43	Fell down mine shaft.
Miner.....	Stewart, B.C.....	Feb. 11	45	Explosion from drilling into a missed hole.
Miner.....	Stewart, B.C.....	Feb. 11	47	Explosion from drilling into a missed hole.
Prospector.....	Woman Lake Portage, Ont..	" 11	.....	Perished when trapped in burning cabin.
Prospector.....	Woman Lake Portage, Ont..	" 11	.....	Perished when trapped in burning cabin.
Prospector.....	Woman Lake Portage, Ont..	" 11	.....	Perished when trapped in burning cabin.
Driller.....	Creighton Mine, Ont.....	" 13	53	Leg crushed by fall of rock causing cerebral embolus. Died Feb. 17.
Miner.....	Near Cobalt, Ont.....	" 16	30	Injured during blasting operations. Died Feb. 16.
Pipefitter.....	Kirkland Lake, Ont.....	" 23	33	Fell down mine shaft.
Miner.....	Britannia, B.C.....	" 28	24	Struck by fall of rock. Fractured skull and back.
Miner.....	Anoyx, B.C.....	Mar. 6	48	Struck by falling rock. Broken back.
Miner.....	Britannia, B.C.....	About Mar. 6	50	Injured in mine. Died Mar. 11.
Miner.....	Kimberley, B.C.....	" 9	32	Struck by falling rock.
Mucker.....	Flin Flon, Man.....	" 13	30	Fainted and fell from elevator and crushed between cage and shaft.
Miner.....	Britannia, B.C.....	" 20	50	Fell 45 feet when ladder on which he was working gave way.
<i>Coal Mining—</i>				
Miner.....	Stellarton, N.S.....	About Jan. 1	45	Received blow on head from hammer of boring machine. Died Jan. 23.
Driver.....	Rosedale, Alta.....	" 4	24	Buried under car of coal when it overturned.
Machine helper.....	Drumheller, Alta.....	" 14	31	Electrocuted by electric coal cutting machine.
Miner.....	Beersville, N.B.....	" 16	24	Crushed by falling rock in mine.
Miner.....	Springhill, N.S.....	" 19	51	Hand injured by jig wheel; blood poisoning. Died Jan. 31.
Miner.....	Coleman, Alta.....	Feb. 12	35	Buried by cave-in.
Miner.....	Luscar, Alta.....	" 14	.....	Crushed by cave-in of mine.
Miner.....	Minto, N.B.....	" 16	24	Buried under rock slide.
Trip rider.....	New Waterford, N.S.....	" 19	25	Coal trip he was riding jumped track and brought down a fall of stone.
Miner.....	Hillcrest, Alta.....	Mar. 2	26	Crushed by falling coal.
Miner.....	Glace Bay, N.S.....	" 2	51	Struck on head by iron hoisting block. Died Mar. 4.
Miner.....	Glace Bay, N.S.....	" 20	50	Crushed by fall of rock.
Brakeman.....	Bellevue, Alta.....	" 21	43	Caught between two cars; fractured skull, ribs and jaw.
Timberman.....	Blakeburn, B.C.....	" 23	44	Struck by falling roof. Died Mar. 26.
Miner.....	Westville, N.S.....	" 27	52	Struck by fall of coal. Died April 3.
<i>Non-Metallic Mineral Mining—</i>				
Truck driver's helper	Near Calgary, Alta.....	Jan. 15	22	Crushed by castings when chain broke while unloading same.
Labourer.....	Winnipegosis, Man.....	Feb. 15	.....	Injured during blasting operations.
Miner.....	Thetford Mines, Que.....	Mar. 9	53	Crushed by falling rock.
Labourer.....	St. Marc des Carrieres, Que.	" 11	.....	Buried by cave-in.
Oil well driller.....	Near Calgary, Alta.....	" 31	.....	Struck by drill rods which were forced up by terrific flow of gas in well. Second man died April 1.
Oil well driller.....	Near Calgary, Alta.....	" 31	.....	Struck by drill rods which were forced up by terrific flow of gas in well. Second man died April 1.
<i>Structural Materials—</i>				
Derrick operator.....	Beachville, Ont.....	Jan. 10	38	Crushed beneath derrick when it was being removed.
Labourer.....	St. Eustache, Que.....	" 17	28	Buried in sand pit when wall collapsed. Died Jan. 18.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER  
OF 1929—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>MANUFACTURING— Vegetable Foods, Drink and Tobacco—</i>				
Miller.....	Delisle, Sask.....	Feb. 15	88	Injured when sleeve became caught in machinery. Died Feb. 16.
<i>Textiles and Clothing—</i>				
Bleach house hand.....	Galt, Ont.....	Jan. 7	48	Mangled when clothing became caught in shaft.
Labourer.....	Montreal, Que.....	" 7	21	Crushed under elevator while at work in elevator shaft.
Janitor at cotton mills.....	Toronto, Ont.....	" 9	.....	Box fell on foot crushing toe. Gangrene. Died Feb. 7.
Mill worker.....	Sherbrooke, Que.....	Mar. 9	24	Electrocuted when he came in contact with wire-carrying power for machine he was operating.
<i>Saw and Planing Mill Products—</i>				
Oiler.....	Gloucester Co., N.B.....	Jan. 10	50	Caught in shaft. Fractured skull.
Tractor operator.....	Burnsville, Gloucester Co., N.B.....	" 10	.....	Leg torn off when caught in gear of tractor.
Labourer.....	Janeville, N.B.....	" 13	47	Arm caught in belt.
Mill hand.....	Port Alberni, B.C.....	" 16	42	Tuberculosis following knee injury on Jan. 11, 1926.
Fireman.....	Near Wolfville, N.S.....	" 21	40	Boiler explosion caused by frozen pipes.
Watchman.....	Toronto, Ont.....	" 27	43	Overcome by fumes from open coke fire at plant.
Culler's assistant.....	Melare River, Que.....	Feb. 15	61	Horse bolted and sleigh crashed with him in it.
Labourer.....	Limoilou, Que.....	Feb. 18	23	Mangled by circular saw when it broke away from its base.
Saw operator.....	Calgary, Alta.....	Mar. 6	48	Struck in abdomen by piece of lumber which rebounded from saw. Died Mar. 7.
Sawyer.....	Summerland, B.C.....	" 9	60	Fell against circular saw.
Engine man.....	Bolingbroke, Ont.....	" 26	30	Caught in engine belt. Fractured skull.
Saw mill worker.....	Saint Luc, Que.....	" 26	17	Injured when his apron got caught in machinery.
Farmer.....	Near Brussels, Ont.....	" 29	25	Struck by board which flew from portable saw.
<i>Wood Products—</i>				
Labourer in basket factory.....	Grimsby, Ont.....	Jan. 7	25	While helping to empty steam vat of logs, fell into vat and scalded.
President of furniture manufacturers.....	Napanee, Ont.....	" 12	44	Asphyxiated by carbon monoxide gas from car engine in garage.
Sawyer.....	Wingham, Ont.....	" 23	27	Piece of lumber flew from saw hitting him in abdomen. Died Jan. 26.
Shaper hand.....	Toronto, Ont.....	Feb. 19	.....	Struck on head by frame while cutting groove in it.
Carpenter.....	Montreal, Que.....	Mar. 5	.....	Cut by saw. Blood poison. Died. Mar. 18.
<i>Pulp, Paper and Paper Products—</i>				
Shift runner.....	Temiskaming, Que.....	Jan. 31	.....	Caught in gears of bleaching machine. Died Feb. 1.
Yard labourer.....	Thorold, Ont.....	Mar. 23	.....	Struck by sticks while working on pile of pulp-wood.
<i>Iron, Steel and Pro- ducts—</i>				
Steel worker.....	Hamilton, Ont.....	Jan. 4	42	Badly burned when he fell while repairing furnace pipe. Died Jan. 5.
Helper with auto manufacturers.....	Montreal, Que.....	" 7	32	Bruised elbow. Died of septicemia April 2.
Labourer.....	Winnipeg, Man.....	" 8	26	Crushed beneath boiler when it fell from tackle hoist.
Labourer with elevator manufacturers.....	Hamilton, Ont.....	" 9	58	Struck on head by handle of truck while unloading truck. Concussion of brain. Died Feb. 10.
Carpenter with implement manufacturers.....	Brantford, Ont.....	" 25	78	Squeezed between load of poles and bench. Gangrene. Died Mar. 23.
Night watchman.....	Sault Ste. Marie, Ont.....	" 30	60	Fell from ladder fracturing hip. Died Feb. 8.
Locomotive engineer.....	Hamilton, Ont.....	" 31	52	Boiler of his engine exploded. Crushed skull.
Driver for wagon builders.....	Montreal, Que.....	Feb. 14	45	Thrown out of sleigh injuring head. Died Mar. 4.
Helper.....	Toronto, Ont.....	Mar. 6	18	Crushed under falling girder.
<i>Non-Metallic Mineral Products—</i>				
Stonecutter (Monumental).....	Kingston, Ont.....	Feb. 19	44	Pneumoconiosis from inhaling stone dust. Incapacitated since Oct. 28, 1927.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER  
OF 1929—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MANUFACTURING—Con.</b>				
<i>Chemical and Allied Products—</i>				
Labourer.....	Montreal, Que.....	Jan. 25	18	Collapsed from lung affection while at work in factory where nitric acid is used. Died Jan. 26. Burned when clothing caught fire while shovelling ashes from incinerator. Died Feb. 18.
Janitor with soap manufacturers....	Toronto, Ont.....	" 30	75	
<i>Miscellaneous Products—</i>				
Labourer.....	Montreal, Que.....	Mar. 18	31	Fell down elevator shaft.
<b>CONSTRUCTION—</b>				
<i>Buildings and Structures—</i>				
Labourer.....	Winnipeg, Man.....	Jan. 8	26	Fell 40 feet from ladder, fracturing skull.
Elevator mechanic..	Toronto, Ont.....	" 8	40	Fell down elevator shaft.
Labourer.....	Hamilton, Ont.....	" 14	.....	Collapsed while at work.
Labourer.....	Hamilton, Ont.....	" 16	48	Fell 40 feet from building.
Labourer.....	Brockville, Ont.....	" 23	24	Fell down shaft when beam supporting freight hoist on which they were working gave way.
Labourer.....	Collingwood, Ont.....	Feb. 2	40	
Mechanic's helper with elevator company.....	Hamilton, Ont.....	" 4	44	Struck by falling block of aircrete fracturing skull. Died Feb. 7.
Labourer.....	Toronto, Ont.....	" 9	32	Crushed by steel beam which fell during dismantling operations.
Painter.....	Toronto, Ont.....	" 18	58	Fell when scaffolding collapsed.
Bricklayer.....	Toronto, Ont.....	" 19	42	
Painter.....	Toronto, Ont.....	" 20	.....	Fell to basement.
Carpenter.....	Toronto, Ont.....	" 20	.....	Collapsed from heart failure while at work.
Labourer.....	Montreal, Que.....	" 21	35	Fell from fourth floor while loading wood on elevator.
Carpenter.....	Sapperton, B.C.....	" 22	50	Fell from scaffold. Died Mar. 28.
Labourer.....	Montreal, Que.....	" 27	31	Crushed when earth collapsed in excavation.
Roofer.....	Toronto, Ont.....	Mar. 5	40	Fell 40 feet from roof. Fractured skull. Developed meningitis. Died Mar. 17.
Carpenter.....	Peterborough, Ont.....	" 8	52	Slipped and fell from scaffold. Fractured skull.
Labourer with contractors.....	Roberval, Que.....	" 12	30	Struck on head by stone during blasting operations. Died Mar. 16.
Carpenter.....	Niagara Falls, Ont.....	" 14	50	Fell from roof, fracturing skull.
Labour foreman.....	Hamilton, Ont.....	" 14	44	Struck on head by falling iron pipe.
Carpenter.....	Ville La Salle, Que.....	" 18	31	Killed when scaffolding collapsed. Fractured spine.
Painter.....	Thamesville, Ont.....	" 20	About 55	Fell from scaffold when rope broke. Fractured skull.
Labourer.....	Murray Bay, Que.....	About Mar. 20	33	Carbon monoxide poisoning from fumes of heater. Developed pneumonia. Died Mar. 26.
Ironworker.....	Hamilton, Ont.....	" 20	28	Struck by falling girder.
Steel erector.....	Ottawa, Ont.....	" 20	22	Fell 60 feet from building.
Carpenter.....	Near Colonsay, Sask.....	" 24	.....	Fell from ladder injuring head.
Labourer.....	Vancouver, B.C.....	" 24	.....	Fell 60 feet while repairing chimney.
Carpenter's apprentice.....	Lachine, Que.....	" 26	23	Knocked down by elevator. Fractured skull. Died March 31.
Riveter.....	Claresholm, Alta.....	" 26	43	Struck on head by falling equipment while working on oil tank.
<b>Railway—</b>				
Labourer.....	Near Le Pas, Man.....	Feb. 2	35	Struck by rock following blasting operations.
Checker of supplies..	Churchill, Man.....	" 9	42	Hernia from lifting heavy boxes. Thrombosis following operation.
Labourer.....	Rosemay, Alta.....	Mar. 10	46	Fell off hand car. Died Mar. 11.
Labourer.....	Near Sudbury, Ont.....	" 13	.....	Injured during blasting operations.
<b>Highway and Bridge—</b>				
Bridge builder.....	Albert Canyon, B.C.....	Jan. 7	32	Struck leg on derrick. Blood poisoning. Died Jan. 16.
Labourer.....	Quesnel, B.C.....	" 23	27	Blasting ice and charge exploded in hand.
Labourer.....	Mile 273, Ferguson Highway near North Bay, Ont.....	" 25	28	Buried under cave-in of gravel.
Farmer engaged in road repairing.....	St. Amable, Que.....	Feb. 20	41	Struck on face by falling rock. Died Mar. 23.
Steelworker.....	Donald, B.C.....	Mar. 7	28	Fell from scaffold at bridge when rope broke.
Road superintendent	Haileybury, Ont.....	" 20	.....	Injured when stick of dynamite exploded in his hand. Died Mar. 21.
<b>Miscellaneous—</b>				
Carpenter on dam construction.....	St. Vincent de Paul, Que....	Jan. 8	36	Fell from ladder fracturing skull.
Labourer.....	Near Bracebridge, Ont.....	" 17	35	Struck on head by falling rock.
Labourer.....	Kitchener, Ont.....	" 18	28	Clamshell scoop shovel fell on him when the brakes failed.
Cement finisher.....	Ear Falls, Ont.....	Feb. 23	32	Fell 40 feet from top of pier, fracturing skull.
Well driller.....	Turner Valley, Alta.....	Mar. 18	.....	Caught in belt when part of machinery broke. Fractured skull.
Labourer on canal construction.....	Near Port Colborne, Ont....	" 22	35	Fell into canal and drowned.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER  
OF 1929—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<i>Steam Railways—</i>				
Trainman	Granum, Alta.	Jan. 2	32	Slipped and fell under train during switching operations.
Air brake inspector	Montreal, Que.	" 7	31	Run over by locomotive.
Patrolman	Lytton, B.C.	" 14	46	Struck by rock. Broken back.
Engineer	Near Belleville, Ont.	" 19	35	Train derailed owing to washout. Engineer died Jan. 19. Other two died Jan. 20.
Fireman			33	
Brakeman	Near Stoney Creek, Ont.	" 18	41	Killed when train was derailed owing to washout.
Fireman			33	
Bridgeman	Ottawa, Ont.	" 19	54	Fell from ladder.
Conductor	Near Brandon, Man.	" 21	51	Struck by engine.
Conductor	Rivière du Loup, Que.	" 23	69	Collision of two trains.
Sectionman	Montreal, Que.	" 23	27	Struck by an engine.
Dining car waiter	Winnipeg, Man.	" 26	36	Fell from steps of car and run over.
Trainman	Lauretta, B.C.	" 27	24	Collision of two freight trains.
Trainman	Near Kamloops, B.C.	" 27	25	Collapsed at his engine.
Engineer			42	
Conductor	Near Calgary, Alta.	" 27	24	Collision of two freight trains.
Trainman	Near Revelstoke, B.C.	" 28	43	Their engine went over bridge into ravine.
Engineer			27	
Fireman	Calgary, Alta.	" 31	47	Fell from top of box car, fracturing skull.
Yardman			21	
Brakeman	Smiths Falls, Ont.	Feb. 2	21	Slipped and fell under wheels of moving freight train.
Bridgeman	Victoria, B.C.	" 8	51	Chains supporting ferry slip broke, throwing him into water.
Fireman	Sharbot Lake, Ont.	" 13	29	Injured groin on Mar. 31, 1922, when he fell on spout while watering engine.
Labourer	Toronto, Ont.	" 13	47	Struck by piece of wood hurled from saw.
Machinist	Westmoreland, N.B.	" 15	48	Struck by sash from saw. Internal hemorrhage.
Fireman	Moore's Siding, Ont.	" 20	40	Injured when train was derailed. Engineer died Feb. 21.
Brakeman			32	
Engineer	Ottawa, Ont.	" 25	44	Run over by shunting engine.
Car helper			55	
Extra gang foreman	Near Revelstoke, B.C.	" 27	45	Load of piling fell on him when stake broke.
Trainman	Gleichen, Alta.	" 27	28	Run over by car during switching operations.
Machinist	Turcot, Que.	Mar. 1	53	Fell into open pit. Died Mar. 2.
Brakeman	Hawkesbury, Ont.	" 2	33	Crushed between engine and freight car in yards.
Carman	Niagara Falls, Ont.	" 3	46	Run over by train.
Sectionman	Near London, Ont.	" 7	65	Struck by train during blinding snowstorm.
Engineer	Deschambault, Que.	" 8	61	Injured when train was derailed. Second man died Mar. 9.
Fireman	Near Attercliffe, Ont.	" 8	59	Thrown against interior of car when brakes were applied suddenly. Died Mar. 9.
Brakeman			33	
Sectionman	Sarnia, Ont.	" 9	45	Struck by switch engine.
Switchman	Calgary, Alta.	" 10	38	Crushed beneath wheels of engine when he fell.
Labourer	Near Hartley Bay, Ont.	" 13	.....	Piece of rock rolled over him while carrying drills to air drills.
Boiler foreman	McLennan, Alta.	" 17	50	Injured when shop dynamo broke. Died Mar. 18.
Conductor	Montreal, Que.	" 19	53	Run over by train.
Conductor	Droccourt, Ont.	" 20	52	Collision of two trains.
Brakeman			37	
Brakeman	Neville, Que.	" 23	34	Struck by train during heavy storm.
Fireman			46	
Express messenger	Port Mann, B.C.	" 26	55	Thrown from engine during switching operations.
News agent			34	
Brakeman	Saskatoon, Sask.	" 27	46	Fell between two freight cars.
Sectionman			55	
Brakeman	Near Cochrane, Ont.	" 27	27	Crowbar pierced his body when two gasoline speeders collided.
Switchman			34	
Line foreman				
<i>Street and Electric Railways—</i>				
Motorman	Winnipeg, Man.	Feb. 1	.....	Injured when he walked into a moving oil truck. Died Feb. 19.
Worker in car shop	Montreal, Que.	Mar. 26	30	Run over by train while going to work.
<i>Water Transportation—</i>				
Boatman	South Slocan, B.C.	Feb. 23	28	Drowned when engine stalled and boat drifted into rough water.
Boatman			34	
Cadet	Victoria, B.C.	About Mar. 27	20	Fell into hold of ship, fracturing skull.
<i>Local Transportation—</i>				
Teamster	Montreal, Que.	Jan. 9	59	Horse crushed his foot. Died Feb. 24.
Truck driver	Montreal, Que.	" 11	30	Truck he was driving fell into river when road gave way, and he was drowned.
Truck driver with butter makers.	Grafton, Ont.	" 26	40	Collision of train with truck.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER  
OF 1929—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>TRANSPORTATION AND PUBLIC UTILITIES—<i>Con.</i></b>				
<i>Local Transportation—</i>				
<i>Con.</i>				
Carter.....	Montreal, Que.....	" 31	63	Fell down elevator shaft. Fractured skull
Truck driver with canning company.	Near Port Hope, Ont.....	Feb. 14	40	Collision of train with his truck. Fractured skull.
Tractor operator.....	Savant Lake, Ont.....	Mar. 15	39	Drowned when tractor crashed through ice.
Piano mover.....	Montreal, Que.....	" 25	48	Collapsed after heavy lifting.

Cellarman at brewers.....	Windsor, Ont.....	Oct. 15	About	
Stableman with bread and cake manufacturers.....	Toronto, Ont.....	Dec. 2	35	Hand burned when some gasoline ignited. Infection. Died Feb. 1, 1929.
<i>Saw and Planing Mill Products—</i>				
Scowman for saw mill.....	Saint John Co., N.B.....	Aug. 24	65	Injured knee when stepping from scow. Infection.
Lineman.....	Rimouski, Que.....	Dec. 14	31	Electrocuted while dismantling transmission line.
<i>Pulp, Paper and Paper Products—</i>				
Labourer in box factory.....	New Westminster, B.C.....	Sept. 10	56	Injured hand. Infection. Died Mar. 5, 1929.
<i>Iron, Steel and Products—</i>				
Polisher with steel manufacturers.....	London, Ont.....	Nov. 22	52	Struck by falling weight bar which was knocked off table when polishing wheel caught on it. Died Mar. 5, 1929.
<i>Miscellaneous Products—</i>				
Labourer with leather substitute manufacturers.....	Toronto, Ont.....	Oct. 21	50	Benzol poisoning. Aplastic anaemia.
<b>CONSTRUCTION—</b>				
<i>Buildings and structures—</i>				
Steamfitter with plumbing and heating company.....	London, Ont.....	Aug. 27	45	Pipe fell and struck him on head. Infection. Died Feb. 5, 1929.
Labourer.....	St. Hyacinthe, Que.....	Dec. 31	23	Crushed when car overturned.
<i>Miscellaneous—</i>				
Labourer on water works construction	Manawenne, Que.....	Dec. 10	33	Fell and broke three ribs. Died Dec. 23, 1928.
<b>TRANSPORTATION—</b>				
<i>Steam Railways—</i>				
Labourer.....	St. Malo, Que.....	Dec. 10	33	Took ill while at work. Died of heart trouble Feb. 15, 1929.
<i>Water Transportation—</i>				
Sailor.....	Point Edward, Ont.....	Nov. 10	21	Injured spine when caught in line shaft and thrown to deck. Died Nov. 15.
<i>Local Transportation—</i>				
Chauffeur with transport company.....	Banff, Alta.....	July* 8	.....	Motor accident.
<b>TRADE—</b>				
<i>Retail—</i>				
Labourer with lumber company.....	Windsor, Ont.....	Sept. 6	64	Fell into excavation while delivering lumber and rod pierced his body. Died about April 13, 1929.
Auto driver for fish market.....	Vancouver, B.C.....	Nov. 16	21	Run over by auto.
<b>SERVICE—</b>				
<i>Public Administration—</i>				
Labourer on road repairs.....	Montreal, Que.....	Dec. 1	.....	Contracted pneumonia. Died Dec. 7, 1928.
Labourer for garbage removers.....	Three Rivers, Que.....	" 19	41	Took ill at work. Pneumonia. Died Feb. 16, 1929.

## IMMIGRATION TO CANADA DURING THE FISCAL YEAR ENDED MARCH 31, 1929

THE accompanying tables from the Department of Immigration and Colonization show the nature and extent of immigration into Canada during the fiscal year ended March 31, 1929, with some comparative figures for the previous fiscal year. Out of a total of 167,722 immigrants 58,880 or 35 per cent were British, 30,560 or 18 per cent from the United States and 78,282 or 47 per cent from other countries. It should be noted that included in the total figures and in those for Britain are 8,449 who came in August, 1928, under the special harvester movement and that later 6,445 of these returned to their homes in the British Isles. During the year 33,798 Canadians returned from the United States, as compared with 39,887, the number previously given for 1927-1928. If these are included with those of general immigration the totals are 201,520 for 1928-1929 and 191,484 for 1927-1928.

## EMIGRATION FROM GREAT BRITAIN IN 1928

THE *British Ministry of Labour Gazette*, April, 1929, gives a compilation of statistics of emigration from Great Britain and Northern Ireland during 1928, with particulars of the occupations of the emigrants.

The following table shows the numbers of emigrants of British nationality from Great Britain and Northern Ireland to the principal countries in each of the last two years:

Country of Future Permanent Residence	1927	1928
British North America.....	52,916	54,709
Australia.....	40,991	28,714
New Zealand.....	7,841	4,975
Other parts of the British Empire..	20,985	20,584
Totals, British Empire....	122,733	108,982
United States.....	25,662	22,345
Other Foreign Countries.....	5,110	5,507
Totals, All Destinations...	153,505	136,834

The occupations of the emigrants during 1928 are stated as follows:—

Occupations	1928
Males (18 years and over):—	
Agricultural.....	12,478
Commercial, finance and insurance.....	9,187
Professional.....	2,653
Skilled Trades—	
Mining and quarrying.....	6,531
Metal and engineering.....	5,806
Building.....	944
Other.....	5,194
Transport and communications.....	2,050
Labourers not in agriculture or transport.....	6,942
Other and ill-defined occupations.....	5,947
Totals, males.....	57,552
Females (18 years and over):—	
Domestic, hotel, etc., service.....	11,264
Commercial, finance and insurance.....	2,867
Professional.....	2,702
Clothing trades.....	874
Wife or housewife (not otherwise described)..	21,411
Other and ill-defined occupations.....	6,560
Totals, females.....	45,678

In comparing the distribution among the groups of occupations of the male emigrants of 18 years and upwards in 1928 and in 1927, allowance must be made for the persons who

sailed in August, 1928, for harvest work in Canada. Of the 8,449 men recruited for this purpose, the great majority were shown in the Board of Trade passenger lists as 'emigrants'; 39 per cent of such "emigrants" were recorded in the mining and quarrying group, 16 per cent in "other skilled trades", 39 per cent as labourers, and the occupations of the remaining 7 per cent were classified as "other and ill-defined." If allowance is made for these harvesters the distribution of the remaining emigrants between the various occupations

shows little alteration in 1928 as compared with 1927. Again, as regards the return movement of adult males to Great Britain and Northern Ireland, the increase of 4,000 in 1928 as compared with 1927, is accounted for by the numbers of harvesters (recorded as "immigrants") who returned to Great Britain from Canada in the fourth quarter of 1928. These returning harvesters account for the increased numbers shown in the mining and quarrying group, and as labourers (not in agriculture or transport).

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Canadian Border Workers Held to be Immigrants in U.S.A.

The United States Supreme Court, in a judgment delivered by Mr. Justice Sutherland on April 8, 1929, reversed the decision of the United States Circuit Court of Appeals at New York in March, 1928 (LABOUR GAZETTE, March, 1928, page 336). The decision affects the right of workers residing in Canada to cross the international border to temporary employment in the United States. The lower Court had held that this right was secured to such workers by the terms of the Jay Treaty entered into by Canada and the United States in 1794, which permitted persons of either nationality to transact "business" in the neighbouring country, and for that purpose to enter the country temporarily without being subject to the usual immigration restrictions.

The respondents in this case were Mary Cook, a British subject born in Scotland, and Antonio Danelon, a native of Italy. Both sought admission to the United States on December 1, 1927, as non-immigrants under the excepting clause (2) of Section 3 of the Immigration Act of 1924, which defines an immigrant as "any alien except... (2) an alien visiting the United States temporarily as a tourist, or temporarily for business or pleasure," etc. Both applicants were denied admission by the immigration authorities on the ground that they were quota-immigrants within the meaning of the Act, and did not come within the excepting clause above quoted.

The following departmental regulation adopted under 24 of the act, has been in force since September, 1925. "Temporary visits... for the purpose of performing labour for hire are not considered to be within the purview of section 3 (2) of the act." It was not disputed that both aliens were properly excluded if the validity of this regulation is established.

In *habeas corpus* proceedings, brought in behalf of the two aliens, the Federal District Court for the Western District of New York sustained the action of the immigration officials and dismissed the writ. On appeal, this judgment was reversed by the Circuit Court of Appeals, which held that an alien crossing from Canada to the United States daily to labour for hire was not an immigrant, but a visitor for business within the meaning of section 3 (2) of the act.

Mr. Justice Sutherland, in his judgment in the Supreme Court, pointed out that "the decision below affects not only aliens crossing daily from Canada to labour in the United States, but, if followed, will extend to include those entering the United States for the same purpose from all countries, including Canada, who intend to remain for any period of time embraced within the meaning of the word 'temporary.' By the immigration rules, this time is defined as a reasonable fixed period to be determined by the examining officer, which may be extended from time to time, though not to exceed one year altogether from the date of original entry. Thus, if the view of the court below prevail, it will result that aliens—not native of Canada or any other American country named in 4 (c),—whose entry as immigrants is precluded, may land as temporary visitors and remain at work in the United States for weeks or months at a time."

In regard to the bearing of the Jay Treaty on this case the Supreme Court held that that treaty was abrogated by the war of 1812. Discussing the effect of war upon treaties in general the judgment declared as follows:—

"There seems to be fairly common agreement that, at least, the following treaty obligations remain in force:—stipulations in respect of what shall be done in a state of war; treaties of cession, boundary, and the like; provisions giving the right to citizens

or subjects of one of the high contracting powers to continue to hold and transmit land in the territory of the other; and, generally provisions which represent completed acts. On the other hand, treaties of amity, of alliance, and the like, having a political character, the object of which 'is to promote relations of harmony between nation and nation,' are generally regarded as belonging to the class of treaty stipulations that are absolutely annulled by war."

After a discussion of various previous decisions, Mr. Justice Sutherland proceeded:—"It is true, as respondents assert, that citizens and subjects of the two countries continued after the War of 1812, as before, freely to pass and repass the international boundary line. And so they would have done if there never had been a treaty on the subject. Until a very recent period, the policy of the United States, with certain definitely specified exceptions, had been to open its doors to all comers without regard to their allegiance. This policy sufficiently accounts for the acquiescence of the Government in the continued exercise of the crossing privilege upon the part of the inhabitants of Canada, with whom we have always been upon the most friendly terms; and a presumption that such acquiescence recognized a revival of the treaty obligation cannot be indulged."

On the claim of the respondents that they were within the terms of the excepting clause (b) in the definition of "immigrants" Mr. Justice Sutherland said:—

"The contention is that respondents were temporary visitors for business; and the case is, therefore, narrowed to the simple inquiry whether the word 'business,' as used in the statute, includes ordinary work for hire. The word is one of flexibility; and, when used in a statute, its meaning depends upon the context or upon the purposes of the legislation. It may be so used as either to include or exclude labour; 'for though labour may be business, it is not necessarily so, and the converse, is equally true, that business is not always labour'. The true sense in which the word was here employed will be best ascertained by considering the policy, necessity and causes which induced the enactment."

"The various acts of Congress since 1916 evince a progressive policy of restricting immigration. The history of this legislation points clearly to the conclusion that one of its great purposes was to protect American labour against the influx of foreign labour. In the report of the House Committee to accompany the bill which became the Quota Act of May 19, 1921, it was stated that one of the causes which called for the immediate

passage of an act to restrict immigration was: '2. Large unemployment in the United States making it impracticable for the United States to accept a heavy immigration.' And further: 'in the opinion of a majority of the members of this committee the economic aspects of immigration alone call for the passage of this restrictive legislation, if there were no other reasons.' In the Senate report upon the same bill one of the evils pointed out was that a large part of the new immigration had been of a migratory character, immigrants coming to the United States not so much for the purpose of permanent residence as to seek temporary profitable employment. The report of the House Committee to accompany the bill which afterwards became the Act of 1924, now under consideration, likewise makes clear that protection of American labour was one of the controlling reasons for further restriction of immigration. The committee, after pointing out that various suggested plans for admitting labourers and farmers had been rejected, said: 'As has been so often said with reference to the demand for the admission of labourers, the present gain is not worth the future cost.'

"In view of this definite policy, it cannot be supposed that Congress intended, by admitting aliens temporarily for business, to permit their coming to labour for hire in competition with American workmen, whose protection it was one of the main purposes of the legislation to secure.

"The word 'business,' as here used, must be limited in application to intercourse of a commercial character; and we hold that the departmental regulation, to the effect that temporary visits for the purpose of performing labour for hire, are not within the purview of 3 (2) of the act, is in accordance with the Congressional intent."

#### **Employee preparing Meal is not in Course of His Employment**

Two brothers named Ewan were employed by the Consolidated Mining and Smelting Company in the woods, each receiving a wage of \$5 a day, and each paying the employer \$1 a day for their meals. Becoming dissatisfied with the camp arrangements, they applied for, and received from the engineer in charge, permission to board themselves. The company lent them a tent and cooking utensils to assist them in carrying out this arrangement, and also supplied them with the provisions they required for 50 cents a day, the men saving 50 cents a day by cooking for themselves. On a certain day, before starting out for their day's work in trenching operations, the two men lit a fire and cooked their breakfast, after which, by their own account,

they extinguished the fire by pouring water over it. Later in the morning fire broke out in the vicinity of the spot where they had breakfasted, and being fanned by a strong wind overran lands on which another party had a license to cut timber, burning standing timber and also a quantity of posts and poles. This other party brought an action against the Consolidated Mining and Smelting Company, claiming that the fire was caused by the negligence of the company's workmen in the course of their employment, or alternatively, that the company's workmen set out a fire on the company's property in the midst of inflammable material, and did not totally extinguish it but allowed it to spread and damage the plaintiff's property. To this claim the company set up two defences: first, that the fire in question was not kindled by its workmen and, secondly, that if it was, its workmen in so kindling it were not acting in the course of their employment.

The trial Judge found in favour of the plaintiff, holding that the fire which destroyed their property had its origin in the fire kindled by the Ewan brothers for the purpose of cooking their meals, and that at the time it was so kindled they were acting in the course of their employment. This judgment was affirmed by the British Columbia Court of Appeal, one judge dissenting.

The defendant then appealed to the Supreme Court of Canada, which reversed the judgment of the Provincial Court of Appeal.

Mr. Justice Lamont, in the course of his judgment, said: "Having, by the terms of their employment, to board themselves, the appellant (that is, the defendant) was under no obligation to cook their meals or to see that they obtained them. It was argued, however, that as eating was a necessary operation, the preparation of their meals was incidental to their employment and that therefore, while engaged in preparing their meals the workmen were acting in the course of their employment. The acts of a workman which come within the scope of his employment are in general determined by the terms of the contract, including the terms implied as well as those expressed."

After citing various English judgments on the question of the terms to be implied, his Lordship proceeded:—

"In view of these and other authorities to which we were referred, I am of opinion that before it can be held that the Ewan brothers were in the course of their employment when they lighted the fire which escaped and did damage to the respondents' property, it must be shown that the lighting of that fire was an

act which they were under a contractual obligation to perform as a duty to their employer, or which their employer had ordered them to do. The appellant in this case did not order workmen to light a fire nor were the workmen under any contractual obligation to do so. Their contract called upon them to board themselves which \* \* \* did not constitute a contractual obligation on their part as a duty to the appellant to cook their meals. It was necessary for them to have food if they wished to be in physical condition to do their work, just as it was necessary for them to wear stout boots while performing it, but in securing these necessary things they were doing something for themselves rather than discharging a duty towards the appellant.

"If, instead of cooking their own food, the Ewan brothers had, without loss of time to their employers, gone elsewhere for their meals the appellant could not have objected thereto for it was none of its concern. Once the workmen had finished their eight hours' work in any one day they were, it seems to me, at liberty, so far as the appellant was concerned, to go where they wished and to do what they pleased until they commenced their next day's work.

"I am, therefore, of the opinion that when they lighted the fire which escaped and damaged the respondents' property the Ewan brothers were not acting in the course of the employment."

His Lordship next discussed various other aspects of this case including the point that the workmen were trespassers in the property of the plaintiffs; who had passively acquiesced in the act of trespass. On this point he said:—

"If a farmer sees a workman taking a short cut across his field to and from his work, and smoking as he goes, must he forbid him to smoke on his premises on pain of being liable for damages in case the smoker, after lighting his pipe, throws down a lighted match which sets fire to the grass, spreads to the adjoining property and there occasions damage? I do not think the law goes so far. I am unable to see how an occupier can be said to bring a person upon his land simply because when he sees him there he takes no steps to put him off."

The appeal was allowed, and judgment entered for the defendants, the action being dismissed with costs in all courts.

*Murdock et al versus Consolidated Mining, Smelting and Power Company, Limited.*  
Supreme Court of Canada (1929) 1 Dominion Law Reports, page 913.

### Workman assuming Risk not entitled to Damages for Injury

A workman was employed to assist in the reconstruction of a store building in the Province of Quebec. It was necessary first to demolish a small two-story extension at the back of the store, but this demolition was being carried out by the employer himself. On a certain day the employer was engaged in pulling down the roof of the extension, and when the workman offered to assist him in doing so he refused the offer. The employer stated moreover that he positively forbade the workman to mount on the roof. In spite of this order the workman persisted in his offer, and mounted to the roof, which gave way suddenly, precipitating both men to the ground, a distance of about twelve feet. In his fall the workman sustained a broken ankle. The employer called a doctor, who rendered first aid, and also offered to obtain treatment from another doctor, but the injured workman submitted to treatment by an inexperienced bonesetter who prescribed poultices and salves for a fractured bone. As a result of the accident and the improper treatment the workman's ankle became permanently stiff. He took action for \$6,000 damages. The action was dismissed by the Superior Court at Abitibi, and this judgment, on appeal by the plaintiff, was affirmed by the Court of King's Bench, Quebec. In the course of the judgment in the latter court it was stated that the work at which the plaintiff sustained injury was no part of the workman's duty, and that "he assumed the risk attendant upon his embarking on the insecure floor of the partially demolished extension on his own initiative, and in full knowledge of the possible danger of a collapse. I am at a loss to conceive how the learned trial judge could have come to any other conclusion than that the accident was due to the appellant's voluntary act.

*Ayotte versus Marleau (Quebec), Rapports Judiciaires, Cour du Banc du Roi (en Appel), April, 1929, page 343.*

### "Labour's Case in Parliament"

The Canadian Brotherhood of Railroad Employees has published in booklet form a selection from speeches on labour topics delivered on various occasions during the past seven years by Mr. J. S. Woodsworth, member of Parliament for Winnipeg North Centre, and leader of the labour group in the House since 1921. The book is edited by Mr. J. L. Cohen,

a lawyer and labour research specialist of Toronto. It contains a preface contributed by Mr. A. E. Mosher, president of the Brotherhood, who gives an account of the activities of the labour members in recent years. The subject of the addresses contained in the booklet are as follows: Labour and politics; Canada's natural resources; the socialization of industry; the Canadian banking system; the standard of living and social insurance; Unemployment; Civil liberties; Trade relations and immigration; Taxation; Capital levy; Proportional representation; Constitutional amendments and Dominion autonomy; Militarism and war.

### Safety of Life at Sea

The International Conference on Safety of Life at Sea met at London during April, the delegates in attendance including representatives of the following countries:—Belgium, Denmark, Finland, France, Germany, Italy, Japan, The Netherlands, Norway, Russia, Spain, Sweden, and the United States, besides the delegations of the United Kingdom, Canada, Australia, the Irish Free State and India. Representatives from the League of Nations were also present. The object of the convention was the conclusion of an international convention to provide for the safety of life in passenger ships engaged in international voyages. The subject was considered under the following heads:—

- (1) Measures to avert the occurrence of accidents;
- (2) Construction of ships so as to mitigate the effect of accidents should they occur;
- (3) Means for obtaining assistance should accidents occur; and
- (4) Means for sustaining lift until that assistance arrived or the security of the land was reached.

Mr. Victor A. Sinclair, K.C., chairman of the Workmen's Compensation Board of Ontario, recently called attention to the special dangers of workmen engaged in the erection of large buildings. "The dangers on high buildings are too great to be ignored," he said, "and we propose to take action. Trouble was prevalent in Ottawa lately, when steel workers were dropping red-hot rivets on workers of other trades working below them. Sometimes there were serious accidents because there was no planking on the floors." He felt that more protection should be given bricklayers and other trades against this.

## CONSTITUTIONAL VALIDITY OF DOMINION LEGISLATION RESPECTING COMBINES

**Text of Judgment of the Supreme Court of Canada delivered April 30 1929**

IN THE SUPREME COURT OF CANADA

IN THE MATTER of a Reference as to the Validity of The Combines Investigation Act, R.S.C. 1927, Chapter 26, and of Section 498 of the Criminal Code

Questions and formal answers thereto:—

1. Is the Combines Investigation Act, R.S.C. 1927, Chapter 26, *ultra vires* the Parliament of Canada, either in whole or in part, and if so, in what particular or particulars, or to what extent? The answer is No.
2. Is Section 498 of the Criminal Code *ultra vires* the Parliament of Canada, and if so, in what particular or particulars, or to what extent? The answer is No.

(Signed) L. P. DUFF,  
P. B. MIGNAULT,  
E. L. NEWCOMBE,  
T. RINFRET,  
J. H. LAMONT,  
R. SMITH.

DUFF J.—(Concurred in by Rinfret and Smith JJ.)

The scope of the 27th head of sec. 91 of the British North America Act under these words, ("The Criminal Law, except the constitution of Courts of criminal jurisdiction, but including the procedure in criminal matters,") has been described in sweeping terms by the judgment of the Privy Council in *Attorney General of Ontario v. Hamilton Street Railway Co.*, [1903] A.C. 524, at pages 528 and 529. The Lord Chancellor (Lord Halsbury) in delivering the judgment there, said,

"The question turns upon a very simple consideration. The reservation of the criminal law for the Dominion of Canada is given in clear and intelligible words which must be construed according to their natural and ordinary signification. Those words seem to their Lordships to require, and indeed to admit, of no plainer exposition than the language itself affords. Sect. 91, sub-s. 27, of the British North America Act, 1867, reserves for the exclusive legislative authority of the Parliament of Canada 'the criminal law, except the constitution of Courts of criminal jurisdiction.' It is, therefore, the criminal law in its widest sense that is reserved, and it is impossible, notwithstanding the very protracted argument to which their Lordships have listened, to doubt that an infraction of the Act, which in its original form, without the amendment afterwards introduced, was in operation at the time of confederation, is an offence against the criminal law. The fact that from the criminal law generally there is one exception, namely, 'the constitution of Courts of criminal jurisdiction,' renders it more clear, if anything were necessary to render it more clear, that with that exception (which obviously does not include what has been contended for in this case) the criminal law, in its widest sense, is reserved for the exclusive authority of the Dominion Parliament."

The question for consideration in that case was the competency of the Ontario Legislature to pass an enactment respecting the observance of Sunday, and the subject of the paragraph just quoted is the exclusive jurisdiction of the Parliament of Canada.

Nevertheless, some limitation upon the general words of sec. 91 (27) is necessarily implied by (1) the fact itself that co-ordinate exclusive authority in respect of a variety of subjects is vested in the provincial legislatures, and executive authority of the same order in the provincial governments, and (2) character of the enactments of sec. 92. This has been recognized in a series of cases, *The Dominion License Acts* reference, the *Board of Commerce* case, [1922] 1 A.C. 191, the *Attorney General of Ontario v. The Reciprocal Insurers* [1924] A.C. 328, *Attorney General of Canada v. Attorney General of Alberta* [1916] 1 A.C. 588, *Snider's* case [1925] A.C. 396.

The words of head 27 read in their widest sense would enable Parliament to take notice of conduct in any field of human activity, by prohibiting acts of a given description and declaring such acts to be criminal and punishable as such. But it is obvious that the constitutional autonomy of the provinces would disappear, if it were open to the Dominion to employ its powers under head 27 for the purpose of controlling by such means the conduct of persons charged with responsibility for the working of provincial institutions. It is quite clear also that the same result would follow, if it were competent to Parliament, by the use of those powers, to prescribe and indirectly to enforce rules of conduct, to which the provincial legislatures had not given their sanction, in spheres exclusively allotted to provincial control. This has been fully elaborated in the series of cases just mentioned.

Second, the language of head 27 must be read in the light of head 15 of section 92. Provincial legislative enactments in relation to matters falling within the various heads of section 92 may by force of head 15 prescribe sanctions of fine and imprisonment for regulations in respect of such matters; and such regulations may be of such a character, that but for the language of head 27 of section 91, the offences thus created would be described without hesitation as criminal offences—regulations, for example, for the preservation of public health, order and decency. *Hodge v. The Queen*, 9 App. Cas. 117. The exclusive jurisdiction of the Dominion in relation to "Criminal Law" under section 91 is not incompatible with the possession by the provinces of this jurisdiction; although there is the highest authority for applying to proceedings for enforcing the penal clauses of such enactments the description "criminal"; and notwithstanding that it appears to have been assumed, in *Nadan v. The King*, [1926] A.C. 482, that such proceedings come within the exclusive jurisdiction of the Dominion Parliament under head 27, section 91 "procedure in criminal cases."

It is of course essential to the exercise of this jurisdiction by the provinces that the substantive provisions shall, within the sense of section 92, have "relation to" such "local" or "private" matters, as fall within the scope of the subjects designated by the heads of that section.

The existence of this undoubted jurisdiction of the provinces necessarily affects the operation of the powers conferred upon the Dominion under head 27, section 91. Evidently the Act does not contemplate the use of these powers for the purpose merely of creating sanctions for rules of law in relation to such matters in their provincial aspects. Matters however, which in one aspect and for one purpose fall within the jurisdiction of a province over the subjects designated by one or more of the heads of section 92 may in another aspect and for another purpose be proper subjects of legislation under 91, and in particular under head 27.

This may be illustrated by reference to the subject matters of section 92 (13) "Property and Civil Rights." You cannot create a new criminal offence without directly affecting civil rights. The characteristic rules of the Criminal Law, rules designed for the protection of the State and its institutions, for the security of property and the person and public order, rules for the suppression of practices which the Criminal Law notices as deserving chastisement by the State, and so on, all are rules restricting the liberty of action of the subjects of the State, and in that sense affecting civil rights; but such acts and neglects are not as a rule viewed by the Criminal Law in their juristic aspect, but in their actual effects, physical or moral, as harmful to some interest which it is the duty of the State to protect. They are concerned primarily not with rights, with their creation, the conditions of their exercise, or their extinction; but with some evil or some menace, moral or physical, which the law aims to prevent or suppress through the control of human conduct.

Fraud, for example, may be of such a character as to constitute an actionable wrong or a criminal offence. The law in relation to civil rights, while necessarily concerned with defining the elements of the wrong entailing the civil responsibility of the wrong-doer, is primarily concerned with the victim's right of reparation, while the Criminal Law deals with the fraud as such, as something deserving of punishment at the hands of the State. So in the case of contracts. An agreement involving bribery of a public official may be a criminal offence because the law marks such acts of corruption as criminal and punishes them. The law in relation to civil rights, the law of contracts, takes note of the elements of the transaction which give it character as bribery, but solely for the purpose of denying to the parties the legal right of enforcing it.

These considerations do not provide of course any precise formula for discriminating between Criminal Law and legislation in relation to property and civil rights. But the indicia suggested by them would probably be sufficient in most cases for deciding to which of these two categories a given enactment belongs. Indeed as to the first fourteen heads

of section 92, there would probably be little difficulty in determining whether or not legislation dealing with matters falling in their provincial aspects within the subjects designated by those heads is truly legislation from the provincial point of view, or legislation dealing with such matters in some aspect within the jurisdiction of the Dominion under section 91, head 27.

On the other hand, matters falling within section 16 come under the jurisdiction of a province because they are matters "merely local" or "merely private" within the province, in the sense of section 92. Prohibitions may be enacted under the authority of that head under sanction of fine and imprisonment, with the object of abating or preventing a local evil in the interests of public order or decency, which as we have seen may be perfectly valid and plausible arguments may be adduced in support of the view, that all such enactments are valid, provided they do not trench upon topics already dealt with by the Criminal Law of the Dominion, expressly or tacitly, and do not intervene in subject matters which by their "very nature belong to the domain of criminal jurisprudence." The exclusive jurisdiction of the Dominion in relation to Criminal Law is not, as I have said, incompatible with the creation by provincial enactment of offences which it has been held properly fall within the description "criminal." But if such matters present aspects which are appropriate subjects for criminal legislation, and at the same time are not "merely local or private" within the several provinces, it does not follow that they may not be the subject of valid legislation under the powers conferred by section 91 (27).

The matter of section 498 is not property and civil rights. It strikes at agreements, no doubt, but not at those agreements as juridical acts, as having effects in point of law, in creating rights between the parties. The legislation aims at suppressing certain practices calculated, in the view of Parliament, to limit competition and produce the evil of high prices. Agreements of defined classes are dealt with from that point of view and from that point of view only. Nor can the matter of section 498 be described as matter "merely local or private" within the several provinces. The combinations struck at, rarely, in their origin or in their operation, take account of provincial boundaries. There is in this respect little if any resemblance between section 498 and the enactments which were the subjects of decision in the *Dominion Liquor Licence Acts* reference, in the *Board of Commerce* case (*supra*) or in *Snider's* case (*supra*). In the enactments in debate in those cases, the penal provisions were merely incidental. There was an attempt, in each case, in the substantive provisions of the impeached enactment, to regulate matters which were unquestionably "merely local" or "merely private" in each of the Provinces in a manner which could, it was held, not be justified, as an exercise of the powers conferred by the residuary clause or the 2nd head of section 91.

It was argued that the Dominion's jurisdiction only enables Parliament to legislate in relation to offences which were criminal offences at the time of Confederation, or to offences which in "their very nature" belong to the domain "of the Criminal Law". It is difficult to understand upon what justification the Dominion Parliament can be denied the power under sec. 91 to declare any act to be a crime, which in its opinion is such a violation of generally accepted standards of conduct, as to deserve chastisement as a crime. The views of the community as to what deserves punishment, change from generation to generation. Practices calculated to imperil health and safety, or to prejudice the moral standards of the community may become in the course of a few years so widely prevalent to create a general demand for the abatement and prevention of them by State action in the sphere of the Criminal Law. Other acts, once within the scope of the Criminal Law, may, in the course of time, come to be regarded as outside the proper domain of State interference. It is difficult to understand on what principle the Court is to review the decisions of Parliament in seeking to adapt the Criminal Law to successive phases of public opinion in such matters. I am assuming of course that Parliament in such decisions is not attempting to deal with matters committed to the provinces in their provincial aspects. Moreover, practices tending to limit competition, to foster monopolies in the popular sense, to enhance prices (the practices of forestalling, regrating and engrossing), were for centuries treated as crimes and were regarded by the law as crimes *mala in se*; the matter of sec. 498 is a kindred topic.

I do not intend by what I have said to imply that Dominion legislation on the subject of the criminal law is necessarily *ultra vires* because it deals with a matter which is local in one or more of the provinces.

As to the Combines Investigation Act, that is an Act which, as its name imports, provides for the investigation of matters touching the existence of a Combine or the pending

formation of a Combine; and further provides that where as the result of investigation, it appears that such a Combine exists, the Governor-in-Council may in appropriate cases cause the reduction or abolition of any customs duty imposed on any article affected by it, and where it appears that there has been abuse of his privileges by the holder of any patent under the Patent Act, in the manner set out by the Act, the Minister of Justice may exhibit an information in the Exchequer Court of Canada praying the revocation of the Patent, and authority is given to the Court to give judgment accordingly. The Act also provides that anybody knowingly assisting in the formation of a Combine shall be guilty of an indictable offence, and punishable on conviction at the instance of the Solicitor-General of Canada or an Attorney-General of the Province. Throughout the Act the word "Combines" denotes,

"combines which have operated or are likely to operate to the detriment or against the interest of the public, whether consumers, producers or others, and which

- (a) are mergers, trusts or monopolies, so called; or
- (b) result from the purchase, lease, or other acquisition by any person of any control over or interest in the whole or part of the business of any other person; or
- (c) result from any actual or tacit contract, agreement, arrangement, or combination which has or is designed to have the effect of
  - (i) limiting facilities for transporting, producing, manufacturing, supplying, storing or dealing, or
  - (ii) preventing, limiting or lessening manufacture or production, or
  - (iii) fixing a common price or a resale price, or a common rental, or a common cost of storage or transportation, or
  - (iv) enhancing the price, rental or cost of article, rental, storage or transportation, or
  - (v) preventing or lessening competition in, or substantially controlling within any particular area or district or generally, production, manufacture, purchase, barter, sale, storage, transportation, insurance or supply, or
  - (vi) otherwise restraining or injuring trade or commerce."

That part of the Act which makes it a criminal offence to assist in the formation of a Combine, has in principle been already discussed.

As to the other provinces, they may be looked upon from two points of view. First, one may consider them from the point of view of the responsibility imposed upon Parliament in respect of trade and commerce, especially the responsibility in relation to trade with foreign countries and customs and excise duties. It is hardly necessary to observe that trade combinations and their effect upon competition and the results of competition have a special importance and significance in view of the settled policy of this country in the matter of protective duties. To the general belief that such duties, when imposed upon the scale on which they are maintained in this country, tend in their effects to facilitate the operation of plans for reducing competition and maintaining prices, there can be little doubt that legislation such as Sec. 498 in the Criminal Code and the Statute we are now considering is very largely due. It appears to me that legislative authority over trade and commerce with foreign countries, and particularly over such aspects of those subjects as are related to the economic conditions and tendencies arising from the law in force on those subjects, must embrace the authority to legislate for such investigations as those authorized by this Act. It is quite true, combinations in relation to transport and to insurance would not appear, *ex facie*, to be directly connected with the imposition of custom duties, but the Dominion has a special jurisdiction in relation to insurance, jurisdiction touching, that is to say, the rights of foreign countries and foreigners generally to engage in the business of insurance in Canada; and considering that the design of the reigning trade policy is to encourage domestic trade, and that its effectiveness for that end may depend upon the character of the facilities for, and the rates of, domestic transport, the authority to conduct such investigations ought, in a fair view of the matter, to enable Parliament to include the subject of transport within the scope of them.

The other point of view is that of the responsibility of the Dominion with regard to the Criminal Law. The authority in relation to the Criminal Law and Criminal procedure given by sec. 91 (27), would appear to confer upon the Dominion, not as an incidental power merely, but as an essential part of it, the power to provide for investigation into crime, actual and potential.

An attempt was made on the argument to bring this Statute under the decision of the Privy Council in relation to the Combines and Fair Prices Act. There is no doubt that parts of the present Statute are taken from the earlier Act, but the provisions of the earlier Act which gave character to that Act have disappeared.

The former Statute in its substantive enactments on the subject of Combines, conferred upon the Board of Commerce, a Board created by Dominion legislation, composed of persons named by the Dominion Government, the authority and the duty to enquire into the existence of Combines and plans for the formation of Combines, and to suppress, by order of the Board, the Combines themselves, and practices associated with Combines, in so far as the Board might think it right and in the public interest to do so. The present Act gives no such power of regulation.

Both questions should be answered in the negative.

NEWCOMBE J.—(Concurred in by Mignault and Lamont JJ.)

Two questions have been propounded by the Governor General in Council for hearing and consideration under the usual practice. They are:—

- “ 1. Is the Combines Investigation Act, R.S.C. 1927, Chapter 26, *ultra vires* the Parliament of Canada, either in whole or in part, and, if so, in what particular or particulars, or to what extent?
- “ 2. Is Section 498 of the Criminal Code *ultra vires* the Parliament of Canada, and, if so, in what particular or particulars, or to what extent?”

Counsel were heard on behalf of the Attorney General of Canada and also for several of the provinces, and counsel were also heard on behalf of the Amalgamated Builders Council and Amalgamated Clothing Industries Council, and for the Proprietary Articles Trade Association; these bodies having been authorized by the Court to be heard as classes of persons interested within the meaning of subsection 4 of section 60 of the Supreme Court Act.

I would answer both these questions in the negative, because I am satisfied that the legislation strictly appertains to powers which the Parliament of Canada has, by section 91 of the British North America Act, 1867,

“ . . . . . to make Laws for the Peace, Order and good Government of Canada, in relation to all Matters not coming within the Classes of Subjects by this Act assigned exclusively to the Legislatures of the Provinces, and for greater Certainty, but not so as to restrict the Generality of the foregoing terms of this Section, it is hereby declared that (notwithstanding anything in this Act) the exclusive Legislative Authority of the Parliament of Canada extends to all Matters coming within the Classes of Subjects next hereinafter enumerated; that is to say,—

“ 2. The Regulation of Trade and Commerce.

“ 27. The Criminal Law, except the Constitution of Courts of Criminal Jurisdiction, but including the Procedure in Criminal Matters.

And any Matter coming within any of the Classes of Subjects enumerated in this Section shall not be deemed to come within the Class of Matters of a local or private Nature comprised in the Enumeration of the Classes of Subjects by this Act assigned exclusively to the Legislatures of the Provinces.”

In the consideration of these provisions it may be useful here to mention the provincial enumerations upon which the advocates of affirmative answers rely. They are to be found in section 92, by which it is enacted that

“ In each Province the Legislature may exclusively make Laws in relation to Matters coming within the Classes of Subjects next hereinafter enumerated; that is to say,—

“ 13. Property and Civil Rights in the Province.

- "14. The Administration of Justice in the Province, including the Constitution, Maintenance and Organization of Provincial Courts, both of Civil and of Criminal Jurisdiction, and including Procedure in Civil Matters in those Courts.
- "15. The Imposition of Punishment by Fine, Penalty, or Imprisonment for enforcing any Law of the Province made in relation to any Matter coming within any of the Classes of Subjects enumerated in this Section.
- "16. Generally all Matters of a merely local or private Nature in the Province."

It is not, in my opinion, open to question that the powers of Parliament with relation to the criminal law extend, not only to common law and statutory offences, as derived from the Laws of England, or locally enacted, under the constitution of the various provinces and territories of the Dominion, and existing therein at the time of the Union or admission of these provinces or territories into the Union, but comprehend also the power to create new statutory offences. It is, I think, certain that there is legislative authority in the Dominion, when the need arises, to declare criminal, and to prescribe the punishments for, acts or omissions which were lawful and innocent by the common law or by Imperial legislation which, subject to the provisions of the Colonial Laws Validity Act, 28-29 Vic., c. 63, is continued in force by sec. 129 of the British North America Act, 1867, in the four original provinces, or as extended and applied to the provinces and territories subsequently admitted; and this conclusion must follow from the interpretation enunciated by their Lordships of the Judicial Committee in the case of *Attorney General of Ontario v. Hamilton Street Railway Co.*, [1903] A.C. 524, where it was held that the Ontario Act to Prevent the Profanation of the Lord's Day, R.S.O., 1897, ch. 246, was, as a whole, *ultra vires* of the provincial legislature. That case was heard by a very powerful court, which included the Lord Chancellor (Halsbury), Lord Macnaghten, Lord Shand, Lord Davey, Lord Robertson and Lord Lindley. The Lord Chancellor, in pronouncing the judgment, expressed himself as follows:—

"The question turns upon a very simple consideration. The reservation of the criminal law for the Dominion of Canada is given in clear and intelligible words which must be construed according to their natural and ordinary signification. Those words seem to their Lordships to require, and indeed to admit, of no plainer exposition than the language itself affords. Sect. 91, sub-s. 27, of the British North America Act, 1867, reserves for the exclusive legislative authority of the Parliament of Canada 'the criminal law, except the constitution of Courts of criminal jurisdiction.' It is, therefore, the criminal law in its widest sense that is reserved, and it is impossible, notwithstanding the very protracted argument to which their Lordships have listened, to doubt that an infraction of the Act, which in its original form, without the amendments afterwards introduced, was in operation at the time of confederation, is an offence against the criminal law. The fact that from the criminal law generally there is one exception, namely, 'the constitution of Courts of criminal jurisdiction', renders it more clear, if anything were necessary to render it more clear, that with that exception (which obviously does not include what has been contended for in this case) the criminal law, in its widest sense, is reserved for the exclusive authority of the Dominion Parliament."

The extent of the Dominion power is thus so clearly and unmistakeably stated that one seeks for a reason for the submission of the questions in hand, and it appears to have arisen out of some of the observations of their Lordships of the Judicial Committee in more recent decisions; but in my view the doubt so suggested vanishes when these decisions are properly understood.

The Dominion Insurance Act of 1910, which was considered in *Attorney General of Canada v. Attorney General of Alberta*, [1916] 1 A.C. 588, embodied a very elaborate set of provisions of considerable variety, designed to regulate the business or trade of insurance, based upon a legislative prohibition, which is to be found in sec. 4, the leading section of that Act, against the acceptance of any insurance risk or policy without a general license from the Minister who was charged with the administration of the Act. The principal question was as to whether sec. 4 was *ultra vires* of the Parliament, and it was held in the affirmative, upon the ground that the subject matter was within the exclusive provincial powers. Sec. 70 was an ancillary provision, imposing penalties for contravention of the Act, and, of course, it fell with the principal enactment, which it was designed to enforce. It was not, indeed, attempted to uphold this latter provision as an independent exercise of the Dominion power with relation to criminal law. This decision led to some amendments of the Dominion Insurance Act involving modifications of the former provisions.

Subsequently, in 1921, a question arose as to the validity of the Board of Commerce Act, 1919, and the Combines and Fair Prices Act, 1919, whereby, as narrated in the head-note, the Parliament of Canada had purported to prohibit the formation and operation of such trade combinations for production and distribution in the provinces as the Board of Commerce might consider to be detrimental to the public interest. It was, moreover, provided that the Board might restrict the accumulation of food, clothing and fuel beyond the amount reasonably required, in the case of a private person, for his household, and in the case of a trader, for his business, and require the surplus to be offered for sale at fair prices; and that the Board could attach criminal consequences for breaches of the Act. The case is reported in [1922] 1 A.C. 191. It was argued that the legislation could be sustained, among other grounds, as criminal law, but it was held otherwise. Their Lordships referred to the *Insurance* case of 1916 (*supra*) as an illustration of the impotency of the Dominion power for the regulation of trade and commerce, taken by itself, to authorize interference with particular trades in which Canadians would, apart from any right of interference otherwise conferred, be free to engage in the provinces. The result was said to be the outcome of a series of well-known decisions of earlier dates. Then follow these observations:—

“For analogous reasons the words of head 27 of s. 91 do not assist the argument for the Dominion. It is one thing to construe the words ‘the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters,’ as enabling the Dominion Parliament to exercise exclusive legislative power where the subject matter is one which by its very nature belongs to the domain of criminal jurisprudence. A general law, to take an example, making incest a crime, belongs to this class. It is quite another thing, first to attempt to interfere with a class of subject committed exclusively to the Provincial Legislature, and then to justify this by enacting ancillary provisions designated as new phases of Dominion criminal law which require a title to so interfere as basis of their application.”

One must, of course, endeavour to extract the meaning of this paragraph, and perhaps some confusion is apt to be caused by the antithesis, and the illustration chosen for the explanation of the first limb, but I am persuaded that there can be no intention here to restrict the legislative power of Parliament in the creation of offences under sec. 91 (27) so as to exclude an act or omission which is not *malum in se*. The occasion did not call for that, and the passage should be read, *secundum subjectam materiam*. It is not necessarily inconsistent, and I do not think it was meant to be incompatible, with the notion, that one must have regard to the subject matter, the aspect, the purpose and intention, instead of the form of the legislation, in ascertaining whether, in producing the enactment, Parliament was engaged in the exercise of its exclusive and comprehensive powers with respect to the criminal law, or was attempting, in excess of its authority, under colour of the criminal law, to trench upon property and civil rights, or private and local matters, in the provinces; and when, in the case of the Combines and Fair Prices Act, 1919, as in the case of the Insurance Act, 1910, their Lordships found that Parliament was really occupied in a project of regulating property and civil rights, and outside of its constitutional sphere, there was no footing upon which the exercise of Dominion powers, with relation to the criminal law, could effectively be introduced—no valid enactment to which criminal sanction could be applied. The principle is illustrated by a remark of Lord Dunedin in *Grand Trunk Railway of Canada v. Attorney General of Canada*, [1907] A.C. 65, at 68, which may be applied *mutatis mutandis*; his Lordship said:—

“accordingly, the true question in the present case does not seem to turn upon the question whether this law deals with a civil right—which may be conceded—but whether this law is truly ancillary to railway legislation.”

In the *Insurance* case, 1916, (*supra*), at 596, Lord Haldane had already recognized the principle as well established, but none the less to be applied only with great caution,

“ . . . that subjects which in one aspect and for one purpose fall within the jurisdiction of the provincial legislatures may in another aspect and for another purpose fall within Dominion legislative jurisdiction.”

And I am convinced that he never intended to suggest that Parliament might not competently find a public wrong lurking or tolerated under the head of civil rights in a province which it is necessary or expedient, according to its will and discretion, or, using Sir Matthew Hale’s expression, “by the prudence of law-givers,” to suppress, in the exercise of its authority over the criminal law.

Then came the *Reciprocal Insurers* case, [1924] A.C. 328, which contributes a very instructive addition to the interpretation of the British North America Acts. This case suggests no limitation of the legislative authority of the Dominion with regard to the criminal law, although it recognizes that a Dominion enactment, which, in language and form, and *a sociis*, is criminal, may, having regard to its history, real subject matter, true aspect and purpose, by which it must also be judged, be found in reality intended to regulate property and civil rights in a province, or matters of a merely local or private nature, such as have been committed to the exclusive authority of the provinces, and so not to fall within the Dominion enumeration; and it is especially made clear that the quality of such an enactment is not concluded by its introduction into the Criminal Code. This decision, in its application to the present question, affirms, with respect to the Dominion insurance legislation of 1917, what was decided in the year immediately preceding, namely, that a provision like sec. 70 of the Act of 1910, and which differed from it in no material respect as to the essential purpose which it was intended to serve, remained ancillary and inoperative, notwithstanding the alterations of form to which it had been subjected and its incorporation as an independent section in the Criminal Code; and Mr. Justice Duff, who pronounced the judgment of the Board, having reviewed the preceding decisions, observed at page 337, that

"It has been formally laid down in judgments of this Board, that in such an inquiry the Courts must ascertain the 'true nature and character' of the enactment; *Citizens' Insurance Co. v. Parsons*; its 'pith and substance'; *Union Colliery Co. v. Bryden*; and it is the result of this investigation, not the form alone, which the statute may have assumed under the hand of the draughtsman, that will determine within which of the categories of subject matters mentioned in ss. 91 and 92 the legislation falls; and for this purpose the legislation must be 'scrutinized in its entirety'; *Great West Saddlery Co. v. The King*. Of course, where there is an absolute jurisdiction vested in a legislature, the laws promulgated by it must take effect according to the proper construction of the language in which they are expressed. But where the law-making authority is of a limited or qualified character, obviously it may be necessary to examine with some strictness the substance of the legislation for the purpose of determining what it is that the Legislature is really doing."

And further, at page 342:—

"In accordance with the principle inherent in these decisions their Lordships think it is no longer open to dispute that the Parliament of Canada cannot, by purporting to create penal sanctions under s. 91, head 27, appropriate to itself exclusively a field of jurisdiction in which, apart from such a procedure, it could exert no legal authority, and that if, when examined as a whole, legislation in form criminal is found, in aspects and for purposes exclusively within the provincial sphere, to deal with matters committed to the Provinces, it cannot be upheld as valid."

His Lordship thought it proper to add, however, that what had been said

"does not involve any denial of the authority of the Dominion Parliament to create offences merely because the legislation deals with matters which, in another aspect, may fall under one or more of the subdivisions of the jurisdiction entrusted to the Provinces."

A case involving the like consideration was *Toronto Electric Commissioners v. Snider*, [1925] A.C. 396, where the question arose as to the authority of the Dominion to enact the Industrial Disputes Investigation Act, 1907, which provided, in effect, speaking by the head-note, that upon disputes occurring between employers and employees in any of a large number of important industries in Canada, the Dominion Minister for Labour might appoint a Board of Investigation and Conciliation to make investigations, with power to summon witnesses and inspect documents and premises, and, if no settlement could be brought about, to recommend fair terms; and, pending the reference, a lockout or strike was prohibited, subject to penalties. It was held that this legislation conflicted with provincial powers as to property and civil rights in the provinces or other enumerations of sec. 92; and Lord Haldane, who pronounced the judgment, referred to the judgment in the *Reciprocal Insurers'* case (*supra*), as summing up the effect of the series of previous decisions relating to the point; and he reiterated the antithetical passage quoted above. His Lordship was of the opinion that, on authority as well as on principle, the Board was precluded from accepting the Act as justified in the exercise of the Dominion power under sec. 91, in relation to criminal law. He reviewed the provision of the Act in question, and concluded with the following important observations:—

"It is obvious that these provisions dealt with civil rights, and it was not within the power of the Dominion Parliament to make this otherwise by imposing merely ancillary penalties. The penalties for breach of the restrictions did not render the statute the less an interference with civil rights in its pith and substance. The Act is not one which aims at making striking generally a new crime."

It would seem manifestly to be implied from the last sentence, that different considerations would have presented themselves if the real purpose of the statute had been found to be the construction of a new offence.

It must not be overlooked that, by the 15th enumeration of sec. 92, there is included among the classes of subjects as to which the provincial legislatures may exclusively make laws:—

"The Imposition of Punishment by Fine, Penalty, or Imprisonment for enforcing any Law of the Province made in relation to any Matter coming within any of the Classes of Subjects enumerated in this Section."

And local enactments, deriving their force from the exercise of the powers conferred by this enumeration, have been described as provincial criminal law. In *Russell v. The Queen*, 7 App. Cas. 829, at 840, Sir Montague Smith, delivering the judgment, referred to an argument submitted by Mr. Benjamin, that, if the Act related to Criminal law, it was provincial criminal law under the 15th enumeration of sec. 92; and his Lordship said that no doubt

"this argument would be well founded if the principal matter of the Act could be brought within any of these classes of subjects."

More recently, in the case of *Rex v. Nat Bell Liquors Limited*, [1922] 2 A.C. 128, their Lordships had to consider the effect of a conviction under a local liquor Act of Alberta. By sec. 36 of the Supreme Court Act, as enacted by ch. 32 of 1920, the appellate jurisdiction of the Court had been limited by an exception excluding

"criminal causes and in proceedings for or upon a writ of habeas corpus, certiorari or prohibition arising out of a criminal charge,"

and the question was considered as to whether a prosecution under a typical temperance Act was or was not a criminal charge. Lord Sumner, who delivered the judgment, at pages 167 and 168, disposed of this issue as follows:—

"The issue is really this. Ought the word 'criminal' in the section in question to be limited to the sense in which 'criminal' legislation is exclusively reserved to the Dominion Legislature by the British North America Act, s. 91, or does it include that power of enforcing other legislation by the imposition of penalties, including imprisonment, which it has been held that s. 92 authorizes Provincial Legislatures to exercise? It may also be asked (though this question is not precisely identical) under which category does this conviction fall of the two referred to by Bowen L. J., in *Osborne v. Milman*, when he contrasts the cases 'where an act is prohibited in the sense that it is rendered criminal', and 'where the statute merely affixes certain consequences, more or less unpleasant, to the doing of the act.'

"Their Lordships are of opinion that the word 'criminal' in the section and in the context in question is used in contradistinction to 'civil', and 'connotes a proceeding which is not civil in its character.' Certiorari and prohibition are matters of procedure, and all the procedural incidents of this charge are the same whether or not it was one falling exclusively within the legislative competence of the Dominion Legislature, under s. 91, head 27."

It is not, for present purposes, necessary to ascertain precisely what is meant by the concluding sentence, but it may be observed that the criminal law, under sec. 91 (27), includes expressly "the procedure in criminal matters," and that, viewing section 92 (15) as authorizing the constitution of crimes by the provincial legislatures, there is no express provision empowering those legislatures to enact procedure for the enforcement of the punishments so imposed.

Later, in *Nadan v. The King*, [1926] A.C. 482 at 489, the Board had to consider the effect of sec. 1025 of the Criminal Code, by which it was provided that

"Notwithstanding any royal prerogative, or anything contained in the Interpretation Act or in the Supreme Court Act, no appeal shall be brought in any criminal case from any judgment or order of any Court in Canada to any court of appeal or authority by which in the United Kingdom appeals or petitions to His Majesty in Council may be heard."

There was a conviction in question for an offence against the provincial Liquor Control Act of Alberta, and it was argued that the foregoing section did not apply to a penalty imposed by a provincial statute in which it was not incorporated. Their Lordships were of the view, however, that this contention was negated in principle by the judgment of the Board in *Rex v. Nat Bell Liquors Ltd.*, [1922] 2 A.C. 128, 167. They held that

“Sect. 1025 is expressed to apply to an appeal in a criminal case from ‘any judgment or order of any Court in Canada,’ and this expression is wide enough to cover a conviction in any Canadian Court for breach of a statute, whether passed by the Legislature of the Dominion or by the Legislature of the Province.”

It must therefore, of course, if I realize the effect of these decisions, be considered that provincial enactments, falling within the 15th enumeration of sec. 92, belong to that branch of the law which is criminal. But this does not necessarily diminish or affect the amplitude of Dominion powers under sec. 91 (27). What the provinces may do under the authority of sec. 92 (15) is to impose punishment, by fine, penalty or imprisonment, for enforcing any law of the province made in relation to a matter coming within any of the provincial enumerations, and is therefore confined to matters described generally as of a merely local or private nature in the province. But the concluding paragraph of sec. 91 must be considered, and it was thus explained by Lord Watson, in the *Liquor Prohibition* case, [1896] A.C., 359-60:—

“It was apparently contemplated by the framers of the Imperial Act of 1867 that the due exercise of the enumerated powers conferred upon the Parliament of Canada by s. 91 might, occasionally and incidentally, involve legislation upon matters which are *prima facie* committed exclusively to the provincial legislatures by s. 92. In order to provide against that contingency, the concluding part of s. 91 enacts that ‘any matter coming within any of the classes of subjects enumerated in this section shall not be deemed to come within the class of matters of a local or private nature comprised in the enumeration of the classes of subjects by this Act assigned exclusively to the legislatures of the provinces.’ It was observed by this Board in *Citizens’ Insurance Co. of Canada v. Parsons* that the paragraph just quoted ‘applies in its grammatical construction only to No. 16 of s. 92’. The observation was not material to the question arising in that case, and it does not appear to their Lordships to be strictly accurate. It appears to them that the language of the exception in s. 91 was meant to include and correctly describes all the matters enumerated in the sixteen heads of s. 92, as being, from a provincial point of view, of a local or private nature. It also appears to their Lordships that the exception was not meant to derogate from the legislative authority given to provincial legislatures by these sixteen subsections, save to the extent of enabling the Parliament of Canada to deal with matters local or private in those cases where such legislation is necessarily incidental to the exercise of the powers conferred upon it by the enumerative heads of clause 91. That view was stated and illustrated by Sir Montague Smith in *Citizens’ Insurance Co. of Canada v. Parsons* and in *Cushing v. Dupuy*; and it has been recognized by this Board in *Tennant v. Union Bank of Canada* and in *Attorney General of Ontario v. Attorney General for the Dominion*.”

Consequently, if it be, as I apprehend, that the criminal law, in its widest sense, is reserved for the Parliament of Canada, a branch of that criminal law cannot well be *exclusively* within the authority of a province, and, while the provinces may undoubtedly, within their local and private range of legislative power, and in that aspect, impose punishments for enforcing their local laws which are in other respects *intra vires*—punishments that are, in the sense of the decisions, laws of a criminal nature—they cannot thereby occupy, so as to obstruct, a field of legislation, like that of the criminal law, which has been committed exclusively to the Dominion.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada showed a considerable improvement at the beginning of May, according to returns received by the Dominion Bureau of Statistics from 6,636 firms, each employing a minimum of 15 workers, and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 991,093 persons, as compared with 941,644 in the preceding month. The employment index (with the average in the calendar year 1926 as the base, equal to 100) stood at 116.2, as compared with 110.4 on April 1, and with 106.8, 101.8, 95.4, 91.9, 92.9, 92.5, 84.3, and 85.1 on May 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

At the beginning of May, 1929, the percentage of unemployment reported by local trade unions stood at 5.5, as compared with percentages of 6.0 at the beginning of April and 5.2 at the beginning of May, 1928. The percentage for May was based on the reports tabulated by the Department of Labour from a total of 1,661 local trade unions embracing a membership of 188,874 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed a considerable increase in the volume of business transacted by these offices during April when compared both with the business of the previous month and with that of April, 1928.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.94 at the beginning of May, as compared with \$11.01 for April; \$10.80 for May, 1928; \$10.76 for May, 1927; \$11.29 for May, 1926; \$10.48 for May, 1925; \$9.89 for May, 1924; \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.92 for June, 1920 (the peak); \$12.66 for May, 1918; and \$7.43 for May, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was 92.4 for May, as compared with 94.1 for April; 97.9 for May, 1928; 98.5 for May, 1927; and 100.2 for May, 1926.

### Industrial Disputes Investigation Act

The Department of Labour received during May the report of the Board of Conciliation and Investigation under the provisions of the Act in connection with a dispute between the Ottawa Electric Railway Company and certain of its employees. Five applications for the establishment of Boards were dealt with during the month. The text of the report and a full account of the recent proceedings under the Act are given on page 592.

### Old age pensions in Canada

The quarterly statements of the number of aged persons in receipt of pensions, the amount of pensions paid, etc., under the provisions of the Old Age Pensions Act, 1927, which were published in the LABOUR GAZETTE, May, 1929, page 499, and in previous issues, give cumulative figures showing the numbers and amounts as at the end of the period from the commencement of the Act to the end of the quarter covered by the respective statements. This fact is noted in order to correct the impression which readers of these quarterly statements might have formed, that the totals given referred only to the preceding three months. In pursuance of the legislation enacted by the Ontario Legislature at its last session (LABOUR GAZETTE, May, 1929, page 484), an agreement between the federal and provincial authorities was signed at Toronto on June 11, making the act operative in the province as from November 1, 1929.

### Old age pensions in United States

A Bill "to protect Labour in its Old Age" was introduced in the House of Representatives of the United States Congress on April 18 and referred to the Committee of Labour. The purpose of this bill is to provide for the establishment of a system of old age pensions under the supervision of the State authorities, with financial assistance from the federal treasury. The bill would allow of pension plans being drawn by the State authorities and of their approval by the Old Age Security Bureau attached to the

United States Department of Labour. It is stipulated that no pensions plan shall be approved which does not provide that persons entitled to relief shall have been residents of the United States for at least twenty years; are sixty years of age and over; are not possessed of real or personal property in excess of \$5,000; and have no children or other persons responsible at law for their support and able to support them. The amount of assistance to aged persons is to be at the rate of \$1 a day, and the federal contribution is to be not more than one-third of the pensions payments.

Two bills on the subject of Old Age Pensions have been introduced in the New York State Legislature. One provides that all persons over 70 shall receive an allowance of not more than \$1 a day. The other creates a Bureau of Old Age Welfare and gives men over 65 and women over 60 an allowance of not more than \$50 a month. Governor Franklin D. Roosevelt, of New York, speaking on the subject of these bills, stated that "more and more business men are coming to realize that security against old-age want is economically sound. Once the mere thought of security in old age was regarded as radical and socialistic. Now, it is considered inevitable. Let us have it now."

Since the beginning of the current year three States—Wyoming, Minnesota, and Utah—have enacted old-age pension laws, closely similar in terms. In Minnesota the pensionable age is 70, in Utah and Wyoming, 65; in Minnesota and Wyoming the maximum pension payable is \$30 a month, in Utah, \$25.

The addition of these three States brings the number having old-age pension laws up to nine, in addition to the territory of Alaska. Pension legislation is pending in a number of other States, and in several favourable action before the adjournment of the legislature is confidently expected.

#### **Settlement of industrial disputes in Manitoba**

The Prairie Division of the Canadian Manufacturers' Association, at a convention held at Winnipeg in April, adopted a report submitted by the Executive Committee on the subject of legislation for the settlement of industrial disputes. The report stated that "organized labour having requested the Manitoba Government to pass an Act providing for compulsory arbitration of industrial disputes along the lines of the Alberta Act, the executive secured information as to the working of the latter. In view of the fact that Manitoba already had on its statute books an act providing a method of

handling industrial disputes, viz., 'Joint Council of Industry' Act, the executive felt there was no need for further legislation, and appointed a committee to deal with this matter and oppose such an act if it was introduced in the Legislature."

The "Joint Council of Industry" Act referred to is the Industrial Conditions Act (Revised Statutes of Manitoba, 1924, chapter 92), enacted in 1919. The text of this Act was printed in the *LABOUR GAZETTE*, April, 1919, page 492. It provides for the appointment of a joint council of industry consisting of two representatives of employers, two representatives of employees, and an impartial chairman. The council is empowered by the act to hold investigations into all matters relating to impending or existing industrial disputes and to report thereon; and to make investigations with respect to the cost of living, to conditions of employment and conditions under which employees live, to excessive profits resulting from unfair wage rates, and to alleged breaches of individual contracts and violations of laws affecting employers and employees as such. At the request of the parties to any industrial dispute the council acts as a board of arbitration.

The Alberta Act mentioned in the report of the committee quoted above, is the Labour Disputes Act (Statutes of Alberta, 1926, chapter 53). This act provides, in connection with disputes within the exclusive legislative jurisdiction of the province, for the appointment of a Board of Conciliation and Investigation when either of the parties to the dispute has applied to the minister for its establishment. (*LABOUR GAZETTE*, May, 1926, page 447). The provisions of the Alberta Act are discussed in a report presented at the annual convention of the Canadian Manufacturers' Association held this month at Halifax. This report is given on another page of this issue.

**Social insurance in British Columbia** The chairman of the British Columbia Workmen's Compensation Board, Mr. E. S. H. Winn, K.C., gave an address before the Vancouver

Kiwanis Club on May 30, in which he described the work being carried on under the social legislation in this province. He pointed out that of the five main branches of "social insurance"—workmen's compensation, mothers' pensions, old age pensions, health insurance, and unemployment insurance—the first three were already flourishing in British Columbia; health insurance was being considered by the government; while unemployment insurance was something to be taken up in the future.

Mr. Winn stated that in the twelve years of the operation of the Workmen's Compensation Act the board had paid out about thirty million dollars on behalf of 200,000 employees injured in the course of their employment.

Mothers' pension expenditures amounted, he said, to \$4,600,000 since the system was established in 1920. The mothers' pensions budget for 1929 is for about \$800,000. Mr. Winn stated that the principle underlying this legislation is that where mothers and children are deprived of their supporter, the mother becomes the agent of the state in maintaining her children, who might otherwise have to be maintained at public expense.

Old age pensions, which are administered in British Columbia by the Workmen's Compensation Board, are now benefiting 3,867 persons in the province. It was expected that about one million dollars would be expended under this head in 1929.

#### Estimated cost of illness in Canada

An estimate of the average extent of disablement due to sickness throughout Canada was made in the course of an address before the recent convention of the Province of Quebec Safety by Mr. A. O. Dawson, president of Canadian Cottons Limited. "Various authentic estimates," he said, "would show that from 2 to 3 per cent of the total population is continually ill. Of these 91 per cent to 96 per cent are ill enough to be disabled, so that it might be established as a conservative figure that 2 per cent of the population is continually unable to work. From these percentages, therefore, it can be estimated that 180,000 individuals are continually suffering from disabling illness in the Dominion of Canada. Of the population of Canada 30 per cent are adult males and 30 per cent are adult females. It is thus estimated that 54,000 adult males are continually ill. This amount of illness would indicate that in the adult male population alone, there are lost each year 16,200,000 working days. Calculations show that, for every twenty males gainfully employed there are approximately six females similarly occupied. This would suggest, therefore, that the female population in addition loses 4,800,000 working days per year, or a total loss per year of 21,000,000 working days, of which at least 50 per cent is preventable. The superfluous loss per year may accordingly be placed at 10,500,000 working days. It is estimated that the total cost of illness to the Dominion of Canada per year is \$270,000,000 or about 75 per cent of the total expenditure of the federal government."

#### Arbitration in British civil service

An "introductory essay" on the British Civil Service by Dr. Herman Finer, of the London School of Economics and Political Science has been published by the Fabian Society, London. A chapter on Joint Industrial Councils and Arbitration Court states that the councils now represent almost all the public servants. These councils perform the following functions: provision of the best means for utilizing the ideas and experience of the staff; securing the staff a greater share in responsibility for the determination and observance of the conditions under which they work; determination of the general provisions governing recruitment, hours, tenure, and remuneration; encouragement of further education of civil servants and their training in higher administration and organization; improvement of office machinery and organization; and provision of opportunities for the full consideration of suggestions by the staff on this subject; and proposals for legislation bearing upon the position of civil servants in relation to their employment. The councils derive their powers simply from agreement between the two sides. Where agreement is for any reason impossible and compromise cannot be effected, the official decision naturally holds good, and then the only benefit of the system is that the staff's point of view, having been expressed, may in time modify the full effect of that decision.

Early in 1917 a Civil Service Arbitration Board was set up as a result of agitation by Civil Service Associations because the war had sent prices sky-high while wages lagged far behind. The board was abolished in 1922 when the Whitley Councils began to operate, but it was re-established early in 1925. It now consists of a chairman who is either the president of the Industrial Court or the chairman of a Division of the Court, together with one member drawn from a panel of persons appointed to the Industrial Court by the Minister of Labour as representing the Chancellor of the Exchequer for the time being (this is the employers' representative), and one member drawn from a panel of persons appointed to the Industrial Court by the Minister of Labour after nomination by the staff side of the National Whitley Council. Civil servants and officials of Civil Service Associations are ineligible for appointment as members of the court.

Only claims in regard to salaries of £700 and less can be referred to the court, unless by the consent of the parties concerned in the claim. When negotiation fails arbitration is open to the government departments on

one hand, and the recognized Civil Service Association within the National Whitley Council on the other hand, on application by either party. The matters which may be taken to the court are claims affecting emoluments, weekly hours of work and leave. Claims can be made only for "classes," i.e., "any well-defined category of civil servants who for the purpose of a particular claim occupy the same position, or have a common interest in the claim."

On April 1, 1926, the number of civil servants in Great Britain was 296,398.

### **Conciliation and arbitration in Australia**

The constitutional difficulties experienced in connection with the conciliation and arbitration of industrial disputes in the Commonwealth of Australia are outlined in a recent communication to the International Labour Office. The Commonwealth Parliament has the constitutional power to legislate only for conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one state. The jurisdiction of the arbitration courts established by the Commonwealth thus depends upon the extent of the dispute. Accordingly, in order to bring themselves before the court, parties create industrial disputes extending beyond a single State. This is now generally done, not by any method of strike or lockout, but by making a number of demands. The refusal of these demands by the other side constitutes a dispute. The government endeavoured to obtain an amendment to the constitution in 1926, in order to avoid this necessity for a dispute to be created before any action by the Commonwealth court could be taken. The people, however, at a referendum, refused to make the amendment, so that the position remains unchanged. When the parties are before the Commonwealth court, the only thing that the court can deal with is the dispute. Matters which are not in dispute cannot be handled by the court at all.

Six State parliaments have full power to legislate on the subject of industrial matters. They have set up arbitration courts, wages boards, etc., which bodies deal with industrial matters within the State to which they belong. It frequently happens that a State tribunal has laid down rules for wages, hours, or conditions of labour, and that the same matters have come up for determination in an inter-State dispute before the federal arbitration Court. If the federal arbitration court and the State tribunal both make awards dealing with the same subjects, then

the federal award prevails over the State award. The position is the same if a State parliament legislates on industrial conditions in a manner inconsistent with a federal award. In this case also the federal award prevails. Although the Commonwealth parliament has authority to establish an arbitration court with these powers, the parliament can exercise none of these powers itself. The result is that the difficulties naturally inherent in the problem of industrial relations are greatly complicated.

These obstacles cannot be finally removed by any parliament, because parliament cannot alter the constitution. Experience has, however, shown that, when a proposal to alter the constitution comes before the people, the question may possibly become a contest between the Commonwealth and the State, rather than a discussion of merits of the particular proposal.

### **"Canadian Journal of Research"**

The first number of a new magazine, the *Canadian Journal of Research*, was issued during May by the National Research Council of Canada. Dr. H. M. Tory, the president, states the purpose of the new publication as follows:—

"In the last few years scientific papers resulting from the activities of the universities, the National Research Council and other research agencies in Canada, have become so numerous as to cause difficulty in securing prompt publication. This is largely due to the fact that there has been in Canada no national periodical devoted to research. Canadians have consequently been largely dependent upon foreign journals already overcrowded as a result of the activities of their own scientific men. It has therefore been decided to publish, under the auspices of the National Research Council, a *Canadian Journal of Research*. While the *Journal* is intended primarily for the publication of the results of work carried out under the auspices of the Council, it will also be open for suitable papers from Canadian research workers not connected with this organization. Material is already in sight to guarantee its publication bi-monthly. Moreover, it is expected that within a short period of time there will be available a volume of scientific papers sufficient for monthly issues. In its future development the *Canadian Journal of Research* can be depended upon to keep pace with the progress of scientific and industrial research throughout Canada, and the Council hopes that it may make a material contribution towards that progress."

The first issue contains a series of studies on the nature of rust resistance in wheat, forming part of a co-operative attack on the problem of cereal rusts in Canada carried on jointly by the National Research Council, the federal Department of Agriculture and the Universities of Alberta, Manitoba and Saskatchewan. Other papers describe the results of investigations into the resistance of Portland cement to sulphate action; in certain kinds of vaccine used against tuberculosis; and into the effects of ultra-violet sunlight rays on certain marine organisms.

### Research in University of Toronto

A bulletin just published by the University of Toronto outlines the work carried on in the University in research, which is described as one of the three main functions of any university, namely teaching, research, and publication. Many of the most important investigations, it is pointed out, may seem to have little or no direct application to the solution of the more practical difficulties of industry, science or commerce; but on the other hand, the establishment of scientific facts has often led to far-reaching and revolutionary changes in the field of practice. This truth is illustrated by the long processes of research which ultimately led to the discovery of insulin, and by the investigations in pure science which culminated in modern industrial methods. "Research men working in what is called applied science are the first to point out that the investigations they make would be impossible were it not for the fundamental work done in pure sciences—in chemistry, physics, geology, mineralogy, botany, zoology, and so on".

The pamphlet goes on to mention some of the results of university research work on basic industries—agriculture, mining, forestry, fishing, and manufacturing. For example, "here is part of the work which a professor in the University did for the forest industries. He studied the disease of jackpine from the standpoint of its utilization for railway ties, the control of disease in the forest, and the age at which timber can be harvested with the maximum yield. He effected a saving of an immense amount of material, formerly considered not usable, and his work was of great value to the railways. Then he studied defective pulpwoods, especially spruce and pine. Fifty per cent of these, which had formerly been left unharvested, can now be used as a result of his researches. Then he attacked the blight of young conifers, par-

ticularly spruce. This blight was noticed especially in the snow-laden areas in Quebec and in Ontario and millions of trees were lost in the nurseries. This professor was able to find a means of controlling this blight so that, where his method of control is adopted, the disease makes no headway and will probably be ultimately wiped out. This same professor discovered a means of preventing railway ties from rotting. Another devised a treatment to prevent logs sinking in the rivers and lakes when being floated down in the spring. Members of the staff of the Faculty of Forestry are working on conservation, reforestation, the value of young growth stands on areas in Northern Ontario which have been burned over, regeneration of pulpwood species, and related problems. How many millions of dollars, one wonders, have these men added, and will they add, to the value of the forest resources of Ontario?

"Then there is the fishing industry. What can the Provincial University do to assist fishermen? A great deal. There is, for example, the new method of refrigeration, recently announced by which sea fish can be brought to Ontario in excellent condition. This work was done under the Biological Board of Canada. Research workers in the Department of Biology have studied the fish in Lake Nipigon, in Lake Erie, and in Lake Ontario. They have learned how fast certain kinds of fish grow and which species of fish are best adapted for conditions in certain lakes. They have studied the factors affecting production of lake trout in Lake Ontario. They, too, have made incalculable additions to the industry in whose progress they are especially interested. . . . .

"But when one thinks of manufacturing, the research problems involved are so numerous and of such varied significance that they cannot possibly be described within the ordinary limits of a small publication. In astronomy, biochemistry, chemistry, food chemistry, geology, household science, psychology, radiology, engineering of all branches, there are under investigation problems, the solution of which will benefit a great many phases of manufacturing."

The pamphlet goes on to describe the results obtained by means of research in the fields of engineering, health, cancer, dentistry, and physics, pointing out that this is by no means a complete summary of all the research work going on in the University of Toronto.

**Research work  
in the pulp  
and paper  
industry**

The extent of the research work carried on by the Canadian Pulp and Paper Association was described by the president, Colonel C. H. L. Jones, in his address at the recent annual convention held at Montreal. "If we go back," he said, "to the time when the first five thousand dollars was appropriated by the Association to assist in the compilation and publication of the Text-books on Pulp and Paper, which have since won such a distinguished place for themselves in this and other countries, and if we take note of all the funds which the Association has provided in the meantime for research and for educational and kindred objects, including the cost of this building (that is, the Pulp and Paper Research Institute, Montreal), it will be found that the total sum exceeds half a million by more than ten thousand dollars. In addition, the Association has become committed to a program covering the next five years which will require the expenditure of some seventy thousand dollars a year in the furtherance of this work. This may be taken as an indication of our serious interest in the scientific development of our industry, and I think we are justified in taking some small measure of pride in our accomplishment.

"One of the gratifying developments which has followed our own procedure along these lines has been the quickening of interest in industrial research throughout the Dominion. We may not, perhaps, claim any credit for the fact that since we started upon our program, the Dominion Government has made an actual beginning with the long-mooted Central Bureau of Research at Ottawa, nor for the additional fact that the Government of the province of Ontario has established a fund of \$2,000,000 (which has been doubled by private contributions), to be applied to the encouragement of industrial research, but we may at least take credit to ourselves as being in the vanguard of the movement so far as Canada is concerned and of being the first of the larger industrial groups of the country to co-operate for the advancement of our industry by organized investigation."

**Sherman  
Anti-Trust law  
and trade union  
activities**

The present attitude of organized labour in the United States to the "Sherman" Anti-Trust Act is discussed by G. W. Terborgh in an article appearing in the April issue of the *Journal of Political Economy*. "It is now thirty-five years," the writer states, "since the Sherman Law was first ap-

plied to trade union activities. During this period it has been frequently invoked against union members and officials both by the government and by private suitors. The government alone has instituted upward of thirty equity suits and criminal prosecutions against Labour, more than half of which have resulted in injunctions or convictions. The number of private actions against trade-unions for treble damages under section 7 of the Sherman Law, or for injunctions authorized by section 16 of the Clayton Act, is certainly very large, though precise figures are not available. The action of the courts in placing the activities of trade-unions under the ban of the Sherman Law has elicited the vehement opposition of organized labour. Almost from the beginning the American Federation of Labour has been engaged in efforts to secure amendatory legislation exempting trade-unions from its provisions, efforts which were rewarded, after persistent agitation, by the passage of the labour sections of the Clayton Act. As these sections have been construed by the courts, however, they have proved a tragic disappointment to their proponents. In consequence, the legislative battle has been renewed and the American Federation of Labour, exasperated by the failure of relief through amendment of the Sherman Act, is now considering the advisability of its total repeal."

The decision of the United States Supreme Court in the case *Bedford Cut Stone Company versus Journeymen Stone Cutters' Association* (LABOUR GAZETTE, June, 1927, page 693) is regarded by the writer as illustrating the widening range of trade union activities now judged to be under the Sherman Act. It is pointed out that the invariable charge involved in such cases is that of conspiracy. "This means that acts of individuals, no matter what their effect on trade, are actionable under the Sherman Act only when done in furtherance of a conspiracy in restraint of trade." Discussing this aspect of the question Mr. Terborgh asks "When is an intent to restrain interstate commerce present? If we mean by intent that the restraint of commerce is the object and motive of the combination, it is practically never present. . . . If the real objectives of the combination be the test, all labour conspiracies should be excluded from the Sherman Act; if the effects of the combination upon interstate commerce be the test, then all conspiracies which unreasonably restrain it should be included—save as they are exempted by the exercise of some paramount right, such as the right to strike for certain purposes, and the like. Intent to restrain interstate commerce should either be invariably

presumed, as a mere matter of legal form, when the effect of a labour combination is to restrain it, or it should be abandoned altogether as a criterion in such cases."

### Employers' Association of Manitoba

An account of the origin and aims of the Employers' Association of Manitoba was given by Mr. J. R. Deacon in his presidential

address at the annual convention of the association held in Winnipeg.

"It was nine years ago," Mr. Deacon said, "that we felt that a proper solution to many of our labour problems was more or less dependent upon the organizing ability and influence of the employers. It was in November, 1920, that I attended the first informal meeting of a few employers, and I was appointed with others to act on a committee of seven to investigate and report upon the advisability of organizing the Employers' Association of Manitoba." This committee recommended that immediate steps be taken for the formation of the association. . . .

"Our aims and objects are such that they do not overlap any of the good work being done by any other organized bodies. Therefore, no apology, in my estimation, is needed for this association. Its work has been to exert every effort to eliminate the causes of differences between employer and employee. It has stood prepared in case of trouble to lend support and influence and its services to the members in dealing with the various phases of workmen's compensation and opposing unwise legislation affecting working conditions. We always stand ready to aid members with information concerning all kinds of legislation affecting the various interests represented in the membership. In fact, the association is acting as a general clearing office for other organized bodies in furnishing information relating to working conditions, unwarranted advertising schemes, solicitations for cash donations and other appeals that business men are continuously being asked to support."

### Plan to reduce accidents in building trades

Reference was made in the last issue (page 568) to a statement by the chairman of the Ontario Workmen's Compensation Board on

the increasing risks to workmen engaged in the construction of large buildings. A plan for reducing construction accidents was described in *Safety Engineering* (New York), March, 1929, by Mr. Max Baumann, a member of the Accident Prevention Committee of the Buildings Trades Employers' Association.

The association appointed this committee in 1928 to devise a method of dealing with the growing accident problem. In its investigations the committee found evidence of a "disturbing factor" introduced by the irresponsible contractor. "This class is in constant competition with the general contractor who erects and maintains safeguards, either in accordance with the local laws, or through safety experience on all his jobs at a big expense."

The committee prepared safety specifications entitled "Protection and Safety Work." This specification is composed of fifteen articles covering the more important hazards of building construction, most of which are covered by the industrial code of New York State. It was sent to contractors and architects in New York with a recommendation that it be embodied in the general specifications in all building construction.

"The adoption of this plan," it is suggested, "would definitely fix the responsibility for safeguarding on the contractors, each for his own employees by virtue of his contract. A legal requirement would become a contractual responsibility. It would not be inequitable, for the reason that this responsibility would be placed upon each contractor only in so far as the protection was applicable to his work, avoiding confusion as to who should safeguard a particular piece of work, and tending to eliminate duplication of such safeguarding. Contractors including this cost in their bids would not rely, as is sometimes practised, upon the safeguarding equipment of others, thereby cutting down a prolific source of accidents caused by the removal of a board, etc., which renders a safeguard inoperative."

The committee found that the two main elements of safety in building construction are safeguarding and education, this conclusion being drawn from an analysis of the major accidents which showed the causes of accidents to be divided approximately as follows: (1) Twenty-five per cent due to either the lack of physical safeguarding or the improper maintenance of these safeguards. (2) Seventy-five per cent due to causes such as carelessness, ignorance, or the disregard of safe practice regulations by the worker.

Among the mechanical rules Mr. Baumann mentions providing safe equipment and not overloading scaffolds; overhead protection for sidewalks; guarding of ladders and temporary stairways, permanent stairways, permanent or temporary elevator cars used for carrying workmen, and floor openings; guarding material hoist shaftways; guarding and proper installation of swinging, suspended, built-up

outrigger and special scaffolds; artificial lighting for dark places; and the planking over of the derrick floor.

In regard to the prevention of accidents due to carelessness the committee emphasizes the responsibilities resting upon foremen for turning the minds of his workmen in the direction of carefulness.

An examining Board for plumbers had been appointed at Ford City, Ontario, for the purpose of examining and giving certificates to qualified plumbers in the city. The board is composed of two master plumbers and two journeymen.

About 3,000 persons in British Columbia are stated to be now in receipt of benefits under the Mothers' Pensions Act of 1920. Since that year a total of nearly five million dollars has been paid to widowed or otherwise qualified mothers. The expenditure during the current year is expected to amount to about \$800,000.

*Child Welfare News*, published by the Canadian Council on Child Welfare, in its issue for May 15, notes that children's work in Nova Scotia has expanded by leaps and bounds in recent years, and the province is

rapidly becoming one of the best organized in the Dominion from the point of view of child protection and provision for the delinquent and feebleminded child. Much greater attention is also being given on the part of the Children's Aid Societies, to keeping children in their own homes rather than making them wards, and also to the selection of good foster homes. A large amount of work, that would be generally described as family welfare work, is being done by the Children's Aid Societies in Nova Scotia.

The Workman's Compensation Board of Alberta has issued an appeal for safety first in industry, summarizing accident statistics in the province for 1929, and stating that 13,400 accidents were reported to the Board in 1928, the majority of these accidents being preventable. It is pointed out that a fatal accident occurred every five days; every third person employed in the coal mining industry met with an accident, and every fifth person in other industries met with an accident. More than 3,000 cases of cuts and lacerations were reported last year, and 630 became infected because of the carelessness of workmen to apply simple remedies to the wound, the appeal states in advising employers to have a first aid kit on every job.

### Prospecting by Airplane in Northern Canada

The improved working conditions resulting from the use of airplanes in prospecting for minerals in northern Canada are described by Mr. John E. Hammell, president of the Northern Aerial Minerals Exploration, Limited, in the *Engineering and Mining Journal* for May 11. In the nine months since this Canadian company was organized, airplanes have flown 100,000 miles over the north country without a single air casualty; much of it over virgin territory probably never before visited by white men; some of it over regions that abound with possibilities for minerals; all of it effective, for exploration and the establishment of bases and supply stations, and for the carrying of men and their tools and provisions.

The writer states that "there can be no doubt that the future of mineral exploration will depend on aircraft. When the company was launched, I said that more development would result from the use of airplanes by experienced men in the next five years than had been accomplished in the last fifty years. This has been demonstrated in a few months' operations. Below are enumerated a few of the advantages gained by the use of the airplane:—

"1. *Safety*.—Since 1926, when the first serious air transport started in the Patricia district, there have been no casualties among air passengers, whereas about 42 men have lost their lives by the old methods.

"2. *Communication and Supervision*.—These are essential to effective prospecting. Our parties are at all times in touch with district engineers and headquarters, and receive help and advice on the ground when they need it.

"3. *Morale*.—Increased out of all proportion. Men are in touch with civilization and have had the worry and labour of transportation of supplies removed. They can apply themselves 100 per cent to prospecting work within a convenient radius of their main camp. For their purposes, this man camp is the equivalent of Timmins or Cochrane or any other town on the steel. When they are through with that particular locality, they, their canoes, and their supplies are transported to another area in a fraction of a day, and work is resumed.

"4. *Aerial Observation*.—Geological boundaries can be outlined roughly by an engineer or experienced prospector, and topographical features of the country can be supplied to the field parties in remarkably quick time."

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation throughout Canada at the end of May was reported by the superintendents of the offices of the Employment Service of Canada to be as follows:—

The agricultural industry in the province of Nova Scotia was busy completing spring work, which had been hampered to some extent by heavy rains. Fairly heavy catches of fish were being reported toward the close of the month. There appeared to be quite a substantial amount of construction being carried forward, including the pulp and paper mill at Liverpool and several projects in Halifax, as well as smaller jobs throughout the rest of the province, and satisfactory progress was reported. Some logging activity in preparation for the summer cut was reported. The coal mines appeared to be working full time, with a reasonably heavy production being turned out. The iron and steel industries continued at about the same pace as in the previous months. The transportation industry continued busy while trade was stated to be good. As usual, the demand for women domestic workers exceeded the supply.

As in Nova Scotia, farmers in the province of New Brunswick were busily engaged in finishing up spring farm work. The fishing industry in this province recorded heavy catches, particularly in the case of salmon and lobsters. In the logging industry river driving was practically completed, while some summer operations were being put in hand. Factories throughout the province seemed to be working normally as a general rule, while a few were reported as being exceptionally busy. A fair amount of construction work was underway, and building trades workers appeared to be fairly well employed. Transportation and trade were both reported as favourable. The women domestic divisions reported the usual number of placements.

With a brisk demand for farm workers being made to the Quebec employment offices, a large number of placements were reported. Vacancies for the logging industry consisted almost wholly of log drivers. The general situation throughout the province of Quebec in respect of manufacturing industries appeared to be exceedingly favourable, with practically all districts and all branches of the industry sharing in the satisfactory conditions. Work in the building and construction industry was rapidly gaining its summer stride, and orders for tradesmen of the different classes were quite numerous. Condi-

tions in so far as trade and transportation were concerned, were quite satisfactory. Again a shortage of women domestic workers was reported.

Although spring farm work in the province of Ontario was practically completed, there was still a good demand for farm help, in most sections of the province. Reports on manufacturing throughout Ontario seemed conflicting. Toronto reported factories as showing decreased activity, and the automobile and allied industries generally showed a slackened pace, while centres other than Toronto and industries other than the automobile industry reported continued improvement, with additions to working staffs. The program of building and construction under way was such that very few skilled artisans were unemployed at any point, while road, railroad, and sewer and paving work were absorbing a large number of unskilled workmen. Although mines in the northern section of the province continued busy, not many men were being taken on. With river-drivers, wood cutters, and pulp peelers being in demand, the logging industry was not proving an attractive field at this particular time, to applicants. The demand for women houseworkers still continued.

As seeding was practically completed in the province of Manitoba there had occurred a very noticeable decrease in the number of farm workers required, and most of those wanted were for the normal farm work between seeding and harvesting. Crop prospects in this province, based on the progress made by the growing grain so far, appeared exceedingly favourable. Considerable construction of various kinds was progressing, and some placements were being made in this industry. Mining activity in the northern central part of the province was reported as continuing. The Winnipeg employment office reported greatly increased demands for workers for the logging industry. The demands for women domestic workers continued rather heavy, but there was no particular shortage of applicants reported.

The number of farm placements recorded in Saskatchewan was not heavy, as men were only wanted for normal summer farm work; there was no shortage of applicants to fill those vacancies reported. Requirements of men for the building trades were not heavy, but railroad construction was increasing its demands. The number of women domestic workers being sought still continued at a rather high figure.

A fair demand for farm labour for summer work was reported by the Alberta employment offices, with there being no shortage of suitable applicants. All classes of building and construction appeared active,

and the employment situation in these industries was good. The coal mining situation was seasonally dull. Orders for women domestic workers were quite plentiful, with some local shortages of women for farm

(13) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughtering of cattle, sheep, and hogs; storage holdings of butter and cheese.

homes reported. While there seemed to be considerable activity throughout this province, there were still some numbers of unemployed registered at each of the different centres.

