## Accidents, Industrial:

### Canada—

- fatalities during fourth quarter of 1928, 248; first quarter of 1929, 554; second quarter of 1929, 948; third quarter of 1929, 1301.
- supplementary list of fatalities occurring during 1927, 257; during 1928, 257, 956, 1313; during first and second quarters of 1929, 957, 1313.
- accident statistics on steam and electric railways for 1927, 314.
- fatal accidents in 1928 by industries, by causes and by provinces, 351.
- Alta.: accidents in 1928, 882, 1343; in June, 1929, 802; accident increase during first six months of 1929, owing to inclusion of railway employees under Compensation Act, 1109.
- B.C.: accidents statistics for 1928 and previous years, 743; fatal accident ratios in mines in 1928, 745.
- Man.: accidents during 1928, 1107, 1340.
- N.S.: accidents in 1928, 494; also January to September, 1928, 45; accident problem in smaller plants, 965; accident reduction record at Sydney steel plant, 398.
- N.B.: number of accidents by severity of injury from 1919 to 1927, 742.
- Ont.: accidents in 1928, 634; in various months 7, 234, 303, 372, 706, 896, 965, 969, 1075; death of factory superintendent at Chatham due to accident, 898; factory accidents in 1928, 883; large increase in industrial accidents, 13, 965; mining accidents in 1928, 746.
- Que.: accidents from September to December, 1928, 739; mining accidents in 1928, 1243.
- Sask.: accidents and time loss in 1927-28, 176.
- United Kingdom: accidents in factories and workshops, 610; fatal accidents in 1928, 1000.
- U.S.A.: continued increase in accidents, 1247; fatal accidents, in Pennsylvania during first three months, 1929, 706; upward trend of accident record in construction industry, 5.
- See also CANADIAN NATIONAL SAFETY LEAGUE; EXPLOSIVES; LEGAL DECISIONS AFFECTING LABOUR; SAFETY AND HEALTH; STATISTICS; WORKMEN'S COMPENSATION.

## Accident Insurance:

See INSURANCE.

## Aged Workers:

See AMERICAN ASSOCIATION FOR OLD AGE SECURITY; MECHANIZATION OF INDUSTRY; PENSIONS; UNEMPLOYMENT.

## Agreements, Industrial:

### Canada—

changes in wages and working conditions on railways in Canada, 541, 1419.

recent agreements and schedules of wages, 91, 228, 335, 454, 536, 676, 803, 924, 1050, 1159, 1282, 1413.

## Agreements, Industrial—Con.

Ont.: outline of negotiations prior to signing of agreement between Toronto Transportation Commission and street railway employees, 808; outline of events leading to signing of agreement between plumbers' union and master plumbers in Toronto, 679; union rule governing contract may be lawfully applied, 260.

U.S.A.: American Bar Association sponsors legislation to make industrial agreements legally binding, 388.

## CLASSIFICATION BY INDUSTRIES (Canada):

### Construction—buildings and structures—

- asbestos workers, Toronto, 229.
- bricklayers, masons and plasterers, Calgary, 536; Fort William and Port Arthur, 1161; Hamilton, 1284; Kingston, 1284; Niagara Falls, 1160; Ottawa, 806; Saskatoon, 926; Welland, 1160; Winnipeg, 93.
- carpenters and joiners, Brantford, 1160; Edmonton, 678; Halifax, 1052; Hamilton, 677; Hull, 806; (correction 1283); Lethbridge, 806; Montreal, 805; Niagara Falls, 678; Ottawa, 677, (correction 1283); Regina, 927; St. Catharines, 806; Sault Ste. Marie, 1161; Toronto (A.C. of C.), 1414; Vancouver, 1162; Victoria, 1054; Windsor and Essex county, 806; Winnipeg, 92.
- electrical workers, Calgary, 678; Montreal, 925; Saskatoon, 1053; Toronto, 677; Victoria, 455; Winnipeg, 454.
- granite cutters, Vancouver, 927.
- hod carriers and common labourers, Edmonton, 1284.
- lathers (wood, wire and metal), Calgary, 536.
- painters and decorators, Edmonton, 1161; Halifax, 925; Montreal, 677; Quebec, 1052; St. Catharines, 1161; Toronto, 1414; Victoria, 536; Winnipeg, 454.
- plasterers, Calgary, 536, 678; Halifax, 805; Hamilton, 926; Ottawa, 806; Regina, 1053; Vancouver, 1284; Windsor, 806; Winnipeg, 926.
- plumbers, steamfitters, etc. (sprinkler fitters), 806; Brockville, 1283; Hamilton, 1053; Ottawa, 1160; Regina, 1053; Saint John, 1283; Toronto, 677, 680; Victoria, 927 Welland, 1161; Windsor, 335.
- sheet metal workers, Edmonton, 1161; Montreal, 1052; Ottawa, 1052; Saskatoon, 1053; Toronto, 926; Vancouver, 1162.
- stone cutters, Ottawa, 926.
- Construction—shipbuilding—
- blacksmiths and helpers, Saint John, 927.
- machinists, Saint John, 1415.
- Construction—miscellaneous—
- carpenters, Vancouver, 1415.
- Manufacturing—food, drink and tobacco—
- brewery and soft drink workers, Victoria, 924.
- Manufacturing—fur and products—
- fur workers, Montreal, 454.
- Manufacturing—iron, steel and products—
- machinists, Saint John, 1413.
- sheet metal workers, Calgary, 536; Windsor, 335.

**Agreements, Industrial—Con.**

- Manufacturing—printing and publishing—*  
bookbinders, Saskatoon, 1050; Vancouver, 804; Victoria, 1413.  
photo engravers, Vancouver, 1051.  
pressmen and assistants, Calgary, 676, 1159; Edmonton, 1413; Saint John, 924, 1050; Saskatoon, 228; Vancouver, 1051.  
printers, Brantford, 91, Calgary, 676, 804; Edmonton, 804; Kitchener, 1050; Montreal, 925; Moose Jaw, 804; New Westminster, 229; Regina, 804; Toronto, 925; Vancouver, 92; Victoria, 1051; Windsor, 803.  
stereotypers and electrotypers, Winnipeg, 1050.
- Manufacturing—pulp, paper and paper products—*  
mill workers, Fort Frances, 803; Port Arthur, 803.  
paper makers, Kenora, 924.
- Manufacturing—vegetable foods—*  
bakery workers, Edmonton, 676.
- Manufacturing—wood products—*  
carpenters and joiners, Vancouver, 924.
- Manufacturing—miscellaneous—*  
upholsterers, Toronto, 1052.
- Mining (non-ferrous smelting and quarrying)—quarrying—*  
quarry workers, Hants County, N.S., 1282, 1283; Vancouver, 1283.
- Service—personal—*  
barbers, Vancouver, 1162.  
hotel and restaurant employees, Vancouver, 1162.
- Service—public administration—*  
civic employees, Calgary, 927; Prince Albert, 1417; Regina, 1288; Saskatoon, 1417.  
fire-fighters, Calgary, 335.
- Transportation and Public Utilities—electric railways—*  
street and electric railway employees, Calgary, 927, 928; Edmonton, 1416; Halifax, 1285, 1286; Ottawa, 1054; Port Arthur and Fort William, 1416; Saskatoon, 1416; Toronto, 808; Windsor, 678.
- Transportation and Public Utilities—electricity and gas—*  
line, meter and gas employees, Halifax, 1286.
- Transportation and Public Utilities—local transportation—*  
milk drivers and dairy employees, New Westminster and Vancouver, 1285; Winnipeg, 807.
- Transportation and Public Utilities—steam railways—*  
conductors and trainmen, 1420; locomotive engineers and firemen, maintenance of way employees, 541, 1419, 1420; shop mechanics, 541 (Canadian National and Canadian Pacific Railways).
- Transportation and Public Utilities—telegraphs and telephones—*  
telephone operators, Manitoba, 1287, 1288.
- Transportation and Public Utilities—water transportation—*  
harbour employees, Montreal, 807.  
labourers, Charlottetown, 1415.  
longshoremen, Amherstburg, 1162; Montreal, 537.  
waterfront workers, Vancouver, 455.

See also APPRENTICESHIP; INDUSTRIAL DISPUTES INVESTIGATION ACT; SAFETY AND HEALTH; SEAMEN.

**Agriculture:***Canada—*

- agricultural courses in Canadian universities, 195.  
wages of employees on farms in 1925-28, 453.
- Ont.: annual report of statistics branch, Department of Agriculture describes farming problems in province, 1117; Legislature requested to advance financial assistance to graduates of agricultural college, 278; results of provincial survey in relation to farm labour, 495.

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 29]

JANUARY, 1929

[NUMBER 1

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada at the beginning of December showed the reduction usual at this season, but the losses were on a smaller scale than on the same date in most of the last nine years, and the employment situation continued better than on December 1 in any previous year of the record. The Dominion Bureau of Statistics tabulated statements from 6,600 firms (each with at least 15 employees), employing an aggregate staff of 981,723 persons, as compared with 1,000,239 in the preceding month; the employment index stood 116.7, compared with 119.1 on November 1, and with 106.8, 101.1, 95.3, 90.8, 95.7, 95.1, and 87.2 on December 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. These indexes, which are based upon the number of employees of the reporting firms in January, 1920, as 100, are indicative of conditions in all industries except agriculture, fishing, hunting and highly specialized business. At the beginning of December the percentage of unemployment reported to the Department of Labour by local trade unions stood at 4.2, contrasted with unemployment percentages of 3.1 at the beginning of November, and 5.2 at the beginning of December, 1927. The percentage for November was based on the reports tabulated by the Department of Labour from a total of 1,672 labour organizations with a combined membership of 186,528 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed the usual large seasonal decrease in the volume of business transacted during November, chiefly due to a reduction in farm placements, though there were fewer placements in all other industrial groups.

The average cost of a weekly budget of twenty-nine staple foods was \$11.31 at the beginning of December, as compared with \$11.28 for November; \$11.17 for December, 1927; \$11.18 for December, 1926; \$11.56 for December, 1925; \$10.58 for December, 1924; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11 for December, 1921; \$14.84 for

December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, was 146.7 for December, as compared with 148.6 for November; 151.8 for December, 1927; 150.3 for December, 1926; 163.5 for December, 1925; 160.9 for December, 1924; 153.5 for December, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (peak); and 205.6 for December, 1918.

The time loss due to industrial disputes in December, 1928, was much less than during the previous month, but greater than in December, 1927. Eight disputes were in progress at some time during the month involving 449 workpeople and resulting in a loss of 8,628 working days. Corresponding figures for November, 1928, were twelve disputes, 1,712 workpeople and 21,953 working days; and for December, 1927, nine disputes, 301 workpeople and 5,164 working days.

### Industrial Disputes Investigation Act, 1907

During December the Department received an application for a Board of Conciliation and Investigation from the locomotive firemen and hostlers employed on the Eastern lines of the Canadian Pacific Railway Company, and a board was established accordingly. The Board established in connection with the dispute in the printing industry at Calgary, noted in the last issue, was completed by the appointment of a chairman. A full account of the proceedings under the Act during the month will be found on page 13.

### Change in the base of employment indexes

In the section of this issue dealing with the employment situation as reported to the Dominion Bureau of Statistics by employers, notice is given of the change in the base of the index of employment. The use of a new base for the em-

ployment index maintained by the Dominion Bureau of Statistics has long been under discussion, as the January, 1920, base heretofore used is now obsolete, besides possessing the disadvantage of being a single-month base in a highly abnormal period. After much deliberation it was decided that the new base should be the average of the 1926 payrolls of the reporting firms. The work of calculating the individual bases for the co-operating employers, and of recalculating the index numbers for past years upon the new base has now been effected, and from January 1, 1929, the indexes published in the monthly reports will refer to the calendar year 1926 as 100.

In order to give comparisons in greater detail than is possible in the monthly articles, the 1928 Annual Review of Employment, given on another page of this issue, has been somewhat enlarged to show monthly index numbers for every month from January, 1921, as recalculated upon the 1926 base, for the economic areas and main industrial groups. Index numbers for the leading cities are also given on the new base for each month since January, 1922, no earlier figures being available. Finally, monthly index numbers for some 65 cities are shown on the new base for the five years 1924-1928.

In the past, the index numbers have reflected the change in the employment afforded by the reporting firms in a given unit for any month, from that afforded by the same firms in January, 1920, as 100 per cent. The 1920 factor in the indexes having been constant throughout the record, it was only necessary to find the percentage relationship between the 1926 average index for any particular industry or locality, and that for the same unit in other months, in order that this new index might express for the particular month, the relationship existing between the current situation in that industry or locality and its 1926 average employment. This method, which possesses the great advantage of simplicity, has accordingly been followed in recalculating upon the 1926 base the indexes for past months. From January 1, 1929, the use of the figures for 1926 as 100 has ceased, and future indexes will be computed in the manner heretofore used, but with the 1926 average of employment afforded by the reporting firms as 100 per cent.

The Bureau expresses its appreciation of the prompt and regular co-operation that has been rendered by individual employers in all lines of industry, in furnishing the data upon which these indexes are based.

### **Joint Advisory Board on Civil Service Superannuation Act**

Late in December, the Federal Government authorized by Order in Council the establishment of an advisory committee to deal with questions arising in connection with the administration of the Civil Service Superannuation Act and proposed amendments to the Act and of regulations made in pursuance of it. This action was taken by the Government after numerous requests for it had been presented by various Civil Service organizations. The committee is composed of ten members, five representing the administrative side and five to be chosen to represent the organized Civil Service. On the Government's side the Department of Finance is to be represented by three of its officials, the Department of Justice by one, and the Department of Insurance by one. For the Civil Service the postal workers' associations will name one representative, while each of the following organizations will name one representative: Civil Service Federation of Canada; Civil Service Association of Ottawa; the Professional Institute of Civil Servants; and the Amalgamated Civil Servants of Canada.

### **Old age pensions in South Africa**

The Old Age Pensions Act which was adopted in the Union of South Africa during the parliamentary session of 1928, came definitely into force on January 1, 1929. The provisions of the Act follow the main recommendations of the special commission on Old Age Pensions, whose report was outlined in the LABOUR GAZETTE, June, 1928, page 589. After the passing of the Act, six commissioners were appointed to organize the work of its administration. These officers ceased to function on January 1, and the administration of the Act is now centralized at the head pensions office at Pretoria. The magistrates in all districts except six, have been appointed to act as District Officers, special arrangements being made for the more populous centres. Application forms are obtainable on application to the magistrates, postmasters and officers in charge of police stations. They may be submitted by any white or coloured person who attained the age of 65 on or before January 1, 1929. Applicants must be domiciled and resident of the Union at the time of application, and must have been British subjects for five years, and ordinarily resident in the Union for fifteen out of the twenty years immediately preceding the date of application. Pensions cannot be assigned, transferred, pledged or hypothecated, or

attached. They may be suspended in the event of misconduct and are not payable when pensioners are confined in a mental hospital, prison, etc. If it is deemed to be inadvisable to pay a pension to a pensioner direct, payment may be made to some person acting on his behalf. Pensions may be paid to institutions such as hospitals and homes for old people in respect of pensioners supported and under treatment in these institutions.

A pension will be discontinued in respect of any absence of the pensioner from the Union in excess of sixty consecutive days, unless reciprocal arrangements have been entered into with the country in which he is living during his absence.

Machinery will be set up for the review of pension awards where the circumstances of the pensioners may be changed. At any time subsequent to the award of the pension the commissioner may require the pensioner to furnish him with a statement of his means, and if after investigation the commissioner is satisfied that the pension be discontinued, increased or reduced, he may take action accordingly.

Old age pensions are granted to persons of small means who have reached the age of 65 years. The pensions for Europeans is £30 per annum and for coloured persons (not including natives), £18 per annum, the means limit being £54 and £36 respectively. If the income is below £24 and £18 respectively, the full pension is paid, and as the means increase to £51 and £33 respectively, the pension is reduced in the same proportion.

#### **Industrial dental clinic at Montreal General Hospital**

In addition to the work already carried on by McGill University, Montreal, in the interest of industrial health (LABOUR GAZETTE, December, 1928, page 1318), a night clinic, known as the Industrial Dental Clinic, is now in operation at the Montreal General Hospital, under the auspices of the Hospital and the University. This clinic is designed for workmen who are able to pay something, but are unable to pay the usual dental fees. No cases are treated free, but the charges are as moderate as it is possible to make them. The charges vary with the time taken by the dentist, and are based on a running cost of \$4 an hour. This running cost covers the salaries of the dentists and the clerk and the cost of materials. The General Hospital donates the space without charge. The clinic operates from 7 until 9 each night, except Saturdays and Sundays. All communications in regard to this clinic

should be addressed to Dr. Frank G. Pedley, The Industrial Clinic, Montreal General Hospital.

#### **Union representation in railway management in United States**

An agreement was reached recently between the Chicago and Alton Railroad and fourteen railwaymen's organizations, on the subject of union representation. This agreement, which settles a controversy that began more than five years ago, is the latest step in a development initiated in February, 1923, after a long period of negotiation between the Baltimore and Ohio Railroad and the shop craft unions.

The so-called "B. and O." plan was later adopted with minor modifications by the Canadian National Railways, the Chicago and North Western Railway Company and the Chicago, Milwaukee and St. Paul Railway Company.

In the case of the Chicago and Alton Railroad, the controversy began in May, 1923, when representatives of the shop craft employees requested a conference with the management to negotiate rates of pay, rules and working conditions. Since 1922 they had been required to be members of company-controlled associations, dues for which were deducted from their wages by the company. This conference was refused, and the employees made an *ex parte* submission of the dispute to the United States Railroad Labour Board, while the company continued in its policy of non-recognition of the shop unions, although 85 per cent of the shop workers were members in good standing of the standard trade union organizations.

It has been largely at the insistence of a mediator from the Federal Board of Mediation that the company has accepted the agreement and conceded recognition of the fourteen trade unions for the purpose of making agreements and settling disputes. It has also been agreed that the existing schedule of rules governing shop workers will be replaced by an agreement.

#### **Provision for vocational guidance in Ontario schools**

Replying to a resolution adopted by the Ontario Boys' Parliament urging the government to create a vocational branch within the present Department of Education, the Hon. G. Howard Ferguson, Minister of Education, pointed out that such legislation already existed in the province.

The legislation referred to is the School Law Amendment Act, 1921, which amended the High Schools Act by adding a section as follows:—

"50a. Subject to the approval of the minister, a high school board or a board of educa-

tion may appoint one or more officers qualified according to the regulations to collect and distribute information regarding available occupations and employments, and to offer such counsel to the pupils of the schools under the charge of the board as will enable them to plan intelligently for their vocational and educational advancement and every person so appointed shall be subject to the control of the board."

Mr. Ferguson pointed out that "it is evident that many of our people are unaware of the scope of our educational work or its possibilities under existing legislation. The legislation is there and the government stands ready to assist by grants. It is now a matter for the local educationalists.

A correspondent writing in the *Toronto Globe* on January 2, 1929, describes the recent progress of vocational guidance in the state of New York. Vocational guidance, he said, has now become an essential part of the program of many high schools in the state. Forty-five minutes must be spent each day by the older pupils in studying selected occupations. "The state is providing no less than two-thirds of the salary of specially trained teachers who are generally called counsellors, and whose main duties are to teach life-career and try-out classes, to make intelligence and aptitude tests and to guide individual pupils as to the occupation they should follow. Also these vocational specialists keep in touch with employers and employment agencies with a view to suitably placing those leaving the school for good. Nor do their duties stop even here. Until the pupils become of age the school counsellor is supposed to keep trace of them, and, if need arise, to advise a transfer from one job to another better suited to those concerned."

The *British Columbia Labour statistics in British Columbia* *Gazette*, December 20, 1928, published the draft forms prepared under the provisions of the Department of Labour Act, for the collection of statistical and other information in regard to industry in the province. The information secured from the employers by means of these returns is used as the basis of the full and informative annual reports of the provincial Department on the prevailing conditions of labour. In addition to details regarding the nature of their products, employers are required to furnish the following information regarding their operations during the past year:—

Total salary and wage payments during the year;

Average number of wage earners (not including salaried officials);

Nationality of employees on payroll for week of employment of the highest number;

Number of wage earners classified in groups according to amount of wages paid, thirty such groups being specified;

Number of hours per week worked normally by wage earners;

Capital invested, showing fixed and working capital;

Value of production, including gross value, or total value of all commodities produced; and net value, or gross value less cost of materials used only in manufacture;

Normal hourly rates of wages paid to the different classes of male employees.

Employers are obliged by the terms of the Act to supply this information, the correctness of their replies being vouched for.

### Increased employment during past year

In a brief study of employment conditions in Canada during the past eight years, Professor Michell of McMaster University, Toronto, writing in the December issue of *Industrial Canada*, points out that the advance in all industries in 1928 was steady all round, and in the case of one or two industries was truly remarkable.

"In conclusion," he says, "it may be seen that the post-war recession is now definitely over, and industry is going forward at an accelerated speed. The depression of 1924 and 1925 was a set-back but not a serious or lasting one, and whatever lull in the business activity may come in the future, it will not be so severe as to bring us back again to the low levels of former years."

Mr. Michell bases his conclusions on the statistics published monthly in the *LABOUR GAZETTE*, including trade union returns on unemployment among their members, and on returns from employers showing the number of their workers each month. "The Department has been able," he says, "to build up during the course of years a highly valuable mass of figures from which conclusions of the greatest importance may be drawn. . . . The annual averages," he continues, "are exceedingly interesting as showing the trends which have been visible during the post-war years. It will be observed that there was a long period, from 1921-26, when employment was below the level of 1920, but with the coming of greater activity in 1925 the average shot over the former mark and in 1927-28 is well above it. The depression of 1924-25 is well marked. The only regrettable item in the whole series is logging, and even the prosperity of 1928 has not been able to raise the

figure. The steadily dwindling amounts of lumber imported also bear evidence to the difficulties of the industry. The most remarkable advance of all is certainly in the construction group, where the advance has been quite phenomenal. . . . Since the war, and with ever increasing volume, the needs of industry and commerce have called for building programs undreamed of a few years ago."

### Remedies for seasonal unemployment

In the same article Professor Michell comments on the wide prevalence of seasonal unemployment in Canada, attributable largely to the nature of the climate. What stands out most clearly, he says, is that between October and January there is a difference of 11 per cent in the volume of employment. The most highly seasonal industries are logging and construction, followed by clay, glass and stone, with a variation of 21.2 per cent; rubber, with a variation of 15.9 per cent; and pulp and paper with a variation of 15.5 per cent.

"Seasonal unemployment," Mr. Michell points out, "is an evil for both the workers and the employers. The working force becomes disorganized, good workers drift away, and new ones taken on at periods of increased demand have to be taught their jobs. Labour turnover, if it is large, is always a serious loss, and any means than can be devised whereby it may be minimized are of value to industry as a whole."

The methods now used for minimizing seasonal unemployment are classified as follows:—(a) intelligent planning at least a year in advance; (b) the development of a permanent demand for standard types of goods which may be made for stock; (c) training of employees in several operations to facilitate inter-department transfer; (d) co-operation with retailers to spread the delivery of orders throughout the season, or where it is possible to secure advance orders far ahead.

### Transfer of unemployed workmen in Great Britain

On December 18 the Right Hon. Stanley Baldwin, Prime Minister of Great Britain, announced in the House of Commons the government's programme of action for the relief of the distress prevailing in the mining areas in consequence of unemployment. The primary object of the government's policy, he said, was the training and transference (including migration) of the unemployed workers, and for this purpose \$10,000,000 would be expended in the current financial year, while it was es-

timated that for 1929 the amount expended would be \$15,000,000. The House would be asked, he said, to vote \$500,000 to assist the removal of needy families to other areas, and to grant authority for government contributions to the Lord Mayor of London's relief fund, equal to the amount subscribed by the public.

The Prime Minister stated that the transfer of workers from the distressed areas was proceeding steadily and with increased effectiveness, but it was hindered by two main difficulties, first, that married men found it difficult to leave their homes unless special assistance was available for the removal and resettlement of their families; second, that the number of men who have been unemployed over a long period were in danger of losing the physical fitness which was necessary to qualify them for work elsewhere, and the needs of these men could only be partly met by extension of the existing training schemes, for which provision had already been made. In order to meet the second difficulty the Government is considering the establishment of courses of occupational training to fit the men to receive aid for a subsequent transfer to employment. In areas where further employment is not likely to be available in the near future such training would increase their value as applicants for employment elsewhere.

### Need for a safety code for construction industry

Dr. Ethelbert Stewart, United States Commissioner of Labour Statistics, discussed the accident record of the construction industry in the course of an address before the 12th New York Industrial Safety Congress in December. This record for the construction group shows a much more decided upward trend than the records of other industries. "When you see that Ohio charges a premium rate of \$4 per hundred dollars of payroll for masonry work, building chimneys only, that it charges \$7.50 per hundred dollars of payroll for structural iron work, while it charges only \$3.50 per hundred dollars of payroll for coal mining, one is dazed that the men in the building industry in the United States do not get together and agree upon some intelligent building safety code that is sufficiently specific to be really effective in accident prevention."

Dr. Stewart considers that most of the existing state codes are out of date, through New York, Wisconsin and Ohio are now engaged in the work of revising their codes.

"The time, however, is ripe for a council of all the States to review their building laws in consonance with the new methods and types of building, and inasmuch as building contractors are becoming more and more engaged in interstate business the wisdom of having a building safety code that all the States could adopt, thus making the regulations uniform, becomes more and more apparent."

Dr. Stewart points out that there are two sources of government Regulations, this statement being true for Canada as for the United States. The States or provinces have laws which have for their objective the safety of employees; and the cities have laws which for the most part have for their objective the safety of the public. "Then we have the construction of government buildings, over which matter the State nor the city inspectors have any jurisdiction, while the government has no safety laws touching the construction of such buildings." He suggests that there is no reason why a general construction safety act should not be passed to govern instruction work on government buildings.

#### **Prevention of silicosis in Ontario**

By a proclamation appearing in the *Ontario Gazette*, December 29, 1928, effect is given to the section added to the Ontario Mining Act at the last session of the provincial legislature (LABOUR GAZETTE, May, 1928, page 464), providing for the annual examination of underground workers. This provision was made in view of the risk of silicosis and tuberculosis of the respiratory organs, to which workmen exposed to silica dust are specially subject.

In 1926 silicosis was classed as an "industrial disease" compensable under the Workmen's Compensation Act of the province (LABOUR GAZETTE, May, 1926, page 450). The rates of compensation payable in respect to this disease were noted in the issue for last April, page 341. An article on another page of the present issue describes the facts connected with silicosis, this article being part of an address by Dr. J. G. Cunningham, Director of Industrial Hygiene, and chairman of the Silicosis Board of the province, delivered at the last annual convention of the Industrial Accident Prevention Associations of Ontario (LABOUR GAZETTE, June, 1928, page 609).

#### **Compensation for silicosis in Great Britain**

In Great Britain the Departmental Committee on Compensation for Industrial Diseases which reported in 1907 found that silicosis, i.e., fibroid phthisis of the lungs due to

inhalation of silica dust, is a specific trade disease among workers in various trades—including potters engaged in certain processes. They saw practical difficulties in the way of scheduling the disease under the Workmen's Compensation Act of 1906, and they recommended that it should be dealt with in special trade schemes. In 1918 special powers were obtained in the Workmen's Compensation (Silicosis) Act of that year which empowered the Secretary of State to make compensation schemes for specified industries involving exposure to silica dust. In addition to prescribing the scales of compensation to be allowed in any scheme, the Act authorized the inclusion in any scheme of provisions for (1) the establishment of a general trade compensation fund to which all employers in the particular industry should be required to subscribe, and out of which all expenses arising under the scheme should be paid; (2) the settlement of claims by joint committees of employers and workmen under an independent chairman; and (3) the appointment of special medical officers to carry out periodic examinations of the workmen, and to give certificates under the scheme. The Act of 1918 was amended by the Workmen's Compensation (Silicosis) Act, 1924, the chief modifications of the earlier Act being that power was given to provide in any scheme for the suspension of workmen suffering from tuberculosis apart from silicosis, and for the appointment of medical boards. The two Acts are now consolidated in Section 47 of the Workmen's Compensation Act, 1925.

#### **Organized labour and public policy in Germany**

Labour organization in Germany is described by Fritz Kummer, of Stuttgart, in the current issue of the *Monthly Labour Review*, published by the United States Department of Labour. There are three main labour organizations in Germany, each having its separate federation: the General Federation of Labour, including agriculture and industrial workers, having 4,415,600 members at the beginning of 1928; the General Federation of Salaried Employees, with 411,700 members; and the General Federation of Government Officials, with 180,000 members. These three organizations, it is stated, are on the friendliest terms among themselves. "There is perhaps not a single question of general importance which is not jointly discussed or made a common concern. At the convention of one, the others are represented by delegates. This close co-operation is also to be found among the membership and on the floors of the factories."

Organized labour in Germany holds a unique position also in regard to matters of public policy. "There is hardly a phase in economic and social life in which the unions do not assist and co-operate to a high degree. Their representatives co-operate with economic organizations in the making of commercial treaties, the fixing of prices for coal, potash, etc., the employment service, the building of dwellings, protective legislation for tenants, the administration for the State sick benefit, accident and sickness insurance, and during the year that has elapsed since the enactment of the law for labour tribunals they have assisted in the appointment of judges. The labour tribunals now handle all disputes between workers and employers, disputes concerning tariff agreements, wage contracts, questions on industrial management, and similar problems."

An account of the labour courts established under an act which took effect on July 1, 1927, was given in the LABOUR GAZETTE, April, 1927, page 367.

Strict adherence to that section of the Coal Mines Act relating to the inspection and examination of safety lamps used in and around coal mines is being demanded by the district mines inspectors since the disaster at Coleman, Alberta, recently, when two miners lost their lives through the failure of proper use of the safety lamp.

The Toronto City Council, at a special meeting on December 17, unanimously decided to petition the provincial government to establish a home for aged couples, so that married men and women may not be separated in the declining years of their life.

### Mothers' Allowances in Ontario, 1927-8

The Mothers' Allowance Commission of Ontario, during the fiscal year ending October 31, 1928, disbursed the sum of \$2,190,638 to mothers and their families in the province. (The provisions of the Mothers' Allowance Act, and the extent of the provisions made thereunder in the two fiscal years 1925-26 and 1926-27, were outlined in the LABOUR GAZETTE, December, 1928, page 1337.) The total for last year compares with \$2,007,087 distributed in the preceding year. The number of mothers participating was 5,170, and that of the children provided for was 15,505.

Of the total amount disbursed during the year recently closed, \$986,586.50 was contributed by the municipalities, including 43 counties, 26 cities, nine separated towns and

The *Canadian Congress Journal*, December, 1928, contains a summary of the various provincial laws and regulations governing industrial safety and hygiene in Canada. The survey is intended to indicate both the extent of existing legislation and also the gaps existing in certain places, and to show what changes or additional measures may be necessary to secure greater uniformity in provincial legislation and more adequate protection of the workers.

During the month of December a total of 5,649 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 29 of them being fatal cases. In schedule 2 industries, 450 accidents were reported, including 5 fatal cases; and 356 accidents were reported in Crown undertakings, 2 of which were fatal, making in all 6,455 accidents, of which 36 were fatal.

The Workmen's Compensation Commission of the province of Quebec opened a permanent office at 89 Notre Dame street, Montreal, early in December. The Commission, it is stated, will not hold judicial sittings outside the city of Quebec, and the Montreal office will be used for the purpose of furnishing information and of giving technical and legal advice to all enquirers. Mr. Joseph Gauthier is the advisor on technical, and Mr. Maurice Parent on legal matters.

The Ontario Government is stated to be giving serious consideration to a proposal made by the Port Arthur City Council that fathers left without their wives and with families to support should be provided for in the same manner as mothers under the Mother's Allowance Act.

the Indian Reserves. The cost to the province was \$1,183,667.50. Approximately \$200,000 was distributed in judicial districts, where the full amount paid is met by the province.

By co-operation of the Provincial Treasury, some 5,200 cheques, totalling \$190,154, were mailed on December 20, eight days in advance of the usual monthly mailing date, in order that the homes concerned would be provided with funds at Christmas.

Causes of dependence, in order of prevalence, were incapacitation of the father of the children; widowhood, fatherless children; desertion of the family by the father, where the period of desertion is in excess of three years; foster mothers to orphaned children.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation throughout Canada at the end of December was commented upon by the superintendents of the Employment Service of Canada as follows:—

The agricultural industry in the Province of Nova Scotia was quiet. The fishing industry reported rather fair catches. The holiday season and winter conditions had interfered seriously with the logging operations, with the result that this industry had not made its customary headway up to the end of the month. Apart from the construction of a large pulp and paper mill, there was not much building activity proceeding throughout the province, except in Halifax where numerous projects were being gone ahead with, in consequence of which the volume of employment being afforded in this industry was substantially in excess of the normal for the season. Coal mining was fairly active with production not unfavourable for the time of year. The manufacturing groups showed normal activity, with the iron and steel group being fairly busy. Transportation was stated to be heavy, while trade was quiet.

As in Nova Scotia, the agricultural industry in the Province of New Brunswick was very quiet. Fishing catches in this province were of a fair size. Weather conditions had been holding up operations in the logging industry but work seemed to be experiencing a speeding-up at the end of the month. Manufacturers reported a fair level of production for the time of year. The volume of construction work in hand was not unsatisfactory for the season, although it showed some considerable decrease from the summer volume. The transportation industry was busy, particularly at St. John, at which point activity was stimulated by the work consequent upon the winter port season.

The employment offices in the Province of Quebec reported that there was practically no demand for farm workers. Some curtailment of logging operations had already been noted, though several hundred bush workers had been placed. Manufacturing industries were stated to be quite busy, except in the case of the boot and shoe and leather lines, where operations were below capacity. A few orders were being received for additional workers in some factories, notably pulp and paper and electric power plants. While the demand for building labourers showed a marked falling off, Montreal and Quebec reported substantial programs of work as being continued during the winter.

The closing of the port in Montreal had increased the volume of rail traffic. Holiday trade had been good, and business was stated to be quite satisfactory apart from the increased business due to holiday purchases. In the Women's Division the usual shortage of applicants, accentuated by the Christmas and New Year holidays, was reported.

A few calls for winter farm hands were being registered with the Ontario employment offices. Though few new building and construction projects were being opened up throughout this province, work on buildings already in hand was continuing in considerable volume, with the result that unemployment among tradesmen in this industry was at a comparatively low figure for the season. Factories seemed busy, and some workers were being taken on at different points, with difficulty reported in locating certain classes of skilled men. In the northern section of the province the mining industry reported normal production, but few applicants were being referred in this industry; little activity was in evidence in the logging industry. The usual increase in placements of women domestic workers noticeable at Christmas time had been reported. Generally speaking, conditions throughout Ontario seemed very favourable for the season.

Few farm placements were reported from the Province of Manitoba. Although construction work showed the usual seasonal slackness, prospects, particularly in Winnipeg, were good. All orders for logging workers registered in Manitoba offices were readily filled from the available surplus of applicants. In the central and northern section of the province a very keen interest in the mining industry was being maintained, and development work was progressing satisfactorily. The Christmas increase in trade was stated to be very satisfactory, and after Christmas business continued on a rather satisfactory level. Placements of women domestic workers were not particularly numerous.

With no scarcity of applicants to fill them, few farm orders were being reported to the Saskatchewan employment offices. The customary seasonal slackness in the building and construction groups was once more quite apparent throughout this province. The condition of the logging industry was quiet, with few calls for additional workers being received. Orders for women domestic workers were not in very large volume. There was a fair demand for general labour in the different offices, but there were plenty of applicants to take care

of them. General conditions were fairly good, considering the season.

As in the other Prairie Provinces, there were not many vacancies for farm workers being reported in the Province of Alberta, and there were plenty of applicants to fill such orders as

were coming to hand. Demands for building and construction workers were few in number and were easily filled. The condition of the coal mining industry was rather quiet; the strike in the Wayne district was reported to be still in effect. The logging industry was

quiet, due to adverse weather conditions. Very little activity was reported from the several women's divisions. General conditions were commented upon as being fair for the time of year.

The logging industry in the Province of British Columbia was fairly busy, although the holiday season had interfered with operations to some extent. Metallic and coal mines throughout this province seemed to be experiencing normal activity. A fair volume of construction work for the winter season was proceeding, with Vancouver specially mentioned in this respect. Manufacturing industries throughout the province reported normal production. General conditions were rather fair at the end of the year, though some surpluses of applicants, not unusually large, were reported.

#### EMPLOYERS' REPORTS

The seasonal losses in employment recorded at the beginning of December were on a smaller scale than on the same date in most of the last nine years, and the situation continued better than on December 1 in any previous year of the record. Statements were tabulated by the Dominion Bureau of Statistics from 6 600 firms, employing 981,723 persons, compared with 1,000,239 in the preceding month; the index (January, 1920=100), stood at 116.7, compared with 119.1 on November 1 and with 106.8, 101.1, 95.3, 90.8, 95.7, 95.1 and 87.2 on December 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

All provinces registered curtailment, the largest recessions taking place in the Prairie Provinces and Ontario. In the Maritime Provinces, further though smaller seasonal reductions in employment were noted, chiefly in construction, but also in lumber mills, while logging, mining, trade, services and iron and steel showed improvement. In Quebec, manufacturing and construction indicated declines, while logging was decidedly busier, and important gains were also reported in transportation and trade. In Ontario, employment suffered its first general decline since the early spring; trade and logging registered marked seasonal increases, and considerable improvement took place in the pulp and paper and textile groups. Construction and lumber mills, however, reported large losses, and smaller decreases were shown in mining, transportation and services. In the Prairie Provinces, there was also a reduction in employment; logging, mining and trade were much more active, while construction registered pronounced declines and transportation was quieter. In

British Columbia, food canneries and lumber mills were slacker, as were construction and transportation. On the other hand, trade and logging recorded heightened activity.

Montreal, Quebec, Ottawa, Windsor and the adjacent Border Cities and Vancouver reported lessened activity; employment advanced in Toronto and Hamilton, while Winnipeg showed practically no change. In Montreal, manufacturing, transportation and construction reported a falling-off, but retail establishments afforded increased employment. In Quebec, there was a decrease, chiefly in construction and manufacturing. In Toronto, manufacturers and trade recorded improvement, while construction, services and transportation were slacker. In Ottawa, further curtailment was indicated, chiefly in construction, transportation and manufacturing. In Hamilton, manufacturers were decidedly busier, while only small changes occurred in other industries. In Windsor and the adjacent Border Cities, there was another large decline, mainly in manufacturing. In Winnipeg, improvement was reported in trade, but manufacturing and construction work released employees. In Vancouver, manufacturing, transportation and construction showed curtailment; on the other hand, trade afforded more employment.

A substantial reduction in activity occurred in manufacturing establishments, mainly in lumber and food factories, but to some extent also in leather and electric current plants. On the other hand, the metal industries, particularly iron and steel works, textile and tobacco factories afforded more employment. Coal-mining, communications, logging and trade also registered marked improvement, the gains in the last two being especially large. Transportation and construction and maintenance, however, reported reductions, which were very extensive in the latter.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of December, 1928.

#### TRADE UNION REPORTS

The unemployment volume among local trade unions at the close of November was somewhat in advance of that reported at the end of the previous month, as was indicated by the returns received from 1,672 labour organizations with a united membership of 186,528 persons. Of those 4.2 per cent were idle on the last day of November, compared with 3.1 per cent of unemployed members in October. Improvement was registered, however, over November, 1927, when 5.2 per cent of the members reported were without

employment. The partial cessation of building and construction operations, due to seasonal dullness, affected the trade union situation to a marked degree during November, especially in Manitoba, British Columbia, Alberta, and Ontario. The unemployment reported in the metal trades in Quebec, particularly among railway carmen, accounted largely for the increase in idleness reported during November over the previous month in that province. The reductions in activity registered by New Brunswick unions over October, were very slight, while in Nova Scotia no change in the situation occurred. Saskatchewan was the only province to register improvement, and this was nominal only. When a comparison is made with the returns for November, 1927, all provinces with the exception of Manitoba recorded heightened activity during the month under review, while the reductions in employment reported from Manitoba were very slight.

In another section of this issue will be found a report in detail of the unemployment registered by local trade unions at the close of November, 1928.

**EMPLOYMENT  
OFFICE  
REPORTS**

During the month of November, 1928, the offices of the Employment Service of Canada referred 28,688 workers to positions and effected a total of 27,318 placements. Of

these the placements in regular employment were 17,071, of which 13,145 were of men and 3,926 of women. Placements in casual work numbered 10,247. Employers notified the Service of 28,656 vacancies, of which 19,075 were for men and 9,581 for women. Applications for work received at the offices from 29,425 men and 11,499 women, a total of 40,924. These figures are considerably lower than those for the preceding month, but only slightly less than those for November of last year, the reports for October 1928 showing 61,926 vacancies offered, 70,803 applications made and 57,740 placements effected, while in November, 1927, there were recorded 31,162 vacancies, 44,303 applications for work and 29,218 placements in regular and casual employment. A report in detail of the work of the offices for the month of November, 1928, will be found elsewhere in this issue.

**Production and Trade**

**INDUSTRIAL  
PRODUCTION.**

Figures showing the volume of production in certain industries during recent months and also in the corresponding months in the previous year are given in the table on page 9.

Marked expansion was shown in the major departments of Canadian productive enterprise during 1928, according to indexes maintained by the Dominion Bureau of Statistics, and published in the *Monthly Review of Business Statistics*. The index of the physical volume of business, constructed from more than thirty factors essential to the national welfare, averaged 16.5 per cent higher in the first eleven months of 1928 than in the same period in 1927. The building industry, favoured by the prevailing active conditions, showed an increase of more than 18 per cent in the value of new contracts. The index for manufactures, based on the use of output of 16 important commodities, showed an increase of 14 per cent in the monthly average during the first eleven months of 1928 as compared with the preceding year. The marked increase in the output of iron and steel was probably the most significant in this connection, but pronounced gains were shown in the output of motor cars, newsprint and flour. The imports of crude petroleum and rubber increased 25 per cent and 13 per cent respectively, indicating active conditions in the oil and rubber industries.

The monthly average of the index of mining, constructed from exports of metals and minerals, mint receipts of precious metal and production of coal, showed an increase of 9.2 per cent during the first eleven months of 1928. The employment in wholesale and retail trade was 9 per cent greater, indicating that the ultimate distribution of commodities was in better volume. The gross operating revenue of Canadian railways during the first nine months of 1928 was \$389,226,000, an increase of nearly 11 per cent over 1927. Owing partly to the heavy grain traffic from September to November, the gain in the gross operating revenues of the two large railway systems during the first eleven months of 1928 was nearly 13 per cent.

An official bulletin issued on December 14 gives an estimate of \$1,054,000,000 for the value of the principal field crops in 1928. This compares with \$1,134,000,000 in 1927 and \$1,105,000,000 in 1926. In the Prairie Provinces the value of production in 1928 showed an increase in Manitoba and Saskatchewan and a decline in Alberta. Decreases were shown in Ontario and Quebec and in British Columbia, while gains were apparent in New Brunswick and Nova Scotia.

**EXTERNAL  
TRADE.**

A summary of Canadian trade prepared by the Department of National Revenue shows that in November, 1928, the merchandise entered for consump-

tion amounted to \$102,966,710, as compared with \$112,340,617 in the preceding month and with \$94,311,883 in November, 1927. The chief imports in November, 1928, were: iron and its products, \$21,539,297; fibres, textiles and textile products, \$16,397,376; non-metallic minerals and products, \$16,235,068.

The domestic merchandise exported during November, 1928, amounted to \$167,013,618 as compared with \$141,816,210 in October, 1928, and with \$153,118,718 in November, 1927. The chief exports in November, 1928, were: agricultural and vegetable products, mainly foods, \$97,506,781; wood, wood products and paper, \$25,212,999; and animals and animal products, \$15,451,216.

In the seven months ending November, 1928, exports of domestic merchandise totalled \$940,799,741 and imports \$841,728,992.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 63 cities during November was \$15,822,401, as compared with \$21,511,812 in October, 1928, and with \$12,857,622 in November, 1927.

According to the *MacLean Building Review* for January, 1929, building in Canada during 1928 reached its peak. The total value of contracts awarded for all types of construction in the Dominion reached a level which over-topped that of 1912, the outstanding year heretofore. The total value of contracts awarded as compiled by Maclean Building Reports, Ltd., amounted to \$472,032,600 for 1928, as compared with \$463,083,000 in 1912 and \$418,951,000 for 1927, an increase of 12.6 per cent over 1927. The increase of 1927 over 1926 was 12.3 per cent.

Ontario continues to lead the provinces in value of new work, although there was a slight falling off of 3.9 per cent from 1927. On the other hand, all the other provinces show increases, with the exception of Manitoba. Quebec increased \$11,000,000 for the year, or 8.2 per cent. Nova Scotia, with usually a small volume of construction, started several large projects and shows an increase of 408.6 per cent. Saskatchewan, Alberta and New Brunswick also show splendid increases.

### Strikes and Lockouts

The time loss due to industrial disputes in December, 1928, was much less than during November, the number of employees involved being much lower, but the time loss in man working days was greater than during December, 1927. There were in existence during the month eight disputes, involving 449

workpeople, and resulting in a time loss of 8,628 working days, as compared with twelve disputes, involving 1,712 workpeople and resulting in a time loss of 21,953 working days in November. In December, 1927, there were on record nine disputes involving 301 workpeople and resulting in a time loss of 5,164 working days. No new disputes commenced during December and four of the disputes carried over from November terminated during the month. At the end of the month, therefore, there were on record four strikes and lockouts affecting 290 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$11.31 at the beginning of December, as compared with \$11.28 for November; \$11.17 for December, 1927; \$11.18 for December, 1926; \$11.56 for December, 1925; \$10.58 for December, 1924; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. The most important increase was a seasonal advance in the price of eggs, while less important increases occurred in the prices of milk, butter, beans and mutton. The prices of beef, fresh and salt pork, bacon, lard, rolled oats, rice, evaporated apples, granulated sugar and potatoes declined. Including the cost of fuel and rent with that of foods the total budget averaged \$21.56 at the beginning of December, as compared with \$21.52 for November; \$21.37 for December, 1927; \$21.41 for December, 1926; \$21.87 for December, 1925; \$20.90 for December, 1924; \$21.21 for December, 1923; \$20.97 for December, 1922; \$21.49 for December, 1921; \$25.67 for December, 1920; \$26.92 for July, 1920 (the peak); \$21.64 for December, 1918; and \$14.26 for December, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined to 146.7 for December, as compared with 148.6 for November; 151.8 for December, 1927; 150.3 for December, 1926; 163.5 for December, 1925; 160.9 for December, 1924; 153.5 for December, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); and 205.6 for December, 1918. In the grouping according to chief component,

materials five of the eight main groups were lower, one was higher and two were unchanged. The groups which declined were: the Vegetables and their Products group, mainly because of lower prices for grains, flour, potatoes, hay and rubber; the Animals and their Products group, due to lower prices for meats, eggs, fish, hides and leather, which more than offset higher prices for livestock and furs; the Non-

Ferrous Metals group, due to declines in the prices of silver, lead, tin and solder; the Chemicals and Allied Products group, due chiefly to lower prices for glycerine; and the Iron and its Products group. The Fibres, Textiles and Textile Products group advanced, due mainly to higher prices for cotton. The Wood, Wood Products and Paper group and the Non-Metallic Minerals group were unchanged.

### PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF DECEMBER, 1928

**D**URING the month of December an application for the establishment of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was received from locomotive firemen and hostlers employed on Eastern Lines of the Canadian Pacific Railway Company. Fourteen hundred employees were stated to be directly affected by the dispute, which grew out of failure by the parties concerned to agree upon the adoption of a proposed revision of one of the articles of the schedule. A Board of Conciliation and Investigation was established, constituted as follows: the Honourable Mr. Justice W. L. Bond, Montreal, P.Q., chairman, appointed on the joint recommendation of the other Board members, and Messrs. Isaac Pitblado, K.C., Winnipeg, Manitoba, and R. L. Calder, K.C., Montreal, P.Q., members appointed on the recommendation of the company and employees, respectively.

#### Other Proceedings under the Act

Reference was made in the December issue of the *LABOUR GAZETTE* to the establishment of a Board of Conciliation and Investigation to deal with a dispute between the employing printers of Calgary and the Calgary Typographical Union No. 449, and to the appointment of Messrs. James H. Garden and Andrew Davison, both of Calgary, Alberta, as members thereof on the recommendation of the employers and employees, respectively. On December 11 the Board was completed by the appointment of the Honourable Mr. Justice Harry W. Lunney, of Calgary, as chairman, on the joint recommendation of the other Board members.

The December number of the *LABOUR GAZETTE* also contained reference to the appointment of Mr. Harold Fisher, K.C., of Ottawa, as chairman of the Board of Conciliation and Investigation established to deal

with a dispute between the Hull Electric Company and certain of its employees being members of Division 591, Amalgamated Association of Street and Electric Railway Employees of America. Owing to the illness of the chairman, Board proceedings were interrupted after several sittings had been held. Mr. Fisher died on December 19, 1928, and on January 2, Dr. Adam Shortt, of Ottawa, was appointed to replace the late Mr. Fisher as chairman on the recommendation of the other Board members.

#### Increase in Minor Industrial Accidents

In 1928, up to the end of November, more industrial accidents had been reported to the Ontario Workmen's Compensation Board than in the whole of 1927. The total number in eleven months of 1928 was 72,943, and the total for the year 1927 was 71,979. Many more minor accidents are reported than in former years, according to the figures compiled by Mr. R. B. Morley, general manager, Industrial Accident Prevention Associations of Ontario, covering the last year on which final figures are available, and showing the average cost of accidents on which compensation or medical aid was awarded under Schedule 1 of the Workmen's Compensation Act in the past several years. These figures are as follows:—

Year	Total cost	Average cost per accident
	\$	\$ cts.
1921.....	4,277,034	134 09
1922.....	4,323,801	114 73
1923.....	4,977,331	107 11
1924.....	4,746,314	107 20
1925.....	4,438,802	95 77
1926.....	4,711,970	92 80

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of Recent Proceedings

**F**IVE new decisions were recently given by the Canadian Railway Board of Adjustment No. 1. This Board was established by a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, the Brotherhood of Railway Trainmen, the Order of Telegraphers, and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. Earlier decisions were outlined in the *LABOUR GAZETTE*, November, 1928, and in previous issues. The third report of the proceedings of the Board, covering the decisions rendered from October 1, 1923, to September 30, 1927, was issued as a supplement to the issue of November, 1927.

#### **Case No. 338.—Canadian National Railways (Atlantic region) and Order of Railway Conductors and Brotherhood of Railway Trainmen.**

This case concerned the claim of certain employees for payment of wages for federal legal holidays. A work train crew was notified on June 29, 1927, that they would not be required for duty on July 1 and 2, these days being public holidays. The employees claimed that the crews were actually held for service and not used, and that if it was not the intention of the company to pay for the days on which they were held, the men should have been so advised, and given an opportunity to secure runs out of their terminal either in assigned or unassigned service.

The company denied that in estimating the wages due to trainmen assigned to work train service, legal holidays had ever been considered as working days, or paid for as such when men were laid off on such holidays.

The Board held that federal holidays were not regarded as "working days," and the claim of the employees was not sustained.

#### **Case No. 339.—Canadian National Railways (Atlantic region) and Order of Railway Conductors and Brotherhood of Railway Trainmen.**

A conductor and crew in assigned passenger service were held away from their home ter-

minal for about 25½ hours, owing to a blockade of snow on the line. They claimed payment for all time of detention, but only one day's pay, or 150 miles, was allowed. This claim was made under Article F, Clause B, of the current schedule, which is as follows:—

In the event of train being late, passenger trainmen away from home terminal will be paid terminal delay from the time train is due to depart until it has departed. Passenger trainmen at home terminal will be notified of time train is due, and will not be paid for lapsed time.

Under this article the men claimed one mile for every three minutes delayed beyond the advertised departure time of their train, up to the time their train actually left the terminal. This time was reduced by the company, and crews were paid 150 miles, or a minimum day for each twenty-four-hour period crews were delayed.

The Railways contended that it did not appear equitable to pay employees more wages when not working than they would have earned had they been working, and that no rule would contemplate having such an effect.

The Board found that the schedule rule would necessarily apply in the absence of any special arrangement between the Railways and the employees. The claim of the employees was therefore sustained.

#### **Case No. 340.—Canadian Pacific Railways (Western lines) and Order of Railway Conductors and Brotherhood of Locomotive Engineers.**

An engineer and conductor were dismissed for alleged responsibility in connection with a collision which resulted in loss of life and damage to property. The employees denied having received a certain order changing the place at which the two trains should have passed, and accordingly the Board, recognizing the element of doubt in the case due to lack of definite evidence, recommended a reconsideration of the discipline as applied.

#### **Case No. 341.—Canadian Pacific Railway (Western lines) and Brotherhood of Locomotive Engineers.**

A dispute arose on the question of payment to an unassigned engine crew, which had been used temporarily in unassigned pusher service and claimed payment for the time they were held en route at an intermediate point. The company contended that Article 2, Clause

"D" of the schedule, which reads as follows, should govern the case:—

In short turn-round service between terminals and turn-round points, miles and junction switching combined, or hours, whichever is the greater, will be paid on each leg of the run, all time from arrival at turn-around point to departure and all time at final terminals from the time of making the first stop, until thirty minutes after engine is placed on shop track will be paid on the minute basis. A minimum of one hundred miles will be allowed.

The employees claimed that the rule governing the case should be the British Columbia District Local Rule "B," which reads:—

Road engineers and firemen held enroute to assist trains will be paid detention rates for the time so held or detained on the basis of twelve and one half miles per hour in addition to mileage covered assisting such train.

The contention of the employees, that the unassigned crew used in unassigned pusher service should be paid under British Columbia Local Rule "B," was sustained by the Board.

**Case No. 342.—Canadian National Railways (Western lines) and Order of Railway Telegraphers.**

Certain telegraph operators were required to handle a ground switch once each day except Sunday, as part of their regular duties. They claimed they were entitled to special compensation for this service, but the company denied the claim on the ground that the telegraph schedule did not specially exempt operators from such duties, and that in the present case they had been called upon to throw switches so as to avoid delay to passenger trains. In the opinion of the management the amount of work involved in throwing in one switch a day did not call for extra compensation. The Board held that compensation should be paid for the work, the amount to be fixed by agreement between the Railways and the general chairman of the union.

**STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1928**

THE number of strikes and lockouts in existence in Canada during December was eight as compared with twelve the previous month. The time loss for the month was much lower than during the preceding month, only about one-quarter as many workers being involved, but the time loss was greater than in December, 1927.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Dec. 1928.....	8	449	8,628
*Nov. 1928.....	12	1,712	21,953
Dec. 1927.....	9	301	5,164

\*Preliminary figures.  
The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days' or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eight disputes, involving 449 workpeople, were carried over from November, no disputes arising during December. Four of these disputes terminated during the month, three

being in favour of the workers and one in favour of the employer. At the end of December, therefore, there were on record four disputes involving strikes or lockouts, as follows: coal miners, Wayne, Alta., two strikes of clothing factory workers, Toronto, Ont., and plumbers at Kingston, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to seven such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926; bakers, Montreal, P.Q., May 1, 1927; stonecutters, Montreal, P.Q., June 10, 1927; sheet metal workers, Montreal, P.Q., September, 21, 1927; coal miners, River Hebert, N.S., February 1, 1928; fur workers, Toronto, Ont., April 10, 1928, and shoe factory workers, Toronto, Ont., August 13, 1928.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

**PULPWOOD CUTTERS, NORTHERN ONTARIO.**—The strike of pulpwood cutters in Northern Ontario, which began in the vicinity of Cochrane in October, spread to the vicinity of Port Arthur in November and involved forty workers at Hurkett, owing to a demand for an increase in wages from \$4 per double cord to \$4.50. Within a few days work was resumed at

the higher rate on condition that the employees should do good, clean work. On December 14 twenty-eight workers became involved at Pearl, near Hurkett, owing to a demand for an increase in wages from \$2.50 per cord to \$2.75, said to be the rate for the previous season. Work was resumed at the end of the month at the higher rate. Information reached the Department too late to be included in the statistical table that over two hundred workers in the vicinity of Kapuskasing ceased work toward the end of November.

**COAL MINERS, WAYNE, ALTA.**—No settlement has been reached in the dispute between the four coal mining operators at Wayne, Alta., and the Mine Workers' Union of Canada. The workers became involved in a strike from August 13, 1928, following the reference of the dispute to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, one of the operators involved having signed an agreement with this union on August 26 and another operator, not originally involved, having signed an agree-

ment with the union in October. The Board had recommended that each operator should sign an agreement with the local organization which included his own employees, but not with the union, and that contract miners should be paid on the basis of screened coal, with an increase in the rate per ton over the rate for run-of-mines coal. The union refused to accept these recommendations and called a strike. Toward the end of December it was reported that the remaining operators were negotiating agreements with the United Mine Workers of America (which had similar agreements with the operators in the neighbouring district at Drumheller) on the basis of the Board's report, but this union decided not to enter the field while a dispute existed. During recent weeks it has been reported these operators have been operating the mines to some extent with new employees, but at the end of the month it was reported that 250 strikers were still out. About December 25 one of the workers involved in the dispute was killed by a blow from the

#### STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1928

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts Occurring Prior to December, 1928.</b>			
<b>LOGGING—</b> Pulpwood cutters, Northern Ontario.	68	600	Commenced October 15, 1928, for increase in wages. Terminated December 31, 1928, in favour of workers.
<b>MINING—</b> <i>Non-ferrous Smelting and Quarrying—</i> Coal miners, Wayne, Alta. ....	300	6,875	Commenced August 13, 1928, for recognition of union and against payment per ton on a screened basis with an increase of 4c. per ton. Underminated.
<b>MANUFACTURING—</b> <i>Clothing (including knitted goods)—</i> Men's clothing factory workers, Toronto, Ont.	6	150	Commenced August 21, 1928, against alleged violation of agreement for employment of union members only. Underminated.
Clothing factory workers, Toronto, Ont.	24	600	Alleged lockout, commenced November 28, 1928, for union agreement. Underminated.
<b>CONSTRUCTION—</b> <i>Buildings and Structures—</i> Plumbers, Kingston, Ont. ....	9	225	Commenced April 2, 1928, for increase in wages. Underminated.
Sheet metal workers, Kingston, Ont.	4	24	Commenced April 17, 1928, in sympathy with striking plumbers. Terminated December 7, 1928; in favour of employer.
<i>Highway and Bridge—</i> Pile drivers, New Westminster, B.C.	30	90	Commenced November 21, 1928, against the employment of strike breakers taken on during the strike in sympathy with carpenters. Terminated December 4, 1928, in favour of workers.
<b>SERVICE—</b> <i>Personal and Domestic—</i> Restaurant employees, Edmonton, Alta.	8	64	Alleged lockout, October 22, 1928, of union employees; agreement cancelled. Terminated Dec. 10, 1928, in favour of workers.

club of a watchman at one of the mines. The reports indicate that this fatality did not occur in connection with picketing, but that the deceased striker and others had an altercation with the watchman when they were attempting to cross the railway tracks near the mine.

**CLOTHING FACTORY WORKERS, TORONTO, ONT.**—In this dispute, commencing August 21, 1928, involving fourteen employees, at the end of December eight had secured work with other employers, leaving six on strike.

**CLOTHING FACTORY WORKERS, TORONTO, ONT.**—A cessation of work involving twenty-four employees in a waterproof clothing manufacturing establishment occurred on November 28, an increase in wages, piece rates, being demanded. The strikers stated that a number of employees had been dismissed because they had joined a union, but the employer stated that work was slack and that he was giving employment to as many as possible until Christmas. At the end of December the dispute was still unterminated.

**SHEET METAL WORKERS, KINGSTON, ONT.**—This dispute, commencing April 17 in con-

nection with the strike of plumbers in Kingston, was declared off on December 7, the strikers being taken back by the employers at the rates of wages prevailing before the strike as vacancies occurred.

**PILE DRIVERS, NEW WESTMINSTER, B.C.**—Employees ceased work on November 21 demanding that strike breakers who had been taken on during the strike of various building trades in sympathy with the carpenters' strike which terminated on November 8, should be dismissed. Negotiations were carried on through the intervention of the Deputy Minister of Labour for British Columbia at the request of the resident representative of the Federal Labour Department during his absence. On December 4 work was resumed, the strike breakers having been dismissed.

**RESTAURANT EMPLOYEES, EDMONTON, ALBERTA.**—This dispute, commencing on October 22 owing to the cancellation of an agreement by the employer, was terminated on December 10, the strikers returning to work at the same wages as prior to the dispute, it having been arranged that inexperienced employees should work on an apprenticeship basis.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1928, in the review of Strikes and Lockouts in Canada and Other Countries in 1927. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

### Great Britain

The number of disputes which began during November was 18, and 12 were still in progress from the previous month, making a total of 30 disputes in progress during the month, involving 7,000 workpeople and resulting in a time loss of 64,000 working days. Of the 18 disputes beginning in November, 3 arose out of proposed reductions in wages,

8 on other wages questions, 5 on questions respecting the employment of particular classes or persons, and 2 on other questions. Settlements were reached in 14 disputes, one in favour of workpeople, 5 in favour of employers and 8 ended in compromise. In the case of 5 other disputes, work was resumed pending negotiations.

On November 14, about 1,200 colliery workers became involved in a dispute about the "making-up" of one worker's wage. After the beginning of the dispute the employers demanded a reduction in wages. The dispute ended on December 1, when work was resumed on the former terms until the end of the year when, if no district agreement had then been reached, wages would be reduced to the rates paid at a neighbouring colliery.

### Belgium

The number of disputes which began during October was 14, and 13 were still in progress from the previous month, making a total of 27 disputes in progress during the month, involving 11,928 workers and resulting in a time loss of 144,691 working days.

### France

It was reported on December 31, that eight thousand coal miners in the Loire coal region had gone on strike for an increase in wages.

### Germany

The lockout of 225,000 metal workers of the Rhine district, which was reported in the LABOUR GAZETTE for December, terminated on December 3, when both parties agreed to resume work and submit the dispute to arbitration by the Minister of the Interior. His decision was given on December 21 and provided for a partial increase in wages and a reduction in hours from 60 to 57 per week.

The strike of 50,000 shipyard workers at Baltic and North Sea ports, which began on October 1, and was mentioned in the LABOUR GAZETTE for November, was still in progress at the end of December. The award of the arbitration court granting an increase in wages was rejected by both parties, but was later declared binding by the Minister of Labour. No report was received that work had been resumed.

### Australia

During the second quarter of 1928, there were 60 disputes involving 401 establishments. The total number of workpeople involved was 20,959, of which 15,410 were directly and 5,549 indirectly involved. The time loss was 178,321 working days and the estimated loss in wages £173,262.

### United States

During October the number of disputes which began was 42 and 56 were in effect at the end of the month, involving 45,749 workers and resulting in a time loss of 1,349,347 working days for the month.

*Bituminous Coal Disputes.*—Mention of various district settlements of these disputes which began on April 1, 1927, and April 1, 1928, was made in the LABOUR GAZETTE for September, October and November. In addition to these a settlement was reached in Iowa on September 28. No general settlements were reached for Ohio, Pennsylvania or West Virginia, but it is reported that many of these mines have been for some time operating open shop or non-union.

During October there were a number of short disputes involving a large number of workers. On October 11 at New York City, 7,000 express company employees went on strike but returned to work after two days. About 3,000 silk workers at Paterson, N.J., were involved in a dispute which began on

October 10. By the end of October settlements had been reached in the majority of the establishments, the workers securing a 10 per cent wage increase, a 44-hour week and union recognition.

### Colombia

A strike involving several thousand banana plantation workers began about the middle of November. A number of riots took place in which there was loss of life and extensive damage to property. By the middle of December it was reported that order had been restored and that work was being resumed.

### Employees Welfare Plan of Steel Company of Canada

The Steel Company of Canada, on December 1, inaugurated a new welfare plan for the benefit of employees of at least one year's standing. This company has eleven factories, of which three are at Montreal, three at Hamilton, two at Gananoque, one at Toronto, one at Brantford, and one at Lachine. The new plan affects 5,000 employees. Members are provided with death, sickness and medical benefits. In cases of death, \$500 is paid from the fund to the widow and dependants of deceased employees; and pensioners of the company will receive the death benefit free. In cases of total and permanent disablement, the employee, provided he is under 60 years of age, receives \$25 per month up to a maximum of \$500. In cases of sickness, if the employee is on a salary basis the salary is continued, and if on a wage basis he is paid \$10 a week, both for a period not longer than 13 weeks.

Members of the Employees' Welfare and Benefit Fund are provided with medical attendance, for which they must themselves pay, but, subject to certain conditions, hospital charges, specialists' fees, anaesthetics, medicines, etc., are paid out of the fund. No charges are paid out of the fund to any member whose illness or disability is covered by the terms of any Workmen's Compensation law.

In return for these benefits, the subscribing employees contribute 70 cents per month. The fund is administered by three trustees appointed by the board of directors of the company.

OLD AGE PENSIONS IN CANADA

Statistics for Three Provinces Co-operating in the Federal-Provincial Scheme

THE accompanying tables give particulars of the operations of the Old Age Pension Act (Revised Statutes of Canada, 1927, chapter 156). The text of this Act was given in the LABOUR GAZETTE, April, 1927, page 375. It makes provision for the establishing of a Dominion-Provincial pension system to be effective in such provinces as have enacted special legislation for this purpose. Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has resided in Canada for the 20 years preceding, and has resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension will be subject to a re-

duction by the amount, if any, that their private income exceeds \$125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments.

The federal act became operative in British Columbia in September, 1927; in Saskatchewan in June, 1928; and in Manitoba in September, 1928. The Yukon Council at its session in 1927 passed an ordinance respecting Old Age Pensions, which provided for the participation of Yukon Territory in the scheme, but no payments of pensions within the Territory have yet been recorded. The accompanying tables therefore relate to the payment of pensions under the Dominion-Provincial scheme only within the three provinces enumerated above. It will be noted that the figures relating to British Columbia are fuller than those for the other two provinces, the Act having been in operation in that province for a longer period.

TABLE I.—STATISTICAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT SEPTEMBER 30, 1928

	British Columbia		Manitoba		Saskatchewan		Three Provinces	
	Males	Females	Males	Females	Males	Females	Males	Females

Signing of agreement, May 19th, 1928, between the Dominion and Provincial Governments for Old Age Pensions in Saskatchewan. Left to right, seated—Hon. Peter Heenan, Minister of Labour; Dr. Donnelly, M.P.; John Millar, M.P.; Hon. W. R. Motherwell, Minister of Agriculture; Rt. Hon. W. L. Mackenzie King, Prime Minister; Hon. C. A. Dunning, Minister of Railways; Standing, Fred Johnston, M.P.; John Vallance, M.P.; Ed. Young, M.P.; C. R. McIntosh, M.P.; Robt. McKenzie, M.P.; Gordon Ross, M.P.; A. F. Totzke, M.P.; George McPhee, M.P.; Malcolm McLean, M.P.; Wm. Bock, M.P. The Members of Parliament present all represent Saskatchewan constituencies.

Signing of agreement, August 17th, 1928, between the Dominion and Provincial Governments for Old Age Pensions in Manitoba. Left to right: Hon. W. J. Major, Attorney-General; Hon. John Bracken, Premier of Manitoba; Rt. Hon. J. Ramsay MacDonald, First Labour Prime Minister of Great Britain; and Hon. Peter Heenan, Dominion Minister of Labour. Mr. Heenan was photographed in the act of writing his signature to the agreement, with Mr. MacDonald looking on as his witness to the signature. Mr. Major signed for the province, and Premier Bracken was his witness.

## PENSIONS FOR WINNIPEG SCHOOL BOARD EMPLOYEES (OTHER THAN TEACHERS)

**A** BY-LAW recently passed by the trustees of the School District of Winnipeg, to take effect on January 1, 1929, provides for the establishment, operation and maintenance of a pension fund for some 200 employees of the Board other than teachers. The fund is to be administered by a pension committee of five trustees. Permanent employees will be required henceforth to contribute a uniform percentage of wages, or salary, according to the following schedule:—

Under the age of 27 years, 3 per cent throughout future service;

Over the age of 27 and under 33 years, 3½ per cent throughout future service;

Over the age of 33 and under 38 years, 4 per cent throughout future service;

Over the age of 38 and under 42 years, 4½ per cent throughout future service;

Over the age of 42 and under 45 years, 5 per cent throughout future service;

Present employees over 45 years of age, 5 per cent throughout future service.

Hereafter no person entering the service of the School District after having passed his 45th birthday will be eligible for pension.

The annual sum payable under the scheme is set at one-fiftieth of the average yearly remuneration for the five consecutive years of service showing the highest aggregate salary, multiplied by the number of years of service up to but not exceeding 40 years of service.

No pension will be less than \$720 or greater than \$3,000 per annum.

All persons, other than teachers and including superintendents and assistant superintendents, are included in the new pension scheme. It will apply to every permanent employee, "permanent employee" meaning any person who is employed for a full year, whether paid by the hour, day, week or month.

Pensions will be granted (a) to those who have served 15 years and have become unfit for further service, but may be discontinued if they become fit for service or other employment again; (b) to those who have served at least 40 years and are 60 years of age, and to those who have served 20 years and are 65 years of age.

If any employee is entitled to compensation under the Workmen's Compensation Act or any other accident or indemnity insurance carried by the trustees, he must accept such compensation; and should the amount received be less than he would be entitled to under the by-law the difference is made up to him from the Pension Fund; provided that in the case of permanent and total disability if the amount he receives from said compensation or other accident or indemnity insurance be the same as or greater than the amount he would be entitled to from the Pension Fund he shall not be entitled to a pension, but his own contributions to the

Pension Fund shall be refunded and an equal amount shall be refunded to the School District.

Pension retirement is fixed at 65 years. However, every employee who has reached the age of 65 years shall retire on pension, provided that if at the time of passing of the by-law there shall be in the service of the School District permanent employees who have reached the age of 65 years or who may hereafter reach that age before having been in the service of the District for twenty years, then and in every such case the said employee shall be entitled to receive for each year of service one-twentieth of the pension he would have received had he served for twenty years, and in such case the minimum pension payable shall not apply.

No assignment of pension is permitted, nor can such money be attachable for debts except if the pensioner be indebted to the school district.

The by-law does not prevent the School District from exercising its right to discharge or retire at any time any employee from its service, when the Board of Trustees so decides, and there shall be no liability upon the School District in respect of any claim for pension or other allowances beyond salary or wages due and unpaid and the benefits provided by this by-law.

Any employee who at any time during his employment is suffering from any infirmity of body or mind brought about by any injury received, arising out of the performance of his duties, who is not provided for by Workmen's Compensation or other indemnity, and who is certified by a board of three fully qualified medical practitioners to be no longer fit for duty, shall be entitled to a pension of an amount equivalent to that which he would have been entitled to should he have completed fifteen years of service.

Employees who were on active service at any time between 1914 and 1919, and who re-entered the service of the School District within six months from the date of receiving their discharge, shall be given credit for the time of their absence on such service.

When a pensioner dies before receiving sums by way of pension, equal to the whole amount he has contributed towards the fund, the balance, together with interest at such rate as the Pension Committee from time to time shall decide, shall be payable to his estate.

The trustees of the School District shall pay into the Pension Fund monthly a sum equal to the total monthly contributions made by the employees.

*Teachers' Retirement Fund.*—In addition to the by-law providing pension for permanent employees of the School District, the Board of Trustees established, in 1905, a teachers' retirement fund for the teachers of Winnipeg public day schools.

The report of the trustees of the Teachers' Retirement Fund on the progress and development of the fund during 1928 showed an estimated accumulated reserve of \$489,064.68. At the present time the fund is paying 44 regular annuities and 3 partial annuities or disability allowances. In 1928, 955 employed teachers contributed to the fund, 726 at the rate of \$20 per annum, and the other 229 on a \$10 per annum basis. The maximum rate of annuity allowed by the by-law governing the fund is \$800.

The basis of this scheme consists of a permanent fund composed of gifts and legacies and a sum set apart annually by the school board; plus a general fund, also comprising gifts and legacies, but chiefly made up of the contributions from the teachers' salaries.

This fund is administered by five trustees and two members of the teachers' staff, selected by vote of the teachers themselves.

### Extent of Old Age Dependency

The Industrial Welfare Department of the National Civic Federation (United States) recently published a report giving the results of a study of the extent of old age dependency, and of the economic and physical state of persons 65 years of age and over, other than those dependent on public charity, in the states of New York, New Jersey, Pennsylvania and Connecticut. The report includes also additional material in regard to Massachusetts. The study was made possible by substantial support from the Carnegie Corporation of New York. Its purpose was to

remove the subject from the sphere of sentiment and political propaganda and to present "attested facts" as to the prevalence of poverty among the aged in the states covered by the inquiry. For the first time, in the United States, it is stated, the rate of disability on old age has been secured, and also for the first time outside of Massachusetts definite material is given as to the incomes of persons over 65, and as to their wealth up to \$10,000. The financial condition of 32,172 aged persons is shown in the present report and in the

earlier report relating to conditions in Massachusetts.

The report refers to two main causes of dependency in the centres of industry, one being the large number of foreign-born workers who have lived at a precarious economic level from their earliest years, many now being public dependants; and the other, the excessive wearing out of wage earners in industry either by overwork or because of the unhealthy working conditions to which many of them were exposed in early life.

As to the first of these causes it was found that, as compared with the foreign-born, the American-born does not appear to be so far ahead as their superior advantages might suggest, especially in regard to savings and education. Of the native-born men interviewed, 31 per cent were worth \$10,000 and upward, as compared with a percentage of 24 for the foreign-born. Commenting on the good showing made by foreign-born in spite of their initial disadvantages, the report remarks that "it would be well if the great and prosperous mass of the native-born should direct their attention more to such encouraging facts."

The investigator found that among the aged persons interviewed more than one person in four possessed property to the value of \$10,000 and upwards, and that nearly six persons in ten possessed property to the value of \$5,000 and upwards, or had an annual income of at least \$1,000. With regard to their property holdings the aged persons were divided into ten categories. The lowest category, comprising those with no property, formed 29.5 per cent of the total number. It is considered remarkable that out of nearly 14,000 elderly persons the investigators came upon only 200 cases of destitution. Of the five categories below the highest, including the classes having between \$2,000 and \$10,000, the percentage of the total number was over 30.

In regard to the conditions of those reported as being without property, it is pointed out that, regarding their families as a social unit, they must be credited with "assets represented by the investment in education and upbringing of the children who are now responsible for the care of the elders." There is also the further consideration that many persons, especially foreigners, are reluctant to disclose information about their money affairs, and are often classed as having no property, though they have considerable means.

A section of the report deals with the position of non-manual or "white collar" workers. This growing class in the community was found to be mostly above the "needy" line,

partly because the character of their work permits them to remain in active employment longer than manual workers, although their earnings have not placed them in the highest category in regard to their resources.

Old age dependency, it is declared, constitutes a national problem, but it is mainly one of industry. The problem is stated to be "on the way to be solved" by the new policy and practice of employers in providing for the workers who have passed their years of efficiency. "The majority of employees spend their lives within the limits of office, factory, the mine or line of transportation. In this sphere of activities, where approaching old age so often presents to the workers for hire apprehensions that are gloomy, one may foresee provision for the general financial security of retired workers, a logical sequence to the up-building of the present unparalleled regime of industry and commerce. Industry can approach its best effectiveness only as it will assure to all who devote themselves to it a reasonable degree of comfort, even to the end of life."

#### Seamen's Agreement in New Zealand

A new national agreement to take the place of the previous agreement which expired on 30 June, 1928, has been entered into between the Shipowners' Federation of New Zealand and the Federated Seamen's Union of New Zealand. The agreement which is not to be registered under the Arbitration Act, is to remain in force for two years, and thereafter until a new agreement is concluded. An outstanding feature of the new agreement is the introduction of payment for mooring and unmooring vessels, which work had never before been recognized in the hours of labour of seamen in New Zealand. The principal changes introduced into the new agreement relate to payment for overtime, the minimum payment being for half an hour, instead of 15 minutes; boiler work and engine cleaning; daymen; Sundays and holidays, washing decks; mooring and unmooring; fumigation; medical benefits (it is now provided that where a seaman is invalided on shore outside New Zealand he shall, except when actually in hospital, receive a subsistence allowance of 9 shillings a day); trimming coal in stoke holds; and definition of arrival.

## TEST OF CONSTITUTIONAL VALIDITY OF DOMINION LEGISLATION RESPECTING COMBINES

A REFERENCE to the Supreme Court of Canada of the question of the constitutional validity of the Combines Investigation Act and Section 498 of the Criminal Code has been authorized by the Dominion Government through an order in council (P.C. 2194) dated December 6, 1928. The reference arises out of an investigation under the Combines Investigation Act into the Proprietary Articles Trade Association, which was found to be in contravention of the Act (LABOUR GAZETTE, November, 1927, p. 1165-7). The order in council is as follows:—

P.C. 2194.

The Committee of the Privy Council have had before them a Report, dated 3rd December, 1928, from the Minister of Justice, submitting that during the year 1927 an investigation under the Combines Investigation Act, 1923, into the operations of the Proprietary Articles Trade Association, an alleged combine of wholesale and retail distributors and manufacturers of proprietary medicines and toilet articles, was conducted at the instance of the Minister of Labour, by a Commissioner, Mr. L. V. O'Connor, appointed in that behalf. The finding of the Commissioner was that a combine existed contrary to the provisions of the Combines Investigation Act, 1923, and that such combine had operated and was likely to operate to the detriment of and against the interest of the public.

In view of the findings of the said Commissioner action might have been taken under sections 29, 30, 31 or 32 of the Combines Investigation Act, but no action was taken, for the reason that the Association made representations through its counsel, Mr. Eugene Lafleur, K.C., to the effect that, in his opinion, the statute was *ultra vires* the Parliament of Canada, and that the constitutional validity of the statute should be tested by a reference to the Supreme Court of Canada. Mr. Lafleur pointed out that such a course would, for the purpose of securing an authoritative decision on the constitutional question, have an advantage over a criminal prosecution, because in the latter case the rights of appeal are limited, particularly in the case of an appeal by the prosecuting authority.

The Minister further submits that he is informed that the Association has discontinued the practices complained of pending a decision whether the constitutional validity of the statute is to be referred.

The Minister observes that in several cases judges of the Superior Courts of the provinces have intimated that in their view the effect of certain decisions of the Judicial Committee of the Privy Council is to cast doubt upon the constitutional validity of section 498 of the Criminal Code, which deals with conspiracies and combinations affecting trade, while other judges of these courts do not so interpret these decisions.

The Minister is therefore of opinion that, while he is not disposed to doubt the validity of the aforesaid Combines Investigation Act and section 498 of the Criminal Code, it is essential for the due enforcement of these pro-

visions that the questions raised by counsel for the above-named Association, and by certain judges of the provincial courts, should be set at rest, and for that purpose, and having in view the importance of the questions of law involved, he considers it desirable to obtain the opinion of the Supreme Court of Canada thereupon.

The Committee, therefore, on the recommendation of the Minister of Justice, advise that the following questions be referred to the Supreme Court of Canada for hearing and consideration, pursuant to the authority of section 55 of the Supreme Court Act:—

1. Is the Combines Investigation Act, R.S.C., 1927, chapter 26, *ultra vires* the Parliament of Canada, either in whole or in part, and, if so, in what particular or particulars or to what extent?

2. Is section 498 of the Criminal Code *ultra vires* the Parliament of Canada, and if so, in what particular or particulars or to what extent?

It is expected that argument on the appeal will be heard by the Supreme Court at its mid-winter session. Honourable N. W. Rowell, K.C., of Toronto, and Mr. A. R. McMaster, K.C., of Montreal, have been retained as counsel for the Government.

The Hon. L. A. Taschereau, premier of the Province of Quebec, stated in a New Year message that 8,000 cases had been submitted to the commission administering the new Workmen's Compensation Act, which took effect in the province on September 1. Three thousand of these cases had been settled to the entire satisfaction of the interested parties, and 1,200 workmen were drawing compensation while waiting for the commission to give a final decision in the several cases.

The annual report of the Mediation and Conciliation Commission of Porto Rico for the fiscal year 1927-28 refers to the conciliatory service of the government as performing an important work of social education. It is declared that "to bring together employers and employees to discuss their interests peaceably, so that one party submits its complaints and the other listens with courtesy, even with sympathy, is a new thing in the industrial sphere." The Commission's policy is to refrain from intervention in a dispute until conferences have taken place between the representatives of organized labour and those of employers. The report states that "from its own experience this Commission knows that organized labour shows more readiness and intelligence in discussing its interests than unorganized labour, making it easier to reach an understanding without the intervention of the Board."

## AMERICAN FEDERATION OF LABOUR

### Summary of Proceedings of the Convention Held in New Orleans

THE 48th annual convention of the American Federation of Labour was held in New Orleans, Louisiana, November 19 to 28. The opening ceremonies were conducted by Mr. M. L. Boehling, chairman of the Trades Council convention committee, who called on the Rev. G. Frohn, pastor of St. John the Baptist church, New Orleans, to offer the invocation. Mayor Arthur O'Keefe spoke for the city of New Orleans and Col. John P. Sullivan represented the Hon. Huey Long, governor of the State of Louisiana. Mr. Dave Marcusy, president of the Central Trades and Labour Council, welcomed the delegates on behalf of organized labour of New Orleans, and Mr. Chas. W. Swallow, president of the State Federation of Labour, extended greetings from organized labour of the State of Louisiana. The Hon. James O'Connor, member of the U.S. Congress, also contributed an address at the opening session. The various addresses were replied to by Mr. Wm. Green, president of the American Federation of Labour.

The report of the credential committee, as finally adopted, showed 387 delegates present, of whom 274 represented 91 national and international organizations; the four departments of the federation, 28 state bodies, 49 central labour unions, 27 trade and federal labour unions being represented by one delegate each, and also five fraternal delegates, one of whom represented the Trades and Labour Congress of Canada and two the British Trades Union Congress.

Subsequently the customary committees were appointed, following which copies of the report of the executive council were distributed. The report consisted of 100 pages, of which the executive submitted the following summary:

In our report to this forty-eighth annual convention of the American Federation of Labour, we point out that our trade union policies are tested by their results and we then apply various measuring rods to test progress during the past year.

We include first a report of the secretary which shows the following:—

Secretary Morrison's report furnishes detailed information covering the funds of the Federation and membership. This report appears on pages 2-12 of the printed report.

The total receipts for the fiscal year ending August 31, 1928, were \$797,080.66, the total expenses were \$496,971.23, leaving a balance on hand of \$300,109.43. Of this total \$250,584.75 belonged to the defence fund of the directly affiliated local unions, \$49,524.68 in the General Fund.

The average paid up and reported membership for the year ending August 31, 1928, was 2,896,063, an increase of 83,537 members over the membership reported upon last year.

The report of the Trustees of the A.F. of L. Building appears on page 14 of the printed report. This report shows that the total receipts in the building fund for the fiscal year ending August 31, 1928, were \$58,324.67; the total expenses were \$22,822.85, leaving a balance of \$35,501.82.

Our report then reviews the membership during the past year, the progress of the *American Federationist*, and the status of workers. The latter we first discuss from the economic point of view. We submit in table form concrete evidence of what trade unions do for their members in the way of securities, reducing the daily and weekly hours of work and increasing wages. The various securities provided include sick and death benefits, unemployment compensation, old age pensions, disability provisions, high wages and reasonable work hours.