The logging industry in the province of British Columbia showed some improvement in activity, and several placements were reported. While the mining industry continued active, demands for help were quite rare occurrences. Building and construction were affording much employment, and considerable numbers of workers were being taken on in these lines. Manufacturing was stated to be improving throughout the province, and additional workers were being taken on by several factories. Generally speaking, employment conditions throughout British Columbia were fairly satisfactory, and the improvements being shown in different lines made the future look rather promising for the forthcoming summer.

The Dominion Bureau of Statistics tabulated returns from 6,636 firms who reported a decidedly upward movement in employment on May 1, when they increased their payrolls by 49,449 persons to 991,093. Reflecting this gain of over six per cent, the index (with the average for the calendar year 1926 as 100), rose to 116.2, as compared with 110.4 on April 1, and with 106.8, 101.8, 95.4, 91.9, 92.9, 92.5, 84.3 and 85.1, on May 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Heightened activity was recorded in all provinces, but Quebec and Ontario registered the largest increases. In the Maritime Provinces, manufacturing and construction showed the greatest advances, while transportation and logging were seasonally slacker. In Quebec, important increases were shown in manufacturing, transportation and construction and maintenance, and there were smaller gains in trade, mining, communications and logging, those in the last-named being due to river drives. In Ontario, manufacturing, construction and transportation reported the most pronounced increases, but the movement was also decidedly upward in mining, communications and trade, while logging was seasonally slacker. In the Prairie Provinces, manufacturing, transportation, trade, communications, services and construction showed heightened activity, the advances in construction being most marked. In British Columbia, manufacturing and construction were decidedly busier, especially pronounced improvement taking place in the latter.

The eight cities for which separate returns are tabulated showed considerably increased

activity, Montreal firms adding a particularly large number to their staffs. In Montreal, transportation, construction and manufacturing recorded the greatest gains. In Quebec, most of the improvement took place in transportation and construction. In Toronto, manufacturing, transportation and trade reported important increases in personnel. In Ottawa, lumber mills and construction registered most of the increase. In Hamilton, manufactures were busier, while only slight changes were noted in other groups. In Windsor and the adjacent Border Cities, considerable advances were noted, chiefly in automobile factories, but also in construction. In Winnipeg, construction, manufacturing, trade and communications reported the most noteworthy expansion. In Vancouver, road construction and manufacturing registered the greatest increases.

An analysis of the returns by industries shows that there were important advances in manufacturing particularly in iron and steel works and in lumber mills, in which they were of a seasonal character. Marked improvement also took place in the fish-packing, pulp and paper, rubber, tobacco, distilled and malt liquor, building material, electric current, electrical apparatus, mineral product and non-ferrous metal divisions, while boot and shoe and textile factories were slacker. Mining, transportation, communications, services, trade and construction and maintenance also registered large increases in employment, those in the last-named being especially noteworthy. On the other hand, logging camps released employees.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of May, 1929.

A moderate increase in activity among local trade unions was manifest at the close of April, the 1,661 unions from which reports were tabulated, with a combined membership of 188,874 persons, indicating 5.5 per cent of unemployment, compared with 6.0 per cent in March. Ontario, Manitoba, Saskatchewan, Nova Scotia and New Brunswick union members were all more busily engaged than in March, the improvement registered in building and construction operations and in transportation, especially the steam railway division, being important factors in the better situations indicated by these provinces. Reductions in employment were reported from Quebec, caused by between season quietness in the garment trades, followed by lesser declines among British Columbia and Alberta unions. The percent-

#### EMPLOYERS' REPORTS

#### TRADE UNION REPORTS

age of unemployment for the country, as a whole, was slightly in advance of that registered in April last year when the percentage of inactivity stood at 5.2. The contractions were confined to a large degree to the Quebec garment trades where the summer dull period set in slightly earlier this year than last. British Columbia unions also contributed to the total increase in unemployment, while in all other provinces the situation showed improvement.

A more detailed article with tabular statements on unemployment among local trade unions appears elsewhere in this issue.

**EMPLOYMENT OFFICE REPORTS.**

During the month of April, 1929, the offices of the Employment Service of Canada made 39,599 references of persons to positions and effected a total of 38,118 placements. The placements in regular employment were 25,734, of which 21,027 were of men and 4,707 of women, while those in casual work were 12,384 in number. Applications for work reported at the various offices numbered 48,523, of which 34,887 were from men and 13,636 from women workers. Employers advised the Service of 41,557 vacancies during April, 28,144 for men and 13,413 for women. A noteworthy advance was indicated in the volume of business transacted when the above figures are compared both with those of the previous month and with those of April last year, the records for March, 1929, showing 27,695 vacancies afforded, 37,104 applications made, and 25,044 placements effected, while in April, 1928, the records show 36,829 vacancies, 44,152 applications for work, and a total of 33,444 placements in regular and casual work. A report in greater detail of the work of the employment offices for the month of April, 1929, appears elsewhere in this issue.

**BUILDING PERMITS AND CONTRACTS AWARDED.**

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during April, 1929, was \$29,621,097, as compared with \$24,057,456 in the preceding month and with \$18,606,167 in April, 1928.

The *MacLean Building Review* estimated the total value of construction contracts awarded in Canada in May at \$64,859,700, this figure being an increase of 49 per cent over the total value of awards reported during April. Construction volume for the year to date was 4.7 per cent greater than that for the corresponding period of 1928. Of the May total, \$18,749,100 was for residential

buildings; \$16,692,100 was for public works and utilities; \$15,230,900 was for business buildings; and \$14,187,600 was for industrial buildings. The apportionment of the contracts awarded during May, 1929, by provinces, was as follows: Ontario, \$25,807,400; Quebec, \$18,162,000; Saskatchewan, \$10,631,000; British Columbia, \$3,411,300; Alberta, \$3,017,800; Manitoba, \$1,860,600; New Brunswick, \$1,730,700; Nova Scotia, \$166,700; Prince Edward Island, \$72,200.

### Production and Trade

**INDUSTRIAL PRODUCTION.**

Figures showing the volume of production in certain industries during the recent months and also in the corresponding months in the previous year are given in the table on page 588.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that industrial production was practically maintained in April at the high level of the preceding month, considerable expansion being shown in the paper and lumber industries. The production of newsprint was greater than in any other month with the single exception of November last and lumber exports, after seasonal adjustment, were greater than in any month since June, 1927. The output of automobiles was larger in April than in any preceding month, though after seasonal adjustment a moderate recession was shown from March. Production of iron and steel was somewhat less than in the preceding month, one blast furnace at Sydney being blown out during April. Preparations for a large distribution of gasoline during the present season were made in the oil industry in April, when the imports of crude petroleum were specially heavy.

**EXTERNAL TRADE**

A summary of Canadian trade prepared by the Department of National Revenue shows that in April, 1929,

being the first month of the financial year, the merchandise entered for consumption amounted to \$97,517,207 as compared with \$135,289,621 in the preceding month and with \$78,490,470 in April, 1929. The chief imports in April, 1929, were: Iron and its products, \$33,463,739; fibres, textiles and textile products, \$14,845,838; non-metallic minerals and products, \$9,774,610.

The domestic merchandise exported during April, 1929, amounted to \$65,727,599, as compared with \$114,763,270 in March, 1929, and with \$58,975,315 in April, 1928. The chief exports in April, 1929, were: wood, wood pro-

ducts and paper, \$18,983,506; agricultural and vegetable products, mainly foods, \$14,271,472; non-ferrous metals and their products, \$10,073,397.

### Strikes and Lockouts

The time loss due to industrial disputes in May, 1929, was greater than during April, various strikes in the building trades raising the total by about 15,000 days. The time loss in man working days was practically the same as during May, 1928, although more employees were affected. There were in existence during the month twenty-four disputes, involving 5,054 workpeople, and resulting in a time loss of 39,590 working days, as compared with twelve disputes, involving 2,310 workpeople and resulting in a time loss of 24,201 working days in April. In May, 1928, there were on record twenty disputes, involving 3,415 workpeople, resulting in a time loss of 39,317 working days. At the end of May there were on record five disputes affecting 170 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again somewhat lower at \$10.94 for May, as compared with \$11.01 for April; \$10.80 for May, 1928 \$10.76 for May, 1927; \$11.29 for May, 1926; \$10.48 for May, 1925; \$9.89 for May, 1924; \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.92 for June, 1920 (the peak); \$12.66 for May, 1918; and \$7.43 for May, 1914. The decline was due mainly to a seasonal fall in the price of eggs. The prices of veal, lard, milk, butter, potatoes and sugar were however also slightly lower. Slight advances in the prices of beef, fresh and salt pork and evaporated apples occurred. Including the cost of fuel and rent with that of foods the total budget averaged \$21.21 at the beginning of May, as compared with \$21.30 for April; \$21.04 for May, 1928; \$20.95 for May, 1927; \$21.54 for May, 1926; \$20.72 for May, 1925; \$20.24 for May, 1924; \$20.90 for May, 1923; \$20.57 for May, 1922; \$22.84 for May, 1921; \$26.92 for July, 1920 (the peak); \$20.09 for May, 1918; and \$14.21 for May, 1914. Fuel was slightly lower, due mainly to lower prices in some localities for anthracite coal. Rent was practically unchanged in the average.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics,

based upon prices in 1926 as 100, was again considerably lower at 92.4 for May, as compared with 94.1 for April; 97.9 for May, 1928; 98.5 for May, 1927; and 100.2 for May, 1926. In the classification according to chief component materials four of the eight main groups declined, while four were slightly higher. The groups which declined were: the Vegetables and Vegetable Products group, due to lower prices for apples, grain, flour, vegetable oils, sugar, cocoa, chocolate and tea, which more than offset increases in the prices of foreign fruits, flax, rubber and potatoes; the Fibres, Textiles and Textile Products group, due to lower prices for raw materials; the Wood, Wood Products and Paper group, due to lower prices for some lines of lumber, laths and shingles; and the Non-Ferrous Metals group. The Animals and their Products group and the Iron and its Products group were both somewhat higher, the former due to higher prices for fish, livestock and meats, which more than offset lower prices for hides, leather, shoes, butter, milk, cheese and eggs, and the latter due mainly to higher prices for steel sheets, tinplate and cast iron pipe. The Chemicals and Allied Products group and the Non-Metallic Minerals group were also slightly higher.

### Minimum Wages in Germany

The German Reichstag recently adopted an Act for the ratification of the Convention of the International Labour Conference concerning the creation of minimum wage-fixing machinery. The Government Bill on this subject had previously passed the Reichsrat. The German Minister of Labour, Herr Wisell, in discussing this measure in the Reichstag, declared that the creation of minimum wage-fixing machinery, as laid down in this Convention, constituted the first step in the direction of fixing minimum wages for the lowest paid workers and especially those employed at homework. He added that the possibility of fixing minimum wages in home-working industries already existed in Germany through the industrial committees on which workers were represented, and which had the power to fix rates of wages or to declare compulsory the rates laid down in collective agreements.

The Alberta Workmen's Compensation Board, under the powers conferred upon it by the Electrical Protection Act, has published amended and additional regulations under the Act. These regulations comply with the standards contained in the Canadian Electrical Code prepared by the Canadian Engineering Standards Association.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF MAY, 1929

**D**URING the month of May the Department of Labour received the report of a Board of Conciliation and Investigation which had been established under the provisions of the Industrial Disputes Investigation Act to inquire into a dispute between the Ottawa Electric Railway Company and certain of its employees, being motormen and conductors, one-man car operators, shopmen, shedmen, trackmen, linemen and power-house employees, members of Division No. 279, Amalgamated Association of Street and Electric Railway Employees of America.

Five applications for the establishment of Boards were dealt with during the month, and further appointments were made to boards previously established.

### Applications Received

An application was received from certain employees of the Canadian National Railways, being locomotive engineers, members of the Brotherhood of Locomotive Engineers, for a board to deal with a dispute growing out of the employees' desire to secure certain changes in the agreement of May 1, 1926, known as the Montreal agreement. The number of employees directly concerned in the dispute was given as 4,000. The Minister of Labour established a board on May 7, constituted as follows: His Honour Judge Albert Constantineau, Ottawa, chairman, appointed on the joint recommendation of the other board members, Messrs. J. L. Counsell, K.C., Hamilton, and A. Cyril Boyce, K.C., Ottawa, members nominated by the employer and employees respectively.

An application was received from conductors employed on eastern lines of the Canadian Pacific Railway Company, being members of the Order of Railway Conductors. The cause of the dispute was given as the employees' request for a separate agreement covering conductors as a class on the eastern lines of the railway and involving wage increases. Eight hundred employees were stated to be directly affected and 2,600 indirectly. A board was established by the Minister on May 23 and was constituted as follows: Mr. George C. McDonald, C.A., Montreal, chairman; Mr. George A. Campbell, K.C., Montreal, employer's nominee, and Mr. A. Cyril Boyce, K.C., Ottawa, employees' nominee. The appointment of Mr. McDonald to the chairmanship was made on the joint recommendation of Messrs. Campbell and Boyce.

Grain liners' helpers employed by the British Columbia Marine Co., Ltd., Empire Stevedoring Co., Enterprise Contracting Co., Wallace Shipbuilding and Drydock Co., all of Vancouver, B.C., submitted an application for a board to deal with a dispute involving a demand for increased wages and improved working conditions. The applicants consisted of helpers, winchmen, hatchtenders and dryers, forming the Waterfront Section of the Building Construction Labourers' Unit No. 6 of the General Workers Union of Canada, the number directly affected by the dispute being given as 150. At the close of the month the application was under consideration.

An application was received from labourers and specialists employed in the Rail Plant of the Canadian National Railways at Fort Rouge, Winnipeg. One hundred and thirty employees, members of the Fort Rouge Unit of the One Big Union, were stated to be directly affected by the dispute, which arose out of the men's request for an agreement including increased wages and changed working conditions.

The Minister received an application for a board to deal with a dispute between the Winnipeg Electric Company and certain of its employees being trackmen engaged in repairing, maintaining and building street railway car tracks and switches. The application, which emanated from the employees, protested against an alleged reduction in wages. One hundred and twenty employees were stated to be directly affected by the dispute and 1,000 indirectly.

### Other Proceedings under the Act

In the May number of the *LABOUR GAZETTE* reference was made to the appointment, on the employees' recommendation, of Mr. John M. Godfrey, K.C., Toronto, as a member of the Board of Conciliation and Investigation established to deal with a dispute between the Canadian National Railways and certain of its employees, being locomotive firemen and enginemen, members of the Brotherhood of Locomotive Firemen and Enginemen. During the month of May Mr. J. L. Counsell, K.C., Hamilton, was appointed a member of the board on the employer's nomination, and Mr. John G. Gauld, Hamilton, was appointed to the chairmanship on the joint recommendation of the two other board members.

Reference was also made in the May issue of the *LABOUR GAZETTE* to the establishment of a board to inquire into a wage dispute be-

tween the British Columbia Marine Engineers and Shipbuilders, Vancouver Shipyards, Ltd., Burrard Shipyard and Engineering Works, Chappell Bros., Pacific Salvage Co., A. Linton and Co., Eriksen Boatbuilders, Ltd., and Burrard Drydock Co., Ltd., members of the Shipbuilders' Branch of the Canadian Manufacturers' Association on one side, and certain of their employees, being ships' caulkers, members of Shipyard Branch No. 2, Amalga-

mated Carpenters of Canada, on the other side. On May 11 the board was completed by the appointment of the Honourable A. M. Manson, Vancouver, B.C., as chairman, the appointment being made on the joint recommendation of the other board members, Messrs. Ernest F. Cribb and Henry Burgess, both of Vancouver, employers' and employees' nominees respectively.

### Report of Board in Dispute between the Ottawa Electric Railway Company and its Street Railway Employees

The Minister received on May 30 the report of the Board of Conciliation and Investigation which had been established in April to deal with a dispute between the Ottawa Electric Railway Company and certain of its employees being motormen and conductors, one-man car operators, shopmen, shedmen, trackmen, linemen and power-house employees, members of Division No. 279, Amalgamated Association of Street and Electric Railway Employees of America. The dispute, which related to the matter of wages, affected 320 employees directly and 200 indirectly. The personnel of the board was as follows: His Honour Judge E. J. Daly, Ottawa, chairman, appointed on the joint recommendation of the other board members, Messrs. Redmond Quain and H. J. Burns, both of Ottawa. the company's and employees' nominees, respectively.

The report was unanimous and made certain recommendations which were accepted by both the company and employees.

#### Report of Board

*In the matter of the Industrial Disputes Investigation Act, R.S.C., Chap. 112, in the matter of the Dispute Between Division Number 279, Amalgamated Association Street and Electric Railway Employees of America, and the Ottawa Electric Railway Company.*

To The Honourable PETER HEENAN,  
Minister of Labour,  
Ottawa, Canada.

OTTAWA, ONTARIO,  
May 29, 1929.

SIR,—We, the undersigned members of the Board of Conciliation and Investigation established under the provisions of the Industrial Disputes and Investigation Act, having before entering upon the functions of our office, taken the oath of office required by the

Act, before Charles L. Bray, Esq., a Commissioner, etc., and having taken upon ourselves the burden of the investigation, have the honour to report as follows:—

The application by Division 279, Amalgamated Association Street and Electric Railway Employees of America, hereinafter called the "Employees", for the establishment of a Board of Conciliation and Investigation dated April 26, 1929, requested an increase over the present wage rates paid to the Employees by the Company, and further requested the continuation of the rates paid the Employees by the Company for work performed on Sundays and Legal Holidays.

The Ottawa Electric Railway Company in its letter to the Deputy Minister of Labour, dated April 30, 1929, asked for a reduction of ten cents per hour to train men (being conductors and motormen), and a reduction of 20 per cent to employees other than train men, and further asked for the abolition of the extra remuneration which had previously been paid for work performed on Sundays and Legal Holidays.

The Board at a preliminary meeting at the office of the Chairman in the Court House, Ottawa, on May 9, 1929, considered the procedure to be followed at the meetings of the Board, and after this meeting the Members of the Board took the oath of office above mentioned.

The first meeting of the Board at which the parties to the dispute were represented took place at the City Hall, Ottawa, on May 10, 1929. At this meeting the Employees were represented by Mr. John M. Parker, of Niagara Falls, Ontario, Vice-President of the Amalgamated Association of Street and Electric Railway Employees of America, Mr. Arthur Robinson, President of Union 279, Amalgamated Association of Street and Electric Railway Employees of America, and Messrs. Howard McGuire, Arger Brisbois, Percy Tompkins and Frank McRae, Employees of the Company, and the Company was repre-

sent by Major F. D. Burpee, its Vice-President and Manager, and Mr. A. J. Tobin, its Superintendent.

A general discussion took place at this meeting as to whether or not a settlement of the dispute between the parties could be reached, and after hearing Mr. Parker and Major Burpee the Board came to the conclusion that it would be a waste of time to continue further overtures towards settlement, and that the parties to the dispute should present their cases in the usual way. Mr. Parker then presented the case for the Employees by verbal argument, and also by filing certain exhibits which he had prepared in order to save the calling and examination of witnesses. The Board adjourned until May 15, when Major Burpee for the Company by verbal argument and by filing several exhibits presented the case for the Company. The meeting was adjourned until the following day, in order to give Mr. Parker an opportunity to reply to the arguments made by Major Burpee on behalf of the Company. After hearing Mr. Parker for some time on May 16, the Members of the Board called Mr. Parker and Major Burpee into private consultation with a view of making a final effort towards a settlement, but nothing definite was arranged at this meeting. Mr. Parker then asked a further adjournment of the hearing until May 23 to complete his reply, and in order to consider whether it might be advisable for the Employees to have evidence given on their behalf by an independent auditor.

At the meeting on May 23, Mr. H. W. Steele, Chartered Accountant, Auditor of the Company, appeared with Major Burpee and Mr. Tobin, and answered several inquiries made by Mr. Parker as to the financial position of the Company. Mr. Parker at this meeting continued his further argument and announced that the Employees would not call any independent auditor as a witness.

It appeared from the case presented by the Employees that one of their main reasons for asking an increase was that the Company had, on or about August 23, 1928, obtained an increase of fare for passengers on the railway from five cents to seven cents. On the other hand, the argument of Major Burpee was to the effect that some of the main reasons why the Company was asking a reduction in wages were that it is not at present making enough money to justify an increase of wages that no dividends had been paid by the Company to its shareholders since 1927, that, under the Act of Parliament ratifying the Company's

agreement with the City, the shareholders of the Company are entitled to a just and reasonable return on their investment, that the Company would and will from time to time be in need of further capital, that, under the terms of the Trust Deed which controls the Company's issue of bonds, the Company cannot obtain further capital by the sale of bonds unless its net profits are at least equal to one and three-quarter times the amount of the interest on the existing bonds and of any bonds which it may desire to sell in the future as further capital is required, and that the net profits for the fiscal year ending December 31, 1928, were not sufficient to enable the Company to raise any more capital by the sale of bonds.

The Board realizes that the Employees are entitled to a fair living wage considering the nature of their work and also the cost of living, and it also realizes that the shareholders of the Company are entitled to a fair return on their investment.

After having given the best consideration possible to the respective claims of the Employees and the Company, after having considered the arguments of Mr. Parker and Major Burpee, and after having carefully examined all exhibits filed, both by the Employees and the Company, the Board recommends:—

That the wages provided for in the agreement between the Employees and the Company for the year ending on April 30, 1929, including the wages paid for Sundays and Legal Holidays, be continued for another year, to expire on April 30, 1930.

Without agreeing to the principle that wages should increase with increased prosperity of the Company regardless of variations in living costs, the Board trusts that the Company will, at the expiration of the year ending on April 30, 1930, should the revenue of the Company be sufficient to warrant it, deal generously with the men as it has always done hitherto.

All of which is respectfully submitted.

(Sgd.) E. J. DALY,  
*Chairman.*

(Sgd.) H. J. BURNS,  
*Representing the  
Employees.*

(Sgd.) REDMOND QUAIN,  
*Representing the  
Company.*

**STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1929**

THE number of strikes and lockouts in existence in Canada during May was twenty-four as compared with twelve the previous month. The time loss for the month was much greater than in April, strikes of various building trades throughout Canada accounting for most of the increase. As compared with May, 1928, there was little difference in time loss, although the number of employees involved in May, 1929, was greater.

Four disputes, involving 1,067 workpeople, were carried over from April, and twenty disputes commenced during May. Of these twenty-four disputes, nineteen terminated during the month, six being in favour of employers, four in favour of workers, six resulting in compromises; the results of three disputes were recorded as indefinite. At the end of May, therefore, there were five disputes recorded as strikes or lockouts, as follows:—Painters, Toronto, Ont.; shoe factory workers, Toronto, Ont.; plumbers, Kingston, Ont.; glove factory workers, Winnipeg, Man.; and moulders at Lachine, P.Q.

Date	Number of disputes	Number of employees involved	Time loss in working days
*May, 1929.....	24	5,054	39,590
*April, 1929.....	12	2,310	24,201
May, 1928.....	20	3,415	39,317

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical file, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Information is available as to three such disputes, namely: electrotypers, Toronto, Ont., December 29, 1926; fur workers, Toronto, Ont., April 10, 1928; and photo engravers, Toronto, Ont., January 17, 1929. During May four of the disputes carried in this list for some months lapsed or were called off by the union. The strike of bakers in Montreal which commenced on May 1, 1927, was called off on May 8, 1929, the men returning on the employers' terms. The dispute involving stonecutters in Montreal since September 21, 1927, lapsed during the

<b>(b) Strikes and Lockouts Occurring during May, 1929.</b>			
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>			
Gold miners (machine shop crew) vicinity of Dawson City, Yukon Territory.....	10	20	Commenced May 17, 1929, against delay in payment of wages. Terminated May 1929; in favour of workers.
Coal miners, Glace Bay, N.S..	1,200	2,400	Commenced May 29, 1929, against double shifting on certain pillar work. Terminated May 31, 1929. Indefinite.
<b>MANUFACTURING—</b>			
<i>Textiles—</i>			
Plush weavers, Auburn, Ont..	18	75	Commenced May 10, 1929, for increase in wages. Terminated May 17, 1929; in favour of employer.
<i>Clothing (including knitted goods)—</i>			
Glove factory workers, Winnipeg, Man.....	23	161	Commenced May 28, 1929, against institution of piece work system. Underminated.
<i>Iron, steel and products—</i>			
Foundry workers, Trenton, N.S.....	50	150	Commenced May 1, 1929, against demotion of worker. Terminated May 4, 1929; in favour of employer.
Moulders, Lachine, P.Q.....	80	2,000	Commenced May 2, 1929, for increase in wages. Underminated.
<b>CONSTRUCTION—</b>			
<i>Buildings and structures—</i>			
Painters, Toronto, Ont.....	600	7,500	Commenced May 1, 1929, for increase in wages. Underminated.
Plumbers, Toronto, Ont.....	400	7,500	Commenced May 1, 1929, for employment with members of one employers' organization only. Terminated May 23, 1929; in favour of workers.
Stonecutters, Toronto, Ont....	120	840	Commenced May 1, 1929, for increase in wages and shorter hours. Terminated May 9, 1929. Compromise.
Plasterers, Toronto, Ont.....	500	6,000	Commenced May 1, 1929, for increase in wages and to maintain forty-hour week. Terminated May 15, 1929. Compromise.
Plasterers' labourers, Toronto, Ont.....	200	2,400	Commenced May 1, 1929, sympathy with strike of plasterers. Terminated May 15, 1929. Indefinite.
Lathers, Toronto, Ont.....	120	1,560	Commenced May 1, 1929, for increase in wages and to maintain the forty-hour week. Terminated May 16, 1929. Compromise.
Carpenters, St. Catharines, Ont.....	60	60	Commenced May 1, 1929, for increase in wages. Terminated May 2, 1929; in favour of workers.
Plasterers' labourers, Calgary, Alta.....	65	130	Commenced May 1, 1929, for increase in wages. Terminated May 3, 1929. Compromise.
Painters, Saskatoon, Sask.....	56	200	Commenced May 1, 1929, for increase in wages. Terminated May 3, 1929. Indefinite.
Structural iron workers, Victoria, B.C.....	50	50	Commenced May 1, 1929, for increase in wages. Terminated May 2, 1929; in favour of employer.
Carpenters, Niagara Falls, Ont.....	175	350	Commenced May 2, 1929, for increase in wages. Terminated May 6, 1929. Compromise.
Painters, London, Ont.....	80	800	Commenced May 6, 1929, for increase in wages. Terminated May 20, 1929; in favour of employer.
Electricians, Halifax, N.S....	43	350	Commenced May 10, 1929, for increase in wages and a signed agreement. Terminated May 21, 1929; in favour of workers.
Structural iron workers, Windsor, Ont.....	137	1,000	Commenced May 11, 1929, for increase in wages. Terminated May 25, 1929; in favour of employer.

month. Sheet metal workers who ceased work in Montreal, P.Q., on June 10, 1927, on May 7, 1929, declared the dispute to be terminated as from that date; and the strike of shoe factory workers in Toronto, Ont., which commenced on August 13, 1928, was considered as over, a new strike having been called in the establishment affected, on April 23, 1929.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

**CARPENTERS, MONTREAL, P.Q.**—The dispute between carpenters and building contractors in Montreal, in connection with which work ceased on April 24, the carpenters demanding an increase in wages from 75 cents per hour to 85 cents with a reduction in hours from nine hours per day to eight, was settled as the result of the mediation of the representative of the Department of Labour. Following a conference on May 4 between representatives of the union and the contractors it was agreed that the wage rate should be 80 cents per hour until September 30, 1929, with nine hours per day, and that from October 1, 1929, until April 30, 1930, the wage rate should be 85 cents per hour with eight hours per day. Work was resumed on May 7 under these terms. No agreement was signed between the contractors' association and the union, but the terms of settlement were set forth in an interchange of correspondence between the officers of the two organizations. It was also arranged that overtime from five p.m. to midnight, Monday to Friday, should be paid at the rate of time and one-half, and also work from one p.m. to midnight on Saturday, double time to be paid for work after midnight and on certain holidays.

**PLUMBERS, KINGSTON, ONT.**—During May a number of plumbers who had been on strike since April 2, 1928, returned to work, leaving nine still on strike against six employers out of the nine reported as originally affected.

**SHIP LINERS' HELPERS, VANCOUVER, B.C.**—As stated in the May issue of the *LABOUR GAZETTE* in regard to the strike of shipwrights, caulkers, grain liners' helpers, etc., a settlement was reached with regard to the shipwrights, and the dispute as to wages of caulkers was referred to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, while the dispute involving ship liners' helpers, being partly with employers not having shipwrights, etc., was untermiated. The employees concerned in this latter dispute also applied for a Board.

At the beginning of May it was reported that approximately twenty-five men were involved, but the grain shipping season being practically over, the dispute is reported to have lapsed until the grain shipping season commences in the autumn.

**COAL MINERS, VICINITY OF DAWSON CITY, YUKON TERRITORY.**—Employees in the machine shop crew of a mining company ceased work on May 17, 1929, against a delay in the payment of their wages. After two days, payment was made and work was resumed.

**COAL MINERS, GLACE BAY, N.S.**—Employees in Number Two Colliery in the Glacé Bay district ceased work on May 29, protesting against an announcement by the management that double shift work would be carried on in a certain section of the colliery. The employees claimed that this constituted a change in conditions, and that under the agreement in force no such change should be made until agreed to by both parties. The management, on the other hand, claimed that this did not constitute a change in conditions within the meaning of the section, and that as the agreement provided that there should be no cessation of work in the event of a dispute pending settlement, the employees by striking had violated the agreement. The management, therefore, refused to negotiate until the employees returned to work. After two days, work was resumed and the officers of the union and the management of the colliery negotiated the question at issue.

**PLUSH WEAVERS, AUBURN, ONT.**—Employees in the plush weaving department of a woollen manufacturing establishment ceased work on May 10 demanding an increase in wages. Some of the employees concerned had been brought from England with a guarantee that their earnings would equal \$20 per week of fifty hours, and the strikers claimed that they were making only about \$15 per week, apart from overtime payments, and demanded higher piece rates. Officials of the Department of Labour investigated the dispute, and it was arranged that three workers who did not wish to resume their employment should return to England at the expense of the employer. The management undertook that the other employees brought from England would be paid at least \$20 per week exclusive of overtime. Most of the other strikers had already returned to work, one had secured employment elsewhere, and the one remaining resumed work on the day of the settlement.

**GLOVE FACTORY WORKERS, WINNIPEG, MAN.**—Employees in a glove manufacturing establishment ceased work on May 23, demanding a

return to the time rate system of payment instead of that of piece work under which they had worked for one week. The employees stated that they had been paid \$26 per week on time work and were only making from \$17-\$19 per week at piece work. The management reported that the piece rates were subject to adjustment but that the employees refused to consider this. At the end of the month no settlement had been reached.

**FOUNDRY WORKERS, TRENTON, N.S.**—Employees ceased work on May 1 protesting against the demotion of a moulder to the position of a helper, his position being given to a new employee. After three days the employees returned to work and the demoted employee secured work in another establishment.

**MOULDERS, LACHINE, P.Q.**—In the strike involving employees in two foundries on May 2, demanding an increase in wages, twenty-six workers out of the eighty involved secured work elsewhere during the month.

**PAINTERS, TORONTO, ONT.**—Painters and decorators, members of the International Brotherhood of Painters, Paperhangers, and Decorators, employed by various master painters, ceased work on May 1, in order to enforce a demand for an increase in wages from 80 cents per hour to 90 cents. From time to time certain of the employers agreed to pay the 90 cent rate, and at the end of the month the union reported that this settlement had been effected with thirty-five such independent master painters, and that of the six hundred on strike at the beginning of the month there were only twenty-five on the strike list of the union. In the meantime the Master Painters' Association had signed on May 6 an agreement with the National Union of Painters, Decorators, and Paperhangers of Canada providing for 80 cents per hour.

**PLUMBERS, TORONTO, ONT.**—Employees of certain master plumbers ceased work on May 1 because such employers had not joined a master plumbers' organization with which the union had signed an agreement providing that members of the employers' organization would employ only union plumbers and that the union members would work only for members of such employers' organization. Prior to this date there were in force agreements between the union and two master plumbers' organizations. As a result of the mediation of the Minister of Labour, the Honourable Peter Heenan, the various master plumbers agreed to organize a new society, including

members of both the previous organizations and others, with which the union signed an agreement providing for employment of union members only on the one hand, and that members of the union would work for members of this employers' organization only. A change in the wage rate from \$1 per hour to \$1.25 per hour had previously been conceded and the forty-hour week during July and August. The strike was, therefore, called off on May 23. The text of the agreement is given elsewhere in this issue, with an account of the circumstances leading up to it.

**STONECUTTERS, TORONTO, ONT.**—Employees of various building contractors ceased work on May 1 to secure an increase in wages from \$1.12½ per hour, forty-four hours per week, to \$1.30 per hour with a five-day week of forty hours. On May 9 work was resumed, an increase in the wage rate to \$1.25 per hour having been conceded while the forty-four hour week was retained.

**PLASTERERS, TORONTO, ONT.**—Employees of various plastering contractors in Toronto ceased work on May 1 to secure an increase in wages from \$1.25 per hour to \$1.50. It is reported that in the negotiations the plastering employers offered to increase the wage rate if the hours were lengthened from forty per week to forty-four. On May 15 work was resumed, an agreement having been reached that the wage rate should be increased to \$1.32½ per hour until April 30, 1930, and to \$1.37½ from May 1, 1930, to April 30, 1931, the forty-hour week to be retained.

**PLASTERERS' LABOURERS, TORONTO, ONT.**—In connection with the plasterers' strike, labourers employed on the same jobs as the striking plasterers ceased work as the terms of their agreement with the employers required that they should work only with union plasterers. Work was accordingly resumed on May 15, 1929, when the plasterers' strike was settled.

**LATHERS, TORONTO, ONT.**—Employees of various contractors ceased work on May 1 to secure an increase in wages from \$1.25 per hour to \$1.50, with a corresponding increase in piece rates. The employers on the other hand had proposed to increase the hours per week from forty to forty-four. Work was resumed on May 16, an agreement having been reached to increase the rate of wages to \$1.32½ per hour until April 30, 1930, with a further increase to \$1.37½ from May 1, 1930, to April 30, 1931, the forty-hour week being maintained.

**CARPENTERS, ST. CATHARINES, ONT.**—Employees on certain jobs ceased work on May 1 demanding an increase in wages from 90 cents per hour to \$1. The contractors had offered an increase to 95 cents per hour with a further increase to \$1 per hour next year. The following day work was resumed, the employers having agreed to pay \$1 per hour.

**PLASTERERS' LABOURERS, CALGARY, ALTA.**—Employees ceased work on May 1 demanding an increase in wages from 70 cents per hour to 85 cents per hour. Work was resumed on May 3, it having been agreed that 77½ cents per hour would be paid to experienced men, 60 cents per hour to beginners during the first two weeks, 65 cents per hour during the next two weeks, after which the full rate would be paid.

**PAINTERS, SASKATOON, SASK.**—Painters employed by five contractors ceased work on May 1 to secure an increase in wages from 80 cents per hour to 87½ cents, with nine hours per day as before. Negotiations with the employers had been under way since January, without settlement. On May 6 the dispute was declared off by the union pending a settlement by arbitration. In the meantime certain employers had agreed to increase the wages for certain jobs under way.

**STRUCTURAL IRON WORKERS, VICTORIA, B.C.**—Structural iron workers on one building ceased work on May 1 to secure an increase in wages from \$9 per day to \$10. Work was resumed the next day, it having been ascertained that there was a misapprehension as to the meaning of the information from the union headquarters and that no strike was intended.

**CARPENTERS, NIAGARA FALLS, ONT.**—Carpenters employed by nine contractors ceased work on May 2 to secure an increase in wages from 90 cents per hour to \$1.10, with the forty-four hour week as before. On May 6 the dispute was terminated, an agreement having been signed providing for a wage

rate of \$1 per hour, the same as in Hamilton and St. Catharines. Employees of certain contractors had resumed work in the interval on these terms.

**PAINTERS, LONDON, ONT.**—Painters employed by twelve firms ceased work on May 6 to secure an increase in wages from 65 cents per hour to 85 cents, with forty-four hours per week as before. It was reported that the employers had refused to negotiate. It was also reported that as the employers had no organization a general settlement could not be reached. Some of the employers increased wages from 65 cents per hour to 70 cents. The dispute was called off on May 20, the remaining employees returning to work at 65 cents per hour. It also appears that a large number of painters in the city take contracts themselves and, therefore, were not involved in the dispute.

**ELECTRICIANS, HALIFAX, N.S.**—Employees of seven firms ceased work from May 10 to secure an increase in wages from 70 cents per hour to 80 cents and a signed agreement for three years providing for further increases later. On May 21 the dispute was terminated, an agreement having been reached between the union and the employers' association for a period of three years providing for 80 cents per hour until May 1, 1930, 90 cents during the next twelve months, and \$1 per hour during the twelve months beginning May 1, 1931, as the result of the mediation of the resident representative of the Department of Labour.

**STRUCTURAL IRON WORKERS, WINDSOR, ONT.**—Structural iron workers ceased work on May 11 to secure an increase in wages from \$1 per hour to \$1.15, with forty-four hours per week as before. It is reported that the employer had refused to negotiate with the union. Work was resumed on May 25 under the same conditions as prior to the dispute, except with weekly paydays instead of fortnightly pay days.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1929, in the review of Strikes and Lockouts in Canada and Other Countries, 1928. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several

countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in April was 37 and 16 were still in progress from the previous month, making a total of 53 disputes in progress during the month, involving 23,100 workpeople and resulting in a loss of about 159,000 working days for the month. Of the 37 disputes beginning in April, 8 arose over demands for increased wages, 12 on other wages questions, 9 on questions respecting the employment of particular classes or persons and 8 on other questions. Settlements were made in 35 disputes, of which 9 were in favour of workpeople, 11 in favour of employers and 15 ended in compromise. In one other dispute, work was resumed pending negotiations.

At the end of April, no settlement had been reached of the dispute involving about 3,800 coal miners at Seaham Harbour, Durham, who went on strike on March 2, against a reduction in piece-work rates.

It was reported on May 17, that about 2,500 woollen mill workers at mills in the Calder Valley, Yorkshire, had decided to go on strike against a proposed reduction in wages.

### Austria

During the year 1928, the total number of disputes occurring was 264, involving 757 establishments and 38,257 workers. The time loss for the year was 657,925 working days. Corresponding figures (revised) for the year 1927 are 216 disputes involving 527 establishments and 35,300 workers with a time loss of 686,560 working days.

### Finland

The strike of 12,000 dockers at Finnish ports which began on June 2, 1928, (LABOUR GAZETTE, February, 1929, page 157), was terminated on April 12, 1929, when a compromise suggested by the Minister of Social Affairs, was accepted by both parties.

### Switzerland

During 1928, the number of disputes which terminated was 45, involving 283 establishments and 5,474 workers. The time loss was 98,015 working days. Revised figures for 1927 show 26 disputes terminating, involving 328 establishments and 2,058 workers with a time loss of 34,160 working days.

### Australia

At the end of May, no settlement was reported of the dispute of timber mill workers which began on February 1, when they re-

fused to accept the award of the Federal Arbitration Court establishing a 48-hour week instead of a 44-hour week in the industry. After members of building trades had refused to work on certain jobs where lumber was used from mills employing strikebreakers, a state of strike was declared, and on May 1, employers closed down practically all building operations in Melbourne, which action increased the total number out of work through the dispute to about 14,000.

### British India

Statistics for the year 1928 give the number of disputes in British India as 203, involving 506,851 workers and causing a time loss of 31,647,404 working days for the year. Over 80 per cent of the total time loss occurred in cotton and woollen mills. Of the 203 disputes, 109 were over wages questions and 44 over personnel. Settlements were made in 196 disputes, of which employees were successful in 27, partially successful in 41 and unsuccessful in 128.

During May, the strike which originally involved 100,000 cotton mill workers at Bombay, continued. However, it was reported that about 50 of the mills involved were open and about 50,000 employees at work. Another 20,000 returned to their native villages on the advice of the union. A number of riots occurred with some loss of life. The chief demand of the strikers was for the reinstatement of 6,000 workers dismissed at a certain group of mills.

### United States

The number of disputes which began during March was 67, and 45 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 42,103, and the time loss for the month 1,088,374 working days.

The strikes in textile mills in the Southern States, an account of which was given in the LABOUR GAZETTE for May, were practically terminated by the end of May. Through the mediation of a conciliation commissioner of the Department of Labour, Washington, the strike of rayon factory workers at Elizabethton, Tennessee, was terminated about June 1. In North Carolina, the strikes are reported to have petered out. In South Carolina, where the dispute was over the new "stretch-out" system, the strikers are reported to have been successful in most cases and a return was made to the old system.

## PROCEEDINGS OF THE PARLIAMENT OF CANADA DURING THE SESSION OF 1929

DURING the session of Parliament which began on February 7 continuing to June 14, 1929, the House of Commons, for the sixth time, passed a bill to repeal the section of the criminal code enacted in 1919, relating to unlawful associations and the printing and distribution of seditious literature. This section was enacted after the war when there was considerable unrest especially in western Canada and it was thought desirable to define certain types of sedition. The bill also provided for the restoration of the former section 133 of the criminal code as it was in force before 1919. This bill, as in previous years, was rejected by the Senate.

The Hon. Ernest Lapointe, Minister of Justice, in explaining the provisions of the bill said:—"Its purpose is to replace the law as it was prior to the session of 1919. The crime of sedition existed then and will still be in the criminal code after this bill has become law. Under the present section 132 of the criminal code the crime of sedition is divided into seditious words, which are words expressive of a seditious intention; seditious libel, which is a libel expressive of a seditious intention; and, thirdly, seditious conspiracy, which is an agreement between two or more persons to carry into execution a seditious intention.

"The crime of sedition under the British law is a crime under the common law, and it has never been found advisable to define exactly what circumstances and what facts constitute sedition; this has been left to the courts, judges and juries.

"It was so general in its meaning as first introduced that parliament found it advisable to place in the code a section safeguarding freedom of speech. That section, which appeared in the criminal code until 1919, and which we are asking now to reinstate, is rather the most important part of this bill. Section 133 of the criminal code as it was in force before 1919, and which section 2 of this bill is intended to reinstate reads:—

"No one shall be deemed to have a seditious intention only because he intends in good faith,—

'(a) to show that His Majesty has been misled or mistaken in his measures; or,

'(b) to point out errors or defects in the government or constitution of the United Kingdom, or of any part of it, or of Canada or any province thereof, or in either house of par-

liament of the United Kingdom or of Canada, or in any legislature, or in the administration of justice; or to excite His Majesty's subjects to attempt to procure, by lawful means, the alteration of any matter in the state; or,

'(c) to point out, in order to their removal, matters which are producing or have a tendency to produce feelings of hatred and ill-will between different classes of His Majesty's subjects.'

"The second purpose is to repeal the sections which are now consolidated in section 98 of the present criminal code and which were enacted at the same session 1919, purporting to define certain acts, words or publications as being seditious. As I stated before, these are absolutely unnecessary because the offence of sedition as it exists under the common law, and as it is already in the criminal code, embraces all the things which might have been mentioned in that section. It did not improve the law; far from it. On the other hand, it has been strongly resented and found objectionable by a large section of the citizens of Canada. As a matter of fact, since I have been a member of the government it has been my privilege to attend every delegation which has met the government each year from the Trades and Labour Council, from the railroad brotherhoods and from other labour organizations, who have all represented to the government their strong resentment of this change in the criminal code."

### Technical Education Act

As already noted in the *LABOUR GAZETTE*, March, page 266, provision was made for carrying forward for a further period of five years beyond March 31, 1929 (the date at which the Act would otherwise cease to be operative), certain unexpended portions of the appropriations made by the Dominion Government to the Provinces for the purposes of the Act.

### Winnipeg Postal Employees

Note was made in the May issue of the *LABOUR GAZETTE*, page 464, of the action taken by Parliament with a view to the readjustment of the salaries of certain employees of Post Offices in Western Canada who participated in a sympathetic strike in 1919, payment being made to them for services actually performed, as from the date of their re-employment, at the rate of remuneration paid to other employees for similar services. An Act making this provision was passed during the session.

### Canadian National Railway Pensions

Two Acts were passed in order to place all the employees of the Canadian National Railways on the same basis in regard to pensions. The first amended the Grand Trunk Act (Statutes of 1907, chapter 89), with respect to pensions, and the other further amended the Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act (Statutes of 1907, chapter 22). Hitherto the pensions provided by the Grand Trunk Act were payable only on the former Grand Trunk system, the employees on that system receiving pensions, while those on the Canadian Northern, Grand Trunk Pacific and the other Canadian National lines received none. The amending act authorizes the application of the existing pension arrangements to all employees on the Canadian National Railways without discrimination. (The Grand Trunk Pension Plan was outlined in the *LABOUR GAZETTE*, January, 1924, page 33, and the Intercolonial plan was outlined in the issue of January, 1925, page 27).

The Hon. Charles A. Dunning, Minister of Railways, in the House of Commons on March 18, gave the following information in regard to Canadian National Employees' pensions as now operating.

"Full consideration will be given to each individual and if retained in the service each will be given credit for seniority earned on the line on which employed. Any employees of railways acquired by the Canadian National will participate in the proposed pension plan in the same way as employees now in the service of the railway. Fifty years of age is the maximum age limit at which an employee, medically fit, may enter the service and participate in pension benefits. The age at which an employee becomes eligible for pension, is 65, and 15 years' continuous service are required to qualify. All pension allowances are calculated at the rate of one per cent for each year of service on the highest average rate of wages or pay during any ten consecutive years of service.

"Pensions to disabled or incapacitated employees are granted as follows:—

"To an employee of the age of 60 and under 65 years with 20 or more years of service to his credit retired by reason of permanent physical or mental disability upon the certificate of the company's chief medical officer that for such reason the employee is unfitted to follow his usual or any other suitable employment in the company's service;

"To an employee who, after ten or more years of service to his credit, becomes incapable of continuing his service by reason of injuries received whilst actually at work in the employment of the company but only for so long as his incapacity shall continue."

In reference to the Intercolonial and P. E. I. Railway Employees' Provident Fund Act, Mr. Dunning, speaking on February 12, explained that it was not intended to abolish the Intercolonial Provident Fund, but only to stop entry into it. The fund, which was started in 1907, failed to be self-supporting on account of the addition since its inception of many railways and employers to the Canadian Government Railway system. It is therefore provided that the Governor in Council shall have power to close it to new entrants, thus protecting the present members in any acquired rights, and that members shall be able to withdraw from membership, and non-members shall have the privileges of the Canadian National pensions.

Referring to the new general pension system, Mr. Dunning stated that "in the course of a few years the logical result will be one pension system for all the employees of the Canadian National system, and for the employees of hotels, express company, telegraph company, and steamship company. About 109,000 employees will be affected. There are 11,165 members in the intercolonial provident fund, so 98,258 employees would be affected by the provisions of the scheme now being inaugurated. Of this 98,000, approximately 15,000 are of a non-permanent character, and therefore not pensionable. Deducting this figure from the former would leave in the neighbourhood of 83,000 men and women who would be affected by this scheme. The return to the employee under this scheme would be substantially identical with that now being paid by the Canadian Pacific Railway and other great railway corporations on this continent. This is calculated upon the basis of 1 per cent of the average pay of the employee for the 10 years period previous to his retirement, multiplied by the number of years of his service."

In reply to a question as to whether the railway brotherhoods approved of the bills, Mr. Dunning said that the working out of the plan arrived at began two years ago, and that absolute agreement between management and men had been secured. In reply to a question as to whether the bills would make any difference to former Grand Trunk Railway employees, he stated that they would not. In reply to a question as to how the pensions

to be enjoyed by employees under the Grand Trunk rules would compare with those under the Intercolonial and Prince Edward Island Railways Employees' Provident Fund, he explained that under the latter scheme, the employees contribute to the fund, while under

the former, the one designed to apply to the whole Canadian National system, the employee contributes nothing whatever, and that, necessarily, the employees' contributions to the one fund must be reflected in the pensions paid them, thus making comparison difficult.

### Insurance Against Unemployment, Sickness and Invalidity

The House of Commons of Canada concurred on May 23 in a report which was presented by the Industrial and International Relations Committee on the subject of Insurance against Unemployment, Sickness and Invalidity, in the terms following:—

Your Committee has had under consideration a resolution adopted by the House on February 14, 1929, as follows:—

That the Committee on Industrial and International Relations be authorized to investigate and report on insurance against unemployment, sickness and invalidity.

The following witnesses appeared before your Committee to give evidence on the said subject matter of investigation:

A. Grant Fleming, M.D., Professor of Public Health and Preventive Medicine, Montreal; J. G. Fitzgerald, Professor of Hygiene and Preventive Medicine, University of Toronto; Gerald H. Brown, Assistant Deputy Minister of Labour, Ottawa; R. A. Rigg, Director of Employment Service of Canada, Ottawa; Andrew D. Watson, Dominion Department of Insurance, Ottawa; W. Stuart Edwards, Deputy Minister of Justice, Ottawa; Robert H. Coats, Dominion Statistician, Ottawa.

Dr. Grant Fleming and Dr. Fitzgerald gave evidence dealing specially with sickness insurance.

1. Your Committee would reaffirm the position taken in the final report adopted on June 6 of last session, namely:—

That your Committee accept and endorse the principle of unemployment insurance, based on compulsory contributions derived from the State, employer and employees.

2. Your Committee recognizes that, while it is highly desirable that such legislation should be uniform in all the provinces, and while social insurance has a federal aspect, nevertheless, according to the Department of Justice, under our constitution legislative jurisdiction in relation to the establishment of a compulsory system of unemployment insurance is vested exclusively in the provincial legislatures.

3. Your Committee finds that the provinces, on being consulted by the Department of Labour with regard to their attitude towards the establishment of a general scheme, do not appear to be prepared to take immediate action.

4. Under these circumstances, your Committee submits the following recommendations:—

(a) That with regard to sickness insurance, the Department of Pensions and National

Health be requested to initiate a comprehensive survey of the field of public health, with special reference to a national health program. In this, it is believed that it would be possible to secure the co-operation of the provincial and municipal health departments, as well as the organized medical profession.

(b) That in the forthcoming census, provision should be made for the securing of the fullest possible data regarding the extent of unemployment and sickness, and that this should be compiled and published at as early a date as possible.

(c) That the Federal Government be requested to bring the subject matter of this reference before the next Federal-Provincial conference; and your Committee suggests, when the agenda for such a conference is being arranged that the provincial governments be invited to send representatives of the Employer and Employee to discuss the subject matter of this report.

Your Committee further recommends that 750 copies in English and 200 copies in French of this report, and the evidence upon which it is based, be printed in blue book form, and that Standing Order No. 64 be suspended in relation thereto.

All of which is respectfully submitted.

Mr. C. R. McIntosh (North Battleford), Chairman of the Industrial and International Relations Committee, in moving concurrence in the forthcoming report, directed attention to the fact that a report on this same subject had been submitted by the Committee on Industrial and International Relations last year and adopted by the House of Commons on June 6th. (LABOUR GAZETTE, June, 1928, page 586).

Mr. McIntosh went on to say that the report of last year was divided into several parts. He said:—

"The committee took the stand, in the first place, that unemployment is an important national problem, and a problem that must be faced and solved if we are to solve the problems of the labour world during the next few years. We cannot dodge the issue; we must face it provincially and nationally. Some hon. members may think that a resolution of this kind is not very important, but it is bound to assume more and more importance as the years pass by.

"In the second clause of last year's report the committee took a square stand on the

question of unemployment insurance; that is, insurance against unemployment based on compulsory contributions by the employer, the employee, and the state. The next clause in that report, which was adopted by the house on June 6th last year, places the responsibility for unemployment insurance upon the different provinces. It was a question that the committee considered to be one of provincial jurisdiction.

"The committee next drew attention to the fact that in Canada we have not got the necessary data upon which to base the approximate cost of an unemployment insurance scheme in Canada, and it asked the Labour Department at Ottawa to get to work during the ensuing year and do its best to provide that data.

"The other clause in the report was to the effect that the committee would like to re-investigate the question this session. We have spent one or two months on this work.

"The resolution this year again deals with insurance against unemployment, sickness and invalidity. The report presented a few days ago to a large extent covers the same ground as the report of last session, with one or two new features.

"The committee, after investigating as far as possible the subject matter of the resolution, took pretty much the same ground as I have mentioned last year, that insurance against unemployment should be based on a compulsory foundation. Since the matter is one of provincial jurisdiction, and since all the provinces last year were notified of the report of the committee and replied that they were not ready to take any action, the present committee recommended: that the Department of National Health be asked to initiate a comprehensive health program by co-operating with the provincial and municipal health departments; that in the forthcoming census provision be made to register all unemployment and sickness in Canada, and that when that data is secured it should be compiled and published as quickly as possible; that when the next provincial-federal conference is held, the Dominion government should invite the representatives of organized labour and of organized industry to be present to discuss the subject matter of the report.

"As I have said, Mr. Speaker, the present report to a large extent follows the lines of that presented last year; they have certain points in common. Briefly, both recommend compulsory contributions from the state, the employer and the employee. As the subject matter falls within the competency of the provincial authorities, the committee recommends that action be taken by the legislatures

of the respective provinces. The committee recognizes the importance of securing all the data possible on sickness insurance."

Mr. A. A. Heaps (North Winnipeg), moved in amendment seconded by Mr. A. W. Neill (Comox-Alberni):—

"That the said report of the select standing committee on industrial and international relations be not now concurred in but that it be referred back to the select standing committee on industrial and international relations with instructions that they have power to amend the same by adding thereto a clause recommending that all the provinces of the Dominion be requested to pass legislation under which the jurisdiction in relation to legislation providing for unemployment, sickness and invalidity insurance based on compulsory contribution and which is now claimed to be within or subject to the exclusive jurisdiction of the provinces be vested in the Dominion government."

In support of his amendment Mr. Heaps stated that if legislation on this subject was to be adopted in Canada, it was essential that it should apply to all the provinces. To this end the legislation would have to come from some central body and his contention was that the necessary action in this respect should be taken by the Dominion Parliament. In his opinion the matters dealt with in the report of the Industrial and International Relations Committee constituted the most important matter to the working people of Canada which had come before Parliament this year, since probably twenty-five per cent of the Canadian people were vitally interested in this subject.

The Minister of Justice, Hon. Ernest Lapointe, speaking on Mr. Heaps' amendment, declared that it asked the provinces to do something which they had no power to do; that is to say, to delegate powers which devolved on them under the Constitution, to the Federal Parliament. The view of the Minister of Justice, which was supported by quotations from legal authorities, was also endorsed by Mr. C. H. Cahan (St. Lawrence-St. George).

Messrs. A. W. Neill (Comox-Alberni), Henri Bourassa (Labelle), and J. S. Woodsworth (Winnipeg North Centre), spoke in support of Mr. Heaps' amendment.

The question was raised by the Prime Minister as to whether the amendment was in order or not. Hon. R. B. Bennett, Leader of the Opposition, took the ground that the amendment was in violation of the constitution and that on this account the House should not consider it.

The Speaker stated that he had his own personal opinion as to the constitutionality of the amendment but that the House by pronouncing on it could decide whether the amendment was constitutional or not.

### Report on Family Allowances

A resolution on the subject of family allowances, in the terms following, was moved in the House of Commons on February 13 by Mr. J. E. Letellier (Compton) and seconded by Mr. J. S. Woodsworth (Winnipeg North Centre):—"That, in the opinion of this house, the question of granting family allowances should be studied, taking into consideration the respective jurisdiction of both federal and provincial parliaments in the matter, and that the said question should be referred to the committee on industrial and international relations, with instructions to inquire into and make report."

This resolution was adopted without dissent.

Mr. Letellier, in support of his motion, stated that under present-day conditions, the large family has become a social and economic problem which requires prompt solution. In years past, when the burden of raising children was relatively light, parents were soon compensated by the increased production which additional hands were able to assure. This, however, is no longer the case, for our present-day educational system imposes a burden which, for years at least, brings no compensation, so that the conditions imposed on fathers of large families under the conditions of modern civilization are distinctly more difficult than those which obtained formerly and the status of large families to-day is precarious indeed.

The Committee on Industrial and International Relations proceeded in due course with this reference. On May 31, the Report of the Committee was presented to the House of Commons and was adopted by the latter body on June 6 without dissent. The report was as follows:—

Your Committee has had under consideration a Resolution which was adopted by the House of Commons on February 13, 1929, as follows:—

That the question of granting family allowances should be studied, taking into consideration the respective jurisdiction of both Federal and Provincial Parliaments in the matter, and that the said question should be referred to the Committee on Industrial and International Relations, with instructions to enquire into and make report.

The following witnesses appeared before your Committee to give evidence:—

Rev. Father Leon Lebel, S.J., Teacher of Philosophy, L'Immaculee Conception, Montreal, P.Q.;

A vote was taken which resulted in the defeat of Mr. Heaps' amendment by 92 nays to 18 yeas. The report of the Committee was thereupon agreed to on division.

Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, Ottawa, Ontario;

Mr. Joseph Daoust, Shoe Manufacturer, Montreal, P.Q.; and

Miss Charlotte Whitton, of Ottawa;

Mrs. Mildred Kensit, of Montreal; and

Mr. Robert E. Mills, of Toronto; representing the Social Service Council of Canada.

Your Committee begs to submit the evidence of these witnesses on the subject matter of investigation, and recommends that

- (a) as this proposal is new in Canada, and requires more careful consideration, no immediate action shall be taken; and
- (b) that before the next session of Parliament the question of jurisdiction in matters of this nature as between the Dominion and the Provinces be considered by the Government;
- (c) that 500 copies in English and 500 copies in French of this Report and Evidence be printed in blue book form and that Standing Order No. 64 be suspended in relation thereto.

Rev. Father Lebel, teacher of Philosophy in the Immaculate Conception, Montreal, in his evidence before the Committee on Industrial Relations on February 26 and 27, outlined at some length the social and economic problems involved in large families under modern conditions and indicated the means which had been adopted in various countries of meeting the situation through the payment of special allowances. Three systems had been applied in different countries. One of these was the optional system, which consists of the creation of compensation funds provided by employers in different branches of industry and entirely under the employers' control. This system had been introduced in France and afterwards adopted in Germany, Belgium, Holland, Italy and other countries. The second system was compulsory by law and was restricted to wage earners in industry and commerce. This plan had been adopted in New South Wales. A third system, compulsory by law but applicable to all classes of society, had been applied in New Zealand. At the end of the war and during the subsequent years, more than twenty-five European countries had introduced the principle of family allowances. In a number of cases this system had been applied to civil servants. There were in France in 1927 218 compensation funds in which 12,000 employers participated, which distributed allowances to 1,500,000 heads of families, amounting in all to 260 million francs.

Father Lebel contended that the family is the fundamental unit of society and that it was the duty of the state to facilitate the existence and well-being of families. In the concluding portion of his evidence he dealt with the probable cost of allowances in Canada payable to families having upwards of two children, at the rate of \$50 a year for each child, and estimated the cost at 45 million dollars yearly. The witness suggested that the cost of these allowances might be borne as follows: by the Federal Government, \$5,000,000; by the Provincial Governments, \$5,000,000, divided in proportion to their population; by the municipalities, \$5,000,000; by employers, \$20,000,000; and the unmarried men \$10,000,000. He intimated that a contribution of \$20,000,000 by the Canadian employers would represent two (2) per cent. of their present wage bill. The tax on bachelors might, he said, cost \$20 per head, or 40 cents per week. If the allowances per child were fixed at \$25 per year, which is the rate in New Zealand, the cost would be cut in half. In Australia the allowance is paid only to families having a revenue of less than \$1,000 per year. If the system were established on this basis in Canada, the outlay would possibly be from \$15,000,000 to \$18,000,000.

Mr. Brown, the Assistant Deputy Minister of Labour, furnished the committee with statistics from the Census of 1921, showing the percentages of private families according to the number of children in the different provinces, also the number of private families in Canada. The number of families in Canada, according to the Census of 1921, was as follows:—

Families having 1 child.....	397,184
“ “ 2 children.....	321,900
“ “ 3 “ .....	231,355
“ “ 4 “ .....	159,236
“ “ 5 “ .....	106,496
“ “ 6 “ .....	69,889
“ “ 7 “ .....	45,384
“ “ 8 “ .....	27,838
“ “ 9 “ .....	16,578
“ “ 10 “ .....	7,526
“ “ 11 “ .....	3,557
“ “ 12 “ .....	1,488
“ “ 13 “ .....	517
“ “ 14 “ .....	198
“ “ 15 “ .....	73
“ “ 16 “ .....	26
“ “ 17 “ .....	9

The term “children” in these returns includes all those living at home (unmarried) of any age.

The Assistant Deputy Minister quoted also the Census returns showing the average number of dependents supported by heads of families of wage earners in cities of 30,000 and over, and gave the Committee as well

Census statistics of the average yearly earnings of heads of families in specified occupations, and yearly budgets of expenditures for families of five, classified according to income in Canadian cities.

Mr. Joseph Daoust, manufacturer of Montreal, in his evidence, commended the subject of family allowances to the attention of Parliament.

Mr. Robert H. Coats, Dominion Statistician, indicated the attention which had been given to family statistics in the last Census and the plans which were being formulated for the taking of the next decennial Census in 1931.

The Deputy Minister of Justice gave it as his opinion that jurisdiction to provide for a scheme of assistance in the form of family allowances belonged to the provinces.

The last three witnesses who appeared before the Committee—Miss Charlotte Whitton, secretary of the Canadian Council on Child Welfare, Ottawa; Mrs. Mildred Kensit, director of the Children's Bureau of Montreal, and Mr. Robert E. Mills, director of the Children's Aid Society, Toronto, gave evidence in opposition to the principle of family allowances, as being fraught with danger to families and to the community at large. It was their view that the experience of European countries with family allowances did not offer any justification for the introduction of this plan in Canada, and that its effect would be to add to our social and economic problems rather than to remove them.

The report of the committee is being printed by Parliament for distribution.

The *Alberta Gazette*, May 31, contained a notice that after June 1 “any building, workshop, structure, or premises at any oil well, or at any gas well, from which oil or gasoline is by any means obtained, shall be a ‘factory’ within the meaning of the said Act” (i.e. the Factories Act, Statutes of Alberta, 1926, chapter 52).

A commission of federal and state officials which inquired into the causes of the Kinlock mine explosion, at Parnassus, Pennsylvania, on March 21, found that the disaster had been caused by a broken conveyor, followed by an impact of metal and coal at the bottom of a slope, with a resulting electric arc in the presence of coal dust. In this explosion 46 men were killed, 1 on the outside; 4 were injured and 212 escaped after hours of self-rescue strategy in finding a way out through unfrequented passageways to openings of an idle connecting mine.

## LABOUR LEGISLATION IN BRITISH COLUMBIA IN 1929

THE first session of the seventeenth Legislature of the British Columbia opened on January 22, and closed on March 20, 1929. The principal measure affecting labour that was enacted was a re-enactment of the Male Minimum Wage Act with some variations. It will be recalled that the orders issued by the Board under the provisions of the Act of 1925 were declared by the Supreme Court of Canada to be invalid and no longer in effect (LABOUR GAZETTE, November, 1928, page 1310, etc.)

The opening speech from the Throne stated that serious consideration was being given by the government to the question of land settlement and that a Commissioner of Immigration and Colonization had been appointed to promote the settlement of reclaimed and government-owned lands. It was announced also that a marketing branch in connection with the Department of Agriculture was being considered, for the purpose of co-operating with existing agencies for the better marketing of farm products and for improving trade facilities.

### Male Minimum Wage Act

The new Act, like the original Act of 1925, applies to all occupations other than those of farm labourers, fruit-pickers, fruit-packers, fruit and vegetable canners, and domestic servants. It provides for the establishment of a "Male Minimum Wage Board," to consist of three members appointed by and to hold office during the pleasure of the Lieutenant-Governor in Council. (The Act of 1925 was administered by the Board of Adjustment appointed under the Hours of Work Act, 1923). The powers of the Board are defined in section 4 of the Act as follows:—

(1) Upon complaint in writing addressed to the Chairman of the Board by at least ten employees engaged in any common occupation, complaining that the wages paid to them in such occupation are insufficient or inadequate for the services rendered by them in such occupation, the Board shall conduct an inquiry into the circumstances surrounding the employment of employees engaged in the occupation in which the complainant is engaged, or in any other occupation of a similar nature; and thereafter the Board may make an order fixing a minimum wage to be paid to all employees engaged in that occupation, and in any other occupation of a similar nature named in the order.

(2) The Board may, without having received any complaint, institute an inquiry into the circumstances surrounding the employment of employees in any occupation to

which this Act applies, and may thereupon fix a minimum wage to be paid of all employees engaged in that occupation and in any other occupation of a similar nature named in the order.

(3) In fixing any minimum wage under this Act, the Board may vary the minimum wage according to the conditions prevailing in different localities in the Province, and may define the boundaries of different localities for the purposes of fixing a minimum wage to take effect in each locality. In fixing a minimum wage, the Board may fix the same upon an hourly, daily, monthly, or weekly basis.

In conducting an inquiry the Board will have the same authority as commissioners under the Public Inquiries Act. It has power to grant by writing, exemptions from the provisions of the Act to any employer in respect of the payment of wages to any casual employee, part-time employee, apprentice employee, or employee handicapped by reason of advanced age or physical infirmity; but no such exemption will be granted unless the Board is of opinion that it is in the interests of the employee.

Provision is made for re-opening the question after a minimum wage order has been in effect for at least six months, and the Board may then amend the order or substitute a new one.

Appeal may be made against any order of the Board, within 30 days after its publication in the *British Columbia Gazette*, by petition to a judge of the Supreme Court, or to a County Court judge. The Board must be notified of such proceedings at least two days before the hearing. The judge may review, confirm, vary, or rescind the order in question, and his decision is to be final and conclusive, except that on a point of law appeal may be carried to the Court of Appeal, after 30 days' notice to the Board. "Every order of a judge made on a hearing under this section, or, in the event of an appeal therefrom, the order of the final Court of Appeal, shall be published in the *Gazette*, and thereupon shall as regards any minimum wage fixed or confirmed therein be deemed for all purposes of this Act an order of the Board fixing a minimum wage."

Employers are required, as in the earlier act, to keep full records of the wages paid to, and the hours worked by, their workmen, with registers of their names, ages, residences, etc. These records are to be available for inspection as required. The Board has power to inspect and examine all books, pay-rolls, and other records of any employer which in any way relate to the wages, hours of labour, or conditions

of employment affecting any employees; and may take extracts from or make copies of any entry in such books, pay-rolls, and records; and may require from any employer full and correct statements respecting the wages paid to his employees and the hours of labour and conditions of their employment duly verified on oath.

A fine of from \$50 to \$500 may be imposed on any employer who contravenes any order of the Board, or imprisonment for from two to six months in default. For failure to perform any duty as required by the act the penalty to an employer varies from \$10 to \$500.

"If any employee is paid less than the minimum wage to which he is entitled under this Act, the employee shall be entitled to recover from his employer, in a civil action, the balance between the amount paid and the amount of the minimum wage, with costs of action; but in the case of an employee whose services with the employer have terminated no action shall be brought by the employee under this section unless the action is commenced within sixty days next after the termination of the services.

Employees are further protected by the following section:—

15. (1) Any employer who discharges or in any other manner discriminates against any employee because the employee has made a complaint under this Act or has testified or is about to testify, or because such employer believes that the employee may testify, at any inquiry or in any proceedings relative to the enforcement of this Act shall be liable, on summary conviction, to a penalty of not more than five hundred dollars.

(2) For the purpose of carrying out the provisions of this Act without prejudice to any complainant, the name and identity of the complainant shall not be divulged to any person by the Board in any case where the complainant requests that his name and identity be withheld.

The Lieutenant Governor in Council is given power to make regulations as may be considered necessary to give effect to the true intent and meaning of the Act.

#### **Eight-Hour Day**

Some amendments were made in the Hours of Work Act (Revised Statutes of B.C. 1924, chapter 107), enacted in 1923 (LABOUR GAZETTE, January, 1924, page 24) to provide for the establishment of an eight-hour working day and a 48-hour working week in industrial undertakings in the province, excepting those in which only members of the same family are employed. The section of the Act allowing an exception to be made in the 8-hour day rule in the event of an accident occurring in a plant

is now guarded by a general provision that such exceptions are only to be permitted in cases where they are necessary to avoid serious interference with the ordinary working of industrial undertakings.

Another amendment removes the condition by which under section 9 the regulations made from time to time by the Board of Adjustment, the body administering the Act, were subject to the approval of the Lieutenant Governor in Council, the powers of the Board in regard to the making of regulations being made absolute.

A new section was added to the Act as follows:—

10a. (1) Every employer shall keep in his principal place of business in the Province a true and correct record of the wages paid to and the hours worked each day by each of his employees, together with a register of the names, ages, and residential addresses of all his employees.

(2) Every employer shall, on demand of the Board or any person authorized in writing by the Board, produce for inspection all records kept by him relating to the wages, hours of labour, or conditions of employment affecting any of his employees.

#### **Coal Mines Regulation Act**

The section of the Coal Mines Regulation Act defining the qualifications to be required of a candidate for a mine surveyor's certificate was changed so as to recognize as a qualification for such a certificate the holding of a license to practise and good standing as a land surveyor according to the provisions of the Land Surveyor's Act. In connection with any inquiries that may be necessary into the competency of managers, overmen, shift-bosses, fire-bosses, shotlighters, mine surveyors, or coal miners, the Court holding such an inquiry may consider, as a cause of suspension, "negligence leading to or resulting in loss of life or serious injury to any employee." This is in addition to the list given in the original act of the possible causes of suspension, namely "incompetency, drunkenness, or gross negligence."

#### **Regulation of Quarries**

The Quarries Regulation Act makes provision for the safe working of any excavation or opening on or under the surface of the ground made or worked for the purpose of obtaining or removing rock, stone, gravel, sand, clay, or earth, which excavation or opening is not a mine within the scope of either the Coal-mines Regulation Act; or the Metaliferous Mines Regulation Act including all machinery, equipment, appliances, and plant used in the working of a quarry. Any inspector

appointed under the Metalliferous Mines Regulation Act, or the Coal Mines Regulation Act, is given authority to inspect any such quarry and to make a report as to its condition and with respect to the safety of the employees and the observance of the regulations. Owners and managers must give the inspectors free access to their quarries on penalty of a fine of \$10 to \$100. Regulations under this act will be made by the Lieutenant Governor in Council.

### Placer Miners' Certificates

Amendments were made in the Placer Mining Act (Revised Statutes, 1924, chapter 109) to authorize the deputy recorder to issue free miners' certificates.

### Superannuation Act

Part III of the Superannuation Act, relating to municipal employees, was amended in regard to the basis used for calculating the amount of the additional allowances, that is the allowances payable in addition to the sum to which the amount at an employee's credit in the superannuation fund, arising from deductions from his salary and accrued interest, together with a like amount paid by the employer, would entitle him according to the life tables in force. The amount of the additional allowance is to be arrived at by multiplying one-fiftieth of the employee's average yearly salary for the last ten years by the number of years of his employment. Under the Act as originally passed the additional allowance was three-fourths of the average salary for 10 years multiplied by the number of years of service.

Several amendments were made in that part of the Act relating to School Board employees. Teachers were taken out of the classes of employees to whom the part applies. The approval of the Municipal Council is not to be required when a Board of School Trustees makes an agreement with their employees for the purpose of securing the benefits of the Act. In the case of the School Board employees the additional allowance was increased to an amount calculated in the same manner as the additional allowances of municipal employees above described. Formerly the amount (in respect of school board employees) was arrived at by dividing the average salary of ten years by 100, and multiplying the result by the number of years of service.

### School Teachers

By an amendment to the Public Schools Act (R.S. of B.C., 1924, chapter 226) the Council of Public Instruction was authorized from time

to time to appoint a person to inquire into the social and living conditions under which female teachers work in rural school districts and to make recommendations to the local trustees for the improvement of their conditions.

### Barbers Certificates

Beauty parlours and hair dressing shops patronized by women and children only were by an amendment brought within the scope of the Barbers' Act of 1924, from which they had been expressly excepted. The Barbers' Association of British Columbia, a body composed of barbers registered under the Act, was given power to make or amend by-laws not inconsistent with the Act. Besides the certificates already granted, special certificates of registration may now be granted for hair-cutting only. The holders of such certificates, however, are not qualified to advertise to the public that they are engaged in the occupation of "barbering".

### Maternity and Health Insurance

The following resolution was adopted by the Legislature:—

"Whereas it is advisable, in the interests of the people of this Province, that this Legislature should be in possession of authentic, full, and up-to-date information regarding the subjects of maternity benefits and health insurance: Therefore be it Resolved, That a humble petition be presented to His Honour the Lieutenant-Governor, praying that a Commission composed of members of the Legislature, who shall serve without salary, be appointed under the 'Public Inquiries Act' to inquire as to what laws relating to the subjects of maternity benefits and health insurance are in force in other Provinces of Canada or any other countries; to collect facts as to the actual operation of such laws and as to how far they have been found satisfactory; to inquire as to whether and to what extent the public interest requires the introduction of similar laws into the Province of British Columbia; to estimate what would be the total annual cost to the people of the Province in regard to each of these subjects, and what portion of the annual cost would fall upon (a) employers of labour, (b) prospective beneficiaries, and (c) the general taxpayers; to suggest methods by which the annual cost might be collected from the employers, prospective beneficiaries, and general taxpayers respectively; and generally to inquire into any or all matters affecting the said subjects respectively; and to report its findings and recommendations to this Legislature at its next Session."

The Select Standing Committee on Public Accounts recommended that special attention should be given to the sickness prevention,

and that when an inquiry is made into hospital matters generally this question should be one of the principal questions considered.

### Workmen's Compensation

The same committee made the following recommendation which was noted in the *LABOUR GAZETTE* (April, 1929, page 363), on the recommendation of Mr. Winn, chairman of the Workmen's Compensation Board, in regard to the so-called Reserve Fund maintained by the Board. The committee stated that—

"it was felt that the title 'Reserve Fund' was a misnomer and gave the wrong impression. The name leads the public to believe the fund is a general one accumulated for no special purpose, and one which the Board has on hand as an emergency fund. The fund, in reality, is created to meet the obligations incurred by the Board through awards to workmen, but which obligations are for future payment. When a person is injured or has a claim, his case is established on an actuarial basis, and this fund provides the means of meeting his claim during the time that claim exists, whether for a period certain or for a term of the life of the recipient. In other words, it is a pension fund. It was felt that, at the earliest possible moment, the name should be changed to 'Pension Fund' or some other suitable name."

### Technical Education

The following motion was carried on March 20:—

Whereas the Government of British Columbia did, on the 2nd day of January, 1929, petition the Government of Canada, setting forth, among other things, the fact that the Government of Canada had provided annually for a period of ten years a certain sum to assist the Provinces in promoting vocation and educational training and in establishing technical schools; and, further, that such vocational and educational training would assist materially in the industrial expansion of the country; and that the period of ten years above referred to expires on March 31, 1929; and in the said petition the Government of British Columbia did petition the Government of Canada to extend for a period of years the financial assistance rendered by it in the past for the purposes specified:

Be it Resolved, That this Legislature not only approves the action of the Government of British Columbia, but also concurs in and reiterates the petition so made to the Government of Canada.

And be it further Resolved, That an humble petition be presented to His Honour the Lieutenant-Governor, praying that copies of this Resolution and the preamble thereto be forwarded to the Honourable the Secretary of State and other proper officials of the Government of Canada.

### Organized Labour in Various Countries

The International Federation of Trade Unions (Amsterdam) published in the April number of its organ the *International Trade Union Movement*, statistics of the trade union movement in various countries in the years 1925 and 1928 as follows:—

Affiliation	January, 1925		January, 1928		Increase or decrease of members
	Members	Count-ries.	Members	Count-ries	
I.F.T.U.....	17,702,431	30	19,377,448	47	per cent + 9.5
Communist.....	7,333,845	12	13,670,462	17	+86.4
Denominational...	2,112,109	15	2,149,069	15	+ 1.7
Syndicalist.....	471,439	12	285,500	12	-39.4
Miscellaneous.....	8,442,887	32	10,704,581	36	+26.8
Total.....	36,062,711	46	46,187,060	62	+28.1

The greater part of the increase in the communist group is claimed to be due to the Russian trade union movement, which during the period in question rose from 6,604,684 to 10,248,000 (3,643,316). On the other hand, the International Communist Trade Union Move-

ment counts as within its ranks, 2,800,000 Chinese organized workers. Ten new countries appear for the first time in the communist statistics of membership for January 1st, 1928; these are Argentine, Belgium, Canada, China, Colombia, Germany, Ireland, Mongolia, Portugal and Spain. With the exception of China, the memberships of the Communist trade unions in these countries are stated to be insignificant.

In answer to a question in the British House of Commons in March, the Home Secretary stated that the number of accidents to workpeople in factories and workshops in England and Wales in 1928 was 126,366, of which 578 were fatal. In the autumn of 1928 representations had been made, as a result of which a number of important employers' associations had taken action and substantial progress was being made in the industries chiefly concerned. There were still many works where no adequate arrangements had yet been set up, but the outlook was encouraging.

## EMPLOYMENT SERVICE COUNCIL OF CANADA

### Tenth Annual Meeting, Ottawa, May 30-31, 1929

THE Employment Service Council of Canada held its tenth annual meeting in Room 268, House of Commons, Ottawa, on May 30 and 31, 1929. The Council is an advisory body which advises the Minister of Labour relative to the operations of the offices of the Employment Service of Canada, and on the question of employment generally. It is composed of representatives of the Department of Labour and the provincial departments connected with the Employment Service of Canada, in addition to representatives of those interests throughout the country chiefly concerned in the general question of the employment situation, and with the proper functioning of the public employment offices under the Employment Offices' Co-ordination Act.

The meeting of the Council was formally opened by an address of welcome by the Hon. Peter Heenan, Minister of Labour. Mr. James Clark Reilly, in the absence of Mr. James Simpson, the chairman of the council, presided throughout the sessions.

The agenda of the meeting contained the following items:—

- (1) Policy of importing from Europe additional harvest help.
- (2) Factors responsible for recent unemployment.
- (3) Policy of the Employment Service with respect to institutions giving unemployment relief, i.e., municipalities, churches, and other agencies,
- (4) Winter employment: question of the composition of the unemployed as to skilled, unskilled, returned soldiers, etc.
- (5) The relationship between the Employment Service and institutions graduating boys and girls into industry, such as technical schools.
- (6) The employment problem as affecting middle-aged men and women.
- (7) Immigration as affecting the Employment Service.

All of these topics were discussed at length, and, in line with the past policy of the Council recommendations concerning them were adopted for presentation to the Minister of Labour at a later date by the Executive.

The representatives attending the Council were as follows:—

Representing their respective provinces, Col. R. Innes, Halifax; Mr. George R. Melvin,

Saint John; Mr. Joseph Ainey, Montreal; Mr. J. H. H. Ballantyne, Toronto; Mr. J. A. Bowman, Winnipeg; Mr. Walter Smitten, Edmonton.

Representing:

The Canadian Manufacturers' Association, Mr. E. Blake Robertson, Ottawa, and Mr. H. W. Macdonnell, Toronto;

The Trades and Labour Congress of Canada, Mr. J. T. Foster, Montreal, and Mr. Tom Moore, Ottawa;

The Railway Association of Canada, Mr. C. P. Riddell, Montreal;

The Canadian Railway Brotherhoods, Mr. R. H. Cobb, Toronto;

The Canadian Council of Agriculture, Mr. Bruce McNevin, Omeme, Ont., and Mr. Thomas Wood, Winnipeg;

The returned soldiers' organizations, Mr. J. A. MacIsaac, Ottawa;

The Canadian Construction Association, Mr. J. Clark Reilly, Ottawa;

The Department of Pensions and National Health, Mr. D. F. Rowe, Ottawa;

The Department of Labour, Mrs. Charles Caucutt, Kenora, Miss Mary McNab, Toronto, and Mr. R. A. Rigg, Ottawa.

The Provinces of Saskatchewan and British Columbia, and the Canadian Lumbermen's Association were not represented at the meeting.

The election of officers resulted in the selection of Mr. J. Clark Reilly as chairman, Mr. E. Blake Robertson as vice-chairman, and Mr. R. A. Rigg as secretary (re-elected). The full executive committee will be composed of the three officials elected, and three additional members, one to be named by each of the following: the Trades and Labour Congress of Canada, the Canadian Manufacturers' Association, and the Canadian Council of Agriculture.

In several provinces provision is made to encourage thrift among school children by the establishment of school savings banks. In Winnipeg on December 31, 1928, school savings bank accounts totalled \$192,458 and that in Ontario, up to June 30, 1928, school children had deposited more than \$1,000,000. In Regina, up to June 30, 1928, public school children had \$22,884 on deposit; in Saskatoon on December 31, 1928, the amount on deposit was \$9,207.57 and in Prince Albert, the school savings accounts contained 7,799.44 on June 30, 1928.

## SOME FACTS AND REFLECTIONS REGARDING EMPLOYMENT AND UNEMPLOYMENT STATISTICS

*Paper read before the Sixteenth Annual Convention of the Association of Governmental Officials in Industry of the United States and Canada at Toronto, June 5, 1929,  
by R. A. Rigg, Director, Employment Service Branch, Department  
of Labour of Canada\**

**T**HERE are few subjects which during recent years have provoked so much discussion as that of unemployment, and probably no one would care to challenge the assertion that no problem which has succeeded in engaging the thought of interested authorities to such an extent has been left more completely unsolved. Government executives are besieged by requests from representatives of, and sympathizers with, labour that something should be done to cure the evil or at least to alleviate the suffering arising therefrom. No legislative session, whether federal or state or provincial, is complete that does not entertain a discussion of the subject. Of books published and articles written and reports prepared by economists, statisticians, and sociological experts there is no end. Conferences constituted as the present one invariably devote attention to the problem. Labour organizations have it continually before them. Remembering, then, the widespread attention devoted to the question, it is unnecessary to do more than remark that this present contribution is advanced without expectation that it is going to definitely and finally settle anything, but rather in the hope that it may prove to be provocative of more discussion.

At least one definite accomplishment has been achieved during this century as a consequence of the attention that has been directed toward this problem. No well-informed, intelligent person now denies that a problem exists. To use the old form of disposing of the matter by vehement denunciation of the unemployed as being idle, drunken wretches and bums is to merit and receive contempt for such opinion. To those of us who are in employment service work, and to all who have undertaken any study of the unemployed with any degree of impartiality, it is obvious that the overwhelming majority of those who are out of work are keenly desirous of finding it. Neither is one indulging in any exaggeration or overstepping the bonds of moderation in emphasizing that the ranks of the degenerate charity-mongers are largely recruited from among those who would have been industrious and self-sustaining had reasonably

continuous employment been available for them. Idleness has habit-forming qualities quite as pronounced as drug taking. However, we may find comfort in the general appreciation of the fact that it is now commonly conceded that a problem of unemployment does exist, and that there are reserves of labour beyond the legitimate requirements of industry.

Although the primary purpose of this paper is to deal with statistical data relating to employment and unemployment, a few observations regarding unemployment may be quite relevantly made.

### Unemployment a Social Disease

Unemployment is a ravaging social disease, both endemic and epidemic in its nature, and, because it is a social disease, it is the duty of society for its own protection, if for no other reason, to reduce it to the lowest proportion possible. The ensuring of continuous employment at rates of remuneration that will provide a reasonable standard of living to all who need to work in order to live is admittedly an Utopian dream. But while conceding the improbability of the complete stamping out of this disease, it is the duty of all to aim at the preservation of the highest standard of economic and social health that may be possible. Poverty and pauperism, and their demoralizing concomitants, under famine conditions are understandable. When the means of life are inadequate to supply the needs of all, some must inevitably suffer. Such conditions, however, do not obtain under our modern system of production and distribution; the reverse is the fact. Shortage and need in the form of demand are the very life of industry and the guarantee of prosperity so long as the commodities required are obtainable. Whether the commodities needed are available to the public or not does not depend upon their existence; they do exist. Indeed the anomaly and tragedy of our present system are to be found in the fact that the most acute suffering from unmet need is coincident with an overstocked market. Trade depressions mean that, because warehouses are choked with clothing, cold storage plants and grain elevators bursting with food, and coal banked up like black hills, men, women

\*A report of this convention is given on another page of this issue.

and children must go unclothed, must exist half starved upon some form of charity, and must freeze in their hovels. In other words, there is no question about there being enough to go around to meet legitimate need.

Thus there are two facts that may be accepted as established beyond dispute; first, both in the United States and Canada, there is either seasonally or continuously a considerable number of persons whose only legal means of obtaining an independent livelihood is through the medium of their services being employed by others, who are unable to find such employment; and second, the suffering caused by unemployment is not due to the inability of the means of production to adequately supply a sufficiency of commodities to meet legitimate human need. Wealth which makes Croesus look comparatively poor is possessed by thousands, while unemployment and the fear of it inflict their black misery upon millions.

### Statistical Data

Herein lies the challenge, that the efforts of labour applied to the natural resources produce an abundance for all, but through inability to find employment for their labour-power multitudes are divorced from access to the things they need. This condition constitutes the problem which society on the North American continent is faced with, and which is obviously troublesome to our legislators. During the pre-election session of the United States Congress last year keen interest in this problem was exhibited. A somewhat popular attitude was that it was useless to attempt to do anything until the extent and volume of unemployment were precisely known. Others claimed to possess this knowledge, at least approximately, although the figures quoted by them varied by millions. Our esteemed friend Commissioner Ethelbert Stewart, of the United States Bureau of Labour Statistics, compiled an estimate of the shrinkage in the volume of employment in the United States from 1925 to 1928, and the figure so derived was 1,874,000. There were people who exhibited Houdini-like agility and cunning in extricating themselves from embarrassing positions on this subject by quoting—with the air of having finally disposed of everything—that old wise crack about three kinds of liars, which is too familiar to require repetition. But as furnishing evidence of the carelessness with which some people (who ought to know better) handle statistics, the writer recalls hearing two distinguished members of the United States Cabinet last year assert that there were 1,874,000 unemployed

persons in the United States. Such a gross misuse of statistical data is almost incredible. Originating from this hopeless dilemma came the hearing this year of evidence on unemployment in the United States before the Senate Committee on Education and Labour.

During the past two sessions of the Canadian Parliament the subject of unemployment insurance has been before the Parliamentary Committee on Industrial and International Relations.\* The reports of this Committee have expressed approval of the principal of unemployment insurance, but the Committee has urged that much more complete statistical data should be available to provide a factual basis upon which a scheme might be built. Thus we have in both countries the common factors—the existence of unemployment, practical admission that something should be done about it, and the expressed need for statistical information that will in a comprehensive, accurate, and up-to-date manner vividly reveal the size of the problem.

### Canada's Experience with Unemployment Statistics

Setting aside for the moment the question as to whether it is imperative that such complete data should be available before any practical steps are taken to cope with the unemployment problem, it will perhaps be of interest to indicate what material is presently at our disposal in Canada. I must leave to our friends from the United States the task of stating what data are obtained in that country. There are five principal sources from which data concerning employment or unemployment in Canada are secured by the Federal Government: (1) The decennial census; (2) the annual industrial census; (3) current monthly returns from selected firms showing numbers of persons in their employ; (4) current monthly returns from trade unions giving total memberships and numbers of members unemployed; and (5) the records of the Employment Service of Canada. Keeping in mind the demand made by authorities for approximately complete, accurate, and up-to-date statistical information as a preliminary to the adoption of practical measures to cope with unemployment, what is the value of any or all of the data secured?

*Decennial Census.*—The last decennial census provided for ascertaining the following information:—

- (1) If a person, ordinarily an employee, were out of work June 1, 1921.
- (2) Number of weeks unemployed in the past twelve months.

\* The recommendations of this Committee are given on page 603 of this issue.

(3) Number of weeks unemployed during past twelve months because of illness.

Without attempting to closely analyse the value of the information thus acquired, it is clear that it fails to satisfy the demand. As all who are in any degree familiar with the colossal task of dissecting decennial census data know, it takes years to segregate and compile the immense amount of material collected through that source. Obviously the knowledge that on June 1, 1921, there were a given number of persons unemployed in Canada cannot be accepted as an indication of the number out of work in January some years later. Moreover, such a record is seriously open to the suspicion that it would not be compiled with the rigid scrupulousness necessary to indicate how many persons were involuntarily out of work. Would the record not be liable to contain those who were idle on account of strikes and lockouts, temporary shut downs and lay offs, and many of those taking voluntary holidays, and so forth? Would the suspicion of such possible dilution escape those who demand specific and reasonably accurate data? And the two columns which aim to chronicle unemployment experience during the preceding twelve months are open to even more severe criticism, in that correctness of answer depends upon accuracy of memory and the conscientious truthfulness of the individual.

*Annual Industrial Census.*—A comprehensive census of manufacturing industries in Canada is taken annually. By this means data are secured indicating the total numbers of salaried and wage earning employees in this group, by months. It has been found impracticable to secure complete returns until some months after the expiry of the calendar year. Thus the information relative to even the latest months of the calendar year is usually not available until twelve months or so after they have elapsed. Surveys of certain other industries, such as mining and fishing, are also made annually, which yield figures showing the number of workers employed therein on a given date. These censuses, however, do not cover all industries, nor do they attempt to sample all industries; they fail, therefore, to meet either the requirement of being sufficiently up to date or comprehensive.

*Returns from Employers.*—We now come to the third form of statistical tabulation bearing on this subject, namely, that made in connection with the returns furnished by establishments employing not less than fifteen persons in industries other than agriculture, fishing and domestic service. These returns are made monthly and show the number of persons on

the pay rolls of the reporting firms as at the end of each month. The chart\* before you shows the plotting of the curve of employment by the reporting firms from December, 1921, to March, 1929, reduced to index figures. The original base figure of 100 represented the numbers reported as employed in January, 1920, one of the first months of collection, but recently the average for the year 1926 was adopted as the base (100) and the previous figures were adjusted thereto. Although it is perhaps somewhat of an irrelevant interpolation, it is interesting to note in passing that the index numbers pertaining to manufacturing industries exclusively have declined during the past six years in the United States. According to the *Monthly Labour Review*, the index numbers reflecting the trend of employment in representative manufacturing industries in the United States showed an average of 108.8 for the year 1923, the first year for which these figures are regularly published, and of 93.8 for 1928. On the other hand, in Canada the average of the index numbers in manufacturing industries for the respective years were 96.6 and 110.1, that is to say, there was an increase of 13.5 points in the Canadian figures simultaneously with a decline of 15 points in the United States figures. It might be added that both the United States and Canadian figures have as their base (i.e.100) the average for the year 1926, and they are therefore quite comparable. In these employment indexes we have data that are up to date, and we may assume, reasonably accurate, but not covering the field comprehensively.

*Trade Union Returns.*—The fourth quarry from which we hew material is limited to the trade union area. There are in Canada some 2,600 trade union branches or locals, comprising approximately 290,000 members. The latest monthly returns, giving the totals of local memberships and the numbers of these unemployed due to economic causes, were received from 1727 local unions, representing 194,890 members. Although it is impossible to exclude the element of error in the reporting, there is good reason to believe that these returns, which include two-thirds of the organized workers in Canada, are entitled to be treated as sufficiently reliable for practical purposes. The chart exhibited to you tells the story of the record on a percentage basis during the period from December, 1921, to March, 1929.

Since these statistics are limited to the trade union field, which in a very large measure is representative of the skilled and semi-skilled workers, and as it is highly probable that the percentage of unemployment among unskilled

workers is materially greater than that of the semi-skilled or skilled, they also, like the employers' pay roll figures, fail to meet the test of comprehensiveness. That they are regarded in trade union circles as possessing considerable value, however, is evidenced by the fact that the American Federation of Labour recently organized a statistical department for the express purpose of collecting and tabulating similar data in the United States. In passing, it may be interesting to mention that the average percentage of unemployment among trade unionists in the United States during the year 1928, as shown in the published tabulations of the American Federation of Labour is 13.1, while that for Canada during the same period is 4.5.

Two of the three charts before you positively identify unemployment. The trade union chart shows that for the period covered the percentage of unemployment among the unions reporting has varied from 2.0 per cent to 15.1 per cent, the average for the seven and a quarter years being 5.8 per cent. Assuming that the percentage of unemployment among the unions failing to report was the same as that of the reporting unions in view of the fact that 67 per cent of the union membership is covered, there were on the average approximately 16,800 trade unionists unable to find work. That much information is tolerably well established.

*Employment Office Reports.*—The fifth source lies in the record of performance of the Employment Service of Canada, one of the wall charts setting forth the story of applications, vacancies and placements. A glance at this record chart is sufficient to demonstrate the general existence of a substantial army of unemployed persons. In interpreting the significance of this chart, it is necessary that due weight be given to the fact that the Employment Service of Canada enjoys no monopoly of employment work. Many firms hire their own employees, and seldom, if ever, place their orders with the Government Service. Many workers depend on their own efforts, or those of friends to find employment and do not register with our offices. Many labour organizations provide employment office facilities for their members, and we still have some private agencies in Canada, including some twenty-three of the licensed, fee-charging variety. Since we are unable to determine what percentage of the total employment business in Canada is represented by the Employment Service records, it is impossible for us to make the same deduction concerning all the workers of Canada that we have been able to in the case of the organized section of them.

However, some definite facts do stand out very boldly. Chief among these for our present purpose is the lightning-like stroke showing the relationship of the application or registration curve to those of vacancies and placements. This comparison indicates that the demand for and supply of labour practically match each other about September of each year, that is during the harvest period. It further emphasizes that the reduction of the excess of registered applicants over the opportunities for employment is by no means wholly accounted for by the number of placements made by the Employment Service offices, and a considerable percentage of those registering for employment find work through some other means.

You are sure to wonder at the skyrocketing phenomenon exhibited by the registration curve at the beginning of 1922, and to require an explanation as to why at that time applications should bear to vacancies the relationship of almost two to one. The answer is that on account of the distressful conditions existing in Canada due to economic want, many of the governments and municipalities of Canada provided emergency relief for those for whom the Employment Service offices certified there was no work, and who were in need.

### Economic Activities in United States and Canada

We could dazzle you with statistical demonstration of the romantic progress which Canada is enjoying, but you may refrain from the use of smoked glasses as we shall only turn on the glare for a moment. Our friends from the United States know how bounteously blessed with prosperity their country is. We Canadians hope that your prosperity will continue to increase. The business record of Canada for the past few years has been one of consistently rapid development. The following figures, which constitute a comparison of indices of various economic activities between the United States and Canada for the period 1926 to 1928, will provide ample demonstration of this fact:—

	United States	Canada
Index of industrial production.....	2 p.c. increase	12 p.c. increase
Employment in manufacturing industries..	6.2 " decrease	12 " "
Steel production.....	6 " increase	58 " "
Construction contracts.	5 " "	25 " "
Railway operating revenue.....	4 " decrease	14 " "
Car loadings.....	3 " "	17 " "
Foreign trade.....	.2 " "	13 " "
Hydro-electric power generated.....	19 " increase	49 " "
Petroleum consumption.....	16 " "	50 " "

Consult once more the employers' return chart, and, bearing in mind the staggering increase of production per worker as a result of the over-increasing efficiency of the machine, note the ascension of the curve of employment from the index figure of 78.8 on January 1, 1922, to 109.1 on January 1 of the present year. What more eloquent testimony of progress could be desired?

### The Dark Side

But lest we lose our sense of proportion in the glamorous ecstasy created by this picture, let us turn again to the trade union and Employment Service charts. The space between the curve of trade union employment and the one hundred line, and the wide distances that for a considerable portion of each year separate curves of vacancies and registrations as shown on the Employment Service chart, emphasize the existence of our problem. Here they are only coloured lines, projected on a frame. In reality, they represent the degradation, poverty, fear, heart-break and misery of thousands of human beings. The paeans of prosperity strike upon the ears of these victims as the dirges of despair. It is not within the sphere of the present opportunity to attempt to discuss the solution of this problem. If anything in the nature of inspiration is responsible for this modest contribution, that inspiration has its source in the very generally expressed dogma that no solution, even in part, is possible until the exact extent and volume of unemployment is known. The time is overdue when this attitude should be challenged and the mind of society disabused of the illusion. The main purpose of this paper is to hazard the opinion that it is unnecessary to possess complete and accurate statistics as to the volume of unemployment in order to begin to grapple with it. To know down to the very last one the number of the unemployed would be academically interesting, but it is difficult to see how it would assist in the solution of the problem.

### Problem of Providing Employment

Perhaps the most common method of avoiding the issue, adopted by many whose efforts should be directed towards the elimination of this evil, is, first, to classify unemployment as a disease and then having done so, adroitly to proceed to prepare an avenue of escape from a troublesome predicament by insisting that the first act of a physician is to diagnose the disease. This they assure us is the scientific preliminary that precedes the application of the remedy. They

construe the diagnosis of this malady as involving the discovery of the number of persons affected by it.

To what degree is this analogy correct? When a patient calls in a doctor does the doctor postpone action until he has ascertained how many others are suffering from the same disease? If an epidemic of black influenza afflicted this continent would the medical fraternity insist that their first duty was to take a census for the purpose of determining how many victims it had claimed? Answers to these questions are unnecessary.

It is respectfully submitted that the effects of unemployment upon the individual are quite as baneful, irrespective of whether the number out of work is two thousand, two hundred thousand, or two million. In other words the error is all too commonly made of confusing the disease with its extent. The problem is not one of diagnosis or primarily of knowing how many are affected by the disease. It is rather that methods of applying the cure should be discovered. And it cannot be too emphatically stated that unemployment, insurance or maintenance during periods of unemployment, while these may perhaps be desirable temporary palliatives, are after all only palliatives. Unemployment insurance applicable to all industries would yield unchallengeable statistical evidence as to the extent and volume of involuntary idleness, but the only cure for unemployment is work. Nothing else will ensure the highest standard of social healthfulness and well being. Herein lies the crux of the whole matter. How shall employment be provided? Efforts directed towards the accomplishment of this purpose are infinitely more likely to produce worthwhile practical results than engaging in academic or acrimonious discussion as to the exact number of the unemployed. Incidentally it is an excellent way to discover how many are unemployed.

Within the lifetime of all who are gathered here and within the memory of a considerable percentage of us, interested parties quarrelled about the number of industrial accidents. Those who favoured workmen's compensation urged that there were a great many more industrial accidents than their opponents would admit. Both were wrong in their estimates. The administration of workmen's compensation acts has demonstrated that there are many more accidents occurring in industry than the wildest imaginings of compensation advocates could conceive. And had the enactment of legislation been delayed until the extent of the problem was known, our statutes would today be barren of workmen's compensation acts.

When Commissioner Ethelbert Stewart appeared last January as a witness before the United States Senate Committee dealing with unemployment and was giving testimony regarding a census of the unemployed, the chairman of the committee asked: "What would we do with the information when we have it?" Would it have been impertinent for Mr. Stewart to have answered by inquiring "What do you do with the information you already possess?" If it is sincerely desired to do something about it, is there not sufficient reason to begin now?

With the enormous resources available on this North American Continent, suffering as a consequence of inability to find work is a social disgrace, but there are evidences to be found in the side-stepping of this problem by many which suggest that the Priests and Le-

vites are as numerous to-day, and the good Samaritans are as rare, as they were two thousand years ago. Possessing the material means and being evidently endowed with the genius for invention and organization, so far as the interests of industry, commerce and finance are concerned, it is inconceivable that the problem of employment should remain insoluble, unless we are to confess ourselves bankrupt of capacity to apply to this question the same effective ability which is apparent in other directions. If anything in the nature of real progress is to be made in stamping out the evil of unemployment, which is more disastrous to human well being and a much graver menace to our civilization than physical disease, it will be necessary to obey the injunction of Thomas Carlyle "do the duty that lies nearest to thee: the second duty will all-ready have become clearer."

---

### UNITED STATES SENATE COMMITTEE'S RECOMMENDATIONS REGARDING UNEMPLOYMENT

THE United States Senate in May, 1928, directed the Committee on Education and Labour to make an investigation of the causes of unemployment and the relation to its relief of (a) the continuous collection and interpretation of adequate statistics of employment and unemployment; (b) the organization and extension of systems of public employment agencies, Federal and State; (c) the establishment of systems of unemployment insurance or other unemployment reserve funds, Federal and State, or private; (d) curtailed production, consolidation, and economic reconstruction; (e) the planning of public works with regard to stabilization of employment; and (f) the feasibility of co-operation between Federal, State, and private agencies with reference to (a), (b), (c) and (e).

A report of the hearings before the Committee, containing the recommendations of the Committee, has been published recently. The evidence showed that the causes or the types of unemployment might be divided into three classes: cyclical, seasonal, and technological. Cyclical unemployment, it was considered, can best be attacked through the control of credit. Seasonal unemployment the evidence showed can be attacked in many ways, and is being successfully attacked in many industries. Technological unemployment, it is stated covers that vast field where, through one device or another, and chiefly through a machine supplanting a human worker, skilled workers have found that their trades no longer exist, and that their skill is no longer needed.

Some of the experienced witnesses stated that "new industries absorb the labour turned adrift by machine development. The automobile, the airplane, the radio, and related industries, were suggested as examples. Undoubtedly there is much truth in these statements, but nevertheless we are not relieved of the individual problem. It offers little to the skilled musician to say that he, who has devoted his life to his art, may find a job in a factory where radio equipment is manufactured. Then there is the delay, that inevitable period of idleness, when readjustments are being effected, the suffering, the loss, and enforced change in environment. True, this may all be 'the price of progress,' but society has an obligation to try, at least, to see that all this 'price' does not become the burden of the worker."

The recommendations of the Committee are summed up as follows:—

1. Private industry should recognize the responsibility it has to stabilize employment within the industry. The government should encourage this effort in every way through sponsoring national conferences, through publishing information concerning the experience had by industries in this work, and through watching every opportunity to keep the thought of stability uppermost in the minds of employers.

2. Insurance plans against unemployment should be confined to the industry itself as much as possible. There is no necessity and no place for Federal interference in such

efforts at this time. If any public insurance scheme is considered, it should be left to the State legislatures to study that problem.

3. The States and municipalities should be responsible for building efficient unemployment exchanges. The government should be responsible for co-ordinating the work of the States so as to give a national understanding of any condition which may rise, and so as to be able to assist in any national functioning of the unemployment exchanges.

4. The existing United States Employment Service should be reorganized, and every employee should be placed under civil service.

5. Efforts should be made to provide an efficient system for obtaining statistics of unemployment. The first step should be taken by the Bureau of Census in 1930, when the

bureau should ascertain how many were unemployed as of a certain date and how many were not seeking employment and yet were unemployed as of that date.

6. The Government should adopt legislation without delay which would provide a system of planning public works so that they would form a reserve against unemployment in times of depression. States and municipalities and other public agencies should do likewise.

7. Further consideration might well be given to two questions, the effect had on unemployment by industrial developments such as consolidation of capital, and the necessity and advisability of providing either through private industry, through the States, or through the Federal Government, a system of old-age pensions.

### **Evidence of Mr. Bryce M. Stewart, formerly Director of the Employment Service of Canada**

Mr. Bryce M. Stewart was one of the witnesses appearing before the United States Senate Committee on Education and Labour in their investigation of unemployment. His evidence was in part as follows:—

"The regularization process toward which private industry is directing so much attention means that by cutting down their seasonal peaks they have more steady employment for a smaller number of workers, and that as they do release people it is only good business to release those who are least efficient; and I think students of unemployment are agreed that in time of unemployment the first people that are let out among the workers are those that are least efficient. To me that means an ever-increasing volume of work for some kind of agency that works outside the individual plant. We have the employment agencies within the plants in this business of regularization, but the community is faced as a result of that effort with a larger element of unemployment, a greater shifting of labour, and a corresponding need for better organization as between plants and industries."

Speaking of the Employment Service of Canada, Mr. Stewart said "The seasonal character of employment in Canada by reason of the climate has emphasized the need for some such service. The depression of 1913 and 1914 brought the matter pretty much to a head, and employment-exchange legislation was considered by a number of agencies at that time. I was with the Department of Labour of Canada then, and was set to work studying the whole problem; but in the meantime the war broke out, the war orders began, the unemployed were recruited in

regiments, and in a short time there was no serious unemployment problem. However, in 1918 we began to anticipate the end of the war and the problem of demobilization, and the work we had done in 1914 and 1915 was resurrected. There we found the recommendation for employment exchanges on a national basis, and legislation on the subject was introduced and passed.

The law—the Employment Officers' Co-ordination Act, as it is called—provides a Federal vote of \$150,000 to the provinces to assist them in their employment-office work. The provinces to participate in the Federal grant must conform to certain standards of efficiency and they must permit federal inspection. They must standardize their procedure and their statistics according to Federal regulation. The money is allocated to the provinces, not on the basis of population, as is so often proposed in those measures.—It is allocated on the basis of the particular province's expenditure in proportion to the total expenditure by all the provinces. That is, if all the provinces should spend \$300,000 on employment service and Ontario should spend \$100,000, then it would receive one-third of the Dominion Government's grant, the idea being that if they were spending a third it was because the need for the service was there. Obviously, different localities and different industries require different degrees of employment service. One may be fairly stable; the people are seldom let out. Another may be a seasonal industry, and people are employed and released as the peaks and depressions of employment require. Some 75 employment offices were organized in co-operation with the

provinces. In one or two provinces, the smaller ones, where the need was not felt by the province itself, the Government in view of the demobilization problem established its own employment office. Now agreements exist between the two governments, the provincial and Dominion Governments, in all provinces but one small province—that of Prince Edward Island, which has only 90,000 people and is mainly agricultural.

“There is a federal director in the Department of Labour. He, in co-operation with the provinces, works out the standards of efficiency. He also works out methods of clearance and distribution of labour between the provinces. The standard as to statistics, so that we have a national figure comparable all through from one end of the country to the other, is also maintained; and they report regularly to him. He has an office in Ottawa which acts as the clearing house between the provinces of the east, and an office in Winnipeg which acts as a clearing house for the western provinces. Each office reports daily to the clearing house of the province, indicating the labour that they have that they cannot place locally, and the jobs that they have that they feel they cannot fill locally. These are compiled in a bulletin and reported to every office in the province, and the office that feels it has labour to fill the job is authorized to telephone or telegraph the office with the job and try to effect a placement. There are about 400,000 placements made a year, of which approximately 100,000 are casual, and the balance 300,000 are regular placements, so called. Of the total of 400,000, the figures show that about half have to buy railroad transportation. Not only that, but the employment service has arranged with the big railroad systems of the country for a reduced fare to workers who are being sent by an employment office to employment at a distance. If one goes more than 116 miles, and has a fare of more than \$4, therefore, he is entitled to this cheaper rate of transportation, which amounts to a reduction of about 25 per cent from the regular rate. About 10 per cent of the placements use that cheap rate, which means that they must move more than 116 miles.

“In the harvest season in the Canadian grain-growing provinces of course there is a very marked migration of labour, both from the east toward the west and from the extreme west toward the central west. The farmers in the east used to complain about the extent of the movement, and through negotiations by the director of the employment service the railroads began to recruit on the western

coast as well, so that now there is a much more efficient distribution, the western labour supply for the harvest moving east of the territory contiguous to the west, and no farther; the labour from the east moving to the provinces contiguous to Ontario, and no farther; so that the overlapping and disjointed arrangement that formerly obtained has been pretty well cleared up. In that movement we may move, inside of one month, as many as 35,000 or 40,000 harvest hands at decidedly reduced transportation rates. The fare is slightly higher on the way back, but it is very much reduced fare; the idea being that they have had two months' employment and should be able at least to pay their way back. The railroads try to get some compensation for the very much reduced fare. I think it is only about \$15 from Montreal to Winnipeg, and a cent a mile past Winnipeg. I think you can get back, say, for perhaps \$20, or something of that sort.”

Senator Sheppard:—“What about quarters or accommodations for these harvest hands? Do you give any concern to that?”

Mr. Stewart:—“Nothing has been done thus far. I think that is a very important question—something that, before I came away, I was thinking very seriously about. I left that position in 1922, and should have liked to take that on as the next step. If I may say in two sentences what I had in mind, I had hoped to work out with the farmers' organizations a system of canteens with tents at central points through the provinces in the west, say the Militia Department furnishing the tents after the summer camps and the farmers' organizations supplying the food at cost; that as these excursions moved into the west the men should be unloaded and go into reserve in these camps; that at each of these points there should be an employment office, an employment agent, tied up to the permanent employment office nearest that point; that the men should be moved out as the farmer demand came. Of course it is a very irregular thing, on account of weather. The farmers do not like to be paying men \$5 a day when it is raining. There needs to be some system of that sort for them to move into reserve and out as demands require, according as the demand has registered and according as the weather permits. Now they lose a great deal on account of the weather. The farmer sometimes charges them for their board when they are not getting wages, and they sometimes come back quite disappointed. Some supplementary organization of that sort should be worked out.”

## Labour Plan for Stabilizing Employment on Railways in U.S.A.

At a meeting during April in Cleveland, Ohio, the Railway Labour Executives Association, composed of the executives of 21 railroad labour organizations, and representing more than a million employees, decided upon a program to meet the serious unemployment situation in the railroad industry. In a statement to the press, it was stated that hundreds of thousands of railroad men had recently been thrown out of work. This decline in employment occurred notwithstanding the fact that more traffic was being handled by the smaller number employed, operating expenses per traffic unit having steadily declined from 49 cents per gross ton mile in 1923 to 42.7 cents in 1927.

The executives accordingly adopted the following program "for stabilizing employment in the railroad industry."

(1) Not less than one day's rest in seven for all railroad workers;

(2) Actual establishment of the maximum eight-hour day, including amendment of present hours of service law.

(3) Utilization of a minimum five-day week and a minimum six-hour day to provide for reduction in days and hours of work to

stabilize employment, instead of utilizing a reduction of forces with its periodic and increasing creation of unemployment.

(4) Gradual shortening of the work day or work week, without loss of compensation, to aid in maintaining employment and wage earners' income, so as to absorb the general increase in productivity of industry.

(5) Establishment by agreement with each railroad annually of a minimum force for each class of employees, to be guaranteed a minimum annual employment for the ensuing year; and the establishment of extra forces with similar guarantees to protect those reasonably needed for part-time work.

(6) Relief of employees from undue burdens caused by economy, efficiency or consolidation programs whereby large groups of employees suffer from loss of employment, additional expense or the necessity of moving their homes at financial sacrifice.

(7) Acceptance of the principle of "preventive overtime" rates of pay; that is, higher rates to be paid for overtime in order to discourage overworking a minimum number of employees, instead of employing a maximum number at straight time rates.

---

## RECENT ECONOMIC CHANGES IN UNITED STATES

THE Conference on Unemployment in the United States which met in 1921, with Secretary of State (now President) Hoover as chairman, was followed by three national surveys. The work of President Hoover's Unemployment Conference was outlined in the *LABOUR GAZETTE*, September, 1921, page 1087; October, 1921, page 1286; November, 1921, page 1373, etc. The first of these surveys was the study of Business Cycles and Unemployment, made in 1922-23, for a committee of the unemployment conference. The second was a study of Seasonal Operation in the Construction Industries, made in 1923-24 for another committee of the conference.

The third survey was carried out by the committee on Recent Economic Changes, which was directed to make a critical appraisal of the factors of stability and instability. The report of this committee has just been published (U.S. Department of Commerce—Elimination of Waste Series). The committee found that "acceleration rather than structural change is the key to an understanding of our recent economic developments. Gradually the fact emerged during

the course of this survey that the distinctive character of the years 1922 to 1929 owes less to fundamental change than to intensified activity. . . . The increased supply of power and it wider uses; the multiplication by man of his strength and skill through machinery, the expert division and arrangement of work in mines and factories, on the farms and in the trades, so that production per man-hour of effort has arisen to new heights; the quickening of these instrumentalities through capital provided from the surplus incomes of a constantly widening proportion of our people—all these represent an accumulation of forces which have long been at work.

"The committee, like other observers, was early impressed by the degree of economic activity in these seven years. It was struck by the outpouring of energy which piled up skyscrapers in scores of cities; knit the 48 states together with 20,000 miles of airways; moved each year over railways and waterways more than a billion and a half tons of freight; thronged the highways with 25,000,000 motor cars; carried electricity to 17,000,000 homes; sent each year 3,750,000 children to

high school and more than 1,000,000 young men and women to college; and fed, clothed, housed, and amused the 120,000,000 persons who occupy our twentieth of the habitable area of the earth. . . .

### Rising Standard of Living

"Geographical differences also were noted. The Pacific States have made an extraordinary advance; the South has rapidly developed as a manufacturing area; the East North-Central Division has grown while the New England States, and to some extent the Middle Atlantic Section, have developed less rapidly and have experienced some difficulties in adapting their older industries to new conditions. However, in spite of this variability, this difference in activity, as between groups and areas and industries, the rising standard of living characteristic of this period was wide-spread and has reached the highest level in our national history.

"Participation by the people as a whole in many of the benefits of increased productivity, which of itself varied as between different groups and geographical areas, has been one of the marked characteristics of the period. While industrial, agricultural, and commercial activity has been 'spotty,' the broad social advantages of our accelerated activity flowed out over the land. For example, the highway-building programs through the nation were not limited to the intensely active areas; good roads were extended in all directions, serving the whole population. The same might be said for educational advantages, radio entertainment, personal mobility made possible by low-priced motor cars, swift and dependable transportation and communication, and numerous other facilities and services making for comfort and well-being, beyond the elemental requirements of food, clothing and shelter.

"This spread of higher living standards has been characteristic of our national life practically throughout our history. As a phenomenon it is not new, but in its degree and scope it has taken on a new importance."

### Increase of Power Production

"Characteristic also has been the rise in the use of power—three and three-quarters times faster than the growth in population—and the extent to which power has been made readily available not alone for driving tools of increasing size and capacity, but for a convenient diversity of purposes in the smallest business enterprise and on the farm and in the home."

### Source and Use of Credit

In a chapter on the "Source and Use of Credit" the report states: "In former periods the savings funds of the American people were not alone adequate for our capital requirements. In periods of business expansion the demand for funds pressed heavily upon the supply. The reverse has been found to be true in the period under review. For the larger part of this period not only the earnings and savings of the people supplied the additional capital for financing the rapid development of industry, but in addition they furnished several billions of dollars for loans to foreign countries. . . .

"During the later months of the period covered by the survey a new tendency has been observed. Investors, as well as a large body of speculators, have invested through the stock exchanges not only their savings, but the proceeds of loans secured through banks and brokers, until the credit structure of the country has been sufficiently weighted to indicate a credit stringency, resulting in an abnormally high rate for call money and an appreciable increase in the rate of interest for business purposes. The consequences of this process can not be measured at this time, but they are factors in the problem of maintaining economic balance.

### Prices and Wages

The committee declares that in the field of price relationships, wages, and the cost of living is to be found one of the striking and significant developments revealed by the survey, and one which more than any other gives these years their distinctive character.

"According to the best available statistics, in the period between 1896 and 1913, the wholesale price level rose on the average 2.3 per cent a year, but wages rose only a little more, so that their purchasing power advanced only 0.5 per cent a year. In the period from 1922 to 1927, prices declined on the average of 0.1 per cent per year, while the purchasing power of wages rose 2.1 per cent a year. In this latter period the fortunate synchronizing of a high wage level and a stationary cost of living created a phenomenon, new in degree, which had widespread influence on the economic situation, and which will bear close study in its details.

"The increasing tendency toward price stability, both as between classes of commodities and in the price experience of individual commodities, was a characteristic of the period under review, tending toward a more equitable basis of exchange of products among the various groups. Price fluctuations seem to

have been held within narrow limits during this period by a combination of factors: A more complete background of statistical information making possible better judgment regarding supply and demand on the part both of producers and consumers, prudence on the part of management, cost reductions by technicians, skill on the part of bankers, an enlightened attitude on the part of labour, and the expansion of foreign markets.

"Relative price stability has involved a change in the direction in which business men look for profits. Profits made from the fluctuations of individual commodity prices and from changes in the relation among prices have tended to diminish.

"The widening gap between wages and the cost of living—wages increasing while the cost of living was stationary—may be assumed to have contributed definitely to the degree of prosperity which has characterized the period as a whole. With rising wages and relatively stable prices we have become consumers of what we produce to an extent never before realized.

"The factors in this situation appear in part to be accidental and in part the consequences of an advanced economic point of view.

"In the early postwar period much of the press and many employers demanded a 'liquidation' of labour. It was freely declared that business could not settle down until wages were brought back to prewar levels. Labour had enjoyed a higher standard of living and naturally opposed wage cuts.

"This might have precipitated a period of serious strife had it not been that leaders of industrial thought, watching the trend of affairs, noted that the result of the continuance of high wages was that the dammed-up purchasing desires which had been held back during the war on account of the national economic program burst forth and not only the high wages which were being currently earned but accumulated savings as well were poured into the channels of commerce. They were quick to grasp the significance of the power of the consumer with money to spend to create an accelerated cycle of productivity. They began consciously to propound the principle of high wages and low costs as a policy of enlightened industrial practice. This principle has since attracted the attention of economists all over the world, and while it is in no sense new, its application on a broad scale is so novel as to impress the committee as being a fundamental development."

## ASSOCIATION OF GOVERNMENTAL OFFICIALS IN INDUSTRY OF THE UNITED STATES AND CANADA

### Synopsis of Proceedings of the 16th Annual Convention Held in Toronto

THE 16th annual convention of the Association of Governmental Officials in Industry of the United States and Canada, which was attended by ninety delegates representing four Canadian provinces and fifteen states, as well as the Federal Labour Departments of Canada and the United States, was opened in Toronto on the evening of June 4 by an informal dinner tendered by the Hon. Dr. Forbes Godfrey, Minister of Health and Labour, on behalf of the Ontario Government, who welcomed the delegates. Mr. James H. H. Ballantyne, deputy Minister of Labour of Ontario, presided. The civic welcome was extended by Commissioner R. C. Harris. The Hon. Peter Heenan, Minister of Labour in the Federal Cabinet, who was to have addressed the meeting, telegraphed expressing regret that, owing to Sessional duties at Ottawa, he was unable to be present. The addresses were responded to by Miss Maud Swett, president of the association. Mr. Tom Moore, president of the Trades and Labour Congress of Canada, and Mr. A. J. McLean, president of

Canada Packers, addressed the delegates on "Stabilization of Employment in Industry."

Miss Maud Swett, the president, presided at the morning session of Wednesday, June 5, at which the report of the secretary-treasurer was submitted. This was referred to the committee on officers reports, which later reported that the accounts had been audited and found correct, and that there was a surplus of receipts over disbursements of \$431.01. The committee also recommended, and it was approved, that efforts be made to have a number of departments of labour pay the annual fee and thus be re-instated in membership in the association; also that other departments be invited to become affiliated with the association.

Reports were submitted by representatives serving on safety code committees as follows: (1) Safety code correlating; (2) Cranes, derricks and hoists; (3) Dust explosion code; (4) Building exits, textile safety, walkway surface; (5) Gas mask cannisters, and (6) Conveyors

and conveying machinery, head and eye safety, elevators and elevator machinery.

A paper on the "Necessity for Safety Standardization in the United States; How Can This be Brought About?" was read by Mr. Lewis DeBlois, director of the safety engineering division of the National Bureau of Casualty and Surety Underwriters of New York city. At this session reports were made by the delegates on new legislation or progress made in labour law enforcement.

The afternoon meeting on June 5, which was termed the "employment session," was presided over by Mr. James Ballantyne, who introduced to the delegates Mr. R. A. Rigg, director of the Employment Service of Canada, who read a paper on "Some Facts and Reflections Regarding Employment and Unemployment Statistics." This paper is given on another page of this issue. This was followed by a paper by Mr. H. C. Hudson, Superintendent of the public employment offices of the Province of Ontario, on "A Decade of Employment Office Work in Ontario". The discussion, which was led by Mr. John S. B. Davie, commissioner of the Bureau of Labour of New Hampshire, was taken part in by many of the delegates, who showed a keen interest in the work of the Canadian employment service.

The morning session of Thursday, June 6, was presided over by Miss Ethel Johnson, assistant commissioner of the Department of Labour of Massachusetts. The first paper presented was by Miss Mary Anderson, director of the Women's Bureau of the United States Department of Labour, the subject being "Relation of Women's Bureau to State Departments of Labour," which was followed by an address on the "Administration of the Minimum Wage Law in Ontario" by Dr. J. W. MacMillon, chairman of the Minimum Wage Board of Ontario. This proved a very interesting subject, and during the discussion which followed many questions were asked, all of which were satisfactorily answered by the speaker. Miss M. Marsh, of the National Consumers' League, New York, spoke on the enforcement of child labour laws, out of which arose a discussion on the subject of home work and the supervision which was made in connection with such employment by local boards of health.

The afternoon meeting of June 6 was largely taken up with matters pertaining to factory inspection, and was presided over by General Le Roy Sweetser, commissioner of the Department of Labour of Massachusetts. Three papers were read, as follows: (1) "Promotion

of Safety Education Through State Departments of Labour," by Mr. W. T. Blake, director of Department of Industrial Relations of Ohio; (2) "Promotion of Safety Education Through Provincial Departments of Labour," by Mr. W. Smitten, Commissioner of the Bureau of Labour of Alberta, and (3) "What New York is Doing," by Miss Frances Perkins, commissioner of the Department of Labour of New York State. These papers were supplemented by reports from representatives present as to what is being done in safety education work in their respective localities. A history of the association, outlining some of its accomplishments, was presented by Miss Louise E. Schutz, secretary-treasurer. The delegates were so pleased with the paper that it was decided to have copies printed for distribution among members and prospective members of the association.

At the morning session of Friday, June 7, at which Dr. Eugene B. Patton, director of the Bureau of Statistics and Information, Department of Labour of New York State, presided, three papers dealing with certain aspects of factory inspection were presented as follows: (1) "The History and Administration of Factory Inspection," by Mr. James T. Burke, chief inspector of factories of Ontario; (2) "How Factory Inspectors Can Best Assist in the Work of Accident Prevention," by Mr. A. MacNamara, assistant deputy minister of public works and chief inspector of Bureau of Labour of Manitoba; (3) "Factory Inspection as a Profession," by Mrs. Ethel Hanks Van Buskirk, of the American Association for Labour Legislation.

The session of Friday afternoon, presided over by Mr. A. Rooksbery, commissioner of the Bureau of Labour and Statistics of Arkansas, was given over to consideration of workmen's compensation and industrial diseases, the first paper, "Significant Trends of Workmen's Compensation Laws," being read by Dr. John B. Andrews, secretary of the American Association for Labour Legislation, the discussion on which was led by Mr. James Ballantyne, Deputy Minister of Labour for Ontario. Other papers were (1) "Some Aspects of Compensation Work in Ontario," by Victor A. Sinclair, K.C., chairman of the Workmen's Compensation Board of Ontario; (2) "Industrial Poisons—Where They Are Found—What is Being Done About Them," by Mr. John Roach, deputy commissioner of the Department of Labour of New Jersey, read by Mr. A. L. Urick, commissioner of the Department of Labour of Iowa. The discussion on these papers was led by Dr. W. E. Obetz,

of the Department of Industrial Relations of Ohio. A paper on "Best Methods to Prevent Injuries from Use of Industrial Poisons" was given by Dr. J. Grant Cunningham, director of the Industrial Hygiene Division of the Department of Health of Ontario.

At the business meeting of the association held on Friday morning it was decided to amend the aim of the association to read as follows:

(1) To encourage the co-operation of all Branches of Federal, State and Provincial Governments who are charged with the administration of laws and regulations for the protection of women and children and the safety and welfare of all workers in industry; (2) to maintain and promote the best possible standards of law enforcement and administrative method; (3) to act as a medium for the interchange of information for and by the members of the association in all matters pertaining to the general welfare of men, women and young workers in industry; (4) to aid in securing the best possible education for minors which will enable them to adequately meet the constantly changing industrial and social changes; (5) to promote the enactment of legislation that conforms to and deals with the ever recurring changes that take place in industry and in rendering more harmonious relations in industry between employers and employees; (6) to assist in providing greater and better safeguards to life and limb of industrial workers and to co-operate with other agencies in making the best and safest use of property devoted to industrial purposes; (7) to secure by means of educational methods, a greater degree of interstate and interprovincial uniformity in the enforcement of labour laws and regulations; (8) to assist in the establishment of standards of industrial safety that will give adequate protection to workers; (9) to encourage Federal, State and Provincial Labour Departments to co-operate in compiling and disseminating statistics dealing with employment, unemployment, earnings, hours of labour and other matters of interest to industrial workers and of importance to the welfare of women and children; (10) to collaborate and co-operate with associations of employers and associations of employees in order that all of these matters may be given the most adequate consideration and to promote national prosperity and international good will by correlating as far as possible the activities of the members of this association.

A resolution was adopted in favour of the United States being represented at the convention to be held in Switzerland in connection with calendar reform.

It was decided that the association support the American Engineering Standards Committee in regard to safety codes, and Mr. Ethelbert Stewart, commissioner of the Bureau of Labour Statistics of the United States, was named as the association's representative on the committee.

The election of officers for 1929-30 resulted as follows:

President, Miss Maud Swett, Field Director, Woman and Child Labour, Industrial Commission, Milwaukee, Wis.

First Vice-President, James H. H. Ballantyne, Deputy Minister, Department of Labour, Toronto, Ont.

Second Vice-President, W. A. Rooksbery, Commissioner, Bureau of Labour and Statistics, Little Rock, Ark.

Third Vice-President, Gen. E. LeRoy Sweetser, Commissioner, Department of Labour and Industries, Boston, Mass.

Fourth Vice-President, Dr. Eugene B. Patton, Director, Bureau of Statistics and Information, Department of Labour, Albany, N.Y.

Fifth Vice-President, T. E. Whitaker, Commissioner, Industrial Commission, Atlanta, Ga.

Secretary-Treasurer, Miss Louise E. Schutz, Superintendent, Division of Women and Children Industrial Commission, St. Paul, Minn.

Louisville, Ky., was chosen as the convention city for 1930.

#### **Professor F. Clarke, South Africa, appointed to Staff of McGill University**

The following item appeared in the April issue of the *Social and Industrial Review*, South Africa.

"It was recently announced that Prof. F. Clarke of the University of Capetown has accepted an appointment in the McGill University, Montreal. Professor Clarke has also been appointed a member of the Southern Rhodesia Education Commission, which is to inquire into educational matters.

"In Professor Clarke the Department of Labour will lose an active collaborator in many spheres. Professor Clarke was a member of the Capetown Juvenile Affairs Board from its inception in 1916, and chairman from June, 1920, to the end of 1925. He resumed the chairmanship in December, 1928. He was chairman of the National Printing Apprenticeship Committee from June, 1923, to February, 1928, and in September, 1927, he acted as chairman of the National Apprenticeship Conference convened by the Minister of Labour. He was a member of the Advisory Council of Labour since April, 1926.

"Professor Clarke is well-known as a trenchant speaker and writer on social, educational and industrial questions, and he has been a frequent contributor to the *Social and Industrial Review*."

## CANADIAN MANUFACTURERS' ASSOCIATION

### Annual Convention, Halifax, Nova Scotia, June 4-7, 1929

THE 58th annual general meeting of the Canadian Manufacturers' Association was held at Halifax, Nova Scotia, on June 4-7, members representing practically all the industries in every province of Canada being in attendance. Mr. L. W. Simms, of Saint John, N.B., president of the Association, dwelt in his opening address on the interdependence of the various factors in the economic life of Canada. He said that in the broad field of production embracing both rural and urban efforts, there lay great and, as yet, hardly touched opportunities for an unselfish pooling of effort toward the general well-being. One of the most basic of economic truths was the inseparable interdependence of all who produce, distribute and consume. "When men come to fully realize this," declared Mr. Simms, "both the manufacturer and the agriculturist, having passed through a gold cure for selfishness, will cease to allow their relationship to pivot around the bargain counter of mere price and will concentrate on a joint effort to reduce drudgery and enhance efficiency for the man and woman on the farm and in the factory. Why should we have such difficulty in perceiving that, when brains are used to lighten labour on farm or in factory, costs are inevitably lowered and purchasing power heightened for all of us; also that these opportunities are so tremendous and so challenging as to demand the attention of us all in earnest co-operation?"

The principal subjects of interest to labour that were discussed by the delegates were covered by the report of the Industrial Relations committee which was adopted by the Convention. This report is given in part on the next page.

The report of the Membership Committee stated while the volume of industrial production was steadily increasing, and many established industries were enlarging their output, there appeared to be no increase in the number of new concerns entering the manufacturing field in Canada.

Striking indications of the growth of public sentiment in favour of Canadian goods were noted by the Executive Committee in its report on the "Produced in Canada" campaign. Statements made recently by some of the greatest Canadian enterprises that materials and supplies used in extensive building and contracts were to be of Canadian production were given as indications of this trend, and special reference was made to the very large orders for railway equipment that had been

placed in Canada. These provided much employment, not only in the factories directly supplying such equipment, but also in nearly a thousand other factories that made materials and supplies. The influence of the "Produced in Canada" campaign was steadily extending and there was an increasing tendency to specify Canadian products in preference to those made in other countries, the report said.

On the question of manufacturing in government institutions, the committee deprecated any tendency to enlarge such manufacturing operations, believing these should be carried on by private industries. It was admitted that a reasonable amount of manufacturing in prisons and hospitals for use in institutions was permissible, as it provided occupation for the inmates, but such manufacturing should not be carried to a point where it took away employment from Canadian workmen. From reports received during the year it appeared that there was no appreciable increase in manufacturing in institutions, but there had been some increases in manufacturing by public-owned or semi-publicly-owned organizations.

#### Officers Elected

President:—R. J. Hutchings, Calgary, vice-president of the Great West Saddlery Company, Limited.

First vice-president:—Mr. Elmer Davis, Kingston, Ontario; second vice-president, Mr. W. H. Miner, of Granby, Quebec; and treasurer, Mr. T. F. Monypenny, Toronto.

Chairmen of the committees are as follows: Tariff committee, Mr. J. O. Thorn, Winnipeg, Manitoba.

Transportation committee, Mr. C. A. Watrous, Brantford.

Insurance committee, Mr. H. M. Jauquays, Montreal.

Membership committee, Mr. F. R. Whittall, Montreal.

Legislation committee, Mr. W. S. Morden, Toronto.

Industrial relations committee, Mr. L. L. Anthes, Toronto.

Education committee, Mr. Henri Rolland, Montreal.

Commercial intelligence committee, Mr. W. R. Dryna, Hamilton.

Publishing committee, Mr. W. C. Coulter, Toronto.

An executive council of eighty-two completed the elected membership of the directing board.

## Report of the Industrial Relations Committee

The report of the Industrial Relations Committee, which was adopted by the convention, opened with an outline of the work of the Eleventh Session of the International Labour Conference held at Geneva in 1928 (*LABOUR GAZETTE*, July, 1928, page 738). It then proceeded with the following outline of the chief events of the past year affecting the relations of employers and workers in Canada.

### Workmen's Compensation

#### (a) Saskatchewan.

Following the report of the Committee which last summer made an investigation of the whole question, the Saskatchewan Legislature at its last session passed a compulsory state insurance workmen's compensation act closely modelled on the Ontario Act, the rate of compensation being 66½% of the average wages as in Ontario. The running trades, which had opposed the introduction of the compulsory state system were given the right to come under the Act or stay out as they pleased. It will be recalled that the Saskatchewan members of the Association were unanimously in favour of the introduction of the compulsory state insurance system, so that the general result is satisfactory to them.

#### (b) Quebec.

The new Workmen's Compensation Act has only been in force since Sept. 1, 1928, so that it is not yet possible to form an opinion whether or not it is going to be an unqualified success. In the meantime its constitutionality has been called in question, on the point whether the Quebec Legislature had power to take away the right to sue at common law. The decision, according to the advice your Committee has received, is likely to uphold the constitutionality of the Act, since workmen's compensation comes under the heading of "property and civil rights," in respect of which, when a provincial legislature is legislating, it is exercising what are virtually sovereign powers, in other words it can do what it likes.

### Old Age Pensions

Your Committee has during the past year given considerable time to the question of old age pension legislation. It will be recalled that the Dominion Parliament three years ago passed an Act granting a pension of \$20 per month to all persons of 70 and over whose incomes do not exceed \$365 a year. No contribution is required from the beneficiaries. The cost is met half by the Dominion Government and half by any province which passes auxiliary legislation. The provinces of Ontario and

Alberta this year followed the example of British Columbia, Saskatchewan and Manitoba in passing old age pensions acts, ancillary to the Dominion Act, so that there are now five provinces which have this type of legislation. Your Committee after securing the views of the Association membership and studying the experience of the various countries which have adopted legislation of this type, came to the conclusion that the present day trend is markedly away from the non-contributory, deserving-poor type of legislation and in the direction of the contributory, "all-in" system. Since the first old age pensions act was passed in Germany 40 years ago, not a single country which began with a contributory "all-in" system has ever seen fit to discard it. Germany for example began with this system 40 years ago, and has adhered to it ever since. In the second place, a number of countries, which began with the non-contributory, deserving-poor system have found it wanting and have turned to the contributory, "all-in" system. Cases in point are Great Britain and Belgium. In the third place it is significant that, with the exception of Uruguay and Norway, no country in the last ten years has adopted the non-contributory, deserving-poor system; while some ten countries including Italy, Czechoslovakia, Bulgaria, and Greece, have, after consideration of the experience of their predecessors in this field, adopted the contributory, "all-in" system.

The reasons given for the comparative failure of the non-contributory, deserving-poor type of legislation are that it puts a premium on thriftlessness and fraud. What Charles Booth, the well-known English sociologist predicted 20 years ago, has proved to be true, namely that "to select the poor is to pauperize."

In these circumstances the chief reason why the deserving-poor system still persists in presumably because the alternative, i.e., the "all-in" system, would be too expensive. The solution of this difficulty, however, your Committee believes, is to adopt the contributory system which should serve the triple purpose of keeping down the expense, eliminating the incentive to thriftlessness and stimulating instead of sapping, self-reliance and independence.

In view of the experience of practically all the countries which have entered this field of legislation, your Committee is inclined seriously to question whether Canada has been wise in adopting the non-contributory, deserving-poor system.

Representations to the above effect have been made by your Committee but the difficulty in which the provinces find themselves is that, if they are to secure the financial assistance offered by the Dominion Act, they must model their legislation upon that of the Dominion. In these circumstances your Committee considers that the best course is to try to have the Dominion Act amended along the lines mentioned above, viz., by abandoning the non-contributory, deserving-poor principle and incorporating the contributory "all-in" principle.

It remains to report that the Quebec Government which is opposed to old age pension legislation has received legal advice from eminent counsel that the constitutionality of the Old Age Pension Act is open to grave doubt. There is likely therefore to be a reference to the courts to determine whether or not the Dominion Act is ultra vires of Parliament.

### Unemployment Insurance

It will be recalled that at the last Annual Meeting, your Committee was instructed to make a further study of unemployment insurance legislation and prepare a brief along the lines of the resolution passed last year to the effect that it would be a mistake for Canada to adopt this type of legislation. This has been done, and your Committee is in a position to make representations if and when legislation of this type is introduced in any of the provinces.

In the meantime, however, there is little prospect of any of the provinces taking this step. Mr. Heenan, the Dominion Minister of Labour, has recently reported to the Parliamentary Committee on Industrial and International Relations that the provinces have been sounded by the Dominion Government but none of them is "very enthusiastic" about unemployment insurance legislation, particularly in view of the fact that it is not yet clear how the recently-passed old age pensions legislation is going to work out.

In these circumstances your Committee proposes to keep in close touch with the situation and to make representations along the lines laid down, if and when occasion arises.

### Industrial Disputes Legislation

It will be recalled that four years ago the Toronto Hydro-Electric Commissioners succeeded in having the Industrial Disputes Investigation (Lemieux) Act declared ultra vires of the Dominion Parliament so far as disputes limited in their scope to a particular province were concerned.

Following this the Dominion Parliament amended the Lemieux Act by making it applicable to purely provincial disputes only in the event of the province in question passing legislation that it should so apply. Three of the Western provinces, namely British Columbia, Saskatchewan and Manitoba, thereupon passed legislation so providing. Alberta on the other hand, instead of following the example of the other three, passed an entirely new Industrial Disputes Act, which was almost identical with the Lemieux Act except in one important particular, namely that instead of being made applicable only to railways, mines and public utilities, it was made to apply to employment of all kinds, provided the employer in question had ten or more employees.

This feature of the Alberta Industrial Disputes Act was vigorously objected to by the Association on the ground that while compulsory arbitration legislation of the kind in question might be desirable in the case of great public services such as railways, the suspension of which would cause injury to the general public, no such need could be shown in the case of disputes in purely private industry, and that the application of the compulsory arbitration principle to general industry constituted an unwarranted interference with an employer's management of his own business. In spite of the Association's opposition the Alberta Industrial Disputes Act was passed without the objectionable feature being eliminated.

The same question has now come up in Manitoba where organized labour is urging that Manitoba should follow the example of Alberta. Your Committee is still of the opinion that this type of legislation should not be made applicable to general industry and steps are being taken to give our Manitoba members all possible assistance in opposing the bill. Apart from the argument already mentioned that no need for compulsory arbitration machinery exists in the case of general industry, experience has shown, in the opinion of your Committee, that where such machinery is in existence, there is a tendency for repeated recourse to be had to it, with the result that an employer may find himself frequently called upon to take part in possibly long-drawn-out arbitration proceedings, without any guarantee that the settlement will have any permanence—all of which must tend to embitter rather than improve the relations between employer and employees.

All things considered, therefore, and chiefly for the simple reason that no need for any such innovation has been shown, your Committee has taken the view that this legislation should be opposed in Manitoba as it was four

years ago in Alberta. As the Manitoba Legislature is, at the time of writing, still in session, it is impossible to say what the result will be.

### Eight Hour Day Legislation

#### (a) *General.*

It will be recalled that the Eight Hour Day Draft Convention was passed at the International Labour Conference held in Washington, November, 1919. Up to the present, however, it has been ratified by none of the chief industrial countries. One of the reasons for this has been the very ambiguous nature of a number of its provisions. In March, 1926, representatives of Great Britain, France, Germany, Italy and Belgium held a meeting in London with a view to reaching an agreement as to the ambiguous terms and provisions. Certain progress was made but none of the five countries has since seen fit to ratify the Convention except Belgium.

At a meeting of the International Labour officials held in Geneva, Sir Arthur Steel-Maitland, British Minister of Labour, in response to a challenge thrown out last year, made a statement of the reasons why Great Britain had refused to ratify the Convention. He emphasized that, important as it was that a national law should be clear and unambiguous, it was absolutely imperative that an international law should be without ambiguity.

Among the points in respect of which Great Britain found the Convention ambiguous were the meaning of the words "hours of work," "intermittent work," "week" (that is whether Sunday was included or excluded), "accident and force majeure" in Article 3 (which provides that the hours of work may be exceeded in case of "accident" or of "force majeure"), the question of making up lost time and the rate of payment applicable in such cases, the question of the limits of "over-time" as applied in railways, the question whether Article 5 (dealing with "exceptional cases") could be applied to the building trade, etc., etc. The significance of this in the opinion of your Committee is as showing the extreme difficulty of dealing with the eight hour day question on an international basis. The Eight Hour Day Draft Convention was passed unanimously, with the exception of the two dissenting voices, of the employer delegates from Canada (Mr. S. R. Parsons) and Norway; and yet ten years later we find that none of the chief industrial countries of the world has seen fit to ratify it.

The fact that such a situation exists ten years after the passing of the Hours Convention is, your Committee feels, a striking vindication of the stand taken by Mr. Parsons on behalf of the employers of Canada at the 1919

Washington Conference viz., that while eight hour day conditions might be, and indeed were, proper and desirable in certain industries, the question was not one which could be dealt with by compulsory legislation on an international basis.

#### (b) *Canada*

The only province in Canada which has this year considered the eight hour day question is Alberta. It will be recalled that two years ago an attempt was made to pass a compulsory eight hour day law in Alberta but when formidable opposition developed on the part of the farmers and merchants as well as the manufacturers, the project was dropped. This year a Government bill was again introduced, and one of the chief arguments used in its support was that British Columbia had had eight hour day legislation for several years with no appreciable ill effects on industry. Steps were at once taken by the Alberta Branch in collaboration with the British Columbia Secretary to show the Alberta Government that the only reason the British Columbia legislation had not proved more onerous and hampering to industry was that some seven hundred exemptions had been allowed from its provisions. In the result, the bill was dropped for this year, though there is reason to believe that an attempt will be made to have it passed next year.

### Thirteen Month Calendar

It will be recalled that at last year's annual meeting, the association went on record as approving the adoption of a calendar of thirteen months with twenty-eight days each instead of the present system of twelve months of unequal length. The association's action was reported in due course to the Canadian Government and to the League of Nations in Geneva. Your committee begs further to report that the movement for the adoption of the thirteen month calendar is making rapid progress. National committees are being set up in the various countries to study the report which has been made on the subject by the League of Nations Committee, and increasing interest in the proposed change is being shown by business men all over the world, particularly in the United States.

### Recent Industrial Relations Developments

The following summary of recent developments in the industrial relations field in the United States, seemed to your committee worth bringing to the attention of the association.

1. *Works Councils.*—The number of companies in which works councils have been set up has increased from 145 in 1919, to 399 in 1928.

The number of employees affected has increased from 403,765 in 1919 to 1,547,766 in 1928.

2. *Employee Stock Ownership.*—The number of companies with employees stock ownership schemes has increased from 3 in 1900 to 189 in 1927. Not less than a billion dollars of United States securities are to-day owned by approximately 800,000 employees,—an average of \$1,250 per employee.

3. *Group Life Insurance.*—It is estimated that not less than \$8,500,000,000 of such coverage is now in effect, covering nearly one-quarter of all industrial employees.—an average individual coverage of about \$1,200.

4. *Pensions.*—More than 400 companies employing 4,000,000 workers have pensions' plans in operation.

That a similar development is taking place in Canada is shown by an Industrial Welfare survey, which has recently been made by the Ontario Government, covering 300 firms, and some 185,000 employees. This showed the situation to be as follows:—

1. Sixty-one per cent of the firms had pension schemes of various kinds.

2. Thirty-five per cent of the firms had group insurance schemes.

3. Twenty-six per cent of the firms (covering half of the employees) had insurance schemes other than group insurance.

4. Twenty-five per cent of the firms had bonus systems of various kinds.

5. Fifteen per cent had schemes for sale of stock to employees.

6. Twenty-one per cent, employing 48 per cent of the workers, had Works Councils and Shop Committee schemes in operation.

## NATIONAL RESEARCH COUNCIL

### Annual Report for Financial Year 1927-28

THE annual report of the president of the National Research Council (The Honorary Advisory Council for Scientific and Industrial Research) details the extent and cost of its operations under The Research Council Act during the year ending March 31, 1928. The origin and scope of the National Research Council were described in the *LABOUR GAZETTE*, June, 1926, page 558. Generally, the object of the organization is to promote the utilization of the natural resources of Canada.

The first section of the report describes the activities of the Council during the fiscal year 1927-28. These are broadly divided as follows:—

(1) The organization and stimulation of co-operative research work on major problems through associate research committees, thus utilizing to the fullest possible extent the scientific man power and the scientific equipment of universities and other laboratories in Canada.

(2) The stimulation of research work, and the utilization of the scientific man power and equipment of Canadian laboratories in connection with individual research problems through the awarding of research grants for special equipment, or technical assistance to qualified research men working in established laboratories.

(3) The post-graduate training of research workers through the awarding of graduate scholarships in science and research to university graduates who have completed a university course in science with distinction.

At the close of the year under review, there were organized under the Council twenty-four associate committees, with a total membership of 363 persons. During the same period, there were in active operation in laboratories spread from coast to coast 105 specific investigations carried out under 83 research grants, each of which was directed by a highly trained research worker specially qualified to undertake work on the particular problem entrusted to him. These investigations were carried out in 25 divisions of science at ten Canadian universities and in twelve Government and industrial laboratories.

The departments of science in which these investigations were undertaken were as follows: Physics, 21 investigations; chemistry, 16; botany, 7, bacteriology, field husbandry and mechanical engineering, 6 investigations each; pathology, plant pathology, and plant breeding, 4 investigations each; biochemistry, plant biochemistry, biology, geology, mining engineering, and electrical engineering, three investigations each; civil engineering, two investigations; biophysics, entomology, aerodynamics, zoology, oceanography, pharmacology, and ceramics, one investigation each.

Particulars are tabulated concerning the 88 researches in progress during 1927-28, as well as the 56 additional researches completed in previous years.

Section Two of the report records the activities of the various associate committees appointed by the Council for the specific purpose of organizing research on major problems, and

for the stimulation of such work in Canadian laboratories. At the close of the year under review, there were operating under the auspices of the National Research Council, 16 associate research committees working on the following major problems: cereal rust; field crop diseases; grain research; accurate plot work in agricultural research; storage of fruit in warehouses; tuberculosis in man and animal; aeronautics; heating and insulation; the development and utilization of Canadian magnesite; classification of Canadian coals, the development and utilization of Canadian wool; food research; the reseeded of burned-over and cut-over forest areas; the health hazard of spray-painting; and oceanography.

Another group of associate committees, appointed by the Council, are mainly advisory in character. It is the function of each such committee to keep the Council constantly in touch with important research problems requiring attention, and with the advances made from time to time in the particular department of science which it covers.

The following eight associate committees of an advisory nature were in existence at the end of March, 1928: Associate Committee on Physics and Engineering Physics; Associate Committee on Mining and Metallurgy; Associate Committee of Chemists; Associate Biological Committee; Associate Committee on Engineering Standards; Associate Library Committee; Associate Committee for British Columbia and Associate Committee on Nitrogen Fixation.

An analysis of reports on assisted researches is given in Section Three, while in Section Four the various post-graduate research scholarships are outlined. Three classes of scholarships are awarded by the National Research Council, namely, bursaries, studentships and fellowships, having an annual value of \$750, \$1,000 and \$1,200 respectively. These awards are intended to enable students who have graduated with distinction from a university to continue their training in science until they have qualified for a Ph.D. degree, three years being the maximum assistance granted to an individual candidate under any combination of awards. These scholarships are awarded to the best qualified applicants therefor. The minimum qualification for a bursary is graduation with distinction from an approved university. An applicant for a studentship must have had at least one year of post graduate research experience, while fellowships are awarded only to persons who possess very high qualifications and who have

demonstrated beyond question their ability to carry on independent research.

During the year, five fellowships, sixteen studentships and twenty-seven bursaries were awarded and held under the auspices of the Council. These 48 awards were won by graduates of eleven Canadian universities as follows; University of British Columbia, two awards; University of Alberta, three awards; University of Saskatchewan, two awards; University of Manitoba, three awards; University of Toronto, eight awards; University of Western Ontario, four awards; Queen's University, five awards; McGill University, sixteen awards; and Dalhousie University, five awards.

Emphasizing the necessity for technically-trained research workers this section of the report concludes as follows:—

"The National Research Council clearly recognizes that it is essential to build up in Canada a corps of thoroughly trained research workers capable of undertaking and directing scientific research. The Council consequently regrets exceedingly that there are so few scholarships available in Canada to promising university graduates. Until the existing situation in this respect has been greatly improved it is inevitable that many of our most brilliant graduates will accept awards available abroad and complete their training in foreign countries with the obvious result that their services are generally lost to Canada.

"In view of these facts the National Research Council would urge that all business organizations, societies, and individuals who believe that scientific research is an essential factor in the development of Canadian industries and natural resources, give serious consideration to the possibility of establishing in Canada an increased number of graduate scholarships for scientific research tenable at Canadian universities. Such scholarships would unquestionably keep in Canada many promising university graduates who at present are forced to go abroad and use their specialized training and ability to assist in the development of foreign industries."

*Finance.*—The total expenditure during the year amounted to \$201,485, which was distributed among various activities and resources of the Council as follows:—

Approximately 80 per cent of this expenditure was devoted directly to the prosecution and stimulation of research work in Canada, the remaining 20 per cent being expended on general administration, travelling expenses and salaries.

## CANADIAN GOVERNMENT ANNUITIES

*Address delivered over the Canadian National Railways Radio System by Mr. E. G. Blackadar,  
Superintendent of Canadian Government Annuities*

**T**HROUGHOUT the Dominion of Canada there is a large number of retired people who are dependent on a moderate income and are reliant partly, if not altogether, on their children or their relatives for their maintenance. There is also a large number of elderly people without friends or relatives who are being maintained at the public expense. It was to relieve this condition of affairs that the Canadian Government Annuities Act was passed. The late Sir Richard Cartwright conceived the idea and was the founder of the system.

The number of persons purchasing annuities is rapidly increasing and the Department of Labour is desirous of broadening out the system so that more people may avail themselves of this splendid method of making provision for old age, and in order to insure comfort and independence for persons who find it necessary to retire from active employment.

The following illustration will indicate how cheaply a young person may provide himself with a sufficient income when his earning days are over. A young man aged 20, by paying in twenty-five cents a week, could purchase a Government Annuity of \$461.33 beginning at age seventy, and if he were to make a regular saving of fifty cents a week, he could secure an annuity of \$922.66. Does it not seem reasonable to expect that the average person could make this small deposit without hardship to himself? The reason that the Government is able to guarantee such a large return on these annuities is on account of the compound interest with which the Government accumulates these small premiums. In one year alone the amount of interest at 4 per cent would be negligible, but during the number of years in which this young man will be able to earn and save before he reaches the retiring age of 65, the premiums and compound interest have accumulated to a considerable sum. In other words, the saving of only 25 cents a week is accumulated with interest to over \$2,000. This will show you what systematic savings will do, and explain one of the principles underlying the Canadian Government Annuities system. In this connection I may also say, that you are really giving your money to the Government to use and to earn interest for you, and when you are old, the Government will have at your credit a sum of money which will be paid to you with interest during the remainder of your life.

Government Annuities are sold on various plans, and the plan which I wish to describe to you in the short time remaining is the Deferred Last Survivor Annuity. This plan should appeal to a young married man as it provides both himself and his wife with an income which will begin at the retiring age and will then be payable as long as both live, and to the survivor as long as he or she lives. For instance, a young man aged 30 and his wife a year younger could secure an annuity to begin when he reaches the age of 65 and payable thereafter as long as he lives, or as long as his wife lives, of \$600 a year, or \$50 a month, by making a monthly premium payment of only \$8.03. If the husband should die before the annuity has begun, the amount at the credit of both annuitants could be used to purchase an annuity, to begin immediately, on the life of his wife. If both of them should die before the annuity has begun, all money paid in, with 4 per cent compound interest added, would be refunded to heirs.

It is realized that persons may not be able to make regular savings owing to lack of employment, ill health, etc., and provision has, therefore, been made that, if for any reason a person who is purchasing a deferred annuity is unable to make his premium payments regularly, he does not forfeit what he has already paid in. The arrears may be made up later, but if the annuitant is unable to do so, when the annuity begins he receives a proportionate amount based upon the payments he has made. On the other hand, if an annuitant is able to make larger premium payments than necessary to secure the amount of annuity for which he has made application, upon the maturity of the contract he receives a proportionately larger amount of annuity.

You may say that I can put my savings in stocks or other investments which will give me a better return. Let me here point out that in order to receive an income of \$600 a year, to begin at age 65, it would be necessary for you to accumulate the sum of \$12,000, and to invest it at 5 per cent. It would, therefore, be much easier if you were to take advantage of the Government Annuities System to provide for your old age.

If a young married couple were to purchase the annuity referred to, they would be required to save only the amount of \$3,372.60, and the same result would be attained. I may also say that, if either the husband or wife lived to be 80 years of age, they would have received back

\$9,000. If either of them lived to be 90 years of age, a thing which is not uncommon, they would receive back \$15,000.

There are, of course, of other plans of annuity designed to meet the needs of older persons who desire to retire now and have their annuity

begin at once. All these plans are described in an illustrated booklet descriptive of the system, which may be obtained, free of charge, by calling at your nearest post office or by writing to the Annuities Branch, Department of Labour, Ottawa. No postage is required on your letter.

## MINIMUM WAGES FOR WOMEN IN ONTARIO

### Orders governing Wholesale Houses, Elevators, and Seasonal Industries

THE Minimum Wage Board of Ontario published three new orders in the *Ontario Gazette*, May 25, 1929, governing respectively female employees in wholesale houses, warehouses, etc.; female elevator operators; and female employees in certain seasonal canning and other factories. It will be recalled that at the recent session of the Legislature of Ontario the Minimum Wage Act was amended so as to enable the Board to give effect to a new provision of the Factory, Shop and Office Building Act, the Board being authorized to establish a wage for all time worked by a child, youth, young girl or woman in excess of the statutory number of hours in any one day or week. The new orders are made under the authority of the Act as thus amended. (LABOUR GAZETTE, May, 1929, pages 486-487).

*Wholesale Houses and Warehouses.*—The new order provides that "female employees in wholesale houses, warehouses, and the like, shall be included with office workers in the orders governing them." This order becomes effective on July 1, 1929. The orders governing office workers were outlined in the LABOUR GAZETTE, May, 1923, page 510.

*Elevator Operators.*—The following regulations are to be enforced regarding female employees operating elevators:

1. There shall be a learning period of two weeks during which no minimum wage rates shall be enforced.

2. After the expiration of two weeks no female operating an elevator shall be paid wages at less rates per week than as follows:

Twelve dollars and a half in the City of Toronto.

Twelve dollars in cities of thirty thousand population or more, excepting Toronto.

Eleven dollars in cities and towns having ten thousand population or more and less than thirty thousand.

Ten dollars in cities and towns having four thousand population or more and less than ten thousand.

Nine dollars in towns and villages having one thousand population or more and less than four thousand.

Eight dollars throughout the rest of the province.

*Seasonal Employees in Canneries, etc.*—The following regulations will be enforced respecting female employees in factories canning, packing and evaporating fruits and vegetables which operate seasonally:

1. No female employee who is over eighteen and less than sixty years of age shall be paid wages at less rates per hour than as follows:—

Twenty-five cents in the City of Toronto.

Twenty-three cents in cities of thirty thousand and population or more, excepting Toronto.

Twenty-two cents in cities and towns having five thousand population or more and less than thirty thousand.

Twenty cents in towns and villages having two thousand population or more and less than five thousand.

Eighteen cents throughout the rest of the province.

2. No female employee who is less than eighteen or more than sixty years of age shall be paid wages at less rates per hour than as follows:

Twenty cents in the City of Toronto.

Seventeen cents in cities of thirty thousand population or more, excepting Toronto.

Fifteen cents throughout the rest of the province.

3. These wage rates shall apply to each time worker. As regards pieceworkers it shall be sufficient if sixty per cent of the pieceworkers in any factory receive wages at these rates. If, however, less than sixty per cent of the pieceworkers in any factory receive wages at these rates, these rates shall apply to all the pieceworkers.

4. An employee required to wait on the premises shall be paid for the time thus spent.

5. Lodging shall not be charged for in excess of a rate of one dollar and a half per week; no board in excess of a rate of four dollars and a half per week; nor single meals in excess of a rate of twenty-five cents per meal.

**PROVINCIAL APPRENTICESHIP COMMITTEE OF ONTARIO**

**Ruling Governing the Plumbing and Steamfitting Trades**

At the last meeting of the Ontario Provincial Apprenticeship Committee, held at Toronto, on May 28, it was decided that the minimum wage scale for apprentices in all designated trades, except plumbing and steamfitting, shall be as follows.

- For the first year—  
20% of the prevalent journeymen rate.
- For the second year—  
25% of the prevalent journeymen rate,
- For the third year—  
35% of the prevalent journeymen rate.
- For the fourth year—  
50% of the prevalent journeymen rate.

The rates set forth in the contract, however, must be in the form of dollars per week or cents per hour, and the wages so set forth are to remain fixed throughout the term of the contract. The percentage rate is used merely as a guide in determining the cents per hour or dollars per week to be paid, and the prevalent journeymen rate is that which prevails at the time the contract is entered into.

In order that it may be known to the Committee what minimum rates are acceptable for registration, the district inspectors are directed to report as soon as possible, the prevalent rate for journeymen in each designated trade for each city and large town in their respective districts. Where a municipality is fairly well organized, the rates are those set forth in trade agreements, but where the trades are not well organized it may be necessary to secure rates from several firms in order to strike an average or estimate a median rate.

The Committee also decided that the minimum rate for the plumbing and steamfitting trade shall be:—

For the first year... ..	\$ 7 00
For the second year... ..	\$ 9 00
For the third year... ..	\$11 00
For the fourth year... ..	\$15 00

until Dec. 31, 1929, after which date the percentage minimum as set forth above will apply to these two trades. It is understood, of course, that wherever an agreement affecting wages has been entered into between the apprentice and his employer before the Act is put in operation in any community, these rates may be used in the Contract of Apprenticeship, covering the balance of time to be served. All new apprentices, however, and those not serving under agreement, or indenture, must receive wages equal to or in excess of the above mentioned minimums.

Another decision of the Committee was that employers in the plumbing and steamfitting trades shall be given until October 1, 1929, to indenture all minors in their employ. Any employer retaining a minor who is not regularly indentured and registered by October 1, may be prosecuted in accordance with section 21 of the Act.

All plumbing and steamfitting employers throughout the province, have been notified of this decision. Boys dismissed as a result of the ruling may re-enter the trades at the first opportunity and will be given credit for time served as apprentices, if satisfactory to the employer.

The Committee has approved a form for the Certificate of Apprenticeship, or diploma, to be issued to all apprentices who successfully complete their training under the provisions of the Act.

The total number of apprentices registered under the Act up to June 6, was 657. These were distributed as follows:

Brick layers and masons. . . . .	104
Carpenters. . . . .	83
Painters and decorators. . . . .	25
Plasterers. . . . .	48
Plumbers. . . . .	198
Steamfitters. . . . .	82
Sheet Metal Workers. . . . .	42
Electricians. . . . .	75

**Labour Educational Association of Ontario**

The Labour Educational Association of Ontario held its 27th annual convention at St. Thomas on May 24, with 82 delegates present, representing affiliated organizations from various sections of the province. Secretary-treasurer Joseph T. Marks in his report reviewed the activity of the association since the last convention and showed that during that time there had been substantial increases both numerically and financially.

The resolutions adopted included the following recommendations:—

Amendment of the Federal Civil Service Act to allow the fixing of salaries of postal employees by the Minister in charge instead of by the Civil Service Commission as at present;

Payment of court witnesses at the same rate as jurymen;

Stricter enforcement of the provisions of the Minimum Wage Act respecting the posting of the Board's orders;

Enforcement of building by-laws with a view to meeting conditions created by the erection of the "sky-scraper" type of structure;

Immediate appointment by municipalities of local old age pension boards, in order that the Old Age Pensions Act may become operative in Ontario with the least possible delay;

Establishment of full time health services in counties throughout the province, and the fullest co-operation between the federal, provincial and municipal authorities;

Prohibition of the use of the paint spraying machines by students in vocational schools;

Amendments to the Alien Labour Act and to the immigration regulations so as to prevent importation of contract labour unless certified as necessary by the Employment Service Council of Canada.

Provincial legislation making the Industrial Disputes Investigation Act fully applicable to Ontario;

Cadet training in schools was condemned, a system of physical training instead being proposed. Satisfaction was expressed at the success of the Plasterers and Lathers' International Unions of Toronto in retaining the five day week, and the principle of the five-day forty-hour week was endorsed. The convention condemned the alleged action of the National Union of Painters of Toronto in signing an agreement with the employers for a lower wage rate than that sought by the International Union while the latter was on strike. The convention referred to the execu-

tive committee a resolution concerning the problem created by the growing tendency in industry to eliminate workers of over forty-five years of age, and asking the Federal Government to obtain accurate data by questionnaires in this regard. Another resolution that was referred to the executive called for the enactment of legislation making compulsory the repairing in Canada, on a pro rata basis, of rolling stock used by United States railroads operating in this country.

In recognition of services rendered the association, secretary-treasurer Marks was voted the sum of \$1,500. In thanking the delegates, Mr. Marks stated that the money would be used to further the interest of the association.

A report, showing the work engaged in by the United Women's Educational Federation of Ontario, was presented by Mrs. J. Laing of Toronto, secretary of the organization. The activities of the Federation were endorsed by the convention and the delegates were urged to assist in this work wherever possible.

Addresses were delivered by Fred. W. Baer of Washington, D.C., general president of the International Association of Fire Fighters, and George Keen, Brantford, Ont., secretary of the Co-operative Union of Canada.

Officers elected were: president, Ald. Rod Plant, Ottawa; vice-president, Larry O'Connell, Toronto; secretary-treasurer, Joseph T. Marks, Toronto.

Niagara Falls, Ont., was selected as the convention city for 1930.

## WORKMEN'S COMPENSATION IN ONTARIO

### Annual Report of Board for 1928

**A**NOTHER increase in the number of accidents over the preceding years was indicated in the report of the Workmen's Compensation Board for Ontario for the year 1928, which is the fourteenth year of the operation of the Act.

*Number of Industrial Accidents:*—The number of accidents reported during 1928, totalled 79,398, as compared with 71,979 in 1927, or an increase of nearly 33½ per cent over the accidents in 1925, which numbered 60,012. Analysing the possible reasons for the increase in accidents, the report states that one explanation for part of the increase is the active state of industry as a whole throughout the province. The increased number of accidents is also partially attributed to increased reporting of small accidents which either do not involve payment or involve payment of only medical aid. However, a request is made to employers to "carefully note this increase in

the number of accidents and make investigation as to its causes, and ascertain whether by increased efforts for accident prevention and by care, both on the part of the employer and workman, this number might be reduced."

The actual number of employers under the Act decreased from 24,700, at the end of 1927, to 23,685 for 1928. This was accounted for by the decreases in number of employers in the lumbering and general construction classes, but as the amount of the wage rolls in both classes showed an increase it was regarded as not indicating any lessening of industry in connection with such classes, but rather the carrying on of these industries by the larger employers of labour. Although the number of employers decreased, the wage expenditures again increased considerably, being \$503,392,000 in 1928, as compared with \$440,578,000 in 1927, or about a 14 per cent

increase. Practically every class showed an increased wage expenditure.

In \*Schedule 1 industries (in which medical aid is paid by the Board), out of 61,384 allowed cases, in which payments of any kind were made, 30,298, or about 50 per cent, involved medical aid only, and 28,305 involved temporary disability only, leaving 2,436 cases in which awards were made for permanent disability. Commenting on this condition and the necessity for reducing the accident total, the report states as follows:

"There is a chance of abuse of the privileges of the Act where cases which are first aid cases only and do not need the attendance of a doctor are treated as cases for medical aid, and which may readily increase the number of accidents reported to the Board. In any event, in spite of any explanation, the fact remains that the number of accidents is steadily increasing, and both employer and employees should put forth every endeavour to change the situation and to endeavour to avoid all accidents which can be avoided by greater care in the kind of machines and guards supplied and in operation of plants generally."

Of the total of 79,398 accidents reported in 1928, compensation or medical aid was allowed in 66,532 cases as compared with 61,078 cases in 1927. Out of the total cases allowed 453 were death cases, 9 were permanent total disability cases, 2,724 were permanent partial disability cases, 33,048 were temporary disability cases, and 30,298 were cases which entailed medical aid only.

Again the month of August recorded the greatest number of accidents, August, 1928, showing a total of 8,022, as compared with 7,010 in August of 1927. The fatal accidents reported during the year numbered 553 as compared with 429 during the year 1927.

*Benefits*:—The total amount of benefits awarded under the Act during the year 1928 was \$7,067,946.93, as compared with \$6,084,654.87 in 1927, the increased number of accidents showing an increase of nearly \$1,000,000 in benefit awards.

Out of the total benefits so awarded in 1928, \$5,732,196.10 were in Schedule 1 industries, \$756,549.06 in Schedule 2 industries, and \$579,201.77 in Crown cases. In Schedule

2 industries, medical aid is paid by the employer, but out of \$5,732,196.10 awarded in Schedule 1 industries, medical aid amounted to \$1,166,507.54 again showing an increase of over \$100,000 over the medical aid paid in 1927 and representing a little over 20½ per cent of the total amount awarded for benefits in Schedule 1.

The total benefit awarded from the commencement of the Act to the end of 1928, amounted to \$70,468,049.15, while the total accidents reported during the same period numbered 719,307.

*Average Rates of Assessment*:—Based on the provisional wage expenditure, the average rate of assessment in all classes in Schedule 1 shows an increase from the adjusted rate of \$1.20 in 1927 and \$1.22 for 1926 to \$1.33 per \$100 of payroll in 1928. These figures emphasize, the report observes, the absolute necessity of lessening as far as possible the increase in accidents.

*Administration Expenses*:—The administration expenses for the year amounted to \$317,247.35, as compared with \$283,718.51 in 1927. This increase is accounted for by the fact that during the year the Board decided to give the staff the benefits of group insurance as there is no pension scheme applicable to the Board's employees, and 50 per cent of the cost of group insurance is paid as part of administration expenses. Also one of the legislative amendments has required the salaries of the commissioners to be paid out of the Accident Fund instead of out of the Consolidated Revenue Fund of the Province. These two causes, together with the increased expense created by the extra amount of work to be handled, fully explain this increase. This conclusion is confirmed also by the percentage relation of administration costs to the amount of benefits awarded, the total administration expense for 1928 being 4.49 per cent of the total benefits awarded, as compared with 4.66 per cent in 1927 and 4.77 per cent in 1926. The percentage in Schedule 1 industries for 1928 was 4.76 per cent of the benefits awarded, and in Schedule 2 and Crown cases 3.33 per cent as compared with 4.80 per cent in Schedule 1 and 4.04 per cent in Schedule 2 and Crown cases for 1927.

*Legislative Amendments*:—There were two legislative amendments during the year affecting the work of the Board. Chapter 26 of the Ontario Statutes for 1928 gives the Board power to divert from a workman in whole or in part the compensation to which he is entitled for the support of his wife and children where he deserts his wife and removes from the province, leaving them without

\* Schedule 1 comprises industries under the collective liability system, the employer not being individually liable for accidents to his workmen, but being assessed to provide a general fund out of which accidents occurring in the several classes of industry throughout the province are taken care of. In Schedule 2 industries the employer is individually liable for accidents to his workmen. The greater number of accidents are under schedule 1.

any good means of support, so that they are apt to become a charge upon a municipality or private charity, or where such workman, although residing in Ontario, is not supporting his wife and children and an order has been made against such workman by a court of competent jurisdiction, so that if a workman now fails in his obligation to support his wife and family the Board may protect them by diversion of his compensation.

Amendments were also made to the Workmen's Compensation Act and to the Mining Act requiring that all workmen employed underground in any mine in Ontario shall be examined by a medical officer appointed under the provisions of The Workmen's Compensation Act at least once in every twelve months, and the Board is authorized to appoint the necessary medical officers to carry out the provisions of this Act, and the remuneration of such officers is directed to be imposed upon the employers in the mining class to be paid out of the levies imposed in respect of silicosis.

*Safety Associations:*—The Board spent during the year for furthering safety work the sum of \$115,620.55, as compared with \$117,981.51 during the year 1927. Of this amount \$19,900 was paid to the Lumbermen's Safety Association, \$10,000 to the Ontario Pulp and Paper Makers' Safety Association, \$78,720.54 to The Industrial Accident Prevention Associations, and \$7,000 to the Electrical Employers' Association of Ontario. While the payments made are slightly less, it is stated that the work has been carried on vigorously, with great enthusiasm and with a largely increased interest on the part of employers of labour and the workmen and their representatives. Twice during the year the chairman of the Board was asked to be present at presentations of trophies in large industries where there had been over a year elapse without a lost time accident in the plant.

*First Aid:*—The Board again emphasizes the necessity of first aid kits and establishments in all plants, and draws attention to the ruling passed during the year, requiring a suitable first aid kit to be provided in every plant not heretofore covered by the regulations. The regulation is as follows:—

"Every employer having fifteen or less workmen usually employed shall provide and maintain in his factory or place of employment a first aid kit suitable to the employment carried on by him."

*Rehabilitation:*—As regards rehabilitation the Board reiterates its opinion, expressed in the 1927 report, that the number of cases in which rehabilitation can be advantageously employed is limited. The Board is still con-

vinced that in the great majority of cases owing to age, lack of education, foreign nationality, and other reasons, the only method of rehabilitation which can be successfully employed is by the employers supplying suitable work to the injured workmen, and once again the Board urges upon all employers their obligations to workmen injured in industry to give them employment suited to their impaired working capacity, so that with the awards which may be made by the Board for permanent partial disability the workman may be enabled to earn a good living wage.

*Merit Rating.*—Merit rating is the system whereby individual distinction between employers even in the same industry in regard to their assessment rates is made according to their accident experience. The report states that the Board had fixed the merit rating for 1928 in accordance with the principles outlined in the report for 1927 (LABOUR GAZETTE, June, 1928, page 608). It was announced that refunds would be made in connection with the assessments for the year 1929, but the attention of employers is drawn to the fact that the merit rating made in connection with the assessments for 1928 was for a period of three years, whereas the merit rating will now be made annually, although based on the average experience of the three preceding years. While a little over \$300,000 was distributed in merit rating in the assessment notices for the year 1928 for the three-year period, the amount to be distributed in 1929, being for one year, will amount to \$85,597.27. It was considered that in a three-year period this will, if the accident experience is good, be equal to the three-year distribution made in the 1928 assessments.

*Disaster Fund.*—In connection with the Disaster Fund, which is the only reserve fund carried by the Board to meet contingencies, it has been found necessary to make a levy to meet the present year's calls. This fund was created by the deduction of one per cent from all assessments paid by employers in Schedule 1 so that it might be used to the relief of any class which might otherwise be too heavily burdened in any year by reason of some catastrophe or heavy disaster. Deductions were made of this percentage up to the year 1922, when this Disaster Fund amounted to over \$260,000, when it was decided not to make further levy until necessity required it. However, during the year 1928 a disaster occurred in the mine of the Hollinger Consolidated Gold Mines at Timmins, which resulted in the death of 30 miners, involving a cost to the accident fund in the

neighbourhood of \$150,000. This is the first substantial disaster occurring in the plant of an employer in Schedule 1 since the disaster in connection with the Consumers' Gas Company of Toronto in 1922, and at that time a contribution was made in aid of the employers in this class out of the Disaster Fund. In view of the findings of the Royal Commission of negligence in connection with the management of the mine in question, the Board after careful consideration decided that the cost of the disaster should be charged in the following proportions, namely, one-third to the employer, one-third to the class involved, and one-third to the Disaster Fund. This involved a withdrawal from the Disaster Fund of \$50,000, and in order that this important fund, which has been established to carry out the principle of collective responsibility of all industries in Schedule 1 for accidents to workmen, should not be depleted, the Board decided to make a levy on all employers of 1928 in their adjusted rates for that year of one per cent, for the purpose of recouping the amount paid out in connection with this disaster. This will leave the Disaster Fund at the end of 1928 with \$269,263.63 as compared with \$266,251.25 at the end of 1927.

The accompanying table indicates the total income and expenditure for the various industrial classes in Schedule 1 for 1928.

STATE OF INCOME AND EXPENDITURE FOR SCHEDULE 1 DURING 1928

Class of Industry	Total Income (actual and estimated)	Total Expenditure (actual and estimated)
	\$ cts.	\$ cts.

Completed Statistics for 1927

In a special chapter of the report are detailed the operations for 1927 containing information which was not available when the report for that year was made.

The final figures for the thirteen year period from 1915 to 1927, inclusive, indicate a total of 528,037 accidents. Of this number, 4,323 were fatal; 29,608 were cases of permanent disability; 305,066 were cases of temporary disability and 189,040 entailed medical aid only.

The report makes a comparison of accident frequencies by correlating the number of accidents with the total number of full-year workers, data for this being available, however, only in Schedule 1. Eliminating accidents in which medical aid only was paid, the number of accidents for each 100 full-year workers for the different years are as follows:—

Year	Temporary Disability	Permanent Disability	Death	Totals
1915.....	3.63	.58	.12	4.32
1916.....	4.99	.79	.10	5.88
1917.....	5.78	.72	.07	6.57
1918.....	5.81	.66	.07	6.54
1919.....	5.81	.68	.07	6.56
1920.....	6.23	.67	.07	6.97
1921.....	6.25	.60	.05	6.90
1922.....	5.82	.52	.06	6.40
1923.....	6.02	.51	.05	6.58
1924.....	6.08	.54	.06	6.68
1925.....	5.94	.51	.05	6.50
1926.....	5.84	.54	.05	6.43
1927.....	5.94	.53	.05	6.52

On the same basis of calculation the frequency of medical aid only cases has been: 1918, 3.66; 1919, 3.70; 1920, 4.26; 1921, 4.24; 1922, 4.67; 1923, 4.96; 1924, 5.84; 1925, 6.09; 1926, 6.37; and 1927, 6.73.

The average age of workmen receiving compensation in 1927 was 35.25 years. The average weekly wage for 1927 was 23.11 as compared with \$22.64 for 1926, and \$22.29 for 1925. The total time loss in temporary disability cases was 607,131 days or an average of 21.05 days, as compared with an average of 20.74 days in 1926, and 20.68 days in 1925.

The total cost of all accidents in Schedule 1 for 1927 was \$5,082,073.61, of which \$3,982,544.92 was for compensation (including payments for rehabilitation) and \$1,099,528.69 was for medical aid.

Of the \$3,982,544.92 compensation cost, \$1,454,596.03 was for temporary disability cases, \$1,753,316.07 was for permanent disability cases, and \$774,632.82 was for death cases.

The average cost of temporary disability cases was \$86.13 of which \$59.32 was for compensation and \$26.81 was for medical aid, the average in 1926 being \$77.41, and in 1925, \$75.47.

The average cost of permanent disability cases was \$933.69 of which \$225.34 was for temporary disability, \$580.04 for permanent disability, and \$128.31 for medical aid.

The average cost of death cases where there were dependents was \$4,567.41, and the average cost for all death cases was \$3,633.36, of which \$8.40 was for temporary disability, \$118.85 for burial expenses, \$47.10 for medical aid, and \$3,459.01 for death benefits.

The average cost of all cases in which compensation was paid was \$183.14, of which \$147.96 was for compensation, and \$35.18 for medical aid, as compared with \$180.18 for 1926, and 180.60 for 1925.

The average cost of medical aid in medical aid cases only was \$5.49, as compared with \$5.42 in 1926, and 5.21 in 1925.

In 47 per cent of the cases the disability terminated in from one to two weeks. In

nineteen cases the disability lasted more than a year.

During 1927 there were 10,436 cuts, lacerations, and punctures; 7,326 bruises, contusions, and abrasions; 3,045 fractures; 2,787 sprains, strains, twistings, and wrenchings; 2,448 crushes; 1,202 scalds and burns; 845 injuries to the eyes, 203 dislocations and 162 herniae, among the temporary disabilities.

Among the 2,476 permanent disabilities were eight permanent total disability cases, and 294 cases exceeded 10 per cent of earning capacity.

There were 140 industrial disease cases, of which 35 involved medical aid only, 77 were temporary disability cases, 25 were permanent disability cases, and 3 were death cases. Included in these totals are 36 cases of lead poisoning, 29 cases of silicosis, 72 cases of caisson disease, and 1 case each of mercury poisoning, arsenic poisoning, and pneumoconiosis. All three deaths were from silicosis.

Machinery was responsible for 11,540 cases of accidents out of a total of 59,475, or 19.40 per cent of all cases, as compared with 19.60 per cent in 1926, and 19.39 per cent in 1925.

### Conference for Progressive Labour Action in United States

A new organization for furthering the interests of labour throughout the United States was formed at New York during May, under the title: "Conference for Progressive Labour Action." Its purpose as given in the *New York Times*, May 27, is to carry on research, educational work and agitation among the workers both organized and unorganized, in industry and agriculture, in order to stimulate in the existing and potential labour organizations a progressive realistic, militant labour spirit and activity in all its phases—trade union, political and educational."

Among the immediate aims of the new organization are the following:

1. To educate the workers to demand a complete program of social insurance to meet the problem created by unemployment old-age dependency, sickness and accident.

2. To promote a more effective organization along voluntary industrial lines of the skilled, semi-skilled and unskilled workers in basic industries so that they may successfully cope with company unions.

3. To encourage uncensored working-class education.

4. To develop genuine farmer and labour co-operatives, to develop labour solidarity, and to give workers an effective and necessary training in industrial democracy.

5. To promote independent labour party action as a substitute for non-partisan policy.

6. The establishment of a centralized research agency to make studies and to prepare literature.

The Ontario Fire Marshal recently requested hospitals in Ontario to discard, wherever possible, the explosive nitro-cellulose film used in X-Ray Photography, in favour of non-explosive acetate film. This action was taken as the result of a recent disaster at the Cleveland General Hospital, when many employees and patients were killed as the result of an explosion of the nitro-cellulose film in storage. Toronto General Hospital has been using the acetate film for some time, and reports that it is not only a safer, but a better film for X-Ray photography.

Regulations for the licensing of Public Commercial Vehicles, published in the *Ontario Gazette*, April 27, 1929, contain the provision that "no person owning, controlling, operating or managing any public commercial vehicle, shall cause or allow any driver or operator of such public commercial vehicle to work as driver or operator for more than a maximum of ten hours in any twenty-four hour period."

## INDUSTRIAL ACCIDENT PREVENTION ASSOCIATIONS OF ONTARIO

### Annual Safety Convention held at Windsor, May, 1929

THE Annual Safety Convention of the Industrial Accident Prevention Associations of Ontario was held at Windsor on May 2-3, 1929, 954 members attending. Mr. A. E. Adam of Canadian Cottons Limited, Hamilton, was elected chairman; Mr. F. M. Kimbark, Business Systems Limited, Toronto, first vice-chairman, and Mr. M. S. Moss, Anaconda American Brass Limited, New Toronto, second vice-chairman.

The retiring chairman, Mr. W. C. Coulter, Coulter Copper and Brass Limited, Toronto, one of the delegates to the International Labour Conference at Geneva this year, referred in his address to the 8,000 manufacturing concerns that were members of the Industrial Accident Prevention Associations. A continuous program of inspection and distribution of literature was carried on, and Mr. Coulter reminded the meeting that the financing of the organization was an open book as the money for operations came entirely from the Workmen's Compensation Board. Reference was made to the increase in benefits allowed to injured workers in the past several years, including an increase from 55 per cent of the average earnings to 66½ per cent, an increase in the allowances to widows and children, the extension of medical aid services and the dropping by the provincial government of the grant of one hundred thousand dollars a year. All of these things, Mr. Coulter said, would tend to increase compensation costs, and yet the total payments on account of accidents had not increased out of line with these facts and the greatly increased payrolls.

During the meeting, letters and cablegrams from a large number of people were read, including the Right Hon. W. L. Mackenzie King, the Hon. G. H. Ferguson, Sir Hugh E. Poynter, Bart., Sydney, Australia, and from safety workers in the United States, in England, France, Germany, Italy, Sweden, Switzerland, Belgium, Holland, Czecho-Slovakia and other places.

The financial statement, presented by W. S. Campbell, Canadian General Electric Co. Limited, Toronto, and a former chairman of the organization, showed expenditures of \$86,518.53. Mr. Campbell, in moving the adoption of the financial statement and auditor's report, said that the expenditures on behalf of accident prevention had been almost too conservative, and that in the near future industry might be asked to spend a larger sum.

The report of Mr. R. B. Morley, general manager, referred to the active supports given by the directors of the Associations; paid tribute to the Workmen's Compensation Board for their close co-operation and general assistance; touched on the activities of the various class associations comprising the general federation known as the Industrial Accident Prevention Associations; commended both the field force and the office staff for work done; reported on the divisional activities in Essex-Kent and in Wentworth, on a large distribution of safety literature to the plants comprising the membership; and wound up with a warning that industry must take full advantage of the accident prevention clause written into the Workmen's Compensation Act.

Mr. V. A. Sinclair, K.C., chairman of the Ontario Workmen's Compensation Board, spoke on "industry needs safety work" and showed that, unless industry followed through the whole problem, some other steps might be necessary to correct conditions that were not entirely satisfactory. Mr. Sinclair said that the reports to the Workmen's Compensation Board showed a large increase in the past several years, and this increase was somewhat out of line with the total increase in payrolls.

Addresses were also given by Mr. George Opp, safety engineer, Detroit Edison Company; Mr. J. C. Callaghan, Canada Works, Steel Company of Canada Limited, Hamilton; Dr. R. M. Little, Chief of the Bureau of Rehabilitation, New York State Department of Education at Albany; Dr. C. S. Sanborn of Windsor; Mr. A. P. Ross, Divisional Superintendent, Bell Telephone Company of Toronto; Dr. Harry Myers of Frigidaire Corporation, Dayton, Ohio; Mr. Henry T. Myers of General Motors Products Limited, Truck and Coach Division, Walkerville. Mr. Ross's address is given on page 646 of this issue.

### Annual Report

The annual report submitted by Mr. R. B. Morley, general manager, stated that the Workmen's Compensation Act in Ontario, unlike most such Acts, has a provision for organized accident prevention—this being covered by Section 114 which authorizes the industries to establish Safety Associations and the Compensation Board to make grants for the maintenance of such Associations. There are twenty-four Classes of industry in Schedule 1 under compensation, with an estimated

payroll of over five hundred million dollars in 1928. Of these Classes, eighteen have set up accident prevention Associations, and fifteen of those eighteen have federated in the Industrial Accident Prevention Associations. The fifteen classes included in our organization are as follows:—

Classes 3 and 4—Woodworkers' Accident Prevention Association.

Class 6—Ceramics and Stone Safety Association.

Classes 7, 8, 9, 10 and 11—Metal Trades Safety Association.

Class 12—Chemical Industries Safety Association.

Classes 14 and 15—Food Products Safety Association.

Class 16—Leather, Rubber and Tanners Safety Association.

Classes 17 and 18—Textile and Allied Industries Safety Association.

Class 19—Printing Trades Accident Prevention Association.

The work of the organization is roughly divided into inspection services and educational propaganda. The field force consists of eleven men including Mr. V. L. Mummery, the Chief Inspector. The duties of these men take them into thousands of plants every year for various purposes. Inspections are made, accidents investigated, plant safety meetings are held and every effort put forth to convince employer and employee of the need for and value of safety.

“At one time, safety literature was considered a small thing, but one of the lessons of the war was the uses of propaganda. And now, we in Canada are exchanging literature with good friends in the safety movement in the United States, England, France, Germany, Russia, Italy, Switzerland, Austria, Hungary, Sweden, Finland, Belgium, Holland, Japan and Czechoslovakia.

*Accidents in 1928.*—“Through the courtesy of the Workmen's Compensation Board we receive, several times each month, accident reports known as ‘accident memos.’ These give briefly certain details on individual accidents, most of which involve a loss of seven days' time or more. The memos sent to us relate, of course, only to the fifteen classes included in our membership and provide a most valuable check on the experience of our plants, for through this source our field force are able to go to a plant with definite knowledge of accident frequency and frequency is a finger-post of practical worth to a safety man.

*Workmen's Compensation Board.*—“Too much cannot be said of the courtesy and assistance of Mr. Sinclair and the Board generally. Your Directors have found the Board ready and willing at all times to give careful consideration to any subject brought before them and it is a keen pleasure to make this comment on the full spirit of co-operation existing between the Board and the Associations. It is not vain repetition, when I again urge upon industry the value of proper contact with the Compensation Board and the need for full and adequate reports to the Board so that the injured worker may be fairly dealt with at all times.

“I have referred to Section 114 of the Compensation Act and how industry had by that Section been authorized to carry on accident prevention work. I now leave this thought with you. Industry, and I mean those classes organized for safety as well as those not so organized, must take full advantage of that Section of the Act or stand in danger of losing some of the privileges granted and thus come under some form of compulsion in this matter of accident prevention.”

## PROVINCE OF QUEBEC SAFETY LEAGUE

### First Industrial Safety Conference, Montreal, May, 1929

THE Province of Quebec Safety League held its first industrial safety conference in Montreal Technical School, on May 20-22, over 3,600 persons attending. One hundred and twenty-five chief officials, superintendents and other key-men attended the preliminary luncheon at the Mount Royal Hotel, over which Allan M. Mitchell, president of the Robert Mitchell Company Limited, presided. Unselfishness as a safety keynote was brought out by Mayor Houde in the opening address: the conference, he said, had gathered, “not to

consider the trumpery problem of personal safety, but to look into the much bigger question, that of the safety of our neighbours. We want to instil into the minds of our workers, our executives and ourselves, the most heroic of all fears, that of hurting someone else. Our own negligence often does this.”

The work of Mr. Arthur Gaboury, general secretary of the League, upon whose shoulders the responsibility of the conference rested was highly commended by chairman Mitchell and several of the speakers.

Mr. A. O. Dawson, president of the Canadian Cottons Limited, in his address, stated that there was being actually killed and maimed in North America industries twice as many men as fell in the Canadian and American armies in an average day of hostilities during the Great War. "Safety engineers tell us," he said, "that if proper accident preventive work were done, about 18,000 of the 25,000 killed annually might still be living; 375,000 of the half-million injured might go unharmed, and \$75,000,000 of the billion dollar loss through industrial accidents might be saved and put to productive purposes.... The terrible record of the past can only be corrected through a process of education."

Mr. Dawson went on to show figures for a textile plant in which the number of accidents and days lost in 1922 had been reduced from 48 and 1084 to 7 and 196 through a safety campaign, and emphasized the fact that as a purely business proposition the work connected with accident prevention more than justified itself. "Accidents on the basis of a labour turnover enter into and increase the cost of production. New men are less efficient and cause the loss of time, spoilage of material and extra wear and tear on equipment. In short, accidents slow up industrial production all around."

Mr. John Cuthbert, safety engineer of the Canada Cement Company, quoted some figures obtained as a result of a nation-wide campaign of 160 plants, employing 40,000 men for a June No-Accident month. This campaign started in 1926, and the number of accidents were reduced from 204 in that year to 48 in 1928, the days lost falling from 2221 to 913 for the month.

### Foremen's Convention

At the Foremen's convention 1,200 persons attended the first evening meeting under the chairmanship of Mr. E. D. Timmerman, of the Steel Company of Canada, Mayor Houde in his opening address stressed the responsibility of the foreman for the safety of those under his care, morally at least, and the few foremen that realize this responsibility fully.

"There are six laws that every foreman should observe" said R. B. Morley, general manager, Industrial Accident Prevention Associations of Ontario. "He must see to it that his department is clean and orderly, and that the workmen under his care are provided with proper equipment, the proper materials, the proper instruction, the proper supervision and the proper pay. The foreman is the key-man of industry. He must be fair, must not waste his anger, and above all never show discouragement.

Special care must be paid to the new man as many accidents are traced to him."

A large feature of the evening's programme were the motion pictures, "Safety Always," "Paying the Price," and "Gaming with Death," which dealt with actualities and served to bring greater realization of the movement more forcibly to the foremen.

Mr. Henri Rolland, president of the Canadian Manufacturers' Association, Quebec Division, on the second evening welcomed a record attendance of 1,300 who heard a series of addresses in French. Mr. E. C. Holmes, director of Public Relations, Southern Canada Power, and Dr. Damase Généreux, spoke of the sincerity in safety campaigns and of their history and records. Speaking of the responsibility of foremen towards their employees and of the employees towards the foremen, the Rev. J. C. Beaudin said that foremen are at the same time employers and employees, and as such they bear the responsibilities of the former and the obligations of the latter; the success of the enterprise therefore rests largely upon their shoulders.

Mr. Howard Gates, Employers' Liability, Boston, dealt with the campaigns conducted by the textile mills of Massachusetts and described the causes of accidents and preventive measures taken. He summed up with the statement that "of the mills where safety work has been taken seriously, at least 25 per cent have established records of having no compensable cases for nine months of the year and the remaining 75 per cent have gone from 3 to 6 months out of the year with a clean record. One mill has now gone over 700 consecutive days without a loss time accident, another 390 days and another with 1,200 employees 300 days."

The three days session closed with an attendance of 1,000 at a bilingual sitting sponsored by Mr. W. S. Fallis, president of the Sherwin-Williams Company of Canada and under the chairmanship of J. N. Doyle of the Dominion Bridge Company and Hon. J. Alfred Leduc. Mr. A. G. Shakespeare, chairman of the First Aid Committee, stressed the need for safety in the home, saying that fifty per cent of the accidents in the province occur in the home. Mr. A. Poitras, also of the St. John Ambulance Association, spoke of the proper ways of resuscitation on those asphyxiated by gas fumes, smoke and electricity. Mr. Florant Faille, of Parke, Davis and Company, chairman of the Committee on Industrial Hygiene, announced that a campaign for the promotion of hygiene in manufacturing plants of the province would be launched shortly. "Sickness," he said, "was often the indirect cause of accidents among employees."

Mr. E. D. Timmerman, in the name of the directors of the Safety League, presented Mr. Arthur Gaboury with the first ticket issued for these conferences, framed in a solid silver mounting, as a token of gratitude for the excellent safety work he had achieved. Each

speaker commented on the enthusiasm showed in the conference, the excellent attendance and the manner in which the Province of Quebec Safety League was conducted, all due to the untiring efforts of the general secretary, Mr. Arthur Gaboury.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Engineers in Drocourt Train Disaster Acquitted

**F**OLLOWING the disaster which occurred on the Canadian National Railways, Parry Sound, Ontario, on March 20, when train No. 3, collided with another train after running past the appointed meeting place at Drocourt, a charge of manslaughter and criminal negligence was brought against the engine driver, the fireman and the brakeman of train No. 3. This accident, by which seven members of the train crews and five passengers were killed, was noted in the last issue of the *LABOUR GAZETTE*, page 555. The case was heard before Mr. Justice Raney and a jury at Parry Sound. The verdict of the jury acquitted the engineer on both charges, at the same time recommending that block signals be installed at all stations where there are no operators, and that trains should not be ordered to meet at stations where there are neither block signals nor operators.

Mr. Justice Raney instructed the jury to ignore the more serious charge of manslaughter and to concentrate on the lesser one of criminal negligence or causing grievous bodily harm through neglect of duty. He also told them he felt it was not a case for a jail penalty and announced he had no intention of sending the engineer to prison. The question was, he continued, "did the accused man take reasonable precautions to avoid danger to human life?"

"I would not like to think", said Judge Raney, "that an engineer would be justified in running a lame engine which required so much attention as to imperil the lives of passengers. The engineer could have run it into a siding, spent the necessary time to correct the engine into a workable condition, and then proceeded. He might then have reported the cause of the delay and the officials could investigate who was responsible for the faulty engine going on the road. Somebody was responsible for this disaster. You are not asked to place the responsibility on the engineer entirely. You could not honourably do so. But you must determine if he was partially responsible, regardless of the fact that some one else may also have been responsible."

### Duties of a Factory Inspector

Mr. James H. H. Ballantyne, Deputy Minister of Labour of Ontario, in the course of an address delivered before the association of Governmental Officials in Industry of the United States and Canada, at its convention at New Orleans last year, outlined some of the important duties of a modern factory inspector (The proceedings at this convention have been published recently in book form). Mr. Ballantyne emphasized the fact that factory legislation operates continuously for the benefit of all workers.

"It ought to be better understood", he said, "that compensation laws, minimum wage laws, and similar forms of beneficial labour legislation, while general in their application, only cover and protect a proportion of industrial workers at any given time. In other words it is the actual beneficiaries under such laws that enjoy and are afforded their protective features. Factory acts at any given time cover all employees included within the scope of the respective acts, and benefits that accrue through the administration of factory acts are distributed equitably over each and every employee. . . . Laws which determine the fundamental rights and duties of master and servant or employer and employee in the labour contract, such as acts respecting wages, mechanics' liens, employers' liability, etc., are enforced only when a private individual brings a case to court, but factory legislation, as represented by the factory, shop, and office buildings act of Ontario, is that part of labour law which requires officials for continuous inspection or enforcement."

Describing the work of factory inspectors Mr. Ballantyne said: "In the administration of a factory act or any similar industrial code several responsibilities develop on the inspectorate staff. The term 'inspection' is used to cover a multitude of activities. One responsibility is the inspection of machinery used directly in the processes of manufacture, that is, the productive or physical equipment, including prime movers impelled by steam, electricity, gas, oil, or water. Auxiliary physical equipment such as elevators, cranes, hoists, ladders, etc., have also to be inspected. Special physical equipment such as machinery

for removing dust, fumes, gases, vapours, metal particles, etc., are included in this inspection responsibility. Safety of operation without impairing efficiency of production of all such machinery and appliances is the objective aimed at by the inspector and to reach this objective the inspector must keep himself or herself fully informed on all the latest scientific and technical developments bearing on this phase of inspection work. . . . Another phase of inspection service involves the comfort and convenience of workers in industry. It is necessary to have proper sanitary conveniences, wash rooms, lockers, chairs, etc., and to enforce observance of sanitation requirements as distinguished from safety requirements requires different methods.

"An inspection responsibility quite distinct from the preceding one is the enforcement of that part of the law which governs employment and hours of employment of women and minors in industry. In the province of Ontario it is the duty of the factory inspector to see that no youth, young girl, or woman is employed for a greater number of hours than those prescribed by statute, and it is also his duty to see that no child 14 years of age or under is employed in industry. It is the duty of the inspector also to see that no young person between the ages of 14 and 16 is employed in industry without an exemption permit from school attendance having been issued by the educational authority in the province. Investigation bearing upon the minimum wage law as affecting female workers in a factory is part of the responsibility exercised by the factory inspector.

"It is becoming more and more recognized." Mr. Ballantyne continued, "that some diseases attack workers in the course of their employment in certain industrial occupations. Some of these occupational diseases are fairly well known. Recently an Act was passed in the province of Ontario whereby all miners will be medically examined prior to their employment in mines and thereafter be examined once in each calendar year. This is being done with a view to the prevention and control of an occupational disease known as 'silicosis.'"

Reference was also made in the address to the work devolving upon the inspectors in connection with the Ontario regulations for the protection of persons working in compressed air.

Referring to the safety work carried on by the employers the Deputy Minister said: "Employers with a legitimate desire to reduce the amount of compensation premiums payable by them, employ a staff of safety engineers,

who are extremely efficient in their special line of work. It must not be overlooked, however, especially by the State inspector, that the recommendations of such safety engineers are invariably based on uninterrupted rapidity of production to a much greater extent than positive safety of operation."

#### Accidents in Canada in connection with Explosives

The annual report of the Explosives Division of the Department of Mines of Canada for the calendar year 1928 describes the work of the department in connection with the manufacture and importation of explosives. There are in Canada four licensed factories for blasting explosives; one for the manufacture of ammunition, detonators, etc.; one for safety fuse; one for fulminate of mercury; and five for fireworks. The total number of magazines in Canada at the close of the year was 283. The report states that inspectors of the Division made 32 visits of inspection to factories, and 7 additional visits were made to fireworks factories by deputy inspectors of the Royal Canadian Mounted Police. The conditions found were satisfactory. No irregularity, other than of a minor character, promptly rectified, came to notice.

In the larger factories the system in vogue during the last few years of keeping records of time lost through accidents, and the healthy rivalry induced between factories, or sections of factories, in aspiring towards freedom from accidents, has unquestionably gone far in inculcating employees with an appreciation of the possible causes of accidents, and in developing that care in work, which is instinctive, and in no way delays operation. "Animated by this spirit, operatives regard rules and regulations not as bugbears, but as the sign posts they truly are on the road to safety."

Only one of the accidents which took place in explosives factories during the year had serious consequences, one employee being killed. Each of the two others, caused injuries of a minor character to an employee, involving only short absence from duty.

The fatal accident occurred at Belœil on Saturday, January 23, while a catch box for wash water from a nitro-glycerine neutralizing house was being cleaned out. The operator was instantly killed by the explosion. An analysis is given of the various accidents during the year, the causes being carefully ascertained with a view to their removal. Proceedings were taken in twelve cases for violation of the regulations.

Examination of the fatalities, under the headings of "Mines and Quarries," "Elsewhere" and "Various," offers a fair basis of compari-

son, and may with advantage be tabulated. The figures given under the heading "Various" refer mainly to fatalities arising from playing with explosives.

#### FATALITIES WITH EXPLOSIVES

Year	In use		Various	Total
	Mines and quarries	Elsewhere		
1923.....	11	29	6	46
1924.....	15	17	7	39
1925.....	19	23	12	54
1926.....	17	26	4	47
1927.....	12	25	7	44
Average 5 years	14.8	24	7.2	48
1928.....	26	31	7	64

The consumption of explosives is practically the same as the production, which has increased steadily during the years under review, and for 1928 was 35 per cent greater than the average of the preceding five years. The fatalities for 1928 are in the same proportion but are still high in comparison with those for 1927, and, viewed generally, the fact that the frequency of fatalities in the use of explosives shows no sign of decrease is a distinctly unsatisfactory feature. The figures for mines and quarries show a greater percentage increase, but this is coincident with notable developments in the mining industry.

Another factor to be considered is that a greater quantity of explosives is used in mines and quarries than elsewhere. A fairly close estimate has been made of the distribution of explosives during the year and, comparing this with the fatalities in use, it is found that one life has been lost in mines and quarries for each one and one-quarter million pounds of explosives used, and, elsewhere, one for each three-quarter million pounds.

Attention has been directed repeatedly to the frequency of accidents arising from playing with explosives, in particular with detonators.

#### Health and Housing

The Social Service Council of Canada defines bad housing as being any condition of housing which tends to impair the physical or mental health of the tenants or the community. To be more specific, it may be said that housing evils are found in dark rooms, alcove rooms, rooms with no cross ventilation, cellar dwellings, room and land overcrowding, air and light shafts, inadequate water supplies, dark halls, stairways and water-closets, lack of food safes, outside privies, filthy lanes, yards and courts, and improper methods for disposal of refuse. The housing problem

became serious in the big Canadian cities for the same reason as in the older countries—the rapid increase in population following industrial development. In addition, there was and is the immigration that is going on with greater or lesser degree of intensity.

It is to be hoped that in this new country, with so small a relative population and so great an area of territory, there will never arise, on so large a scale, the housing evils that mark and disgrace many of the older cities. And yet, if action is not taken in the near future, the housing sores already existing are bound to become aggravated and to extend. Where housing conditions are bad, there are: 1. A lessened expectation of life; 2. An increased general death rate, especially from tuberculosis, measles, whooping cough and diphtheria; 3. An increased infantile mortality rate; 4. An increased incidence of and death-rate from rickets; 5. An increased incidence of anaemia and rheumatism; 6. An increased incidence of all the common communicable diseases; 7. An increased general deterioration in the health of the people leading to debility and poor physique.

The Montreal Anti-Tuberculosis and General Health League conducted a survey, in 1927, in connection with their tuberculosis field service. An analysis of this survey, embracing 737 cases and 497 families, shows: 1. that 63 per cent of the cases had not a separate room; 2. that 50 per cent had not a separate bed; 3. that 19 per cent occupied a room improperly lighted and ventilated; 4. that 25 per cent of the homes were not clean, 32 per cent had not a bath and 65 per cent, had not a wash-basin; 5. that in 37 per cent of all cases, there had been one or more previous cases.

#### Plans for Medical Service for Employees

The National Metal Trades Association (U.S.A.) reached the following conclusions after a study of the medical service rendered in the shops of its members.

1. The operation of a plan for employee medical service is desirable from an economic as well as a social standpoint.

2. Employee medical service is invaluable in plants where accidents or absenteeism is high or where group insurance policies of Employee Benefit Plans or Relief Associations are in operation. Such service is not only a direct contribution to the well being of the individual employee, but also will probably tend to lessen demands for state legislation in favour of compulsory health insurance and similar measures, which, in the opinion of the Committee, should be discouraged.

3. The physical examination by a physician of all new employees, and sometimes of old employees, should be included as a part of any program of employee medical service. Periodic examination of major executives is especially important.

4. The careful selection of medical personnel is of paramount importance. Properly qualified and well-paid doctors or nurses will not only operate the medical department successfully, but will create tremendously valuable by-products of employee goodwill, confidence, and understanding. Indeed, the carefully selected physician will have many of the attributes of a Personnel Manager, and in some large and medium sized plants will probably fill that position admirably.

5. Small plants would, in many cases, be well advised to organize themselves in groups, so that each may enjoy the services of a physician and nurse, even though it be on a "part time basis."

#### The Foreman's Place in Safety Work

Mr. T. R. Deacon, in his recent address as president of the Employers' Association of Manitoba, said that "accident prevention is really a part of good management and supervision in plants. The old-time hard-boiled foreman is a thing of the past." To-day, the successful, progressive foreman is an exponent of the new theory of management and of the new science of leadership. I repeat, therefore, that accident prevention is an essential part of good management, and I am equally certain that neither accident prevention or any of these fine things can be achieved without foreman responsibility and foreman ability to manage men. The question that drives straight and strong to the heart of the safety problem is, 'How can the management get and keep the interest and co-operation of the employee in preventing accidents?' The answer is, "Through the foreman, backed up and aided by the management, working councils or safety committees inside the plant."

"The number of incidents classified as accidents last year is cause for great concern on the part of employers. I hope the \$10,000 in the government estimates (*i.e.* in Manitoba) for industrial and public safety work will improve the situation. The Employers' Association members are directly interested, both from the human and financial aspect. Unless something can be done in Manitoba to prevent the increasing number of accidents, the assessment rates under the Workmen's Compensation Act will become a burden that will be hard to carry."

#### Safety Studies by International Labour Office

Under the title "Hydro-Extractors: Their Safe Construction and Equipment", the International Labour Office has just published in its *Studies and Reports* the second of a series of monographs on special problems of accident prevention. These studies are the outcome of co-operation between the Safety Service of the Office and an international correspondence committee of experts on the prevention of accidents. Canada is represented on this committee by Mr. R. B. Morley, general manager of the Industrial Accident Prevention Associations of Ontario; and Great Britain by Sir Gerald Bellhouse, chief inspector of factories. The Committee advises the Office on the choice of the problems to be dealt with in the monographs, and also proposes the experts—who need not necessarily be members of the Committee—for the various subjects. The expert draws up the plan on which his monograph will be based, and the plan is sent to all the members of the committee, who are at the same time requested to make any proposal for amending or completing it which they may think desirable, and to procure the material available in their country on the subject. This material is then sifted by the Safety Service of the International Labour Office, and completed where necessary. The first report in this series dealt with "Safety in the use of chains." Reports are in preparation on the following subjects: Protective devices for presses; The prevention of accidents in the manufacture and use of celluloid, including cinematograph films. Protective devices for wood-working machines. The Prevention of Accidents in the manufacture and use of acetylene.

In a paper in a recent issue of the *Pulp and Paper Magazine*, describing the trends of development in woods operations, Professor R. C. Bryant of Yale Forestry School states that piece work as a substitute for the day wage has been favourably accepted in many forms of industry including logging. It is by no means a new idea in forest work, because it was in use in Australia more than a century ago. It is not applicable to all classes of labour on a logging operation, because there are some jobs which are not functions of a given unit of output. However, felling, log-making, road cutting, heavy grading work, skidding, loading, and hauling have all proved adaptable to this form of payment, and if the piece rate has been justly determined and applied, both the employee and the employer gain.

## SAFETY WORK OF BELL TELEPHONE COMPANY OF CANADA

*Address delivered by A. P. Ross, Divisional Superintendent, Toronto, before Annual Safety Convention of Industrial Accident Prevention Associations of Ontario, Windsor, Friday morning, 3rd May, 1929.*

ORGANIZED effort, having as its objective the elimination of accidents to employees engaged in the Telephone industry, was introduced into our company about the beginning of the year 1922. Prior to this time, while safety had been recognized as an important factor in the prosecution of our work, it had been followed up in a more or less perfunctory way. Previous to the outbreak of the War, and during the period of the War itself, the growth of our company had proceeded with a fairly steady upward trend and the increase in staff followed along the same lines. Under such conditions the percentage of the older and skilled employee was necessarily much greater than that of the new and less skilled employee. The training of the new employee was usually carried out in the field and his education in safety methods, as well as in the technique of his job, was largely in the hands of his direct supervisor and these older employees. The result of this was that we were doing some sort of a job along the lines of Accident Prevention without any very definite organization.

Following the close of the War the Telephone Company faced a vastly different situation. The days of normal telephone expansion, as we had known it, disappeared, and we were plunged into a state of activity far beyond the anticipation of anyone connected with the industry. There was an ever increasing influx of new employees, while at the same time there was an equally pressing demand for employees capable of moving up into supervisory positions. It was quickly recognized that if we were to keep pace with developments that a radical departure from all previous training methods was necessary. Intensive training became the order of the day.

The Bell Telephone Company of Canada is divided into five operating divisions. Two of these, the cities of Montreal and Toronto, are known as Metropolitan Divisions. The balance of the company's territory is divided into the Eastern Division, with headquarters in Montreal, the Central Division, with headquarters in Toronto, and the Western Division with headquarters at London. The General Plant Manager, as operating head of all the Plant activities in the five divisions, is located, with his staff, in Montreal. The organization of the divisions and of the general office is carried along on parallel lines and one of the major departments in our organization is that of Employment and safety. The telephone growth

which followed the War was largely in urban territories, with rural and toll line development being more or less stabilized. The immediate result was a particularly large increase in staff in the cities of Montreal and Toronto. At the present time, under the stimulus of greatly increased toll activities, an equally rapid growth is taking place in the forces of the other three divisions. Over the entire company, plant forces increased from 2,750 people in 1922 to 5,500 at the close of 1928. Exactly 100 per cent increase in seven years. If we add to this the nominal labour turnover for this period, we can have some idea of the total number of people passing through our plant organization in that time.

During this period lost time accidents in the Plant Department were reduced from 45 per thousand employees in 1922 to just under 20 per thousand in the past year 1928. At the beginning of our training campaign we perhaps were inclined, through necessity, to concentrate on mechanical efficiency first, and our education in safety methods was more or less sketchy. We endeavoured to introduce the spirit of competition for good safety results as between divisions and districts, and the smaller areas, as well as between various vocational groups. A definite four years schedule of awards for the group supervisor was set up. For the first non accident year the supervisor in active charge of workmen was awarded a bronze lapel button. At the completion of the second non accident year the bronze button was replaced by a gold button. At the end of a third consecutive non accident year an award of an individual pocket book was made. Four non accident years earned for the supervisor a small silver cup suitably engraved. In addition to the individual awards each year banners were allotted to the different sections and groups, on which space was provided whereon the record of each month could be shown.

This program undoubtedly produced results, but at the end of the four years we realized the necessity of even more intensive endeavour if we were to satisfactorily cope with the accident situation. It was the feeling of everyone, both employees and management, that the matter of safety was a major problem and should be dealt with as such. Headed by the general employment and safety supervisor, reporting to the general plant manager, a definite safety organization came into being,

and instruction in safety became a headliner in all training activities. With the whole hearted support of the entire organization we now attack this problem in the view point of—"There is no Substitute for Safety."

### Safety Organization

The general responsibilities of our safety organization may be briefly summarized here:—

(a) Responsibility for the successful carrying out of the safety program.

(b) The inclusion of definite safety instructions in all training courses whether for employees or supervisors. In these courses we give much time to the education of the foremen and workmen in safe handling and planning of work.

(c) The issuing of field educational literature beginning with a hand book on safety methods compiled jointly by the management and employees. A feature at the present time is the sending out from our general office a Monday Morning Safety Talk which is distributed to every employee, and frequently based on suggestions contributed by the employees.

(d) The observation of working practices with discussion and explanation of the safety features involved.

(e) Inspection of tools and equipment from a safety standpoint.

(f) Supervision and analysis of accident reports and investigation of all accidents for the discovery of the basic cause.

(g) Supervision of the prompt reporting of dangerous plant conditions and setting up the proper methods of overcoming these conditions.

(h) Organizing and carrying on adequate First Aid training with which is allied the duty of initiating competition in the various divisions between First Aid teams.

(i) Making the question of accident prevention a live topic at all joint conference meetings between employees and management.

In addition to our responsibilities towards the employee with regard to safety training, there is also our responsibility to the public in the safe operation of our motor vehicle fleet, which at the present time is one of the largest in the country. In addition to the "Government Permit," which all drivers must carry, our drivers also undergo an inspection by the chief vehicle supervisor in the division, who issues to them a certificate attesting the fact that the driver is a safe and responsible man. In the development of a safety organization, our company has not perhaps proceeded as far as other operating companies, but we are on our way. In the three divisions outside of the Metropolitan areas where the rapid expansion of toll program is now the major activity,

safety supervisors are being added to the staff of the division employment supervisor. These men will visit the construction forces scattered throughout the territory and supervise and stimulate active safety training. In the Metropolitan divisions there is a safety supervisor on the staff of the employment supervisor, but as work and staff in these divisions is concentrated in a relatively small area, we are proceeding, generally, along the lines of making every foreman a safety supervisor. As a sample of an intensive safety organization I might mention a typical layout of the general plant manager's area in another operating company. In this territory there are 21 people classed as safety supervisors.

For a period of 8 years there has been 100 per cent growth in the company's plant in Toronto, with a corresponding increase in staff. After 40 years of operation in the city of Toronto, there were 100,000 working telephones. Before the end of this present year, or covering a period of 8 years, this number will have reached 200,000. For this same 8 year period plant forces in Toronto increased from 560 to approximately 1,300 people. In the face of this rapid growth, however, we have materially improved our performance in Accident Prevention. In 1922 we had 3.75 accidents per 100 employees. For the year 1928, the figure was .60. The years 1925 and 1926 showed even better results than last year. We have recently completed a period of 155 days without a lost time accident and so far have had but one in the current year.

### Safety Education

Education of the new employee begins with his engagement, when he is placed for two weeks in our plant school, under skilled instructors who are practical telephone men. Here he is given elementary training in his job under these subject—(a) Technical training; (b) General knowledge of company's policy; (c) Safety methods. In teaching safety methods the employee is first given instruction with our Safety Code Book as a manual. As he proceeds in the course of practical work assigned to him in the school, the lessons of the Code Book are applied as he goes along. During the course he is also given some simple lessons in First Aid and before leaving the school, as part of his final examination, he is called upon to show that he has grasped the principles of safety as outlined to him. When he goes out on the job he is given his pocket "Safety Token" and his foreman continues his education. Each Monday morning, when the weekly Safety Talk is issued, it is the foreman's duty to discuss the message with his group and see that it is

thoroughly understood. The new employee's training course covers a period of two years, during which time he is under the close observation of his immediate foreman, and is also returned to the plant school at periodical intervals for further instruction when safety is again made a feature of the course.

During this time he is induced to enter one of our First Aid classes, which are carried on during the winter months. The Toronto staff to-day are 100 per cent First Aiders, and 50 per cent of the staff have taken more than one course in the practice of First Aid. We consider that a knowledge of First Aid is an essential factor in Accident Prevention as it brings home clearly to the employee the fact that an accident is a personal painful business, as well as an economic waste. A knowledge of First Aid also enables our employees who are scattered throughout the city to render valuable assistance in emergency to the public. Many fine tributes to the work of this kind reach us from time to time. Through the medium of a small monthly publication issued in the Toronto Division, which reaches every employee, we endeavour to keep alive interest in safety. By this means we keep the Division performance constantly before the employee and endeavour to build up and hold a definite safety morale throughout the gang. This publication reaches the employee's home and carries the message directly into his family life.

### Investigation of Accidents

At all Joint Conference Committee meetings between the representatives of the various groups and management, discussion is always introduced on the topic of safety and the performance of the Division in this respect. All accidents, whether involving loss of time or classed as "no lost time accidents", are investigated by a committee drawn from fellow workers of the employee and management representatives. This committee endeavours to bring out all facts connected with the accident with a view of preventing future repetitions. The findings of the committee are published in our monthly organ and in this manner reach all employees. The committee deals only with the basic cause of the accident and is not concerned with any disciplinary action which may be necessary, this being the function of management.

### Training Supervisors

With the supervisory staff, Safety education is a continuous performance. We are operating a Foreman's Training Conference in groups of not more than twelve people, under the direction of a trained leader. The confer-

ence lasts for two weeks and all supervisors must attend. These conferences are designed for the specific purpose of development of leadership qualities. In all the subjects discussed the application of Safety is a leading topic. In Toronto during the fall and winter months, monthly meetings of all supervisors are held and at these meetings accident prevention and safety methods are always a head line subject. Weekly meetings are held with all department heads and the status of our safety program is discussed. This group is also in receipt of all general office summaries and details regarding accidents throughout the entire company. The results of these studies and analysis of accidents are passed down the line of organization to all supervisors. A safe job requires a safe plant, and a routine has been set up for the reporting of all hazardous plant conditions. It is the management's duty to see that recommendations looking towards the elimination of hazards are given attention promptly. The engineers charged with the design of the plant, therefore, become deeply involved in this question and a new plant must be designed as a safe plant in order that we may hold the confidence of the employee and prove to them that we are working with them to the same common end.

A recent survey on the origin of accidents, issued by the Travellers' Insurance Company of Hartford, established that 98 per cent of all accidents are preventable. If this be correct and there appears no good reason for questioning it, we have a long hard road ahead of us all, if we are to eliminate this 98 per cent. Any ideas which we have set forth in this paper can only be looked upon as a means to an end, and that is, to create in the mind of every employee a "safety consciousness." This may be defined as a sub-conscious mental attitude which precedes every operation with "Stop: am I doing this in a safe way?"