Other developments on which we report progress are union-management co-operation, research work sponsored by the American Federation of Labour, progress in establishing the 8-hour workday and the 5-day work week. We report in table form the organizations that have secured the 5-day week together with the number of workers affected.

Our reports put a special emphasis on promotion of regularity of employment. We show that fewer workers are now employed in manufacturing industries and that machinery is displacing workers. Supplementing these facts is a table prepared in the Department of Commerce which shows the industries that have been increasing their number of employees.

In discussing unemployment we include the unemployment figures gathered and published by the American Federation of Labour during the past year covering twenty-four cities and showing unemployment for some specific industries.

We emphasize the need of preventive measures in dealing with unemployment—specifically, employment services, the stabilization of industry, public works as a prosperity reserve.

We end this section by pointing out the increasing influence of trade unions in industrial circles.

The next portion of the report deals with organization activities. This year we initiated a system of reporting by city central bodies, volunteer district organizers and state federations of labour. We succeeded in getting representative reports from these free fields and the information will be helpful in planning the year's work.

Of unusual interest are the reports of special organizing campaigns which may be suggestive to organizations planning similar undertakings for the coming year.

Under the caption "Internal Union Problems" we submit a program for the coming year. The goal for the coming year is "Double Union Membership." In order to realize this goal we submit specific suggestions for local unions covering first the activities of the union itself; secondly, organizing methods; thirdly, educa-

tional work for both the wage earner, the community and the employer. We then make special suggestions to help both central labour unions and state federations of labour to plan their work for the coming year.

The next portion of our report deals with relations between national and international unions. Under this section we report adjustment of difficulties between the Teamsters and Railway Clerks, the Boilermakers and the Bridge and Structural Iron Workers, the Machinists and Street and Electric Railway Employees, and the Carpenters and Sheet Metal Workers.

We then report the status of various problems that are still pending.

We submit brief reports on the miners' struggle, Carpenters' Home and labour banks.

Under official changes we report the death of James Duncan and the election of new Council members.

In the political field we make report on labour's non-partisan political campaign activities and the legislative matters of the seventieth Congress in which labour is interested.

Under "Education" we report the work of the A.F. of L. Committee on Education as well as progress in promoting educational undertakings for adult workers.

We include a list of publications of the American Federation of Labour, the work of the Legal Information Bureau, a reference to Labour's three special days, and progress in the matter of erecting a memorial to Samuel Gompers.

We mention with approval the proposed Chicago World's Fair for 1933.

Under Pan-American Labour Relations, we report on the Pan-American Conference in Havana, the sixth convention of the Pan-American Federation of Labour, Mexico and Mexican Immigration.

Under "International Labour Relations" we report no progress in reaching an understanding with the International Federation of Trade Unions.

The last section of our report deals with some outstanding labour problems, the first of which is old age pensions. We recount various provisions that have been made both by legislation and trade unions to provide incomes for aged persons. The information gathered on old age and disability provisions is especially valuable.

Our report on this subject ends with a recommendation that we ask Congress to make the necessary appropriation and to authorize a commission on old age income.

The next problem which we discuss is proposed anti-injunction legislation. This discussion includes the text of a bill now under consideration by the Senate Judiciary Committee.

The other problems that we discuss are child labour, company unions, radio broadcasting, the legislative proposals developed by the American Bar Association and attempted communistic control.

Our report ends with a plea to all unions to adopt the slogan Double Union Membership in 1929.

The various sections of the report were referred to the appropriate committees for consideration and report.

Former treasurer Daniel J. Tobin submitted a report as to the finances of the federation, the figures as above mentioned showing a total of cash on hand of \$300,109.43. Mr. Tobin also made a recommendation that the secretary of the federation be made the secretary-treasurer. In explaining his suggestion he said that "it is impossible to carry out the constitution of the American Federation of Labour and do business along the lines that business should be done in the best interest of the federation." So that there would be an odd number of members of the executive council, he suggested increasing the number of vice-presidents from eight to nine. The financial statement was referred to the auditing committee along with the report of the secretary. The recommendations of the executive council were referred to the committee on laws. The auditing committee subsequently reported on the financial statements, which were found correct in every detail. The committee on laws reported against the recommendation of former Treasurer Tobin, but recommended that the executive council should appoint three of its members as a finance committee, this committee with the treasurer to have authority to invest the surplus funds of the federation in sound securities or to deposit certificates of deposit. This recommendation with some necessary minor amendments to the constitution was adopted by the convention.

### Shorter Work Week Approved

To the committee on shorter work-day were referred the portion of the executive council's report dealing with the eight-hour work-day, five-day work-week and the four-hour day on Saturday. The committee expressed approval in these sections of the report of the executive council, and recommended that the council carry on an energetic campaign within the trade union movement, and also a public education in connection with the five-day week through trade union publications, the public press and the other available avenues of publicity. The committee closed this section of its report by declaring that "the five-day week is not only socially and economically sound, but it is a necessity to the welfare of commerce as well as a condition to which the wage-earners are entitled." This recommendation was adopted.

Approval was also given on report of the committee to (1) urging application of the eight-hour law of the United States to employees of veterans' hospitals, (2) in favour of eight-hour day for firefighters.

### Organization

The committee on organization expressed satisfaction with the increase in the membership of the federation and approved of the survey made by the executive council as to the present conditions, growth, development and advancement of the labour movement, activities under way and gains made. The committee recommended that the executive council continue the survey during the coming year, and insist on all affiliated bodies supplying the information desired. The committee congratulated the federation on the success of organizing campaigns in the Piedmont section of North Carolina and in Reading, Pennsylvania.

The committee recommended the adoption of the slogan proposed by the executive council, "Double union membership in 1929," and in doing so further recommended that the suggestions of the executive council be carried into effect to make meeting places agreeable and attractive; to make meetings sociable and interesting; to secure the services of good speakers, and to make the home, the family and the community interested in union affairs.

The committee recommended concurrence in those portions of the executive council's report under the captions of "Union Records," "Benefits," "Employment Bureau," "Organizing Method," "Central Labour Union," and "State Federation of Labour." These recommendations were adopted.

The convention gave approval to requests (1) for assistance in an organizing campaign by the cigarmakers; (2) For support of Bookkeepers and Stenographers' Union No. 12,646, of New York; (3) In favour of organizers using their efforts to organize the laundry workers, and (4) Urging patronage of certain union-made textile products.

### Union Labels

The committee on union labels expressed concurrence in a resolution urging members of labour organizations to patronize retail stores displaying the Retail Clerks' Union store card. A resolution which called attention to the large importations of hats into the United States declared that this was due not only to inadequate tariff protection, but to wrong classification and valuation, and called upon all members of the A. F. of L. to buy American-made hats which bear the union label of the United Hatters of North America. Both of the above resolutions were adopted. The committee made a strong plea for the members of organized labour to use their purchasing power to its fullest extent in demanding union labelled goods as a means of decreasing unemployment.

### Legislation

The committee on legislation noted with approval the legislative results enumerated under the caption "Legislation" in the report of the executive council, the federation being the mouthpiece for its affiliated membership in the United States in all legislative matters. The committee stated "in view of the involved legislative processes existing in the United States Congress, the executive council is to be congratulated for having transformed into statutory law a number of important objectives of the organized labour movement."

Among the matters dealt with in the report of the committee were (1) convict labour, (2) Civil Service retirement, (3) modification in immigration laws, (4) United States citizens on public works, (5) night work in postal service, (6) retirement of Panama Canal employees, (7) repeal of the estate tax, (8) Cuban cigar competition, (9) Mississippi flood control, (10) farm relief legislation, (11) retirement for ex-service officers, (12) farms for narcotic victims, (13) exclusion of Filipinos.

The committee on legislation reported favourably on resolutions (1) favouring legislation pending in Congress granting wage increases to post office labourers, watchmen and messengers and labourers in the railway mail service; (2) protesting the passage of bills designed to repeal certain provisions of the United States Seamen's Act; (3) endorsing legislation to prevent the smuggling of Chinese and excluded Europeans into the United States; (4) favouring the extension of Saturday half holiday for government employees; (5) in favour of the establishment of a civil service court of appeal; (6) proposing that the Post Office Department establish a new system of accounting, discounting charges of public welfare work of the department against postal revenues; (7) in favour of Saturday half-holiday for postal service; (8) in favour of the elimination of speeding-up practices in Government employment; and (9) urging standardizing of annual and sick leave for Government employees.

### Boycotts

The committee on boycotts reported favourably on a number of resolutions of protest against the actions of certain manufacturing companies, some of which were declared "unfair." In some instances the committee recommended that further efforts be made to bring about adjustments before the firms were declared to be antagonistic to organized labour.

### Anti-Injunction Legislation

Besides the large number of resolutions submitted to the committee on resolutions certain sections of the report of the executive council were also referred for report. The committee first reported on the reference in the executive council report to proposed anti-injunction legislation, with which the committee considered two resolutions. The committee recommended adherence to the decision of the 1927 convention. "In other words," the committee stated, "we are convinced that the remedy is to be found in propositions one and three combined as outlined above, namely, in defining the equity jurisdiction and in repealing and amending the anti-trust and anti-combination laws." The recommendation of the committee was adopted.

One of the resolutions asked for the endorsement of an original Senate bill to regulate and limit the jurisdiction of courts sitting in equity, so amended as to repeal section 4 of the Sherman Anti-Trust Act, together with such extensions of the said Act as may have been made by subsequent legislation or by decisions of the court. The committee did not consider the bill sufficiently broad in scope with reference to the amending of the Sherman Anti-Trust Act, but recommended that the resolution be referred to the executive council for guidance in connection with the other recommendations in the report of the committee.

The other resolution condemned injunction abuse and urged defeat of judges having unfavourable injunction records. For this resolution the committee approved the declaration of the 1927 convention, which was as follows:—

The committee also recommends that the president and executive council take steps to bring to the attention of all affiliated organizations the need for participating in the nomination and election or selection of judges and that the candidates be called upon to account for the misuse of the equity power. Require them to meet the issue in the open field of public discussion during campaigns for the nomination and election of judges within the states and when federal judges are being selected. It is true that this policy has been carried out to some extent in the past. It should be applied with greater persistency in the future.

These two recommendations of the committee were adopted.

The committee on resolutions also referred to the case in which the Interborough Rapid Transit Company of New York City sought to enjoin the American Federation of Labour and the Amalgamated Association of Street and Electric Railway Employees from organ-

izing the street and electric railway men employed by the company. While the result of the trial, the committee stated, was the defeat of the company, the affiliated unions were urged to study the manner in which the victory was achieved.\*

### Radio Broadcasting

The committee approved of the report of the executive council in reference to radio broadcasting, and recommended that the council continue its examination of the radio industry to the end that the rights of labour may be properly protected. It was also decided to assist in the efforts to secure for WCFL the broadcasting station owned, controlled and operated by the Chicago Federation of Labour, the necessary extended allocations and permits from the Federal Radio Commission.

The committee reported favourably on the portion of the executive council report wherein reference was made to a conference with the American Bar Association. The committee commended the council for its firm stand against communists, endorsed the report of the council on company unions and recommended that the council continue its efforts to expose company unions.

### Release of Tom Mooney

As a substitute for a resolution asking for the release of Tom Mooney and all other workers "unjustly held" in the prisons of California, the convention approved of a declaration that the executive council continue to proceed in the manner which in their judgment is best calculated to bring about the release of Mooney and Billings.

### Immigration

In addition to the section of the executive council's report dealing with the subject of "Mexico and Immigration," the committee on resolutions considered six resolutions dealing with immigration matters. Resolution No. 5 proposed placing Mexico and all Latin American countries under the quota provisions of the United States immigration laws; Nos. 9 and 10 proposed to place all countries under the quota provisions of the laws, and to secure a more rigorous prosecution of those who smuggle aliens into the United States; No. 57 proposed the cessation of border-crossing privileges and protested against the issuance of Federal injunctions against local directors of immigration in their enforcement

\* This case was outlined in the LABOUR GAZETTE, March, 1928, page 335.

of the 1924 immigration laws; No. 84 proposed to have the trade unions acquainted with the manner in which protective provisions of the immigration law are annulled by proclamations and orders, particularly at Detroit, and protested against "the destruction of the immigration laws by the Federal courts." The committee recommended that the entire subject be referred to the executive council for an all embracing study and examination and directions for the approval and furtherance of such legislation as will most speedily and effectually attain the ends sought and as may be required to safeguard and promote the economic, industrial, social and political well-being of all people in the United States in general and of the wage earners in particular.

The committee on resolutions approved of a resolution asking the U.S. Secretary of Labour to repudiate a statement of the Assistant Secretary of Labour favouring putting Chinese under the quota law.

#### Other Resolutions Adopted

Other resolutions approved by the committee on resolutions and endorsed by the convention were as follows:—

Opposing importation of Chinese-made shingles from British Columbia.

Commending the A. F. of L. for co-operation with the Metal Trades Department in legislative matters.

In support of the teachers of Seattle in their fight against the "yellow dog" contract.

In favour of co-operating with the Journeymen Tailors' Union in a publicity campaign against sweat shops.

In favour of assisting to secure release of imprisoned trade unionists in hosiery workers' strike in Kenosha, Wisconsin.

Endorsing movement of Stenographers' Union No. 12,646, of New York, to secure five-day work week.

Urging support of Stenographers' Union No. 12,646 of New York in campaign against communists.

Urging employment of union accountants by union affiliated with the A. F. of L.

Urging that work in naval construction program of the United States be done in Government navy yards.

In favour of the A. F. of L. assisting in securing the ratification of the Kellogg peace treaty.

In favour of state tenure laws for teachers.

Protesting against the policy of denying employment to middle-aged workers and proposing investigation of employers' use of group insurance to restrict labour.

Demanding that the Federal Trade Commission prosecute a complaint against a baking corporation.

Urging establishment of adequate salaries for the United States steamboat inspection service.

In favour of free speech, free press and free assemblage.

In favour of such changes in the tariff laws as may be desired by the printing trades organizations.

Opposition to the extension of the prison laundry system in competition with free labour.

Expressing approval of the United Hebrew Trades of New York in assistance rendered to the Central Federation of Jewish Workers in Palestine.

In favour of rendering assistance to the International Ladies' Garment Workers' Union in efforts to renew agreements with employers.

In favour of the Boulder dam project on the Colorado river, such to be placed under the direction of the Federal Power Commission.

In favour of conference to consider organizing work in the Southern States.

In favour of support of affiliated Theatrical Agents and Managers.

Commending the support extended by the labour press and urging support for the various labour papers.

In favour of support to the International Association of Bridge, Structural and Ornamental Iron Workers in the "struggle against the United States Steel Corporation and the National Erectors' Association."

In favour of investigation of the Vestris disaster.

In favour of United States enforcing maritime laws upon foreign vessels.

#### Resolutions to be Considered

The following resolutions on the recommendation of the committee on resolutions were referred to the executive council for consideration.

Asking support for the International Brotherhood of Paper Makers in the Department of Justice suit involving the use of the union label water mark.

Favouring a protective tariff on foreign-made shoes.

In favour of empowering State Industrial commissions or departments of labour to grant licenses for private fee-charging employment agencies.

In favour of A. F. of L. studying method of combating "yellow dog" contracts.

Proposing endorsement of proposed measure for child health extension service.

Asking for federal legislation to compel printed matter to bear imprint of the printer.

Urging legislation regulating issuance of fire insurance policies.

In favour of the executive council of the federation assisting the Amalgamated Meat Cutters in an effort to have a New York City branch reaffiliate.

### Jurisdictional Questions

To the committee on executive council's report were referred certain questions regarding jurisdictional disputes, together with some other matters not submitted to other committees.

Regarding the controversy between the teamsters and railway clerks the committee submitted a proposition for the final settlement, the executive council to arrange for a conference.

Commendation was offered for the successful settlement of disputes (1) between boiler-makers and bridge and structural iron workers, (2) between machinists and street and electric railway employees, (3) between carpenters and sheet metal workers, (4) between the operating engineers and stationary firemen.

Approval was given the action of the executive council in suspending the Brotherhood of Railroad Signalmen for failure to carry out decision of the 1927 convention in regard to a dispute with the International Brotherhood of Electrical Workers.

Approval was also given to the change in title of the International Union of Steam and Operating Engineers to International Union of Operating Engineers.

The disputes between (1) flint glass workers and machinists, and (2) tunnel and subway constructors and hodcarriers and building labourers were referred to the executive council to continue to endeavour to effect settlements.

A proposal to merge the Cigarmakers' International Union and the Tobacco Workers' International Union was referred to the president of the federation with a view to presenting the proposal to the tobacco workers' executive.

### Committee on Education

To the committee on education several sections of the report of the executive council were referred. These were under the following headings: (1) "The American Federationist"; (2) "Text Book Review"; (3) "Compulsory School Attendance Laws"; (4) "Free Text Books"; (5) "Continuation School"; (6) "On Co-operative Part-Time

Education"; (7) "Adult Education"; (8) "Workers' Educational Movement"; (9) "California Plan"; (10) "On Week-End Conferences"; (11) "On Summer Schools for Workers"; (12) "On Publications"; (13) "On Legal Information Bureau"; (14) "On Labour's Three Special Days"; (15) "Child Health Day"; (16) "Child Labour"; (17) "Child Labour in the District of Columbia"; (18) "On Public Health"; (19) "On Chicago World Fair, and (20) "On Samuel Gompers Memorial." The convention approved of the work of the executive council in the above matters.

A resolution proposing the establishment of a national labour college for workers' education was presented to the convention. The committee on education recommended that the proposal be referred to the executive council. In the discussion on the resolution the name of Brookwood College was injected. Vice-President Woll, who had been delegated by President Green to investigate Brookwood College, read the findings in his report. Mr. Woll declared that the evidence which he had examined from the students at Brookwood and from reports that had come to his attention prompted the conclusion that "in fact the direction of its teaching is propagandistic." He stated also that three members of the faculty are on the board of advisers of the Workers (Communist) Party in New York. After further discussion the recommendation of the committee was adopted. Subsequently a motion was adopted endorsing the action of the executive council in regard to Brookwood College.

The committee on education also reported favourably on resolutions (1) urging trade union editors to allot space in their publications to assist educational campaign of Union Label Trades Department, and (2) opposing use of public schools "to spread propaganda of special interests." The convention adopted the report.

### International Labour Relations

The committee on International Labour Relations was in accord with the views expressed by the executive council under the caption of "Pan-American Labour Relations," in which it was stated that a special effort be made for the continuation of the policy to draw the workers of the North, Central and South American countries more closely together in fraternal relationship for their mutual advancement and protection. Reference was also made to the Pan-American Conference in Havana and to the later date for the meeting of the sixth convention of the Pan-American Federation of Labour.

The committee recommended that the executive council continue its effort to establish reaffiliation with the International Federation of Trades Unions upon the basis declared by earlier conventions of the A. F. of L.

### Fraternal Greetings

At the morning session of the third day the messages from the fraternal delegates were delivered. The greetings from the British Trades Union Congress were extended by Mr. J. Marchbank, assistant industrial general secretary of the National Union of Railwaymen, London, England, and Mr. E. Edwards, financial secretary of the Northumberland Miners' Union. The message from the Trades and Labour Congress of Canada was delivered by Mr. Wm. Varley, Toronto, Ont., and that from the Women's International Union Label League and Trade Union Auxiliary by Miss Anna Fitzgerald, while Miss Matilda Lindsay spoke for the National Trade Union Label League.

At one of the sessions, previous to the departure of the British delegates for Mexico, where they were to represent the British Trades Union Congress at the meeting of the Mexican Federation of Labour, they were each presented with a gold watch and chain. Each delegate was also given a watch to take home to his wife. The Canadian fraternal delegate received a similar present, as did also Mrs. Varley, who was present.

Others who addressed the convention at one or other of the sessions were Col. C. B. Ross, representing the U.S. War Department; Mr. Paul V. McNutt, National commander of the American Legion; Mr. J. Talbot Clark,

representative of the Near East Relief Committee; Hon. Thos. F. Gore, ex-senator from Oklahoma; Mr. John P. Frey, secretary of the Metal Trades Department of the A. F. of L.; Mr. Spencer Miller, junior secretary of the Workers' Education Bureau of America, and Hon. James J. Davis, United States Secretary of Labour.

At one of the sessions of the convention the names of 29 departed outstanding representatives of the trade union movement were read by the secretary. At the request of the president the delegates stood in silence for a moment as a tribute of respect to their memory.

### Officers Elected

The officers elected for the year 1928-29 were as follows: President Wm. Green, Washington, D.C.; 1st vice-president, Frank Duffy, Indianapolis, Ind.; 2nd vice-president, Thos. A. Rickett, New York, N.Y.; 3rd vice-president, Jacob Fischer, Indianapolis, Ind.; 4th vice-president, Matthew Woll, Chicago, Ill.; 5th vice-president, James Wilson, Cincinnati, Ohio; 6th vice-president, James P. Noonan, Washington, D.C.; 7th vice-president, John Coefield, Chicago, Ill.; 8th vice-president, A. O. Wharton, Washington, D.C.; treasurer, Martin F. Ryan, Kansas City, Mo.; secretary, Frank Morrison, Washington, D.C.; fraternal delegates to the British Trades Union Congress, Wm. J. Rooney, Washington, D.C., and Wm. P. Clarke, Toledo, Ohio; fraternal delegate to the Trades and Labour Congress of Canada, John D. Haggerty, Washington, D.C.

Toronto, Ont., was chosen as the convention city for 1929.

## Houseworkers and Workmen's Compensation

The *Victoria Colonist*, in a recent issue, discussed the position of houseworkers in relation to accident insurance as follows:—

"Workmen's Compensation, if it is to be adequate in the expression of its needs, should cover housework. This is a phase of industry that, in the matter of insurance, has been far too neglected up to the present. The women who perform homely chores are as much entitled to compensation as any other class of the community, and no doubt would be prepared to contribute to the premiums of Workmen's Compensation. Under the present dispensation the housewife finds it difficult to get an accident policy. The belief exists, no doubt founded on statistics, that housework is the most dangerous of all occupations for women. As a consequence insurance companies fight shy of the risk, or only accept it at much higher rates.

"The Rochester *Times-Union* says that the high casualty list among women in the home 'is due to the housewife's own persistence in doing the day's work, even when weary from long hours, to her lack of proper tools or unfamiliarity with the tools she has.' There ought to be no such unfamiliarity in these days of domestic science in the schools, that is if the domestic science taught is practical and capable of application to the homes. Under Workmen's Compensation, in which an immense reserve fund has been accumulated—beyond present and immediately prospective needs—the housewives could be cared for without having to pay any higher rates of insurance than obtain in any average industry. This is a matter that should be of moment to women's organizations. The housewife is just as much entitled to protection as any workman."

## TRADES AND LABOUR CONGRESS OF CANADA

### Legislative Program Submitted to Dominion Government

THE executive council of the Trades and Labour Congress of Canada and an accompanying delegation of Canadian representatives of affiliated international and national unions, on January 8, 1929, submitted to the Dominion Government the legislative program of organized labour. The following Cabinet Ministers were present at the meeting:—

The Right Hon. W. L. Mackenzie King, Prime Minister; Hon. Peter Heenan, Minister of Labour; Hon. Dr. J. H. King, Minister of Health and Soldiers' Civil Re-establishment; Hon. Charles Dunning, Minister of Railways and Canals; Hon. J. C. Elliott, Minister of Public Works; Hon. Ernest Lapointe, Minister of Justice; Hon. P. J. Veniot, Postmaster General; Hon. Colonel J. L. Ralston, Minister of National Defence; and Hon. W. R. Motherwell, Minister of Agriculture.

Mr. Tom Moore, President of the Trades and Labour Congress of Canada, was the chief spokesman during the presentation and he was assisted by J. T. Foster, James Simpson and R. J. Tallon, vice-presidents, and P. M. Draper, secretary-treasurer.

Other representatives of labour organizations who composed the delegation were: Arthur Martel, executive board member; James F. Marsh and Pat Green, general representatives, United Brotherhood of Carpenters and Joiners; J. G. A. Decelles, chairman, executive board, Commercial Telegraphers Union; John W. Bruce, organizer, United Association of Plumbers and Steamfitters; E. W. A. O'Dell, organizer, Boot and Shoe Workers' Union; J. J. Reaves, president, Federated Association of Letter Carriers; W. P. Covert, vice-president, International Alliance Theatrical Stage Employees and Motion Picture Machine Operators; E. Ingles, vice-president, John Noble and James Broderick, general representatives, International Brotherhood of Electrical Workers; A. Bastien, Canadian representative, American Federation of Labour; Maurice Labelle, vice-president, International Brotherhood of Pulp, Sulphite and Paper Mill Workers; Fred Molineux, and R. Gervais, organizers, Brotherhood of Painters, Decorators and Paperhangers; James Ward, vice-president, International Association of Operative Plasterers; A. Bell, vice-president, International Association of Sheet Metal Workers; James Somerville, vice-president, International Association of Machinists; George R. Brunet,

Printing Pressmen and Assistant's Union; M. L. Bergstein, organizer, Cloth Hat, Cap and Millinery Workers International Union; Joseph Corbett, chairman, Joint Protective Board (Central Region), C. N. Rys., Brotherhood Railway Carmen; Thomas O'Reilly, vice-president, National Association of Marine Engineers; Frank Healey, organizer, International Union of Steam and Operating Engineers; W. F. Bush, executive board member, United Garment Workers' Union; F. W. Felker, district representative, International Moulders' Union; A. Gariepy, vice-president, Cigar Makers' International Union; Thomas Black, International Typographical Union; J. A. P. Haydon, legislative representative, Ontario and Quebec Conference Typographical Unions; A. D. Dear, vice-president, International Association of Fire Fighters; Charles Dickie, secretary, Division No. 4, Railway Employees' Department, American Federation of Labour.

#### President Moore's Address

President Moore after introducing the delegation said:—"In our presentation of a year ago the status and membership of the Trades and Labour Congress of Canada was dealt with in considerable detail. It is not thought necessary at this time to deal further with this subject, except to say that during the past year several thousands more members have been added to the ranks of our affiliated organizations, thus further strengthening our claims to continue, as for the past forty-four years, to speak authoritatively on behalf of the organized workers of this Dominion.

"Being Canadian citizens and desiring to build up the country in which we live and earn our livelihood, our policy has always been one of seeking betterment through constitutional channels. In accord with this we again respectfully submit a program of legislative changes considered necessary in the furtherance of social and economic justice and industrial peace in Canada.

"Many of these matters have been presented and discussed at previous interviews and therefore are only very briefly summarized, but we trust will nevertheless be given equal consideration with those more fully dealt with."

"*Old Age Pensions.*—By the adoption of the Federal-Provincial Old Age Pension Act in the Province of British Columbia, Saskatchewan and Manitoba some practical

knowledge has been gained in respect to this measure. Whilst we still believe that changes will be necessary to this Act before it can be considered as providing reasonable relief and protection to the needy workers in their old age, yet we are of the opinion that it is advisable to secure much wider application of the measure in other provinces and greater experience as to costs, administration, etc., before coming to a decision as to what amendments may be of the greatest benefit. For this reason no changes are sought at the present time, but we do urge that the Federal Government exert its influence on the participating provincial authorities to ensure that the Act is administered in the most generous terms.

"It is pleasing to note that the Minister of Labour has continued to publicly urge all Provincial Governments to accept the Federal-Provincial Old Age Pension Act, and this we accept as a manifestation of the sincerity of the Federal Government in seeking to have the benefits of the measure made applicable throughout the entire Dominion at the earliest time.

*"Re-enactment Technical Education Act 1919.*—It is to be regretted that the Government has not yet seen fit to re-enact the Technical Education Act of 1919, which expires on March 31st this year, as we are convinced that without Federal assistance technical educational activities in the various provinces will be restricted. We believe that the Premier of Ontario stated the case clearly when, in a press statement published May last, he said:—

The Technical Education Act passed by the Dominion in 1919, did not encroach on the prerogative of the provinces. It did not assume to take control of any schools; it left the responsibility for the administration of technical schools strictly to the provinces to which it belongs by constitutional right.

The Act was, in fact, a financial measure dealing with Federal funds. It undertook to use federal money to promote and assist technical education in Canada. In other words, the Dominion sought to induce the provinces and the municipalities, on the assurance of Federal assistance, to undertake a very expensive service to the country, on a larger scale than would otherwise be possible.

"Reiterating our statement presented last year we would emphasize that technical education is an essential part of apprentice training, and as such, lays the foundation for industrial efficiency, which reflects itself in Dominion revenues. For this and similar reasons we again advance the opinion that the Dominion Government could properly continue grants for technical education and urge

the enactment of legislation to make this possible when the Act of 1919 expires.

*"Fair Wage Matters.*—It is disappointing to note that the promises held out last year by the Minister of Labour for the appointment of a fair wages officer for the Maritime Provinces have not as yet been carried into effect. With the industrial revival apparent in these provinces it is hoped that this position will be filled in the immediate future.

"Changes in the present regulations previously urged are again reiterated, these being briefly:—The substitution of the words 'not to exceed eight hours per day' instead of 'such hours as are customary in the district'; that Clause 5, Section (a) relating to the duties of inspecting officers including supervision over labour conditions, be strictly enforced; That penalties be imposed on contractors violating the fair wage clauses and making false declarations as to compliance with the same; Moneys collected for such violations to become the property of the Government, when the workmen entitled to the same can not be located within a reasonable time; That Clause 3, Section (a) limiting the powers of the Minister of Labour be repealed; That extended authority to examine books, pay rolls, etc., and take action in cases of violations be given by the Minister of Labour to the fair wages officers; That a new clause be inserted providing for the right of representatives of workers' organizations to have free access to all jobs covered by fair wage policies of the Government; That fair wage regulations should apply not only to works undertaken by the Government itself, or by commissions using Government funds, but also to trading companies of which the Government own part or all of the stock; That the fair wage regulations with the amendments above suggested be incorporated in an Act of Parliament so as to give the full power of the law in enforcing the same.

"It is noted that the Fair Wages Clauses have been inserted in bills enacted during the last session granting charters to companies to build bridges crossing international waterways. This action on the part of Parliament is highly appreciated, and, we trust, will be continued as a policy of the Government when dealing with bills of a similar nature in future.

"It is further requested that the Fair Wages Policy should be made to apply to all industries enjoying protection under the tariff laws. (This matter is dealt with more fully in the Memorandum on Tariff.)

*Government Plant Conditions.*—Request is made that established standard working conditions should be observed in Government plants manufacturing uniforms or doing other similar commercial work which proposal will be best assured by the adoption of such conditions as will enable the union label to be fixed on these products.

*Curtailement of Veto Power of Senate.*—Attention is again directed to the need for curtailing the powers of the Senate so as to make it responsive to public opinion and establish the supremacy of the elective chamber, the House of Commons, in all legislative matters. As a step in this direction it is urged that action be taken to provide that 'the veto of the Senate shall not be operative in respect to legislation which has passed three different sessions of the House of Commons.'

*British North America Act.*—Changes are sought in this Act as will foster national unity by (a) giving any necessary power to the Federal Government to deal with all matters covered in recommendations and conventions of the International Labour Conferences (League of Nations); (b) Abolish appeals to the Privy Council and establish the Supreme Court of Canada as the highest court of appeal; (c) Bring about such changes in the constitution of Parliament as may be necessary to make decisions of the elected representatives of the people paramount.

*Criminal Code Amendments.*—It is gratifying to note that the Government again introduced a bill proposing to repeal the sections of the Criminal Code respecting sedition, freedom of speech, assembly, etc., inserted during the 1919 session of Parliament and to substitute therefor the provisions which obtained prior to that time. It is disappointing, however, to find that though the bill passed the House of Commons it was rejected by the Senate, this being the sixth occasion on which similar legislation has met defeat in the Upper Chamber.

"According to 'Hansard', April 23, 1928, the Hon. Ernest Lapointe, Minister of Justice, in introducing the above bill said 'If it is defeated there (the Senate) again, I will bring it in again next year.' We trust this promise will be carried out and desire to give the assurance that such action will have the full support of labour throughout the Dominion.

"Another amendment to the Criminal Code which is of serious import to Labour and has been continuously urged for several years past is to re-insert the clauses defining and legalizing peaceful picketing which were originally

contained in Section 12, Chapter 173 of the Consolidated Statutes of Canada, 1886. Recent experiences are that Canadian Courts appear to be following more closely United States practices instead of British custom in this matter, and owing to the varied interpretations as to the legal rights of workers in the conducting of strikes it is, we believe, in the best interest of all concerned that the section above referred to, which was dropped from the Statutes in consolidating the same and not by any action or authority of Parliament, should be again reinserted.

*Eight Hour Day.*—No real progress has yet been made by way of giving legal effect to the Washington (1919) Eight Hour Day Convention which the representatives of the Federal Government were parties to adopting. The decision of the Supreme Court of Canada, to which this question was referred by the Government, left no doubt as to the right of the Federal Government to apply the same to its own employees and others coming within its jurisdiction. We once more ask for favourable action on this matter. (Further reference to this convention is included in the Memorandum on International Labour Organization matters.)

*One Day's Rest in Seven.*—It would seem reasonable to assume that the intent of the Lord's Day Act was to prevent workers being compelled to work seven days per week. Developments since its enactment have, however, made the Act ineffective so far as the large majority of workers are concerned, and we therefore ask that new legislation embodying the principle of the 'One Day's Rest in Seven' Convention of the International Labour Office be enacted, or that the present Lord's Day Act be amended so as to enable this convention to be ratified and made operative in Canada. (This matter is also referred to in the Memorandum on International Labour Office conventions, etc.)

*Militia Act Amendments.*—Whilst sincerely endeavouring to prevent any conditions arising in the industrial world which would provide an opportunity for calling on the Federal armed forces to participate in a trade dispute, there is always the possibility, however remote, of such occurring. Past experiences have shown the unsatisfactory provisions of the Militia Act in this respect, and we therefore again urge that it be so amended to (a) prohibit the maintenance by industrial corporations of armed forces designed for use during industrial disputes; (b) enable the Federal Government to use discretionary

powers as to the provision of troops when requisitioned by municipal or provincial governments.

*"Cadet Training.*—This matter was again under discussion at our last convention when it was resolved to request that legislation be enacted to provide for the abolition of all money grants for cadet training and other military activities in schools and that grants be given for the purpose of physical training instead.

"We desire to emphasize our belief that it is in the best interest of the youth that every encouragement should be given to the development of their physical condition instead of instilling into their minds militaristic ideas by the continuance of the cadet system. It is our sincere belief that if grants are to be made by the Federal Government to educational authorities such grants should be for technical education or purely physical development and not for military training.

*"Marine Matters.*—Considerable disappointment exists at the continued delay in revising the Canada Shipping Act so as to remove many injustices to marine engineers and others whose conditions of employment are governed by this obsolete Act. Though there may be valid reason for delaying to undertake a general revision of the same, we would urge that amendments to the Shipping Act and Regulations, as set forth in the memoranda presented to the Minister of Marine and Fisheries during the past several years, be proceeded with. These briefly deal with the licensing and conditions of employment of marine engineers; that the organization affected be graded representation on the examining board for marine engineers; appointment of a qualified engineer to sit as a commissioner with the Wreck Commission on all cases; that a Health Inspector be appointed at each important port in Canada with power of inspection on Canadian ships; changes in the method of computing horse power on steamships, and for the revision of the section dealing with coastwise training so as to exclude from Canadian port to port trade other than ships built in Canada, owned by Canadians, manned by Canadian seamen and registered in Canada, with a view of permitting ships of other countries to enter this trade only under proper duties; that a duty be placed on ships used exclusively in Canadian trade, built or repaired outside of Canada so as to assist in providing employment in the ship building trades, and for the adoption of the eight-hour day for marine engineers.

"It is further requested that the policy of equalizing wages paid to marine engineers in

different sections of Canada now in effect by the Marine and Fisheries and Public Works Departments be adopted by other departments of the Government operating vessels.

*"Prison Reform.*—That steps be taken to give effect to the report of the Government Commission (1921) on this matter.

*"Bankruptcy Act.*—Amendments to this Act are sought which would give claims for wages and salaries of employees first rank and priority over all other creditors where said estates or concerns are wound up or liquidated by virtue of the Bankruptcy and Winding Up Acts.

*"Taxation.*—We note with satisfaction that a further reduction was made in the sales tax from four per cent to three per cent during the last session of Parliament, and express the hope that further reduction or total elimination of this tax will take precedence over any other tax reduction that may be found possible, as in our opinion the sales tax is an obstruction to business and places an unfair burden on people of small means.

"The Government is also to be commended for amending the income tax so as to extend the exemption for dependent children to twenty-one years or over if they are incapable of self-support on account of mental or physical condition.

"Organized labour believes that the income tax, fairly administered, is a just method of raising national revenue and though changes may be necessary to remove inequalities, believes that this tax should be maintained permanently in Canada, and that no further general reduction should be made which would reduce the national revenue beyond a point where provision can be made to fulfil the State's obligation to protect those who, either from old age, unemployment or sickness, find themselves unable to provide the necessities of life.

*"Canada Marking Act.*—Up to the present this Act has been confined in its operations to the printing industry. In view of the large importation of boots and shoes into Canada during the past year, many of which we believe to have been made in countries with exceptionally low-wage conditions, we strongly recommend that the Canada Marking Act be applied to the boot and shoe industry so that purchasers may be aware of the country of origin of the same.

*"Electoral Reform.*—Note has been taken of the unsuccessful effort made by a member of the House of Commons, by the introduction of Bill 28 to amend the Senate and House of Commons Act so as to remove the

necessity for re-election of a member of the House of Commons on acceptance of a position as a Minister of the Crown, providing he is elected to the House of Commons whilst he held such office, or is a member of the House of Commons at the date of nomination to the same.

"A request for this legislation has been incorporated in our program for the past two years and we would ask that the Government introduce a similar bill as that herein referred to, during the next session of Parliament. We also desire to reiterate our other requests for amendments to the Election Act which would provide for (a) Changes in the method of appointment and control of returning officers and their subordinates charged with the conduct of Federal elections so as to eliminate the interjection of political partyism into what should be an impartial State function; (b) The introduction of proportional representation in group constituencies and the use of the transferable vote in single member constituencies; (c) A compulsory half-day holiday with pay on Federal election days instead of the two hours now stipulated in the Act; (d) Protection against the imposition of restrictions by public authorities which prevent their employees from exercising their full political rights under free conditions; (e) Abolition of forfeiture of election deposits and the substitution therefor of a stated number of signatures before nominations are accepted; (f) Repeal of Clauses 10 and 11 of the Franchise Act (1920) which prohibit voluntary contributions towards election campaigns from trade unions or other groups unless they are specially incorporated as political associations and prohibit non-residents from participating in election campaigns.. .

A further request adopted at our last convention is that enabling legislation be obtained so that seamen be privileged to exercise their franchise away from home whilst following their employment.

*"Industrial Disputes Investigation Act.*—Attention is again directed to the desire for the amendment to Clause B, subsection 2, section 16 of the Industrial Disputes Investigation Act of 1925 so as to eliminate the necessity of the formality of taking a strike vote before a Board can be granted, substituting the words "A declaration of failure to reach agreement by direct negotiations" for the present oath which reads:—"To the belief of the declarant a strike or lockout will be declared." The necessity of taking a strike vote prior to making application for a Board many times acts as a deterrent to conciliation.

*"International Arbitration as a substitute for war.*—The studied opinion of the labour movement on this important question is embodied in the following resolution, adopted at our last convention, which is herewith brought to your attention with the expressed hope that steps will be taken to give effect to the recommendation contained therein:—

Whereas the labour movement is opposed to war and in favour of the substitution of the principle of arbitration in the settlement of all disputes between nations. Therefore, be it resolved, that this Forty-fourth convention of the Trades and Labour Congress of Canada expresses its approval of the action of the Federal Government in affixing its signature to the Kellogg Treaty outlawing war, and further, be it resolved, that we urge our government to also add its signature to those of the twenty-seven other nations who have already signed the optional clause of the protocol of the World Court League of Nations, providing for the judicial settlement of international disputes.

*"Alien Labour Act.*—The inadequacy of the Alien Labour Act to protect Canadian Labour, especially during trade disputes, has been demonstrated on several occasions during the past year. To some extent this interlocks with immigration regulations, which are referred to in a subsequent memorandum on that question.

One of the greatest difficulties met with in respect to the present Alien Labour Act is that there is no provision made in the same for the enforcement by any department of the Government. We, therefore, again request that the administration of the Alien Labour Act be assigned to a Minister of the Government so that violations of the Act may be effectively dealt with.

*"Letter Carriers' Conditions.*—At our last convention it was unanimously decided to again call the attention of the Government to the inadequate salaries paid letter carriers for responsible and arduous duties. In connection with this it was pointed out that under the Civil Service Act, as amended in 1919, classification and salaries of letter carriers were placed under the jurisdiction of the Civil Service Commission and that the powers of this Commission are so wide as to enable it to arbitrarily repudiate recommendations made by the Postmaster General respecting salary increases and classification. Exercising these powers this Commission has turned down flat the recommendations of two Postmasters General for reclassification and higher salaries for letter carriers. Comparing salaries of letter carriers it was pointed out that in 1918 they were on a par with policemen and fire fighters, and at that time Canadian letter carriers received \$89 per year more than United States letter carriers, whereas in 1927 the

maximum salary of a Canadian letter carrier was \$1,500 while the United States letter carrier's maximum was \$2,200 and the average for policemen and fire fighters was \$1,850. It was, therefore, unanimously resolved that we impress upon the Government the urgent necessity of introducing legislation at the forthcoming session of Parliament that will remove the amendment of 1919, known as section 45b from the Civil Service Act, and place the Postmaster General in a position to deal directly on such matters as classification and the fixing of salaries for letter carriers.

"This opportunity is taken to express appreciation of the Government's action in passing legislation which provides for the setting up of joint councils within the Civil Service, and we trust that these councils, when established, may be the medium through which unsatisfactory conditions will be dealt with promptly and with justice to all concerned.

The request is again reiterated that as Christmas Day and New Year's day are recognized as legal holidays, enjoyed by the great majority of the people of Canada, that all delivery of mail by letter carriers be suspended on these two days. In respect to this we would point out that a resolution embodying this request was again adopted at the 25th convention of the Federated Association of Letter Carriers, held in the city of Windsor, Ont., during September last.

*"Federal Office Cleaners' Conditions.*—During the past year this matter has been the subject of a conference with the Minister of Public Works and the Minister of Labour, but up to the present time none of the requests have been granted. We, therefore, on the part of these underpaid workers request that they be placed on an annual basis as permanent employees including privileges of sick leave, holidays with pay and superannuation.

*"Pensions Act.*—On behalf of the Marine Engineers in the employ of the Federal Government the request is submitted that they be brought under the Superannuation Act and thus be enabled to enjoy similar benefits as those employees who come under the Civil Service Act.

*"Co-operative Legislation.*—In order to encourage co-operative trading in Canada, Federal legislation should be simplified in respect to the Dominion incorporation of such societies."

The following memoranda were also presented:—

MEMORANDUM ON INTERNATIONAL LABOUR CONFERENCES AND THE CONVENTIONS AND RECOMMENDATIONS ARISING THEREFROM 1919 TO 1928

This memorandum contained the following subjects on which legislation is sought: (1) Eight-hour day; (2) One day's rest in seven; (3) Seamen's articles of agreement; (4) Unemployment and unemployment insurance; (5) Emigration. In conclusion the memorandum stated that according to reports submitted to the 1928 conference of the League of Nations International Labour Organization only two countries, South Africa and Australia, had recorded a less number of ratifications than Canada. Belgium heads the list with eighteen; Great Britain coming fifth with thirteen, India ninth with eleven, the Irish Free State fourteenth with nine, whilst, as previously mentioned, Canada had only ratified four. This might be accounted for to some degree because of the number of conventions and recommendations which have been considered as coming within the competence of Provincial Governments. The memorandum declared that "as a means of securing greater interest by the Provincial Governments in these matters we would reiterate our proposals for the holding of annual Inter-Provincial conferences to deal with International Labour Organization matters and for the encouragement of Provincial Governments to have representatives present at the annual conference in Geneva."

MEMORANDUM ON UNEMPLOYMENT AND UNEMPLOYMENT INSURANCE

It is the opinion of organized labour that unemployment could be dealt with in three ways: First, to increase the number of jobs available within Canada and stabilize employment to the fullest possible extent. Secondly, to provide facilities for bringing the job and the worker together; and thirdly, by the payment of unemployment insurance. To give effect to the first proposal the following action is suggested: (1) Those outlined in tariff memorandum (referred to later in this report); (2) Generous support to the National Research Council so as to encourage fullest development and use of our natural resources; (3) The carrying on of all public works and purchase of public supplies during periods of depression; (4) The limitation of the work day to eight hours on all government jobs so as to more evenly distribute employment; (5) Adoption of the recommendation of the National Conference regarding winter employment in Canada, held September, 1924, for the encouragement of building operations during winter seasons.

The following measures are suggested to give effect to the second proposal:—(1) The encouraging of the abolition of fee-charging employment agencies and the development of free employment bureaus by the Provinces, coordinated by the Federal Employment Service; (2) The adoption of the recommendation of the Employment Service Council of Canada respecting methods of hiring labour outside Canada; (3) Assistance towards transportation of workers to distant jobs and for temporary work,

such as harvest labour, etc.; (4) Co-ordination of seasonal occupation; (5) Adoption of recommendations embodied in the memorandum on migration respecting importation of labour, etc.

Labour's reasons advanced for the adoption of the third proposal, or unemployment insurance, are: (1) It will tend to reduce the volume of unemployment by (a) stabilizing purchasing power of the workers and thus continuing to provide employment to thousands who would otherwise be added to the ranks of the unemployed; (b) Inducing greater effort towards co-ordination of seasonal activities; (c) Leading to the employment of labour already in Canada instead of the seeking of immigrant supplies of same; (d) Better budgeting of work so as to reduce the peak period of employment and subsequent periods of depression; (2) It would give protection to the worker and his family and prevent the demoralization which often occurs when, through inability to obtain employment, workers are compelled to depend on charity; (3) It will reveal actual facts concerning the amount and causes of unemployment, thus providing valuable information essential to the prevention of unemployment; (4) It will make higher living standards possible and assist in decreasing industrial unrest; (5) It will reduce waste.

In conclusion the memorandum strongly urged that definite action be taken during the forthcoming session of Parliament to establish in Canada a system of unemployment insurance.

#### MEMORANDUM ON TARIFF AND PROTECTION

After several years of agitation on the part of organized labour for the establishment of a non-political advisory board on tariff matters, a tariff board was formed on April 7, 1926, but on which Labour was not represented. It was urged that the wage earners be given representation, as it was considered that those employed in industry were of equal, if not greater, importance than those of other groups already represented. Action was requested either by special legislation or Order in Council to give effect to the recommendation contained in the following resolution which was adopted at the recent convention of the Congress in Toronto:—

"Whereas, the protective tariff has only been of advantage to the manufacturers in Canada without corresponding benefit either to the employee in the protected industries or to the consumer of protected commodities, and whereas, in many protected industries the workers are refused the right to organize or associate themselves with the trade union movement in this country. Be it resolved, that we go on record as advocating to the Dominion Government the passing of legislation that all workers in protected industries be included in that section of the Fair Wage Regulations which provide that all works aided by Dominion public funds are subject to the provisions of the Act inasmuch as protection itself is but an indirect subsidy by the state to the manufacturers in this country."

#### MEMORANDUM ON COLONIZATION AND MIGRATION

The Government was commended for its persistence in introducing legislation which amended the Immigration Act, by the repeal of section 41. Under this section, it had been possible to deport citizens without trial. Grati-

fication was also expressed at the action of the government in continuing the overseas medical examination of intending immigrants and of the regulations prohibiting admittance of children under fourteen years of age, unless accompanied by or coming to join their parents or other responsible relatives. The suggestion was made that the Government create an advisory council on immigration, on which organized labour would have proper representation. It would be the duty of this council to strive to establish co-operation with provincial authorities, particularly in the matter of placement, settlement and supervision of immigrants. In the matter of land settlement and immigration it was urged that the same opportunities be given to residents of Canada as are given to those resident in the British Isles and foreign countries. Prohibition of entry of 'contract labour' unless certified as necessary by and secured through the Employment Service of Canada, was urgently requested. The attention of the Government was drawn to the vigorous protests of organized labour throughout the Dominion regarding the importation of British unemployed ostensibly for the purpose of assisting in the western harvest fields. Strong disapproval was expressed of the request emanating from the Police Chiefs' Association that all immigrants be finger-printed.

Previous requests concerning admission and control of Oriental immigration was again reiterated, as follows: (1) Abolition of all bonuses or grants to private agencies; (2) That the British Government be requested to assume fuller supervision and control of immigrant booking agencies operating in the British Isles; (3) For the securing of equal right of entry to the United States to all *bona fide* Canadian citizens irrespective of their place of birth; (4) For the gathering and international exchange of emigration as well as immigration statistics in accordance with the recommendation of the International Labour Organization (1923). The immigration policies of organized labour as propounded by the Trades and Labour Congress of Canada for many years are set forth in the following:

"For the peopling of Canada, through immigration, by a free, enlightened, moral, energetic and law-abiding class of citizens; all false inducements to secure immigrants to be prohibited and the fullest accurate information freely circulated in the countries from which they come. Whilst regard should be had for the welfare of those who seek our shores, the first consideration should be the Canadian people and the betterment of our common country, therefore, nationalities and classes of people who either by temperament, non-assimilative qualifications, habits, customs or absence of any permanent good which their coming brings to us are not a desirable acquisition to our citizenship."

The Rt. Hon. W. L. Mackenzie King replied to the address of President Moore. He was followed by Hon. Peter Heenan, Minister of Labour.

## NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act, 1919. Other activities which have a direct bearing on the training of apprentices and industrial workers are also noted. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

### Kitchener-Waterloo Vocational School

In his report for the calendar year 1928, Mr. H. W. Brown, Co-ordinating Officer for the Kitchener-Waterloo Vocational School, states that a most friendly relationship and condition of mutual confidence exists between the school and the employers of Kitchener and Waterloo. These co-operative conditions, he says, are better now than heretofore because employers are learning from actual experience the practical value to them of employees who are vocationally trained before entering service, while at the same time the school has become so organized that it is able to supply for industries and their offices the demand for boys and girls which is becoming more and more urgent and exacting. Mr. Brown also points out that the present demand for the services of boys and girls trained expressly for various trades at the vocational classes is greater than the supply.

### Scholarships

Scholarships aggregating \$1,000 in value, available to students of the London (Ontario) Technical School, have been offered by some forty citizens interested in the progress of the school.

### Technical School for Oshawa

The erection of a technical school in Oshawa has been forwarded by the unanimous vote of the city council to grant the request of the Board of Education for funds to build a school, the cost of which was estimated at \$261,500.

### Domestic Science Courses—Ontario

Short courses in home nursing, domestic science and sewing are being opened at 22 points in eighteen counties of the province under arrangements of the Women's Institute branch of the Department of Agriculture.

### Correspondence Course—British Columbia

Hon. Mr. Hinchliffe, Minister of Education for British Columbia, recently announced that his department would extend operations of the correspondence courses of instruction to take in high school work. This announcement by the minister follows a statement which he made a short time ago that the matter was under consideration by himself and officials of his department. The minister states that the course has been decided upon following investigations by J. W. Gibson, who is in charge of the agricultural education for the province, and who will be in charge of this department of work.

### The Apprenticeship Act of Ontario

In a review of the activities of the Canadian Construction Association for 1928, appearing in the December issue of *Contract Record and Engineering Review*, Mr. J. Clark Reilly, general manager of the association, makes the following comments:—

"If I were asked what I consider to be the most outstanding feature in the months that have intervened since the Winnipeg Convention, I would say that, to my mind, it is the passage of the apprentice training act by the Ontario legislature. The text of this legislation has been made familiar to our members, through the columns of the *Contract Record*, and is also available in a very attractive pamphlet, published under the signature of the Minister of Labour, Hon. Forbes Godfrey. It is, in my opinion, one of the most far reaching and momentous pieces of legislation that has been enacted in our country and will undoubtedly have far reaching influences in our construction industry, not only in Ontario, but in all other provinces as well.

"Behind the passage of this legislation lies an immense amount of work by some of the leaders of the construction industry in Canada, and years of patient, but persistent, effort to crystallize their ideas into action. Too much credit cannot be given to men like Joseph M. Pigott, J. P. Anglin, K. D. Church, John

V. Gray, Harry J. Mero, and others, who a number of years ago became seized with the idea of the necessity for training men in some of our skilled trades. Wrapped up with the question of apprentice training were the related subjects of immigration of skilled mechanics and labour relations with the trade unions.

"After discussing the question of apprentice training and the need of skilled workmen with the federal authorities, it was finally established that this was a matter for provincial action. It was resolved, therefore, that efforts should be made to get some such system started in the province of Ontario, from which it might be spread to the other provinces of the Dominion as opportunity might arise. Popular interest in the question was kept up by means of various articles contributed by our men to the leading trade journals and the public press. In addition, apprentice contests were held during our annual convention at Windsor and Montreal. A mothers' rest building was built during the Toronto exhibition by apprentices sent there by our members. The services of George L. Sprague were utilized on the part-time basis in gathering valuable data and bringing the question before the employers, the trade union officials and the boys themselves. At length the premier of Ontario, Hon. G. Howard

Ferguson, became actively interested in the question, and this year has witnessed passage of the Ontario Apprenticeship Act.

"The administration of the act has been placed in the hands of the Minister of Labour, Hon. Forbes Godfrey, who has been ably assisted by J. H. H. Ballantyne. The services of A. W. Crawford have been secured as inspector of apprenticeship, and he will have the directorship of apprentice training. Recently four assistants have been appointed, who will have territorial jurisdiction over the registering of apprentices and the fostering of their training. A provincial committee has been working, on which both employers and trades unions are represented and under whose direction these different activities will be carried on. There yet remains a great deal to do. A complete system of financing, by assessment or otherwise, has to be worked out and the merits of the plan will have to be sold to all employers throughout the province. Many obstacles will undoubtedly be encountered, but a way has been provided by the passage of this legislation for the linking up of boys who desire to learn a trade with employers in the building construction industry, and a means provided by which they may, at the same time, receive an education through the technical schools which will make them better citizens of our country."

---

### Technical Education in the Maritime Fishing Industry

The Minister of Fisheries recently approved of proposals as to the lines to be followed in the reorganization of the fisheries service, particularly in the light of the report of the recommendations contained in the recent report of the federal Commission on Fisheries in the Maritime Provinces. (The report of this commission was outlined in the *LABOUR GAZETTE*, July, 1928, page 711.) The main features of the proposed reorganization will be as follows:—

1. Advanced methods in all branches of the industry will be encouraged in every feasible way. Towards the development of such methods, investigations at the Experimental and Biological Stations will be intensified and accelerated as much as possible. Educational courses will be given the Fishery Officers at the Stations at regular intervals, so that they will be kept informed of all new developments and will be in a position to pass the information along to those engaging in the industry, both by explanation and demonstration. Also, the courses available to those engaging in the

industry, that were started last year at the Halifax Experimental Station, will be continued and extended.

2. Duplication of officers will be avoided. By giving competent overseers the necessary training they can become capable inspectors and graders of fish prepared for market by the different methods. Hence the administrative and inspection services will be merged. Existing overseers will be given an opportunity to take a proper course of training at the Experimental Stations, and those who qualify, following such, will have their duties extended accordingly. This will involve the payment of better salaries to such overseers than they now receive. All new appointees as Fishery Officers will be required to be adequately qualified for inspection as well as administrative duties. It is hoped that arrangements can be made whereby new appointees will be selected from the young men in the industry who will graduate from the fishery courses, above explained, that will be given at the Experimental Stations.

3. Educational work will be given the prominence its great importance merits. It will be approached from two standpoints,—

(a) Adequately trained Fishery Officers will give those engaging in the industry needed information as to the proper handling of fish that are being prepared for market by the different methods. Such will be done by explanation and demonstration. Also, such officers will be the regular medium through which information as to new developments at the stations, or elsewhere, will be communicated to those engaging in the industry.

(b) Attractively written articles on the natural history of the different species of fish and shellfish, which will show the importance of protective measures, where such are necessary, will be prepared for use in the schools. In addition to the courses that will be given at the Experimental Stations to representatives of the industry, extension courses from such stations will be developed. It is also hoped that arrangements can be made for the universities directly interested, to take a hand in such courses. The culminating point of such work will be the B.Sc. (Fisheries) course instituted by Dalhousie University.

4. Inspection will be extended to all kinds of pickled, smoked, dried and canned fish, as well as to plants and vessels.

The foregoing keeps in the forefront the fact that if the industry is to advance as rapidly as it should, all fishery products must be of uniformly good quality and of high class.

A competent Headquarters officer will be placed in charge of this educational and inspection work.

5. Fishermen will be encouraged to form themselves into associations to enable them better to consider their own problems, and also to make it easier for the Department to have a ready means of contact with them as a body. Co-operative undertakings, particularly in production and purchasing, will also be encouraged. Arrangements are being made for a campaign to the above end to be carried out during the present winter.

6. An Intelligence and Publicity Division will be established in the Department. Through this division continuous information will be available with regard to the production of fish, developments in the industry, etc., in all countries having important fisheries, as well as to market conditions. Information regarding such, after being properly edited, will be made available to the public through the press. It is also proposed to issue, at regular intervals, a Fisheries Intelligence publication.

Reorganization along the above lines is being undertaken immediately.

### Membership of Trade Unions in Great Britain in 1927

The annual report of the chief Registrar of Friendly Societies for 1927 gives statistics showing the membership of trade unions in Great Britain and Northern Ireland at the end of the year. The statistics are based on returns collected by the Chief Registrar from trade unions registered under the Trade Union Act, and by the Ministry of Labour from unregistered unions. They relate to all organizations of employees,—including those of salaried and professional workers, as well as those of manual wage earners—which are known to include among their functions that of negotiating with employers with the object of regulating the conditions of employment of their members.

The total membership at the end of 1927 was approximately 4,908,000 as compared with 5,207,000 at the end of 1926, showing a decrease of 299,000 or 5.7 per cent. The number of male members was 4,116,000 a decrease of 280,000, or 6.4 per cent, as compared with the previous year, and the number of female members was 792,000 a decrease of 19,000 or 2.3 per cent.

The manufacturing industries group accounted for 41 per cent of the total member-

ship at the end of 1927, and of these the metal groups, with a total of 620,000, represented 13 per cent, and the textile groups, totalling nearly 600,000, accounted for 12 per cent of the total membership of all unions. Railway service (413,000) and water and other transport (464,000) together comprised 18 per cent; mining and quarrying, with 678,000, 14 per cent; government (341,000), teaching (205,000), commerce, distribution and finance (221,000), and entertainments and miscellaneous (78,000), 17 per cent. General labour, with a membership of 448,000, accounted for 9 per cent. The male membership represented more than 75 per cent of the total male and female membership in the manufacturing industries, more than 90 per cent in general labour, and nearly 100 per cent in mining and in transport; in the remaining groups of industries, taken together, it represented 70 per cent, of the total male and female membership. Female membership was mainly concentrated in the textile group (328,000) and the teaching group (140,000) which together accounted for nearly 60 per cent, of the total female membership in all groups.

## SILICOSIS AND OTHER COMPENSABLE DISEASES

Part of Address by Dr. J. G. Cunningham, Director, Division of Industrial Hygiene, and Chairman, Silicosis Board of Ontario

THE first portion of Dr. Cunningham's address dealt with the subject of lead poisoning, the conditions produced by exposure to lead and silica being regarded as the most important in reference to the risks of industrial disease. He then proceeded as follows:—

With reference to silica, the direct effects of silica are more important. Silicosis is the name of the condition that silica produces, and it is a condition due to the inhalation of silica particles about the size of germs which get into the lungs and are not thrown off. Normally the lung has a mechanism for either throwing off in sputum or dissolving the foreign particles of dust-like lime and many other dusts without producing any very serious effects; in fact, no serious effect. Silica, however, is not thrown off, and the dust is picked up by cells in the lung, retained there, where it blocks what are called the lymph channels, interfering with the circulation of that part of the lung and interferes consequently with its nutrition, so that eventually scar tissue is formed, throwing that part of the lung out of commission. That process can extend with continued exposure for a number of years until the individual dies with uncomplicated silicosis. His symptoms, from beginning to end, have been cough and breathlessness, increasing as time goes on, until, before he dies, it is all he can do to breathe even when sitting still. The serious thing with reference to the inhalation of silica is that, after exposure for some years, the individual is more liable to the development of tuberculosis; not only so, but when he develops tuberculosis, it runs a very rapid course with fatal termination. In fact there are some indications now that many cases of silicosis are complicated with tuberculosis and very early in the condition. When this is the case the removal from exposure to silica does not halt the disease. Ordinarily, silicosis, not complicated with tuberculosis, is not a communicable condition, and is not progressive beyond the effect of the silica that was already inhaled at the time the man quit his job. The difficult and serious part occurs when tuberculosis arises. South Africans, in connection with gold mining on the Rand, have had much the widest experience with silicosis, and an indication that tuberculosis is an early factor will be shown by this sort of experience.

*Stages of Disease.*—First of all, we divide silicosis, for a matter of convenience, into

three stages; the ante-primary stage, which, when you come to think of it, is a ridiculous term, the primary stage and the secondary stage. In the ante-primary stage there is no disability. The man has definite evidence of silicosis, however. In the primary stage there is some disability, and in the secondary stage there is total disability. The experience of South Africa is this: Under the conditions of work which now are rather good (certainly an enormous amount of effort and money have been spent to make them good), and under the conditions of a careful selection of the workers, out of 100 ante-primary cases of silicosis, which have been taken out of the mines, and removed from exposure, after four years, fifty-two are still ante-primary, twenty-four have gone on to primary, ten have gone on to secondary, and ten more have died from conditions complicated by silicosis, and three more have died from other causes. Not only that, but the progress from primary to secondary, from year to year, is about the same in number as from secondary to death, so that it is not a condition to be played with.

In addition to that, it has been noted that in 1923-4 there were five cases of uncomplicated silicosis, which had developed tuberculosis after the men had left the mines for a period of six years. Whether that tuberculosis developed as the result of a new infection, because the individual was exposed to someone else, or whether he already had it within him, we do not know. Now, that sounds rather black. But I do not wish to leave the impression that the situation is hopeless. As a matter of fact, we are apt to be accused of painting too dark a picture, but that is exactly the situation. However, it has been possible to lengthen the time which it takes silicosis to develop in South Africa from a period of something less than five years to something over eleven years, which is quite an accomplishment. While that refers to men who get silicosis, it does not mean that all miners who are engaged will develop silicosis in eleven years. Of course any man who is exposed long enough will get it eventually.

*Costly Problem.*—In South Africa, too, with 12,000 white miners employed, and about 600 new cases per year, their compensation bill for silicosis is about \$4,000,000 a year. In Ontario, the amount of silica in the rock in our mines is much less than half that in South Africa; and in some of the mining camps it is very small. So that the expenditure is not

comparable at all, though it is enough. Last year there were 63 compensable cases reported in the mines. Conditions in the mines are favourable to tuberculosis, because it is wet, and there is no sunshine. However, on the surface, there is still a good deal of danger from the inhalation of silica dust. Granite cutters in the state of Vermont, the centre of the granite cutting industry, develop silicosis with tuberculosis, although they are working in comparatively open sheds. It takes the condition about 20 to 25 years to develop, and about 85 per cent of them die with tuberculosis. So that, even on surface, it requires some attention. Granite cutters in Ontario have some silicosis. There is a certain amount of silicosis distributed widely—but totalling a comparatively small number of known cases—throughout industry in Ontario, e.g., among men exposed to natural abrasive wheels. They develop silicosis over a long period of time, although men exposed to artificial abrasive wheels do not develop it so far as we know. There are a number of other instances, such as in iron moulders and quarrymen.

*Benzol Poisoning.*—Benzol poisoning is another compensable condition which you are apt to run into more frequently. This poisoning is due to the inhalation of fumes. It is controlled in the same way by exhaust systems, and legislation exists for a periodic examination for the condition. The blood early in this condition shows certain changes which are more or less characteristic, and which make it comparatively easy to determine when a man is being affected, so that it is possible to remove him from exposure before he actually develops disability. It produces a condition which only with care can be distinguished from pernicious anaemia, but is not so serious, of course. In this respect, if you catch a man early at all and remove him from the exposure, he will recover completely, whereas, if he develops pernicious anaemia, he may not.

*Caisson Disease.*—Another condition that might interest you is the effect of compressed air. It is also compensable in Ontario. There is not a great deal of that work going on just now, but it is increasing all the time, and the condition is due to removing men from under compressed air too rapidly. When men go into compressed air, the gas pressure within the tissues of the body is increased in proportion to the increase of the pressure in the atmosphere they are working in. When they come out from under that pressure, this gas must be released. If they come out too rapidly, it is released within the tissue rather than through the lung, you get bubbles of nitrogen gas here and there in the body, and

the symptoms which are presented will be determined by where this gas happens to be—whether in the spinal cord, the brain, the knee, the elbow. It can be treated by one method only, and that is by returning the man under compressed air again and releasing him slowly. Any other treatment is entirely useless; and if it happens to be in the spinal cord that this air bubble is formed, and he is not returned to pressure, paralysis will develop which will be permanent. The condition can be controlled absolutely by taking precautions in removing the man from pressure, and providing that men are picked through physical examination so that those with gross heart and lung disease are not permitted to engage in that kind of work.

*Prevention of Industrial Diseases.*—In general, the preventive measures for these and many other conditions depend very largely on the removal of dust and fumes. I have indicated that that is frequently a very difficult thing to do, and that it has been supplemented fairly commonly in the legislation by the provision of periodic physical examination. These examinations, of course, are useless unless the man is removed from exposure before he has been disabled, and that, of course, is the idea in having them. At the same time, they are of comparatively little value, unless the physician has some idea of processes to which the men are exposed. A doctor who is appointed to make these examinations for a particular plant familiarizes himself with the processes and with the substances the individual is exposed to; but the physician who never sees the inside of the plant has very little opportunity of knowing the hazards the man is exposed to, and when we remember that a great many of the occupational conditions, particularly in the early stages, present general symptoms and no specific sign which enables you to state the condition as a particular entity, you can see what a hopeless position the doctor is in if he has no first-hand information regarding the history of exposure. Many of you are familiar with cases which have been diagnosed as lead poisoning where you felt the man had never been exposed to lead. That sounds odd; but as a matter of fact, there is some excuse or even reason. The lack of information, or the lack of the possibilities of obtaining information as to what exposure has existed, makes it extremely difficult, in many of these occupational conditions, to determine just whether an individual has been affected or not. A situation which will bring the physician into contact with the plant, so that he knows what is going on from the standpoint of exposure, gives him a different point of view, not only

from the side of the patient, which enables him to see the employee at his work, but from the standpoint of the employer as well. And it is when such a situation as that exists that it is possible for the employer and physician to get together and see what the possibilities are towards the reduction of disability, not only from industrial disease but from the general run of disease for which industry is not responsible, but which exacts a toll which is very much more costly than occupational diseases or even than accidents.

*Value of First Aid.*—In fact, accident prevention, in which you are primarily interested at the minute, touches this, I think, very closely. Probably enough attention has not been paid to what happens after the accident occurs. In my mind, there are three stages. The physician touches them all and the employer, of course, touches them all very closely. The first is the question of First Aid, on which you have heard a splendid discourse and seen a demonstration, and I am sure by now you are familiar with the fact that infection is costing you at least a million dollars a year in compensation, and I think probably at least half as much again. Then, the question of good treatment, and you know that the best treatment is always the cheapest; and then the period when the man is ready to go back to work. It touches industrial disease, but it touches accidents just as closely.

The physician who has under his care a man as a patient is responsible to that patient. His responsibility is that he be returned to work in a safe condition. Now, if he has no information as to the class of work this man is going back to, or if he would like the man to go back to his work before he is entirely fit, which is quite practical in some cases, he is not able to do it without supervision. The physician does not have supervision in the plant. The consequence is that the doctor must play safe and cannot let his patient away from supervision until he is sure that he is fit. Occupational therapy occupies a good deal of attention, and is very important, and one of the most important factors in occupational therapy is the idea that the man should be busy, that he should not be a victim of hospitalization. Very frequently it would be possible to return him to work, to do part of a day's work, or half a job for a whole day, or something of that kind, if there were arrangements whereby he could be released to some kind of work under supervision so that the doctor would not need to take the responsibility without having any opportunity of determining what the conditions of his work would be. I think that situation at present is rather haphazard. It has possibilities in it, but it is not yet in line with the very satisfactory and progressive type of organization which exists within industry generally.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Progress of Safety Work in Nova Scotia

The number of accidents involving lost time which occurred at the Sydney plant of the Dominion Iron and Steel Company from January 1 to November 15 this year was 112, this being a record for any year since the plant was founded. This reduction in the number of accidents which amounts to 75 per cent in 1928 as compared with 1923, was made possible by close co-operation between the company and its workmen. The safety work of this British Empire Steel Corporation, with special reference to its coal mining operations, was outlined in the *LABOUR GAZETTE*, December, 1927, page 1318; April, 1927, page 348.

*Industrial Safety News*, published quarterly by the Nova Scotia Accident Prevention Association, states that "during the period, January to September, 1920, there were 4,789 accidents reported from the industries of Nova Scotia; the number reported in the corresponding period of 1927 was 4,587 or an

increase in 1928 of 211. Both Coal Mining and Steel Manufacturing, the two largest groups of industry, show a decrease in accidents. As the bulk of the operations in these classes are controlled by the British Empire Steel Corporation, the decrease is no doubt due to the very active campaign against accidents being carried on in the constituent companies of that corporation.

"A comparison of the accident reports received from the Lumbering and Woodworking industries of the province during the nine months January to September, shows an increase of about ten per cent in the present year over the total reported in the same period of 1927. The totals are 1,099 in 1927, and 1,204 in 1928. Having in mind the general increase in business activity throughout the province in the current year, in which the industries referred to above are likely sharing to some degree, the increase in the number of accidents may not be significant. It can, however, be inferred that the general situation has not improved over previous years.

"Analyzing the causes of accidents it is noticed that the percentage of machinery accidents has decreased from 13.9 to 12.6. While this reduction is not great it perhaps indicates that the safeguarding of machinery is being given greater attention and is also beginning to have some effect in reducing accidents. Our statistics of a few years ago covering these industries showed between 16 per cent and 17 per cent of the accidents happening in connection with machinery. Nearly 30 per cent of the accidents reported to the end of September this year happened in the use of axes and other hand tools. Many lumber operators regard these 'axe cuts' as non-preventable, and although woods operations are carried on under conditions which make it sometimes difficult to avoid accidents, a study of the circumstances as outlined in the reports shows that far too many of these injuries are due to carelessness or thoughtlessness in the use of these tools. During the coming season it is the intention of the Accident Prevention Association to make a special drive on this particular source of accidents in the hope of reducing their number. 'Falls of Person' accounted for 15 per cent of the accidents reported in the period under review, and 'Falling Material' and 'Jammed Between Objects' for about 10 per cent each."

#### How to Succeed in Accident Prevention

An address on this subject was given at Montreal in December, under the auspices of the Province of Quebec Safety League, by Mr. W. G. Cann, power and safety engineer of the Canada Cement Company. The success of this company in eliminating industrial accidents in its various plants has been noted in recent issues of the *LABOUR GAZETTE* (July, 1928, page 724). Mr. Cann summed up the main reasons for the company's success as follows:—

"We have a clean plant, an asset to any successful drive for safety work. We have a weekly paper, a medium for spreading safety information throughout the rank and file of the organization and keeping accident prevention to the fore. We have our departmental dials recording the number of days since our last accident, and operated by the employees individually, each as his turn arrives. We sign all new employees in our First Aid Department and therefore introduce them to all rules and regulations covering the work and impress on them the necessity of attending to all cuts and bruises, even the most trivial. We have our executives and foremen sold on the idea that accidents can and must be prevented, and that their re-

sponsibility for efficiency and production does not cease at this point, but includes cleanliness, maintenance, installation of guards and accident prevention education to all employees under their direct control."

#### A Practical Safety Program

The Province of Quebec Safety League recently published a pamphlet, for the use chiefly of industrial managers, under the title "A safety program for your plant," and containing a summary of the essentials of an accident prevention organization in an industrial plant.

It outlines briefly in chronological order the eight important steps that must be taken to insure success in safety work as learned from the twelve years experience of the members of the national Safety Council of the United States, of the Canadian National Safety League of Canada, and of the Province of Quebec Safety League.

These steps are: 1, Appointment of Safety director; 2, Analysis of accident records; 3, Meeting of operating executives; 4, Plant inspection; 5, Mechanical Safeguarding; 6, General announcement; 7, Educational program; 8, Engineering division.

The pamphlet recommends that one man should direct the safety work in every plant, regardless of its size. (The larger the industry, the greater is the need for a safety director trained in the personnel and technical problems of accident prevention. In the smaller plants this man may do other duties also.) The duties devolving on the safety director are detailed at length in the pamphlet. After his appointment his first duty should be to analyse all accident records for several years past. He should then tabulate them by causes and departments, and calculate frequency and severity rates, etc. After accidents for the past year or two have been analysed, all foremen, divisional superintendents and department heads should be summoned to a general meeting presided over by the works manager or some executive of the company. Following the meeting of the foreman, a complete inspection of the plant should be made by the safety director, accompanied in each department by the foreman.

The mechanical safeguarding program should be developed immediately following the plant inspection. Handrails and guards for gears, bolts and pulleys, etc., should be installed in accordance with the specifications of the province or insurance company standards. After a good start has been made in the safeguarding program, the workmen should be acquainted with the accident prevention plan.

This can be done by personal letters to the workers, through announcements posted on bulletin boards, through department meetings, or at a general mass meeting. This is necessary to give publicity to the safety plan and to arouse enthusiasm for carrying it out.

Without co-operation of the workers, it is declared, the safety effort will fail. A comprehensive educational program is essential and it must be borne in mind that three

groups of people must be educated—the management, the foremen and the workers.

Engineering revision means the improvement of machinery, equipment and process, so as not merely to cover up hazards, but to eliminate them and at the same time to increase efficiency and production. This engineering phase of safety is often neglected, but it can well be made a major activity, and will pay unusually large returns on all the time and effort that may be invested.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Ratifications of Conventions

*Industrial and Labour Information*, the weekly publication of the International Labour Office, contains in its issue of December 3 a note on the progress of ratifications of Conventions of the International Labour Conference. The total number of ratifications registered on December 1, 1928, was 333, of which 84 were registered in the course of 1928 as against 34 in 1927 and 30 in 1926.

The Conventions which obtained the largest number of ratifications in 1928 were the following: the Convention concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents (11), that concerning workmen's compensation for occupational diseases (7), the Convention concerning the compulsory medical examination of children and young persons employed at sea (5), the Convention concerning the simplification of the inspection of emigrants on board ship (5), the Convention fixing the minimum age for the admission of young persons to employment as trimmers or stokers (4), and the Convention concerning workmen's compensation for accidents (4).

The following Conventions came into force in consequence of ratifications registered in 1928: the Convention concerning night work in bakeries, the Convention concerning seamen's articles of agreement, the Convention concerning the repatriation of seamen, the Convention concerning sickness insurance for workers in industry and commerce and domestic servants, and the Convention concerning sickness insurance for agricultural workers. The Conventions adopted by the International Labour Conference at its 1927 Session (those relating to sickness insurance) were first ratified by Germany and Luxemburg. One of them has also been ratified by Hungary.

### Great Britain and the Hours Convention

The following resolution was moved by the Earl of Lytton in the British House of Lords on November 20, 1928:—

That in the opinion of this House it is desirable:—

(1) That the Government should inform the International Labour Office, at Geneva, of the precise points on which they desire a revision of the Washington Eight Hours Convention;

(2) That the Government should publish the text of a Draft Bill showing what modifications, if any, in the existing industrial agreements in this country would be required as a result of the ratification of an International Eight Hours Convention in the amended form desired by the Government.

After referring to the history of the Convention since its adoption at Washington, Lord Lytton said that, as he understood it, the London Conference of 1926 had resulted in agreement between the Powers represented on the interpretation of the text of the Convention, but that the British Government held the view that the terms of the London Agreement were incompatible with the text and would have to be added to the Convention in the form of a protocol; the other Governments represented, however, took the view that the terms of the Convention as it stood were sufficiently clear to bear the interpretation agreed upon. The British Government thus found itself unable to ratify the Convention. A deputation had waited upon the Minister of Labour in July, 1927, and asked him to define the points upon which the Government desired a revision and to show those points in the form of a Draft Bill, so that the actual legislative effect upon industrial agreements in Great Britain could be made known. The Minister had replied that it would be inopportune and tactless to specify the particular form of revision required, since a great many other countries were parties to the Convention. Since discussing the matter this

year at Geneva, Lord Lytton said that he had got the impression that if the British Government would only specify the particular points on which it desired to revise the Convention, and make it clear, if possible, that it did not desire to re-open the whole question of an international eight-hour day, its hands would be very considerably strengthened in dealing with other countries; and that if the Government merely desired the addition of the points adopted at the London Conference, there would be very little difficulty in securing general agreement.

Replying on behalf of the Government, the Marquis of Londonderry explained that there was no obligation to ratify the Convention and that the honour of Great Britain was not therefore in question. The only point of honour he could see was that the Government, and every Government of Great Britain, must maintain and promote the application of the eight-hour day and forty-eight hour week "so far as special circumstances permit." He then recapitulated the stages through which the question of ratification had passed. The Government had doubted whether the London Agreement did not go beyond fair interpretation of the Convention and finally decided that revision would be the only really satisfactory solution, and that it was clear that neither the present Government nor the Labour Party, if in power, could ratify the Convention as it stood. Lord Londonderry concluded by repeating that the British Government had never entertained the desire or remotely intended to abandon the principle of the forty-eight hour week, to the maintenance of which it stood solemnly pledged by the Treaty of Versailles, and that the sole reason that impelled it to call for revision was that it could not set its hand to any document whose terms it was unable exactly and with the utmost punctilio to fulfill.

Lord Cecil expressed his opinion that the Government should first make a clear statement of what it wanted and then ask other countries whether by some method short of complete revision of the Convention—by a protocol, interchange of notes, or other diplomatic device—they could reach the desired agreement.

The Marquis of Salisbury, on behalf of the Government, said that the Government had arrived at the conclusion that the Convention, though admirable in principle, contained immense difficulties in the precise conditions which ought to attach to it, and that to lay down beforehand the exact words which it would like to insist would not facilitate, but would hamper negotiations.

On a division the resolution was rejected by 39 votes to 17.

### Regulation of Native Labour

The Committee of Experts on Native Labour attached to the International Labour Office held its second session in the Office from December 4 to 8. The committee took note of the draft questionnaire accompanying a report prepared by the Office in view of the discussion which is to take place at the 1929 Session of the International Labour Conference. The purpose of the questionnaire is to ascertain, by consultation of the various Governments, whether it is possible to secure the adoption of a Draft Convention limiting and regulating the use of forced or compulsory labour, pending the complete disappearance of such forms of labour, which is the real object sought. Various suggestions for the improvement of the draft were discussed and adopted.

The Committee also began the study of the problems raised by those forms of labour commonly known as "indentured labour," "contract labour," etc., to which recourse is had in certain localities and in the employment of certain races. Attention was given mainly to the conditions of recruiting of native workers. Agreement was reached on a number of principles, including the liberty of the native to take employment or not, honesty in recruiting methods, and the functions of officials of the administration, native chiefs, and recruiting agents

Referring to the Ontario Apprenticeship Act, passed by the provincial legislature at its last session (LABOUR GAZETTE, August, 1928, page 870), Mr. T. J. Thornton, business agent of the United Brotherhood of Carpenters, writes to the *Alberta Labour News*, calling attention to the need of such an Act in Alberta. He outlines the functions of the Apprenticeship Council in Ontario, and concludes: "If Alberta is to keep in the vanguard, the time is ripe for our organized central bodies to take this matter in hand."

A series of Canadian Industrial Readers is being published by J. M. Dent and Sons, Limited, for use in High Schools and public schools. The first reader covers the whole of Canada, and the second deals with the Maritime Provinces. The industries in other Provinces are to be described in future publications. The Canadian Manufacturers' Association is co-operating in the production of the series, which is intended to provide young students with information in regard to the nature and extent of manufacturing in Canada

## ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1928

THE employment situation throughout Canada was decidedly more favourable in 1928 than in any other year of the record, nearly all localities and industries sharing in the general improvement. From early in January until the first of August there was almost uninterrupted expansion on a larger scale than in other years for which data are available. The upward movement, which carried the curve of employment to a level many points higher than in any of the eight preceding years, resulted in a gain between January and August of over 170,000 persons in the staffs of the firms co-operating with the Dominion Bureau of Statistics. This number was considerably greater than in the same period of any other year of the record. In 1928, the most pronounced gains were registered at the beginning of May, June and July, as is usually the case, but the advances made at the first of August were only slightly less extensive than in July. During the next two months, small declines were shown, followed by a slight increase in activity on November 1, but the customary curtailment took place at the beginning of December. Employment, however, continued in much greater volume than on the same date in any other year since these statistics were instituted in 1920.

The accompanying chart illustrates the course of employment in Canada since the beginning of 1926; the favourable trend indicated during the greater part of 1928 is shown, as is the fact that on December 1, the curve of employment was still at a considerably higher level than in any month of 1926 or 1927.

The Dominion Bureau of Statistics tabulated payroll data from some 6,400 firms who employed a monthly average of 928,580 workers during 1928, their staffs, varying between 826,736 on January 1 and 1,003,085 at the beginning of August. The index, calculated upon the average for the calendar year 1926 as 100, reached its peak for the year in that month, standing at 119.3, which is the maximum so far recorded. In 1927, the peak was 111.0 on September 1. The index averaged 111.8 during the year under review, as compared with 104.6 in 1927, 99.6<sup>1</sup> in 1926, 93.6 in 1925, 93.4 in 1924, 95.8 in 1923, 89.0 in 1922, and 88.8 in 1921.

As in 1927 and 1928, an outstanding feature of the situation during 1928 was the marked expansion in construction, in which the number of workers covered by these statistics considerably more than doubled between February and August. Manufacturing showed consistent gains for many months, affording much more employment than in earlier years of the record. Transportation, mining, logging, services, communications and trade were all much more active than in preceding years; in practically all of these, employment attained the peak so far reached in this record.

**Employment by Economic Areas**

Firms in all provinces reported augmented employment during 1928 as compared with 1927. The index based upon the 1926 average as 100 was higher in the Prairie Provinces and Ontario than elsewhere, these two areas indicating the most pronounced improvement over the preceding year.

*Maritime Provinces.*—In the early part of 1928, employment in the Maritime Provinces showed the customary decrease, succeeded by six months of expansion. From the beginning of August until the end of the year, however, curtailment was noted, but this was gradually less than in the same months in 1927. The index number averaged 106.6 as compared with 103.7 in the preceding year; activity was greater in 1928 than in any other year of the record, the previous high level in employment having been in 1923 when the index averaged 105.7. Manufacturing, as a whole, afforded a greater volume of employment than in the preceding year. The textile industries were comparatively dull throughout 1928; lumber, pulp and paper, and iron and steel, however, showed a much more favourable situation, the activity in the last named being particularly noteworthy both in its local effect and as an indication of generally improved conditions in industry in the three preceding years. During part of 1928, and especially towards the latter end, transportation afforded rather more employment than in 1927, but the average was slightly smaller. Construction was considerably brisker throughout the year, and continuation of work on several important projects forecasts further improvement during 1929. Services, communications and trade registered a higher level of employment than in any other year of the record. The aggregate payrolls of the reporting firms in the Maritime Provinces averaged 70,772 persons, as compared with 68,593 in the preceding year.