The City Council of Edmonton, Alberta, is reported to be preparing a bylaw providing for the licensing of master painters in the city. The Master Painters' Association is supporting the movement, and asks further that provision should be made in the bylaw for requiring master painters to report to the health department all buildings and dwellings which they found to be in an unsanitary or verminous condition and also draw the attention of the proper authorities to fire hazards. It was also urged that this bylaw would prevent unfair competition by fly-by-night painters who did not pay workmen's compensation, business tax etc.,

## STEEL COMPANY OF CANADA, LIMITED

### Employees' Pension and Benefit Plans

**T**HE Steel Company of Canada, Limited, established on December 1, 1928, an employees benefit plan, supplementing the firm's pension plan, which has been in operation since January 1, 1920.

#### Benefit Plan

The objects of the new plan are to provide: (1) death benefits, payable to widows and dependents; (2) total and permanent disability benefits; (3) sickness benefits to provide employees with a certain income when sick, or when disabled by an accident that is not covered by the terms of any Workmen's Compensation law; (4) medical benefits to provide employees with medical attendance when sick, and under certain conditions to pay hospital charges, specialists' fees, etc. All employees who have been continuously in the employ of the company for one year after December 1, 1927, are eligible for membership. The membership is divided into four classes as follows:—

Class A consisting of members 18 years of age and over who are paid wages at an hourly or piece-work rate; Class B members 18 years of age and over, paid a monthly or semi-monthly salary, as straight time employees, whether engaged in the works or in the offices of the company; Class C members under 18 years of age, who are paid wages on an hourly or piece-work rate; Class D members under 18 years of age on a monthly or semi-monthly salary as straight time employees, whether engaged in the works or in the offices of the company.

Benefits are the same in all groups with the exception that sick benefits are not applicable to classes B and D. Contributions to the benefit plan are made by the employee members and the company. The employees contributions range from 70 cents per month for Classes A and B, to 35 cents per month for Classes C and D, these amounts being deducted from the wages or salary. The fact that a participant may be drawing disability benefits under the plan does not relieve him from payment of contributions during sick disability. The company administers the plan, and with the exception of these nominal contributions pay all expenses of operation and benefits as outlined below.

The death benefit is extended to those who become pensioners of the company under its Pension Scheme after December 1, 1928, without payment on the part of the pensioners.

*Amount of Benefits.*—In case of death, the sum of \$500 is paid to the beneficiaries of the deceased employee. In event of a member becoming totally and permanently disabled before the age of sixty years, he will receive benefits at the rate of \$25 per month up to the amount of \$500 in lieu of death benefit. If the member recovers from such disability before the full amount has been paid on account of his disability, the amount remaining will be continued as a death benefit. If the member should die before the full amount has been paid in this manner, the amount remaining will be paid in a lump sum to his beneficiary.

Sickness benefits are paid at the rate of \$10 per week for Class A, and \$5 per week for Class C employees for a period not longer than thirteen weeks for any one sickness during any consecutive twelve months and no payments are made for the first seven days of sickness.

Classes B and D are paid salary or wages for a period not longer than thirteen weeks (including the first seven days) for any one sickness during any consecutive twelve months. Sickness benefits will not be paid in dental cases.

Members are entitled to medical attendance for a period not longer than 14 weeks from date of disablement by a qualified practitioner appointed by the company.

When so recommended by the medical officer, members are entitled to hospital benefits for a period of three weeks for any one sickness during a period of twelve months. On recommendation of the medical officer the member shall be entitled to receive payments or the attention of a specialist according to a cost schedule. Medical attendance does not include the attention of a dentist. No benefits are payable when disability is due to intoxication or misconduct.

It is stipulated that members shall not be entitled to benefit if they decline to permit the medical officer to make, or have made by any other physician, such examination as he may deem necessary to ascertain their condition when claiming disability. Disabled members must take proper care of themselves and have proper treatment. Benefits will be discontinued to members who refuse or neglect to follow the recommendations of the medical officer.

*Termination of Membership.*—Membership terminates automatically and contemporaneously with employment. The time when the

termination of a member's employment or membership takes effect is the time when he ceases work or the duties incidental to his employment.

Neither the creation of the Plan nor any act in connection therewith at any time, either by the Trustee or the Company's officers or employees, is to affect the terms of employment of any employee. All employees remain subject to discharge as always, in the same manner and to the same extent as if the plan had never been created.

### Pension Plan

The object of the pension plan is to afford facilities for retiring and paying pensions to employees of the company, who, by long and faithful service, have earned an honorable retirement. For carrying out the plan, the board of directors are empowered to appropriate such sums of money as are necessary, and no contributions to the fund are required from employees.

Those eligible for pension include both male and female employees whose term of employment has been continuous for 25 years or more. Continuous employment is defined as meaning service with the company continuously without a break of any kind, except on leave of absence, sickness, injury or necessary temporary lay-off on account of reduction of

force or for any other reason, all such cases to be subject to the discretion of the Board, and such absence may at the discretion of the pension committee be deducted in computing the length of service. In any other case, if a person is re-employed after such a break in the continuity of his service, for the purpose of this pension plan he is considered as a new employee. The retiring age limit is 65 years for male employees and 55 years for female employees.

Provision is made for retirement, under certain conditions, after 10 years service in the event of an employee becoming disabled in the performance of his regular duties so as to preclude resuming work.

The amount of pension is determined by multiplying an amount equal to one per cent of an employee's average wage during the last 10 years of service by the number of years of continuous service. The total represents the annual pension which is paid in monthly instalments. It is stipulated that no pension allowance shall exceed \$1,000 per annum, or be less than \$240 per annum. All pensions are paid to the pensioner personally, and the proportion of unpaid pension due to a deceased employee up to and including the date of death may be paid to his or her heirs as the pension committee shall decide.

## NOVA SCOTIA LIGHT, HEAT AND POWER COMPANY Plan for Pensions, Sickness Benefits, and Group Insurance

THE Nova Scotia Light and Power Company Limited gave effect on May 1, 1929, to a plan providing for pensions and sickness benefits and employees' group insurance.

The cost of pensions and sickness benefits is to be met entirely by the company, while group insurance will be made available to all employees of less than retirement age, not members of the Employees' Mutual Benefit Association, at a cost to them of 75 cents per month, per \$1,000 of insurance, the company contributing the remaining cost. However, as a prerequisite to receipt of pensions or sick benefits, employees will be required to subscribe to the group insurance plan on or before July 1, 1929, or new employees within three months of the date of their employment, and to continue throughout their employment, or until they have attained retirement age, to contribute to the cost of same. Employees now members of the Employees' Mutual Benefit Association may continue their membership in that association and such employees will be entitled to pension, but not to sickness benefits or group insurance under this plan. They may, however, at any time resign from

the Employees' Mutual Benefit Association, and in lieu of their membership therein subscribe to the group insurance plan and will then become eligible for sick benefits as well as pensions.

*Group Insurance:*—The group insurance plan became effective on May 1, 1929. The contribution required from an employee is 75 cents per month per \$1,000 of insurance. The amount of insurance which can be obtained by an employee depends upon the length of employment of such employee. To employees with over three months' service, the amount of insurance is \$500, and the amount increases according to graded periods of service until the total of \$1,000 insurance for five years service and over. Insurance under the group life insurance plan is payable in the event of death resulting from sickness or accident. In the event of an employee becoming permanently disabled as a result of sickness or non-occupational accident he will be entitled to receive the full amount of insurance then effective on his life, in accordance with provisions set forth in the policy.

*Pension plan:*—The pension plan provides for payment of an allowance to employees upon retirement in their old age, the retirement age for women being fixed at 60 years, and for men at 65 years. All employees who on May 1, 1929, had reached retirement age and whose term of employment is ten years or more will become eligible for pension upon retirement. All other employees, upon attainment of retirement age, whose term of employment at that time is ten years or more, will become eligible for pension upon retirement, provided only that they have taken out and continued insurance under the group insurance plan.

Supplementing the disability benefit payment under the group insurance plan, with the approval of the board of directors, any employee who has become totally disabled as a result of sickness or injury, (other than by accidental injury arising out of and in the course of employment by the company) and whose term of employment has been ten or more years, may be retired from active service and granted a pension. If a pension is granted it is for such period as the committee may determine. If, at any time during such period, the employee recovers sufficiently to resume active work, the pension is to be discontinued. If the employee re-enters the service of the company at the time such pension is discontinued, he thereupon becomes eligible for benefits under this plan, and the period of absence is considered as leave of absence and not as a break in the continuity of the employee's service.

The amount of pension is based on one per cent of an employee's average annual pay during the ten years previous to retirement, the minimum pension payable to employees with 20 or more years of service being \$240. It is further stipulated that no pension shall exceed an amount equal to 50 per cent of the average annual pay during the next ten years preceding retirement.

*Sickness Benefits:*—The sickness benefit plan provides for the payment of weekly benefits to an employee on account of physical inability to work by reason of sickness or non-occupational accident. Sickness includes injury other than accidental injury arising out of and in the course of employment by the company and for which benefits are received under the Workmen's Compensation Act.

The following is the scale of sickness disability benefits:—

One year's service and over, \$15 per week for 4 weeks, then \$7.50 for 8 weeks; two years' service and over, \$15 per week for 5 weeks, then \$7.50 for 10 weeks; three years' service and over, \$15 per week for 6 weeks, then \$7.50

for 12 weeks; four years' service and over \$15 per week for 7 weeks, then \$7.50 for 14 weeks; five years' service and over, \$15 per week for 8 weeks, then \$7.50 for 16 weeks.

Such payments terminate when the disability ceases and will in no case extend beyond the periods mentioned above.

It is emphasized that "disability" employees must take care of themselves and have proper treatment.

Disability due to intoxication, or immorality, or narcotics, or to fighting, unless in self defence, involves loss of the right of benefits.

### **Pension Plan of Mond Nickel Company**

The Mond Nickel Company, of which Lord Melchett is chairman, introduced a new pension scheme at their nickel works at Clydach, near Swansea, South Wales, on June 1. The plan is non-contributory, and is to be continued indefinitely, and all employees are eligible for membership. There is provision for retiring after 20 years' service, for disability benefit after 10 years if totally and permanently disabled from any cause and benefit is to be paid on the death of a member either in active service or if a pensioner.

Sixty-five is the minimum age for retirement for men and 60 for women. If an employee has put in 30 years' service and earned an average of £3 10s. per week for five years before retirement he will receive a pension of £55 10s. a year. Under the disability provisions a member with 20 years' service and the same average pay will get the last-named amount of pension. On the death of a member in active service his relatives will receive £60, and should he leave dependents there will be additional death benefit. When a pensioner dies £60 will be paid to his beneficiaries.

A memorandum on the rules and financial provisions of industrial pension plans has recently been prepared and published by the Industrial Relations Section of Princeton University. It is a survey of "existing studies of the subject for the benefit of those concerned with the problem of industrial pensions who have but little time to give to research." The phases of the problem with which the memorandum deals are the rates of pension allowed, the length of service required, and the method of financing pension plans. It does not touch on the question of the economic justification of pensions either when maintained by employers or by the State. In conclusion, there is presented an analysis of the outstanding provisions of representative industrial pension plans.

## DAIRY INDUSTRY IN CANADA

Statistics of dairy factories in Canada for 1927, prepared by the Dairy Statistics Section of the Dominion Bureau of Statistics in collaboration with the dairy branches of the various provincial departments of agriculture, indicate the development of the industry, which has become one of the most important in the Dominion. It is pointed out that the statistics in this report relate solely to the production of dairy factories; they do not include butter made on the farm and known as "dairy butter" and home-made cheese. The Census of 1921 showed that the production of dairy butter in 1920 was 103,487,506 pounds, and of home-made cheese, 533,561 pounds, these quantities representing respectively 48 and 0.3 per cent of the totals.

Complete statistics of the production of dairy factories date from 1900 when the total value of the products was \$29,731,922. In 1927 the value of the products of dairy factories was \$135,910,930, representing an increase of \$106,179,008 or 357 per cent during the twenty-seven years. In recent years there has been a large increase in the production of condensed milk. The first milk condensing plant was established at Truro, N.S., in 1883, and there are now in Canada twenty-seven plants for the manufacture of condensed and evaporated milk and milk powder. The value of these products in 1900 was \$269,520, and 1927 the value was \$10,186,312.

The value of all dairy products in Canada in 1927 is estimated at \$253,736,605, distributed as follows: creamery butter 176,978,947 lbs., value \$65,709,986; dairy butter (estimated) 95,000,000 lbs., value \$30,435,121; factory cheese 138,056,908 lbs., value \$25,522,148; home-made cheese (estimated) 415,417 lbs., value \$70,654; miscellaneous factory products \$18,879,335 and milk consumed fresh or otherwise used (estimated) 471,350,310 gallons, value \$113,119,361.

The *per capita* consumption of butter in Canada in 1927 is estimated at 28.88 lbs., and the consumption of cheese at 3.38 lbs.

*Establishments and Patrons.*—The total number of dairy establishments in operation in Canada in 1927 was given as 2,899, comprising 1,266 creameries, 1,334 cheese factories, 272 combined butter and cheese factories, and 27 condenseries. Compared with the preceding year, the number of creameries shows a decrease of 3; cheese factories, a decrease of 84; combined butter and cheese factories a decrease of 62; and condenseries an increase of 1; making a decrease for all factories of 148.

The number of patrons (farmers who supply milk and cream to dairy factories) in 1927 was 310,822, compared with 330,382 in 1926

and 317,762 in 1925. The industry paid to the patrons in 1927 a total of \$97,157,214, an increase over the year 1926 of \$1,507,961, but a decrease from the year 1925 of \$4,705,273. The patrons of creameries in 1927 received \$63,346,230; of cheese factories, \$19,980,023; of combined butter and cheese factories, \$6,850,956; and of condenseries, \$6,980,005. The average price paid for the milk per 100 lbs. was \$1.65 in 1927, \$1.53 in 1926 and \$1.74 in 1925. The cream was paid for at an average price per lb. of butter-fat of 36½ cents in 1927, 35 cents in 1926 and 36 cents in 1925.

*Total value of products.*—The total value of all products of dairy factories in 1927 was \$135,910,930, an increase over the preceding year of two and a half million dollars. The value of the butter production represents 48 per cent of the total value of products, while the relation of each of the other items to total value of product is as follows: cheese, 19 per cent; condensed products, 8 per cent; ice cream, 5 per cent; milk and cream sold, 19 per cent; and sundry products, 1 per cent. The average value of output per factory in 1927 was \$46,882, compared with \$43,765 in 1926 and \$45,910 in 1925.

*Capital.*—The value of the capital investment of the industry in 1927 was \$50,805,132, compared with \$47,091,589 in 1926 and \$44,307,558 in 1925. These totals comprise the value of land, buildings and machinery, materials and products on hand and cash and operating accounts. The average value of capital per establishment was \$17,525, compared with \$15,455 in 1926 and \$14,710 in 1925.

*Employees and Salaries and Wages.*—The returns of dairy factories for all provinces excepting Quebec classify the employees either as salaried employees or as wage-earners. The first classification includes superintendents, managers, head butter and cheese makers, clerks, stenographers, etc., and the second comprises assistant butter and cheese makers and factory helpers. For Quebec no classification is made in this respect and all of the employees in that province are included in the tables as wage-earners. In 1927, the number of persons classified as salaried employees was 4,469 and the number as wage-earners, 7,491, a total of 11,960 compared with a total of 12,069 in 1926. The statistics of employment of wage-earners by months (in the case of Quebec of all employees) show July with 8,447 persons as the month of highest employment, and January and February each with 4,566 as the months of lowest employment. The total amount paid to all employees in 1927 was \$12,181,080 compared with \$12,398,490 in 1926.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Twelfth Session of the International Labour Conference

**T**HE Twelfth Session of the International Labour Conference opened at Geneva, Switzerland, on May 30th. It is hoped to have a comprehensive article in the July issue of the *LABOUR GAZETTE* dealing with the proceedings of this Conference, which include consideration of the following subjects: prevention of industrial accidents (final discussion); protection against accidents of workers engaged in loading or unloading ships (final discussion); forced labour (first discussion); and hours of work of salaried employees (first discussion).

### Joint Maritime Commission

The Joint Maritime Commission of the International Labour Office met in Paris from April 18 to 20, with representatives of ship owners and seamen in attendance, as well as members representing the Governing Body of the International Labour Office. The Commission took note of the progress made during the past year of the ratification of maritime Conventions, the number of ratifications having risen from 76 to 97. The agenda of the Conference comprised a discussion of hours of work, offences committed at sea, and accidents to dockers.

### Draft Convention on Minimum Wage Fixing Machinery

According to information received in the International Labour Office from Berlin, the German Reichstag has approved the Draft Convention concerning the creation of minimum wage fixing machinery which was adopted by the International Labour Conference at its Eleventh Session held in Geneva last year. This Convention had previously been approved by the Reichsrat, and it may therefore be assumed that its ratification by Germany will follow shortly.

The Convention, it will be recalled, aims at the removal in all countries of some of the worst forms of the evil known as "sweating." Each State which ratifies it undertakes to create machinery whereby minimum rates of wages can be fixed for workers employed in trades or parts of trades (especially the home-working trades) in which no arrangements exist for the effective regulation of wages by collective agreement or otherwise and wages are exceptionally low. Each country is free to decide the nature and form of the machinery, the methods to be followed, and the trades to which it should be applied; it must, however, present an annual report to the International Labour Office giving a list of the trades covered, the methods adopted, and the results obtained. A bill is also at present be-

fore the Chamber of Deputies in France to authorize the ratification of the Convention. No pronouncement of policy has yet been made by Great Britain, to whose initiative the Convention is primarily due.

Minimum wage laws are already in existence in seven of the provinces of Canada.

### Report of the Director on His Visit to China

The Director of the International Labour Office, Mr. Albert Thomas, has submitted a report to the Governing Body of his visit to the Far East some months ago. Mr. Thomas travelled to China by way of the Trans-Siberian Railway, arriving on November 15, 1928, and remaining there for three weeks. During this time he was accompanied by Mr. Chan, the Chinese member of the staff of the International Labour Office. It will be remembered that China has been a member of the organization from the beginning. At the Washington Conference the conditions in China were referred to in the report on countries faced with special difficulties from the point of view of workers' protection. Since then the progress achieved has been very uncertain.

A new Labour Code has been drafted and the Minister of Industry, Commerce and Labour submitted the text to the Director of the International Labour Office and asked him to obtain the views of the Office on it. The Director has submitted the draft to experts on the staff of the Office and will communicate to the Chinese Government their remarks or suggestions, as requested. While in Nanking, Mr. Thomas drew the attention of the authorities concerned to the necessity of having well-organized inspection services in order to ensure the enforcement of the social legislation now in course of preparation. Up to the present China has sent only Government representatives to the International Labour Conference, but as a result of the conversations on this subject which the Director had at Nanking, it is hoped that at the next Session of the Conference the employers and workers will also be represented.

The growing international importance of China makes it one of the countries about which exact information is most needed and it is proposed to establish a correspondent's office for the I.L.O. in China, which would have the duty of co-ordinating all the data, at present so irregular and fragmentary, which are available on conditions of labour in China and would serve as a link between the International Labour Office and the Chinese Government.

### Report on Unemployment

A report on unemployment, embodying the results of researches undertaken by the International Labour Office, has been prepared for the information of the International Labour Conference. It describes the influence exerted on unemployment by certain important international factors in the last few years, at the same time recognizing that in each country unemployment results from a number of different causes, many of which are national in character.

The report begins with an investigation into the influence of currency fluctuations, manifested in variations of the price level, and affecting all branches of production. It then proceeds to study the conditions affecting the regularity of employment and business activity in certain industries, the industries selected for this purpose being coal and textiles. In the coal industry the leading factor of the situation is a productive capacity in excess of the demand, resulting in excessive competition between different coal-producing countries, and in the consequent unemployment of the workers now of one country, now of another; in the textile industry, it is shown how the development of new undertakings in certain countries has closed the former outlets of other nations which have not yet adapted themselves to the new situation thus created. The question of the international distribution of labour is then discussed, and it is shown

that the unemployment existing in certain countries may be ascribed to an unstable equilibrium between the quantity of labour available and the productive capacity of the country. Incidentally it is stated that international movements of labour are more often due to the attraction of the country of immigration than to the outward thrust of over-population, and in this connection the legislative steps taken by several States in recent years to adapt migration movements to the needs of their labour markets are described, the suggestion being made that there is an evident necessity for international agreements by which the interests of over-populated and under-populated countries and of the workers themselves may be brought into harmony.

### Publications

*Occupation and Health*.—A further series of brochures of "Occupation and Health," the Encyclopaedia of Hygiene, Pathology and Social Welfare, which is in course of publication by the International Labour Office, has just appeared. It comprises monographs on: Calcium and Calcium Carbide; Camphor (Synthetic); Canning and Food Preserving Industries; Cantharides and Carbanilide; Cements; Chlorates, Chlorides (Alkaline) and Chloroform; Chloropicrine, Chromium and Chromates; Cocaine, Cochineal, Codeine, Coleothar and Colocynthis; and Copper Boiler Making.

## CONVENTION OF ONTARIO SUPERINTENDENTS OF THE EMPLOYMENT SERVICE OF CANADA

A CONFERENCE of the Superintendents of the Ontario offices of the Employment Service of Canada was held at Toronto on June 4-7. This conference was held simultaneously with the Sixteenth Annual Convention of the Association of Governmental Officials in Industry of the United States and Canada,\* and some of the sessions of both conferences were held jointly. Besides round table discussions on matters directly affecting the administration of the employment offices, in which all of the superintendents engaged, addresses were delivered to the employment officials on matters relating to their work as follows:—

The Ontario Apprenticeship Act and its relation to the Employment Service, by Mr. A. W. Crawford, Ontario Inspector of Apprenticeship, Toronto.

Graphology as an aid to employment managers, by Mr. F. D. Jacob, handwriting expert, Ottawa.

Stabilization of employment in industry, by Mr. Tom Moore, President of the Trades and Labour Congress of Canada, Ottawa, and

Mr. S. J. McLean, President of Canada Packers, Toronto.

Some facts and reflections regarding employment and unemployment statistics, by Mr. R. A. Rigg, Director of the Employment Service of Canada, Ottawa.

A decade of Employment Office work in Ontario, by Mr. H. C. Hudson, Superintendent, Ontario Public Employment Offices, Toronto.

The Employment Service from the point of view of the employer, by Mr. E. H. Brown, Secretary of the Employment Committee, American Cyanamid Co., Niagara Falls.

Industrial placement work, by Mr. J. Francis, Bell Telephone Company of Canada, Toronto.

Hon. Dr. Forbes Godfrey, M.D., Ontario Minister of Health and Labour, and Mr. J. H. H. Ballantyne, Deputy Minister of Labour for Ontario, were present at the opening session of the Superintendents' meeting. Mr. H. C. Hudson, B.A., general superintendent of the Ontario Employment Offices, was the presiding officer throughout the sessions. The Employment Service Branch of the Department of Labour was represented by Mr. R. A. Rigg, Director, and Mr. V. C. Phelan.

\*The proceedings at this convention are outlined on page 622.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING APRIL

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in April was 6,636, their employees numbering 991,093 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for April was 1,661, having an aggregate member-

ship of 188,874 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment;

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### Employment Situation at the Beginning of May, 1929, as reported by Employers

The Dominion Bureau of Statistics tabulated reports from 6,636 firms who reported a decidedly upward movement in employment on May 1; the payrolls of these employers were increased by 49,449 persons to 991,093 on the date under review, when the index, reflecting the gain of nearly six per cent, rose to 116.2, as compared with 110.4 on April 1, and with 106.8, 101.8, 95.4, 91.9, 92.9, 92.5, 84.3 and 85.1 on May 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. There was, therefore, an increase in employment of over nine per cent as compared with the same date of last year. The accompanying chart shows the favourable situation as compared with earlier years of the record.

Manufacturing, construction and transportation recorded unusually pronounced improvement, while large gains were also noted in mining, trade, services and communications. On the other hand, there was seasonal curtailment in logging and coal mining.

#### Employment by Economic Areas

Heightened activity was reported in all provinces, but Quebec and Ontario registered the largest increases.

*Maritime Provinces.*—Additions to staffs were indicated in the Maritime Provinces, where 533 firms reported 72,596 employees, or 820 more than in their last return. This gain was smaller than that indicated on May 1 last year, but the index then was lower. Construction showed the greatest advances on the date under review; manufacturing, especially

in lumber and fish-preserving plants, also showed important gains, while transportation and logging were seasonally slacker.

*Quebec.*—General improvement was recorded in Quebec, according to 1,494 employers with 264,457 workers, as against 248,823 in the preceding month. Large increases were recorded in manufacturing, transportation and construction and maintenance, and there were smaller gains in trade, mining, communications and logging, those in the last-named being due to river drives. Employment was in greater volume than on the corresponding date a year ago, when the indicated increase was considerably smaller.

*Ontario.*—The expansion in Ontario on May 1, 1929, was the largest reported in any month since the record was begun in 1920; 22,355 persons were added to the working forces of the 3,003 co-operating firms, who had 432,393 employees. Manufacturing, construction and transportation registered the most pronounced increases, but the movement was also upward in mining, communications and trade, while logging was seasonally slacker. The situation was decidedly better than on May 1 in any other year since 1920.

*Prairie Provinces.*—Manufacturing, transportation, trade, communications, services and construction showed heightened activity, the advance in the last-named being most marked. Statements were tabulated from 902 employers, whose staffs rose from 129,428 persons on April 1, to 135,647 on the date under review. This expansion was on a slightly

smaller scale than at the beginning of May, 1928.

*British Columbia.*—The improvement in British Columbia was more pronounced than in the spring of last year, when the index was lower. An aggregate payroll of 85,999 workers was indicated by the 704 firms furnishing data, who had 81,579 in the preceding month. Manufacturing and construction were decidedly busier, especially marked advances taking place in the last-named; mining, communications and transportation were also busier, while trade was rather dull.

Table I gives index numbers by economic areas.

10,731 on April 1. Most of the improvement took place in construction and transportation. The gain involved rather fewer workers than that recorded on May 1, 1928, when the index was lower.

*Toronto.*—Manufacturing, transportation and trade reported important increases in personal in Toronto, according to data furnished by 870 employers, whose payrolls aggregated 122,496 persons, as compared with 120,386 at the beginning of April. This expansion resulted in a higher level of employment than in the spring of any other year since 1922, when data for this city were first compiled.

#### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

#### Employment by Cities

The eight cities for which separate returns are tabulated showed considerably increased activity, Montreal firms adding an especially large number to their staffs.

*Montreal.*—Transportation, manufacturing and construction recorded the greatest advances in Montreal, where 800 employers added 7,297 workers to their payrolls, bringing them to 135,625 at the beginning of May. Smaller increases were indicated on the same date last year, when the index stood at 105.9, as compared with 114.2 on May 1, 1929.

*Quebec.*—Statements were tabulated from 103 firms with 10,862 employees, as against

*Ottawa.*—Lumber mills and construction registered the bulk of the improvement in Ottawa, where the advance involved a slightly smaller number of persons than that noted on May 1 of last year. Statistics were tabulated from 138 firms employing 12,813 persons, compared with 11,528 on April 1. The index was at its maximum for the spring since the record for this city was commenced.

*Hamilton.*—A combined working force of 39,067 persons was reported by the 208 co-operating employers, who had 37,581 on April 1. Manufacturers were decidedly busier, while only slight changes were noted in other groups. Employment was in greater volume than in

NOTE: "Relative Weight" in Tables I, II, III and IV shows the proportion of employees in the indicated area of industry to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS, (AVERAGE 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

the same month of 1928, when the expansion indicated was not so pronounced.

*Windsor and the Adjacent Border Cities.*—Considerable improvement was shown in the Border Cities, chiefly in automobile factories, but also in construction. Returns were tabulated from 122 firms with 23,235 workers, compared with 21,810 in the preceding month. Employment was more active than in any other month of the record.

*Winnipeg.*—Construction, manufacturing, trade and communications reported the most noteworthy expansion in Winnipeg; 315 employers in that city added 782 persons to their staffs, bringing them to 32,066 on May 1. The situation was more favourable than on the same date last year, although somewhat larger gains had then been indicated.

*Vancouver.*—Manufacturing and road construction registered the greatest increases in Vancouver, where 272 firms employed an aggregate working force of 28,791 persons, compared with 28,017 on April 1. The index was higher than at the beginning of May of a year ago, when the trend was also upward.

Index numbers by cities are given in Table II.

### Manufacturing

Employment in manufactures showed an important gain at the beginning of May; 4,041 establishments reported 566,516 workers, compared with 550,275 in the preceding month. The largest advances were in iron and steel works and in lumber mills, where they were of a seasonal character, but important expansion also took place in the fish-packing, pulp and paper, rubber, tobacco, distilled and malt liquor, building material, electric current, electrical apparatus, mineral product and non-ferrous metal groups. Boot and shoe and textile factories, however, were slacker. Employment was in considerably greater volume than on May 1 in other years since 1920; the situation was, in fact, more favourable than in any other month of the record.

*Animal Products, Edible.*—Continued and larger increases in employment were noted in fish-packing plants and dairies; the improvement was not so extensive as that reported on May 1, 1928, but the index then was lower.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Relative weight of employ- ment by industries as at May 1, 1929.....	100.0	57.2	1.9	5.1	2.9	12.3	10.4	2.0	8.2

Statements were tabulated from 223 firms in this group, employing 17,384 workers, or 709 more than at the beginning of April. The expansion took place chiefly in the Maritime Provinces, but the trend elsewhere was generally upward.

*Leather and Products.*—Employment in boot and shoe and other leather factories showed a seasonally downward movement, according to 179 manufacturers with 16,236 employees, as compared with 16,416 in the preceding month. The largest declines were in Ontario. The reduction involved fewer workers than that noted on May 1, 1928, but the situation then was better.

*Lumber and Products.*—Seasonal activity caused a pronounced advance in this group, practically all divisions showing some improvement, which was, however, particularly noteworthy in sawmills. Data were received from 701 employers of 54,475 persons, as against 47,627 in the preceding month. The increases were distributed over the country, those in

Quebec and Ontario being greatest. Smaller additions to staffs had been registered on May 1, 1928, when the index was lower than at the beginning of May this year

*Musical Instruments.*—Employment in musical instrument works showed an increase, 163 operatives being taken on by the 42 co-operating manufacturers, who had 3,003 workers. Employment was in greater volume than in the corresponding period last year. Most of the advance took place in Quebec.

*Plant Products, Edible.*—There was a slight decline in activity in edible plant product factories, chiefly in those producing biscuits and confectionery. This reduction was smaller than that noted on May 1, 1928, and the index number then was lower than at the beginning of May this year. Statements were compiled from 311 employers, whose payrolls aggregated 27,872 persons, as compared with 27,945 on April 1. There were minor gains in all provinces except the Maritime Provinces and Ontario.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100).

Industries	*Relative Weight	May 1 1929	April 1 1929	May 1 1928	May 1 1927	May 1 1926	May 1 1925	May 1 1924

\*The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

*Pulp and Paper Products.*—There was continued improvement in these industries, in which employment was in greater volume than in the spring of other years of the record. Much of the gain took place in pulp and paper mills, while printing and publishing and paper product plants were also busier. The working forces of the 507 co-operating establish-

ments aggregated 64,921 employees, as against 63,924 in their last report. Heightened activity was shown throughout the Dominion, but the advance in Quebec was most pronounced.

*Rubber Products.*—Considerable recovery was noted in rubber factories on May 1, 1929, greatly exceeding the gains indicated on the same date in 1928, when the index was many

points lower. Returns were tabulated from 37 manufacturers employing 17,705 workers, or 810 more than at the commencement of April. Most of the increase was in Quebec.

*Textile Products.*—There was slight falling-off in employment in this group at the beginning of May, according to statistics from 563 manufacturers having 83,961 persons on their payrolls, as compared with 84,281 on April 1. Employment was brisker in woollen and knitting mills, but cotton and garment and personal furnishing factories released employees. Quebec reported the bulk of the loss, while considerable improvement was shown in Ontario.

*Tobacco, Distilled and Malt Liquors.*—Data were received from 141 plants in this group employing 15,766 persons, or 358 more than in the preceding month. This increase, which was smaller than that recorded on May 1 last year, took place chiefly in Quebec. Employment was at a higher level than on the same date in 1928 and earlier years for which statistics are available.

*Chemicals and Allied Products.*—Employment in chemicals and allied products showed a moderate increase in Quebec and Ontario, according to information from 114 manufacturers, whose staffs included 7,964 workers, as against 7,908 in April. The index was several points higher than on May 1 a year ago, when the trend was also favourable.

*Clay, Glass and Stone Products.*—Building material factories in all provinces indicated seasonal improvement; the general gain was more marked than at the beginning May last year, when the index number was several points lower. The 133 co-operating firms reported 12,311 employees, as against 11,336 in the preceding month.

*Electric Current.*—Further and more pronounced additions to staffs were recorded on May 1 in electric current plants, in which activity was greater than in the spring of any other year of the record. Statements were received from 90 companies employing 14,704 workers, an increase of 521 over their April 1 forces.

*Electrical Apparatus.*—The trend of employment in this group continued upward, 201 persons being added to the payrolls of the 45 reporting establishments, which had 13,727 employees. The improvement was largely confined to Ontario. Gains had also been registered on May 1, 1928, when the index number was much lower.

*Iron and Steel Products.*—The rolling mill, general plant machinery, structural iron and steel, foundry and other divisions of this group

reported considerable increases in activity, and there were large gains in automobile factories. Returns were tabulated from 653 manufacturers with 176,452 operatives, as compared with 172,411 in the preceding month. The improvement indicated at the beginning of May last year was rather less pronounced, and the situation was not so favourable. All except the Maritime Provinces shared in the upward movement, but Ontario registered the greatest advances.

*Non-Ferrous Metal Products.*—Non-ferrous metal products showed an increase in employment, the working forces of the 104 co-operating firms rising from 19,685 at the beginning of April to 20,094 on May 1. There were gains in all provinces except Quebec. Additions to staff on a smaller scale were reported in this group in the same month in 1928, when the index number was lower. Employment on the date under review was, in fact, brisker than in the spring of any other year for which statistics have been compiled.

*Mineral Products.*—Continued improvement was indicated in the mineral products group, the increases being more pronounced than on May 1 a year ago, when the index number was lower than on the date under review. Reports were received from 80 manufacturers, whose payrolls included 12,893 persons, as compared with 12,332 in the preceding month. The greatest advance was in Quebec.

### Logging

In spite of large increases in Quebec on account of river drives, there was, on the whole, a decline in logging, according to 222 firms employing 19,237 men, or 1,984 less than in April. Greater curtailment was registered at the beginning of May, 1928, but the index then was rather higher.

### Mining

*Coal.*—Employment in coal mining showed a reduction, which was more pronounced than in the same month last year. The index then was slightly higher than on May 1, 1928. Data were received from 79 operators with 26,119 employees, as compared with 26,543 in the preceding month. The decrease took place in the Western coal fields, the tendency in the Maritime Provinces being favourable.

*Metallic Ores.*—There was a further substantial improvement in metallic ore mines, chiefly in Ontario and British Columbia. An aggregate working force of 15,371 persons was employed by the 73 co-operating firms, who had 14,896 in their last report. Smaller gains were indicated at the beginning of May a

year ago, but employment this spring is better than in the same period in any other year of the record.

*Non-Metallic Minerals (Other than Coal).—*Employment in this group showed important gains, resulting in the most favourable situation indicated since the series was commenced in 1920. Sixty-six employers enlarged their payrolls by 1,317 workers to 9,137 at the beginning of May. Quarries and other divisions reported heightened activity. The greatest advances were in Ontario, but the movement was generally upward.

### Communications

Further increases were noted in telegraph and telephone operation, 935 persons having been added to the forces of the 188 co-operating companies and branches, which had 28,417 in their employ. Conditions were better than in the spring in any other year of the record.

### Transportation

*Street Railways and Cartage.*—Continued and more pronounced improvement was shown in local transportation at the beginning of May, when the 128 firms from whom information was received, reported 23,215 employees, or 1,150 more than in the preceding month. The index was higher than on the same date in 1928 and earlier years. Quebec and Ontario registered most of the improvement.

*Steam Railways.*—Steam railway operation afforded more employment in Quebec, Ontario and the Prairie Provinces, while curtailment was shown in the Maritime Provinces and British Columbia. Statements were received from 105 employers in this division, whose payrolls increased from 81,016 persons on April 1 to 83,269 at the beginning of May. A decline had been noted on May 1, 1928, when the index was several points lower.

*Shipping and Stevedoring.*—A combined staff of 14,984 men, as compared with 11,557 in the preceding month, was reported by the 69 firms furnishing statistics in the water transportation group. This gain exceeded that noted on the same date last year, when the index was lower. Large reductions in the Maritime Provinces were offset by increases in Quebec and Ontario.

### Construction and Maintenance

*Building.*—Employment in building construction continued to expand largely; the index stood at 114.3, as compared with 102.6 on May 1, 1928. The working forces of the

578 co-operating contractors aggregated 43,169 persons, as against 38,702 at the beginning of April. The tendency was favourable in all except the Maritime Provinces, but the greatest gains were in Quebec and Ontario.

*Highway.*—Activity on roads and highways advanced very considerably, 6,185 men being added to the working forces of the 173 employers making returns, who had 5,792 on May 1. All provinces registered noteworthy increases. Although the additions to staffs indicated on the same date last year were on a rather smaller scale, employment then was in slightly greater volume.

*Railway.*—Forty companies and divisional superintendents in this group employed 48,430 workers, as against 34,346 in the last report. All provinces shared in the upward movement, which, however, was most marked in the Prairie Provinces and Ontario. Expansion involving a smaller number of men was noted at the beginning of May a year ago, when the index number stood at 109.7, as compared with 123.2 on the date under review. The latter was higher than on May 1 in any other year since the record was commenced in 1920.

### Services

The service group, especially the laundry and personal service divisions, reported heightened activity, according to statements from 208 establishments employing 20,031 persons, as against 19,701 in their last report. The situation was decidedly better than on May 1 of 1928 and of earlier years of the record. The Prairie Provinces registered the greatest gains.

### Trade

Continued additions to personnel were shown in trade, in which 666 establishments enlarged their forces by 993 employees to 81,221 on the date under review. The index was at its peak for the beginning of May in the years for which data are available; it was also higher than in any month of the years 1920-1927. Improvement was noted in both retail and wholesale trade, the largest gains being in Ontario

### TABLES

The accompanying tables give index numbers of employment by economic areas, leading cities, and industries. The columns headed "relative weight," show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on May 1, 1929.

### Unemployment in Trade Unions at the Close of April, 1929

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

involving the greatest number of workers, the contractions in Quebec, due, as mentioned above, to inactivity in the garment trades, in a large measure off-setting the gains in employment reported from Ontario, where building and construction and steam railway operation were mainly responsible for the better situation prevailing. In addition to Quebec the British Columbia and Alberta employment trend was reported as unfavourable, while from the remaining provinces advances in available employment were indicated the most substantial of which were recorded by Manitoba and Saskatchewan unions. In comparing with the

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The present article on unemployment deals with the situation among local trade unions at the close of April, and is based on the reports received from an aggregate of 1,661 organizations, comprising a membership of 188,874 persons. Of these 10,382, or a percentage of 5.5, were idle at the end of the month, compared with an unemployment percentage of 6.0 in March. An outstanding feature of the April situation was the expansion shown in building and construction operations, shared to some extent by all provinces, which was due to increased development in various building projects with the approaching summer. Some improvement in the transportation industry was also registered by several of the provinces. Noteworthy reductions, however, were reported from Quebec, owing to the commencement of the usual seasonal slack period in the garment establishments of the province. Quebec and Ontario unions reported changes

returns for April last year, when 5.2 per cent of idleness was registered, Quebec, as in the previous comparison, reported the most pronounced declines in activity during the month under review, and in British Columbia also the situation was adverse, while from the other provinces some improvement was recorded.

Each month a separate compilation is made of unemployment in the largest city in each province with the exception of Prince Edward Island. Of these Winnipeg reflected the most outstanding improvement in conditions during April when compared with March, while in Regina also the employment gain was substantial. Toronto, Saint John, and Edmonton unions in addition registered somewhat heightened activity. A considerable increase in unemployment was recorded by both Montreal and Halifax unions, while in Vancouver minor contractions in activity only were registered. Employment for Halifax and Montreal union

members was, as in the previous comparison, on a much smaller scale during April than in the same month last year, and the situation for Edmonton, Vancouver and Regina unions also was less favourable. On the contrary the volume of employment afforded Saint John and Winnipeg union members was greater than in April a year ago while the unemployment percentage in Toronto remained practically the same in both months.

The chart accompanying this article indicates the unemployment trend by months from January, 1923, to date. During April the course followed by the curve was a continuation of the favourable trend shown in the previous month though the projection was slight, indicating a moderate increase in employment during the month under review. At the close of the month, however, the curve rested at a point slightly above that of the corresponding month of 1928, showing a somewhat lower level of activity during April this year.

The reductions in employment reported in the garment trades were almost entirely responsible for the unfavourable situation existing in the manufacturing industries during April when compared with March. The majority of the trades, however, showed improvement but the declines in the garment trades more than offset these. In addition, wood workers also reported some declines in activity though the reductions were not nearly so extensive as in the garment trades. On the other hand, the most marked gains were indicated by iron and steel workers and paper-makers. Returns for April were tabulated from 468 unions in the manufacturing industries with a total of 55,943 members and of these 3,915 were unemployed at the close of the month. The employment level in the manufacturing industries during April was also considerably lower than in the same month last year, attributable largely, as in the previous comparison, to slackness among garment and wood workers, while cigar makers recorded the most noteworthy gain in activity.

A moderate increase in the volume of unemployment was registered by coal miners during April when compared with March, the 40 unions from which reports were tabulated with 15,991 members showing 8.4 per cent of idleness compared with 5.2 per cent in the previous month. British Columbia unions especially reported curtailment of operations due to mine fires, and in Alberta and Nova Scotia the situation also was less favourable. British Columbia unions alone reported reductions in employment when compared with April last year and these were outstanding,

while in Alberta conditions were considerably better than in April a year ago, and in Nova Scotia also a greater volume of employment was accorded. Short time was fairly prevalent among miners in both the eastern and western coal fields during April.

Continued and more marked improvement was indicated in the building and construction group during April, the 208 unions from which reports were tabulated at the end of the month with a membership covering 25,951 persons, showing 11.3 per cent of idleness contrasted with 17.9 per cent in March. Employment for all tradesmen, with the exception of bridge and structural iron workers, was more plentiful than in March, carpenters and joiners, and bricklayers, masons and plasterers

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edward Island.	New Brunswick.	Quebec.	Ontario.	Manitoba.	Saskatchewan.	Alberta.	British Columbia.	Canada.

reporting the most appreciable gains, while among bridge and structural iron workers the contractions were nominal only. In making a comparison with the the returns for April last year, when 13.6 per cent of unemployment was recorded, carpenters and joiners, tile layers, lathers and roofers, bricklayers, masons and plasterers, granite and stone cutters, plumbers and steamfitters, electrical workers and painters, decorators and paperhangers were all accorded a greater volume of work during the month under review while hodcarriers and building labourers reported a considerable increase in unemployment, and among bridge and structural iron workers the declines reported were very slight.

From unions in the transportation industry 707 reports were received during April, covering a membership of 64,688 persons and of these 1,697 were reported idle at the end of the month, a percentage of 2.6 contrasted with unemployment percentages of 4.3 and 3.2 in March and in April, 1928, respectively. Navigation workers, steam railway employees and teamsters and chauffeurs all participated during April in the employment increases reported over March, while among street and electric railway employees nominal declines occurred. Some improvement was evident also in the transportation industry, as a whole, when comparison is made with April last year. Steam railway employees and navigation workers, as in the previous comparison, shared in the employment advancement, while among teamsters and chauffeurs, and street and electric railway employees fractional reductions in activity only were reported.

From longshore workers, whose returns are tabulated separately each month, 14 reports were received during April, combining a membership of 12,839 persons, 2,220 of whom, or a percentage of 17.3 were without employment at the end of the month contrasted with 6.7 per cent in March. The situation was, however, only slightly less favourable than in April of last year when 15.2 per cent of the workers were reported idle.

Reports were received during April from 8 unions of retail clerks with 1,363 members and of these 12 were reported unemployed at the end of the month, a percentage of .9 as

compared with 5.5 per cent of inactivity in March and 1.2 per cent in April a year ago.

Very little change took place among civic employees in any of the months used here for comparative purposes, the 63 unions from which reports were tabulated at the end of April with a membership of 6,984 persons, indicating .8 per cent of unemployed members in contrast with 1.0 per cent in March and 1.3 per cent in April last year.

The situation in the miscellaneous group of trades was more favourable during April than in the preceding month as shown by the reports tabulated from 111 unions with 5,641 members. Of these 222, or a percentage of 3.9, were idle at the end of the month as compared with 5.1 per cent in March. Stationary engineers and firemen, and theatre and stage employees particularly showed improvement, though among hotel and restaurant employees and barbers the employment movement was also upward. In comparison with the returns for April last year in the miscellaneous group of trades, as a whole, when 5.9 per cent of idleness was recorded, hotel and restaurant employees and stationary engineers and firemen registered gains in employment of around 4 and 3 per cent, respectively. Theatre and stage employees indicated some falling off in the work afforded, while among barbers practically the same situation prevailed as in March.

Fishermen with 3 unions reporting 844 members in April registered 2.6 per cent of inactivity compared with 1.2 per cent in March and no idleness in April last year.

A considerable slump in employment was shown by lumber workers and loggers during April, the 3 unions from which reports were received, embracing a membership of 952 persons, reporting an unemployment percentage of 18.3, as compared with 2.8 per cent in March and 3.1 per cent in April a year ago.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1928, inclusive, and also the percentage of unemployment by provinces for April of each year from 1919 to 1926, inclusive, and for each month from January, 1927, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### Employment Office Reports for April, 1929

The volume of business transacted by the offices of the Employment Service of Canada during April, 1929, as indicated by the average daily placements effected showed a 52 per cent increase when compared with the preceding month, while a gain of about 5 per cent was recorded over April of last year. Manufac-

turing, transportation, construction, services and trade all contributed to the total gain in placements in both comparisons, while farming, mining and communication reported increases in the former comparison but contractions in the latter. Placements in the logging industry were slightly less than in March, although the

improvement reported over April of last year was noteworthy.

The accompanying chart shows the trend of employment from January, 1927, to date, as represented by the ratio of vacancies offered and of placements effected for each 100 applicants for employment registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noted that the curve of vacancies and of placements in relation to applications showed a decided upward trend throughout the month, each attaining at the close of the month a level somewhat above that indicated at the end of April last year. The ratio of vacancies to each 100 applications was 83.3 and 87.7 during the first and second half of

The average number of applications for employment received daily by the offices during the month under review was 1,941 as compared with 1,485 in March and with 1,920 in April last year.

The average number of placements made daily by the offices of the Service during April, 1929, was 1,525, of which 1,030 were in regular employment and 495 in work of one week's duration or less, as compared with a total daily average of 1,002 during the preceding month. Placements in April of last year averaged 1,454 daily, consisting of 1,002 placements in regular and 452 in casual employment.

During the month of April, 1929, the offices of the Service referred 39,599 persons to vacancies and effected a total of 38,118 placements.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

April respectively, in contrast with ratios of 80.8 and 85.4 during the corresponding periods of 1928. The ratios of placements to each 100 applications during the periods under review were 75.5 and 81.3 as compared with 73.4 and 77.5 during April, 1928.

The average number of vacancies reported by employers to the offices of the Service throughout Canada daily was 1,662 as compared with 1,108 in the previous month and with 1,601 in April, 1928.

Of these the placements in regular employment were 25,734, of which 21,027 were of men and 4,707 of women, while placements in casual work totalled 12,381. The number of vacancies reported by employers was 28,144 for men and 13,413 for women, a total of 41,557, while applications for work numbered 48,523, of which 34,837 were from men and 13,636 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522

1929 (4 months).....	66,937	39,159	106,146

## NOVA SCOTIA

Orders listed at employment offices in Nova Scotia during April showed an increase of 36 per cent in comparison with the preceding month, but of less than one per cent when compared with the corresponding month last year. There was an increase of 29 per cent in placements in comparison with March, but a decline of over 4 per cent when compared with April, 1928. Placements in the transportation and construction and maintenance groups were higher during the month under review than in April last year, but these gains were more than offset by decreased placements in all other divisions. Industrial groups in which most of the placements were effected during the month were: manufacturing, 51; transportation, 40; construction and maintenance, 104; trade, 45, and services, 405, of which 313 were of household workers. During the month 142 men and 52 women were placed in regular employment.

## NEW BRUNSWICK

Opportunities for employment as indicated by orders received at employment offices in New Brunswick during April were 44 per cent better than in the preceding month and 34 per cent in excess of the corresponding month last year. There was a gain of nearly 42 per cent in placements over March and of more than 33 per cent when compared with April, 1928. All groups except farming participated in the gains in placements over April last year, those in construction and maintenance and services being the most noteworthy. Placements by industrial divisions included: manufacturing, 35; logging, 43; transportation, 33; construction and maintenance, 113; trade, 33, and services, 625, of which 487 were of household workers. There were 202 men and 73 women placed in regular employment during the month.

## QUEBEC

There was an increase of 37 per cent in the number of orders received by employment offices in the Province of Quebec over both

the preceding month and the corresponding month last year. Placements also were 23 per cent higher than in March and nearly 45 per cent above April, 1928. All industrial divisions showed increased placements over April last year, those in construction and maintenance being the most pronounced. Industrial groups in which most of the placements were effected during the month included: manufacturing, 174; logging, 279; farming, 98; transportation, 46; construction and maintenance, 644; trade, 67, and services, 698, of which 466 were of household workers. Placements in regular employment numbered 1,361 of men and 586 of women.

## ONTARIO

Employment opportunities as indicated by orders listed at Ontario offices during April were over 40 per cent better than in the preceding month and over 36 per cent in excess of the corresponding month last year. There was a gain of over 43 per cent in placements when compared with March and of over 42 per cent in comparison with April, 1928. All groups except mining participated in the gain in placements over April last year, those in manufacturing, construction and maintenance and services being the most pronounced. Placements by industrial divisions included: manufacturing, 2,492; logging, 756; farming, 1,081; mining, 88; transportation, 599; construction and maintenance, 3,844; trade, 700, and services, 5,437, of which 2,996 were of household workers. During the month 8,017 men and 1,661 women were placed in regular employment.

## MANITOBA

During the month of April positions offered through employment offices in Manitoba were 62 per cent higher than in the preceding month and nearly 9 per cent above the corresponding month last year. There was an increase also in placements of 72 per cent in comparison with March and of over 11 per cent when compared with April, 1928. Construction and maintenance was the only group in which fewer placements were made during the month under review than in April last year. Of the gains in other groups services showed the most marked increase. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 108; logging, 90; farming, 1,635; construction and maintenance, 690; trade, 203, and services, 2,498, of which 2,015 were of household workers. Regular employment was found for 2,385 men and 714 women.

## SASKATCHEWAN

Employment offices in Saskatchewan were notified of 75 per cent more vacancies during April than in the preceding month and 13 per cent more than during the corresponding month last year. There was a gain of 90 per cent in placements when compared with March and of nearly 16 per cent in comparison with April, 1928. All groups except farming, in which the decline was nominal, participated in the gains in placements over April last year, those in construction and maintenance and services being the most pronounced. Placements by industrial divisions included: manufacturing, 179; farming, 2,819; transportation, 106; construction and maintenance, 661; trade, 171, and services, 1,507, of which 992 were of household workers. There were 3,497 men and 822 women placed in regular employment during the month.

## ALBERTA

The demand for workers as indicated by orders received at employment offices in Alberta during April was nearly 74 per cent higher than in the preceding month, but over 28 per cent less than in the corresponding month last year. There was an increase of nearly 62 per cent in placements when compared with March, but a decline of nearly 29 per cent in comparison with April, 1928. There were fewer placements in April last year in all groups except manufacturing, services and trade, but a heavy reduction in farm placements was almost entirely responsible for the adverse change under this comparison. Placements by industrial divisions included: manufacturing, 349; logging, 56; farming, 2,302; transportation, 67; construction and maintenance, 540; trade, 175, and services, 1,095, of which 750 were of household workers. During the month 3,248 men and 484 women were placed in regular employment.

## BRITISH COLUMBIA

During April orders received at employment offices in British Columbia called for nearly 36 per cent more workers than in the preceding month and 8 per cent more than during the corresponding month last year. There was an increase of nearly 40 per cent in placements when compared with March, but a decline of over one per cent in comparison with April, 1928. Manufacturing, logging, transportation and services showed gains in placements over April last year, but these increases were more than offset by declines in other groups. The highway division of construction and maintenance showed the largest reduction in placements. The majority of placements made dur-

ing the month were in the following industrial groups: manufacturing, 625; logging, 310; farming, 431; mining, 110; transportation, 230; construction and maintenance, 1,035; trade, 123, and services, 1,200, of which 656 were of household workers. There were 2,175 men and 315 women placed in regular employment during the month.

## Movement of Labour

During the month of April, 1929, the offices of the Employment Service of Canada made 25,734 placements in regular employment, of which 14,706 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 2,034 were granted the Employment Service reduced transportation rate, 1,405 going to centres within the same province as the despatching office and 629 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Workers securing reduced rate certificates in Quebec during April numbered 24, of whom 4 were destined to provincial employment and 20 to points outside the province. The transfers within the province were from Montreal and included 2 saw mill labourers and 2 bush workers going to points within the territory covered by that office. The interprovincial movement was entirely from Hull, from which centre 20 bushmen were conveyed to points within the Pembroke zone.

Ontario offices granted 174 certificates for reduced transportation during April, 170 of which were to provincial points and the remainder to other provinces. Within the province Fort William transferred 8 bushmen and one mill wright and Port Arthur 65 bush workers, 2 saw mill labourers and one cook to employment in their respective zones. From Cobalt 5 carpenters travelled to Sudbury, 6 mine workers to Port Arthur, one boiler-maker to Brantford and 29 bushmen and 2 miners to points in the Cobalt zone, while Sudbury despatched 3 farm hands to Brantford and 26 bushmen and one saw mill engineer within its own zone. The North Bay office issued certificates to one machinist going to Timmins, 9 bushmen to Sault Ste. Marie and to one farm hand bound for Cobalt. From Toronto 2 locomotive workers were carried at the special rate to Kingston, 1 timekeeper to Port Arthur and one farm hand to Chatham. The North Bay zone received one teamster from Ottawa, Sault Ste.

Marie 2 lumber pilers from Pembroke, Fort William one stationary engineer from Timmins and Sarnia one hotel porter from Windsor. The interprovincial transfers included 2 miners proceeding from Sudbury to Winnipeg, one bricklayer from Toronto to Vancouver and one farm hand from Pembroke to Calgary.

During April 944 persons received certificates for reduced transportation at Manitoba offices, 590 of whom travelled to employment within the province and 354 to points in other provinces. The Winnipeg office effected all the transfers provincially, 2 hotel employees, 2 cooks and 2 farm domestics going to Dauphin, 33 farm household workers and 10 hotel workers to Brandon and 405 farm hands, 3 farm generals, 102 railroad construction labourers, 17 building construction workers, 4 hotel employees, 7 bush workers and 3 mine workers to employment within the Winnipeg zone. Of the workers transferred to other provinces 167 were farm hands and 9 farm domestics for various districts in Saskatchewan, and of these, all but one journeyed from Winnipeg, the Dauphin office being responsible for the transfer of one farm hand. From Winnipeg, in addition, 65 railroad construction workers, 15 carpenters, 2 bushmen and one hotel cook were carried at the special rate to Prince Albert, one dry cleaner and one cook to Regina, 48 railway construction workers, 26 carpenters, 2 granite cutters and one cook to Saskatoon, one cook to Moose Jaw and one construction cook to Yorkton. For employment in Alberta Winnipeg despatched one farm hand and one farm general to the Edmonton zone and one farm hand to Medicine Hat. The remainder of the interprovincial movement was to the Port Arthur zone, which was the destination of 4 section labourers, 5 hotel employees, one farm hand and one bushman.

The offices in Saskatchewan effected transfers of 180 persons during April, 177 of whom went to provincial employment and the balance outside the province. A large part of the provincial movement was to the agricultural districts, the Saskatoon office despatching 92 farm hands and 2 farm household workers, Moose Jaw 33 farm hands and 2 farm domestics and Regina 20 farm hands and one farm household worker to various rural points throughout the province. The Saskatoon office in addition was responsible for the transfer of one blacksmith to Regina, one hotel waitress to Prince Albert, 6 bushmen to North Battleford and one labourer and 4 domestic workers to points within its own zone, while from Regina also one hotel porter proceeded to Estevan and one labourer and 2 housekeepers within the Moose Jaw zone. From

Prince Albert 2 bush workers were conveyed to North Battleford and 6 bushmen, one saw mill labourer and one cook within its own zone. Of the 3 persons going outside the province one was a waitress for Fort William and one a cook for Calgary, both of whom travelled from Moose Jaw, while from Regina one farm hand was carried at the special rate, also to Calgary.

Reduced transportation rate certificates granted by Alberta offices in April numbered 382, of which 336 were provincial and 46 interprovincial. Of the former 242 were issued at Edmonton from which centre 5 farm hands and 2 farm housekeepers journeyed to Drumheller, 6 farm hands to Calgary, 4 farm hands and one miner to Lethbridge and 111 farm workers, 6 farm domestics, 34 bush workers, 26 saw mill employees, 13 railroad construction workers, 17 building construction labourers, 7 miners, 3 cooks, 2 teamsters, one labourer, one housekeeper, one store manager and 2 hotel employees to centres within the Edmonton zone. Transfers effected by the Calgary office included 43 farm hands, 4 farm housekeepers and 2 carpenters going to Drumheller, 9 farm hands, one farm housekeeper and one hotel employee to Edmonton, 3 farm hands and one housekeeper to Medicine Hat, 2 farm hands to Lethbridge and 28 farm hands within the Calgary zone. The movement outside the province was to Saskatchewan farm centres, Edmonton sending 36 farm hands to the Saskatoon zone and 7 farm hands and 2 farm domestics to North Battleford, while Calgary despatched one farm hand to the Moose Jaw zone.

In British Columbia 330 persons took advantage of the reduced transportation rate during April, 128 of whom went to points within the province and 202 to stations in other provinces. From Vancouver the provincial movement comprised the transfer of 20 mine workers and 2 engineers to Nelson, 2 farm hands, 4 bush workers, 3 labourers and one engineer to Kamloops, 4 mine workers, 3 railroad construction workers, 9 building construction employees and one steel sharpener to Revelstoke, 6 power construction workers, one fireman and 4 mine workers to Penticton, 8 miners to Cranbrook, one engineer, 2 farm hands and one planer man to Prince George and 6 mine workers, 4 millwrights, 2 millwright's helpers, 2 farm hands, 2 tunnel construction workers, 2 carpenters, one cook, one construction superintendent, one handyman and one waitress to employment within the Vancouver zone. The balance of the movement within the province included 12 mine workers and 12 loggers travelling from Nelson, 4 mine workers, 2 farm hands, one bushman

and one cook from Prince Rupert and 2 cooks from Prince George to centres within their respective zones. With the exception of one handy man going to Calgary from Vancouver and one saw filer to Lethbridge from the same centre all the workers transferred outside the province were for the agricultural regions of the Prairie Provinces Alberta receiving 132 farm hands and 11 farm household workers, Saskatchewan 52 farm hands and 3 farm domestics and Manitoba 2 farm hands. Of

these 141 received their certificates for the special rate at the Vancouver office, the remainder travelling from New Westminster, Victoria, Prince George and Prince Rupert.

Of the 2,034 persons who benefited by the Employment Service reduced transportation rate during April, 993 were carried by the Canadian National Railways, 978 by the Canadian Pacific Railway, 44 by the Temiskaming and Northern Ontario Railway and 19 by the Pacific Great Eastern Railway.

### Building Permits issued in Canada during April, 1929

The Dominion Bureau of Statistics tabulated returns from 61 cities which granted building permits valued at \$29,621,097 during April, as compared with \$24,057,456 in the preceding month and \$18,606,167 in the same month last year. There was, therefore, an increase of \$5,563,641 or 23.1 per cent in the first comparison, and of \$11,014,930 or 59.2 per cent in the second. The aggregate for the elapsed months of this year \$72,516,702—exceeds that for any other since the record was begun in 1920, while building costs continue lower than in most years of the record.

Some 50 cities furnished detailed statistics, showing that they had issued nearly 1,700 permits for dwellings valued at over \$9,000,000 and for some 4,000 other buildings estimated to cost more than \$17,000,000. In March, authority was given for the erection of some 1,200 dwellings and 1,900 other buildings, valued at approximately \$4,700,000 and \$18,000,000, respectively.

Nova Scotia, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia recorded increases in the value of the building permits issued during April as compared with March, the greatest gains, of \$3,531,686 or 53.1 per cent, and \$2,552,095 or 177.7 per cent, taking place in Ontario and British Columbia, respectively.

As compared with April, 1928, all provinces except Alberta reported increases in the value of the building authorized. Quebec indicated the most pronounced advance, of \$3,786,151, or 126.5 per cent Alberta recorded a loss of \$400,463 or 18.5 per cent.

Of the larger cities, Toronto and Winnipeg registered increases in the building authorized during April as compared with the preceding month and with April, 1928; in Montreal, there was a decline in the former, but an increase in the latter comparison. Of the smaller centres, Halifax, New Glasgow, Moncton, Quebec, Sherbrooke, Three Rivers, Brantford, Fort William, Galt, Guelph, Niagara Falls, Ottawa, Peterborough, Port Arthur, Stratford, St. Catharines, St. Thomas, Sault Ste. Marie,

Windsor, Ford, Riverview, Sandwich, Woodstock, Brandon, Regina, Saskatoon, Medicine Hat, Kamloops, Nanaimo, New Westminster and Victoria reported increases in the value of the permits issued as compared with March, 1929, and April, 1928.

*Cumulative Record for First Four Months, 1929.*—The following table gives the value of the building authorized by 61 cities during April and in the first four months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first four months of the same years are also given (1926=100).

Year	Value of permits issued		Indexes of value of permits issued first four months (1920=100)	Average indexes of wholesale prices of building materials in first four months (1926=average = 100)
	In April	In first four months		
	\$	\$		
1929.....	29,621,097	72,516,702	209.8	99.2
1928.....	18,606,167	51,769,505	149.8	96.8
1927.....	17,312,470	42,340,823	122.5	96.8
1926.....	19,044,499	41,538,073	120.2	101.7
1925.....	15,482,383	35,463,398	102.6	103.1
1924.....	13,689,101	31,737,100	91.8	111.6
1923.....	19,530,851	39,008,970	112.9	110.8
1922.....	15,833,688	34,513,861	99.9	107.7
1921.....	13,500,360	27,069,872	78.3	136.9
1920.....	15,648,915	34,558,901	100.0	143.1

The aggregate for the first four months of this year was 40.1 per cent greater than in 1928, the previous high level of the record, while the average index number of wholesale prices of the building materials continued lower than in most years since 1920.

The accompanying table gives the value of the building permits issued by 61 cities during April and March, 1929, and April, 1928. The 35 cities for which records are available since 1910 are marked with asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY PERMITS ISSUED BY 61 CITIES.

<sup>1</sup> Revised Total.

<sup>2</sup> Includes Point Grey and South Vancouver, formerly given separately. From Jan. 1, 1929, when the amalgamation of these cities was effected, the total for the 35 cities includes the "Greater Vancouver" aggregate instead of that of the area formerly known as Vancouver.

<sup>3</sup> Data not received.

EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during April. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the May issue relates to the situation existing in March, 1929. The employment situation in the United States is further indicated by unemployment percentage based on statistics compiled each month by the

American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for March and previous months taken from the May, 1929, issue of the *American Federationist*, the official publication of the organization, are reproduced below.

Great Britain

There was a further improvement in employment in most industries during April. The principal industries in which improvement occurred included the mining group, exclusive of coal mining and slate quarrying; building and public works contracting; brick, tile, cement and pottery manufacture; tinplate manufacture; shipbuilding, ship repairing and marine engineering; the shipping service; artificial silk and lace manufacture; the clothing trades and boot and shoe manufacture. In the coal mining industry there was a

further reduction in the numbers of work-people wholly unemployed, but this was more than counterbalanced by an increase in the numbers temporarily stopped. There were also increases in the numbers unemployed in the cotton, linen and jute industries, in textile bleaching, dyeing and finishing, in the glass bottle industry, and in river, dock and harbour services.

Among workpeople, numbering approximately 11,880,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 22nd April, 1929 (including those temporarily stopped as well as those wholly unemployed), was 9.9, as compared with 10.1 at 25th March, 1929, and 9.5 at 23rd April, 1928. For males alone the percentage at 22nd April, 1929, was 11.1, as compared with 11.4 at 25th March, 1929; for females the corresponding figures were 6.8 and 6.9. The percentage wholly unemployed at 22nd April, 1929, was 8.0, as compared with 8.4 at 25th March, 1929. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 22nd April, 1929, was approximately 1,175,000, of whom 905,000 were men and 197,000 were women, the remainder being boys and girls; at 25th March, 1929, it was 1,168,000, of whom 918,000 were men and 190,000 were women; and at 30th April, 1928, it was 1,171,000, of whom 942,000 were men and 160,000 were women. At 29th April, 1929, the total had risen to 1,198,000, owing mainly to an increase in the numbers unemployed in the coal mining industry.

#### United States

Employment in the United States increased 0.8 per cent in March, 1929, as compared with February, and pay-roll totals increased 1 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of January and February, 1929, and therefore cannot be included in the general statement for the month of March. The number of employees on Class I railroads as at February 15 totalled 1,589,351, representing an increase of 0.7 per cent since January 15. The amount of pay-roll in the entire month of

February was \$215,173,183, or a decrease of 5.9 per cent.

Employment in manufacturing industries increased 1.2 per cent in March, 1929, as compared with February, and pay-roll totals increased 2.1 per cent, according to returns made to the Bureau of Labour Statistics by 12,138 establishments in 54 of the foremost manufacturing industries of the United States. These establishments in March had 3,459,042 employees whose combined earnings in one week were \$97,220,138. These employees represent 53 per cent of all employees in the 54 industries surveyed and more than 40 per cent of the total number of employees in all manufacturing industries in the United States.

An increase in employment in manufacturing industries in March has been shown in each of the last 7 years, except in 1924, but this increase of 1.2 per cent in March, 1929, is considerably greater than the increases in any of the years except 1923.

The Bureau of Labour Statistics' weighted index of employment in manufacturing industries for March, 1929, is 98.6, as compared with 97.4 in February, 1929, 95.2 in January, 1929, and 93.7 in March, 1928; the weighted index for pay-roll totals in March, 1929, is 103.9, as compared with 101.8 in February, 1929, 94.5 in January, 1929, and 95.2 in March, 1928. The monthly average for 1926 equals 100.

Manufacturing employment stood at a higher level in March, 1929, than at any time since April, 1927, and pay-roll totals were greater than at any time since November, 1923.

Thirty-eight of the 54 separate industries had more employees in March than in February and 39 industries reported higher pay-roll totals.

The spectacular gains in March were 45.8 per cent in employment and 38.9 per cent in pay-roll totals in the fertilizer industry, which habitually reaches its highest level in March and April; carriages and wagons showed gains of 13.8 per cent and 15.4 per cent in the two items; the gains in employment in shipbuilding, cast-iron pipe, cane-sugar refining, and women's clothing ranged from 7.2 per cent to 5.7 per cent, while gains in employment of from 3.9 to 3.1 per cent were shown in brick, machine tools, electric-railroad car building and repairing, millinery and lace goods, foundry and machine-shop products, and electrical machinery. The automobile industry gained 1.3 per cent in employment and 0.6 per cent in pay-roll totals, these comparatively small increases being in strong contrast to the sharply upward trend of the two months immediately preceding; the iron and steel industry gained 1 per cent in employment and 2 per cent in pay-roll totals.

The decreases in employment in March were all small except a seasonal drop of 4.9 per cent in slaughtering and meat packing.

The rayon industry reported an employment increase of 2.6 per cent with a decrease in pay-roll totals of 1.3 per cent.

Increased employment and greater pay-roll totals were shown in March in each geographic division with one exception—a small decrease in employment in the West North Central division. The pronounced increases were in the West South Central, Mountain, and Pacific divisions, while the increases in Eastern States were less notable.

*Unemployment percentage.*—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States. The method of compiling as described in the *American Federationist*, March, 1928, is as follows:—

“The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the first of the month of the nearest possible date. From these reports the percentage of unem-

ployed members is calculated for identical unions in the current and the previous month. Thus for every month there are two percentage figures—that is for identical unions in December and January—and for identical unions in January and February, and so on. The final figure for January, then, is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers.”

By the above method the proportion of unemployed members to the total membership of the local unions reporting, is computed. According to the May issue of the *American Federationist*, the most recent unemployed percentages during the various months in the 23 cities work out as follows October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent, March, 1929, 15 per cent.

### Canadian Engineering Standards Association

The 1928 Year Book of the Canadian Engineering Standards Association details the continued growth of the work of standardization in the Canadian industrial field. The Association, since its incorporation in 1919, has published 22 standard specifications including the Canadian Electrical Code, (Reference to the Code appeared in the *LABOUR GAZETTE* for February 1928, page 156; May, 1928, page 444; December, 1928, page 1342; February, 1929, page 162). Two revised editions of the specification for steel railway bridges, and a revised edition of the specifications for Portland cement have also been issued. C. E. S. A. specifications have been widely adopted throughout Canada, and the demand for copies is reported to be steadily increasing. They are used as standard in most Dominion Government Departments, the specifications for steel railway bridges having been officially adopted by the Board of Railway Commissioners for Canada.

The latest issue of the quarterly bulletin published by the Canadian Engineering Standards Association notes the adoption of the Electrical Licensing Act by the Saskatchewan Legislature. This legislation, which became effective on May 1, requires that all agents of manufactures or of electrical supply houses whose headquarters are situated outside the province shall obtain written authority from the Power Commission before offering for sale electrical material, apparatus or equipment of any kind. It further requires that all electrical contractors and journeymen electricians in the province shall be bonded and obtain a provincial license before doing wiring work in Saskatchewan. The Act also empowers the commission to appoint inspectors who are authorized to enter any premises at reasonable time for the purpose of inspecting electrical material, in interests of the public safety and fire prevention (*LABOUR GAZETTE*, April, 1929, page 381).

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for principal classes of labour are given, with other information of general interest.

### Manufacturing: Vegetable Foods

EDMONTON, ALBERTA.—CERTAIN BAKERIES AND THE BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION, LOCAL NO. 276.

Agreement to be in effect from May 1, 1929, to April 30, 1930, and thereafter until a new agreement is reached or this one terminated with notice.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for August, 1928, with the following exceptions:

Wages per week: in bread shops (called machine shops): working foremen \$35, doughmen and ovenmen \$33; board hands \$29, helpers \$22. In cake shops, bakeries and small shops: foremen \$35 and up, regular journeymen \$30 and up, helpers \$22.

Wages per week for apprentices: first year \$12, second year \$15, third year \$18.

One helper allowed to every three journeymen.

In cake shops, bakeries and small shops, only one apprentice allowed to any one bakery.

### Manufacturing: Printing and Publishing

CALGARY, ALBERTA.—EMPLOYING JOB PRINTERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 449.

Agreement signed after the report of the Board of Conciliation under the Industrial Disputes Investigation Act, 1907, published in the LABOUR GAZETTE, February, 1929, page 130.

Agreement to be in effect from January 28, 1929, to January 27, 1930, and from year to year until notice of change is given by either party 60 days prior to the expiration date in any year.

Only local union members to be employed if available.

Hours: 44 per week for both day and night work.

Overtime: time and one-half for first three hours; after three hours and all work on Sun-

days, double time; work on holidays also at overtime rate. When called back to work after leaving, \$1 to be paid, in addition to overtime pay.

Wages: journeymen printers \$1 per hour for day work; night work at the rate of \$3 per week higher than day work. Machinist operators 50 cents per shift extra.

One apprentice allowed for first five journeymen employed, two for first ten journeymen and one additional apprentice for each ten journeymen thereafter, but not more than five apprentices in any one office.

Apprentices to be at least 16 years of age and have a common school education and must be accepted by the apprentice committee. Apprenticeship to be for five years and apprentices must complete the course in printing of the International Union. They must also take regular yearly examinations before the local apprentice committee.

Wages for apprentices: first year, one-fifth of journeymen's scale, second year one-quarter, third year one-third, fourth year one-half, fifth year two-thirds.

Foreman to have the right to employ help and discharge for certain specified reasons.

Machine learners to serve fifteen weeks. If standard of competency not reached, then the period may be extended up to three months. Not more than one journeyman learner to be employed in any one office at one time. Learners to receive two-fifths of journeymen's scale for first five weeks, three-fifths for next five weeks and four-fifths for next five weeks.

Employers agree not to require union members to execute struck work for unfair employing printers or publications. Union members are not to engage in any sympathetic strike or boycott. Union not to limit the output of any employee. If any better terms allowed by union to any job proprietor, they shall also be conceded to all employers covered by this agreement.

A joint standing committee consisting of two representatives of each party shall be formed and all disputes shall be referred to it. The finding of this committee shall be final and binding on both parties.

CALGARY, ALBERTA.—EMPLOYING JOB PRINTERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL NO. 201.

Agreement to be in effect from April 15, 1929 to September 30, 1930, and from year to year unless notice of change is given by either party 60 days previous to April 15, 1930, or 60 days previous to September 30, of any succeeding year.

Only local union members to be employed if available.

Hours: 8 per day, 4 on Saturdays, a 44-hour week for day work; and 7 per day, a 42-hour week for night work.

Overtime: time and one-half for first three hours; after first three hours, double time. Work on holidays at overtime rate.

Wages per week for pressmen: foremen journeymen \$46, cylinder journeymen \$44. Journeymen for 2 automatics or 3 or 4 hand-fed presses: from April 15 to October 15, 1929, \$38; from

October 15, 1929, to April 15, 1930, \$39; after April 15, 1930, \$40. Journeymen for 1 automatic and 1 hand-fed or 1 automatic, or 1 or 2 hand-fed presses: from April 15, to October 15, 1929, \$36; from October 15, 1929, to April 15, 1930, \$37; after April 15, 1930, \$38. For night work \$3 per week in addition.

Wages per week for cylinder feeders: first six months, \$15, second six months \$18, second year \$23; third year \$26, after three years' experience \$28.

Wages per week for platen feeders: first six months \$10, second six months \$13, second year \$15, third year \$18, after three years' experience \$23.

Wages per week for apprentice pressmen: first year \$30, second year \$35, third year \$40.

Assistants to be paid 50 cents extra per shift for night work.

An assistant with three or more years' experience can enter his apprenticeship as an apprentice pressman when a vacancy occurs; he shall be examined quarterly as provided for in the international Technical Trades School correspondence course.

One apprentice allowed for every four journeymen or fraction thereof.

Any apprentice or assistant substituting or doing the work of a journeyman, to be paid journeyman's wage.

### Construction: Buildings and Structures

**MONTREAL, QUEBEC.—CERTAIN CONTRACTORS AND THE BROTHERHOOD OF PAINTERS, DECORATORS, PAPERHANGERS, GLAZIERS AND GLASS WORKERS OF AMERICA, DISTRICT COUNCIL No. 5.**

Agreement reached at the conclusion of the strike mentioned in the LABOUR GAZETTE, May, 1929, page 482, to be in effect from April 1, 1929, to April 1, 1932. Notice of any change must be given three months prior to the date of expiration.

Only local union members to be employed if available.

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one-half until midnight. After midnight and work on Sundays and holidays, double time.

Wages per hour for journeymen: for the twelve months beginning April 1, 1929, 80 cents; for the twelve months beginning April 1, 1930, 85 cents; for the twelve months beginning April 1, 1931, 90 cents.

Wages per hour for apprentices: first year 40 cents, second year 55 cents, third year 75 cents.

**OTTAWA, ONTARIO.—THE OTTAWA BRANCH OF THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL No. 93.**

Agreement to be in effect from May 1, 1929, to April 30, 1931, and from year to year unless four months' notice be given by either party.

Only union members to be employed if available.

Hours: 8 per day, 4 on Saturday.

Overtime: from 5 p.m. to 10 p.m. and work on Saturday afternoons, Sundays and holidays,

time and one-half; between 10 p.m. and 8 a.m., double time except when part of regular shift.

Wages per hour: 90 cents.

A joint industrial council to be established consisting of five members of each party and an independent chairman chosen by both parties to adjust all disputes, the decision of this council to be binding.

**TORONTO, ONTARIO.—TORONTO DISTRICT, ONTARIO ASSOCIATION OF ELECTRICAL CONTRACTORS AND DEALERS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 353.**

Agreement to be in effect from June 1, 1929, to May 31, 1932. New agreement to be negotiated 6 months before the expiration of this one.

This agreement is the same as that previously in force and summarized in the LABOUR GAZETTE, November, 1926, with the following exceptions:

Journeymen to be divided into Class "A" and Class "B". Class "B" men to be limited to certain kinds of work; Class "A" men to do all other kinds.

Wages per hour for journeymen: from June 1, 1929 to May 31, 1930, Class "A" \$1.15, Class "B" \$1; from June 1, 1930 to May 31, 1931 Class "A" \$1.25, Class "B" \$1.15; from June 1, 1931 to May 31, 1932, one class \$1.35; foremen 12½ cents per hour extra.

The joint conference board to meet at least once a month or at call of the chairman.

For first twelve months of these rules, no new apprentices to be taken on and those now in the trade to be classified and given proper standing by a joint board of examiners and efforts to be made to provide continuity of employment for apprentices.

No union member to work for any employer for a lower wage rate than provided in the agreement.

**TORONTO, ONTARIO.—TORONTO PLUMBING AND HEATING CONTRACTORS' UNION AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 46.**

This agreement is printed in full on page 680 of this issue.

**HAMILTON, ONTARIO.—CONTRACTORS' ASSOCIATION OF HAMILTON AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, HAMILTON DISTRICT COUNCIL.**

Agreement to be in effect from March 1, 1929 to February 28, 1931 and thereafter unless notice is given by either party by January 1, 1931.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE, June, 1928, and July, 1927, with the following exceptions:

Wages for journeymen: \$1 per hour.

Where more than one shift is worked in a day, the carpenters on the second and third shifts to be paid 8 hours for 7 hours' work; no carpenter to be allowed to work more than one shift in 24 hours.

**NIAGARA FALLS, ONTARIO, AND SURROUNDING DISTRICT.—THE BUILDERS EXCHANGE, MASTER CARPENTERS OF NIAGARA FALLS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 713.**

Agreement signed on conclusion of the strike referred to on page 599 of this issue.

Agreement to be in effect from May 1, 1929 to April 30, 1931. If any change is desired, notice to be given three months previous to expiration and an effort made to reach a settlement by April 1. If the party receiving such notice fails to meet the party sending it, the desired change is to be granted and made effective from the following May 1.

This agreement is similar to the one previously in force and summarized in the *LABOUR GAZETTE*, August, 1927, with the following exceptions:

Wages for journeymen carpenters: \$1 per hour. Men working on scaffolds fifty feet in height to be paid 5 cents per hour extra and an additional five cents for every twenty feet higher.

**CALGARY, ALBERTA.—CALGARY ELECTRICAL ASSOCIATION AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 348.**

Agreement to be in effect from May 1, 1929 to April 30, 1930, and from year to year until notice of change is given by either party 60 days prior to the expiration date in any year.

This agreement is similar to the one previously in force and summarized in the *LABOUR GAZETTE*, November, 1928, with the following exceptions:

Only union members to be employed if competent men available. The union agrees to give preference to firms who are members of the Calgary Electrical Association in supplying men.

Every journeyman shall have a complete set of tools, a list of which is included in the agreement and must correct mistakes in his work in his own time when they are the result of his own fault, and the union undertakes, after investigation, to discipline any member who leaves his work in an unsatisfactory condition.

Wages per hour for journeymen: job foreman \$1.25; journeymen \$1.10.

Wages per hour for apprentices: after six months 40 cents, second year 50 cents, third year 60 cents, fourth year 75 cents, fourth year working alone with license 90 cents.

**CALGARY, ALBERTA.—MASTER PLASTERERS AND THE PLASTERERS' LABOURERS' UNION OF CALGARY.**

Agreement reached at the conclusion of the strike mentioned in this issue on page 599, to be in effect from May 1, 1929, to April 30, 1930. If any change is desired by either party, notice to be given three months before expiration date.

Union members to be employed if competent members available; closed shop for the City of Calgary and ten-mile radius from the centre of the city.

Hours: 8 per day; mixers to start 15 minutes ahead of time to get material ready for plasterers.

Overtime: double time.

Wages: 77½ cents per hour; if necessary to employ unskilled labourers, they are to be paid 60 cents per hour for first two weeks, 65 cents during second two weeks; after that the union rate. Straight night shift to be paid at rate of 8 hours pay for 7 hours work.

For work outside city and ten-mile radius, 10 cents per hour extra.

Any dispute as to the interpretation of any part of the agreement which cannot be settled between the parties shall be referred to the executive committee of the Building Trades Section of the Calgary Trades and Labour Council for a decision.

**EDMONTON, ALBERTA.—GENERAL CONTRACTORS' ASSOCIATION OF THE EDMONTON BUILDERS' EXCHANGE AND THE AMALGAMATED CARPENTERS OF CANADA, EDMONTON BRANCH, AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL No. 1325.**

Agreement to be in effect from May 1, 1929, to April 30, 1930. If no notice of desire of either party to change is given before January 31, 1930, this agreement will remain in force for another year.

Members of local unions who are parties to this agreement to be given preference in employment.

Hours: 8 per day, 4 on Saturdays, except in case of night shifts when 7½ hours will be equivalent to 8 hours.

Overtime: time and one-half; work on Sundays and holidays double time.

Wages for carpenters: \$1 per hour.

For work out of town, transportation to be paid both ways.

Labourers to be restricted to work that requires no carpenters' tools.

**Transportation and Public Utilities:  
Electric Railways.**

**WINDSOR, ONTARIO, AND VICINITY.—ESSEX DIVISION, HYDRO ELECTRIC RAILWAYS AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, LOCAL No. 616.**

Agreement to be in effect from July 1, 1928, to June 30, 1929.

All passenger, freight cars and busses are to be operated by members of local union.

Officers of the railway are to meet representatives of the union to discuss any grievances or disputes.

Hours for motormen, conductors, one-man car and bus operators: 9 per day with a maximum of 10; all work in excess of 10 consecutive hours to be paid overtime rate. The day's work to be completed within 11 hours as far as possible; all work not completed within 11 consecutive hours to be paid at overtime rate.

Wages for motormen, conductors, one-man car and bus operators: for first six months 52 cents per hour, second six months, 57 cents, after first year 62 cents. For training students 50 cents extra per day or part of day. Overtime rate to be 20 cents per hour in addition to regular rate. Sub-station operators, \$130 per month.

In case of suspension or dismissal by Superintendent, the employee concerned will have the right to appeal to the General Superintendent

or Commission and may bring with him a committee of fellow employees, and if it is shown that he was suspended or dismissed without sufficient cause, he will be reinstated and paid for all time lost.

Uniforms to be supplied by the Railway. Conductors and motormen will have the choice of runs according to seniority, cars to be properly equipped and to be heated from October 1 to May 1.

## UNION AGREEMENT BETWEEN PLUMBERS AND MASTER PLUMBERS IN TORONTO

THE strike of plumbers in Toronto against certain master plumbers from May 1, to May 23, is recorded in the article on "Strikes and Lockouts" in this issue. As there stated, the plumbers' union declared a strike against certain master plumbers who refused to join an employers' organization with which the union had entered into an agreement, providing that the master plumbers in such organization would employ only members of the union and that union members would work only for master plumbers who were members of such organization.

The plumbers' union had in 1927, following a strike (LABOUR GAZETTE, September, 1927, page 942), signed an agreement with two associations of master plumbers, the Toronto Society of Domestic, Sanitary and Heating Engineers and the Toronto Association of Master Plumbers and Steamfitters (LABOUR GAZETTE, July, 1928, page 786). This agreement provided for the "closed union shop," namely that members of the union would be employed by the master plumbers, parties to the agreement, and also that union plumbers would work only for master plumbers parties to the agreement "except when work from the said parties is not available". This agreement expired on April 30, 1929, and in the meantime a new organization of master plumbers in Toronto was formed containing members of both of the above named organizations, which became Local Section 111 of the Amalgamated Builders' Council, an organization of building contractors with sections in various localities. The new organization negotiated an agreement with the plumbers' union in Toronto. This agreement, signed on September 1, 1928, provided that the parties to it were to be subject to the conditions of the agreement then in force between the union and the two master plumbers' associations until April 30, 1929, after which certain conditions were to become effective; an increase in the wage rate to \$1.25 per hour, five-day week of forty hours during July and August, and a provision that the employers would engage union members only

and that union plumbers would work only for members of the contractors' association. A number of master plumbers in Toronto, including some members of the Toronto Society of Domestic, Sanitary and Heating Engineers who employed large numbers of plumbers, steamfitters, etc., refused to join the new association and, therefore, became involved in a strike on the part of union plumbers on May 1, 1929. The master plumbers affected by the strike had offered to observe the wages and working conditions of the agreement. One of the objections to joining the new organization offered by certain master plumbers was that there were certain features in its constitution and rules as to trading, securing of supplies, etc., which they had been informed by their legal advisers appeared to be illegal under the provisions of the Criminal Code respecting restraint of trade, and under the Combines Investigation Act, 1923. The Amalgamated Builders' Council had been registered as a union under the Trade Unions Act, 1872, which provided for registration of unions of both employees and employers, and its representatives claimed it was, therefore, exempted from the provisions of these laws respecting restraint of trade. The Minister of Labour met the parties to the dispute in Toronto, and after several conferences it was arranged that a new employers' association would be formed containing master plumbers who were members of the Amalgamated Builders' Council and those who were not, and that the union would sign an agreement with the association, the previous agreement with the Amalgamated Builders' Council being abrogated. The new employers' association was to be registered under the Trade Union Act as an employers' association and was to deal only with employment relations.

The strike was, therefore, declared off on May 23, and an agreement was signed between the plumbers' union and the Toronto Plumbing and Heating Contractors' Union, effective from that date until April 30, 1930, the text being as follows:—

MEMORANDUM OF AGREEMENT made at the City of Toronto in the Province of Ontario, Dominion of Canada, this day of May, 1929.

BETWEEN:—TORONTO PLUMBING AND HEATING CONTRACTORS' UNION, which is a Trade Union of Employers registered as such under the Trade Unions Act of Canada, consisting of plumbing and heating contractors who carry on business in and about the said City of Toronto which union is hereinafter referred to as *The Contractors' Union*, of the one part and LOCAL UNION 46, Toronto, of the United Association of Plumbers and Steamfitters, of the United States and Canada, which is an International Trade Union of workmen, consisting of such locally chartered members of such association as are from time to time employed as plumbers or steamfitters in or about said City of Toronto, which union is hereinafter referred to as *THE LABOUR UNION*, of the other part.

Whereas a certain agreement as to wages and working conditions, hereinafter referred to as "The Former Agreement" which was to remain in force until the 30th day of April, 1930, was on the first day of September, 1928, entered into between Local Section 111 of Amalgamated Builders' Council (hereinafter referred to as "Local 111 of A.B.C.") of the one part, and the Labour Union of the other part, of which former agreement a true copy is hereunto annexed; and

Whereas now the Contractors Union has been organized as a Trade Union of Employers, and has been registered as such under the Trade Unions Act, and the Contractors' Union now includes in its membership, members of said Local 111 of A.B.C. and other plumbing and heating contractors; and

Whereas after registration as aforesaid, the Contractors' Union proposed to Local 111 of A.B.C. and to the Labour Union that if they, respectively, being the only parties to said former agreement, would mutually rescind it the Contractors' Union would execute at once with the Labour Union an agreement in the same terms as those of said former agreement, operative for the unexpired portion of the full intended period of said former agreement, in consequence whereof said local section 111 of A.B.C. and said Labour Union did thereafter mutually rescind such former agreement; and

Now, therefore, the Contractors' Union and the Labour Union, respectively, each in consideration of the mutual promises of the other, do respectively promise and agree to and with each other that their respective members shall henceforth deal with each other as employers and workmen upon the conditions following, that is to say:—

*Clause 1.*—The ordinary hours of labour on Mondays to Fridays, inclusive, will be from eight o'clock a.m. to five o'clock p.m., with one hour for lunch, but on Saturdays they will be from eight o'clock a.m. to twelve o'clock noon.

*Clause 2.*—The minimum rate of wages payable will be a dollar and a quarter (\$1.25) per hour.

*Clause 3.*—The minimum rate of wages for fifth year apprentices will be eighty-five (85c.) per hour.

*Clause 4.*—All overtime will be paid for at the rate of double time. All work shall count

as done in overtime which is done other than during ordinary hours, or on Saturdays during the months of July and August, Sundays or on the following holidays: New Year's Day, Good Friday, Victoria Day, Dominion Day, Civic Holiday, Labour Day, Thanksgiving Day and Christmas Day. When finishing up a repair job on regular working days, if to finish will not take more than one hour's time, it will be done, notwithstanding anything herein contained, at the regular rate of wages.

*Clause 5.*—Workmen, working out of Toronto, will have their fare and board paid. Time travelling to and from such work will be paid for at the rate of single time but only up to nine o'clock p.m. If such travelling is at night, sleeping accommodation will be provided, and the workman will be paid his fare home and back for a week-end at least once a month.

*Clause 6.*—The members of the Contractors' Union will not employ as plumbers or steamfitters other than members of the Labour Union and members of the Labour Union will not accept employment from other than members of the Contractors' Union. Provided, however, that if for any sufficient reason, such as the inability of the Labour Union to supply skilled plumbers or steamfitters or the non-availability of work from members of the Contractors' Union, the business agent of the Labour Union and the Commissioner of the Contractors' Union shall concur in permitting a variation of this clause in a particular case and for a limited time, the variation so made will be immediately effective, and such variation will continue in effect as made unless and until the Joint Conference Board hereinafter referred to shall, by a majority vote, veto the variation.

*Clause 7.*—No workman will be employed to do any work in Toronto in connection with sanitation or the city water system, who is not in possession of a city license under By-law 102, sections 2, 39, 40 and By-law 6388, section 70, or as the same may have been or may be replaced or amended.

*Clause 8.*—The respective parties to this agreement will use their best endeavours, short of suit at law, to compel by every lawful means on the part of every member of the organizations which are parties hereto, observance of the terms and of every term of this agreement. To this end each thereof shall, from time to time, upon request, or may at its own volition, supply to the Secretary of the other party hereto revised lists of its members, respectively. Provided that either party hereto may establish, instead, and put into execution an identification card system for its members, which, being done, shall be deemed for so long as done to be in compliance with this clause.

*Clause 9.*—The respective parties to this agreement agree to control the number of journeymen brought out each year, through control of the number of apprentices employed; their number will not exceed twenty-four per year, 14 plumbers and 10 steamfitters, and each thereof shall serve five years' apprenticeship, four years under the supervision of a journeyman and one year as an improver. Each must be registered by the Labour Union. The parties hereto will observe and enforce all provisions of the law of Ontario as to apprentices.

*Clause 10.*—One improver only to each branch of the trade will be allowed or employed on

any job except where there are more than five journeymen plumbers or five journeymen steamfitters employed, and then one additional improver may be allowed to each additional five journeymen plumbers or five journeymen steamfitters.

*Clause 11.*—A Joint Conference Board will be formed, composed of four members of the Contractors' Union and four members of the Labour Union. Regular meetings of such board will be held at least once a month, at which meeting three members of each party will form a quorum. Such Board will have power, on behalf of the respective parties hereto, to adjust trade disputes or grievances between the parties hereto or their members or any or either of them.

*Clause 12.*—In case of any such dispute or grievance arising which cannot be adjusted informally by representatives of the parties hereto, it will be referred to such Joint Conference Board. Such Board, if necessary, shall meet within forty-eight hours.

*Clause 13.*—If the Joint Conference Board is unable to adjust satisfactorily any dispute or grievance referred to it, (including any claimed violation or non-observance of any of the clauses of this agreement), the matter of difference shall be referred to or may be taken cognizance of by the General Organizer of the aforesaid United Association and the said Commissioner who, when jointly concurring, shall have and may exercise for the purposes of settlement the power of the Joint Conference Board in the premises. In the

event of their failure to effect a settlement, however, no strike shall be declared or come into effect against any member of the Contractors' Union until the said General Organizer has investigated the matter and rendered a decision, nor shall any lockout be made or come into effect by or on the part of any member of the Contractors' Union until the said Commissioner has investigated the matter and rendered a decision.

*Clause 14.*—This agreement shall become effective upon execution thereof by both the parties hereto and it shall remain in effect until the 30th day of April, 1930. Should either party hereto desire to make at the conclusion of this agreement a different agreement in substitution hereof, that party agrees to give to the other not less than one month's notice in writing to terminate on the 30th day of April, 1930. Provided that if no such notice is given in time by either party, this agreement shall remain in force from year to year until such notice is given as hereinbefore provided. If and when any such notice is given, a Joint Committee shall be forthwith formed consisting of equal representation of each of the parties hereto, and such Joint Committee shall, during such period of notice, convene, consider and announce its decision or failure to reach a decision upon the matter of such proposed new agreement.

In witness whereof the parties hereto have duly executed this agreement under seal and by the signatures of members accredited for that purpose.

## League of Nations and the Coal Situation

The Economic Committee of the League of Nations, at its 28th Session, held in Geneva from 8 to 12 March, 1929, prepared, on the basis of the two consultations which have taken place on the subject, a preliminary report for the Council on the international aspects of the coal problem. This preliminary reports deals with the principal normal features of the coal industry, special post-war and recent features, the interests of consumers, and natural, national and international remedies.

The Economic Committee summarizes the proposals put forward by the experts in the following suggestions: (1) that international agreements between producers should be arranged concerning output, markets and prices; (2) that a special international committee representative of all interests—Governments, employers, miners, merchants, producers and consumers—should be set up; (3) that measures should be taken for assimilating, if not equalising, wages, hours and the social conditions of labour; (4) that the existing artificial restrictions to trade in coal and artificial stimuli to production should be abolished. In conclusion, the report states that action to carry out the suggestion relating to conditions of labour would fall within the competence of

the International Labour Office. No definite proposal is put forward with regard to the setting up of a special international committee. The report contains an outline of the position of the League of Nations in relation to the other two proposals. A further consultation of experts on a somewhat wider basis is contemplated by the Committee.

In England and Wales in 1927 there was lost to the nation, among the insured population only, and excluding the loss due to sickness for which insurance benefit was not provided, a total of 30,500,000 weeks' work, or the equivalent of twelve months' work for nearly 590,000 persons. It is during the winter months that the heaviest expense is experienced.

Rheumatic affections cost the country £17,000,000 per year.

The common cold causes great economic loss, particularly during the Winter months. These are largely preventable. The number of firms that retain the whole-time service of medical men is slowly increasing in England, though it is still not as common a feature in industry as in America. A medical department is among the most profitable investment an industry can make.

## FAIR WAGES FOR WORK UNDER PROVINCIAL GOVERNMENT CONTRACTS IN QUEBEC

### Order in Council requiring Payment of Current Rates of Wages

**F**OLLOWING is a translation of the report of a committee of the Executive Council of the province of Quebec, dated April 24, 1929, and approved by the Lieutenant Governor on the same date.

CONCERNING a resolution of the Legislative Assembly (re: workmen's wages).  
(800)

It is stated in a report of the Honourable the Minister of Public Works and Labour, dated April 30, 1929, as follows:—

In view of the adoption by the Quebec Legislative Assembly, on April 14, 1908, of a resolution in the following terms: "That all Government contracts should contain such conditions as will prevent abuses, which may arise from the subletting of such contracts, and that every effort should be made to secure the payment of such wages as are generally accepted as current in each trade for competent workmen in the district where the work is carried out; and that this House cordially concurs in such policy, and deems it the duty of the Government to take immediate steps to give effect thereto."

In conformity with the foregoing, a clause has been inserted in the contract forms of the Department of Public Works and Labour determining the observance of the current wages, and in order to secure the object desired, the Minister of Public Works and Labour has the honour to submit for your approval the following recommendations:—

1. That the conditions following shall be observed by the Department of Public Works and Labour in connection with all contracts made on behalf of the Government of the province of Quebec for the construction or remodelling of public buildings of all kinds and all other works and properties constructed and remodelled for the Government of the province of Quebec.

The following clause shall be inserted in all contracts to which these conditions apply:—

#### THE FAIR WAGES CLAUSE AS INSERTED IN GOVERNMENT CONTRACTS

All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purpose of this contract, what are the current or fair and reasonable rates of wages, and the current or fair and reasonable hours, and

may from time to time rescind, revoke, amend or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, what is the proper classification of all overtime and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder, the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may pay such wages at the rates so fixed and deduct the amount thereof from any moneys owing by the Government to the contractor and any such payment shall for all purposes as between the contractor and the Government be deemed and taken to be payment to the contractor, and the contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representative of such class of employees fixing rates of wages, overtime conditions and hours of labour.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

2. The following conditions shall also be inserted in all contracts to which these conditions apply:—

(a) The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

The Contractor's premises and the work being performed under this contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose.

(b) The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the

wages paid to and time worked by each workman, and the books or documents containing such record shall be open for inspection by the Fair Wages Officer of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

(c) The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing,—

- (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract;
- (2) whether any wages in respect of the said work and labour remain in arrears;
- (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted.

The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

(d) With a view to the avoidance of any abuses which might arise from the subletting of contracts, it shall be understood that subletting, other than such as may be customary in the trades concerned, is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of the sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister.

(Signed) A. MORISSET,  
Clerk of the Executive Council.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours

of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements

between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer

authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

**Contracts Awarded Recently**

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

**DEPARTMENT OF MARINE AND FISHERIES**

*Contracts in Group "A" (Construction, etc.)*

Construction of a new lighthouse tower at Cranberry Island, Guysboro Co., N.S. Name of contractor, Mr. W. M. Gerroir, Guysboro, N.S. Date of contract, April 3, 1929. Amount of contract, \$1,975. The General Fair Wages Clause was inserted in the contract.

Construction of a dwelling, boat-house and fog-alarm building at Long Point, Whitehead Island, Charlotte Co., N.B. Name of contractor, C. S. Whitehead, Latour Hotel, Saint John, N.B. Date of contract, April 22, 1929. Amount of contract, \$7,489. The General Fair Wages Clause was included in the contract.

**DEPARTMENT OF NATIONAL DEFENCE**

*Contracts in Group "A" (Construction, etc.)*

Construction of a rifle range, Moose Jaw, Sask. Name of contractors, P. W. Graham & Sons, Ltd., Moose Jaw, Sask. Date of contract, May 27, 1929. Amount of contract, \$7,990. A fair wages schedule was inserted in the contract as follows:

Trade or Class of labour	Rate of wages: Not less than	Hours per day
	Per hour	
Carpenters and joiners.....	\$0 90	9
Cement finishers.....	0 85	9
Cement mixers.....	0 50	9
Electricians.....	0 90	9
Labourers.....	0 45	9
Painters.....	0 85	9
Teamsters with team and scraper....	0 90	9
Teamsters with team and wagon.....	0 90	9

Construction of a rifle range, Calgary, Alta. Name of contractor, James E. Jefferies, Calgary, Alta. Date of contract May 27, 1929. Amount of contract, \$8,274. A fair wages

schedule was inserted in the contract as follows:

Trade or Class of labour	Rates of wages: Not less than	Hours per day
	Per hour	
Carpenters and joiners.....	\$1 00	8
Cement finisher.....	1 45	8
Cement mixer.....	0 50	8 to 10
Electricians.....	1 00	8
Labourers.....	0 45	8 to 10
Teamsters with team and wagon....	1 25	8 to 10
Teamsters with team and scraper....	1 25	8 to 10

**DEPARTMENT OF PUBLIC WORKS**

*Contract in Group "A" (Construction, etc.)*

Docking, cleaning, painting and repairing Dredge P.W.D. No. 303 (Fruhling). Name of contractors, Burrard Dry Dock Co., Ltd., North Vancouver, B.C. Date of contract, May 8, 1929. Amount of contract, \$7,485. The General Fair Wages Clause was embodied in the contract.

*Contract in Group "B" (Interior Fittings, etc.)*

Interior fittings for Post Office at Tisdale, Sask. Name of contractors, The Western Mfg. Co., Ltd., Regina, Sask. Date of contract, May 20, 1929. Amount of contract, \$1,818. The General Fair Wages Clause was inserted in the contract.

**POST OFFICE DEPARTMENT**

Following is a statement of payments made in May, 1929, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment of the workers of fair wages and the performance of the work under proper sanitary conditions:

Nature of Orders	Amount of orders
Making metal dating stamps and type also other hand stamps and brass crown seals.....	\$ 1,099 33
Making and repairing rubber stamps, daters, etc. Making up and supplying Letter Carriers' uniforms, etc.....	336 76
Stamping pads, ink, etc.....	21,087 58
Stamping pads, ink, etc.....	282 22
Bag fittings.....	2,672 70
Scales.....	279 25
Letter box locks.....	3,085 50

## PRICES, RETAIL AND WHOLESALE, IN CANADA, MAY, 1929

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month continued downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$10.94 at the beginning of May, as compared with \$11.01 for April; \$10.80 for May, 1928; \$10.76 for May, 1927; \$11.29 for May, 1926; \$10.48 for May, 1925; \$9.89 for May, 1924; \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.92 for June, 1920 (the peak); \$12.66 for May, 1918; and \$7.43 for May, 1914. The decline was due mainly to a seasonal fall in the price of eggs, although the prices of milk, butter, veal, lard, sugar and potatoes were also slightly lower. Prices of beef, mutton, pork and beans advanced somewhat. Including the cost of fuel and rent with that of foods the total budget averaged \$21.21 at the beginning of May, as compared with \$21.30 for April; \$21.04 for May, 1928; \$20.95 for May, 1927; \$21.54 for May, 1926; \$20.72 for May, 1925; \$20.24 for May, 1924; \$20.90 for May, 1923; \$20.57 for May, 1922; \$22.84 for May, 1921; \$26.92 for July, 1920 (the peak); \$20.09 for May, 1918; and \$14.21 for May, 1914. Fuel was somewhat lower, due to lower prices for anthracite coal. Rent was practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, declined to 92.4 for May, as compared with 94.1 for April; 97.9 for May, 1928; 98.5 for May, 1927; and 100.2 for May, 1926. Ninety-six prices quotations were lower, sixty-eight were higher, while three hundred and thirty-eight were unchanged.

In the grouping according to chief component materials four of the eight main groups were lower, while four advanced. The groups which declined were: the Vegetable and Vegetable Products group, due to lower prices for apples, grains, flour, vegetable oils, sugar, cocoa, chocolate and tea, which more than offset higher prices for foreign fruits, flax, rubber and potatoes; the Fibres, Textiles and Textile Products group, due to lower prices for raw cotton, raw silk, wool, jute and hemp; the Wood, Wood Products and Paper group, due to lower prices for some lines of lumber; and the Non-Ferrous Metals group, because of declines in the prices of copper, lead, sil-

ver, tin and spelter. The Animals and their Products group and the Iron and its Products group advanced, the former due to higher prices for fish, livestock and meats, and the latter due to higher prices for steel sheets, tinplate and cast iron pipe. The Chemicals and Allied Products groups also advanced, due to higher prices for shellac and certain inorganic chemicals. The Non-Metallic Minerals group was slightly higher.

In the grouping according to purpose consumers' goods declined, due to lower prices for tea, flour and other milled products, milk, sugar and footwear, which more than offset higher prices for fish, dried fruits, meats, potatoes and onions. In producers' goods building and construction materials were lower, because of declines in the prices of lumber and wall plaster. Manufacturers' materials advanced slightly, increases in materials for the chemical using industries and for the meat packing industries more than offsetting declines in materials for the textile and clothing industries, for the fur and leather goods industries, for the metal working industries, for the milling and other industries, as well as miscellaneous producers' materials.

#### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of May, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to

(Continued on page 694)

RENTALS IN CANADA AT THE BEGINNING OF MAY, 1929

(Continued from page 686)

extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts, extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar

principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps, two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supple-

ment to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the abovementioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

**Cost of Electric Current and Gas for Householders**

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6; 1927, 73.4; 1928, 71.7; 1929, 71.4.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318) and bringing the figures down to 1929. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living

**CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1929\***

\*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 18%; Sundries 20%.

Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

Beef prices continued to advance in most localities, sirloin steak being up in the average from 35.4 cents per pound in April to 36.3 cents in May; round steak from 30.1 cents per pound in April to 31.2 cents in May; rib roast from 27.5 cents per pound in April to 28.8 cents in May; and shoulder roast from 21.9 cents per pound in April to 22.5 cents in May. Veal was slightly lower, averaging 24 cents per pound, while mutton was up from an average of 30.1 cents per pound in April to 30.5 cents in May. Both fresh and salt pork advanced, the former being up from an average of 29 cents per pound in April to 30.2 cents in May, and the latter from 26.6 cents per pound in April to 27.1 cents in May. Bacon was also slightly higher, averaging 38.2 cents per pound. Lard was lower, averaging 21.9 cents per pound in May, as compared with 22.1 cents in April.

Eggs again showed a substantial seasonal decline, fresh averaging 36 cents per dozen, as compared with 40.3 cents in April and 51.3 cents in March, and cooking averaging 30.7 cents per dozen in May, 34.9 cents in April and 44.7 cents in March. Milk declined in the average from 12.5 cents per quart to 12.2 cents. Lower prices were reported from Quebec, Sherbrooke, Sorel, St. Hyacinthe, Thetford Mines, Hull, Ottawa, Brockville, Toronto, Woodstock, North Bay, Winnipeg and Lethbridge. Creamery butter was slightly lower at 48.4 cents per pound.