<sup>1</sup> As the average for the calendar year 1926, including figures up to December 31, 1926, is the base used in computing these indexes, the average for the 12 months, January 1—December 1, 1926, generally shows a slight variation from 100.

## EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS.

NOTE.— The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Quebec.—Employment in Quebec showed rather less fluctuation than in 1927, the trend being more uniformly upward, while the situation each month was more favourable than in the corresponding month in any of the last seven years. From the low point of 99.2 on

April 1, the index rose to 115.7 at its peak on September 1, while at the beginning of December it was 112.6 or 13 points higher than on January 1. The labour forces of the 1,400 co-operating employers varied between 233,765 and 279,369 workers on the dates of minimum.

NOTE.—The indexes are recalculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated area to the total number of employees reported in Canada by the firms making returns on the date indicated.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	Canada
1921						
Jan. 1.....	107.6	84.2	88.8	95.0	76.7	88.8
Feb. 1.....	108.1	86.2	93.8	93.0	77.4	91.2
Mar. 1.....	101.8	84.6	91.8	90.4	77.5	89.1
Apr. 1.....	98.0	76.6	88.9	88.1	78.2	85.1
May 1.....	98.2	77.0	89.0	86.0	79.9	85.1
June 1.....	100.4	79.5	90.4	90.5	82.8	87.7
July 1.....	99.9	83.1	89.7	94.0	83.9	89.2
Aug. 1.....	102.4	83.7	90.5	96.8	82.2	88.6
Sept. 1.....	104.9	83.3	89.1	97.8	85.4	90.0
Oct. 1.....	104.5	85.0	91.5	99.3	84.8	89.8
Nov. 1.....	102.6	83.4	92.7	101.9	85.5	91.3
Dec. 1.....	100.4	79.8	91.5	94.9	83.7	91.3
Average 1921.....	102.4	82.2	90.6	94.0	81.1	88.8

<sup>1</sup>The average for the calendar year 1926, including figures up to Dec. 31, 1926, being the base used in computing these indexes, the average index here given for the 12 months Jan. 1—Dec. 1, 1926, generally shows a slight variation from 100.

recorded a materially larger volume of employment than in the preceding year, while rather greater activity was indicated, on the whole, in lumber factories. With the commencement of development work in the newly prospected mining areas of Quebec, employment in this industry has gained, very considerably, though not so extensively as may be expected

NOTE.—These indexes are recalculated upon the average for the calendar year 1926 as 100. The "relative weight" shows the proportion of employees reported in the indicated city to the total number of employees reported in Canada by the firms making returns on the date indicated.

Relative Weight of Employment by Cities as at Dec. 1, 1928.....	13.4	1.1	12.3	1.2	3.5	1.8	3.4	2.7

<sup>1</sup> The average for the calendar year 1926, including figures up to Dec. 31, 1926, being the base used in computing these indexes, the average index here shown for the 12 months, Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100.

when operations are more fully established. Communications, services, transportation and trade were all decidedly more active than in 1927; construction, during the greater part of 1928, afforded less employment than in the preceding year, the index averaging slightly lower; this was mainly due to the completion of various important industrial undertakings in which production was thus enabled to commence. Employment in logging camps was in much greater volume than in almost any other year of the record, forecasting an active season in 1929 in saw and pulp and paper mills.

*Ontario.*—Almost uninterrupted improvement was noted from the first of the year until November 1, the longest period of expansion indicated since 1920, which brought the index at the beginning of November to 121.8, the highest point in the record. An average staff of 388,995 employees was registered by the firms furnishing data in Ontario, as compared with the mean of 356,222 in 1927; the index averaged 113.8 in 1928, or 8.2 points higher than in the preceding year. Manufactures consistently reported a better situation, the index being higher in every

month than on the same date in 1927, and also averaging slightly higher than that for manufacturing in Canada as a whole. Employment in iron and steel, pulp and paper, food, electrical apparatus, rubber, building material, non-ferrous metal, lumber, textiles and other factories showed decided improvement over the preceding year. The advances in iron and steel products were particularly significant. All divisions of this industry shared in the upward movement, but the gains in automobile factories were especially noteworthy; during 1927, curtailment of production in a large motor plant pending the issue of the new model greatly affected the group as a whole, although other factories reported a high level of employment. In 1928, however, general and marked activity prevailed. Operations in logging camps showed an increase; mining, communications, transportation, construction and maintenance, services and trade employed considerably larger payrolls, the improvement in construction being especially pronounced in this province.

*Prairie Provinces.*—Important expansion was indicated in the Prairie Provinces during the summer months; the payrolls of the employers furnishing data averaged 130,062 persons during the year and the index, 117.9, while in 1927 an average payroll of 112,877 workers, and a mean index of 105.3 were recorded. The level of employment in manufacturing, logging, mining, communications, transportation, construction and maintenance, services, and trade was much higher in 1928 than in 1927, when the situation generally was better than in 1926 and 1925. Within the manufacturing group, there were important gains in the lumber, pulp and paper, iron and steel and other industries. Construction work on the railroads, in association with the development of the northern parts of these provinces, was maintained at a high level during 1928, and highway and building construction were also brisk.

*British Columbia.*—The firms reporting in British Columbia employed an average working force of 80,692 employees, while in the preceding year the mean was 75,898. The index averaged 106.4, the highest on record, was begun in 1920, as compared with 101.1 in 1927. At the end of the year, employment was some 15 points higher than at the beginning. Within the manufacturing division, iron and steel, non-ferrous metals and some other groups showed heightened activity, while lumber and pulp and paper plants reported very little change on the whole. Logging, mining, communications, transportation, construction, services and trade were much busier during the greater part of 1928 than in 1927. The

improvement in logging is important, as this and the lumbering group have been quiet in recent years.

Index numbers by economic areas since 1921 are shown in Table I.

### Employment by Cities

*Montreal.*—The staffs of the Montreal firms making returns averaged 125,545 persons, as compared with an average of 115,874 on the payrolls of the employers reporting in 1927; the mean index, at 108.2, was over five points higher than that for the preceding year. Steady increases were indicated from early in January until October, when there was a small decline, but the upward movement was then resumed until December 1, when the customary contraction was indicated. Manufacturing as a whole reported marked gains, especially in printing and publishing, tobacco, distilled and malt liquors and iron and steel plants; on the other hand, edible plant and textile factories registered a slightly lower average of employment. Communications, transportation, construction and trade generally showed a much better situation than in 1927 or any other year of the record.

*Quebec.*—Considerable fluctuations were indicated in Quebec, but the index averaged higher than in earlier years of the record. From the low point of 106.3 on March 1, it rose to its maximum of 132.7 on September 1. At the beginning of December conditions were better than in the same month of any other year for which statistics are available. The staffs of the employers furnishing data averaged 11,028 and the index 119.9 in 1928, compared with means of 10,202 and 111.3 in 1927. Manufacturing and transportation were active; within the first-named, general improvement was noted. In construction, however, employment was in smaller volume, owing to the completion of several large contracts for industrial buildings, in which production was thus enabled to begin.

*Toronto.*—Employment at the beginning of 1928 showed the usual pronounced curtailment, the losses being rather more extensive than in the same period of the preceding year. From February on, however, the trend was uninterruptedly upward, the index, which rose from 105.1 on January 1 to 120.5 on December 1, averaging 112.1 as against 105.7 in 1927. The number of employees of the co-operating firms during 1928 averaged 11,992, while in the year before the mean was 102,916. Within the manufacturing group, food, iron and steel, printing and publishing and other plants recorded marked gains, and in textiles

NOTE:—These indexes are recalculated upon the averages for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.

there was practically no general change. Transportation, construction and trade were decidedly more active, while communications afforded rather less employment.

Ottawa.—Manufacturing on the whole recorded a better situation than in the preceding

year, lumber, pulp and paper and other plants affording heightened employment, while gains were also shown in construction and trade, those in the former being especially noteworthy. A mean payroll of 11,995 workers was reported by the employers furnishing data, and

NOTE.—These indexes are recalculated upon the averages for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns in the date indicated.)

most of 1927. Other branches of manufactures also registered expansion, and construction was also busier.

*Winnipeg.*—The situation in Winnipeg was more favourable during every month of 1928 than in the corresponding month of the preceding year. The mean index of employment for the year was 110.1, compared with 104.1

in 1927. Manufacturing, generally, was much brisker in practically all branches, as were transportation and trade, while construction also reported a slightly higher level of employment. An average staff of 30,882 was recorded by the firms whose data were received, an increase of more than 2,500 over the 1927 mean.

NOTE.—These indexes are recalculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.

Vancouver.—Conditions in Vancouver, on the whole, were better, the index averaging 104.3 as compared with 100.7 in the preceding year, while the pay lists covered averaged 26,682 persons as against 25,298 in 1927, an upward movement was shown in manufactures, as a whole, during 1928, as compared with the preceding year; improvement was re-

ported in animal food, iron and steel, pulp and paper, textile and electric current factories, but this was partly offset by losses in the lumber industries. Communications, transportation, construction, services and trade were decidedly more active.

Index numbers by cities are given in Table II.

NOTE.—These indexes are recalculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.

### Manufacturing

A steady advance in manufacturing was an important factor in the general improvement registered in 1928, when activity in this division was greater than in any other year since 1920; on December 1, the index, at 113.4, was, in fact, higher than in any month of the

years 1921-1927. Statistics were received from some 3,950 manufacturers employing, on the average, 508,462 operatives, as compared with 472,286 in 1927, while the mean index, standing at 110.1, compared satisfactorily with an average of 103.4 in the preceding year. The payrolls rose from 123 employees in each es-

NOTE.—These indexes are recalculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.

<sup>1</sup> The average for the calendar year 1926, including figures up to Dec. 1, 1926, being the base used in computing these indexes the average index here given for the 12 months Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100.

establishment during 1927 to 129 in 1928. Practically all branches of manufacturing shared in the generally favourable movement. Especially noteworthy were the gains in the iron and steel, pulp and paper, rubber, lumber and

textile groups, which together employ a large proportion of the workers engaged in manufacturing processes. Although the usual heavy losses incidental to the holiday and inventory season will have reduced employment

NOTE.—These indexes are recalculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.

to a considerable extent on January 1, 1929, it may be expected that the upward trend will soon be resumed.

*Animal Products, Edible.*—Employment in this division during 1927 was better than in any previous year of the record, and further improvement was noted in 1928. Fish and meat preserving plants and dairies registered

marked activity. The payrolls of the reporting employers averaged 17,366 persons, varying between 14,782 on March 1 and 19,453 at the beginning of September. The mean index was 111.2, compared with 106.9 in 1927.

*Leather and Products.*—Boot and shoe and other leather-using factories, on the whole, afforded rather less employment than in the

Note—These indexes are recalculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.

preceding year; an average working force of 17,390 employees was recorded by the co-operating establishments, and the mean index was 100.7 as compared with 103.1 in 1927.

*Lumber Products.*—The seasonal movements always indicated in lumber work caused the usual fluctuations during 1928, but employ-

ment was generally brisker than in 1927. Steady gains between February 1 and August 1 were succeeded by consistent losses during the latter part of the year. The pay-rolls of the firms furnishing data ranged between 38,413 persons at the beginning of January, and 60,522 on August 1, averaging 51,185

NOTE.—These indexes are recalculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.

in the 12 months, as compared with the 1927 mean of 48,910. The average index, standing at 102.8, was several points above the mean for the preceding year; it was also higher than in earlier years of the record. Rough and dressed lumber mills recorded a larger volume of employment than in 1927, and im-

provement in that comparison was also noted in furniture and other lumber factories.

*Musical Instruments.*—Activity in musical instrument factories was rather more pronounced than in 1927, according to statements from some 40 firms whose staffs averaged 3,141. The mean index stood at 101.4, com-

NOTE.—These indexes are recalculated upon the average for the calendar year 1925 as 100. The relative weight shows the proportion of employees in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES, 1924-1928—*Concluded*

pared with 100.5 in the preceding year. Considerable improvement was indicated during the last quarter of 1928. The production of radio apparatus is not included in this industrial group, which has undoubtedly been affected by the marked activity recently prevailing in that line.

*Plant Products, Edible.*—Employment in vegetable food factories, on the whole, was better in 1928 than in the preceding year. The biscuit and confectionery industries reported greater activity, while canneries afforded more employment than in 1927, and flour and cereal mills were also busier. On

the other hand, sugar and syrup refineries indicated curtailment. An average working force of 28,158 persons was registered by the reporting establishments, in which the number of operatives ranged between 23,792 on January 1 and 33,262 at the beginning of October. The mean, general index of 103.2 in 1928 compares favourably with the 1927 average of 101.7.

*Pulp and Paper.*—Continued development of the pulp and paper industry caused considerable increases in employment, which was at a higher level in 1928 than in any other of the nine years for which records are available. The reported staffs averaged 62,052 employees and the index 108.8, as compared with 58,581 and 105.2, respectively, in 1927. Despite the general talk of over-production of pulp and paper, much of the improvement registered last year was in such mills; printing and publishing and other industries coming under this heading, however, were also busier.

*Ruber Products.*—There was almost continuous expansion in rubber factories during the year under review, when reported fluctuations were rather less marked than in 1927. Employment continued in greater volume than in any other year of the record. The mean index in 1928 was 128.7, compared with 112.8 in the preceding year. Footwear, tire and other rubber factories were active in Quebec and Ontario. The payrolls of the plants supplying information averaged 16,206, ranging between 14,522 workers on January 1 and 18,453 at the beginning of November, in 1927, the reported staffs averaged 14,075.

*Textile Products.*—Employment in the textile industries showed rather different fluctuations than in 1927, but improvement was indicated during eight months of the year, while in the preceding year there were gains in only seven months; the index averaged 105.1 as compared with 104.1 in 1927. An average staff of 76,371 employees was reported by the co-operating manufacturers, while in the preceding year the mean was 74,740. The hosiery and knit goods, garment and personal furnishings and other textile groups were decidedly busier during the year, while employment in thread, yard and cloth factories was, on the whole, in smaller volume.

*Tobacco, Distilled and Malt Liquors.*—Statements were compiled from over 130 firms, whose working forces averaged 14,417 persons; varying between 12,859 on January 1 and 15,387 at the beginning of December. The mean index of 109.3 in 1928 was nearly three points higher than in 1927. Tobacco factories and breweries were active during the year under review.

*Chemical and Allied Products.*—A higher level of employment than in previous years of the record was indicated in this group during 1928, when the index averaged 110.5 as compared with 103.2 in 1927. An average payroll of 7,183 workers was registered by the employers whose statistics were tabulated, as against the 1927 mean of 6,656.

*Clay, Glass and Stone Products.*—Improvement was reported during eight months in 1928, when employment was in greater volume than in any other year of the record. The index number averaged 111.4, while in 1927 it was 102.7. The marked activity in building during 1928 is reflected in the personnel of building material factories, 125 of which reported an average working force of 11,103 persons. At the maximum, the number employed was 12,459.

*Electric Current.*—The number employed in electric current works was greater than in any other of the last nine years; the index averaged 118.3 as compared with 106.8 during 1927, the previous high level of the record. The aggregate staffs of the co-operating producers averaged 14,076 during 1928, while the average number on the payrolls of the individual firms making returns was 158, compared with 143 in the preceding year.

*Electrical Apparatus.*—Employment in this division, which includes the manufacture of radios and equipment, was in greater volume during 1928 than in any other year of the record. The reported payrolls included, on the average, 11,912 workers and the mean index was 117.9 as compared with 10,631 and 107.6 respectively, in 1927.

*Iron and Steel Products.*—Improvement in the general situation was noted during 1928, the average index, 113.6, being about 12 points above the 1927 mean, which in turn was higher than in other years of the record including 1923 the previous maximum. Gains were shown in all branches of the group, those in vehicle factories being particularly noteworthy. The resumption of large scale operations in an important automobile plant whose production was seriously curtailed in 1927, owing to a change in model, contributed considerably to this improvement, but other factories of the same kind, as well as locomotive and other vehicle works were also active in 1928. The aggregate working forces of some 665 manufacturers of iron and steel products who reported during 1928 averaged 143,013 persons, while in 1927 the mean was 126,920 and in 1926 it was 123,748; the average payroll in the year under review was included 215 workers, or 17 more than in the preceding year.

*Non-Ferrous Metal Products.*—Employment in this division increased during practically the whole of the year under review, when activity was greater than in any other since 1920. The index averaged 119·7 and the reported employees, 17,705, compared with 110·1 and 16,151 respectively, in 1927.

*Mineral Products.*—Employment in non-metallic mineral products plants was much brisker, the index standing at 120·5, as compared with 102·8 in 1927. Statements were received from over 75 firms with an average staff of 11,439 persons. The gas, petroleum and other divisions of this classification maintained a good volume of employment.

*Other Manufacturing Industries.*—Fur factories showed a slightly less favourable situation than in the preceding year, while the production of wood distillates and extracts and of miscellaneous manufactured products increased.

### Logging

Logging camps on the whole reported greater activity than in 1927; in fact the index averaged higher than in any other year for which data are available. The working force of the firms supplying information averaged 27,518 men and the index number 114·5 in 1928; in 1927, the mean index was 109·3 and the average payroll 25,538. The practice, constantly gaining in popularity, of the larger operators doing their cutting through small contractors and local settlers in the northern reaches makes it increasingly difficult to collect current statistics on employment. As usual, the greatest variation in logging was in Ontario and Quebec, while in British Columbia a rather more constant volume of employment was afforded.

### Mining

There were losses in employment in mining during the first part of 1928, followed by a series of advances lasting until the beginning of December, when slight declines were indicated. These gains during this period of expansion resulted in a better situation than in any other year of the record. The index averaged 114·4 compared with 107·0 in 1927. In *coal mining* conditions were slightly better than in 1927, employment being more active, especially towards the close of the year. The mean index was 106·4, as compared with 105·5 in 1927, while the labour force of the co-operating operators averaged 27,054 workers. In *metallic ores*, the level of employment was decidedly higher, the index at 116·6, averaging some five points more than in 1927. The staffs of the reporting firms averaged 14,312 during

the year under review. When the operations planned in the newly prospected areas are established, employment in metallic ore mines may be expected to show important advances. *Non-metallic minerals* (other than coal) registered greatly increased employment, an upward movement being recorded during most of the year. The index averaged 123·8 as against 106·3 in the preceding year; a mean payroll of 7,876 persons was employed by the co-operating firms. Quarries, asbestos mines and other divisions coming under this heading reported considerable activity.

### Communications

Telegraphs and telephones showed further substantial advances during 1928; the index averaged 108·2 or over four points higher than in 1927, the previous high level of this record. The personnel of the companies furnishing data averaged 26,187 employees, of whom some 78 per cent were engaged in telephones. The improvement during 1928 was general throughout the Dominion.

### Transportation

Heavy seasonal losses were shown in the first three months of 1928, after which the tendency was uninterruptedly favourable until the close of the year, resulting in the maximum employment so far reached in this record. The index averaged 105·9, as compared with 102·5 in 1927. The transportation companies whose returns were tabulated employed, on the average, 118,759 workers, or between 13 and 14 per cent of the total number covered by these statistics throughout the Dominion. In the *steam railway division*, improvement was indicated over all other years for which data are available. The index averaged 106·3 in 1928, or nearly four points higher than in 1927; at its peak on November 1 it stood at 112·6, which was the highest point reached. An average working force of 83,337 employees was recorded in steam railway operation. *Street railways and cartage*, reporting an average pay-roll of 21,912 persons, were generally more active, the index averaging 111·7, compared with 103·2 in 1927. Employment in *shipping and stevedoring* was not so brisk as in 1927; the mean index was 96·4, while the reported staffs averaged 13,510, varying between 10,035 persons on January 1 and 15,814 at the beginning of December. In the preceding year, the average index was 101·5.

### Construction and Maintenance

Very pronounced expansion was indicated by the construction industries in 1928; during

the period of most marked activity, from March 1 to August 1, over 90,000 workers were added to the forces of the co-operating contractors, whose payrolls averaged 106,901 during the 12 months, varying between 63,451 on March 1, and 154,199 at the beginning of August. The general index for this group averaged 118.8 compared with 109.0 in 1927, the previous high level of this record. *Building construction* gained steadily from March 1 to September 1, but was comparatively brisk in every month. A mean index of 112.0 in 1928, compared favourably with that of 108.7 in the preceding year. The average number of persons employed by the reporting contractors was 40,067. As already mentioned in the case of logging, there is a growing tendency on the part of the larger contractors to sub-let their contracts by trades to sub-contractors, who usually employ a comparatively small number of workers. When they have less than 15 employees, they are not asked to furnish data on employment, so that the number employed in building is probably considerably in excess of that covered in these statistics. *Road construction* reported many additions to staffs during the summer, when the number employed was higher than in any other of the last nine years. The payrolls registered averaged 20,686 workers, and ranged between 6,041 on April 1 and 38,546 at the beginning of August. In many districts, this work is supplementary to the occupations ordinarily followed by nearby residents, particularly agriculturists during slack periods on their farms. Employment in *railway construction* (in which the working forces covered averaged 46,148 men) attained a greater volume than in any other year of the record. The index averaged 116.7, while in 1927 the mean was 101.6. As usual, a large share of this work was performed in the Prairie Provinces, which in 1928 reported 41 per cent of the total number engaged in railway construction, compared with 35 per cent in 1927.

### Services

Statements were received monthly from some 180 firms in this division, whose employees averaged 17,718. Steady gains were noted from January to September, succeeded by seasonal declines until the end of the year. Employment in hotels and restaurants was very active during 1928, partly as a result of the extensive tourist trade, while improvement was also shown in other divisions. The index number averaged 118.1, as against 106.2 in 1927; this was considerably better than in any other year of the record.

### Trade

Employment in trade was decidedly more favourable than in previous years of the record, the index number being higher in each month of 1928 than in the corresponding month of any other of the last nine years. Both *retail* and *wholesale trading establishments* shared in the gains, which were fairly well distributed over the country. There was almost uninterrupted expansion from March until the end of the year. The payrolls of the co-operating firms averaged 73,811 persons and the index 116.1, compared with 63,971 and 107.4 respectively, in 1927. In recent years a growing tendency has been in evidence in this group for the larger stores and the chain organizations to absorb smaller businesses which would not otherwise have been represented in these statistics, but it is also true that a general and wealthy growth has characterized trade; this is specially significant as an indication of general improvement in the industrial life of Canada.

### TABLES SHOWING EMPLOYMENT BY INDUSTRIES

Table III gives the index numbers of employment by main industrial divisions since 1921, while the trends of employment during the years 1924-28 in some 60 industries are shown in Table IV. The columns headed "relative weight" indicate the proportion that the number of employees in the indicated industry is of the total number of employees reported in Canada by the firms making returns on June 1 and December 1 of the indicated years.

The National Maritime Board (Great Britain), a joint body representing employers and workers, has been requested by the British Board of Trade to prepare an analysis of the present conditions in the British Mercantile marine, and accordingly has asked the affiliated seamen's organizations to communicate their views on the subject. This action was taken by the Board of Trade in response to a request from the International Labour Office at Geneva to the various governments, that they would promote investigations for the purpose of obtaining precise information as to the hours actually worked by seamen, with a view to the discussion on this subject at the special maritime session of the International Conference to be held in 1929.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING NOVEMBER

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in November was 6,600, their employees numbering 981,723 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting

for November was 1,672, having an aggregate membership of 186,528 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment;

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions;

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 63 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### Employment Situation at the Beginning of December, 1928, as Reported by the Employers

#### NOTICE OF CHANGE OF BASE

*This is the last month in which the index numbers of employment will refer to January, 1920 as 100; from January 1, 1929, the indexes will appear upon a revised base—the average employment of the reporting firms in the calendar year 1926 as 100. The Annual Review of Employment for 1928, appearing on another page, contains indexes for the years 1921-1928, recalculated upon this new base.*

The seasonal contraction in employment recorded at the beginning of December was on a smaller scale than on the same date in most of the last nine years, and the situation continued better than on December 1 in any previous year of the record. Statements were tabulated by the Dominion Bureau of Statistics from 6,600 firms employing 981,723 persons, compared with 1,000,239 in the preceding month; the index stood at 116.7, compared with 119.1 on November 1, and with 106.8, 101.1, 95.3, 90.8, 95.7, 95.1 and 87.2 on December 1, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The most noteworthy losses were again indicated in construction and lumber mills, while very pronounced improvement was reported in logging and trade. Mining, transportation and iron and steel plants were also busier.

#### Employment by Economic Areas

All provinces registered curtailment, the largest recessions taking place in Ontario and the Prairie Provinces.

*Maritime Provinces.*—Further, but much smaller seasonal reductions were noted in the Maritime Provinces, chiefly in construction, but also in lumber mills, while logging, mining, trade, services and iron and steel afforded greater employment. The payrolls of the 542 co-operating employers totalled 72,000, as against 72,977 on November 1. Similar losses were reported on the same date of last year, when the index was much lower.

*Quebec.*—There was a falling-off in activity in Quebec, according to statements from 1,473 employers of 271,888 persons, or 5,304 less than in the preceding month. Manufacturing and construction showed declines, those in the latter being considerable; on the other hand, logging was decidedly busier and important improvement was also shown in trade and transportation. Slight decreases were recorded on December 1, 1927, when employment was in smaller volume.

*Ontario.*—Employment in Ontario showed its first general contraction since the early spring; 4,692 workers were released from the staffs of the 2,998 firms whose statistics were received, and who had 414,512 on their payrolls. Trade and logging registered marked

seasonal gains, and considerable improvement was also shown in the pulp and paper and textile groups. Construction and lumber mills, however, reported large losses, and smaller reductions were shown in mining, transportation and services. The index was some 11 points higher than in the same month of last year, when curtailment was also reported.

*Prairie Provinces.*—Declines were indicated in the Prairie Provinces on the date under review, when 4,342 persons were let out by the 884 reporting employers, who had 141,210 on their staffs. Logging, coal mining and trade were much more active, while construction registered pronounced reductions and transportation was also slacker. Conditions were decidedly more favourable than at the beginning of December in earlier years of the record.

Table I gives index numbers by economic areas.

### Employment by Cities

Montreal, Quebec, Ottawa, Windsor and the adjoining Border Cities and Vancouver reported lessened activity; employment advanced in Toronto and Hamilton, while Winnipeg showed practically no change.

*Montreal.*—There was a reduction in the employment afforded by the 772 co-operating firms, whose staffs declined by 2,206 persons to 131,672 at the beginning of December. Manufacturing, transportation and construction reported a falling-off, while retail establishments showed increased employment. Less extensive losses were noted on the same date of last year, but the situation continued much better than in the early winter of 1927, or

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

*British Columbia.*—Continued losses involving a rather larger number of workers than those noted on December 1, 1927, were shown in British Columbia, where 703 firms had 82,113 employees, as compared with 85,314 in their last report. Food factories and lumber mills were slacker, as were construction and transportation on the other hand, trade and logging recorded heightened activity. The situation continued better than on the same date in any of the last nine years.

of any other year since the record for this city was commenced in 1922.

*Quebec.*—Employment in Quebec City showed a decrease, 520 workers being laid off by the 105 employers whose returns were received and who had 11,049 employees on December 1. The largest contractions were in construction and manufacturing. Rather smaller declines were indicated on the same date in 1927, when the index was higher.

Toronto.—Important additions to personnel were made in Toronto by 849 firms who employed 121,071 persons, as compared with 120,236 at the beginning of November. Manufactures and trade showed improvement,

that in the latter being especially noteworthy, while construction, services and transportation were slacker. Gains were also registered on December 1 of last year, but the volume of employment was then much smaller.

Note: Number employed by the reporting firms in Jan. 1920=100 in every case. The "Relative Weight" in Tables 1, 2, 3 and 4 shows the proportion of employees in the indicated area or industry to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
1921

*Ottawa.*—Further curtailment was shown in Ottawa, chiefly in construction, transportation and manufacturing; 144 employers recorded a combined payroll of 12,016 workers, as against 12,862 in their last report. Employment was more active than at the beginning of December, 1927, when losses were also indicated.

*Hamilton.*—Continued important increases were reported in Hamilton, where an aggre-

gate staff of 34,817 persons was employed by the 204 firms furnishing data, a gain of 771 as compared with their November 1 labour forces. Manufactures were decidedly busier, while only small changes occurred in other industries. The index was many points higher than on the same date of a year ago, when slight improvement was noted.

*Windsor and the Adjacent Border Cities.*—There was another large decline in the Border

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100).

\*The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

Cities, mainly in manufacturing. Statements were tabulated from 131 employers with 17,549 workers, or 1,642 less than in the preceding month. Moderate gains were indicated on December 1, 1927, but employment then was at a decidedly lower level.

*Winnipeg.*—Little general change was shown in Winnipeg, according to data received from 305 firms employing 33,515 persons. Improvement was reported in trade, while manufacturing and construction work released employees. The index was many points higher than on the same date of last year, when an increase in activity had been noted.

*Vancouver.*—There was a further but rather smaller contraction in Vancouver, according to 257 employers of 26,385 workers, or 747 less than in November. Manufacturing, transportation and construction showed curtailment, but trade afforded more employment. A less extensive reduction had been recorded at the beginning of December, 1927, when the index was somewhat lower.

Index numbers by cities are given in Table II.

### Manufacturing

A substantial reduction in employment occurred in manufacturing establishments, 3,954 of which employed 526,571 operatives; compared with 534,129 on November 1. This decline was slightly smaller than the average loss at the beginning of December in the nine years' record, in all of which the index was much lower than on the date under review. Lumber and food factories were seasonally slacker, and smaller losses were noted in leather and electric current plants, while the metal industries, particularly iron and steel works, textile and tobacco factories afforded considerably more employment.

*Animal Products—Edible.*—Meat preserving establishments reported slight improvement, but there was a further seasonal decline in fish-canneries, (mainly in British Columbia), and also in dairies. The result was a reduction of 633 in the staffs of the 187 firms making returns, who had 17,349 employees. This decrease involved about the same number of persons as that recorded on the same date in 1926, when employment was at a similar level.

*Leather and Products.*—Continuing the unfavourable movement indicated during the last few months, employment in this industry showed a loss at the beginning of December, chiefly in boot and shoe factories. Statements were tabulated from 188 manufactur-

ers employing 16,555 persons, as compared with 17,079 on November 1. Expansion had been noted on December 1, 1927, when the situation was better than on the date under review.

*Lumber and Products.*—Seasonal curtailment of operations on a larger scale than in the preceding month and also than at the beginning of December, 1927, was noted in sawmills. Furniture and match factories, however, reported additions to payrolls. All except the Prairie Provinces shared in the downward movement. Data were received from 718 firms in this industry, whose staffs declined from 54,360 workers on November 1, to 47,717 on December 1. The index was higher than on the same date of a year ago.

*Plant Products, Edible.*—Varying conditions in the different divisions of the vegetable food group produced a reduction of 1,051 employees in the 312 plants from which returns were received, and which reported a combined working force of 30,607 operatives. Fruit and vegetable canneries released help, owing to the completion of the season's work, and biscuit and confectionery factories were also slacker, while the sugar and syrup division recorded improvement. In Quebec and the Prairie Provinces activity increased, but elsewhere curtailment was indicated. The volume of employment on December 1, 1927, was smaller, although the losses then noted were rather less extensive.

*Pulp and Paper.*—Statements were received from 473 manufacturers in the pulp and paper industry, whose payrolls were reduced by 80 persons to 63,744 at the beginning of December. Employment continued much brisker than on the same date in any other year of the record. Improvement took place in printing and publishing and miscellaneous paper goods establishments, while pulp and paper works released some employees. Additions to staffs were shown in all provinces except Quebec.

*Textile Products.*—There was an advance in employment in these industries, shared in by all divisions except the garment group which was seasonally dull. Returns were compiled from 520 manufacturers employing 79,938 workers, or 540 more than in the preceding month. General improvement was shown, that in Ontario being most noteworthy. There was a smaller gain at the beginning of December, 1927, when the index was several points lower.

*Tobacco, Distilled and Malt Liquors.*—Employment in tobacco factories was considerably more active, while other divisions

of this group showed only slight changes. An aggregate payroll of 15,387 persons was indicated by the 134 co-operating firms, compared with 14,735 at the beginning of November. Most of the increase took place in Quebec. Little general change had been shown on the same date last year, when the index was lower.

*Electric Current.*—There was a reduction in employment in electric current plants, 91 of which reported 14,960 employees, or 441 less than in the preceding month. The recessions were distributed over the different provinces. A smaller number of workers was released at the beginning of December, 1927, but the index number was then considerably lower.

*Electrical Appliances.*—Losses in payrolls were noted in electrical apparatus plants, mainly in Quebec; 47 manufacturers employed 13,021 persons, as compared with 13,190 in their last report. Employment on December 1 was at its maximum for that date in this record.

*Iron and Steel Products.*—Considerable improvement was indicated in iron and steel factories, chiefly in the agricultural implement, iron and steel fabrication and ship-building divisions, while automobile and some other plants released employees. The result was an increase of 734 in the staffs of the 673 co-operating manufacturers, who employed 148,507 workers. Employment advanced in all provinces except Ontario and the Prairie Provinces. The situation continued much more favourable than on the same date in the preceding year.

*Non-Ferrous Metal Products.*—There was a further increase in employment in this division at the beginning of December, according to data received from 112 employers of 18,884 persons, as compared with 18,602 in the preceding month. An upward movement was noted in all provinces except British Columbia. The index was much higher than on December 1, 1927, when gains were also made.

### Logging

Continued advances were shown in logging there being an improvement in all provinces, with the largest gains in Quebec and Ontario. Statements were tabulated from 265 logging camps having 44,073 employees, or 9,373 more than in their last report. This expansion brought the index number to the highest point so far reached in this record.

### Mining

*Coal.*—Employment in coal mines increased considerably at the beginning of December, 720 persons being added to the payrolls of the 91 reporting operators, who had 28,912 employees. The Prairie Provinces reported most of the improvement. The seasonal gains on the corresponding date in 1927 were larger, but the index number then stood at 90.4, as compared with 91.8 on December 1, 1928.

*Metallic Ores.*—For the first time since the beginning of January, there was a decline in employment in metallic ore mines; 505 workers were released from the forces of the 72 employers from whom information was received and who had 14,981 persons on their pay lists. Curtailment had also been indicated in December, 1927, but the number then engaged in this industry was considerably smaller.

*Non-Metallic Minerals, other than Coal.*—Continued declines in employment were noted in this industry, in which 61 firms furnished data, showing that they had reduced their staffs by 298 persons to 8,617 on the date under review. Quebec, Ontario and the Prairie Provinces shared in this seasonal slackness. Conditions were much better than in the same month of 1927, when the movement was also downward.

### Communications

Increased activity was noted on telephones, while employment in the telegraphic division was slightly lower; 191 persons were added to the payrolls of the 186 co-operating companies and branches, which had 27,730 employees on the date under review; the index was decidedly higher than in the early winter of any other year of the record.

### Transportation

*Street Railways and Cartage.*—Employment in this division was seasonally quiet in all provinces. Data were compiled from 124 firms whose staffs declined from 23,698 on November 1, to 22,977 at the beginning of December. Although this loss was more pronounced than that recorded on the same date in 1927, the index continued higher than in the early winter of that, or any other year since the record was instituted.

*Steam Railways.*—The trend of employment in railway operation was downward, 103 employers reporting 87,728 workers as compared with 88,984 in the preceding month. The largest decrease was in Ontario. The

index number was higher than on December 1 in any other year of the record; in most of the years since 1920 employment has shown a contraction at the beginning of December.

### Construction and Maintenance

*Building.*—Employment in building construction showed a seasonal falling-off from the preceding month, although it was still at a higher level than in the early winter of previous years of the record, which was commenced in 1920. Statements were compiled from 589 contractors employing 46,601 persons, as compared with 50,615 on November 1. The most extensive curtailment was in Quebec and Ontario, although there were general recessions except in the Maritime Provinces.

*Highway.*—Further important decreases were noted in the staffs of the 184 highway contractors furnishing statistics, who employed 17,106 workers on December 1, as compared with 25,190 in the preceding month. The number released was less than on December 1, 1927. Important declines were registered in all provinces.

*Railway.*—Activity on railway construction and maintenance showed another seasonal decline, which exceeded that noted on the same date in 1927. The index number then was very much lower than on December 1, 1928. Statistics were received from 49 contractors and divisional superintendents whose staffs diminished from 50,233 men on November 1,

to 40,349 on the date under review. The most pronounced contractions were in Ontario and the Prairie Provinces, although there was general losses throughout the country.

### Services

Further seasonal reductions were reported by the 181 co-operating firms in this division, who had 17,527 employees, or 325 less than in the preceding month. Hotels and restaurants continued to decrease their labour forces, and laundries were also slacker. Employment was more active than on December 1 in any earlier year of the record.

### Trade

Large seasonal increases were again noted in retail trade, but wholesale houses released some employees. Returns were received from 661 trading establishments with 82,737 employees, or 3,490 more than on November 1. The index standing at 129.6, was at its maximum for the last nine years; this index is particularly significant as an indication of the anticipated purchasing power of the people during the holiday season.

Index numbers of employment by economic areas leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

## Unemployment in Trade Unions at the Close of November, 1928

Unemployment as used in the following report refers to involuntary idleness due to economic causes. Persons who are occupied in work other than their own trades, or who are idle on account of illness are not considered as unemployed. Unions which are involved in industrial disputes are excluded from the tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

There was a further though moderate increase in the volume of unemployment reported by local trade unions at the close of November from that of the previous month as manifested by the returns tabulated from a total of 1,672 labour organizations, with a combined membership of 186,528 persons. Of

these 7,742, or a percentage of 4.2, were without work on the last day of the month, contrasted with 3.1 per cent of inactivity in October. The level of employment was, however, higher than in November, 1927, when the percentage of idleness stood at 5.2.

In all provinces with the exception of Nova Scotia and Saskatchewan the tendency was toward lessened employment during November, recessions of a seasonal character, especially in the building and construction trades, being a large factor in the adverse changes reported. From Nova Scotia the same percentage of unemployed members was registered as in October, while from Saskatchewan unions the improvement noted was nominal. When a comparison is made with the returns for November of 1927, Manitoba unions reported minor reductions in activity during the month under review, while in the

remaining provinces moderate advances in employment were indicated.

Each month a separate tabulation is made of unemployment affecting trade union members in the largest city in each province, with the exception of Prince Edward Island. During November, Edmonton unions reported the most outstanding contractions in employment when compared with October, the declines in Winnipeg, Montreal and Toronto also being noteworthy. From Halifax, Saint John and Vancouver, however, the increase in idleness recorded was slight. Regina unions indicated substantial recovery from the unemployment reported in October. Compared with the November situation of 1927, Edmonton unions showed a considerable falling off in available

centages of 4.5 in October and 7.2 in November, 1927. Reductions in activity over October which involved the largest number of workers were reported in the metal trades, particularly among railway carmen. Among leather and wood workers, and hat and cap makers also, the increase in unemployment was considerable. Bakers and confectioners, textile and glass workers, and metal polishers also contributed on a smaller scale to the unemployment total. Among garment workers there was practically no change in the situation, the percentage of idle members in both months of the comparison being fractional only. Paper makers, printing tradesmen and cigar makers were, however, more actively engaged than in October. That the percent-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

employment during the month under review, and reductions on a smaller scale were reported from Saint John, Toronto, Winnipeg, Regina and Vancouver. Montreal and Halifax unions, on the contrary, were afforded a greater volume of work.

The chart which accompanies this article shows the unemployment trend by months from January, 1922, to date. The curve during November continued in the upward course followed during the preceding month, indicating a reduction in the employment volume. The level attained at the close of November was, however, somewhat below that of the same month in 1927, showing that the situation for organized workers during November was more favourable than in the corresponding month a year ago.

In the manufacturing industries, where reports for November were tabulated from 459 unions with 53,181 members, the percentage of idleness stood at 5.6 contrasted with per-

centage of unemployment in the manufacturing industries at the end of November was smaller than in the same month of 1927 may be attributed, in large part, to a lessening in the unemployment volume for garment and iron and steel workers, from which tradesmen, however, considerable short time was reported. Papermakers, printing tradesmen and metal polishers also registered a higher level of employment than in November. On the other hand, less favourable conditions were reflected during the month under review for hat and cap makers, bakers and confectioners, and glass, textile, leather and wood workers.

From the coal mining areas 46 reports were received during November, combining a membership of 18,450 persons, .4 per cent of whom were unemployed at the end of the month compared with .9 per cent in October, and with 2.1 per cent of inactivity in November, 1927. Alberta unions were almost wholly responsible for the better situation obtaining

during November than in October. From British Columbia unions the improvement registered was nominal only, while Nova Scotia showed practically no change in the percentage of unemployed members. When a comparison is made with the returns for November, 1927, Alberta, as in the previous comparison, reported the most pronounced increase in activity during the month under review, supplemented by lesser gains for Nova Scotia members. In British Columbia the percentage of unemployment was small compared with no idleness in November, 1927. Quarry workers in Nova Scotia reported the same percentage of unemployment as in October, but showed substantial improvement over November, 1927, conditions.

Depression in the building and construction trades continued throughout November, and to a more marked degree than in the preceding month, as shown by the reports tabulated at the close of November from a total of 210 unions, the combined membership of which aggregated 25,437 persons. Of these 9.3 per cent were reported idle, compared with 5.1 per cent at the end of October, and with 13.3 per cent in November last year. Carpenters and joiners registered declines in activity at the close of November, affecting the greatest number of members, which were augmented by contractions of lesser magnitude, though noteworthy, among bricklayers, masons and plasterers, painters, decorators and paper-hangers, and hod carriers and building labourers. All other tradesmen in the group, in addition, contributed a share to the total unemployment increase. A better situation prevailed during November than in the corresponding month a year ago for all tradesmen with the exception of hod carriers and building labourers, the gains in employment for bricklayers, masons and plasterers, and bridge and structural iron workers being particularly pronounced.

The transportation industries at the close of November reported a nominal decline in work afforded when compared with the preceding month, as shown by the reports tabulated for November from 720 unions embracing a membership of 64,540 persons. Of these 1,682 were idle at the close of the month, a percentage of 2.6, contrasted with 2.3 per cent of unemployment in October. Steam railway employees, whose returns constitute over 82 per cent of the entire group membership reporting, indicated a fractional percentage increase in idleness over October, and employment for workers in the navigation division was retarded, especially in Quebec. No change, however, from October occurred among street and electric railway employees, and teamsters and

chauffeurs. The situation in the transportation group, as a whole, in November showed slight improvement over the same month in 1927, steam railway employees, navigation workers, and street and electric railway employees all sharing the advancement. Teamsters and chauffeurs, however, reported a nominal unemployment percentage, compared with no inactivity in November, 1927.

Reports from longshore workers which are tabulated separately each month indicated at the close of November 16.5 per cent of unemployed members, as compared with 16.2 per cent in October, and with 16.3 per cent in November, 1927. The percentage for November was based on the returns tabulated from a total of 13 organizations, with a combined membership of 7,326 persons.

The 6 unions of retail clerks making returns at the close of November, with 735 members, showed no change in the situation from that

indicated on the last day of October, the percentage of unemployment at the end of each month of the comparison standing at .7. Conditions, however, were slightly less favourable than in November, 1927, when .2 per cent of inactivity was registered.

Civic employees were not quite so actively engaged at the close of November as in the preceding month, the 65 unions from which reports were received during November with 6,596 members, indicating 1.5 per cent of unemployment as against .2 per cent on October 31. Nominal declines in employment were recorded over November, 1927, when 1.3 per cent of the members were idle.

In the group of miscellaneous trades the 112 reports tabulated at the end of November included a membership of 5,454 persons, of whom 6.1 per cent were without work, compared with 5.1 per cent in October and with 6.7 per cent in November, 1927. Hotel and restaurant employees reported a more favourable situation than in October, but among theatre and stage employees the volume of unemployment increased considerably. Barbers showed nominal reductions in activity, as compared with October, while among stationary engineers and firemen the unemployment percentage remained the same in both months of the comparison. The slight

improvement in the miscellaneous trades, as a whole, over November, 1927, was due to gains in employment for hotel and restaurant workers, and stationary engineers and firemen. Theatre and stage employees were afforded less work than in November, 1927, and nominal declines were reported by barbers.

Fishermen were considerably slacker during November than in the preceding month, as shown by the reports received from 2 unions of these workers, with a membership of 755 persons, 19.9 per cent of whom were idle as compared with 4.0 per cent in October. The same situation, however, prevailed as in November, 1927, when the percentage of idle members also stood at 19.9.

Reports were tabulated at the end of November from 2 unions of lumber workers and loggers, with 794 members, none of whom were idle, compared with 12.6 per cent of unemployed members in October and with a fully engaged situation in November, 1927.

Table I summarizes the returns by provinces for November of each year from 1919 to 1925 inclusive, and for each month from January, 1926, to date, and Table II indicates the percentages of unemployment in the various groups of industries for the same months.

### Employment Office Reports for November, 1928

The volume of business transacted during the month of November, 1928, by offices operated under the Employment Service of Canada was nearly 49 per cent less than in the preceding month. The large decline under this comparison was chiefly due to a reduction in farm placements, although there were fewer placements in all other industrial groups. Heavy harvest placements in the Prairie Provinces during October, and the completion of this work during that month was responsible for the decline in November in the farming industry. The falling-off in other groups was seasonal as is usual at this time of the year. There was a decrease of nearly 7 per cent in placements when comparison is made with November, 1927. Manufacturing, construction and maintenance, services, communication and trade showed gains, but the increased placements in these groups were more than offset by reductions in all other industrial divisions.

The chart on page 84 shows the trend of employment since January, 1925, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made

semi-monthly. It will be noted that the curve of vacancies and of placements in relation to applications continued to decline throughout the month, although at the close of the period under review the level attained was slightly higher than that shown at the close of November, 1927. The ratio of vacancies to each 100 applications was 71.9 and 68.1 during the first and second halves of November, 1928, in comparison with ratios of 73.0 and 67.4 during the same periods of 1927. The ratios of placements to each 100 applications during the periods under review were 67.8 and 65.7, as compared with 69.0 and 62.6 during the corresponding month of 1927.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during November, 1928, was 1,146 as compared with 2,294 during the preceding month, and with 1,246 in November a year ago.

The average number of applications for employment received daily by the offices during the month under review was 1,637 in comparison with 2,623 in October, and with 1,772 during November last year.

The average number of placements made daily by the offices of the Service during November, 1928, was 1,093, of which 683 were in regular employment and 410 in work of one week's duration or less, as compared with a total daily average of 2,139 during the preceding month. Placements in November a year ago averaged 1,169 daily, consisting of 796 placements in regular and 373 in casual employment.

During the month of November, 1928, the offices of the Service referred 28,688 persons to vacancies and effected a total of 27,318 placements. Of these the placements in regular employment were 17,071, of which 13,145 were of men and 3,926 of women, while placements in casual work totalled 10,247. The number of vacancies reported by employers was 19,075 for men and 9,581 for women, a total of 28,656, while applications for work numbered 40,924, of which 29,425 were from men and 11,499 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552

1927.....	302,723	112,046	414,769
1928 (11 months).....	322,438	125,361	447,799

NOVA SCOTIA

During the month of November, 1928, positions offered and placements effected through employment offices in Nova Scotia were about 15 per cent less than in the preceding month. When comparison is made with November, 1927, a decrease of nearly 8 per cent in vacancies and over 11 per cent in placements is shown. Manufacturing, transportation, construction and maintenance and trade showed gains in placements over the corresponding month of 1927, but these increases were more than offset by declines in the other groups. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 53; logging, 45; transportation, 31; construction and maintenance, 43; trade, 55; and services, 318, of which 239 were of household workers. Regular employment was found for 83 men and 71 women.

NEW BRUNSWICK

There was an increase of over 3 per cent in the number of positions offered through employment offices in New Brunswick during November when compared with the preceding month and of over 7 per cent in comparison with November, 1927. Placements were nearly 9 per cent higher than in October and over 26 per cent in excess of November a year ago. Increased placements in construction and maintenance were mainly responsible for the gains over November, 1927, although all groups except manufacturing and farming showed improvement. Industrial divisions in which most of the placements were effected during the month included: logging, 88; mining, 25; transportation, 28; construction and maintenance, 165; trade, 22 and services, 573, of which 387 were of household workers. Placements of men in regular work numbered 289 and of women 76.

QUEBEC

Opportunities for employment as indicated by orders received at employment offices in the Province of Quebec during the month of November were 45 per cent less than in the preceding month and nearly 14 per cent less than in November, 1927. There was a decline in placements also of 35 per cent when compared with October, but a nominal gain over November a year ago. Transportation and services showed gains in placements over November, 1927, but these increases were almost entirely offset by declines in other groups. Placements by industries included: manufacturing, 118; logging, 857; transportation, 176; construction and maintenance, 683; trade, 49 and services, 622, of which 420 were of household workers. During the month 1,915 men and 538 women were placed in regular employment.

ONTARIO

Orders listed at employment offices in Ontario during November called for 30 per cent fewer workers than in the preceding month, but nearly 4 per cent more than during the corresponding month of a year ago. Placements also declined nearly 28 per cent from October, but were nearly 10 per cent higher than in November, 1927. Manufacturing, construction and maintenance, trade and services showed the most substantial gains in placements over November, 1927, while logging showed the largest decline. The only other groups in which less placements were made than in November a year ago were farming, mining and transportation. Industrial divisions

in which most of the placements were effected during the month were: manufacturing, 1,915; logging, 2,205; farming, 527; mining, 53; communication, 49; transportation, 523; construction and maintenance, 2,107; trade, 603 and services, 3,912, of which 2,365 were of household workers. Placements in regular employment numbered 6,013 of men and 1,377 of women.

MANITOBA

There was a decline of 40 per cent in opportunities for employment offered through Manitoba employment offices during November

SASKATCHEWAN

Harvest operations having been completed in October positions offered and placements effected by employment offices in Saskatchewan during November were 86 per cent less than in the preceding month. When making comparison with November of last year a decline of nearly 24 per cent in vacancies and of 23 per cent in placements is shown. Under the latter comparison more placements were made in all groups except logging and farming, but the declines in these two divisions were more than sufficient to offset the gains

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o—o—o—o—o

when compared with the preceding month and 11 per cent when compared with the corresponding month of 1927. Placements showed a decline of 41 per cent from October and of nearly 20 per cent in comparison with November a year ago. Services was the only group to show any appreciable gain in placements over November, 1927, and these increases were more than offset by large reductions in logging and farming. The changes in other groups were small. Placements by industries included: manufacturing, 117; logging, 326; farming, 476; construction and maintenance, 143; trade, 166 and services, 1,948, of which 1,550 were of household workers. There were 894 men and 641 women placed in regular employment during the month.

in all other industrial groups. Placements by industries included: manufacturing, 89; logging, 225; farming, 559; communication, 39; transportation, 110; construction and maintenance, 277; trade, 243 and services 1,136, of which 715 were of household workers. During the month under review 1,117 men and 541 women were placed in regular employment.

ALBERTA

Employment opportunities as indicated by orders received at employment offices in Alberta during November were 61 per cent less than in the preceding month and 29 per cent fewer than in November, 1927. There was a decline also in placements of 54 per cent when

\* 62 placements effected by offices since closed.

compared with October and of 32 per cent in comparison with November a year ago. All groups except services showed reduced placements when compared with November, 1927, those in farming being the most pronounced due to an earlier completion of harvest operations in 1928 than in 1927. Industrial division in which most of the placements were effected during the month were: manufacturing, 148; logging, 638; farming, 564; transportation, 46; construction and maintenance, 373; trade, 138; and services, 877, of which 649 were of household workers. There were 1,801 men and 400 women placed in regular employment during the month.

#### BRITISH COLUMBIA

During November employment offices in British Columbia received orders for 37 per cent less workers than in the preceding month and over 4 per cent less than during November, 1927. There was a decrease in placements of 38 per cent when compared with October, and of over 3 per cent in comparison with November a year ago. Logging and services showed the only gains of note in placements over November, 1927, and construction and maintenance the only decline, although fewer placements were also made in manufacturing, farming and trade. Placements by industrial groups included: manufacturing, 347; logging, 586; farming, 87; mining, 42; transportation, 134; construction and maintenance, 253; trade; 110; and services, 868, of which 479 were of household workers. During the month 1,033 men and 282 women were placed in regular employment.

#### Movement of Labour

During the month of November, 1928, the offices of the Employment Service of Canada effected 17,071 placements in regular employment, 9,014 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 2,092 were granted the Employment Service reduced transportation rate, 1,647 travelling to points within the same province as the dispatching office, and 445 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Offices in Quebec issued 242 certificates for reduced transportation during November, 78 of which were provincial and 164 interpro-

vincial. Of the former 77 were granted to bushmen, 56 going from Quebec and 21 from Montreal to points within their respective zones. From Quebec also, 1 blacksmith travelled to employment within the same zone. The movement outside the province was from Hull and entirely of bushmen, Cobalt and vicinity receiving 85 and North Bay 79.

Of the 815 persons who were transferred from Ontario offices at the special reduced rate during November, 806 went to employment within the province, and 9 to points in other provinces. Provincially 776 of the transfers were of bushmen, mainly for points in the vicinity of Port Arthur, Fort William, Sudbury, Timmins and North Bay, who received their certificates, for the most part, at Northern Ontario offices. From Toronto 1 dairyman travelled to Timmins, 1 rigger to Port Arthur, and 1 cook and 1 carpenter to North Bay, while from Sudbury 1 blacksmith was conveyed to Sault Ste. Marie, and 2 miners and 2 teamsters within the Sudbury zone. The North Bay office dispatched 1 waiter at the reduced rate to Cobalt, and 3 teamsters to Timmins, and Port Arthur transferred 2 labourers, 2 blacksmiths, 1 fireman, 2 cookees and 5 cooks within its own zone. In addition, Oshawa received 3 tool and die makers from Windsor, Sudbury 1 cook from Ottawa, and Port Arthur 1 cook from Cobalt. The interprovincial movement was from Sudbury, from which point 7 rockmen were carried at the reduced rate to Hull and 2 miners to Winnipeg.

Certificates for reduced transportation were granted by Manitoba offices during November to 400 persons, 155 of whom were travelling to provincial centres and 245 to points outside the province. Of those going within the province 15 were teamsters and 1 a farm hand transported from Brandon to Dauphin, while from Winnipeg 10 hotel and household workers were dispatched to Brandon, 4 hotel workers to Dauphin, and 93 farm hands, 2 farm domestics, 24 bushmen, 2 camp cooks, 1 labourer, 1 cook, 1 fisherman and 1 hotel cook to employment within the Winnipeg zone. Of the transfers outside the province 210 were to Port Arthur, including 193 bushmen, 7 lath cutters, 3 hotel porters, 2 cookees, 1 waitress, 1 cook, 1 farm hand, 1 blacksmith, and 1 motor mechanic. All of these travelled on certificates issued at Winnipeg. From Winnipeg also 10 farm hands, 2 mechanics and 1 chambermaid journeyed to Regina, 5 farm hands and 2 camp cooks to Yorkton, 2 bushmen to Prince Albert, 1 farm hand to North Battleford, 1 hotel general to Saskatoon, 1 farm hand and

1 hotel cook to Estevan, and 2 cooks, 1 camp clerk, 1 cookee and 2 construction foremen to Prince George. The Prince Albert zone received 1 waitress and 1 cook dispatched from Dauphin, and the Estevan zone 1 hotel porter from Brandon.

Workers securing reduced rate certificates during November from Saskatchewan offices were 141 in number, 132 of whom were destined to centres within the province. The balance represented an interprovincial movement and consisted of the transfer of 8 bushmen to Dauphin and 1 domestic to Winnipeg, these travelling on certificates issued at Regina, Moose Jaw and Prince Albert. Of the provincial certificates, 55 were granted to bushmen going to points within the Prince Albert zone and transported for the most part, from Saskatoon and Prince Albert, which centres in addition transferred 16 bushmen to Yorkton. From Prince Albert also 1 blacksmith, 1 saw filer, 1 cook, 2 teamsters and 1 handyman went to points within the same zone, while from Saskatoon 22 bushmen and 1 waitress were conveyed at the special rate to North Battleford, 1 cook to Prince Albert, and 8 farm hands within the Saskatoon zone. The transfers from Regina included 3 farm hands, 1 domestic, 1 housekeeper, and 1 line-man going to Moose Jaw, 5 farm hands, 1 cook and 1 housekeeper within the Regina zone, 1 motor mechanic to Prince Albert, 1 cook to Yorkton, and 1 farm hand each to the Estevan and Weyburn zone. The Moose Jaw office issued certificates to 3 farm hands and 1 housekeeper for points within the territory covered by that office, while from Estevan 2 coal miners were carried at the reduced rate to Swift Current.

From centres in Alberta 317 persons benefited by the special reduced rate in November, 302 going to employment within the province and 15 to outside points. Provincially 228 were transferred from Edmonton to points within its own zone, including 140 bushmen, 12 farm hands, 3 farm domestics, 8 cookees, 5 labourers, 9 miners, 3 clerks, 3 flunkeys, 4 engineers, 1 timekeeper, 1 kitchen maid, 1 book-keeper, 6 carpenters, 3 fishermen, 1 blacksmith, 1 planer man, 1 porter, 4 sawyers, 13 cooks, 6 teamsters, 1 painter, 1

bull cook, and 1 lather. From Edmonton in addition, 2 farm hands journeyed to Calgary, 41 log cutters and 1 cook to Lethbridge, and 1 cook to Drumheller. The Calgary office effected transfers of 3 machinists, 3 loggers, 2 cooks, 1 farm hand, 1 miner, 1 teamster, and 1 stationary engineer to Lethbridge, 1 sheep herder, 1 porter and 6 hotel and household workers to Drumheller, 3 farm hands and 1 cook to Edmonton, 2 sheep herders to Medicine Hat, and 3 farm hands within the Calgary zone. The interprovincial transfers were to British Columbia points, Edmonton dispatching 14 tie makers to Prince George, and Calgary 1 farm hand to Revelstoke.

The certificates issued by British Columbia offices during November numbered 177, of which 174 were provincial and 3 interprovincial. The latter were granted at Vancouver to 1 farm hand and 1 plasterer going to Calgary, and to 1 farm hand bound for Regina. The movement within the province from Vancouver included the transfer of 3 farm hands, 2 tile setters, 1 cook and 1 waiter to Kamloops, 2 miners, 1 handyman, 2 cooks, 1 blacksmith and 1 kitchen help to Penticton, 1 miner, 1 carpenter, 1 waitress, 1 lead burner and 1 pattern maker to Nelson, 4 miners and 1 carpenter to Revelstoke, 4 tie makers to Prince George, 1 machinist and 1 labourer to Vernon, 1 housekeeper to Kelowna, and 3 miners, 3 muckers, 1 first aid man, 2 cooks, 1 flunkey, 1 engineer, 3 carpenters, 1 dishwasher, and 1 timber framer to employment within the Vancouver zone. From Prince George 80 tie makers, 4 sawyers, 2 cooks, 1 bartender, 1 edgerman and 1 farm hand, and from Nelson 2 sawyers, 2 tie makers, 1 teamster and 1 cook travelled to points within their respective zones. The Prince Rupert office issued certificates to 25 tie makers and 2 cooks going to Prince George, and to 3 bushmen, 1 cook and 1 carpenter for points within its own zone.

Of the 2,092 persons who profited by the Employment Service reduced transportation during November, 1,301 were carried by the Canadian National Railways, 776 by the Canadian Pacific Railway, 14 by the Pacific Great Eastern Railway, and 1 by the Temiskaming and Northern Ontario Railway.

## Building Permits Issued in Canada During November, 1928

The aggregate value of the construction represented by the building permits issued by 63 cities during November was \$15,822,401. This was a seasonal decline of \$5,689,411 or 26.4 per cent as compared with the October total of \$21,511,812, but an increase of \$2,964,779 or 23.1 per cent in the more significant comparison with the aggregate of \$12,857,622 for November, 1927. The total for November, 1928, was greater than in the same month of any other year for which statistics for the 63 centres are available. The cumulative value for the elapsed eleven months of 1928 exceeds by nearly \$31,000,000 that for the same months in 1927, the previous high level of this nine years' record.

Some 50 cities furnished detailed statistics, showing that they had issued more than 1,100 permits for dwellings estimated to cost over \$6,000,000 and about 2,600 permits for other buildings estimated at almost \$6,900,000. During October, authority was granted for the erection of about 1,300 dwellings and 3,500 other buildings, estimated to cost approximately \$7,800,000 and \$11,700,000, respectively.

New Brunswick, Alberta and British Columbia reported increases in the value of the construction represented by the permits issued as compared with October, that of \$1,427,912 or 116.8 per cent. In the last named being especially large. Of the reductions in the remaining provinces, that of \$3,229,639 or 30.1 per cent in Ontario was the largest.

As compared with November, 1927, all provinces except Nova Scotia and Quebec reported increases; that of \$1,007,929 or 15.5 per cent in Ontario was most noteworthy.

Of the four largest centres, Toronto and Winnipeg recorded seasonal declines as compared with the preceding month, but increases over November of a year ago; in Montreal there was a falling-off in both comparisons, while Vancouver registered a higher total than in October, 1928, or November, 1927. Of the other centres, New Glasgow, Moncton, Shawinigan Falls, Belleville, Chatham, Galt, London, Owen Sound, Port Arthur, St. Thomas, Sault Ste. Marie, Walkerville, Moose Jaw, Edmonton, Lethbridge, Kamloops, Nanaimo, New Westminster and North Vancouver, reported higher totals of building permits issued than in either comparison.

*Cumulative Record for First Eleven Months, 1928.*—The table on page 89 shows the value of the building authorized by 63 cities during November and in the first eleven months of

<sup>1</sup>Corrected Total.

each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The January-November index numbers of the wholesale prices of building materials in these years are also given (1913 = 100).

The aggregate for the first eleven months of this year was 17.7 per cent greater than in 1927, the previous high level of the record, while the average index numbers of wholesals prices of building materials continue lower than in most of the years since 1920.

The table on page 88 gives the value of the building permits issued by 63 cities in October and November, 1928, and November, 1927. The 35 cities for which records are available since 1910 are marked with asterisks.

Year	Value of permits issued in November	Value of permits issued in first eleven months	Indexes of value of permits issued, first eleven months (1920=100)	Average indexes of wholesale prices of building materials in first eleven months (1913=100)

### EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during November. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the December issue relates to the situation existing in October, 1928. The employment situation in the United States is further indicated by unemployment percentage based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for September and previous months taken from the December issue of the *American Federationist*, the official publication of the organization, are reproduced below.

#### Great Britain

There was a further decline, on the whole, in employment in Great Britain and Northern Ireland during November. The principal industries in which the rate of unemployment increased included the building trade, public works contracting, brick, tile, cement and con-

crete manufacture, the pig iron and tin plate industries, general engineering, leather tanning, the clothing trades, river, dock and harbour service and the fishing industry. In the coal-mining industry there was a slight increase in the numbers recorded as wholly unemployed, which was partly offset by a reduction in the numbers temporarily stopped.

There was a further improvement, however, in the cotton, worsted, linen, and motor vehicle industries, while a reduction in the numbers unemployed also occurred in textile bleaching, dyeing and finishing, and in the shipbuilding, coke oven and by-product, and glass bottle industries.

Among workpeople, numbering approximately 11,880,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at November 26, 1928 (including those temporarily stopped as well as those wholly unemployed) was 12.2, as compared with 11.8 at October 22, 1928, and 9.9 at November 21, 1927. For males alone the percentage at November 26 was 13.8, as compared with 13.3 at October 22; for females the corresponding figures were 8.1 and 7.8. The percentage wholly unemployed at November 26, 1928, was 9.3 as compared with 8.9 at October 22, 1928. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at November 26, 1928, was approximately 1,439,000, of whom 1,131,000 were men and 235,000 were women, the remainder being boys and girls; at October 29, 1928, it was 1,421,000, of whom 1,118,-

000 were men and 227,000 were women; and at November 28, 1927, it was 1,172,000, of whom 937,000 were men and 173,000 were women.

### United States

Employment in manufacturing industries in the United States increased 0.9 per cent in October, 1928, as compared with September, and pay-roll totals increased 3.7 per cent, as shown by returns from 11,940 establishments in 54 of the principals manufacturing industries of the United States. While these industries are for the most part long-established ones, the very prominent newer industries, although not specifically mentioned, are nevertheless represented in a considerable degree. For example, many silk mills, cotton mills, and hosiery mills have added rayon goods to their regular products; radio and electric-refrigerator parts and supplies are turned out by establishments making electrical machinery, apparatus, and supplies; phonograph cabinets are made in furniture factories; and automobile bodies and parts are included in the automobile industry.

The 11,940 establishments reporting had, in October, 3,287,165 employees and combined pay-rolls amounting to \$90,868,879. These employees represent more than one-half of the total employees in the 54 industries included and nearly 40 per cent of the total employees in all manufacturing industries of the United States. The last named percentage shows very clearly the relative importance of the 54 industries covered.

The Bureau of Labour Statistics' weighted index of employment in manufacturing industries for October, 1928, is 88.1, as compared with 87.3 for September, 1928, 86 for August, 1928, and 87.6 for October, 1927; the weighted index for pay-roll totals for October, 1928, is 94.8, as compared with 91.4 for September, 1928, 90.2 for August, 1928, and 91.2 for October, 1927. The monthly average for 1923=100.

The level of employment in manufacturing industries for October, 1928, is distinctive in two particulars—it is higher than the level of employment in any month since June, 1927, and also it is higher than the level of employment in the same month (October) of the year immediately preceding, this being the first time in exactly two years, that is, since October, 1926, that the index of employment for the current month has been higher than the index for the same month of the year next preceding.

Thirty-three of the fifty-four separate industries and 9 of the 12 groups of industries

had more employees in October, 1928, than in September, and 44 of the separate industries and 11 of the groups of industries had higher pay-rolls totals.

The notable increase in employment in any group of industries was 3.1 per cent in the textile group, very large increases having appeared in 8 of the 10 separate industries, millinery and men's clothing alone having reported decreased employment. The iron and steel industry gained 0.3 per cent in employment in October. The automobile industry showed a decrease in employment of 1.4 per cent, this being the first decrease reported in this industry since November, 1927, with two very small exceptions, one decrease having been one-tenth of 1 per cent and one even smaller; the total increase in employment in the automobile industry from November, 1927, to September, 1928, was 53.3 per cent.

Five of the nine geographic divisions reported increased employment in October, the New England and Middle Atlantic divisions showing the notable gains; the greatest decrease among the remaining four divisions was in the Pacific States.

*Unemployment percentage.*—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States. The method of compiling as described in the *American Federationist*, March, 1928, is as follows:—

“The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the first of the month or the nearest possible date. From these reports the percentage of unemployed members is calculated for identical unions in the current and the previous month. Thus for every month there are two percentage figures—that is for identical unions in December and January—and for identical unions in January and February, and so on. The final figure for January, then, is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers.”

By the above method the proportion of unemployed members to the total membership of the local unions reporting, is completed. According to the December issue of the *Ameri-*

can Federationist, the most recent unemployed percentages during the various months in the 23 cities work out as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent;

March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Printing and Publishing

BRANTFORD, ONTARIO.—PUBLISHERS OF A DAILY NEWSPAPER AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 378.

Agreement to be in effect from September 30, 1928 to September 30, 1931, and for such reasonable time thereafter (not exceeding 30 days) as may be required for the negotiation of a new agreement.

Only local union members to be employed as machine operators, linotype machinists, monotype keyboard or caster men, hand compositors or make-ups.

Hours: for day work, 8 per day, 48-hour week; for night work,  $7\frac{1}{2}$  per night, 45-hour week.

Overtime: on day work time and one half to 11 p.m. and double time thereafter; on night work, time and one half to 7 a.m.; for work on Sundays and holidays, double time except in case of regular night shifts beginning on or extending into the morning of Sunday or a holiday.

Wages per week: from October 1, 1928 to September 30, 1929, machine operators, hand compositors, make-ups and journeymen proofreaders \$36 for day work and \$33 for night work, foremen \$40; from October 1, 1929 to September 30, 1931, same classes of journeymen \$37 for day work and \$39 for night work, foremen \$41.

Wages for apprentices; first two years optional; third year 35 per cent of journeyman's scale; fourth year, 40 per cent of journeyman's scale for first six months and  $47\frac{1}{2}$  per cent for second six months; fifth year, 55 per

cent of journeyman's scale for first six months and 65 per cent for second six months.

One apprentice allowed to every three journeymen regularly employed. Apprentices to be at least 16 years old and to serve five years. They shall be examined each year by the apprentice committee of the union and must complete the course in printing of the International Union.

A standard of competency for journeymen is set, and no union member is allowed to work on the bonus or piece-work system.

One week's notice of discharge or of resigning to be given.

Learners on machines must be union members or fifth year apprentices and they shall receive two-thirds of the journeyman's scale for a period not exceeding six months.

One superannuated member may work in any one office at not less than two-thirds of the regular scale.

Foremen to have right to hire and discharge employees for certain specified reasons. When reducing staff, employees last employed to be discharged first, but when staff increased again, these men to be given preference of employment.

Union members may refuse to execute all work received from or destined for struck offices or unfair employers or publications.

All disputes as to this agreement to be referred to a joint standing committee consisting of two representatives of each party. If this joint committee is unable to agree, the dispute will then be referred to an arbitration committee consisting of two representatives of each party, these four to select a fifth, the decision of such committee to be final and binding.

BRANTFORD, ONTARIO.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 378.

Agreement to be in effect from September 30, 1928 to September 30, 1931 and for such reasonable time thereafter (not exceeding 30 days) as may be required for the negotiation of a new agreement.

Only local union members to be employed.

Hours: 8 per day, 4 on Saturday, a 44-hour week for both day and night work.

Overtime: time and one-half; for work performed by day or night shifts beginning on Sundays or holidays, double time.

Wages per week: hand compositors, make-ups, proofreaders, machine operators and journeymen not otherwise specified \$33 for day work and \$35 for night work; machinist operators \$36 for day work and \$38 for night work.

Other clauses are practically the same as those of the newspaper agreement summarized above.

**GALT, ONTARIO.—A CERTAIN NEWSPAPER PUBLISHER AND INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 411.**

This agreement which was originally in effect from December 1, 1923 to November 30, 1925 was extended, with the changes in wages noted below, to November 30, 1931.

Only local union members to be employed.

Hours: in newspaper offices 48 per week; in book and job offices 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half; Sundays and holidays, double time.

Wages per week: Journeymen printers (type-setting, machine operators, make-up men, job and advertisement compositors, stonemen, bank men, floormen and proofreaders) from December 1, 1923 to November 30, 1924, \$32; from December 1, 1924 to May 31, 1925, \$32.50; from June 1, 1925 to November 30, 1925, \$33 (this scale extended to November 30, 1928); from December 1, 1928 to December 1, 1929, \$35. It is provided that a change of wages may be negotiated by either party giving 30 days' notice.

Wages per week for apprentices; third year, three-eighths of journeyman's scale; fourth year, one-half of journeyman's scale for first six months and five-eighths for second six months; fifth year three-quarters of journeyman's scale for first six months and seven-eighths for second six months.

Wages for apprentices on the machine; one-half of journeyman's scale for first ten weeks, three-fifths for next five weeks and four-fifths of journeyman's scale for next five weeks. If work up to standard at end of twenty weeks, journeyman's scale to be paid.

One apprentice allowed to every four journeymen regularly employed. Apprentices to be examined yearly by the local committee on apprentices and their work must show if they are entitled to the increased wage scale. Apprentices must complete the course in printing of the International Union.

The union may refuse to execute struck work received from or destined for unfair employers or publications. The agreement may become null and void in case of trouble with an allied craft if such trouble cannot be settled by arbitration.

All disputes as to this agreement to be referred to a joint standing committee consisting of two representatives of each party. If this committee is unable to agree, the matter shall be referred to a board of arbitration consisting of one representative of each party and a third selected by these two, the decision of such board to be final and binding.

**VANCOUVER, B.C.—CERTAIN BOOK AND JOB OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 226.**

Agreement to be in effect from February 1, 1928 to February 1, 1931 and may be extended from year to year provided mutually satisfactory arrangements can be made whereby wages and hours may be adjusted by local conciliation or arbitration.

Only local union members to be employed.

Hours: 8 per day, 4 on Saturdays, a 44-hour week for both day and night work.

Overtime: time and one-half, Sundays and holidays, double time.

Wages per week: from February 1, 1928 to February 1, 1929 compositors, stonemen and proofreaders \$43.50 for day work and \$47 for night work, operators and machinists \$45.50 for day work and \$49.90 for night work; from February 1, 1929 to February 1, 1931, compositors, stonemen and machinists \$45 for day work and \$48.50 for night work, operators and machinists \$47 for day work and \$51.40 for night work. Machinist-operators to receive 50 cents per shift more than operators. When a shift is worked part day and part night, the night scale shall be paid. Shifts commencing between 11.30 p.m. and 6 a.m. to receive 50 cents per shift extra.

Wages for apprentices: in last six months of first year, one-fifth of journeyman's wages; second year, one-fourth; third year, one-third; fourth year, one half; fifth year, two-thirds.

Apprentices: One allowed in each office where eight or less journeymen are employed; where more than eight journeymen are employed two apprentices allowed. Apprentices to be examined by examination committee of union.

Both parties agree that any dispute arising out of this agreement shall be settled by conciliation and arbitration. Provided an arbitration agreement is later reached, each employer signing this agreement, agrees to become a party of one arbitration proceeding representing the employing commercial parties of Greater Vancouver and the findings of such arbitration to be binding.

**Construction: Buildings and Structures**

**WINNIPEG, MANITOBA.—GENERAL CONTRACTORS' SECTION OF THE WINNIPEG BUILDERS' EXCHANGE AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, DISTRICT COUNCIL, WINNIPEG, LOCAL No. 343.**

Agreement reached on conclusion of strike reported in the LABOUR GAZETTE for July, 1928, page 703 and for August, 1928, page 843, to be in effect from July 5, 1928 to April 30, 1930 and from year to year unless notice of change is given by either party three months previous to April 30 of any year.

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one half for over eight and up to twelve hours in a day; over 12 hours and all work on Sundays and holidays, double time.

Wages: \$1 per hour from July 5, 1928 to December 31, 1928 and \$1.10 from January 1, 1929 to April 30, 1930; foremen to be union members and to receive at least 10 cents per hour extra.

For work out of town, transportation to be paid and travelling time up to 8 hours per day to be paid.

One apprentice allowed every employer employing two or more journeymen and one additional apprentice for every seven journeymen. The question of an apprenticeship system to be taken up by a joint committee.

Any disputes to be referred to a joint arbitration committee consisting of three members of each party, the decision of such committee to be binding. If this committee is unable to agree, no strike or lockout to take place until the dispute is referred to the General President

of the Brotherhood or his appointee and a representative of the employers. If these two cannot agree they shall appoint a third party and the decision of these to be binding. Should the two representatives be unable to agree on a third party, he shall be appointed in accordance with the terms of the Act of Arbitration of the Province of Manitoba and his decision shall be final and binding.

**WINNIPEG, MANITOBA.—GENERAL CONTRACTORS' SECTION OF THE BUILDERS' EXCHANGE AND THE BRICKLAYERS AND MASONS' INTERNATIONAL UNION No. 1 OF MANITOBA.**

Agreement to be in effect from June 1, 1928 to April 30, 1930. Both parties agree to meet in January, 1930, to formulate a new agreement.

Hours: 8 per day, 4 on Saturdays; when consecutive shifts are worked, 7½ hours shall be a day's work.

Overtime: time and one half to 10 p.m.; after 10 p.m. on other days and after 12 noon on Saturdays and all work on Sundays and holidays, double time.

Wages of bricklayers and masons: \$1.35 per hour until December 31, 1928 and \$1.45 from January 1, 1929 until April 30, 1930. Foremen to be union members and receive at least 10 cents per hour extra.

For work out of city, transportation and travelling time up to eight hours per day to be paid and an additional 15 cents per hour to cover expenses.

Any dispute to be referred to a committee consisting of three members of each party, the decision of this committee to be binding. No strike or lockout until decision reached by this joint committee.

**WINNIPEG, MANITOBA.—MARBLE AND TILE SECTION OF THE WINNIPEG BUILDERS' EXCHANGE AND THE BRICKLAYERS AND MASONS' INTERNATIONAL UNION No. 1 OF MANITOBA.**

Agreement to be in effect from June 1, 1928 to April 30, 1930. Both parties agree to meet in January, 1930 to formulate a new agreement.

A definition of the work covered is defined in the agreement.

Union agrees to supply competent workmen, but if unable to do so, union members agree to work with other mechanics who may be employed.

Hours: 8 per day, 4 on Saturdays.

Overtime: After 8 hours and up to 13 in a day, time and one-half; after 13 hours and work on Sundays and holidays and on Saturdays after 12 noon, double time.

Wages: from June 1 to December 31, 1928, marble masons \$1.30 per hour, tile setters \$1.25; from January 1, 1929 to April 30, 1930, marble masons \$1.40 and tile setters, \$1.35.

Employers may determine the number of labourers to be employed on any job.

The clauses with regard to work outside the city and the provisions for arbitration are the same as those summarized above in the agreement between this same union and the general contractors.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain

either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the

Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract

for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A"

conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

**Contracts Awarded Recently**

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wage clause above mentioned:—

**DEPARTMENT OF MARINE AND FISHERIES**

*Contracts in Group "A" (Construction, etc.)*

Construction of range lights at Brule Bank, River St. Lawrence, North Channel, 30 miles east of Quebec city. Name of contractors, Northern Logging & Contracting Ltd., 229 St. Paul street, Quebec, P.Q. Date of contract, November 8, 1928. Amount of contract, \$165,000. The General Fair Wages Clause was inserted in the contract.

**DEPARTMENT OF NATIONAL DEFENCE**

*Contracts in Group "A" (Construction, etc.)*

Clearing of Rifle Range site at North Vancouver. B.C. Name of contractors, Ellis-Cotton Ltd., Vancouver, B.C. Date of contract, November 19, 1928. Amount of contract, \$12,350. The General Fair Wages Clause was inserted in the contract.

**DEPARTMENT OF PUBLIC WORKS**

*Contracts in Group "A" (Construction, etc.)*

Repairs to fourth section of the North Jetty, Fraser River, Steveston, B.C. Name of contractors, The Vancouver Pile Driving

& Contracting Co., Ltd., Vancouver, B.C. Date of contract, November 19, 1928. Amount of contract, approximately \$58,547.25. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages:	Hours per day
	Not less than	
	per day	
	\$ cts

Bag fittings.....	7,831 26
Scales.....	78 80
Letter boxes.....	506 40
Cotton duck bagging.....	5,360 78

## PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1928

### Cost of Living, Prices of Staple Articles and Index Numbers

THE weekly family budget in terms of retail prices showed little change, but was slightly higher than in November, while the Dominion Bureau of Statistics index number of wholesale prices declined.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.31 at the beginning of December, as compared with \$11.28 for November; \$11.17 for December, 1927; \$11.18 for December, 1926; \$11.56 for December, 1925; \$10.58 for December, 1924; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. The advance was due mainly to seasonal increases in the prices of eggs, while less important increases occurred in the prices of milk, butter, beans and mutton. The prices of beef, fresh and salt pork, bacon, lard, rolled oats, granulated sugar and potatoes were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.56 at the beginning of December, as compared with \$21.52 for November; \$21.37 for December, 1927; \$21.41 for December, 1926; \$21.87 for December, 1925; \$20.90 for December, 1924; \$21.21 for December, 1923; \$20.97 for December, 1922; \$21.49 for December, 1921; \$25.67 for December, 1920; \$26.92 for July, 1920 (the peak); \$21.64 for December, 1918; and \$14.26 for December, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100 and weighted according to the commercial importance of the commodities, declined to 146.7 for December, as compared with 148.6 for November; 151.8 for December, 1927; 150.3 for December, 1926; 163.5 for December, 1925; 160.9 for December, 1924; 153.5 for December, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); and 205.6 for December, 1918. Forty prices quotations were lower, twenty-seven were higher and one hundred and sixty-nine were unchanged.

In the grouping according to chief component materials five of the eight main groups declined, one advanced and two were unchanged. The groups which declined were: the Vegetables and their Products group, due chiefly to lower prices for grains, flour, potatoes, hay and rubber; the Animals and their

Products group, due to lower prices for meats, eggs, fish, hides and leather, which more than offset higher prices for livestock and furs; the Non-Ferrous Metals group, due to declines in the prices of silver, lead, tin and antimony; the Chemicals and Allied Products group, due mainly to lower prices for glycerine; and the Iron and its Products group. The Fibres, Textiles and Textile Products group advanced, due to higher prices for cotton. The Wood, Wood Products and Paper group and the Non-Metallic Minerals group were unchanged.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former due mainly to lower prices for flour, meats, potatoes and eggs, and the latter due to declines in the prices of materials for the leather industry, for the metal working industries, for the chemical using industries, for the meat packing industries, for milling and other industries, as well as miscellaneous producers' materials. Materials for the textile and clothing industries and for the fur industry advanced.

In the grouping according to origin raw or partly manufactured goods declined, lower prices for grains, potatoes, hay, fresh meats, eggs, hides, silver, lead and tin more than offsetting higher prices for livestock, furs, tea, cotton, jute and spelter. Fully or chiefly manufactured goods also declined, due mainly to lower prices for flour, bacon, ham, lime and glycerine. Domestic farm products and articles of marine origin were lower, while articles of forest origin and articles of mineral origin were unchanged.

### EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period of 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of

classification and with those of the classification according to the purpose or use in detail for the current month and for certain preceding dates.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of December of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class.

For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for

Higher price for petroleum coke. f. Petroleum coke. g. Natural gas used extensively. h. Lignite. i. Poplar, etc. j. In a. Houses with conveniences not extensively occupied by workmen but some at \$35.00. p. Mining Company houses \$20

Continued from page 98

December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to

show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

INDEX NUMBERS OF WHOLESALE PRICES (WEIGHTED) CALCULATED BY THE DOMINION BUREAU OF STATISTICS (Average Prices 1913=100)

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900; 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1927 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

Beef prices were again somewhat lower, sirloin steak being down from an average of 35.1 cents per pound in November to 34.6 cents in December; round steak from 30 cents per pound in November to 29.5 cents in December; rib roast from 27.6 cents per pound in November to 27.1 cents in December; and shoulder roast from 21.6 cents per pound in November to 21.3 cents per pound in December. Mutton advanced from an average of 29.7 cents per pound in November to 30 cents in

\*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 18%; Sundries 20%.

†Revised.

December. Prices in the Maritime Provinces, the Prairie Provinces and in British Columbia declined, but these were more than offset by increases in Ontario and Quebec. Both fresh and salt pork were lower in the average, the former being down from 28.4 cents per pound in November to 27.1 cents in December, and the latter from 27.1 cents per pound in November to 26.6 cents in December. Breakfast bacon was lower, averaging 39 cents per pound in December, as compared with 40.5 cents in November. In fresh fish cod steak, halibut and white fish were slightly lower. Lard declined slightly, averaging 22.6 cents per pound.

Eggs showed a substantial seasonal advance in practically all localities, fresh averaging 64.1 cents per dozen in December, as compared with 57.4 in November and 51 cents in October, and cooking averaging 50.8 cents per dozen in December, 49.2 cents in November and 45.6 cents in October. Milk was again slightly higher in the average at 12.4 cents per quart. Higher prices were reported from Three Rivers, St. Hyacinthe, St. John's, Brockville, Winnipeg and Prince Albert. Butter was slightly higher, dairy being up from 43.3 cents per pound in November to 43.7 cents in December and creamery from 47.6 cents per pound in November to 47.8 cents in December. Cheese was slightly lower, averaging 33.6 cents per pound.

No changes were reported in bread, the price averaging 7.7 cents per pound. Soda biscuits and flour were steady. Rolled oats were slightly lower at an average price of 6.2 cents per pound. Canned vegetables showed little change. Beans advanced from an average price of 9.3 cents per pound in November to 10.3 cents in December. Onions advanced somewhat, averaging 6.8 cents per pound. Potatoes averaged \$1.24 per ninety pounds, as compared with \$1.26 in November. Evaporated apples were down from an average of 21.5 cents per pound in November to 21 cents in December. Prunes showed little change. Granulated sugar was slightly lower, averaging 7.6 cents per pound. Coffee and tea showed little change. Anthracite coal averaged \$16.30 per ton in December, as compared with \$16.26 in November. Higher prices were reported from Moncton, London and Sarnia. Bituminous coal was practically unchanged at \$10.06 per ton.

#### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to lower levels in December, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaging \$1.17 per bushel, as compared with \$1.21 in November. The low price for the month was \$1.16½, reached on the 7th and the high \$1.18½ reached on the 14th. Western barley at Winnipeg was down from 68½ cents per bushel to 66½ cents; American corn at Toronto from \$1.01½ per bushel to 97½ cents; and flax at Winnipeg from \$1.95½ per bushel to \$1.90½. Western oats at Winnipeg advanced from 56½ cents per bushel to 58½ cents. Flour at Toronto declined from \$7.37 per barrel in November to \$7.20 in December. Rolled oats were up from \$3.55 per ninety pounds to \$3.65 and shorts from \$36.80 per ton to \$37. Raw sugar at New York advanced from \$2.06½ per hundred to \$2.18½. Ceylon rubber was slightly lower at 17.8 cents per pound, as compared with 18.1 cents in November. Linseed oil advanced 2 cents per gallon to 87 cents. Ceylon and India tea at Toronto advanced from 46 cents per pound to 49 cents. Ontario potatoes at Toronto declined from 87½ cents per ninety pounds to 77½ cents and Quebec grades at Montreal from 80 cents per eighty pounds to 70 cents. Hay was down \$1 per ton to \$16. Oranges were down from \$5.50-\$6 per box to \$4.25-\$6.25 and lemons from \$6.50-\$7 per box to \$5.50-\$6. Choice steers at Toronto advanced from \$9.28 per hundred pounds to \$9.41 and hogs from \$9.65 per hundred pounds to \$10.17. Dressed beef, forequarters, at Toronto declined from \$14.90 per hundred pounds to \$14.50 and hindquarters from \$17.90 per hundred pounds to \$17.50. Dressed hogs were down from \$16.30 per hundred pounds to \$14.50. Bacon was substantially lower at 24-26 cents per pound, as compared with 30 cents in November. Beef hides were down from 17-18 cents per pound to 16½-17 cents and calf skins from 24-25 cents per pound to 23-24 cents. Fresh eggs at Montreal declined from 65-75 cents per dozen to 60-65 cents and storage eggs at Toronto from 38-40 cents per dozen to 37-38 cents. Raw cotton at New York advanced from 19.9 cents per pound to 20.5 cents. In Non-ferrous metals tin declined from 52½ cents per pound to 52 cents; lead from \$6.35 per hundred pounds to \$6.25; and silver from 58 cents per ounce to 57½ cents. Zinc was slightly higher averaging \$7.305 per cwt., as compared with \$6.993 in November. Glycerine at Toronto declined from 17½ cents per pound to 15½ cents.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1913 = 100, was 137.9 for November, a decline of 0.1 per cent from the previous month. Food advanced 0.1 per cent due to advances in cereals and meat and fish, although miscellaneous foods declined. Industrial materials, as a whole, fell 0.3 per cent, due to a fall of 2.2 per cent in miscellaneous materials. All other groups of industrial materials showed very small advances.

The *Economist* index number, on the base 1901-05 = 100, was 174.3 for November, an advance of 0.5 per cent over October. Both groups of food declined slightly, textiles and minerals advanced and miscellaneous products declined.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-77 = 100, was 117.9 at the end of November, an advance of 0.9 per cent over the previous month. Foodstuffs advanced 1.2 per cent and industrial materials advanced 0.8 per cent. Except for groceries which declined 1.8 per cent owing to lower prices for coffee, all other groups advanced. Vegetable foods advanced 0.4 per cent with higher prices for wheat, oats, potatoes and rice; animal foods advanced 2.8 per cent with higher prices for butter, mutton, bacon and pork. The rise in minerals was due chiefly to a rise in tin, household coal and copper. Textiles rose 1.2 per cent due to rises in cotton, wool and silk; miscellaneous materials advanced 0.4 per cent.

**COST OF LIVING.**—The index number of the Ministry of Labour, on the base July, 1914 = 100, was 168 at December 1, an advance of 0.7 per cent over the previous month. Food advanced due to higher prices for eggs and fish. The index number for rent advanced from 150 to 152 due to the inclusion of "decontrolled rents" in the calculation as well as "controlled rents." Other groups were unchanged.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Office, on the base July, 1914 = 100, was 639 for November as

compared with 630 for October. Food advanced owing to higher prices for vegetable and animal foods, although there were declines in sugar, coffee and cocoa. Industrial materials advanced from 672 to 678 due to advances in minerals and metals and textiles.

### Australia

**WHOLESALE PRICES.**—The Melbourne index number, on the base 1911 = 1000, was 1,746 for September, as compared with 1,751 for August. Dairy produce, groceries and building materials advanced, while jute, leather, etc., agricultural produce and meat declined; metals and coal and chemicals were unchanged.

### New Zealand

**WHOLESALE PRICES.**—The index number of the Government Statistician, on the base 1909-13 = 1000, was 1,572 for October as compared with 1,557 for September. The advance was due to increases in the groups, foodstuffs of vegetable origin and metals and their products. On the other hand, textiles, wood and wood products, animal products and chemicals declined; non-metallic minerals and their products were unchanged.

### India

**WHOLESALE PRICES.**—The index number of the Labour Office, Government of Bombay, on the base prices in July, 1914 = 100, was 150 for October. Foods advanced from 150 to 157, showing increases in all groups. Non-foods as a whole were unchanged, increases in oil-seeds, raw cotton, cotton manufactures and hides and skins were counteracted by declines in textiles other than cotton and miscellaneous articles.

**COST OF LIVING.**—The working class cost of living index number, Bombay, on the base prices in July, 1914 = 100, was 147 for November, as compared with 146 in October. Foods advanced from 142 to 144; fuel and lighting declined slightly, clothing advanced and rent was unchanged.

### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base 1926 = 100, was 96.7 for November, a decline of 1.1 per cent from the level of the previous month. There were considerable declines in foods, farm products and hides and leather and smaller declines in fuel and lighting materials, house furnishing goods and miscellaneous commodities. Textile products

were unchanged and there were small increases in the groups metals and metal products, building materials and chemicals and drugs.

The *Annalist* index number, on the base 1913 = 100, was 147.5 for December, a decline of 0.5 per cent from November. The changes were very small in all groups. Declines in food products, fuels and chemicals were partly counteracted by advances in farm products, textile products, metals and miscellaneous commodities; building materials were unchanged.

Bradstreet's index number (which is the sums total of the prices per pound of 96 articles of common consumption) was \$12.9651 at Janu-

ary 1, 1929. As compared with the same date in 1928, this shows a decline of 4.4 per cent for the year. Over this period there were declines in provisions, breadstuffs and fruits, hides and leather, textiles, metals, oils, chemicals and miscellaneous products. There were advances in live stock, naval stores and building materials; coal and coke were unchanged.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base July, 1914 = 100, showed a slight decline for November, the index number standing at 162.6 as compared with 162.9 for October. Housing and clothing were each one point lower, while fuel and light advanced one point; food and sundries were unchanged.

### Immigration Policy of Trades and Labour Congress of Canada

The following statement of the policy of the Trades and Labour Congress of Canada in regard to immigration was given by Mr. P. M. Draper, its secretary-treasurer, in the course of a recent address:—

1. For the peopling of Canada, through immigration, by a free, enlightened, moral, energetic and law-abiding class of citizens; all false inducements to secure immigrants to be prohibited and the fullest accurate information freely circulated in the countries from which they come.

Whilst regard should be had for the welfare of those who seek our shores, the first consideration should be the Canadian people and the betterment of our common country. Therefore, nationalities and classes of people who, either by temperament, non-assimilative qualifications, habits, customs or absence of any permanent good which their coming brings to us, are not a desirable acquisition to our citizenship, should not be admitted.

2. For strict application of the laws concerning the admission and control of Orientals, pending the enactment of legislation for total exclusion.

3. Abolition of all bonuses or grants to private agencies and that the British Government be requested to assume fuller supervision and control over emigrant-booking agencies operating in the British Isles.

4. For the prohibition of entry of "contract labour" unless certified as necessary by and secured through the Employment Service of Canada and for the prohibition of entry of labour engaged to replace workers during industrial disputes.

5. For the maintenance of the Department of Immigration under a separate Minister of the Crown, and for the creation of Dominion Advisory Council on Immigration on which labour shall have representation, and which would co-ordinate federal, provincial and other immigration activities, prevent overlapping of same, and formulate policies suitable to conditions as they exist from time to time.

6. That in order to relieve congestion in industrial centres, land settlement and colonization schemes should be made widely known in Canada and the same opportunities and assistance offered residents of Canada as are given to those of the British Isles and foreign countries.

7. For the continued prohibition of the admission of child immigrants under working age unless accompanied by or coming to join their parents or other responsible relatives.

8. That representation be made by the Dominion Government to the United States authorities with the object of restoring equal rights of entry to the U.S.A. to all Canadian citizens, irrespective of their places of birth.

9. For international exchange of migration statistics and compliance with recommendation of the International Labour Office (1923) to compile and publish statistics regarding emigration from Canada as well as immigration to Canada.

10. For medical and other examination of emigrants to take place, as far as possible, at port of embarkation.

11. For deportation of those entering Canada, under assisted immigration schemes and exempt class regulations and who, within 12 months, seek or accept employment in other occupations.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Employer not held Negligent if Workman Neglected Precautions

A company carrying on a motor car agency in the province of Quebec operated a service and repair garage in connection therewith. The garage consisted of a four-story building, and was equipped with a platform elevator to carry cars and materials to the various floors. On May 11, 1925, a car sent in for repairs was brought up to the third floor by a young mechanic, who ran it off the elevator and stopped it a few feet from and facing the shaft. The employee worked for over an hour on the car. He had one knee on the running board, his body being inside the car, when the car suddenly started, crashed through the wooden barrier, and fell down the shaft to the bottom, carrying him with it, the accident resulting in the employee's death. His mother brought an action against the company for \$4,999.99, alleging negligence on their part (1) in allowing the deceased to work on the car near the elevator; (2) in lowering the elevator to the ground floor without warning deceased; and (3) in failing to protect the elevator shaft adequately. Damages were awarded to the plaintiff, but the Quebec Court of King's Bench subsequently, in 1927, reversed the judgment of the lower court. On further appeal by the plaintiff the Supreme Court of Canada affirmed the latter judgment in favour of the employer.

Chief Justice Anglin, in delivering the judgment of the Supreme Court of Canada, pointed out that the plaintiff relied upon articles 1053 and 1054 of the Civil Code of Lower Canada, which provide as follows:—

1053. Every person capable of discerning right from wrong is responsible for the damage caused by his fault to another, whether by positive act, imprudence, neglect or want of skill.

1054. He is responsible not only for the damage caused by his own fault, but also for that caused by the fault of persons under his control and by things he has under his care.

"Before the plaintiff," he said, "can invoke a presumption of fault against the defendants under article 1054, she is obliged to establish (a) that the damage was in fact caused by the thing in question within the meaning of that article, and (b) that that thing was at the time under the care of the defendant.

"The automobile on which the deceased was working was safe and harmless while in the position in which he had placed it on the third floor of the defendants' garage. It became dangerous only because it either started

of itself or was put in motion. If the proper inference from the evidence was that the automobile started of itself, i.e., without the intervention of human agency, and owing to something inherent in the machine, the ensuing damage might be ascribable to it as a 'thing,' and be within the purview of article 1054. But if its movement was due to an act of the deceased, conscious or unconscious, the damage was caused, not by the thing itself, but by that act, whether it should be regarded as purely involuntary and accidental or as amounting to negligence or fault. On the latter hypothesis, the provision of article 1054, invoked by the appellant, does not apply; either the case was one of pure accident, entailing no liability; or, if there be liability, it must rest on fault to be proven and not presumed.

"On the evidence before us, the most likely cause of the movement of the automobile was the act of the deceased workman in pressing down the self-starter—probably inadvertently, as the car was in gear and unbroken in a place where it was dangerous to start it, and the workman must have known that fact unless he was utterly careless or indifferent as to his own safety. That the car was started in any other way would seem highly improbable and may not be assumed in the absence of any evidence of facts which would warrant such an inference.

"Moreover, as was pointed out during the argument, we should have to consider very carefully whether, upon the facts before us, the automobile was not, for the purposes of article 1954, at the time of the accident under the care of the deceased, Tremblay, himself, who was an expert workman, rather than under the care of the defendants. The action cannot, in our opinion, be maintained under that article.

"Nor has the plaintiff established fault of the defendants which was the cause of the death of Tremblay so as to render them liable therefor under article 1053. Assuming that the deceased was obliged to work upon the car where it was, he might have averted the danger by turning the front wheels sideways or by throwing the transmission out of gear and setting the brakes. As a skilled workman he should have realized the risk to which he was exposed in working upon the unbraked car while in gear, situated as it was, and he must have known that the means of avoiding such risk were entirely in his own hands. Under such circumstances the maxim *volenti non fit injuria* would seem to be much in

point. The place was in fact dangerous only because the deceased neglected obvious precautions which would have made it quite safe.

"Tremblay probably actually knew, at all events he should have seen, that the elevator was not stationed on the third floor, and that the elevator shaft was open, save for the light railing which served for a guard to prevent persons passing, accidentally falling into it. There was no duty incumbent on the defendants to guard against such an occurrence as that which actually happened.

"We are not prepared to impose on the proprietor of every garage such as that operated by the defendants, the duty of maintaining at each opening of an elevator shaft a barrier of sufficient strength to withstand the impact of any automobile which may be allowed to run against it. There may be circumstances under which such a duty would arise, but there is no evidence of their existence in the present case. The defendants owed no such duty to the deceased Tremblay.

"Had he taken the precaution either of turning the front wheels of the car away from the direction of the elevator shaft or of throwing the transmission out of gear and setting the brakes before attempting to do work upon the automobile which involved danger of his accidentally pressing the self-starter, the unfortunate occurrence which cost him his life would not have happened. If he was not the 'author of his own injury,' at least the plaintiff has failed to prove his death was caused by actionable fault of the defendants necessary to entail their liability under article 1053.

"The appeal fails and must be dismissed with costs."—*Supreme Court of Canada—Lacombe versus Power et al.* [1928] 4 D.R.L., page 979.

### Employees' Substitute not Entitled to Damages for Injury

The Ottawa City Corporation employed the owner of a team to drive a snowplough, when required by the ward foreman, for the purpose of removing the snow from the sidewalks. On a certain occasion the owner of the team, having other work to do, engaged a substitute to take out the plough, a third man acting as ploughman. While the plough was being removed from the yard, and before it reached the sidewalk which was to be cleaned, an accident, said to be due to the ploughman's negligence, happened to the substitute, his leg being broken. The injured man presented a claim under the Workman's Compensation Act of Ontario, but the claim

was rejected by the Board on the ground that the plaintiff was not an employee of the city. He then sued for damages against the city as employer, and damages to the extent of \$1,350 were awarded by the court.

On the appeal by the City Corporation the Ontario Supreme Court reversed the judgment of the lower court, stating that the same reason which disentitled the applicant to receive compensation precluded his recovery of damages against the city—the reason, namely, that he was not an employee or servant of the city, but a volunteer undertaking to discharge for a servant the duty of that servant. By voluntarily undertaking to discharge the duty of the servant the claimant could not, it was stated, impose a new or greater liability upon the "master."

"At common law, where the injury is occasioned by the negligence of the fellow servant in the course of the common employment, the risk is undertaken by the servant as one of the risks incident to his employment, and the master is not liable. This rule now has been applied to one voluntarily assisting in the employment, as the plaintiff here. If this rule should now be modified so as to place the volunteer in the same position as a fellow servant, yet, having regard to the statutory modification of the common law abolishing this doctrine of common employment, this would not help the plaintiff in this court, for the servant is now entirely deprived of his right of action in the courts and must rely upon the right of compensation, which can only be accorded him by the compensation board. I regret that the board has taken the narrow view that such a volunteer does not come within the scope of the Act, but upon all such questions the board is supreme and there is no appeal."—*Switzer versus Ottawa, Ontario*, (1928) 4 D.L.R., page 991.

### Province has Jurisdiction to Regulate Marketing

A Chinese market gardener was convicted in a local court in British Columbia of unlawfully marketing potatoes in Delta municipality, without having obtained the permission, in writing, of the Mainland Potato Committee of Direction, contrary to the provisions of the Produce Marketing Act, 1926-7 (B.C.), chapter 54, and the orders and regulations made thereunder. After his conviction the defendant applied in the British Columbia Supreme Court for a writ of *habeas corpus*, the application being based solely on the ground that the Act was *ultra vires* of the provincial legislature.

Marketing is defined in the Act as follows:—

“Marketing” means the buying or selling of a product, and includes the shipping of a product for sale or for storage and subsequent sale, and the offering of a product for sale, and the contracting for the sale or purchase of a product, whether the shipping, offering, or contracting be to or with a purchaser, a shipper or otherwise, but does not include a sale by a wholesale or retail store in the ordinary course of business, and does not relate to the marketing of a product for consumption outside the Dominion; and “market” has a corresponding meaning.

The committee of direction under the act is authorized to delegate any or all of its powers to local committees. By an amendment of 1928 the committees so formed have power “to determine whether or not and at what time and in what quantity, and from and to what places, and at what price and on what terms the product may be marketed and delivered, and to make orders and regulations in relation to such matters.”

One of the regulations under this section enacted that “no potatoes of any class, variety, grade, or size of the crop of the year 1928,” raised in the Delta of the Fraser river, were to be marketed without the permission of the Mainland Potato Committee of Direction. Such permission, when given, provided that all such potatoes for marketing should be delivered to and despatched from one of several enumerated places.

The Supreme Court pointed out that the only substantial question before the court was whether it was within the legislative capacity of the Legislative Assembly to enact the statute. This involved a consideration of sections 91 and 92 of the British North America Act, 1867. In this connection the court cited the decision of the Judicial Committee of the Privy Council in *Toronto Electric Commissioners versus Snider* (LABOUR GAZETTE, February, 1925, page 243), where the following principles were stated:—

“The Dominion Parliament has, under the initial words of section 91 a general power to make laws for Canada. But these laws are not to relate to the class of subjects assigned to the Provinces by section 92, unless their enactment falls under heads specifically assigned to the Dominion Parliament by the enumeration in section 91. When there is a question as to which legislative authority has the power to pass an Act, the first question therefore must be, whether the subject falls within section 92. Even if it does, the further question must be answered whether it falls also under an enumerated head in section 91. If so, the Dominion has the paramount power of legislating in relation to it. If the subject falls within neither of the sets of enumerated heads, then the Dominion may have power to legislate under the general words at the beginning of section 91.

“Applying this principle, does the subject of legislation now being considered fall fully under section 92? In my opinion, both on principle and on authority, it clearly does. Section 92 (13), commits the making of laws in relation to property and civil rights in the Province exclusively to the legislatures of the Provinces.”

Answering the question whether, granted that the legislation impugned falls fully under section 92, the exclusive power *prima facie* conferred on the province is trenchanted on by any of the overriding powers set out in section 91, the British Columbia Supreme Court gave a negative opinion, there being, in its view, no hint of a possible conflict with the general power conferred on the Dominion by the opening paragraph of section 91. “There is no suggestion in the record of the existence in the Dominion of such extraordinary peril to the national life of Canada as a whole in relation to the subject-matter of this legislation as the Judicial Committee lays down in *Toronto Electric Commissioners versus Snider*, *supra*, as a prerequisite to such conflict arising.”

For the applicant it was argued that the Produce Marketing Act infringed section 91 (2) which commits to the Dominion Parliament exclusive jurisdiction over the regulation of trade and commerce; and that it also infringed section 27, which grants to the Dominion a like jurisdiction over criminal law excepting the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters. On the first point the opinion of the Judicial Committee of the Privy Council in the same case was cited.

“It is, in their Lordships’ opinion, now clear that, excepting so far as the power can be invoked in aid of capacity conferred independently under other words in section 19, the power to regulate trade and commerce cannot be relied on as enabling the Dominion Parliament to regulate civil rights in the Provinces.”

Greater difficulty was found by the Appeal Court with regard to the question of conflict between the Produce Marketing Act and Criminal law. This question was discussed with particular reference to the Board of Commerce case, *Attorney General of Canada versus Attorney General of Alberta* (LABOUR GAZETTE, December, 1921, page 1508), the decision being reached that the province in passing the Produce Marketing Act was “in no way meddling with section 498” (of the Criminal Code), and that it was “occupying a field of legislation exclusively its own as shown by the Board of Commerce case.”—*Rex versus Chung Chuck* (*British Columbia*), 1928, D.L.R., page 659.

### Compensation for Diseases Started by Exposure

A miner was engaged by a gas and electric company in California as a rough carpenter to do repair work on a timber flume supplying water to a power plant. The employee was given a thorough physical examination by the company's physician before he began work and was found in good physical condition. Immediately after his examination he was called with other workmen to repair a break in the flume. It was an emergency job, the employees working in long shifts. The employee in question worked for a period of thirty-eight hours; and as a result of exposure and exhaustion he was unable to go to his home after quitting work. The physician examined him and found him suffering from acute rheumatism. About six months later a physician found that he had an enlarged

heart, and advised him to do no manual labour. A year later the same physician found the rheumatic condition and heart enlargement still present. Five months after this last examination the employee was taken to a hospital, where he underwent an operation for removal of fluid from the pleural cavity. A little later he died.

The California Industrial Accident Commission concluded that death resulted from an enlarged heart condition which did not arise out of or in the course of employment and the employer was discharged of all responsibility for the death of the employee. The case was appealed to the State Supreme Court, which found that the commission erred in not granting compensation. The case was remanded with instructions to determine the degree of dependency in order properly to fix the benefits payable.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

THE usual seasonal contraction in the volume of industrial employment was shown at the beginning of January, 1929, the resulting losses involving practically the same proportion of the aggregate staffs as that indicated on January 1, 1928. The employment situation however, continued better than on the corresponding date in any other year of the record, which was instituted in 1920. Employment in recent months has been maintained at an exceptionally high level, so that many employers took advantage of the opportunity of closing their entire plants during the holiday season for necessary repairs and inventories, as well as to provide a vacation for their staffs. The Dominion Bureau of Statistics tabulated statements from 6,358 firms, each with at least 15 employees, in all industries except agriculture, fishing, hunting and highly specialized business. The payrolls of these concerns declined from 983,698 persons on December 1 to 918,780 at the beginning of January, a decrease of some 65,000 persons, 6.6 per cent. Reflecting this contraction, the employment index number (based upon the 1926 average as 100) stood at 109.1 on January 1, 1929, compared with 116.7 in the preceding month, and with 100.7, 95.9, 90.7, 84.9, 89.8, 87.3, 78.8 and 88.8 on the same date in 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

At the beginning of January, 1929, the percentage of unemployment reported to the Department of Labour by local trade unions stood at 6.6, contrasted with 4.2 per cent of idleness at the beginning of December, and with 6.6 per cent at the beginning of January, 1928. The percentage for January was based on the reports tabulated by the Department of Labour from a total of 1,695 local trade unions with an aggregate membership of 190,839 persons.

Reports received by the Department of Labour from the office of the Employment Service of Canada showed a decrease in the number of placements during November

when compared with the preceding month, chiefly due to the seasonal curtailment of outdoor work.

The average cost of a weekly budget of twenty-nine staple foods was little changed being \$11.30 for the beginning of January, 1929, as compared with \$11.31 for December, 1928; \$11.19 for January, 1928; \$11.37 for January, 1927; \$11.63 for January, 1926; \$10.77 for January, 1925; \$10.78 for January, 1924; \$10.52 for January, 1923; \$11.03 for January, 1922; \$14.48 for January, 1921; \$15.30 for January, 1920; \$16.92 for June, 1920 (the peak); \$12.42 for January, 1918; and \$7.73 for January, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics has been revised and based upon prices in 1926 as 100. This index stood at 94.5 for January, 1929, the same level as for December, 1928, as compared with 97.3 for January, 1928.

The time loss due to industrial disputes in January, 1929, was about two-thirds of that in December, though the number of workers involved was greater. The time loss was less than in January, 1928. Eight disputes were in progress at some time during the month involving 754 workpeople and resulting in a loss of 5,724 working days. Corresponding figures for December, 1928, were eight disputes, 449 workpeople and 8,628 working days; and for January, 1928, 10 disputes 517 workpeople and 8,029 working days.

### Industrial Disputes Investigation Act

During January the Department of Labour received reports from three Boards of Conciliation and Investigation in connection with disputes respectively involving printers at Calgary, locomotive firemen employed on the eastern lines of the Canadian Pacific Railway Company, and street Railway employees at Hull, Quebec. There were some further proceedings in connection with the dispute at the Angus car shops of the Canadian Pacific Railway Company, on which a Board had previously made

a report. The text of the three reports, and full particulars concerning the administration of the act during the month, will be found on page 128.

#### Reference Boards for Teachers in Saskatchewan

A bill to amend the School Act is now before the Saskatchewan Legislature, its purpose being to provide for the establishment of boards of reference to deal with disputes arising between teachers and boards of School trustees. It is proposed that such Boards should consist of the school inspector, a representative of the teachers and one of the school trustees. Either party concerned may apply for the appointment of a board. The Hon. J. G. Gardiner, premier and minister of education of the province, who introduced the bill, stated that he believed it would have the effect of bringing both parties to give more careful thought to their mutual relationships, particularly with regard to any action which might be contemplated before the completion of a school term.

#### Progress of Old Age Pensions in Canada

An Order in Council, dated January 25, 1929, making the Old Age Pensions Act effective in the Northwest Territories, is printed on another page of this issue.

The speeches from the Throne at the opening of the sessions of the Legislatures of Ontario and Alberta intimated that bills would be introduced to provide for the establishment of Old Age Pension systems. In Ontario it was intimated merely that such legislation would be submitted. In Alberta the statement was as follows: "In accordance with the intimation given to this house during the last session, my ministers have inquired and considered the needs of the Province in the matter of Old Age Pensions, as well as the problems involved in framing and financing a scheme suited to the needs and circumstances of the Province, and in conformity with the Old Age Pensions Act of the Dominion". At the session of 1928 (LABOUR GAZETTE, May, 1928, page 438) the Hon. John Brownlee, premier of the Province, announced that a careful inquiry would be made into this question before the next session, and that information thus secured would decide whether the federal scheme would be applied to Alberta.

Statistics in connection with the administration of Old Age Pensions in British Columbia, Saskatchewan and Manitoba for the last

three months of the year 1928, are given on another page.

#### Workmen's Compensation in Saskatchewan

The legislature of Saskatchewan is considering a bill to establish a system of Workmen's Compensation similar to that in Manitoba, Ontario, and the other provinces with state accident insurance. It was announced at the opening of the present session of the Legislature that the provincial government intended to introduce legislation providing for a "provincial system" of Workmen's Compensation. "This has been decided," it was stated, "after a very careful investigation of the conditions existing in this province, and will result, it is hoped, in a more satisfactory and assured position for employes with a more equitable distribution of costs to employers." Early last year the government appointed a special commission under the Public Inquiries Act, to investigate this subject (LABOUR GAZETTE, April, 1928, page 344). Many of the witnesses recommended the adoption of a "state-fund" system such as exists in Ontario, Manitoba and other provinces. The bill subsequently introduced in the legislature was based upon the conclusions reached by the commission. It is largely modelled upon the Workmen's Compensation Acts of Manitoba and Ontario, provision being made for the establishment of a Board to administer the Act, and for an accident fund maintained by means of assessments levied on employers of labour. The new act abolishes the previous system under which compensation cases were dealt with by means of court procedure. A full outline of its provisions will be given in a future issue, in an account of the legislation enacted at this year's session of the legislature.

#### Some effects of minimum wages for women in Quebec

The second annual report of the Quebec Minimum Wage Board, summarized on another page of this issue, records a marked improvement in the conditions of female employment in those industries in which minimum wage orders have been in force for a year or more. The orders governing the employment of female workers in laundries, dye-works and dry cleaning establishments took effect on March 1, 1927, and had been in force for one year and four months when the report was prepared. These regulations not only fix minimum weekly rates of wages for experienced and inexperienced employes, but set a definite limit to the proportion of inexperienced to experienced workers. During the

year a marked reduction was noted in the number of inexperienced workers, and a corresponding increase in the number of experienced workers, the number of those receiving the full minimum rate as experienced workers being about doubled. The average weekly wage earned by all the employees, experienced and inexperienced, increased in the Montreal district from \$11.75 to \$12.65, and in the rest of the province from \$8.16 to \$9.36. On the other side, the report quotes the opinion of employers to the effect that the minimum wage law, instead of hurting the industry has rather stabilized it by suppressing the unfair competition of employers who paid inadequate wages, and by supporting those who paid fair wages. At the same time it is pointed out that the law guarantees to workwomen a minimum wage from the start, with periodical increases fixed in advance, making employment steadier and reducing the labour turnover.

#### **Movement to check accidents in building industry**

A movement is on foot within the construction industry in the Toronto district to petition the Workmen's Compensation Board of Ontario for permission to establish an Accident Prevention Association under section 101 of the Workmen's Compensation Act. This section provides that employers in any of the classes included in Schedule I of the Act may form themselves into an association for accident prevention, and may make rules for that purpose. "If the Board is of opinion that an association so formed sufficiently represents the employers in the industries included in the class, the Board may approve such rules, and when approved by the Board and by the Lieutenant-Governor in Council they shall be binding on all employers in industries included in the class."

Commenting on this movement within the building industry, Mr. George Gander, secretary of the Toronto Builders' Exchange, writing in the *Contract Record and Engineering Review* (January 30, 1929) contracts conditions in the building with those in other industries where standardization is less difficult. In building, he points out, it rarely happens that two jobs can be done in exactly the same manner.

"The move by the Toronto group", he says, is one that should be supported to the very limit by everyone in the district affected; and it should be copied everywhere throughout the Dominion. It should be remembered

that accident prevention work, while it may cost money to maintain, is infinitely less expensive from all angles than the continual drain caused by accidents. Wherever the scheme has been employed it has paid large dividends in the form of accident reduction, and will do the same thing in the construction industry."

In the last issue of the *LABOUR GAZETTE* (page 5) reference was made to an address by Dr. Ethelbert Stewart, pointing out the special risk of the building industry, and recommending the formation of a special safety code to govern building practices.

#### **Fair wages on water power development**

In connection with the regulations under which licenses are granted by the Dominion Government for Dominion water-power rights, an order in council has been passed requiring the insertion in all such licenses of a Fair Wages Clause for the protection of the workmen employed in the terms following:—

83A. Every license shall be deemed to be executed on the express condition that the licensee shall pay or require to be paid to those employed in the construction, alteration, extension, maintenance and operation of the works authorized by such license, wages not less than those generally accepted as current for similar services in similar undertakings in the locality, and that such licensee shall maintain conditions of labour not less favourable than these prevailing in similar undertakings in the locality.

#### **New bulletin on technical education**

The Technical Education Branch of the Department of Labour has just published Bulletin No. 29 which consists of three papers read at the Third Annual Convention of the Technical Section of the Ontario Education Association at its meeting held in Toronto last April. These papers deal with the following subjects:—The Technical Schools as a Preliminary to Hospital Training, by Miss O'Donoghue, of the Windsor-Walker-ville Technical School; The Influence of Art on Home Economics, by Mr. S. S. Pinlay, of the Riverdale Branch Technical School, Toronto; and What Technical Schools have done to meet the Recommendations of the Royal Commission on Technical Education, by Mr. F. S. Rutherford, Assistant Director of Technical Education for the Province of Ontario.

### Reform of mine rescue work in Alberta

A complete reorganization of mine rescue work in Alberta in the near future was announced by the Hon. Alexander Ross, chairman of the Workmen's Compensation Board of the Province, in the course of an address delivered at the recent convention of the Alberta Federation of Labour at Lethbridge. He stated that the Drumheller field was the best organized in the province in respect to the provision of training in relief work, but that better provision was needed in the Mountain, Crow's Nest Pass, and Lethbridge fields. Mr. Ross said further that a "safety-first" campaign would be undertaken immediately throughout the province for the purpose of reducing the number of industrial accidents, of which by far the largest proportion were "psychological", being caused by carelessness on the part of the parties concerned. The Mining industry is reported to be responsible for the majority of the accidents reported to the Board, one employee in every thirty in this industry being injured in the course of each year. Logging comes second in order, with payments for compensation during the past year totalling \$100,000. The building industry has the third place in the number of accidents reported.

### National Health Insurance in Great Britain

On January 1 the new British National Health Insurance Act became effective. Some of the provisions of this measure were outlined in the *LABOUR GAZETTE*, April, 1928, page 341, in connection with its introduction as a bill earlier in the same year. Certain classes of workers not employed under a contract of service, and not previously insurable for compulsory health insurance, are now brought within the scope of compulsory insurance under the National Health Insurance Act, 1924, and the Widows', Orphans' and Old Age Contributory Pensions Act, 1925. The classes of employment affected by the new provisions are (i) Employment by way of manual labour under a contract for the performance of such labour for the purposes of any trade or business, except in so far as such employment is excluded by a special order. (ii) Employment as a master, or member of a crew, of any fishing or other vessel registered in the United Kingdom, or of any other British vessel of which the owner, or if there be more than one owner the managing owner or manager, resides or has his principal place of business in the United

Kingdom, when the person so employed is remunerated by a share in the profits of gross earnings of the vessel, except in so far as such employment is excluded by special order.

It is stated that the provision applies only to class (i) where the person doing the manual work takes an active part in it himself, and where the work is performed for the purposes of the employer's trade or business. Thus, it does not apply to a contractor or subcontractor who only supervises the work of his assistants, without taking any substantial part in the manual work himself, or who is carrying out work not for the purposes of the trade or business of the person with whom he contracts—e.g., private domestic work where the person employed contracts directly with the householder.

As regards share fishermen, it is stated that the effect of the new provisions is to bring into compulsory health and pensions insurance share fishermen who work as co-adventurers, and are not already insured as being employed under a contract of service. The new clause applies irrespectively of whether the fisherman has any share in the ownership of the boat or gear, or whether he is only contributing his labour to the venture. The only exception is where the fish caught is shared out amongst the crew for their own consumption or for sale, instead of being first sold and the proceeds shared. Fishermen working under such a system are excluded from the new clause by a special order.

### Movement for co-ordinated Social Insurance

Some employers in the United States are now in search of some general principle under which a definite proportion of the increasing profits of industry would be regularly invested in a comprehensive provident social scheme. This latest phase of social insurance is described in the *Bulletin* of the Taylor Society (New York) for December, 1928, in the course of an address by Mr. H. S. Person, the managing director of the Society. In order to illustrate the aim of this movement Mr. Person said that "just as a provident individual plans to work hard during the earlier part of life so that, through income from savings, he may enjoy relative independence and comfort during the latter part of life, so each generation as a group should so organize the distribution of the social income that individuals collectively may enjoy similar benefits." It is proposed that "a substantial portion of the larger social income which results from marked increase in techno-

logical efficiency should be handled after the manner of a credit to be drawn upon by workers after middle age, when physical capacity and productivity decrease as the result of age and of inflexibility in adjustments to new technological conditions."

Mr. Person notes the campaign for the shorter work week announced by the American Federation of Labour at its recent convention at New Orleans (LABOUR GAZETTE, January, 1929, page 27). Parallel with the movement for shorter working hours there is an equally strong development of sentiment in favour of unemployment insurance, old age pensions, group insurance, etc. The proposal is that these various movements should be co-ordinated in one comprehensive scheme. "The question is, whether we should, on the one hand, with each marked increase of technological efficiency, immediately shorten the secondary work-periods as much as possible, and uniformly for all age classes; or whether, on the other hand, for instance, there should not be a graduated scale of shortening the secondary work periods so that the length of the work-day or work-week would decrease from a scientifically determined maximum for the younger group, to zero for the old age group, income being provided for all during the entire life-span."

#### A criticism of industrial pensions

Some criticism of employees' pensions as an industrial policy is made in the *Journal of Industrial Hygiene*, January, 1929, by Dr. W. Irving Clark, of Worcester, Massachusetts. Dr. Clark examined the record of a factory employing 2,500 employees, established since 1885, and carrying a considerable number of pensioners. "Pensions", he says, "are, on the whole, a compromise which is unsatisfactory both to the company, because of the rapid increase in expense, and also to the worker, because at best a pension can only eke out his savings. Few workers prefer a pension to continued work. The worker wants to keep active in factory work as long as possible because he does not like to idle. He prefers the regularity, the activity, and the companionship of a factory job to trying to find something to occupy his time at home. If, because of lack of thrift, sickness, or other misfortune, his savings are scant, the small pension which he receives is of little help in maintaining the home, and he is frequently forced to change his residence to something less expensive or to live with one of his children—a thing which he usually does not wish to do. The fate of the poor pensioned employee is not a happy one."

The writer, after a detailed medical examination of the older employees, concludes, first, that while pensions are necessary, they are satisfactory neither to the worker nor to the company and should be postponed as long as possible; second, that by means of medical supervision and careful placement, older workmen may be kept at work which is of value to them and to the company; third, that the physical condition of a group of workers 65 years of age and over varies little from year to year, and fourth, that careful medical supervision between the ages of 50 and 65 should reduce the number of workers ultimately placed on the pension list.

#### Comparative cost of labour and materials in building

The relative cost of material and labour in representative cities in the United States is examined in the *Monthly Labour Review* (published by the U. S. Department of Labour) for January. Three cities were selected for the purposes of the investigation, namely Washington, D.C., Cincinnati, Ohio, and Decatur, Illinois, the period covered being the early part of 1928. The cost of the material was considered as being its actual cost as delivered on the job, including freight and hauling, and the labour cost as that of the labour on the job, not including work in shops, mills or quarries.

In the three cities taken as a whole material accounted for 54 per cent of the total cost of residential building and 61.7 per cent of non-residential building, while labour accounted for 46 per cent of the residential and 38.3 per cent of the non-residential building. By weighting each class of building by the proportion it formed of all building in the year 1927, it was found that 53.1 per cent of the total cost of all building was for material, and 41.8 per cent was for labour.

Carpenter work accounted for the largest percentage of the cost of residential building, followed by brickwork, concrete work, plumbing and plastering, in the order named. In non-residential buildings only three items, namely, excavating, plastering and painting, showed a higher cost for labour than for material.

#### Industrial benefits of group insurance

Group insurance as a means of advancing social welfare was discussed by Mr. James E. Kavanagh, second vice-president of the Metropolitan Life Insurance Company, in an address delivered in December to the Association of Life Assurance Presidents at New York. Such insurance to an amount estimated at more

than seven and a half billions of dollars is now in force in United States and Canadian insurance companies. These companies number 57, ten being in Canada. The total number of lives covered is approximately five millions, the average coverage per life being a little less than \$1,500. On this figure Mr. Kavanagh has the following comment: "If one were to consider capitalized value rather than the annual income of the American worker, the proportion of life value covered by group insurance on employees in America is still pathetically small."

Approximately 17,000 employers of labour in the United States and Canada have programs of employees' group insurance ranging from \$500 to \$10,000 per life. The method of buying group insurance is described by Mr. Kavanagh as follows: Group life insurance is sold to employers of labour that have fifty or more employees. No medical examination is required. When the employee pays a portion of the premium, which is nearly always the case, there must be at least 75 per cent of the eligible employees participating in order to have the insurance effective. The contract, however, can be placed only through the employer. The employees get their insurance at what is to them a level premium rate. The employer pays the balance or uncertain portion, which may vary in different concerns from year to year, depending upon the age distribution and the amount of insurance per life. The employer deducts from the employee's pay envelope or monthly cheque the amount authorized by the employee; he assembles the total deductions and adds to them his own portion necessary to make up the aggregate premium; then, in one cheque, he remits the amount direct to the insurance company, usually monthly.

The insurance companies, by handling group insurance, have come into contact with the problems of labour conditions. The Metropolitan Company has already built up an industrial division with sections dealing respectively with industrial hygiene, business administration, safety engineering, publicity, marketing, production engineering, and personal methods. The general benefits of group insurance are enumerated by Mr. Kavanagh as follows:

1. Greater co-operation between employer and employee;
2. Reduction in labour turnover;
3. Increased protection for the employees against the hazards of death, sickness, accident and old age;
4. Increased thrift amongst employees;
5. Increased co-operative drive for better health and better working conditions;
6. More intelligent effort to keep

well; 7. The creation of good will towards the employer throughout his constituency.

#### Progress in industrial relations activities

Recent developments in industrial relations activities in the United States are described in the issue for January 5, of the semi-monthly *Service Letter on Industrial Relations*, published by the National Industrial Conference Board (United States). Until recently industrial relations work was associated primarily with large business organizations, being regarded mainly as a substitute for the personal contact which is inevitably lost as industrial organizations grow. The developments of "industrial relations" by the larger firms have brought about such improvements in the position of the workers, and furthered mutual good will to such an extent, that smaller concerns also are now adopting industrial relations policies with these objects in view.

A recent survey conducted by the Board into 6,163 plants with a total of 2,500,000 workers shows the extent of the welfare activities of the smaller concerns. One-fourth of the companies employed 100 workers or less, and another quarter employed from 100 to 250; the remaining half employing between 500 and 1,000 workers. The main welfare activities in the smaller plants consists of group life insurance, vacations with pay, and supplemental bonuses. The number of smaller plants carrying group life insurance is considered noteworthy, since insurance carriers require a minimum coverage of fifty employees before issuing a group policy. Besides these three types of activity other industrial relations schemes, involving larger expenditures, are found most frequently in plants with at least 250 workers. Such work includes the provision of plant lunch rooms, mutual benefit association disability benefits, pensions, and work councils. About half of these activities are found in plants with working forces of 500 employees or more.

The survey showed that, of the 6,000 companies examined nearly 2,000 provide private group life insurance for their employees; more than 1,000 have accepted, in some form or another, the principle of paid vacation for wage earners; nearly 1,000 have installed plant lunch rooms; almost as many are operating supplemental bonus plans; while disability benefits and pensions are paid and work councils are in operation in many plants. "Quite evidently," it is stated, "organized industrial relations work is, in many business establishments in the United States, recognized as a

necessary part of administrative procedure, applicable by adaptation to the smaller as well as to the larger plants."

### Industry's duty towards the displaced worker

President Daniel Willard, of the Baltimore and Ohio Railroad, testifying recently before the United States Senate Committee on Education and Labour, expressed the opinion that upon industry generally devolves the burden of providing employment for the men displaced by the introduction of labour-saving devices which make it possible for one man to do the work formerly done by several. "It is for the benefit of society," he said, "we have mass production and reduced costs. Then society must assume the responsibility of giving work to these men, and the Baltimore and Ohio, as a unit of society, has its responsibility in the matter.

The president explained how the railroads have been stabilizing employment in recent years, and how his own company in particular had been able to reduce its labour turnover from 20 per cent in 1923 to 10 per cent at the present time. He admitted that before the war "we did not have a consciousness of the duty of trying to stabilize our employment." The methods now used include the postponement of new building and repair work to times when train movement is lowered. Mr. Willard declared himself impressed with the idea that if society is to take advantage of mass production and reduced costs, it must assume responsibility for finding employment for the men who are thus displaced.

### Benefits of teachers' superannuation schemes

The Hon. J. G. Gardiner, premier of Saskatchewan, announced in the provincial legislature in January that the government intended, in the recess following the present session, to formulate an adequate superannuation scheme for school teachers. The teachers of the province submitted a draft bill last year, but it was considered by the government to be inadequate in its provisions. This year also they submitted another draft bill which was largely based on the Civil Service Superannuation Act, but the government considered that the difference in the employment conditions of teachers and civil servants would require differing provisions in regard to superannuation.

In the discussion on the subject in the legislature it was pointed out that in Canada teachers' superannuation schemes were in operation in Nova Scotia, New Brunswick, Quebec, Ontario, and Manitoba, while British

Columbia and Alberta had legislation on the same subject in view. A teachers' superannuation scheme, it was considered, would stabilize and unify the teaching profession; keep the profession clear of "deadwood" by retiring those rendered ineffective by old age; promote efficiency by assuring every teacher of a maintenance in old age, leaving him free to devote himself to his work; attract the right kind of people to the teaching profession, and keep them there; maintain the flow of promotion that would assure that young and progressive men and women would be in charge of important positions; retain in the province the best of the teaching profession who would otherwise go where they would find more favourable conditions.

### Problem of collection of unpaid wages

The Industrial Commission of Wisconsin, in its biennial report for the years 1926-28, suggests to the legislature of the state the advisability of vesting the commission with authority to deal with cases concerning the collection from employers of unpaid wages. At the present time, the workers' only legal recourse is to bring suit in the courts for amounts up to \$200. In cases where the worker obtains a judgment for any amount under \$50 an allowance of \$5 is provided by law toward payment of the attorney's fees. Claims for wages arise mostly in cases where the employer's liability for wages has not been clearly defined, or where the employer, without entering on an agreement, assumes the right to adjust wages in respect to alleged negligent service or damages to materials on the part of the workmen. Commenting on the workman's position under this system, the Commission says:—

"Not infrequently the unpaid wages clearly due, in addition to the amount involved under controverted questions, is withheld pending a solution of the deadlock. The employee is out his time and labour represented by the wages withheld, and he finds he must further assume the risk of a lawsuit with its fees for a lawyer and possible court costs if he would undertake to prove his claim and secure a judgment therefor. The employer, on the other hand, stands by until compelled to pay. It is well recognized by litigants, judges and attorneys that the keen court contest involving a small sum almost invariably develops into a contest to see who will pay the costs of the suit. As the case becomes well advanced, each party litigant would be willing to abandon his position regarding the claim of debt or damage if he could accomplish it gracefully and at the same time escape liability for the costs.

"The court method of settlement of wage disputes is so burdensome, so protracted, and so unsatisfactory to all parties that public interest calls for the development of some system like the administration of workmen's compensation, for the arbitration of the issue in wage disputes. It must be a simple, inexpensive, speedy system for the determination of the facts. The costs of adjusting the dispute under the present system do not correspond to the usual efficient manner in which industry functions."

The City Council of Sydney, Nova Scotia, is supporting a recommendation made by the local workmen's council that the fees paid to jurymen serving on a coroner's or a Supreme Court Jury should be increased to the amount of a day's pay.

The Canada Cement Company plant at Exshaw, Alta., has just won the safety trophy offered annually by the Portland Cement Association for a perfect score in safety performance, which means no accidents throughout the year. The trophy is open to competition among practically all Portland cement manufacturers on the continent and the victory of the Exshaw plant in 1928 gives the Canada Cement Company a remarkable record since five of its plants have now won this trophy in the past four years. Between 1920 and 1927 the Canada Cement Company reduced accidents by 76 per cent and increased man-power efficiency by 86 per cent.

The Minimum Wage Board of Alberta has amended order No. 4 governing female employees in personal service occupations. This order was first gazetted in January, 1925, and was amended in July, 1928 (*LABOUR GAZETTE*, August, 1928, page 854). The change relates to the definition, for the purposes of the Act, of "hairdressing or manicuring establishments or schools or beauty parlours or schools of beauty culture, or barber shops where any charge is made for services to the public". The following words are inserted after the word 'schools': "where any charge is made to, or any consideration is received from, the public, for services, material, use of premises, or in any manner relating thereto." The minimum rate of \$14 per week remains unchanged.

A conductor employed by the Ottawa Electric Railway Company, who held insurance against sickness with an insurance company, accepted a month's remuneration from the latter company, and it was claimed by the company that he signed a release of the policy. Subsequently he claimed a further sum of \$300 from the company, contending that while he had signed a receipt for a month's sickness, this did not cancel the future emoluments which might accrue from the policy. The County Court gave judgment for the plaintiff for the full amount of his claim, with costs, holding that he had not received consideration for the cancellation of the future benefits of his policy.

## Mining in Ontario in 1928

The *Canadian Mining Journal*, December, 1928, contained a review of Mining in Ontario by Mr. J. A. McRea. "Although all the latest machinery and every possible labour-saving device," he says, "has been introduced into the mines of Northern Ontario yet the increase in the scope of work is resulting in a greater pay-roll than ever at any time in the past. The 1928 records will show approximately \$18,000,000 paid in wages by the metal mines of this province,—distributed to about 12,000 employees and representing an average of about \$1,500 a year to each.

"These wages of \$18,000,000 were earned chiefly at Sudbury, Timmins, Kirkland Lake and Cobalt. And while this reflects one reason for the prosperity throughout the country, yet there is the added fact that

about \$15,000,000 was expended in other ways, chiefly for material and supplies—which, in turn, provided employment for many men in factories and railways throughout the country. Add to this the fact that profits of nearly \$30,000,000 will be realized this year either for distribution in dividends or for accumulation in surpluses and paid-up development, and an idea may be gathered of the prosperity which is directly attributable to the growing industry of Northern Ontario. There is, however, another branch of industry—the prospecting activity. In this direction there is no way of arriving at the number of men actually engaged. Licenses are taken out by each prospector, but licenses are also taken out in the names of relatives, friends, and employers."

## GENERAL REVIEW OF 'THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of January was reported by the Superintendents of the Employment Service of Canada to be as follows:—

Owing to more favourable weather conditions, activity in the logging industry was more brisk, and several woodsmen were being placed. For the season of the year the coal mining industry appeared to be quite favourable, and fair production was reported. While building and construction were seasonally quiet in most centres, there was a fair amount of work in hand in the City of Halifax, while operations on the pulp and paper plant at Liverpool were being carried on. The catches reported by the fishing industry were somewhat disappointing. The level of production of manufacturing plants was quite normal, with the iron and steel industries reported as in fair condition. Trade was stated to be fair. There was quite a demand for women domestic workers and several placements were being made.

Fishing in the Province of New Brunswick was reported by the industry as being fairly good. Although weather conditions had improved to some extent, the lack of snow was still interfering with activity in the logging industry. Manufacturing throughout this Province was about normal for the time of year. Construction was rather dull, although a substantial amount of work was in prospect, particularly in the City of Saint John; work had again been started on the paper mill at Dalhousie. Transportation activity was fair, with the winter port activities at Saint John particularly active. Trade was quite satisfactory. The usual number of placements of women domestic workers were made.

The employment offices in the Province of Quebec reported that very few farm placements were being made. With the approach of the end of the cutting season in the logging industry throughout this Province, the demands for workers were considerably decreased. Manufacturing industries generally, and particularly in the metal group, were showing satisfactory activity, with additional workers being taken on in some lines. Orders for building tradesmen and labourers were seasonally few, but prospects for work for the spring were hopeful. Railway traffic was reported as being heavy. Trade was quite satisfactory for the season. The number of orders for domestic workers being received was quite substantial, with no shortage of applicants.

Orders for farm workers being registered at Ontario offices were not numerous, as it was yet too early to expect a demand in anticipation of spring work. For the winter season conditions in the building and construction group were regarded as very satisfactory, with the prospect of substantial work opening up throughout the Province with the arrival of spring. While few orders were being received for workers in the lumbering industry, the demands were not heavy owing to the advance of the season. The mining industry in the northern section of the Province continued on a normal basis, but few additional workers were being taken on. Manufacturing continued steady, some additional help being engaged by factories in various lines. The usual number of vacancies for domestic workers were being notified with the customary shortage of suitable applicants. Apart from Winnipeg, where a substantial volume of work was in hand for the season of the year, the building and construction group were very quiet throughout the Province. The demands for logging workers being registered were not very numerous, and many applicants were still anxious to secure such work. The mining activity in the central portion of the Province was still going forward with the same vigour. Trade was reported as being satisfactory. Casual vacancies for general labour were not particularly numerous. Demands for women domestic workers were being registered, with no noteworthy shortage of applicants reported.

Throughout the Province of Saskatchewan there seemed to be plenty of applicants seeking farm work, although the vacancies being notified for this class of workers were not very numerous. Orders for logging workers were few in number, but some difficulty was being experienced in securing suitable applicants. Throughout the Province building and construction were fairly quiet. While there was no difficulty in filling orders for general labour for casual employment, a fair number of such orders were being notified. The demand for women domestic workers was not large, and there was no difficulty in securing suitable applicants to meet requirements.

The severity of the weather throughout Alberta had reacted unfavourably on the number of farm vacancies of which the employment offices in this Province were being advised. Building and construction were also being interfered with by the cold, although a fair volume of work for the time of year was under way. The demand for workers in the logging

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(12) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports exports, car loadings, shares traded and bank debts. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep, and hogs; storage holdings of butter and cheese.

group was only fair, with plenty of applicants available. Some slight improvement in coal mining conditions was noted, although the industrial dispute in the Drumheller district was still interfering with the normal progress of the industry. Casual demands for general labourers were easily filled from available applicants. The number of vacancies for women domestic workers showed no increase, nor did the applicants for such work appear to be any more numerous.

The logging industry in the Province of British Columbia appeared to be quite active, and some vacancies for additional workers were being registered. Although the mines were not taking on more workers, the industry as a whole seemed to be quite busy. Building and construction were fairly active for the season of the year. Manufacturing industries showed a normal volume of production. Demands for women domestic workers remained steady with Vancouver reporting shortages in some lines. Employment conditions, generally speaking, appeared to be quite favourable throughout British Columbia for the time of year.

**EMPLOYERS' REPORTS.** The seasonal curtailment in employment registered at the beginning of January, 1929,

involved much the same proportion of the reported payrolls as on January 1, 1928. Employment in recent months has been maintained at an exceptionally high level, so that many employers took advantage of the opportunity of closing their entire plants during the holiday season for necessary repairs and inventories, as well as to provide a vacation for their staffs. The year-end epidemic of influenza which prevailed in many areas, also resulted in reduced employment. Despite these factors, the situation continued better than on the corresponding date in any other year since the record was instituted. The Dominion Bureau of Statistics tabulated returns from 6,358 firms, whose payrolls declined from 983,698 persons on December 1, to 918,780 at the beginning of January. Reflecting this contraction, the index (based upon the average in 1926 as 100), stood at 109.1 on January 1, 1929, as compared with 116.7 in the preceding month, and with 100.7, 95.9, 90.7, 84.9, 89.8, 87.3, 78.8 and 88.8 on the same date in 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

All provinces recorded declines, those in Quebec and Ontario being most extensive. In the Maritime Provinces, the recession took place chiefly in manufacturing and construction, while mining was also rather slacker, but logging and transportation showed sea-

sonally heightened activity. In Quebec, manufacturing, construction and transportation reported especially pronounced losses, while the tendency was also unfavourable in logging, mining and trade. In Ontario, manufacturing, construction and transportation registered the greatest losses, but logging and trade showed improvement. In the Prairie Provinces, construction and transportation reported the most noteworthy decrease; on the other hand, iron and steel and logging indicated increased activity. In British Columbia, lumber factories, logging and construction recorded important curtailment, while there were smaller losses in food, electric current and other factories and in mining and trade.

There were contractions in seven of the eight cities for which separate tabulations are made, Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor and the Adjacent Border Cities and Winnipeg reporting reduced employment, while practically no change was shown in Vancouver. In Montreal, important declines were noted in construction, transportation and manufacturing. In Quebec, manufactures, shipping and construction reported losses in employment. In Toronto, there were contractions in manufacturing and also in construction and transportation, but trade showed improvement. In Ottawa, manufactures and construction indicated seasonal curtailment, while little general change occurred in other industries. In Hamilton, manufacturing showed reduced activity, while only small changes took place in other groups. In Windsor and the Adjacent Border Cities, manufacturing and building were dull. In Winnipeg, manufacturing and construction registered the greatest declines, but transportation and communications were also slacker. In Vancouver, employment in manufactures, construction and trade showed a falling-off, while transportation afforded increased employment.

An analysis of the returns by industries shows important contractions in manufacturing, construction, transportation, logging, mining and communications, while services and retail trade recorded gains.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of January, 1929.

**TRADE UNION REPORTS.** Further increases in the volume of unemployment were reported among local trade unions at the close of

December than in the previous month, attributable in part to holiday

closings and subsequent inventory periods augmented by mid-winter slackness in various lines of business. The situation in Canada as a whole, however, remained unchanged during December from that of the same month a year ago, the percentages of inactivity at the close of both months being identical. During December reports were tabulated from a total of 1,695 labour organizations, covering a membership of 190,839 persons, 12,553 of whom were idle at the end of the month, a percentage of 6.6 in contrast with 4.2 per cent of inactivity in November and with 6.6 per cent in December, 1927. New Brunswick and British Columbia unions were the only ones to record improvement over November and this was slight, while in the remaining provinces the general trend was adverse. Reductions in activity in building and construction operations influenced the situation to a considerable degree in several of the provinces, principally Ontario and combined in Quebec with recessions in the garment trades were practically responsible for the unemployment gain in that province being the most outstanding. Expansion in employment was recorded in Nova Scotia, New Brunswick, Ontario, Saskatchewan and British Columbia during the month under review when compared with December a year ago which the reductions in employment afforded Quebec, Manitoba and Alberta members were just sufficient to counteract.

A review in greater detail of the unemployment situation at the close of December 1928 as indicated by local trade unions is printed elsewhere in this issue.

**EMPLOYMENT OFFICE REPORTS.** During the month of December, 1928, the offices of the Employment Service of Canada made 23,425 references of persons to positions, and effected a total of 22,529 placements. The number of placements made in regular employment during the month was 12,166, of which 9,046 were of men and 3,120 of women workers. In casual work the offices made 10,363 placements. Employers notified the Service of 23,708 vacancies, of which 14,014 were for men and 9,694 for women. The number of registrations for work was 22,114 of men and 9,812 of women, a total of 31,926 applications. Compared with the preceding month, and also with December a year ago, the transactions of the offices show a slight decline, the records for November, 1928, showing 28,656 vacancies offered, 40,924 applications made, and 27,318 placements effected,

while in December, 1927, there were recorded 24,384 vacancies, 34,149 applications for work, and 23,374 placements in regular and casual employment. A report in detail of the work of the offices for the month of December, 1928, may be found elsewhere in this issue, and on another page will be found a statement of the activities of the offices for the last quarter of the same year.

**BUILDING PERMITS AND CONTRACTS AWARDED.** According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 63 cities during December was \$16,742,139 as compared with \$15,822,401 in November, 1928, and with \$11,755,566 in December, 1927.

The *MacLean Building Review* estimates the total value of the construction contracts awarded in Canada in January, 1929, at \$41,962,900, setting a new record for this month. Of this amount \$20,064,000 was for engineering construction; \$16,895,900 was for business buildings; \$925,500 was for industrial work.

The apportionment of the contracts awarded during January, 1929, by provinces was as follows: Ontario, \$12,473,000; Quebec, \$4,578,900; New Brunswick, \$71,500; Nova Scotia, \$4,500; Prince Edward Island, \$17,500; British Columbia, \$7,710,100; Alberta, \$824,500; Saskatchewan, \$595,700; Manitoba, \$15,687,200.

### Production and Trade

**INDUSTRIAL PRODUCTION.** Figures showing the volume of production in certain industries during recent months and also in the corresponding months in the previous year are given in the table on page 124.

The expansion in the physical volume of business in Canada during 1928 was highly satisfactory, an index combining the main lines of business activity in physical units averaging 15.5 per cent higher than in the preceding year. The majority of the indexes of physical volume maintained in the Dominion Bureau of Statistics and published in the *Monthly Review of Business Statistics*, show that there were marked advances in most lines over the preceding year.

In the first half of the year, the building industry was especially active, contracts awarded and building permits establishing for the year new high records in the history of the Dominion. The increase in the output of copper and nickel was the striking feature in the mining industry. General manufacturing produc-

tion showed an increase of about 14.5 per cent, according to an index embracing the principal commodities. The imports of raw cotton showed an increase during the latter half of the year, indicating that preparations are being made for increased production. The production of steel established a new record for the post-war period. More motor cars were produced than in any previous year, and the output of tires and gasoline broke all previous records. The expansion in the production of newsprint was continued throughout 1928. The production of flour and refined sugar was greater during the latter half of the year. The export of semi-manufactured lumber was about the only factor to show a substantial decline. Revenue carloadings, mainly reflecting the heavy movement of grain, showed an increase of 9 per cent, over the preceding year. The export of wheat and flour also accounted in part for the increase in merchandise exports to the second highest total in history surpassed only under the abnormal war-time conditions of 1917. The increase in the imports over 1927 was about 12.5 per cent. Active conditions in Canadian industry attracted a greater number of workers, the employment situation throughout Canada being decidedly more favourable than in any other year on record from 1920 to the present.

**EXTERNAL TRADE.** A summary of Canadian Trade prepared by the Department of National Revenue shows that in December, 1928, the merchandise entered for consumption amounted to \$94,620,925 as compared with \$102,966,710 in the preceding month and with \$83,262,695 in December, 1927. The chief imports in December, 1928, were: Iron and its products, \$20,268,345; Fibres, textiles and textile products, \$16,214,684; Non-metallic minerals and products, \$14,226,306.

The domestic merchandise exported during December, 1928, amounted to \$130,847,423, as compared with \$167,013,618 in November, 1928, and with \$130,277,157 in December, 1927. The chief exports in December, 1928, were: Agricultural and vegetable products, mainly foods, \$64,032,940; Wood, wood products and paper, \$24,577,110; Animals and animals products, \$13,391,022.

In the nine months ending December, 1928, exports of domestic merchandise totalled \$1,071,647,164 and imports \$936,349,917.

### Strikes and Lockouts

The time loss due to industrial disputes in January, 1929, was only about two-thirds of that in December, 1928, although the number of workpeople involved was considerably greater. The time loss in man working days was also less than in January, 1928. There were in existence during the month, eight disputes, involving 754 workpeople, and resulting in a time loss of 5,724 working days, as compared with eight disputes, involving 449 workpeople and resulting in a time loss of 8,628 working days in December. In January, 1928, there were on record ten disputes involving 517 workpeople and resulting in a time loss of 8,029 working days. Four new disputes commenced during January but none of the eight disputes recorded terminated during the month. At the end of January, therefore, there were on record eight disputes affecting 754 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was little changed at \$11.30 for the beginning of January, 1929; as compared with \$11.31 for December, 1928; \$11.19 for January, 1928; \$11.37 for January, 1927; \$11.63 for January, 1926; \$10.77 for January, 1925; \$10.78 for January, 1924; \$10.52 for January, 1923; \$11.03 for January, 1922; \$14.48 for January, 1921; \$15.30 for January, 1920; \$16.92 for June, 1920 (the peak); \$12.42 for January, 1918; and \$7.73 for January, 1914. The most important change was a fall in the price of eggs, while less important declines occurred in the prices of bacon, lard, evaporated apples and granulated sugar. The prices of beef, veal, milk, butter, cheese, rolled oats, rice, beans and potatoes were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$21.55 at the beginning of January, 1929, as compared with \$21.56 for December, 1928; \$21.41 for January, 1928; \$21.59 for January, 1927; \$21.96 for January, 1926; \$21.09 for January, 1925; \$21.23 for January, 1924; \$21.13 for January, 1923; \$21.52 for January, 1922; \$25.30 for January, 1921; \$26.92 for July, 1920 (the peak); \$24.15 for January, 1920; \$19.61 for January, 1918; and \$14.49 for January, 1914. Fuel showed little change. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics has been revised and calculated on a new base, with 1926 as 100. This index stood at 94.5 for January, 1929, the same level as for December, 1928, as compared with 97.3 for January, 1928. The Vegetables and their Products group and the Non-Ferrous Metals

group were considerably higher, while the Fibres, Textiles and Textile Products group, the Iron and its Products group, and the Chemicals and Allied Products group also showed slight increases. The Animals and their Products group and the Wood, Wood Products and Paper group declined, while the Non-Metallic Minerals group was unchanged.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF JANUARY, 1929

**D**URING the month of January the Department received the reports of three Boards of Conciliation and Investigation established to deal with disputes between (1) the employing printers of Calgary and the Calgary Typographical Union No. 449; (2) the Canadian Pacific Railway Company, Eastern Lines, and certain of its employees, being locomotive firemen and hostlers, members of the Brotherhood of Locomotive Firemen and Enginemen; and (3) the Hull Electric Company and certain of its employees, being members of Division No. 591, Amalgamated Association of Street and Electric Railway Employees of America.

### Other Proceedings Under the Act

The Board of Conciliation and Investigation established in October, 1927, to deal with a dispute between the Canadian Pacific

Railway Company and certain of its employees in the Mechanical Department at the Angus Shops, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, was reconvened by the Minister of Labour on January 9, 1929, for the purpose of expressing an opinion upon a question which had arisen respecting the meaning of one of the recommendations contained in the Board's report dated January 14, 1928. The personnel of the Board was as follows:— Professor Edouard Montpetit, of Montreal, chairman, appointed on the joint recommendation of the other two members, Sir William Stavert, of Montreal, appointed by the Minister in the absence of a recommendation from the company, and Mr. J. T. Foster, also of Montreal, nominated by the employees.

### Report of Board in Dispute Between Canadian Pacific Railway and Locomotive Firemen and Hostlers

On January 18 the Minister received the report of the Board of Conciliation and Investigation to which had been referred for adjustment certain matters in dispute between the Canadian Pacific Railway Company, Eastern Lines, and certain of its employees, being locomotive firemen and hostlers, members of the Brotherhood of Locomotive Firemen and Enginemen. Fourteen hundred employees were stated to be affected by the dispute, which grew out of failure by the parties concerned to agree upon the adoption of a proposed revision of one of the articles of their schedule. The personnel of the Board established in this matter was as follows: The Honourable Mr. Justice W. L. Bond, of Montreal, chairman, appointed on the joint recommendation of the other Board members; Mr. Isaac Pitblado, K.C., of Winnipeg, the company's nominee; and Mr. R. L. Calder, K.C., of Montreal, the employees' nominee. The text of the unanimous findings of the Board is given below.

### Report of Board

*In the matter of the Industrial Disputes Act R.S.C., 1927, and of a dispute between The Canadian Pacific Railway Company (Eastern Lines), employers, and certain of its employees being locomotive firemen and hostlers, members of the Brotherhood of Locomotive Firemen and Enginemen, employees.*

To The Hon. Peter Heenan, a Member of His Majesty's Privy Council for Canada, and Minister of Labour.

The report of the Board of Conciliation and Investigation constituted under date of December 19, 1928, for the investigation of the dispute above mentioned, respectfully sets forth as follows:

The dispute referred to this Board is stated in the application to be—"Failure to agree upon the adoption of an intended revision by the Company of Article 31 of schedule to which locomotive firemen and hostlers object."

This Article 31, in its original form, is part of a tripartite agreement between The Canadian Pacific Railway Company, the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen, and it contains provisions affecting the engineers, and also the firemen and enginemen.

The engineers desire a revision of this article, and the proposed revision relates, *inter alia*, to an increase in the maximum and minimum mileage applicable to "spare" engineers, and the putting into effect of new regulations governing the maximum mileage of all engineers, and alterations in the method of computation of such mileage.

It is the contention of the present applicants that such revision affects, adversely, the provisions of the agreement as respects firemen—parties to such agreement, and they accordingly oppose it. The applicants submit that the result of the proposed revision is to alter the terms whereby "spare" engineers are demoted to firemen, and as a consequence the position of junior firemen is seriously affected inasmuch as they become more liable to periods of unemployment, and that the positions of senior firemen would be affected by demotion. The applicants also oppose the alterations in the computation of mileage, for similar reasons.

The Engineers on the other hand have contended before another Board and with the company that the proposed revision is a fair one.

It will be seen at once that the dispute was really one between two classes of employees rather than one between employer and employees, until the company gave notice that it would proceed to put the new rule into effect. The company now contends that the new rule is a fair one between the two classes of employees affected.

The proposed revision not having been put into effect by the company, the Brotherhood of Locomotive Engineers applied for a Board, which was granted, and that Board heard the application of the engineers for the enforcement of the article as revised. That Board made a report on the 25th of November, 1928, and based it, principally, on the effect of Article No. 24 of the joint agreement.

The portion of the article to which that Board referred reads as follows:—

"(a) The right to make and interpret contracts, rules, rates and working agreements for locomotive engineers shall be vested in the regularly constituted committee of locomotive engineers."

That Board, accordingly, affirmed the principle that the Brotherhood of Locomotive

Engineers was entitled to enter into an agreement with the company for the revision of Article 31 in the interests of the Engineers, and concluded that the company would be justified in giving effect to its provisions as so revised and as set out in its report.

The Brotherhood of Locomotive Firemen and Enginemen then applied for a Board, contending that Article 31 forms part of an agreement to which they also were parties, and the effect of such proposed revision is adverse to their interests. They point out that Article 24 (a), on which the former Board relied, is followed by another section—24 (b)—, in similar terms, granting to the firemen similar rights.

Article 24 (b) reads as follows:—

"(b) The right to make and interpret contracts, rules, rates, and working agreements for locomotive firemen and hostlers shall be vested in the regularly constituted committee of locomotive firemen."

The present applicants accordingly oppose the enforcement of the Revision of Article 31, in respect to which they do not agree.

The present Board was constituted to consider this latter application which stated that there was a failure to agree upon the adoption of an intended revision by the company of Article 31.

The company is thus placed in a dilemma arising out of a difference between two classes of its employees, and the present dispute (as already pointed out) is in reality not between employer and employee but between employees—a matter not contemplated by the provisions of the Act under which this Board has been constituted.

This Board met on the 7th of January, 1929, and heard the representatives of the Brotherhood of Locomotive Firemen and Enginemen, as also the evidence then submitted on its behalf, and has also subsequently examined the documentary evidence filed. It also heard the representatives of the company and examined the evidence submitted on its behalf.

Two representatives of the Brotherhood of Locomotives Engineers were also in attendance at the meeting of the Board, and on the invitation of the Board they outlined the position of that Brotherhood.

There is undoubtedly some evidence before this Board tending to establish that the interests of the present applicants may be adversely affected as a result of putting into effect the proposed revision, although the representatives of the company heard before this Board do not share that view. But as the Brotherhood of Locomotive Engineers is not a party to the present proceedings, it

does not appear to this Board that all possible avenues have been fully explored which might conceivably lead to a reconciliation or at least a modification of the conflicting views of the parties chiefly concerned. There did exist until recently a method whereby questions of this nature could be referred to arbitration as between the Brotherhoods concerned. As a result of the abrogation of what is known as the "Chicago Agreement," this method unfortunately no longer exists.

This Board accordingly recommends that the putting into effect of the proposed revision of Article 31 be postponed for a reason-

able period so as to permit the Department of Labour to endeavour to arrange without delay a conference between representatives of the two Brotherhoods with a view of bringing about a possible reconciliation or modification of their conflicting views.

The whole respectfully submitted.

(Sgd.) W. L. BOND,  
*Chairman,*

(Sgd.) I. PITBLADO,  
(Sgd.) R. L. CALDER.

MONTREAL, January 16, 1929.

### Report of Board in Dispute Between Employing Printers of Calgary and Calgary Typographical Union No. 449

A report was received on January 21, 1929, from the Board of Conciliation and Investigation established on the joint application of the employing printers of Calgary and the Calgary Typographical Union No. 449. The Board was composed of the Honourable Mr. Justice Harry W. Lunney, of Calgary, chairman, appointed on the recommendation of the other members, and Messrs. James H. Garden and Andrew Davison, both of Calgary, nominated by the employers and employees, respectively. The matters in dispute related to a minimum wage scale, the employment of non-union men when the union is unable to furnish union men promptly, employment of apprentices and scale of wages for apprentices. Forty employees were stated to be directly concerned in the controversy. The text of the Board report follows.

#### Report of Board

Both parties have agreed to abide by the decision of the Board.

The Board finds as follows:—

1. *Re Minimum Wage Scale.* That from and after the 28th day of January, A.D. 1929, for a period of one year ending the 27th day of January, A.D. 1930, the minimum scale for journeymen printers shall be at the rate of \$1 per hour for day work, night work to be paid at the rate of \$3 per week higher than day work.

2. If at any time the local union shall fail to promptly furnish as many competent compositors as the employer requires, the employer shall be at liberty to engage the required additional compositors anywhere without reference to their being members of the union or not and all persons employed under

such conditions shall make application for admission to membership in the union, upon the same terms and conditions as now govern the admission of others. In the event of their not being admitted to membership in the union, they shall be dismissed within one week after the union shall have notified the employer of its ability to furnish competent union help, and further that the agreed scale of wages, hours of employment, and working conditions shall apply to such persons during the period of their employment.

3. The number of apprentices in job offices shall not be greater than one for the first five (5) journeymen regularly employed, two up to ten (10) journeymen, and one additional apprentice for each ten (10) journeymen thereafter; provided, however, that no more than five (5) apprentices shall be employed in any one office; provided, further, that in any office where five (5) or more journeymen are regularly employed and where there is one apprentice when such apprentice has served three years, the office shall be entitled to an additional apprentice.

4. The following scale shall be paid to apprentices duly registered:

First year, one-fifth of journeymen scale;  
Second year, one-quarter of journeymen scale;  
Third year, one-third of journeymen scale;  
Fourth year, one-half of journeymen scale;  
Fifth year, two-thirds of journeymen scale.

It being understood and agreed that the present rate of pay to apprentices shall continue until the next adjustment date.

(Sgd.) H. W. LUNNEY,  
(Sgd.) JAMES H. GARDEN,  
(Sgd.) ANDREW DAVISON.

## Report of Board in Dispute Between Hull Electric Company and Its Street Railway Employees

The findings of the Board of Conciliation and Investigation established to deal with differences between the Hull Electric Company and certain of its employees, being members of Division 591, Amalgamated Association of Street and Electric Railway Employees of America, were forwarded to the Department of Labour on January 31. The dispute related to demands made by the employees for increased wages and improved working conditions, ninety employees being directly affected. The report was signed by the chairman, Dr. Adam Shortt, and the Board member representing the employees, Mr. W. L. Best, and recommended a wage increase of two cents an hour for conductors and motormen, to date from December 6, 1928. Mr. Hamnett P. Hill, the employer's member of the Board, did not concur in this recommendation and submitted a minority report on February 1. The text of the majority and minority reports follows.

### Report of Board

OTTAWA, January 31, 1929.

*In the matter of a dispute between the Hull Electric Company, employer, and Division No. 591 of the Amalgamated Association of Street and Electric Railway Employees of America, employees.*

On the application of the employees, a Board of Conciliation and Investigation was established by the Department of Labour, consisting of Mr. W. L. Best, nominated by the employees, Mr. H. P. Hill, nominated by the company, and Dr. Adam Shortt, appointed by the Minister of Labour, as Chairman of the Board, on the joint recommendation of the other members.

After a full hearing and consideration of the case as presented by the two parties respectively, but without the Board being able to reach a unanimous conclusion, the Chairman and Mr. W. L. Best beg to submit the following report.

As indicated in a letter, dated May 30, 1928, addressed by a committee of the employees to the Manager of the company, a copy of which was submitted to the Department of Labour, certain demands were made upon the company for improved wages and better working conditions. The latter covered quite a variety of matters relating, chiefly, to the betterment of conditions in the operation of the cars, and the question of overtime allowances during certain periods. It was found

that practically all of the matters covered in this section could be amicably adjusted. But when it came to the claims of the employees involving an increase of wages, the Company declined to concede any increase whatever.

The employees had made claims for an increase of wages of from ten to twenty cents per hour. This meant, substantially, an increase of from one to two dollars per day, and would have placed them much above most of the employees, in similar positions, throughout Canada. They submitted as evidence in support of their claims, various figures purporting to represent the cost of living in the shape of quantities of articles required, and current prices for the same. These representations certainly paralleled in extravagance the claims for increased wages.

The company, on its side, claimed that it could not pay any increase of wages, alleging that, under existing conditions as to fares obtained and costs involved in operating the system, it had to meet annual deficits. It is obvious, however, that such a statement, even if true, could not be held as justifying a claim for a special reduction in the rates paid by the company in the purchase of their cars, rails and other equipment of the system. Neither could it, therefore, be taken as justifying the reduction of a fair market rate for the purchase of the labour employed. The only practical conclusion from the claims of the company must be, that if it cannot operate its system at a profit under normal conditions, it must improve its income, sell the system to parties who could make it remunerative, or abandon it altogether. The latter decision would leave the service of local transportation in the area now served to, say, the motor buses which now compete with it, and which require a much less costly equipment in both capital outlay and wages, and might thus serve the public at a profit.

Obviously, the practical solution of the problem faced by the Board was but slightly aided by the chief evidence as submitted by either the company or their employees. The Board had, therefore, to face the situation on such more practical evidence as could be obtained from the respective parties, and from comparisons with similar conditions throughout the country and especially in the neighbourhood. The members of the Board found themselves unable to reach a unanimous conclusion in the matter of wages. The chairman and Mr. Best, however, have reached

certain conclusions, which may be summarized as follows:—

(a) The employees of the Hull Electric Railway, other than the motormen and conductors, are now in receipt of wages, relatively higher than as received by similar employees throughout the country.

(b) To relatively equalize the rates of wages paid by the company, the motormen and conductors should be allowed an increase of two cents an hour.

(c) If this equalization is made, in view of the general cost of living in Hull and Aylmer where most of the employees of the company reside, the average return for their wages to the employees of the company would be substantially equivalent to that which exists in Ottawa, the nearest comparable centre.

It is recommended that the increase of wages, as here proposed, should begin from December 6, 1928, when the first proceedings took place in connection with the formation and sittings of the Board.

(Sgd.) ADAM SHORTT,  
*Chairman.*

(Sgd.) WM. L. BEST,  
*Member of the Board.*

#### *Minority Report*

OTTAWA, February 1, 1929.

HON. PETER HEENAN, M.P.,  
Minister of Labour,  
Ottawa, Ont.

Re *Industrial Dispute Investigation Act and re differences as between the Hull Electric Company and certain of its employees, members of Division No. 591, Amalgamated Association of Street and Electric Railway Employees of America.*

DEAR SIR,—It is a matter of sincere regret to me that I am unable to agree with my colleagues on the Board in the recommendation that the motormen and conductors should receive an increased wage of two cents per hour. Particularly is this a source of regret in view of the fact that our relations have been most pleasant and I have a high regard and great respect for both of them.

My colleagues are of opinion that the conductors and motormen are not paid sufficiently, having regard to what is being paid to the other employees of the company, and for this reason recommend an increase of two cents an hour to the conductors and motormen. With this finding and recommendation I cannot agree. No figures were given to us to enable us to make a comprehensive study or survey of what was paid employees of street railways in Eastern Canada other than the conductors and motormen. From a study of

the meagre figures given and from what I could gather from the reports of your Department as to what was paid similar classes of labour, i.e., blacksmiths, carpenters, electricians, etc., in manufacturing plants, I am inclined to the opinion that these other employees are being paid on a somewhat generous scale in comparison with what is being paid to the conductors and motormen, but I disagree with my colleagues on the manner in which they propose to deal with this situation. For reasons which I explain later, I find that the conductors and motormen are now being paid generous wages and, if the situation is to be dealt with at all, I am inclined to the opinion from the figures furnished us that the wages paid the other employees should be reduced. As the company, however, has not raised this question and the situation has been in existence for a number of years and the conductors and motormen are not complaining about it, I do not make any such finding or recommendation. I deal, therefore, in this report, only with the problem as to whether or not the conductors and motormen, under all the circumstances, are now receiving fair and proper wages.

As the Hull Electric Company is a public utility corporation furnishing service to the citizens of Hull, I have felt that the matters submitted to the Board should be considered having in mind, firstly, the interests of the public, secondly, the demands of the employees, and, thirdly, the position of the employer.

The company has not only never earned a dividend since its inception, but has, during the last few years, suffered very heavy deficits. It is operating under an old franchise, is limited to a five-cent fare, and is subject to the competition of an unlimited number of buses operating through the city of Hull and on the highway between Hull and Aylmer. It is, therefore, clear that, as the public pays for the service given, any increase in the cost of service must be borne by the public either in increased fares or depreciation in the facilities furnished. The present agreement between the company and the city of Hull expires on the first day of May this year and a new agreement will then have to be negotiated. The affairs of the company will then undergo minute scrutiny and the cost of the service will be one of great local public interest. The citizens of Hull, therefore, have an unusual interest in the present application.

The employees are entitled without any question to fair and reasonable wages and I assume that the citizens of Hull desire that they receive same, but I also assume that, inasmuch as these citizens in the final analysis

pay and will pay the wages, they do not desire that these wages be more than what is fair and reasonable.

The usual method of determining what is a fair and reasonable wage is by comparing the wages paid with wages paid in other places for similar services and by a comparison of wages paid other classes of labour in other places compared with wages paid the same classes of labour in the locality in which this problem arises. In the present instance I think it a fair and proper test as to the fairness of the wages paid the conductors and motormen to ascertain (1) what is paid to conductors and motormen by street railways in other places of similar size, and (2) to compare the wages paid other classes of labour in Ottawa with what is paid the same classes of labour in Hull with a view to ascertaining whether the difference between the various scales of wages is approximately the same.

The motormen and conductors are now paid 45 cents an hour when operating two men cars, and 49 cents an hour when operating one man cars. These wages were agreed on in 1923 and have been in force since then. As it is the employees who have applied for the increase, the onus is on them to satisfy the Board that they are justified in their request.

Both the employer and the employees filed statements with the Board showing what was paid motormen and conductors in virtually every place in North America where a street railway is in operation. I have discarded all the figures with the exception of those dealing with the smaller places in Eastern Canada. The wages paid throughout the West are higher than are paid in the East. The following tabulation shows what is paid the operators of one man cars in every small locality in Eastern Canada. I have included the City of Quebec in this tabulation, although it cannot be accurately described as one of the small places.

Operators of One-Man Cars

	per hour
Cape Breton Electric Co. . . . .	46c.
Cornwall Railway Light and Power Co. . . . .	44
Hydro Electric Railways, Guelph. . .	45
International Transit Co., Sault Ste. Marie. . . . .	45
Kitchener and Waterloo Railway. . .	45
Moncton Tramways. . . . .	36
New Brunswick Power Co. . . . .	48
Brantford Municipal Ry. . . . .	50
Niagara, St. Catharines and Toronto Ry. . . . .	52
Nova Scotia Tramways and Power Co. .	50
Oshawa Railway Co. . . . .	43
Quebec Railway, Light and Power Co. .	50
Sherbrooke Railway and Power Co. . .	36
Three Rivers Traction Company. . . .	48
Hull Electric Company. . . . .	49

In looking over the above tabulation, it will be noticed that the Hull Electric Company is, with one or two exceptions, paying higher wages to the motormen and conductors than in any of the places mentioned. The average is 45½ cents, and if Moncton and Sherbrooke, which seem unduly low, are left out, the average is 47 cents, or two cents less than the Hull Company is paying. If to the above list is added what is paid motormen and conductors in Hamilton, London, Windsor, Toronto, Ottawa and Montreal, the average would be 49½ cents an hour. I think it is fair to compare the Hull Electric Company with the companies operating in Three Rivers and Quebec, as it is a fair presumption that conditions in these places are somewhat similar to conditions in Hull. With Three Rivers paying 48 cents, Hull 49 cents and Quebec 50 cents an hour, how can it be said that the Hull Company is not paying a fair wage.