Bread was unchanged at an average price of 7.7 cents per pound. Soda biscuits, flour and rolled oats were steady. Beans advanced slightly, averaging 12 cents per pound, as compared with 11.8 cents in April. Onions were also slightly higher at an average price of 8.6 cents per pound. Potatoes averaged \$1.23 per ninety pounds in May, as compared with \$1.27 in April. Granulated sugar continued toward slightly lower levels, the price in May averaging 7.3 cents per pound. Anthracite coal was down from an average price of \$16.37 per ton in April to \$16.15 in May. Lower prices were reported from Charlottetown, St. Hyacinthe, Montreal, Belleville, Peterborough, Orillia, Toronto, St. Catharines, Brantford, Galt, Kitchener, Guelph, Stratford,

London and Sarnia. Bituminous coal was also slightly lower, averaging \$10.07 per ton. Coke was down from an average price of \$13 per ton in April to \$12.83 in May. A slight increase in rent was reported from Thetford Mines.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices continued toward lower levels. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged \$1.133 per bushel in May, as compared with \$1.227 in April. The high price for the month was \$1.21 $\frac{7}{8}$  reached on the 2nd and the low \$1.04 $\frac{7}{8}$  reached on the 30th. The decline was said to be due to large supplies coming on the market from the Argentine, together with the congestion in Canadian terminal elevators and the favourable crop reports. Coarse grains, for the most part, followed the trend in wheat prices, western barley being down from 71.6 cents per bushel to 67.2 cents, western oats from 57.7 cents per bushel to 50 cents, rye from 99.8 cents per bushel to 86.5 cents, and American corn from \$1.038 per bushel to 94.7 cents. Flax was slightly higher, being up from an average of \$2.023 per bushel in April to \$2.056 in May. Flour at Toronto was down 17 cents per barrel to \$7.19. Rolled oats fell from \$3.75 per bag to \$3.50. Bran was down from \$30.16 per ton to \$28.25 and shorts from \$30.16 per ton to \$28.63. Oranges rose from \$4.94 per case to \$5.13, while bananas were again lower, being down at Toronto from 5.5 $\frac{1}{2}$  cents per pound to 4 $\frac{1}{2}$  cents. Raisins at Toronto advanced from 10 cents per pound to 11-12 cents and prunes from 10-11 cents to 10 $\frac{1}{2}$ -11 cents. Nova Scotia potatoes at Halifax advanced from 65 cents per ninety pound bag to 75 cents. Sugar prices were substantially lower, raw sugar at New York being down from an average of \$1.937 per hundred pounds to \$1.844 and granulated from \$5.22 $\frac{1}{2}$  per hundred pounds to \$4.94. Ceylon rubber was slightly higher, averaging 21.6 cents per pound. Good steers at Toronto advanced from \$10.18 per hundred pounds to \$11.21, and at Winnipeg from \$9.56 per hundred pounds to \$10.50. Hogs at Toronto rose from \$12.73 per hundred pounds to \$13.38, at Montreal from \$13.37 per hundred pounds to \$14.01, and at Winnipeg from \$11.82 per hundred pounds to \$12.40. Meats reflected the movement in livestock prices, beef showing advances ranging from  $\frac{1}{2}$  cent per pound to 3 $\frac{1}{2}$  cents. Lamb at Montreal rose from 24 cents per pound to 26 cents and hogs at Toronto from 19 $\frac{1}{2}$  cents per pound to 20 $\frac{1}{2}$  cents. Milk at Toronto was down from

\$2.05 per eight gallon can to \$2, and at Ottawa from \$3 per hundred pounds to \$2.80. Creamery butter showed declines ranging from 2 cents per pound to 7 cents. Raw cotton at New York declined from 20.3 cents per pound to 19.6 cents. Cotton fabrics also declined, grey cotton being down from 12 $\frac{3}{8}$  cents per yard to 12 $\frac{1}{2}$  cents, bleached cotton from 10 $\frac{7}{8}$  cents per yard to 10 $\frac{3}{8}$  cents, and sheeting from 27 $\frac{7}{8}$  cents per yard to 26 $\frac{3}{8}$  cents. Raw silk

continued toward lower levels, the price being down from \$5.55 per pound to \$5.40. Wool also showed a decline of 2 cents per pound. Non-ferrous metals were again lower, copper declining from \$21.62 per hundred pound to \$19.60, copper wire from 19 $\frac{1}{2}$  cents per pound to 18 cents, lead from \$7.08 per hundred pounds to \$6.74, silver from 55 $\frac{7}{8}$  cents per ounce to 54 $\frac{7}{8}$  cents, and tin ingots from 47 $\frac{1}{2}$  cents per pound to 46 $\frac{1}{2}$  cents.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 138.8 for April, a decline of 1.1 per cent from the previous month. Food declined 1.6 per cent due to lower prices for cereals and for miscellaneous foods, including milk, butter, potatoes, sugar, oranges and onions; on the other hand, all kinds of meat used in the calculation rose in price, notably bacon, which was higher than at any time since 1926. Industrial materials fell 0.6 per cent due to declines in all groups, except iron and steel which advanced 0.6 per cent.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-77=100, was 116.5 at the end of April, a decline of 3.3 per cent for the month. This figure is lower than any monthly figure recorded since November, 1915. All groups declined, with the exception of animal food which advanced 3.2 per cent due to higher prices for beef, bacon and pork. Minerals fell 6.1 per cent owing to lower prices for copper and tin. Textiles and sundries also fell considerably, due to reductions in the prices of cotton, flax and jute and in hides, olive oil and timber.

The London *Times* index number, on the base 1913=100, was 135.5 at the end of April, a decline of 2.4 per cent for the month and it is the lowest figure recorded since the war and 7.1 per cent lower than a year ago. Except meat and fish and iron and steel, which advanced, all groups fell, notably "other metals and minerals," due to a sharp decline in copper and tin.

COST OF LIVING.—The index number of the Ministry of Labour on the base July, 1914=100, was 161 at May 1, a decline of one point from the previous month. Food declined one point, owing to lower prices for tea, milk and butter, while bacon was dearer. Rent showed a slight advance, while clothing and fuel and light declined; sundries were unchanged.

### Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social Affairs, on the base April, 1914=100, was 865 for February, as compared with 867 for January. Raw rubber advanced 18 per cent from the January level, all other groups showing comparatively slight variations.

COST OF LIVING.—The official index number of the cost of living of a middle class family of moderate income, on the base 1921=100, was 219.11 for March, as compared with 220.98 for February. There were advances in the groups, heat and light, clothing and sundries, while food and rent declined.

### France

WHOLESALE PRICES.—The index number of *Statistique Générale* on the base July, 1914=100, was 640 for April, a decline of 2 per cent from the March level. Foods as a group were unchanged, an advance in animal foods being offset by declines in vegetable foods and sugar, coffee and cocoa. Industrial materials fell 3.5 per cent with declines in all groups.

### Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 137.1 for April, a decline of 1.8 per cent for the month. Agricultural products fell 4.1 per cent, due principally to a fall of 11.1 per cent in foods of animal origin. Of industrial materials the most marked changes were

declines of 12.2 per cent in rubber and of 3.6 per cent in non-ferrous metals.

**COST OF LIVING.**—The official index number of the cost of living was 153.6 for April, a decline of 1.9 per cent for the month, due to a decline of 3.3 per cent in food and of 0.9 per cent in heat and light; on the other hand, rent, clothing and sundries each advanced 0.1 per cent.

### New Zealand

**WHOLESALE PRICES.**—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1545 for March, showing practically no change for the month. The groups, foodstuffs, etc., of vegetable origin, textile manufactures and metals and their products all were unchanged; wood and wood products and animal products declined, while non-metallic minerals and their products and chemicals and manures advanced.

**COST OF LIVING.**—The official index number for February, on the base July, 1914=100, was 1612 for February, as compared with 1621 for November, 1928. Foods as a whole declined owing to a decline in groceries, although dairy produce and meats both advanced. Rent advanced slightly, while fuel and light, clothing, drapery and footwear and miscellaneous products declined.

### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 96.8 for April, a decrease of 0.7 per cent from the previous month. Farm products fell 2 per cent due to decreases in

prices of grains, cotton, eggs and wool; although under this head, beef cattle, hogs, sheep and lambs increased in price. Foods fell 0.5 per cent due to declines in butter and flour. Small decreases were noted in the groups hides and leather, textile products, building materials, chemicals and drugs and miscellaneous commodities, while fuel and lighting and metals and their products were unchanged.

Bradstreet's index number (showing the cost of a list of 106 commodities) was \$12.4562 at June 1, a decrease of 1.7 per cent for the month. The principal declines were in breadstuffs amounting to 13 per cent, livestock 6 per cent, textiles 2.9 per cent and provisions 2.1 per cent.

Dun's index number, based on the prices of the estimated *per capita* consumption of each of the many articles included, was \$135.856 at June 1, a decline of 1.7 per cent from the previous month. Breadstuffs declined 7.9 per cent and all other groups showed smaller decreases.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 159.8 for March, a decline of 0.8 per cent due to declines in food, clothing and fuel and light, while housing showed a very small increase.

The index number of the Massachusetts Special Commission on the Necessaries of Life, on the base 1913=100, was 159.8 for April as compared with 160.0 for March. A small advance in food, chiefly meat, was counterbalanced by slight decreases in the other groups, clothing, fuel and light and sundries; shelter remained the same.

## Prison Contract Labour in the United States

A Federal Convict Labour Act has recently been adopted by the United States Congress, to come into effect five years hence. This Act is the outcome of many years of effect on the part of organised labour and private organizations interested in prison reform. It provides that convict-made goods transported into any State or Territory of the United States, and remaining therein for use, consumption, sale or storage, shall be subject to the laws of such State or Territory to the same extent and in the same manner as though they had been manufactured, produced, or mined in such State or Territory. It now rests with the trade unions and others interested in prison reform to mould the legislation in these States. One proposal is to permit the manufacture of convict-made goods solely for the use of the institutions of that State in which

the convict is held. A second suggestion, put forward by the National Committee of Prisons and Prison Labour, is to permit the inter-State passage of convict-made goods for the use of all State institutions, regardless of where the goods are made, but not to permit these goods to enter into ordinary trade.

The reason for trade union opposition to the various types of prison contract labour is, primarily, that prison contract labour tends to compete with free labour. Research carried out by the United States Bureau of Labour Statistics covering the year 1923 showed that the value of goods used and produced by prison labour amounted approximately to \$43,463,000 annually, the average number of convicts being 79,350, of whom 47,799 were employed on productive labour.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Loss of Wages caused by Accident is not susceptible of Accurate Proof

A car inspector employed by the Canadian National Railways in Saskatchewan was injured in December, 1926, while discharging his duties, under circumstances which were held by the court to indicate negligence on the part of the employer. When the case was tried before a jury, negligence on the company's part was found, and damages were assessed as follows: special damages, \$2,089.80, and general damages, \$11,000. The defendant appealed in the Saskatchewan Court of Appeal against this judgment, on the ground that there was no evidence of negligence to go to the jury; that the damages awarded were excessive; and that in the award for special damages there were included the loss of wages from the day of the accident to the date of the trial, and that the loss of wages should not properly be allowed as special damages.

The Court of Appeal found that there had been ample evidence to submit to the jury of negligence on the part of the defendant.

"As to the question of damages generally," the judgment proceeded, "this was manifestly a question for the jury, and an Appellate Court should not disturb the amount unless it can be shown that the jury proceeded upon a wrong principle, or took into consideration matters which they should not have considered, or applied a wrong measure of damages, or unless the amount is so unreasonable that no body of twelve reasonable men could have given such a sum.

"In the statement of claim 'loss of wages' is claimed as special damage, and at the trial, which took place on April 10, 1928, evidence was given to show what the earnings of the plaintiff were at the date of the accident, and what he would likely have earned had he continued to work for the defendants to the time of the trial. . . .

"In assessing the general damages, the jury, as they were instructed, and, if I may say so, properly instructed, by the trial judge, no doubt considered the probable inability of the plaintiff to earn an income equal to that which he had been able to earn in the past. The tendency of a jury in assessing general damages, after allowing as special damages the estimated wages lost to the date of the trial, or even to the time of the commencement of the action would be, to allow just as large a sum for the loss of earning power as they would have allowed had

nothing been awarded for loss of wages as special damages from the date of the injury to the date of the trial.

"It seems to me that the natural result of such a practice is in effect, to permit of the assessment of damages twice for the time following the injury to the commencement of the action or the date of the trial. Moreover, a plaintiff who commences his action promptly and brings it to trial without delay, procures a very small amount for loss of wages as special damages, whereas one who has suffered similar injury under similar circumstances, and whose action may not come to trial for years—in the present case, a year and a half—procures a very large sum as special damages for loss of wages, and in all probability obtains just as large a sum by way of general damages as the plaintiff whose loss of wages to the date of the trial is very small. . . ."

After quoting English precedents, of which one defined "general damages" as being those presumed to be the natural or probable consequence of the act complained of, and "special damages" as being exceptional, and not to be inferred from the nature of the act complained of, the Court of Appeal continued:—

"A careful reading of the judgments in this case convinces me that the claim for loss of wages or earnings to the date of the commencement of the action, or to the date of the trial, was not considered at all as recoverable by way of special damage, but the plaintiff's earnings at the time of the accident and the length of time he has been deprived of the earnings should be considered as elements in arriving at a fair and reasonable compensation for the loss of earning power in assessing general damages. . . .

"There can be no difference, in this respect, between a professional man and a labouring man, for no one can say that, if the plaintiff had not been injured he would have continued to work for the defendants during all the time down to the trial, nor how much he might have earned at other work, nor that work for him would always have been available; it would be as easy to estimate what his loss of wages would be during the year or years after the trial. In the case of a medical man, he might lose all his patients either before or after the trial, and in the case of a labouring man he might not be able to obtain work either before or after the trial. Whether one considers the loss of wages, before the trial or afterwards, contingencies and vicissitudes must enter into the calculation, and

this being so, I do not see how loss of wages following the injury can be capable of accurate proof. . . .

"I am of the opinion that loss of wages, either to the date of commencement of the action or to the date of the trial is not properly recoverable as special damage, for it does not admit of accurate proof, on account of the uncertainties which are connected with any employment and with the life of any individual. It has been held by many of the courts of the United States that, when a plaintiff is allowed to prove his average earnings, or the wages actually lost by him, such evidence is simply a measure of the value of his time of which he has been deprived, and the wages are not, of themselves, recoverable.

"The assessment of \$1,575 for loss of wages between the date of the accident and the trial cannot stand. I do not think that the conclusion can be reached that, in assessing general damages the jury took into consideration the loss of time between the accident and the trial, and it may very well be that in assessing general damages they awarded a less sum by reason of the fact that they had already allowed for loss of time to the trial. This being so, the plaintiff should be given the opportunity of accepting the verdict of the jury as amended, and such acceptance should be made an alternative to a new trial.

"The appeal will be allowed with costs, and the judgment varied by reducing the amount allowed as special damages by the sum of \$1,575. If the plaintiff accepts the verdict as reduced, the costs of the appeal will be set off against the judgment below."

*Trache versus Canadian National Railways*, Saskatchewan (1929), 2 Dominion Law Reports, page 321.

#### **Responsibility for Fatal Accidents where Cause is Unknown**

A workman employed by a contracting construction company on the tracks of the Canadian Pacific Railway in Saskatchewan was killed by a passing train, the cause of the fatality (other than that he was struck by a locomotive) being unknown. His dependants brought action against the company and the contractors under the Fatal Accidents Act (Statutes of Saskatchewan, 1920, chapter 29) alleging negligence. The trial Judge dismissed the action, having first withdrawn the case from the jury. On appeal by the plaintiffs in

the Saskatchewan Court of Appeal, it appeared that pursuant to a system established by the employer the deceased workman was warned of the danger, and from the circumstances of the case it was concluded that the workman either did not apprehend the warning, or having apprehended it failed to heed it. The Appeal Court held that under these circumstances the jury should have been asked to decide which of these two conclusions was the more probable, and in the event of their finding the second alternative the more probable (i.e. that the deceased failed to heed the warning), they should have been asked to find whether or not the workman's failure to heed the warning was due to a defect in the employer's system of warning. The appeal was dismissed as against the railway company with costs, but allowed as against the construction company with costs, the court directing that the judgment of the lower court in favour of the contractors be set aside, and ordering a new trial as against the latter company.—*Harvie versus Canadian Pacific Railway Co. et al*—(Saskatchewan (1929) 2 Dominion Law Reports, page 422.

#### **Acceleration by Accident of Existing Disease is Compensable**

A labourer while walking on a graded street was struck by an automobile and sustained various injuries. The Alberta Supreme Court in assessing damages included as an element therein the acceleration, by reason of the shock, of the progress of arthritis from which the plaintiff had previously suffered. "The plaintiff who was able to do heavy manual work before he was injured was unable to do it afterwards. And I think I must hold that at present he is unable to do anything more than light work and that is not always easy to procure. I think the injuries had the effect of accelerating the progress of the arthritis and that the plaintiff is in the condition now he would not have reached for a number of years had it not been for the injuries. . . . I think therefore the injury had the effect of accelerating the progress of the disease by several years. I am of the opinion, therefore, that substantial justice would be done if the plaintiff were awarded \$3,500 damages. This will include all damages both general and special."

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada at the beginning of June showed a further pronounced gain, resulting in a more favourable situation than in any other recorded month. This statement is based on returns tabulated by the Dominion Bureau of Statistics from 6,752 firms, each employing a minimum of 15 persons, the firms being representative of all industries except agriculture, fishing, hunting and highly specialized business. These firms had 1,046,756 employees on June 1, as compared with 993,253 on May 1. The index of employment (with the average for the calendar year 1926 as the base equal to 100) stood at 122.4 on June 1, as compared with 116.2 on May 1, 1929, and with 113.8, 107.2, 102.2, 95.6, 96.4, 98.5, 90.3 and 87.7, on June 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. At the beginning of June, 1929, the unemployment percentage reported by local trade unions was 4.0 contrasted with percentages of 5.5 at the beginning of May, and 3.7 at the beginning of June, 1928. The percentage for June was based on the returns tabulated by the Department of Labour from 1,642 labour organizations, covering a membership of 193,787 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed that the number of daily placements in May was practically unchanged from that in the previous month, but was somewhat below the corresponding average for May, 1928. Placements in farming were fewer, increases being shown in the industrial groups.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.92 at the beginning of June, as compared with \$10.94 for May; \$10.73 for June, 1928; \$10.86 for June, 1927; \$11.06 for June, 1926; \$10.44 for June, 1925; \$9.86 for June, 1924; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); \$12.79 for June, 1918; and \$7.49 for June, 1914. In wholesale prices the index number calculated by the Dominion Bureau of

Statistics, based upon prices in 1926 as 100, was 92.6 for June, as compared with 92.4 for May, 97.1 for June, 1928; 98.9 for June, 1927; and 100.2 for June, 1926.

The loss in working time caused by industrial disputes in Canada in June was much less than during May, and was also less than in June last year. Fifteen disputes were in existence during the month, involving 647 workpeople and resulting in a time loss of 6,625 working days. Corresponding figures for May, 1929, were 24 disputes, 5,054 workpeople and 39,590 working days; and for June, 1928, 21 disputes 4,027 workpeople, and 25,336 working days.

### Industrial Disputes Investigation Act.

During the month of June the Department received reports from two Boards of Conciliation and Investigation in connection respectively with disputes involving the telegraphers employed by the Canadian Marconi Company, Limited, and certain employees of shipbuilding firms in Vancouver. A further report was received from a Board appointed in 1927 in a dispute in the Angus carshops, Montreal, interpreting one of the paragraphs in its original report. Four new applications for the establishment of Boards were received during the month. A full account of the proceedings under the act during the month is given on page 712.

### Twelfth International Labour Conference

An account of the proceedings of the Twelfth International Labour Conference at Geneva, which concluded on June 21, is given on another page of this issue. The president of the Conference was Dr. Brauns, former German minister of labour, who contributed an interesting address on recent industrial tendencies, with special reference to conditions existing in Europe. The main subjects considered at the conference were the prevention of industrial accidents; the protection of workers employed in loading or unloading ships; the hours of work of salaried employees; the causes of unemployment in specified industries; and the problem

of forced and indentured labour in certain states or dependencies.

**Progress of  
Old Age  
Pensions in  
Canada**

Proclamation of the Old Age Pensions Act of Alberta, the provisions of which are outlined on another page of this issue, is likely to be made on August 1, and the first cheques to pensioners will be mailed towards the end of the same month. All the provinces of Canada from Manitoba to the Pacific coast will then have the Dominion-provincial pension system in operation. Ontario will be added on November 1, as announced in the last issue of the LABOUR GAZETTE, page 579. The regulations under the Ontario Act are given on another page of this issue.

A new feature in the administration of old age pensions is being introduced in Alberta in the form of an Advisory Board, consisting of Mr. Justice J. D. Hyndman of the appellate division, Supreme Court of Alberta; Elmer E. Roper, secretary of the Alberta Federation of Labour, representing labour, and Edward Rinchbeck, Spruce Grove, representing municipal districts. The Advisory Board will be called together at intervals and to it will be submitted any doubtful cases for disposal. No such body exists in any other province, and the Alberta Board is considered in the nature of an experiment that will add little to the cost of administration. The Alberta Act will be administered by the Workmen's Compensation Board.

**Canadian  
Postmasters and  
Government  
Annuities**

The Canadian Postmasters' Association, at a meeting held at Ottawa in June, adopted a resolution proposing the establishment of a form of superannuation under which postmasters and assistant postmasters in commission offices throughout Canada would be given assistance in the purchase of Canadian Government Annuities to provide for their old age. At present, postmasters in commission branch offices are not eligible, like other civil servants to contribute to the Civil Service Superannuation Fund by the deduction of 5 per cent of their salary. As the revenue of a postmaster is not fixed, but depends on the total sale of stamps at his office, which varies from time to time, such a contribution of a fixed percentage is impossible. The postmasters therefore ask for themselves and their assistants that the government pay half the cost of an annuity to provide not more than \$500 annually for postmasters and \$300 for assistant postmasters.

**Coming  
Convention of  
Trades and  
Labour Congress  
of Canada**

The call for the forty-fifth convention of the Trades and Labour Congress of Canada has been issued by the executive council of the Congress. The meeting is to be held in Saint John, N.B., commencing Monday, August 26, 1929. The call states that "Only on two previous occasions has the Trades and Labour Congress of Canada met in the Maritime Provinces, namely at Halifax, N.S. (1908) and Saint John, N.B. (1914). Every effort should therefore be put forth to make the present convention truly representative of the workers throughout the entire Dominion in order that the policies of the trade union movement, as represented by the Trades and Labour Congress of Canada, may become better known and understood in this eastern section of the Dominion. The splendid progress made on the industrial field in all parts of Canada during the past year should reflect itself in a determined endeavour on the part of the organized workers to secure progressive legislation which will protect established standards of living, and provide relief when unemployed or incapacitated by sickness, accident or old age. The opportunity which the annual convention of the Trades and Labour Congress of Canada affords to make known labour's views on these and other equally important questions is one that every Canadian worker should seek to take advantage of by having the organization of which he is a member send its full quota of delegates to this convention."

**Holidays with  
Pay for  
T. and N.O.  
Railway**

The Temiskaming and Northern Ontario Railway Commission announced early in July that an arrangement had been completed by which the System Federated Trades (District 30), the men's trade union organization, which includes the shopmen, would have one week's holidays with pay each year. This plan was the result of direct negotiations between the management and the labour union.

It will be recalled that a similar arrangement was made last year for the benefit of the shopmen coming under the union-management co-operative program on the system lines of the Canadian National Railways (LABOUR GAZETTE, June, 1928, page 563). Some Canadian examples of "holidays with pay" were given in the (LABOUR GAZETTE, April, 1925, page 334.)

### Non-union members and seniority rights

The text of an important decision by Mr. Justice Dysart in the Court of King's Bench at Winnipeg, in the case *Young versus Canadian Northern Railway Company*, is given in full on another page of this issue. The decision establishes that where a collective agreement has been concluded between a union of employees and an employer, a workman who cannot prove that he was a party, through representation, to the agreement, has no rights or standing under the agreement. This principle may be applied even although the agreement in question states that it is made on behalf of the employees in general, and although the employer in signing it intended that it should apply to all employees. Moreover, since the subject matter of such an agreement, that is, rates of wages, hours, and conditions of labour, is not property, the non-member cannot claim that the agreement created any benefit for him which he can enforce as a trust.

On the plea of the plaintiff that his claim should be allowed on the ground that the custom was to recognize the standing of non-members, the judgment ruled that a custom cannot be read into a written contract of service unless it is so universal that no workman could be supposed to have entered the service without considering such a custom as a part of the contract of agreement. The plaintiff in this case was a member of the One Big Union, and the agreement with the Railway Company was made by Division 4 (Railway Employees' Department), American Federation of Labour.

### Inspection service and accident prevention

The British Columbia Workmen's Compensation Board recently adopted the plan of utilizing the services of the boiler and electrical energy inspectors in connection with their work of accident prevention. This additional inspection service has been found to give promise of beneficial results.

On the general subject of accident prevention the Board's annual report points out that "the prevention of accidents improves morale, decreases labour turnover, and saves compensation cost. The actual compensation paid does not cover the full cost of an accident. The employer bears the cost of the loss of time due to disorganization which follows an accident. There is delay in retraining afresh a new man to the point of efficiency attained by the regular workman. Labour turnover is

costly. Recruiting and retraining runs into substantial cost every year. The physical suffering to the workman and reduced income during a period of lay-off due to an accident are evidence enough that accidents are something which employer and workman alike should join in eliminating so far as is humanly possible. The most effective educational campaigns in this field are sponsored and carried through jointly by committees of the management and workmen co-operating and co-ordinating the diversified efforts of those striving for greater safety in industry."

The annual report of the Board for 1928 is outlined on another page of this issue.

### Importance of study of industrial hygiene

The importance of the study of industrial hygiene was emphasized at the annual meeting of the Canadian Medical Association, held at Montreal in June. Dr. Wade Wright, assistant medical director of the Metropolitan Life Insurance Company, New York, spoke of the value of this branch of research in Canada, which is now becoming one of the leading industrial countries of the world. He suggested that industrial hygiene should be part of the routine of every physician. "It is not a thing by itself," he said, "but an avenue of approach to a proper grasp of the conditions of health prevalent amongst a large part of the population. It helps to find the proper job for the man, and enlarges the breadth and depth of his life as well as its length. Canada, with her fast-growing industrial population, is facing an opportunity to develop a new social order, and through proper attention to industrial hygiene, Canadian workers will be assured of proper physical care."

Dr. Wright declared that the span of life of the average worker outside the industrial field is 49 years, while that of the industrial worker is only 42 years. It has been found that tin-miners, grinders, slate masons, and pottery workers, suffer more than any other class from respiratory tuberculosis, and that in industry as a whole there is twice as great a loss of time from rheumatism beyond a period of six months, as there is from respiratory tuberculosis. Loss from appendicitis is almost as great as from tuberculosis.

It may be noted that District 26 United Mine Workers of America, at their recent convention at New Glasgow, Nova Scotia, asked the municipalities of Cape Breton to take steps to build a sanatorium for the treatment of tuberculosis, to be jointly built and maintained by the municipalities and the provincial government.

**Proposal to include safety codes in industrial agreements**

Reference was made in the last issue of the *LABOUR GAZETTE* (page 585) to a proposal emanating from the Building Trades Employers' Association that safety specifications should be included in construction contracts. This proposal receives support in an article in the *Monthly Labour Review*, by Dr. Ethelbert Stewart, United States Commissioner of Labour Statistics. Dr. Stewart says:—

"It is here proposed that the recognized national or local safety codes, where there are such, be written into every collective wage agreement as a part of the wage contract. Where there is no national or local safety code, then a safety code which shall be agreed upon between the employer or employers' association and the employees or the employees' associations shall be developed and written into the contract. This accomplished, the plea of ignorance cannot be made. Carelessness becomes a direct violation of the contract and can be handled as such.

"This is just as applicable to company-union agreements as it is to trade-union agreements; and where there is no agreement at all, the courts would probably for the most part hold that such agreements written into trade-union and company-union agreements were indicative of the established custom of the industry and were binding upon employers and workmen whether or not there was any agreement.....

"It would be infinitely cheaper for the State to print and issue free a sufficient number of copies of any code, to be made a part of individual contracts, than it would be to enact a State law with the attendant legislative expense. It would be cheaper for the insurance companies and the monopolistic State fund compensation States to issue these codes in sufficient numbers than it would be to pay the compensation cost of accidents. Besides, some of us are getting tired of the question of cheapness when it comes to unnecessary killing and maintaining of human beings.

"Once the writing of safety codes into collective agreements and building contracts becomes a common practice, the courts will gradually drift into an attitude that where this is neglected such neglect is deliberate, and the parties guilty of such neglect, whether they are associations of employers or national or local trade-unions, establishments or company unions, or what not, are on the face of things unusually and culpably negligent as to the common prevailing safety practices."

**Ontario Welfare Commission**

During June the Government of Ontario appointed a "welfare" commission to make an inquiry into certain problems that have arisen in connection with various social laws enacted in the province in recent years which require to be correlated and organized. The survey will include the provincial mental institutions, the public general hospitals and the various juvenile welfare organizations. It also embraces an inquiry into the problem of handling the unfortunate "below par" mental cases, particularly the younger element such as will admit of some form of education or training, and such question as the training of nurses for occupational therapy, as well as the wider question of the relation of the nursing profession to various hospitals and public institutions.

**British schemes for training for employment**

The fifth annual report of the British Ministry of Labour describes the arrangements for training the unemployed that were in operation during 1928. The Ministry's scheme for the training of young unemployed men provides for two kinds of training: one for giving those who desire to settle in the Dominions preliminary training in the rudiments of farm work; the other for improving the employability of men seeking industrial work in this country.

The two original farm training centres—at Claydon, in Suffolk, and at Brandon, in Norfolk—have accommodation for 250 men each for oversea settlement, besides 50 places each for men in training for home employment. The normal training course at both centres for oversea employment is now one of twelve weeks. In addition two training camps under canvas were improvised in May, each with accommodation for 200 men, where the men were taught milking and ploughing and were given practice in felling timber, grubbing roots, and clearing land.

The total number of men who went oversea in 1928 after a course of training at one of the Ministry's farm centres was 1,031 to Australia, and 999 to Canada. The total numbers who have passed through the centres at Claydon and at Brandon (including the two camps) since they were opened in November, 1925, and February, 1926, respectively, up to the end of 1928 were 1,791 (at Claydon) and 2,077 (at Brandon), of whom 1,481 and 1,673 respectively, went overseas after training.

Towards the end of 1928 arrangements were concluded with the Canadian Government for

placing on the land in Canada during the current year (1929) up to 6,000 trained and tested men; and four new centres have been established, three in Norfolk and one in Scotland, with a total accommodation for 720 men at a time. Arrangements have also been made with the War Office for training 200 men at a time at the Army Vocational Centre at Chisleton.

Furthermore, five additional centres provided with hutments have been established, with accommodation for 1,200 men at a time, at which men are put through a practical test for their general suitability for open-air life on the land oversea. No training in farm work is given, but the men are engaged in the work of timber felling, grubbing roots, clearing scrub, fencing, road-making, etc.; they are also instructed in the handling of horses, under instructors with Canadian experience.

Reports from the Canadian Department of Immigration indicate that 78 per cent of the trainees who sailed to Canada in 1928 were making good on the land and that 22 per cent had either left the farms on which they had been first placed, or that their success in farm life was doubtful. Even of this minority, some are known to have established themselves successfully on other farms; and many who have abandoned farm work are earning their living successfully in industry or commerce.

Training for home employment is carried on at Birmingham and at Wallsend (where the centres were opened in October, 1925, and January, 1926, respectively), and at Dudley, Bristol, and Glasgow (all opened in 1928). A certain number of men for home employment are also, as mentioned above, received at the farm training centres at Claydon and at Brandon. A building is now being erected at Park Royal (in the London area), where a new centre will be established to accommodate 400 men; and two more centres in the south are contemplated.

The total number admitted to training at all the centres, from the time of their establishment to the end of 1928, was 9,558, of whom 7,869 passed through the centres. Of these, 6,747, completed their training or passed into employment during the course; and 6,394 are known to have found employment.

The Central Committee on Women's Training and Employment continued and extended its work during 1928. Centres have been provided in 42 towns (including ten in Northumberland and Durham, and nine in South Wales) in which three months' training in cookery, laundry, housewifery, and

needlework is given to unemployed women and girls, to enable them to take up domestic employment.

The total number of women and girls who completed training at the centres during 1928 was 3,506 and the number in training at the end of the year was 810. In addition, the Central Committee administer, on behalf of the Oversea Settlement Department and the Australian Government, a residential training centre for women who desire to qualify for a free passage to Australia as household workers. 268 trainees have completed training at this centre since it was opened in September, 1927.

#### **Providing employment for blind workers in Canada**

The annual report of the Canadian National Institute for the Blind for the year ending March 31, 1929, describes the work carried on in assisting blind men and women to obtain suitable employment. Placement work was first tried by the Institute in 1920, but was then abandoned owing to unfavourable conditions in industry. The effort was resumed in 1927, and in the following year a special officer was assigned to the work. It is pointed out that placement work of this character requires personal contact and thorough knowledge of each position or operation that is to furnish employment to a blind worker. Some remarkable examples are given in the report of positions which blind men have been found capable of filling. For example, the Steel Company of Canada, on the suggestion of the Institute's officer, agreed to employ a blind man in one of their plants at Toronto on a semi-automatic eight-spindle tapping machine used for threading of nuts. The blind worker mastered the required process and reached average production in approximately the same period as would have been required for an apprentice with eyesight, and is to-day a very satisfactory workman, his earnings being equal to the average of his fellow employees. Another example is that of a blind worker, 50 years of age, formerly a dry goods salesman who conducted a concession stand in the plant of the Coulter Copper and Brass Company in Toronto, selling tea, coffee, sandwiches and miscellaneous articles to the employees.

The report states that there are few employable blind people in Canada unemployed to-day, but it is also true that there are many who are employed but who are not fully occupied or fully self-supporting. It is for the partially employed and the unemployed that improved conditions are sought.

The Canadian Manufacturers' Association has already expressed its desire both officially and through its members, to co-operate with the institute in its placement program. It is felt that this field can be developed to a point where employment for most blind persons with reasonable productive capacity can be found in the business and industry of Canada. "It is the aim of the Institute wherever possible to place blind people in independent positions or in business or factory employment where they will work shoulder to shoulder with their fellow-workers. If this can be accomplished they will be more likely to achieve and retain a normal viewpoint than would be the case if segregated."

The Council of the Institute recommends that the Old Age Pensions Act should be made applicable to blind persons otherwise eligible at the age of fifty years.

#### **Effect of Wage Boards on South African Industry**

The South African Wage Board has prepared, at the request of the Minister of Labour of the Union, a report on its activities during the three years it has been in existence. The report is summarized in the *Social and Industrial Review*, the monthly publication of the Union Department of Labour. The Wage Board was established by an Act of 1925, consisting of three members, one representing the government, one the employers, and one the workers. In order to expedite the work of the Board, should numerous applications be made, divisions of the Board may be created for *ad hoc* inquiries, but the proceedings do not become effective except as endorsed by the Wage Board itself. The Wage Board begins to function upon a requisition by the Minister, or on the application of a registered trade union or association of employers, or, where no such registered union or association exists, on the application of employees or employers who satisfy the Board as to their representative character. The proviso is made, however, that where there exist registered organizations of both employers and employees sufficiently representative, the Board shall not proceed with any investigation in respect of such trade unless directed to do so by the Minister. The object of this proviso is to empower the Minister to insist upon resort to the conciliation machinery.

Reviewing its experience during the past three years, the Board claims, for industries affected by wage determinations, that efficiency has been increased (through the pressure of higher wages) and that high wages are not inconsistent with low cost of production.

On the question of numbers in employment the Board declares that if there has been any reduction in the number of employees as the result of wage determinations, the fact must represent improved management and greater output per employee, since there is no evidence of any reduction in the total output. In such cases a reduction in the labour force, which possibly inflicts hardship on individual employees, would be in the wider interests of the industry, since it would mean the elimination of unnecessary or inefficient persons. The report states that there appears to have been a considerable reduction in some areas in the number of natives employed on unskilled work, the inference being drawn that there had been great waste in the employment of natives on such work as long as the old wage rates were payable. Dealing with the effect of wage regulation on competition and prices, the Board states that competition based on wage differences is being eliminated through the equalization of wages, and that no increases of prices to the consumer have resulted from the fixing of wages under the Act. The report mentions that the Board co-operates closely with the Board of Trade and Industries, so that "the vicious circle of rising prices and rising wages is avoided."

The Board in concluding this section of the report, records that in making its recommendations it has recognized the need for proceeding gradually.

Fatal industrial accidents in Pennsylvania during the first three months of 1929, numbered 505, and non-fatal accidents numbered 36, 426, showing increases respectively of 11.7 per cent and 8.4 per cent over the figures for the corresponding period last year.

During the month of June a total of 6,637 accidents were reported to the Workmen's Compensation Board of Ontario in the industries in Schedule 1 of the Act, 25 of which were fatal cases; in Schedule 2 industries 569 accidents were reported, including 7 fatal cases; and 470 Crown, 4 of which were fatal, were reported during the month, making in all 7,676 accidents of which 36 were fatal.

Under the provisions of a new section of the Department of Public Health Act (Revised Statutes of Alberta, Chapter 18) a "Eugenics Board for the Province of Alberta" has been appointed "to institute inquiry into, and collect information and statistics relating to eugenics and to disseminate information with respect to the subject of eugenics, in such manner and form as may be best adapted to promote health."

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of June was reported by the superintendents of the Employment Service of Canada to be as follows:—

The agricultural industry in the Province of Nova Scotia reported fair prospects although the season had been somewhat backward. The lobster fishing season which closed about the end of the month was the most successful experienced in several years: catches of fish in general were reported as very favourable. The usual difficulty in securing lumbermen to go into the woods in the summer was reported from this province. Halifax had quite a substantial building program in hand, while construction throughout the balance of the province showed normal summer activity. Increased business was reported by various manufacturing concerns, while the iron and steel industry continued at about the same pace. The coal mining industry showed normal activity. Tourist traffic was very heavy throughout the different sections of Nova Scotia. The usual shortage of women domestic workers was in evidence.

Spring farm work in the Province of New Brunswick had been delayed by the weather, and crop prospects did not seem as favourable as might be hoped for. As in Nova Scotia, the lobster fishing season in the Province of New Brunswick was commented upon as being exceptionally favourable; catches of other fish were quite heavy. The logging industry showed a considerable amount of activity for the summer season. Manufacturing industries were operating at a favourable level. Building and construction were giving considerable employment as substantial volumes of the different classes of work were under way. Passenger traffic was quite heavy due to the tourist trade while freight shipments were also in good volume. Trade was fairly good for the time of year.

The employment offices in the Province of Quebec reported having made a number of farm placements. A few additional workers were being taken on by the mining industry throughout this province, with quite a number of men being placed as log drivers in the lumbering industry. Manufacturing firms showed favourable conditions, and some increases in employment in the different centres were noticeable. With building and construction in full swing, the demand for building tradesmen and labourers was heavy, and the

offices were making frequent placements. Transportation was active, while trade was satisfactory. A continued shortage of suitable women domestic workers was reported.

With a continued demand for farm hands throughout the Province of Ontario, a decided shortage of suitable applicants to the employment offices was reported. A large number of women and girls were being employed by fruit growers as berry pickers. While the general situation in the manufacturing industry continued favourable, with most plants running full time, the automobile industry proved to be an exception owing to the seasonal slackness. All branches of the building and construction industry showed a large volume of activity and few skilled tradesmen were out of work. Owing to the fact that men do not ordinarily want bush work in the summer time, the Ontario employment offices were finding it difficult to satisfy the requirements of employers in this industry. The usual situation in the mining industry obtained, that is, normal activity continued although not many additional workers were being taken on. As in the Eastern provinces, the shortage of women domestic workers in Ontario continued.

With crop prospects in the Province of Manitoba none too promising, the requirements of farm workers were not very extensive, and no shortage of applicants for this class of work was reported from any section of the province. The building programme in the City of Winnipeg continued to exceed in value the large volume of work undertaken during the same period of 1928, with the result that most tradesmen were employed. At different points in the province considerable gangs were engaged on road and railroad construction, but not much additional help was being taken on at the close of June. Winnipeg reported an increased demand for logging workers. In the north central portion of the province mining displayed great activity and aroused considerable interest, though the industry seemed to have sufficient workers. There appeared to be sufficient men registered at the different employment offices to satisfy all orders being listed.

There was not much demand for farm help in the Province of Saskatchewan at this particular season, and all jobs notified were easily filled immediately. Building tradesmen seemed to be very well employed while considerable gangs were engaged at highway and railroad construction. A shortage of women domestic workers was reported in some sections of the province, although other centres seemed to

have a sufficient number of applicants. The employment situation throughout the province was not unfavourable for this season of the year.

The conclusion of spring farm work in the Province of Alberta had reduced the demands for farm help to a nominal number, and no shortage of applicants was reported. Building

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

	1929			1928

(9) Life Insurance Sales Research Bureau, Hartford Conn.

and construction throughout the province appear to be very active, and tradesmen for the most part seemed to be employed. The logging industry reported a fair demand for mill hands, although the majority of the saw-mills were fully staffed. The coal mining industry was seasonally quiet. There was not much demand for women domestic workers nor was there any noticeable shortage of applicants of this class.

The logging and lumbering industries in the Province of British Columbia seemed more active than usual in most centres, and several placements of workers were being made. Metal mining continued to show normal activity, and a number of placements were being made in this industry by the employment offices. The building and construction industries were rather busy, and orders for tradesmen and applicants seemed to be evenly balanced. Although there was a surplus of applicants for work in the manufacturing industries, production appeared to be on a rather favourable level. With most local workers employed, the usual surplus of transients was reported from several centres.

The Dominion Bureau of  
 EMPLOYERS' Statistics tabulated returns on  
 REPORT. employment from 6,752 firms  
 with 1,046,756 employees on  
 June 1, as compared with 993,253 on May 1. This increase of 5.4 per cent brought the index to 122.4, or over three points above the previous high level in the last nine years, recorded on August 1, 1928. In the preceding month, the index number stood at 116.2 and on June 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921 it was 113.8, 107.2, 102.2, 95.6, 96.4, 98.5, 90.3 and 87.7, respectively.

Expansion was noted in all of the five economic areas, the increases being greatest in Quebec and the Prairie Provinces. In the Maritime Provinces, manufacturing and construction registered heightened activity, while transportation was seasonally slacker. In Quebec, construction, manufacturing, logging and transportation recorded pronounced increases in personnel, and smaller gains were shown in mining, communications and trade. In Ontario, construction and transportation registered the greatest expansion, but gains were also noted in mining, trade, logging, communications and services. In the Prairie Provinces, construction, especially railroad construction, transportation, manufacturing and services reported marked improvement. In British Columbia, construction and manufacturing recorded the largest advances, but logging, transportation and other groups also showed heightened activity.

The trend of employment was favourable in seven of the eight cities for which separate tabulations are made; Montreal, Quebec, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver showed considerable gains, while declines were noted in Windsor and the adjacent Border Cities. In Montreal, transportation, construction and manufacturing reported the greatest increases, but trade was also busier. In Quebec, the gains took place chiefly in manufacturing, transportation and construction. In Toronto, manufacturing, particularly of iron and steel products, was slacker, but improvement was shown in construction, trade, services and transportation. In Ottawa, construction, services and manufactures reported heightened activity. In Hamilton most of the expansion took place in manufacturing, notably in food, electrical apparatus and iron and steel plants, but other industries were also busier. In Windsor and the adjacent Border Cities, considerable declines were registered in automobile factories, in which activity has recently been maintained at an exceptionally high level, while construction was brisker. In Winnipeg, most of the improvement was recorded in communications and construction. Manufacturing reported the bulk of the gain in Vancouver, where transportation was rather more slack.

An analysis of the returns by industries shows that there were increases in manufacturing, particularly in lumber plants, but also in the fish-preserving, pulp and paper, vegetable food, building material, rubber, electric current, electrical apparatus, mineral products, non-ferrous metal and some other industries. On the other hand, iron and steel, shoe and textile factories were seasonally dull. Logging, metallic ores, mining, transportation, communications, construction and maintenance, services and trade also registered considerable improvement, that in construction and transportation being especially noteworthy.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of June, 1929.

TRADE The trend of employment  
 UNION among local trade unions at  
 REPORTS the close of May was upward  
 from that of the preceding  
 month as shown by the re-  
 turns tabulated from a total of 1,642 labour  
 organizations, representing 193,787 members.  
 Of these 7,830 or a percentage of 4.0 were  
 idle at the close of May, contrasted with an  
 unemployment percentage of 5.5 in April.  
 The situation was slightly less favourable than  
 in May of last year when the percentage of  
 unemployed members stood at 3.7. All

provinces shared in the employment advance recorded over April, British Columbia, Quebec and Nova Scotia unions indicating the most noteworthy expansion, while in the other provinces the gains were small. No marked change was apparent in any province when compared with the returns for May of last year, Quebec and Manitoba unions reporting moderate reductions in employment, Alberta the same percentage of unemployed members, while in the remaining provinces the situation showed some improvement.

Elsewhere in this issue will be found an article in greater detail on the unemployment situation reported by local trade unions at the close of May.

**EMPLOYMENT OFFICE REPORTS** Reports from the offices of the Employment Service of Canada for the month of May, 1929, showed 40,922 references of persons to positions and a total of 39,542 placements. Of these the placements in regular employment were 24,838, of which 20,331 were of men and 4,507 of women, while placements in casual work totalled 14,704. Vacancies offered by employers to the Service were 42,793, and of these 29,278 were for men and 13,515 were women. Applications for employment were received from 36,674 men and 13,721 women, a total of 50,395. The volume of business transacted showed some increase during May over the preceding month, though declines were apparent when a comparison was made with the records for May of last year, the reports for April showing 41,557 vacancies available, 48,523 applications made, and 38,118 placements effected, while in May, 1928, there were recorded 45,742 vacancies, 52,089 applications for work, and 42,237 placements in regular and casual employment.

A report in detail of the work of the offices for the month of May will be found on another page of this issue.

**BUILDING PERMITS AND CONTRACTS AWARDED** According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during May, 1929, was \$23,007,371, as compared with \$29,621,097 in the preceding month and \$27,515,522 in May, 1928.

The *MacLean Building Review* estimated the total value of construction contracts awarded in Canada in June, 1929 at \$72,419,800 this being a new high record for any month in history, exceeding the total for June, 1928, by 20 per cent. Of the June total, \$26,065,400 was for business buildings; \$21,233,600 was for engineering purposes; \$17,-

848,300 was for residential buildings and \$7,272,800 was for industrial buildings. The apportionment of the contracts awarded during June, 1929, by provinces was as follows: Ontario, \$28,366,600; Quebec, \$16,085,300; New Brunswick, \$1,071,100; Nova Scotia, \$664,000; Prince Edward Island, \$79,500; British Columbia, \$5,818,900; Alberta, \$10,452,400; Saskatchewan, \$4,539,400; Manitoba, \$5,342,600.

### Production and Trade

**INDUSTRIAL PRODUCTION** Figures showing the volume of production in certain industries during the recent months and also in the corresponding months in the previous year are given in the table on page 708.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics states that business activity was well maintained in May at the high level of preceding months, production indexes being considerably higher in most instances than in the same month of last year. The output of newsprint exceeded all preceding records, the demand being strengthened by lower prices than in 1928, and by prosperous business conditions in the countries furnishing the chief markets. Several large contracts, including the Island Falls power development in Saskatchewan, a copper refinery near Sudbury and a pulp-mill in northern New Brunswick, contributed to a fairly large total of construction awards in May, but the decline in building permits reflected the recession in residential building due to adverse money conditions. The iron and steel industry operated at a high level, comparable to the production schedules of preceding months. After an active season in the first four months of the present year, automobile production was considerably reduced in May. Industrial employment showed a seasonal gain at the first of June, the increase of more than 6 points in the official index being explained by seasonal tendencies. Employment in manufactures after adjustment, showed a slight decline during May, though the rubber and textile industries were more active at the beginning of June. Significant increases in working forces were shown in trade and transportation.

**EXTERNAL TRADE** A summary of Canadian trade prepared by the Department of National Revenue shows that in May, 1929, the merchandise entered for consumption amounted to \$125,615,364 as compared with \$97,517,207 in the preceding month and with \$113,582,238 in May, 1928. The chief imports in May, 1929 were: Iron and its

products, \$42,235,227; Fibres, textiles and textile products, \$16,348,196; Non-metallic minerals and products, \$14,709,543.

The domestic merchandise exported during May, 1929, amounted to \$107,472,827, as compared with \$65,727,599 in April, 1929 and with \$118,021,324 in May, 1928. The chief exports in May, 1929 were: Agricultural and vegetable products, mainly foods, \$39,723,237; Wood, wood products and paper, \$24,848,594; Non-ferrous metals and their products, \$12,285,100.

**Strikes and Lockouts**

The time loss due to industrial disputes in June, 1929, was much less than during May, several important strikes in the building trades commencing during the latter month having terminated before the beginning of June and no new disputes involving large numbers of men occurring during the month. As compared with June, 1928, the figures for June, 1929, are much lower, fewer strikes being in existence and smaller numbers of workers involved. There were in existence during the month fifteen disputes, involving 647 workers, and resulting in a time loss of 6,625 working days, as compared with twenty-four disputes, involving 5,054 workers and resulting in a time loss of 39,590 working days in May. In June, 1928, there were on record twenty-one disputes, involving 4,027 workers, and resulting in a time loss of 25,336 working days. At the end of June there were on record five disputes affecting 175 workers, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

**Prices**

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.92 at the beginning of June, as compared with \$10.94 for May; \$10.73 for June, 1928; \$10.86 for June, 1927; \$11.06 for June, 1926; \$10.44 for June, 1925; \$9.86 for June, 1924; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); \$12.79 for June, 1918; and \$7.49 for June, 1914. The most important decline was a seasonal fall in the price of butter, while less important decreases occurred in the prices of mutton, milk, cheese, flour, rolled oats and sugar. Beef prices were substantially higher, while less important increases occurred in the prices of veal, fresh and salt pork, bacon, lard, eggs, evaporated apples and potatoes. Including the cost of fuel and rent with that of foods the total

budget averaged \$21.18 at the beginning of June, as compared with \$21.21 for May; \$20.97 for June, 1928; \$21.04 for June, 1927; \$21.31 for June, 1926; \$20.67 for June, 1925; \$20.22 for June, 1924; \$20.72 for June, 1923; \$20.58 for June, 1922; \$21.74 for June, 1921; \$26.92 for July, 1920 (the peak); \$20.36 for June, 1918; and \$14.27 for June, 1914. Fuel was slightly lower, due to decreases in the price of coal. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly higher at 92.6 for June, as compared with 92.4 for May, 97.1 for June, 1928; 98.9 for June, 1927; and 100.2 for June, 1926. In the classification according to chief component materials four of the eight main groups were slightly higher and four were slightly lower. The groups which advanced were: the Vegetables and their Products group, due to higher prices for western grains, flour and foreign fruits, which more than offset declines in the prices of raw rubber, raw sugar, tea and rolled oats; the Wood, Wood Products and Paper group, due to higher prices for some lines of lumber; the Non-Metallic Minerals and their Products group, due mainly to higher prices for gasoline and crude oil; and the Chemicals and Allied Products group. The Animals and their Products group and the Fibres, Textiles and Textile Products group were lower, the former due to lower prices for fish, leather, milk and its products which more than offset advances in the prices of live stock, fresh meats and eggs, and the former because of lower prices for raw cotton, raw jute and raw silk. The iron and its Products group and the Non-Ferrous Metals group were also slightly lower.

**Extent of Trade Union Benefits in America**

The trade unions affiliated with the American Federation of Labour spent the following sums for relieving distress from varying causes among their members during the three years 1925-1927. The figures are as given by President William Green in a recent address to the Workers' Educational Bureau:—

	1925	1926	1927
	\$	\$	\$

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF JUNE, 1929

**D**URING the month of June, the Department of Labour received the reports of two Boards of Conciliation and Investigation established to deal with disputes between (1) The Canadian Marconi Company, Limited, and certain of its employees being Canadian Marconi telegraphers, members of Division 59, Commercial Telegraphers' Union of North America, and (2) various shipbuilding firms at Vancouver, B.C., members of the Shipbuilders' Branch of the Canadian Manufacturers' Association, and certain of their employees being ships caulkers, members of Shipyard Branch No. 2, Amalgamated Carpenters of Canada.

An interpretation of a certain paragraph of its findings was also received from the Board of Conciliation and Investigation established in October, 1927, to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees in the mechanical department at the Angus Shops, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

### Applications Received

Four applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department during June and were under consideration at the close of the month, namely:

(1) From conductors, trainmen, and yard service employees on western lines of the Canadian Pacific Railway and Canadian National Railways, being members of the Order

of Railway Conductors and Brotherhood of Railroad Trainmen. The dispute related to the employees' request for increased compensation, 6,000 men being directly affected and 10,000 indirectly.

(2) From certain employees of the Canadian Marconi Company, Limited, being members of Radio Division No. 1, Electrical Communication Workers of Canada. The dispute, which related to the employees' request for increased wages and improved working conditions, was stated to affect 37 employees directly and 750 indirectly.

(3) From clerks, freight handlers, station and stores department employees of the Canadian Pacific Railway Company, being members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. Two applications were received in this case, one covering employees on the eastern lines of the company, and the second application relating to employees on western lines. The number of employees on eastern lines directly affected by the dispute was given as 3,000, and indirectly, 4,000; on western lines, 2,500 directly affected, and 3,000 indirectly. The employees' request for increased wages and changed working conditions was stated to be the cause of the dispute.

(4) From certain employees of "The London Free Press" and "The London Advertiser" being members of the London Typographical Union No. 133. The employees' request to negotiate a new wage scale was given as the cause of the dispute, 85 employees being directly affected and 25 indirectly.

### Report of Board in Dispute between the Canadian Marconi Company, Limited, and its Employees

The Minister received on June 14th the report of the Board of Conciliation and Investigation which had been established in April to deal with a dispute between the Canadian Marconi Company, Limited, and certain of its employees being Canadian Marconi telegraphers, members of Division No. 59, Commercial Telegraphers' Union of North America. The dispute affected approximately 300 employees who were seeking new agreements involving increased wages and improved working conditions. The personnel of the Board was as follows:—Mr. Joseph Singer, Toronto, chairman, appointed by the Minister in the absence of a joint recommenda-

tion from the other Board members; Lt.-Col. Wilfred Bovey, O.B.E., Montreal, the company's nominee, and Mr. Thomas Taylor, Toronto, the employees' nominee.

The report of the Board was unanimous and was accompanied by proposed agreements covering rates of pay and conditions of service. For coastal and ships operators, the Board did not recommend any change in the minimum rate of \$70, but recommended annual increases of \$10, instead of \$5, for the second, third, fourth, and fifth years, respectively; \$12.50 increase for the next year, instead of \$10 as formerly; and that the period for which annual increases are given

should be extended to the ninth year, making the maximum \$135 per month, instead of \$115 as before.

For telegraphers in trans-oceanic service, the Board did not recommend any increase in the minimum rate of \$140 per month, or in the annual rate of increase of \$5 per month, up to the fourth year, but recommended a continuation of the annual increases during the fifth and sixth years, making the maximum \$175 per month, instead of \$165.

The Board's recommendation also included payment of full maintenance allowance to coast station telegraphers temporarily assigned to ship duty for a period of three, instead of two weeks, or less; a uniform allowance to ships' operators; and time and one-half for legal holidays, maintenance allowance included.

Following is the text of the Board's report and of the proposed agreement.

### Report of Board

*In the matter of Industrial Disputes Investigation Act and in the matter of differences between the Canadian Marconi Company, Limited, and certain of its Employees being Canadian Marconi Telegraphers, Members of Division 59, Commercial Telegraphers Union of North America.*

MONTREAL, June 13, 1929.

To the Hon. PETER HEENAN,  
Minister of Labour,  
Ottawa, Ontario.

The Board to consider the above differences was authorized by the Honourable the Minister of Labour on the 10th day of April, 1929.

The Board was convened at Montreal on the 10th day of May, 1929, and further sittings of the Board were held on May 20, 21, 22, 23, 27, 28, 29, 30, 31, June 11, 12 and 13.

The Board was composed of Joseph Singer, Toronto, Chairman; Lt.-Col. Wilfrid Bovey, O.B.E., Montreal; Thomas Taylor, Toronto.

The men were represented by Alfred I. Sundstrom, General Secretary-Treasurer, representing Atlantic Ship Department; F. C. Allen, General Chairman; L. J. A. Chebron, Eastern District Chairman; J. H. Bartlett, Great Lakes Coasts Stations; C. P. Kraft, Great Lakes Ships Districts; C. Ferland, Trans-oceanic District Chairman; W. L. Allen, International Secretary-Treasurer.

The Company was represented by J. Lyons, Secretary; W. J. Gray, Marine Superintendent; L. G. Smith, Traffic Manager; P. J. Murphy, Traffic Superintendent.

The subject-matter of this dispute related to the wages and working conditions of the said telegraphers and are fully set out in the new proposed agreement submitted on behalf of the telegraphers as attached to and forming part of the application for establishment of a Board of Conciliation and Investigation bearing date April 1, 1929.

All matters in dispute were fully and carefully considered by the Board at its various sittings and, as a result of the negotiations carried on at the said sittings and the co-operation rendered by all interested parties, agreement was reached on the majority of the clauses of the proposed agreement.

The Board reports that with respect to those clauses which could not be agreed upon it has arrived at a unanimous decision.

Attached hereto as Schedule A is an agreement between the Marconi Company and its telegraphers which the Board recommends and believes should be entered into by the parties to the dispute.

The following clauses were not agreed upon by the representatives of the Company and the telegraphers:—

#### MARINE SECTION

- Article 4—Clause B.
- Article 5—Clauses A, C, D, H.
- Article 6—Clause A.
- Article 7—Clauses A, B.
- Article 14—Clause A.

#### TRANS-OCEANIC SECTION

- Article 3—Clause A.
- Article 9—Clauses E, F.
- Article 13—Clause A.
- Article 14—Clause A.

The said clauses as contained in the agreement hereto attached (in capital letters) set out the unanimous opinion and recommendation of the Board with respect to the matters affected thereby.

The remaining clauses in the said agreement are satisfactory to and have been approved by the Company and the telegraphers.

The Board sincerely hopes that these recommendations will be accepted by both the Company and its employees.

Respectfully submitted,

(Sgd.) J. SINGER,  
Chairman.

(Sgd.) WILFRID BOVEY,  
Member.

(Sgd.) THOS. TAYLOR,  
Member.

**SCHEDULE A**

AN AGREEMENT made this \_\_\_\_\_ day of June, Nineteen Hundred and Twenty-nine, at Montreal, P.Q., between Canadian Marconi Company (Limited Liability), hereinafter called *The Company*, and a subordinate unit of the Commercial Telegraphers' Union of North America, known as *Canadian Marconi System, Division No. 59*, hereinafter called *The Union*.

WITNESSETH:

**ARTICLE 1**

*Clause A*

The company shall furnish annually during the term of this agreement to the general secretary-treasurer of the Union, in triplicate, by March 1, a list showing the seniority of all telegraphers and the divisions to which they are attached as at December 31, and such list shall be kept up to date monthly by advising this officer of any changes. The monthly amendments shall indicate the divisions to which new entrants are attached.

*Clause B*

The general secretary-treasurer shall, as soon as possible after the first day of each recurring month, be advised of the month-end location of all telegraphers who have been transferred during the preceding month and such list shall show the location of new entrants.

*Clause C*

The right of seniority shall govern in all cases, ability, technical and otherwise, being equal.

*Clause D*

All seniority shall be determined by accumulated service and seniors under this clause, who have the requisite ability, technical and otherwise, shall be eligible, for, and shall receive consideration in the matter of appointments to the higher positions in the service.

**ARTICLE 2**

*Clause A*

Any telegrapher in good standing, whose services have been dispensed with on account of reduction in staff, shall be given preference in the filling of new positions or vacancies, ability, technical and otherwise, being equal.

*Clause B*

In case of reduction of staff, the junior telegrapher shall be dispensed with first, having due regard to the exigencies of the service.

*Clause C*

Telegraphers leaving the service of their own accord shall be required to give the company fifteen days previous notice in writing

and acknowledgment of the receipt of such notice shall be sent without delay by the proper authority.

*Clause D*

The company shall be required, in the event of reduction in staff, to give fifteen days' previous notice in writing, or fifteen days' wages inclusive of all allowances in lieu thereof.

*Clause E*

Dismissal cases consequent upon proven misdemeanor shall not be entitled to previous notice or pay in lieu thereof, as provided in the foregoing clause.

**ARTICLE 3**

*Clause A*

No telegrapher shall be suspended except for investigation, and no telegrapher shall be disciplined or discharged until his case has been investigated and he has been proven guilty of the offences charged against him. Any telegrapher who has been suspended and disproving the offences charged against him, shall be reinstated and reimbursed for all loss of pay.

*Clause B*

A telegrapher, leaving the service, shall, upon application, be furnished with a certificate of discharge by the company and such certificate shall show length of service, capacity in which employed, and if desired by the telegrapher, a recommendation as to character and ability. This certificate shall be available to the telegrapher with his settlement cheque, and within a reasonable time.

**ARTICLE 4**

*Clause A*

Two weeks leave of absence, with full wages and maintenance allowance as per scale shall be due to telegraphers upon completion of one full year's service at Coast Stations, and yearly thereafter.

*Clause B*

DOMINION PUBLIC LEGAL HOLIDAYS (NEW YEAR'S DAY, GOOD FRIDAY, EMPIRE DAY, DOMINION DAY, LABOUR DAY, THANKSGIVING DAY AND CHRISTMAS DAY) WHICH OCCUR DURING THE TERM OF A COAST STATION TELEGRAPHER'S VACATION SHALL NOT BE DEEMED A PART OF SUCH VACATION AND EXTRA DAYS SHALL BE ALLOWED.

*Clause C*

Applications for annual leave shall be made in writing within thirty days subsequent to expiry of date due, and holidays shall be granted subject to the mutual convenience of the telegrapher and the company, as far as possible between the months of May and October, inclusive.

*Clause D*

Casual service of regularly appointed coast station telegraphers aboard ship by way of temporary relief, shall not be deemed a reason for denial of annual vacation.

*Clause E*

Vacation periods shall not be cumulative and payment in lieu of lapsed vacations shall not be made. In special cases consideration will be given upon application.

*Clause F*

Generous effort shall be made to grant vacations of uncertain and variable duration with full wages as per scale to ships' telegraphers who have been on extended voyages and who have been unable to secure shore leave for a prolonged period, such vacations to take effect immediately upon their return to their divisional headquarters.

ARTICLE 5

*Clause A*

WAGE SCALE—ALLOWANCES

	PER MONTH
FIRST YEAR.. . . . .	\$ 70 00
SECOND YEAR.. . . . .	80 00
THIRD YEAR.. . . . .	90 00
FOURTH YEAR.. . . . .	100 00
FIFTH YEAR.. . . . .	110 00
SIXTH YEAR.. . . . .	122 50
SEVENTH YEAR.. . . . .	127 50
EIGHTH YEAR.. . . . .	132 50
NINTH YEAR AND THERE- AFTER.. . . . .	135 00

*Clause B*

In addition to the above scale, an allowance of forty (\$40) dollars per month shall be paid where maintenance is not furnished.

*Clause C*

FULL MAINTENANCE ALLOWANCE SHALL BE PAID IN ALL CASES WHERE A COAST STATION TELEGRAPHER HAS BEEN TEMPORARILY ASSIGNED TO SHIP DUTY FOR A PERIOD (3) WEEKS OR LESS.

*Clause D*

IN ADDITION TO THE ABOVE SCALE AND ALLOWANCES, A BONUS OF FIFTEEN (\$15) DOLLARS PER MONTH SHALL BE PAYABLE TO THE REGULARLY APPOINTED OFFICERS IN CHARGE OF COAST STATIONS.

A SIMILAR BONUS SHALL BE PAYABLE TO ANY TELEGRAPHER TEMPORARILY APPOINTED TO THE DUTIES OF OFFICER-IN-CHARGE.

*Clause E*

Regularly appointed Officers-in-Charge of coast stations shall not suffer loss of bonus due to absence on annual vacation but such bonus shall not be payable to substitutes.

*Clause F*

A telegrapher, alone on a coast station, where such coast station is in operation, shall

be entitled to and shall receive the bonus attached to the position of Officer-in-Charge.

*Clause G*

On ships carrying two or more telegraphers, a bonus of ten (\$10) dollars per month, shall be due and shall be payable to the Officer-in-Charge of such ships.

*Clause H*

A UNIFORM ALLOWANCE OF FORTY-FIVE (\$45) DOLLARS FOR EACH YEAR OF SERVICE SHALL BE PAYABLE TO SHIP'S TELEGRAPHERS WHERE UNIFORMS ARE REQUIRED TO BE WORN BY SHIP'S REGULATIONS. SUCH ALLOWANCE SHALL BE PAID—TWENTY (\$20) DOLLARS WHEN UNIFORM TO BE PURCHASED AND THE BALANCE IN SIX (6) EQUAL MONTHLY INSTALLMENTS DURING THE LAST SIX MONTHS OF EACH YEAR OF SERVICE ACTUALLY SERVED WITH THE COMPANY.

TRIMMINGS SHALL BE SUPPLIED FREE CHARGE BY THE COMPANY AND SHALL REMAIN THE PROPERTY OF THE COMPANY.

ARTICLE 6

*Clause A*

IN THE EVENT OF A COAST STATION BEING SHORT STAFFED, OVERTIME FOR EXTRA DUTY IN EXCESS OF EIGHT (8) HOURS PER DAY SHALL BE PAID AT THE RATE OF TIME AND ONE-HALF OF THE REGULAR DAILY WAGE, INCLUSIVE OF MAINTENANCE ALLOWANCE.

*Clause B*

When acting on instructions received from the company's officials, a telegrapher in addition to his own tour of duty proceeds to inspect, overhaul, and/or repair apparatus, other than that of his own station, overtime shall be paid for such additional work.

ARTICLE 7

*Clause A*

ON ALL COAST STATIONS, FULL HOLIDAYS SHALL BE GRANTED ON THE FOLLOWING DAYS: NEW YEAR'S DAY, GOOD FRIDAY, EMPIRE DAY, DOMINION DAY, LABOUR DAY, THANKSGIVING DAY AND CHRISTMAS DAY.

*Clause B*

ON SUCH DAYS, THE OFFICER-IN-CHARGE IS AUTHORIZED TO REQUIRE THE SERVICES OF SUFFICIENT OPERATORS TO CARRY ON THE SERVICE OF WHOM HE MAY BE ONE. SUCH OPERATORS SHALL BE PAID OVERTIME ON A PRO RATA BASIS, MAINTENANCE ALLOWANCE INCLUDED.

ARTICLE 8

*Clause A*

In the event of a Telegrapher on any Coast Station after having completed his regular

tour of duty, being transferred to and reporting for duty on a ship on the same day, such Telegrapher shall be allowed the regular overtime rate of pay as from the time he proceeds to move until he arrives on ship-board or until he ceases duty on that day, whichever shall be the later.

#### Clause B

Cheques in payment of wages shall be available to Telegraphers as soon as possible after the first of the month following that for which payment is due and not later than the 15th.

#### Clause C

A Telegrapher upon being laid off as provided herein (Article 2, Clause "D"), shall be entitled to wages, transportation and expenses until his return to Divisional Headquarters to which he shall proceed with due expedition.

Where a Telegrapher is laid off and with the sanction of his Divisional Headquarters proceeds elsewhere than to his Divisional Headquarters, such Telegrapher shall receive transportation expenses, but not in excess of the amount necessary to bring him to Divisional Headquarters from the point of lay-off.

#### Clause D

A Telegrapher who resigns from the service or who is dismissed on account of proven misdemeanor shall not be entitled to transportation and expenses to his Divisional Headquarters or to his home.

#### Clause E

In all cases of transfer, sufficient funds shall be advanced to cover reasonable expenses. Telegraphers travelling upon the Company's service between points on the North American Continent shall be entitled to first class rail and/or steamship fare, reasonable hotel accommodation and board. When travelling to or from points other than on the North American Continent, Telegraphers shall be entitled to second-class steamship fare and/or rail fare equivalent to first-class accommodation on Canadian railways. Reasonable hotel accommodation will be allowed.

#### Clause F

Vouchers shall be obtained and shall be filed with the Company when statements of expense are submitted.

### ARTICLE 9

#### Clause A

Wages shall commence from and shall include the date upon which the Telegrapher is engaged by the Company, which date shall mean the day upon which the Telegrapher reports for duty at the Station to which he is assigned or the day upon which he leaves the appropriate Divisional Office of the Company to assume such assignment.

Telegraphers receiving telegraphic or telephonic instructions to take up such assignments shall not be required to pay charges on such communications.

When a Telegrapher is instructed to report direct to a designated station, his wages shall

commence on the same basis as would obtain if he had first reported for duty to the Divisional Headquarters nearest the point at which he receives his instructions.

#### Clause B

No deduction from wages or allowances shall be made where a Telegrapher, acting on instructions from the Company, is travelling on the Company's business.

#### Clause C

In the case of transfer of a Telegrapher from one Coast Station to another, travelling expenses shall be paid in lieu of maintenance allowance.

### ARTICLE 10

#### Clause A

No Telegrapher shall be transferred unjustly or unfairly. Married men when being transferred on the initiative of the Company, shall immediately prior to transfer date and without monetary loss to themselves, be freed from Station (Coast Station) duty for four (4) days. This provision shall not apply in the case of temporary transfers.

#### Clause B

Orders of transfer shall be in writing and may be communicated by message, letter or transfer card.

Urgent instructions received by telephone shall be confirmed in writing.

### ARTICLE 11

#### Clause A

A telegrapher aboard ship shall hold the title of wireless officer.

#### Clause B

The company undertakes to insert in its future agreements with shipowners, for the provision of telegraphers' services, a clause providing that the shipowners shall furnish wireless officers with medical and other attendance and comfortable sleeping accommodation in accordance with the terms of the ship's articles, and where more than one wireless officer is employed, to provide sleeping accommodations for them in a suitable room separate from the wireless cabin.

### ARTICLE 12

#### Clause A

The company shall not be held liable for damage to or loss of telegraphers' personal property, in stations or dwellings through fire or any other cause.

#### Clause B

Rentals on dwellings shall not be more than nine (\$9) dollars per month.

#### Clause C

Fuel shall be supplied by the company in accordance with actual requirements for operating individual stations other than dwellings, it being understood that the foregoing shall not apply to coast stations where maintenance allowance is not paid.

#### Clause D

The company shall supply light for all stations and dwellings attached thereto.

They shall pay all taxes on station property and buildings.

#### ARTICLE 13

##### Clause A

Absence from duty consequent upon authorized union or company conferences shall not affect seniority.

##### Clause B

If at any time a negotiating or other authorized union committee expresses the desire to have an international officer of the C.T.U.N.A., or his duly accredited deputy, present at conferences, the company will offer no objections.

##### Clause C

(1) The company shall, upon the request of the general chairman, meet a committee to discuss grievances, whether actual or alleged.

(2) The divisional superintendent or district manager shall, upon request of the district chairman, meet a committee to discuss grievances, whether actual or alleged.

(3) Where negotiations as between the district chairman and the divisional superintendent or district manager fail, the company on request of the general chairman shall meet a further committee to be named by the general chairman.

#### ARTICLE 14

##### Clause A

THIS AGREEMENT SHALL BE EFFECTIVE AS OF APRIL 1, 1929, AND SHALL SUPERSEDE ALL PREVIOUS AGREEMENTS. IT SHALL REMAIN IN FORCE UNTIL APRIL 4, 1931, AND THEREAFTER UNTIL THE SAID AGREEMENT IS CANCELLED BY SIXTY (60) DAYS' NOTICE IN WRITING BY EITHER PARTY. EITHER PARTY MAY CANCEL THE SAID AGREEMENT ON APRIL 4, 1931, BY GIVING SIXTY DAYS' NOTICE IN WRITING PRIOR TO THE SAID DATE OF THEIR INTENTION SO TO DO.

##### Clause B

It is understood and agreed that this agreement does not apply to the coast stations in Newfoundland operated by the company under contract with the Newfoundland government.

AGREEMENT between Canadian Marconi Company (limited liability) and Canadian Marconi System, Division No. 59, The Commercial Telegraphers' Union of North America.

SPECIAL RULES AND WAGE SCALES GOVERNING TELEGRAPHERS ENGAGED IN TRANS-OCEANIC SERVICE

#### ARTICLE 1

##### Clause A

A list showing the seniority of all telegraphers, shall be supplied in triplicate to the general secretary-treasurer of Canadian Marconi System, Division No. 59, C.T.U.N.A.,

as of January 1, 1929, and such list shall be kept up to date monthly by advising this officer of any and all changes.

##### Clause B

The right of seniority shall govern, in all cases, ability, technical and otherwise, being equal.

##### Clause C

In the Transoceanic service, seniority shall be determined by accumulated service. Seniors shall receive consideration in the matter of appointments to the higher positions in the service and, in such event, seniority shall govern, ability, technical and otherwise, being equal.

##### Clause D

In the event of a telegrapher being transferred from the Montreal Transoceanic Central Station to some other branch of the service and in time returns to the former (T.O.) service, he shall not forfeit previous accumulated seniority in that service, but his seniority shall continue as from date of his return to Transoceanic service.

#### ARTICLE 2

##### Clause A

Any telegrapher in good standing, whose services have been dispensed with on account of reduction in staff, shall be given preference in the filling of new positions or vacancies, ability, technical and otherwise, being equal.

##### Clause B

In the case of reduction in staff, the junior telegrapher shall be dispensed with first, having due regard to the exigencies of the service, ability, technical and otherwise, being equal.

#### ARTICLE 3

##### Clause A

TWO WEEKS' LEAVE OF ABSENCE WITH FULL WAGES AS PER SCALE SHALL BE DUE TO TELEGRAPHERS UPON COMPLETION OF ONE FULL YEAR'S SERVICE, AND YEARLY THEREAFTER.

##### Clause B

Vacation periods shall, if desired, be cumulative for two years.

##### Clause C

Applications for annual vacation shall be filed in the month of January of each year.

#### ARTICLE 4

##### Clause A

The company shall, upon request of the district chairman, meet a committee to discuss grievances, whether actual or alleged.

##### Clause B

Where negotiations as between the district chairman and the company fail, the company, on request of the general chairman, shall meet a further committee to be named by the general chairman.

## ARTICLE 5

*Clause A*

Telegraphers leaving the service of their own accord shall be required to give the company fifteen (15) days' previous notice in writing, and acknowledgment of the receipt of such notice shall be sent without delay by the proper authority.

*Clause B*

The company shall be required, in the event of reduction of staff, to give fifteen (15) days' previous notice in writing, or fifteen (15) days' pay in lieu thereof.

*Clause C*

Dismissal cases, consequent upon proven misdemeanor, shall not be entitled to previous notice or pay in lieu thereof.

*Clause D*

No telegrapher shall be disciplined, suspended or discharged except for just cause, and any telegrapher who has so been suspended or discharged and disproving the charge (s) made against him, shall be reinstated without prejudice and shall be reimbursed for all loss of pay. Provided, however, that if, having regard to the exigencies of the service, any telegrapher lacks the ability, technical or otherwise to qualify such telegrapher for the position he holds, such lack of ability shall be deemed to constitute just cause within the meaning of this article.

*Clause E*

After sixty (60) days' satisfactory service, a telegrapher shall be considered a regular member of the staff, it being understood that should the company consider any additional period of trial to be necessary, such additional period shall be agreed between the company and the union, the latter as represented by the district chairman.

*Clause F*

A telegrapher leaving the service, shall, upon application, be furnished with a certificate by the company, stating length of service, capacity in which employed, and (if desired by the telegrapher) a recommendation as to character and ability, and such certificate shall be available to the telegrapher with his settlement cheque and within a reasonable time.

## ARTICLE 6

*Clause A*

Wages shall commence from the date upon which a telegrapher assumes the duties to which he has been appointed by the company.

## ARTICLE 7

*Clause A*

In all cases of transfer, sufficient funds shall be advanced to cover reasonable expenses, and telegraphers travelling on the company's service, shall be entitled to first class rail and steamship fare, reasonable hotel accommodation and board.

*Clause B*

Vouchers shall be obtained and shall be filed with the company when statements of expense are submitted.

*Clause C*

Orders of transfer shall be in writing and may be communicated by message, letter or transfer card.

*Clause D*

No telegrapher shall be transferred unjustly or unfairly, and married men, when being transferred on the initiative of the company, shall, immediately prior to transfer date, and without monetary loss to themselves, be freed from station duty for four (4) days.

## ARTICLE 8

*Clause A*

No deduction from wages shall be made where a telegrapher is travelling on instructions received from the company.

## ARTICLE 9

*Clause A*

Eight (8) hours' work shall constitute a day, and forty-eight (48) hours' work shall constitute a week.

*Clause B*

A meal relief of forty (40) minutes shall be provided between 8 a.m. and midnight.

A similar relief shall be granted between midnight and 8 a.m. if working conditions are such that the same can be granted without the employment of additional men. The Supervisor to be the sole judge of such working conditions.

*Clause C*

On completion of regular eight hour duty, kept on overtime beyond four hours, a telegrapher shall be entitled to and shall be granted a meal relief of fifteen minutes within such four hours.

*Clause D*

All time worked in excess of the regular eight hour tour of duty shall be paid for at the rate of time and one half.

*Clause E*

SUNDAYS AND THOSE HOLIDAYS REFERRED TO IN ARTICLE 10, CLAUSE A, WORKED BY A TELEGRAPHER SHALL BE PAID FOR AT THE RATE OF TIME AND ONE HALF.

*Clause F*

OVERTIME SHALL BE COMPUTED ON THE BASIS OF THREE HUNDRED AND SIX (306) WORKING DAYS PER YEAR.

## ARTICLE 10

*Clause A*

Full holidays shall be granted on all Dominion legal public holidays. Said holidays to be: New Year's Day, Good Friday, Empire Day, Dominion Day, Labour Day, Thanksgiving Day and Christmas Day, seven (7) days in all.

*Clause B*

Dominion legal public holidays which occur during the time of a telegrapher's annual vacation shall not be deemed as part of such vacation period, but extra days shall be allowed.

*Clause C*

If a sufficient number of employees do not voluntarily agree to work on Public holidays, the Company will have the right to assign the required number of employees to each successive Public holiday in regular staff rotation.

ARTICLE 11

*Clause A*

Salary cheques shall be paid semi-monthly on the fifteenth (15th) and last days of each month.

*Clause B*

Overtime worked during any month shall be payable not later than the fifteenth (15th) of the following month.

ARTICLE 12

*Clause A*

A telegrapher called upon to perform Supervisory duty for a period exceeding five days within any thirty day period will during the time he is so employed receive Junior Supervisor's salary.

ARTICLE 13

*Clause A*

WAGE—CENTRAL T. O. STATION

FIRST YEAR.. . . . .	\$140
SECOND YEAR.. . . . .	145
THIRD YEAR.. . . . .	155
FOURTH YEAR.. . . . .	165
FIFTH YEAR.. . . . .	170
SIXTH YEAR AND THERE- AFTER.. . . . .	175
	PER MONTH

*Clause B*

Wages

So far as it affects entering the service after this date the foregoing wage scale shall be dependent upon an operator's ability to accurately punch and transcribe from moving slip at the following speeds:—

	PUNCH- ING LETTERS PER MINUTE	TRAN- SCRIBING LETTERS PER MINUTE
--	---	---

ENTRANCE DATE. . . .	175	150
AFTER SIXTY DAYS.	200	175
SECOND YEAR. . . . .	225	200
THIRD YEAR. . . . .	250	225
FOURTH YEAR. . . . .	275	250

First year operators will be required to pass the stipulated sending and transcribing tests before appointment to the staff. Before an operator is promoted to Second and succeeding year ratings he must:—

- (a) Pass the tests above specified for such rating.
- (b) Have a good working knowledge of the International Telegraph Regulations.

Before an operator is promoted to Fifth year rating he must have sufficient knowledge of the general office routine to enable him to take over supervisory duties when necessary.

*Clause C*

The foregoing scale of wages shall apply to Telegraphers engaged on the existing Transoceanic circuits (which include the New York circuit) or additional circuits of similar type at the Montreal Central Telegraph office so long as the present system of sending and receiving now used by the Company remains in use.

ARTICLE 14

*Clause A*

THIS AGREEMENT SHALL BE EFFECTIVE AS OF APRIL 1ST, 1929, AND SHALL SUPERSEDE ALL PREVIOUS AGREEMENTS. IT SHALL REMAIN IN FORCE UNTIL APRIL 4TH, 1931, AND THEREAFTER UNTIL THE SAID AGREEMENT IS CANCELLED BY SIXTY (60) DAYS' NOTICE IN WRITING BY EITHER PARTY. EITHER PARTY MAY CANCEL THE SAID AGREEMENT ON APRIL 4TH, 1931, BY GIVING SIXTY (60) DAYS' NOTICE IN WRITING PRIOR TO THE SAID DATE OF THEIR INTENTION SO TO DO.

**Report of Board in Dispute between Various Shipbuilding Firms at Vancouver, B.C., and their Ships' Caulkers**

A report was received on June 15 from the Board of Conciliation and Investigation to which had been referred in the month of May a dispute between the British Columbia Marine Engineers and Shipbuilders, Vancouver Shipyards Ltd., Burrard Shipyards and Engineering Works, Chappel Bros., Pacific Salvage Co., A. Linton and Co., Eriksen Boatbuilders, Ltd., and Burrard Drydock Co., Ltd., members of the Shipbuilders' Branch of the Canadian Manufacturers' Association, and certain of their employees being ships caulkers, members of Shipyard Branch No. 2. Amalgamated Carpenters of Canada. Demands on

the part of the employees for increased wages were stated to be the cause of the dispute, 20 employees being directly affected and 150 indirectly. The Board was composed of the Hon. A. M. Manson, Vancouver, chairman, appointed on the joint recommendation of the other members, and Messrs. Ernest F. Cribb and Henry Burgess, both of Vancouver, nominated by the employers and employees, respectively. The report was signed by all three Board members, Mr. Burgess, the employees' representative, dissenting, however, from the recommendation of the majority of the Board concerning the wage claim.

### Report of Board

*In the matter of the Industrial Disputes Investigation Act, and of a dispute between: British Columbia Marine Engineers and Shipbuilders, Vancouver Shipyards, Limited, Burrard Shipyards and Engineering Works, Chappel Brothers, Pacific Salvage Company, A. Linton and Company, Erikson Boatbuilders, Limited, and Burrard Drydock Company, Limited, members of the Shipbuilders' Branch of the Canadian Manufacturers' Association, employers, and certain of their employees being ships caulkers, members of Shipyard Branch No. 2, Amalgamated Carpenters of Canada, employees.*

Pursuant to the above mentioned Act, a Board of Conciliation and Investigation, consisting of A. M. Manson, K.C., Chairman, Henry Burgess and Ernest F. Cribb, all of the City of Vancouver, B.C., was appointed for the purposes of the above dispute. Mr. Manson and Mr. Cribb took the oath on the 21st day of May, 1929, and Mr. Burgess took the oath on the 23rd day of May, 1929.

Notice was served upon the parties involved of a sitting of the Board on the morning of Thursday, the 23rd day of May, 1929, at the Board of Trade rooms in the City of Vancouver.

The employers were represented by Mr. R. V. Robinson, Secretary of the Shipyards Association, and the employees were represented by James M. McAninch, Business Agent of the employees. Witnesses were heard, first on behalf of the employees, and subsequently on behalf of the employers. In order to permit ample time for submission of a reply to the evidence of the employers, and in order that both sides might have an opportunity of giving every possible assistance to the Board in arriving at a conclusion, the sitting was adjourned at the end of the first day until Thursday, the 30th day of May, 1929. The parties to the dispute were heard during the whole of the morning of the second day, and, both sides having indicated that they had no further evidence to submit, the Board spent the afternoon in considering its findings, and adjourned until the morning of Saturday, the 1st day of June, 1929, when an endeavour was made to bring the parties to an agreement, but this proving impossible, the Board proceeded to make its findings and award.

In arriving at a conclusion, the Board considered the quality of the labour exercised by caulkers, the skill employed, the relative wage paid in the shipbuilding and repair industry to different classes of craftsmen and artisans, the cost of the average kit of tools carried, the loss of tools incidental to the employment, the continuity of the employment available for caulkers, the general trend of wages, and the general trend of cost of living.

The Board found that the number of workmen carrying on the caulking craft as an exclusive employment in the vicinity of the City

of Vancouver is between fourteen and twenty persons; and the Board further found that about seventy-five per cent of the shipwrights and carpenters employed in the shipyards of Greater Vancouver do caulking work. Undisputed evidence was submitted that there has always been a spread in wage as between caulkers and shipwrights, in the yards of Greater Vancouver, of approximately \$1 per day, and it was urged on behalf of the employees that this spread should be continued.

Mr. Cribb and Mr. Burgess were somewhat in disagreement as to the comparative quality of the labour involved in the occupations of a shipwright and of a caulker, Mr. Cribb being of the opinion that a shipwright has quite as strenuous an occupation, if not a more strenuous one, than a caulker. The Chairman was of the opinion that there is a somewhat greater physical strain in the caulking craft; he recognized that the long hours of the caulker in a cramped position, only varied by the more comfortable hours spent in spinning oakum, are monotonous work, as against the more active labour of a shipwright.

In the matter of skill, the Members of the Board were in accord that, while each occupation requires considerable skill, the shipwright requires a greater variety of skill and, therefore, a more prolonged period of training, than the caulker. The Members of the Board were in agreement that the workman who follows the occupation of caulking alone will, on the average, be a distinctly better caulker than the man who devotes the major part of his time to shipwright work and does caulking as a side-line.

On the matter of cost of kit of tools, the Members of the Board were in agreement that the shipwright carries, on the average, a kit costing at least five times the kit carried, on the average, by a caulker.

On the question of loss of tools, the Members of the Board were in agreement that, while the caulker loses a greater number of tools which are not covered by insurance, the carpenters' tools lost are of greater individual cost. The Board concluded that the carpenters recovered a greater proportion of their losses from insurance than did the caulkers, but that, on the whole, the difference as between the losses sustained by each craft which were irrecoverable was not great in value. The Members of the Board, however, on this point, were unanimous in the conclusion that the loss to the shipwright, as against the loss to the caulker, by reason of wear and tear of tools, was distinctly greater.

On the question of cost of living, the members of the Board were unanimous in finding that there has been a very slight increase in the cost of living over the last four years, an increase of about eleven or twelve cents per week on the average workman's budget. The members were unanimous in finding that the trend of wages in British Columbia for the last four years has been slightly upward.

In the building trade, it has been distinctly more conspicuously upward by reason of the tremendous building program under way during the last several years in Greater Vancouver.

On the question of availability of employment, the members of the Board were unanimous in finding that there has been a sharp decrease in the amount of employment available for caulkers since the war years; and that, while there was comparatively steady employment for a large number of caulkers in British Columbia during the war years the amount of employment has been gradually falling off ever since, until to-day, of the fourteen to twenty straight caulkers in Greater Vancouver, there is not employment for more than 50 per cent of the working days—this fact being due to the marked decline in the shipbuilding industry, and to the fact that, of the one hundred and fifty shipwrights engaged in the industry in Greater Vancouver, 75 per cent do caulking work.

The members of the Board found another serious situation in the shipbuilding industry, which has had a very depressing effect on the white shipyards, namely, that the white shipyards are to-day subject to the very severe competition, in the construction and repair of boats of seventy-five feet and under in length, of Japanese yards. Japanese yards work from daylight to dark, seven days a week, at a wage far from a living wage for a white workman. Women and children are employed in the Japanese yards, and the wages of the members of the families of Japanese shipbuilders and repair men are probably not taken into account at all. The net result is that Japanese yards, on the work mentioned, underbid the white yards by from \$1,000 to \$1,500 on jobs of \$10,000 to \$15,000. The Board finds, with regret, that white owners, despite the very inferior quality of the workmanship of the Japanese yards and the inferior material used, patronize the Japanese yards to a substantial extent, to the detriment of the white shipbuilding and repair industry in Greater Vancouver. The white shipbuilding and repair industry in Greater Vancouver is not in a flourishing condition, and this was recognized by the shipwrights in the recent adjustment of wages with the yards, in that they accepted a substantially less wage in work on boats of seventy-five feet and under than on old work and on new work over seventy-five feet. The Board also found that the white yards are suffering as a result of owners doing a good deal of their own minor repair work.

The Board found that a wage of \$7 per day is paid to shipwrights on old work and on

new work over seventy-five feet, and that a wage of \$6.50 per day is paid on new work under seventy-five feet. The Board found, upon the evidence, that, in the ports of San Francisco, Portland, Seattle, Halifax and Montreal, the wage scale for ships carpenters and ships caulkers is approximately the same; that in the port of New York shipwrights receive 80 cents per hour and caulkers 70 cents per hour; that in the Bremerton Navy Yards in the State of Washington, under the wage scale for 1929, shipwrights receive a maximum of \$7.76 per day, an intermediate of \$7.36 per day, and a minimum of \$6.96 per day, and that caulkers receive a maximum of \$7.36 per day, an intermediate of \$6.96 per day, and a minimum of \$6.50 per day, or an average of 40 cents per day less than shipwrights. A survey in the port of Seattle in January of this year indicated that seventy-five ships carpenters were receiving an average of 90.8 cents per hour, that sixty ships joiners were receiving an average of 91.9 cents per hour; that one shipyard was paying their wood caulkers 91 cents per hour, plus a dirty hour, their joiners 91 cents, and their carpenters 88 cents; that another yard was paying \$7.50 to \$8 a day, with no dirty hour. Other evidence from the port of Seattle indicated that shipwrights, joiners, boat-builders and caulkers were receiving about \$1 an hour, with double time for overtime, and that one yard was paying \$8.20 per day to caulkers; and that conditions at the ports of Tacoma, Everett and Bremerton were about the same.

HAVING REGARD, THEREFORE, to the foregoing findings of fact, a majority of the Board concludes that a wage scale of more than \$7.25 per day for caulkers in British Columbia can not be justified at the present time, and that the old spread as between caulkers and shipwrights of \$1 per day in favour of the caulkers cannot be justified.

Mr. Burgess, dissenting from the majority of the Board, finds that a wage scale of \$7.50 per day, being the wages asked for, for caulkers is justified.

The Board draws attention to the serious and regrettable invasion of the industry by Japanese yards, and regrets the patronage extended thereto by white owners.

The Board regrets that caulking, which was at one time a very important craft in the ship-building industry, is gradually becoming extinct as a separate craft, and recommends to employers that they give preference on caulking work to the few remaining craftsmen who know no other trade, recognizing that they are men up in years who will not find it easy to acquire another craft at their years.

In conclusion, the Board desires to note its satisfaction with the thorough presentation of facts by both sides to the dispute, and with the friendly relations of employers and employees, and expresses the hope that in the

present state of the industry its findings and award may be accepted by the parties.

(Sgd.) A. M. MANSON,  
E. F. CRIBB,  
H. BURGESS.

### Supplementary Report of Board in dispute between the Canadian Pacific Railway Company and certain of its Clerks in the Mechanical Department at the Angus Shops

On June 8th the Minister received a supplementary report from the Board of Conciliation and Investigation established in October, 1927, to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees in the Mechanical Department at the Angus Shops, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The personnel of the Board was as follows:—Professor Edouard Montpetit, Montreal, Chairman, appointed on the joint recommendation of the other Board members, Sir William Stavert, Montreal, appointed by the Minister in the absence of a recommendation from the company, and Mr. J. T. Foster, Montreal, nominated by the employees. The Board was reconvened on January 9, 1929, for the purpose of expressing an opinion upon a question which had arisen regarding the meaning of one of the recommendations contained in the Board's report dated January 14, 1928. The text of the Board's interpretation follows:—

MONTREAL, June 7, 1929.

RE: *Industrial Disputes Investigation Act and re Differences between the Canadian Pacific Railway Company and certain of its employees in the Mechanical Department at Angus Shops, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.*

SIR,—I have received your letter requesting, by direction of the Minister of Labour, that the Board of Conciliation and Investigation

which was established in this matter, in October, 1927, be reconvened for the purpose of dealing with a dispute which has arisen between the company and the employees respecting the meaning of that part of the report of the Conciliation Board dated January 14, 1928, reading as follows:—

“With regard to the employees in the Works Manager's office at Angus Shops, the board is of the opinion that they should approach the employers with a view of arriving at an agreement specifically applying to themselves.”

The Board, composed of Sir William Stavert, Mr. J. T. Foster and myself, was reconvened. It held three sessions, on Tuesday, May 28, on Tuesday, June 4, and on Friday, June 7. The matter was carefully discussed and the unanimous opinion of the members of the Board was that the meaning of the part of the report quoted above should be absolutely clear. The interpretation of the Board is that it is open to the employees in the Works Manager's Office to negotiate an agreement on their own behalf, applying specifically to themselves, in the same way that any other employees negotiate such agreements.

Yours truly,

(Sgd.) EDOUARD MONTPETIT,  
Chairman.

(Sgd.) W. E. STAVERT,

(Sgd.) J. T. FOSTER.

To the Honourable  
The Minister of Labour,  
Ottawa.

### Number of Insured Unemployed in Great Britain

The number of persons coming under unemployment insurance in Great Britain, and the number unemployed and employed, during the first three months of 1929, were as follows:—

Estimated total insured persons,	
aged 16 to 64 years.. . . .	\$11,609,000
Number unemployed.. . . .	1,333,000
Numbers not recorded as unem-	
ployed.. . . .	10,357,000

Estimated number in employment after allowance for sickness, etc. 9,947,000

The index numbers of insured unemployed persons during the four quarters of 1928 and the first quarter of 1929 were as follows:—

Jan.-March, 1928.. . . .	103.2
April-June, 1928.. . . .	100.9
July-September, 1928.. . . .	115.8
October-December, 1928.. . . .	118.8
January-March, 1929.. . . .	117.2

## STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1929

THE number of strikes and lockouts in existence in Canada during June was fifteen as compared with twenty-four during the previous month. The time loss in June was also much smaller than in May, several important strikes in the building trades commencing during the latter month having terminated before the beginning of June and no new disputes involving large numbers of workers commencing during the month. As compared with June, 1928, the figures for June, 1929, are much lower, fewer strikes being in existence and smaller numbers of workers involved.

Date	Number of disputes	Number of employees involved	Time loss in working days
*June, 1929.....	15	647	6,625
*May, 1929.....	24	5,054	39,590
June, 1928.....	21	4,027	25,336

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Six disputes, involving 190 workpeople, were carried over from May, and nine disputes commenced during June. Of these fifteen disputes, ten terminated during the month, four being in favour of workers, four in favour of employers, and two resulting in compromises. At the end of June, therefore, there were five disputes recorded as strikes or lockouts, as follows: shoe factory workers, Toronto, Ont.; glove factory workers, Winnipeg, Man.; moulders, Lachine, P.Q.; plumbers, Kingston, Ont.; and men's clothing factory workers, Winnipeg, Man.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Information is available

as to three such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926; fur workers, Toronto, Ont., April 10, 1928; and photo engravers, Toronto, Ont., January 17, 1929.

Reports have been received in the Department as to disputes in the pulpwood industry in Northern Ontario involving the Thunder Bay, Porcupine and Cochrane districts. Information secured by representatives of the Department indicates that the lumber workers' organization determined to resist a decrease in wages, expected to be twenty-five per cent, and announced that unless a certain scale were paid by June 15 its members would cease work. It appears that the majority of the employers paid the rate stipulated, and it has not yet been ascertained to what extent, if any, the workers went on strike.

A dispute in connection with the installation of equipment for "movietones" in theatres in Vancouver has been reported but particulars as to the dispute have not yet been received in the Department. The cause of the dispute, however, appears to have been in connection with the employment of non-union electricians on the work, an arrangement being made to have the work done by union workers.

Employees of a woodworking factory at New Westminster are reported to have ceased work on June 24 to secure the same agreement as other firms had signed, being successful after two days.

A strike in a raincoat factory in Montreal has been reported but particulars as to the dispute have not yet been received.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

**SHOE FACTORY WORKERS, TORONTO, ONT.**—A number of the strikers involved in this cessation of work on April 23, following a reduction in wages, had secured work elsewhere by the end of June, leaving eleven out of the original thirty-three still on strike.

**GLOVE FACTORY WORKERS, WINNIPEG, MAN.**—In connection with the strike of glove factory workers in Winnipeg on May 25, the dispute extended to another establishment to which the employer originally involved sent work, bringing the total number of strikers up to forty.

**MOULDERS, LACHINE, P.Q.**—In connection with the strike beginning on May 2, of moulders in two establishments, who demanded an increase in wages to \$2½ cents per hour, being the union rate, the representative of the De-

## STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1929

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts occurring prior to June, 1929.</b>			
<b>MANUFACTURING—</b>			
<i>Boots and shoes—</i>			
Shoe factory workers, Toronto, Ont.....	27	700	Commenced April 23, 1929, against reduction in wages. Unterminated.
<i>Clothing (including knitted goods)—</i>			
Glove factory workers, Winnipeg, Man.....	40	1,000	Commenced May 25, 1929, against institution of piece work system. Unterminated.
<i>Iron, steel and products—</i>			
Moulders, Lachine, P.Q.....	54	1,000	Commenced May 2, 1929, for increase in wages. Unterminated.
<i>Other metal products—</i>			
Moulders (brass), Ottawa, Ont.....	5	5	Commenced May 29, 1929, for increase in wages. Terminated June 4, 1929; return of workers on employers' terms.
<b>CONSTRUCTION—</b>			
<i>Buildings and structures—</i>			
Plumbers, Kingston, Ont.....	9	234	Commenced April 2, 1928, for increase in wages. Unterminated.
Painters, Toronto, Ont.....	55	300	Commenced May 1, 1929, for increase in wages. Terminated June 15, 1929; in favour of workers.
<b>(b) Strikes and Lockouts occurring during June, 1929.</b>			
<b>MINING—</b>			
<i>Metallic—</i>			
Gold miners, Vicinity of Dawson City, Yukon Territory..	25	25	Commenced June 18, 1929, against delay in payment of wages. Terminated June 19, 1929; in favour of workers.
<b>MANUFACTURING—</b>			
<i>Vegetable Foods—</i>			
Biscuit factory workers, (packers), Calgary, Alta.....	6	12	Commenced June 14, 1929, against suspension of employee. Terminated June 17, 1929; workers replaced.
<i>Clothing (including knitted goods)—</i>			
Clothing factory workers, (men's), Winnipeg, Man.....	65	325	Commenced June 25, 1929, against introduction of piece rate system. Unterminated.
<i>Iron, steel and products—</i>			
Ornamental iron workers, Montreal, P.Q.....	51	714	Commenced June 10, 1929, for increase in wages. Terminated June 26, 1929; in favour of workers.
<b>CONSTRUCTION—</b>			
<i>Buildings and structures—</i>			
Plasterers, Vancouver, B.C....	140	1,400	Commenced June 6, 1929, for increase in wages. Terminated June 20, 1929. Compromise.
Plasterers' helpers, Vancouver, B.C.....	80	800	Commenced June 6, 1929, for increase in wages. Terminated June 20, 1929. Compromise.
Plumbers, Moncton, N.B.....	6	10	Commenced June 17, 1929, for increase in wages and shorter hours. Terminated June 19, 1929; in favour of workers.
Bricklayers and stonemasons, Ottawa, Ont.....	16	32	Commenced June 22, 1929, for employment of union members only by a sub-contractor on another job. Terminated June 25, 1929; workers replaced.
<b>TRANSPORTATION—</b>			
<i>Steam railways—</i>			
Track labourers, Taylor, Ont.	68	68	Commenced June 18, 1929, for changes in working conditions. Terminated June 19, 1929; workers replaced.

partment of Labour was requested by the strikers to mediate and he took the matter up with the employers. The latter stated that they were paying from 75 cents to 92½ cents per hour but would not agree to any minimum rate, and that the strikers might apply individually for reinstatement. At the end of the month it was reported that there were still thirty-three involved and receiving strike pay, that some of the others had returned to work in the establishments affected and the rest had secured work elsewhere.

**MOULDERS, OTTAWA, ONT.**—A number of brass moulders ceased work on May 29 demanding an increase in wages. Most of them returned to work within six days on the employer's terms while the others secured work elsewhere.

**PAINTERS, TORONTO, ONT.**—The strike of painters in Toronto to secure an increase in the union rate from 80 cents per hour to 90 cents, commencing on May 1, was declared terminated on July 15, the strikers having secured work at the 90 cent rate, agreements having been signed with about forty-five master painters and a number while not signing the agreement agreed to pay the 90 cent rate.

**GOLD MINERS, VICINITY OF DAWSON CITY, YUKON TERRITORY.**—Employees in the machine shops and the dredge and drilling crews of certain mining companies ceased work to secure the prompt payment of wages. Work was resumed the next day, the wages having been paid. A similar dispute in May was recorded in the last issue of the *LABOUR GAZETTE*.

**BISCUIT FACTORY WORKERS, CALGARY, ALTA.**—Six girls ceased work protesting against the suspension of one girl alleged by the employer to be guilty of offensive conduct towards another employee. The employer thereupon dismissed the strikers but stated that the suspended employee might return at the end of the suspension.

**MEN'S CLOTHING FACTORY WORKERS, WINNIPEG, MAN.**—Employees ceased work on June 25 to prevent the introduction of a sectional piece rate wages system. It is stated that two weeks previously the employer had proposed the new system and the workers had stopped work for a short time to prevent it. At the end of the month no settlement had been reported, but early in July negotiations with a view to a settlement were reported to be under way.

**ORNAMENTAL IRON WORKERS, MONTREAL, P.Q.**—Employees in one establishment ceased work when their employer refused to sign an agreement with the union providing for an increase in wages of 5 cents per hour. Following a conference between the management,

Mr. Bernard Rose, K.C., representing the employees, and the Secretary of the Builders' Exchange, Mr. D. A. Paterson, a settlement was reached providing for the increase in wages.

**PLASTERERS AND PLASTERERS' HELPERS, VANCOUVER, B.C.**—Plasterers ceased work on June 6, demanding an increase in wages from \$10 per 8-hour day to \$11. Following negotiations between the parties, work was resumed on June 20, an understanding having been reached, that an agreement would be negotiated covering work for the next two years providing for increases in wages at stated intervals, the first being five cents per hour in August, 1929. The settlement was delayed a few days owing to the existence of a strike of plasterers' helpers which began at the same time, and there was an agreement between the two unions that the members of each would work only with members of the other. Following the negotiations in the plasterers' dispute a settlement with the helpers was made providing that in August an increase in wages would be negotiated and work was resumed on June 20.

**PLUMBERS, MONCTON, N.B.**—Employees ceased work on June 17 to secure an increase in wages from 75 cents per hour, 48 hours per week, to 85 cents per hour, 44 hours per week. The employers at first offered 80 cents per hour. Some of them, however, agreed to the terms requested and their employees were not involved in the strike. Negotiations between the other employers and the union resulted in a settlement providing for the union demands.

**BRICKLAYERS AND MASONS, OTTAWA, ONT.**—Employees ceased work on a certain building because the employer had not required a sub-contractor on another building to employ only stonemasons who were members of the international union. The employer pointed out that his agreement with the international union, while providing for employment of union members only, did not stipulate that he was to require sub-contractors to do likewise. The employer reported that the strikers were replaced within two days by other workers who were members of a Canadian national union.

**TRACK LABOURERS, TAYLOR, ONT.**—Extra gang employees on the railroad became involved in a dispute on June 18. It is reported that these employees complained about the amount of work they were required to do during the excessive heat and also against being required to walk some distance from the boarding car to their work places before starting in the morning. Not complying with the orders of the foreman they were dismissed and their places filled by a new gang the same day.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1929, in the review of Strikes and Lockouts in Canada and Other Countries, 1928. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

### Great Britain and Northern Ireland

During May, 32 new disputes began and 17, which began before May, were still in progress, making a total of 49 disputes in progress during the month, involving about 17,200 workpeople and resulting in a time loss of 218,000 working days for the month. Of the 32 disputes beginning in May, 8 arose out of proposed reductions in wages, 12 on other wages questions, 8 on questions respecting the employment of particular classes or persons and 4 on other questions. Settlements were reached in 30 disputes, of which 6 were in favour of workpeople, 12 in favour of employers, and 12 ended in compromises. In two other disputes, work was resumed pending negotiations.

The dispute involving 3,800 coal miners at Seaham Harbour, Durham, who went on strike on March 2, against a proposed reduction in certain piece-work rates, was settled on June 17, when miners agreed to accept employers' terms and have disputes settled by local negotiations, or, failing this, by arbitration.

Up to the middle of June, no general settlement had been reached of the dispute involving 1,500 woollen mill workers in the Calder Valley district, Yorkshire, who went on strike on May 17, against proposed reductions in wages.

### Australia

During the fourth quarter of the year 1928, 52 disputes were reported, involving 56 establishments and 16,637 workers (both directly and indirectly). The total time loss was 169,032 working days and the estimated loss in wages £171,412.

The strike of timber workers, which began on February 1, and was reported in the *LABOUR GAZETTE* for June and previous months, continued until June 25, when an agreement was reached. The strikers agreed to accept the 48-hour week pending an independent inquiry into the industry to find out whether the 44-hour week would be financially possible. If it is found possible, employees will be paid for the extra four hours worked from the date of settlement to the date that the 44-hour week begins. Volunteer workers who have been operating many of the mills for some time are to be safeguarded, but employers agreed to engage as many union members as possible. Bush workers are to receive a slight increase in wages. In parts of New South Wales, however, union members still refused to work until the 44-hour week is established.

### British India

The strike of cotton mill workers, which began on April 26, involving about 100,000 workers, and which was reported in the *LABOUR GAZETTE* for May and for June, continued during June, but by June 25, it was reported that nearly 80,000 operatives were at work. Steps were being taken by the Government of Bombay to restore peace in the industry.

### Belgium

During April, 23 new and old disputes were in progress, involving 4,044 workers. The total time loss for the month was about 29,484 working days.

### Germany

In the first quarter of 1929, the number of disputes terminating was 45, involving 630 establishments and directly and indirectly involving 87,716 workers, with a time loss of 1,046,018 working days. Corresponding figures for the fourth quarter of 1928 are: 108 disputes involving 1,094 establishments and 324,146 workers, with a time loss of 10,167,689 working days. It was reported that, following the failure of negotiations for a new agreement, 50,000 workers in the Silesian textile industry were out of employment when the mills were closed.

### United States

The number of disputes which began during April was 99, while 61 were in effect at the end of the month. The number of workers involved in disputes which were in effect at

the end of the month was 51,865 and the time loss for the month 1,385,796 working days.

About 1,500 restaurant and cafeteria workers in a certain section of New York City, were on strike on April 4, for increased wages, shorter hours and other demands. No settlement has been reported.

On April 8, a strike began of shoe workers

in Massachusetts for reduced hours, better wages and working conditions.

A strike of 25,000 garment workers in New York City began on July 2, for the purpose of securing a new agreement providing for wage increases and better conditions. About half of the number of strikers had been temporarily unemployed due to the slack season.