My colleagues are of the opinion that in comparison with what is paid in Ottawa, the Hull conductors and motormen are underpaid. I disagree entirely with them in this opinion. The Ottawa Electric Company is financially a very strong corporation, enjoying a seven cent fare and peculiarly favorable local conditions, and since its inception until recently has paid substantial dividends to its shareholders. It is paying its motormen and conductors from 45 to 50 cents an hour for two men cars and five cents additional per hour when they operate a one man car. They are paid on the basis of a nine hour day, but the last hour is fractional, depending on when each man's run is concluded. If its Board of Directors, actuated by motives peculiar to the company, have agreed to pay generous wages, that is no more a reason why the Hull Electric Company should raise its wages than it is an argument that the Hull Company should pay the same scale of wages. It would be equally logical to say that, should the Board of Directors of the Ottawa Electric Railway decide to purchase the most expensive and luxurious cars possible, then the Hull Company must improve its rolling stock correspondingly—and this without any reference to all the conditions under which the company operates. Proximity of locality cannot be regarded as a factor. As, however, my colleagues have found that, if two cents increase is given to the motormen and conductors, the average return for their wages would be substantially equivalent to that which exists in Ottawa, I have looked into the question of the relative rates of wages paid different classes of labour in Ottawa and in Hull. I have obtained the figures which I am using from Report Number 11 of your Department dealing with Wages and Hours of Labour in

Canada from 1920 to 1927, issued as a supplement to the LABOUR GAZETTE of January, 1928, and I find that there is a very material difference in the rates of wages paid by the two municipalities as will be noted from the following tabulation:

	Hull	Ottawa
Police. . . .	\$1,200	\$1,912
Firemen. . . .	1,200	1,751
Civic labour .	40c per hr.	50c per hr.

This statement shows that relatively the conductors and motormen are at present receiving a bigger wage than the other classes of labour mentioned. The wages paid the police and firemen in Hull are just about two-thirds of what they are paid in Ottawa, and civic labour in Hull is paid four-fifths of what is paid in Ottawa, whereas the conductors and motormen in Hull are paid between nine-tenths and nine-elevenths of what is being paid in Ottawa. Tested by this measure I am of opinion that the scale of wages now in effect is more than fair to the conductors and motormen. In connection with the above tabulation, I have not the figures for 1928, but I am assuming that there is no very material difference between what was paid in 1927 and what was paid in 1928.

It has been mentioned that the Hull Company is in competition with busses in the extension to Aylmer and I should point out that, with respect to the Aylmer extension, the bus line is very popular, as it drops its patrons at their doors, whereas the Railway Company runs at some considerable distance back from the main road. I feel that what is being paid the operators of busses operating in competition with the cars of the Hull Electric Company is a factor which must be considered in determining the wages to be paid the operators of the street cars. These bus drivers are being paid from 31 to 40 cents an hour.

As mentioned above, the last agreement between the Company and the men was made in 1923. This agreement was entered into without the intervention of a Board of Arbitration and must therefore be presumed to have been fair both to the Company and to the employees. In the report mentioned above dealing with Wages and Hours of Labour in Canada is a table of index numbers of rates of wages for various classes of labour in Canada from 1901 to 1927, inclusive. The wages paid in 1913, being the year immediately before the outbreak of the war, has been placed at 100, and the variations in the amount paid to employees of Electric Railways each year since then has been figured in relation to the 1913 wages. This statement shows that in 1923 the index number of 100 had risen to 186.4, and at the end of 1927 it had risen to the figure of 189.9. This indicates that the gross wages paid all the employees of all the electric railways in Canada, whether privately or municipally owned, has risen since the end of 1923 to the end of 1927 by 3.5 per cent of the wages for 1913. I do not know what the wages paid the Hull employees in 1913 were, but, if this table alone was taken as a test and the 1913 wage was a fair wage, the utmost the conductors and motormen would be entitled to would be a fraction of a cent per hour, but, in view of what I have stated above, I do not consider that the Company should be obliged to pay that fraction.

For the reasons stated above I am of opinion that the conductors and motormen are being paid relatively generous wages and I so report.

I have the honour to remain, Sir,

Your obedient servant,

(Sgd.) H. P. HILL.

## STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1929

THE number of strikes and lockouts in existence in Canada during January was eight, the same number as in the previous month. The time loss for the month, however, was lower than in December, and lower also than in January, 1928.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Jan. 1929.....	8	754	5,724
Dec. 1928.....	8	449	8,628
Jan. 1928.....	10	517	8,029

\*Preliminary figures.

Four disputes, involving 289 workpeople, were carried over from December and four disputes commenced during January, but none of these terminated during the month. At the end of January, therefore, there were on record eight disputes involving strikes or lockouts, as follows: tie cutters, Onion Lake, Ont., coal miners, Wayne, Alta., two disputes involving clothing factory workers in Toronto, Ont., textile factory workers, Hamilton, Ont., photo engravers, Toronto, Ont., photo engravers, Vancouver, B.C., and plumbers at Kingston, Ont.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days' or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to six such disputes, namely; electrotypers, Toronto, Ont., Dec. 20, 1926; bakers, Montreal, May 1, 1927; stonecutters, Montreal, P.Q., June 10, 1927; sheet metal workers, Montreal, P.Q., Septem-

ber 21, 1927; fur workers, Toronto, Ont., April 10, 1928, and shoe factory workers, Toronto, Ont., August 13, 1928. The dispute involving coal miners at River Hebert, N.S., since February 1, 1928, carried in this list for some months, is recorded as lapsed during December, 1928.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

**COAL MINERS, WAYNE, ALTA.**—During January it was reported that the employees of one of the mines involved in this dispute, commencing August 13, 1928, had voted to resume work on the basis of the Conciliation Board's recommendation as to payment per ton on a screened coal basis with an increase in the rate per ton to offset the miner's loss. Early in February such an agreement is reported to have been signed, providing also for union recognition. During the month an officer of the union was arrested in the district on a charge of intimidation and a number of men reported to be strikers were arrested for assault.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1929

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts Occurring prior to January, 1929.</b>			
<b>MINING—</b>			
<i>Non-Ferrous Smelting and Quarrying—</i>			
Coal miners, Wayne, Alta. ....	250	3,000	Commenced Aug. 13, 1928, for recognition of union and against payment per ton on a screened basis with an increase of 4 cents per ton. Underminated
<b>MANUFACTURING—</b>			
<i>Clothing (including knitted goods)—</i>			
Men's clothing factory workers Toronto, Ont. ....	6	150	Commenced Aug. 21, 1928, against alleged violation of agreement for employment of union members only. Underminated.
Clothing factory workers, Toronto, Ont. ....	24	600	Alleged lockout, commencing Nov. 28, 1928, for union agreement. Underminated.
<b>CONSTRUCTION—</b>			
<i>Buildings and Structures—</i>			
Plumbers, Kingston, Ont. ....	9	234	Commenced April 2, 1928, for increase in wages. Underminated.
<b>(b) Strikes and Lockouts Occurring during January, 1929.</b>			
<b>LOGGING—</b>			
Tie cutters, Onion Lake, Ont. ....	90	360	Commenced Jan. 28, 1929, for increase in piece rates. Underminated.
<b>MANUFACTURING—</b>			
<i>Textiles—</i>			
Textile factory workers, Hamilton, Ont. ....	300	500	Commenced Jan. 30, 1929, against changes in working conditions involving discharge of employees. Underminated.
<b>PRINTING AND PUBLISHING—</b>			
Photo engravers, Toronto, Ont. .	40	880	Alleged lockout, commenced Jan. 7, 1929, of union employees. Underminated.
Photo engravers, Vancouver, B.C. ....	25	100	Commenced Jan. 28, 1929, for increase in wages and shorter hours. Underminated.

**TIE CUTTERS, UNION LAKE, ONT.**—Employees cutting ties ceased work about January 28 to secure an increase in wages, demanding \$50 per month for men on time rates instead of \$26-\$30 and an increase in piece rates. No settlement has yet been reported.

**TEXTILE FACTORY WORKERS, HAMILTON, ONT.**—Employees in the spinning department of a cotton manufacturing establishment in Hamilton ceased work on January 30 protesting against the introduction of changes in the methods of production and in working conditions, apparently involving the laying off of a number of the staff. In a short time this made it necessary to close down the establishment, thus indirectly involving about 500 other employees, bringing the total number affected to about 800.

**PHOTO ENGRAVERS, TORONTO, ONT.**—Photo engravers, members of the union, in a printing establishment in Toronto, were reported to have been discharged, and the employer announced that the establishment would be operated under non-union conditions and that non-union employees had been secured. Toward the end of the month through the efforts of the Minister of Labour negotiations were carried on with a view to the re-instatement of union employees.

**PHOTO ENGRAVERS, VANCOUVER, B.C.**—Employees in a number of establishments were reported to have ceased work on January 28, demanding the 40-hour week instead of the 44-hour week and an increase in wages from \$55 per week to \$57.50 with further increases later. No settlement of the dispute has yet been reported.

## RECENT STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month. A table is given on page 159 summarizing the principal statistics as to strikes and lockouts from 1919 as far as possible to date.

### Great Britain

In the British *Ministry of Labour Gazette* for January preliminary figures are given in a report of trade disputes in the year 1928. The number of disputes which began during the year was 302. In addition, 8 disputes were still in progress from the previous year. The number of workpeople involved directly and indirectly in all disputes in progress was 124,300, and the time loss approximately 1,405,000 working days.

The table given below shows the disputes for the year classified by industries. Of the total number of 124,300 workpeople, approximately 44,200 were indirectly involved.

The number of disputes reported as beginning in December, 1928, was 15, while 12 were still in progress from the previous month, making a total of 27 disputes in progress during the month, in which 6,000 workpeople were involved; the time loss was 32,000 working days.

Of the 15 disputes beginning in December, 7 arose on wages questions, 2 on questions of working hours and 6 on other questions.

Settlements were reached in 17 disputes, of which 2 were in favour of workpeople, 8 in favour of employers and 7 ended in compromise.

### INDUSTRIAL DISPUTES IN GREAT BRITAIN AND NORTHERN IRELAND DURING 1928

Groups of industries	Number of disputes beginning in 1928	Number of work-people involved in all disputes in progress	Aggregate duration in working days of all disputes in progress
Coal mining.....	97	82,300	469,000
Other mining and quarrying	3	300	9,000
Brick, pottery, glass, etc....	11	700	21,000
Engineering.....	10	600	4,000
Shipbuilding.....	23	4,100	16,000
Other metal.....	18	3,500	40,000
Textile.....	33	24,300	695,000
Clothing.....	9	1,100	25,000
Woodworking and furniture.	26	1,100	13,000
Building, public works contracting, etc.....	38	3,000	83,000
Transport.....	16	2,000	11,000
Commerce, distribution and Finance.....	6	300	8,000
Other.....	12	1,000	11,000
<b>Total.....</b>	<b>302</b>	<b>124,300</b>	<b>1,405,000</b>

### United States

The number of disputes which began during November was 30 and 55 were still in effect at the end of the month, involving 43,273 workers and resulting in a time loss of 1,101,111 working days.

It was reported that between 10,000 and 12,000 dressmakers in New York City went on strike on February 6th for union recognition, a 40-hour week and minimum wages of \$44 a week for operators and \$50 for cutters and pressers.

## STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES, 1928

### Annual Review of Industrial Disputes

THE feature of the industrial disputes record for Canada in 1928 was the prevalence of strikes and lockouts of short duration and of those involving small numbers of employees, 39 out of the 101 disputes in existence during the year being of less than five days with 62 disputes under 15 days, while 65 disputes involved less than 100 employees. The number of disputes was, therefore, greater than in 1927 with the number of employees less, while the time loss in man working days was greater than in 1927, a protracted strike of coal miners in Alberta with two shorter disputes causing a time loss one-third of the total for the year. Another important feature of the year was the large number of strikes in the building trades, which also caused about one-third of the total time loss for the year.

far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analyzing the data, since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the LABOUR GAZETTE are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada 1901 to 1912," issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables and the annual reviews in the LABOUR GAZETTE have brought the lists of disputes and analytical tables down to date each year.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such disputes involving less than 10 days time loss is maintained in the Department. During 1928 there were seven such disputes, involving 101 employees, making a time loss of twenty-six and one-half working days.

The figures in this report are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. So far as concerns figures given with respect to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and, with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the num-

TABLE I.—RECORD OF STRIKES AND LOCKOUTS BY YEARS

Year	Number of disputes		Disputes in existence in the year		
	In existence in the year	Beginning in the year	Employers involved	Workers involved	Time loss in working days
1901.....	104	104	273	28,086	632,311
1902.....	121	121	420	12,264	120,940
1903.....	146	146	927	50,041	1,226,500
1904.....	99	99	575	16,482	265,004
1905.....	89	88	437	16,225	217,244
1906.....	141	141	1,015	26,050	359,797
1907.....	149	144	825	36,224	621,862
1908.....	68	65	175	25,293	708,285
1909.....	69	69	397	17,332	871,845
1910.....	84	82	1,335	36,224	718,635
1911.....	99	96	475	25,293	2,046,650
1912.....	150	148	980	40,511	1,099,293
1913.....	113	106	1,015	38,536	1,287,673
1914.....	44	40	205	8,678	430,054
1915.....	43	38	96	9,140	106,149
1916.....	75	74	271	21,157	208,277
1917.....	148	141	714	48,329	1,134,970
1918.....	196	191	766	68,489	763,341
1919.....	298	290	1,913	138,988	3,942,189
1920.....	285	272	1,273	52,150	886,754
1921.....	145	138	907	22,930	956,461
1922.....	85	70	569	41,050	1,975,276
1923.....	91	77	419	32,868	768,494
1924.....	73	63	415	32,494	1,770,825
1925.....	83	81	510	25,796	1,743,996
1926.....	77	73	598	24,142	296,811
1927.....	79	72	652	22,683	165,238
1928.....	101	97	726	18,239	238,132
Total..	3,255*	3,126	18,892*	926,549*	25,563,076

\*In these totals figures for disputes extending over the end of a year are counted more than once.

Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the LABOUR GAZETTE each month a complete list of those in progress, so

 NUMBER OF EMPLOYEES WHO WON  
 INDEFINITE

ber of employees involved in the dispute from time to time so far as known. The numbers of employees recorded for each dispute is the number of those directly affected that is on strike or locked out and does not include those indirectly affected.

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in mining considerable time loss occurred in 1903, 1909, 1910, 1911 and 1913, and again in 1917, 1919, 1922, 1924, 1925 and 1928. In metal trades no great time loss appeared except in 1919, when the strikes in the metal trades in various cities and the general strike in Winnipeg in sympathy with the metal trades' strike there, caused a time loss of about two million days. In 1918, 1920 and 1923, however, the time losses (in these trades) were larger than in other years. In building and construction considerable time loss appeared in 1903, 1907, 1911, 1919 and 1928. In transportation there was considerable time loss only in 1901, due to a strike of trackmen, in 1908, due to a strike of railway shop machinists and in 1918 and 1919 due to numbers of strikes in street railway operation, as well as among freight handlers, in local transportation, cartage, etc. The item "other industries" for 1926 included a comparatively large time loss in boot and shoe manufacturing.

From the chart showing results of the settlements arrived at it appears that the majority of employees were successful or substantially successful in 1903, 1915, 1917 and 1918, but were unsuccessful in 1908, 1919, 1923, 1925 and 1926.

The record does not include minor disputes as described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employ-

ment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. In addition to the list in Table 10 information

TABLE III.—STRIKES AND LOCKOUTS, 1928, BY TIME LOSS

Period of working days lost	Disputes		Number involved	Time loss

is available as to the following disputes of this nature carried over from 1927: women's clothing factory workers, Toronto, June 30, 1926, lapsed in July, 1928; electrotypers, Toronto, Ont., December 20, 1926; plumbers, Windsor, Ont., April 5, 1927, settled August 11, 1928; and sheet metal workers, Montreal, P.Q., September 1, 1927. Also during 1928 the following disputes included in Table X were added to this list: bakers, Montreal, P.Q., May 1, 1927; stonecutters, Montreal, P.Q., June 10, 1927; fur workers, Toronto, Ont., April 10, 1928, and shoe factory workers, Toronto, Ont., August 13, 1928.

The following notes deal with the chief features in strikes and lockouts during the year 1928:—

LOGGING.—The five strikes in logging occurred in Northern Ontario, one in June and the others in the last quarter of the year. All involved pulpwood cutters and were to secure increases in wages, piece rates, and all except one at Kapuskasing were successful. To some extent they appear to have been to secure a return to the rates paid in the 1927 season.

FISHING AND TRAPPING.—The only dispute in this industry was a strike of salmon fishermen on the Fraser River, demanding the same rates per fish from the canning companies as in 1927, an increase from 65 cents per fish to 75 cents for sockeye and similar increases for other varieties. A compromise was reached at 70 cents per fish for sockeye until September 15, the price to be reconsidered then. Similar compromises were reached as to prices for other varieties.

COAL MINING.—The most important stoppage in this industry was that in the lignite field at Wayne, Alberta, near Drumheller, involving 1,200 miners from August to the end of the year, the workers in five mines demanding recognition of their union, the Mine Workers' Union of Canada with an increase in wages. A Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, applied for by the miners having been appointed, on this point and others, including a proposal by the operators that contract miners be paid per ton for screened coal instead of run of mines as before, the Board recommended that each operating company should sign an agreement with the local union which included its own employees, granting the check-off of union dues, and that payment for coal should be on a screened basis but with an increase of four cents per ton as an allowance for the wage loss on screenings. (Labour Gazette, August, 1928, page 827).

The operators had objected to signing an agreement with the Mine Workers' Union, organized in 1925 from independent locals which had seceded from the United Mine Workers of America that year following a reduction in wages. The principal mines at Drumheller had continued to be operated under agreements between the operators and the United Mine Workers of America and negotiations for such agreements at Wayne are reported to have been discussed. A Conciliation Board for the mines at Lethbridge had similarly recommended that the operators sign an agreement with the local including its own employees and this was accepted. At Wayne the operators agreed to the Board's report but the miners voted against it and ceased work on August 13. Shortly afterwards one of the five mine operators signed an agreement with the union and in October another mine in the neighbourhood not involved in the strike signed such an agreement. The other four operators began to operate with partial crews in the autumn and proposals to have the United Mine Workers of America organize these employees and sign agreements with the operators were revived. The latter union, however, decided not to enter the field under the existing conditions of the strike. Early in 1929 another of the operating companies involved signed an agreement recognizing the union but carrying out the Board's recommendation as to payment for screened coal.

Two other strikes of importance occurred in Alberta, one at Canmore involving 270 workers from March to June and one at Coalhurst involving 425 workers during most of August. Both were against the discharge of workers. At Canmore the cause of the discharge was allowing explosives to go out in the coal. The parties were prosecuted but it was found impossible to prove which miners had been criminally negligent. Through the mediation of officers of the Labour Department work was resumed with the reinstatement of the discharged employees. At Coalhurst, miners were discharged for repeatedly loading dirty coal, but the miners claimed that the particular men discharged might not have been responsible. The agreement having expired during the strike, clauses in a new agreement were re-drafted to deal with such cases more satisfactorily, through the mediation of the Deputy Minister of Labour, who visited the district at the time, accompanied by Conciliation Officers, and work was resumed. The other stoppages in coal mines were chiefly in Nova Scotia and were of brief duration, chiefly in disputes as to conditions in particular mines,

piece rates, discharge of workers, duties of employees, etc., with one stoppage at Thorburn in Pictou County to enforce a demand for employment of union members only. There was one stoppage at Aerial, Alta., in February for the same purpose.

**MANUFACTURING.**—Most of the stoppages in this industry were in ready-made clothing factories, but important strikes occurred in a rubber factory in Montreal and an automobile manufacturing establishment at Oshawa, both being against the introduction of new piece rates in connection with changes in production processes which the workers alleged would reduce earnings and which the employer claimed would not do so. Both were referred to Boards under the Industrial Disputes Investigation Act, 1907, as a result of the mediation of the Chief Conciliation Officer of the Department of Labour. In the Oshawa dispute, which involved a large number of employees in other departments indirectly and possibly to some extent in sympathy, the Board recommended that the former piece rates should be paid for work on the current model of automobile. In the rubber factory dispute the Board recommended that earnings should be made up by means of a bonus to the average earnings per week prior to the change until July and then the new piece rates should be reconsidered if not satisfactory. At the end of June the employees ceased work again claiming that the award of the Board had not been carried out whereas the employer claimed it had been carried out to the letter. Conciliation officers of the Department of Labour went into the matter and pointed out that the employees should have requested the Department to investigate their grievances before ceasing work and advised a resumption of employment. The strikers subsequently returned to work.

In the clothing industries, including ready-made suits, hats, caps, etc., as in recent years, there have been numerous stoppages resulting from disputes as to piece rates and working conditions, especially the maintenance of union conditions or to secure union conditions. Only one of these was important from the standpoint of numbers of workers involved or duration, that of men's clothing factory workers at Montreal, involving 1,300 employees for two weeks in August. Four disputes of a similar nature occurred in boot and shoe factories and one involving fur workers. Three disputes occurred in knitting factories and one in a textile mill, one in connection with union activity and the others resulting from re-organization of factory methods. In addition

to that at Oshawa, three strikes occurred in automobile establishments, all to secure increases in wages or better conditions and all but one were partially successful. The two disputes in printing trades were partially successful, one being for an increase of wages and one against five days per week of nine hours per day instead of the forty-four hour week of five and one-half days. A strike of stonecutters in Montreal carried over from 1927, by May, 1928, no longer affected employment conditions, the strikers having secured work elsewhere, but was not called off by the union by the end of the year.

**CONSTRUCTION.**—The disputes in building trades while numerous and involving in some instances large numbers of employees were in nearly all cases of brief duration. The chief exception was a dispute at Kingston, Ontario, one involving plumbers, demanding a wage increase to \$1 per hour and certain rules as to apprentices, and a sympathetic strike of sheet metal workers, chiefly employed by the same employers as the plumbers, who ceased work on jobs where the master plumbers and sheet metal workers did the work of plumbers on strike. Other building trades also ceased work on jobs where union rules were violated or strike breakers were employed. The other trades resumed work after July 18, but the sheet metal workers not till December, and the plumbers dispute was unterminated at the end of the year, although they had been to a great extent replaced and many had left the city for other localities.

A dispute causing considerable time loss during the year was that of carpenters at Vancouver for the "closed shop" for the international carpenters' union, involving over 500 carpenters for twenty-eight working days in October and November. Other building trades ceased work in sympathy with carpenters. The contractors had made a verbal agreement with the international union and the Canadian carpenters' union at the beginning of the year as to wages and working conditions, and through the conciliation of the Deputy Minister of Labour for the Province of British Columbia and the resident representative of the Dominion Department of Labour a settlement was reached, the contractors signing an agreement with the international union providing, however, for the open shop. The dispute causing most time loss in building during the year was one involving structural iron workers at Montreal and Toronto in May to secure recognition for the union and a wage rate of \$1 per hour. Rates had been advanced considerably by the beginning of the building season,

the principal employers in this branch of industry offering from 85 cents to 90 cents per hour for work paid for in the preceding season at 65 cents to 85 cents with extra rates for hazardous work. During the strike, the Minister of Labour met the parties at Montreal, and the union offered to drop its demand for recognition and to call off the strike if the employers would make the 90 cent rate a minimum instead of a maximum or the rate for the best mechanics only. The employers refused, stating they were always ready to meet their own employees but not union representatives. The strike was called off in Montreal at the end of May, the strikers having been to a considerable extent replaced, but in Toronto early in June, certain building trades ceased work on certain buildings where strike breaking structural iron workers were employed, in large numbers after the collapse of the strike in Montreal. These sympathetic strikers in turn being replaced, their unions called off the sympathetic strike and the structural iron workers being replaced or returning to work, their strike was declared terminated on July 18. In the meantime, the union had reached agreements with some of the structural iron firms and the strikers secured work with these employers to a great extent. A small number of structural iron workers in Vancouver were on strike for one day in sympathy with this dispute but it is reported that it was owing to a misunderstanding of a communication. There were also reports of similar stoppages elsewhere but none of them could be verified. A strike of painters in Vancouver for nearly a month in April caused considerable time loss, but a compromise on the wage rate in dispute was reached at 90 cents per hour through the mediation of the Department of Labour representative. A dispute involving carpenters at Calgary was referred to a Board of Arbitration under the Industrial Disputes Investigation Act, 1907, after 400 workers had been out during the whole of May. The Arbitration Board refused to award an increase in the wage rate of \$1 per hour and a three year agreement at this rate was signed in accordance with the terms of the strike settlement. While most of the remaining disputes were in connection with wages or working conditions, in twelve out of twenty-seven in this industry there was some question of unionism involved and in three of these it was the "closed shop."

**TRANSPORTATION.**—Two of the three disputes in this group were strikes of teamsters, one against discharge of workers for union activity, the strikers being replaced, and the other

to secure an increase in wages, which was partially successful, agreements with some employers being secured.

**SERVICE.**—A strike of garage mechanics in Saskatoon was partially successful, securing union agreements with several employers. A number of similar disputes in Alberta were settled without stoppages by reference to Boards under the Alberta Disputes Act, 1926. A strike of restaurant employees to maintain union conditions was successful after six weeks.

### Analysis of Statistics

Table II, an analysis by numbers of workers involved, shows that nearly seventy per cent of the disputes involved less than one hundred employees and that these disputes caused only about twenty per cent of the time loss for the year, while only one dispute involved over 1,500 employees and two between 1,000 and 1,500 employees. Most of the time loss for the year was due to twenty-one disputes involving between 250 and 1,500 workers. These figures refer to employees directly affected, that is on strike or locked out. One dispute, while involving only 450 workers directly, affected indirectly for a short time nearly 6,000 workers through closing down the plant.

Table III, an analysis by time loss in man working days, shows that 21.4 per cent of the time loss occurred in one dispute, that of coal miners at Wayne, Alberta, involving 1,200 workers, with 51,000 days time loss. Five disputes caused time loss each between 10,000 and 25,000 days and involved 2,890 employees, causing 32 per cent of the time loss for the year. Sixty-seven disputes each caused less than 1,000 days time loss and only 20,397 days altogether or eight per cent of the total for the year.

Table IV, an analysis by duration, shows that nearly 39 per cent of the disputes were under five days, 62 per cent under fifteen days and that these involved nearly 11,000 workers out of the total of 18,239 for the year. The disputes lasting over twenty days caused a large part of the time loss for the year and the four unterminated or indefinite included the most important strike of the year for time loss, that of coal miners at Wayne.

Table V, an analysis by provinces, shows that fifty per cent of the disputes occurred in Ontario but these caused only about one-sixth of the time loss for the year and involved about one-fifth of the employees out during the year. Alberta experienced the

most time loss, nearly one-third of the total; Quebec and British Columbia had about three-quarters as much time loss as Ontario. Clothing strikes were most important in Quebec and building strikes in British Columbia. No disputes for New Brunswick or Prince Edward Island were recorded. One dispute was recorded as Interprovincial, that of structural iron workers in Montreal and Toronto, which caused 22,675 days time loss.

Table VI, giving an analysis by industries, shows that the industrial groups experiencing most time loss during the year were mining, 36.5 per cent; building 32.7 per cent; clothing manufacturing 6.7 per cent; rubber manufacturing 6.4 per cent; and logging 5.3 per cent, and the disputes in these involved large numbers of employees, mining 5,578; building 3,890; clothing 2,486; rubber 1,728; and logging 1,006. Except in logging and rubber manufacturing these were due to relatively numerous disputes, building 27, clothing 26, mining 14. The only other industry having over 1,000 employees involved in disputes was fishing where 1,500 workers were out in one strike lasting only three days, Frazer River salmon fisheries.

Table VII, an analysis by causes and results, shows that, out of 101 disputes, in forty-six the principal cause or object was a change in wages of which twenty-eight were to secure increases and ten were due to proposed decreases. Out of these forty-six, workers were successful in nine, unsuccessful in fifteen and partially successful in eighteen, while four were unterminated or indefinite. Questions of union organization were the principal issue in twenty-seven disputes of which thirteen terminated in favour of workers, six in favour of employers and six were partially successful for the workers. Out of 101 disputes during the year, twenty-nine terminated in favour of workers, thirty-five in favour of employers, in thirty the workers were partially successful and of the seven indefinite or unterminated four were unterminated. Out of 18,239 workers involved in 101 disputes, 5,532 were successful, 5,721 were unsuccessful, 5,602 were partially successful and 1,384 were in disputes unterminated or indefinite; this including the Wayne coal miners dispute with 1,200 workers involved.

Table VIII, an analysis by methods of settlement, shows that direct negotiations between the parties resulted in settlements in 45 out of 101 disputes, that conciliation was successful in ten disputes, two were referred to arbitration and two were settled by refer-

(Concluded on page 156)

\* Non-union workers secured.

† Under agreement between the international union and employers' association.

\*\* Montreal, May 11 to May 31; Toronto, May 15 to July 23.  
 ‡ Afterwards a Department of Labour representative arranged for a minimum rate of 35 cents.

§§ Upwards of 5,000 employees indirectly involved.

†† Not called off by union at end of year.

(Concluded from page 144)

ences to Boards under the Industrial Disputes Investigation Act, 1907, in addition to one of the above arbitrated cases dealt with under the I.D.I. Act. The dispute involving coal miners at Wayne was referred to a Board before the strike which was un-terminated at the end of the year. In eighteen of the disputes the workers returned without negotiations and in sixteen disputes the replacement of the workers settled the

issue, in some cases there being then a partial return of the workers.

Table IX gives the principal statistics by months since 1921, showing that there is a tendency to have more disputes in the spring and early summer months, as well as the largest number of employees, but that the greatest time loss is sometimes later in the year when disputes with large numbers of employees are protracted and unsettled before other important disputes begin.

## Strikes and Lockouts in Other Countries 1919-1928

The accompanying table gives the principal figures as to strikes and lockouts in other countries as compared with Canada since 1919, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man working days in those countries for which such figures are available.

In some of these countries, figures as to strikes and lockouts are published separately, but in the table here given they have been included together. The practice varies greatly in the various countries also in regard to other points. In some cases the number of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year, and in still other cases it is the number in existence during the year, including those carried over from the previous year, with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly involved, that is, thrown out of work by disputes to which they were not parties, but exact information as to these points is not always given. In the table given herewith the column showing numbers of employees involved includes figures for the numbers directly involved, or the total number directly and indirectly involved according to the method adopted by the country in question.

For some countries, figures as to time loss, that is, the number of man working days lost, are not given. Footnotes to the table indicate the nature of the statistics with reference to the above points. Many countries publish these statistics only once each year or less frequently, the figures being issued in some cases after an interval of some length.

The following notes give information as to the more important strikes and lock-outs in each country.

### Great Britain

In addition to the information contained in the table below, a summary of industrial disputes for the year 1928 is also given on page 136.

The industry showing the greatest time loss for the year was the textile industry. This was due to a series of disputes which took place in June. The principal one, which was also the largest single dispute of the year, and accounts for a time loss of 600,000 working days, occurred in the cotton weaving industry at Nelson. Following a strike in one mill for the reinstatement of a weaver who was dismissed when he refused to pay a fine for poor work, 16,600 workers were locked out. This dispute began on May 30 and terminated on July 12, when a compromise was reached and the matters in dispute referred to a joint committee. Other disputes occurred about the same time in the dyeing and finishing trades, at various centres in Lancashire and in spinning mills at Oldham.

In coal mining, a number of disputes took place in March in Northumberland and Durham involving about 35,000 workers and causing a time loss of 137,000 working days. These disputes were against reductions in wages and ended in favour of employers.

### Australia

A strike of sea cooks which began during May seriously affected shipping and caused thousands of marine workers to be thrown out of employment, but was settled during June on the employers' terms.

On September 10, a large number of water-side workers in all of the larger ports of Australia went on strike when they refused to accept the award of the arbitration court. Although the award was in favour of workers in the matter of wages and overtime pay, they objected to the provision that they might be hired twice a day rather than once

a day. On October 19, the strikers accepted the original award, but other disturbances took place when they found that the volunteer workers were still being employed at some places.

### Belgium

A strike involving about 12,000 dock workers broke out on June 18 at Antwerp and terminated on July 11. The demand was for an increase in wages of 10 francs per day. The dispute was referred to a joint committee and an agreement reached providing for the decasualization of dock labour, an increase in wages of 4 francs per day and a collective agreement which would be arranged annually or run from year to year if neither party wishes a change.

### Finland

On June 2, a dockers' dispute began involving about 12,000 workers in thirty ports. The chief demand of the union was for a collective agreement, although the question of wages also entered into the dispute. By August, employers claimed that they were able to carry on at about 60 per cent of the normal rate with the aid of voluntary labour and strikers who had returned to work. An interesting feature of this dispute was the appeal of the Finnish workers to the International Union which resulted during July, in the blockade, of all Finnish ships in Scandinavian ports, and later in Denmark, of all cargoes from or to a blockaded Finland port. This latter action caused the matter to be referred to the Permanent Arbitration Court, who ruled that Danish workers had the right to organize disputes only with reference to Danish Conditions.

### Germany

By far the largest dispute of the year was that in the heavy iron and steel industry in Rhenish-Westphalia, when about 215,000 workers were locked out on November 1, following the failure of negotiations for a new agreement. The union insisted on a general increase in wages for all workers over 21 years and certain other changes. Prior to November 1, the Official Conciliation Officer had issued an arbitration award granting a partial increase in wages. This award was accepted by the union but was rejected by the employers. It was then declared binding by the Federal Minister of Labour, but in spite of this the lockout took place on November 1. The case was brought before the State Labour Court at Duisberg which upheld the contention of the employers that the award was in-

valid. When the case was appealed, however, the award was declared valid. The employers then took the case to the Federal Labour Court which on January 23, 1929, gave judgment in favour of the employers, stating that the original arbitration award was invalid as it was given by the arbitrator alone and not by a majority of the Arbitration Court and also on the ground that the terms of the wage agreement were still in force at that time. While these legal proceedings were taking place, the two parties were persuaded by government representatives to resume work on December 2, and to submit to arbitration by the Minister of the Interior. His decision made the original award binding until December 31, 1928, after which another scale would come into force providing for a reduction in hours and a small increase in wages.

Another dispute occurred in the North-West Shipyards when about 45,000 workers went out on strike on October 1, demanding a 48-hour week and an increase in wages. Following conciliation proceedings, an award was given granting part of the workers' demands. Although this award was rejected by the both parties, it was declared binding by the Minister of Labour on January 3, 1929, and the dispute was thus terminated.

Demands for increases in wages by textile workers in the Düren and München-Gladbach districts resulted in lockouts affecting 45,000 workers in September. Work was resumed on October 29, when the Conciliation Officer declared binding awards granting increases in wages.

During April, about 20,000 workers in the Saxon metal industry were on strike for an increase in wages, and on April 12, a lockout was declared by employers affecting some 130,000 workers. After conciliation proceedings, awards were issued granting partial increases in wages and these awards were declared binding by the Minister of Labour and the dispute terminated on May 9.

### India

The largest single dispute during the year was the general strike in the textile mills in Bombay. Several small strikes took place in April against the introduction of new systems of work whereby workers were given an additional number of machines to attend and also against alleged reductions in wages. The strike lasted until October and was featured by a number of riots. By October 11, 75,000 workers or a little over half the number involved had returned to work. A large number of others had left the city and returned

temporarily to their native villages. It was estimated that over 21 million working days were lost in this dispute.

### Japan

A strike of seamen occurred during June involving several thousand workers and holding up nearly 300 vessels. The workers demanded a minimum wage scale. After a three-days' strike, a settlement was reached through arbitration and for the first time in that country a minimum wage scale for seamen was established.

### Poland

Two disputes in the textile industry at Lodz took place in September and October. For ten days in September, nearly 40,000 workers were unemployed as the result of a dispute over the question of fining. When they returned to work they demanded an increase of 20 per cent in wages, and again went on strike for this demand on October 4. In this strike about 60,000 textile workers were involved and a general strike was also in effect for four days. An agreement was concluded on October 22, granting an increase in wages of 5 per cent and other concessions to workers.

### Sweden

The most important dispute for the year was in the wood pulp industry. This began on January 1, and at first involved 17,500 workers when negotiations for a new agreement failed. The employers demanded a reduction in wages of highest paid workers and changes in working conditions. When attempts at conciliation failed, employers declared a lockout in the related sawmill industry and later on March 5 in the paper industry, involving in all 50,000 workers. On April 8, a settlement was reached through the Conciliation Committee whereby the wages of the highest paid workers were reduced but some other classes were increased, and the working conditions agreed on were in favour of the workers. At the same time the sympathetic lockouts in the sawmill and paper industries were withdrawn.

There was also a strike of 8,000 workers in the central Swedish iron mines, which began

on January 2, for an increase in wages. This dispute seriously affected the export of iron ore and was not settled until August 27, when an agreement was reached on very much the same terms as the previous agreement with partial increases in wages of lower paid workers, but with decreases in the case of some other classes.

### United States

The dispute involving some 200,000 bituminous coal miners in ten states which began on April 1, 1927, continued in 1928. The cause of the dispute was the refusal of the United Mine Workers to agree to a reduction in wages from the 1920 scale which had been renewed from time to time down to that date. In October, 1927, a considerable number of miners returned to work under district agreements providing for the same wage scale until April 1, 1928, but on that date employers refused to continue to pay this scale and these miners were again out from April 1, 1928. A considerable number of mines, however, in Ohio, Pennsylvania and West Virginia operated with non-union labour. On July 18, 1928, the union decided to abandon its attempt to enforce the 1920 wage scale and to allow each district to negotiate its own agreement. Following this decision, various agreements were reached, providing for a reduced wage scale, and by the end of 1928 the dispute was practically terminated, with general district agreements in force in practically all districts with the exception of Ohio and Pennsylvania where many mines are still operating with non-union labour.

A dispute involving some 27,000 cleaners and dyers occurred in New York city during February, as a protest against cut rates charged by certain shops. Work was resumed after a two weeks' stoppage.

On April 16, a strike began involving 28,000 textile workers at New Bedford, Massachusetts, as a protest against a 10 per cent reduction in wages. The State Board of Arbitration and Conciliation intervened and recommended that a reduction in wages of 5 per cent be accepted. This was agreed to by both workers and employers and the mills were reopened on October 8.

### Saskatchewan Superannuation Board Report

The first annual report of the Civil Service Superannuation Board of Saskatchewan, recently submitted to Premier J. G. Gardiner as president of the Council, shows that 59 civil servants were superannuated during the fiscal year ended April 30, 1928. Included in the number were four superannuated on account of physical incapacity before having attained the age of retirement. The cost of administration of the Act during the year was \$2,221.15, and during the year contributions made by civil servants amounted to \$83,685.85. Allowances paid to superannuates and widows of civil servants amounted to \$23,990.43, while the sum of \$1,999.50 was refunded to civil servants who resigned or were dismissed. Lump sum payments to civil servants retired with less than 10 years' service amounted to \$5,691.85, the balance in hand at April 30, 1928, being \$52,004.07.

The report cites amendments to the Act made at last session of the Provincial Legislature regarding previous service and the fixing of a minimum allowance to superannuates of \$360 a year.

Further progress in connection with the adoption of the Canadian Electrical Code is reported by the Canadian Engineering Standards Association in the current issue of its *Quarterly Bulletin*. As noted in the *LABOUR GAZETTE*, December, 1928, the Code had then been recognized by the Provinces of British Columbia, Saskatchewan, Ontario, Quebec and Nova Scotia. It has now been adopted in the cities of Moncton, New Brunswick, and Vancouver, B.C. In the Province of New Brunswick the committee in charge of the Code is reported to be very active, and is seeking legislation to provide for provincial recognition.

OLD AGE PENSIONS IN CANADA

Statistics for British Columbia, Saskatchewan, and Manitoba for last quarter of 1928

THE accompanying tables give particulars of the operations of the Old Age Pension Act (Revised Statutes of Canada, 1927, chapter 156). During the last three months of the year, 1928, similar tables, covering the period ending September 30, 1928, were given in the last issue (page 19). The text of this Act was given in the LABOUR GAZETTE, April, 1927, page 375. It makes provision for the establishing of a Dominion-Provincial pension system to be effective in such provinces as have enacted special legislation for this purpose. Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has resided in Canada for the 20 years preceding, and has resided in the province in which the application is made

for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension will be subject to a reduction by the amount, if any, that their private income exceeds \$125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments.

The federal act became operative in British Columbia in September, 1927; in Saskatchewan in June, 1928; and in Manitoba in September, 1928. The Yukon Council at its session in 1927 passed an ordinance respecting Old Age Pensions, which provided for the participation of Yukon Territory in the scheme, but no payments of pensions within

## Old Age Pensions Regulations

Revised regulations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156) were approved by His Excellency the Governor General in Council on December 21, 1928. The regulations as previously sanctioned, together with an amendment dated January 16, 1928, were reprinted in the LABOUR GAZETTE, February, 1928, page 133. The principal new amendments contained in the new regulations are as follows:

1. In Regulation 13, the words "the Imperial Government with the concurrence of the Dominion of Canada" are new.

2. Regulation 19 is new, and the subsequent regulations are re-numbered, the former Regulation 19 being now numbered 20, etc.

3. Regulation 23 is also new, the subsequent regulations being re-numbered accordingly, the former Regulation 22 being numbered 24.

### THE OLD AGE PENSIONS REGULATIONS

#### SHORT TITLE

1. These regulations may be cited as The Old Age Pensions Regulations.

#### INTERPRETATION

2. (a) In these Regulations, unless the context otherwise requires, "The Act" means the Old Age Pensions Act, 1927.

(b) The definition of expressions contained in the Old Age Pensions Act, 1927, shall apply to the said expressions whenever used in these Regulations.

(c) "To lodge" means to be present in person in circumstances consistent with an intention to reside.

#### PROVISION AS TO NOTICES

3. (a) Any notice or other document required or authorized to be sent or delivered for the purpose of these Regulations shall be in writing.

(b) Any notice or other document required or authorized to be sent or delivered to any person by the pension authority for the purpose of these Regulations shall be deemed to be duly sent or delivered at the time at which the notice or document is posted to that person at his ordinary address.

#### WHEN APPLICATION MAY BE MADE

4. An application for a pension may be made at any time after the proposed pensioner has reached the age of sixty-nine years and nine months.

#### METHOD OF MAKING APPLICATION

5. (a) Every person who desires to make application for pension under the Act shall complete the form of application prescribed by the pension authority; this application shall contain, inter alia, the full name of the applicant, his address, occupation, sex, conjugal

state, age, date of birth, place of birth, nationality, date of naturalization, place of residence during the past twenty years, income (including income of spouse), other means of subsistence and description of any property transferred within the past five years with name of transferee.

(b) Every pension authority shall supply a form *gratis* to any person who desires to make an application and if so requested shall give all necessary information and assistance in completing the said form.

#### INVESTIGATION OF CLAIMS

6. As soon as may be after receiving any application the pension authority shall take all necessary steps to ascertain whether the applicant is entitled to a pension and if he is so entitled, what rate of pension should be paid.

#### AGE

7. (1) For the purpose of determining the age of any person regard may be had to any of the following documents:

- (a) Certificate of birth;
- (b) Certificate of baptism;
- (c) Entries in a family Bible or other genealogical record or memorandum of the family of the pensioner;
- (d) The returns of any census taken more than 30 years before the date of application for such pension, provided:

(i) That any request for census information by a pension authority be made with the consent in writing of the person regarding whom the information is required;

(ii) That the specific locality (city, town, village, township or rural municipality) in which the applicant resided at the date of the census aforesaid be stated;

(iii) That any information supplied by the Bureau shall be confidential and shall not be used for any other purpose than that of the administration of the Old Age Pension Act; and

(iv) That a request for census information be made only in the event of failure to obtain information under the immediately preceding subsections;

(e) And when better evidence cannot be obtained a statutory declaration setting forth that none of the certificates above referred to in this Regulation are obtainable, and a further statutory declaration as to the age of the pensioner by any person who has knowledge of the fact.

(2) The pension authority, however, shall not be bound to accept evidence mentioned in this clause and may accept other evidence not herein mentioned.

#### NATIONALITY

8. (1) For the purpose of determining the nationality of any person regard may be had to any of the following documents:—

- (a) Certificate of birth;
- (b) Certificate of baptism;
- (c) Certificate of service in any of His Majesty's forces;
- (d) Certificate of Naturalization; and

(e) When better evidence cannot be obtained a statutory declaration or evidence under oath by any person who has knowledge of the fact.

(2) The pension authority, however, shall not be bound to accept evidence mentioned in this clause and may accept other evidence not herein mentioned.

9. Every pension authority shall be entitled to obtain without charge from the Department of the Secretary of State or any other Department any information available in such Department as to the nationality of any pensioner.

#### RESIDENCE

10. An applicant shall, in the absence of evidence to rebut such presumption, be presumed to have been resident in Canada for the twenty years immediately preceding the date of the proposed commencement of the pension if he (a) has actually lodged within Canada on at least 4,384 days within the said twenty years, and (b) has not within the said twenty years been absent from Canada for more than 731 consecutive days, but in no case shall a pensioner be deemed a resident of Canada for twenty years unless lodged within Canada some time at least twenty years prior to making application.

11. An applicant shall, in the absence of evidence to rebut such presumption, be presumed to have resided in the province in which the application for pension is made for the five years immediately preceding the date of the proposed commencement of pension if he is then residing in the province, and if he has lodged therein on at least 1,095 days in the said five years, but in no case shall a pensioner be presumed to be a resident of such province for five years unless he lodged within said province some time at least five years prior to making application.

12. For the purpose of determining the province in which an applicant has resided and subject to Regulations 10 and 11, if an applicant had left Canada and subsequently returned to Canada he shall, in the absence of evidence to rebut such presumption, be presumed to have continued to reside in the province which he left until the date of his return.

13. If an applicant was employed and paid by the Dominion of Canada, the Imperial Government with the concurrence of the Dominion of Canada, or any province for services performed without Canada, or if his travelling expenses out of Canada were paid by Canada, the Imperial Government, or by any province or municipality, he shall when he was so employed or while his travelling expenses were paid, be presumed to have continued to lodge in that province of Canada in which he was resident immediately before entering such employment or proceeding on the journey in respect of which his travelling expenses were paid.

14. An applicant who has been employed on a ship registered at or sailing regularly from any Canadian port shall be presumed to have lodged in Canada during the whole time he was employed on such ship, and in such province where he last resided previous to such employment.

15. An applicant who was employed by any railway company having its head office in Canada, on trains running out of Canada, or the wife of such pensioner, shall be presumed to have lodged in the province in which was situate the Canadian terminus to and from which such trains were operated during the whole time he was employed on such trains.

#### INCOME

16. In determining the income of a pensioner receivable in the form of periodic payments

in the nature of an annuity to which he is entitled, his income shall (a) if he has a right to assign or charge the same, be taken as equal to 5 per cent of the present value of his right thereto, or (b) if he has no right to assign or charge the same, the full amount thereof.

17. The income of a pensioner derivable from real property shall be taken as equal to 5 per cent of the assessed value in excess of the encumbrances thereof, and the income of a pensioner derivable from personal property shall be taken as equal to 5 per cent of the cash value thereof.

18. Where a pensioner lives with his or her wife or husband, his or her income shall be taken to be equal to one-half of the sum of the incomes, calculated as in the Act and these Regulations provided, receivable by each of them separately.

19. The pension authority may, however, adopt such other methods as may be deemed equitable in determining the income of the pensioner.

#### TRANSFER OF PROPERTY

20. A transfer of property made more than five years before the date of application for pension shall be deemed not to have been made for the purpose of qualifying for a pension.

#### WHEN PENSION SHALL COMMENCE

21. Every pension granted shall commence on the day after the application is received by the pension authority, or on the day when the pensioner first becomes entitled, whichever is the later.

#### MANNER PENSION PAYABLE

22. Pensions shall be payable monthly in such manner as may be provided by provincial regulation.

23. In the event of the incapacity of any pensioner or if the pension authority considers that the pensioner is using or is likely to use his pension otherwise than for his own benefit, the pension authority may pay the pension of such pensioner to a trustee or trustees approved by such pension authority to be expended for the benefit of the pensioner.

#### SUSPENSION OF PENSION

24. The payment of a pension shall be suspended during the lawful imprisonment of the pensioner for an offence.

#### INCREASE OR REDUCTION OF PENSION

25. Every pensioner shall forthwith report to the pension authority any increase in his real or personal property of a total value of \$100 or more, occurring by devolution, bequest or gift or any other change in his financial condition.

26. Any pensioner who desires to make a claim for an increase of pension to which he may be entitled under the Act shall complete the form of claim provided, and deliver the form when completed to the proper pension authority, who shall investigate the claim as provided herein.

#### MANAGEMENT OF PENSIONER'S PROPERTY

27. Any pension authority may, if so authorized by the law of the province, and with the consent of the pensioner, assume the management of any property belonging to the pensioner.

28. Every pension authority shall be entitled to recover from a pensioner any sum improperly paid by way of pension whether as the result of the non-disclosure of facts, innocent or false representations or any other cause.

#### ACCOUNTING

29. Any sums due by Canada to any province in settlement of Canada's half share of the net amount expended by any province in the payment of pensions shall be ascertained as of the last day of March, June, September and December, and shall be paid as soon thereafter as possible.

30. In calculating the amount due by Canada to any province no account shall be taken of any sums which, under the provisions of the Act, such province is liable to reimburse another province or to be reimbursed by another province in respect of a pension granted therein or in such other province, nor shall any account be taken of the cost of administering or paying pensions.

31. In calculating the amount in which any province is liable to be reimbursed by another province under the provisions of Section 10 of the Act, regard shall be had only to the net amount of the pension paid by the province to be reimbursed after deducting therefrom the amount payable by Canada on account of such pension.

32. Balances due by one province to another province under the provisions of the Act shall be settled quarterly as of the same date as the sums due by Canada are payable from time to time.

33. The Minister charged with the administration of the Act may at any time require the province to furnish information, detailed or otherwise, in connection with statements of account rendered by the province.

#### INTERPROVINCIAL BOARD

34. An Interprovincial Board is authorized to be established with powers to interpret and recommend alterations in the Regulations, such board to be appointed by the Governor in Council.

The Department of Industrial Relations of the British Empire Steel Corporation stated recently that since the company's pension scheme was established about the beginning of 1924 no less than 332 pensions have been granted to employees who had reached ages varying from 65 to 87 and with records of service extending from the minimum requirement of 25 years up to 70 years. As many as 109 pensioners retired after more than 50 years service, twenty-two had been at work for 60 years or more, and one a full 70 years. Sixty-five pensioners have died, and two have gone back to work, leaving 315 on roll at December 31st, 1928. These former employees enjoy an average pension of \$29.15 per month. The provisions of the pension scheme of the British Empire Steel Corporation were outlined in the LABOUR GAZETTE, March, 1926, page 237.

## OLD AGE PENSIONS IN THE NORTHWEST TERRITORIES

### Department of Labour in Charge of Administration

**A**N Order in Council (P.C. 114) dated January 25, 1929, authorizes and directs the Department of Labour of Canada to pay pensions monthly to persons of the Northwest Territories under the provisions of the Old Age Pensions Act.

The text of the Order is as follows:—

#### P.C. 114

Whereas by Section 6 of the Old Age Pensions Act, Revised Statutes of Canada, 1927, Chapter 156, it is provided that:

“As soon as agreements under this Act have been made with two of the provinces adjoining the Northwest Territories, the Commissioner of the said territories may submit to the Governor in Council for approval a scheme for the administration and payment of pensions therein, and upon the approval of such scheme, the same shall stand, in all respects other than its duration, in the same position as an agreement with a province.”

And whereas agreements under the said Act have been made with the provinces of British Columbia, Saskatchewan and Manitoba;

And whereas the Minister of the Interior recommends, on the advice of the Commissioner of the Northwest Territories, approval

of the following scheme for the administration and payment of pensions in the said Northwest Territories:—

“1. The Department of Labour is authorized and directed to pay pensions monthly by bank cheque to persons of the Northwest Territories who qualify therefor under the provisions of the Old Age Pensions Act and Regulations made thereunder; to keep such records and books of accounts of receipts and expenditures as may be necessary and to do all such other acts and things as are incidental, conducive or necessary to the proper administration of old age pensions in the Northwest Territories under the provisions of the said Act.

“2. Every person of the Northwest Territories who makes application for a pension shall complete such forms and furnish such evidence and proofs of claim from time to time as may be required by the Department of Labour.

“3. All sums required for the payment of such pensions shall be advanced from time to time on the certificate of the Minister of Finance out of such moneys belonging to the Consolidated Revenue Fund of Canada not otherwise appropriated.”

Therefore His Excellency the Governor General in Council is pleased to approve the said scheme and it is hereby approved accordingly.

E. J. LEMAIRE,

*Clerk of the Privy Council.*

## CANADIAN GOVERNMENT ANNUITIES

*Address delivered over the Canadian National Radio System, prepared by Mr. E. G. Blackadar, Superintendent of Canadian Government Annuities*

**A**LTHOUGH the Government Annuities Act was passed some twenty years ago, it is only in recent years that the public really began to take advantage of this system as a means of making provision for old age, but during the last year or two increase in interest has been displayed by the Canadian people with the result that during the last fiscal year the number of contracts issued exceeded the number sold during the previous fiscal year by more than 150 per cent.

As many of you will be unfamiliar with just what a Canadian Government Annuity is, let me here explain that an annuity is a fixed yearly income paid to you by the Government of Canada. You may purchase these annuities in the same way as you would deposit your money in a Savings Bank, during the productive years of your life. Payment of the annuity ordinarily commences when your earning powers have departed because of old

age, and continues as long as you live, no matter how long that may be. The Government Annuities System is safeguarded by the whole resources of the Dominion, and assures a safe and profitable investment of your earnings while you are young, with the certainty of a definite livable income when your working days are over.

If you are a young man or woman bear in mind that if you would have an old age free from want or dependence you must save and invest wisely in your youth. The standard of living in Canada compares very favourably with that of any other country in the world. Huge sums of money are spent by Canadians each year for luxuries, which indicates that it should be quite easy for the average Canadian to lay aside out of his income a sufficient amount to provide a steady and dependable income when his earning days are over.

When you consider the fact that ninety-five per cent of men at 60 years of age are dependent upon their daily earnings or their children for support, you will see the necessity of commencing a systematic saving for the time when you will no longer be able to remain in profitable employment. Most persons make ample provision by means of life insurance to take care of any contingency arising in the event of their death, but the great majority of people do not realize there is also a possibility of their living to a very advanced age and unless they make ample provision for old age they might find themselves without means of support at a time of life when they are no longer able to help themselves. At this time of life only a very small percentage of people have sufficient money laid aside or a sufficient income to keep them in comfort in their old age. The others must either keep right on working hard or depend on someone else to support them. How many middle-aged people do you know who are no better off to-day than they were fifteen or twenty years ago, and whose future means of support is very uncertain? These people are beginning to look into the future with grave concern. In their advancing years they make every effort to save a little so that they may have something when they are old, but as many of them begin too late in life, very few meet with any degree of success.

The Government Annuities System is provided to the Canadian people at cost, there being no loading in our rates for either profits or expenses. The Government bears all costs of administration and every person resident or domiciled in Canada between the ages of 5 and 85 is eligible to purchase an annuity. If you are a young man or woman still earning your own living and do not think of retiring for a good many years, a Deferred Annuity is the form of contract which would best meet your requirements. As an illustration of the cost of such an annuity I may say that a young man aged twenty-five could purchase an annuity of \$1,000 per year to begin when he reaches the age of 65, by making a regular systematic saving of only \$1.08 per week. As an illustration of the advantages of making provision for old age by the Government System, it may be said that in order to obtain such an income by means of accumulating capital and investing it, it would be necessary for this young man to save \$20,000 before he attained the age of 65 and invest it at 5 per cent, whereas if he were to purchase an annuity, the total amount he would be required to save before 65 would be only \$2,228, and he would achieve the same result.

You may say 'how can the Government do this?' The reason is that your payments are accumulated at approximately 5 per cent and when your annuity commences part of your principal is returned to you with interest, but in any event you receive an undiminished amount of income as long as you live, no matter how long that may be.

Deferred Annuities may be purchased by small monthly or annual payments, which may be conveniently paid in at any Postal Money Order Office in Canada. If you were to purchase an annuity and for any reason you were unable to make your premium payments regularly, you would not forfeit what you had paid in. The arrears could be made up later and if not, when your contract matured, you would receive a proportionate amount of annuity based upon the payments you had made.

The earlier in life the purchase of a Deferred Annuity is decided upon, the less it will cost. I would, therefore, urge that every young person listening in to-night obtain a free copy of our latest descriptive booklet by calling at the nearest post office or by telephoning to our Ottawa office, which is located at Room 29, Regal Building, Queen and O'Connor Sts., Telephone, Queen 3000, Local 563. The descriptive booklets may also be obtained by writing to the Department of Labour at Ottawa.

There are also plans of annuity designed to meet the requirements of older people who find it necessary to retire now and to receive an income commencing at once. This second class is called Immediate Annuities. All the money you have to pay for such an annuity is paid in one lump sum. Your annuity commences three months from the date the purchase money is received, and from then on you receive an income from the Government of Canada payable in quarterly instalments for life, even if you live to be 100 years of age. Such annuities may be guaranteed for from ten to twenty years, and in the event of your death shortly after purchasing the annuity, the remaining payments would be continued to your estate.

Both the Deferred Annuities referred to at the beginning of this talk, as being suitable for young persons, as well as Immediate Annuities which are of particular interest to older persons, may be purchased jointly including any two persons, (usually husband and wife), in the one contract. The annuity is then paid to both as long as both live, with the full amount to the survivor as long as he or she lives.

The Government Annuities System of providing a dependable income when one's earning days are over is of interest to young and

old, the poor and the person of moderate means. This is *your own* system, the expenses of which are met by the Canadian Government, and every resident of Canada should take advantage of it.

Let me now repeat where you may obtain a free copy of our booklet in which the various plans of annuity and other details of purchase are described. First, by calling at your nearest post office; second, by writing to the Department of Labour, Ottawa; or third, by calling or telephoning to any of the following Annuities Representatives:

Ottawa.—H. Quinn, Room 29, Regal Building. Telephone, Queen 3000, Local 563.

Montreal.—E. McG. Quirk, Room 102, 1254 Bishop Street. Telephone, Uptown 2311.

Toronto.—E. N. Compton, Room 1, 65 Victoria Street. Telephone, Elgin 4751.

Quebec.—W. L. Brodie, Room 38, Lindsay Building, 203 St. John Street. Telephone, 2-4639.

Sherbrooke.—Wilfrid Cloutier, Room 5, Genest Building, 22 Wellington Street N. Telephone, 2903.

Winnipeg.—D. E. Dobson, 712 Commercial Building. Telephone, 23-607.

Hamilton.—D. F. Almas, Victoria Chambers, 69 James St. S. Telephone, Regent 1157.

Vancouver.—C. G. Beveridge, 215 Winch Building. Telephone 4551.

Victoria.—H. F. Bishop, Post Office Building. Telephone 8398.

## ANNUAL REPORT OF THE DEPARTMENT OF LABOUR OF CANADA

THE annual report of the Department of Labour of Canada for the fiscal year ended March 31, 1928, recently issued, describes the work carried on in connection with the Acts administered by the Department, as well as its various other activities in the interest of labour. The following statutes are now administered under the authority of the Minister of Labour:—(1) Labour Department Act; (2) Conciliation and Labour Act; (3) Industrial Disputes Investigation Act; (4) Government Annuities Act; (5) Old Age Pensions Act; (6) Employment Offices Co-ordination Act; (7) Technical Education Act; (8) Combines Investigation Act; (9) White Phosphorous Matches Act.

The Minister of Labour administers also the Fair Wages Policy of the government in conformity with the resolution of the House of Commons in 1900.

No infractions of the White Phosphorus Matches Act were reported during the year. This act prohibits the manufacture, sale and importation of matches made with white phosphorus.

The report refers to the increased industrial activity throughout Canada during the period covered, employment showing the largest volume since 1920, while wage rates in most industries moved upward, reaching levels exceeded only in 1920 and 1921. At the same time prices showed a downward tendency.

Another feature of the year was its comparative immunity from strikes which involved serious stoppages of work. In this connection the report points out that the Minister of Labour had been indefatigable in his

efforts to promote harmonious relations between employer and employee in all parts of Canada, and that to just what extent the favourable strike record is due to the minister's efforts and those of his officers in assisting disputants in reaching working agreements is perhaps scarcely realized. "Certainly," it is stated, "the general public is little aware of the nature and extent of the work performed by those concerned in the adjustment of labour controversies. The department is always willing, when a request from either side is received, to lend its good offices in the task of smoothing away difficulties which have arisen, and the success achieved by the minister and his officers in avoiding industrial disturbances has resulted in a most commendable tendency on the part of employers and workmen to request departmental mediation before a break in working relations."

For the purpose of furthering this branch of the Department's work, the position of Chief Conciliation Officer was created during the year, Mr. M. S. Campbell, being appointed. A full account of the conciliation work carried on during the year is included in the report.

### Industrial Disputes Investigation Act

The scope of the federal Industrial Disputes Investigation Act was extended during the 1928 session of the Alberta Legislature to disputes of the classes named in the Dominion law and otherwise within the exclusive legislative jurisdiction of that province, the provincial statute to come into force on proclamation of the Lieutenant-Governor in Council.

This proclamation was issued on May 2, 1928, shortly after the close of the fiscal year under review. It is pointed out that Ontario, Quebec and Prince Edward Island are now the only provinces that have failed so far to pass enabling legislation making the federal statute applicable in respect of disputes within provincial jurisdiction.

A statement of proceedings under the Industrial Disputes Investigation Act during the fiscal year is included in the report. Out of twenty-seven applications received under the terms of the statute, eleven Boards of Conciliation and Investigation were established and the proceedings of two boards already established during the preceding year were carried over into 1927-28. Two boards during the year dealt with two disputes each. In each of the fifteen disputes coming before Conciliation Boards during the year, the threatened strike or lockout was averted through the instrumentality of the statute.

With respect to the cases in which boards were not granted, the object of the Act, namely, the settlement of industrial disputes without strike or lockout, was obtained in nearly all instances through mediation by the Minister of Labour or departmental officials, or through the adjustment of matters in dispute by mutual agreement between the parties whilst steps looking to the formation of a board were pending. In only two disputes, both falling outside the direct scope of the statute, was the friendly intervention of the Department of Labour not accepted.

### Old Age Pensions

The report contains an account of the present standing of the Old Age Pensions Act in Canada. The province of British Columbia had already adopted the scheme, and during the fiscal year, early in 1928, Saskatchewan and Manitoba adopted legislation making the act effective in these provinces. The Yukon Territorial Council enacted an Old Age Pensions Ordinance in the summer of 1927, and investigations were undertaken by the governments of Ontario and Alberta, with a view to the enactment of concurrent legislation, should the scheme appear suitable to local conditions.

### Government Annuities

Substantial success was achieved by the Department of Labour during 1927-28 in promoting the sale of Government annuities as a means of protection for old age, 1,223 persons having contracted during the fiscal period for annuities, amounting to \$630,360, as compared with 503 contracts issued during

the preceding fiscal year, amounting to \$195,360. Receipts on account of premium payments during the fiscal year amounted to \$3,843,087, an increase of \$1,948,202, or 104 per cent, over the amount received during last year. This pronounced increase in business was largely attributable to the methods pursued during the year in bringing the Government annuities system to the attention of the Canadian public by way of advertisements in newspapers and periodicals, radio talks, and the appointment of special annuities representatives at various points throughout the Dominion.

The federal Government's annuity system was adopted during the year by the province of Quebec as a pension plan for technical school teachers. The project was approved by the Provincial Secretary, and at the close of the fiscal year the teachers and professors of the Montreal Technical School, the Quebec Technical School, the Hull Technical School, and L'Ecole Polytechnique and L'Ecole des Hautes Etudes Commerciales of the University of Montreal had come within the scope of the scheme. Premium payments are met by five per cent being deducted from the teachers' salaries and an additional sum equal to this five per cent being contributed by the provincial Government. The annuity is to commence at the age of 65.

### Combines Investigation Act

Activities under the Combines Investigation Act during the fiscal year included the completion of the inquiry into the Proprietary Articles Trade Association, an organization of wholesale and retail druggists and manufacturers established to fix and maintain minimum resale prices of proprietary medicines and toilet articles. The report of the commissioner in this case, Mr. L. V. O'Connor, was received and published in October, 1927. The commissioner found the organization to be in contravention of the Act, and in concluding his report, stated: "I am thoroughly convinced that the P.A.T.A., all-embracing as it is, or as it is designed to be, in its control of the entire trade in nationally advertised proprietary medicines and toilet articles, is an organization which has operated and is likely to operate to the detriment of and against the interests of the public." The findings in the P.A.T.A. case were summarized in the *LABOUR GAZETTE*, November, 1927, page 1165.

Reference is made in the report also to other inquiries which have been proceeding, two of them into industries in which foreign as well as domestic competition is alleged to have been all but eliminated, others into ar-

rangements involving the maintenance of resale prices, the fixing of uniform prices, withholding of supplies from certain dealers, and other practices alleged to be in restraint of trade and against the public interest.

The satisfactory settlement is reported also of a case involving lessening of competition by means of exclusive dealing contracts. In the case in question the producing company agreed to eliminate the exclusive dealing feature in its contracts with distributors.

### Technical Education

Progress made with respect to technical education during the year is reviewed in the chapter concerning operations under the Technical Education Act. The total enrolment in all vocational classes receiving federal grants by virtue of this Act was 109,008, an increase of 12,326 over the preceding period.

Records kept by several schools in the province of Ontario as to placements of technical students in suitable occupations were of an encouraging nature, 9,392 placements being reported. An analysis of these placements shows commercial courses with the greatest number, 4,282; industrial courses next with 3,193 placements; home-making third with 1,378 placements; navigation, 198; mining, 108; art, 99; agricultural, 92; marine engineering, 27; and telegraphy, 15. The Provincial Director states that it is the intention to obtain figures on placement annually and to endeavour to establish an adequate system of placement and follow-up where such does not already exist.

Legislation of importance as bearing on vocational education was enacted during the year by the provinces of Quebec and Ontario. The Quebec statute amended the Quebec Technical or Professional School Act and provided for the organization of arts and trades schools to assist in the development of primary technical education in the province. The Ontario Apprenticeship Act, operating under the provincial Department of Labour, was the first of its kind to be introduced in Canada and should do much to promote and improve the training of young Canadians in skilled industrial occupations. This Act provides for the control and regulation of apprentice training in certain trades, for the appointment of an Inspector of Apprenticeship, the formation of apprenticeship committees, etc.

Five bulletins were issued by the Technical Education Branch during the year as follows: "Woodworking and Building Construction," "Apprenticeship and Vocational Schools," "Metal Trades," "Electricity and Printing," and "Automobile Mechanics, Gas and Steam

Engineering." Over four thousand copies of each of these bulletins were distributed throughout the Dominion.

### Fair Wages

The Fair Wages Branch of the Department of Labour prepared 145 fair wage schedules and clauses during 1927-28 for inclusion in federal government contracts. This brings to 4,487 the total number prepared by the department since the work was commenced in 1900. The year was exceptionally light as to grievances arising out of the application of the Fair Wages Policy, only seventeen complaints having been received as to alleged non-observance by contractors of the labour conditions of various contracts.

The report contains full information as to the various works for which Fair Wage Conditions were laid down during the year.

### Employment Service of Canada

The administration of the Employment Offices Co-ordination Act proceeded along usual lines, disbursements to the provinces under the provisions of the statute totalling \$150,000. This amount, when distributed among the provinces in proportion to their expenditures on employment office administration and operation, enabled a repayment to them of 34.1 per cent of their gross expenditures. Employment offices were conducted during the year in sixty-four centres, and the number of placements effected totalled 418,306, as compared with 410,310 during the preceding fiscal year.

### Labour Gazette

The LABOUR GAZETTE was published monthly in English and French during the fiscal year ended March 31, 1927, which was the twenty-seventh year of its existence, the average number distributed each month being 10,029 of the English edition and 1,856 of the French. The average monthly paid circulation was 6,916, or 5,779 of the English edition and 1,137 of the French.

### Statistics

Statistical and other information relating to labour conditions has been collected and published by the Department of Labour since its establishment in 1900 as required by statute (Labour Department Act, chapter 111, Revised Statutes, 1927, section 4). In accordance with the Statistics Act, (1918), chapter 190, Revised Statutes, 1927, and under arrangements with the Dominion Statistician, statistics are collected and published in co-

operation with the Dominion Statistician, in close association with statistics of general social and economic conditions as organized in the Dominion Bureau of Statistics.

An important feature of this arrangement is the use by the department of the classification of industries and occupations drawn up in the bureau and followed by various departments of the federal Government service in the compilation and publication of records and statistics.

The report contains information as to strikes and lockouts, wages and hours, prices and cost of living, and as to fatal industrial accidents. This information has been published in the LABOUR GAZETTE from time to time.

### **Labour Organization**

The Seventeenth Annual Report on Labour Organization in Canada, covering the calendar year 1927, was prepared in the Labour Intelligence Branch, and contained the usual information as to the nature of the labour bodies with which the trade unionists of the Dominion are identified, with complete statistics of organized labour in Canada, as well as dealing with some of the more important incidents of interest to trade unionists and those who concern themselves with the activities of labour organizations.

### **Organization in Industry, Commerce and the Professions**

Another publication prepared in the Labour Intelligence Branch is the Report on Organization in Industry, Commerce and the Professions in Canada. This report was originated in 1921 with the object of meeting the demand for information concerning the extent of organization among persons engaged in industrial, commercial and professional pursuits.

### **Labour Legislation**

Since 1915 the Department of Labour has issued annual reports containing the text of the labour legislation enacted by the Parliament of Canada and the legislatures of the several provinces. The reports for 1915 and 1920 were consolidations of all Canadian labour legislation existing on December 31 of these respective years. The consolidation, which would normally have appeared in 1925 was postponed, and will be issued as the report for 1928. This action was taken owing to the fact that the statutes of Canada and of several provinces were under revision. With the publication of the consolidated volume in view it was decided to omit the annual report for 1927.

The labour legislation for 1927 was fully reported in the LABOUR GAZETTE in articles appearing in the issues of April, May, June, July, and October.

### **Library**

The library of the Department of Labour was organized in 1900 and has steadily increased its collection of documents since that time. Through the exchange of publications with departments of other governments carrying on work along similar lines, the department is kept in touch with labour matters in almost all countries of the world. The primary purpose of the library is to serve as an information centre for the officers of the department and the library staff assumes the task of putting before the officers concerned the current information of interest to them.

Subject to the requirements of the departmental officers, the services of the library are at the disposal of the general public, and frequent use is made of its material by students from the Canadian universities and by others interested in labour problems. Books are sent by mail, wherever possible, to any persons wishing to borrow them and special information and bibliographies are compiled when required.

### **International Labour Organization**

The Department of Labour is entrusted with the duties arising out of the relations of Canada with the International Labour Organization. These have entailed much correspondence, not only with the International Labour Office, but also with other departments of the Dominion Government, with the provinces and with employers' and workers' organizations. Replies have also been prepared in the Department of Labour to various questionnaires which were circulated on behalf of the International Labour Office. The performance of these duties has necessarily entailed a close study on the part of officers of the department of the various technical questions which have figured on the various conference agenda and meetings of the Governing Body and of questionnaires received from the International Labour Office.

A bulletin entitled "Canada and the International Labour Conference" was issued by the Department of Labour in February, 1922, for the purpose of furnishing information in reference to the International Labour Organization and the subjects which have received attention at the hands of this body.

## ANNUAL REPORT OF LABOUR DEPARTMENT OF QUEBEC

THE general report of the Minister of Public Works and Labour of the Province of Quebec for the year ending June 30, 1928, gives an account of the activities of the Department during this period in administering the various acts and regulations that have been assigned to it from time to time. In addition to the former duties this Department now supervises the work of the Women's Minimum Wage Commission. Its functions include also the supervision of all proceedings under the Quebec Trades Disputes Act; the inspection of industrial establishments, especially from the standpoint of the workers' safety and health; the carrying out of the provincial government's "fair wage" policy, requiring the payment of current rates of wages in connection with work under government contracts, superintending licensed registry offices for domestic servants; administering the Boiler Inspection Act; superintending the inspection of foundries; maintaining provincial employment offices and supervising juvenile employment by means of educational certificates issued to children under 16 years of age.

The Deputy Minister of Labour states that the operations of the department are being decentralized, and that in future each division will furnish a distinct report. This rule will apply to the work under the Workmen's Compensation Act, the Women's Minimum Wage Act, the Electrician's Act and the collection of fees for certificates granted to hotels and restaurants.

The new Workmen's Compensation Act became operative in the Province only on September 1, and the present report does not include any account of work done under this head. It is anticipated, however, that the act will have the effect of stimulating the work of accident prevention. "If it be impossible," the report says, "to entirely suppress accidents, their number may be considerably lessened, either by means of judicious changes in regard to the installation or use of apparatus, or by suitable protective regulations."

*Registration of Children.*—Since the passing of amendment to the Quebec Industrial Establishments Act in 1919, requiring educational certificates for children before they can be employed, 28,787 children have been registered. During the period covered by the report 2,071 children were registered at Montreal; 480 at Quebec, and 128 in the Eastern Townships, 28 children being refused certificates.

*Steam Boilers.*—The new law regulating the inspection and construction of boilers began to take effect during the year. This act, which was passed at the 1928 session of the provincial legislature, called for the adoption of the "Canadian Interprovincial Standard" in force in other provinces in Canada, to serve as a guide for "(1) the construction of steam boilers and the classification of their accessories; and (2) the elaboration of forms and documents necessary for the proper administration of the law, its uniform application, and the technical direction of examiners in the exercise of their duties." The new law also provides for the proper supervision of boiler construction, and for the registration and certification of boilers made outside the province. It is anticipated that these new duties will call for an enlargement of the Department's staff. The report points out that "an abuse which the new law will remove is the unlawful trade in second-hand boilers. These old boilers, sold at a low figure to innocent manufacturers, meant, after a time, an economic loss and often a loss of life. In future, a conspicuous mark on the plates of the boilers will put purchasers and owners on their guard when delivering a boiler which has not been inspected, that they will incur a serious fine. The year begun promises much for this important branch of our service. Fewer old boilers, fewer accidents."

*Fair Wages on Government Contracts.*—The report states that no complaints were received during the year regarding non-compliance with the provincial governments fair wage policy, the contractors realizing that it was to their advantage to pay the wages current in work for the Provincial Government.

*Free Employment Bureaus.*—The report notes that the Employment Bureau Act dates from 1910 and was made to meet the wishes of workmen expressed at different times by resolutions of the conventions of Trade and Labour. At first the bureaus had to deal specially with the unemployed in Montreal, but the increased demands from contractors in the lumber regions induced the Department to give a wider interpretation to the legislation. At that time, it is stated, there were a good many private registry offices for servants, but it was only later, after the Department had adhered to the agreement proposed by the Dominion Government to pay part of the cost of administration of the employment offices, that the question arose

of reducing each year the number of private registry offices. Following this program, the Department reduced each year the number of city offices, and out of 15 licensed offices, there now remain only 8, the Department having refused all applications whenever an office closed. Occasionally difficulties arise in connection with contracts of employment, and long investigations often result where foreigners are concerned.

*Provincial Employment Offices.*—The report points out that lumbering still holds the first place in the demand for labour; railway construction and maintenance also showed a heavy demand, as well as the building and other industries. In regard to domestic servants, it is stated that "despite competition by servant registry offices licensed by the city, the provincial office, through the precautions taken by our staff to obtain exact information from applicants, gives our service a first class character and a certainty that the employees possess the

necessary knowledge and the best recommendations from former employers.

*Trade Disputes.*—Some Account of the Quebec Trades Disputes Act was given in the LABOUR GAZETTE, February, 1927, page 162. The present report includes a statement by the Registrar of Conciliation and Arbitration Council under this Act, showing that a friendly settlement was effected during the year in disputes involving electrical workers and textile workers at Montreal. Separate investigations were held into a case in which it was alleged that preference was being given by an employer to foreign workmen, and to another case concerning Sunday work at a pulp and paper plant at Three Rivers. These cases are dealt with in separate reports.

*Hotel Inspection.*—The Weekly Day of Rest law of the province was enforced during the year in regard to hotels. A list was made of the restaurants which were the chief offenders, and this resulted in checking the infringement of the law.

### Report of Women's Minimum Wage Board of Quebec, 1927-28

The second annual report of the Women's Minimum Wage Board is included in the general report of the Department of Public Works and Labour for the 12 months period ending June 30, 1928. The orders so far issued by the Board govern the employment of female workers in the following industries—(1) Laundries, dye works and dry cleaning establishments; (2) Printing, bookbinding, lithography and envelope making; (3) Textile trades, which include weaving, knitting, spinning and allied processes. Of these orders those governing the printing and textile industries were issued during the period covered by the present report (LABOUR GAZETTE, November, 1927, page 1174; January, 1928, page 30; July, 1928, page 713).

*Printing Industry.*—It was found that over 300 establishments were covered by the order governing the printing industry, 123 of these establishments employing 921 women and young girls. According to the evidence of several employers the application of the minimum rates caused no disturbance in the business, but in some cases it became necessary to adjust the proportion of apprentices and experienced workwomen. The average wages of the experienced workers is stated to be generally higher than the minimum rates fixed by the Board.

In the course of its inquiry, the Commission remarked that in a particular branch of

the printing industry, that of the manufacture of cardboard young girls is much greater than in other branches, and that the average wage is consequently lower. On the subject of the cardboard industry the report says:—"Considering the reasons given by the employers and the peculiar position of this industry, the Commission thought wise to temporize and to suspend provisionally the putting into force of the enactments in this special branch, while suggesting to those concerned to make a readjustment in their cost prices and, if necessary, in their methods of manufacture, so as, within a reasonable delay, to place themselves on an equal footing with the other branches of the printing industry.

*Textile Industry.*—In the textile industry there were 39 establishments employing on an average of 10,189 workwomen. As the great majority of the workwomen in the textile industry work by the piece the task of establishing an average minimum wage was more complicated in this than in other industries.

#### Laundries and Dyeworks

The orders governing laundries and dyeworks have been in force since March 1, 1927, and it is now possible to estimate the effects they have had upon the industry. The report

contains comparative statistics of the industry for 1927 and 1928, indicating some of these effects.

ORDER GOVERNING LAUNDRIES AND DYEWORKS

—	City and Island of Montreal		Rest of Province	
	1927	1928	1927	1928
Number of firms reporting.....	43	49	19	20
Number of workwomen.....	1,087	1,162	253	246
Inexperienced workers.....	634	346	176	76
Experienced workers.....	453	816	77	170
Total wages per week.....\$	12,761.89	14,689.17	2,062.07	2,299.69
Average wage per week.....\$	11.75	12.65	8.16	9.36

Tables are given also showing the changes in the numbers of workers in the various wage groups. From these it appears that the minimum wage orders tend to reduce or even obliterate the number of workwomen in the lower groups.

These figures show that, for the Montreal District, the number of workwomen receiving less than the minimum rate of \$12 per week declined from 634 in 1927 to 346 in 1928, while there was a corresponding increase in the number of workers receiving \$12 a week and over, from 453 in 1927 to 816 in 1928. In the rest of the province the number of workers receiving less than the minimum rate (\$9) decreased from 176 in 1927 to 76 in 1928, while those receiving the minimum rate or over increased from 77 in 1927 to 170 in

1928. The report states that "according to the testimony of the employers' representatives, the putting into force of the minimum wage enactment, far from hurting their industry, has rather stabilized it, suppressed the unfair competition of a small number of employers who paid a wage below the average, and has stimulated others while it guarantees to workwomen a minimum wage upon entering, with periodical increases fixed in advance, which will make them more steady and change situations less often."

NUMBER OF WORKERS IN VARIOUS AGE GROUPS, 1927, 1928

Wage group	City and Island of Montreal		Rest of Province	
	1927	1928	1927	1928
\$ 3 00 to \$ 4 00.....			3	0
4 00 to 5 00.....			4	0
5 00 to 6 00.....			7	0
6 00 to 7 00.....	18	0	44	14
7 00 to 8 00.....	33	0	64	35
8 00 to 9 00.....	37	0	54	27
9 00 to 10 00.....	158	74	21	107

18 00 to 19 00.....	20	32		
19 00 to 20 00.....	4	4		
20 00 and over.....	42	40		

The report state that the Board is now investigating conditions in the shoe and leather industry, with a view to fixing a minimum weekly wage rate for female employees in this important group.

WOMEN'S MINIMUM WAGES IN QUEBEC

Revision of Orders Nos. 1 and 2, Governing Laundries, Dye Works, Etc.

THE Minimum Wage Board of the Province of Quebec recently revised both the existing orders governing female employees in laundries, dye works and dry cleaning establishments in the province. Order No. 1, governed establishments situated in the city and Island of Montreal and within a radius of ten miles around and beyond the island, and Order No. 2 governed establishments in the rest of the province. The original Order No. 1 was published in the LABOUR GAZETTE, December, 1926, page 1195, and Order No. 2, was published in the issue of March, 1927, page 271. The provisions of the amended Order (No. 2a) were outlined in the issue of November, 1928, page 1198. The orders as amended, numbered respectively 1a and 2a, took effect on Janu-

ary 1, 1929. The accompanying table shows the minimum rates of wages as fixed by the revised orders.

MINIMUM WAGE RATES FOR FEMALE EMPLOYEES IN LAUNDRIES, ETC., IN THE PROVINCE OF QUEBEC

Class of workers	Order No. 1a Montreal City and District	Order No. 2a rest of Province
	per week \$	per week \$
Experienced workers.....	12 00	9 00
Inexperienced workers—		
6 months at.....	9 00	7 00
6 months at.....	10 50	8 00

The revised orders leave unchanged the minimum wage rates for experienced workers. They abolish the distinction formerly made

between apprentices under 18 years of age, and other inexperienced workers. The three learning periods of three months each formerly served by apprentices now disappear, all inexperienced workers being required to serve only two 6-months' probationary periods. Another change in the original orders provides that the number of inexperienced workers, that is, those having less than 12 months' experience, shall not exceed one-half of the total female working force. Formerly the proportion of inexperienced workers and apprentice could not exceed 35 per cent of the total force.

The remaining provisions of the orders are as follows:—

**Overtime:** Any female employee doing work in excess of the regular recognized working period of the establishment shall be paid for same at not less than the regular rates.

**Lost Time:** Any female employee losing time during the regular recognized working period of the establishment will be paid proportionately for the actual number of hours worked.

**Deductions for Absence:** No deduction below the minimum wage line for absence shall exceed the value of the time lost, reckoned proportionately to the regular recognized working period of the establishment.

**Waiting:** Any employee required to wait on the premises shall be paid for the time thus spent.

**Permits:** The Board may issue permits for lower wages on behalf of aged or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers and employees are invited to consult the Board regarding any problems which this Order may concern.

**Penalties:** Any violation of this Order is punishable by fine. (See Section 12 of the Act.)

**Posting:** Each establishment shall keep a copy of this Order posted in a conspicuous place.

This Order is subject to annual revision by the Board.

This Order shall come into force and be effective on January 1, 1929.

## LABOUR AND INDUSTRY IN SASKATCHEWAN

### Annual Report of Provincial Bureau of Labour and Industries for 1927-8

THE eighth annual report of the Bureau of Labour and Industries of Saskatchewan, recently published, contains a summary of the various activities of the Bureau during the year ending April 30, 1928. The functions of the Bureau as specified in the Bureau of Labour and Industries Act of 1920 include the administration of the Factories Act, the Building Trades Protection Act, the Electrical Workers' Protection Act, the Employment Agencies Act, the Mines Act, and the Minimum Wage Act. The Bureau is also charged with the duty of preparing statistics of employment, wages and hours of labour, strikes and lockouts, labour organization, industrial relations, conditions of industrial employment and the natural resources of the Province.