## LABOUR LEGISLATION IN ALBERTA IN 1929

THE third session of the Sixth Legislature of Alberta opened on January 31 and closed on March 20, 1929. Several of the measures enacted were of special interest to labour, including an act giving effect within the province to the Dominion Old Age Pensions Act; amendments to the Workmen's Compensation Act respecting a workman's right of action against a third party, compensation for hernia, etc.; amendments to the Electrical Protection Act, the Thresher's Lien Act, the Woodmen's Lien Act, and the Superannuation Act; besides several measures affecting agricultural co-operation, public health, and education. The opening speech from the Throne referred to the steady improvement during the past year in economic conditions throughout the province: "The demand for labour has exceeded that of any previous year, while there has been a substantial development along industrial lines. The present indications are such as to warrant a confident belief in the continuation of sound and profitable expansion of industrial and mercantile undertakings, accompanied by an improvement in subsidiary businesses, trades and professions." The coal mining industry also was stated to have made substantial progress, the production of coal in 1928 having exceeded that of any previous year.

### Old Age Pensions

Under the "Old Age Pensions Act—Alberta" (chapter 24) the Lieutenant-Governor in Council was given power to enter into an agreement with the Governor General in Council of the character contemplated in the Old Age Pensions Act, 1927, of the Dominion of Canada under which the Federal Government undertakes to pay quarterly to each province entering into the scheme an amount equal to one-half of the net sum paid out during the preceding quarter by the province for old age pensions. Provision is made for the payment of pension to every person who at the date of the commencement of the pension—

(a) is a British subject, or being a widow who is not a British subject but was such before her marriage;

(b) has attained the age of 70 years;

(c) has resided in Canada for the twenty years immediately preceding the date aforesaid;

(d) has resided in the province in which the application for pension is made, for the five years immediately preceding the said date;

(e) is not an Indian as defined by the Indian Act;

(f) is not in receipt of an income of as much as \$365 a year; and

(g) has not made any voluntary assignment or transfer of property for the purpose of qualifying for a pension.

The maximum pension payable under the Act is \$240 yearly, subject to reduction by the amount of the income of the pensioner in excess of \$125. Where the pensioner is the owner of an interest in a dwelling house in which he resides and the pension authority accepts a transfer to it of such interest, the pension payable to the pensioner is not subject to any reduction in respect of the annual value of such interest, but it is provided that the pension authority shall, on the death of the pensioner or upon his ceasing to use such dwelling house as his place of residence, be entitled to sell the pensioner's interest therein, and to retain out of the proceeds of the sale the amount of all payments made to the pensioner in excess of the amount he would have received if such interest had not been transferred to the pension authority, together with interest on the said payments at the rate of five per cent per annum compounded annually.

It is provided that the receipt of pension shall not be a disqualification from voting at any provincial or municipal election.

The pension authority is entitled to recover out of the estate of any deceased pensioner the sum of the pension payments made to such pensioner, together with interest at five per cent per annum, compounded annually;

but no claim may be made by a pension authority for the recovery of such debt directly or indirectly out of any part of the pensioner's estate which passes by will or on any intestacy to any other pensioner or to any person who has since the grant of such pension, or for the last three years during which pension has continued to be paid, regularly contributed to the support of the pensioner by the payment of money, or otherwise, to an extent which (having regard to the moneys of the person having so contributed) is considered by the pension authority to be reasonable.

Within one month after the end of every year the municipality within whose area the pensioner is resident must pay to the provincial treasurer ten per cent of the amount paid during the previous year to pensioners resident within such municipality.

Any person having been granted a pension whilst resident in a municipal or an improvement district is deemed to continue to be resident therein as long as he continues to reside in the province.

The Lieutenant-Governor in Council has power to appoint a pension authority, a Board of Review, and all such other officers as may be necessary for the administration of the Act; and to make regulations as to the times and mode of payment by the Provincial Treasurer to the pension authority of the sums necessary for the administration of the Act.

The Act came into force upon proclamation of the Lieutenant-Governor in Council, and an agreement with the Dominion Government was signed in July, the Act to become operative on August 1.

### **Workmen's Compensation (Accident Fund) Act**

An amendment was made in the section of the Act added in 1928 relating to actions to recover damages against a third person (This section, now repealed, provided that, where an accident to a workman has been caused by some person other than his employer, the Board may take action for damages on his behalf, and that if the accident was due to the negligence of one employer other than his own employer, the compensation may be charged against the class to which the employer causing the accident belongs). The new section permits a workman who has been injured (or his dependants) through the fault of a third person to bring action for compensation against that person. If he does so, and the amount of damages he receives is less than he would be entitled

to under the Act, provision is made for the payment to him of the amount of such difference. "If any such workman or dependants make an application to the Board claiming compensation under this Act, the Board shall be subrogated to the rights of the workman or dependants as against such other person for the whole or any outstanding part of the claim of the workman or dependants against such other person." However, neither the workman nor his employer have the right of action against a third party who is an employer in any industry within the scope of the Act. If the accident has been due to the fault of the latter employer the Board may charge the compensation against the class of industry to which he belongs.

At the session of 1928 new provisions were added to the Act in regard to hernia (LABOUR GAZETTE, June, 1928, page 583). Among these was a provision requiring that any claimant for compensation in regard to hernia had to report his condition to his employer immediately or to cease work and report to his employer within 24 hours of his ceasing from work. By a new amendment the time limit for so reporting is now extended to 72 hours.

The new amendments to the Act were made effective as from March 21, 1929.

### **Boilers Act**

The Boilers Act was amended and consolidated so as to incorporate the various amendments added since the last consolidation in 1923. The new Act is designed to provide greater safety and efficiency in industries using boilers. In addition to boilers the Act now governs compressed air containers, oil stills, and refrigerator boilers. Boilers, as the term is used in the Act, include any boiler in which steam is generated or stored under pressure and having a greater capacity than two horsepower, and includes the engine or engines, all apparatus, appliances, connections and things attached thereto or connected therewith, if any, but does not include a boiler of a heating plant in a private residence occupied by not more than two families. Regulations under the Act may be made on the following subjects:—the construction, installation, inspection and operation of all pressure vessels, and the registration of their design and specifications; the examination of all applicants for certificates; the granting, renewal, suspension or cancellation of any certificate; temporary certificates; penalties for the breach of any regulation, not to exceed one hundred dollars as a maximum; fees payable for any inspection, etc; records kept by inspectors; methods of inspection of

pressure vessels; classification of boilers and other pressure vessels; methods of preparing boilers or other pressure vessels for inspection; qualification and the examination of welders who may weld pressure vessels; etc.

Before being enforced the regulations must be approved by the legislature at its next ensuing session.

The Act provides for the restrictions of the sale of pressure vessels or accessories unless they are constructed in accordance with the regulations.

An inspector must be a British subject, with five years' experience as a practical machinist or boilermaker, holding a first class engineer's certificate. The duties and powers of inspectors are defined in the Act. Rules are made as to Safety precautions to be taken during examination of boilers.

*Engineers and Firemen.*—Certificates of competency are to be issued as follows: First and second class engineers' certificates; third class engineers' (100 h.p.) certificates; third class engineers (50 h.p.) certificates; traction engineers' certificates; provisional engineers' certificates; firemen's certificates and special certificates. The qualifications required for the holding of these certificates are detailed in the Act.

No person is permitted to weld any pressure vessel unless he holds a certificate enabling him to do so.

The Act regulates the sale or importation of second hand pressure vessels, a certificate in respect of each vessel being necessary.

Explosions are to be reported to the chief inspector within 24 hours, with full details.

### Electrical Protection Act

The Electrical Protection Act, first enacted in 1919 for the protection of persons engaged in the generation or use of electrical energy, was amended so as to confer on the Workmen's Compensation Board, which administers its provisions, wider powers in regard to the framing of standard specifications for the design, construction, installation, protection, use, repair, etc., of electrical works and appliances. Electrical works may not be used, advertised, or sold until they have been inspected and approved.

Provision is made for the adoption of any code of electrical rules promulgated by an association or body.

### Superannuation of Civil Servants

The Act respecting superannuation and retiring allowances for civil servants was amended to provide that in the event of any employee dying after ten years of continuous

service, then whether he has or has not reached the age of retirement, his widow shall be entitled to a non-contributory annuity of the same amount as if the employee had been entitled to exercise and had exercised the option given him of receiving an annuity during the joint lives of himself and his wife during the life of the survivor. This provision only applies to an employee's widow living after the first day of April, 1929, and does not entitle her to any payment in respect of any time prior to that date.

The minimum superannuation amount is raised from twenty to thirty dollars per month.

### Threshers' Liens

The Threshers' Lien Act was amended by the addition of the provision that "whenever any person threshes or causes to be threshed grain of different kinds, such person may take a sufficient quantity of grain of any kind so threshed to satisfy his lien in respect of all the different kinds threshed or caused to be threshed." The time within which grain retained under the provisions of this Act shall be sold was extended from thirty to sixty days.

### Woodmen's Liens

The Woodmen's Lien Act was amended in regard to the procedure to be followed in connection with the service of a statement of claim.

### Public Health

The Public Health Act was amended to provide for the organization of health districts consisting of a number of municipalities, and for the establishment of district boards of health, the members nominated by the municipalities. The boards have authority to enforce the provisions of the Public Health Act, to appoint a medical and sanitary staff, including inspectors and one or more trained nurses. Proposals for such boards will be submitted to the municipalities by the Department of Health for approval.

### Co-operative Marketing

An Act was passed authorizing provincial guarantees to co-operative marketing associations for capital expenditures. Such associations must have first paid at least 15 per cent of the cost of acquiring land, factories, warehouses or machinery and the period of repayment is up to 20 years. The total amount of the liability of the province for a guarantee may not exceed one million dollars.

## OLD AGE PENSIONS IN ONTARIO

A PAMPHLET on Old Age Pensions in Ontario was published at Toronto in June, by order of the Legislative Assembly, for the use of local pension authorities. It includes reprints of the Dominion and Ontario Acts and of the regulations thereunder, and a summary of the procedure. As noted in the last issue of the *LABOUR GAZETTE*, page 579, the Ontario Act will take effect in the province on November 1, 1929. The provisions of this Act were outlined in the May issue, page 484. The Dominion Regulations were reprinted in the issue for February, 1928, page 138.

The pamphlet lays stress on the fact that the Old Age Pensions Act is not to be regarded as relieving a son or daughter from any responsibility under the Ontario Parents' Maintenance Act for providing for the maintenance of a dependent parent. Under the latter act proceedings may be taken against a son or daughter having sufficient means by the governing body of any hospital, home for the aged, house of refuge, or other charitable institution in which the dependent parent is an inmate, or by any local board or commission acting under the Old Age Pensions Act in the case of a person applying for or in receipt of a pension.

### Applications for Pensions

All applications for pensions made on or before 1st July, 1930, must be made to the local pensions board of the county, city, separated town, or provisional judicial district, in which the applicant resided on 1st July, 1929. After 1st July, 1930, the applications must be made to the local pensions board of the county, city, separated town, or provisional judicial district, in which the applicant then resides.

Every application must be made in the prescribed form (Form No. 1) which will be supplied free by the Province to the local pensions boards, and by such boards to any person who desires to make an application. If so requested by the applicant the local pensions board shall give all necessary information and assistance in completing the form. A declaration must also be made by an acquaintance as to the residence of the applicant, forms of which (Form No. 2) are also supplied free.

The local pensions board must give its decision in writing upon each application, the form of which is provided at the end of the application. The original application must then be forwarded to the Old Age Pensions Commission at Toronto. A copy of

each application should be made by the local pensions board and kept for reference. The latter board must notify each applicant of its decision within seven days (Forms 5 and 6).

For the purpose of determining the age of any person regard may be had to the birth certificate, certificate of baptism or other church record, or certificate of marriage showing the age at the date of marriage, or family Bible record, or other proof of age, as is more fully set out in Dominion Regulation No. 7.

If an applicant has been naturalized the naturalization papers should be filed with the application. Other proof of naturalization is more fully set out in Dominion Regulation No. 8.

Dominion Regulations 10 to 15 (incl.) deal with what is deemed to be residence in Canada for 20 years, and in Ontario for 5 years.

Every local pensions board is entitled to obtain without charge from any Dominion government department any information available as to the nationality of any applicant (Dominion Regulation No. 9), and from any Ontario government department any available information as to age or otherwise which is deemed necessary in the administration of the Act (Ontario Regulation No. 21).

### Amount of Pension

Where the applicant has an income of \$365 a year or more no pension can be granted. The maximum pension of \$240 a year is to be reduced when the pensioner has an income in excess of \$125 a year, so that the pensioner's income and the amount of the pension together will not exceed \$365 a year. For example, if the pensioner has an income of \$200 a year the pension will be \$165 a year.

The income mentioned will generally be in the nature of an annuity or derived from real or personal property. Dominion Regulations 16, 17, 18, 18a, and 19, deal with how the income of an applicant is to be ascertained. The local pensions board will fix the amount of the pension after deducting from the maximum of \$20 a month any deductions to be made for income as above mentioned.

Where the applicant has not resided in Ontario during the whole of the past 20 years, but has resided in one or more other provinces during that period he will be entitled to receive the full amount of the pension in Ontario, provided the other province or provinces in which he has so resided are under the Dominion Old Age Pensions Act. At present these provinces are Alberta,

British Columbia, Manitoba, and Saskatchewan and also the Yukon Territory.

Where during part of the 20 years the applicant has resided in a province in which the Act is not in force he will only be entitled to be paid in Ontario a proportion of \$20 per month, after deducting \$1 per month for each year in which he has resided in such other province. (Dominion Act, sections 10 to 14 (incl..))

Where a pensioner transfers his residence some place out of Canada the pension ceases. (Dominion Act, section 15.)

#### Appeals from Local Pensions Boards to Commission

Ontario Regulations 12, 13, and 14, deal with this matter and the procedure to be followed. An appeal can be taken where an application for a pension has been granted or refused, or against the amount of the pension fixed by a local pensions board.

#### Payment of Pensions

Where an application has been received before 1st November, 1929, and the pension has been granted, the pension will be payable monthly thereafter by bank cheque. After that date every pension granted shall commence on the day after the application is received by the local pensions board, and in the event of the pension commencing on a day other than the first day of the month the first payment shall include such proportion of the pension as the balance of the month bears to the whole month. For example, when a pension commences on the 15th day of a month the first payment will be for the period from that date until the end of the following month.

In the event of the death of the pensioner any part of the pension unpaid may be paid to such person as the Old Age Pensions Commission of Ontario considers equitably entitled thereto.

The Commission is entitled to recover from a pensioner any sum improperly paid by way of a pension whether as the result of the non-disclosure of facts, innocent or false representations or any other cause; and the local pensions board is to notify the commission of the death of any pensioner, or of any change that may occur in the family or financial condition of a pensioner, immediately upon becoming aware of same.

The payment of any pension shall be suspended during the lawful imprisonment of the pensioner for any offence. (Dominion Regulation No 22).

#### Contributions to Pensions

The Ontario Act provides that the province will pay thirty per cent. of the pensions, and that each county, union of counties, city separated town, and each town of 10,000 or more population in a provisional judicial district, shall pay twenty per cent. In the provisional judicial districts (including the provisional County of Haliburton) outside the cities and towns over 10,000, no municipal contribution is required. The Dominion pays the remaining fifty per cent of the pensions.

The contribution of twenty per cent to be paid by the municipalities is to be paid monthly to the Treasurer of Ontario upon receipt of an account for same from the Old Age Pensions Commission of Ontario.

Where a pensioner moves from the county, city, or separated town, where the pension was granted, such county, city or town, remains liable to contribute to such pension for one year after such removal; and after that period the county, city or separated town to which the pensioner has moved becomes liable to contribute (Ontario Regulations 7 to 10 (incl..))

#### REGULATIONS

The following regulations made pursuant to the Old Age Pensions Act, 1929, were approved by the Lieutenant-Governor in Council on 22nd May, 1929.

1. In these regulations:—

- (a) "Municipality" shall mean county, union of counties, city, separated town, or town of 10,000 or more population in a Provisional Judicial District.
- (b) "District" shall mean a Provisional Judicial District (excluding the cities and towns of 10,000 or more population therein) and the Provisional County of Haliburton.

2. The Board appointed for the purposes of the Act by the council of a municipality shall consist of five members. After the first appointment the members of such Board shall be appointed annually by the municipal council at its first meeting in each year. The members of such Boards shall hold office until their successors are appointed. At the first meeting, and thereafter at the first meeting in each year, a Chairman shall be appointed.

3. In a district the Local Authority shall be a Board composed of three persons to be appointed by the Lieutenant-Governor in Council, one of whom shall be appointed by the members of the Board as Chairman. The members of such Boards appointed by the Lieutenant-Governor in Council shall hold office until their successors are appointed.

4. Application for a pension shall be in the form annexed hereto. With each application there shall be furnished the proofs as to age mentioned in such form and in the Dominion regulations, together with such other evidence and proofs of claim as the Commission may from time to time prescribe.

5. Applications must be made to the Local Authority of the municipality or district where the applicant resided on 1st July, 1929, and after 1st July, 1930, to the Local Authority of the municipality or district where the applicant then resides.

6. With regard to all applications received by a Local Authority on or before 1st July, 1930, the residence of a pensioner shall be deemed to be the municipality or district where the pensioner resided on 1st July, 1929, and after 1st July, 1930, such residence shall be deemed to be the municipality or district where the pensioner then resides.

7. In case of the removal of a pensioner from a municipality such municipality shall be liable to contribute to the pension for one year after such removal, and after this period the municipality to which the pensioner has removed shall become liable to contribute towards such pension.

8. In case of the removal of a pensioner from a district to a municipality the municipality shall become liable to contribute towards such pension one year after such removal.

9. Where there is a dispute as to the residence of a pensioner such dispute shall be determined by the Commission whose decision shall be final and binding.

10. Where a pensioner moves outside a municipality or district where the pension was granted the Local Authority shall notify the Commission of the date of such removal and of the place to which the pensioner has gone.

11. The Local Authority shall investigate the circumstances connected with each application, and give its decision in writing upon each application. All original applications and proofs shall be forwarded to the Old Age Pensions Commission at Toronto. Each applicant for a pension shall within seven days of the decision of the Local Authority having been given be notified in writing by the Local Authority of such decision.

12. An appeal may be filed with the Commission by any applicant for a pension within one month from the date of the decision of the Local Authority. The Commission may in its discretion extend the time for appealing where it is shown that through incapacity or other reasonable circumstances it was not possible to give notice of appeal within the time mentioned.

13. There shall be the same right of appeal as provided for in the preceding regulation to the Commission from any Local Authority by any person who objects to the allowance of a pension or any part thereof.

14. Upon an appeal being made to the Commission notice in writing thereof shall be given to the Local Authority by the Commission. The Commission shall make such investigation as it deems necessary, and shall notify the person appealing and the Local Authority in writing of its decision.

15. Where an application has been received before 1st November, 1929, and a pension has been granted the pension will be payable monthly thereafter by bank cheque. After that date every pension granted shall commence on the day after the application is received by the Local Authority, and in the event of the pension commencing on a day other than the first day of the month the first payment shall include such proportion of the pension as the balance of the month bears to the whole month.

16. In the event of the death of a pensioner any part of the pension unpaid may be paid to

such person as the Commission considers equitably entitled thereto.

17. The Commission shall render monthly to the corporation of each municipality an account for twenty per centum of the pensions for which such corporation is liable.

18. Any pension or part thereof granted may be paid to any statutory or other Committee or Trustee of the estate of the person to whom the pension is granted, or with the consent of the pensioner to any person or Trust or Corporate body undertaking or liable for the maintenance and care of any person to whom a pension is granted under the Act.

19. The Local Authority must notify the Commission of the death of any pensioner, or of any change that may occur in the family or financial condition of a pensioner, immediately upon becoming aware of same.

20. The Commission shall be entitled to recover from a pensioner any sum improperly paid by way of a pension whether as the result of the non-disclosure of facts, innocent or false representations or any other cause.

21. The Commission and any Local Authority shall be entitled to obtain without charge from any Government department of Ontario any available information deemed necessary in the administration of the "Old Age Pensions Act, 1927," Chapter 35, Statutes of Canada, and the "Old Age Pensions Act, 1929" Chapter 73, Statutes of Ontario.

### Salaries of Canadian Postmasters

The Canadian Postmasters' Association, at their annual convention at Ottawa in June, considered the question of the basis on which the salaries of postmasters are determined. The salaries resulting from the use of the existing commission basis were declared to be inadequate, and representations will be made to the government for a further increase in the commission rates. Originally, the commission rate was 40 per cent on the first thousand dollars worth of stamps sold; 25 per cent on the next nine thousand, and 15 per cent on all over ten thousand. This was when the three-cent postage was in effect, wage conditions having been more favourable than now. Last year, in partial compliance with requests made by the Postmaster's Association the rate was increased to 70 per cent on the first thousand and 20 per cent on all over ten thousand. The rate now suggested is one hundred per cent on the first five thousand; 75 per cent on the next four thousand; 40 per cent on the next five thousand and 25 per cent on all over ten thousand. The postmasters are willing to retain the 70 per cent on the first thousand instead of the proposed rate, but they would press for the higher rate on the succeeding thousands, considering that the present wage is too low for government servants. "No other branch of the service is paid on a commission basis," said Mr H. E. Proctor, of Aurora, secretary-treasurer of the organization, "and we feel that such an increase should be granted."

## ONTARIO APPRENTICESHIP ACT

### Regulations governing Apprenticeship in Building Trades

THE following regulations under the Ontario Apprenticeship Act were approved by the Lieutenant Governor in Council on June 28, 1929, and are now in effect. Tentative regulations, including regulations governing the plumbing and painting trades, were made public earlier this year (LABOUR GAZETTE, March, 1929, page 287). These have now been amended and trade regulations governing carpentry, bricklaying, plastering, sheet metal work, electric wiring and installation, have been added.

#### GENERAL REGULATIONS

1. *Definitions:* In the following regulations,

(a) "Apprenticeship" means the relationship between the employer and the apprentice by which the apprentice, with the consent of his parent or guardian, and in accordance with the Apprenticeship Act engages himself for a certain minimum period to the employer for the purpose of learning a trade.

(b) "Apprentice" means any minor at least sixteen years of age who enters into a contract of service in accordance with the Apprenticeship Act, whereby he is to receive from or through his employer, in whole or in part, instruction in a designated trade.

(c) "Employer" means any person, firm or corporation, or municipal, provincial or other public authority to whom an apprentice is bound by contract, in accordance with the Apprenticeship Act.

(d) "Provincial Apprenticeship Committee" means the committee appointed by the Lieutenant-Governor in Council in pursuance of section 5, subsection 1, of the Apprenticeship Act.

(e) "Trade Apprenticeship Committee" means an advisory committee from industry composed of an equal number of employers and employees in a designated trade or trades, together with an independent chairman who may also act as secretary. Committees may consist of from three to nine members.

(f) "Inspector of Apprenticeship" or "Inspector" means the person appointed by the Lieutenant-Governor in Council in pursuance of section 5, subsection 2, of the Apprenticeship Act.

(g) "District Inspector of Apprenticeship" or "District Inspector" means a person appointed by the Lieutenant-Governor in Council in pursuance of section 5, subsection 2, of the Apprenticeship Act to assist and act for the Inspector in a district allotted by the Minister.

(h) "District" means the area or territory assigned to a District Inspector.

(i) "Temporary Transfer" means the removal of the apprentice from one employer to another without relieving the first employer of his obligations under the contract.

(j) "Permanent Transfer" means the removal of the apprentice from one employer to another involving the transfer of the employer's obligations, also the signature and registration of the apprenticeship contract.

#### 2. *Obligations of an Apprentice:*

(a) To render faithful service during the period of apprenticeship.

(b) To show due regard for the tools and goods of the employer and not to damage or waste the same.

(c) To furnish to his employer satisfactory reasons for absence from work.

(d) To attend regularly such classes in related trade training as may be required by the Provincial Apprenticeship Committee.

(e) To suffer loss of pay for non-attendance at day classes in related trade training, and to incur the cancellation of his apprenticeship contract for wilful failure to attend such classes.

(f) To make up all lost time for which he is responsible in any year, including time lost through illness if it exceeds ten working days, before the next year of his apprenticeship shall begin.

(g) To notify the District Inspector immediately when, for any reason, he ceases to be employed with the employer to whom he is indentured.

(h) To be subject to and obey the regulations made by the Lieutenant-Governor in Council governing his employment and training as an apprentice.

#### 3. *Obligations of an Employer:*

(a) To provide adequate training in all branches of the trade in so far as his facilities and the character of his work will permit.

(b) To provide continuous employment for the apprentice during each year of the apprenticeship period.

(c) To pay the wages set forth in the apprenticeship contract.

(d) To co-operate with the District Inspector in the transfer of an apprentice if for any reason such transfer is deemed necessary, and to pay the apprentice's wages in full until such transfer has been effected.

(e) To submit an annual report on the progress and conduct of the apprentice to the Provincial Apprenticeship Committee.

(f) To notify the District Inspector before employing a minor in any designated trade.

(g) To abide by and carry out the regulations made by the Lieutenant-Governor in Council, governing the employment of an apprentice.

#### 4. *The Number of Apprentices:*

The number of apprentices to be trained in the designated trades shall be set forth in special regulations for each trade and shall be based on the total number of journeymen employed in each trade.

#### 5. *Entrance Requirements:*

(a) No person shall commence apprenticeship until he has passed his sixteenth birthday.

(b) Persons applying for apprenticeship may be required to furnish proof of age.

(c) Every person entering apprenticeship shall have completed the work of the junior fourth book in public school, or its equivalent.

(d) Any person applying for apprenticeship may be required to produce a medical certificate or pass a medical examination showing that he is in good health and possesses the

physical requirements to successfully carry on the work of a journeyman.

(c) Every application for apprenticeship shall be made on a form to be supplied by the Minister.

(f) Applications shall be forwarded to the nearest District Inspector.

(g) No person may be employed as an apprentice until his application has been approved by the District Inspector.

#### 6. Probationary Period:

The first three months of employment shall be regarded as a probationary period during which either the apprentice or the employer may terminate employment at will.

#### 7. Registration:

(a) No minor may be employed for a longer period than three months without being indentured in accordance with the provisions of the Act. Those boys who have previously served three months at the trade and whose employment record is satisfactory to the District Inspector, must be placed under contract within one month after date of commencement.

(b) Triplicate copies of each apprenticeship contract shall be forwarded by the employer to the office of the Inspector of Apprenticeship for approval and registration, immediately after being drawn up. One copy will be retained by the Inspector, one copy returned to the employer and the other given to the apprentice.

(c) Each registered apprentice shall be given an identification card, furnished by the Minister, and this card shall be carried by the apprentice at all times.

(d) Whenever an apprentice is permanently transferred from one employer to another, all three copies of the contract must be signed by the parties concerned and the transfer registered in the same manner as a new contract.

#### 8. Period of Apprenticeship:

(a) The period of apprenticeship shall be set forth in the contract of apprenticeship as provided in special regulations for each designated trade.

(b) Allowance of time may be granted to boys who have had previous experience in the trade. The time to be allowed shall be determined by the Provincial Apprenticeship Committee on the recommendation of the District Inspector.

#### 9. Hours of Employment:

(a) The hours of employment for apprentices shall be the same as those for journeymen.

(b) An apprentice may work overtime, but such time shall not reduce the period of apprenticeship except that the actual number of hours of overtime may be deducted from any period of training required to make up for time lost due to illness.

#### 10. Wages:

(a) The wages to be paid an apprentice shall be set forth in the Contract of Apprenticeship in the form of dollars per week or cents per hour.

(b) An apprentice shall be paid the full wages set forth in the contract except that deductions may be made for time lost due to illness and voluntary absence for personal reasons.

(c) Wage rates shall be determined by local trade apprenticeship committees, subject to approval by the Provincial Apprenticeship

Committee. In districts where local trade apprenticeship committees have not been formed, the employer shall consult directly with the Provincial Apprenticeship Committee and obtain its approval on rates.

(d) No wage rates shall be approved by the Provincial Apprenticeship Committee unless they equal or exceed the following minimum requirements:

For the first year: 20 per cent of the current journeyman's rate in the district when the indenture is signed.

For the second year: 25 per cent of the current journeyman's rate in the district when the indenture is signed.

For the third year: 35 per cent of the current journeyman's rate in the district when the indenture is signed.

For the fourth year: 50 per cent of the current journeyman's rate in the district when the indenture is signed.

(e) The decision of the Provincial Apprenticeship Committee on any questions arising from an interpretation of the above clause (d) shall be final.

(f) The rates set out in the contract shall remain fixed for the term of the contract.

#### 11. Trade Training:

An apprentice shall be taught the common practices of the trade. A schedule of the operations and processes to be covered shall be prepared by the Inspector and when approved by the Provincial Apprenticeship Committee it shall be appended to the regulations governing the trade.

#### 12. School Training:

(a) Apprentices in designated trades shall attend special classes for at least eight weeks of five eight-hour days, or three hundred and twenty class hours, during each of the first two years of apprenticeship. The time and place for such classes shall be arranged for each designated trade as determined by local facilities and conditions. The employer shall pay for such time at the rate set forth in the contract of apprenticeship.

(b) Apprentices shall be encouraged to attend evening classes when not in attendance at day classes.

(c) The courses in these day and evening classes must be approved by the Provincial Apprenticeship Committee.

(d) Where day or evening classes cannot be arranged, apprentices shall be required to follow approved correspondence courses.

(e) An annual report on each apprentice shall be submitted to the Provincial Apprenticeship Committee by the school or institution from which instruction is being received. Forms for this report shall be furnished by the Minister.

(f) Apprentices shall be reimbursed by the employer for fees in connection with prescribed courses, provided they attend at least seventy-five per cent of the class sessions.

(g) Weekly attendance records shall be furnished by the school to the employer for each boy in attendance at day classes.

#### 13. Supervision of Training:

(a) All minor disputes between the employer and employee, except those involving policy, shall be settled by the District Inspector.

(b) Disputes of a major character and those involving policy shall be referred to the Provincial Apprenticeship Committee.

(c) Transfers from one employer to another may be arranged by the District Inspector, but permanent transfers must be approved by the Provincial Apprenticeship Committee.

(d) Contracts may be cancelled or terminated in accordance with section 15 of the Act.

(e) An inspection visit shall be paid to each apprentice at least once each year and a written report submitted to the Provincial Apprenticeship Committee by the District Inspector.

(f) The employer shall notify the District Inspector before making any change affecting the contract of apprenticeship and all such changes must be approved by the Provincial Apprenticeship Committee.

(g) The employer shall submit an annual report to the Provincial Apprenticeship Committee on each apprentice in his employ. Forms for this report will be supplied by the District Inspector.

#### 14. Examinations and Tests:

(a) Every apprentice shall receive a practical test at least once each year. This test must be passed to the satisfaction of the District Inspector before the apprentice is advanced to the next year of his apprenticeship.

(b) Every apprentice shall be required to pass an annual examination or theoretical test in each related subject and branch of the trade taught in the school classes.

(c) Apprentices receiving instruction by correspondence must produce proof that they have successfully completed the course before the apprenticeship training may be regarded as completed.

#### 15. Certificates and Diplomas:

(a) Every apprentice who serves the prescribed term of apprenticeship and completes the school training to the satisfaction of the Provincial Apprenticeship Committee will be granted a diploma.

(b) Those apprentices who show exceptional ability and application in connection with the trade and school training will be granted a diploma with honour standing.

## TRADE REGULATIONS

### CARPENTRY

#### 1. Number of Apprentices:

(a) The ratio of apprentices to journeymen in the carpentry trade throughout the province shall not exceed 1 to 8, except that those persons employed as apprentices when the Act is put into operation in any district may be allowed to complete their apprenticeship in accordance with the provisions of the Act, regardless of this ratio.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the number of journeymen reported in each district. The figures shall be obtained by the District Inspector of Apprenticeship, and shall include all journeymen regardless of their affiliations. Provision shall be made to accept first-year apprentices each year, so that the first, second, third and fourth year apprentices computed, shall complete the ratio quota.

(c) Each employer who employs from two to eight journeymen and is approved by the District Inspector of Apprenticeship may have one apprentice. He may also employ one additional apprentice for each additional eight journeymen employed, provided the number of apprentices in the district does not exceed the

ratio of 1 to 8 as determined in accordance with provisions in paragraph (a).

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

#### 2. Term of Apprenticeship:

The term of apprenticeship shall be four years, including the probationary period. The full term of four years shall be served under contract with an employer in accordance with the provisions of the Act.

## BRICKLAYING AND MASONRY

#### 1. Number of Apprentices:

(a) The ratio of apprentices to journeymen in bricklaying and masonry throughout the province shall not exceed 1 to 8.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the number of journeymen reported in each district. The figures shall be obtained by the District Inspector of Apprenticeship, and shall include all journeymen regardless of their affiliations.

(c) Each employer who employs from one to eight journeymen and is approved by the District Inspector may have one apprentice. He may also employ one additional apprentice for each additional eight journeymen regularly employed, provided the number of apprentices in the district does not exceed the ratio of 1 to 8. In no case shall more than three apprentices be under contract to one employer.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

#### 2. Term of Apprenticeship:

The term of apprenticeship shall be four years, including the probationary period.

#### 3. Age of Admission:

Apprentices shall enter bricklaying and masonry between their sixteenth and eighteenth birthdays, except by special permission from the Provincial Apprenticeship Committee.

## PAINTING AND DECORATING

#### 1. Number of Apprentices:

(a) The ratio of apprentices to journeymen in painting and decorating shall not exceed 1 to 5.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the total number of journeymen in each district. The figures shall be obtained by the District Inspector of Apprenticeship.

(c) Each employer who is approved by the District Inspector of Apprenticeship may have one apprentice. He may also employ one additional apprentice for each five journeymen regularly employed, provided the ratio of apprentices in the district does not exceed 1 to 5.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

#### 2. Term of Apprenticeship:

The term of apprenticeship shall be three years, including the probationary period.

## PLASTERING

#### 1. Number of Apprentices:

(a) The ratio of apprentices to journeymen in plastering throughout the province shall not exceed 1 to 8.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the number of journeymen reported in each district. The figures shall be obtained by the District Inspector of Apprenticeship, and shall include all journeymen regardless of their affiliations.

(c) Each employer who employs from one to eight journeymen and is approved by the District Inspector may have one apprentice. He may also employ one additional apprentice for each additional eight journeymen regularly employed, provided the number of apprentices in the district does not exceed the ratio of 1 to 8. In no case shall more than three apprentices be under contract to one employer.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

## 2. Term of Apprenticeship:

The term of apprenticeship shall be four years, including the probationary period.

## 3. Age of Admission:

Apprentices shall enter the plastering trade between their sixteenth and eighteenth birthdays, except by special permission from the Provincial Apprenticeship Committee.

### PLUMBING AND STEAMFITTING

#### 1. Number of Apprentices:

(a) The ratio of apprentices to journeymen in plumbing and steamfitting throughout the province shall not exceed 1 to 5, except that those persons employed as apprentices when the Act is put into operation in any district may be allowed to complete their apprenticeship in accordance with the provisions of the Act, regardless of this ratio.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the number of journeymen reported in each district. The figures shall be obtained by the District Inspector of Apprenticeship, and shall include all journeymen regardless of their affiliations.

(c) Each employer who is approved by the District Inspector of Apprenticeship may have one apprentice. He may also employ one additional apprentice for each five journeymen regularly employed provided the number of apprentices in the district does not exceed the ratio of 1 to 5.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

#### 2. Term of Apprenticeship:

(a) The term of apprenticeship shall be five years, including the probationary period. The first four years shall be served under contract with an employer in accordance with the provisions of the Act. The fifth year shall be served as a junior mechanic, subject to the regulations governing apprentices except for the following provisions:

1. The employer shall not be obliged to keep the junior mechanic employed during slack periods.
2. The junior mechanic shall not be obliged to remain with the employer during a strike or lockout, but, under other conditions, shall continue to serve the employer with whom he was last indentured.

3. Time lost due to illness or lack of employment must be made up by the junior mechanic before he receives his diploma.
4. Where a trade agreement exists between employers and the local union, the conditions of employment for the junior mechanic shall be those set forth in the agreement.

### SHEET METAL WORK

#### 1. Number of Apprentices:

(a) The ratio of apprentices to journeymen in sheet metal work, throughout the province shall not exceed 1 to 4 except that those persons employed as apprentices when the Act is put into operation in any district may be allowed to complete their apprenticeship in accordance with the provisions of the Act, regardless of this ratio.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the number of journeymen reported in each district. The figures shall be obtained by the District Inspector of Apprenticeship, and shall include all journeymen regardless of their affiliations.

(c) Each employer who is approved by the District Inspector of Apprenticeship may have one apprentice. He may also employ one additional apprentice for each four journeymen regularly employed provided the number of apprentices in the district does not exceed the ratio of 1 to 4.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

#### 2. Term of Apprenticeship:

The term of apprenticeship shall be four years including the probationary period. The full term of four years shall be served under contract with an employer in accordance with the Act.

### ELECTRIC WIRING AND INSTALLATION

#### 1. Number of Apprentices:

(a) The ratio of apprentices to journeymen in electric wiring and installation throughout the province shall not exceed 1 to 3 except that those persons employed as apprentices when the Act is put into operation in any district may be allowed to complete their apprenticeship in accordance with the provisions of the Act, regardless of this ratio.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the number of journeymen reported in each district. The figures shall be obtained by the District Inspector of Apprenticeship, and shall include all journeymen regardless of their affiliations.

(c) Each employer who is approved by the District Inspector of Apprenticeship may have one apprentice. He may also employ one additional apprentice for each three journeymen regularly employed provided the number of apprentices in the district does not exceed the ratio of 1 to 3.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

#### 2. Term of Apprenticeship:

The term of apprenticeship shall be four years, including the probationary period. The full term of four years shall be served under contract with an employer in accordance with the provisions of the Act.

## THE ONTARIO APPRENTICESHIP ACT: ITS EFFECT ON VOCATIONAL EDUCATION

MR. A. W. Crawford, inspector of apprenticeship under the Apprenticeship Act of Ontario, 1928, delivered an address to the Urban School Teachers' Association of Brockville on June 12 on the Act and its effect upon vocational education. The provisions of the Act and the events leading to its enactment were outlined in the *LABOUR GAZETTE*, August, 1928, page 870, and in previous issues. Mr. Crawford's address is given below, the information already given in former articles being omitted.

The training of skilled workers in Canada, Mr. Crawford said, has not kept pace with other industrial developments. In most industries, apprenticeship is regarded as a thing of the past, unsuited to modern conditions, and little has been done to devise new training methods which will maintain the supply of skilled mechanics. The idea that Canadian boys are unwilling to bind themselves to an employer for the purpose of learning a trade appears to be firmly embedded in the minds of many people but such persons fail to appreciate the changed conditions in industry which make it impossible to train workers under the old type of apprenticeship. They expect boys to accept wages and working conditions which are not consistent with modern developments. Mass production and specialization have brought about industrial and social conditions which make it unnecessary and undesirable that boys should learn trades under the system which was developed in medieval times. Progressive employers and the leaders of organized labour realize that new methods of training are necessary for boys entering industrial life. In a few Canadian industries, efforts are being made to develop new types of apprenticeship which will meet the needs of modern conditions.

One of the best systems of apprenticeship is to be found in the printing trades where boys serve five years under carefully supervised conditions of training and instruction. Theory and practice are blended in school and workshop training. Correspondence instruction is provided for apprentices who cannot attend day or evening apprenticeship classes in technical schools.

The two larger railway systems in Canada operate complete systems of apprenticeship for boys entering such trades as machine shop practice, electrical installation, carpentry, car building, blacksmithing, and moulding. Hundreds of bright young men are serving their time at these trades and I am informed that the railway shops throughout

the Dominion have long waiting list of boys anxious to become apprentices in these trades.

Several of the large industrial corporations, including the Canadian Westinghouse, the Canadian General Electric, and some of the manufacturers of automobiles, agricultural implements, and industrial machinery, operate apprenticeship plans in connection with their production plants and service departments. Approximately two hundred apprentices from various types of industrial plants attend special, day, apprenticeship classes in the Hamilton Technical Institute. The time spent in these school classes is paid for by the employers.

The most recent development in apprenticeship and one which promises to have a far reaching effect upon Canadian industry is that in connection with the building trades. The training of young workers in these trades has been disorganized and neglected for many years but a new system is being built up which is worthy of careful consideration by everyone interested in the welfare of Canadian boys.

This new development first took definite form at the Joint Conference of the Building and Construction Industries held at Ottawa, in May 1921. At this conference, a committee composed of six employers, six representatives of labour, and an independent chairman was appointed to study the question of apprenticeship and to devise a plan which might be adopted throughout the nine provinces. The committee recommended a plan involving a National Apprenticeship Council, and local councils in the larger cities of the Dominion.

Mr. Crawford went on to outline the events leading to the passing of the Act, and described its provisions in detail. He then proceeded:—

General regulations dealing with the school training of apprentices are of particular interest to members of this organization. They read as follows:—

### *School Training*

(a) Apprentices in designated trades shall attend special classes for at least eight weeks of five eight hour days, or three hundred and twenty class hours, during each of the first two years of apprenticeship. The time and place for such classes shall be arranged for each designated trade as determined by local facilities and conditions. The employer shall pay for such time at the rate set forth in the contract of apprenticeship.

(b) Apprentices shall be encouraged to attend evening classes when not in attendance at day classes.

(c) The courses in these day and evening classes must be approved by the Provincial Apprenticeship Committee.

(d) Where day or evening classes cannot be arranged, apprentices shall be required to follow approved correspondence courses.

(e) An annual report on each apprentice shall be submitted to the Provincial Apprenticeship Committee by the school or institution from which instruction is being received. Forms for this report shall be furnished by the Minister.

(f) Apprentices shall be reimbursed by the employer for fees in connection with approved classes, provided they attend at least seventy-five per cent of the class sessions.

(g) Weekly attendance records shall be furnished by the school to the employer for each boy in attendance at day schools."

It has not been possible to organize day classes for apprentices throughout the province, but a start has been made in Hamilton and Toronto, where twenty-three apprentices in carpentry and bricklaying attended classes during the months of January and February. They were paid by the employers for the time spent at school and, with few exceptions were greatly benefited by the instruction received.

Evening classes are conducted in most of the larger industrial centres throughout the province. They are attended by both journeymen and apprentices. No attempt has yet been made to prescribe special apprenticeship courses, but several technical schools have made special efforts to meet the requirements of the building trades by organizing graded evening courses in carpentry, bricklaying, plumbing, steamfitting, electrical installation, and sheetmetal work.

Correspondence instruction for apprentices in building trades is a development of the future.

The organization of the work is by no means complete and many changes will be made before apprenticeship in the building trades is established on a permanent, satisfactory basis. It is expected that a system of assessment will be inaugurated in the near future—whereby the cost of training apprentices in school classes, or when not employed during slack periods, will be distributed amongst all employers in the building industry. It may be that, in certain trades, the apprentices will be indentured to apprenticeship committees and placed with different employers for training, rather than being indentured to one employer, as at present. All such changes will be made only after careful study and on the advice of joint committees representing the trades concerned.

It is too early to appreciate the benefits which will follow from the operation of the Act, but some idea of the progress being made may be gained from the following figures.

The total number of apprentices registered under the Act on June 6, was 657. These were distributed as follows:—

104 Bricklayers and Masons; 83 Carpenters; 25 Painters and Decorators; 48 Plasterers; 198 Plumbers; 82 Steamfitters; 42 Sheet Metal Workers; 75 Electricians.

Few apprentices have been indentured in the smaller centres throughout the province, but, when it is considered that the work is just being organized and that comparatively few people know what is being attempted, the progress to date seems entirely satisfactory. Canadian boys have shown themselves to be not only willing but anxious to bind themselves for periods of from three to five years. Employers and employees in the building industry are favourably inclined towards the Act and rapid developments are expected during the next few years. Other industries have shown a keen interest in the work and it is hoped that they will make application to come within the scope of the Act in the near future.

### Education in Maternal and Infant Welfare

The Canadian Council on Child Welfare has announced that through the interest of the Canadian Life Insurance Officers' Association it will be enabled to undertake a three-year intensive educational campaign in the field of maternal and infant welfare. The council has been carrying on considerable educational work in co-operation with the public health departments of the provinces in the distribution of simple pre-natal letters and diet folders and other material on nutrition. The organization now plans to issue pre-natal and post-natal literature and malnutrition and diet folders, published in both English and French, which will be prepared and reviewed by competent authorities before release. A special feature of its work will be the preparation of health exhibit material, which will be available to other organizations, to conferences, and especially to women's conventions, fairs, and summer picnics in the smaller towns and cities and in the rural areas. The work will be directed by a committee of the child-hygiene section of the council, which will include representative public-health workers from different parts of the Dominion.

## WORKMEN'S COMPENSATION IN QUEBEC

### First Annual Report of Commission, September to December, 1928

THE Commission administering the Workmen's Compensation Act of Quebec (Statutes of Quebec, 1928, chapter 80) recently published its first report, covering operations during the period from September 1 to December 31, 1928. The provisions of the Act were outlined in the LABOUR GAZETTE, May, 1928, page 459. The Act became effective by proclamation on June 9, the members of the Commission (Messrs. Robert Taschereau, K.C., chairman, Simon Lapointe, K.C., and O. E. Sharpe) being nominated later in the same month, together with a secretary, and assistant secretary, a chief medical officer, and four technical advisers. For the purpose of acquiring knowledge of the methods of administration, the commissioners visited Toronto and Boston, where industrial accidents are under the jurisdiction of a commission or Board. The head office of the commission is at 73 Grande Allee, Quebec City, and a sub-office has been opened at 89 Notre Dame Street East, Montreal.

With the exception of certain salaries and expenses for office accommodation and furniture, the Insurance Companies and those who have become self-insurers are called upon to meet the expenses of administration of the Commission, according to the method of assessment determined by it. The amount of these expenses chargeable to the Insurance Companies and self-insurers for the last four months of 1928 was \$52,535.38.

Considerable initial expenditure was involved in organization of the work of the Commission, including the printing of the required forms to be distributed to the public in large numbers, the furniture for the staff, files, etc.

**Claims.**—From September 1 to December 31, 1928, 8,266 claims for compensation were submitted by injured workmen to the commission. The reports of accidents received by the Commission during these four months were as follows:—

September . . . . .	915
October . . . . .	2,287
November . . . . .	2,516
December . . . . .	2,548
Of these cases, 2,625 were definitely closed by the Commission under the following headings:—	
Claims involving compensation for temporary total incapacity only . . . . .	2,557
Claims involving compensation for permanent partial or total incapacity . . . . .	48
Claims involving compensation on account of fatal accidents . . . . .	20
<b>Total . . . . .</b>	<b>2,625</b>

Accidents involving an incapacity of seven days or less are not required to be reported. However, this fact was not generally known, and 447 such cases were actually reported where the disability lasted seven days or less and medical aid only was payable. In addition, 238 claims did not involve compensation on account of the enterprise not being subject to the Act, or of disallowance of claims by the Commission, and in 89 cases, two numbers were allotted for the same accident as reports were received from two different sources. In 1,228 cases, in addition to those definitely closed, the Commission received advice from the insurer that compensation was being paid, but owing to the nature of the disability, the healing period was not complete as at December 31.

At the close of the year, 214 additional claims had been settled, but the details had not been fully verified for inclusion in the statistics. The remaining 3,425 claims reported were in suspense, either due to the fact that the necessary documents to complete the files were not received, or because proof of payment of the indemnity had not been submitted. In a great number of these cases, the injured workman had received a part of his indemnity, but many insurers were not fully aware of the procedure necessary in reporting these payments. It was anticipated that the number of claims in suspense would be greatly reduced in the near future due to the close "follow-up" of such cases by the Commission.

The report contains a table showing the number of accidents, classified according to industry, as follows:—

NUMBER OF ACCIDENTS IN FOUR MONTHS OF 1928 INVOLVING PAYMENT OF COMPENSATION

—	Temporary Incapacity	Permanent Incapacity	Death	Total
Building or demolishing . . . . .	359	8	3	370
Factories or workshops . . . . .	689	14	4	707
Stone, wood or coal yards . . . . .	19	1	.....	20
Lumbering . . . . .	791	13	3	807
Transportation (land and water) . . . . .	365	4	3	372
Gas and electrical undertakings . . . . .	41	3	1	45
Construction (roads, railways and bridges) . . . . .	124	2	2	128
Mines and quarries . . . . .	110	3	4	117
Other industries . . . . .	11	.....	.....	11
Commercial establishments . . . . .	48	.....	.....	48
<b>Totals . . . . .</b>	<b>2,557</b>	<b>48</b>	<b>20</b>	<b>2,625</b>

Approximately 40 per cent of all the accidents disposed of by the commission occurred in Montreal district. Another table in the report shows the total temporary or permanent disability. This table is as follows:

TOTAL AND AVERAGE COMPENSATION CLASSIFIED ACCORDING TO ENTERPRISES, 1928

	Temporary Incapacity Cases			Permanent Incapacity Cases						Death Cases			All Cases					
	For temporary incapacity			For temporary incapacity			For permanent incapacity			For temporary incapacity			Rents payable to representatives					
	Totals	Average		Totals	Average		Totals	Average		Totals	Average		Totals	Average		Totals	Average

Other industries.....	322 02	29 27	.....	.....	.....	.....	.....	.....	322 02	29 27	322 02	29 27	322 02	29 27	322 02	29 27	322 02	29 27
Commercial establishments...	1,157 61	24 11	.....	.....	.....	.....	.....	.....	1,157 61	24 11	1,157 61	24 11	1,157 61	24 11	1,157 61	24 11	1,157 61	24 11
	79,702 96	31 17	4,059 92	84 58	10,787 87	224 75	10,787 87	224 75	115,213 00	5,760 65	209,763 75	79 91	209,763 75	79 91	209,763 75	79 91	209,763 75	79 91

The amount paid or due to the injured workmen or their representatives on account of claims disposed of on their behalf for the four months after the coming into force of the new Act was \$209,763.75. Only 40 per cent of the 8,266 claims reported to the commission since September 1 are included in this amount, the balance of the reported claims, with the exception of those involving absence from work for less than 7 days, etc., were not finally disposed of as payment of compensation was being continued as at December 31. Further, the amounts paid for medical aid on account of accidents are not included.

Tables are given in the report showing the marital condition of the injured workmen, the numbers of married and unmarried men being nearly equal. Of 2,558 injured workmen 566 were under 21 years of age. Another table shows the nature of the injuries by industrial groups.

Of the 48 injuries involving permanent incapacity, 43 involved percentages of incapacity less than ten, and in 5 cases the percentages lay between twenty and thirty.

The commissioners conclude their report by making the following observations on the Act in the light of the experience of its working during the first four months:

"The two main obstacles which must be overcome are the delay in commencing payment of the indemnity to the injured workman, and secondly the high cost of treatment of the victim of the accident by the hospital and doctors.

"Insurance companies and self-insurers very materially assist in making the new law a success by promptly discharging their obligations towards the injured workman. Failure to do so cannot be excused and in such cases general dissatisfaction and complaint arises which, in many cases, is amply justified. The insurance companies and self-insurers generally comply with the provisions of the law in this respect, but we are of the opinion that

there still remains a certain number subject to criticism which make the work of the commission very difficult.

"The hospitals and doctors are responsible that the injured workman receives appropriate treatment in each case, but on the other hand, precautions should be taken that this treatment is not unduly prolonged, imposing excessive expense on the employer and the insurer. The medical profession may with advantage co-operate with the commission and the employers by taking all possible means to check such abuses as they arise. We are of the opinion that strict supervision with respect to excessive medical charges is absolutely necessary.

"The workmen in general appear to be satisfied with the new law which provides prompt payment of the compensation to which they are entitled, without recourse to the courts, where they are exposed to the payment of costs. In addition, they appreciate the assistance received from the commission, either in the preparation of claims on account of accidents, or by giving information as to their rights and obligations. Doubtless the workmen will better understand the advantages of this new legislation when they become familiar with the details thereof.

"The members of the commission have been very glad to respond to invitations from workmen, employers and insurers to explain and point out the outstanding features and operation of the law. It is very important that this law should be familiar to the public and every effort has been made to accomplish this result.

"Certain employers are not insured, although the law is very clear on this point and leaves no alternative. In certain cases these employers give as an excuse that the insurance companies refuse the risk. The commission cannot oblige an insurance company to assume any particular risk. It appears, therefore, that special measures are necessary to deal with these particular cases."

### New Regulations of Ontario Workmen's Compensation Board

The *Ontario Gazette*, June 29, 1929, contained two new Regulations made by the Board pursuant to the Workmen's Compensation Act of the province. Regulation 98 carries out one of the recommendations made by Judge Godson in his report on the Hollinger Mine disaster last year (*LABOUR GAZETTE*, November, 1928, page 1208). Regulation 99 provides for the inclusion of chrome

poisoning among the occupational diseases that are compensable under the Act. The text of the new Regulation is as follows:—

98. The employers in Class 5 of Schedule 1 shall establish, equip and maintain rescue stations at Timmins, Kirkland Lake and Sudbury, the location, equipment, management and operation of the same to be under the jurisdiction and control of the Department of Mines of Ontario, and the cost of the location, equipment, management and operation of the same

to be charged and assessed by the Board to and upon the appropriate group or groups of employers in Class 5 of Schedule 1.

99. It is hereby declared that chrome poisoning due to employment in any process involving the use of chromium or its compounds shall be an industrial disease within the meaning

of the Workmen's Compensation Act as if the words "chrome poisoning" were inserted in the first column of Schedule 3 of the Act and the words "any process involving the use of chromium or its compounds" were inserted opposite thereto in the second column of the said Schedule.

## WORKMEN'S COMPENSATION IN NEW BRUNSWICK IN 1928

THE tenth annual report of the Workmen's Compensation Board of the Province of New Brunswick outlines the activities of the Board in the administration of the Act during the year ending December 31, 1928.

The total income for the year 1928 is estimated at \$645,325.29, from which is deducted a cumulative deficit from the year 1927 of \$126,639.89, showing a net estimated income of \$518,685.40. The estimated expenditure is shown as \$598,773.21, leaving an estimated deficit of \$80,087.81, less estimated profit on bonds of \$73,078.45 or a net provisional deficit of \$7,009.36. It is pointed out that these figures as in other years do not purport to be the actual amount of money to the debit or credit of classes, but show what has been collected from the provisional statements filed, and what the Board think, after going over the data in their possession, is a fair income to be expected from the amount to be collected, owing to the expected increase of the

actual payrolls over the provisional estimates. The expenditure shows the same condition. To the amount paid out is added a sufficient sum which the Board estimates will cover the cost of claims in assembly and the claims which may be existing as of December 31, 1928, but not reported to the Board, and also the estimated amount for claims reported partly paid, but not completed. When the actual figures for 1928 are received and all collections made and all claims adjusted, the figures may vary materially.

No information is available in the report concerning accident statistics for the year 1928 as the time for reporting accidents was not ended at the date of publication. Final figures, however, are given for the year 1927, and these indicate an increase both in the total number of accidents and in the number of fatal accidents over preceding year of 1926.

The accompanying table shows the number of industrial accidents according to degree of severity from 1919 to 1926 inclusive:—

	Industrial accidents in New Brunswick, 1919-1927									
	1919	1920	1921	1922	1923	1924	1925	1926	1927	Total
Fatal Accidents.....	25	47	35	30	37	38	31	23	28	294
Permanent total.....			1	1	2	1	1			6
Contingency.....					4	8	11			44
Permanent partial.....	183	254	241	245	244	261	241	218	269	2,156
Temporary total.....	1,832	2,967	3,032	3,225	4,047	3,823	3,612	3,658	3,913	30,109
Minor and medical aid only.....	656	796	1,037	1,310	1,835	1,978	2,075	2,150	2,751	14,588
	2,696	4,064	4,346	4,811	6,169	6,109	5,971	6,065	6,966	47,197

At the present time, there are 223 widows and 463 children in New Brunswick drawing pensions. A comparison of compensation costs of accidents from 1919 to 1927 indicates

the following amounts for the respective years in that period: In 1919, \$376,007.45; 1920, \$548,302.83; 1921, \$469,675.69; 1922, \$496,676.40; 1923, \$564,890.08; 1924, \$620,756.34; 1925, \$570,883.19; 1926, \$485,772.14; 1927, \$543,087.88.

Next year the Safety Convention of the Industrial Accident Prevention Association of Ontario will be held on April 24 and 25 at the Royal York Hotel, Toronto. Mr. R. B. Morley, general manager of the Associations, states that about 1,800 delegates are expected to attend the convention from all parts of Ontario.

A permanent commission composed of thirty-six ledgers in organized labour has been appointed in New York State to carry on a continuous campaign to reduce accidents in industry. President J. J. Sullivan of the New York State Federation of Labour, is chairman of the Commission.

## WORKMEN'S COMPENSATION IN BRITISH COLUMBIA IN 1928

THE twelfth annual report of the Workmen's Compensation Board of British Columbia reviews its activities in the administration of the Act during 1928. Tabulated summaries are given including the record of all the finalled claims according to the class or sub-class of the industry; a complete analysis of finalled temporary disability claims with reference to the industry concerned, the wage loss involved, the average length of disability, sex, conjugal state, nationality and average age of the workmen. The causes of accidents with the average cost of compensation are also shown. The tables also include an analysis of permanent partial disability and of total temporary disability accidents.

*Extent of Protection.*—The report shows that the protection of the Act extends to over 175,000 employees and covers the workmen in practically all industries in the province. During the twelve years it has been in effect 282,340 accidents have been reported. Fatal accidents for the same period numbered 2,670, while 6,401 injured persons were left either totally or partially incapacitated from work for life. On the pension list at the end of 1928 there were: Widows, 687; children, (under 16), 1,116; dependent mothers, 108; dependent fathers, 50; other dependents, 29; and permanently disabled workmen, 1,277; or a total of 3,277 persons in receipt of regular pensions. In addition there are temporary totally disabled workmen to the number of nearly 2,000 at any given time receiving time-loss compensation and medical attention. With their dependents there are more than 10,000 people relying for their maintenance, in whole or in part, at all times on the benefits provided under the Act.

*Industrial Progress.*—A review of the annual payroll figures in the industries within the scope of the Act reveals the industrial growth and development in the Province during the past few years. The adjusted payroll figures for 1921 amounted to \$129,518,375; for 1922, \$130,592,502; for 1923, \$153,548,944; for 1924, \$155,410,227; for 1925, \$164,216,219; for 1926, \$172,862,307; and for 1927, \$175,315,992.

The payroll audits for 1928 will not be completed for some months. According to the report the indications are that it may reach a figure close to \$180,000,000. That the growth is not confined entirely to existing firms is evidenced by the steady increase in the number of industrial enterprises on the records. There were 6,524 firms engaged in industries under the Act at the end of 1923; 6,838 in 1924; 7,197 in 1925; 7,613 in 1926; 8,243 in

1927; and 8,688 on December 31st, 1928. Out of the number of firms operating in 1928 there were 1,512 who were employing labour under the Act for the first time. Former employers to the number of 227 resumed operations. Optional protection by special application was extended to 162 employers during 1928. After allowing for the firms which discontinued business, there was a net gain of 445 in the number actively operating for the year. The necessity for employers registering their operations with the Board is now generally understood and observed. Out of 32,793 accidents reported in 1928 it was found that in only 14 cases had the employer failed to report his operations prior to an accident occurring.

*Accidents and Claims.*—With the increase in the number of workmen engaged in industries under the Act during the past year, there was a corresponding increase in the number of accidents reported, the figures being 32,793 in 1928, and 30,066 in 1927. Fatal accidents reported in 1928 were 251, as compared with 219 in 1927; 198 in 1926; 213 in 1925; 236 in 1924; and 268 in 1923. The figures for non-fatal accidents are as follows: 32,542 in 1928; 29,847 in 1927; 30,167 in 1926; 27,563 in 1925; 25,566 in 1924; and 24,184 in 1923. There are, in addition, approximately 3,000 minor injuries in which first-aid men rendered the necessary service. No medical attention or time-loss compensation is provided in such cases. Accidents for 1928 averaged 2,733 per month or over 100 for each working-day in the year. Both time-loss compensation and medical aid were paid in 16,672 cases.

The lumbering industry in its various branches again accounted for 42 per cent of all time-loss accidents; the construction class, 9 per cent; the railroading groups, 8 per cent; coal-mining, 7 per cent; general manufacturing, 6 per cent; metal mining, 5 per cent; navigation and stevedoring, 5 per cent, and all other classes, 18 per cent. The fatal accidents were distributed as follows; Lumbering, 47 per cent; the railroading groups, 11 per cent; metal-mining, 9 per cent; coal-mining, 7 per cent; construction 7 per cent; and all other classes, 19 per cent.

The extent to which workmen rely on the protection afforded by the Act for periods of lay-off due to accident is shown by the fact that in 1928 only 590 of the 32,793 injured stated that they were in receipt of any kind of benefits. Almost 75 per cent of those injured by accident claimed to be British or

Canadian, and almost 50 per cent of all those injured were married.

*Accident Prevention and First Aid.*—It is pointed out that ever since the Act came into effect a persistent campaign has been waged to keep before employers and workmen the vital importance of an adequate accident-prevention program. By placards, circular letters, public addresses, safety literature, conferences, and correspondence, accident-prevention measures have been advocated and advanced as the soundest and surest way to reduce human wastage in industry and curtail the heavy drain on industry resulting from the cost of avoidable accidents. That there has

been a quickening of interest in this important matter is evidenced by the large number of employers and employers' associations that have taken up and met the problem by putting on educational campaigns among their employees. The report recommends a study of accidents—their causes and elimination—as being of first importance to all employers and workmen.

As regards first-aid the report, after outlining the requirements under the regulations and facilities now available for the efficient treatment of minor injuries, emphasizes that the accident record constitutes "ample evidence" that much still remains to be done before maximum results are obtained.

## MINING INDUSTRY IN BRITISH COLUMBIA IN 1928

THE annual report of British Columbia Bureau of Mines for the calendar year 1928 reviews the progress of mining, development, and prospecting throughout the province. The various phases of the industry are comprehensively dealt with in numerous statistical tables, showing the mineral production of the province by districts and divisions during the year, together with comparative figures for previous years. Included also are the reports of the resident mining engineers, and the reports of the inspectors of mines.

The provincial mineralogist, in a general summary, remarks on the steady progress of the mineral industry, stating that "increased production, widespread development, and satisfactory profits all combined to make the year the most successful in the history of mining in the province".

The gross value of the mineral production in 1928 was \$65,372,583 as compared with \$60,729,358 in 1927, an increase of \$4,643,225 or 7.6 per cent. While the actual output of metals and minerals was the greatest on record, the gross value of the production was somewhat less than the figure for 1926, when an output valued at \$67,188,842 was made. In 1926, however, metal prices on the average were much higher than in 1928, particularly for lead and zinc.

The tonnage of metalliferous ore mined and treated in the province in 1928 amounted to 6,241,310, which is a high record figure. Compared with 5,416,021 tons in 1927, it represents an increase of 845,289 tons, or 15.2 per cent. The average gross value of the ore treated during the year was about \$7.75. As compared with 1927, the production figures show increased outputs of all metals except placer gold, and indicate a larger tonnage of coal and increased valuations of structural

materials and miscellaneous metals and minerals. The quantities of copper, lead, and zinc produced in 1928 were the highest in the history of mining in the province.

The mineral production of the province is divided into four classes—metal-mining, coal-mining, structural materials, miscellaneous metals and minerals. Of these, the first class is by far the most important, with a production for 1928 valued at \$48,425,033 (including placer gold). This is followed by coal, with an output valued at \$12,633,510 and structural materials and miscellaneous metals and minerals totalling together \$4,315,040. By value, the various products of the mineral industry in 1928 are ranked in the following order: Copper, lead, coal, zinc, silver, gold, structural materials, miscellaneous metals and minerals.

Analysing the metal mining group, the report indicates that copper mining recorded a prosperous year with a production of 97,908,316 pounds valued at \$14,265,242, while the output of lead in 1928 was 305,140,792 pounds, valued at \$13,961,412. The silver production for 1928 was 10,627,167 ounces, valued at \$6,182,461. This output is slightly greater than in 1927 and slightly less than in 1926.

The production of gold (including placer and lode mines) in 1928 amounted to \$4,031,305, an increase of \$195,457 as compared with 1927. It was pointed out that the virtual exhaustion of the Rossland gold-copper deposits in recent years has curtailed gold production, but during the last two years a number of gold properties have been under development and a larger gold output may be expected in the future.

The output of structural materials in 1928 is valued at \$3,408,686, as compared with \$2,867,380 in 1927, an increase of \$541,306, or 18.8

per cent, indicating that building activity in the province was greater in 1928 than in the preceding year. Continued expansion of this branch of the mineral industry is expected as there is an abundance of raw material in the province.

An encouraging feature during the last three years is the growth in annual value of the output of miscellaneous minerals and metals. The production in 1928 is valued at \$905,354, as compared with \$459,514 in 1927 and \$332,583 in 1926. The most important item in this group for 1928 was cadmium, valued at \$341,374, followed by pyrite and gypsum. It is interesting to note that both cadmium and pyrite are by-products which formerly went to waste. It is expected that as a result of research work other metals (including bismuth and antimony) will in future be recovered at the Trail plant of the Consolidated Mining and Smelting Company of Canada, Limited.

Coal mining production during 1928 was valued at \$12,633,510, an increase of 2·87 per cent. The report points out that this industry is subject to intensive competition in the marketing of imported crude oil and hydro-electric power. In spite of this, a steady, though small, production increase of coal was maintained. It is pointed out that the province has immense resources in coal, and that with the gradual perfecting of more scientific methods of processing and utilization, the yearly production may be expected to grow.

### Labour and Employment

The total number of workers employed in the mineral industry in 1928 was 15,424. Of this number 5,334 were employed in or about coal mines; 5,176 in lode mining; 2,748 in smelters; 355 in placer mining; 911 in concentrators; 412 in quarries; 368 in structural material plants; and 120 in miscellaneous mineral work. In coal mining there were 3,814 employed underground and 1,520 above ground, while in lode mining the numbers respectively were 2,707 and 2,469.

The collieries were practically free from labour disputes during the year, the only time lost being due to lack of trade. Apart from regular holidays, the mines in Vancouver Island lost about 14 per cent of the working days through lack of trade. In the Nicola-Princeton district the different collieries worked from 82 to 93 per cent of the possible working days averaging for the district, about 87 per cent of the working days. The mines in the East Kootenay district worked from 82 per cent to 94 per cent of the working days during

the year—an average for the whole district of about 90 per cent.

*Accidents.*—During 1928 there were fourteen fatal accidents in and around coal mines, as compared with eleven for 1927. Of these eight were caused by blow-out of coal and gas. The ratio of fatal accidents per 1,000 persons employed was 2·64, as compared with 2·10 in 1927; in 1926 the ratio was 1·88; in 1925, 1·10; in 1924, 1·66; in 1923, 7·32; in 1922, 4·66; in 1921, 1·45; in 1920, 2·67; in 1919, 2·10. The average for the ten-year period is 2·81. The number of fatal accidents per 1,000,000 tons of coal produced during 1928 was 5·54. During 1927 the fatalities per 1,000,000 tons of coal mined was 4·48; in 1926, 4·3; in 1925, 2·45; in 1924, 4·52; in 1923, 1·76; in 1922, 12·01; in 1921, 3·98; in 1920, 6·30; in 1919, 4·98; the average for the ten-year period being 6·72 per 1,000,000 tons of coal mined.

There were fourteen fatal accidents during the year in and about metalliferous mines, and of these six were by falls of ground, five by falls into shafts, and three by blasting. The fatalities in 1927 numbered six. The tonnage mined per fatal accident in 1928 was 445,807 as compared with 664,920 tons per fatal accident in 1927. The tonnage mined per fatal accident for the last ten-year period was 428,602.

*Mine Rescue Training and First Aid.*—During 1928 eleven prosecutions were made for infractions of the Coal Mines Regulation Act and of special rules, all of which resulted in convictions. As regards first aid and accident prevention work, the chief inspector's report details the numerous mine rescue competitions and outlines the safety measures utilized. All the larger operating companies have carried on or inaugurated accident prevention work during the year, while in the larger mines a safety first engineer devotes all his time to the promotion of safety methods. Every effort was made to interest the employees to take an individual share in the work of accident prevention. The first aid work carried on by the different companies and employees is stated to have made distinct advances during the year, and the services rendered by qualified first aid men are particularly emphasized.

The Alberta Workmen's Compensation Board has appointed Mr. E. E. Owen, a member of the International Plumbers and Steamfitters Union, to direct and carry on a campaign for accident prevention in the province.

## MINERAL PRODUCTION OF CANADA IN 1927

Completed statistics for the mining industry of Canada for the year 1927 are presented by the Dominion Bureau of Statistics in a report just issued. The capital employed in Canadian mines in 1927 amounted to \$714,073,000 of which \$335,708,206 was invested in metal mining and metallurgical works; \$225,943,815 in coal mines and oil and gas wells; \$53,793,776 in other non-metals such as asbestos, feldspar, graphite, etc.; \$30,437,607 in the clay products industry; and \$68,189,596 in properties producing cement, lime, sand and gravel and stone.

Investments in coal mining accounted for 20 per cent of the total capital employed in the mining industry. Gold quartz mining represented another 17 per cent of the capital; metallurgical works 12 per cent; natural gas, 8 per cent; nickel-copper mining and cement manufacture about 6 per cent each; silver-cobalt and clay products about 4 per cent each, and stone quarry, 2 per cent. Ontario mines accounted for 40 per cent of the total investment in the industry. For the other provinces, the relative capital investments in mining expressed in percentages of the total for Canada were as follows: British Columbia, 16 per cent; Quebec, 15 per cent; Alberta, 14.5 per cent; Nova Scotia, 10 per cent; Manitoba, 1.5 per cent; the remaining 3 per cent represented the investment in the provinces of New Brunswick, Saskatchewan and the Yukon Territory.

Salaries and wages paid to 84,674 employees amounted to \$104,220,892 of which \$40,284,887 was distributed among 26,343 individuals in the metal mines and metallurgical works; 37,949 people employed by coal and other non-metal mines received \$48,273,491 and clay products and other structural materials industries had 20,382 employees who received \$15,662,514. In the metal mining and metallurgical group there was a marked and steady increase in the number employed during the past five years and in the total of fuels and other non-metallic mining industries although the number employed was greater in 1927 than in 1926 yet it did not reach the total of 1923 when Canada's coal output was the greatest of all time.

In the clay products manufacture and in the production of lime, sand and gravel and stone the total number of men was the largest in the past five years while the number employed in the cement industry showed a slight decrease from the previous year. More complete returns of sand and gravel production were obtained through the co-operation in 1926 and 1927 with the Bureau of Mines of the province of Quebec who in turn co-operated with the Provincial Roads Department. The Roads Department report accounted for the major part of the production from Quebec and this in turn was reflected in the increase shown in the number of employees and in the total salaries and wages paid during the past two years in that industry.

## MINING ACCIDENTS IN ONTARIO IN 1928

THE Ontario Department of Mines recently published Bulletin No. 67, containing statistics of mining accidents in the Province in 1928. In the mines, metallurgical works, quarries, clay, sand, and gravel pits regulated by the Mining Act, there were 2,558 accidents to employees reported to the Department of Mines up to January 15, 1929. Forty-three of the accidents resulted in the death of eighty-five men. The fire in the Hollinger mine on February 10 caused the death of thirty-nine men. Not including this disaster, there was an increase over the previous year of fourteen men killed. The total number of non-fatal accidents shows an increase of seventy-one over the previous year, which is a decrease of about one and a half per cent of injuries to men employed.

*Fatal Accidents.*—Classification of fatalities according to industry indicates that of the 85

fatal accidents, 59 were charged to gold mines; 14 to nickel mines; 4 to metallurgical works; 4 to gravel pits; and 2 each to lead mines and quarries. An analysis of causes shows that 64 per cent of accidents during 1928 were attributed to miscellaneous underground work; and 12 per cent to explosives; 9.3 per cent to shafts; 6.6 per cent to fall of ground; 5.3 per cent to run of ore or rock; and 2.6 per cent to surface work.

*Workmen's Compensation Rates.*—The assessment rate per \$100 of pay roll made by the Workmen's Compensation Board is based on the actual Cost of the accidents occurring in each class during the previous year, and consequently shows the accident hazard of each class. This accident hazard in various phases of mining is indicated in the accompanying table of compensation rates—

COMPENSATION RATES IN ONTARIO  
MINING INDUSTRY, 1925-1928

Schedule	1925	1926	1927	1928
	ad-justed	ad-justed	ad-justed	pro-visional
	\$ cts.	\$ cts.	\$ cts.	\$ cts.

Quarries, as a business; stone crushing.....	5 00	5 00	6 00	6 00

*Non-fatal accidents.*—Of the total of 2,515 non-fatal accidents in 1928, 2,080 occurred at mines, the allocation of the remainder being as follows; metallurgical works, 108; quarries, 243; sand and gravel pits, 85.

The causes of the 2,080 non-fatal accidents at mines are shown in the accompanying table:

CAUSES OF NON-FATAL ACCIDENTS AT MINES IN ONTARIO DURING 1928

During 1928, the total number of persons employed in mines, metallurgical works, quarries, and gravel, sand and clay pits was 17,787—an increase over the previous year of 2,476. The percentage of fatal accidents per 1,000 employees was 4.76 as compared with 2.1 in 1927; and 5.11 in 1908, which year had the largest percentage since the records were commenced in 1903.

The records show that infection developed in 269 cases out of the 2,515 non-fatal accidents in 1928.

Included in the report are particulars concerning the operation of underground refuge stations and mine rescue stations at the Creighton Mine of the International Nickel Company.

MOTHERS' PENSIONS IN BRITISH COLUMBIA IN 1928

THE report of the Mothers' Pensions Board of British Columbia, to which reference was made in the last issue of the LABOUR GAZETTE (pages 581 and 586) details the activities involved in the administration of the Mothers' Pensions Act for the year ending September 30, 1928. During the year 504 new applications for assistance under the Act were received, this being a substantial increase over those in the preceding year, when 431 applications were submitted. In all, 1,458 families including 3,402 children were assisted

at some time during the twelve months period under review. The expenditure made under the Act for that period was \$660,860.44, of which \$643,931.98 was paid in assistance to applicants, and \$16,928.46 was required for administration expenses. The cost of administration bore a lower ratio to the total expenditure than during the previous year, being 2.56 per cent. During September, 1928, there were 1,233 families, including 2,757 children, in receipt of assistance, while \$56,412.25 was

expended on assistance during that month, or an average of \$45.75 per family.

Since the Act became effective in July, 1920, claims for assistance under its provisions to the number of 4,704 have been filed. In that, also, the amount of \$4,211,829.06 has been expended under the Act.

The report pays tribute to the "generous co-operation extended by physicians, dentists, solicitors and social service organizations" in the solution of many problems vital to the happiness of assisted families. Dealing with administrative methods and policy, the report states that the problem of finding suitable employment for children as they reach the age limit of sixteen years has continued to receive every attention. Assistance is also given in the matter of suitable housing, mothers living in congested quarters and areas being encouraged to move to suburban districts where their children may have the advantage of better air and more healthful environment. A look-out is kept for suitable places at low rentals, and many mothers have been assisted in locating places suited to their particular needs. Assisted mothers have been encouraged to retain possession of the modest homes in which they owned an equity, and others by rigid economy and good management, have acquired homes on the instalment plan in suitable areas. Of the 1,233 families

assisted in September, 1928, no less than 534 owned their homes, had an equity in them, or were living rent free. Commenting on the results of its work the Board in conclusion says:—

"The most noteworthy result effected by the assistance granted under this Act has been the marked improvement in the physical health and mental outlook of these families. With a definite fixed sum of money on which to prepare a household budget the haunting fear of want has disappeared, and plans can be made for undertakings on a modest scale with every hope of fulfilment. . . .

"As far as possible the spirit of self-help has been encouraged. Any tendency toward relaxation in individual effort on the part of assisted families has been discouraged. The creating of a mentality content to lean forever on public benevolence is one of the problems arising out of social legislation and which must at all cost be faced, not only in the interest of the mothers themselves but of the families they rear. Tiding a mother over the difficult period until the older children have reached the earning stage, and then encouraging the family to maintain itself and retain its self-respect and independence has been the consistent policy followed in administering the Act."

## TORONTO MOTHERS' ALLOWANCES BOARD

THE eighth annual meeting of the Toronto Mothers' Allowances Board was held at Toronto on March 1, 1929. The report of the secretary, Miss Jane Barclay, gave the following information regarding the work of the local board during the financial year ended September 30, 1928.

The total number of applications made to the Board from the commencement of the Act to September 30, 1928, was 3,074. 2,200 mothers in Toronto have received mothers' allowances, the total amount paid to mothers in the city being \$500,357. Fifty per cent of this amount was paid by the city. On October 1, 1928, there were 1,074 mothers in Toronto receiving an allowance, an increase of 92 over the number on the list October, 1927.

Applications made during the year numbered 347, an increase of 68 applications over the preceding year 1927. The cost of administration of the Mothers' Allowances Local Board is less than \$900 per year. During the year 20 families were referred for House of Industry assistance.

The average number of children per family in Toronto is 2.67 of 73 families, 34 had 2 children; 25 had 3 children; 9 families had 4 children, and 5 had 5 children.

Miss Gertrude Lawler, the chairman of the local Board, in her opening address, pointed out that its work was carried on by voluntary workers, assisted by the municipal and provincial authorities, as well as by many generous citizens, social service workers and organizations, employers, guardians and friends. The speaker summarized the provisions of the Act, and the activities of the Mothers' Allowances Board as follows:—

"Allowances are paid (1) to a widow who had resident with her two or more of her own children under sixteen years of age, and who has not adequate means to provide for them. The widow may have \$500 in cash and an equity in her home of not more than \$4,000. She must have been a resident in Ontario at the time of the death of the father of her children and for the two years immediately prior to her application for an allowance, and at the time of the application.

Also, she must be a British subject by birth, by naturalization, or the widow of a British subject; (2) To a mother who is conditioned as above relative to children, residence, and citizenship, and whose husband is an inmate of a hospital for the insane in Canada; (3) To a mother who is conditioned as above relative to children, resident, and citizenship, and whose husband, is declared by medical authority to be totally and permanently incapacitated and consequently incapable of contributing to the support of his family. When such husband is resident with his family, he is considered as a dependent child; (4) To a foster-mother conditioned as above relative to children, residence, and citizenship; (5) To a mother conditioned as above relative to children, residence and citizenship apparently deserted by her husband, of whom no trace has been found and who is consequently considered dead.

"The mothers apparently ruthlessly deserted by the fathers of their children form a class extremely pitiable. The children are too young to realize the heroic struggles that their mother is making to shield them from poverty and to keep them with her in sanguine expectation, the return of their father to his moral and legal duties.

"Another class of mothers has not yet been assisted by any governmental regulation, and has appealed to be included under the Mothers' Allowances Act. We could easily provide for them if permitted to do so. The fathers of their children are in Ontario prisons for lengthy periods. The want of such mothers and children is keen; the needy are worthy; the children should be with their mothers; the law that is punitive for the erring may be beneficent for the helpless and worthy.

"The allowance is paid as follows: The flat monthly rates of payment are—\$40 for a mother with two dependent children; \$45 for such a mother with three children; \$50 with four; \$55 with five; and \$60 with six or more. Equitable reductions are made when beneficiaries own their own homes, have wage earners, or other assets not disqualifying.

"The arrival of the monthly cheque would be a far greater blessing if it supplied the essentials of physical life—adequate fuel, food, and clothing. In many homes, we find that supplementary aid is absolutely necessary, and is given by individuals, organizations, institutions—the House of Industry being the chief source of supplies from the City. It has always been deplored by our Board that City Relief has been found necessary for any beneficiaries under the Mothers' Allowances Act; for the spirit of independence that a

government cheque is calculated to engender, is minimized, if not nullified, by frequent appeals to public charity. We hope that the flat rates will be increased in the near future, and that eventually scientific and consequently more economic systems of budgeting will replace the flat rates.

"It would not be consistent or satisfactory to omit from our annual summary, an expression of our expectation that the municipal and provincial authorities will soon see in their range of vision the moneyless widow with one dependent son or daughter pleading for material assistance to prevent a humble little Canadian home from being disintegrated by poverty—to prevent a helpless child from being taken from its mother's arms, so that the mother may relinquish her hourly care to earn the bread of life apart from her offspring. Why deny that Canadian boy or girl a home because there is no brother or sister? Commendably, Ontario is inviting strangers to find homes in its beautiful and bountiful area; but is it not a greater need, a closer duty, to maintain a Canadian home already intact, but yesterday flourishing under the protection of its master, and to-day fatherless, fireless, breadless, because death has unexpectedly intervened? In the experience of this Board, the Toronto tax-payers are not unwilling to provide for the widow with one dependent child, and expect an adjustment of the policy that excluded them in 1920. The following figures are interesting to Toronto taxpayers:—

Years	Mothers in Ontario	Toronto	*York County	Ottawa	Hamilton
1920-21.....	2,670	572	110	213	101
1921-22.....	3,559	687	144	253	136
1922-23.....	3,870	717	150	286	163
1923-24.....	4,058	752	182	289	172
1924-25.....	4,185	805	205	291	185
1925-26.....	4,412	872	223	295	196
1926-27.....	4,720	971	247	305	196
1927-28.....		1,074			

"From the above, it is evident that the Toronto Board handles over one-fifth of the applications for allowances in Ontario.

"The amount of money expended in allowances is also interesting, the Province paying one-half, Toronto the other:—

Years	Paid in Ontario	Paid in Toronto
1920-21.....	\$ 774,667	\$ 195,932
1921-22.....	1,382,138	304,195
1922-23.....	1,612,701	333,758
1923-24.....	1,715,295	349,246
1924-25.....	1,700,600	379,406
1925-26.....	1,876,900	404,929
1926-27.....	2,007,087	439,823
1927-28.....	2,190,407	500,357

"We testify gladly that the money is well spent.

"A serious problem that presents itself results from the Adolescent School Attendance Act, which requires children to remain at school till they are sixteen years of age. Some brilliant pupils of our City Schools attain entrance standing at the age of ten, eleven or twelve, and are thus fourteen or even thirteen or twelve years of age at the end of the second year in a Collegiate Institute, when tuition at the expense of the government ceases. What are those children to do during their fourteenth, fifteenth and

sixteenth years? They are forced to obtain permits for work when, by aptitude and desire, day-school would be their wisest choice, and is their legal right, for a competitive manhood or womanhood among those privileged to remain at school. Sometimes, distressed mothers do not seem to realize the educational rights of the children. Rarely are the children insensible of their loss. Better health, wider knowledge, deeper wisdom, and more lasting happiness would result if all Toronto children could be kept in school till their sixteenth year."

## SURVEY OF CHILD WELFARE IN NEW BRUNSWICK

The findings and recommendations of the New Brunswick Child Welfare Survey began in 1927, under the auspices of the Department of Public Health of the Province and conducted under the direction of Miss Charlotte Whitton, executive secretary, Canadian Council on Child Welfare, have been published recently. The investigators recommend among other measures the appointment of a superintendent of Child Protection, the organization of Children's Aid Societies on a county basis, and action along legislative lines. Among the related problems for which action is suggested are those connected with the adoption of children without guardians; children born out of wedlock; family desertion; poor relief; feeble-minded children; the juvenile offender; housing; school attendance and illiteracy; infant mortality; recreation; institutional care, and trained leadership.

*Mothers' Allowances.*—In regard to mothers' allowances the survey recommends as follows:—

1. That the establishment and development of child protection and family welfare work, on a provincial scale, are practically essential as a preliminary, and to provide the personnel for any successful system of mothers' allowances for the Province.

2. That, therefore, immediate and energetic effort be made towards the establishment and development, under provincial direction, of child care and protection services.

3. That, of equal importance in relation to the subsequent possibility of any mothers' allowances system, is the energetic development of family welfare work in Saint John, Moncton and Fredericton, and in many of the counties in which such work could be satisfactorily related to child protection services on a county basis.

4. That both the poor relief and settlement legislation of the province require careful

analysis and amendment, preliminary to the inauguration of any system of mothers' allowances.

The investigators record as their opinion, however, "that, were child protection services established on a province-wide basis, and such provision made for local and county administration that family welfare and child protection services could be carried on in co-operation, it would be quite possible, by the sympathetic support of the county councils and the commissioners and overseers of the poor, to provide for the assistance in their own homes, out of funds levied for 'outdoor poor relief' and under supervision, of those mothers, deemed capable of caring for their own children, in their own families. And that this adaptation of local poor relief funds to demonstrate the principle of mothers' allowances could be made without change in present legislation."

The Government of India recently appointed a Royal Commission, with the Right Hon. J. H. Whitley as chairman, "to inquire into and report on the existing conditions of labour in industrial undertakings and plantations in British India, on the health, efficiency and standard of living of the workers and on the relations between the employers and the employed and to make recommendations." Among the commissioners are several prominent members of the legislature, with John Cluff, assistant general secretary of the Transport and Railway Workers' Union of Great Britain, and Poer Power, deputy chief inspector of British trade boards.

## REPORT OF AUSTRALIAN COMMONWEALTH COMMISSION ON CHILD ENDOWMENT AND FAMILY ALLOWANCES

IN September, 1921, the government of the Commonwealth of Australia appointed a Royal Commission, composed of five members, to investigate and report on the question of child endowment and family allowances. The report of this commission has been received recently. The commissioners heard evidence from official representatives of Commonwealth and State government departments, members of professional staffs attached to the departments of economics and commerce at various universities, members of the medical profession connected with maternity and child welfare activities, representatives of a number of large commercial undertakings (including banks), also of organized bodies, chiefly organizations of employers and of workers, women's leagues and associations, charitable and philanthropic bodies, nursing societies, kindergarten unions, baby health centres, etc.

The commissioners were divided in their opinion as to the feasibility of legislation at the present time to provide for the establishment of a system of family allowances in the Commonwealth, the majority, composed of the chairman, T. S. O'Halloran and two other commissioners, being adverse to the proposal; while the remaining two commissioners were in favour of legislative action by the Commonwealth.

### Terms of Reference

The Commissioners were instructed to inquire into, and report upon, the following subjects:—

(1) The general question of the institution of a system of child endowment or family allowances in Australia, with particular reference to its social and economic effects, and, if the institution of such a system is recommended—

(2) The methods by which such a system could be established;

(3) The relation of such a system to wage-fixation, having regard to the interests of the wage-earner of industry generally, and of the community;

(4) The application of a system of child endowment or family allowances to persons whose wages are not regulated by law or who are not engaged in industry as wage earners;

(5) The limit of income, if any, subject to which payments by way of child endowment or family allowances should be made;

(6) The methods of financing and giving effect to a system of child endowment or

family allowances, with particular reference to the practicability and desirability of providing the necessary funds from public revenue, from industry, or from both sources, and in what proportions, and upon what principle;

(7) The methods of administering such a system;

(8) The cost of such a system, including administrative expenses and reserves if thought necessary;

(9) The legal methods of giving effect to any system, recommended, with particular reference to the existing distribution of Commonwealth and State Powers;

(10) Any matters of public interest which may arise as the result of the institution of a system of child endowment or family allowances.

### Majority Report

The conclusions reached by the majority of the Commission, which are amplified in the report by an analysis of the evidence heard in the course of the inquiry, are contained in the following statement:—

The scheme contemplated in the terms of reference is one in which the necessary funds would be provided from public revenue, or from industry, or from both sources. The assumption seems to be (and this was the point of view of numerous witnesses) that this provision of funds should be wholly an addition to the sums now paid as wages.

In our opinion, such a scheme should not be adopted. Some of the reasons for that conclusion are that:—

(1) The claim that child endowment in this form is necessary on the ground that wages are insufficient, has not, we think, been established.

(2) The additional taxation necessary to finance from public revenue a scheme for full maintenance of dependent children as claimed, would cause disastrous reactions.

(3) If "industry" were directly levied upon to provide the funds, or an important proportion of the funds, the result would be not less injurious. An immediate effect would be an increase in the cost of living, partially defeating the object of the levy. Also there would be great danger of adding to unemployment, and so increasing rather than diminishing the total of distress in the community.

(4) The basic wage contains elements of child endowment much more than sufficient, if directly applied, to provide for all existing dependent children. If the basic wage be not

reduced by the elimination of those elements, and if public funds be applied to provide a general scheme of child endowment, the result, in our opinion, would be a marked flush of extravagant spending and a sharp rise in the cost of living, shortly followed by a check in prosperity, by a more or less severe collapse in values, and by serious unemployment.

(5) By removing from parents all financial responsibility for their children, parental responsibility would be weakened, incentive to effort reduced, and the sense of unity of interest between parents lessened.

(6) Any available public money could be more beneficially used than in providing child endowment. So far as the residual cases in the community which need some assistance are concerned, we are satisfied that the expenditure of sums much less than those required, even for a small measure of child endowment would, if applied to the extension and perfecting of existing social services, secure greater benefits.

(7) We are of opinion that essential conditions precedent to the establishment of any scheme of child endowment should be—

(1) that the Commonwealth Parliament should have first obtained full and exclusive power—

(a) to control wage fixation, and "industrial matters" as defined in industrial Statutes;

(b) to establish and control child endowment.

(2) that any existing State legislation instituting a scheme of child endowment be repealed.

(3) (a condition of another order) that the basic wage should be reduced by elimination of the provision for children which is now an integral part of that wage.

(8) Unless both Child Endowment and wage fixation were under the exclusive control of one tribunal new and prolific causes of industrial discontent and disputes would be created.

### Minority Report

The minority report contained the following findings and recommendations:—

(1) That for workers in industry some system of family allowances is the logical corollary of the living wage doctrine.

(2) That on the whole the basic wage as determined by the Commonwealth and State tribunals has provided a frugal standard of comfort for a family of man, wife and two children.

(3) That for families of wage earners where the children number more than two, the standard has been generally lower than is reason-

able, having regard to the definitions implied in the awards of the courts, the disparity increasing with the size of the family.

(4) That in equity any system of allowances to improve the standard of living for the larger families of wage-earners should be extended to similar families of those who are not wage-earners.

(5) That in the case of widows with dependent children and other families without a male wage-earner there is urgent need both in the interests of these families and of the community for the payment of allowances.

(6) That it is undesirable to make allowances for the families of wage-earners part of the system of wage fixing and that although it may be desirable for all wages to be fixed for the same family unit, it is not essential that any scheme of family allowances should be delayed because the Commonwealth government has not at present sole control of industrial matters.

(7) That the country can at present afford to inaugurate a moderate system of family allowances.

(8) That such an expenditure of part of the national income would be a good investment for the community.

(9) That according to the evidence of the Federal solicitor-general (Sir Robert R. Garron) the Commonwealth Parliament possesses the constitutional power to enact legislation providing for a system of allowances to families.

(10) That the present services in respect of maternity and child welfare are inadequate and need considerable extension to ensure that all mothers and children who need them have these facilities available.

(11) That in the larger cities the supply of rented houses is inadequate for families on a low income.

We recommend:—

1. That the Commonwealth government pay to widows with dependent children and also to other families of dependent children where there is no male bread winner, allowances equal to those paid under the New South Wales Widows' Pensions Act of 1925, i.e., £1 per week for the mother and 10s. per week for each dependent child, with a similar limitation of income to that adopted in the New South Wales Act.

2. That the Commonwealth government pay to the mother in each family where there are more than two children an allowance of £10 per annum for each dependent child excluding the first two in each family, provided the total income of the family shall not thereby be increased beyond the sum of £300 per annum.

3. That this allowance be paid also for the first and second dependent child in families where the income falls below the basic wage to an extent which makes it necessary for the allowance to bring the income up to the basic wage. In the case of non-wage-earners or of those not working under specified awards it is recommended that the wage level used as a basic wage for the purposes of the computation of income be the Commonwealth Basic Wage adjusted to the 30 towns weighted average, or the State basic wage, whichever is the lower.

4. That for the purposes of these allowances the definition of the age of dependency (taken usually as under the school leaving age, at present 14 years of age in all states) be extended so as to include all children attending school or other instructional courses until the age of at least 16 years.

5. That in the computation of wages industrial tribunals adopt the family unit of man, wife and two children.

6. That until all tribunals so adopt a similar unit, it be assumed by the Commonwealth Parliament in legislating to establish family allowances that the wages paid at present for unskilled workers do provide for a family unit of man, wife and two children.

7. That, to obtain funds for family allowances, the Federal income tax be reviewed in order (a) to lower the limit of taxable income for persons without dependents to £200, and (b) to grade more steeply the rate of tax for incomes at the highest levels.

8. That the Federal Government establish a Bureau of Social and Economic Research, either as an independent organization or attached to some existing Department.

9. That the State government extend as quickly as is practicable the provisions now being developed for:—

(a) Pre-natal clinics and Infant Health Centres.

(b) Maternity hospitals.

(c) Schools for mothercraft.

(d) Dental and medical services for school children (including treatment for those who require it) so that these services shall be within the reach of all.

10. That children of pre-school age (from two to five) be examined once every twelve months by school medical and dental officers.

11. That the Commonwealth Government subsidize the services above mentioned as recommended by the Federal Health Council which is representative of the States and the Commonwealth and has already laid the foundations of a joint policy in these matters.

12. That the Federal Health Council arrange for a survey of the housing of the people to discover the extent to which the health of children suffers by reason of unsuitable living premises and make recommendations for reform.

13. That the Department of Education in each State extend as rapidly as possible the teaching of domestic economy for all girls attending primary schools.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Maintaining Interest in Safety

The Province of Quebec Safety League gives the following advice in regard to the organization and maintenance of a safety movement in a factory.

*To Organize a Safety Campaign.*—Before starting a Safety Organization, ten steps are absolutely necessary, as follows:—1. Get the co-operation of the manager; 2. Secure the co-operation of the superintendent; 3. Engage the service of a safety engineer; 4. Organize a control safety committee; 5. Secure co-operation of foreman and sub-foreman; 6. Hold foremen's safety meetings; 7. Appoint foremen's inspection committee; 8. Hold mass meeting of all employees; 9. Appoint workmen's safety committee; 10. Start use of safety bulletin boards.

*Program of Activities.*—The safety engineer at first should analyze carefully the records of the accidents having happened in the plant

during the last year or the one before. After that, he will be in a position to devote his attention to the points that need immediate attention. The safety engineer should also map out a definite program of activities, including ventilation, sanitation, first aid, accident records, safeguards, inspections, committees, etc. This program should be fixed from time to time by adding new ideas to it. This is necessary, as it affords a method of comparing the value of various activities, of judging what time the safety man can devote to any one idea and keep him from forgetting a lot of things that might otherwise escape his attention. Also it might be proper to fix in advance the regular periods at which the equipment, etc. should be inspected.

*Maintaining the Interest of the Management.*—Safety engineers who know their business soon take the habit of submitting weekly or monthly reports to the management. But

they must not forget that managers are busy men and those reports must be brief and to the point to be valuable. Details should be eliminated as much as possible and all charts or graphs should be easy of interpretation. Comparative rates of accident frequency, severity and costs are always interesting as well as reports comparing various departments and plants. Annual reports are valuable to keep boards of directors, stockholders and others informed as regards the progress made and work performed. It is also proper that managers should be urged to attend mass meetings of employees, outings, committee meetings and other activities. The participation has an excellent effect on the superintendents, foremen and workers and gives them first hand information about the problems to be solved. Moreover, seeing the great interest in safety displayed by the management, everybody is encouraged to promote the movement.

*Maintaining the Interest of the Foremen.*—Each and every foreman must understand that he is responsible for the safety of his men; the safety man is only an advisor and helper for the foreman. Particular stress can be laid on the fact that without the co-operation of the foreman, the Safety Movement has no chance to succeed.

*Maintaining the Interest of the Workmen.*—Methods tending to interest workers to the safety movement are much varied as experience shows that from 60 to 80 per cent of all accidents are due to causes that are within the control of the men themselves, and could have been avoided if the victims had followed the most elementary rules of the Safety Work. It is absolutely necessary that the accident prevention program must be connected to the new men at the start in order to secure their whole-hearted co-operation. Another good method for maintaining the interest of the workmen in accident prevention is to place neat and attractive bulletin boards properly illuminated where everybody can have a look at them. It is well to see that posters be supplemented by the use of circular letters, photographs, cartoons, graphics, charts, etc. Care must be used in preparing material that can be easily understood by the men. Committee and mass meetings play an important part in maintaining the interest of the men as well as picnics, evening entertainments and suggestion systems.

Variety is absolutely essential for maintaining interest in safety, the program can be modified at will and adapted to the needs of any industrial plant.

### Accidents to Longshoremen at Vancouver

A delegation representing the Vancouver Trades and Labour Council interviewed the Harbour Commissioners on June 25, recommending that a safety first campaign along the water front be undertaken. Figures were produced which proved, according to the delegation, that a longshoreman engaged at Vancouver docks has in a 12 months' period two chances out of seven of escaping serious injury. Workmen's Compensation Board records for 1928 showed, it stated, payment of \$11,498 to injured longshoremen or their dependents. Of the accidents recorded, 32 resulted in partial disability and five in death. There were 528 longshoremen temporarily disabled. The labour men pointed out that Montreal and Saint John now have safety inspectors whose duty it is to carry on educational work among the men in the cause of safety first and to enforce preventive measures in the way of guards for hatchways, screens and other devices for protecting men from gears and machinery in operation.

It was stated at the offices of the Harbour Commissioners that the suggestions of the labour delegation would be thoroughly considered.

### Safety on Building Construction

Relative to the newer methods of building construction increasing hazards and consequently higher compensation costs, demanding greater precautions along these lines, Mr. V. A. Sinclair, Chairman of the Workmen's Compensation Board of Ontario, recently speaking on the subject—"Industry Needs Safety Work," said that: Under the Workmen's Compensation Act the employers had reserved to themselves the carrying on of Safety work and the responsibility for it rested upon them and not upon the Board, who simply levied the funds required for that purpose, and that public attention was being attracted to the lack of any safety appliances or safety practices in connection with the construction of large buildings which was being carried on by a number of different employers whose workmen were all working at the same time, those higher up having no regard for those trades working below them, and that articles had been written to the press and the matter brought to the attention of the proper Department of the Government, and also representations had been made by labour organizations whose members went on strike rather than work under such conditions." And the Chairman warned the employers,—“if more regard was not paid to Safety work under these conditions that outside authority

would have to intervene to protect the workmen. The Board had substantially advanced rates of assessment in certain classes affected to cover additional accident cost but employers would have to take their responsibility and see that the safety of the workmen was reasonably assured."

### Silicosis Among Rock Drillers, etc.

The results of a study made by Adelaide Ross Smith, M.D., of 208 rock drillers, blasters, and excavators in New York City for the purpose of determining the incidence of silicosis among them were published in the *Journal of Industrial Hygiene*, February, 1929. Silicosis was found to be present in 118, or 57 per cent of the men examined. Twenty-three per cent of the men examined showed radiographic evidence of ante-primary silicosis; 19 per cent of first stage silicosis; 7 per cent of second stage silicosis and 8 per cent of third stage silicosis.

Blasters, rock drillers, and excavators were affected by the disease in frequency and in severity in the order named. Second and third stage silicosis occurred four times as frequently among those who had done underground work, as among those who had done only open excavating.

Face masks of various kinds have in the past been recommended and given some trials, but they have been found unsatisfactory by the men for the type of work in which rock drillers and blasters are engaged. Other measures which have been recommended, some of which are being tried out, include (a) the prohibition by law of all dry drilling, making it compulsory for employers to discard the present dry jack hammer and supply the rock drillers with jack hammers having water supply attachment; (b) installation of dust and sludge collectors or attachments to drilling machines; (c) adequate ventilation in tunnel work; and (d) proper spacing of drillers so as to reduce the dust concentration in given areas.

The substitution of wet drilling for dry drilling will not, it is thought, suffice to eliminate entirely the hazard of silicosis, although it has been considered sufficiently important by authorities in other parts of the world to have been made compulsory. There is also some questions as to the practicability of the wet drill in open cuts and excavations in times of freezing temperature. Dust collectors of various types have also been recommended and tried out, but such contrivances for trapping dust at the source have yet to prove their practicability under working conditions.

The following recommendations are made by the investigator:—1. Rock drilling, blasting, and excavating in New York City constitute a serious hazard to the health of the workers, owing to the constant exposure to silica dust, resulting in silicosis and tuberculosis. Remedial measures are urgently needed; (2). Efforts must be made immediately to improve markedly by controlling the dust concentration, the conditions under which the men employed in these occupations are compelled to work; (3). Compensation should be granted by law for disability due to silicosis.

### The Ship's Medicine Chest and First Aid at Sea

The medical handbook for merchant seamen, first issued by the United States Public Health Service in 1881, has been amplified and reprinted, dedicated to the American merchant seamen, "at whose behest the marine hospitals were first established in the year 1798, and whose history as a patient of the Public Health Service is a record of the progress of medicine and sanitation in the United States." The book will be even more useful than heretofore because recently ship's officers, as a condition to obtaining their licenses, have been required to know medical first-aid principles. The growing custom of ships at sea to radio for medical advice from marine hospitals and other relief stations of the Public Health Service has also made it necessary to standardize medical equipment. This matter is covered in the handbook, together with valuable advice useful in such emergencies as poisoning, bleeding, suffocation, fractures, dislocations, burns, electric shock, fits, wounds, etc.

The report on municipal statistics of the Province of Quebec for the year 1927, prepared by the Secretary's Department of the Provincial Bureau of Statistics, estimates the population of the province as being 2,888,677. Of this number 1,214,511 persons are in rural and 1,674,166 in urban municipalities, or 16 per cent more in towns and cities than in the country districts. The population of villages, whether incorporated or not, is included with that of the rural municipalities. The number of farmers is given as 146,363.

## ANNUAL CONVENTION OF DISTRICT 26, UNITED MINE WORKERS OF AMERICA

THE annual convention of District 26, United Mine Workers of America, was held in New Glasgow, June 17-26, 1929. This convention was the largest ever held in the District, being attended by 131 delegates representing the twenty-six local unions. President D. W. Morrison, of Glace Bay, in his report, gave an outline of the work of organization in the District during the past year. This was followed by the reports of vice-president Muise and secretary W. P. Delaney. The latter report covered the financial affairs of the organization.

Approximately 150 resolutions, relative to workmen's compensation, old age pensions, policy and dual organizations, were considered. One of the resolutions on compensation asked that a weekly rate of \$12 be established regardless of the salary received. With reference to old age pensions, the convention affirmed the stand of previous conventions, adopting the principle of pensions whether paid by the Federal or Provincial Government, or by both. The consensus of opinion of the delegates was that the Province of

Nova Scotia should fall in line with the other provinces that have adopted the Federal Old Age Pensions Act.

A large number of resolutions embodying recommendations concerning policy and wage scales were presented. One of the most important matters decided at the convention was the policy that will govern coming wage negotiations. This calls for a twenty per cent increase on all datal rates, or a ten per cent increase on all contract rates in effect at the present time, and for the same differential that existed in 1919-1920 between rates paid under the Canadian Railway Board award and rates paid in the railway shops of the British Empire Steel Corporation. In regard to dual organizations, the convention went on record as being opposed to seating delegates from the Mine Workers Union of Canada, who sought recognition as fraternal delegates. The convention also went on record as being opposed to holding a referendum vote to ascertain if the members wished to stay with the United Mine Workers of America or become members of a strictly Canadian organization.

### Social Cost of Illness

The social cost of illness in the United States is analysed in an article by Mr. Niles Carpenter, assistant director of study (Committee on the Cost of Medical Care), Washington, published in the June issue of the *American Labour Legislation Review*. The social cost of illness is classified into two divisions: (a) losses in earning power and general social and economic effectiveness attendant upon illness; (b) actual expenditure made by either the individual or the community for the prevention and cure of illness. The annual total in the first category of costs for the United States is estimated at about \$13,245,000,000, of which \$12,030,000,000 is for loss of future net earnings on account of premature death due to illness.

In the second class, the estimated annual cost is placed at approximately \$2,485,000,000, comprising such items as expenditures for physicians, medicine, dispensaries, hospitals, nursing and dental care. Included also is an item for \$120,000,000 per year for quack and fraudulent medical care, and treatment by unqualified and unlicensed practitioners.

The five year program of research in medical economics and sociology to be conducted by the Committee on the Cost of Medical

Care, is expected by Mr. Carpenter to contribute to the data relating to actual expenditures by the individual and community for the prevention and cure of illness. At the end of the five year period it is expected that the committee will make a report embodying a summary of investigations and recommendations looking toward increased effectiveness in the administration of medical and allied services. This enquiry will cover three fields as follows: (1) the incidence of disease and disability requiring medical services and existing facilities for dealing with them; (2) cost to the patient of medical services and the return accruing to physicians and other agencies furnishing such services; (3) specially organized facilities for medical care now serving particular groups of the population.

The Women's Minimum Wage Board of Quebec is investigating the men's and women's clothing factories in the province with a view to the fixing of minimum wage rates. The Board points out that the existing rates effective in Montreal and District apply to factories within a radius of ten miles, and that distances by road or rail must not be considered in determining their location.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Twelfth Session of the International Labour Conference

THE Twelfth Session of the International Labour Conference (League of Nations), constituted under the provisions of the Treaties of Peace, was held at Geneva, Switzerland, from May 30 to June 21, 1929.

The objects for which the International Labour Organization was formed are set out in Part XIII of the Treaties of Peace and are, briefly, to promote the improvement of industrial conditions by legislative action and international agreement.

Eleven previous sessions of the International Labour Conference have been held as follows: Washington, D.C., 1919, (LABOUR GAZETTE, December, 1919); Genoa, Italy, 1920; (LABOUR GAZETTE, October, 1920); Geneva, 1921 (LABOUR GAZETTE, January, 1922); Geneva, 1922 (LABOUR GAZETTE, December, 1922); Geneva, 1923 (LABOUR GAZETTE, December, 1923); Geneva, 1924 (LABOUR GAZETTE, August 1924); Geneva, 1925 (LABOUR GAZETTE, July, 1925); Geneva, 1926 (8th and 9th Sessions) (LABOUR GAZETTE, July, 1926); Geneva, 1927 (LABOUR GAZETTE, July, 1927); and Geneva, 1928 (LABOUR GAZETTE, July, 1928).

It will be observed that only one session of the Conference had been held annually until 1926, when the Eighth Session was followed immediately by the Ninth. This year again a second session will be held in October, which will be devoted entirely to matters affecting seamen. The Treaty of Peace requires that "the meetings of the general conference of representatives of the members shall be held from time to time as occasion may require, and at least once in every year."