**Accidents and Accident Prevention.**—The report of the Inspection Division outlines its work under the provisions of the Mines Act, the Minimum Wage Act, the Factory Act and Elevator Regulations. A number of investigations were also made by request into claims for compensation for injury by accident to employees of the government whose work fell within the scope of the Workmen's Compensation Act. (As no compensation board existed last year disputed claims for compensation were dealt with by the courts).

The recommendations following such investigations were apparently satisfactory to all parties concerned, with but one exception. All the accidents investigated occurred on work performed for the Highways Department.

There were 94 recommendations for greater safety in the operation of elevators, while 75 recommendations were made for the better safeguarding of factory employees. These recommendations were in practically all cases given immediate consideration and complied with. In all, 612 inspections were made of the industrial establishments coming under the provisions of the Factories Act.

ACCIDENTS AND TIME LOSS IN VARIOUS INDUSTRIES IN SASKATCHEWAN, 1927-8

Trade or industry	Fatal	Per- manent	Tempo- rary	Time lost in days
Building trades.....	1	1	80	1,480
Electrical or metal trades	1	1	84	1,666
Lumbering.....		2	10	512
Mines (coal).....		3	33	639
Food preparation.....	1		56	1,084
Railways—				
Steam or electric.....	6	21	7.8	16,284
Printing and publishing.....		1	7	165
Woodworkers.....			5	121
Civic employees.....		1	62	791
Elevators.....		1	41	1,835
Miscellaneous.....	2		43	628
	15	31	1,149	25,205

As regards accident prevention, the report points out the need for more attention to the causes of accidents from falling material, handling objects, or stepping on nails and loose material, and emphasizes the importance of keeping injuries free from infection. In the accompanying table, the accidents and time loss in the various industries are summarized.

*Manufacturing Industries.*—Manufacturing in the province remained on a healthy level and there was considerable expansion in building during the year. Electric power plants are being expanded to provide for increasing public requirements, and power lines are being extended to new towns and villages. This development, when completed, will create a field for new industries, and lead to an expansion in manufacturing. The accompanying table indicates the extent of the manufacturing industries in the Province.

PRINCIPAL STATISTICS OF MANUFACTURING INDUSTRIES FOR 1924, 1925 AND 1926

Principal statistics	1924	1925	1926
Establishments reporting.....	645	650	674
Capital invested... \$	30,269,547	31,607,896	33,943,060
Employees.....	4,152	4,405	4,904
Salaries and wages. \$	5,554,416	5,755,629	6,397,545
Cost of fuel..... \$	61,896	72,847	.....
Power equipment, h.p.	1,640,381	1,483,860	.....
Cost of materials.. \$	22,179,147	24,353,581	29,128,035
Gross value of products.....	36,313,931	40,093,273	47,108,097
Net value of products..... \$	14,134,784	15,739,692	18,080,062

*Coal Mining.*—The number of coal mines in operation during 1927 was 53, and the total production was 472,182 tons as compared with 451,077 tons produced in 1926. The number of employees under ground averaged 370 for the year while the number of employees above ground averaged 119. Nine mines were ventilated by fans, and 44 by natural means.

*Other Industries.*—During the period from May 1, 1927 to April 30, 1928, the Employment Service placed 48,713 men in employment on the farms. The average wage for farm work throughout the year was as follows: winter work, \$10 to \$25 per month; spring work, \$35 to \$50 per month; harvest work, \$4 to \$6 per day; fall work, after threshing to freeze-up, \$50 per month.

The fur industry of the Province for the year closed June 30, 1928, showed a slight

increase in volume over the previous year. The estimated amount paid to trappers for the 1927-28 season was \$1,821,483 as compared with \$1,609,782 in 1926-27.

The statistics of the lumbering industry are taken from statistics compiled by the Department of Interior. There were 9 mills in operation in 1926 with an invested capital of \$533,133, and a production value of \$447,157. The number of employees was 212, whose salaries and wages totalled \$165,026.

The report showed that the products of the commercial fisheries in 1927 had a total market value of \$503,609, an increase over the preceding year of \$59,321. Whitefish is of chief importance in this industry, representing 75 per cent of the total value of the fish production of the Province.

*Strikes and Lockouts.*—The number of strikes in the Province during 1927 was 3, a percentage of 3.8 of the total in Canada, in which 5 firms and 79 workers were involved with a time loss of 1,217 working days.

*Employment Service.*—The work of the Employment Service is dealt with in regular articles appearing in the LABOUR GAZETTE. Nine permanent offices are maintained in Saskatchewan, and the average cost of placement is 76 cents.

*Labour Legislation.*—The report outlines the legislation enacted during the year, and the amendments to existing Acts. The Labour legislation enacted during 1928 was dealt with in the LABOUR GAZETTE for April, 1928, page 369.

*Immigration.*—The report presents a table indicating the number and nationality of immigrants who came to Saskatchewan from 1923 to 1927. For this five year period the immigration to the province each year was as follows: 12,147 in 1923; 14,953 in 1924; 12,347 in 1925; 19,816 in 1926; 16,163 in 1927. The report states that there was received through the Department of Immigration, under the Empire Settlement Act, some 200 girls who were placed in city and farm homes. Under this scheme the girls were brought to Saskatchewan at a very cheap transportation rate, the amount of money loaned to any one girl for transportation not exceeding \$14.60. The branch acted as a collection agency for the repayment of the loans, and reports that practically all the girls have repaid their loans in full. The girls are stated to be of a very good class, and from reports received gave satisfaction in their employment.

## Minimum Wages in Saskatchewan, 1927-28

The report of the Minimum Wage Board of Saskatchewan for the year ending April 30, 1928, forms a section of the annual report of the Bureau of Labour and Industries. One of the chief difficulties confronted in enforcing the Minimum Wage Act is detailed in the report of the Board as follows:—

Experience has proved that the rigid enforcement of the regulations of the Minimum Wage Board, in regard to the rate of wages to be paid to female employees, has not in all cases proved satisfactory. It is urged by some that the orders of the board should be strictly enforced and no deviation be allowed, whatever the circumstances or whatever the result may be. On the other hand it is found that some employers, willing enough to employ women at a lower rate, are not inclined to pay the increased rate requested, to those whom they consider have not the ability to earn such wage. The result is the employee is given notice to leave. Instances have occurred where employees have been recommended by the inspector for an increase and have been dismissed in consequence. These employees have come to the department begging to be given a permit to allow them to continue in their employment at the lesser wage, for the reason that they were unable to find other employment, and, being entirely dependent upon themselves for their living, the consequences would be serious if they were out of employment. In other instances parents have berated the board for refusing to issue such permits, giving as a reason that other employment was difficult to find, and the earnings were necessary.

"It is regrettable," the report states, "that some few employers in factories, hotels and cafés have taken advantage of non-English-speaking employees. These employees, unable to speak English, and therefore unable to read the orders regulating their employment, are ignorant of their rights under The Minimum Wage Act. Frequently these girls are employed in factories, particularly those operating for the first time, at a less rate of wages than that provided for beginners in the Minimum Wage Regulations. The inability to speak English causes them to be afraid of losing their jobs and very reluctant to do anything that would jeopardise their employment. In the investigation of two cafés, one hotel and one store, back wages were obtained without recourse to the courts, and in a large number of other cases the wages of employees were increased to the amount set by the regulations by recom-

mendations made to employers. In July, 1927, legal proceedings were commenced against several café proprietors in Saskatoon for working female employees for long hours, but due to the strike instituted by the café employees, which resulted in better working conditions, the matter upon request of the workers was allowed to drop."

Of the 833 women employed in hotels and restaurants and refreshment rooms, 188 work a six day week, the remainder working seven days.

Some figures in connection with administration of several Orders in 1927-28 are given as follows:—

*Shops and Stores.*—Number of firms, 211; Number of employees, 1,223 (inexperienced, 391, experienced, 823); employees on piece work and part time, 92 experienced employees receiving the minimum wage of \$15 per week or over, 775; inexperienced employees receiving under \$15 per week, 356.

*Laundries and Factories.*—Number of firms, 66; Number of employees, 360 (inexperienced, 127, experienced, 233); employees on piece work and part time, 14; experienced employees receiving the minimum rate of \$14 per week or over, 223; inexperienced employees receiving under \$14 per week, 123.

*Mail Order Houses.*—Number of firms, 4; number of employees, 355, (inexperienced, 75, experienced, 280); employees receiving the minimum rate of \$14 per week or over, 280; inexperienced employees receiving under \$14 per week, 75.

*Beauty Parlors and Barber Shops.*—Number of firms, 36; number of employees, 118, (inexperienced, 36, experienced, 82); employees on piece work and part time, 13; number of apprentices paying premiums, 33; experienced employees receiving the minimum wage of \$15 per week or over, 67; inexperienced employees receiving under \$15 per week, 5.

*Hotels, Restaurants and Refreshment Rooms.*—Number of firms, 170; number of employees, 833, (inexperienced, 16, experienced, 817). The minimum wage of experience employees is \$13 per week for a six-day week, and \$14 per week for a seven-day week. The Order also permits a deduction of \$5.25 per week for board of 21 meals, and of \$2.50 for lodging per week of seven days. The number of employees receiving \$14 per week or over, was 57. A considerable proportion of the employees in this group receive board or lodgings, or both, as part compensation.

## Child Welfare and Mothers' Allowances in Manitoba

The third annual report of the Child Welfare Division, Department of Public Welfare, Manitoba, details the activities of the Division of the year ending April 30, 1927. As was noted in the *LABOUR GAZETTE* (May, 1924, page 373, and August, 1924, page 626) the Mothers' Allowance Commission was abolished in 1924 its functions being transferred to the Child Welfare Division. Co-operating in the work of the Child Welfare Division are many individuals and agencies interested in promoting family welfare throughout the Province. The report expresses its appreciation of the services rendered by these organizations. Outlining the amendments to the Child Welfare Act, the report states that "the aim and object in the consolidation of the child welfare laws in Manitoba was and is that the responsibility of the Province towards its child citizens may be more adequately recognized and discharged, to the end that neglect of children may be minimized and a higher standard of child care inculcated and established throughout the Province."

The report reviews "standards of State aid to children in their own homes." under Part III of the Child Welfare Act, as follows:—

"The standard of living provided should furnish everything necessary for the health and moral welfare of children concerned. Adequate food should be provided to enable them to grow up with strong and healthy bodies. The mother should not be away from home at work at any time when her children need her, nor do work that is beyond her physical strength. The care and training that a mother gives her children should be the greatest service she can render. In order to approximate such standards special attention is given to housing, food, clothing, education and recreation. Families are encouraged to live in the outskirts of the city, where it would be possible for them to have a cottage with space for play and for a vegetable garden and chickens and possible a cow for milk. The number of rooms and their size, light, ventilation, and repair are factors that also require careful supervision of our official visitors. Sufficient number of beds and bed linen, the minimum amount of milk per day for each child, clothing sufficient for protection and cleanliness, and comparable in appearance to that of the companions of the wearer. Educational facilities, other than that which the public school affords, and to include the use of the public libraries. In regard to the health services, remediable

defects (defective eyesight, diseased tonsils, bad teeth and other conditions) have to be corrected necessary operations being performed and hospital care provided.

"In this connection it is felt that the general welfare of the average child under allowance is well looked after when compared with their companions who are not under allowance. Our workers realize that service to a family must be conditioned upon its real needs (sometimes different from, and sometimes more extensive than its apparent needs) and that the foundation of intelligent and effective service is a thorough knowledge of the family's problems and the resources at its command."

At the beginning of the year 696 families were receiving allowances, this number increased to 748 at the end of the fiscal year April 30, 1927—a net increase of 6.6 per cent. For varying periods during the year 855 families were dealt with. The number of new applications in 1926-27 was 166, a reduction of one as compared with the previous 12-month period. Of the total of 124 families where the allowance was discontinued during the year, it is noticeable that 76, or 57.25 per cent became self-supporting, and 26 mothers, or 21 per cent, were remarried.

Cheques were distributed in February by Saskatchewan Pool Elevators Limited to Wheat Pool members, returning to each his proportionate share of the surplus earnings of the Saskatchewan Pool Elevator system for the crop year 1927-28. At the annual meeting of Saskatchewan Wheat Pool Delegates held in Regina last November it was decided that these be distributed to the Growers in cash. The total amount of the earnings available for distribution from last year's operations is \$1,430,791.96. The payment is being made on the basis of 1½ cents per bushel for grain delivered through Pool country elevators and 1 cent per bushel for grain delivered to Pool terminals over the platform.

This is the third payment in cash covering the excess charges refund which has been made to Pool members. The amount of the surplus earnings of Saskatchewan Pool Elevators Limited during 1925-26 was returned to Growers in February, 1927, and amounted to over \$476,000. This figure jumped to \$1,372,000 for 1926-27, and for 1927-28 to \$1,430,791.96, the amount now distributed.

## WORKMEN'S COMPENSATION IN QUEBEC

### Portion of Expense of Administration to be Borne by Insurers.

THE Workmen's Compensation Commission Act (Statutes of Quebec, 1928, chapter 80) provides at section 10 (1) that insurers are to bear all expenses incurred by the Commission in administering the Workmen's Compensation Act (Statutes of Quebec, 1928, chapter 79) and the Workmen's Compensation Commission Act, except the expenses for salaries and offices, which are assumed by the government. "Insurer" means any fixed premium or mutual insurance company engaged in workmen's compensation insurance under the Act and also every employer or head of an enterprise or owner of an industry who becomes his own insurer. The section referred to provides that "the manner of apportioning such expenses among the insurers shall be determined as equitably as possible by the Commission after hearing the interested parties called before it. The method of apportionment determined by the Commission shall take effect as soon as it has been approved by the Lieutenant Governor in Council and published in the *Quebec Official Gazette*, and it may be changed by the Commission, by following the same formalities."

In compliance with these provisions the following notice was published in the *Quebec Official Gazette*, January 26, 1929.

#### NOTICE AS REQUIRED UNDER SUBSECTION 1 OF SECTION 10 OF THE WORKMEN'S COMPENSATION COMMISSION ACT, 1928.

The method of apportionment at the expiration of each calendar year of the expenses of the Workmen's Compensation Commission, payable by the insurers in accordance with subsection (1) of section 10 of the Workmen's Compensation Commission Act, 1928, has been determined by the Commission as follows, and approved by the Lieutenant-Governor in Council on January 17, 1929.

(a) Each insurance company approved in accordance with subsection (1) of Section 23 of the Workmen's Compensation Act, 1928, shall pay the sum of \$500 in addition to an assessment based on the number of claims disposed of on its behalf by the Commission, as for the year for which the apportionment is made.

(b) Each self-insurer licensed under section 24 of the said Act, shall pay 1% (one per cent) of the guarantee, exclusive of any addition thereto required by the Commission after the issue of the initial license on account of sums due for past workmen's compensation accidents, furnished to the Commission as at the expiration of each calendar year, in accordance with section 25 of the said Act, in addition to an assessment based on the number of claims disposed of on his behalf by the Commission as for the year for which the apportionment is made.

(c) The balance of the expenses of the Commission for each year for which the apportionment is made, after taking into consideration the total of the minimum assessments levied in accordance with sub-paragraphs (a) and (b) of this paragraph, shall be paid by insurance companies and self-insurers in proportion to the number of claims reported by each one to the Commission and disposed of as for the year for which the apportionment is made. The unit claim shall be one involving temporary total incapacity only; claims involving any permanent incapacity shall count as five units and fatal accidents shall count as seven units. The total of the units so determined for all claims disposed of as for the year for which the apportionment is made shall be divided into the balance of the expenses to determine the unit claim cost of administration after allowing for the assessments provided in sub-paragraphs (a) and (b) above.

### Hours of Labour in Germany

The General Confederation of German Trade Unions conducted an inquiry into the hours actually worked during the first week in October, 1928, in the building, printing, chemical, woodworking, metal and engineering, boot and shoe, and textile industries in Germany. The inquiry covered a total of 3,101,078 workers, of whom 414,086 were in the building industry; 96,369 in the printing; 230,567 in the chemical; 222,160 in the woodworking; 1,525,591 in the metal and engineering; 81,879 in the boot and shoe; and 530,426 in the textile industries. The longest hours were worked in the textile industry, 32.5 per cent of the employees working over 48 hours per week. Of the total number of workers in all industries, 6.5 per cent worked under 48 hours per week; 55.6 per cent worked 48 hours per week; 11.3 per cent worked over 48 and up to 51 hours per week; 11.9 per cent worked over 51 and up to 54 hours per week; and 3.4 per cent worked over 54 hours per week. Of the total number of employees, 11.3 per cent were working on short time.

The legislative committee of the city council of Calgary, Alberta, recently recommended that transient painter, paperhanger, and decorator contractors be included under the heading of transient traders, and that the by-law concerning transient traders be amended to include them. The fee for transient traders is \$100. The committee also recommended that resident painter contractors be assessed a fee of \$10. The licensing of both transient and resident painter contractors was asked for by both the master painters' association and the members of the union.

## PROVISIONAL ASSESSMENT RATES FOR WORKMENS' COMPENSATION IN NEW BRUNSWICK, 1929

**T**HE Workmen's Compensation Board of New Brunswick, as provided for under the Act, recently published the provisional assessments for 1929, being the estimated amounts necessary to provide sufficient funds in each of the industrial classes to meet all claims for compensation payable during the ensuing year. The provisional rates of assessment for 1929, per \$100 of payroll, show a few changes from the rates for 1928 (LABOUR GAZETTE, February, 1929, page 153). These changes indicate to some extent the nature of the accident record in each group on which assessment is based.

In several of the larger industrial groups the assessments remained unchanged from last year, among these being the following: coal mining continues at \$5 per \$100 of payroll; steel and iron (manufacture of bolts, nuts, nails, etc.) continues at \$2; steel ship-building and repairing continues at \$2.50; erection of steel buildings continues at \$7; bricklaying, mason work and general construction continues at \$3; logging, cutting of timber, etc., continues at \$5.

The principal changes in industrial classifications, in the rates for 1929, as compared with 1928, are as follows:—

Manufacture of oil from shale: assessment increased from \$3 to \$5.

Sugar refineries: assessments decreased from \$2 to \$1.50.

Manufacture of boxes, cardboard and paper: assessment increased from 40 cents to 70 cents.

Provincial, municipal or civic roads and streets; making and repairing exclusive of bridge construction; scavenging; street cleaning; snow or ice removal; culverts; construction not otherwise classified, concrete work or cement work not otherwise classified: assessment increased from \$2 to \$3.

Construction of dry docks, piers, wharves, breakwaters or other harbour improvements including dredging, subaqueous construction or pile driving: assessment increased from \$2 to \$2.50.

Stevedoring: assessment increased from \$5 to \$6.

Tunnelling, rock work or blasting: assessment increased from \$6 to \$8.

Dam construction (concrete or wood) and all work connected with same, including excavating and blasting and preliminary surveys, dam building, earth or cement: assessment increased from \$4 to \$5.

## Workmen's Compensation in Ontario in 1928

The Workmen's Compensation Board of Ontario reports that during the year 1928 there was awarded in compensation benefits the sum of \$7,067,946.93, as compared with \$6,084,654.87 during 1927. Last year's total includes \$5,901,439.39 paid for compensation and \$1,166,507.54 for medical aid. The accidents reported during the year numbered 79,398, as compared with 71,979 during 1927. The fatal accidents showed an increase from 429 during 1927 to 553 during 1928. In December there were 6,455 accidents reported including 36 fatalities which was somewhat lower than November when 7,021 reports were received including 51 fatalities.

Mr. R. B. Morley, general manager of the Industrial Accident Prevention Association, calls attention to the division of employers by the Compensation Act into Schedules 1 and 2 and Crown Cases. The Crown cases are those of the Federal and Provincial Governments. Schedule 2 includes the steam and electric railways, the telegraph and telephone companies, school boards, municipalities, etc. In Schedule 1 there are approxi-

mately twenty-five thousand industries, these being by payroll largely the manufacturing interests of the Province in which there has been a remarkable increase in employment over former years.

The plants included in Schedule 1 showed an increase in the number of accidents reported during every month of 1928 except in January only when the figures were lower than in 1927. The total medical aid awarded in Schedule 1 in 1928 shows an increase of over one hundred thousand dollars and total compensation awards over six hundred thousand dollars. The accident fund of the Board received several heavy blows during 1928 including the Manassoo disaster and the Holinger fire.

Records now available indicate an increase in 1928 over 1927 of eight per cent in employment, an increase of eleven per cent in total number of accidents reported to the Workmen's Compensation Board and an increase of sixteen per cent in total awards by the Board.

## WORKMEN'S COMPENSATION IN SASKATCHEWAN

### Report of Commission appointed by Provincial Government

AS noted on another page of this issue, a new Workmen's Compension Act is now before the Legislature of Saskatchewan, the bill having been introduced early in the session by the Hon. George Spence, Minister of Railways, Labour and Industries. The provisions of the bill follow the main lines of the recommendations of the Royal commission appointed by the provincial government last March to inquire into the subject of Workmen's Compensation in the Province. The Commission was composed of the following members; Messrs. P. M. Anderson, Regina; L. D. McTavish, Moose Jaw; H. Perry, Regina; F. M. Still, Regina, and A. W. Heise, Saskatoon, the first named being the chairman.

The report of the commission, which was returned to the provincial department early in January, contained the following conclusions and recommendations:—

1. The enactment of a new workmen's compensation act, embodying the abrogation of the present system of compensation to injured workmen and their dependents, and the adoption of a collective liability system similar to that of the province of Ontario save and except as applicable to those railway employees included in the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, the Brotherhood of Railway Trainmen, the Order of Railway Telegraphers and Maintenance of Way Employees, all of whom shall retain the present system, subject to the right of each association to withdraw from the present system and come under the proposed system upon a favourable ballot therefor being taken.

2. That the act be administered by an independent board of three commissioners devoting their whole time to its administration, removable only for cause. As the success of the system depends so largely on the personnel of the board, we suggest that personal fitness for the position be the determining factor in making appointments to the board, and the remuneration be sufficient to attract good men.

3. That the new act shall not at present include farm labourers, domestic servants and outworkers, but provision may be made for inclusion of the two first-named classes at a later date.

4. That the scale of compensation be 66½ per cent, but that the monthly allowance to the widow be \$50 instead of \$40 as in Ontario, otherwise the scale in the Ontario Act be followed.

5. That the employers do not contribute to the general fund but that a small monthly deduction may be made in sparsely settled districts, such as lumber, mining and construction camps, for hospital and medical treatment, subject always to the approval of the board.

6. That the proposed act include a clause, as the Ontario act (subsection 4 of section 67), to the effect that the decisions of the board shall be upon the real merits and justice of the case, and it shall not be bound to follow strict legal precedent.

7. That the decision of the board be final on all questions.

8. That adequate provision be made in the act for an effective system of accident prevention based on the representation and co-operation of both employers and employees, such system to be under the jurisdiction of the board.

9. That the Government of Saskatchewan make an annual grant sufficient to bear the cost of administration for the first few years until the system is well established as done in the province of Ontario.

The Alberta Provincial Department of Public Health recently published an accident prevention number of its monthly *Bulletin*, in order to bring to the attention of the general public the seriousness of the existing situation in regard to accidents, and to create a sentiment in favour of greater caution. Accidents now stand third among the general causes of death on this continent. Deaths by accidents in the United States during 1927 numbered 95,500. "On a *per capita* basis at the same rate there would have been for all Canada in the same year approximately 8,600, and in Alberta approximately 570. While the figures for Canada are not available at present, those for Alberta show that 457 died violent deaths last year. While this rate is somewhat lower than that of the United States it will be readily agreed that it is far too high, and unfortunately the rate is increasing year by year. In 1926, 414 lives were lost in this way, constituting 7.18 per cent of all deaths in the province, and being twice as high a rate as that of London, England, for the same year."

## LAWS RESTRICTING HOURS OF LABOUR OF MEN IN THE UNITED STATES

THE January issue of the *Monthly Labour Review*, published by the United States Department of Labour, contains a summary of the provisions contained in federal and state laws in the United States restricting the hours of labour of men. The article is prefaced by a classification of the existing legislation governing the hours of labour for all workers, including women and minors, and the laws relating to the latter classes are to be dealt with in detail in a future article.

### General Classification

The different classes of legislation governing hours of labour are enumerated as follows:—

1. Laws declaring the policy of the State as to the number of hours that shall constitute a day's work in the absence of contractual agreement between the parties to the employment contract. As a rule, no penalty is provided for. It is doubtful whether penalties, if any, are enforced or damages collected for overtime work.

2. Laws fixing a maximum number of hours for men. These laws are generally not limited to men, but include also women and minors unless they are otherwise provided for by law. These laws usually have penalty and enforcement provisions. They may be divided into several groups: (a) Legislation limiting the hours of labour of workmen employed on public works. (b) Legislation for the protection of the safety and health of the general public (as, for instance, acts covering railroad and railway operating employees, seamen, and drug clerks). (c) Legislation limiting the hours of labour of employees in obviously dangerous or unhealthful employments (as in mines, smelters, tunnels, and in certain types of mills). (d) Legislation limiting the hours of labour in employment less obviously dangerous than in mines, smelters, etc., but in which investigation proves that there is direct correlation between the hours worked and the safety and health of the employees and that the safety and health hazard can be considerably reduced by a limitation in the hours of labour worked.

3. Laws fixing a maximum number of hours for females. These laws include all females except certain minors otherwise provided for. The degree of reasonableness in the regulations of the hours of women may not necessarily be the same as that for men, as women's physical structure is not so strong as that of men.

4. Laws fixing a maximum number of hours for certain minors. The hours of labour of female employees from a particular age (generally 16) up to 21 is usually the same as that of other females. The laws very generally limit the hours of labour of minors between the ages at which employment of minors is permitted (usually 14) up to an age at which it is probably considered that they are sufficiently strong to carry on the tasks for the same number of hours as adults—usually 16, but sometimes 18 in the case of females.

5. Laws requiring a day of rest. The early legislation of this type took the form of prohibiting employment on Sunday. The newer development permits certain employments to be carried on on Sunday because of necessity or public convenience, but requires that workers in these employments be given one day of rest in seven. Where "one day of rest in seven" does not exist, the "Sunday rest" law is effective as to some employments.

6. The prohibition of night work of women and minors. Like hour legislation, laws prohibiting the employment of women between certain hours at night (usually 7 p.m.) and a fixed hour in the morning (usually 6 a.m.) are applicable to females generally, and include certain minors unless they are otherwise specifically provided for. Many of the child-labour laws include provisions, usually applicable to children between 14 and 16 years of age, prohibiting night work. Some statutes attempt to prohibit night work for men by fixing the maximum number of hours, as in mines, and providing further that the men will not be required to start their employment prior to a fixed hour, as 6 a.m.

7. Laws requiring rest periods. These laws may be divided into several classes:

(a) Those prohibiting the employment of men for more than a fixed number of hours within a given period, such as legislation prohibiting the employment of railroad or railway operating employees from working more than 10 hours per day in 12 consecutive hours or 16 consecutive hours in 24, insuring a proper interval for rest, and making it certain that the hour legislation cannot be violated in principle though technically complied with.

(b) Those requiring the hours of labour, usually of females and minors, to be so arranged that a sufficient period or interval be allowed during the course of the eight hours, or other period set, to enable the employees to eat or rest, or both. This provision is quite common in the laws relating to hours of labour for women.

### Hours of Labour of Men

*Public Works.*—Dealing in detail with the laws contained in class 2 in the above classification the writer in the *Monthly Labour Review* first describes the various provisions governing labour engaged in public works. The State and Federal Government, it is stated, may fix the hours of labour of persons employed by them. Early attempts at 8-hour day legislation were in the nature of a general direction, but by a legal decision in 1876 it was declared that to be effective the statutes must be mandatory and provide penalties for violations. Mandatory statutes were therefore passed, including in their provisions contractors and subcontractors engaged in public works for the state on one of its governmental subdivisions. The constitutional power of the States to pass such statutes was at once questioned, and a test case arising in Kansas in 1903 went to the Supreme Court of the United States, which declared that it could "imagine no possible ground to dispute the power of the State to declare that no one undertaking work for it or for one of its municipal agencies should permit or require an employee on such work to labour in excess of eight hours each day, and to inflict punishment upon those who are embraced by such regulations and yet disregard them. It cannot be deemed a part of the liberty of any contractor that he be allowed to do public work in any mode he may choose to adopt, without regard to the wishes of the State. On the contrary, it belongs to the State, as the guardian and trustee for its people, and having control of its affairs, to prescribe the conditions upon which it will permit public work to be done on its behalf, or on behalf of its municipalities."

A case involving the constitutionality of a similar federal Act was decided by the United States Supreme Court in 1907. An attempt was made to show that Congress lacked the power to deal with labour conditions, but on this point the court declared that Congress had power to decide as to the manner in which contracts with the United States shall be performed. In addition to the federal laws, State laws limiting the hours of labour in public works are now in force in 29 States and territories.

*Private Employment.*—Courts in the United States now uphold the constitutionality of legislation providing reasonable hours of labour in industry, the assumption being made that the physical well-being of the population is an object of public interest. In the federal field the federal Hours of Service Act of March 4, 1907, in which the hours of labour of employees connected with the movement

of trains in interstate transportation were restricted, was held constitutional on a basis different from that of an act of a State regulating the hours of labour of men generally. As Congress is without the general power over the conditions of labour that is found in the States, the constitutional basis of the Federal law is found among the specific powers given to Congress by the Federal Constitution, that is, the power to regulate interstate and foreign commerce, and therefore to enact laws for the safeguarding of the persons and property transported in that commerce.

The present article in the *Monthly Labour Review* contains, in tabular form, a list of the acts of the several states, and of the United States, limiting the working hours in various occupations. These occupations include mines and smelters, power plants, drug clerks, cement plants, street railways, factories, saw mills, logging camps, work in compressed air, brick yards, railway operating employees, and seamen. The laws relating to seamen include the Act of Congress of 1915, providing that while at sea sailors shall be divided into two watches, and firemen, oilers, and water tenders into three watches. While in safe harbour no seaman may be required to do any unnecessary work on Sunday. The Act also limits work to six days per week.

The general health work carried on by labour organizations is described in the December issue of the *Monthly Labour Review*, published by the United States Department of Labour. The usual method adopted by the unions to raise the standards of sanitation and cleanliness in the workrooms is to incorporate "health" clauses in collective agreements with employers. The enforcement of these clauses, guaranteeing safe and sanitary conditions of work, is generally left to the workers themselves, to a shop chairman or union representative, or to some machinery set up within the industry. Special mention is made of the successful work accomplished by the International Ladies' Garment Workers' Union. A joint board of sanitary control has been voluntarily set up in many centres of this industry, composed of representatives not only of workers and employers, but of the public as well. "As a result of the work of the board," it is stated, "remarkable results have been obtained in raising health standards and in introducing safety measures." The printing trades, the men's clothing, and the locomotive engineers' organizations are also mentioned as having done effective work in the same direction.

## CANADIAN CONSTRUCTION ASSOCIATION

### Proceedings at Eleventh Annual Convention, Hamilton, January, 1929.

THE eleventh annual convention of the Canadian Construction Association was held at Hamilton, Ontario, from January 29 to 31, being attended by nearly 200 general contractors, trade contractors, manufacturers and supply men.

Mr. S. E. Dinsmore, the new president, spoke of the industrial prosperity which had marked the past year. "All industries shared in this advancement," he said, "and new records of achievement were established in all phases of our economic life. That the construction industry participated in the general prosperity is shown by the fact that the total value of contracts awarded in 1928 was \$472,000,000—an increase of 12.6 per cent over the figures for 1927, which year in turn showed an increase of 12.3 per cent over 1926.

"During the year our association was able to make considerable progress in securing apprentice legislation in the province of Ontario, in which matter we believe we have taken one of the most forward steps affecting the future of our industry. It is to be regretted, however, that federal aid to the provinces for technical education was withdrawn, in view of the need for training of apprentices.

"The standard contract forms, which were approved at the convention of last year, have been received favourably and are being used in all parts of Canada.

"Some headway has also been made toward effective accident prevention in the province of Ontario, and a committee is at present working on the problem. Before long we hope to have an accident prevention association in operation,\* and the experience that will be gained as a result of this will enable the other provinces to follow Ontario's example.

#### Effect of the 5-day Week

Mr. Dinsmore referred to the new movement on the part of labour for a five-day week, with an advance in pay. "What will this demand mean?" he asked. "Who will benefit? In my opinion, nobody will, not even the workmen. Before pushing this demand, the unions will be well advised to look ahead. Taking the matter from the standpoint of construction building costs will be bound to increase. Any increase in the cost of building is passed on to the consumer, so that it touches every man, woman and child

in the community. The man who builds a house has to pay more for it; the man who rents also has to pay more. The storekeeper who has to pay more rent has to charge more for what he sells. The extra burden that the unions wish to impose would be reflected in the price of everything from homes to all the daily necessities of life. I say it is the duty of the Canadian Construction Association to protect the public and point out to the unions wherein they are ill-advised."

#### Manager's Report

Mr. J. Clark Reilly, general manager of the association, reviewed its various activities during the year. Among these activities were the following:—

*Contract Standard Forms.*—The forms approved at the Winnipeg convention were printed and widely distributed. They are finding general acceptance throughout the country for building construction work. These forms are now being considered by the Royal Architectural Institute of Canada, and the Engineering Institute of Canada, and it was hoped that full approval would be given by these bodies.

*Technical Education.*—The executive joined with other leading organizations in Canada in protesting to the federal government against the discontinuance of the scheme of federal aid to the provinces for technical education. The government, however, has decided to discontinue this aid, intimating instead that large sums of money would be spent in the establishment of research bureaus. It was suggested that the construction industry should have a voice in such research work, as it will certainly share in the benefits which will result.

*Apprentice Training.*—The manager reported that the year 1928 was marked by the passage of the first legislation of its kind in Canada, namely, the Apprentice Training Act (Ontario). A provincial committee, composed of representatives of employers and labour, has the direction of this work, which is being ably handled by the Director, Mr. A. W. Crawford, and four assistants recently appointed. "This experiment," he said, "is one which will no doubt be watched very closely in other parts of the country, and will eventually lead to similar legislation elsewhere. The very difficult part of providing a system of assessment still remains to be solved."

\* This movement is noted also on page 117.

*Labour Relations.*—Industrial peace in the building industry was threatened during the year in two large centres, Toronto and Vancouver, but settlements were reached, due to the careful handling of negotiations and points in dispute. Demands for increases in wages, and fewer hours called for the most careful consideration of employers, both in relation to their personal business and the good of the public.

*Labour Agreements.*—Branch organizations throughout the country were asked for copies of the agreements they have made with their labour organizations. This has been done with the idea that careful study might lead to the framing of a standard form of labour agreement applicable to all parts of Canada.

Valuable addresses on various aspects of the building industry were delivered, including one on the "Training of boys for skilled

position," by Mr. J. M. Pigott, which will be given in detail in a future issue.

### Accident Prevention

Mr. J. Clark Reilly, in the course of a discussion in accident prevention, suggested that contractors were not doing all they could to cut down mishaps. Manufacturers, lumbermen, pulp and paper producers and other industries all had their accident prevention groupings for the purpose of eliminating dangers and educating the men in safety work. He said he had approached many general contractors in an effort to form them into a group with their own accident prevention association, and at the present moment he had signatures from a considerable majority of the firms carrying payrolls of over \$30,000 a year. A safety organization was needed if real work was to be accomplished.

## Hours of Work in Great Britain

The British Factory Inspection Report for 1927 explains that advantage was taken of the more normal conditions prevailing throughout that year to ascertain the actual hours worked in the principal industries. In this connection enquiry was made to determine whether there was any general tendency to lengthen the hours of work.

Reports from all parts of the country and from Scotland showed that the 48-hour week remained the basic week. At busy seasons 52 to 54 hours weekly might be worked, not from any tendency to lengthen hours, but because this has always been the practice except in times of actual depression. In a few instances even longer hours were worked, up to the legal maximum of 55½ in textile and 60 in non-textile works. Hours in excess of 48 were more frequent in the Midlands and South than in the North, where the continued depression in the textile trades adversely affected other industries catering for textile workers.

In many trades irregularity of employment operated against steady employment for 48 hours a weekly. In trades affected by fashion, there seemed to be a tendency to keep stocks very low, so that rush orders caused overtime employment, followed by short time. Similar conditions were found in the silk trade and in the textile part of hosiery factories.

In bakehouses employment in excess of 48 hours continued in all parts of the country. In London the usual working week was 50 to

59 hours; elsewhere in several cases a total weekly period of well over 70 hours was found.

The five-day week maintained its popularity, and there was a slight increase in the number of factories working on this system, which is specially convenient when labour is drawn from outlying districts, as a long journey on Saturday is avoided. In a large engineering works in North-East London, where the five-day week was in force, it was reported that output had at least been maintained, if not increased, and neither employers nor workers had any desire to revert to the six-day week.

A delegation representing the policemen, firemen, and other municipal employees of Victoria, Vancouver, and other cities in British Columbia laid before the provincial government in January proposals for the further amendment of the Superannuation Act. This Act was outlined in the *LABOUR GAZETTE*, February, 1924, page 127, and amendments made last year were noted in the issue for June, 1928, page 532. The municipal employees now ask that the basic figure for long service employees who are approaching the age limit be increased so as to give them larger retiring allowance; that arrangements be made to permit the transference of fund credits from one municipality to another in the event of an employee changing his civic employers; and that the changes be made retroactive.

## REQUESTS OF ORGANIZED LABOUR IN CANADA FOR NEW LEGISLATION

### Ontario Executive Committee of the Trades and Labour Congress of Canada

THE legislative program of the Trades and Labour Congress of Canada was presented on January 15 to the Hon. G. Howard Ferguson, Premier of Ontario, and members of the provincial government, by the Ontario Executive Committee of the Congress and representatives of affiliated organizations. Those who composed the delegation were: Alderman Humphrey Mitchell, Hamilton, chairman; Ald. Rod Plant, Ottawa; James Watt, Toronto; J. P. McKay, Windsor, members of Ontario Executive Committee, Trades and Labour Congress of Canada. They were accompanied by Tom Moore, president, James Simpson and T. J. Tallon, vice-presidents, of the Congress, and the following representatives of labour organizations: Fred. Molineux, Brotherhood of Painters, Decorators and Paperhangers; J. W. Bruce, United Association of Plumbers and Steamfitters; James F. Marsh, Pat. Green, William Dunn, J. Gillanders, United Brotherhood of Carpenters and Joiners; James Ward, J. C. Sim, Operative Plasterers International Association; E. Ingles, International Brotherhood of Electrical Workers; W. P. Covert, International Alliance of Theatrical Stage Employees; M. L. Bergstein, International Union of Cloth, Hat, Cap and Millinery Workers; Charles MacIntosh, International Union of Elevator Constructors; A. Kirzner, S. Kransman, Toronto Joint Board, International Ladies' Garment Workers; Joseph T. Marks, Labour Educational Association of Ontario; W. D. Robbins, Amalgamated Association of Street and Electric Railway Employees; Dave Lamb, P. Herd, R. Lyons, International Association of Firefighters; W. C. Atkinson, F. W. Stougnell, W. C. Smith, International Photo-Engravers; William Varley, Toronto Building Trades Council; Albert Coll, Ontario Journeymen Barbers Association; J. Munro, International Association of Machinists; S. J. McMaster, International Typographical Union; Mrs. J. Laing, Miss Mary McNab, Toronto District Labour Council; W. Jenoves, Ontario Conference, Bricklayers, Masons and Plasterers International Union.

Among the requests presented were the following:

(1) That definite action be taken to give effect to such decisions of the eight annual conferences of the International Labour Or-

ganization as have been considered to come within the jurisdiction of the provincial legislature. This includes: (a) Enactment of an eight-hour day law for industrial and commercial undertakings; (b) Legislation for the further protection of women and children in industrial and commercial undertakings and agriculture; (c) Co-operation with other provinces so as to make possible ratification, by Canada, of these draft conventions and recommendations; (d) Bringing of all young persons, irrespective of sex, under the Minimum Wage Act.

(2) That enabling legislation be enacted so as to make the Industrial Disputes Investigation Act fully operative within the province.

Satisfaction was expressed with the statement of Premier Ferguson intimating the intention of the government to pass the necessary legislation for the payment of Old Age Pensions.

Other legislative requests were as follows:

Compulsory superannuation funds for permanent firemen;

Three-platoon system for permanent fire departments;

That no official of the inspection department of the government should have the right to suspend or cancel the license of any moving picture operator and that operating rooms be properly ventilated and kept in a sanitary condition;

That all moving picture operators at the present time be granted a first-class license and that if a change in the Theatre and Cinematograph Act is found necessary, the picture operators be given sufficient opportunity to present their views;

That the Liquor Control Act be so amended so as to permit the sale of beer and wine by the glass in properly equipped places under government regulations;

That legislation be enacted providing for the fixing of a minimum wage for all male labour;

That all members of the legal profession be required to carry such bond or other legal safeguard as may be requisite to insure the protection of the public;

That the Mothers' Allowance Act be amended so as to include mothers with one child, and mothers with two children, the older of whom has reached the age of sixteen; also,

that allowances be granted to mothers who have been deserted for three or more years and that the property qualification limit be raised from \$2,500 to \$5,000; and further, that a flat rate allowance be established for the entire province;

That boys under the age of 18 be included within the scope of the Minimum Wage Act;

That legislation be enacted eliminating military training in schools;

That all barbers be required to have a license and that a sanitary law be enacted to govern barber shops;

That the Factory Act be amended to provide for a 44-hour work-week, and other minor changes;

That a duplicate record card system, defining experience and giving age of girl, shall be required by the Factory Act, and that this card shall be a certificate of experience under the Minimum Wage Law;

That the making of clothing in the homes of the wage earners shall be prohibited by law;

That the government make an investigation concerning accidents in the electrical industry, and that legislation be enacted giving greater protection to linemen and others engaged in this work;

That the eight-hour day be established on all public works;

That the fair wage provisions of the province be strengthened, and be more adequately enforced;

That a uniform building by-law be established for the entire province;

That all pressure vessels be brought under the scope of the Steam Boiler Act and that the powers of the inspection department be extended so as to regulate, govern and inspect, the installation of all heating systems within the province;

That uniform standard plumbing regulations for the province be enacted;

That the Factory Act be amended so as to provide for greater protection of workers employed in garages;

That auto mechanics be required to obtain a certificate of competency by examination;

That employers advertising in the press for labour, when a strike exists in their establishments, shall be required to state this fact in their advertisement.

That bakers be required to wrap in wax paper all bread before leaving the bakeries;

That all motor car owners be compelled to take out public liability insurance before being granted licenses;

That the government increase the facilities of the Province of Ontario Savings Office for the benefit of depositors in all parts of the province, and that the 4 per cent rate of interest be restored;

That publishing houses be required to place the imprint of their name on all printing for public circulation;

That private employment bureaus be abolished;

That private detective agencies be abolished;

That labour be given representation on appointed commissions, especially on the Hydro-Electric Power Commission of Ontario and the Provincial Parole Board;

Public ownership and operation of all public utilities;

That civic employees and civil servants be guaranteed complete political rights;

That all employers of labour be required to give employees, who have been in their employ for ten months, at least two weeks' holidays with full pay each year.

### **Dominion Legislation Desired by the Railway Running Trades**

The legislative requests of the railroad running trades were presented to the Dominion Cabinet on January 25, 1929, by a delegation composed of Messrs. L. L. Peltier, Dominion legislative representative, Order of Railway Conductors; Byron Baker, Dominion legislative representative, Brotherhood of Locomotive Engineers; T. J. Coughlin, Dominion legislative representative, Brotherhood of Railroad Trainmen; and W. L. Best, national legislative representative, Brotherhood of Locomotive Firemen and Enginemen. The requests were as follows:—

(1) Seeking an amendment to the British North America Act restricting the powers of the Senate to veto any bill that has been passed by the House of Commons more than twice.

(2) Asking for an amendment to the Dominion Elections Act so as to permit railway employees, sailors and commercial travellers, upon a proper declaration, to cast their ballot between the hours of 2 and 5 and between 7 and 10 o'clock in the afternoons of the three days, exclusive of Sundays, immediately preceding polling day;

(3) Advocating the repeal of the Sales Tax but opposing the repeal of the Income Tax Act.

Appreciation was expressed at the government's action in providing a larger appropriation from the Railway Grade Crossing Fund

for the elimination of and protection at highway crossings with railways. The action of the Government in appointing an officer on the Board of Railway Commissioners to advise in matters pertaining to level crossings was also commended.

### Legislation Desired by Railway Running Trades in Ontario

A delegation representing the railroad running trades (Order of Railway Conductors, Brotherhood of Locomotive Engineers, Brotherhood of Railroad Trainmen, Brotherhood of Locomotive Firemen and Engineers), waited upon the Ontario Government in January and presented the following requests:—

(1) Seeking an amendment to the Public and High School Act to provide for free school books to all pupils up to and including the fourth grade in high schools or junior matriculation;

(2) Urging that all industries within the Province be brought under the application of the Federal Industrial Disputes Investigation Act;

(3) Advocating the restriction of the powers of the Senate to veto bills which have been passed by the House of Commons more than twice;

(4) Recommending the elimination of all highway crossings with railways at rail level, and pending the complete removal of such crossings, that adequate protection be provided;

(5) Seeking uniform traffic regulations with all Provinces in Canada;

(6) Advocating the levying of equitable taxes on all motor vehicles using the highways, for revenue purposes;

(7) Recommending that if compulsory liability insurance for motor car owners be enacted it should include all vehicles using the highway, and that this insurance should be carried by the government at cost;

(8) Recommending that the Ontario Government co-operate with the Federal Government to prevent the duplication of taxes on income;

(9) Recommending that the Ontario legislature enact concurrent legislation to give effect to the Old Age Pension Act passed by the Federal Government;

(10) Seeking amendments to the Mothers' Allowance Act;

(11) Urging legislation or regulation in connection with the Workmen's Compensation Act which will provide that an injured workman shall have access to all files pertaining to his case in the presence of an officer of the Compensation Board;

(12) Advocating amendments to the Assessment Act.

### Federation of Catholic Workers of Canada

The executive council of the Federation of Catholic Workers of Canada presented to the Federal Government on January 24, the legislative recommendations contained in resolutions adopted by the Congress of the Federation held at Quebec, September 8—11, 1928 (LABOUR GAZETTE, October, 1928, page 1090). Among these were, old age pensions and unemployment insurance, in regard to which the delegation stated as follows:—

"Old age pensions have already been established by you, and we thank you for same. However, we would request that you make this system more popular and more easily acceptable. The Catholic Workers do not wish to be pensioners of the State, and that is the reason why we urge strongly that the scheme be made contributory. The workers of our

movement are anxious to share in any provident measure for their old age. With regard to unemployment insurance, this is a measure you have already considered, and the Federation of Catholic Workers of Canada hopes sincerely that the matter will be proceeded with, as unemployment has become a permanent ill in Canada".

Other demands were as follows:—

The establishment of fair wage rates for work under Dominion government contracts, based on the cost of living;

That representatives of the Federation be appointed on all boards and delegations wherein organized labour is represented, and also in federal departments where representatives of labour are recognized;

That the Federal government carry on public works during the winter months;

That Canadian ships be built in Canadian shipyards, and that a uniform fair wages basis be established in these yards;

That immigration be restricted to agricultural requirements;

The observance of Sundays as legal holidays by postal and other government employees.

### Quebec Executive Committee of the Trades and Labour Congress of Canada

The Quebec executive committee of the Trades and Labour Congress of Canada and about forty representatives of various labour organizations composed a delegation that waited on the Hon. L. A. Taschereau, the premier, and members of the Provincial Cabinet, prior to the opening of the session of the Legislature and presented the legislative requests of organized labour of the province.

Among the more important subjects dealt with were the following:

(1) The enacting of legislation embodying the decision of the International Labour Organization of the League of Nations, which would include,—(a) Establishment of the eight-hour day; (b) Protection of women and children in industry and commerce; (c) Co-operation with other provinces to obtain ratification by Canada of all these conventions and recommendations; (d) That the province should be officially represented at the annual conference of the International Labour Organization at Geneva;

(2) The Workmen's Compensation Law,—While this legislation has been in operation since September 1, 1928, only, the delegation declared that strong objection was taken to the present system whereby the insurance and the collection of premiums was retained by private casualty insurance companies. This had the effect, it was claimed, of depriving injured workmen and their dependants of their legal benefits. The delegation urged the government to amend the Act so that the provisions would be similar to those existing in the other provinces;

(3) Industrial Disputes.—In connection with this subject, the government was asked to enact enabling legislation which would make fully effective within the Province the provisions of the Industrial Disputes Investigation Act. It was pointed out that legislation of this nature had been passed already in seven of the provinces and had worked out to the mutual advantage of both employer and employee.

Other requests were as follows:

That legislation be enacted establishing unemployment, sickness and invalidity insurance;

That the provincial government pass the necessary legislation for the payment of old age pensions;

That the government make provision for the payment of mothers' allowances and maternity benefits;

That a fair-wage policy similar to that adopted by the Federal Government be adopted in connection with provincial government contracts;

That female workers in all industrial and commercial establishments be brought under the scope of the Women's Minimum Wage Act;

That public employees be given annually two weeks' vacation with pay;

That amendments be made to existing statutes whereby all wage earners in the province shall be entitled to one day's rest of not less than twenty-four consecutive hours each week;

That all fee-charging employment bureaus be abolished;

That the three-platoon system for fire-fighters be adopted;

That legislation be enacted prohibiting the manufacture or making of clothing for commercial purposes in the homes of wage earners;

That adequate protection be given to workers operating paint-spraying machines;

That it be made a punishable offence to neglect to strip and wash walls of dwellings before new wall-paper is hung;

That legislation be enacted governing the erection and operation of elevators and hoisting machinery in building and construction work;

That the Scaffolding Act be made to apply to the whole province;

That stationary engineers and firemen be required to obtain proper certificates;

That moving picture machine operators be granted a license after passing the necessary examination.

## Alberta Federation of Labour

On January 28, 1929, the legislative demands of the Alberta Federation of Labour were presented to the Hon. J. E. Brownlee, premier of the province and his Cabinet by the members of the executive board of the Federation who were accompanied by representatives of affiliated organizations. Those who composed the delegation were: Fred J. White, M.L.A. (president), Calgary; A. Farmilo, Edmonton; Robert Livett, Calgary; H. H. McKim, Calgary; Fred. Smeed, Lethbridge, (vice-presidents) and E. E. Roper, Edmonton, (secretary), executive of the Federation; A. J. Morrison, United Mine Workers; Carl E. Berg, Building Trades Council, Edmonton; W. B. Allen and F. C. Packebusch, Theatrical Stage Employees; Messrs. Scoffield, Aiken and Grindley, Civil Service Association of Alberta; E. Shirlaw, Brotherhood of Operating Engineers; Messrs. Dobbie and Hardman, Journeymen Barbers; James MacLean, Hotel and Restaurant Employees.

Among the requests presented were the following:—

That at the coming session of the Legislature a measure be enacted providing for the payment of Old Age Pensions;

That amendments be made to the Workmen's Compensation Act, providing for (a) The payment of compensation for the first three days of injury; (b) The increasing of the amount of compensation payable to workmen whose injuries prevent them from working for a period of from ten to forty-nine days; (c) the clearer interpretation of section 56 of the Act, which deals with the computation of average earnings; (d) The extension of the time in which hernia cases can be reported; (e) The inclusion of hotel and restaurant employees within the scope of the Act. Appreciation was expressed for the efforts being put forth by the Compensation Board to prevent accidents in industry.

Other requests were as follows: —

That the government inaugurate a scheme of health insurance;

That an eight-hour day law be enacted;

That the Mothers' Allowance Act be amended so as to provide for the wife whose husband is unable to support her by reason of total disability, and also that the reciprocal clause as contained in the Ontario Mothers' Allowance Act be adopted;

That picture projection rooms be adequately provided with toilet facilities;

That motion picture projectionists be granted a first or second class certificate for

twenty dollars, and renewed annually for a fee of two dollars;

That an employer shall be liable to a penalty who assigns to an engineer duties the carrying out of which will cause a violation of the Boilers Act;

That all low pressure heating systems in public buildings be in charge of a duly qualified engineer or firemen;

More adequate inspection of building operations;

That the province shall have only one mining inspection board, two members of which shall be recommended by the Alberta Federation of Labour;

That a synopsis of the Mines Act be given to each miner on commencing work;

That the mine workers in each district elect a mines inspector;

That hotels, restaurants, institutions and other eating establishments be compelled to use proper utensils for the cooking and storing of food;

That orientals be prohibited from employing white girls;

That all those engaged actually in the handling or purveying of food to the public be medically examined at various periods;

That the principle of collective bargaining be established between the government and the Alberta Civil Service Association;

That the provincial government agree to discuss with the Alberta Federation of Labour, at a later date, the enactment of civil service legislation;

That a maximum eight-hour day be established for employees in provincial institutions;

That the union rate of wages be paid on all provincial construction work, and that the eight-hour day and forty-four hour week be observed;

That the government encourage the principle of collective bargaining on government owned utilities;

That a barbers' license law be enacted for the province;

That the government develop and control the power resources of the province;

That the right to enter the University of Alberta or any of the other schools for higher education shall be by securing the requisite percentage of qualification marks by examination;

That the children in rural districts be given the same educational advantages as are given to children in the cities;

That the Alberta government memorialize the Federal Government to re-enact the Technical Educational Act;

That election day be made a public holiday;

That the government investigate the operation of paint-spraying machines, and if found to be injurious to the health of the operator, that the use of these machines be prohibited.

## ANNUAL CONVENTION OF THE ALBERTA FEDERATION OF LABOUR

The thirteenth annual convention of the Alberta Federation of Labour was held in Lethbridge, January 14-17, 1929, with sixty-seven delegates in attendance. In the report of the president and secretary a review was given of the activities of the organization since the last convention. The year 1928, the report stated, had been characterized by increased activity in industry and business, and this was reflected in greater employment, particularly in the building trades. It was also stated that officers had been called upon to deal with many important matters in the interest of the workers.

A review was given of the legislation passed at the last session of the Alberta Legislature together with regulations made under certain statutes and orders of the Minimum Wage Board. Gratification was expressed at the securing of a number of amendments to the Workmen's Compensation Act, and at the inclusion of certain classes of railway workers within the scope of the Act. Some criticism was made of the alleged practice by employers in moving employees around, thereby evading the real purpose of the Minimum Wage Act. The committee approved the new regulations set out in the Building Trades Protection Act as amended in 1928. The convention was requested to note the passing of enabling legislation for dealing with industrial disputes within the province under the Industrial Disputes Investigation Act, and that the Alberta Labour Disputes Act was still in force for dealing with disputes in industries within provincial jurisdiction. Pleasure was expressed at the progress made in securing revised regulations under the Boilers Act. The new regulations to the Theatres Act was favourably commented upon as were also the new rules governing oil well drilling and the protection of the workers engaged in this industry.

The committee was in accord with the activity of the executive relative to Old Age Pension legislation, recommending that this be dealt with at the forthcoming session of the legislature. Hearty approval was given to the efforts put forth to secure the enactment of health insurance, and the executive was urged to continue its work in this regard. The com-

mittee concurred in the efforts made to have the eight-hour day incorporated in the Factories Act. Recommendations of the executive in regard to the Mothers' Allowance Act were concurred in, and it was urged that the 1926 amendment\* be put into operation, and also that other improvements in the Act should be sought. The Barbers' License Act was again approved and it was recommended that the executive assist barbers in having this measure of legislation enacted. Approval was given to a resolution presented to the legislature at its last session calling for physical training to replace cadet training in schools.

Concurrence in the request of the Trades and Labour Congress of Canada for the renewal of Federal grants for technical education was affirmed. Satisfaction was expressed at the growth of the co-operative movement in Canada, and it was hoped that the British Co-operative Wholesale Society would open branches in this country thereby giving greater strength and stimulus to this method of merchandising throughout Canada. Pleasure was expressed at the exchange of fraternal delegates between the various organizations, and the committee concluded by stating "that the executive committee of the Federation has been very active in seeking improvements in existing social legislation and the enactment of new measures".

*Workmen's Compensation.*—The special committee to which was referred a number of resolutions pertaining to the Workmen's Compensation Act, brought in the following recommendations, which were adopted by the convention: (1) That the time limit for reporting hernia cases should be extended; (2) That an opportunity to accept suitable work be given to a man who has been pronounced fit by the Workmen's Compensation Board or the medical referee before his compensation is reduced or terminated; (3) That the resolutions dealing with the method of computing the amount of compensation payable on an average basis be referred to the incoming executive for their guidance; (4) That sub-section 6, of section 34, of the

\* LABOUR GAZETTE, May, 1926, page 448.

Workmen's Compensation Act, which deals with the three-day waiting period exception in the payment of compensation, be deleted; (5) That the co-operation of all workmen should be given to the Workmen's Compensation Board in its efforts to develop accident prevention in all industries. The committee expressed pleasure at the active campaign established by the Workmen's Compensation Board for the removal of carbon monoxide gas from garages.

The treasurer's report for the year 1928, showed receipts of \$1,734.02, and disbursements of \$1,426.76, leaving a balance of \$307.26.

*Resolutions.*—Among the resolutions adopted were following:—

Favouring a government policy whereby entrance to all high schools or the University of Alberta shall be by securing the requisite qualifying marks by examination;

An eight-hour day and six-day week for employees in provincial institutions;

Enactment of a new Provincial Civil Service Act;

That all employees of restaurants and cafés in the province be brought under the scope of the Workmen's Compensation Act;

That all hotels, cafés, etc., be compelled to use proper utensils for cooking and maintaining food;

Stricter enforcement of the Minimum Wage Act for restaurants and cafés;

Prohibition of employment of white girls by orientals;

That the Provincial Government appoint a committee to deal with health insurance;

That children in rural districts be given the same educational advantages as are given in cities;

An amendment to the Mines Act so that there shall be one examining board composed of two miners recommended by the Alberta Federation of Labour for the whole province, and the abolition of provincial certificates;

That a copy of the Mines Act be given to all employees on commencing mining work;

That the Alberta Federation of Labour carry on as heretofore in regard to representations to the Provincial Government;

That oil companies be required to enter into an agreement to pay union scale of wages, and that labour organizations be informed of the companies recognizing these wages;

Legislation to provide for a maximum 8-hour day and 44-hour week for all workers;

An amendment to the Boilers Act so as to make it unlawful for an employer or other

person to assign work to an engineer that will cause a violation of the Act;

That all schools, theatres and other public buildings using low pressure heating systems shall have a qualified engineer or fireman in charge;

A united effort to maintain organizations of workers on publicly owned utilities;

Legislation declaring public holidays for all provincial and civic elections;

That ways be devised to impress upon the various organizations the importance of affiliation and of keeping in close touch with the Federation;

That the government insist upon theatres installing complete toilet facilities in or adjacent to the projection rooms of all theatres in Calgary and Edmonton;

That the Legislature establish a fee of \$20 for first and second class licenses of motion picture projectionists and that the annual renewal fee be \$2;

That the Provincial Government pay union rates of wages on its construction work and that the 8-hour day and 44-hour week be observed;

Legislation providing for medical examination at stated intervals of those engaged actually in the handling or purveying of food to the public;

That the members of the various affiliated organizations ask for union-made products when purchasing soft drinks;

Government development and control of the power resources of the province;

An adequate scheme of unemployment insurance;

Seeking through the medium of the Trades and Labour Congress of Canada the immediate cancellation of any and all contracts between the Federal Government and the railways under which farm labourers are brought in, and the immediate abolition of all colonization companies;

Endorsing fully the immigration policy of the Trades and Labour Congress of Canada (LABOUR GAZETTE, October, 1928, pages 1081-1082.)

Fred. White, M.L.A., of Calgary was re-elected president of the Federation, and Elmer E. Roper, Edmonton, was re-elected secretary-treasurer. The Vice-presidents will be elected by the Trades and Labour Councils of Calgary, Edmonton and Lethbridge. Fred Smead, Lethbridge, was elected delegate to the Trades and Labour Congress of Canada.

## Fishermen's Co-Operatives in Quebec

The success attending the provincially-assisted co-operative movement among the fishermen of Quebec forms the subject of an article by Mr. Colin McKay in the *Canadian Fisherman*, December, 1928. The writer notes that at Confederation the Province of Quebec did not surrender to the Dominion jurisdiction over its fisheries as did the other provinces. He states that "neither by way of example, nor education, has the work of the Dominion Department had any important effects upon Quebec fishing communities, largely because of the isolation of most of them." Consequently, it is pointed out, some years ago the Quebec Government undertook to render practical assistance to develop the fisheries and help the fishermen to a better standard of living. One step towards this objective was the decision to encourage the creation of co-operative societies, and the Federated Co-operative of Quebec was asked to engage upon organization work among the fishermen. Accordingly a Fisheries Department of the Federated Co-operative was formed.

The writer attributes the initiation of the movement among the fishermen directly to representations made by Bishop Ross of Gaspé to the Government at Quebec. As a result, the Government, after investigation, decided to help the fishermen to develop a more modern system. This assistance is somewhat along the lines of that given by the Dominion Government to the fisheries of other provinces. A young man is selected and is enabled to take the courses at the Fishermen's College in Seattle; also to study the methods employed in leading fish-

ing districts of the continent. On completing his studies, he devotes his time toward working among and teaching the fishermen of the Gaspé coast. Another expert, familiar with the preparation of salt fish for every important market, is also employed by the Government to give lectures and demonstrations, and in every way possible interest the fishermen in supplying a choice product.

At the present time, there are nine fishermen's co-operatives on the Gaspé coast, and their success has been sufficient to warrant the preliminary organization of three additional units on the North shore of the St. Lawrence.

It is explained that all these fishermen's co-operatives are independent of each other, but are affiliated with the Federated Co-operative, thus giving them the advantage of having a sales organization already successfully established. Another advantage of affiliation with the strongly entrenched farmers' co-operative, it is claimed, is the fact that it has enabled the placement of Gaspé fish in the fresh state in markets beyond the range of the activities of even the largest Canadian dealers.

The fishermen's co-operatives are said to have made the first shipment of Gaspé salmon ever seen on the Chicago markets. Other shipments of salmon, reaching their destination in first class condition, have been made to St. Louis, Norfolk, Washington, and other places far beyond the main American markets for salmon. These co-operatives have also successfully shipped Gaspé salmon to England and Scotland.

---

## NOTES ON APPRENTICESHIP AND TECHNICAL EDUCATION

**T**HE notes in this section of the *LABOUR GAZETTE* relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act, 1919. Other activities which have a direct bearing on the training of apprentices and industrial workers are also noted. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

### Short Courses—Peterborough County

The annual short courses in agriculture and home economics for Peterborough County have been arranged and will be held in Havelock for the period of four weeks between February 4 and March 1. These courses are conducted by the Department of Agriculture.

The course in agriculture embraces a wide field of studies including:—plant diseases, poultry, vegetables, and gardening, special courses in sheep and swine, and bank forms and banking. The course in home economics consists of: domestic science, housecleaning and decoration, home nursing and first aid, and sewing. Both classes will unite once a week to carry on a literary and debating

society, which will give the students instruction in the proper method of handling meetings, preparing minutes, making motions, rules of order, and carrying on debates.

**Apprentices—Ontario**

On January 1, Mr. Crawford, Inspector of Apprenticeship, reported 108 registrations under the Ontario Apprenticeship Act, made up as follows:

Bricklayers.. . . . .	46
Carpenters.. . . . .	21
Painters and Decorators.. . . . .	1
Plasterers.. . . . .	9
Plumbers.. . . . .	29
Steamfitters.. . . . .	2
	108

**Apprenticeship in France**

The French Senate and Chamber of Deputies recently passed an Act which provides that a contract of apprenticeship must be reduced to writing within a fortnight of the engagement of the apprentice. The contract must take cognizance of the usages and customs of the trade, including rules laid down by competent bodies. The contract must stipulate the courses of training which the employer agrees to provide. At the end of the period of apprenticeship, the apprentice is required to undergo an examination and if successful he receives a diploma. The Act provides that an arbitration board or a Justice of the Peace may, on application of the district vocational training committee, limit the number of apprentices who may be employed in an undertaking which is not affording its apprentices sufficient training to enable them to qualify.

**Apprenticeship Plan—Motor Car Industry**

A system has been inaugurated by the motor dealers of Vancouver by which boys will be trained in their various places of business under an indenture of apprenticeship, covering a period of three years. Boys between the ages of 15 and 18 years will be given an opportunity to associate themselves with a motor dealer and by a supervised method of progressive training become thoroughly trained and competent in the motor business.

The technical schools are co-operating with the dealers and will hold special night classes once a week which the boys will attend. The course of training will be specially adapted to augment the apprenticeship work that the boys will be doing. C. E. Thompson, manager of Vancouver Motors Ltd., is chairman of the apprenticeship committee.

Boys may apply at any dealer's place where particulars will be taken and when an opportunity occurs for that dealer to start the boy, he will sign an indenture, endorsed by his parents or guardians.

**Universities Teaching Agriculture**

The University of Saskatchewan was the first university in Canada to include agriculture in the list of courses of instruction. Similar instruction is now given in the University of Alberta, British Columbia and Manitoba. The Saskatchewan *Public Service Monthly* states that the "Saskatchewan idea" was that graduate-training should be made an essential for properly qualified teachers and research workers in agriculture. While the province cannot claim the credit for being the only, or the greatest agency in bringing about this change, it claims to have been among the first to make this requirement an essential for its teachers and to encourage its graduates to take post graduate courses, with the result that over one-third of the Bachelors in Agriculture have taken higher degrees, one in six winning the coveted Ph.D. This policy has resulted in attracting the pure scientists to agricultural problems. The chemist turned to the milling qualities of wheat—the factors modifying the quantity and quality of protein, the effect of weather and artificial drying on baking qualities. The biologist studied the theory of breeding crosses of the different kinds of wheat, the causes and remedies of plant diseases, the insect pests and their control. The physicist began to investigate soil temperatures; the engineer to study power problems, water supply and waste in farm houses. Even the economists and historians found their horizon crowded with agricultural questions. Agricultural students have been brought into the closest relations with the students of other faculties and developed friendships and co-operation that will in years to come produce good team work in every municipality and district in this province.

The University of Saskatchewan was the first in Canada to stand for co-operation between professors of agriculture and professors of other subjects, co-operation between agricultural and other students, co-operation between men and women in agriculture and the other provincial interests.

**The Three Rivers Paper School**

The enrolment records of the Technical and Paper Making School at Three Rivers show that 15 employees, representing all four of the Three River Mills, are availing them-

selves of the opportunities provided by the school for continuing their studies, while there are 16 young men enrolled in the day school course for prospective paper makers in the technical section curriculum. These students come from a number of localities

throughout the province as well as from Three Rivers. The complete enrolment of the technical school is 199 students, of which 43 are enrolled in the day classes of the trade school, 125 in the evening classes; with 31 students in the various paper making classes.

## HEALTH SURVEY OF MONTREAL

**T**HE Montreal Health Survey Committee, an organization of business and professional citizens specially formed for this purpose, recently completed an investigation of health problems in Montreal, and a report on their findings has now been published by the Metropolitan Life Insurance Company. The survey was financed by the Montreal Anti-Tuberculosis and General Health League, which organization, through its chairman, Sir Arthur W. Currie, first suggested the undertaking. The general committee was assisted in its work by a local public health specialist, and by consultants from the American Public Health Association.

The estimated population of Montreal for 1927, was 699,500, with a considerable additional population adjacent to the city proper. The race distribution, according to the 1921 Dominion Census, is 63 per cent French origin, 24 per cent British origin, 7 per cent Hebrew origin, and 6 per cent of all other origin. The birthplace of the inhabitants showed at that time 81 per cent born in Canada, 8 per cent born in the British Isles, others, 11 per cent.

The report contains sections dealing with public health under its various aspects, and makes a number of important recommendations, including proposals for the reorganization of the Department of Health and better provision for a school health service, a laboratory service, communicable disease control, and other essential services; fuller co-operation between public and voluntary health organizations; and the continuation of the Montreal Health Survey Committee as a co-ordinating agency in the carrying on of the recommendations.

*Industrial Hygiene.*—One of the main divisions of the report deals with the subject of industrial hygiene. It is stated that there are approximately 1,700 industrial establishments in Montreal. The existing arrangements for promoting industrial health are described as follows:

Two Departments of the Provincial Government take cognizance of hygiene in industry, the Department of Labour and the Provincial Bureau of Health. The Depart-

ment of Labour employs 13 inspectors, known as "inspectors of industrial establishments appointed under the Industrial Establishments Act," to cover the inspection of factories for the entire province. Their inspection covers unsafe machinery, ventilation, lighting and sanitary facilities. These same inspectors have been depended upon to enforce the regulations made under the Quebec Public Health Act concerning industrial establishments. The Industrial Establishment Act provides for the appointment of "sanitary physicians" for the purpose of supervising sanitary conditions in factories. These positions are now vacant, not having been filled since the original appointees died or left the service.

The Quebec Public Health Act gives authority for making laws to regulate sanitary conditions in industrial establishments. Regulations have been made for their enforcement. The Provincial Bureau of Health depends on the inspectors of industrial establishments of the Department of Labour, and the Provincial Health District Inspectors.

The City of Montreal provides a yearly inspection of all plants which is made by an inspector of the Division of Sanitation of the Department of Health. No plant inspections are made by a physician.

In Montreal, 31 industries provide a complete or partial Industrial Health Service in their plants and 4 full-time physicians, 21 part-time physicians and 18 nurses are engaged in this service. A medical examination is made in 16 plants at the time of employment; 7 plants give a periodic medical examination; and ten carry on health education among the employees. Approximately 10,000 industrial workers are safe-guarded by a very satisfactory Industrial Health Service.

*Recommendations.*—The Committee makes the following recommendations—

1. Reporting of occupational diseases by physicians to the Department of Health.

2. Regular and thorough inspection of factories with follow-up by inspectors and physicians of the Department of Health from a sanitary standpoint.

3. No child under 13 years of age to be employed without having had a medical examina-

tion and secured a certificate permitting his employment at certain work. Such examinations could be made by the physicians of the Department of Health on Saturday mornings. The examination should be of a uniform standard and have as their object to prevent the child from over-taxing his strength. The physicians must, therefore, know the normal development of the child, his capacity for work without overstrain and the work called for in various occupations, in order to be able to issue a proper certificate.

4. Pregnant women to be excluded from work at least four weeks before expected date of confinement and six weeks after.

5. That a survey of industries be made to ascertain the number of pregnant women employed and to consider the question of a bonus to such women when excluded from work.

6. The Board of Health to include detailed regulations for lighting and ventilation as part of the proposed sanitary code for Montreal.

7. The Department of Health to arrange for making air analyses of material thought to be poisonous.

8. The Division of Medical Control of the Department of Health to be replaced by a Section of Industrial Hygiene under the recommended Division of Medical Service of the Department.

9. The recommended Section of Industrial Hygiene to establish a model health service for the municipal employees consisting of: (a) pre-employment examinations (compulsory); (b) emergency care of employees in the City Hall or the City Hall Annex; (c) periodic health examinations (voluntary); (d) visiting nurse service—nurses of the Department of Health to visit all employees absent for two days to see that they are being cared for, and to assist the family in making any necessary arrangements as to such care; (e) health education.

Recommendation 9 is based upon a conviction that not only should the City set an example in caring for its own employees but that such care results in greater efficiency on the part of the staff, reduces lost time, and is in the interest of both the employee and the employer.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Quebec Safety Program for 1929

At the annual meeting of the Province of Quebec Safety League, held at Montreal on December 19, the following program of activities for the coming year was announced: Increased membership to cover whole of Province; organize branches in all industrial centres and cities of the province; obtain moral and financial support from the Government to extend propaganda over the whole province; resume our magazine at beginning of the year; obtain contact with remaining safety organizations of the world; organize safety patrols in every school of the province; organize workmen's safety committees in all industries of the province; organize suggestion box contest in order to get workmen's views to prevent them from getting hurt; organize program of expert speakers; obtain the best of traffic experts and industrial safety experts, as well as public safety experts; organize safe drivers' club; organize special clubs for motortruck drivers; carry on work to protect children in boarding schools; carry on work to protect window washers from falling off buildings; follow up scaffold inspection; promote safety of the highway; education of the motorist; promote more playgrounds.

*Safety Campaign.*—The Province of Quebec Safety League is arranging new accident prevention campaigns, particularly in Quebec City and in Three Rivers and the surrounding districts. Mr. Arthur Gaboury, secretary general of the League, in an address delivered at Montreal in January, stated that in the four months since the new Workmen's Compensation Act had been in active operation, 8,500 industrial accidents had been reported to the Commission, a large number of lives having been lost and many workers maimed for life. The League, he said, offered the full benefit of its experience to all those who were interested in the prevention of so much suffering. The movement is progressing in Montreal and district, safety rallies being held in many large plants. Those in the lead at present, Mr. Gaboury stated, are the Steel Company of Canada; the Robert Mitchell Company; the Canadian Car and Foundry; the Dominion Bridge Company; Jenkins Brothers and the Montreal Locomotive Company. The Montreal Tramways Company also recently launched a safety campaign among its men, headed by a special committee well trained in accident prevention work. In order to carry on the work the Industrial Section will soon commence a

series of round table club meetings where the members will meet and exchange ideas. The organization of this club is in the hands of E. D. Timmerman, chemist and secretary of the safety committee of the Steel Company of Canada and James N. Doyle, superintendent of insurance for the Dominion Bridge Company, the latter representing the group of self-insuring plants.

#### Joint Committee of Montreal Tramways Company

A co-operative committee composed of representatives of the management and the employees has been organized by the Montreal Tramways Company for the purpose of bringing about a reduction in the number of accidents in connection with the operation of tramway service. President Gagnon of the employees' union has been placed in charge of the work of accident prevention, and will devote his whole time to it. Employees' committees will be elected in each of the six operating divisions, and will meet to discuss safety measures and improvements at suitable intervals; their respective chairmen will meet the management once a month as a general committee of employees.

Locked suggestion boxes have been distributed over the system for collecting unsigned suggestions from individuals as to improvements of service, prevention of accidents, etc. The suggestions received will be studied and sent forward by the sub-committees and general committee to the management, with recommendations as to approval or rejection. The authors of suggestions of practical worth that are accepted by the

company will be rewarded in proportion to the value of their ideas. Authors will identify themselves by retaining a duplicate numbered stub attached to the forms. It is believed that beneficial results will be obtained by bringing to light the many good ideas that must exist in the minds of the large staff of employees and that this good result will help to offset the accident hazard which is increasing rapidly with the congestion of traffic on city streets.

#### Effects of Atmospheric Conditions on Workers

Some effects of atmospheric conditions on the industrial worker are described by Dr. T. Bedford, investigator of the Industrial Fatigue Research Board, London, England, in the December issue of the *Journal of Industrial Hygiene*.

Formerly, ventilation was mostly considered as the replacement of ventilated air by fresh, little regard being paid to temperature and humidity. In recent years, however, the importance of these factors has been demonstrated, and attention has been drawn to the importance of air movement.

The conclusion is reached that moderate temperature conditions are required if a maximum of efficiency and general well-being for the industrial worker is to be insured. Comfort, and therefore probable contentment, is closely related to atmospheric conditions. Absence, on account both of sickness and of accident, is influenced to a large extent by temperature conditions of the workplace; and the efficiency has shown to be adversely affected by high air temperature.

### THE COAL PROBLEM IN EUROPE

**A** TECHNICAL and economic consultation on the coal problem was held at Geneva from January 8 to 11, under the direction of a delegation of the Economic Committee of the League of Nations. The conference was the result of a decision of the Assembly of the League recommending a thorough study of the coal problem with a view to determining whether international action in this sphere is desirable and feasible. It was attended by experts who described the points of view of their respective countries as regards the coal question in general. The conference also discussed questions of production, consumption, domestic and foreign trade, and domestic and export prices. On January 15, after hearing a report of the chairman of the delegation on the results of the first consultation, the

Economic Committee discussed the steps to be taken to carry on the enquiry, and decided to hold a consultation of experts belonging to labour circles, at the end of February. The experts will be nationals of the principal coal producing countries of Europe (Austria, Belgium, Czechoslovakia, France, Germany, Great Britain, the Netherlands, Poland and Spain). They will be persons who, while belonging to the world of labour, are in position to have an insight into all aspects of the coal question, whether in the matter of production, consumption, trade or transport. The experts will be chosen after consultation with the International Labour Office. The Economic Committee will submit to them the same documents as were submitted to the experts on the employers' side in January,

and will ask for their views on the same questions.

On the basis of the two consultations, that already held and that which is to take place at the end of February, the Economic Committee will draw up a report to the Council of the League. This report will be communicated to the Economic Consultative Committee, which will thus be in a position to take a decision as to the pursuance of the enquiry.

*Industrial and Labour Information*, the weekly publication of the International Labour Office, in its issue of January 14, publishes notes on the coal situation which serve to illustrate the existing outlook and the progress of the coal industry in the different countries.

*Great Britain.*—The Parliamentary Private Secretary to the Chancellor of the Exchequer, in a letter to the *Times* published on November 30, wrote as follows:—

"I believe that the ultimate solution to the European coal problem lies in an international agreement. The Germans have frequently expressed a desire for such an agreement, but whereas one man can speak on behalf of the whole German coal industry, there is nobody in this country which is capable of negotiating on behalf of the British coal industry. . . . The creation of a central authority to control British coal exports must not be allowed to obscure the equally urgent necessity of rationalisation within the industry. . . . This will involve a recognition on the part of labour that the coal industry under modern conditions can only employ a limited number of miners at full time and at decent wages; and similarly a recognition on the part of the owners that those who bar the way to efficiency must go, and go without undue compensation."

The Executive Committee of the South Wales Coal Marketing Association has drawn up a plan for the regulation of coal output in the South Wales coalfield. The main features of the new marketing scheme are systematic regulation of the output of coal having regard to the estimated demand over a period of one year, allocation to the various collieries of their prescribed quota, compensation of collieries producing less than their allocations up to a maximum amount of 2s. a ton, and a provision by which a member may transfer his quarterly allocation to another member "for such consideration as they may think fit."

The Executive of the Miners' Federation went to the Mines Department on November 9, to discuss the present position in the coal-

fields. The miners pleaded for a scientific reorganization of the industry and the provision of work or maintenance for the surplus miners. An official statement from the Department subsequently issued announced that, as regards national co-operation, the Minister declared that he was convinced that developments in this direction were satisfactory, and that there was no need for the Government to intervene. The time he said, was not propitious for international agreements, so long as the British coal industry had hopes of regaining its foreign markets to a greater extent than at present.

*Germany.*—The annual report of the Ruhr Coal Syndicate for the year 1927-1928, which was recently published, contained an expression of the Syndicate's views on the prospects of an international coal agreement. The report stated that a willingness to take part in negotiations with this end in view had been repeatedly expressed in Germany. Conditions in England, however, were not ripe for such an agreement, since a desire to contest the market still existed in that country and was taking practical effect with Government aid. The Ruhr coal industry could not be expected to accept, as a basis for an agreement, conditions which were artificially created by a policy of Government subventions. The intervention of the British Government had transformed the whole question from one of private economic competition to that of competitive power between States. The hope of the Syndicate in advocating a "systematic rejection" of any kind of subsidising policy was that the German Government would succeed by "other remedial measures" in counteracting the injurious effect on the Ruhr coal industry of such policies abroad. It would appear from the report that by "other remedial measures" the Syndicate implies a further reduction in freights, the extension of the Dortmund-Ems Canal and the construction of the Hansa Canal. This canal is considered the only way by which further ground can be won for German coal in the fiercely contested coastal regions.

*Australia.*—The proposals of the Australian and the New South Wales Governments for the rehabilitation of the coal industry are encountering strong opposition from other states—in particular from Victoria—and from the miners' unions. A conference of unions associated with coal mining, held in Sydney in September, rejected the proposals of the New South Wales Ministry and passed a resolution unanimously refusing to agree to any reduction in wages or increase in hours, and

urging that employees should put up a struggle against any attempt to lower the standard of the workers in the industry. The Minister of Railways assured members that there was no need for immediate worry. It was impossible for the New South Wales Government to make reductions without Federal legislation and they should be able

to rely on the Senate refusing to pass harmful legislation in the exercise of its powers for the protection of State rights.

A note on the proposed "rationalization" of the coal industry, based on an article by Dr. Mack Eastman, was given in the *LABOUR GAZETTE*, March, 1928, page 243.

### Report of Dominion Fuel Board

The Dominion Fuel Board has issued a progress report covering the activities of the Board and the changes that the fuel situation in Canada has undergone since publication of the Board's interim report in 1923. The report contrasts conditions of five years ago, when the main fuel problem was one of supply, with those of to-day, and states that there is now an abundance of both native and foreign fuels for all purposes and that the major problem now is one of markets for Canadian coals.

At the time of the Board's inception a question of primary importance was to replace foreign anthracite in Central Canada by suitable alternative fuels. There had also arisen a strong national desire for a maximum of Canadian fuel independence instead of reliance on the United States for 50 per cent of the coal used. A number of broad investigations have contributed materially to the solution of the problem of an adequate supply of fuel and in part, at least, to the solution of the other problems of national independence. Ontario and Quebec, though still using large quantities of American anthracite, are no longer entirely dependent on this fuel, the producers of which are fighting here as in their own country to retain a declining market. Coke, British anthracite, low volatile coals and fuel oil are strong competitors with American anthracite in the house hold fuel trade, and the range of Alberta and Maritime coals is being extended through special provisions. The fact is emphasized, however, that the problem of Canada's complete fuel independence is still unsolved. The geographic handicap consequent on the location of our largest markets far from our great producing fields, but in close proximity to those of the United States, is one difficult to overcome.

The Board points out that it cannot assume as its function the formulation of a

national fuel policy, for this is a prerogative of Government, and any such policy, so far as it concerns complete fuel independence, must be determined largely by questions of national expediency, based however upon the most complete and accurate knowledge of all technical and economic facts obtainable. The Board is endeavouring to secure and correlate these facts. The most important point still to be ascertained is the cost of transporting coal to Ontario and Quebec from Alberta and the Maritime Provinces and the determination of this by actual test has been assigned by the Government to the Board of Railway Commissioners.

The report summarizes the results of widespread investigation in fuel utilization conducted by the Board through its members and in some cases with the assistance of eminent outside engineers. It is shown that technical research is opening up many possibilities for more efficient and diversified uses of coal. In the matter of low temperature carbonization of bituminous coals, the report points out the difficulty of applying in Canada methods now in operation in countries like Great Britain, France and Germany where the density of population provides a near and ready market for the products. The Board, however, is keeping in close touch with the development of the different processes so that advantages may be taken of them should they prove applicable to conditions in Canada.

The report closes with the statement that the necessity for the study of fuels and fuel problems will probably continue as long as coal is mined. A new fuel research laboratory now being completed for the Department of Mines is exceptionally well equipped, and through association with the Department the Fuel Board will avail itself of these improved facilities.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Work of the Organization in 1928

The *Monthly Summary* of the I.L.O. in a review of the work of the past year, states that the International Labour Organization continued and intensified during the year 1928 its endeavours to assure the benefits of labour legislation on an international basis to all categories of workers the protection of which is entrusted to it. With this in view, its work more and more assumed a character of universality in conformity with the spirit of its Charter, Part XIII of the Peace Treaty.

The number of States represented at the Conference of 1928 was greater than at any other Conference except 1925. Brazil, although no longer participating in the work of the League of Nations, indicated its desire to continue its collaboration in the Organization by sending a complete delegation. Turkey, although not a member of the Organization, sent an observer, and the same course was taken by Ecuador. The journeys of the Director of the Office contributed to render closer the bonds existing between the Organization and many European countries, in particular Italy and Spain. The Session of the Governing Body in October held at Warsaw and Cracow, on the invitation of the Polish Government, constituted for Poland an opportunity to manifest the interest that it bears to the work of the Organization. Notable progress was made in the development of relations with distant countries. In 1927, reference was made to the journey of the Deputy Director to South Africa. Last year the Director undertook a long journey in the Far East. A correspondent's office for India was opened at Delhi. Mention should also be made of the intensification of the relations of the office with the States of Latin America, which in 1928 sent to the Conference a larger number of complete delegations.

Contacts with the great organizations of employers and workers continued to develop in 1928. The great organizations of salaried employees have given evidence of their satisfaction at the decision to place on the agenda of the Conference of 1929 the question of hours of work of salaried employees. The first meeting of the Advisory Committee on Intellectual Workers enabled these workers to let the Governing Body know their opinion on the particular questions which interest them.

From the legislative point of view the year 1928 was marked by a notable acceleration in the movement of the ratification of International Labour Conventions. On January 1, 1928, the number of ratifications officially registered was 248; at the end of December it was 333, an increase of 85. In the course of the year 1927 there were 33 ratifications, and in 1926, 29. A third fundamental question raised during the year constituted the subject of discussions in the Governing Body and at the Conference. This was the question of the revision of Conventions. The discussions almost always involved the consideration of two connected but distinct problems: the problem of the revision of Conventions, properly called a general problem, and the particular problem of the revision of the Washington Eight-Hour Convention.

### Economic Questions and the International Labour Organization

Mr. G. Curcin, general secretary of the Federation of Industrial Corporations of the Kingdom of the Serbs, Croats and Slovenes, writing in the December issue of the *International Labour Review*, the monthly organ of the International Labour Office, on "Economic Questions and the International Labour Organization," contends that more attention should be given by the International Labour Organization to economic questions in their relation to social problems. In this article he discusses some of the causes which in his opinion have operated to prevent simultaneous discussion of both aspects of the problems with which the International Labour Organization is dealing.

"These causes," he says, "might perhaps be sought in the more or less conscious apprehensions described by an employers' delegate at the last Conference as 'general distrust'; without claiming that these are the only causes involved, they may be approximately summed up by saying that the Office and the Workers' Group of the Conference both fear that, if economic considerations are allowed to intervene, the drafting of Conventions may be checked or at all events retarded."

The writer goes on to declare that this apprehension is as vain as it is dangerous, since in the international regulation of conditions of labour the omission of so important an item as the economic factor can at best only result in artificial and temporary advantages; while on the other hand, it may have harmful effects

for the whole of the working class. The International Labour Organization has attacked social questions without taking economic conditions into account. Mr. Curcin contends that the neglect of economic considerations in the framing of international labour Conventions stands in the way of ratification of these Conventions by various governments. The best proof of this, he says, is furnished by the Hours of Work Convention. In spite of the most tenacious efforts on the part of the International Labour Organization, and in spite of changes of government in many countries, this Convention, adopted nearly ten years ago and considered of primary importance by workers all over the world, has only secured a very modest number of ratifications, most of them conditional. Even Great Britain, closely watched by all the partisans of ratification, has made a formal proposal for revision. "It is very natural," he adds, "that a country which in five years has expended a thousand million pounds sterling on unemployment relief, should wish to have a clear insight into the possible effects of the uniform application of the eight-hour day—especially the effect upon costs of production—before binding herself by ratification of a Convention which, while introducing a social reform, also deals with an economic problem."

### Regulation of Hours, of Work in European Industry

The Governing Body of the International Labour Office, at its 33rd Session held in October, 1926, examined the international situation with regard to the Washington Eight-Hours Convention, and set up a Committee to "determine the actual position in the various States with regard to legislation on hours of work and its application." The report, after being approved by the Committee, was laid before the Governing Body in January, 1927, and was subsequently completed in accordance with certain suggestions made by members of the Governing Body. This report has just been published in the *International Labour Review*, Vol. XVIII, Nos. 1, 2 and 3. It includes a comparative study of the systems of regulation of hours of work for adult workers in European industry. It does not deal with countries outside Europe or with special provisions for women, young persons, and children. It does not consider the regulations for two very important branches of labour: mining and transport. These call for separate study by reason of the special conditions in these occupations; such a study has already been made for mining, and one for transport will be undertaken shortly.

The report published in the *International Labour Review* concludes that general legislation on the subject of hours of work is in force in twenty-one States. Six States have only partial legislation—Denmark, Estonia, Great Britain, the Irish Free State, Luxemburg, and Switzerland. If, however, account is taken of the scope of regulation by collective agreement, it appears that the only States with no regulations on hours of work are Hungary and Turkey (whose European territory is very small), in which industry occupies a quite secondary place in the national economy, and Albania, which has no industrial establishments at all.

Almost all the legislations and collective agreements prescribe a normal working week of forty-eight hours or less. The only exceptions to this rule are certain occupations subject to special legislative provisions (such as dockers in the Netherlands, and bakers in Greece) and small-scale industry in the Serbo-Croat-Slovene Kingdom. In Switzerland the collective agreements for the various handicrafts rarely exceed this limit. A considerable number of countries have instituted the Saturday half-holiday. While this does not always reduce the weekly hours of work, it improves the position of the workers as regards weekly rest.

The distribution of hours of work over a longer period than a week has been adopted in a number of countries. Belgium, which has ratified the Eight-Hours Convention, has in a variety of ways avoided the prolongation of hours of work by making a generous use of this derogation. For work which must necessarily be carried on continuously several States have adopted an average working week of fifty-six hours, while others, such as Italy, the Netherlands and Norway, have maintained the average forty-eight hours even in this case. This is also in some degree true of France. In Belgium workers employed in shifts for an average of fifty-six hours a week over a period of three weeks are entitled to a compensatory rest of twenty-six complete days per annum, which reduces by so much the average annual weekly hours of work calculated over the year.

The collective making up of hours lost for reasons as a rule specifically mentioned is allowed by the Austrian, French, German, Italian, Spanish, and Swiss legislations. The extent to which the normal number of hours of work is authorized to be extended in the case of preparatory or complementary work varies according to the different legislations, but rarely exceeds two hours. In addition, certain prolongations are generally authorized without limits in case of accident or *force majeure*. A

certain number of hours of overtime are also allowed in the event of exceptional stress of work.

According to the legislation of most countries overtime has to be paid at an increased rate. The minimum rate of increase is generally from 25 to 50 per cent.

Finally, the legislation of the great majority of countries considered provides measures to ensure the regular application of the provisions on hours of work, the establishment of a timetable, its supervision by factory inspectors, and the application of a system of penalties.

### Publications of the Office

*"Migration Laws and Treaties."*—Under the above title the International Labour Office is publishing a second edition, revised and enlarged, of the study entitled "Emigration and Immigration Legislation and Treaties," which was published in 1922. A note on Volume I of the new edition appeared in the LABOUR GAZETTE of October, 1928, page 1116. Volume II has just appeared and deals with immigration legislation. After considering the definition of an immigrant, it proceeds to

study provisions limiting freedom of immigration, public and private organizations entrusted with the supervision or development of immigration, arrangements for the instruction and preparation of immigrants, the recruitment and employment of foreign workers, reception of immigrants, their protection during the journey and in the country which receives them, the position in which they are generally placed during their stay, and their repatriation. A chapter is devoted to continental and frontier zone immigration. An appendix gives a list of the most important legislative texts relating to immigration, and a supplement is added, giving the contents of the Act recently adopted in the United States modifying the conditions for the admission of relations of immigrants.

*"Occupation and Health."*—A further series of brochures of "Occupation and Health," the Encyclopaedia of Hygiene, Pathology and Social Welfare which is in course of preparation by the International Labour Office, has recently appeared. It comprises monographs on: Noises; Timber Industry; Explosives; Metal Grinding and Polishing; and Radium and Radioactive Substances.

### Progress of the 7-Hour Day in Russia

*Industrial and Labour Information*, the weekly publication of the International Labour Office, in its issue for December 31, contained an article presenting information compiled from various sources on the progress of the seven-hour working day in Soviet Russia. It will be recalled that on the occasion of the Bolshevik revolution, in 1927, the Central Executive Committee of the Soviet Union issued a manifesto announcing that the seven-hour day was to be introduced gradually in Russian industry within the period of five years (LABOUR GAZETTE, January, 1928, page 96). In 1928 the seven-hour system was applied to 28 undertakings, employing 123,700 workers. Of these undertakings 24 belonged to the textile industry and employed 118,600 workers. The first result of the change to the seven-hour system was an increase in the number of workers employed. In the textile undertakings, the increase was about 20 per cent. Up to the present, according to information supplied by the People's Commissar of Labour, the economic results of the reform have been found to be variable and unsatisfactory. The introduction of the seven-hour working day in 1927-1928 has not so far given the expected results in the majority of fac-

ories, though progressive improvements are noted in the work of the textile factories concerned. Economically and technically the seven-hour system has nowhere reached as high a degree of efficiency as the eight-hour day. The governmental committee on the seven-hour day has drawn up a program which provides for the change-over of another section of industry to the seven-hour day in 1928-1929. During the next twelve months the reform will be applied to 158 existing undertakings, with 206,000 workers, and to 40 new undertakings with 14,300 workers. This will involve the admission to industry of 30,000 new workers. The reform will be spread over many branches this year instead of being limited as last year to the textile industry.

The Association of Licensed Barbers and Hairdressers of the Province of Quebec recently asked the provincial government to amend their charter to provide that "from June, 1929, no person without a license or permit issued under this Act shall practise the trade of barber and hairdresser in cities and towns having a population of twenty thousand souls or over."

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING DECEMBER

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in December was 6,358, their employees numbering 918,780 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for December was 1,695, having an aggregate

membership of 190,839 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment;

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 63 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### Employment Situation at the Beginning of January, 1929, as reported by Employers

As is customary at the beginning of the year, employment on January 1, 1929, showed a pronounced curtailment which involved practically the same proportion of the aggregate staffs as that indicated on January 1, 1928. Activity in recent months has been at an exceptionally high level, so that many employers took advantage of the opportunity of closing their entire plants during the holiday season for necessary repairs and inventories, as well as to provide a vacation for their staffs. The year-end epidemic of influenza which prevailed in many areas also resulted in reduced employment. Despite these factors, the situation continues better than on the corresponding date in any other year since the record was instituted in 1920. The Dominion Bureau of Statistics tabulated returns from 6,358 firms, whose payrolls declined from 983,698 persons on December 1 to 918,780 at the beginning of January, a decrease of approximately 65,000 persons, or 6.6 per cent. Reflecting this contraction, the index (based upon the 1926 average employment as 100) stood at 109.1 on January 1, 1929, as compared with 116.7 in the preceding month, and with 100.7, 95.9, 90.7, 84.9, 89.8, 87.3, 78.8 and 88.8 on the same date in 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Manufacturing, construction, transportation, mining and logging reported pronounced seasonal contractions as compared with December while trade and services registered improvement.

#### Employment by Economic Areas

All provinces recorded declines, those in Quebec and Ontario, where manufactures are especially important in the industrial distribution, being most extensive.

*Maritime Provinces.*—There was a further and larger recession in employment in the Maritime Provinces, chiefly in manufacturing and construction, while mining was also rather slacker. On the other hand, logging and transportation showed seasonally heightened activity. Statements were received from 494 firms employing 63,688 persons, compared with 72,149 at the beginning of December. Smaller reductions had been noted on January 1, 1928, but the index was then several points lower.

*Quebec.*—The decrease in Quebec was less than on the same date in 1928, and the situation continued much more favourable than on January 1 of any other year since this series was instituted in 1920. Manufacturing (notably of tobacco products, food, lumber, pulp and paper, electric current and building materials), construction and transportation reported especially pronounced losses, but the tendency was also downward in logging, mining and trade. In many cases, operations will have been resumed early in the New Year. The labour forces of the 1,420 co-operating employers aggregated 251,092 workers, as against 272,588 on December 1, 1928.

*Ontario.*—Manufacturing, construction and transportation showed the greatest curtailment in Ontario. Within the manufacturing division, textiles, food, iron and steel and lumber reported the most extensive shrinkage. Logging, however, recorded an advance, and trade, though not at the pre-Christmas peak, was nevertheless considerably busier than at the beginning of December. A combined payroll of 391,422 persons was employed by the 2,918 firms whose returns were received, and who had 415,613 on their staffs on December 1. These contractions involved a rather smaller proportion of the reported employees than was the case on January 1, 1928, while the index continued higher than on the same date in other years of the record.

ary 1 last year, while the index was higher than on the same date in any of the last eight years. The 662 firms furnishing data reported 76,252 employees, as against 82,343 in the preceding month. Lumber mills, logging and construction recorded important curtailment, while there were smaller losses in food, electric current and other factories, and in mining and trade.

Index numbers of employment by economic areas are given in Table I.

**Employment by Cities**

There were contractions in seven of the eight cities for which separate tabulations are made, Montreal, Quebec, Toronto, Ottawa,

**EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS.**

*NOTE.*—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

*Prairie Provinces.*—Declines involving a greater number of workers than at the beginning of January, 1928, were noted in the Prairie Provinces, where employment continued more active than at the commencement of any other year since 1920. Statistics were tabulated from 862 employers of 131,326 workers, or 9,679 less than on December 1. Construction and transportation reported especially noteworthy losses, but manufacturing, mining and communications were also slacker. On the other hand, iron and steel plants and logging registered improvement.

*British Columbia.*—The recessions in British Columbia were less extensive than on Janu-

ary 1, 1928, while the index was higher than on the same date in any of the last eight years. The 662 firms furnishing data reported 76,252 employees, as against 82,343 in the preceding month. Lumber mills, logging and construction recorded important curtailment, while there were smaller losses in food, electric current and other factories, and in mining and trade.

*Montreal.*—The decrease in Montreal involved a smaller number of workers than that registered on January 1, 1928, when conditions were not so favourable as on the date under review. Statements were received from 753 firms with 121,674 employees, as compared with 131,727 in the preceding month. Important declines were shown in construction and transportation and also in manufacturing, especially in food, building material and tobacco factories; on the other hand, addi-

NOTE: "Relative Weight" in Tables I, II, III and IV shows the proportion of employees in the indicated area or industry to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS, (AVERAGE 1926=100)

		Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
1921							
Jan.	1.	88.8	107.6	84.2	88.8	95.0	76.7
1922

tions to staffs were noted in the iron and steel group.

*Quebec.*—Manufactures, construction, and shipping reported a loss in employment in Quebec City, where 104 employers reduced their staffs from 11,202 persons on December 1 to 10,602 at the beginning of January. This decrease was less than that indicated on January 1 last year, and the index continued considerably higher than on the same date in earlier years of the record.

*Toronto.*—Employment in Toronto showed a smaller seasonal drop than on January 1, 1928, and the general situation was much better that it was either then or at the beginning of any other year of the record. There were contractions in manufacturing, the most noteworthy being in textiles and foods; construction and transportation were also seasonally slacker, but trade showed considerable improvement. Returns were tabulated from 838 firms with 115,606 employees, compared with 120,556 in their last report.

*Ottawa.*—Manufactures and construction registered seasonal curtailment, while little change, on the whole, occurred in other industries. The working forces of the 129 re-

porting establishments aggregated 10,863 persons, or 771 fewer than at the beginning of December. This reduction involved a larger number of employees than that recorded on the same date last year, when employment was, however, in less volume.

*Hamilton.*—Data were received from 201 firms in Hamilton employing 34,394 workers, as against 35,013 on December 1. Manufactures showed reduced activity, while only small changes were indicated in other groups. The declines noted on January 1, 1928, were very much more marked, and the index then was many points lower.

*Windsor and the Other Border Cities.*—There was a rather larger contraction in the Border Cities than on January 1, 1928, but employment continued in much greater volume than on the same date in other years for which statistics are available. Manufactures and construction were seasonally quiet. Returns were compiled from 125 establishments with 16,909 persons in their employ, or 604 less than on December 1.

*Winnipeg.*—Manufacturing and construction registered the greatest declines in Winnipeg, but transportation and communications were

also slacker. The 298 co-operating firms reported 31,085 employees, compared with 33,184 in the preceding month. This reduction involved many more workers than were released on January 1, 1928, when employment was in practically the same volume.

*Vancouver.*—Little general change took place in Vancouver, according to returns from 259 employers of 26,641 persons, practically the same number as on December 1. Pronounced losses had been indicated on the same date last year, and the index then was several points lower. Transportation afforded increased employment while there were losses in manufactures, construction and trade.

Index numbers by cities are given in Table II.

### Manufacturing

The losses in employment registered in manufactures were smaller than on January 1, 1927 and 1928, and the situation continued more favourably than at the beginning of any other year since 1920. The most extensive reductions were in the food, lumber, iron and steel, textile, pulp and paper, building material, electric current, leather and tobacco

industries, but plants in practically all divisions recorded curtailment. As in previous years, these declines were chiefly due to shut-downs for holidays, inventories and repairs, while during the period under review the staffs of many factories suffered seriously from the wide-spread epidemic of influenza; considerable improvement, however, may be looked for in the next report. Statistics were compiled from 3,180 manufactures, employing 499,949 operatives, compared with 527,573 on December 1.

*Animal Products, Edible.*—Large reductions were reported in this division, in which all branches except dairies showed curtailment, that in meat-preserving plants being most extensive. Statements were received from 169 manufacturers with 16,709 workers, as compared with 17,308 at the beginning of December. This loss was much smaller than that recorded on January 1, 1928, when the index number was nearly eight points lower. All provinces reported reduced employment, but the heaviest contractions were in Ontario.

*Leather Products.*—There was a further decline in employment in leather-using indus-

tries at the beginning of January, particularly in boot and shoe factories. The shrinkage involved many more employees than that noted on the corresponding date last year, when the index was higher. A combined working force of 15,114 persons was registered by the 173 firms making returns, as compared with 16,572 in the preceding month.

The tendency was generally downward, but the great losses occurred in Quebec and Ontario.

*Lumber Products.*—Seasonal contractions on a somewhat larger scale than on January 1, 1928, were noted in lumber mills, 676 of which reduced their payrolls from 48,143 on December 1 to 41,844 workers at the begin-

\*The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

ning of January. Employment was in greater volume than on the corresponding date last year. Sawmills registered the most pronounced decreases, but there was also curtailment in furniture, match container and other wood-using industries. There were especially marked losses in British Columbia and Ontario, although employment declined generally except in the Prairie Provinces, where no change was indicated.

*Musical Instruments.*—Forty manufacturers of musical instruments released 225 persons from their staffs, bringing them to 3,311 at the beginning of January. The bulk of the line was in Ontario. A rather smaller recession had been noted on January 1 a year ago, but the index number then was lower.

*Plant Products, Edible.*—There were reductions in employment in all branches of the vegetable food group, the greatest being in sugar and syrup, canning, biscuit, and chocolate and confectionery factories, the working forces of the 308 co-operating employers totalled 26,818 persons, as compared with 30,715 in their last report. The contractions in Ontario were especially pronounced, but the movement was generally unfavourable. The declines noted at the beginning of January last year were much larger, and the index number was several points lower than on the date under review.

*Pulp and Paper Products.*—The shrinkage at the beginning of January, 1929, was more extensive than in 1928, but employment continued rather better than on the corresponding date in any other year since the record was instituted in 1920. Statistics were received from 475 firms, whose staffs aggregated 61,493 workers, or 2,225 less than in their report. The most noteworthy losses were in Quebec and Ontario, although the trend was downward in all except the Prairie Provinces. Pulp and paper mills reported a large proportion of the reduction, but there were also declines in plants producing paper goods.

*Rubber Products.*—Rubber factories showed a decrease, which was smaller than that of January 1, 1928; 38 rubber factories had 18,070 employees on the date under review, as against 18,450 at the beginning of December. Ontario and Quebec reported losses, despite which, the index number, at 142.2, was higher than in any month of the years, 1920-1927, and was only exceeded during two months in 1928.

*Textile Products.*—The 491 firms furnishing data released a smaller number of operatives than were let out by the establishments reporting at the beginning of January, 1928,

when the index number was slightly lower than on the date under review. Their payrolls included 75,090 persons on January 1, against 80,122 in the last report. Ontario recorded the bulk of the shrinkage, which was especially marked in the hosiery and knitting, thread, yarn and cloth and garment divisions.

*Tobacco, Distilled and Malt Liquors.*—The falling-off in employment at the beginning of January involved more employees than on January 1 last year, when employment was in considerably smaller volume. Statements were tabulated from 141 manufacturers in this group, employing 14,315 workers, or 1,408 less than on December 1. Practically all the loss took place in tobacco plants, and in Quebec while elsewhere comparatively slight changes were noted.

*Chemical Products.*—Employment in chemical and allied product factories, chiefly in Quebec and Ontario, showed a contraction on January 1, when 250 persons were released from the labour forces of the 115 reporting plants, which had 7,212 employees. Similar declines had been noted on the corresponding date a year ago, and the index number then was several points lower.

*Clay, Glass and Stone Products.*—Further contractions in employment were made in building material works, 129 of which reported an aggregate staff of 10,658, as compared with 12,133 in the preceding month. All provinces shared in this curtailment, which, however, was most marked in Quebec and Ontario. Brick and stone plants recorded important declines, which were rather smaller than those of January 1, 1928, when the employment was not so active.

*Electric Current.*—There were large decreases in the number employed in electric current plants, according to statistics from 89 producers, employing 13,720 workers, or 1,254 less than on December 1, Quebec reported most of this reduction which involved more employees than that indicated at the beginning of January last year; the index then, however, was several points lower.

*Electrical Apparatus.*—A slight increase in personnel was registered by the 44 co-operating electrical apparatus factories, whose labour forces aggregated 12,928 persons on January 1. Employment was in greater volume than on the same date of the preceding year.

*Iron and Steel Products.*—Crude, rolled and forged, heating appliance, and general plant machinery works reported decided cur-

tailment, while improvement was shown in land vehicle factories; the payrolls of the 643 firms furnishing data in the iron and steel group totalled 147,106, against 148,490 employees on December 1. This contraction, (which was on a much smaller scale than on the corresponding date last year, when the index was lower) was most pronounced in Ontario, while the movement was upward in Quebec and the Prairie Provinces.

*Non-Ferrous Metal Products.*—The loss recorded in non-ferrous metal products, involved a fewer workers than that indicated on the corresponding date in 1928; the index was then many points lower than on January 1, 1929. Returns were compiled from 104 employers of 18,199 persons, as compared with 18,881 at the commencement of December. The most noteworthy reductions were in Ontario.

*Mineral Products.*—Further and greater declines were noted in this group, the shrinkage being larger than that indicated at the beginning of last year. A combined working force of 11,842 persons was employed by the 81 establishments whose returns were received and who had 12,628 employees on December 1. The situation was much more favourable than on January 1, 1928.

#### Logging

Logging camps showed a smaller falling-off than on the same date last year, while employment continued in greater volume than at the beginning of January in most years of the record. A combined working force of 43,401 men was reported by the 233 co-operating firms, who had 44,625 in the preceding month. Improvement was shown in the Maritime and Prairie Provinces and Ontario, while the movement was downward in Quebec and British Columbia.

#### Mining

*Coal.*—There was a decline in coal mines, 78 of which reduced their payrolls from 29,071 persons on December 1 to 28,413 at the beginning of January. The recession took place mainly in the Maritime Provinces. Additions to staffs had been indicated on January 1, 1928, and the index number was then slightly higher.

*Metallic Ores.*—Further losses were noted in metallic ore mines, 421 workers being released from the payrolls of the 67 co-operating firms who employed 14,564 persons at the beginning of January. All provinces registered reductions in this group, in which little general

change had been indicated on January 1, 1928, when employment was not so active.

*Non-Metallic Minerals (other than coal).*—The trend of employment in this division continued downward; although larger losses were noted on January 1 a year ago, the index then was many points lower. Statements were received from 64 firms employing 7,496 workers, as compared with 8,562 in the preceding month. Quebec and Ontario recorded the greatest shrinkage.

#### Communications

Further curtailment in personnel was reported in telephones and telegraphs, but the situation continued to compare favourably with that on the same date in other years of the record. The payrolls of the 187 companies and branches furnishing data declined from 27,677 on December 1 to 27,181 employees at the beginning of January.

#### Transportation

*Street Railways and Cartage.*—Employment in local transportation showed a further seasonal decline, involving a rather larger number of workers than that reported on January 1, 1928, when the index number was over nine points lower. A combined staff of 21,943 was employed by the 122 co-operating firms, who had 22,914 workers in the preceding month. All provinces except British Columbia shared in the reduction.

*Steam Railways.*—Employment on steam railways showed a decrease which exceeded that indicated on the corresponding date a year ago. The index number then, however, was practically the same as on the date under review. Improvement in the Maritime Provinces was offset by contractions elsewhere. The payrolls of the 105 companies and divisional superintendents furnishing returns aggregated 81,853 persons, as against 87,796 in their last report.

*Shipping and Stevedoring.*—There was a large reduction in employment in water transportation, chiefly in Quebec and Ontario, while a seasonal increase was noted in the Maritime Provinces. On the whole, a smaller number of workers was let out than on January 1, 1928, when the index was lower. Returns were compiled from 69 employers of 11,927 men, compared with 15,815 in the preceding month.

#### Construction and Maintenance

*Building.*—Continued curtailment of operations was shown generally in building construction; 577 contractors reduced their staffs from 46,875 at the beginning of December to 36,890

on January 1. The most pronounced declines were in Quebec and Ontario, but there were general losses except in British Columbia. Less extensive decreases were indicated on January 1 last year, when the index was several points lower.

*Highway.*—Statements were received from 174 firms employing 10,662 workers, as compared with 17,399 in the preceding month. The greatest falling-off was in the Maritime Provinces, Quebec and Ontario, but the movement was generally downward. Somewhat larger contractions were indicated at the beginning of January, 1928, when employment was in less volume.

*Railway.*—A further, but rather less marked, recession was shown in this division, in which 45 employers reported 33,454 persons on their payrolls, as compared with 40,363 in the preceding month. The situation was much better than on January 1 of a year ago, although the declines then noted were considerably smaller. All provinces recorded a seasonal falling-off in employment, but that in the Prairie Provinces was greatest.

### Unemployment in Trade Unions at the Close of December, 1928

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed. Unions which are involved in industrial disputes are excluded from our tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The local trade union situation at the close of December was less favourable than at the end of the previous month, the customary curtailment of employment incidental to the holiday and inventory periods, together with mid-season slackness in several trades and industries affecting the situation to a marked degree. The level of employment in the country as a whole, however, remained the same as at the end of 1927, although fluctuations were apparent in the various provinces. Reports for December were tabulated from a total of 1,695 labour organizations with 190,839 members, of whom 12,553 were idle on the last day of the month, a percentage of 6.6 contrasted

### Services

Increased activity was registered in service group; 187 firms employed 17,827 persons, or 141 more than in the preceding month. Reductions were indicated at the beginning of January, 1928, when the index, as on the same date in earlier years of the record, was much lower.

### Trade

Retail trade afforded considerably more employment than on December 1, but there were contractions in wholesale establishments, following an unusually active season. The 640 co-operating employers had 83,220 workers, compared with 82,357 in their last report. Employment continued at a much higher level than in the same month in any previous year for which dates are available.

The accompanying tables give index numbers of employment by economic areas, by leading cities and by industries. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date indicated.

with 4.2 per cent of inactivity in November and with 6.6 per cent in December, 1927.

With the exception of New Brunswick and British Columbia all provinces reflected less activity than in November, the Quebec unemployment percentage being over 4 points in excess of that registered in November, and being caused to a large degree by dullness in the garment trades and building and construction occupations. In Nova Scotia coal miners, quarry workers and navigation employees contributed largely to the total provincial depression. Between-season quietness in building operations was responsible, for the most part, for the adverse situation reported in Ontario tending also to influence, in a smaller way, the unemployment percentages in Manitoba, Saskatchewan and Alberta, in which provinces also some falling off in work available to steam railway employees was apparent. An important factor also in the Alberta situation was the increase in idleness reported among coal miners. The improvement registered in New Brunswick and British Columbia in comparison with November was small, being less than one per cent in each province. When a comparison is made with the returns for December, 1927, Nova Scotia, New Brunswick, Ontario, Saskatchewan and British Columbia unions all

reported employment expansion during the month under review, which was offset by reductions in the remaining provinces. British Columbia unions reported the most substantial gains in activity over December a year ago, the manufacturing industries and the building trades especially reporting better situations. The unemployment increase in Quebec during December over the same month in 1927 was due to greater depression in the garment trades. Coal miners in Alberta and building tradesmen in Manitoba were in a large measure accountable for the unfavourable tendencies in these provinces.

The chart accompanying this article illustrates the trend of unemployment by months from January, 1922, to date. The course followed by the curve during the first two months of 1928 was slightly upward from that indicated at the close of the previous year showing an increase in the unemployment volume, but during the following seven months expansion was noted and as a result the trend of the curve was consistently downward. With the beginning of October, however, a period of depression set in, chiefly seasonal in character and the curve again extended in an upward direction in which course it continued until

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

A separate tabulation is compiled each month showing the unemployment existing in the largest city in each province with the exception of Prince Edward Island. Of these Halifax reported the most outstanding reductions in employment when compared with November, while in Regina also the curtailment was pronounced. Moderate increases in idleness were registered by Winnipeg and Edmonton members, and the declines in activity reported from Montreal and Toronto were small. In Saint John and Vancouver employment was more prevalent than in November, the gains in both cities being about 2 per cent. In making a comparison with the returns for December, 1927, Vancouver unions reported a substantially larger percentage of employment during the month under review and a higher level of employment was also maintained in Montreal, Saint John and Toronto. On the other hand, there was an increase in idleness of over 4 per cent reported in both Regina and Edmonton and around 2 per cent in both Halifax and Winnipeg.

the close of the year when it rested at exactly the same level as on December 31, 1927.

The downward movement that employment in the manufacturing industries has experienced during several months continued into December, the 468 unions from which reports were tabulated at the end of December (with a combined membership of 54,361 persons), recording 8.3 per cent of idleness as contrasted with 5.6 per cent in November. The most appreciable change was indicated among garment workers, who were especially slack during December owing to mid-season dullness, particularly in Montreal. The increase in unemployment reported among leather workers and general labourers was also considerable, and nominal declines in employment were indicated by paper makers, printing tradesmen, textile workers and metal polishers. On the other hand, iron and steel, wood and glass workers, bakers, cigar makers and hat and cap makers were more actively engaged than in November. The situation in the manufacturing division, as a whole, was but slightly better than in December, 1927, when 9.3 per cent of idleness was

recorded, though pronounced changes occurred within the group, particularly in the metal and garment trades, the noteworthy advance in the former trades being only slightly more than sufficient to offset the slackness recorded among the latter. Contributory increases in employment, on a smaller scale, were manifest by wood workers, papermakers, metal polishers, glass workers, tailors and printing tradesmen, while reductions in work afforded were indicated among leather workers, hat and cap makers, bakers, cigar makers and general labourers.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month		N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Dec., 1919	1.5	2.0	3.2	1.9	5.0	6.0	2.8	18.6	4.3	
Dec., 1920	6.9	11.0	19.6	12.3	7.8	10.1	9.2	11.6	13.1

Nov., 1926	1.3	2.1	4.9	4.0	2.2	.9	6.7	10.0	4.7	
Dec., 1926	3.2	2.2	7.6	5.6	4.3	2.1	6.7	7.5	5.9	
Jan., 1927	3.0	3.4	7.3	6.8	6.3	6.1	4.0	6.9	6.4	
Feb., 1927	3.8	2.3	7.2	7.2	8.1	5.3	4.2	7.4	6.5	
Mar., 1927	13.1	1.6	6.5	4.9	5.6	4.1	4.4	4.4	5.7	
April, 1927	5.5	2.7	9.3	4.0	6.2	5.1	7.2	3.6	6.0	
May, 1927	5.8	1.9	8.3	3.1	3.7	1.7	6.5	3.9	5.2	
June, 1927	1.8	2.3	4.0	3.1	2.6	1.1	4.6	2.7	3.2	
July, 1927	1.2	2.3	5.2	2.7	2.3	1.5	1.8	4.0	3.3	
Aug., 1927	1.5	1.2	5.4	3.1	2.3	.9	3.5	4.7	3.7	
Sept., 1927	1.4	1.1	4.8	2.2	2.4	2.1	1.4	4.1	3.1	
Oct., 1927	1.1	.9	5.6	3.2	4.2	1.8	4.4	4.9	3.9	
Nov., 1927	2.5	1.7	7.3	3.5	5.1	3.4	4.6	8.0	5.2	
Dec., 1927	4.3	1.5	9.3	3.1	5.4	5.6	3.7	10.5	6.6	
Jan., 1928	5.5	1.5	7.6	7.0	6.3	6.0	4.4	8.0	7.0	
Feb., 1928	9.0	1.7	9.1	5.6	7.3	7.5	5.5	5.0	6.5	
Mar., 1928	10.9	2.3	7.0	5.8	7.5	4.2	6.3	3.3	5.7	
April, 1928	7.4	1.8	6.2	4.1	5.2	3.0	4.8	3.0	3.2	
May, 1928	5.6	1.5	4.3	2.7	2.9	1.1	3.3	3.6	3.2	
June, 1928	.5	.8	5.6	2.4	2.1	1.1	3.3	3.6	2.5	
July, 1928	1.5	.7	2.6	2.6	1.8	.6	4.5	2.8	2.4	
Aug., 1928	1.6	.7	4.0	1.9	1.4	.8	1.2	2.8	2.2	
Sept., 1928	.9	.5	3.5	1.2	1.2	.6	4.2	3.3	2.2	
Oct., 1928	1.1	1.0	5.7	1.8	1.7	1.5	1.4	5.8	3.1	
Nov., 1928	1.1	1.1	6.3	2.8	5.4	1.4	2.9	7.8	4.2	
Dec., 1928	3.9	0.9	10.7	4.0	8.1	4.4	6.9	6.9	6.6	

Among coal miners the situation was somewhat less favourable during December than in the previous month, according to the reports tabulated from a total of 47 unions, with 19,793 members, 3.6 per cent of whom were idle, contrasted with .4 per cent in November. This reduction in employment over November was

shared by both Nova Scotia and Alberta miners, while British Columbia members were afforded the same volume of work in both months of the comparison. In comparison with the returns for December, 1927, when 1.4 per cent of inactivity was recorded, Nova Scotia unions reflected slightly heightened activity during the month under review; in Alberta the situation was adverse and in British Columbia no change was indicated in the number of idle members. Many miners in both the eastern and western coal fields, however, continued to work only a few days a week. Quarry workers in Nova Scotia reported a much larger proportion of their members idle than in November, but moderate reductions in employment over December a year ago.

Curtailement in building and construction operations was again in evidence during December and with increasing force, due to mid-winter slackness, the percentage of idleness standing at 15.5 contrasted with 9.3 per cent of inactivity in November. The percentage for December was based on the reports tabulated from 216 unions with an aggregate membership of 26,544 persons. Carpenters and joiners were the most seriously affected by this depression, in which all trades, however, shared in varying degree. The recessions among bricklayers, masons and plasterers were also noteworthy. Compared with the situation in December, 1927, when 19.1 per cent of idleness was recorded, carpenters, and joiners were the only tradesmen to report a lower level of employment during the month under review, while the gains in the remaining trades those registered among bricklayers, masons and plasterers were the most extensive.

In the transportation group, 3.8 per cent of the members included in the returns were unemployed at the end of December, compared with 2.6 per cent in November and with 3.6 per cent in December a year ago. December reports were received from a total of 720 unions of transportation workers with a combined membership of 65,301 persons. Employment for steam railway workers whose returns constitute about 81 per cent of the entire group membership reporting, eased off somewhat during December when compared with November, and this decline combined with a nominal reduction in activity for teamsters and chauffeurs, more than offset the gains in the navigation division. Among street and electric railway employees there was no change recorded in the unemployment percentage. The nominal decline in employment which was registered among transportation workers during December over the same month a year ago was due, as in the previous comparison, to a slight reduction in

the volume of work afforded steam railway employees and teamsters and chauffeurs. Navigation workers, on the contrary, were busier, and among street and electric railway employees there was practically no change in the situation.

Each month the reports received from associations of longshore workers are tabulated separately, and during December returns were compiled from 15 of these associations including a membership of 7,541 persons. Of these 1,200 were without employment at the end of the month, a percentage of 15.9, as compared with 16.5 per cent of unemployment in November and with 15.0 per cent in December, 1927.

From unions of retail clerks 6 reports were received in December, representing a membership of 742 persons, .4 per cent of whom were idle on December 31 as compared with unemployment percentages of .7 in November and .6 in December, 1927.

Civic employees indicated approximately the same percentage of inactivity during December as in November, the 65 unions reporting in December, with 6,680 members, showing 1.6 per cent of unemployment as compared with 1.5 per cent in the preceding month. Some improvement was, however, recorded over December, 1927, when 2.0 per cent of idleness was registered.

The miscellaneous group of trades showed slightly better conditions during December than in November, the 119 unions from which reports were tabulated at the end of the month,

with 5,737 members, indicating 5.1 per cent of unemployment compared with 6.1 per cent in November. Hotel and restaurant employees were afforded a greater volume of work than in November, and among barbers and stationary engineers and firemen nominal gains in employment were registered. Theatre and stage employees, however, were somewhat slacker. In comparison with the returns for December, 1927, when the unemployment percentage stood at 6.7, hotel and restaurant employees and stationary engineers and firemen reported a more favourable situation during the month under review, while theatre and stage employees and barbers suffered some curtailment of activity.

The level of unemployment among fishermen at the end of December, as indicated by the returns tabulated from 2 unions of these workers with 755 members, remained the same as in November, the unemployment percentage at the end of both months standing at 19.9. Improvement, however, was registered over the December, 1927, situation when 26.7 per cent of the members were idle.

Among lumber workers and loggers no inactivity was apparent during December as in both the preceding month and December a year ago.

Table I summarizes the returns by provinces for December of each year from 1919 to 1925 inclusive and for each month from January, 1926, to date and table II shows the percentages of unemployment registered in the various groups of industries for the same months.

### Employment Office Reports for December, 1928

The volume of business transacted by the offices of the Employment Service of Canada during the month of December, 1928, showed a decline of over 17 per cent in the number of placements effected, while the change in comparison with the corresponding month of 1927 was negligible, being less than 1 per cent. All groups, except trade, showed declines from November, the largest in construction and maintenance. Gains in industries over December a year ago were shown in manufacturing, services and trade, but these increases were slightly more than offset by losses in logging, farming, mining, transportation, and construction and maintenance.

The accompanying chart shows the trend of employment since January, 1926, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noted

that the curves, both of vacancies and placements, in relation to applications showed a steady upward trend throughout the month, and at the close of the period the levels reached were, respectively, 2.5 and 1.5 points higher than those recorded at the close of 1927. The ratio of vacancies to each 100 applications was 70.2 and 79.4 during the first and second halves of December, 1928, in comparison with the ratios of 67.2 and 76.9 during the same periods of 1927. The ratios of placements to each 100 applications during the periods under review were 67.0 and 75.2 as compared with 64.4 and 73.7 during the corresponding month of 1927.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during December, 1928, was 949, as compared with 1,147 during the preceding month and with 938 in December a year ago.

The average number of applications for employment received daily by the offices during the month under review was 1,278 in comparison with 1,637 in November, and with 1,314 during December, 1927.

The average number of placements made daily by the offices of the Service during December, 1928, was 902, of which 487 were in regular employment and 415 in work of one week's duration or less, as compared with a total daily average of 1,093 during the preceding month. Placements in December a year ago averaged 899 daily, consisting of 516 placements in regular and 383 in casual employment.

During the month of December, 1928, the offices of the Service referred 23,425 persons to vacancies, and effected a total of 22,529 placements. Of these the placements in regu-

placements in regular and casual employment. This constituted a record year in placements effected, and exceeded by nearly 2 per cent the former high level attained in 1923.

The following table gives the placements recorded to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,605	393,522

lar employment were 12,166, of which 9,046 were of men and 3,120 of women, while placements in casual work totalled 10,363. The number of vacancies reported by employers was 14,014 for men and 9,694 for women, a total of 23,708, while applications for work numbered 31,926, of which 22,114 were from men and 9,812 from women.

During the year 1928, offices of the Service throughout Canada reported 506,426 vacancies, 597,493 applications, and 470,328

NOVA SCOTIA

During the month of December, 1928, positions offered through employment offices in Nova Scotia were over 7 per cent less than in the preceding month and nearly 3 per cent less than during the corresponding month of 1927. Placements declined 9 per cent in comparison with November and nearly 11 per cent when compared with December, 1927. The manufacturing industries, construction and maintenance and trade were the only groups

8 placements effected by offices since closed.

to show gains in placements over December a year ago and these increases were more than offset by declines in other groups. Industrial divisions, in which most of the placements were effected during the month were: manufacturing, 55; logging, 41; transportation, 23; construction and maintenance, 43; trade, 71, and services, 276, of which 209 were of household workers. During December, 74 men and 47 women were placed in regular employment.

#### NEW BRUNSWICK

There was a decline of over 20 per cent in the number of positions offered through employment offices in New Brunswick during December, when compared with the preceding month, but a gain of nearly 8 per cent in comparison with the corresponding month in 1927. Placements were over 22 per cent less than in November, but nearly 4 per cent higher than in December, 1927. Construction and maintenance and services showed the largest gains in placements over December a year ago and logging the largest decline. The changes in other groups were small. Placements by industrial divisions included: logging, 36; transportation, 24; construction and maintenance, 64; trade, 34; and services, 533, of which 425 were of household workers. Regular employment was found for 125 men and 88 women during the month.

#### QUEBEC

The demand for workers as indicated by orders received at employment offices in the Province of Quebec during December was nearly 34 per cent less than in the preceding month, but showed a gain of nearly 14 per cent when compared with the corresponding month of 1927. Placements declined nearly 43 per cent in comparison with November and were over 3 per cent less than in December, 1927. Placements in the logging industry were considerably higher than in the corresponding month a year ago and services showed some improvement, but the gains in these groups were more than offset by declines in all other divisions, construction and maintenance showing the largest decrease. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 48; logging, 638; construction and maintenance, 284 and services, 449, of which 351 were of household workers. Placements in regular employment numbered 999 of men and 422 of women.

#### ONTARIO

During December employment offices in Ontario received orders for nearly 17 per cent less workers than in the preceding month,

but one per cent more than during the corresponding month of 1927. There was a decline of over 15 per cent in placements when compared with November, but a gain of over 3 per cent in comparison with December, 1927. Manufacturing, services and trade were the only groups to show gain in placements over December a year ago and while these increases were large they were almost entirely offset by declines in other groups, construction and maintenance and logging showing the largest decreases. Placements by industrial divisions included: manufacturing, 1,562; logging, 1,587; farming, 328; mining, 47; transportation, 341; construction and maintenance, 1,630; trade, 580 and services, 3,960, of which 2,217 were of household workers. During the month 4,781 men and 1,166 women were placed in regular employment.

#### MANITOBA

Orders listed at Manitoba offices during December called for over one per cent less workers than in the preceding month and over 14 per cent less than during the corresponding month of 1927. Placements showed a gain of more than 2 per cent over November, but were more than 19 per cent below December, 1927. The decline in placements from a year ago was mainly due to reduced demand for farm and bush workers, although there were fewer placements in all groups except manufacturing, services and trade. Services showed the largest gain and trade a nominal increase only. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 102; logging, 428; farming, 239; construction and maintenance, 88; trade, 201 and services, 2,219, of which 1,874 were of household workers. There were 782 men and 446 women placed in regular employment during the month.

#### SASKATCHEWAN

Opportunities for employment as indicated by orders listed at employment offices in Saskatchewan during December were nearly 12 per cent less than in the preceding month and nearly 2 per cent lower than during the corresponding month of 1927. Placements also were 14 per cent less than in November, but showed an increase of 7 per cent over December, 1928. Fewer placements were made in logging and farming than in the corresponding month a year ago, but these declines were more than offset by gains in other groups, the most noteworthy being in services, trade and construction and maintenance. Industrial divisions in which most of the placements were effected during the

month included: manufacturing, 107; logging, 183; farming, 304; transportation, 128; construction and maintenance, 213; trade, 321 and services, 1,061, of which 691 were of household workers. During the month 640 men and 408 women were placed in regular employment.

#### ALBERTA

There was a decline of nearly 36 per cent in the number of positions offered through employment offices in Alberta during December when compared with the preceding month and of over 20 per cent in comparison with the corresponding month a year ago. Placements were nearly 34 per cent below November and nearly 20 per cent lower than in December, 1927. The only increase of importance in placements over December, 1927, by industrial groups was the services, although trade, manufacturing and transportation showed gains. These increases, however, were more than offset by declines in logging, farming, mining and construction and maintenance. Placements by industrial divisions included: manufacturing, 142; logging, 422; farming, 239; mining, 88; transportation, 36; construction and maintenance, 153; trade, 92 and services, 796, of which 633 were of household workers. Placements in regular employment numbered 942 of men and 321 of women.

#### BRITISH COLUMBIA

Employment opportunities as indicated by orders received at employment offices in British Columbia during December were nearly 11 per cent less favourable than in the preceding month, but over 2 per cent better than during the corresponding month of 1927. There was a decline of 12 per cent in placements when compared with November, but a gain of over 2 per cent in comparison with December a year ago. All groups except manufacturing, logging and transportation showed reductions in placements when compared with December, 1927, but the gains in these divisions were more than sufficient to offset declines in all other groups. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 256; logging, 374; farming, 67; mining, 34; transportation, 168; construction and maintenance, 167; trade, 168 and services, 890, of which 487 were of household workers. During December regular employment was found for 703 men and 222 women.

#### Movement of Labour

During the month of December, 1928, the offices of the Employment Service of Canada effected 12,166 placements in regular employment, 5,869 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,458 were granted the reduced transportation rate, 961 going to points within the same province as the despatching office and 497 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec offices granted reduced rate certificates to 199 persons during December, 67 of whom went to employment within the province and 132 to points outside. Provincially the Quebec city office transferred 57 bushmen and one camp cook, and Montreal 9 bushmen to logging districts within their respective zones. The interprovincial movement was of bushmen despatched from Hull, 100 travelling to North Bay and vicinity and 32 to Cobalt.

By offices in Ontario 368 transfers at the reduced rate were effected during December, 367 of which were provincial. This movement within the province was largely of bushmen, 338 of whom were carried at the special rate to employment, principally around Timmins, Port Arthur, Fort William and Sudbury. The majority of these were granted their certificate for reduced transportation at North Bay and Port Arthur. In addition, North Bay transferred one hotel clerk to Timmins, one millwright and one engineer to Cobalt and one paving construction worker to Toronto, while from Port Arthur also 5 road cutters, 4 cooks, one clerk and 3 cookees went to employment, within the territory covered by that office. Kingston received one electric lineman from London; Timmins one filer from Pembroke; Sudbury, 2 machine runners from Toronto; Port Arthur one hoist man from Cobalt; and Brantford 4 machinists and one fitter from Ottawa and one machinist from Kingston. From Timmins one mine sampler was sent at the reduced rate to a point within the same zone. The one interprovincial transfer was of a miner who journeyed from Sudbury to employment within the Winnipeg zone.

The number of workers travelling from Manitoba centres at the reduced rate totalled 456, of whom 111 were transported to points within the province and 345 to other provinces. The certificates for persons going to provincial centres were all granted at Winnipeg from which point 10 domestic and hotel workers were conveyed to Brandon, 3 hotel workers to Dauphin and 51 farm hands, 17 teamsters, 9 bushmen, one carpenter, one painter, one miner, one road worker, 7 tractor operators, 3 rock men, one carpenter, one blacksmith, 4 cooks and one farm general to centres within the Winnipeg zone. Of those going outside the Province Port Arthur and vicinity was the destination of 308 bush workers, 2 farm hands, 2 cookees, one saw mill labourer, one blacksmith, 4 teamsters and one hotel cook, and Fort William of one steamfitter, all of these receiving their certificates for transportation at Winnipeg. From Winnipeg in addition one camp cook was carried at the special rate to Prince Albert, 4 farm hands and 2 hotel workers to Regina, 3 farm hands and 1 cook to Yorkton, 5 farm hands and 5 hotel workers to Estevan, one farm hand to Calgary and one farm general to Edmonton. The Brandon office effected transfers of 2 hotel porters to Estevan.

Of the 119 reduced rate certificates issued by Saskatchewan offices during December, 108 were to provincial points and the balance to centres in other provinces. A large part of the movement provincially was to the logging regions, the Prince Albert zone receiving 37 bushmen, 23 despatched from Prince Albert, 9 from Saskatoon, 4 from Regina and one from Moose Jaw, while to North Battleford were despatched 38 bushmen, 35 from Saskatoon and 3 from Prince Albert. Saskatoon, in addition, transferred one farm hand to North Battleford, one cook to Prince Albert, 5 teamsters to Yorkton and 2 farm hands within its own zone. From Regina also, 2 farm hands, one cook and one cookee went to Prince Albert, one housekeeper to Swift Current, 3 farm hands to Yorkton, one painter to Estevan, 2 housekeepers to Moose Jaw and 4 farm hands and one cook to employment in the Regina zone. The remaining provincial certificates were granted to one waitress going from Moose Jaw to Regina and 3 teamsters, 2 cooks, one saw filer and one handyman travelling from Prince Albert to points within the same zone. The transfers outside the province from Regina included one store clerk conveyed to Brandon, one bushmen to Dauphin and 2 bushmen to Fort

William, while from Moose Jaw 6 teamsters proceeded to Port Arthur and from Prince Albert one bushmen was sent to Dauphin.

Transfers from Alberta office involving the special rate during December numbered 215, of which 210 were to points within the province. The Edmonton office effected the majority of these issuing certificates to 135 bushmen, 13 miners, 7 farm hands, 7 teamsters, one saw filer, 8 cookees, 4 blacksmiths, one kitchen maid, one edgerman, one clerk, one camp cook, one engineer, one fish dresser, one mine labourer, 3 hotel cooks, 2 sawyers and 2 mining engineers bound for employment within its own zone and also to one farm hand going to Drumheller and 2 canthook men and 2 hoisting engineers travelling to Lethbridge. The Calgary office despatched 8 sawyers and 3 farm hands to Edmonton, one farm housekeeper to Drumheller, one sheep herder and one farm hand within the Calgary zone, one oil driller to Medicine Hat and one cook to Lethbridge. The movement to other provinces originated in Edmonton from which point one tie maker journeyed to Prince George and 2 farm hands each to the North Battleford and Saskatoon zones.

In British Columbia 101 persons took advantage of the reduced transportation rate during December, 98 travelling to provincial situations and the remainder to employment outside the province. Provincially the Vancouver office transferred 22 tie makers, one miner and one mucker to Revelstoke, one engineer, 2 sawyers, 2 farm hands and one caretaker to Prince George, 2 painters, one pole maker, one cook, one flunkey and one farm hand to Kamloops, one cook, one carpenter and one flunkey to Penticton, 2 miners to Nelson and 7 miners, 3 cooks, 2 flunkeys, one tunnel construction worker and 2 labourers to centres within the territory covered by the Vancouver office to points within their respective zones, Nelson despatched 10 bushmen, 8 sawyers, and 4 teamsters, Prince George 13 bushmen and 2 sawyers and Prince Rupert one blacksmith and 2 miners. The Prince George zone also received 2 tie makers from Prince Rupert. The 3 interprovincial transfers were of farm hands one travelling from Prince Rupert to Edmonton, one from Victoria to Calgary and one from Vancouver to Regina.

Of the 1,458 persons who benefited by the Employment Service reduced transportation rate during December 1,086 travelled by the Canadian National Railways, 355 by the Canadian Pacific Railway, 2 by the Temiskaming and Northern Ontario Railway and 15 by the Pacific Great Eastern Railway.

## Building Permits Issued in Canada during December, 1928

The value of the building permits issued by 63 cities in December, 1928, was the highest for that month since this record was begun in 1920, the authorizations being valued at \$16,742,139; this was an increase of 5.8 per cent as compared with the November total of \$15,822,401 and of 42.4 per cent over the aggregate of \$11,755,566 in December, 1927, the previous high level for the month.

Detailed statements were received from some 45 cities, showing that they had issued nearly 600 permits for dwelling valued at some \$3,000,000 and about 1,400 permits for other buildings at an estimated cost of approximately \$12,000,000. During November, the construction was authorized of some 1,100 dwellings and 2,600 other buildings, estimated to cost approximately \$6,000,000 and \$6,900,000, respectively.

As compared with the preceding month, Nova Scotia, Ontario and Saskatchewan registered increases in the value of the authorized building, the gain of \$2,859,835, or 38.1 per cent in Ontario being especially pronounced. Of the declines elsewhere indicated, that of \$755,738 or 28.5 per cent in British Columbia was the greatest absolute reduction, but larger proportional losses were noted in New Brunswick, Manitoba and Alberta.

All provinces except New Brunswick and British Columbia recorded increases over December, 1927, in the value of the building authorized. Ontario showed the most marked absolute gain of \$4,362,044 or 72.8 per cent, but the greatest proportional advance was in Saskatchewan.

Montreal and Toronto registered increases in the value of the building permits issued as compared with November, and also in comparison with December, 1927. In Winnipeg and Vancouver there were losses in the former and gains in the latter comparison. Halifax, Sydney, Brantford, Chatham, Guelph, Kingston, Kitchener, Ottawa, Stratford, Riverside, Walkerville, Woodstock, Regina, Nanaimo, Point Grey and South Vancouver recorded advances in both comparisons.

*Cumulative Record for 1928.*—The following table shows the value of the building authorized by 63 cities during December and in the years since 1920, the 1928 figures are unrevised, while for the preceding years the statistics are revised. The table also gives index numbers, based upon the total value of the building authorized by these cities during 1920 as 100. Average index numbers

ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 63 CITIES.

<sup>1</sup> Reports not received.

NOTE:—From January 1, 1929, there will be only 61 cities shown in this record owing to the amalgamation of Point Grey and South Vancouver with Vancouver. The areas and population covered, however, remain the same.

of wholesale prices of building materials in the years 1920-1928 are also given (1913 = 100).

Year	Value of permits issued in December	Value of permits issued in twelve months	Indexes of value of permits issued in twelve months (1920=100)	Average indexes of wholesale prices of building materials twelve months, (1913=100)
	\$	\$	\$	\$
1928.....	16,742,139	220,265,100	188.2	149.3
1927.....	11,755,566	184,613,742	157.8	147.7
1926.....	11,508,818	156,386,607	133.6	149.2
1925.....	7,363,777	125,029,367	106.8	153.7
1924.....	6,463,319	126,583,148	108.2	159.1
1923.....	6,974,258	133,521,621	114.1	166.8
1922.....	9,517,402	148,215,407	126.7	162.2
1921.....	5,537,330	116,794,414	98.8	183.2
1920.....	4,844,354	117,019,622	100.0	214.9

The December total for the 63 cities was the highest in the record, as shown above, while the unrevised statistics for 1928 indicate that last year's aggregate was greater than in any other of the eight preceding years, exceeding the previous high level of 1927 by over 19 per cent. The twelve months' total for the 35 cities, \$187,014,118—is also the highest in the record (which for these 35 centres goes back to 1910) slightly exceeding the previous maximum of \$185,233,449 in 1912.

The accompanying table gives the value of the building permits issued by 63 cities in November, and December, 1928, and December, 1927. The 35 cities for which records are available since 1910 are marked with asterisks.

## UNEMPLOYMENT AS REPORTED BY TRADE UNIONS FOR THE YEAR 1928

THE reports received monthly by the Department of Labour from local trade unions showing their membership and the number of unemployed members indicated the labour trend for organized workers throughout the country. Unions reporting for the last day of each month during 1928 averaged 1,654 with a membership average of 182,511 persons.

During the early part of 1928 the usual employment curtailment was in evidence, due to winter quietness in a number of industries, the percentages of unemployment at the end of January and February being the largest reported for the year namely 6.8 and 7.0 respectively. The declines in activity reported during these two months were slightly more extensive than in the same period of 1927, the mining, manufacturing and transportation industries contributing in both months to the unemployment increase, while the building and construction trades indicated a lower level of employment during January, but slightly improved conditions in the succeeding month.

During March, 1928, moderate recovery from the February situation was registered mainly in the garment and building trades, and improvement continued without interruption until the close of September, when the employment peak for the year was reached, 2.2 per cent of inactivity being recorded. The 1927 period of expansion had also set in during March and in a more decided manner than in the year under review, but was not

sustained to the same extent as in 1928, the April and August percentage of idleness during 1927 standing above those registered in the preceding months.

In October, 1928, a slight slackening in available work was indicated, as in the corresponding month of the previous year, and employment during November and December was further retarded, the percentage of unemployment at the end of December, 1928, standing at 6.6, the same percentage as at the close of December, 1927. Though there were fractional increases in the percentages of inactivity reported during the first quarter of 1928, as compared with the corresponding period of the previous year, the trend of employment was upward during the following months of the year with the exception of June and December, when no change in the situation was registered from that of the same months in 1927.

The Workman's Compensation Board of Alberta is organizing classes in first aid to the injured. In connection with the class at Edmonton, which opened at the end of January, it was announced that it would be in charge of competent medical and practical instructors. The class meets one evening each week for eight weeks, after which period an examination will be held, successful students receiving the St. John Ambulance Association certificate and also the Industrial First Aid certificate issued by the Workmen's Compensation Board.

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER TO DECEMBER, 1928

**E**MPLOYMENT conditions, as indicated by the work of the offices of the Employment Service of Canada during the quarter October to December, 1928, were more favourable than during the corresponding quarter of 1927, as there was shown an increase of nearly 10 per cent both in vacancies offered and in placements effected in regular and casual

employment. All industries, except logging and mining, showed gains in both instances, the most noteworthy of which were in construction and maintenance, manufacturing, farming and services. Manitoba and Alberta were the only provinces to record a decrease both in vacancies offered, or in placements

effected while Nova Scotia, in addition to Manitoba and Alberta, showed fewer placements, but these declines did not affect to any great extent the general improvement reported by the offices throughout Canada. The accompanying table gives the vacancies and placements of the Employment Service of

Canada by industrial groups in the various provinces, during the period October to December, 1928.

From the chart on page 217, which accompanies the article on the work of the Employment Service for the month of December, it will be noted that the trend of the curves representing the ratio of vacancies and of placements to applications showed a sharp decline during October and November, but during the month of December again showed a marked upward trend and at the end of the quarter was several points higher than that registered at the close of December a year ago. During the period October to December, 1928, there was a ratio of 79.6 vacancies and 74.9 placements for each 100 applications for employment as compared with 77.2 vacancies and 72.5 placements during the corresponding quarter of 1927.

The average number of applicants registered daily during the quarter under review was 1,866, of positions offered 1,485 and of placements effected 1,398 in contrast with a daily average of 1,754 applications, 1,354 vacancies and 1,273 placements in regular and casual employment during the last quarter of 1927.

During the three months October to December, 1928, the offices reported that they had made 111,495 references of persons to positions and had effected a total of 107,587 placements, of which 72,530 were in regular employment and 35,057 in casual work. Of the placements in regular employment 60,703 were of men and 11,827 of women, while casual work was found for 19,846 men and 15,211 women. Comparison with the same period in 1927 showed that 97,957 placements were then made, of which 66,778 were in regular employment and 31,179 in casual work. Applications for employment during the period under review were received from 108,072 men and 35,581 women, a total of 143,653 in contrast with the registration of 135,052 persons during the same period of 1927. Employers notified the Service during October to December, 1928, of 114,290 vacancies, of which 82,985 were for men and 31,305 for women, as compared with 104,224 opportunities for work during the corresponding period in 1927.

In another section of this issue will be found a report in detail of the transactions of the Employment Service for the month of December, 1928.

## EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

**D**ETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during December. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the January, 1929, issue relates to the situation existing in November, 1928. The employment situation in the United States is further indicated by unemployment percentage based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for November and previous months taken from the January, 1929, issue of the *American Federationist*, the official publication of the organization, are reproduced below.

### Great Britain

Employment during the first three weeks of December showed a substantial improvement, owing largely to Christmas trade and traffic and to the approach of the holidays. By the end of the month, however, there was a sharp rise in the numbers unemployed, mainly due to a large increase in extended short-time working, which left the position considerably worse than it was at the end of November.

The improvement in the early part of the month occurred chiefly in the coal-mining industry, where there was a considerable reduction in the numbers temporarily stopped. The other principal industries in which improvement occurred included the manufacture of artificial stone and cement; the iron and steel, tinplate, motor vehicle, shipbuilding and ship repairing, general and marine engineering, cotton, woollen and worsted, linen, carpet, tailoring, and hat and cap industries; the distributive trades; and river, dock and harbour service. On the other hand, there was a decline in the fishing, pottery, pig iron, hosiery, cocoa and chocolate, and building industries.

Among the workpeople, numbering approximately 11,880,000, insured against unemploy-

ment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 17th December, 1928 (including those temporarily stopped as well as those wholly unemployed) was 11.2, as compared with 12.2 at 26th November, 1928, and 9.8 at 19th December, 1927. For males alone the percentage at 17th December was 12.6, as compared with 13.8 at 26th November; for females the corresponding figures were 7.5 and 8.1. The percentage wholly unemployed at 17th December, 1928, was 9.1, as compared with 9.3 at 26th November, 1928. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 17th December, 1928, was approximately 1,312,000, of whom 1,036,000 were men and 216,000 were women, the remaining being boys and girls; at 26th November, 1928, it was 1,439,000, of whom 1,131,000 were men and 235,000 were women; and at 19th December, 1927, it was 1,127,000, of whom 925,000 were men and 151,000 were women. At 31st December, 1928, the total number registered had risen to 1,565,000 as compared with 1,368,000 at 2nd January, 1928.

#### United States

Employment in the United States decreased 0.5 per cent in November, 1928, and pay-roll totals decreased 3 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous, public utilities, trade (wholesale and retail) and hotels.

Employment in manufacturing industries decreased 0.5 per cent in November, 1928, as compared with October, and payroll totals decreased 2.8 per cent, as shown by returns from 11,954 establishments in 54 of the principal manufacturing industries of the United States. These establishments in November had 3,273,766 employees whose combined earnings in one week were \$87,870,491.

The Bureau of Labour Statistics' weighted index of employment in manufacturing industries for November, 1928, is 87.7, as compared with 88.1 for October, 1928, 87.3 for September, 1928, and 85.9 for November, 1927; the weighted index for pay-roll totals for November, 1928, is 92.1, as compared with 94.8 for October, 1928, 91.4 for September, 1928, and 87.8 for November, 1927. The monthly average for 1923=100.

Twenty-six of the 54 separate industries and 5 of the 12 groups of industries had more employees in November, 1928, than in October, but only 18 industries and 2 groups of industries showed higher pay-roll totals.

The notable increases in employment in separate industries were in slaughtering and

meat packing, cotton goods, woolen and worsted goods, dyeing and finishing textiles, machine tools, pianos, and shipbuilding; the iron and steel industry showed a gain of 1.7 per cent. Increased employment was shown in the textile, iron and steel, paper, and non-ferrous metal groups, and in the group of miscellaneous industries.

The outstanding decrease in employment in November was one of 9 per cent, in the automobile industry. Other industries reporting a considerable falling off in employment were confectionery, ice cream, men's clothing, women's clothing, cast-iron pipe, steam fittings, leather, boots and shoes, fertilizer, cement, glass, and automobile tires, most of these being seasonal in character.

Of the 9 geographic divisions the 3 divisions along the Atlantic seaboard and the 2 South Central divisions showed gains in employment in November.

*Unemployment percentage.*—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States. The method of compiling as described in the *American Federationist*, March, 1928, is as follows:—

"The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the first of the month or the nearest possible date. From these reports the percentage of unemployed members is calculated for identical unions in the current and the previous month. Thus for every month there are two percentage figures—that is for identical unions in December and January—and for identical unions in January and February, and so on. The final figure for January, then, is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers."

By the above method the proportion of unemployed members to the total membership of the local unions reporting, is computed. According to the December issue of the *American Federationist*, the most recent unemployed percentages during the various months in the 23 cities work out as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 7 per cent.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rate of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Printing and Publishing

#### SASKATOON, SASKATCHEWAN. — EMPLOYING PRINTERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 663.

Agreement to be in effect from November 1, 1928 to October 31, 1931.

Hours: In book and job offices 8 per day, 4 on Saturdays, a 44-hour week; in daily newspaper offices 8 hours per day with 6 day week for day work and 7½ hours for night work, six nights per week. When necessary to work split shifts, running from day into night hours or vice versa, shift to be 7½ hours and be paid at night rates.

Overtime: time and one-half for first three hours; thereafter and all work on Sundays and holidays, double time, except for work on morning newspapers after 7 p.m. Where night work is carried on a 5½ hour shift to constitute a night's work on the night previous to a holiday. Employees called back after leaving office to be paid \$1 for such call back and overtime rates for all time worked.

Wages per week for hand compositors, make-ups, proofreaders, machine operators and machinists, \$44 for day work and \$49.87 for night work in book and job offices; in daily newspaper offices \$48 for day work and \$51 for night work.

Wages per week for learners on machines (who shall be union members or fifth year apprentices); \$22 for first three weeks, \$28 for next five weeks and \$35 for last five weeks with \$3 extra per week for night work. If after the 13 weeks term the standard speed is attained, the full journeyman's scale to be paid. If standard speed not attained, time may be extended to three months with wage of \$38.50 per week.

Apprentices may be employed in the ratio of one to every five journeymen employed. Applicants to be examined by the office foreman and local apprentice committee. They must have a common school education, be 16 years of age, be registered with the union and serve a five year term. They must take the course in print-

ing of the International Union and pass regular yearly examinations on their work before the local committee on apprentices.

Wages of Apprentices: first year 33¼ per cent of journeyman's scale, second year 42 per cent, third year 53 per cent, fourth year 68 per cent and fifth year 80 per cent.

A standing committee of two representatives of each party shall be appointed and all disputes to be referred to it. Should this joint committee be unable to agree, they shall refer the matter to a board of arbitration consisting of one representative of each party, these two to agree on a third. The decision of this board will be final and binding.

Foreman to have right to employ and discharge for certain specified reasons. If any member is discharged and believes it unjustified he may appeal to the chapel; either party may appeal from the decision of the chapel to the joint committee or arbitration committee mentioned above.

The union reserves the right to refuse to execute all work received from or destined for unfair employers or publications.

#### SASKATOON, SASKATCHEWAN.—CERTAIN LOCAL FIRMS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 206.

Agreement to be in effect from November 1, 1928 to October 31, 1931.

Hours: in webb pressrooms 8 per day, 48 hour week for day work and 7½ hours or part thereof to be a night's work, with 45 hours per week basis for night work; in job pressrooms, 8 hours per day, 4 on Saturdays, a 44 hour week for day work and 41 hour week for night work.

Overtime: time and one-half for first three hours; after three hours overtime and work on Sundays and holidays, double time. In webb pressrooms on all holidays, five hours shall constitute a night's work to be paid for as regular night's work. In case of emergency a webb press crew, if called upon to print the regular edition of an outside publication shall receive 8 hours time for their services.

Wages per week in webb pressrooms; journeyman pressman (day) \$48; (night) \$51, pressman in charge \$5 over journeyman's scale.

Wages per week of assistants in webb pressrooms; assistant, first year 33¼ per cent of journeyman's scale, second year 42 per cent third year 53 per cent, fourth year 68 per cent, fifth year 80 per cent.

Wages per week in job pressrooms, cylinder presses: journeyman pressman (day) \$44, (night) \$47.

Wages per week of assistants in job pressrooms; assistant, first year 40 per cent of journeyman's scale, second year 50 per cent, third year 70 per cent, fourth year 80 per cent; feeder, first year no scale, second year 33¼ per cent of journeyman's scale.

Wages per week on offset presses: pressmen \$48.50.

The term of apprentice or assistant to be four years, such apprentice to be a feeder of at least two years who is considered competent and to be a member of the union. One apprentice allowed up to four journeymen. When two or more pressmen are employed, one

of them is to be considered pressman in charge.

Foreman to be union member and to have complete charge of the pressroom and to employ and discharge help.

Any employee quitting work or failing to keep an engagement without notice or without supplying a competent substitute shall be disciplined by the union.

In the absence of the pressman in charge or journeyman pressman, no feeder or assistant shall operate any press either before or after regular working hours.

#### NEW WESTMINSTER, B.C.—NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 632.

Agreement to be in effect from January 1, 1926 to December 31, 1929.

Local union members to be employed if available, otherwise members of other locals of the union may be employed.

If at any time during period of this agreement, the wages contained in the agreement of the Vancouver Typographical Union No. 226 are increased or any privilege to publishers in modification of or in addition to terms of the Vancouver agreement becomes operative, same shall immediately apply to this agreement.

Hours: 7½ per day, 6 day week for day and night work.

Overtime: time and one-half; double time for all work on holidays; double time also for work on Sundays except for regular editions.

Wages for compositors and operators \$1.06½ per hour for day work and \$1.16½ per hour for night work; foremen and machinist operators at least 50 cents per shift extra; if more than four machines used, a regular machinist to be employed.

One apprentice allowed for each six journeymen or major fraction thereof. Apprentices to be at least 16 years of age and pass an examination before the examining committee of the union and must take the course in printing of the international union.

Wages of apprentices: during third year one-third of journeymen's scale; fourth year one-half; fifth year two-thirds of journeyman's scale.

Learners on machines to be journeymen members of union or apprentices. Period of learning to be 17 weeks. Wages of journeymen learners: for first three weeks 40 per cent of scale, second three weeks 50 per cent, third three weeks 66⅔ per cent, next four weeks 75 per cent and last four weeks 85 per cent of journeymen's scale.

No strikes, walkouts, boycotts or lockouts are to take place.

Foremen to be judge of competency and to have right to employ help and discharge for certain specified reasons. Foreman shall not be disciplined by union for carrying out instructions of employers authorized by this agreement.

All disputes regarding terms of this agreement to be referred to a joint standing committee of two representatives of each party. If unable to agree, they shall select a fifth disinterested party, whose decision shall be final and binding. If a controversy arises which cannot be settled by the Joint Standing Committee, it shall be referred to local arbitration.

#### NEW WESTMINSTER, B.C.—BOOK AND JOB OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 632.

Agreement to be in effect from 1928 to February 1, 1931 and thereafter unless 30 days' notice is given by either party.

If at any time during period of this agreement the wages contained in the agreement of the Vancouver Typographical Union No. 226 are increased or any privilege to publishers in modification of or in addition to terms of the Vancouver agreement becomes operative, same shall immediately apply to this agreement.

Only local union members to be employed.

Hours: 8 per day, 4 on Saturdays, a 44 hour week for both day and night work.

Overtime: time and one-half; Sundays and holidays, double time.

Wages per week; from date of agreement to February 1, 1929, \$43.50 for day work and \$47 for night work for all compositors and stonemen and \$45.50 for day work and \$49.90 for night work for all operators and machinists; from February 1, 1929 to February 1, 1931, \$45 for day work and \$48.50 for night work for all compositors and stonemen and \$47 for day work and \$51.40 for night work for all operators and machinists.

Foremen and machinist operators to receive at least 50 cents extra per shift.

One apprentice allowed in office where from one to eight journeymen are employed; where more than eight journeymen employed, two apprentices allowed.

Apprentices must be at least 16 years of age and pass examination of examination committee of the union. During third year apprentices must begin course in printing of International Union.

Wages of Apprentices; during third year one-third of journeyman's wage, fourth year one-half, fifth year two-thirds of journeyman's scale.

Learners on machines shall be journeymen members of union or apprentice members and the period of learning shall be 17 weeks.

Wages of learners, other than apprentices; for first three weeks 40 per cent of scale, second three weeks 50 per cent, third three weeks 66⅔ per cent, next four weeks 75 per cent, last four weeks 85 per cent of journeymen's scale.

Each party agrees that conciliation and arbitration shall govern the adjustment of any disputes that may arise.

#### Construction: Buildings and Structures

#### TORONTO, ONTARIO.—CERTAIN CONTRACTORS AND THE INTERNATIONAL ASSOCIATION OF HEAT AND FROST INSULATORS AND ASBESTOS WORKERS, LOCAL No. 20.

Agreement to be in effect from January 1, 1929 to December 31, 1929.

This agreement is the same as the one previously in force and summarized in the LABOUR GAZETTE for July, 1928, with the following exception:

Wages of mechanics \$1 per hour.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Contractor to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to

the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available,

or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

**Contracts Awarded Recently**

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wage clause above mentioned:—

DEPARTMENT OF PUBLIC WORKS

*Contracts in Group "A" (Construction, etc.)*

Construction of an addition to the Detention Building, Savard Park, Quebec, P.Q. Name of contractors, Robt. A. Scott and Samuel J. Scott, Scotstown, Que. Date of contract, November 26, 1928. Amount of contract, \$83,870. A fair wages schedule was inserted in this contract as follows:—

Trade or Class of Labour	Rates of wages: Not less than	Hours
Bricklayers.....	90 cents per hour	9 per day
Masons.....	85 "	9 "
Plasterers.....	85 "	9 "
Carpenters and joiners....	55 "	9 "
Plumbers.....	55 "	55 per week
Steamfitters.....	55 "	55 "
Electricians.....	55 "	55 "
Sheet metal workers.....	50 "	55 "
Roofers (tar and gravel)...	40 "	55 "
Terrazzo layers.....	70 "	55 "
Marble setters.....	90 "	55 "
Structural steel workers...	65 "	55 "
Concrete workers.....	40 "	9 per day
Labourers.....	35 "	9 "
Driver (one horse and cart)	60 "	10 "
Driver (two horses and cart).....	80 "	10 "
Lathers.....	\$3 00 per thousand	

Construction of a grain inspection building at Calgary, Alta. Name of contractors, Wm. S. McDonald and John H. McDonald, Calgary, Alta. Date of contract, Dec. 17, 1928.

Amount of contract, \$2,500. A fair wages schedule was inserted in this contract as follows:—

Trade or Class of Labour	Rates of wages: Not less than	Hours per day
	per hour \$ cts.	
Common labourers.....	0 45	9
Building labourers.....	0 50	9
Concrete workers.....	0 50	9
Carpenters and joiners.....	1 00	8
Sheet metal workers.....	1 00	8
Painters and glaziers.....	0 90	8
Electricians.....	0 90	8
Plumbers.....	1 15	8
Teamsters (two horses and wagon).....	1 25	8

Construction of a new Federal Building at Swift Current, Sask. Name of contractor, James Friel, Saskatoon, Sask. Date of contract, Dec. 29, 1928. Amount of contract, \$43,200. A fair wages schedule was inserted in this contract as follows:—

Trade or Class of Labour	Rates of wages: Not less than	Hours per day
	\$ cts. per hour	
Labourers.....	0 45	10

Removal of shoal at Burnaby Shoal, Vancouver, B.C. Name of contractors, North Western Dredging Co., Ltd., Vancouver, B.C. Date of contract, Nov. 20, 1928. Amount of contract, approximately \$48,508. The General Fair Wages Clause was inserted in the contract.

Wharf repairs at Montmagny, P.Q. Name of contractors, Joseph Beaumont and Philippe Tetu, Montmagny, P.Q. Date of contract, Dec. 15, 1928. Amount of contract, approximately \$5,095.20. The General Fair Wages Clause was inserted in the contract.

Widening and straightening the entrance to Vancouver Harbour at First Narrows, Vancouver, B.C. Name of contractors, North Western Dredging Co., Ltd., Vancouver, B.C. Date of contract, Nov. 20, 1928. Amount of contract, approximately, \$142,827.98. The General Fair Wages Clause was inserted in the contract.

Construction of additions and alterations to the Public Building at Truro, N.S. Name of contractors, Robert Ed. Co., Moncton, N.B. Date of contract, Dec. 10, 1928. Amount of contract, \$17,966. The General Fair Wages Clause was inserted in the contract.

Construction of a public building at Hespeler, Ont. Name of contractors, G. H. Thomas & Son, Ltd., Galt, Ont. Date of contract, Dec. 18, 1928. Amount of contract, \$33,776. The General Fair Wages Clause was inserted in the contract.

Construction of a Customs and Immigration Building at St. Croix, N.B. Name of contractor, J. S. Parker, Saint John, N.B. Date of contract, Dec. 19, 1928. Amount of contract, \$9,750. The General Fair Wages Clause was inserted in the contract.

Construction of repairs to Shear Dam Revelstoke, Kootenay West District, B.C. Name of contractors, Farquhar Roderick McCharles and Colin Francis McDougall, Nelson, B.C. Date of contract, Dec. 20, 1928. Amount of contract, approximately \$5,799. The General Fair Wages Clause was inserted in the contract.

Construction of a breakwater at Petite Riviere East, Gaspé Co., P.Q. Name of contractor, Arthur Nadeau, Chandler, P.Q. Date of contract, Dec. 31, 1928. Amount of contract, approximately, \$19,305. The General Fair Wages Clause was inserted in the contract.

Construction of a new Federal Building at Wainwright, Alta. Name of contractors, Permanent Construction Co., Ltd., Edmonton, Alta. Date of contract, Dec. 31, 1928. Amount of contract, \$37,500. The General Fair Wages Clause was inserted in the contract.

Improvements, alterations and fittings for the Post Office, London, Ont. Name of contractors, R. G. Wilson and F. C. Wilson, London, Ont. Date of contract, Jan. 18, 1929. Amount of contract, \$5,975. The General Fair Wages Clause was inserted in the contract.

Construction of 3 steel hopper scows, Nos. 166, 167 and 168. Name of contractors, Saint John Dry Dock and Shipbuilding Co., Ltd., Saint John, N.B. Date of contract, Jan. 22, 1929. Amount of contract, \$110,000. The General Fair Wages Clause was inserted in the contract.

Reconstruction of the wharf in concrete at St. Placide, Two Mountains Co., P.Q. Name of contractor, Hormidas Gravel, St. Lambert, P.Q. Date of contract, Jan. 23, 1929. Amount of contract, approximately, \$5,742. The General Fair Wages Clause was inserted in the contract.

*Contracts in Group "B" (Interior Fittings, etc.)*

Construction and installation of new fittings (in oak) in the Customs and Excise Long Room of the Public Building at Granby, P.Q. Name of contractors, Messrs. Barré and Charron, Granby, P.Q. Date of contract, Dec. 17, 1928. Amount of contract, \$875. The General Fair Wages Clause was inserted in the contract.

Supply and installation of fittings in the McGregor Street Armoury, Winnipeg, Man. Name of contractor, R. N. Wyatt, Winnipeg, Man. Date of contract, Jan. 18, 1929. Amount of contract, approximately, \$4,023.53. The General Fair Wages Clause was inserted in the contract.

Supply and installation of Armoury fittings at Port Arthur, Ont. Name of contractor, R. N. Wyatt, Winnipeg, Man. Date of contract, Jan. 18, 1929. Amount of contract, approximately, \$4,494.89. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF INDIAN AFFAIRS

*Contracts in Group "A" (Construction, etc.)*

Construction of Indian residential school at Shubenacadie, N.S. Name of contractors, Rhodes, Curry Ltd., Amherst, N.S. Date of contract, May 10, 1928. Amount of contract, \$153,000. The General Fair Wages Clause was inserted in the contract.

Construction of boys' wing for Indian residential school at Kamloops, B.C. Name of contractors, Johnson & Co., Kamloops, B.C. Date of contract, June 20, 1928. Amount of contract, \$63,373.81. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per day \$ cts.	
Bricklayers and masons.....	10 00	8
Carpenters.....	7 00	8
Concrete mixers.....	4 00	8
Electricians.....	8 00	8

Roofers (felt and gravel).....	0	80	8
Sheet metal workers.....	0	80	8
Labourers.....	0	42½	9

#### POST OFFICE DEPARTMENT

Following is a statement of payments made in December, 1928, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount of orders
	\$ cts.
Making metal dating stamps and type also other hand stamps and brass crown seals....	908 08
Making and repairing rubber stamps, daters, etc.....	297 24
Making up and supplying letter carriers' uniforms, etc.....	12,530 25
Stamping pads, ink, etc.....	214 82
Bag fittings.....	13,795 22
Scales.....	55 85
Cotton duck bagging.....	32,291 12

### Labour Organization in Chile

A bulletin recently published by the United States Department of Labour (No. 461) on "Labour Organizations in Chile" states that in Chile, liberty of association was fully guaranteed by the former political constitution of 1833, as it is now by the new fundamental charter, the constitution promulgated September 18, 1925. In this regard Chile has led the majority of existing civilized peoples, being also the first country in America to enact a special law covering union organization. Moreover, the right of association thus sanctioned is freely exercised by the I.W.W., the communists, and other organizations of a revolutionary character.

On the other hand, the Civil Code, which dates back to 1857, provides that "the rules or regulations formulated by said corporation, shall be subject to the approval of the President of the Republic, who shall give such approval, if there is nothing therein, contrary

to public order, the laws, or good morals." The law gives the President of the Republic the right to dissolve such corporations. The public is allowed to intervene for the purpose of denouncing unlawful acts by corporations. Incorporation being accorded, such associations are able to acquire property, conclude contracts, etc. The civil-code system, however, was modified by special laws in 1924.

During January 6,188 industrial accidents were reported to the Ontario Workmen's Compensation Board, including 37 fatalities. In the same month the total benefits awarded amounted to \$673,776, of which \$106,399 was for medical aid. In January, 1928, 5,056 accidents were reported, and of these 58 were fatalities; \$568,612 was awarded in total benefits, of which \$91,445 was for medical aid.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1929

### Cost of Living, Prices of Staple Articles and Index Numbers

The movement in prices during the month was slight, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being practically unchanged.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.30 at the beginning of January, as compared with \$11.31 for December, 1928; \$11.19 for January, 1928; \$11.37 for January, 1927; \$11.63 for January, 1926; \$10.77 for January, 1925; \$10.78 for January, 1924; \$10.52 for January, 1923; \$11.03 for January, 1922; \$14.48 for January, 1921; \$15.30 for January, 1920; \$16.92 for June, 1920 (the peak); \$12.42 for January, 1918, and \$7.73 for January, 1914. The most important change was the fall in the price of eggs while less important declines occurred in the prices of bacon, lard, evaporated apples and sugar. Prices of beef, veal, milk, butter, cheese, rolled oats, rice, beans and potatoes were somewhat higher. Including the cost of fuel and rent with that of foods the total budget averaged \$21.55 at the beginning of January, as compared with \$21.56 for December, 1928; \$21.41 for January, 1928; \$21.59 for January, 1927; \$21.96 for January, 1926; \$21.09 for January, 1925; \$21.23 for January, 1924; \$21.13 for January, 1923; \$21.52 for January, 1922; \$25.30 for January, 1921; \$26.92 for July, 1920 (the peak); \$24.15 for January, 1920; \$19.61 for January, 1918, and \$14.49 for January, 1914. Fuel showed little change. No changes were reported in rent.

The index number of wholesale prices calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, has been revised and reconstructed upon a basis of 1926 as 100. The number of commodities has been increased to 502. The revised index stood at 94.5 for January, the same figure as for December, 1928. This compares with the level of 97.3 in January, 1928.