Each member state is entitled, under the terms of the Treaties of Peace, to send four delegates to the International Labour Conference, two of whom must be Government delegates and the two others are to be delegates representing, respectively, the employers and the workpeople of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in the respective countries. Each delegate may be accompanied by advisers not exceeding two in number for each item of the agenda.

The decisions of the Conference may take the form of either a Recommendation or a Draft Convention. A two-thirds majority of the votes cast by the delegates is required for the adoption of any Recommendation or Draft Convention by the Conference. The

Recommendations and Draft Conventions are afterwards transmitted through the Secretariat of the League of Nations to the different countries represented on the International Labour Organization for acceptance or otherwise. Each country is obliged under the Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the Conference, to bring the respective Recommendations or Draft Conventions "before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action."

#### Conference Agenda

The agenda of the Twelfth Session of the Conference comprised four items as follows: (1) Prevention of Industrial Accidents (Final Discussion); (2) Protection against Accidents of Workers engaged in Loading or Unloading Ships (Final Discussion); (3) Forced Labour (First Discussion); and (4) Hours of Work of Salaries Employees (First Discussion). The third and fourth subjects on the agenda were presented for general consideration with a view to the formulation of questionnaires for submission to the various member states of the International Organization and the proposals on these items to be dealt with at the 1930 session of the Conference.

#### Decisions of the Conference

The decisions of the Twelfth Conference may be summarized as follows:—

*Industrial Accidents.*—By 100 votes to 12 the Conference adopted a Recommendation embodying principles and rules for the prevention of accidents in industrial establishments and in agriculture.

By 98 votes to 24 the Conference adopted a Draft Convention concerning the marking of the weight on heavy packages transported by vessels.

By 87 votes to 28 the Conference adopted a Recommendation concerning responsibility for the protection of power-driven machinery.

By a unanimous vote the Conference adopted a Resolution concerning uniformity in the compilation of industrial accident statistics.

*Protection of Dockers.*—By 84 votes to 22 the Conference adopted a Draft Convention

containing detailed provisions for the protection against accidents of workers employed in loading or unloading vessels.

By 101 votes to 0 the Conference adopted a Recommendation in favour of reciprocity agreements for the recognition of inspection certificates.

By 88 votes to 1 (vote given in mistake for abstention) the Conference adopted a Recommendation in favour of consultation with employers' and workers' organizations in the drafting of regulations under the Convention.

By a unanimous vote the Conference adopted a Resolution in favour of the appointment of an international technical Committee to draft model regulations for the guidance of Governments in applying the Convention.

*Forced Labour.*—By 101 votes to 15 the Conference decided to place the question of forced labour on the agenda of next year's Conference, for the second stage of the double-discussion procedure.

By 83 votes to 17 the Conference adopted a Questionnaire tending to the adoption next year of a Draft Convention for the abolition of forced labour or, alternatively, for its limitation and regulation; and by a unanimous vote it added questions tending to the adoption of a Recommendation on certain economic aspects of forced labour.

By 64 votes to 21 the Conference adopted a Resolution in favour of an enquiry into long-term contract labour, with a view to its consideration at a future Conference.

*Hours of Work of Salaried Employees.*—By 103 votes to 17 the Conference decided to place the question of the hours of work of salaried employees on the agenda of next year's Conference for the second stage of the double-discussion procedure.

By 92 votes to 15 the Conference adopted a Questionnaire tending to the adoption next year of a Draft Convention or, alternatively a Recommendation, for the international regulation of the hours of work of salaried employees

*Application of Conventions.*—By a unanimous vote the Conference adopted the findings of a Committee which had examined 240 annual reports furnished by Governments on the measures taken to carry out Conventions ratified by them, in order to ascertain the degree of concordance between national legislation and the provisions of the Conventions.

*Procedure and Standing Orders.*—Unanimously or by large majorities the Conference adopted amendments to its Standing Orders relating to revision of Conventions, the double-discussion procedure, etc.

As regards revision of Conventions, the amendments empower the Governing Body to specify (and thereby limit) the points in respect of which the Conference may be called on to revise a Convention.

As regards the double-discussion procedure, the amendments provide that henceforth the Conference will not itself draft a Questionnaire, but will indicate the points on which Governments should be consulted and leave the actual drafting of the Questionnaire to the Office, under the supervision of the Governing Body.

By a unanimous vote the Conference adopted a Resolution requesting the Governing Body to consider what method can be adopted to lay down a procedure for draft resolutions submitted by individual delegates to the Conference.

*Unemployment.*—By a unanimous vote the Conference adopted a Resolution setting out various aspects of the unemployment problem with regard to which the Office should pursue its investigations, including the best means of bringing about the adoption of measures for the reduction of unemployment among miners.

By 101 votes to 4 the Conference added to the Resolution a paragraph inviting the Governing Body of the Office to consider the desirability of placing the question of unemployment among miners on the agenda of a future Conference, preferably next year's Conference.

*Other Resolutions.*—Unanimously or by large majorities the Conference adopted Resolutions submitted by individual delegates in favour of the consideration by the Governing Body of the following questions for possible discussion at future Sessions of the Conference:

(1) The organization of work in sheet-glass factories on a shift basis which would ensure to the workers a regular weekly rest;

(2) Insurance against old age, invalidity and death, and the rights of foreign workers in connection therewith;

(3) The underground work of women and young persons;

(4) Equality of treatment between national and coloured foreign workers.

A Resolution was adopted unanimously, expressing the hope that the expansion of the activities of the International Labour Organization will not be hampered by a policy of restrictive economy in connection with its budget, but that Governments will freely place at its disposal the funds needed for the progressive development of its work.

A Resolution was adopted unanimously, calling for a report on the organizations of white and non-white workers in countries where non-white workers are in the majority, as a basis for judging to what extent such workers obtain representation in the Conference.

A Resolution was adopted unanimously, requesting the Governing Body to report to an early Session of the Conference on the observance by States of their obligation under Article 405 of the Peace Treaty to bring Conventions and Recommendations before the competent authorities within a prescribed time limit.

A Resolution was adopted unanimously, requesting the Governing Body to enquire into the operation of the Washington Recommendation concerning the recruiting of bodies of workers for employment abroad, and to report to next year's Conference.

A Resolution was adopted unanimously, to the effect that, in the event of a revision of the Hours Convention, particular attention should be drawn to the higher maxima fixed for "special" countries, such as India and Japan.

A Resolution proposed by the Chinese Government Delegate, calling attention to the problem of the application of labour legislation to foreign settlements under extra-territorial jurisdiction and requesting the Governing Body to take such steps as are within its competence to deal with it, failed to obtain a quorum owing to abstentions from voting: 53 votes were cast for it, and none against.

In conclusion, mention may be made of the general discussion which took place on the annual Report of the Director. This discussion occupied the greater part of seven sittings, and constituted a useful exchange of views in which some sixty speakers, representing Governments, employers or workers in more than thirty countries and employing eight languages, took part.

### Countries Represented

Of the fifty-five countries which are members of the International Labour Organization, fifty sent delegates to the Twelfth Session, this being the highest percentage of attendance yet recorded. On only four previous occasions—at the Fifth Session in 1923, the Seventh in 1925, the Tenth in 1927 and the Eleventh in 1928—has the number of states represented exceeded forty. Further, the number of countries sending "complete" delegations, i.e., delegations comprising representatives of employers and workers as well as of governments, was larger (thirty-eight)

than at any previous session. A list of the countries represented follows:—

Albania	Italy
Australia	Japan
Austria	Latvia
Belgium	Liberia
Bolivia	Lithuania
Brazil	Luxemburg
Bulgaria	Netherlands
British Empire	Nicaragua
Canada	Norway
Chile	Panama
China	Paraguay
Colombia	Peru
Cuba	Poland
Czechoslovakia	Portugal
Denmark	Roumania
Dominican Republic	Salvador
Estonia	Serb-Croat-Slovene
Finland	Kingdom
France	Siam
Germany	South Africa
Greece	Spain
Haiti	Switzerland
Honduras	Sweden
Hungary	Uruguay
India	Venezuela
Irish Free State	

### Canadian Delegation

The Canadian delegation in attendance at the Conference was as follows:—

*Government Delegates.*—Dr. W. A. Riddell, Geneva, Switzerland; and Mrs. Mary Ellen Smith, Vancouver, B.C.

*Technical Advisers to Government Delegates.*—Mr. Byron Baker, Ottawa, Ont.; Mr. George Gilbert, Winnipeg, Man.; and Mr. Gerard Tremblay, Montreal, P.Q.

*Employers' Delegate.*—Mr. W. C. Coulter, President, Coulter Copper & Brass Co., Ltd., Toronto, Ont.

*Technical Adviser to Employers' Delegate.*—Mr. Geo. E. Carpenter, Secretary, Prairie Division, Canadian Manufacturers' Association, Winnipeg, Man.

*Workers' Delegate.*—Mr. P. M. Draper, Secretary-Treasurer, Trades and Labour Congress of Canada, Ottawa, Ont.

*Technical Adviser to Workers' Delegate.*—Mr. James Simpson, Vice-President, Trades and Labour Congress of Canada, Toronto, Ont.

### Officers of the Conference

The following were elected as officers of the Conference:—

*President.*—Dr. Heinrich Brauns, late Minister of Labour of Germany, whose election was proposed by Mr. Justin Godart, Govern-

ment delegate of France and a former Minister of Labour of that country, seconded by Sir Malcolm Delevingne, Government Delegate for the British Empire, and supported by Mr. Oersted, Employers' delegate of Denmark and by Mr. Mertens, Workers' delegate of Belgium.

*Vice-Presidents.*—Mr. H. E. Charles Duzmans, Government delegate for Latvia; Mr. Georges Tchourtchine, Employers' delegate of the Kingdom of the Serbs, Croats and Slovenes; and Mr. Arvid Thorberg, Workers' delegate of Sweden.

*Secretary-General.*—Mr. Albert Thomas, Director of the International Labour Office.

*Deputy Secretary-General.*—Mr. Harold B. Butler, Deputy-Director of the International Labour Office.

### Appointment of Committees

Committees were appointed by the Conference as follows:—

*Selection Committee.*—Twenty-four members: 12 from the Government group, 6 from the Employers' group and 6 from the Workers' group.

*Standing Orders Committee.*—Thirty-six members: 12 from each group.

*Committee on Article 408 of the Treaty of Versailles.*—Thirty members: 10 from each group.

*Committee on Prevention of Industrial Accidents.*—Sixty-eight members: 34 from the Government group, 17 from the Employers' group and 17 from the workers' group.

*Committee on Protection against Accidents of Workers engaged in Loading or Unloading Ships.*—Thirty-seven members: 13 from the Government group, 12 from the Employers' group and 12 from the Workers' group.

*Committee on Forced Labour.*—Thirty-six members: 12 from the Government group, 12 from the Employers' group and 12 from the Workers' group.

*Committee on Hours of Work of Salaried Employees.*—Seventy-eight members: 26 from the Government group, 26 from the Employers' group and 26 from the Workers' group.

*Committee on Unemployment.*—Thirty-six members: 12 from the Government group; 12 from the Employers' group and 12 from the Workers' group.

### Address of Chairman of Governing Body

Mr. Arthur Fontaine (Government delegate, France) as Chairman of the Governing Body of the International Labour Office, presided

at the opening of the Conference. He referred with satisfaction to the progress of ratifications of the Conventions of the International Labour body and pointed out that the total number of ratifications to date was 351. The Republic of Cuba, by ratifying 16 conventions, had joined the states which had registered the largest number of ratifications. On the other hand, out of the 55 member states of the International Labour body, there were still 24 which had not ratified any convention. While in most of these latter states, industry was in its infancy, it should be emphasized that the international agreements proposed in these conventions was of great importance to them.

### Address of President

Dr. Brauns, President of the Conference, in taking the chair, recognized the honour conferred on him, which he regarded as a tribute to the social policy of his country. Germany, he said, possessed traditions of long standing in the sphere of social policy, and had always regarded it as a sacred duty to collaborate to the utmost of its ability to the solution of the great social problems of the day.

Recalling the fact that the International Labour Organization had now completed the first decade of its existence, Dr. Brauns proceeded to survey the work of this body and to trace the development which had occurred. In all the states members of the organization, the sphere of action of social policy was constantly being extended. It was only necessary to study the abundant information contained in the director's annual report to see what a surprisingly large number of its tasks had become common to the various nations and how many urgently required, or were ripe for international settlement. The protective action of the state was no longer directed exclusively or even mainly towards the sick, disabled or aged who were unable to work, but concerned itself increasingly with those who were able to work. In this connection he alluded especially to social insurance and systematic employment policies.

Attempts were also being made to improve the civic status of workers. The most important development, he said, was not so much that the function of labour law had become clearer to us than it was before the war, but that we have made progress in a new way of fulfilling that function through the collective regulation of labour. It has been realized that the individual labour contract, which, according to the law of all countries, forms the basis of the relation between employer and employed, is not an adequate

basis. This is partly because there is so much difference between the power of the head of a great undertaking and the individual worker or employee that a freely concluded agreement between the parties, in spite of the nominal equality of their rights, cannot be anything less than the dictatorship of the stronger.

"A still more important consideration, however, is that in modern undertakings, where there is division of labour, and where the work depends on machinery, or is a continuous series of processes, it is essential that conditions of labour should be uniform. If conditions of labour are really to be settled by way of agreement, a collective expression of the will of the workers is therefore necessary. This is a part of the basis of the idea of works councils, which has made considerable progress in Europe."

Dr. Brauns emphasized the fact that the trade unions are now recognized by the Constitution and labour law of many countries, and have been made an integral part of the machinery for settling conditions of labour. Another innovation of the last decade was the conception that the collective will of an association should take precedence over the individual will of its members in settling the economic conditions of the individual. Moreover, the modern State did not merely recognize collective agreements; it helped them to come into existence, sometimes by a system of compulsory arbitration. The prevention of industrial disputes was an important problem of social policy, and a comparison of the experience obtained by different attempts and methods in the various States Members would be of special value.

*Industry and Government.*—On the other hand, these changes involved a responsibility on the part of the employers' and workers' organizations to collaborate in the work of the Government. "Just as the State puts its political machinery at the service of the organized parties to the labour contract, so also it gives employers' and workers' organizations a part to play in its own political functions. The collective regulation of labour conditions thus becomes a factor in self-government, and a specially important factor, because it is more suitable than anything else to provide a means of civic education. Here also we are faced with problems which will need a great deal of thought, but which we cannot fail to take into account. It is becoming increasingly recognized in scientific circles that labour law is primarily a matter of constitutional law. There are unmistakable signs that an industrial constitution is coming into being.

"At the same time, however, these legislative measures show a clear tendency towards giving the staff of the undertaking a certain share in its management and in the organization of production. Although these attempts are somewhat timid, and have in most cases not had very much practical effect, they nevertheless represent an initial step towards the creation of a sound industrial democracy, which is one of the problems of the future."

*Rationalization.*—That problem, the speaker proceeded, was becoming specially urgent owing to the fact that the after-effects of the war must be expected for some time to come to depress the situation of the masses. "Industry has endeavoured to increase its efficiency by means of rationalization. The workers have not in all cases received their fair share of the results of such endeavours, either in the form of a general rise of wages or in that of an equivalent fall of prices. On the other hand, rationalization has had three very unfavourable results for the workers. It has increased unemployment, especially among the older employees. In many cases it has indeed, made the position of the older manual workers almost desperate. It has speeded up the pace of the work, and has generally increased the effort required of the worker at the same time as the output of the undertaking. Above all, it has made working processes more mechanical, so that the individual worker feels himself, even more than before, as a mere cog in the machine, which has no will of its own, but is set in motion from without. The worker performs his own small part of the process, which seems meaningless to him, and this prevents him from taking any pleasure in his work,

"This," Dr. Brauns declared, "is the most dangerous spiritual problem of our day. I cannot venture to assume that in the present state of technical progress it would be possible to reverse the whole trend of industry towards large-scale mechanized production. Little can be done in industries of this character to remove the unfavourable effects which I have mentioned. A twofold compensation must therefore be found. In the first place the worker, as a member of the staff of the undertaking, must have his due share of influence over the undertaking, so that he may to some extent feel that it belongs to him, and that he is partly responsible for it. The attempts which have been made to give the workers a share in profits are not merely important from the economic point of view."

*Hours of Work.*—"In the second place, hours of work must be so regulated as to leave the

worker time, strength, and inclination to play his proper part as father of a family, as citizen, and as a civilized human being.

"This is the underlying cause of the movement towards the general adoption of the eight-hour day, the principle of which was recognized ten years ago by the Washington Conference, and which, in spite of economic difficulties, is bound in the long run to be established. The movement should not be regarded as an attempt to prevent men from working more than eight hours per day—that would be a regrettable misunderstanding. What is desired is to limit the utilization of the labour of others so that those persons who work in the service of others may also be able to live and work for themselves, their families, and their nation.

"If the reduced working day is not only to produce a beneficial effect by promoting health and joy in life, but is also to produce lasting results from the economic point of view, it is necessary to supplement it. The great mass of workers—more than a hundred million—who will be free after their eight hours' work for their employer, must be given an opportunity of exercising their activity in a way which will be useful, and at the same time satisfying and refreshing to themselves. The best opportunity is provided by the worker's own home, especially if there is a little plot of land or garden attached to it."

*International Agreement Required.*—Dr. Brauns concluded by saying: "The more we concentrate on matters in which the ground has been prepared by national legislation, and which are ripe for international settlement, the greater will be the success of our Conferences. In the first ten years of the existence of the International Labour Organization, we have thus made progress in a number of different spheres, among which I need only mention the protection of motherhood, the conditions of work of women and children, insurance against accident and sickness, minimum wage fixing machinery in home working trades, and seamen's articles of agreement. No body is better fitted than the International Labour Organization to promote good will between nations, which is the foundation of all efforts to promote peace, since in that Organization representatives of employers and workers collaborate on an equal footing with Government representatives. Let us continue in the future, as in the past, to work together in harmony, so that the Twelfth Session of the International Labour Conference and the second decade of the existence of the International Labour Office may continue to further social progress."

## Questions Referred to Committees

Two of the questions on the Conference agenda, namely prevention of accidents and the loading and unloading of ships, were referred to committees for examination and report, without discussion in Conference. On the other two items of the agenda, namely forced labour and hours of work of salaried employees, the Conference held brief preliminary debates before sending them to committees for detailed examination.

## Report of Credentials Committee

The report of the Credentials Committee showed that delegations were present from fifty member states of the International Labour Organization, and that complete delegations, representative of employers and workers, as well as Government delegations, were in attendance from thirty-six states. There were thus fourteen delegations which did not represent all the interests involved. It was urged that member states should send complete delegations in future.

Objections had been received to the credentials of three delegates: the Chinese Workers' delegate, the Estonian Employers' delegate, the Italian Workers' delegate.

The Committee considered these objections, and decided that the protests were not well founded. The reports of the Credentials Committee in these matters were confirmed by the conference.

## Director's Report

The Annual Report of the Director was under discussion in the Conference at successive sittings from June 7 to June 13. Fifty-seven speakers in all participated in these debates, during which discussions the work of the International Labour Organization was subjected to critical examination in various respects. The discussion in question centered around the Annual Report of the Director of the International Labour Office, a summary of which appears elsewhere in the present issue of the *LABOUR GAZETTE*.

Among the suggestions and criticisms which were made in this debate were the following: that the publication should be hastened of certain reports including those on social charges, the Asiatic enquiry, etc.; that reports of the International Labour Office should be translated into Portuguese and Dutch; that correspondence of the International Labour Office should be appointed at additional points; that the International Labour Office should carry out enquiries concerning co-operation, rationalization and working-class dietetics, the virtues or dangers of collaboration instituted

between certain northern European countries, high wages and their application to Europe, the necessity for effective control over labour conditions in the concessions and leased territories in China, the absence of Argentina from the Councils of the International Labour Body, relations with Russia and the United States, the progress made in the ratification of conventions.

Mr. Albert Thomas, Director of the International Labour Office, replied at length on June 14 to the discussion to the points which had been raised in the lengthy debate on his Annual Report.

### Britain and the Eight-hour Day Convention

Announcement was made by the British Government delegate during the course of the discussion of the Director's report, that the new British Government proposed to take the necessary steps to ensure at the earliest possible moment the ratification of the eight-hour convention of the International Labour Conference. It was added that in introducing the legislation in the British Parliament, it was necessary that the Government should take account both of the Convention itself and the agreement which was reached on this subject at a conference in London three years ago.

### Report on Unemployment

A report prepared by the International Labour Office on the subject of unemployment was considered by a committee of the Conference, and was afterwards discussed in the Conference itself. There was a general consensus of opinion that the report was a very valuable document, and that the investigation made by the International Labour Office into this subject should be continued. A difference of opinion was shown between groups in the Committee as to whether the enquiry should be confined to one or two special industries, or should range over the field of employment in general. There was a desire also on the part of some members to limit the activities of the Office to the social aspects of unemployment rather than its economic effects.

It was agreed by the Committee to lay special stress on the coal mining industry, but to invite the Office to pursue investigations into other industries as well. The text of a resolution adopted by the Conference on the subject of unemployment is given on page 772.

## RECOMMENDATION CONCERNING THE PREVENTION OF INDUSTRIAL ACCIDENTS

Whereas the protection of the workers against injury arising out of their employment is instanced by the Preamble to Part XIII of the Treaty of Versailles and to the corresponding Parts of the other Treaties of Peace as one of the improvements in industrial conditions which are urgently required;

Whereas industrial accidents not only cause suffering and distress among the workers and their families, but also represent an important material loss to society in general;

Whereas the International Labour Conference in 1923 adopted a Recommendation concerning the general principles for the organization of systems of inspection, in which it is laid down *inter alia* that inspection, in order to become progressively more effective "should be increasingly directed towards securing the adoption of the most suitable safety methods for preventing accidents and diseases with a view to rendering work less dangerous, more healthy, and even less exhausting, by the intelligent understanding, education and co-operation of all concerned."

Whereas it is desirable that these measures and methods which experience in the various countries has shown to be most effective in enabling the number of accidents to be reduced and their gravity mitigated should be put on record for the mutual advantage of the members;

Whereas a Resolution was adopted at the 1928 Session of the International Labour Conference in which the Conference declared its opinion that the time had come to attempt to reach a higher standard of safety by the development of new methods and that the greatest

advance could be made on the lines of the Safety First Movement, although it could not supersede the action of the State in prescribing and enforcing regulations for the prevention of accidents;

Considering that it is of the highest importance that all persons or bodies, including employers, workers, employers' and workers' organizations, Governments and the general public, should use their best endeavours and every means in their power to help to prevent industrial accidents.

The General Conference recommends that each member of the International Labour Organization should take the following principles and rules into consideration for the prevention of accidents in industrial establishments. The following are considered as such:

(a) Mines, quarries, and other works for the extraction of minerals from the earth;

(b) Industries in which articles are manufactured, altered, cleaned, repaired, ornamented, finished, adapted for sale, broken up or demolished, or in which materials are transformed; including shipbuilding and the generation, transformation, and transmission of electricity or motive power of any kind;

(c) Construction, reconstruction, maintenance, repair, alteration or demolition of any building, railway, tramway, harbour, dock, pier, canal, inland waterway, road, tunnel, bridge, viaduct, sewer, drain, well, telegraphic or telephonic installation, electrical undertaking, gaswork, waterwork, or other work of construction, as well as the preparation for or laying the foundations of any such work or structure;

(d) Transport of passengers or goods by road, rail, sea or inland waterway, including the handling of goods at docks, quays, wharves or warehouses, but excluding transport by hand.

The Conference, considering further that the prevention of accidents is just as necessary in agricultural as in industrial establishments, recommends that each member of the International Labour Organization should consider how far it is possible to apply the Recommendations to the prevention of accidents in the agricultural industry.

I. (1) Whereas the foundations of the study of accident prevention are:

- (a) Enquiry into the causes and circumstances of accidents;
- (b) The study, by means of statistics of accidents in the various industries as a whole, of the special dangers which exist in the several industries, the "laws" determining the incidence of accidents and, by comparison over a series of years, the effect of measures taken to avoid them.

The Conference recommends that each Member should take the necessary steps, by means of legislative or administrative action, effectively to ensure the collection and utilization of the above information.

The Conference also recommends that methodical investigation should be carried out in each country by public services, assisted, where it appears desirable, by institutions or committees set up by individual branches of industry.

(2) As experience and research have shown that the incidence and gravity of accidents do not depend merely upon the dangers inherent in the work or in the kind of equipment or the various appliances in use, but also on physical, physiological and psychological factors, the Conference recommends that in addition to the investigations mentioned in paragraph 1 in connection with material factors, these other factors should also be investigated.

(3) Since the suitability of the worker for his work and the interest which he takes in his work are factors of primary importance for the promotion of safety, it is essential that the States Members should encourage scientific research into the best methods of vocational guidance and selection and their practical application.

(4) Since it is essential for the furtherance of accident prevention that the results of the research referred to in paragraphs 1 and 2 should be made known, and since it is also desirable that the International Labour Office should be in possession of the necessary information to enable its work in this sphere to be extended, the more important results of the research undertaken should be communicated to the International Labour Office for use in its work and publications.

It is also desirable that there should be international consultation and exchange of results between the research institutions or organizations in the several industrial countries.

(5) The States Members should establish central departments to collect and collate statistics relating to industrial accidents and should communicate to the International Labour Office all available statistics on industrial accidents in their respective countries. They should also with a view to the subsequent preparation of a Draft Convention, keep in touch with the International Labour Office in

framing and developing their industrial accident statistics, with a view to arriving at uniform bases which would as far as possible allow of a comparative study of the statistics of the different countries.

II. (6) In view of the satisfactory results which experience in different countries has shown to follow from co-operation between all parties interested in the prevention of industrial accidents, particularly between employers and workers, it is essential that the Members should do all in their power to develop and encourage such co-operation, as recommended in the Recommendation on systems of inspection adopted in 1923.

(7) It is recommended that in every industry or branch of industry, so far as circumstances require, periodical conferences should be held between the State inspection service, or other competent bodies, and the representative organizations of employers and workers in the industry: (a) to consider and review the position in the industry as regards, the incidence and gravity of accidents in the industry, the working and effectiveness of the measures which may have been laid down by the law, or agreed upon between the State or other competent bodies and the industry, or tried by individual employers, and (b) to discuss proposals for further improvement.

(8) It is further recommended that every State Member should actively and continuously encourage, and use its influence in favour of, the adoption of measures for the promotion of safety, in particular: (a) the establishment in the works of a safety organization which should include arrangements for a works investigation of every accident occurring in the works, and the consideration of the methods to be adopted for preventing a recurrence; the systematic supervision of the works, machinery and plant for the purpose of ensuring safety, and in particular of seeing that all safeguards and other safety appliances are maintained in proper order and position; the explanation to new, and especially young, workers of the possible dangers of the work or the machinery or plant connected with their work; the organization of first aid and transport for injured workers; and the encouragement of suggestions from the persons employed for rendering work safer; (b) co-operation in the promotion of safety between the management and the workers in the individual works, and of employers' and workers' organizations in the industry, with each other and with the State and with other appropriate bodies by such methods and arrangements as may appear best adapted to the national conditions and aptitudes. The following are suggested as examples for consideration by those concerned: appointment of a safety supervisor for the works, establishments of safety committees in the industrial works.

(9) It is recommended that the States Members should do all in their power to awaken and maintain the interest of the workers in the prevention of accidents and ensure their co-operation by means of lectures, publications, cinematograph films, visits to industrial establishments, and by such other means as they may find most appropriate.

(10) It is recommended that the State should establish or promote the establishment of permanent safety exhibitions where the best appliances, arrangements and methods for pre-

venting accidents and promoting safety can be seen (and in the case of machinery, seen in action) and advice and information given to employers, works officials, and workers, students in the engineering and technical schools, and others.

(11) In view of the fact that the workers, by their conduct in the factory, can and should contribute to a large extent to the success of protective measures, the State should use its influence to secure: (a) that employers should do all in their power to improve the education of their workers in regard to the prevention of accidents, and (b) that the workers' organizations should do all in their power to induce their members to co-operate in this work.

(12) It is recommended that, in addition to measures taken in pursuance of the preceding paragraphs, the State should arrange for monographs on accident causation and prevention in particular industries or branches of industry or particular processes to be prepared by the State inspection service or other competent authorities, embodying the experience obtained as to the best measures for preventing accidents in the industry or process, and to be published by the State for the information of employers, works officials and workers in the industry and employers' and workers' organizations.

(13) In view of the importance of the work of education referred to in the preceding paragraph, and as a foundation for such education, the Members should arrange for the inclusion in the curricula of the elementary schools of lessons designed to inculcate habits of carefulness, and in the curricula of secondary schools lessons in accident prevention and first aid. Instruction in the prevention of industrial accidents should be given in vocational schools of all grades, where the importance of the subject both from the economic and moral standpoints should be impressed upon the pupils.

(14) In view of the great value of immediate first-aid treatment in lessening the gravity of the consequences of accidents, measures should be taken to ensure that the necessary material for first aid should be kept ready for use in all undertakings and that first aid by properly trained persons should be given. It is also desirable that for serious accidents the services of a doctor should be made available as soon as possible. Arrangements should also be made for providing ambulance services for the rapid transport of injured persons to hospital or to their homes.

Great attention should also be paid to the theoretical and practical training of doctors in the treatment of injuries due to accidents.

III. (15) As all methods of furthering accident prevention must necessarily rest on a basis of legal provisions, the Conference recommends that each Member should prescribe by law the measures required to ensure an adequate minimum standard of safety.

(16) It should be a rule of national laws or regulations that it is the duty of the employer to equip and manage his undertaking in such

a way that the workers are adequately protected, regard being had to the nature of the undertaking and the state of technical progress, as well as to see that the workers in his employment are instructed as to the dangers, if any, of their occupation and in the measures to be observed by them in order to avoid accidents.

(17) It is in general desirable that plans for the construction or important alteration of industrial establishments should be submitted sufficiently early to the competent authority in the matter, in order that it may be ascertained whether the plans are such as to satisfy the requirements prescribed for industrial safety. The plans should be examined as rapidly as possible in order not to delay the execution of the work.

(18) So far as the administrative and legal systems of each country may allow, officials of the inspection service or other body responsible for supervising the enforcement of the laws and regulations concerning the protection of workers against accidents should be empowered to give orders in particular cases to the employer as to the steps to be taken by him to fulfil his obligations, subject to a right of appeal to a higher administrative authority or to arbitration.

In case of imminent danger the supervising authority should be empowered to require immediate compliance with the orders, notwithstanding the right of appeal.

(19) In view of the importance of the conduct of the worker alluded to above in connection with accident prevention, national laws or regulations should provide that it is the duty of the worker to comply with the regulations on accident prevention and particularly to refrain from removing safety devices without authorization and to use them properly.

(20) It is recommended that before administrative orders or regulations for the prevention of accidents in any industry are issued definitively by the competent authority, opportunity should be given to the representative organizations of employers and workers in the industry to submit their views for the consideration of the competent authority.

(21) Legal or administrative provision should be made for associating the workers in the work of securing the observance of the safety regulations in the various undertakings by the methods best suited to the respective countries, for example, the appointment of qualified workers to positions in the official inspection service; regulations authorizing the workers to call for a visit from an official of the inspection service or other competent body when they consider such a course desirable, or requiring the employer to give workers or their delegates an opportunity of seeing the inspector when he is visiting the undertaking; safety committees including workers' representatives for securing the enforcement of the regulations and establishing the causes of accidents; or in any other manner which will ensure that the participation of the workers is effected.

### RESOLUTION ON ACCIDENT STATISTICS

The General Conference of the Members of the International Labour Organization,

Having adopted a Recommendation concerning the prevention of industrial accidents which, in paragraph 5, recommends the Members to keep in touch with the International Labour Office in compiling and developing their indus-

trial accident statistics with a view to increasing their international comparability,

Considering that a series of resolutions on the methods of compiling statistics of industrial accidents was adopted by an International Conference of Labour Statisticians convened by the International Labour Office in 1923,

Invites the Governing Body of the International Labour Office to call the attention of the Governments to these resolutions and in particular to ask them to indicate the difficulties experienced in the application,

Requests the Governing Body of the International Labour Office to consider the desirability

### TEXT OF THE DRAFT CONVENTION CONCERNING THE MARKING OF THE WEIGHT ON HEAVY PACKAGES TRANSPORTED BY VESSELS

*Article 1.*—Any package or object of one thousand kilograms (one metric ton) or more gross weight consigned within the territory of any member which ratifies this convention for transport by sea or inland waterway shall have had its gross weight plainly and durably marked upon it on the outside before it is loaded on a ship or vessel.

In exceptional cases where it is difficult to determine the exact weight, national laws or regulations may allow an approximate weight to be marked.

The obligation to see that this requirement is observed shall rest solely upon the Government of the country from which the package or object is consigned, and not on the Government of a country through which it passes on the way to its destination.

It is left to national laws or regulations to determine whether the obligation for having the weight marked as aforesaid shall fall on the consignor or on some other person or body.

*Article 2.*—The formal ratifications of this convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

*Article 3.*—This Convention shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

It shall come into force twelve months after the date on which the ratifications of two Members of the International Labour Organization have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

*Article 4.*—As soon as the ratification of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifica-

of convening a Conference or Commission of experts in accident prevention and accident statistics at a subsequent date for the discussion of these difficulties and for laying down uniform bases for the compilation of industrial accident statistics with particular reference to those industries or services in which special problems arise.

tions which may be communicated subsequently by other Members of the Organization.

*Article 5.*—A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an Act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of ten years and, thereafter, may denounce this Convention at the expiration of each period of ten years under the terms provided for in this Article.

*Article 6.*—At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

*Article 7.*—Should the Conference adopt a new Convention revising this Convention in whole or in part, the ratification by a Member of the new revising Convention would, notwithstanding the periods of delay mentioned in the foregoing Article 5, involve the immediate denunciation of this Convention, provided that the new revising Convention has come into force.

As from the date of the coming into force of the new revising Convention, the present Convention would cease to be open to ratification by the Members.

Nevertheless, this Convention would remain in force in its actual form and content for those Members which had ratified it but had not ratified the revising Convention.

*Article 8.*—The French and English texts of this Convention shall both be authentic.

### RECOMMENDATION CONCERNING RESPONSIBILITY FOR THE PROTECTION OF POWER-DRIVEN MACHINERY

I. In order more effectively to ensure, in the interest of the safety of the workers, that the requirements prescribed by national laws or regulations for the protection of power-driven machinery used in the country concerned are properly complied with, and

Without prejudice to the responsibility which should in any case rest and remain on the employer for seeing that any machinery used in his undertaking is protected in accordance with national laws or regulations.

The Conference recommends that each Member adopt and apply to as great an extent as

possible the principle that it should be prohibited by law to supply or install any machine intended to be driven by mechanical power and to be used within its territory, unless it is furnished with the safety appliances required by law for the operation of machines of that type.

The previous paragraph applies to any electrical equipment forming part of such a machine.

II. Each Member should keep the International Labour Office informed of the measures taken by it to apply the abovementioned principle and of the results of its application.

**TEXT OF THE DRAFT CONVENTION CONCERNING THE PROTECTION  
AGAINST ACCIDENTS OF WORKERS EMPLOYED IN LOADING  
OR UNLOADING SHIPS**

*Article 1.*—For the purpose of this Convention:

(1) the term "processes" means and includes all or any part of the work performed on shore or on board ship of loading or unloading any ship whether engaged in maritime or inland navigation, excluding ships of war, in, on, or at any maritime or inland port, harbour, dock, wharf, quay or similar place at which such work is carried on; and

(2) the term "worker" means any person employed in the processes.

*Article 2.*—Any regular approach over a dock, wharf, quay or similar premises which workers have to use for going to or from a working place at which the processes are carried on and every such working place on shore shall be maintained with due regard to the safety of the workers using them.

In particular,

(1) every said working place on short and any dangerous parts of any said approach thereto from the nearest highway shall be safely and efficiently lighted;

(2) wharves and quays shall be kept sufficiently clear of goods to maintain a clear passage to the means of access referred to in Article 3;

(3) where any space is left along the edge of any wharf or quay, it shall be at least 3 feet (90 cm.) wide and clear of all obstructions other than fixed structures, plant and appliances in use; and

(4) so far as is practicable having regard to traffic and working,

(a) all dangerous parts of the said approaches and working places (e.g. dangerous breaks, corners and edges) shall be adequately fenced to a height of not less than 2 feet 6 inches (75 cm.);

(b) dangerous footways over bridges, caissons and dock gates shall be fenced to a height of not less than 2 feet 6 inches (75cm.) on each side, and the said fencing shall be continued at both ends to a sufficient distance which shall not be required to exceed 5 yards.

*Article 3.*—(1) When a ship is lying alongside a quay or some other vessel for the purpose of the processes, there shall be safe means of access for the use of the workers at such times as they have to pass to or from the ship, unless the conditions are such that they would not be exposed to undue risk if no special appliance were provided.

(2) The said means of access shall be:

(a) where reasonably practicable, the ship's accommodation ladder, a gangway or a similar construction;

(b) in other cases a ladder.

(3) The appliances specified in paragraph (2) (a) of this Article shall be at least 22 inches (55cm.) wide, properly secured to prevent their displacement, not inclined at too steep an angle, constructed of materials of good quality and in good condition, and securely fenced throughout to a clear height of not less than 2 feet 9 inches (82 cm.) on both sides, or in the case of the ship's accommodation ladder securely fenced to the same height on one side, provided that the other side is properly protected by the ship's side;

Provided that any appliance as aforesaid in use at the date of the ratification of this Convention shall be allowed to remain in use:

(a) until the fencing is renewed if they are fenced on both sides to a clear height of at least 2 feet 8 inches (80cm.);

(b) for one year from the date of ratification if they are fenced on both sides to a clear height of at least 2 feet 6 inches (75 cm.).

(4) The ladders specified in paragraph (2) (b) of this article shall be of adequate length and strength, and properly secured.

(5) (a) Exceptions to the provisions of this Article may be allowed by the competent authorities when they are satisfied that the appliances specified in the Article are not required for the safety of the workers.

(b) The provisions of this Article shall not apply to cargo stages or cargo gangways when exclusively used for the processes.

(6) Workers shall not use, or be required to use, any other means of access than the means specified or allowed by this Article.

*Article 4.*—When the workers have to proceed to or from a ship by water for the processes, appropriate measures shall be prescribed to ensure their safe transport, including the conditions to be complied with by the vessels used for this purpose.

*Article 5.*—(1) When the workers have to carry on the processes in a hold the depth of which from the level of the deck to the bottom of the hold exceeds 5 feet (1.5 m.), there shall be safe means of access from the deck to the hold for their use.

(2) The said means of access shall ordinarily be by ladder, which shall not be deemed to be safe unless it complies with the following conditions:

(a) leaves sufficient free space behind the rungs, which in the case of ladders on bulkheads and in trunk hatchways shall not be less than 4½ inches (11½ cm.), or has throughout rungs of proper width for firm foothold and handhold;

(b) is not recessed under the deck more than is reasonably necessary to keep it clear of the hatchway;

(c) is continued by and is in line with arrangements for secure handhold and foothold on the coamings (e.g. cleats or cups);

(d) the said arrangements on the coamings stand out not less than 4½ inches (11½ cm.) for a width of 10 inches (25 cm.); and

(e) if separate ladders are provided between the lower decks, the said ladders are as far as practicable in line with the ladder from the top deck.

Where, however, owing to the construction of the ship, the provision of a ladder would not be reasonably practicable, it shall be open to the competent authorities to allow other means of access, provided that they comply with the conditions laid down in this Article for ladders so far as they are applicable.

(3) Sufficient free passage to the means of access shall be left at the coamings.

(4) Shaft tunnels shall be equipped with adequate handhold and foothold on both sides.

(5) When the ladder is to be used in the hold of a vessel which is not decked it shall be the duty of the contractor undertaking the processes to provide such ladder. It shall be equipped at the top with hooks for fastening it on to the coamings or with other means for firmly securing it.

(6) The workers shall not use, or be required to use, other means of access than the means specified or allowed by this Article.

(7) Ships existing at the date of ratification of this Convention shall be exempt from compliance with the measurements in paragraph 2 (a) and (d) and from the provisions of paragraph 5 of this Article for a period not exceeding four years from the date of ratification of this Convention.

**Article 6.**—While the workers are on a ship for the purpose of the processes, no hatchway of a cargo hold which exceeds 5 feet in depth from the level of the deck to the bottom of the hold and which is accessible to the workers shall be left open and unprotected, but every such hatchway which is not protected to a clear height of 2 feet 6 inches (75 cm.) by the coamings shall either be securely fenced to a height of 3 feet (90 cm.) if the processes at that hatchway are not impeded thereby or be securely covered;

Similar measures shall be taken when necessary to protect any other openings in a deck which might be dangerous to the workers.

Provided that the requirements of this Article shall not apply when a proper and sufficient watch is being kept.

**Article 7.**—When the processes have to be carried on on a ship, the means of access thereto and all places on board at which the workers are employed or to which they may be required to proceed in the course of their employment shall be efficiently lighted.

The means of lighting shall be such as not to endanger the safety of the workers or to interfere with the navigation of other vessels.

**Article 8.**—In order to ensure the safety of the workers when engaged in removing or replacing hatch coverings and beams used for hatch coverings.

(1) hatch coverings and beams used for hatch coverings shall be maintained in good condition;

(2) hatch coverings shall be fitted with adequate hand grips, having regard to their size and weight;

(3) beams used for hatch coverings shall have suitable gear for removing and replacing them of such a character as to render it unnecessary for workers to go upon them for the purpose of adjusting such gear;

(4) all hatch coverings and fore and aft thwart-ship beams shall, in so far as they are not interchangeable, be kept plainly marked to indicate the deck and hatch to which they belong and their position therein;

(5) hatch coverings shall not be used in the construction of cargo stages or for any other purpose which may expose them to damage.

**Article 9.**—Appropriate measures shall be prescribed to ensure that no hoisting machine, or gear, whether fixed or loose, used in connection therewith, is employed in the processes on shore or on board ship unless it is in a safe working condition.

In particular,

(1) before being taken into use, the said machines, fixed gear on board ship accessory thereto as defined by national laws or regulations, and chains and wire ropes used in connection therewith, shall be adequately examined and tested, and the safe working load thereof certified, in the manner prescribed and by a competent person;

(2) after being taken into use, every hoisting machine, whether used on shore or on board

ship, and all fixed gear on board ship accessory thereto as defined by national laws or regulations shall be thoroughly examined or inspected as follows:

(a) to be thoroughly examined every four years and inspected every twelve months: derricks, goose necks, mast bands, derrick bands, eyebolts, spans and any other fixed gear the dismantling of which is specially difficult;

(b) to be thoroughly examined every twelve months: all hoisting machines (e.g. cranes, winches), blocks, shackles and all other accessory gear not included in (a).

All loose gear (e.g. chains, wire ropes, rings, hooks) shall be inspected on each occasion before use unless they have been inspected within the previous three months.

Chains shall not be shortened by tying knots in them and precautions shall be taken to prevent injury to them from sharp edges.

A thimble or loop splice made in any wire rope shall have at least 3 tucks with a whole strand of rope and 2 tucks with one-half of the wires cut out of each strand; provided that this requirement shall not operate to prevent the use of another form of splice which can be shown to be as efficient as the form hereby prescribed.

(3) Chains and such similar gear as is specified by national laws or regulations (e.g. hooks, rings, shackles, swivels) shall unless they have been subjected to such other sufficient treatment as may be prescribed by national laws or regulations, be annealed under the supervision of a competent person as follows:

(a) In the case of chains and the said gear carried on board ship:

(i) half inch and smaller chains or gear in general use once at least in every six months;

(ii) all other chains or gear (including span chains but excluding bridle chains attached to derricks or mast) in general use once at least in every twelve months:

Provided that in the case of such gear used solely on cranes and other hoisting appliances worked by hand, twelve months shall be substituted for six months in subparagraph (i) and two years for twelve months in subparagraph (ii);

Provided also that, if the competent authority is of opinion that owing to the size, design, material or infrequency of use of any of the said gear other than chains the requirements of this paragraph as to annealing are not necessary for the protection of the workers, it may, by certificate in writing (which it may at its discretion revoke) exempt such gear from the said requirements subject to such conditions as may be specified in the said certificate.

(b) In the case of chains and the said gear not carried on board ship.

Measures shall be prescribed to secure the annealing of chains and the said gear.

(c) In the case of chains and the said gear whether carried on board ship or not, which have been lengthened, altered or repaired by welding they shall thereupon be tested and re-examined.

(4) Such duly authenticated records as will provide sufficient *prima facie* evidence of the safe condition of the machines and gear concerned shall be kept, on shore or on the ship as the case may be, specifying the safe working load and the dates and results of the tests and

examinations referred to in paragraphs (1) and (2) of this Article and of the annealings or other treatment referred to in paragraph (3).

Such records shall, on the application of any person authorized for the purpose, be produced by the person in charge thereof.

(5) The safe working load shall be kept plainly marked on all cranes, derricks and chain slings and on any similar hoisting gear used on board ship as specified by national laws or regulations. The safe working load marked on chain slings shall either be in plain figures or letters upon the chains or upon a tablet or ring of durable material attached securely thereto.

(6) All motors, cogwheels, chain and friction gearing, shafting, live electric conductors and steam pipes shall (unless it can be shown that by their position and construction they are equally safe to very worker employed as they would be if securely fenced) be securely fenced so far as is practicable without impeding the safe working of the ship.

(7) Cranes and winches shall be provided with effective appliances to prevent the accidental descent of a load while in process of being lifted or lowered.

(8) Appropriate measures shall be taken to prevent exhaust steam from and, so far as practicable, live steam to any crane or winch obscuring any part of the working place at which a worker is employed.

*Article 10.*—Only sufficiently competent and reliable persons shall be employed to operate lifting or transporting machinery whether driven by mechanical power or otherwise or to give signals to a driver of such machinery or to attend to cargo falls on winch ends of winch drums.

*Article 11.*—(1) No load shall be left suspended from any hoisting machine unless there is a competent person actually in charge of the machine while the load is so left.

(2) Appropriate measures shall be prescribed to provide for the employment of a signaller where this is necessary for the safety of the workers.

(3) Appropriate measures shall be prescribed with the object of preventing dangerous methods of working in the stacking, unstacking, stowing and unstowing of cargo, or handling in connection therewith.

(4) Before work is begun at a hatch the beams thereof shall be removed, unless the hatch is of sufficient size to preclude danger to the workers from a load striking against the beams; provided that when the beams are not removed they shall be securely fastened to prevent their displacement.

(5) Precautions shall be taken to facilitate the escape of the workers when employed in a hold or on 'tween decks in dealing with coal or other bulk cargo.

(6) No stage shall be used in the processes unless it is substantially and firmly constructed, adequately supported and where necessary securely fastened.

No truck shall be used for carrying cargo between ship and shore on a stage so steep as to be unsafe.

Stages shall where necessary be treated with suitable material to prevent the workers slipping.

(7) When the working space in a hold is confined to the square of the hatch, hooks shall not be made fast in the bands or fastenings of bales of cotton, wool, cork, gunny bags or

other similar goods (nor canhooks on barrels), except for the purpose of breaking out or making up slings.

(8) No gear of any description shall be loaded beyond the safe working load, except on special occasions expressly authorized by the owner or his responsible agent of which a record shall be kept.

(9) In the case of shore cranes with varying capacity (e.g. raising and lowering jib with load capacity varying according to the angle) an automatic indicator or a table showing the safe working loads at the corresponding inclinations of the jib shall be provided on the crane.

*Article 12.*—National laws or regulations shall prescribe such precautions as may be deemed necessary to ensure the proper protection of the workers, having regard to the circumstances of each case, when they have to deal with or work in proximity to goods which are in themselves dangerous to life or health by reason either of their inherent nature or of their condition at the time, or work where such goods have been stowed.

*Article 13.*—At docks, wharves, quays and similar places, which are in frequent use for the processes, such facilities as having regard to local circumstances shall be prescribed by national laws or regulations shall be available for rapidly securing the rendering of first-aid and in serious cases of accident removal to the nearest place of treatment. Sufficient supplies of first-aid equipment shall be kept permanently on the premises in such a condition and in such positions as to be fit and readily accessible for immediate use during working hours. The said supplies shall be in charge of a responsible person or persons, who shall include one or more persons competent to render first-aid, and whose services shall also be readily available during working hours.

At such docks, wharves, quays and similar places as aforesaid appropriate provision shall also be made for the rescue of immersed workers from drowning.

*Article 14.*—Any fencing, gangway, gear, ladder, life-saving means or appliance, light, mark, stage or other thing whatsoever required to be provided under this Convention shall not be removed or interfered with by any person except when duly authorized or in case of necessity, and if removed shall be restored at the end of the period for which its removal was necessary.

*Article 15.*—It shall be open to each Member to grant exemptions from or exceptions to the provisions of this Convention in respect of any dock, wharf, quay or similar place at which the processes are only occasionally carried on or the traffic is small and confined to small ships, or in respect of certain special ships or special classes of ships or ships below a certain small tonnage, or in cases where as a result of climatic conditions it would be impracticable to require the provisions of this Convention to be carried out.

The International Labour Office shall be kept informed of the provisions in virtue of which any exemptions and exceptions as aforesaid are allowed.

*Article 16.*—Except as herein otherwise provided, the provisions of this Convention which affect the construction or permanent equipment of the ship shall apply to ships the building of which is commenced after the date of ratifi-

cation of the Convention, and to all other ships within four years after that date, provided that in the meantime the said provisions shall be applied so far as reasonable and practicable to such other ships.

*Article 17.*—In order to ensure the due enforcement of any regulations prescribed for the protection of the workers against accidents.

(1) The regulations shall clearly define the persons or bodies who are to be responsible for compliance with the respective regulations;

(2) Provision shall be made for an efficient system of inspection and for penalties for breaches of the regulations;

(3) Copies or summaries of the regulations shall be posted up in prominent positions at docks, wharves, quays and similar places which are in frequent use for the processes.

*Article 18.*—The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

*Article 19.*—This Convention shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

It shall come into force twelve months after the date on which the ratifications of two Members of the International Labour Organization have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

*Article 20.*—As soon as the ratification of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

#### RECOMMENDATION CONCERNING RECIPROCITY AS REGARD THE PROTECTION AGAINST ACCIDENTS OF WORKERS EMPLOYED IN LOADING OR UNLOADING SHIPS

The Conference,

Recognizing that the Convention concerning the protection against accidents of workers employed in loading or unloading ships, while having as its main object the protection against accidents of the said workers, at the same time affords an opportunity for regulations being prepared and issued by the Members which should secure reasonable uniformity on the basis of the Convention and for extension of the principle of reciprocity in the mutual recognition of certificates of inspection and examination; and

Recalling in this connection the principles laid down in the Copenhagen Convention of

#### RECOMMENDATION CONCERNING THE CONSULTATION OF WORKERS' AND EMPLOYERS' ORGANIZATIONS IN THE DRAWING UP OF REGULATIONS DEALING WITH THE SAFETY OF WORKERS EMPLOYED IN LOADING OR UNLOADING SHIPS

The Conference,

Having adopted a Draft Convention concerning the protection against accidents of workers

*Article 21.*—A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an Act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of five years and, thereafter, may denounce this Convention at the expiration of each period of five years under the terms provided for in this Article.

*Article 22.*—At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

*Article 23.*—Should the Conference adopt a new Convention revising this Convention in whole or in part, the ratification by a Member of the new revising Convention would, notwithstanding the periods of delay mentioned in the foregoing Article 21, involve the immediate denunciation of this Convention, provided that the new revising Convention has come into force.

As from the date of the coming into force of the new revising Convention, the present Convention would cease to be open to ratification by the Members.

Nevertheless, this Convention would remain in force in its actual form and content for those Members which had ratified it but had not ratified the revising Convention.

*Article 24.*—The French and English texts of this Convention shall both be authentic.

28 January, 1926, on the seaworthiness and equipment of ships as modified by the Declaration of 11 June, 1928:

Strongly recommends that, following the ratification and issuing of regulations as aforesaid based upon the Convention concerning the protection against accidents of workers employed in loading or unloading ships, the Members which have ratified the said Convention should enter into conference for the purpose of securing agreement for reciprocity, subject to all such agreements making secure the main object of the Convention namely the safety of the persons employed.

employed in loading or unloading ships, and Desiring to indicate for the guidance of the Members a method of bringing the Conven-

tion into operation in their respective countries, supplements this Draft Convention by the following Recommendation:

That the authorities responsible for the making of regulations for the protection against accidents of workers employed in loading or unloading ships should, either directly or

through any special joint machinery recognized for the purpose, consult the workers' and employers' organizations concerned, if any, in their respective countries in the drawing up of new regulations under the above-mentioned Draft Convention.

## DRAFT QUESTIONNAIRE CONCERNING THE INTERNATIONAL REGULATION OF THE HOURS OF WORK OF SALARIED EMPLOYEES

1. Do you consider it desirable that the International Labour Office should adopt a Draft Convention to regulate internationally the hours of work of salaried employees?

If you are not in favour of a Draft Convention, are you in favour of a Recommendation?

### SCOPE

2. Do you consider that the scope of application of the Draft Convention or Recommendation should be based on a general definition of the expression "salaried employee"?

If so, what definition do you propose?

If it is found impossible to reach a sufficiently exact definition of the term "salaried employee" to what categories of workers do you consider the scope of application should extend?

3. In any case, whether or no you consider it possible to determine the scope of application on the basis of a definition of the expression "salaried employee" or on the basis of categories of workers or both, do you consider that the Draft Convention or Recommendation should include within its scope all persons employed in:

- (a) commercial and trading undertakings of whatever kind;
- (b) undertakings which are both industrial and commercial—in so far as they are not treated by national law as industrial undertakings;
- (c) undertakings, including within that term public administrative services, in which the staff is mainly engaged in office work;
- (d) institutions for the preventive and curative treatment of the sick, infirm, destitute, and mentally unfit;
- (e) theatre and places of public amusement;
- (f) hotels, clubs, cafés, restaurants and other refreshment houses?

What other kinds of undertakings do you propose?

4. Do you consider that the Draft Convention or Recommendation should apply to all undertakings of the kind specified?

- (a) whether they are public or private;
- (b) whether they are secular or religious;
- (c) whether or not they are carried on for profit.

5. Do you consider that undertakings in which only members of the employer's family are employed should be excluded from the scope of the Draft Convention or Recommendation?

What do you understand by the term "members of the employer's family"?

6. What categories of staff, if any, employed in the above kinds of undertakings do you consider should be excluded from the scope of the Draft Convention or Recommendation?

### NORMAL HOURS OF WORK

7. (a) Do you consider that a definition should be given of hours of work for which a maxima is to be fixed?

If so, do you consider that the hours of work to be regulated are the time during which the persons employed are at the disposal of the em-

ployer and that they do not include rest periods posted in accordance with question 14b of the Draft Questionnaire, during which the persons are not at the disposal of the employer?

If not, what other definition do you propose?

(b) Do you consider that the Draft Convention or Recommendation should lay down a general weekly maximum of hours of work for the whole staff in all the undertakings covered?

If so, do you consider that such maximum should be 48 hours per week?

If not, what maximum do you propose?

What do you understand to be the definition of "week"? Do you consider that it is seven days?

(c) Do you consider that the Draft Convention or Recommendation should include a general provision to permit the distribution of hours of work over a period longer than one week, on condition that the average hours of work do not exceed the prescribed normal maxima?

If so, in what circumstances and under what restrictions?

(d) In addition, do you consider it necessary to lay down a daily maximum?

If so, do you consider that such maximum should be 8 hours per day? If not, what maximum do you propose?

(e) Do you consider that the hours of work per week should be able to be so arranged as to allow for a half-day holiday in the week?

Do you consider that the weekly half-day holiday should, as far as possible, come immediately before or immediately after the day of the weekly rest and that the latter should, as far as possible, fall on Sunday?

(f) Should it be permissible to work the general weekly maximum of hours of work in 4 or 5 days?

### SPECIAL ARRANGEMENTS

8. Do you consider that the Draft Convention or Recommendation should lay down daily or weekly maxima higher than the normal maxima for persons employed on certain classes of work or in certain kinds of undertakings?

If so, for what classes of work and for what kinds of undertakings, and what maxima do you propose?

9. Do you consider that the Draft Convention or Recommendation should lay down daily or weekly maxima lower than the normal maxima for persons employed on certain classes of work or in certain kinds of undertakings?

If so, for what classes of work, and for what kinds of undertakings, and what maxima do you propose?

### MAKING UP LOST TIME

10. Do you consider that the Draft Convention or Recommendation should permit the making up of lost time.

If so, in what circumstances and under what restrictions?

What do you understand by lost time?

## TEMPORARY EXCEPTIONS

11. Do you consider that the Draft Convention or Recommendation should permit the normal daily or weekly maxima to be temporarily exceeded:

- (a) in case of accident and in case of "force majeure";
- (b) to prevent the loss of perishable goods;
- (c) for such special work as stock taking and periodical balancing of accounts;
- (d) in case of exceptional pressure of work; what do you understand by the word "exceptional"?
- (e) in what other circumstances, if any?
- (b) to prevent the loss of perishable goods; the above exceptions be subjected in the Draft Convention or Recommendation?

In particular, do you consider that all such exceptions should be laid down by national regulations issued by the competent authorities after consultation with the organizations of employers and employees concerned, where such exist?

Should overtime for exceptional pressure of work be paid for at higher rates? Do you consider that this should also apply to other hours covered by temporary exceptions? If so, do you consider it necessary to lay down the higher rate or rates in the Draft Convention or Recommendation? If so, what rates do you propose?

## EQUIVALENT ARRANGEMENTS

13. Do you consider it desirable to include in the Draft Convention a clause allowing exemption from the provisions of the Convention for persons who, by virtue of agreements between the employers concerned or the associations of employers and the associations of employees where such exist, or, in the absence of agreements, by virtue of custom or practice,

are covered by arrangements in regard to hours of work which on the whole are better than, or are at least as favourable as, those laid down in the Convention?

If so, what guarantees do you consider it necessary to stipulate in order to ensure that any such arrangements are better than, or are at least as favourable as, those laid down in the Draft Convention?

## ENFORCEMENT

14. Do you consider that the Draft Convention should lay down measures to be taken for its enforcement?

If so, do you consider that every employer should be required:

- (a) to notify in some appropriate manner approved by the Government the times at which work is to begin and end;
- (b) to notify in the same manner the rest intervals allowed during working hours which are not reckoned as part of the working hours;
- (c) to keep a record of all overtime worked as well as of the amounts of the higher rates paid in respect thereof in a register in the manner approved by national law?

What other measures, if any, do you propose?

15. Do you consider that the Convention should provide for adequate Government inspection of all places in which persons are employed to whom the Convention applies?

16. Do you consider that a clause should be included in the Draft Convention specifying certain particulars which should be given in the annual reports provided for in Article 408 of the Treaty?

If so, what particulars do you propose?

## RESOLUTION CONCERNING UNEMPLOYMENT

The Conference,

(1) Welcomes the decision taken by the Council of the League of Nations to set up in association with its Financial Committee a Committee of Experts "to examine the causes of fluctuations in the purchasing power of gold and their effect on the economic life of the nations"; and invites the Office:

- (a) To offer its assistance to this Committee of Experts in the investigation of the effects of monetary fluctuations on the economic situation of the workers;
- (b) To communicate to that Committee immediately the results which have already been obtained as a result of its studies concerning the effects of monetary fluctuations on the stability of employment of the workers;
- (c) If possible in co-operation with the Committee of Experts to undertake further investigations concerning the effects of these fluctuations on the standard of living of the workers, on their efficiency, their hours of work, the relations between employers and workers, and on the general development of legislation for the protection of labour;

(2) Invites the Governing Body of the International Labour Office, after due consideration of the work of the Committees or other bodies set up to conduct enquiries in connection with the coal mining industry, to study the best means of bringing about the adoption of measures, either national or international,

which may be thought desirable for the reduction of unemployment among the workers in coal mines;

(3) Invites the Office to continue its investigations on the problem of unemployment in the textile industries and to undertake similar investigations in the case of other industries, not excluding agriculture, and, more particularly, in the case of industries in which unemployment is considerable;

(4) Invites the Office to continue its investigations with a view to ascertaining the principal reasons for variations in the rate of unemployment as between different countries;

(5) Invites the Office to pursue investigations in order to determine as far as possible the influence on unemployment of:

- (a) Increase of population;
- (b) The development of new industries leading to a decreased importance of other industries;

(c) Rationalization and scientific management;

(6) Invites the Office to undertake further investigations into the development of public employment exchanges and their administrative organization in relation to the problem of unemployment;

(7) In view of the difficulties which have been met with heretofore in the application of the Article of the Convention of 1919 concerning unemployment which provides for the co-ordination of the different national employment exchange systems by the International

Labour Office, invites the Governing Body of the International Labour Office, after taking into account the reports furnished by Governments under the provisions of Article 408 and the reports of the Committees of the Conference on Article 408, to examine suitable means of overcoming these difficulties and obtaining a better application of the Article in question;

(8) Refers to the Governing Body and its Permanent Migration Committee that part of the Report of the Office dealing with the international migration of workers, and particularly draws their attention to the problem of the recruiting and placing of foreign workers

#### RESOLUTION CONCERNING THE WEEKLY REST IN GLASS WORKS

The Twelfth Session of the International Labour Conference,—

Whereas the question of the weekly rest of glass workers was considered by the Governing Body of the International Labour Office to be of sufficient importance to justify discussion by the International Labour Conference;

Whereas the question was dealt with at the 1924 and 1925 Sessions without a definite result having been reached;

Whereas it is of the greatest importance that the work of glass workers should be so ordered that they may benefit by a regular rest;

#### RESOLUTION CONCERNING INSURANCE AGAINST OLD AGE, INVALIDITY AND DEATH

The International Labour Conference,

Having noted the Draft Convention drawn up by the Economic Committee of the League of Nations to serve as a basis of discussion for the International Conference on the Treatment of Foreigners;

Considering in particular Article VII of the Protocol appended to this Draft Convention, under the terms of which the High Contracting Parties have not the intention to regulate by the provisions of the said Convention the conditions and guarantees affecting the temporary sojourn or permanent establishment of foreign

workers and employees and other foreign wage-earners;

Recalling the Resolution concerning old-age, widows' and orphans' insurance and the maintenance of the right to pension which it adopted at its Tenth Session;

Requests the Governing Body of the International Labour Office to examine the possibility of placing this question on the Agenda of an early Session of the International Labour Conference.

workers and employees and other foreign wage-earners;

Recalling the Resolution concerning old-age, widows' and orphans' insurance and the maintenance of the right to pension which it adopted at its Tenth Session;

Requests the Governing Body of the International Labour Office to consider the desirability of placing as early as possible on the Agenda of a Session of the International Labour Conference the question of insurance against old age, invalidity and death, together with the question of the rights of foreign workers in case of old age, invalidity and death.

#### RESOLUTION CONCERNING THE UNDERGROUND WORK OF WOMEN AND YOUNG PERSONS

In view of the regrettable fact that underground work for women and young persons is still actually in operation in some of the most important countries represented in the International Labour Conference.

The Conference requests the Governing Body of the International Labour Office to consider the desirability of placing upon the Agenda of an early session of the International Labour Conference the question of the underground work of women and young persons.

#### RESOLUTION CONCERNING EQUALITY OF TREATMENT BETWEEN NATIONAL WORKERS AND COLOURED FOREIGN WORKERS

The International Labour Conference,

Considering the importance assigned in Part XIII of the Treaty of Versailles and the corresponding parts of other Peace Treaties to the protection of the interests of workers when employed in countries other than their own, and with a view to the complete application of the Recommendation of the first International Labour Conference held at Washington concerning reciprocity of treatment of foreign workers,

Particularly draws the attention of the States Members to the necessity of securing equality of

treatment between national workers and coloured foreign workers employed either on land or at sea, in the territory of these States or in their possessions and colonies, and

Requests the Governing Body of the International Labour Office to consider the desirability of placing on the Agenda of a very early Session of the Conference, and if possible in 1931, the question of equality of treatment between national workers and coloured foreign workers employed in the territories of the States Members or in their possessions and colonies.

## Annual Report of the Director of the International Labour Office

The annual report of Mr. Albert Thomas, Director of the International Labour Office, for the calendar year 1928, was presented to the Twelfth Session of the International Labour Conference. The report is in two parts: Part I reviews the general activity of the International Labour Organization, while Part II gives a summary of the annual reports which, under Article 408 of the Treaty of Versailles, the governments are required to submit on the measures taken by them to give effect to Conventions to which they are parties.

The first section of Part I deals with the general work of the Organization and is subdivided into three chapters as follows:—(1) Questions of organization; (2) international information; and (3) relations. The second section consists of a review of the results obtained, following the lines which were adopted last year, under the following headings: (1) working conditions; (2) social insurance; (3) wages; (4) possibilities of employment; (5) protection of special classes of workers; (6) workers' living conditions; and (7) workers' general rights.

### General Activity of the Organization

No change occurred during 1928 in the membership of the International Labour Organization, which comprises the following fifty-five states: Abyssinia, Albania, Argentina, Australia, Austria, Belgium, Bolivia, Brazil, British Empire, Bulgaria, Canada, Chile, China, Colombia, Cuba, Czechoslovakia, Denmark, Estonia, Finland, France, Germany, Greece, Guatemala, Haiti, Honduras, Hungary, India, Irish Free State, Italy, Japan, Latvia, Liberia, Lithuania, Luxemburg, Netherlands, New Zealand, Nicaragua, Norway, Panama, Paraguay, Persia, Peru, Poland, Portugal, Rumania, Salvador, San Domingo, Kingdom of the Serbs, Croats and Slovenes, Siam, South Africa, Spain, Sweden, Switzerland, Uruguay, Venezuela.

In 1927 Spain and Brazil withdrew from the League of Nations, but remained in the International Labour Organization. The Spanish Government notified the Council of the League of Nations in March, 1928, of its decision to resume its membership in the League. The Brazilian Government has remained outside the League but has co-operated fully in the work of the International Labour Organization. This indicates the value which is attached by Brazil to the cause of international social progress.

The Director in his report observes that the United States of America, Mexico, the

Union of Socialist Soviet Republics, Turkey and Egypt are still not members. As regards the United States, reference is made to the unofficial co-operation which was obtained from that country by the International Labour body in various respects and the hope is expressed by the Director that "if at any time political circumstances or economic exigencies induce the United States to develop their international relations they will in the end, as the result of these new relations, become a member of the International Labour Organization. . . . It is indeed possible that, without any change in the official attitude, 1929 may see some further co-operation between the United States and the League of Nations, either on economic or on humanitarian questions. But there is no use disguising the fact that so far as the Labour Office is concerned there are special difficulties to be met: the prejudices of employers and workers in the new world against the pre-occupations of those in the old world; the strict obligations involved in the working of the International Labour Conference, which in fact is less accessible to outside countries than the conferences or special commissions of the League of Nations, etc. All the energy and tenacity of the Organization will be required to pave the way for closer relations with the most highly industrialized, but at the same time perhaps, despite appearances, morally the most isolated country in the world."

There was no change in relations with Mexico to record. That country still provides the International Labour Office with the information which it asks, but political events of recent months, the assassination of General Obregon, the election of a provisional President, and the subsequent state of rebellion, give little hope of any increased interest in international affairs.

Interesting progress was made in the external relations of the International Labour Office with the Union of Socialist Soviet Republics in 1928, at least in the field of scientific information. The general attitude of Soviet Russia to the League of Nations and the International Labour Office certainly shows no change. In newspapers and in official Soviet speeches, the Office is still denounced as "an annex to that imperialist centre, the League of Nations," an instrument in the hands of the capitalist for deceiving the working class by a pretext of "love for the workers" and of "defence of the workers' interests". According to *Trud*, the International Labour Conferences are nothing

more than "a swindle organized by the imperialists of the world". These quotations might be multiplied. Their number at any rate proves that the Soviet administrators and leaders are following attentively the activities of the International Labour body. Fortunately, even the supporters of antagonistic theories can maintain relations with each other in the search for accurate knowledge and in the field of science. Regular exchange of publications with the various Soviet institutions was established some years ago. By means of this exchange the Office's information on present-day Russia has been organized on a sound basis and its studies on Russia have won recognition as being authoritative. A new feature, however, in the extension of relations with Russia has been the direct exchange of information with that country during the past year. This exchange has developed to such an extent that the Office regularly and rapidly receives on the various questions affecting labour conditions in Russia the information it requires for its own publications and to meet demands from without. Thus, the information in the International Labour Office on industrial conditions in Russia is no longer based solely on publicly issued documents, but also (as for all other countries) on information supplied directly by the Government services. The Director passed through Moscow on his journey to the Far East last winter and although the visit was of a purely personal and private nature, Mr. Thomas took advantage of his visit to develop the relations between the services of the International Labour Office and of the Union of Soviet Republics.

Although Turkey is not yet a member of the Organization, cordial relations have been instituted between that country and the International Labour Office.

The question of Egypt's membership in the League of Nations and consequently in the International Labour Organization, depends on negotiations which are still pending between the British and Egyptian Governments.

### Revision of Conventions

The problem of the revision of Conventions of the International Labour Conference was raised during 1928 by the British Government, which proposed a revision of the Eight-Hours Convention. On that occasion the Governing Body decided not to consider the British proposal until rules had been laid down as to the general procedure to be followed for the revision of Conventions. There are three groups of questions which remain to be settled in this connection. In the first place, the standing orders of the

Conference will have to be adapted so as to provide for the possibility of Conventions being revised. In the second place, it is necessary to settle definitely the legal machinery for effecting a revision. There is no doubt, it is stated, but that revision can only be carried out by means of a new Convention, but the form to be given to this Convention must be defined. Lastly, the revision of Conventions raises questions as to the clauses to be included in future Conventions.

### Content of Conventions

The question whether the International Labour Conference should adopt Conventions containing general principles or detailed provisions was frequently discussed. The importance of this question is evident. From the legal point of view it is to be noted that there is no rule limiting the Conference in this respect. The question is rather one of policy. The Director deals with this subject in his report, but no suggestion has been offered to the Conference by the Governing Body or the Director on this point.

### Question of Resolutions adopted by the Conference

Attention is directed to the growing number of resolutions submitted to the annual Conference. At the last session no fewer than nineteen resolutions were adopted on most varied subjects. The resolutions of the Conference have no legal standing, and it is open to the states to which they are addressed to pay no attention to them. The Director feels that it would be better that the Conference should be more moderate in its use of this procedure, which should be followed in exceptional cases only.

### Expenses and Staff

The 1929 Budget of the International Labour Organization amounts to 8,782,640 francs (\$1,695,049.52). The estimated receipts from the sale of publications is 170,000 francs (\$32,810), which leaves a net total of 8,612,640 francs (\$1,662,239.52) to be distributed among the fifty-five states members.

The staff in 1927 numbered 375 persons; 378 in 1928; and will number 399 in 1929. It will thus be slightly more than in 1923, when there were 389 officials in the Office.

The estimates for 1930, as approved by the Governing Body, provide for a budget of 8,713,678 francs (\$1,681,739.85).

### Information Services

The chapter on "International Information" mentions that requests for information made to the International Labour Office dur-

ing the past year have been more numerous than ever, numbering upwards of 1,000, without counting those replied to directly by national correspondents of the Office, which are also increasing steadily. These requests come from governments, employers' organizations, workers' organizations and other institutions and individuals. The majority of the requests were received from France, Germany, Great Britain and Italy, but many came from countries which are not even members of the International Labour Organization: the United States (60) and Russia (15).

The chapter on "International Information" deals also with the publications of the International Labour Office, including the weekly *Industrial and Labour Information*; the *International Labour Review* (monthly); the *Legislative Series*, comprising the texts of labour laws of various countries; the *Encyclopaedia of Industrial Hygiene*, which will comprise a reference work of at least 2,200 pages, of which 133 brochures were issued in English and 168 in French up to the end of 1928; special publications such as the *International Survey of Legal Decisions and Labour Laws*, and studies and reports on many different subjects.

### Relations with Various Organizations

One of the most interesting chapters of the director's report is that on "Relations" in which a review is given of the relations of the International Labour Organizations with universities and educational institutions; the churches, charitable, welfare, and social service organizations; women's organizations; inter-parliamentary organizations; the International Federation of League of Nations Societies; the Institute of Pacific Relations; disabled and other ex-service men's associations; the International Association for Social Progress; workers' organizations (including the International Federation of Trade Unions, Christian trade unions, Fascist trade unions and labour organizations in distant countries): salaried employees; civil servants; employers' organizations; ship-owners and seamen; agriculturists; professional workers and co-operative organizations.

### Examination of Results

The second section of the Director's report comprises an examination of the results of the work of the International Labour Organization since its inception in 1919. At the beginning of this section the Director deals with the economic situation in 1928, mentioning the notable progress which had been made in the stabilization in the currency and

the movement for rationalization in both industrial production and distribution. Attention is given also to the discussions which have occurred in different countries of the problem of industrial relations.

The economic progress made during 1928 was accompanied by notable progress in international labour legislation during the same year. The following figures show the increase in the ratifications of the Conventions of the International Labour Conference, as compared with the preceding year:—

—	March 1928.	March 1929
Ratifications communicated.....	263	342
“ authorized.....	34	33
“ recommended.....	180	121

The number of ratifications has thus increased by 79 in one year, the highest figure so far attained for any single year.

Tables are published listing the Conventions and Recommendations adopted at the successive sessions of the International Labour Conference and showing the action taken on these matters by the different member states.

The Director, in concluding this annual survey of the work of the Organization, does so with a feeling of optimism. "It may now be considered," he observes, "that the Organization has reached a stage of smooth, easy running which is a common phenomenon with good motor cars after they have done a few thousand miles—the engine is 'run in'." The Conference and its groups are now working according to rules which are no longer discussed, but which are frankly accepted and easily applied. The Governing Body has clearly classified and distributed the work of its Committees. The development of the technical bodies of the League of Nations has of itself made possible a clearer division of the international work which has to be done. Even the relations between the International Labour Office and those states which are not members of the League have now attained some sort of regularity. This does not mean, however, that there are not still a number of serious problems requiring attention, but at least the Office can enter into their discussion with the knowledge gained from nine years experience. In any case, these difficulties are surely a proof of the vitality of the Organization, and some of the attacks which have been made on the Office should be regarded as a tribute to the progress it has achieved and the authoritative position which it has won."

### 45th Session of Governing Body

The Governing Body of the International Labour Office held its forty-fifth session in Geneva on May 27-28, under the chairmanship of Mr. Arthur Fontaine, French Government delegate. Dr. W. A. Riddell, Canadian Advisory Officer in Geneva, was present as one of the Government representatives and Mr. P. M. Draper, Secretary-Treasurer of the Trades and Labour Congress of Canada, as one of the workers' representatives.

The Governing Body decided to transmit to the International Labour Conference a report of the Standing Orders Committee, which dealt with (1) certain legal problems connected with the revision of International Labour Conventions, and in particular the standard articles to be inserted in future Conventions, and (2) a proposal put forward by Mr. Riddell, Canadian Government representative, concerning the composition of the Committees of the Conference.

The Committee set up by the Governing Body to consider the various aspects of the problems of the use of different languages in the organs and publications of the International Labour Office submitted a report on the practical means of providing facilities to enable delegates unacquainted with the official languages of the Conference to follow the proceedings. The report was approved for transmission to the Conference.

The Governing Body decided that the Committee of Experts on Automatic Coupling, the creation of which was proposed by a resolution adopted by the Eleventh Session of the Conference, should consist of twenty-four experts, one-third of whom should be nominated by each group of the Governing Body, as well as of one member of each group of the Governing Body. It was agreed that the members of the Committee should be appointed at the Forty-Sixth Session of the Governing Body in October next.

A proposal was approved to hold a conference of housing statisticians to consider

means of obtaining uniformity in statistics relating to housing. Another proposal which was approved was that the Governing Body should appoint a Committee of three of its members to consult with representatives of the League of Nations Committee on Private Law in Inland Navigation to study the best means of regulating conditions of work on international waterways.

### Committee on Social Charges

The Committee on Social Charges held its first session at the International Labour Office on May 24 and 25. The Committee, which was set up by the Governing Body to assist the competent service of the International Labour Office in its work, was called on to examine five monographs, relating to social charges in Czechoslovakia, France, Germany, Great Britain and Poland.

Three sittings were held. The discussions referred almost entirely to the question of the scope of national monographs on social charges. Some of members and experts were of opinion that the studies should be confined to charges connected with social insurance, while others held that social welfare charges should be included. In view of the fact that in most countries there are at present no official statistics covering the cost of social welfare services as a whole, it was decided to postpone the decision until the next session.

At the next session the International Labour Office is to submit to the Committee a report setting forth the various conceptions of the scope of studies of social charges, and indicating, so far as possible, the methods used in the various countries to cover the occupational and social risks of the workers. The Office will also endeavour, with the collaboration of the governments concerned, to supplement the statistics which have been compiled.

The next session of the Committee will be convened as soon as the Office is in a position to submit the report desired.

### Labour Statistics in Australia

The *Quarterly Summary of Australian Statistics*, published by the Commonwealth Bureau of Census and Statistics, gives in its issue for March the most recent labour and industrial statistics of the Commonwealth. The estimated population of the Commonwealth (exclusive of aborigines) at the end of 1928, is given as 6,336,786 (3,241,535 males and 3,095,251 females). Of this number, nearly 2½ millions were in New South Wales, 1¼ millions in Victoria, and less than a million in Queensland.

The membership of trade unions in the

Commonwealth is given as having been 911,652 in 1927. A table is given showing the weighted average nominal weekly and hourly rates of wages throughout the Commonwealth. The average weekly wage for adult males in all industries is 100 shillings, 5 pence; and for all groups except shipping and agriculture the averages are as follows:—weekly wage, 101s. 6d.; working hours 45.27; hourly wage, 26.91d. For adult female employees the weighted average nominal weekly wage was 53s. 10d. at the end of 1928; working hours were 44.79, and the hourly wage was 14.42d.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING MAY

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in May was 6,752, their employees numbering 1,046,756 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for

May was 1,642, having an aggregate membership of 193,787 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### Employment Situation at the Beginning of June, 1929, as Reported by the Employers

Employment at the beginning of June showed a further pronounced gain, resulting in a more favourable situation than in any other month of the record. Statements were tabulated by the Dominion Bureau of Statistics from 6,752 firms with 1,046,756 employees, as compared with 993,253 on May 1; this increase of 53,503 persons, or 5.4 per cent, brought the index number to 122.4 or over three points above the previous high level in the last nine years, recorded on August 1, 1928. In the preceding month, the index (average calendar year 1926=100) stood at 116.2 and on June 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 113.8, 107.2, 102.2, 95.6, 96.4, 98.5, 90.3 and 87.7, respectively.

Unusually large advances were registered in logging, construction and transportation, while manufacturing, trade, services and communications also showed important increases.

#### Employment by Economic Areas

Expansion was noted in all of the five economic areas, firms in Quebec and the Prairie Provinces employing the greatest number of extra workers.

*Maritime Provinces.*—Further improvement was noted in the Maritime Provinces, according to statistics received from 549 employers with a combined working force of 75,431 persons, as compared with 72,836 on May 1. This gain was rather smaller than that reported on June 1 last year, when the index was several points lower. Manufacturing (particularly of lumber and fish products), and

construction registered heightened activity, while transportation was seasonally slacker.

*Quebec.*—Construction, transportation, manufacturing and logging recorded pronounced increases in personnel, and smaller gains were shown in mining, communications and trade; the gain in logging was due to river-drives. Employment was in considerably greater volume than on the same date in any of the last eight years, the index being over five points higher than on June 1, 1928, when important advances had also been indicated. Statements were tabulated from 1,503 firms employing 286,361 workers, or 21,300 more than in their last monthly report.

*Ontario.*—The situation in Ontario was better than in any other month of the years since 1920, the index standing at 126.7 as compared with 115.5 at the beginning of June, 1928, when the trend was also upward. The payrolls of the 3,054 co-operating establishments aggregated 443,397 persons; on May 1, they had 432,847 employees. Construction and transportation registered the greatest expansion, but gains were also noted in trade, mining, communications, logging and services. In manufacturing, considerable increases in the lumber, food, pulp and paper and other groups were offset by losses in iron and steel (which of late has shown exceptional activity), and in textiles.

*Prairie Provinces.*—Construction, especially railroad construction, transportation, manufacturing and services reported the most marked improvement in the Prairie Provinces,

where the 934 firms whose statistics were tabulated employed 150,582 persons, as against 136,084 in the preceding month. Similar increases were indicated on June 1, 1928, but the index then was many points lower.

*British Columbia.*—An aggregate payroll of 90,985 workers was registered by the 712 reporting employers, who had 86,425 at the beginning of May. Employment was in greater volume than in the early summer of any of the last nine years. Construction and manufacturing recorded the most noteworthy expansion on the date under review, but logging, transportation and other groups also showed heightened activity, while coal mining was seasonally slacker.

Table I gives index numbers by economic areas.

increase of 6,347 over their May 1 staffs. Transportation, construction and manufacturing reported the greatest increases, but trade was also busier. The index was at the highest point yet reached.

*Quebec.*—Continued gains were registered in Quebec City, chiefly in manufacturing, construction and transportation. Statements were tabulated from 106 establishments having 11,924 workers, as against 11,316 in the preceding month. Considerable advances had also been indicated on June 1, 1928, when the index was lower. Employment on the date under review was in greater volume than at the same date in any other year of the record.

*Toronto.*—The situation in Toronto continued better than in any other period in the seven years for which statistics are available,

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Employment by Cities

The trend of employment was upward in seven of the eight cities for which separate compilations are made; Montreal, Quebec, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver all showed considerable gains, while declines were noted in Windsor and the adjacent Border Cities.

*Montreal.*—Improvement on a large scale was recorded in Montreal, where the 801 co-operating firms employed 140,660 persons, an

according to returns furnished by 888 employers with 124,417 persons on their payrolls, compared with 123,011 on May 1. Manufacturing, particularly of iron and steel products, was slacker, but improvement was shown in construction, trade, services, and transportation. The general gain was rather smaller than that noted on June 1, 1928.

*Ottawa.*—Construction, services and manufactures recorded heightened activity in Ottawa, where employment was at a higher level than at the beginning of June of last year,

when a decline had been indicated. A combined working force of 13,570 employees, or 540 more than in their last report, was indicated by the 135 co-operating firms.

*Hamilton.*—Additions to staffs on a rather smaller scale than on June 1, 1928, were reported in Hamilton; 219 employers had 39,932 workers on their paylists, as compared with

39,205 at the beginning of May. Most of the expansion took place in manufacturing, notably in food, electrical apparatus and iron and steel plants, but other industries were also busier. Conditions were decidedly better than on the same date a year ago.

*Windsor and the Adjacent Border Cities.*—Following a period of unusual activity, em-

NOTE: "Relative Weight" in Table 1, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS, (AVERAGE 1926=100)

Relative Weight of Employment by Districts as at June 1, 1929.....		100.0	7.2	27.3	42.4	14.4	8.7

ployment in the Border Cities showed a decline on June 1, 2,565 persons being released from the staffs of the 128 firms furnishing data, who reported 20,746 employees. Most of the reduction took place in automobile factories, while improvement was noted in construction. Increases had been registered on June 1, 1928, but employment then was in much smaller volume, the index standing at 147.3, as compared with 168.3 on the date under review.

*Winnipeg.*—An aggregate working force of 32,638 persons was indicated by the 312 employers whose statistics were received, and who had 32,374 employees on May 1. This gain involved a rather smaller number of

persons than that noted at the beginning of June last year, but the index was then slightly lower. Most of the advance recorded was in construction and communications.

*Vancouver.*—Manufacturing reported the largest gain in Vancouver, where transportation was rather slacker. Statements were tabulated from 264 employers with 29,514 workers in their employ, or 242 more than on May 1. Improvement was also indicated on June 1 a year ago, when the situation was not so favourable.

Index numbers by cities are given in Table II.

NOTE. The "relative weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

### Manufacturing

Statements were tabulated from 4,106 manufacturers employing 575,358 operatives, as compared with 568,118 in the preceding month. This increase was not so extensive as that reported on the same date in 1928, but employment continued higher than in any other month for which data are available. Lumber mills registered the greatest gains, which were of a seasonal nature, while important advances were also made in the fish-preserving, pulp and paper, vegetable food, building material, rubber, electric-current, electrical apparatus, mineral, non-ferrous metal

and some other industries. On the other hand, iron and steel and textile plants were slacker; the losses in the former were the first recorded since the beginning of this year, during which exceptional activity has been noted in the metal industries.

*Animal Products, Edible.*—There were further pronounced increases in the number employed in this group, particularly in the fish-preserving division in the Maritime Provinces. Statistics were tabulated from 243 firms employing 19,005 persons, as compared with 17,423 in the preceding month. This increase, which was slightly more extensive than that

NOTE: The 'relative weight' in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE CALENDAR YEAR 1926=100)

—		All industries	Manu- facturing	Logging	Mining	Communi- cation	Trans- portation	Con- struction	Services	Trade
June	1. 1921	87.7	87.8	85.4	92.8	91.2	90.6	68.7	86.7	91.8
June	1. 1922	90.3	91.1	67.7	96.9	86.5	98.1	79.4	83.8	89.3
June	1. 1923	98.5	101.2	94.8	106.3	87.8	100.7	86.0	90.9	91.2
June	1. 1924	96.4	95.7	96.6	108.5	94.5	101.6	90.4	95.1	91.8
June	1. 1925	95.6	95.6	92.6	98.8	94.6	97.1	95.6	97.2	93.1
Jan.	1. 1926	90.7	90.0	129.2	100.9	95.6	95.9	63.4	90.1	101.3

June	1. 1929	122.4	121.2	92.7	115.8	120.9	115.4	144.6	131.1	126.0
Relative weight of employ- ment by Industries as at June 1, 1929.....		100.0	55.0	2.2	4.8	2.8	12.4	12.8	2.1	7.9

reported on June 1, 1928, brought the index to a higher point than on the same date in any other year of the record.

*Leather and Products.*—Employment in this group, chiefly in boot and shoe plants, showed a slight falling-off, which was much smaller than that indicated in the same month last year, when the index was, however, several

points higher. The working forces of the 177 co-operating employers totalled 16,132 persons, as against 16,188 in the preceding month. The largest declines were in the Prairie Provinces.

*Lumber and Products.*—Continued seasonal expansion was noted in lumber mills, and there were also gains in container and other

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	*Relative Weight	June 1 1929	May 1 1929	June 1 1928	June 1 1927	June 1 1926	June 1 1925	June 1 1924

\*The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

wood-using factories. Returns were compiled from 711 manufacturers in the lumber group having 61,394 employees, compared with 54,971 at the beginning of May. All provinces shared in the upward movement on June 1, the greatest advance taking place in Ontario. Rather smaller additions to staffs were made on the same date last year, when the index was considerably lower.

*Musical instruments.*—There was a slightly unfavourable movement in employment in musical instruments factories, 42 of which reduced their payrolls from 3,003 persons at the beginning of May to 2,964 on June 1. Improvement had been indicated on the same date last summer, but employment then was at a lower level. Most of the decrease took place in Ontario.

*Plant Products, Edible.*—Large increases were noted in this group at the beginning of June, when 1,089 persons were added to the forces of the 320 co-operating manufacturers, who had 28,692 employees. Sugar and syrup, fruit and vegetable canning, biscuit and confectionery establishments reported most of the improvement, which occurred mainly in Quebec and Ontario. The increase registered on June 1, 1928, was somewhat larger, but the situation then was not so favourable as on the date under review.

*Pulp and Paper Products.*—Further important additions to staffs were indicated in this group, chiefly in pulp and paper mills, but also in printing and publishing. This increase brought the index number to a higher point than in any other month of the record. An aggregate payroll of 66,711 workers was reported by the 520 establishments whose statistics were compiled, which had employed 65,457 in the preceding month. A considerable proportion of the advance took place in Quebec and Ontario.

*Rubber Products.*—Thirty-seven rubber factories recorded a combined working force of 18,204 persons, or 499 more than in their last return, most of the gain being in Quebec. Employment was in greater volume than at the beginning of June a year ago, when an increase on a smaller scale was noted.

*Textile Products.*—There was a seasonal reduction in activity in textiles on the date under review, chiefly in cotton and clothing factories in Quebec and Ontario. Data were received from 564 firms employing 83,160 persons, as against 84,195 in the preceding month. This contraction involved a greater number of workers than that indicated on June 1, 1928, when the index was slightly below its level at the time of writing.

*Tobacco, Distilled and Malt Liquors.*—Activity in this group showed a small increase, according to 142 employers whose staffs rose from 15,854 in the preceding month to 15,966 on the date under review. Breweries in Quebec and the Prairie Provinces reported this advance, which contrasted with the decrease shown on the same date last year. The index number then was several points lower.

*Chemicals and Allied Products.*—Statements were tabulated from 110 plants in this division with 7,798 persons on their payrolls, as against 7,913 in the preceding month. The index number was higher than in the same month in any of the years since 1920.

*Clay, Glass and Stone Products.*—Further marked improvement was shown in building material plants, 138 of which reported an aggregate working force of 13,116 persons, or 616 more than on May 1. The index was at its maximum for the record of ten years. Quebec, Ontario and the Prairie Provinces reported the bulk of the increase, in which all branches of the industry shared.

*Electric Current.*—A further advance on a larger scale than in previous years was shown in electric current plants; the index was higher than in any other month since the series was commenced. The 92 co-operating companies increased their staffs by 1,242 workers to 15,999 at the beginning of June. Quebec recorded the greatest gain, but the tendency was generally upward.

*Electrical Apparatus.*—Heightened activity was shown in electrical appliance factories, 47 of which enlarged their payrolls by 301 employees to 14,043 on the date under review. This increase brought employment to a higher level than in any other period of the record. Ontario firms registered practically all the advance.

*Iron and Steel Products.*—For the first time since the beginning of the year, there was a decrease in iron and steel works, mainly in automobile plants where activity has been at an exceptionally high level. On the other hand, railway car shops and some other groups showed improvement. Returns were tabulated from 656 manufacturers employing 171,412 persons, compared with 176,739 on May 1. Additions to staffs were noted in the Maritime provinces, but elsewhere the tendency was downward, particularly in Ontario. Improvement was registered on June 1, 1928, when the index was, however, many points lower.

*Non-ferrous Metal Products.*—Smelters and refineries and manufacturers of zinc and aluminum products reported heightened acti-

vity, according to 105 firms employing 20,553 persons, compared with 20,220 at the beginning of May. This increase, which took place chiefly in Ontario and British Columbia, exceeded that recorded at the beginning of June a year ago, when employment was in considerably smaller volume.

*Mineral Products.*—Continued seasonal advances were noted generally in this group, in which they were of practically the same size as those indicated on June 1, 1928, when the index number was many points lower. An aggregate payroll of 13,158 persons was employed by the 81 co-operating firms, who had 12,862 in the preceding month.

*Miscellaneous Manufacturing Industries.*—The production of roofing materials and various other articles listed under this heading showed an increase, 32 workers having been added to the forces of the 73 manufacturers whose returns were tabulated, and who employed 4,489 at the beginning of May.

### Logging

Employment in logging camps, chiefly owing to river-driving operations in Quebec, showed an advance which was on a larger scale than on the same date in the preceding year. The index number then was rather lower. Returns were received from 207 firms employing 23,325 persons, or 4,103 more than on May 1.

### Mining

*Coal Mining.*—Employment in the western coal fields was seasonally slacker; the index was practically the same as on June 1, 1928, when somewhat greater declines had been recorded. Statements were compiled from 77 operators with 25,454 employees, or 548 less than at the beginning of May.

*Metallic Ores.*—Considerable improvement was shown in metallic ore mines in Ontario and the Prairie Provinces; 75 employers enlarged their staffs from 15,479 workers on May 1 to 16,028 at the beginning of June. The index was higher than in any other month since the series was commenced. Smaller gains had been noted on June 1, of last year.

*Non-Metallic Minerals, (other than coal).*—According to data received from 64 firms in this group, they employed 9,046 persons, or 30 less than in the preceding month. Despite this minor decrease, the index numbers was higher than on June 1 in earlier years of the record.

### Transportation

*Street Railways and Cartage.*—A further increase in employment was registered in local

transportation on June 1, when 131 companies added 1,164 employees to their staffs, bringing them to 24,434 on the date under review. This gain was larger than that noted at the beginning of June, 1928, when the index was some 13 points lower. Improvement was shown in all provinces.

*Steam Railways.*—Continued and greater expansion was indicated in steam railway operation, in which the 106 co-operating employers enlarged their staffs from 83,276 in the preceding month to 88,085 on June 1. Ontario, Quebec and the Prairie Provinces reported most of the increase, which was larger than on the same date in other years of the record while the index was also at its maximum for the beginning of June in the years since 1920.

*Shipping and Stevedoring.*—There were pronounced seasonal losses in employment in the Maritime Provinces, but the trend was decidedly upward in Quebec and Ontario. Statistics were received from 68 firms with 17,263 employees, as compared with 15,033 in the preceding month. Slightly greater gains were noted on June 1, 1928, when the index was practically the same as on the date under review.

### Communications

Continued improvement was indicated on telephones and telegraphs; 186 companies enlarged their staffs from 28,413 persons at the beginning of May, to 29,284 on June 1. Employment was more active than in any other month for which data are available.

### Construction and Maintenance

*Building.*—The volume of employment afforded in building was greater than in the early summer of other years of the record, which goes back to 1920. An aggregate staff of 50,897 was reported by the 599 contractors furnishing statistics, who had 43,193 workers on May 1; this expansion was the most pronounced on record. Activity increased in all provinces, but the largest gains were in Quebec.

*Highway.*—The 197 highway and road contractors furnishing returns had 22,329 persons in their employ, or 10,098 more than at the beginning of May. This improvement, in which all provinces shared, was more extensive and the level of employment was higher than on June 1 in any other year since 1920.

*Railway.*—Continued advances were registered by the track departments of the railways; resulting in a greater volume of employment than at the beginning of June in previous years for which data are available. The working forces of the 46 employers totalled 60,737 persons, as against 48,435 in

the preceding month. The most noteworthy increases were in the Prairie Provinces, although there was marked improvement in all provinces.

### Services

Hotels and restaurants showed their customary seasonal increase, while only small changes took place in other branches of this group. Statements were compiled from 213 firms employing 21,612 workers, as compared with 20,023 on May 1. The index was higher than on June 1 in any other year of the record.

## Unemployment in Trade Unions at the Close of May, 1929

Unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons who are engaged in work other than their own trade, or who are idle because of illness, are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The local trade union situation at the close of May continued to show improvement, the 1,642 labour organizations from which reports were tabulated with 193,787 members indicating 4.0 per cent of unemployment contrasted with 5.5 per cent in April. All provinces contributed a share to the increase in employment recorded over April; the most substantial increase was registered from British Columbia, where the building and construction trades and the coal mining industry largely accounted for the better conditions prevailing in that province. Quebec and Nova Scotia unions also reported moderate gains in activity, while the changes indicated from the remaining provinces were slight. In making a comparison with the returns for May of last year, when 3.7 per cent of idleness was recorded, the Alberta situation remained unchanged, while the improvement shown by Nova Scotia, New Brunswick, Ontario, Saskatchewan and British Columbia unions when combined was almost sufficient to offset the declines in employment reported from Quebec and Manitoba. The changes, however, were not particularly noteworthy in any one province.

### Trade

Improvement was indicated in both retail and wholesale trade; 677 establishments reported 82,904 employees, or 1,422 more than in their last monthly return. This gain was slightly larger than that noted on June 1 in any other year since 1920, in all of which the level of employment was lower.

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada on the date under review.

A separate tabulation is made each month of unemployment in the largest city in each province with the exception of Prince Edward Island. During May employment for Halifax union members was in considerably greater volume than in April, and the improvement registered by Montreal, Regina and Vancouver unions was also outstanding. Nominal gains only were registered from Toronto and Winnipeg unions. From Saint John the same percentage of idle members was reported as in April, and from Edmonton a fractional percentage decline in employment only was indicated. Regina unions registered the most extensive increases in employment when compared with the returns for May of last year, while from Saint John, Vancouver and Winnipeg unions gains on a much smaller scale were reported. The situation for Edmonton, Halifax, Montreal and Toronto union members, however, was less favourable than in May a year ago.

Accompanying this article is a chart which illustrates the trend of unemployment from January, 1923, to date. It will be noticed that the curve during May extended in a downward direction from that of April, showing that employment was in greater volume during the month under review. The level at the close of May, however, showed very slight divergence from that indicated during the same month in 1928.

The manufacturing industries reflected greater activity during May than in the preceding month as shown by the returns received from a total of 475 unions, covering a membership of 56,947 persons, 4.8 per cent of whom were idle at the close of the month contrasted with 7.0 per cent in April. The improvement reported over April was attributable largely to expansion in the woodworking

and garment trades, while printing tradesmen and cigar makers reported nominal advances in employment only. On the other hand, hat and cap makers and glass workers were slacker than in April, and reductions in employment on a smaller scale were reported by leather workers, metal polishers and bakers. Among iron and steel, textile and fur workers, and pulp and paper makers the same percentage of idleness was reported as in April. The situation in the manufacturing industries, as a whole, showed little change from May of last year when 4.4 per cent of unemployment was recorded, the increases and declines in employment reported from the various trades in a large measure offsetting each other.

and Alberta coal miners were somewhat better employed than in May of last year, and in British Columbia a fully engaged situation was indicated in both months of the comparison. A number of unions continued to report some part time employment.

Building and construction tradesmen were busier during May than in the preceding month, the 205 unions from which reports were received with 30,680 members showing 8.2 per cent of inactivity compared with 11.3 per cent in April. Hod carriers and building labourers, who formed but a small percentage of the entire group membership reporting showed, the largest percentage gain, but the advance indicated by bricklayers, masons and

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Oigarmakers registered important gains in employment over May a year ago, and among textile, leather, wood and iron and steel workers, hat and cap makers, and printing tradesmen somewhat heightened activity was recorded. Glass and garment workers, general labourers, bakers, pulp and paper makers, and metal polishers all participated in the reductions in employment, which but slightly more than offset the gains reported in the other trades.

From unions of coal miners 42 reports were received during May, combining a membership of 16,015 persons, and of these 921 or a percentage of 5.8 were idle on the last day of the month, compared with 8.4 per cent in April and with 7.0 in May a year ago. British Columbia unions indicated recovery during May from the slackness shown in April, while in Nova Scotia and Alberta conditions were slightly improved. Both Nova Scotia

plasterers and carpenters and joiners, though smaller when viewed from a percentage basis, still involved the greatest number of workers. In addition, nominal gains were recorded by bridge and structural iron workers, granite and stonecutters, painters, decorators and paperhangers and electrical workers. Tile layers, lathers and roofers were considerably slacker than in April, while among plumbers and steamfitters the unemployment increase was fractional only. The same situation prevailed in the building trades as a whole during May as in the corresponding month last year, though fluctuations occurred in the various trades. In this comparison bridge and structural iron workers, carpenters and joiners, electrical workers, granite and stonecutters, and painters, decorators and paperhangers reported a more favourable employment trend during the month under review, which was offset by the curtailment evident among brick-

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE INDUSTRIES BY GROUPS OF INDUSTRIES

layers, masons and plasterers, hod carriers and building labourers, tile layers, lathers and roofers, and plumbers and steamfitters.

The transportation industries registered slight improvement only in conditions during May when compared with April, as indicated by the reports received from 683 unions comprising a membership of 63,989 persons. Of these 2.1 per cent were without work on the last day of May contrasted with an unemployment percentage of 2.6 in April. The employment tendency among navigation workers was slightly upward from that of April, and steam railway employees also were accorded a greater volume of work. On the contrary, the situation for teamsters and chauffeurs was slightly adverse while among

street and electric railway employees practically no change was shown. A minor decline in activity was registered in the transportation group as a whole over May of last year when 1.8 per cent of the members reported were idle, the reductions being confined entirely to the steam railway division. Navigation workers, teamsters and chauffeurs and street and electric railway employees on the other hand were afforded a slightly greater volume of employment. The changes throughout, however, were small.

Owing to the casual nature of their work reports from longshoremen are tabulated separately each month. During May 14 association of longshore workers made returns to the Department, including a membership of 7,121 persons, 15.1 per cent of whom were idle at the end of the month. Employment was on a larger scale during May for these workers than in either the previous month when 22.9 per cent of idleness was registered or in May of last year when the unemployment percentage stood at 19.4.

Slight variation only was indicated in the situation among retail clerks during May, both when compared with the returns for the preceding month or for May of last year, the 8 unions from which returns were tabulated with 1,548 members showing 0.6 per cent of inactivity, compared with percentages of 0.9 and 0.7 in April, and in May, 1928, respectively.

At the close of May reports were received from 67 unions of civic employees, embracing a membership of 7,090 persons, 0.7 per cent of whom were without employment contrasted with 0.8 per cent of idleness in April and 0.2 per cent in May a year ago.

Some slight falling off in available employment was manifest in the miscellaneous group of trades during May, as indicated by the returns tabulated from 106 unions with an aggregate membership of 5,097 persons. Of these 232 were unemployed on the last day of the month, a percentage of 4.6 compared with 3.9 per cent in April. Hotel and restaurant employees were largely responsible for the unfavorable situation reported while theatre and stage employees, barbers and stationary engineers and firemen registered slight improvement. The same percentage of idleness was indicated in the miscellaneous group of trades, as a whole, during the month under review as in May last year, namely 4.6, but changes in the employment volume were shown in the different groups. As in the previous comparison, hotel and restaurant employees were slacker than in May of last year, and among barbers and office workers

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

nominal contractions in employment were reported. A higher level of employment was maintained, however, by stationary engineers and firemen, and barbers.

The three unions of fishermen from which reports were tabulated at the close of May, covering a membership of 848 persons indicated 3.7 per cent of unemployment as compared with percentages of 2.6 in April and 1.1 in May, 1928.

Lumber workers and loggers reported a fully engaged situation in May compared with

18.3 per cent of inactivity in April and 9.5 per cent at the close of May, 1928.

Table II shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1928 inclusive, and also the percentage of unemployment by provinces for May of each year from 1919 to 1926 inclusive, and for each month from January, 1927, to date. Table I summarizes the returns in the various groups of industries for the same months as in Table I.

### Employment Office Reports for May, 1929

During the month of May, 1929, the reports from the offices of the Employment Service of Canada showed a fractional percentage decline in the average daily placements when compared with the preceding month, while a reduction of slightly over 6 per cent was indicated in comparison with the average daily placements effected in May a year ago. Farming registered substantial declines from the previous month, and in all other industrial groups the situation showed improvement. Noteworthy reductions occurred in farming also, when compared with the reports for May of last year, followed by minor contractions in construction and maintenance, services and mining, while in the remaining groups moderate gains were recorded.

The accompanying chart shows the trend of employment from January, 1927, to date, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and of placements in relation to applications declined slightly throughout the month, and in each instance was somewhat lower than that shown in May of last year. The ratio of vacancies to each 100 applications was 85.9 and 83.9 during the first and second half of May respectively, contrasted with ratios of 88.0 and 87.6 during the same periods of 1928. The ratio of placements to each 100 applications during the period under review were 78.9 and 78.0 as compared with 80.9 and 81.3 during the corresponding month of 1928.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during May, 1929, was 1,646 as compared with a daily average of 1,662 in the preceding month and with 1,759 in May, 1928.

The average number of applications for employment received daily by the offices during

the month under review was 1,938 in comparison with 1,941 in April, and with 2,003 in May last year.

The average number of placements made daily by the offices of the Service during May, 1929, was 1,521, of which 955 were in regular employment and 566 in work of one week's duration or less as compared with a total daily average of 1,525 in the previous month. Placements during May of last year averaged 1,625, consisting of 1,006 placements in regular and 619 in casual employment.

During the month of May, 1929, the offices of the Service referred 40,922 persons to vacancies and effected a total of 39,542 placements. Of these the placements in regular employment were 24,838, of which 20,331 were for men and 4,507 for women, while the placements in casual work numbered 14,704. The number of vacancies reported by employers was 29,278 for men and 13,515 for women, a total of 42,793, while applications for work numbered 50,395, of which 36,674 were from men and 13,721 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756

1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929 (5 months).....	91,825	53,863	145,688

#### NOVA SCOTIA

Opportunities for employment as indicated by orders received at employment offices in Nova Scotia during May were nearly 30 per cent better than in the preceding month, but

nearly 5 per cent less favourable than during the corresponding month of last year. Placements were over 48 per cent in excess of April, but showed no change when compared with May, 1928. There was a substantial gain in placements in building construction over May of last year, but this increase was offset by minor declines in all other groups. Industrial division in which most of the placements were effected during the month were: manufacturing, 67; logging, 39; farming, 25; transportation, 27; construction and maintenance, 216; trade, 83; and services, 524, of which 326 were of household workers. During the month 267 men and 57 women were placed in regular employment.

were: manufacturing, 61; logging, 34; construction and maintenance, 170; trade, 24; and services, 745, of which 542 were of household workers. Regular employment was found for 255 men and 79 women.

QUEBEC

Employment opportunities as indicated by orders received at employment offices in the Province of Quebec were nearly 14 per cent better than in the preceding month and were on the same level as in the corresponding month last year. There was a gain of over 27 per cent in placements when compared with April, and of nearly 9 per cent in comparison with May, 1928. Placements in farm-

NEW BRUNSWICK

There was an increase of nearly 17 per cent in the number of positions offered by New Brunswick employment offices during May when compared with the preceding month, but a decline of almost 3 per cent when compared with the corresponding month last year. Placements also were nearly 20 per cent in excess of April, but almost 3 per cent less than during May, 1928. Placements in the manufacturing industries showed the largest increase over May last year, and construction and maintenance the largest reduction. The changes, however, in all groups were small. Industrial divisions in which most of the placements were effected during the month

ing, transportation, services and trade were higher than in May last year and more than offset the declines in manufacturing, logging, and construction and maintenance. Industrial groups in which most of the placements were effected during the month were: manufacturing, 151; logging, 302; farming, 133; transportation, 123; construction and maintenance, 726; trade, 190; and services, 934, of which 490 were household workers. There were 1,891 men and 595 women placed in regular employment during the month.

ONTARIO

During the month of May positions offered through employment offices in Ontario showed

\*25 Placements effected by an office since closed.

an increase of nearly 14 per cent over the preceding month, and of more than one per cent when compared with the corresponding month last year. There was a gain of over 14 per cent in placements when compared with April, and of over 3 per cent in comparison with May, 1928. Manufacturing, logging, transportation, services and trade showed gains in placements over May last year, but there were fewer placements in farming and construction and maintenance. Placements by industrial groups included: manufacturing, 2,603; logging, 1,297; farming, 916; mining, 152; transportation, 698; construction and maintenance, 4,176; trade, 779; and services, 6,485, of which 3,331 were of household workers. During the month 8,993 men and 1,851 women were placed in regular employment.

#### MANITOBA

Employment offices in Manitoba were notified of nearly 14 per cent less vacancies during May than in the preceding month and of over 17 per cent less than in the corresponding month last year. Placements were nearly 20 per cent less than in April and 21 per cent less than in May, 1928. Logging and mining placements were slightly higher than in May last year, but all other groups showed declines, the most noteworthy being in construction and maintenance and services. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 141; logging, 84; farming, 672; construction and maintenance, 490; trade, 213 and services, 2,557, of which 1,940 were household workers. Placements in regular employment numbered 1,279 of men and 662 of women.

#### SASKATCHEWAN

The demand for workers as indicated by orders listed at employment offices in Saskatchewan during May was over 17 per cent less than in the preceding month, and over 10 per cent below the corresponding month last year. There was a decline of over 18 per cent in placements when compared with April and of nearly 13 per cent in comparison with May, 1928. All industrial divisions except mining and transportation participated in the decline in placements from May last year, the reduction in farming being the most noteworthy. Placements by industrial divisions included: manufacturing, 172; logging, 40; farming, 1,269; transportation, 127; construction and maintenance, 1,116; trade, 136; and services, 1,576, of which 839 were of household workers. There were 2,495 men and 552 women placed in regular employment during the month.

#### ALBERTA

During May orders received at employment offices in Alberta called for nearly 17 per cent less workers than in the preceding month and nearly 31 per cent less than during the corresponding month last year. There was a decline also in placements of nearly 8 per cent when compared with April, and of 30 per cent in comparison with May, 1928. All industrial divisions except mining, construction and maintenance and trade showed declines in placements from May of last year, those in farming being the most noteworthy. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 375; logging, 50; farming, 1,446; mining, 93; transportation, 93; construction and maintenance, 842; trade, 162; and services, 1,219, of which 743 were of household workers. During the month 2,814 men and 425 women were placed in regular employment.

#### BRITISH COLUMBIA

Orders listed at employment offices in British Columbia during May called for over 19 per cent more workers than in the preceding month and nearly 7 per cent more than during the corresponding month last year. There was an increase of nearly 15 per cent in placements when compared with April and of nearly 5 per cent in comparison with May, 1928. Manufacturing, logging, transportation and services showed gains in placements over May of last year, but these increases were offset in part by reduced placements in farming, mining and construction and maintenance. Placements by industrial divisions included: manufacturing, 951; logging, 461; farming, 310; mining, 147; transportation, 273; construction and maintenance, 1,065; trade, 130; and services, 1,321; of which 618 were of household workers. There were 2,337 men and 286 women placed in regular employment.

#### Movement of Labour

During the month of May, 1929, the offices of the Employment Service of Canada effected 24,838 placements in regular employment, of which 12,478 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,684 were granted the Employment Service reduced transportation rate, 1,198 proceeding to centres within the same province as the despatching office and 486 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona

vide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The movement of labour both within and from the Province of Quebec during May was of bushmen numbering 142 and of these 27 travelled to employment within the province and 115 to points outside. Provincially 25 were conveyed at the special rate from Montreal and 2 from Quebec city to centres within their respective zones. The inter-provincial transfers were from Hull from which centre 90 bushmen journeyed to Pembroke and surrounding districts and 25 to Cobalt.

Transfers at the reduced rate effected by Ontario offices during May totalled 339, of which 295 were to various centres within the Province and 44 to employment in other provinces. Among the workers who profited by the reduced rate provincially were 60 bush workers, 5 cooks, 5 gravel pit workers, 4 highway construction labourers, one millwright, one farm hand and 10 survey workers who received their certificates at Port Arthur for points within its own zone. From the same centre 5 carpenters went to employment at Kingston. Included in the transfers from Sudbury were 3 rock men going to Sault Ste. Marie, one farm hand to Brantford and 68 bushmen, 4 mill hands, one engineer and 6 labourers within the Sudbury zone, while from Pembroke 3 line men, 3 rod men, one foreman and 2 axe men were bound for Fort William, 3 building construction workers and 4 lumber workers for Sudbury, one fireman, one cook, one cookee and 3 lumber workers for Sault Ste. Marie and 5 teamsters and one highway construction labourer for Belleville. The Cobalt office issued certificates to 5 miners travelling to Port Arthur and to 7 bushmen and 7 miners proceeding to employment in the Cobalt zone. The Cobalt zone was also the destination of 16 pulp cutters sent from North Bay. For logging operations within its own zone, Fort William despatched 46 workers, while from Toronto 5 bushmen journeyed to Peterboro, 2 foremen to Port Arthur, one station man to Kingston, one sawyer to North Bay and one mill hand to Sudbury. The remaining 2 provincial certificates were issued at Timmins to hoistmen for employment within its own zone. The movement outside the province was largely toward the Winnipeg zone, 21 building construction workers and one railway clerk travelling from Pembroke, 11 miners from Sudbury and one chemist from Fort William. Pembroke in addition granted certificates to 7 bridge builders, 6 of whom were carried at the special rate to Three Rivers and one to

Quebec, which zone also received one drill runner from Sudbury. To employment in the Sydney, N.S., zone Cobalt transferred 2 machine runners.

Manitoba offices issued 469 reduced rate certificates during May, 263 to provincial points and 206 to stations in other provinces. To centres within the Province the Winnipeg office granted certificates to 9 farm household workers, 5 hotel employees, 2 sanitarium kitchen workers and one railroad construction cook who was going to Brandon, one baker, 2 hotel employees and one farm general to Dauphin, and to 117 farm hands, one farm domestic, 79 railroad construction workers, 24 mine workers, 4 saw mill labourers, 5 building construction workers, 2 bushmen, one teamster, one edgerman, one store clerk, 2 cooks, one watchman, one plasterer, one butcher and one hotel porter travelling to employment in the Winnipeg zone. In addition the Dauphin office despatched one carpenter, within its own zone. With the exception of one rod man shipped from Dauphin to Calgary all the transfers outside the Province were from Winnipeg from which centre 53 bush workers, 2 railroad construction labourers, 2 farm hands, one market gardener, 6 hotel workers, 2 watchmen, one social worker, one saw mill labourer and 3 cooks were conveyed to Port Arthur, 2 hotel workers to Fort William, 22 railroad construction workers to Moose Jaw, 4 farm hands, 2 farm generals and 2 hotel workers to Estevan, and 20 farm hands, 3 farm domestics and 3 hotel workers to Regina. In addition, the Winnipeg office despatched 10 railroad construction workers, 3 elevator construction labourers, 6 farm hands and one hotel porter to Yorkton, 41 railroad construction workers to North Battleford, 2 railroad construction workers, one farm housekeeper and one waitress to Prince Albert, 2 construction labourers and one farm hand to Weyburn, 3 railroad construction workers to Saskatoon, one farm hand and one grader man to Swift Current and 3 farm hands to Edmonton.

Transportation at the reduced rate was granted 130 persons travelling from Saskatchewan centres during May, 115 of whom went to stations within the Province and the remainder to points outside. Provincially the Saskatoon office was instrumental in the transfer of one engineer to North Battleford, one saw mill labourer to Prince Albert and of 29 farm workers, one farm cook, 2 housekeepers, one engineer and one domestic to employment within its own zone. From Prince Albert 11 railroad construction teamsters were carried at the special rate to North Battleford and 16 saw mill labourers

and 4 bush workers to points within the territory covered by the Prince Albert office, while Moose Jaw despatched one hospital cook to Swift Current and 26 farm hands and 2 farm household workers within its own zone. The balance of the transfers within the Province were from Regina, from which centre 5 farm hands, one blacksmith and one hotel waitress proceeded to Moose Jaw, 5 carpenters and one farm hand to Prince Albert, one railroad construction labourer to Estevan, 1 farm hand to Saskatoon and 3 farm hands and one housekeeper to points in the Regina zone. The 15 persons who travelled outside the Province included 12 carpenters, one teamster and one bookkeeper going from Moose Jaw to Dauphin and one domestic from Regina to Winnipeg.

In Alberta 340 workers took advantage of the reduced transportation rate during May 297 of these travelling to situations within the province, the balance representing an interprovincial movement. Included in the provincial transfers from Edmonton were 32 railroad construction labourers, 2 farm hands and one farm domestic proceeding to Calgary, 2 engineers to Lethbridge, 2 farm hands to Drumheller and 60 bush workers, 54 farm hands, 4 farm domestics, 24 railroad construction workers, 22 saw mill labourers, 11 mine workers, 2 engineers, 8 labourers, 2 teamsters, one store clerk, 2 truck drivers, 2 hotel porters, 2 gardeners, one hotel cook, one blacksmith and one fire ranger to employment in the Edmonton zone. From Calgary 16 building construction labourers, one miner, one cook and one bushman were sent to Lethbridge, one hotel worker to Drumheller and 40 farm hands and farm household workers to various provincial rural districts, while Medicine Hat transferred one farm hand to the Calgary zone. Of the 43 persons going outside the Province 22 were railroad construction labourers for work in the Winnipeg zone who received their certificates for reduced transportation at Edmonton. The remainder were farm hands and farm household workers, 19 for points in Saskatchewan and 2 for British Columbia centres, 18 of these securing their certificates at Edmonton and 3 at Calgary.

The offices in British Columbia granted 264 certificates for reduced transportation during

May, 201 provincial and 63 interprovincial. Of the former 131 were issued at the Vancouver office, 18 railroad construction workers, 5 farm hands, 3 cooks, 2 flunkeys, 2 foremen, one steel sharpener, one blacksmith, one waitress and one kitchen worker receiving certificates to Kamloops; 12 building, railroad and general construction workers, 6 mine employees, one handyman, one cement worker and 2 farm hands to Revelstoke; 14 miners and one engineer to Cranbrook; 12 miners to Prince George; 2 bushmen, 3 engineers, one carpenter and 3 sheet metal workers to Nelson; 2 miners, 2 millwrights, one engineer, one foreman and one farm hand to Penticton; 3 carpenters, one saw filer and one flunkey to Vernon; and 6 miners, 4 flunkeys, 5 tunnel construction workers, 3 farm hands, one farm housekeeper, 4 railroad construction workers, one hospital orderly, one labourer, one cook and one dishwasher to points in the Vancouver zone. From Prince Rupert 14 mine workers, one teamster, one blacksmith, 2 axe men and one waitress went to centres within the same zone and 2 rock men and 2 axe men to Prince George. In addition the Nelson office transferred 34 bush workers and 2 miners, and Prince George 7 highway construction workers, one cook and 3 saw mill workers to employment within their respective zones. The movement to other provinces was largely of agricultural workers, Alberta receiving 22 farm hands and 5 farm household workers, Saskatchewan 10 farm hands and 4 farm household workers and Manitoba 3 farm hands and one farm household worker. Vancouver, New Westminster and Victoria offices were responsible for the transfer of these workers. From Vancouver also 12 carpenters were transferred to Calgary, one saw filer to Edmonton, 2 plumbers to Regina and one housekeeper to Saskatoon, while from the Kamloops office 2 bricklayers secured certificates for transportation to Calgary.

Of the 1,634 persons who took advantage of the Employment Service reduced rate during May 983 were transported by the Canadian National Railways, 632 by the Canadian Pacific Railway, 39 by the Temiskaming and Northern Ontario Railway and 30 by the Pacific Great Eastern Railway.

### Building Permits Issued in Canada During May, 1929

The value of the building permits issued by 61 cities during May, 1929, was lower by 24.5 per cent than in April, 1929, and by 16.4 per cent than in May, 1928, but was higher than in any other May for which data

are available. According to statements tabulated by the Dominion Bureau of Statistics, the authorization amounted to \$23,007,371, as compared with \$29,648,147 in the preceding month and \$27,515,522 in May, 1928. The

total for the elapsed months of this year—\$95,551,123—exceeds that for the same period in any other year since this record was begun in 1920, while building costs continued lower than in most of the last ten years.

Some 50 cities furnished statistics, showing that they had issued over 1,900 permits for dwellings valued at approximately \$8,400,000 and for some 4,300 other buildings estimated to cost over \$14,000,000. In April, authority was given for the erection of some 1,700 dwellings and 4,000 other buildings, valued at approximately \$9,000,000 and \$17,000,000 respectively.

Quebec and Alberta reported increases of 3.1 per cent and 5.1 per cent, respectively, in the value of the permits issued as compared with April, 1929. Of the declines in the remaining provinces, that of \$2,204,511 or 55 per cent in British Columbia was most pronounced.

As compared with May, 1928, Nova Scotia, New Brunswick, Quebec, Saskatchewan, Al-

berta and British Columbia registered increases, that of \$770,599 or 49.7 per cent in Saskatchewan being largest. The other provinces recorded declines, or which that of \$4,526,969 or 34.3 per cent in Ontario was not noteworthy.

Of the larger cities, Montreal reported higher totals of building permits issued than in either April, 1929, or May, 1928; in Toronto there was an increase in the first, but a loss in the second comparison, while Winnipeg and Vancouver showed decreases in both comparisons. Of the other centres, Moncton, Brantford, Guelph, Hamilton, London, Sarnia, St. Boniface, Moose Jaw, Calgary and Nanaimo recorded increases in the value of the building authorized as compared with both the preceding month and the same month of last year.

*Cumulative Record for First Five Months, 1929.*—The following table gives the value of the building authorized by 61 cities in May

1922.....	19,527,061	54,040,822	113.4	102.0
1921.....	14,460,878	41,530,750	87.2	132.2
1920.....	13,082,015	47,640,916	100.0	144.7

and in the first five months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first five months of the same years are also given (1926=100).

The aggregate for the first five months of this year was 20.5 per cent greater than in 1928, the previous high level of the record, while the average index numbers of wholesale prices of building materials continued lower than in most of the years since 1920.

The accompanying table gives the value of the building permits issued by 61 cities during May and April, 1929, and May, 1928. The 35 cities for which records are available since 1910 are marked with asterisks.

### EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month; a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during May. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the June issue relates to the situation existing in April, 1929. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for April and previous months taken from the June, 1929, issue of the *American Federationist*, the official publication of the organization, are reproduced below.

#### Great Britain

Employment continued to improve during the first three weeks of May. In some industries there were extensions of the Whitsuntide holidays, but by the end of the month, the general position which obtained immediately before the holidays had been

recovered. There was further improvement in the building trade, public works contracting, and brick, tile and cement manufacture. In constructional engineering, the fishing industry, glass bottle manufacture, the linen industry, road transport, river dock and harbour service, and hotel and boarding house service, there was also some improvement. On the other hand there was a decline in general engineering and in pottery manufacture, while in several of the textile industries and in boot and shoe manufacture there were extensions of the holiday stoppages. In coal mining there was a further decrease in the numbers wholly unemployed but this was again more than counterbalanced by an increase in the numbers temporarily stopped.

Among workpeople, numbering approximately 11,880,000, insured against unemployment in Great Britain and Northern Ireland and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 27th May, 1929 (including those temporarily stopped as well as those wholly unemployed), was 9.9, as compared with the same percentage at 22nd April, 1929, and with 9.8 at 21st May, 1928. For males alone the percentage at 27th May, 1929, was 11.1, and for females 6.8, both being the same as at 22nd April, 1929. The percentage wholly unemployed at 27th May, 1929, was 7.6, as compared with 8.0 at 22nd April, 1929. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 27th May, 1929, was approximately 1,165,000, of whom 909,000 were men and 198,000 were women, the remainder

being boys and girls; at 29th April, 1929, it was 1,198,000, of whom 930,000 were men and 197,000 were women, and at 21st May, 1928, it was 1,143,000, of whom 918,000 were men and 165,000 were women.

### United States

Employment in the United States increased 0·5 per cent in April, 1929, as compared with March, and pay-roll totals increased 0·1 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of February and March, 1929, and therefore cannot be included in the general statement for the month of April. The number of employees on Class I railroads as at March 15 totalled 1,611,407, representing an increase of 1·4 per cent since February 15. The amount of pay-roll in the entire month of March was \$233,209,099, representing an increase over the previous month of 8·4 per cent.

Employment in manufacturing industries increased 0·5 per cent in April, 1929, as compared with March, and pay-roll totals increased 0·7 per cent, this being the only time in the seven years for which the Bureau of Labour Statistics has computed indexes of employment on the present basis in which employment has been higher in April than in March and the first time in six years that pay-roll totals have been higher in April than in March.

These unusual increases for April were due not altogether to seasonal gains in such industries as fertilizer, brick, cement, lumber, and ice cream, but largely to notable increases in the iron and steel and the nonferrous-metal groups of industries caused by pronounced activities in the metal-using industries—automobiles, agricultural implements, electrical machinery, and shipbuilding.

The April, 1929, report is based on returns made by 12,460 establishments in 54 of the leading manufacturing industries of the United States. These establishments in April had 3,529,230 employees, whose combined earnings in one week were \$99,814,336. These employees represent 54 per cent of all employees in the 54 industries surveyed and more than 42 per cent of the total number of employees in all

manufacturing industries of the United States.

The Bureau of Labour Statistics' weighted index of employment in manufacturing industries for April, 1929, is 99·1 as compared with 98·6 for March, 1929, and 93·3 for April, 1928; the weighted index of pay-roll totals for April, 1929, is 104·6 as compared with 103·9 for March, 1929, and 93·8 for April, 1928. The monthly average for 1926 equals 100.

Manufacturing employment stood at a higher level in April, 1929, than at any time since March, 1927, and pay-roll totals were greater than at any time since November, 1923.

Thirty of the fifty-four separate industries had more employees in April than in March and 32 industries reported higher pay-roll totals.

The recently included industries, rayon and radio, which are not yet used in computing index numbers, gained 0·3 per cent and 2·1 per cent, respectively, in employment, but fell off 0·2 per cent and 2·5 per cent, respectively, in pay-roll totals.

The cotton-goods industry dropped 1·9 per cent of its employees in April, the iron and steel industry gained 1 per cent in employment, and the automobile industry gained 0·2 per cent.

Seven of the nine geographic divisions had more employees in April than in March, and eight divisions reported higher pay-roll totals, the outstanding gains having been in the western half of the United States; employment in both the New England and South Atlantic States fell off slightly, while employees' earnings decreased only in the New England States.

*Unemployment percentage.*—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States. The method of compiling as described in the *American Federationist*, March, 1928, is as follows:—

“The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the first of the month of the nearest possible date. From these reports the percentage of unemployed members is calculated for identical unions in the current and the previous month. Thus for every month there are two percentage figures—that is for identical unions in December and January—and for identical unions in January and February, and so on. The

final figure for January, then, is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers."

By the above method the proportion of unemployed members to the total membership of the local unions reporting, is computed. According to the June issue of the *American Federationist*, the most recent unemployed percentages during the various months in the

23 cities work out as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are

respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the customs of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades

and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

### Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, etc.)*

Construction of a public building at Saskatoon, Sask. Name of contractors, Smith

Bros. & Wilson, Ltd., Regina, Sask. Date of contract, June 13, 1929. Amount of contract, \$725,700. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours per day
	Per hour	
Bricklayers and masons.....	\$1 35	8
Carpenters and joiners.....	0 90	9
Concrete finishers.....	1 00	9
Concrete mixers.....	0 45	10
Electricians.....	0 85	9
Electricians' helpers.....	0 50	9
Labourers.....	0 40	10
	Per sq. yard	
Lathers—Metal lath.....	\$0 08	10
	Per hour	
Marble setters.....	\$1 35	8
Marble setters' helpers.....	0 50	8
Painters and glaziers.....	0 80	9
Plasterers.....	1 25	8
Plasterers' helpers.....	0 60	8
Plumbers.....	1 20	8
Plumbers' helpers.....	0 50	8
Roofers—Tar and gravel.....	0 85	9
Sheet metal workers.....	1 00	9
Sheet metal workers' helpers.....	0 60	9
Steam and operating engineers.....	0 75	9
Structural steel workers—Erectors.....	0 90	8
Structural steel workers—Riveters.....	0 90	8
Teamsters.....	0 40	10
Teamsters with team and wagon.....	0 80	10
Terrazzo layers.....	0 75	9
Terrazzo layers' helpers.....	0 50	9
Tile setters.....	1 35	8
Tile setters' helpers.....	0 50	8
Truck drivers.....	0 50	10
Truck drivers with truck.....	2 00	10

Improvements to the high level wharf at Sorel, P.Q. Name of contractors, Cummins & Robinson, Sorel, P.Q. Date of contract, June 17, 1929. Amount of contract, approximately \$119,987. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages. Not less than	Hours per day
	Per hour	
Foreman carpenter.....	\$0 50	10
Foreman of labourers.....	0 45	10
Mechanical engineer.....	0 45	10
Stationary engineer.....	0 40	10
Derrick driver.....	0 50	10
Pile driver.....	0 50	10
Concrete mixer runner.....	0 35	10
Blacksmiths.....	0 40	10
Blacksmiths' helpers.....	0 30	10
Fireman.....	0 35	10
Carpenters.....	0 40	10
Labourers.....	0 30	10
Carters.....	0 40	10
Teamsters.....	0 60	10
	Per week	
Night watchman.....	\$18 00	
Day watchman.....	18 00	

Construction of a new roof covering for Research Council Building, Ottawa. Name of contractors, McFarlane-Douglas Co., Ltd., Ottawa, Ont. Date of contract, May 30, 1929. Amount of contract, \$1,947. A fair wages

schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours per day
	Per hour	
Roofers—felt and gravel.....	\$0 70	8
Sheet metal workers.....	0 90	8
Labourers.....	0 45	8-10

Reconstruction of wharf at West River Bridge, Queen's County, P.E.I. Name of contractor, Wilfred R. Maynard, Northam, P.E.I. Date of contract, June 12, 1929. Amount of contract, approximately \$7,405.60. The General Fair Wages Clause was inserted in the contract.

Construction of a new north pier at Burlington Channel, Ont. Name of contractors, The R. C. Huffman Construction Co., Toronto, Ont. Date of contract, June 4, 1929. Amount of contract, approximately \$557,730.50. The General Fair Wages Clause was inserted in the contract.

Construction of an extension to the Breakwater at Little Judique Ponds, Inverness County, N.S. Name of contractors, Constantine J. and Dan. A. and Alexander D. MacDonald, all of Little Judique Ponds, N.S. Date of contract, June 26, 1929. Amount of contract, approximately \$5,890.12. The General Fair Wages Clause was inserted in the contract.

Construction of an extension to the wharf at Grondines, Portneuf Co., Que. Name of contractors, Onesime Poliquin and Joseph Poliquin, Portneuf, P.Q. Date of contract, June 25, 1929. Amount of contract, approximately \$17,308.30. The General Fair Wages Clause was inserted in the contract.

The installation of plumbing, heating and ventilating systems, Research Council Building, Ottawa, Ont. Name of contractors, Erskine, Smith & Co., Ltd., Ottawa, Ont. Date of contract June 12, 1929. Amount of contract, approximately \$15,100. The General Fair Wages Clause was inserted in the contract.

Construction of an extension to the breakwater at Charlo Cove, Guysboro Co., N.S. Name of contractor, Wilfrid M. Gerroir, Guysboro, N.S. Date of contract, June 25, 1929. Amount of contract, approximately \$9,002.50. The General Fair Wages Clause was inserted in the contract.

Deepening a turning basin in Yamachiche River, Quebec. Name of contractors, National Dock & Dredging Co., Ltd., Quebec, P.Q. Date of contract, June 20, 1929. Amount of contract, approximately \$11,375. The Gen-

eral Fair Wages Clause was inserted in the contract.

Deepening entrance channel to the harbour, Kincardine, Ont. Name of contractors, The C. S. Boone Dredging and Construction Co., Ltd., Toronto, Ont. Date of contract, June 27, 1929. Amount of contract, approximately \$15,600. The General Fair Wages Clause was inserted in the contract.

Hydraulic dredging for boat slips and hydraulic fill for building and trackage areas, Grain Elevator Terminal, Prescott, Ont. Name of contractors, The Canadian Dredging Co., Ltd., Midland, Ont. Date of contract, June 29, 1929. Amount of contract, approximately \$222,145. The General Fair Wages Clause was inserted in the contract.

*Contracts in Group "B" (Interior Fittings, etc.)*

Interior fittings for the public building at Waterloo, P.Q. Name of contractors, The Canadian Office & School Furniture Co., Ltd., Preston, Ont. Date of contract, June 21, 1929. Amount of contract, \$1,420. The General Fair Wages Clause was inserted in the contract.

Interior fittings for the public building at Wainwright, Alta. Name of contractors, Wood Specialties, Ltd., Alexandria, Ont. Date of contract, June 10, 1929. Amount of contract, \$2,200. The General Fair Wages Clause was inserted in the contract.

Interior fittings for Postal Station at Outremont, P.Q. Name of contractors, Wood Specialties Ltd., Alexandria, Ont. Date of contract, June 10, 1929. Amount of contract, \$2,550. The General Fair Wages Clause was inserted in the contract.

Interior fittings, etc. for the Post Office, Chatham, Ont. Name of contractors, Wood Specialties, Ltd., Alexandria, Ont. Date of contract, June 4, 1929. Amount of contract, \$3,400. The General Fair Wages Clause was inserted in the contract.

Grading, sodding and chain fencing at the Governor General's quarters, the Citadel, Quebec, P.Q. Name of contractor, Victor Plamondon, Quebec, P.Q. Date of contract, June 15, 1929. Amount of contract, \$4,139. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS  
*Contracts in Group "A" (Construction, etc.)*

Removal of certain spoiled material from canal land between Keefer and Killaly Streets in Port Colborne, Ont., and placing it in a hole in a fill between the shore of Lake Erie and the Port Colborne Government Elevator. Name of contractors, D. G. Bawtinheimer,

Ltd., Niagara Falls, Ont. Date of contract, June 4, 1929. Amount of contract, 69 cents per cu. yd. The General Fair Wages Clause was inserted in the contract.

Supply and installation of the plumbing and heating apparatus required in connection with old electric power station at Cote St. Paul, Montreal, P.Q. Name of contractor, Antonio Carmel, Montreal, P.Q. Date of contract, June 18, 1929. Amount of contract, \$2,895. The General Fair Wages Clause was inserted in the contract.

Erection of one switchboard for Canal Power House at Cote St. Paul, Montreal, P.Q. Name of contractor, Monarch Electric, Ltd., St. Johns, P.Q. Date of contract, June 18, 1929. Amount of contract, \$7,904. The General Fair Wages Clause was inserted in the contract.

POST OFFICE DEPARTMENT

Following is a statement of payments made in June, 1929, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type also other hand stamps and brass crown seals.....	\$ 766 36
Making and repairing rubber stamps, daters, etc.	456 78
Making up and supplying Letter Carriers' uniforms, etc.....	15,593 11
Stamping pads, ink, etc.....	353 73
Bag fittings.....	2,747 00
Scales.....	318 32
Letter Boxes.....	457 03
Wooden boxes.....	1,071 00

Accidents reported to the Alberta Workmen's Compensation Board in June numbered 1,275 as compared with 1,114 in June, 1928 or 42.5 per day in June, 1929 as against 37.13 in the same month of 1928. Although the number of accidents is greater this year, members of the Compensation Board believe that this is largely the result of increased industrial activity, there being several thousand more workers registered under the Act this year.

The minimum Wage Board of Alberta will hold meetings early in October to consider the question of the revision of the existing minimum wage rates, with special reference to the wages paid to learners. This question was discussed at the recent session of the provincial legislature.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Pulp, Paper and Paper Products

PORT ARTHUR, ONTARIO.—PORT ARTHUR DIVISION, PROVINCIAL PAPER MILLS LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS.

Agreement to be in effect from May 1, 1929, to April 30, 1930.

Membership of union covered by this agreement to include sulphite workers, groundwood workers, mechanics and mechanic helpers, yard labour, teamsters and slasher mill foremen, but not paper mill workers or slasher mill labour.

Union members to be given preference in employment. New employees to be given 15 days to join the union; outside labour two months. Salaried men may join the union but are not affected by the agreement. No discrimination against various committees of the union.

Hours: 8 per day, six days per week for day workers and tour workers, slasher mill workers 10 hours per day.

Overtime: time and one-half; when called back for repair work, at least 4 hours pay. Work between 7 a.m. Sunday and 7 a.m. Monday and work during the 24 hours mills are closed for holidays, time and one-half. Maintenance men required to work on Sundays to have Saturday afternoons, and if possible, all day Saturday off without pay.

No strikes or lockouts to occur. Grievances to be reported to management. If union and management are unable to settle the dispute a board of arbitration to be formed consisting of one representative of each party and a third chosen by them, or by the Minister of Labour, the decision of such board to be final and binding.

Wages per hour: Cooks, 80 cents; cooks helpers, 50 cents; acid makers, 65 cents; wet machine foremen, 65 cents; wet machine back tenders, 50 cents; machine hands, 45 cents; press operators, 45 cents; head truckers, 50 cents; truckers, 45 cents; screen room men, 45

cents; screenings machine operators, 45 cents; head blow pit man, 45 cents; chlorine operators, 65 cents; chlorine helpers, 45 cents; bellmer operators, 65 cents; drainer men, 45 cents; mill sweeper, 45 cents.

Boiler house: Foremen, 70 cents; firemen, 60 cents; boiler house labour, 45 cents.

Wood room: Foremen, 65 cents; chipper men, 46 cents; drum barker men, 46 cents; wood sorters, 45 cents; labour, 45 cents.

Yard: Teamsters, \$100 per month; labour, 45 cents per hour.

Mechanical Department: Millwright foreman, 73 cents; millwrights, 70 cents; mechanics helpers, 60 cents; digester repair man, 70 cents; screen repair men, 70 cents; blacksmith, 70 cents; painter, 60 cents; electrician, 70 cents; machinists, 70 cents; apprentices, 45 cents up, oilers, 47 cents; pipefitters foreman, 73 cents; pipefitters, 70 cents.

Groundwood Mill: Foreman, 65 cents; grinder men, 45 cents; disc barker operators, 45 cents; labour, 45 cents.

Slasher Mill: Foreman, 60 cents.

FORT FRANCES, ONTARIO.—FORT FRANCES PULP AND PAPER COMPANY LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, LOCAL No. 92.

Agreement to be in effect from May 1, 1928, to April 30, 1929, and from year to year until notice is given by either party 30 days prior to expiration date in any year.

This agreement is the same as the one previously in force and summarized in the *LABOUR GAZETTE* for September, 1926, except that two clauses have been added and the following changes in wages made:

All new positions opened up during the life of the contract to be adjusted after operating such position, providing it is permanent.

All permanent tour workers shall be paid at the rate of 42 cents per hour minimum.

Wages of head grinder man: 66 cents per hour.

### Manufacturing: Printing and Publishing

WINDSOR, ONTARIO.—A CERTAIN NEWSPAPER AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 553.

Agreement to be in effect from January 1, 1929, to December 31, 1931, and from year to year thereafter until either party gives notice 60 days prior to expiration date in any year.

Only local union members to be employed if available.

Hours: 8 per day, a 48-hour week for both day and night work.

Overtime: time and one-half; Sundays and holidays double time.

When called back to work after leaving office \$1 to be paid in addition to overtime pay.

Wages per hour for day work: From January 1, to June 30, 1929, \$1.06; from July 1 to December 31, 1929, \$1.07; from January 1, to June 30, 1930, \$1.08; from July 1, to December 31, 1930, \$1.09; from January 1, to June 30, 1931, \$1.10; from July 1, to December 31,

1931, \$1.12. Night work  $8\frac{1}{2}$  cents per hour more than day work.

If better terms granted by union to any other local firm they shall also be given to this employer.

Apprentices to be at least eighteen years old and must have a high school education and serve five years if found competent; they must complete the course in printing of the International union. The work apprentices are to do in each year is specified. One apprentice allowed for every eight journeymen employed.

Wages per week for apprentices: first half of first year \$10, second half \$12; first half of second year \$14, second half \$16; first half of third year \$18, second half \$20; first half of fourth year \$23, second half \$27; first half of fifth year \$30, second half \$35.

If an apprentice wishes to learn the linotype in last six months of apprenticeship, he shall be paid \$20 per week for first two months, \$25 for second two months and \$30 for last two months of this period.

No interruption of work to occur pending settlement of any dispute by conciliation or arbitration but union reserves right to refuse to execute struck work destined for unfair offices.

A standing committee of two representatives of each party to be formed for the settlement of all disputes. If this committee is unable to agree, an arbitration board will be formed consisting of one representative of each party and a third selected by them, the decision of this board to be final and binding.

#### WINDSOR, ONTARIO.—CERTAIN JOB OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 553.

Agreement to be in effect from January 1, 1929, to December 31, 1929, and from year to year until either party gives 60 days' notice of change.

Hours: 8 per day, 4 on Saturdays for day work, a 44-hour week for both day and night work.

Wages per week: \$44 for day work and \$47 for night work, provided that if the Detroit Typographical Union is awarded a five cent differential between the newspaper and job scales, the same shall prevail in this contract, thereby making the job scale \$1.01 per hour days and \$1.08 per hour nights.

Wages per week for apprentices are the same as in Newspaper agreement, summarized above, for first two and one-half years; second half of third year \$19, first half of fourth year \$21, second half \$23; first half of fifth year \$25, second half \$35.

All other clauses are the same as in the Newspaper agreement summarized above.

#### MOOSE JAW, SASKATCHEWAN.—CERTAIN NEWSPAPER AND BOOK AND JOB FIRMS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 627.

Agreement to be in effect from November 1, 1928, to October 31, 1929, and from year to year until notice is given by either party 60 days prior to expiration date in any year.

This agreement is the same as the one previously in force and summarized in the LABOUR GAZETTE for January, 1926, page 59, with the following exception:

Wages for journeymen workers in both newspaper and book and job offices, including make-ups, admen, bankmen, proofreaders, operators and typesetting and typecasting appliances, machinists and all employees engaged in machine and hand composition and distribution, 93 $\frac{1}{2}$  cents per hour for day work and \$1.11 $\frac{1}{2}$  cents per hour for night work (with a 45 hour week for newspaper work and a 44 hour week in book and job offices).

Wages for apprentices: on newspaper work \$17 per week in third year, \$21.75 in fourth year, \$28 in first half of fifth year and \$33 in last half of fifth year; on book and job work, \$15.50 per week in third year, \$20.50 in fourth year, \$25.75 in first half of fifth year and \$29.75 in last half of fifth year. Night work \$2 extra per week for both newspaper and book and job work.

#### REGINA, SASKATCHEWAN.—CERTAIN NEWSPAPER AND JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 657.

Agreement to be in effect from May 1, 1929, to April 30, 1932.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for July, 1928, page 785, with the following exceptions:

Foremen to have right to employ help or discharge for certain specified reasons. Any member discharged who believes it to be unjust may appeal to the chapel and either party may appeal from the decision of the chapel to the local union.

Minimum wage rate for stonemen, admen, makeupmen, proofreaders, bankmen, foremen, machine operators, machinists and copy preparers, \$1 per hour; night work \$3 extra per week. A 48-hour week for day work and a 45-hour week for night work.

Wages for apprentices: first year 25 per cent of journeyman's scale, second year 35 per cent, third year 45 per cent, fourth year 60 per cent, fifth year 70 per cent.

Machine beginners: first three weeks 40 per cent of journeyman's scale, next five weeks 50 per cent, last five weeks 70 per cent. If standard of competency not reached at end of this period, time may be extended up to three months at 70 per cent of journeyman's scale.

Offices with four or more machines may employ an apprentice assistant to machine tender.

#### Job Offices

Wages for journeymen and apprentices and machine beginners at same rate per hour as for newspaper work with 44-hour week for day work and 42 hours for night work.

#### EDMONTON AND CALGARY, ALBERTA.—DAILY NEWSPAPER PUBLISHERS OF EDMONTON AND CALGARY AND INTERNATIONAL TYPOGRAPHICAL UNION, LOCALS Nos. 604 AND 449.

Agreement to be in effect from May 16, 1929, to May 15, 1932, and thereafter from year to year unless changed by notice from either party 60 days prior to May 15 of any year. If parties unable to reach a new agreement, it shall be referred to the arbitration board mentioned below for a decision.

Only local union members to be employed if available. Union members will not be re-

quired to execute work for unfair employing printers or publications.

Hours: 45 per week.

Overtime: time and one-half for first three hours; thereafter and work on Sundays (for day work) and on Saturday night (for night work) and on certain holidays, double time. On Dominion Day, Labour Day and Christmas Day, straight time to be paid without working. When called in to work either before or after the shift when no notice has been given \$1 extra to be paid in addition to overtime pay.

Wages for journeymen: from May 16, 1929, to May 15, 1931, \$1.05 per hour or \$47.25 per week for day work; from May 16, 1931, to May 15, 1932, \$1.06 $\frac{3}{4}$  per hour or \$48 per week for day work. Night scale \$3 per week in addition; lobster shift (part day and part night work) \$5 per week additional to regular scale.

Apprentices must be at least 16 years of age must have attended high school at least one year and be examined and accepted by the apprentice committee. They must serve five years and complete the course in printing of the International union.

Not more than one apprentice allowed for first five journeymen employed in any one office and one additional apprentice for each ten journeymen regularly employed thereafter, but not more than five apprentices in any one office.

Wages for apprentices: first year, one quarter of journeymen's scale; second year, one third; third year, one half; fourth year, two thirds and fifth year, three quarters of journeymen's scale.

The work to be done by apprentices in each year is specified.

Journeymen learners on machines to be paid two-fifths of journeymen's scale for first five weeks, three-fifths for next five weeks and four-fifths for next five weeks. If standard of competency not reached in this time, an extension may be granted not exceeding three months.

Foreman to have right to hire and discharge for certain specified reasons.

A joint standing committee consisting of two members of each party to be formed and all disputes to be referred to it, the decision of this board to be binding. If unable to agree a fifth member to be selected either unanimously by the committee or by the President of the International Typographical Union and the chairman of the Special Standing Committee of the American Newspaper Publishers Association, and decision of such board to be final.

#### VANCOUVER, BRITISH COLUMBIA.—LOCAL FIRMS AND THE INTERNATIONAL BROTHERHOOD OF BOOKBINDERS, LOCAL No. 105 AND THE WOMEN'S SECTION OF THE UNION.

Agreement to be in effect from August, 1928, to February 28, 1931, and may be extended from year to year provided mutually satisfactory arrangements can be made whereby wages and hours after February 28, 1931, will be adjusted and settled by local conciliation and arbitration, and provided that if an arbitration agreement is reached, the employers agree to accept the findings of one arbitration proceeding representing the employing commercial printers of Greater Vancouver.

Only local union members to be employed if available.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: to 10 p.m. and on Saturday p.m., time and one-half; after 10 p.m. and work on Sundays and holidays double time.

Wages for journeymen bookbinders: to February 28, 1929, \$43.50 per week; from March 1, 1929 to February 28, 1931, \$45 per week.

Wages for journeymen: to February 28, 1929, \$22 per week; from March 1, 1929 to February 28, 1931, \$23 per week.

Men apprentices to serve five years and the number is limited as follows: one apprentice to four men, two apprentices to eight men and one apprentice to each additional five men.

Wages for men apprentices: second year one-fourth of journeymen's wage, third year one-third, fourth year one-half, fifth year two-thirds.

Women apprentices to serve two years and the number is limited as follows: one apprentice to the shop, one apprentice to three journeymen, two apprentices to five journeymen, three apprentices to nine journeymen and one additional apprentice to each five journeymen.

Wages for women apprentices: \$10 per week for first six months, \$12.50 for second six months, \$16 for third six months and \$18.50 for fourth six months.

Apprentices not allowed to work overtime except when journeymen are working.

No union member to do any work under a piece or contract system.

Union members reserve the right to refuse struck work for unfair offices or publications.

Conciliation and arbitration to govern the adjustment of any dispute arising under this agreement.

#### Construction: Buildings and Structures

##### HALIFAX, NOVA SCOTIA.—CONSTRUCTIVE MECHANICAL TRADES EXCHANGE AND THE OPERATIVE PLASTERERS AND CEMENT FINISHERS INTERNATIONAL ASSOCIATION, LOCAL 215.

Verbal agreement to be in effect from May 1, 1929, to May 1, 1930, and from year to year until either party gives ninety days notice of change.

Hours: 8 per day.

Overtime: all overtime including work on holidays recognized by building trades, double time.

Wages for journeymen plasterers and cement finishers \$1 per hour.

##### MONTREAL, QUEBEC.—CERTAIN CONTRACTORS AND THE DISTRICT COUNCIL OF CARPENTERS AND JOINERS.

Agreement signed by certain individual contractors and similar wages and working conditions agreed to by the Builders' Exchange and the union in an exchange of letters. This agreement, which was made in settlement of the strike report in the LABOUR GAZETTE for June, 1929, page 597, is to be in effect from May 1, 1929 to April 30, 1930.

Hours: from May 1 to September 30, 1929, 9 per day and 5 on Saturdays; from October 1, 1929 to April 30, 1930, 8 per day and 4 on Saturdays.

Overtime: from 5 p.m. to midnight on first five days of week, and from 1 p.m. to midnight on Saturday, time and one-half. After midnight and work on Sundays and holidays, double time.

Work on night shift: from May 1, to September 30, 1929, night shift to be eight hours with nine hours' pay; from October 1, 1929 to April 30, 1930, seven hours with eight hours' pay.

Wages: from May 6, 1929, to September 30, 1929, 80 cents per hour; from October 1 to April 30, 1930, 85 cents per hour.

**HULL, QUEBEC.—CERTAIN CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1169.**

This agreement which is in effect from May 1, 1929 to April 30, 1931, is the same as the one in effect in Ottawa, Ontario, which was summarized in the *LABOUR GAZETTE* for June, 1929, page, 677.

**OTTAWA, ONTARIO.—THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES, OTTAWA BRANCH, AND THE BRICKLAYERS, MASONS, TILESETTERS AND MARBLE MASONS UNION, No. 7 ONTARIO, OF THE BRICKLAYERS, MASONS AND PLASTERERS INTERNATIONAL UNION.**

Agreement to be in effect from May 1, 1929, to April 30, 1931, and from year to year until three months notice is given by either party.

Only union members or those who intend to join are to be employed.

Hours: 8 per day and 4 on Saturdays.

Overtime: from 5 p.m. to 10 p.m., time and one-half; after 10 p.m. on other days and afternoon on Saturdays and all work on Sundays and holidays, double time.

Wages for journeymen, to be \$1.25 per hour. Foremen (who must be union members), 10 cents per hour extra.

For work outside of City, transportation and board to be paid.

The apprentice question to be governed by the regulations of the Provincial Apprenticeship Board.

Union members not to quit work or take part in any sympathetic strike except on a direct order from the executive of the international union.

Any violation of the agreement to be dealt with by the Joint Arbitration Committee.

**OTTAWA, ONTARIO.—CERTAIN CONTRACTORS AND CONTRACTING PLASTERERS AND THE OPERATING PLASTERERS AND CEMENT FINISHERS INTERNATIONAL ASSOCIATION, LOCAL No. 124.**

The agreement which came into effect in August, 1926, and was summarized in the *LABOUR GAZETTE* for October, 1926, is still in effect and will be until either party gives three months notice of change. The regular wage rate is \$1 per hour.

**CANADA.—CANADIAN AUTOMATIC SPRINKLER ASSOCIATION AND THE CANADIAN AUTOMATIC SPRINKLER FITTERS' UNION, LOCAL No. 379 OF THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS.**

This agreement relates to installing automatic sprinkler systems and systems used for fire ex-

tinguishing purposes and local union No. 379 is to cover all members of the United Association of Plumbers and Steamfitters who are engaged exclusively in this class of work in Canada.

Agreement to be in effect from May 1, 1929, to April 30, 1931, and from year to year until six months notice is given by either party.

This agreement is the same as the one previously in force and summarized in the *LABOUR GAZETTE*, July, 1927, page 790 (under the heading Toronto, Ontario) with the following exception.

Wages: \$1 per hour for work in journeyman's home town or within a 10 mile radius; when required to work out of this area \$1.20 per hour.

**WINDSOR AND ESSEX COUNTY, ONTARIO.—GENERAL CONTRACTORS ASSOCIATION AND THE GENERAL CONTRACTORS SECTION OF THE ESSEX COUNTY BUILDERS' AND CONTRACTORS' ASSOCIATION AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 494.**

Agreement to be in effect from April 13, 1929, to May 1, 1930, and from year to year until either party gives notice of change by February 1, of any year.

This agreement is similar to the one previously in force and summarized in the *LABOUR GAZETTE* for June, 1926, page 602, with the exception of the clause on wages, which states that minimum rate for carpenters is to be \$1 per hour until May 24, 1929, and \$1.10 per hour after that date.

**WINDSOR, ONTARIO.—EMPLOYERS CONTRACTORS ASSOCIATION AND INTERNATIONAL ASSOCIATION OF OPERATIVE PLASTERERS AND CEMENT FINISHERS, LOCAL No. 345**

Agreement to be in effect from May 1, 1929, to May 1, 1930.

This agreement is similar to the one previously in force and summarized in the *LABOUR GAZETTE* for May, 1926, page 501, with the exception that, with the permission of union officers, work will be permitted on Saturday afternoons on a rush job, double time to be paid for such work.

**ST. CATHERINES, ONTARIO.—MASTER CARPENTERS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 38.**

Agreement signed on conclusion of the strike reported in the *LABOUR GAZETTE* for June, 1929, page 599.

Agreement to be in effect from May 1, 1929, to April 30, 1931. If either party wishes a change at its termination, three months notice to be given.

This agreement is similar to the one previously in force and summarized in the *LABOUR GAZETTE* for July, 1928, page 787, with the following exceptions:

Wages for journeymen carpenters: \$1 per hour.

One apprentice allowed for every eight journeymen employed.

**LETHBRIDGE, ALBERTA.—CERTAIN CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 846.**

A verbal agreement has been in effect since May 1, 1928, providing for the same terms as

under the agreement in Calgary which was summarized in the LABOUR GAZETTE for July, 1928, page 788.

### Transportation and Public Utilities: Street and Electric Railways

TORONTO, ONTARIO.—TORONTO TRANSPORTATION COMMISSION AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES, LOCAL NO. 113.

This agreement, which is in effect from March 31, 1929, to March 31, 1932, is printed in full on page 809 of this issue.

### Transportation and Public Utilities: Local Transportation

WINNIPEG, MANITOBA.—THREE DAIRY COMPANIES AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS OF AMERICA, MILK WAGON DRIVERS AND DAIRY EMPLOYEES, LOCAL NO. 119.

Agreement to be in effect from November 1, 1928, to October 31, 1929, and thereafter from year to year until either party gives notice 30 days prior to November 1, of any year.

Only union members or those willing to join union within 15 days to be employed.

Employees through their representatives to have right to discuss any grievances with company officials and if any employee is suspended or discharged for a reason which, upon investigation, is found insufficient, he shall be reinstated and paid for time lost.

No boys or unauthorized person to ride on wagons or serve customers.

One week's notice of leaving or dismissal to be given.

Choice of routes according to seniority and efficiency.

No retail or wholesale wagon to be loaded before 5 a.m. from November 1, to March 31, or before 4 a.m. from April 1, to October 31.

Six days to be a week's work for all employees. Stablemen to work 8 hours per day, a 48-hour week, and receive one week's vacation with pay after one year's service. Other employees to receive one week's vacation with pay after four years' service.

Drivers must supply \$50 bond on being employed, and are charged 5 cents for every bottle taken out, such charge to be passed on to customers not returning bottles.

Wages per week: Retail drivers to receive a minimum of \$29 per week for a load of less than 1,400 quarts per week, \$29.50 for 1,400 quarts and \$1 additional for every additional 100 quarts per week up to \$45.50 per week for a load of 3,000 quarts; spare route men \$35; wholesale drivers (truck or team) \$31; auto truck drivers (haulers) \$30; special delivery drivers (jitney) \$25; stablemen \$25.

### Transportation and Public Utilities: Water Transportation

MONTREAL, QUEBEC.—THE HARBOUR COMMISSIONERS OF MONTREAL AND THE INDEPENDENT ASSOCIATION OF HARBOUR EMPLOYEES OF THE PORT OF MONTREAL.

Agreement to be in effect from May 1, 1929, to May 1, 1930, for employees of grain elevator system, construction forces, machine shop and

shipyard, harbour yard shop, electrical department and coal storage plant, and to the close of the navigation season of 1929 for other employees.

This agreement is similar to the one summarized in the LABOUR GAZETTE for September, 1927, page 1004, with the following changes:

Grain Elevator System, Elevators Nos. 1, 2, 3 and B: assistant chief weighman 68 cents per hour, boat shoveller 53 cents. Grain boat shovellers to be paid two hours for each call when not required to work, and if ordered to wait, to be paid full waiting time up to two hours, two hours pay for from two to four hours waiting time and half time for waiting time over four hours.

Harbour Yard, Shop and Guard Pier: leading hand boilermaker 74 cents per hour; templatemaker 69 cents; boilermaker and sheet metal worker, blacksmith, machinist, 68 cents; first class painter 63 cents, second class painter 58 cents; sawmill engineer and derrick engineer 55 cents; storekeeper's helper and tool room man 50 cents; blacksmith's helper and boilermaker's helper 46 cents, labourer 42 cents.

Locomotive shop: leading hand 76 cents per hour, blacksmith and boilermaker 68 cents, labourer 42 cents.

Construction and maintenance forces: crane foreman (named) 76 cents per hour, hydrant patrolman 50 cents, foreman plumber \$45 per week.

Electrical department: sub-foreman lineman 68 cents per hour, journeyman electrician 66 cents, first class lineman 63 cents, second class lineman and patrol lineman 58 cents.

Cold storage warehouse: the new wage rates for all members of this department are as follows: temperature man \$42 per week, sub-foreman \$33 per week, warehouseman 55 cents per hour, shipper 50 cents, trucker and checker 45 cents, labourer 42 cents, night watchman \$3.68 per night.

Employees of the Fleet Branch, which is now included in the agreement, to be paid as follows: Dredge crews: engineer 79 cents per hour, cranemer 63 cents, assistant craneman 58 cents, fireman 47 cents, deckhand 42 cents, watchman (night and firing) \$3.94 per shift, watchman (day) \$3.68 per shift.

Derrick crews: engineer 68 cents, assistant engineer 55 cents, fireman 47 cents, deckhand 42 cents, watchman (night and firing) \$3.94 per shift, watchman (day) \$3.68 per shift.

SS. "Sir Hugh Allan": captain and chief engineer \$175 per month; second engineer \$150, steward and chef \$126, mate \$121, second cook \$80, boatswain \$75, second steward \$70, oiler and wheelman \$65, fireman \$61, deckhand, waiter and mess boy \$50, watchman (no firing) \$3.68 per shift.

Tug crews: captain \$132 per month (one or two captains are paid \$150) engineer \$126, fireman \$60, deckhand \$48, cook \$42 (on one tug \$52).

Drilling and blasting boat: engineer \$190 per month, blacksmith 66 cents per hour, blaster 53 cents, driller 49 cents, fireman 47 cents, helper and powder man 44 cents, deckhand 42 cents, watchman (night and firing) \$3.94 per shift.

Floating crane: captain, 74 cents per hour, engineer 68 cents, second engineer 58 cents, fireman 47 cents, deckhand 42 cents, watchman (night and firing) \$3.94 per shift.

Coal barge: foreman \$142 per month, helper 44 cents per hour.

Divers: diver (when diving) \$1 per hour, assistant diver (when diving) 65 cents per

hour. When not diving, they will be paid the regular rate according to the class of work on which they are engaged.

Employees of grain elevators and conveyor galleries, if called to work for short time on Sundays or holidays, to be paid at least 5 hours at overtime rate.

Electrical Department: regular shift operators in electrical substations and cold storage power house to be given one week's holidays with pay and chief operators two weeks, if they have at least two years' service in these positions.

Tug employees' hours of work are not defined. No overtime to be paid men on monthly rate.

Derricks and dredges: hours: 10 per day, 6 days a week if required. Overtime and work on Sundays, time and one-half.

**DETROIT AND ST. CLAIR RIVERS, ONTARIO.—**

CANADIAN NATIONAL RAILWAYS AND CERTAIN UNITED STATES RAILWAYS OPERATING CAR FERRIES ON THE DETROIT AND ST. CLAIR RIVERS, AND THE SAILORS' UNION OF THE GREAT LAKES AND MARINE FIREMEN, OILERS, WATERTENDERS AND COALPASSERS' UNION.

Agreement to be in effect from February 16, 1929, to February 16, 1930, and thereafter subject to thirty days' notice from either party.

Hours: 8 per day.

Overtime: at regular rate up to 9 hours work per day; thereafter time and one-half.

Wages: wheelmen, watchmen, lookouts, oilers and firemen \$105 per month; deckhands \$77 per month. \$50 shall be allowed such employees above specified for subsistence.

Annual holidays of fifteen days to be allowed to regularly assigned employees without deduction in pay.

Promotion to be made by seniority, experience and ability.

Employees may elect a committee to meet with the superintendent to adjust grievances.

Car ferry employees to be given free transportation in accordance with the rules governing the issuance of passes of their respective employers.

Canadian National Railways' steamers are operated under Canadian laws, which would apply if necessity arose.

#### Service: Hotel and Restaurant

**VICTORIA, BRITISH COLUMBIA.—CERTAIN EMPLOYERS AND THE INTERNATIONAL ALLIANCE OF HOTEL AND RESTAURANT EMPLOYEES, LOCAL No. 459.**

Agreement to be in effect from June 1, 1929, to June 1, 1930.

This agreement is the same as the one previously in force and summarized in the *LABOUR GAZETTE* for September, 1926, page 908.

## AGREEMENT COVERING WAGES AND WORKING CONDITIONS OF TORONTO STREET RAILWAY EMPLOYEES

**A**N agreement covering wages and working conditions for employees of the street railway system of Toronto for the ensuing three years was signed on March 31, 1929, by the officials of the Toronto Transportation Commission, which operates the system for the city of Toronto, and of the Amalgamated Association of Street and Electric Railway Employees of America, representing various classes of employees. The agreement resulted from the settlement of a dispute as to the terms of the agreement which was referred to arbitration, the findings of the arbitrators being issued on March 18, 1929.

The agreement expiring on March 31, 1928, (*LABOUR GAZETTE*, May 1926) was substantially that reached in 1920, following a strike and a reference to the Ontario Municipal and Railway Board (*LABOUR GAZETTE*, July, 1920, p. 839). The principal change proposed by the employees was a provision for two weeks' holiday each year with pay, as for civic employees of Toronto, with certain other changes including wage increases for men in shops. The Commission offered to renew the old agreement unchanged, or to refer all the

terms of the agreement to arbitration. The union refused this offer and early in June it was reported that negotiations had been broken off and that a strike was imminent. The Toronto representative of the Department of Labour succeeded in re-opening negotiations and addressed a meeting of the union on June 9, held to decide whether a strike should be called or arbitration accepted. The meeting declared in favour of proceedings under the Industrial Disputes Investigation Act or if the Commission refused in favour of arbitration, the Minister of Labour to appoint the Chairman if not otherwise agreed upon. These proposals were refused by the Commission. After further negotiations, on July 30 the final offer of the Commission was submitted to a vote of the employees by ballot, at the shops, car barns, etc., namely, whether to renew the agreement, with certain minor changes, for two years or to submit the whole agreement to arbitration, and the latter was approved by a large majority. Each party was to appoint one member, these two to choose the third member and chairman, both parties to abide by the majority decision of the arbitrators for two years. No arrange-

ment was made as to the appointment of the chairman if the arbitrators did not agree. The illness and resignation of one arbitrator and the absence of another postponed the establishment of the Arbitration Board until December, 1928, when Mr. James Simpson, vice-president of the Trades and Labour Congress of Canada, appointed by the employees, and Mr. D. L. McCarthy, K.C., appointed by the Commission, agreed on Mr. Dyce Saunders, K.C., as chairman.

In the proceedings before the Arbitration Board the Transportation Commission proposed numerous changes in conditions including reductions in wages and a return to the nine-hour day. The award of the Board was not agreed to by Mr. Simpson, who made a minority report. The award was against the granting of two weeks' holidays with pay, and against the continuation of extra rates of pay for Sunday work, in force for twenty-seven years, and provided for the introduction of piece work and a bonus system in shops, modifications of the rule as to overtime pay for runs exceeding eight hours, and certain other changes chiefly in favour of the Commission. The employees objected strongly to the loss of the extra pay for Sunday work and the Commission offered to continue such pay if the agreement were made for three years instead of two, and this was accepted. The union, however, decided to refer to the courts the question as to whether the employees were legally civic employees and therefore entitled to holidays under the city by-laws.

The text of the agreement follows:—

**AGREEMENT between Toronto Transportation Commission and Employees of said Commission.**

This agreement, entered into on the 31st day of March, 1929, by and between The Toronto Transportation Commission, hereinafter called "The Commission", Party of the First Part: and Division No. 113, Amalgamated Association of Street and Electric Railway Employees of America, for such of the Railway Employees as are members thereof, and with its other Employees in the same class, who are not members thereof, Parties of the Second Part: In the operation of the lines of the Party of the First Part, the parties hereto of the first and second parts agree with each other as follows:

**WAGES**

The schedule of wages shall be as set out in the agreement dated 31st March, 1926, and covered by clauses numbered two and three in the said agreement.

"From the 31st day of March, 1929, until the termination of this agreement, the wages of the

trainmen (that is motormen, conductors, one-man car operators and bus drivers), motor and truck repairmen and shedmen, shall be as follows:

	Cents per hour
<i>For Trainmen—</i>	
For the first three months' service..	55
For the next succeeding nine months' service.. . . . .	57½
After one year's service.. . . . .	60
One-man car operators, extra.. . . . .	5
One-man bus drivers, extra.. . . . .	5
<i>Motor and Truck Repairmen—</i>	
For the first three months' service..	55
For the next succeeding nine months' service.. . . . .	57½
After one year's service.. . . . .	60
<i>Shedmen—</i>	
Foremen.. . . . .	60
Operating shedmen, men who operate cars and do general shed work.. . .	56
Ordinary shedmen, men doing general shed work, but not operating cars..	55
Car cleaners.. . . . .	54
<i>Operating Trackmen.. . . . .</i>	56

Motormen and conductors while in charge of trainers shall be paid twenty-five cents per day extra.

The wages and conditions applying to trackmen formerly in the service of the Toronto Railway Company, and who entered the service of the Commission on the 1st of September, 1921, will not be altered."

The Commission has the right of trying out the payment of a limited number of maintenance employees on the piece work basis or on a bonus system during the life of this agreement. The Commission guarantees that:

(1) During the life of this agreement, all workmen engaged in any work which is being tried out upon the bonus system shall receive in wages not less than the amount they would have been entitled to receive under this agreement if the bonus system had not been tried.

(2) If, during the term of this agreement, such experiment shall prove that the bonus system is not a success, and is not to the advantage of the men, as well as of the Commission, the Commission will not again ask leave to introduce such system in its shops.

**GENERAL CONDITIONS AFFECTING EMPLOYEES**

**1. Meetings—**

The party of the first part, through its duly accredited officers, will meet and treat with the officers or representatives of Division No. 113, who must be members thereof, and duly elected as representatives at the regular meeting, in all matters of grievance and disputes which may arise from time to time with any of the employees of the Commission who are members of the Association.

**2. Committee of Employees—**

The Department Head concerned or General Manager shall receive a duly appointed committee of the members of Division No. 113 at any reasonable time to discuss any matters arising out of this agreement.

**3. Privileges—**

All rights, privileges and immunities now enjoyed by, and all obligations of the employees, shall continue, except as altered herein.

#### 4. Discipline—

The following regulation is agreed upon as to discipline: Any employee against whom charges may be received will be required to report when off duty to the Department Head or Foreman. His case will then be considered by the proper officials of the Commission and will be dealt with upon the following principles:

For minor cases he is to be warned. For serious cases, including drunkenness, drinking while on duty, drinking in uniform, or drinking on cars, destruction of property, accidents through carelessness or neglect, missing fares through neglect or carrying friends free, incivility to passengers, profanity on cars, buses, coaches, motor trucks or on the premises of the Commission, he may be disciplined or released from further service. For absenting himself from duty without leave, or being absent without leave and retaining the Commission's run money during such absence, he may be released from further service. For habitually reporting late, after being duly warned, he may be released from further service. In all cases he shall have the right to appeal to the Department Head and have his case considered by him.

#### 5. Appeal to Department Head—

Any employee against whom a charge is received shall have the right to appeal in person to the Department Head, and except as to a charge of dishonesty, may bring with him in his interest, a deputation or any committee of the employees, or where the employee in question is a member of Division No. 113, he may be represented by their duly elected representative. Attendance in such capacity shall not operate to the employees' disadvantage. An employee attending on such deputation or committee shall give due notice to his car starter or foreman, and shall resume work upon reporting to his car starter or foreman.

#### 6. Leave of Absence—

The Commission will, upon application to the car starter or foreman, give leave of absence to employees for a reasonable period of time when their services may be spared, and in the event of the refusal of the car starter or foreman the matter shall be settled by the Department Head.

Any employee who may at any time be elected to an office in the Association shall upon written application be granted leave of absence for the time he is filling same, and if he returns to the service shall be given his former place, provided, in the opinion of the management, he is qualified to fill such position at the time of reinstatement.

Employees acting as due collectors, board members, or otherwise doing work for the Association shall be allowed leave of absence for the time required for such work.

#### 7. Sickness—

Any employee off duty on account of sickness may be required to produce a doctor's certificate as to the nature of his sickness and also as to his fitness to resume his regular duties, and in the case of a lengthy or serious illness, the employee will be required to undergo a medical examination as to his fitness to resume his regular duties.

#### 8. Equipment—

Cars, buses, motor coaches and motor trucks shall be properly equipped before being taken out each morning, but this shall not relieve

the trainmen, bus, motor coach and motor truck drivers from their obligation to see that their cars or vehicles are properly equipped and in apparent working order.

#### CONDITIONS AFFECTING TRAINMEN, BUS AND MOTOR COACH DRIVERS

##### 1. Reporting Time—

All trainmen, bus and motor coach drivers, required to take cars, buses or motor coaches at the car house or garage shall, at the first time reporting for the day, report to the car starter at least ten minutes before scheduled time, and in the event of them not reporting ten minutes ahead of time, the car starter shall fill the runs with other men.

When the relief point is not at the car house, or garage, men shall, at their first time reporting for the day, report to the car starter fifteen minutes ahead of scheduled time as at present.

Trainmen, bus and motor coach drivers, shall be relieved at a point nearest to the car house or garage at which they are employed, and if required to go to any other point, car house or garage after reporting at their own point, car house or garage, for the purpose of relieving or taking out cars, shall be paid for time occupied in so doing.

Trainmen, bus and motor coach drivers, on scheduled runs shall be paid for any extra time caused by being late when being relieved or running cars, buses or motor coaches, into car house or garage, when such delay is ten minutes or over.

##### 2. Off Days—

No man shall be given a set off-day from month to month but shall take off-days in accordance with his position on the board, except in cases mutually agreed upon.

##### 3. New Lines—

Trainmen, bus and motor coach drivers shall when required train, qualify and operate on lines which have been, or may be, acquired for operation by the Commission.

##### 4. New or Different Equipment—

Trainmen, bus and motor coach drivers shall when required, train, qualify and operate new or different equipment acquired for operation by the Commission.

##### 5. Uniforms—

The Commission will pay half the cost of the uniforms for the trainmen who have been in the Commission's service for a period of one year, and will provide free uniforms for trainmen who have been in the employ of the Commission for a period longer than two years, it being understood that no employee shall be required to pay for more than one uniform and a half.

Regulations from time to time may be made by the Commission to provide for protection against loss in this matter from employees leaving the Commission's service.

#### CONDITIONS AFFECTING ONLY TRAINMEN, BUS DRIVERS AND CITY COACH ROUTE DRIVERS

##### 1. Day's Work—

There shall be an eight hour day, straight time, with a leeway of one-half trip to complete schedule for 66½ per cent of the crews, so far as practicable, the remainder to work ends and spares.

**2. Overtime—**

Overtime rates shall not be paid except in the case of regular scheduled crews, who are scheduled to do over eight hours work, but pay for overtime shall only commence after the time of one scheduled half trip over and above the eight hour period has expired.

Overtime, when paid, shall be at the rate of time and one-half.

Overtime rates shall not be paid after eight hours and the time of one-half scheduled trip, if the overtime is due to failure of the power supply or breakdown of the track, plant or equipment, or any cause beyond the control of the Commission.

**3. Sunday Work—**

The Commission will continue the payment of time and one-quarter for Sunday work. No employee shall be entitled to receive extra payment for overtime on Sundays, but for all work whatsoever on Sunday shall receive only the rate of time and one-quarter.

**4. Standing—**

All trainmen, bus and city coach route drivers, shall have their respective places in the car house or garage to which they are assigned in accordance with their continuous employment in the service of the Commission or its predecessors, and trainmen, bus or motor coach drivers longest in the continuous service of the Commission or its predecessors at the car houses or garages in which they are employed shall have first choice of runs from that car house or garage. The right of such selection of runs shall be granted at least four times a year for men with regular runs and monthly for men below the regulars.

**5. Extras—**

Trainmen, bus drivers and city coach route drivers, shall be granted the existing time allowance of one-half hour for extra runs under two and one-half hours, and extra runs between two and one-half hours and three hours, shall pay three hours, but not more than two allowances shall be given in one day. In addition, the existing ten minutes bonus for tripper or extra runs shall be continued under the existing conditions.

Extra men to be detailed the night before for all crews known to be open, as far as this can be done without any risk of leaving cars, buses or coaches out of service on the following day.

The Commission guarantees to each extra trainman, bus driver and city coach route driver engaged on the work of the Commission, a minimum amount for each regular pay period worked, equal to the equivalent of 6 hours' pay (at the standard rate applicable in each case) per day, six days per week, provided that such man reports for work and carries out the duties assigned to him. If, however, in a pay period, the man fails once to report for work, the minimum guarantee to be reduced in proportion which one day bears to the pay period. A second failure to report for work shall similarly further reduce the minimum guarantee. Failure to report for work more than twice in any pay period to relieve the Commission of any liability for a minimum guarantee in respect of such period.

**CONDITIONS AFFECTING ONLY MOTOR COACH DRIVERS****1. Day's Work—**

The day's work will be arranged to suit the requirements of the business, and existing arrangements as to personnel shall be continued.

**2. Extras—**

Motor Coach Drivers shall be granted a time allowance of one-half hour for extra runs under two and one-half hours, and extra runs between two and one-half hours and three hours, shall pay three hours, but not more than two allowances shall be given in one day. In addition, the existing ten minutes bonus for tripper or extra runs shall be continued under the existing conditions. Adjustments will be made for special, chartered and sightseeing services.

Extra men to be detailed the night before for all crews known to be open, as far as this can be done without any risk of leaving coaches out of service on the following day.

The Commission guarantees to each extra motor coach driver engaged on the work of the Commission, a minimum amount for each regular pay period worked, equal to the equivalent of 6 hours' pay (at the standard rate applicable in each case) per day, six days per week, provided that such man reports for work and carries out the duties assigned to him. If, however, in a pay period, the man fails once to report for work, the minimum guarantee to be reduced in the proportion which one day bears to the pay period. A second failure to report for work shall similarly further reduce the minimum guarantee. Failure to report for work more than twice in any pay period to relieve the Commission of any liability for a minimum guarantee in respect of such period.

**3. Nature of Work—**

Motor Coach Drivers may be called upon to work out of town on chartered, special, sightseeing or interurban services, and the Commission reserves the right of selection of Motor Coach Drivers for the above services.

**CONDITIONS AFFECTING SHOP AND CAR HOUSE EMPLOYEES****1. Day's Work—**

The shop and car houses shall be operated on an eight hour day, but no overtime rates shall be paid until eight and one-half hours shall have been completed.

Overtime, when paid, shall be at the rate of time and one-half.

**2. Sunday Work—**

The Commission will continue the payment of time and one-quarter for Sunday work, but no employee shall be entitled to receive extra payment for overtime on Sundays.

**3. Washing Time—**

The men in the motor shops, garages and their branches shall be given five minutes in which to wash before leaving work, and any employee abusing this privilege, in the opinion of the management, shall be subject to discipline, or may be released from further service with the Commission.

**4. Lunch and Locker Rooms—**

The Commission shall (whenever in the opinion of the management it is practicable)

supply suitable lunch and wash basin rooms, provided with sufficient lockers and keys, at all shops and car houses.

#### 5. *Off-Days Posted*—

Repairmen and Shedmen's Off-Days, as at present, shall be scheduled and posted in the men's rooms.

#### 6. *Rubber Boots, etc.*—

Rubber boots and coats shall be supplied for the emergency crew at the different shops and car houses.

#### 7. *Seniority*—

Seniority of motor and truck repairmen and car house employees will be effective in filling vacancies on the day shift provided that the night man has the necessary ability, and that other things are equal, the Head of the Department to have the final decision.

#### 8. *Shopmen's Tools*—

Tools necessary for work in the motor shops shall be supplied employees. The men shall not take tools away from the shops, and shall be responsible for breakages or loss occasioned by their negligence, and must return said tools in good condition; in default of doing so, they must pay for same.

#### 9. *Lay-Off*—

In case of a lay-off or reduction of staff, the men laid off (other things being equal) shall be given preference in being first taken into the service again. Qualifications being equal, in laying off, junior men shall be the first men off, and in taking men on the senior men, as a general rule, shall get first chance.

#### 10. *Saturday Half-Holiday*—

It is understood that only the men in the shops who are required for the necessities of the service shall be compelled to work on Saturday afternoon, excepting when, in the opinion of the management, the services of all the men, or any of them, are required on Saturday afternoon to meet the necessities of the business.

### CONDITIONS AFFECTING WAY DEPARTMENT EMPLOYEES

#### 1. *Definition*—

The term, Way Department Employees, shall include all hourly rated employees of the Way Department as shown in the attached wage schedule or as may be shown from time to time with the exception of Way Employees on the Lake Simcoe Line whose wages and working conditions shall remain as at present.

#### 2. *Working Hours*—

The daily hours of work will be governed by the urgency of the work on hand, but normally there will be a nine hour day during the summer and an eight hour day during the winter.

It is understood that during the winter a minimum day of eight hours cannot be guaranteed, but that the work will be distributed as equitably as possible among all hourly rated employees of the Way Department.

### PERIOD OF AGREEMENT

This agreement and provisions thereof shall continue in force and be binding on the respective parties hereto, to and including the 31st day of March, 1932.

## Apprenticeship in Germany

According to statistics recently published by the German Federal Statistical Office, the Industrial Census of 1925 showed that on June 16, 1925, there were 986,567 apprentices under a definite system of training, employed in industrial and commercial undertakings out of a total of 18,749,583 occupied persons. The distribution of the apprentices over the principal branches of industry was as follows: manufacture of iron and steel and metal goods, 14.6 per cent of all occupied persons (including apprentices); woodworking, 13.6 per cent; engineering, 11.2 per cent; the clothing trades, 10.3 per cent; the building trades, 8.6 per cent. The proportion of apprentices to the total number of occupied persons in the industry was least in those industries mainly employing semi-skilled labour, such as the mining, chemical and textile industries. Approximately 40 per cent of all apprentices received their training in small undertakings occupying not more than 5 persons; 16.5 per cent were in undertakings occupying 6 to 10 persons; 20.8 per cent in undertakings occupying 11 to 50 persons, and 22.5 per cent in undertakings occupying over 50 persons. The proportion of apprentices to occupied persons was, however, greatest (11 per cent) in under-

takings occupying from 6 to 10 persons. In undertakings of this kind belonging to the iron and steel and metal trades, the engineering, woodworking, electrical engineering and clothing industries, approximately one-fourth of all occupied persons, on an average, were apprentices.

Of the total of 986,567 apprentices, 544,000 were employed in small handicraft undertakings, this number representing a proportion of 1 apprentice in every 6 persons engaged in handicrafts, or, if masters are excluded, one apprentice to every two workmen. The branches of the handicraft industries with the highest percentages of apprentices to persons occupied (including apprentices) were as follows: metal trades, 134,492 apprentices or 24.4 per cent; woodworking, 100,500 or 22.6 per cent; clothing, 117,448 or 14.3 per cent; and the building trades 66,225 or 13.2 per cent.

It is estimated that, having regard to the reduction in the birth-rate during the war years, and the consequent decrease in the numbers of children attaining the age of 14 years during the years 1929 to 1932, there will be in each of these years a great shortage of male apprentices.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1929

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being slightly lower, while the Dominion Bureau of Statistics index number of wholesale prices showed a small advance.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$10.92 at the beginning of June, as compared with \$10.94 for May; \$10.73 for June, 1928; \$10.86 for June, 1927; \$11.06 for June, 1926; \$10.44 for June, 1925; \$9.86 for June, 1924; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); \$12.79 for June, 1918; and \$7.49 for June, 1914. The most important decline occurred in the price of butter, while slight decreases occurred in the prices of mutton, milk, cheese, flour, rolled oats and sugar. The prices of beef, veal, fresh and salt pork, bacon, lard, eggs, evaporated apples and potatoes were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$21.18 at the beginning of June, as compared with \$21.21 for May; \$20.97 for June, 1928; \$21.04 for June, 1927; \$21.31 for June, 1926; \$20.67 for June, 1925; \$20.22 for June, 1924; \$20.72 for June, 1923; \$20.58 for June, 1922; \$21.74 for June, 1921; \$26.92 for July, 1920 (the peak); \$20.36 for June, 1918; and \$14.27 for June, 1914. Fuel was practically unchanged, while no changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was slightly higher at 92.6 for June, as compared with 92.4 for May; 97.1 for June, 1928; 98.9 for June, 1927; and 100.2 for June, 1926. Sixty-seven prices quotations advanced, seventy-two declined and three hundred and sixty-three were unchanged.

In the grouping according to chief component materials four of the eight main groups were higher and four were lower. The groups which advanced were: the Vegetable and Vegetable Products group, due to higher prices for certain grains, flour, and foreign fruits, which more than offset declines in the prices of raw rubber, raw sugar, tea and rolled oats; the Wood, Wood Products and Paper group, due to higher prices for certain lines of lumber; the Non-Metallic Minerals and their Products group, due mainly to higher prices for gasoline and crude oil; and the Chemicals

and Allied Products group. The Animals and their Products group and the Fibres, Textiles and Textile Products group declined, the former due to lower prices for fish, leather, and milk and its products, which more than offset advances in the prices of livestock, fresh meats and eggs, and the latter because of lower prices for raw cotton, raw jute and raw silk. The Iron and its Products group and the Non-Ferrous Metals group were also slightly lower.

In the grouping according to purpose both consumers' goods and producers' goods were slightly higher, the former due to higher prices for fruits, meat and poultry, and household equipment and supplies, which more than offset declines in the prices of beverages, fish, milk and milk products, and vegetables, and the latter due to advances in materials for the textile and clothing industries, for the furs and leather goods industries, for the meat packing industries and for the milling and other industries.

In the grouping according to origin raw or partly manufactured goods were practically unchanged, advances in the prices of grains, fish, foreign fruits, hides and livestock offsetting declines in the prices of milk, tin, lead and leather. Fully or chiefly manufactured goods also showed little change, declines in the prices of tanning extracts, butter, cotton yarn, thread, and rolling mill products offsetting advances in the prices of cheese, gasoline, crude oil and certain chemicals. Domestic farm products and articles of marine origin were lower, while articles of forest origin and articles of mineral origin advanced.

#### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of June, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food,

fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6; 1927, 73.4; 1928, 71.7; 1929, 71.4.

(Continued on page 822)

(Continued from page 814)

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318) and bringing the figures down to 1929. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7;

1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

#### Retail Prices

Beef prices were again generally higher, sirloin steak averaging 38.1 cents per pound in June, as compared with 36.3 cents in May; round steak 33 cents per pound, as compared with 31.2 cents; rib roast 30 cents per pound, as compared with 28.8 cents; and shoulder roast 24.1 cents per pound, as compared with 22.5 cents. Veal was slightly higher, averaging 24.5 cents per pound, while mutton declined from an average of 31.5 cents per pound in May to 31.2 cents in June. Both fresh and salt pork advanced, the former being up from an average of 30.2 cents per pound in May to 31.2 cents in June, and the latter from 27.1 cents per pound to 27.5 cents. Bacon advanced in most localities, averaging 39.6 cents per pound in June, as compared with 38.2 cents in May. In fresh fish halibut and whitefish were slightly higher.

Fresh eggs showed little change at an average price of 35.1 cents per dozen, while cooking advanced from an average price of 30.7 cents per dozen in May to 31.1 cents in June. Milk was down in the average from 12.2 cents per quart in May to 12 cents in June. Lower prices were reported from St. Hyacinthe, St. John's, Montreal, Kingston, Hamilton, Cobalt, Sault Ste. Marie, Medicine Hat, Edmonton and Calgary. Butter was substantially lower, dairy being down from an average of 44.2 cents per pound in May to 40.6 cents in June and creamery from 48.4 cents per pound to 44.7 cents. Lower prices were reported from practically all localities. Cheese was also slightly lower, averaging 33.2 cents per pound in June, as compared with 33.9 cents in May.

Bread was unchanged at an average price of 7.7 cents per pound. Flour and rolled oats were slightly lower, the former averaging 4.8 cents per pound and the latter 6.2 cents per pound. Potatoes rose from an average price of \$1.23 per ninety pounds in May to \$1.31 in June. Evaporated apples and prunes were slightly higher. Granulated sugar declined from an average price of 7.3 cents per pound in May to 7.1 cents in June. Coffee and tea showed little change. Anthracite coal was slightly lower at an average price of \$16.10 per ton as compared with \$16.15 in May. Lower prices were reported from Sherbrooke, Montreal, Hamilton, Woodstock and St. Thomas. No changes were reported in rent.

**Wholesale Prices**

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics. Grain prices recovered during the month, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaging \$1.18 per bushel, as compared with \$1.13 per bushel in May. The higher prices were said to be due to the unfavourable weather conditions in western Canada, as well as in Australia and the Argentine. Coarse grains also advanced, although to a less extent than in the case of wheat. Western barley rose from an average of 67.2 cents per bushel in May to 69.1 cents in June; flax from \$2.056 per bushel to \$2.12; western oats from 50 cents per bushel to 51.1 cents; and rye from 86.5 cents per bushel to 87.4 cents. Flour advanced 4 cents per barrel to \$7.23. Oatmeal was down from \$3.85 per ninety-eight-pound bag to \$3.63. Bran in Montreal declined from \$28.25 per ton to \$27.65. Oranges advanced from \$5.13 per case to \$5.53 and lemons from \$4.25-\$4.75 per case to \$6.50. Raw sugar at New York was down from \$1.84 per hundred pounds to \$1.72. Granulated sugar was unchanged. Ceylon rubber declined from 21.6 cents per pound in May to 20.7 cents in June. Good steers at Toronto advanced from \$11.21 per hundred pounds in May to \$11.47 in June, while at Winnipeg the advance was from \$10.50 per hundred pounds to \$10.62. Hogs at Toronto declined from \$13.38 per hundred pounds to \$12.95. In meats, beef prices for the most part were steady, except at Montreal where the price advanced from 19½ cents per pound to 21½ cents. Pork at Winnipeg and Vancouver declined, while the price at Toronto advanced 1 cent per pound to 21½ cents per pound. Creamery butter showed a substantial seasonal decline, the price ranging from 38-40 cents per pound. Raw cotton at New York declined from 19.6 cents per pound in May to 18.7 cents in

\*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

June. Raw silk was down from \$5.35 per pound to \$5. Jute again declined the price at Montreal being down from \$8.68 per cwt. to \$8.38. In chemicals, sulphuric acid advanced \$2 per ton to \$14 and red lead from \$8.25 per hundred pounds to \$8.50. Tanning products were slightly lower. Structural steel shapes declined from \$2.15 per hundred pounds to \$2, while steel sheets were slightly higher. In non-ferrous metals, copper was unchanged at \$19.60 per hundred pounds.

Antimony declined from \$9 per hundred pounds to \$8.75; lead from \$6.75 per hundred pounds to \$6.70; tin from 46½ cents per pound to 46 cents; and spelter from \$7.05 per hundred pounds to \$7. Anthracite coal at Toronto advanced 10 cents per ton to \$13.12. Gasoline advanced 1 cent per gallon in most of the larger cities. Crude oil prices were approximately 25 cents per barrel higher than last month.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

**T**HE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1913=100, was 135.8 for May, which is 2.0 per cent lower than for April. The index number for food fell 2.5 per cent with a decline of 3 per cent in cereals and of 4 per cent in "other foods," while meat and fish as a whole were the same as in April. Industrial materials fell 1.7 per cent, with declines in all groups with the exception of iron and steel, which advanced 0.5 per cent.

The *Economist* index number, on the base 1927=100, was 91.5 at the end of May, a fall of 2.7 per cent for the month. Cereals and meat fell 6.6 per cent, due to a seasonal decrease in the price of potatoes and to lower prices for imported wheat, maize and flour, beef and bacon. The group "other foods" declined 2.5 per cent. Textiles, minerals and miscellaneous commodities all declined, but the changes were not as marked as in foods.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base of 1867-77=100, was 113.0 at the end of May, a decline of 3 per cent from April, and continuing the recent steady decline. The movement was general and extended to all groups, vegetable foods showing the most marked fall of 6.4 per cent.

**COST OF LIVING.**—The index number of the Ministry of Labour, on the base July, 1914=100, was 160 at June 1, a decline of one point from May, which was due to a fall of two points in food; other groups were unchanged.

### Belgium

**WHOLESALE PRICES.**—The index number of the Ministry of Industry, Labour and Social Affairs, on the base April, 1914=100, was 862 for April as compared with 869 in the previous month. There were no very marked changes in any of the groups.

**COST OF LIVING.**—The official index number of the cost of living of a middle class family of moderate income, on the base 1921=100, was 217.20, showing practically no change from April. There was a slight decline in heat and light which was offset by an advance in clothing.

### Germany

**COST OF LIVING.**—The official index number of the cost of living on the base of 1913-1914=100, was 153.5 for May, a decline of 0.1 per cent. There was a decline of 1.5 per cent in heat and light, while other groups showed only very slight variations from April.

### Italy

**WHOLESALE PRICES.**—The index number of the Milan Chamber of Commerce, on the base 1913=100, was 484.62 for May, a decline of 1.6 per cent from April. Foods declined 1.3 per cent due to a fall in the prices of vegetable foods. Industrial materials fell 1.8 per cent with decreases in all groups, with the exception of construction materials which were unchanged.

### Australia

**WHOLESALE PRICES.**—The Melbourne index number on the base 1911=1000, was 1792 for March, as compared with 1778 for February. The advance was due to a rise of 26.1 per cent in meat prices for the month. There was a slight rise in chemicals, while other groups either showed a small decrease or were unchanged.

### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 95.8 for May, a decline of one per cent from April. Farm products fell about 2.5 per cent due to lower prices for corn, oats, rye, wheat, beef steers, calves, hogs, sheep and lambs, cotton, hay and wool, although eggs, apples and potatoes were higher. There was no change in the food group as a whole. Hides and leather, chemicals and drugs, textile products, metals and metal products declined during the month. Fuel and lighting were higher owing to increases in petroleum products.

Bradstreet's index number (showing the cost of a list of 106 commodities) was \$12.4853 at July 1, an advance of 0.2 per cent over June 1, due to advances in the groups: breadstuffs, live stock, fruits, hides and leather, metals and chemicals and drugs. On the other hand, increases were noted in provisions, textiles, oils, naval stores, building materials and miscellaneous products; coal and coke were unchanged.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 159.4 for May, an advance of 0.1 per cent over April, due to a small increase in food; housing was unchanged, while clothing, fuel and light and sundries declined.

## Pan-Pacific Women's Conference in 1930

The second Pan-Pacific Women's Conference will be held at Honolulu in August, 1930, under the auspices of the Pan-Pacific Union. Committees representing all the countries touching the Pacific are being formed, including Australia, Canada, China, Dutch East Indies, Federated Malay States, Fiji, India, Indo-China, Japan, Korea, Chile, Mexico, Panama, Peru, Salvador, New Zealand, Philippine Islands, Samoa, Siam, Straits Settlement, and the United States.

The chairman of the Canadian Committee will be Miss Charlotte Whitton, correspondents also being appointed to assist in the arrangements as follows: education, Miss Kenneth Haig, Manitoba Free Press, Winnipeg; government, Mrs. W. R. Lang, Toronto, national convener of legislation, Women's Institute of Canada; industrial health, Mrs. Claude Nash, Minimum Wage Board, Winnipeg; standards of living and diet, Miss Marjorie Bell, B.A., Victorian Order of Nurses, Ottawa; industrial clearing house information, Miss Margaret Mackintosh, Department of Labour, Ottawa; social service, Miss Charlotte Whitton, executive secretary, Canadian Council on Child Welfare, Ottawa.

The first conference, held at Honolulu in August, last year, unanimously decided to promote the following projects:—

(a) A correlated inquiry into costs and standards of living in Pacific countries with special reference to diet content.

(b) A study of standards of living and wages in Pacific countries which will make comparison possible.

(c) A survey of the health of women in industry in Pacific countries through an expert committee with Pan-Pacific links forged through this conference.

(d) Formation of a committee of experts for the initiation of health research projects of value to Pacific women.

(e) Research regarding electoral systems, women's place in political parties, effect of compulsory votings and legislation relating to women and children.

The Chief Registrar of Friendly Societies of Great Britain has issued a statistical summary showing the activities of registered trade unions, 1918-1927; co-operative societies, 1918-1927; friendly societies, 1917-1926; and building societies, 1918-1927. The registered trade unions are listed in a tabular summary and arranged in industrial groups, indicating membership, funds, unemployment benefits and dispute benefits. The total number of trade unions registered at the close of 1927 was 487, the total membership of which was 3,903,048. The total revenue derived from the membership was £7,354,042; the allowances from the Ministry of Labour (unemployment insurance and administration expenses amounted to £2,095,994; and the revenue from other sources to £621,603. The total expenditure for unemployment, travelling and emigration benefit, amounted to 3,131,002 while a total of £187,399 was expended in dispute benefits. The total number of employers' associations in 1927 was 91, with a membership of 44,144.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Non-Members Have no Seniority Rights Under Agreement Made by Union

THE following decision, in the case *Young versus Canadian Northern Railway Company*, has been rendered by Mr. Justice Dysart in the Court of King's Bench, Winnipeg. The decision establishes the principle that non-members have no seniority rights under agreements concluded with employers by a group of unions. The facts of the case are set forth in the judgment.

#### Text of Judgment

Mr. Justice Dysart said:—

In this action against his former employer, the plaintiff seeks reinstatement into the service, from which he was indefinitely suspended; or, in the alternative, damages for wrongful dismissal.

The plaintiff is a machinist by trade, and as such had been employed by the defendant in its railway shops at Fort Rouge, Winnipeg, for several years, when on June 9th, 1927, while so employed, he was notified that his services would "not be required after 5 p.m., June 13th, 1927, on account of reduction of staff." Thus compelled, he discontinued his employment on the day appointed, and has never since been restored to the force. His suspension is, for the purposes of this trial at least, considered by both litigants as tantamount to dismissal.

The hiring was arranged on June 9th, 1920. On that day the plaintiff applied in person to the foreman of the defendant's said shops for work as a machinist; reduced his application to writing, on a form supplied for the purpose; presented his credentials, which proved satisfactory; and was told to report for work the following morning. In reply to his direct question, he was informed that he would receive "the going rate" of wages. Nothing more was then said or done.

The written application, which is signed by the plaintiff but not by the defendant, adds nothing material to this statement. The plaintiff accordingly went to work on the following morning, and thereafter continued to work, though not always on full time, until his services were dispensed with, as already mentioned.

At the time this hiring was effected, there were in existence in writing certain rules and regulations embodied in what is called "Wage Agreement No. 4," governing the hours of labour, rates of wages, and general conditions of employment in the defendant's said shops. These were all well known to the shop foreman, who by using the phrase "the going

rate," may have indirectly referred to that agreement. But to the plaintiff that phrase could not suggest the agreement, unless he already knew of it. He tells us, not at all convincingly however, that he had seen and read a copy of the agreement before he applied for work; but at an earlier stage in these proceedings, he told a story somewhat different. The probabilities are against his present version. He had just migrated to Winnipeg from England where he had shortly before completed his apprenticeship as a machinist in a private concern, and where no such wage agreement is disclosed in evidence to have been known to him. If, therefore, he had through the kind offices of a Winnipeg friend borrowed a copy of this wage agreement, it is more than likely that he would have looked up the rate of wages clearly set forth therein, and it is difficult to understand either the need of his enquiry as to wages, or his failure upon receiving the reply, to make some reference to the agreement itself. On the whole I have no doubt that he did not learn of that agreement till after he entered defendant's employ.

What, if anything, is to be inferred from this neglect or failure of these contracting parties to refer to said agreement? For the plaintiff, Mr. Bergman urges as an irresistible inference that if the wage agreement was made for the general management of the shops, it would become a part of the plaintiff's hiring contract, unless expressly *excluded*; for the defendant it is argued with equal confidence, by Mr. Laird, that unless expressly *included*, that agreement could not on any view of it become part of the hiring contract.

This Wage Agreement No. 4 had (through the Canadian Railway War Board, which represented the defendant and other railways in Canada) been negotiated with the defendant by a widespread labour union known as Division No. 4. It had been in force more than six months before the plaintiff hired. The plaintiff was not then, and never has been a member of any local union in affiliation with Division No. 4. Shortly after entering the defendant's employ, he joined up with the "One Big Union," and has ever since remained an ardent member, and sometimes an active official, of that organization. The One Big Union (The O.B.U. as it is shortly designated) was, and is, both in principle and in practice, antagonistic to Division No. 4, whose authority or right to negotiate wage agreements on behalf of all the workmen, especially non-mem-

bers of Division No. 4, it has uniformly disputed and denied. With that attitude the plaintiff expressly associates himself. He scorns the suggestion that Division No. 4 was in any way his agent or representative in negotiating that wage agreement; or, for that matter, any of the other wage agreements to which we may have to refer. Notwithstanding this repudiation, the plaintiff claims, as he is driven to claim, that Wage Agreement No. 4 was made by the defendant for all employees—consider as a group, a continuing, though changing group—in the specified departments, irrespective of what, if any, union they belonged to; and that he, as one of the present members of that group, is entitled to the benefit of that agreement. This position he claims not only for Wage Agreement No. 4, but also for subsequent agreements, as well as for some of the earlier agreements.

In his statement of claim he alleges that the defendant hired him "as a machinist under the provisions and rules as to working conditions, hours of labour, wages to be paid, and provisions for the length of employment and method of dismissal as set forth and contained in Wage Agreement No. 4"; and, further, that he worked under the terms and conditions of that wage agreement and of the supplementals thereto, and of Wage Agreement No. 6.

Wage Agreement No. 6 is nothing more than a consolidation of Wage Agreement No. 4 and the three supplemental agreements thereto, so it may be dismissed from further consideration. The three supplemental agreements just referred to were negotiated with the defendant by said Division No. 4 during the period of plaintiff's employment, but do not materially affect the issues raised herein.

Wage agreement No. 4 on its title page sets out that it is an agreement made between the Canadian Railway War Board and Division No. 4, "governing rates of pay and rules of service for locomotive and car departments," on certain specified Canadian railroads of which defendant is one. Its opening paragraph states that it is an "Agreement.....in respect to rates of pay, work hours and conditions: "For the railway employee's departments just mentioned. The Agreement contains no preamble. It mentions no employee by name. It consists exclusively of Rules—nearly two hundred of them—of which sixty are of general import, the remainder being of special significance to the various crafts concerned. The agreement is executed by the said War Board, through its officials, and by said Division No. 4 through its officers. This execution by Division No. 4 is to be noted,—it reads: "For the railway employees' depart-

ment, Division No. 4, American Federation of Labour." Clearly, therefore, in this execution Division No. 4 did not assume to speak for non-members. Yet, the agreement in its opening paragraph states that it was in fact made "for employees" in the two general departments of defendant's service.

In spite of this restrictive execution, counsel for the plaintiff strongly urge that the phrase "for employees" means for *all employees* in the said departments. This contention finds support in many of the Rules. Rule No. 5 fixes the starting time for "each employee," Rule No. 7 provides that "employees will be paid" for overtime; Rule No. 18 gives preference jobs to "the oldest employee in point of service"; Rule No. 23 stipulates for lighter jobs to "employees who have given long and faithful service"; Rule No. 25 sets the pay-day for "employees"; Rules 27, 28, 29 and 31 set forth Seniority Rights for "employees"; Rules 35 and 36 prescribe the course to be followed by "any employee who believes he has a just grievance"; Rules 37 and 38 declare that "an employee" who has been thirty days in the service shall not be dismissed without an investigation; and Rule 56 provides that "no employee will be required to work under a locomotive or a car" without proper protection. These are general rules, and from them it must appear that there is no limitation of "employees" to those belonging to Division No. 4. Then follow the Special Rules applicable to the respective crafts—boiler makers, blacksmiths, sheet-metal workers, electrical workers, and carmen. A craftsman in each of these crafts is defined by these special Rules to be "any man who has served....." etc. There is no restriction to be found in that language. Then there are Miscellaneous Rules. Rule 183 by providing that, "should either the Canadian Railway War Board or the employees comprising Division No. 4 desire to revise these rules.....", suggests very strongly that there may be other employees than those belonging to Division No. 4 who might desire a revision of the Rules or who may be affected by them. These quoted portions of the Rules, in my opinion, lend very strong support to the defendant's interpretation that the phrase "for employees" means for *all employees*.

If, however, any doubt remains as to the true construction of that phrase, the interpretation which the parties themselves placed upon a doubtful agreement may be resorted to; *Brandon Steam Laundry Co. v. Hanna* (1909), 19 Man. R. 8, at 17, 9, W.L.R. 570, 11 W.L.R. 101. There is no doubt that the defendant, on its part, intended that these Working Rules

should apply to *all* men in the departments affected. Letters and statements from high officials clearly show that. Moreover, the Rules have as a matter of fact, been applied to all the craftsmen, at least in a general way. They have been applied almost uniformly to the plaintiff throughout his employment, and until his suspension there was no suggestion that the rules were not to be applied to him on the same footing as to all other employees. Then there is the attitude of Division No. 4 itself. While at present protesting that it entered into that Agreement only for its own members, it displayed at a recent convention a strong feeling that the agreement should be *expressly restricted* to the members of Division No. 4. The inference is that there was a doubt or fear in the minds of some members of that organization that the agreements did apply to all employees, and should be restricted in its benefits to members of the organization.

Notwithstanding all this, it is to be noted that the defendant did not publish Wage Agreement No. 4, nor in fact any other of the wage agreements. While it had copies printed and distributed among its own shop foremen and other officials for their guidance in dealing with men in these departments, it never distributed copies among the craftsmen nor posted the agreements in the shops or elsewhere for them, nor in any way sought to bring the agreements to the notice of the men. So far as Division No. 4 was concerned, it had copies printed for its own use and distributed among its own members. It made no pretence of distributing agreements among other employees. At the same time, any employee, whether a member or non-member of Division No. 4, could secure a copy of the agreement on application to the defendant. There is nothing to show any effort on the part of the defendant or of Division No. 4 to keep the knowledge of the agreement from any non-member employee or organization.

The provisions of these wage agreements upon which the plaintiff particularly relies in this present action are Rules 27 and 31, which deal with "seniority rights". These so-called "rights" are preferences accorded to each employee, proportioned to his respective seniority in the service. The longer in the service, the better his prospects for uninterrupted employment; and, in the case of interruption, the better his chance of taking alternative work; or, if laid off, the better his chance for quick restoration to the forces. The material parts of these two rules are as follows:—

"Rule 27: When it becomes necessary to make a reduction in expenses at any point, the force at such point, or in any department

or sub-division thereof, shall be reduced by dispensing with employees with less than six months' continuous service in such department or sub-division thereof, after which the hours may be reduced to forty (40) per week before further reduction of forces is made. When the force is reduced seniority as per rule 31 will govern;

"In the restoration of forces, senior men laid off will be given preference or re-employment, if available, within a reasonable time, and shall be returned to their former position if it is to be filled;..... in reducing the force, the ratio of apprentices will be maintained except as may be otherwise mutually arranged."

"Rule 31.—Seniority of employees in each craft covered by this agreement shall be confined to the point at which employed.

"The seniority lists will be open to inspection and copy furnished the Committee."

Rule 27 had already been applied to the defendant's shops generally. At least two stages had been followed in making "a reduction in expenses." We find that when the plaintiff was laid off all men generally had been reduced to forty hours service per week. In the next step which should have been followed for further reduction there was a deviation, a discrimination against the plaintiff. Instead of first suspending the men who were junior to him, the defendant retained those juniors, and suspended the plaintiff. In all about thirty men were thus retained to all of whom the plaintiff was senior in service. In the subsequent "restoration of forces," several apprentices were promoted into machinist jobs, all of whom were far below the plaintiff in the scale of seniority. Inasmuch as the defendant kept only one seniority list on which the names of all employees, members and non-members of Division No. 4 were posted, as at the date they respectively entered the service, it is quite clear that Rules 27 and 31 were violated by the plaintiff's suspension.

The suspension was brought about in this way. The head of the mechanical department, Mr. Eager, requested the shop superintendent "to reduce expenses." The superintendent drew up a list of ten or twelve men whose services he could dispense with. He has told us that the plaintiff was one of the first to occur to him as "a proper man to get rid of." The plaintiff was accordingly given the invidious honor of a place on the list. These names were considered at a conference of four men—the master mechanic and shop superintendent, representing the railway, and two committee men representing the "shop committees" of the two departments from

which the names were drawn. The list was approved without change, and notice of suspension sent out.

The shop superintendent in assigning his reasons for wishing "to get rid of" the plaintiff, states that the plaintiff was never a satisfactory workman; that he was known to be idle and wasteful; that several complaints had been made against him for various shortcomings, and that he was a member of the O.B.U. and was active in trying to frustrate the policies of the defendant. There is some evidence to support these assigned reasons; but, on the other hand, no demerit marks were ever entered up against the plaintiff in the merit system maintained by the defendant. The transgressions complained of were really not serious, and they were all of long standing; and, I think on the whole, must have been condoned. The grounds suggested could hardly, in my opinion, warrant a dismissal of the plaintiff for cause, and so the defence under this head must fail.

The "shop committees" represented at these conferences are called into being under the Rules of Wage Agreement No. 4 and supplementals, and are composed not necessarily but actually of none but members of Division No. 4. The committee men who acted for the committees both belonged to Division No. 4, and very little attempt is made to conceal the fact that they were inclined to discriminate in favour of members of Division No. 4 and against the members of the "One Big Union," to which the plaintiff and all or most of the suspended men belong. While officials representing the defendant had good reasons for favouring members of Division No. 4, there is no direct evidence that they exercised any favouritism on that ground in the present instance.

After receiving notice of suspension, the plaintiff tried to get redress under Rules 35 and 36. Rule 35 reads: "Should any employee subject to this agreement believe he has been unjustly dealt with, or that any provision of this agreement has been violated (which he is unable to adjust direct) the case shall be taken to the Foreman, General Foreman, Shop Superintendent, or Master Mechanic, each in their respective order, by the local committee or one or more duly authorized members thereof." There are further provisions in the succeeding Rule for carrying the matter still higher up the scale of officials to the highest assigned officials of the defendant and of Division No. 4 "for adjudication or final disposition." The plaintiff applied to the shop foreman to ascertain the ground of his suspension in violation of

Seniority Rights, and was by him referred to the Shop Committee. He went to the Shop Committee repeatedly but could get no satisfaction; he applied to several of the proper officials of the defendant but in some instances he was referred back to the Shop Committee and in others was unable to get a hearing. He did, I think, all that he could do under these rules to get redress along the lines therein contemplated, but the local committees, consisting exclusively of members of Division No. 4, displayed neither patience nor impartiality in their attitude towards him. Under these Rules, therefore, the plaintiff found himself helpless to get redress, and because of this helplessness, coupled with the fact that he did all that he could do, the defence based upon this failure to get the shop committees to take up his grievance, has little to commend it.

The plaintiff also complains that his dismissal is a violation of Rule 37. This Rule reads: "An employee who has been in the service of the railroad for over thirty days shall not be dismissed for incompetency nor be discharged for any cause without first being given an investigation." And Rule 38 follows with a provision for reinstatement in certain cases. No investigation was had here into the plaintiff's suspension or dismissal; and the reason assigned is that the plaintiff was neither "dismissed" nor "discharged" but only suspended. This excuse is technically correct, but inasmuch as the plaintiff's suspension was for an indefinite time, and his name has been removed from the defendant's pay roll, it really amounts to a dismissal, and is so treated by both parties. I think, therefore, that Rule 37 was violated, if not in letter at least in spirit.

In view of the fact that the provisions which were generally applicable to the plaintiff were violated in his dismissal, we must now consider the question of what, if any, redress is plaintiff entitled to. The answer to this question depends upon whether Wage Agreement No. 4 is a contract, and, if so, whether it confers contractual rights upon the plaintiff.

The agreement, as must have been noted, is not in the ordinary form of contract. It contains no recitals. It contains no consideration, express or implied. If the plaintiff is correct in his contention, there is no mutuality to the contract, because he would have it that he is at liberty to continue in the employ for life, but is not bound to remain a day. Of course, if the employees work and while they work they are entitled to pay, but beyond that, the agreement is claimed to have

been made entirely for their benefit, not for their burden.

The agreement was intended by the defendant to apply to, and to govern while it remained in force, all defendant's employees in the departments mentioned. The plaintiff was therefore within its purview. But he is not privy to it, and can have no right to call for its enforcement unless some special law gives him that right. He was not privy to it because (1) he was not in any sense represented in the negotiations leading up to it; and (2) he never adopted or ratified it.

He can not claim privity through the defendant, because the defendant was on the opposite side of the bargain. He can not establish privity through Division No. 4, because he never was a member of that organization, never has had any right to look to it to represent him, and never did in fact look to it for that purpose. And Division No. 4 on its part, made no pretension of representing any but its own members, who by its constitution were confined to National, International and Brotherhood organizations of railway employees affiliated with the American Federation of Labour (Sec. 2) employed on "railways in Canada having their greatest mileage north of the International Boundary Line." (Sec. 11).

This organization did not assume to make wage agreements binding upon even its own members, much less upon members of other or of no organization. In that same constitution one of the aims of the organization is set forth as follows:—"To bring about a national agreement, as we believe this will mean a more permanent and stable condition, acceptable to employee, employer and general public alike." The portions of this quotation which I have here italicized, indicate no more than a purpose of bringing about working conditions which members might accept with reason and benefit to themselves. That statement impliedly negatives any intention to bind either employer or employee by such agreement.

Ratification or adoption of such an agreement might be made by members of Division No. 4 because there was some representative capacity in the Division to speak and act for its members in these negotiations. But on what principle a non-member, a violent anti-member (if I may use such a term) can claim the right to ratify or adopt, I confess I am unable to discover. Whatever may be the effect of the agreement, one thing is clear, that Division No. 4 in negotiating the agreement, never assumed to speak for plaintiff, nor for any class of groups to which he be-

longed. Consequently the plaintiff is not in a position to ratify. And then there is the outstanding fact that he not only made no attempt to ratify, but positively denied authority in Division No. 4 to speak or act for him.

He takes the ground, however, that the wage agreement was made to govern the whole group of employees, considered as a continuing though changing group; and that when he became a member of that living group he became entitled to the benefits of that agreement. In the language of his counsel, Mr. Bergman, "The agreement was made for the job," and fixes the terms upon which the job is to be filled. This claim of affection would extend the agreement to all employees, but because Division No. 4 did not at that time include in its membership all the employees, the plaintiff in the alternative falls back on some of the earlier wage agreements, particularly Wage Agreement No. 1, which he feels confident was really meant for all employees.

Looking at this Agreement No. 1, we see it was made between the defendant (acting through the same war Board) and the said Division No. 4. It became effective on May 1st, 1918, and was to "remain in effect until terminated by thirty days notice in writing." (Art. 13). This agreement has never been formally terminated by the notice contemplated, and the plaintiff claims that notwithstanding that it has been superseded in a way by subsequent wage agreements, it has never ceased to be effective. He argues that this agreement was made for all employees, because Division No. 4 at that time actually represented in its own membership every single machinist and craftsman in the departments affected, and, therefore, the entire group of employees. Unanimity of representation is admitted by the defendant, but again the defendant and Division No. 4 cooperate in showing, both in fact and in law, that the union represented only its own members, *qua* members, and not *qua* employees. They declare that the percentage of members included within the membership is a mere accident of no determinative value in a question of this kind. This argument, I think, should prevail, and, I hold, therefore, that the plaintiff's position as a present member of the defendant's force, performing a given job, can be no stronger under Wage Agreement No. 1 than it is under Wage Agreement No. 4.

All these wage agreements are the fruit of collective bargaining conducted between the representatives of the defendant on the one

hand, and the officers of Division No. 4 on the other. Division No. 4 may truly be said to represent its own members in that bargaining. Non-members of Division No. 4 were not represented at all. If they are included within the purview or scope of the agreement, that fact is due to the action of the defendant rather than of Division No. 4. There is no magic in the term "collective bargaining", so that unless a person can show privity by representation, either authorized or adopted, or by statute, there is no principle that I know of by which he can claim it. We have seen the plaintiff was not privy by representation, no statute confers that benefit upon him; the Industrial Disputes Investigation Act, R.S.C. (1927) ch. 112, does not pretend to go that far. The Industrial Conditions Act of Manitoba, Consolidated Amendments (1924), Chap. 92, is restricted by Sec. 2 (d) from applying to "railroads operated under the Railway Act of Canada."

Nor can the plaintiff claim that the agreement made by others created any benefit for him which he can enforce as a trust, because the subject matter of this contract is not property, and is therefore incapable of being the subject of trust.

There is very little English or Canadian authority directly on the points raised by this case.

In *Donald v. Rosser & Sons* (1906) 2 K.B. 728, 75 L.J.K.B., 688, the plaintiff "was employed upon the terms of certain rules which were applicable to all departments of defendant's works." One of the rules provided that "No person regularly employed shall quit or be discharged from these works without giving or receiving twenty-eight days' notice in writing." The plaintiff was paid by piece-work. The works closed down for want of profitable orders, and thereafter the plaintiff was given twenty-eight days' notice. He sued for damages for breach of the implied covenant of the defendant to supply him with work during the period between the closing down of the works and the expiration of the notice. He succeeded at the trial and the verdict was upheld on appeal. On several points that case is to be compared to and contrasted with the case at bar. The Rules in that case were "posted up in the works" as notice to the employees of the terms under which they were expected to work; here they were neither posted nor published. In that case the defendants did not deny—apparently they admitted—that the Rules did form part of the plaintiff's hiring contract; in this case the defendant strongly denies that the Rules were incorporated in the plaintiff's hiring. Consequently what was