In the classification according to chief component materials five of the eight main groups advanced, two declined and one was unchanged. The groups which advanced were: the Vegetables and their Products group, due to higher prices for grains, apples, potatoes, rubber, glucose and naval stores, which more than offset lower prices for bread, mill feed, chocolate and hay; the Fibres, Textiles and Textile Products group, due to higher prices for jute, hemp and sisal which more than offset lower prices for

raw silk and rayon yarns; the Iron and its Products group, due mainly to higher prices for wire and some lines of hardware; the Non-Ferrous Metals group, due to higher prices for copper and lead which more than offset lower prices for silver, gold and tin; and the Chemical and Allied Products group, due mainly to higher prices of copper sulphate and some fertilizers. Figures for the groups in the classifications according to purpose and according to origin are not yet available on the reconstructed basis. The accompanying table gives the group index numbers in the grouping according to chief component material for January, 1929, as compared with December, 1928, and January, 1928, and also on the 1913 basis for the same months. The usual monthly bulletin on prices to be issued by the Dominion Bureau of Statistics in February will contain the reconstructed figures for January and for preceding months back to 1913 and may be obtained on application to the Dominion Statistician.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of December of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in

the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts, extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the *LABOUR GAZETTE* since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps, two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

## Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the *LABOUR GAZETTE* a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workmen's family expenditure in progress since 1913 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the *LABOUR GAZETTE*, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900; 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years 1923, 1924,

†The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family. See text.

†December only. §Kind most sold. \*For electric light see text.

††An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent. See text.

*(Continued from page 236)*

1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1927 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

**Retail Prices**

Beef prices which had declined during the latter part of 1928 were somewhat higher at the beginning of January, sirloin steak averaging 34.7 cents per pound as compared with 34.6 cents for December, rib roast averaging 27.7 cents per pound as compared with 27.1 cents for December, and shoulder roast averaging 21.6 cents per pound as compared with 21.3 cents in December. Veal was up in the average from 23.4 cents per pound in December to 23.9 cents in January. Mutton and pork showed little change, while bacon declined, being down from an average of 39 cents per pound in December to 38.4 cents in January. In fresh fish, cod steak was slightly higher,

while white fish declined somewhat. Lard declined from an average of 22.6 cents in December to 22.4 cents in January.

Eggs showed a substantial seasonal decline, fresh averaging 60.2 cents per dozen in January as compared with 64.1 cents in December and cooking averaging 48.4 cents per dozen in January as compared with 50.8 cents in December. Lower prices were reported for practically all localities. Milk prices were steady. Both dairy and creamery butter were higher, the former averaging 44.1 cents per pound in January as compared with 43.7 cents in December and the latter averaging 48.3 cents per pound in January as compared with 47.8 cents in December. Cheese averaged slightly higher at 33.8 cents per pound.

Bread and flour were unchanged, the former at an average price of 7.7 cents per pound and the latter at an average price of 5.0 cents per pound. Rolled oats was slightly higher at 6.3 cents per pound as compared with 6.2 cents in December. Rice was up from an average of 10.3 cents per pound in December to 10.5 cents in January. Canned vegetables showed little change. The advance in beans continued, the price being up from 8 cents per pound in January, 1928, to 10.3 cents in December, and 10.6 cents in January, 1929. Onions were up from an average of 6.8 cents per pound in December to 7.1 cents in January. Potatoes showed little change, averaging \$1.28 per ninety pounds as compared with \$1.24 in December. Evaporated apples fell from an average of 21 cents per pound in December to 20.6 cents in January. Granulated sugar was down in the average from 7.6 cents per pound in December to 7.5 cents in January. Coffee and tea showed little change. Anthracite coal was slightly higher at an average price of \$16.34 per ton. Increases were reported from Oshawa, Galt, Stratford

and Timmins. Prices of bituminous coal and of wood showed little change. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to higher levels during January, No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaging \$1.21 per bushel as compared with \$1.17 in December. The low price for the month was \$1.13½ reached on the 5th, and the high \$1.26 reached on the 26th. Good export demand, together with unfavourable crop conditions in Australia and the Argentine, were said to be the conditions contributing to higher prices. Coarse grains followed the trend in wheat, western barley at Winnipeg being up from 66½ cents per bushel to 72½ cents, western oats from 58½ cents per bushel to 68½ cents, rye from \$1.01½ per bushel to \$1.03, flax from \$1.90¼ per bushel to \$1.92, and American corn at Toronto from 98½ cents per bushel to \$1.07. The movement in the price of wheat was reflected in that for flour, the price at Toronto rising from \$7.20 per barrel to \$7.23. Oatmeal at Toronto was up from \$4.01 per bag to \$4.13. The price of bread at Toronto fell from 10 cents for a 24-ounce loaf to 9 cents. Raw sugar at New York was down from \$2.18¼ per cwt. to \$2.03½. Nova Scotia potatoes at Halifax advanced from 85 cents per 90-pound bag to 90 cents, and Manitoba grades at Winnipeg from \$1.09 per 100 pounds to \$1.28. Ceylon rubber at New York rose from 17.9 cents per pound to 20.2 cents. The price of good steers at Toronto declined from \$10.03 per 100 pounds to \$9.93; while the price at Winnipeg rose from \$8.25 per 100 pounds to \$8.73. Veal calves at Toronto advanced from \$14.90 per 100 pounds to \$16.10. Hogs at Toronto were up from \$9.71 per 100 pounds to \$10.31, and at Winnipeg from \$8.80 to \$9.24. Dressed pork at Toronto advanced from 15½ cents to 17 cents. Bacon at Toronto fell from 26 cents per pound to 24 cents. Beef hides fell from 14½-15 cents per pound to 13½-14 cents, and calf skins from 23-24 cents per pound to 20-21 cents. The price of milk at Toronto was down from \$2.30 per 8-gallon can to \$2.20 and at Regina from 28½ cents per gallon to 27¼ cents. Cheese at Montreal declined from 30 cents per pound to 28 cents. Eggs were substantially lower, fresh at Montreal declining from 65½ cents per dozen to 47½ cents, and at Toronto from 66¼ cents per dozen to 46¼ cents. Storage eggs at Montreal fell from 40½ cents per dozen to 32 cents. Raw cotton at New York was slightly lower, averaging 20¼ cents per pound as compared

\*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

with 20½ cents in December. In Non-ferrous Metals the price of copper was substantially higher, being up from \$17.66½ per cwt. to \$18.42½. Copper sheets rose from 29 cents per pound to 30 cents and copper wire from 20½

cents per pound to 21½ cents. Lead was up from \$6.27½ per 100 pounds to \$6.43. Tin declined from 52 cents per pound to 51½ cents, spelter from \$7.30 per 100 pounds to \$7.29, and silver from 57½ cents per ounce to 57 cents.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for wholesale prices index numbers are named in all cases.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 138·3 for December, an advance of 0·4 per cent over November. Foods declined slightly, due to declines in cereals and "other foods", partly offset by an advance in meat and fish. Industrial materials advanced slightly owing to advances in textiles and metals and minerals (other than iron and steel which were unchanged), while miscellaneous commodities declined slightly. The changes in all groups were very small.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-1877=100, was 117·9 at the end of December, showing no change from the previous month. Although other foods declined, an advance of 3 per cent in animal foods brought the index number for food up 0·7 per cent over the November level. This however was offset by a decline in materials.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 167 at January 1, which is a drop of one point from December 1. This was due to a decline in foods, as all other groups were unchanged. The most notable declines in food were in the prices of eggs and fish, while butter was dearer.

### Austria

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base prices in gold, first half of 1914=100, was 128 for December as compared with 127 for November. The index number for food was unchanged from the previous month, while industrial materials advanced one point.

COST OF LIVING.—The official index number, on the base prices in gold, July, 1914=100,

was 109 for January, showing no change from the last three months.

### Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social affairs, on the base April, 1914=100, was 847 for November, as compared with 835 for October. Foods declined 2 per cent. Of other commodities, the most notable advances were in glass and resin products.

COST OF LIVING.—The official index number of the cost of living of a middle class family of moderate income, on the base 1921=100, was 220·33 for December, which is practically the same as for November. Food, rent and sundries declined, while heat and light and clothing advanced.

### France

WHOLESALE PRICES.—The index number of the General Statistical Office, on the base July, 1914=100, was 637 for December as compared with 639 for November. Food fell, with declines in all groups. Industrial materials as a whole were practically unchanged, a decline in minerals being offset by an advance in miscellaneous commodities.

COST OF LIVING.—The index number of the cost of living, Paris, on the base 1914=100, was 531 for the fourth quarter of 1928, as compared with 519 for the previous quarter. Food and heat and light advanced, while the other groups, rent, clothing and sundries were unchanged.

### United States

The *Annalist* index number, on the base 1913=100, was 147·5 for December, a decline of 0·5 per cent for the month. There were no marked changes for the month; small advances in farm products, textile products, metals and miscellaneous commodities were more than offset by declines in food products, fuels and chemicals; building materials were unchanged.

*Dun's* index number, showing the cost *per capita* of a year's supply of commodities, was \$194·165 at February 1, an advance of 0·9 per

cent over the previous month, due to advances in breadstuffs, meat and dairy and garden products. On the other hand, other foods, clothing, metals and miscellaneous commodities declined slightly.

**COST OF LIVING.**—The Bureau of Labour Statistics index number of the cost of living, on the base 1913=100, was 171·3 for December, as compared with 170·0 for June and 172·0 for December, 1927. All groups declined

since December, 1927, with the exception of miscellaneous materials which advanced one per cent.

The index number of the National Industrial Conference Board, on the base July, 1914 =100, was 162·1 for December, a decline of 0·3 per cent. Food and clothing each declined one point, fuel and light advanced one point, while housing and sundries were unchanged.

---

## Social Policy in German Republic in Ten Years

At the recent celebration of the tenth anniversary of the establishment of the German Ministry of Labour, Herr Wissell, Minister of Labour, delivered an address in which he reviewed the work of the Ministry since 1918. The Constitution of the German Republic, he said, had laid the foundations of the new social policy, and provided for the participation of the worker on equal terms in the regulation of his conditions of work. The Works Council Act, the system of conciliation and the Labour Courts Act expressed this new spirit, and had substituted the conception of legal right for that of relief. The collective agreement had superseded the individual contract. In accordance with the principles of the Constitution, the employers' and workers' associations were the pillars which supported the social structure. In the conciliation chamber, in the employment exchanges, and in the administration of social insurance, employers and workers themselves shared in the solution of problems as they arose. State regulation and self-determination were blended, but in such a way that the State was generally the final arbiter. In order to provide security for the workers, the old social insurance scheme had been extended, sickness and accident insurance developed, pensions introduced in the mining industry, and benefits for dependants made either compulsory or voluntary functions of insurance. Finally, the introduction of unemployment insurance had palliated the most dreaded menace in the life of the proletariat.

Further, he said, the Ministry had built up a system of accident prevention and carried on comprehensive research in industrial hygiene. Efforts have been made to provide for the reintegration in occupational life of victims of accidents or sickness, by means of treatment, retraining and vocational guidance. The policy of prevention is also applied in dealing with unemployment. The Ministry has tried to reduce the fluctuations of the labour market by organizing the work of em-

ployment exchanges on a large scale. The development of vocational guidance and the regulations of vocational training have contributed to preserve an equilibrium between the supply of labour and the demand for it. Work has been provided for the unemployed by productive works undertaken by the authorities.

Herr Wissel pointed out that, while a State system of social insurance was designed to guarantee the worker a minimum standard of living, wages policy aimed at a maximum. Its object was to increase the share of the poorer classes in the national income so far as economic conditions made it at all possible. It sought to strengthen the weak position of the individual worker in negotiating contracts of employment by establishing the collective agreement as a principle of industrial life. In special cases, the State had attempted to ascertain exactly at what point the requirements of social policy were limited by economic possibilities. It could not be claimed that the Ministry and its conciliating machinery had arrived at the right result on each occasion. Employers and workers would both express dissatisfaction with what had been done. But though the achievements of the past ten years might appear small in comparison with what was desired, it should be remembered that there had been enormous difficulties in the way, particularly those arising from the end of the war, demobilization and inflation.

---

A plan to stabilize prosperity in the United States with the aid of a \$3,000,000 reserve construction fund, which was proposed at the recent Governors' Conference by the Governor of Maine at the request of the President-elect of the United States, was welcomed by the convention of the American Federation of Labor, in session at the same time, as an endorsement of the wages and employment policy of the Federation.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1928

THE number of fatal industrial accidents, including such fatalities from industrial diseases as are included with fatal accidents by workmen's compensation boards, etc., which were recorded in the Department as occurring during the fourth quarter of 1928, was 435, there being 180 in October, 142 in November and 113 in December. In the fourth quarter of 1927, 354 fatal accidents were recorded. In this report it is the custom to record industrial accidents under the dates of the occurrence of the accidents and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, the Board of Railway Commissioners of Canada and certain other official sources; and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

### Fatalities by Industrial Groups

By groups of industries the fatalities occurred as follows: agriculture, 43; logging, 49; fishing and trapping, 5; mining, nonferrous smelting and quarrying, 60; manufacturing, 46; construction, 83; transportation and public utilities, 109; trade, 18; service, 22.

Of the mining accidents 22 were in "metalliferous mining," 19 in "coal mining," 7 in "non-metallic mineral mining and quarrying," and 12 in "structural materials."

Of the accidents in manufacturing, 3 were in the group "vegetable foods, drink, and tobacco," 2 in "textiles and clothing," 1 in "rubber products," 12 in "saw and planing mill products," 1 in "wood products," 8 in "pulp, paper and paper products," 1 in "printing and publishing," 4 in "iron, steel and products," 1 in "non-ferrous metal products," 7 in "non-metallic mineral products," 2 in "chemical and allied products," and 4 in "miscellaneous products."

In construction there were 49 fatalities in "buildings and structures," 7 in "railway," 9 in "highway and bridge," and 19 in "miscellaneous construction."

In transportation and public utilities there were 49 fatalities in "steam railways," 9 in "street and electric railways," 23 in "water transportation," 15 in "local transportation," 5 in "storage," 5 in "electricity and gas," and 3 in "telegraphs and telephones."

There were 22 fatalities in service, of which 15 were in "public administration," 2 in "custom and repair," and 5 in "personal and domestic."

In trade there were 9 fatalities in "wholesale" and 9 in "retail."

### Disasters

The most serious disaster during the period under review occurred on October 26, when five quarrymen were killed by a dynamite explosion in Cote St. Michel, Quebec. The explosion was thought to have been caused by men smoking near a supply of dynamite.

On October 13, 3 drillers were killed by a premature blast at Frood Mine, Ontario.

On October 10, two labourers were killed when caught in delayed explosion of dynamite in a lime quarry near Saint John, New Brunswick.

Two miners were killed in a blast at Premier Mines, British Columbia, on October 17. Two labourers employed on railway construction at Shawinigan Falls, Quebec, were buried in a land-slide on November 10. At Drumheller, Alberta, two miners were poisoned by methane gas in a mine on November 17. Two labourers employed by an insulation manufacturing company at Selkirk, Manitoba, were scalded to death when they fell into a vat of boiling straw mash.

It may be mentioned that during this quarter a fatality occurred in Canadian waters which is not included in this list owing to the fact that the man was employed by another country, being a boatswain from Hamburg, Germany, and working on the SS. *Fanan Head*. He fell down a hatch and fractured his skull off Father Point, Quebec.

*Supplementary Lists of Accidents.*—The supplementary list of fatal accidents occurring in 1927, to be found after the main table of accidents, contains only one fatality, which was in the construction group and occurred in November.

Concluding the lists is a supplementary list of fatal industrial accidents occurring during the first three quarters of 1928. This includes twenty fatalities, of which 2 were in logging, 2 in mining, 1 in manufacturing, 3 in construction, 7 in transportation, 3 in trade and 2 in service. One accident occurred in May, 1 in June, 2 in July, 2 in August and 14 in September.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1928

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE AND STOCKRAISING—</b>				
Farmer.....	Near Islay, Alta.....	Oct. 1	.....	Mangled when he fell beneath the knives of mow.
Farm hand.....	Woodville, N.S.....	" 1	27	Electrocuted when he came in contact with live wire while picking apples from tree.
Farmer.....	Near Cheltenham, Ont.....	" 1	44	Caught in gears of corn cutter.
Farmer.....	Near Moore Park, Man.....	" 3	.....	Burned in fire that destroyed home.
Farmer.....	Near Lucan, Ont.....	" 4	18	Caught in belt of corn-cutting machine.
Farmer.....	Ste. Claire, Que.....	" 5	68	Gored by bull.
Farm hand.....	Near Roland, Man.....	" 6	32	Mangled by plow shares when team ran away.
Farmer's son.....	Dunbar, Ont.....	" 6	14	Killed when knives of corn-cutting machine broke.
Farmer.....	Carrying Place, Ont.....	About Oct. 8	45	Fell from pear tree. Died Oct. 13.
Farmer.....	East Waldec, N.S.....	About Oct. 10	76	Injured finger, died of tetanus, October 24.
Farmer.....	Near Qu'Appelle, Sask.....	" 11	50	Crushed between tractor and separator.
Farmer.....	Otterville, Ont.....	" 11	.....	Fell from wagon and broke his neck.
Farmer.....	Marwayne, Alta.....	" 16	.....	Team took fright while unloading grain and he was thrown under wheels.
Farm hand.....	Near Viceroy, Sask.....	" 21	40	Thrown from hayrake against stone foundation when team bolted.
Farmer.....	Lakefield, Ont.....	" 25	57	Gored by bull.
Farmer.....	Enniskillen, Ont.....	" 25	About 50	Collapsed in wagon while driving team.
Ditchman with drainage contractor.....	Fannystelle, Man.....	Oct. 26	30	Explosion while putting gasoline in lighting plant of machine. Died Oct. 28.
Farmer.....	Near Toronto, Ont.....	" 26	53	Crushed by tractor.
Farmer.....	Near Chatham, Ont.....	" 26	45	Crushed in wagon when team ran away.
Teamster.....	Near Walkerville, Ont.....	" 29	46	Fell down hay chute in barn and broke his neck.
Farmer.....	Elgin District, Man.....	About Oct. 31	65	Injured when his horses ran away.
Farmer.....	Near Earl Grey, Sask.....	About Nov. 1	59	Injured when shotgun accidentally discharged in his wagon.
Farmer.....	Near Merritt, B.C.....	About Nov. 2	.....	Wagon ran over him when his team ran away.
Labourer.....	Wasa, B.C.....	" 2	.....	Cut by piece which broke off circular saw.
Farmer.....	Near North Bay, Ont.....	About Nov. 5	.....	Burned when rescuing children from burning home.
Truck driver.....	Near Lethbridge, Alta.....	" 8	About 43	Injured when grain truck plunged over hill.
Farmer.....	Near Brantford, Ont.....	" 9	.....	Heart failure brought on by shock of jumping into cold water of creek when clothing caught fire while burning straw.
Farmer's son.....	Near Asquith, Sask.....	" 13	11	Fell under wheels while driving wagon load of wheat.
Farmer's son.....	Near Foam Lake, Sask.....	" 13	16	Explosion of gasoline drum belonging to threshermen.
Farmer.....	Near Brockville, Ont.....	" 17	68	Fell from wagon fracturing skull. Died Nov. 18.
Farmer.....	Near Coronation, Alta.....	" 17	.....	Load of oat bundles upset, fractured skull. Died Nov. 19.
Ploughman.....	Near Bible Hill, N.S.....	" 21	16	Crushed when ploughing tractor upset.
<b>AGRICULTURE AND STOCKRAISING—Con.</b>				
Fruitgrower.....	Three Lake Valley, B.C.....	About Nov. 22	.....	Log rolled over him.
Farmer.....	Near Sydenham, Ont.....	" 22	80	Kicked by horse.
Woodcutter.....	Near Holstein, Ont.....	" 24	.....	Crushed by falling tree.
Hired man.....	Near Tilbury, Ont.....	" 30	19	Burned by fire which destroyed house.
Worker in nurseries.....	Port Haney, B.C.....	Dec. 12	22	Smothered under pile of sawdust.
Farmer.....	Swan Lake, Man.....	" 15	51	Fell from roof of his house.
Farmer.....	Near Archive, Sask.....	" 18	.....	Injured when truck he was driving was overturned.
Farmer.....	Near Wetaskiwin, Alta.....	" 24	28	Thrown from horse fracturing skull.
Farmer.....	Near Blackie, Alta.....	" 25	.....	Gored by bull.
Farmer.....	Near Bonarlaw, Ont.....	" 26	.....	Burned in fire which destroyed barn.
Farmer.....	Elkton, Alta.....	" 27	55	Struck by cranking handle of engine used for sawing wood.
<b>LOGGING—</b>				
Logger.....	Courtenay, B.C.....	Oct. 1	39	Neck broken when log slipped off flat car and struck him.
Logger.....	Mission, B.C.....	" 2	18	Struck by snag.
Logger.....	Cowichan Lake, B.C.....	" 3	.....	Struck by snag, broken neck.
Logging train conductor.....	Blued, B.C.....	About Oct. 9	33	Struck by log while switching cars.
Hook-tender.....	Scott Cove, B.C.....	" 15	58	Struck by sapling. Died Oct. 30.
Logger.....	Nelson, B.C.....	" 19	21	Struck while falling tree, fractured skull.
Logger.....	Campbell River, B.C.....	" 19	32	After cutting log, fell on him. Died Oct. 20.
Logger.....	Rock Bay, B.C.....	" 25	55	Struck by falling snag.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>LOGGING—Con.</b>				
Sawyer.....	Thor Lake, Ont.....	" 26	.....	Struck by snag while falling tree injured internally.
Logger.....	Campbell River, B.C.....	" 27	26	Crushed by uprooted tree.
Logger.....	Beaver Lake, Ont.....	" 28	.....	Struck by snag.
Logger.....	Port Neville, B.C.....	" 30	20	Struck by line of donkey engine.
Logger.....	Near North Bay, Ont.....	About Oct. 30	45	Struck by falling tree.
Labourer.....	Near Elk Lake, Ont.....	" 30	.....	Struck by tree.
Labourer.....	Deeparquet Lake, Que.....	" 31	.....	Struck on head by log.
Road cutter.....	Washagama, Ont.....	" 31	70	Struck by falling tree. Died Nov. 28.
Logger.....	Prince George, B.C.....	Nov. 2	40	Burned by fire which destroyed his shack.
Logger.....	Vancouver Island, B.C.....	" 3	39	Struck by falling snag.
Logger.....	Rennys, B.C.....	" 3	20	Struck by rolling log, fractured skull.
Labourer.....	Near Monteith, Ont.....	" 5	.....	Fell through ice and drowned.
Logger.....	Near Sherbrooke, Que.....	About Nov. 7	.....	Gangrene following axe cut in foot.
Wood-splitter.....	Alec, B.C.....	" 7	59	Struck by cable attached to donkey engine.
Faller.....	Lake Cowichan, B.C.....	" 7	26	Struck by limb of falling tree, fractured skull.
Logger.....	Lake of the Woods, Ont.....	" 10	33	Struck by falling tree.
Logger.....	Near Fupper Lake, Ont.....	" 10	30	Head crushed by log when he fell in skidway.
Labourer.....	Brunet, Que.....	" 14	15	Tree fell on him.
Logger.....	Quatsino, B.C.....	Nov. 15	.....	Injured in logging accident.
Labourer.....	Beauce Co., Que.....	" 21	.....	Pneumonia. Died Dec. 27.
Logger.....	Fredric Arn, B.C.....	" 23	25	Struck by timber, fractured skull.
Logger.....	Near Charlesbourg, Que.....	About Nov. 25	20	Exposure during illness in lumber camp. Died Nov. 30.
Logger.....	Phoenix, Alta.....	" 27	33	Struck on head by falling tree.
Lumberman.....	Near Olson, B.C.....	" 28	27	Struck by falling tree.
Labourer.....	Mississauga Reserve, Ont.....	" 29	46	Struck by log while rolling log on skidway, broken leg. Died Jan. 8, 1929.
Logger.....	Near Crow Rock Island, Ont.....	" 30	28	Fell through ice and drowned while returning to camp.
Faller.....	Near Alma, N.B.....	Dec. 3	20	Struck by stub which was knocked down by falling tree, fractured skull.
Teamster.....	Near Quesnel, B.C.....	" 5	28	Kicked by horse and dragged under sleigh.
Logger.....	Near Edson, Alta.....	About Dec. 5	31	Crushed by falling tree.
Logger.....	Lundy Township, Ont.....	" 5	30	Struck by falling tree.
Logger.....	West River, N.B.....	" 5	25	Struck by stub, knocked down by falling tree.
Logger.....	Seymour Inlet, B.C.....	" 6	.....	Struck by falling top of tree.
Logger.....	Flanders, Ont.....	" 7	65	Cut on knee by saw, infection. Died Dec. 26.
Cook.....	Near Cultus Lake, B.C.....	" 8	35	Broke his neck when door of box car was dashed against platform.
Sawyer.....	Flanders, Ont.....	" 15	55	Struck by log while sawing logs. Died Dec. 24.
Labourer.....	Near Dalton Mills, Ont.....	" 16	27	Dog sleigh went through ice on lake and he was drowned.
Logger.....	Comox, B.C.....	" 19	.....	Crushed by log.
Logger.....	Giscombe, B.C.....	" 24	.....	Struck by falling snag.
Logger.....	Near Thetford Mines, Que.....	About Dec. 28	.....	Crushed between two logs. Died Dec. 29.
Bush labourer.....	Near Martin, Ont.....	" 30	.....	Struck by falling tree.
Logger.....	Bloedel, B.C.....	" 31	.....	Crushed by log.
<b>FISHING AND TRAPPING—</b>				
Fisherman.....	Boundary Bay, B.C.....	About Oct. 10	76	Swept off fish trap cabin during storm and drowned.
Fisherman.....	Prince Rupert, B.C.....	Nov. 10	52	Fell from dock on deck of his boat fracturing skull.
Trapper.....	Mile 185 H.B. Ry. Man.....	" 17	.....	Drowned.
Fisherman.....	Off Port Dalhousie, Ont.....	" 29	20	Thrown into river and drowned when reel broke casting a large net.
Trapper.....	Near Quorn, Ont.....	About Dec. 14	60	Drowned while crossing river on unsafe ice.
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>				
<i>Metaliferous Mining—</i>				
Stenographer.....	Cold Lake, Man.....	Oct. 5	.....	Drowned when his canoe tipped.
Drill helper.....	Frood, Ont.....	" 10	27	Crushed by fall of rock.
Driller.....	Frood Mine, Ont.....	" 13	29	.....
Driller.....	Frood Mine, Ont.....	" 13	28	Premature blast in mine. Third man died Oct. 14.
Driller.....	Frood Mine, Ont.....	" 13	22	.....
Miner.....	Premier Mines, B.C.....	" 17	25	Killed by blast in mine.
Miner.....	Premier Mines, B.C.....	" 17	41	.....
Crusher.....	Smithers, B.C.....	" 18	23	Arm torn off in machinery. Died Oct. 20.
Loader.....	Timmins, Ont.....	" 18	47	Crushed in mine. Died Oct. 20.
Miner.....	Creighton, Ont.....	" 19	27	Crushed by fall of rock.
Master mechanic.....	Copper Cliff, Ont.....	" 23	21	Electrocuted when he touched high tension wire while removing insulators.
Caretaker.....	Boston Creek, Ont.....	" 30	45	Thrown from load of lumber when horses took fright.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—Con.</b>				
<i>Metalliciferous Mining—Con.</i>				
Nipper.....	Britannia Beach, B.C.....	Nov. 15	20	Struck by falling rock.
Prospector.....	Near Le Pas, Man.....	About Nov. 18	.....	Accidentally shot.
Labourer.....	Timmins, Ont.....	Nov. 26	36	Silicosis.
Miner.....	Portneuf, Que.....	" 21	.....	Blood poisoning. Died Dec. 18.
Top lander.....	Creighton Mine, Ont.....	" 28	21	Struck by an empty skip and thrown 45 feet to ground. Crushed skull.
Ball Mill foreman.....	Copper Cliff, Ont.....	Dec. 4	55	Fell from ledge striking head on concrete.
Machine runner.....	South Porcupine, Ont.....	" 7	41	Silicosis, contracted June 30, 1926.
Slope mucker.....	Montauben Mines, Que.....	" 10	32	Fell into chute.
Miner.....	Kimberley, B.C.....	" 17	29	Fell into chute.
Trammer.....	Creighton Mine, Ont.....	" 28	30	Crushed beneath platform which was broken down by fall of rock.
<i>Coal Mining—</i>				
Miner.....	Luscar, Alta.....	Oct. 6	45	Struck by runaway trip in slope.
Miner.....	New Waterford, N.S.....	" 11	.....	Struck by an empty trip. Crushed.
Miner.....	Wayne, Alta.....	" 11	52	Crushed by fall of rock. Died Oct. 14.
Miner.....	Nanaimo, B.C.....	" 16	63	Head injured in mine. Died Oct. 20.
Miner.....	Coleman, Alta.....	" 29	.....	Crushed by cave in at mine.
Miner.....	River Hébert, N.S.....	" 31	28	Fell from load of coal in mine slope and it ran over him.
Chain runner.....	New Waterford, N.S.....	Nov. 6	22	Crushed between two boxes of coal.
Miner.....	Taber, Alta.....	" 8	20	Fell from car when it jumped track in mine slope.
Bratticeman.....	Bellevue, Alta.....	" 9	59	Fell from ladder, fractured pelvis.
Miner.....	New Waterford, N.S.....	" 10	19	Struck by empty tram.
Surface labourer.....	Drumheller, Alta.....	" 13	45	Fell in mine shaft.
Miner.....	Lethbridge, Alta.....	" 17	36	Poisoned by gas in mine.
Miner.....	Lethbridge, Alta.....	" 17	29	.....
Driver.....	Drumheller, Alta.....	" 19	21	Crushed between wall and loaded car.
Fireman.....	Glace Bay, N.S.....	" 20	.....	Injured in boiler explosion. Died Nov. 23.
Steel boomer.....	Dominion, N.S.....	Dec. 18	60	Crushed under fall of timber.
Winchman.....	Cassidy, B.C.....	" 20	16	Crushed arm when gloved hand became caught in winch.
Timber packer.....	Cadomin, Alta.....	" 22	40	Pinned between hoist and prop when water washed away the footing causing hoist to slide.
Labourer.....	Glace Bay, N.S.....	" 29	17	Caught in coal conveyor.
<i>Non-Metallic Mineral Mining—</i>				
Miner.....	Thetford Mines, Que.....	Oct. 2	30	Asphyxiated by gas following explosion.
Labourer.....	Near St. John, N.B.....	Oct. 10	45	Caught by delayed explosion of dynamite in lime quarry.
Labourer.....		" 10	58	
Miner.....	Thetford Mines, Que.....	" 24	45	Skull crushed when stone fell on him.
Catheadman.....	Turner Valley, Alta.....	Nov. 5	22	Injured when caught in bull wheel at oil well, fractured skull.
Miner.....	Thetford Mines, Que.....	Dec. 12	42	Skull fractured by fall of rock.
Brakeman.....	Asbestos, Que.....	" 14	23	Crushed underneath car of ore when dumping mechanism slipped.
<i>Structural materials—</i>				
Labourer.....	Near Sherbrooke, Que.....	Oct. 1	50	Buried by slide in gravel pit.
Driller.....	Near Belleville, Ont.....	" 2	46	Premature dynamite explosion in quarry, fractured skull.
Quarry man.....	Cote St. Michel, Que.....	" 26	56	Dynamite explosion in stone quarry.
Quarry man.....		" 26	50	
Quarry man.....		" 26	40	
Quarry man.....		" 26	26	
Quarry man.....		" 26	23	
Labourer.....	Near Arnprior, Ont.....	Nov. 10	35	Injured while working with stone crusher in quarry.
Driller in quarry.....	Pitt Lake, B.C.....	About Nov. 25	30	Struck by car loaded with rock.
Farmer's son.....	Near Woodstock, Ont.....	Dec. 10	25	Buried in gravel pit.
Labourer with sand and gravel Co.....	Hillside, B.C.....	" 20	.....	Killed instantly.
Labourer.....	St. Laurent, Que.....	" 26	43	Killed in delayed explosion of dynamite.
<b>MANUFACTURING—</b>				
<i>Vegetable foods, drink and tobacco—</i>				
Employee of sugar refining Co.....	Montreal, Que.....	Oct. 12	28	Fractured skull.
Mechanic with refineries.....	Corbyville, Ont.....	Nov. 22	30	Caught in conveyor, leg severed.
Assistant engineer....	Leamington, Ont.....	Dec. 5	48	Fell from ledge fracturing skull.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MANUFACTURING—Con.</b>				
<i>Textiles and Clothing—</i>				
Labourer.....	Hespeler, Ont.....	Oct. 17	.....	Fell against house and cut his head. Died Oct. 20.
Elevator man.....	Montreal, Que.....	Nov. 27	67	Fell in elevator shaft.
<i>Rubber Products—</i>				
Gum cutter.....	Kitchener, Ont.....	Oct. 31	51	Cut hand while cutting boot, infection. Died Nov. 9.
<i>Saw and planing mill products—</i>				
Picket mill hand.....	Searchmont, Ont.....	Oct. 9	23	Bolt flew off wheel of machine and struck him.
Mechanical engineer..	Hammond, B.C.....	" 10	49	Injured when engine piston fell on him. Died Oct. 17.
Mill hand.....	Vancouver, B.C.....	" 17	.....	Drowned while tying up boat.
Teamster.....	Ottawa, Ont.....	" 19	59	Cart ran over his head when he lost control of horse. Died Oct. 23.
Millwright.....	L'Anse aux Cousins, Que	" 24	56	Injured when machine belt flew off.
Tie trimmer.....	Near North Bay, Ont.....	" 26	.....	Struck by sliding tie and thrown on circular saw.
Carpenter.....	Kalso, B.C.....	" 29	52	Struck on head by piece of metal from saw. Fractured skull.
Mill proprietor.....	Lanark, Ont.....	" 30	26	Mangled when clothing became caught in pulley.
Sawyer.....	Port Alberni, B.C.....	" 31	58	Struck by lever controlling log carriage.
Sawyer.....	Cowichan Lake, B.C.....	Nov. 3	66	Fell on saw.
Labourer.....	Dean Lake, Ont.....	" 10	23	Drowned.
Labourer.....	New Westminster, B.C.....	Dec. 23	.....	Fell with scaffold when it was knocked down by falling bricks.
<i>Wood products—</i>				
Finisher.....	Waterloo, Ont.....	Nov. 5	59	Burned by fire in finishing room.
<i>Pulp, Paper and Paper Products—</i>				
Labourer.....	Clark City, Que.....	Oct. 3	19	Thrown out of runaway truck. Died Oct. 5.
Stock runner.....	Kenogami, Que.....	" 29	.....	Fell from scaffold.
Labourer.....	Port Alfred, Que.....	Nov. 15	52	Died after seizure.
Labourer.....	Kenora, Ont.....	" 6	30	Crushed under pile of pulpwood which gave away.
Machinist.....	Montreal, Que.....	" 24	58	Fingers mangled while repairing machine. Died about Dec. 3 from tetanus.
Factory hand.....	Port Elgin, N.B.....	" 29	36	Caught in belt while adjusting same. Fractured skull.
Lineman.....	Rimouski, Que.....	Dec. 14	32	Electrocuted when he came in contact with high tension wire.
Labourer.....	Dolbeau, Que.....	" 16	21	Head crushed.
<i>Printing and Publishing—</i>				
Labourer.....	Montreal, Que.....	Nov. 8	22	Fell down elevator shaft.
<i>Iron, steel and products—</i>				
Labourer.....	Winnipeg, Man.....	Oct. 11	44	Tank exploded when it was being tested.
Mechanic.....	Simcoe, Ont.....	" 31	55	Tripped and fell under end of shaft which he was carrying. Died Nov. 5.
Labourer.....	Halifax, N.S.....	Nov. 6	.....	Jammed between two flat cars, chest crushed. Died Nov. 7.
Night watchman....	Oshawa, Ont.....	" 17	43	Fell over steel truck on rail track injuring legs. Died Dec. 22.
<i>Non-ferrous metal products—</i>				
Watchman.....	Toronto, Ont.....	Oct. 1	74	Crushed by falling elevator.
<i>Non-metallic mineral products—</i>				
Well drill operator with cement mfrs.	Point Anne, Que.....	Oct. 2	37	Premature explosion.
Pipe fitters' helper..	Halifax, N.S.....	" 4	23	Overcome by gas in crude oil condenser while rescuing fellow workman. One died Oct. 5.
Pipe fitter.....	" " .....	" 4	47	Other died Oct. 12.
<i>Non-Metallic Mineral Products—</i>				
Rivet heater in oil refinery.....	Sarnia, Ont.....	Oct. 6	30	Fell 30 feet from scaffold.
Labourer.....	Streetsville, Ont.....	" 9	16	Smothered in shale slide.
Labourer.....	Hamilton, Ont.....	Dec. 5	46	Suffocated when buried in feed bin.
Labourer.....	Calgary, Alta.....	" 27	31	Crushed between coke trucks. Died Dec. 28.
<i>Chemical and Allied Products—</i>				
Electrician.....	Niagara Falls, Ont.....	Nov. 9	57	Tripped on gangway and fell on concrete floor.
Labourer with Sulphate Mfg. Co.....	La Tuque, Que.....	Dec. 3	46	Poisoned by sulphur gas. Died Dec. 14.
<i>Miscellaneous Products—</i>				
Night watchman with trunk mfrs.	Toronto, Ont.....	Nov. 11	57	Collapsed in boiler room.
Electrician.....	Shawinigan Falls, Que.....	Dec. 12	32	Electrocuted.
Labourer with insulating company.	Selkirk, Man.....	" 25	29	Fell into vat of boiling straw mash and scalded when scaffolding broke. One died Dec. 23, other on Dec. 29.
Labourer with insulating company.	" " .....	" 25	30	

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1928—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality

## IMMIGRATION TO CANADA DURING THE NINE MONTHS ENDED DECEMBER 31, 1928

THE accompanying tables supplied by the Department of Immigration and Colonization show the nature and extent of immigration to Canada during the nine months ended December 31, 1928, with some comparative figures for the corresponding period in 1927. Of a total of 144,115 immigrants, 50,925 or 36 per cent were British, 24,875 or 17 per cent were from the United States, and 68,315 or 47 per cent from other countries. These figures compare with a total of 128,928 immigrants for the corresponding period of 1927, of whom 45,949 or 36 per cent were British, 19,947 or 15 per cent were from the United States, and 63,032 or 49 per cent from other countries.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Union Rule governing Contract may be lawfully applied.

The appeal of members of Local Union No. 25, Ontario Bricklayers' and Masons' International Union, from a judgment of the Third Division Court of the District of Thunder Bay, was allowed with costs by the First Divisional Court on January 14, 1929. The action was taken in the first instance against the union, but this action was dismissed on the ground that the union, not being incorporated, could not be sued. The names of individual defendants were added later to the defendant union, and the appeal was taken in the name of these individual defendants. The circumstances of the case are detailed in the course of the following judgment, which was delivered by Mr. Justice Hodgins, and concurred in by Chief Justice Sir William Mulock and Justices Magee and Grant. Mr. Justice Middleton also agreed in the result.

Mr. Justice Hodgins, in a written judgment, said that the initial difficulty was that the Local Union, being unincorporated, could not be sued, and therefore that the adding at the trial of the individual defendants was incompetent, it being in fact a substitution of defendants for an original defendant against whom no cause of action existed. This was not pressed at the trial or on the appeal. Nevertheless, the Court is entitled to pronounce upon the point, and upon that ground alone, the action against the individual defendants (the appellants) should be dismissed.

But, apart from that, the appellants argued that there was no evidence against them to warrant the judgment.

The plaintiff who was not then a member of the Local Union, took a contract under one Tocheri to supply all the labour required to do the brick and masonry work at the rate of \$17 per thousand brick upon a building being constructed by Tocheri. This would have given the plaintiff a profit of about \$3 a thousand. The plaintiff did not supply any material. Part of the material was old brick given by the owner of the building, and the rest was supplied by Tocheri. By a rule of the Local Union, "No member or members of this Union shall be allowed to work on any subcontract taken from a building contractor where a subcontract is for labour only."

The officials of the Local Union, having been informed of the plaintiff's contract, appointed, pursuant to their rules, an arbitration committee, who interviewed Tocheri, and di-

rected the defendants Martell and Barrington to deal with Tocheri and the plaintiff. They were instructed to tell Tocheri that, in view of this rule, if he did not get rid of Hay (the plaintiff), the bricklayers working for the latter would be withdrawn, they being members of the Union.

In carrying out these instructions both Martell and Barrington discussed the matter with Tocheri. Both Martell and Barrington denied that any threats were made or that Tocheri was told that he would have to "fire" Hay or they would call a strike.

The learned Justice of Appeal was unable to find from the evidence that any of the defendants used the word "strike" and reads Tocheri's evidence as meaning that the words used were "call the men off the job," which Tocheri translates or compresses into the word "strike."

There is no foundation for a finding that the individual defendants were guilty of conspiracy of combination to injure the plaintiff as found by the trial judge.

Local Union No. 1562 United Mine Workers of America v. Williams and Rees (1919), 59 Can. S.C.R. 240, is not a case on all fours with this. It depends for its force upon the fact that a coercive threat was used to cause a general strike, should the men be retained in the company's employment.

It is quite competent for members of a Union (or the Union itself) who find that their fellow-members are employed on a contract which their rules do not sanction—the rules being founded upon reason and good sense—to warn the contractor and his subcontractor that they must inform the men that they are working contrary to that rule of their Union, and that if, in consequence, the contractor and subcontractor agree to the cancellation of the contract, or the subcontract is cancelled, the warning is within their legal rights and is not a wrongful act which is actionable even if the warning is conveyed by two or three individual members of the Union or by the Union's officials. (Reference to Sorrel v. Smith, (1925) A.C. 700.)

In this case what was done for the purpose, not of injuring the plaintiff, but to forward the trade of the members of the Union, and notice that the members of the Union will be warned of the situation is not a threat which is unlawful and does not give any right of action to the person injured. There is no evidence of spite or malice or desire to injure,

nor of any improper conspiracy or combination, though two members together conveyed the warning.

The appeal should be allowed and the action dismissed without costs; but costs of appeal must be paid by the plaintiff.—*Hay versus Local Union No. 25, Ontario Bricklayers' and Masons' International Union (Ontario Weekly Notes, Jan. 25, 1929).*

### **United States Employers' Liability Law held not to apply to Canadian Employee**

An employee of a Canadian railroad in the United States was drowned in the course of his employment, on the United States side of the international boundary line in the Detroit River, and his administrator was unable to recover under the United States Employer's Liability Act. This was the decision of the United States Supreme Court in the case of David A. Wright, administrator, against the Grand Trunk Railroad Company, the decision of the Circuit Court of Appeals for the Sixth Circuit being affirmed on the authority of the Union Pacific Railway Company against Whyler, 158 U.S. 285.

Douglas B. Ellis was employed by the Grand Trunk Railroad Company, a Canadian corporation, as a carpenter on the car ferry transport. The ferry was under United States registry and was operated by both the Grand Trunk and the Wabash railroads, the latter a Missouri corporation. The transport was making its customary trip from Windsor to Detroit. While on the United States side of the International boundary line on the Detroit River, the transport was stopped to clean fires. Ellis entered the paddle box of the side wheel and was working on one of the paddle buckets when the engine was negligently started. He was thrown into the water and drowned.

The administrator brought action in the U.S. District Court in Michigan under the Federal Employers Liability Act. The railroad company argued that the Grand Trunk was a Canadian corporation, doing most of its

business in Canada, and that the Workmen's Compensation Act of Ontario should apply. The Court held for the administrator and judgment was entered.

The Circuit Court of Appeals for the 6th Circuit reversed the judgment, holding that the Canadian Act should apply because the ferry was chartered by a Canadian corporation and because the Treaty of 1909 between the United States and Great Britain makes the territorial waters of each country absolutely free to the citizens of the respective countries, so that the United States cannot impose its statutes under the circumstances, merely because the ferry had crossed the international boundary line.

The administrator brought the cause to the Supreme Court of the United States, maintaining that the jurisdiction of the United States is absolute in its own territory.

### **"Injury" includes Damage to Business or Employment**

In the court of Criminal Appeal, England and Wales, the Lord Chief Justice dismissed an appeal (Rex versus Jones) by a trade union secretary against his conviction on two counts of an indictment, charging respectively intimidation and besetting, contrary to section 7 of the Conspiracy and Protection of Property Act, 1875. The appellant had been sentenced to a fine of £5 on each count. It was alleged that with the object of compelling a certain workman to join the trade union of which he was the district secretary, the appellant had threatened to cause the workman's dismissal from his employment and had thereby caused in his mind a reasonable apprehension of injury. The Lord Chief Justice said that it was not suggested that there had been any display of violence by the appellant. Once, however, it was conceded that "injury" within section 7 of the Act of 1875 was wide enough to include damage in respect of business, occupation or employment—and section 3 (2) of the Trade Disputes and Trade Unions Act, 1927, made it clear that it was so—there was ample evidence to justify the verdict of the lower court.

[The text in this section is extremely faint and illegible. It appears to be a list or a series of entries, possibly related to a collection or inventory.]

[NUMBER 3

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

AN increase was noted in industrial employment in Canada at the beginning of February, although the situation was still affected to some extent by inventory shut-downs, and more so by continued seasonal slackness in the out-of-door industries. Employment, however, was in considerably greater volume than on the same date in any other year of the record. This statement is based upon returns received by the Dominion Bureau of Statistics from 6,391 firms, each with a minimum of fifteen employees. The staffs of these firms on February 1 aggregated 933,943 persons, as compared with 921,404 on January 1. This increase, which was more extensive than on the corresponding date in the three preceding years, caused the index (average, 1926=100) to stand at 110.5, while in the preceding month it was 109.1, and on February 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 102.0, 96.9, 91.8, 87.1, 91.7, 90.6, 79.9 and 91.2, respectively. The returns are representative of employment in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of February, 1929, the unemployment percentage registered by local trade unions stood at 6.3 as compared with percentages of 6.6 at the beginning of January and 6.8 at the beginning of February, 1928. The percentage for February was based on the reports received by the Department of Labour from an aggregate of 1,697 local trade unions embracing a membership of 188,152 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed a slight gain in the volume of business transacted in January, the number of working days in the month having been greater than in December.

The average cost of a weekly budget of twenty-nine staple foods was \$11.15 at the beginning of February, as compared with \$11.30 for January; \$11.03 for February, 1928; \$11.23 for February, 1927; \$11.50 for February, 1926, \$10.93 for February, 1925; \$10.75 for February, 1924; \$10.53 for February, 1923;

\$10.61 for February, 1922; \$14.08 for February, 1921; \$16.92 for June, 1920 (the peak); \$12.54 for February, 1918; and \$7.75 for February, 1914. In wholesale prices the revised index number of the Dominion Bureau of Statistics was 95.7 for February, as compared with 94.5 for January; 96.8 for February, 1928; 97.6 for February, 1927; and 102.1 for February, 1926.

The time loss due to industrial disputes in February, 1929, was about five times as large as in January, almost twice as many workpeople being involved. The time loss was greater than in February, 1928. Nine disputes were in progress at some time during the month, involving 1,480 workpeople and resulting in a loss of 28,946 working days. Corresponding figures for January, 1929, were eight disputes, 754 workpeople and 5,724 working days. Corresponding figures for February, 1928, were ten disputes, 889 workpeople and 5,853 working days.

### Industrial Disputes Investigation Act

During the month of February no new applications for the establishment of Boards of Conciliation and Investigation were received by the Department. Reference to the settlement of the coal miners' strike at Wayne, Alberta, in August, 1928, following a Board inquiry, is made in the article on "Strikes and Lockouts in Canada," on page 276 of this issue.

### Progress of Old Age Pensions in Canada

The speech from the Throne at the opening of the Legislature of New Brunswick on February 21, contained the following announcement: "The subject of Old Age Pensions has occupied the attention of my Government and in view of the uncertainty as to the probable cost of the administration of that measure it has been decided to appoint a Commission to investigate and report upon the subject."

In the Speech from the Throne at the opening of the Nova Scotia Legislature on February 27, it was stated: "The commissioner

appointed by my government to inquire into matters preliminary to the consideration of the adoption by this province of Old Age Pensions will be able to present a partial report of his investigation, and this will be laid before you."

In accordance with the announcements that were noted in the last issue of the *LABOUR GAZETTE*, bills to provide for provincial participation in the federal Old Age Pensions Act are now before the legislatures of Ontario and Alberta.

**Mine safety devices to be admitted to Canada, duty free.**

Included among the customs tariff changes that were proposed in the budget brought down in the House of Commons by the Hon. J. A. Robb, Minister of Finance, on March 1,

was a provision for the free entry of safety devices for use in the mining industry in Canada. The following articles will be admitted free:—

Miners' acetylene lamps and parts thereof; miners' safety lamps and parts thereof; accessories for cleaning, filling, charging, opening and testing miners' safety lamps, battery renewal preparations for miners' electric safety lamps; all to be used exclusively in mines.

Miners' safety helmets of a class or kind not made in Canada, for use exclusively in mining operations.

Equipment of a class or kind not made in Canada, and integral parts thereof, for distributing stone dust in mines.

The following articles also are to be admitted free:—

Face loading machines, shaker trough or belt trough conveyors, air engines, flame-proof enclosed driving motors for air engines, and integral parts of all motive power or machinery mentioned in this item, to be used exclusively in mining operations.

Many of the suggestions for the free admittance of mine safety devices came from Mr. G. C. Bateman, Toronto, secretary of the Ontario Miners' Association. In suggesting preferential treatment of equipment for distributing stone dust in mines, Mr. Bateman acted for the coal miners of Nova Scotia and British Columbia.

**A veteran labour leader of Ontario**

Reference in the press to the celebration of the sixty-seventh anniversary of the marriage of Mr. and Mrs. J. S. Williams, 357 Ontario

Stret, Toronto, recalls early days in the trade union movement in Canada. Mr. Williams, as a member of the Toronto Typographical Union, took a leading part in 1871 in the organization of the Toronto Trades Assembly, from which was later developed the Toronto Trades and Labour Coun-

cil. Mr. Williams was successively recording secretary, president, and corresponding secretary during the early years of this organization, and was one of the promoters of the Canadian Labour Union in 1873.

Mr. Williams edited the first labour paper published in Ontario the *Ontario Workman*, the first issue of which appeared in April, 1872. This publication was concerned at the time chiefly with advocating a nine-hour day, a subject of considerable agitation among labour unions at the time.

It is interesting to recall that Mr. Williams was one of the printers arrested in 1872 on a charge based on the old English law on conspiracy, which regarded combinations to raise the rate of wages or to decrease the hours of labour as unlawful conspiracies. In order to bring the Canadian laws on this point into line with the contemporary English law, the Dominion Parliament enacted the Trade Union Act, 1872, freeing the trade unions from criminal liability on the ground of conspiracy.

Mr. Williams opened a printing business for himself in 1876, but he always carries a membership card of the Toronto Typographical Union.

**Pensions for Canadian National Railway employees**

Two bills were passed by the House of Commons in February for the purpose of correcting inequalities in the employees' pension system on the Canadian National

Railways. The first was entitled "An Act to amend the Grand Trunk Act, 1906-7, with respect to Pensions", and the second "An Act to further amend the Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act". Prior to the new legislation no legislative authority existed for any pension system which would be applicable to the other employees of the Canadian National Railways, such as the employees of the former Canadian Northern, the Grand Trunk Pacific, and the other lines now comprised in the Canadian National System. The intention of the bills is to make it possible to extend to all employees of the Canadian National Railways the provisions of the existing Grand Trunk pension plan. The Grand Trunk pension plan was outlined in the *LABOUR GAZETTE*, January, 1924, page 33, and the superannuation plan of the Intercolonial Railway was outlined in the issue of January, 1925, page 27. In explaining the purpose of the bills in the House on February 12, the Hon. Charles A. Dunning, Minister of Railways and Canals, spoke as follows:—

"It is not proposed to abolish the Intercolonial provident fund, but only to stop entry

into it. All rights will be preserved to those who are at present members of and contributors to the Intercolonial provident fund. Means will be provided whereby those who are now members of that fund may transfer to the general pension scheme now being inaugurated, should they so desire. In the course of a few years the logical result will be one pension system for all the employees of the Canadian National system, and for the employees of the hotels, express company, telegraph company, and steamship company. About 109,000 employees will be affected. There are 11,165 members in the provident fund of the Intercolonial, so 98,258 employees would be affected by the provisions of the scheme now being inaugurated. Of this 98,000 approximately 15,000 are of a non-permanent character, and therefore not pensionable. Deducting this figure from the former would leave in the neighbourhood of 83,000 men and women who would be affected by this scheme. The return to the employee under this scheme will be substantially identical with that now being paid by the Canadian Pacific Railway Company\* and other great railway corporations on this continent. This is calculated upon the basis of one per cent of the average pay of the employee for the ten-year period previous to his retirement, multiplied by the number of years of service."

#### Teachers' pensions in British Columbia

The Hon. Joshua Hinchcliffe, Minister of Education of British Columbia, introduced in the provincial legislature in February a bill to establish a pension fund for school teachers. Regular contributions of 4 per cent of their salaries would be made by the teachers, supplemented by an equal amount paid by the government. Pensions would be paid in a manner similar to Dominion Government annuities under three plans. Single life guaranteed pensions for the life of the pensioner or a definite number of years, and joint life and "last survivor" pensions covering the life of the pensioner and any person designated by him. Particulars of the new system, if it should be incorporated in legislation, will be given in a future issue, in an account of the work of the session.

#### Employers reject National Council proposal

The recent proposals of the "Melchett - Turner" Conference for the establishment of a Joint National Industrial Council have been rejected by the National Confederation of Employers' Associations and the Federation

of British Industries. These organizations are stated to be representative of practically all the great industries of Great Britain. The constitution and functions of the proposed Council, and the acceptance of the proposal by the Trades Union Council were noted in the *LABOUR GAZETTE*, October, 1928, page 1037; August, 1928, page 846; and the progress of the negotiations were noted in previous issues. The reply of the employers' organizations was in the form of a joint letter addressed to the Trades Union Congress, which was made public on February 14, as follows:—

"The Confederation of Employers' Associations and the Federation of British Industries are distinct and separate bodies, the confederation dealing with Labour questions, and the federation with economic and commercial questions. As a result of the most careful consideration of the interim report, each organization within its own province reached the conclusion that it cannot accept the report. Throughout the consideration of the whole matter, however, the confederation and the federation have been conscious of the importance of doing everything in their power to promote industrial peace in British industry, and the invitation is made in the hope that further discussions will help to forward a better mutual understanding in industry generally."

Discussions relating to industrial peace were instituted through the efforts of Lord Melchett, formerly Sir Alfred Mond, for the purpose of devising means for avoiding such an industrial catastrophe as the general strike of 1926. A conference between a representative group of employers and the General Council of the Trades Union Conference was arranged, and discussions were begun early in 1928.

#### Canadian Act followed in Australia

The provisions of the new Conciliation and Arbitration Act passed by the Australian Parliament in June, 1928, are outlined in the February issue of the *International Labour Review* (Geneva), by Professor Foerander of Melbourne. He states that the Act, by introducing the principle of voluntary arbitration, makes an approach to the Canadian system (Industrial Disputes Investigation Act) and the American State Boards of Arbitration and Federal Railway Labour Board, and the systems in force in Denmark and Norway.

"Provision is made," he says, "by which employers or employees may submit any industrial matter to a judge of conciliation commissioner of their own choosing. In other words, there is made available the skilled ser-

\*Labour Gazette, April, 1928, page 381.

vice of an impartial arbitrator appointed by the Commonwealth. For this purpose a dispute need not necessarily exist, as it is not a question of invoking the court's jurisdiction. The result of such voluntary arbitration proceedings is not, however, enforceable in law, for the court's power, under the Constitution, begins only where there is a 'dispute'. The observance of a determination—it is to be known as a 'determination' to distinguish it from a binding award—will rest upon the honour and good faith of the parties concerned. This innovation—voluntary arbitration under the court's aegis but gratuitous in character—must be distinguished from the conciliation proceedings already known to the law, for conciliation, if fruitful in result, will be binding on the parties."

The new Act amends the Commonwealth Conciliation and Arbitration Act of 1904, under which a Federal Court of Conciliation and Arbitration was constituted "for the prevention and settlement of industrial disputes extending beyond the limits of any one state". The court attained a considerable measure of success, but in recent years its limited legal powers and the slowness of its procedure combined with external conditions to lessen its effectiveness and lead to dissatisfaction with its working.

**Plan to provide for dismissed employees** A plan to provide for 100 workers who had been dismissed in consequence of the introduction of labour-saving machinery was recently announced by Rowntree and Company, Limited, a British firm employing about 7,000 persons. The *Daily Herald* (London) described the procedure as follows:—

"Instead of employing the usual commercial practice of dismissing the men and leaving them to apply to the exchanges and the guardians, the firm has offered to contribute £2 a week in respect of every man for 12 months to anyone who will employ them at not less than 55s. a week with the prospect of permanency.

"An excellent opportunity, 'it is pointed out in the announcement,' for a company just starting to get its labour force for the first year at a nominal wage in a locality suitably situated for industries."

**Amendment to Technical Education Act** The following proposed amendment to the Technical Education Act, which expires March 31, 1929, is incorporated in a bill introduced in the House of Commons by the Hon. Peter Heenan, Minister of Labour, on

February 12. The bill was passed by the House on March 1, and is now before the Senate.

That the Technical Education Act be amended to provide that any balance of the ten million dollars appropriated under this Act unexpended on the 31st March, 1929, shall remain available during any one or more of the five succeeding fiscal years, but no portion thereof shall be paid to any province after the 31st March, 1934.

This amendment is in accord with the government's policy respecting grants to the provinces in connection with the promotion and development of technical education, as announced in the House of Commons by the Right Honourable W. L. Mackenzie King, Prime Minister, in April, 1928. This announcement appeared in the *LABOUR GAZETTE* of May, 1928, page 470.

**Proceedings of U.S. Railroad Mediation Board** The Board of Mediation established in the United States under the Railroad Labour Act of 1926 (*LABOUR GAZETTE*, May, 1926, page 423) recently published a report of its proceedings during the twelve months' period ending June 30, 1928. This Board handles disputes which the carriers and their employees have been unable to settle in conference. In such cases the Board endeavours to induce the parties to submit their controversy to arbitration. Arbitration boards are composed of three or of six members, as the parties may determine, one-third of the number shall represent the carriers, one-third the employees, and one-third being neutral. If the representatives of the carriers and employees fail to name the neutral member or members of the arbitration Board, it becomes the duty of the Board of Mediation to appoint such member or members.

Of the 265 cases submitted to the Board of Mediation during 1926-27, 154 cases remained unsettled on July 1, 1927. During the year ended June 30, 1928, the Board received 98 requests for its services in the adjustment of differences concerning rates of pay, rules, or working conditions, involving 21 railroad labour organizations and 176 carriers. Altogether the board settled 145 cases during the period covered by the report. Of these 145 cases 84 were settled through mediation, 14 cases were submitted to arbitration, 37 cases were withdrawn through mediation, 8 cases were withdrawn without mediation, and 2 cases were closed by board action. These cases related to rates of pay, rules or working conditions. In addition, the Board dealt with 120 grievances cases, involving the interest of employees as affected by the application of rules or of discipline.

### International co-operation in promoting public health

A report recently submitted to Congress by the United States Public Health Service states that during the past year there was a constant interchange of sanitary information with other nations of the world through the International Office of Public Hygiene of Paris, the Pan-American Sanitary Bureau, and the Health Section of the League of Nations. A noteworthy event of the year was the adoption by various nations, including the United States, of the International Sanitary Convention signed in Paris in June, 1926. This revised the Convention of 1912. The revised Convention makes important changes in the requirements for international notification of the presence of quarantinable diseases.

It is pointed out, that the necessity for cooperation among the nations of the world in preventing the spread of diseases dangerous to the public health has been more widely recognized during recent years than formerly. Experience has demonstrated that disease does not regard international boundaries, and the advance in the facilities for rapid transportation increases the danger of the introduction and spread of communicable diseases.

The past year was characterized by generally favourable death rates throughout the world, but any generalization as to the mortality rate for the world must allow for the fact that the rate of mortality varies widely in different countries.

### Factors in industrial accident statistics

The monthly bulletin issued by the Ohio Industrial Commission, in its February issue, calls attention to certain modifying considerations in connection with the apparent increase in industrial accidents in 1928 as compared with 1927. It is pointed out that the figures showing the trend of employment during 1928 indicated a greater exposure to the risk of accidents than existed in the preceding year. Further, the accident records now include many injuries of a minor character that were formerly omitted by reporting employers. Thus, last year's records actually show a large number of accidents which resulted in no loss whatever of working time. Allowance must be made also for the increasing number of claims for compensation which were disallowed by the commission. In addition to these facts, there was an increase in 1928 of approximately 2,000 risks to the state insurance fund, with their attendant effects upon the accident record.

Notwithstanding these circumstances tending to swell the total number of recorded accidents, the decline in 1928 as compared with 1926 shows that recent efforts in accident prevention have not been without a marked effect. On the other hand, the commission realizes that these efforts must be increased rather than relaxed, and now aims to secure a reduction of 25 per cent in the records of the current year, and all the energies and resources of the Division of Safety and Hygiene are to be directed to this end.

### Wage policy in Soviet Russia

At the Eighth Congress of Soviet Trade Unions recently held at Moscow, the General Council of Trade Unions submitted a report on wage policy. This is reproduced in part in *Industrial and Labour Information*, the weekly publication of the International Labour Office at Geneva. The question on wages was also discussed in the Economic Committee of the Congress. The General Council was of the opinion that, under the system of the dictatorship of the proletariat, wage policy should be based mainly on the principle of a strict correlation between wage increases and the actual economic condition of the country, taking account of the economic problems which confront the working class. The allocation of the wages fund by the state should be more careful and more methodical. (The allocation of wages by the States consists in fixing the inclusive amount of wages, including increases, for industry as a whole and for each branch of the industry. The fund is then distributed among the various undertakings, and scales of wages are drafted by means of collective agreements between the managements and the unions). It ought not, however, to be based solely on the principle of equal pay for equal work; it ought also to take account of the following four factors:—

(i) Increase in individual output and its causes, such as intensification of physical labour, rationalization, improvement in the equipment of undertakings;

(ii) the skill of the workers;

(iii) the dangers of the occupation and the influence of each industry on the health of the worker;

(iv) the relative importance of each industry for the general economic system.

The General Council admitted that though wages had increased by 20 to 21 per cent between 1926 and 1928, individual output had increased during the same period by 28 per cent; but it considered that a gap of this kind was necessary in order to allow industry

to raise the capital for the reconstruction of the economic system on a socialistic basis. For the same purpose it was necessary to strengthen the discipline of labour.

The General Council proposed to maintain the system of piecework wherever it was capable of increasing individual output. But where this method of payment had given as much as could be anticipated from it, and especially in undertakings, where labour had been properly rationalized and the process of manufacture had been mechanized, it would be necessary to substitute the hourly wage for the piece-work system, introducing at the same time a system of collective bonuses for work performed over and above the minimum standards of output laid down in the collective agreement. In regard to salaried employees, the Seventh Congress had recommended the adoption of a fixed scale of salaries corresponding to the various duties; this system was to be extended immediately.

#### Actuarial problems of unemployment insurance

A paper on "Some Actuarial Aspects of Unemployment Insurance" recently submitted to the Institute of Actuaries (Great Britain) by members of the Government Actuary's Department, pointed out that the present British figure of 1,400,000 persons unemployed each week does not represent a solid mass of people continuously unemployed. Many thousands of these people, he said, are working part-time for wages and getting benefit for the days on which they did not work; others have the promise of a return to their previous jobs in a week or two; and all the time there is a continual movement of persons, to a degree not generally realized, into and out of employment.

The periodic rise and fall in unemployment over short spans of years which was general before the war was disturbed by the post-war slump, the rate of unemployment having never fallen below 10 per cent, for any length of time since 1920. This high rate is mainly due to the depressed condition of the heavy industries, in which the rate reaches 25 to 30 per cent, or more. It is very little affected by the increased unemployment among older men; not until the age of 45 is reached is there any indication of a rise in unemployment due to age, and even then in the more skilled occupations employment may be as good as, or even better than, at the younger ages. The rate of unemployment is much lower among women than among men, but

this was mainly because they do not enter the heavy industries.

The difficult task of the actuary, it was stated, is not only to estimate how much of all this unemployment counts for benefit under the complicated conditions with which the insured person has to comply, but to attempt to forecast what the rate of unemployment is going to be in the future. At present there is no sign of a diminution in unemployment, but, quite apart from considerations of reviving trade, it may well be that in a few years' time there will actually be a shortage of labour when the fewer births which occurred during the war have led to a diminution in the population at the younger working ages.

#### Consumers' co-operative societies for western Canada

The *Canadian Co-operator*, the organ of the Co-operative Union of Canada, in its issue for January, announces that the "second phase" of co-operative distribution will be launched in Canada during 1929. "In Alberta and Saskatchewan," it is stated, "retail societies will commence to develop their own wholesales. If such enterprises can be soundly and steadily built from the bottom up, they will have a beneficial and stabilizing influence upon the whole movement, besides contributing to more rapid development through economies in price it will be possible to effect thereby."

The *Co-operator* points out that much greater and more practical interest was manifested last year in consumers' co-operation than hitherto. "Friendly attention thereto has been shown by officials of farmers' organizations who formerly were concerned for producers' co-operation only. More and more the people are beginning to realize that organization as producers—whether in farmers' marketing societies or in trade unions of the working class—is incomplete, and to a considerable extent ineffective, without co-operative organization also as consumers."

#### Scientific research in United States

The activities of the United States Bureau of Standards during the last fiscal year are described in the 16th annual report of the Secretary of Commerce. Leaders of industry continued during this period to avail themselves in an increasing measure of the facilities provided by the government for co-operation in scientific research. Some 200 industrial organizations now have working relations with the Bureau, and nearly one thousand industrial experts are called into consultation.

One phase of the work of the Bureau of Standards has a direct bearing on the welfare of industrial workers. "As our population grows," the report states, "and as our means of locomotion increase in variety and speed, and as the number of persons engaged in hazardous occupations and pursuits increases, we are confronted in increasing magnitude with the problem of safety and protection to human life. Through educational and legislative measures, through extension of compensation insurance into areas not now reached by it, and by quickened public interest in the wisdom and value of such effort will we accomplish the reduction of our annual fatalities. It has been well demonstrated that a large percentage of these are avoidable, and because of that fact we should assume a greater personal and national responsibility toward their prevention."

Accordingly, the Department of Commerce, through its Bureau of Standards, is co-operating continually with the various bodies concerned in the development, promulgation, publication, and revision of safety codes. Among the latter are the national safety code for the protection of heads and eyes of industrial workers, the American logging and sawmill safety code, the national electrical safety code, safety rules for installation and maintenance of electrical supply and communication lines. To this list must be added, because of the newness of the hazard, safety rules for radio installation.

The report points out that other codes need to be developed for fields still uncovered in this respect, and current efforts to complete codes for fields partially covered need to be encouraged and supported. "A responsibility which cannot be evaded rests upon industrial managers to make safety a major interest and a continuing care."

Investigations designed to bring about safer and more healthful working conditions in the mineral industries have been extended. Among the more important of these mine-safety studies are those concerned with the prevention of mine explosions—the reduction of heavy loss of life from falls of mine roof and coal, the elimination of hazards from the use of unsafe types of explosives and mechanical equipment, the improvement of ventilation conditions in mines, and the instruction of thousands of miners in first-aid and mine-rescue methods.

A new workmen's club was organized at Montreal recently under the title of Prefontaine Labourers' Club. It is composed entirely of workmen and has already over 200 members. A lecture on some topic of interest to labour is given at the regular meetings. At the last meeting Mr. R. N. Sequin, the founder of the club, gave a history of workmen's compensations in the province from its earliest stage as it existed under the Civil Code in 1867, tracing its progress under the act of 1909, down to the enactment of the law of 1928. The subject of the next lecture will be "Mental hygiene."

Delegates at a recent meeting, of the Central Council of the National Catholic Union at Quebec alleged that one of the effects of the new provincial Workmen's Compensation Act was to cause employing companies to require their workmen to submit to a medical examination, and to weed out those considered to be unfit, and also the fathers of large families. The principle of collective insurance was advocated as a remedy for this condition.

The draft report of the general Secretary of the All-India Trade Union Congress for the past year, printed in the *Bulletin* for December, states that "during the year under report the Indian Mines Act Amendment Bill became law and will come into operation from April 1, 1929. It fixes a maximum of 12 hours daily work for a miner. Mr. Joshi tried to secure the reduction of the hours to 8, and failing that attempt, to 10 hours. But he did not succeed, as both the amendments were negatived by a large majority. It will be the duty of organized labour to see that the excessive number of hours is very soon reduced."

The value of practical training in first-aid work, especially to men engaged in the mechanical trades, was emphasized by Professor Corbett, director of the Department of extension at the University of Alberta and honorary secretary of the St. John Ambulance Association when he recently addressed a special meeting of students at the Institute of Technology and art. At the conclusion of the address, J. H. Ross, vice-principal of the Institute said that arrangements were being made to hold first aid classes at the school. At present the classes will only be open to students attending the institute, but it is thought that later it may be possible to offer the service to outsiders.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation throughout Canada at the end of February was reported by Superintendents of the Employment Service of Canada to be as follows:

Recent snow falls had so improved the logging roads in the Province of Nova Scotia that lumber operators were moving out of the woods timber cut during the winter. Activity in the fishing industry was normal, with fair catches reported. Manufacturing plants were fairly busy with the iron and steel group reported as in fairly satisfactory circumstances. While considerable work in the construction industry was being carried forward on the Mersey River pulp and paper plant project and in the City of Halifax, very little building was being done in other districts. Coal mining showed a fair amount of activity, with satisfactory production for the season being recorded. Rail traffic was heavy, while the trade group was stated to be fair for the time of year. There was the usual demand reported at the different offices for women domestic workers.

Fishing catches in the Province of New Brunswick were stated to be quite good. Although logging operations for the season were gradually drawing to a close throughout this province after a satisfactory cut, the snow fall had increased activity in many districts as it had made possible the usual late winter log haul. Manufacturing was commented upon as being normal. Building and construction were opening up to a small extent while the prospects for the forthcoming season were said to be good. Transportation and trade were both quite active. The usual number of placements of women domestic workers were shown by the different offices.

As might be expected at the time of year, the Quebec employment offices reported having made very few farm placements. Hauling of logs was about the only activity in the logging group in this province, and, while some placements were being made, they were not numerous. The mining industry was quiet. In the manufacturing group textiles showed a slight improvement; metals were busy; leather and rubber were not quite so busy, printing industries were active, and pulp and paper, particularly at Three Rivers, showed improvement. While the prospects in the building and construction industry were good, this line was seasonally slack, and while placements were being made they were not

particularly numerous. Some orders were being received in the hotel and restaurant service group. A number of domestic workers were being placed.

With the approach of spring, enquiries and orders for farm help were reported as showing considerable increase at the different employment offices throughout Ontario. The manufacturing group was stated to be "eminently satisfactory", generally speaking, throughout the province, with the automobile industry showing great activity in Toronto, Oshawa, and Windsor. Machinists and skilled mechanics were very much in demand at different centres in the province, and a real shortage of such workers seemed apparent. Although an exceptionally good building season was in prospect, there was not a great deal of activity in the construction industry at the present time. Owing to the approach of the completion of the winter's work in the woods, the logging industry showed some falling off in the number of vacancies notified to the offices. While mines continued to operate steadily, and while the outlook for the coming summer was promising, there was no particular demand for workers for this industry. Calls for experienced house workers again showed the normal excess over the available supply.

Manitoba employment offices reported that there was a satisfactory increase in the number of orders being listed for farm workers by the month, but apparently the available supply of applicants was at least sufficient to care for all vacancies being notified. With considerable development in view in the northern part of the province, and with substantial programs in sight in Brandon, and more particularly in Winnipeg, the prospects in the building and construction group were excellent, although work presently in hand was not absorbing any number of additional workers as yet. The number of vacancies for workers in the logging industry was not very large. Mining activity in the north and central portions of the province continued to attract attention with some new finds being reported from time to time. Available vacancies for casual labourers were not numerous in comparison with the number of applicants to fill them. There seemed to be increased activity in the direction of placements of women domestic workers without any noticeable shortage of applicants yet reported.

An increase in orders for farm workers was a general feature of the employment office

reports from Saskatchewan, but the number of applicants for such positions was likewise on the increase, with the result that there was no difficulty experienced in supplying require-

ments. Building and construction were seasonally quiet throughout this province. A few logging placements were being made from Prince Albert. Generally speaking, the sup-

(11) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debts. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep, and hogs; storage holdings of butter and cheese.

ply of and demand for women domestic workers seemed to be about equal. While the employment situation in this province from the point of view of the employment office was somewhat dormant, general employment conditions seemed to be quite favourable for the time of year.

As in Saskatchewan, the demand for farm workers in the Province of Alberta was increasing, with plenty of applicants so far to take care of orders being registered. Building and construction were fairly brisk for the winter season, and prospects for the spring were encouraging. There was a fair demand for logging workers, with some placements reported. A decrease in mining operations was evident in the coal mining fields, and some of the mines in the Drumheller districts were laying off their crews. The usual demand for women domestic workers continued, without any feature of the situation appearing worthy of special comment.

Logging in the Province of British Columbia appeared to vary considerably from point to point with respect to the employment condition, though improvement was reported from a few districts. Metal mining continued active, but there were no demands for help. Coal mining in the Nanaimo district was active. Improvement was reported in the building and construction industries, particularly in Vancouver, although applicants for vacancies developing were reported as being plentiful. Manufacturing indicated greater activity, although here again applicants were quite sufficient to care for vacancies. Generally speaking, conditions throughout this province were not disappointing for the time of year, and there did not appear to be any exceptional unemployment.

Though still affected to some extent by inventory shut-downs, and more so, by continual seasonal slackness in the out-of-door industries, employment at the beginning of February showed an increase exceeding that of the corresponding date in 1928 or 1927. The Dominion Bureau of Statistics tabulated returns from 6,391 firms, whose staffs aggregated 933,943 persons, as compared with 921,404 on January 1. Reflecting this advance, the index (average 1926=100) stood at 110.5 at the beginning of February, while in the preceding month it was 109.1 and on February 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 102.0, 96.6, 91.8, 87.1, 91.7, 90.6, 79.9 and 91.2, respectively.

Reductions were recorded in the Prairie Provinces and British Columbia, while else-

where the tendency was upward. In the Maritime Provinces, construction and trade reported a falling-off, while mining, logging and transportation were brisker. In Quebec, manufacturing, especially of iron and steel, pulp and paper, textiles, lumber and tobacco products showed much improvement, as did also logging. On the other hand, transportation and construction recorded pronounced seasonal curtailment. In Ontario, important gains were made in manufacturing, notably in the iron and steel, textile, lumber, non-ferrous metal, leather and pulp and paper divisions. Logging also reported heightened activity, while there were seasonal reductions in trade and construction. In the Prairie Provinces, manufacturing and logging were more active, but shrinkage was recorded in trade, construction, transportation and communications. The situation, however, continued better than on the same date in any other year of the record. In British Columbia, there was recovery in mining, but logging, construction and transportation were slacker.

The trend of employment was upward in Montreal, Toronto, Hamilton, Ottawa, Windsor and the adjacent Border Cities, while Quebec, Winnipeg and Vancouver showed reductions. In Montreal, manufactures registered substantial recovery, especially in the iron and steel, tobacco, textile and building material groups, but there were marked seasonal losses in transportation and construction. In Quebec, manufactures reported improvement, while trade and construction were seasonally slacker. In Toronto, heavy seasonal decreases took place in trade, but there were greater gains in manufacturing, notably in textiles and iron and steel. In Ottawa, manufacturing was busier, especially in the pulp and paper and iron and steel divisions, while trade was seasonally quiet. In Hamilton, the situation showed decided improvement, particularly in the manufacture of iron and steel products, but textiles registered curtailment. In Windsor and the other adjacent Border Cities, important recovery was indicated, chiefly in automobile plants. In Winnipeg, the number employed showed a contraction, mainly in trade, but manufactures were somewhat busier. In Vancouver, the manufacturing industries reported slight expansion, while trade and transportation were seasonally slacker.

An analysis of the return by industries shows a marked revival in manufacturing, notably in the iron and steel, textile, lumber, pulp and paper, leather, non-ferrous metal and tobacco divisions, while there were losses in food, rubber and musical instrument fac-

tories. Logging and mining also showed improvement, but activity declined in communications, transportation, construction and maintenance and trade, the losses in the last named being extensive, as is usual following the activity of the Christmas and holiday season.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of February, 1929.

TRADE  
UNION  
REPORTS

The situation existing among local trade unions at the close of January as was indicated by the returns received from 1,697 labour organiza-

tions with a membership of 188,152 persons showed little change from that of the preceding month, the percentage of unemployment standing at 6.3 contrasted with 6.6 per cent at the close of December. The employment level also varied but slightly from January of last year when 6.8 per cent of idleness was reported. Quebec, with a gain in activity of almost 3 per cent, registered the most pronounced expansion of any of the provinces when compared with December, followed by minor increases in Alberta and Nova Scotia. In all other provinces conditions were somewhat less favourable. When a comparison is made with January of last year, Nova Scotia, Ontario and British Columbia unions all indicated advances in employment during the month under review. In Quebec the same percentage of idleness was reported in both months of the comparison, while of the reductions in activity in the remaining provinces Manitoba reported the most substantial.

A review in greater detail of unemployment at the close of January as indicated by trade unions is printed elsewhere in this issue.

EMPLOYMENT  
OFFICE  
REPORTS

Reports of the Employment Service of Canada for the month of January, 1929, showed 24,238 references of persons to positions, and a

total of 22,800 placements. Of these, the placements in regular employment were 13,738, of which 10,058 were of men and 3,680 of women, while placements in casual employment totalled 9,062. Vacancies offered by employers to the Service numbered 24,865. Of these 15,360 were for men and 9,505 for women, while applications for employment were registered from 26,685 men and 11,643 women, a total of 38,328. A slight gain was shown in the business transacted when the above figures were compared both with those of the preceding month and with those of January last year, the reports for December, 1928, showing 23,708 vacancies offered, 31,926

applications made, and 22,529 placements effected, while in January, 1928, there were recorded 22,864 vacancies, 36,734 applications for work, and 20,959 placements in regular and casual employment. A report in detail of the work of the offices for the month of January, 1929, will be found elsewhere in this issue.

BUILDING  
PERMITS AND  
CONTRACTS  
AWARDED

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities (Point Grey and South Vancouver now being amalgamated with the city of Vancouver) during January, 1929, was \$8,364,670, as compared with \$16,742,139 in the preceding month and \$7,716,587 in January, 1928.

The *MacLean Building Review* estimates the total value of the construction contracts awarded in Canada in February, 1929, at \$28,425,800, setting a new record for this month. Of this amount \$10,352,800 was for business buildings; \$7,973,000 was for industrial work, and \$5,392,300 was for residential buildings.

The apportionment of the contracts awarded during February, 1929, by provinces, was as follows: Ontario, \$10,136,800; Quebec, \$12,355,800; New Brunswick, \$212,000; Nova Scotia, \$391,000; Prince Edward Island —; British Columbia, \$3,220,200; Alberta, \$1,190,500; Saskatchewan, \$281,300; Manitoba, \$638,200.

Production and Trade

INDUSTRIAL  
PRODUCTION.

The Dominion Bureau of Statistics, from current information regarding business conditions in Canada, states that operations in January exceeded the high levels of 1928. Indexes of the physical volume of business, published in the *Monthly Review of Business Statistics*, show that new records were established in some lines, the general result being a higher level than at any time during the period of observation covering the post-war period. The output of forestry products continued at a satisfactory level, a moderate gain being shown over December. The receipts of gold at the Royal Mint were larger than in any month in 1928, and the exports of copper and nickel showed further expansion. The automobile industry was busier in January than in any month since last August, even after adjustment for seasonal tendencies. Judged by the output of iron and steel, the steel industry operated at a high rate of capacity. The importation of crude rubber indicates that the tire industry is making preparations for an active season.

The award of three specially large contracts raised the volume of construction work commenced during January to the highest total on record for the month. The external trade was at a high level, gains being shown over December in both exports and imports after adjustment for seasonal tendencies. Bank debits, placed on a physical volume basis by an adjustment to eliminate the price factor and adjusted for seasonal tendencies, reached the highest total since the record was first compiled in January, 1924.

#### EXTERNAL TRADE.

A summary of Canadian trade prepared by the Department of National Revenue shows that in January, 1929, the merchandise entered for consumption amounted to \$96,959,301, as compared with \$94,620,925 in the preceding month, and with \$79,506,417 in January, 1928. The chief imports in January, 1929, were: Iron and its products, \$23,593,399; Fibres, textiles and textile products, \$19,709,808; Non-metallic minerals and products \$11,896,680.

The domestic merchandise exported during January, 1929, amounted to \$94,942,041, as compared with \$130,847,423, in December, 1928, and with \$82,564,479 in January, 1928. The chief exports in January, 1929, were: Agricultural and vegetable products, mainly foods, \$30,844,782; Wood, wood products and paper, \$21,908,357; animals and animal products, \$12,424,008.

In the ten months ending January, 1928, exports of domestic merchandise totalled \$1,033,309,218, and imports \$1,166,589,205.

#### Strikes and Lockouts

The time loss due to industrial disputes in February, 1929, was about five times as large as in January, almost twice as many workpeople being involved. The time loss in man working days was also much greater than in February, 1928. There were in existence during the month nine disputes, involving 1,480 workpeople, and resulting in a time loss of 28,946 working days, as compared with eight disputes, involving 754 workpeople, and resulting in a time loss of 5,724 working days in January. In February, 1928, there were on record ten disputes involving 889 workpeople and resulting in a time loss of 5,853 working days. At the end of February, therefore, there were on record four disputes affecting 975 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

#### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was slightly lower at \$11.15 at the beginning of February, as compared with \$11.30 for January; \$11.03 for February, 1928; \$11.23 for February, 1927; \$11.50 for February, 1926; \$10.93 for February, 1925; \$10.75 for February, 1924; \$10.53 for February, 1923; \$10.61 for February, 1922; \$14.08 for February, 1921; \$16.92 for June, 1920 (the peak); \$12.54 for February, 1918; and \$7.75 for February, 1914. The decline was due mainly to a seasonal fall in the price of eggs, while slight decreases occurred in the prices of bacon, dairy butter and flour. The prices of beef, veal, mutton, fresh pork, lard, beans, potatoes and granulated sugar were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$21.41 at the beginning of February, as compared with \$21.55 for January; \$21.25 for February, 1928; \$21.46 for February, 1927; \$21.87 for February, 1926; \$21.19 for February, 1925; \$21.18 for February, 1924; \$21.17 for February, 1923; \$21.07 for February, 1922; \$24.85 for February, 1921; \$26.92 for July, 1920 (the peak); \$19.80 for February, 1918; and \$14.54 for February, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was somewhat higher being 95.7 for February, as compared with 94.5 for January; 96.8 for February, 1928; 97.6 for February, 1927; 102.1 for February, 1926; In the grouping according to chief component materials four of the eight main groups were higher, one was lower and three were unchanged. The groups which advanced were: the Vegetables and their Products group, due mainly to higher prices for grains, flour and other milled products, apples, bananas, tea, rubber, linseed oil and canned vegetables; the Animals and their Products group, due to higher prices for furs, meats, poultry, butter, cheese and eggs, which more than offset lower prices for fish, hides, leather, livestock, milk and lard; the Wood, Wood Products and Paper group, due chiefly to higher prices for some lines of lumber; and the Non-Ferrous Metals group, because of advances in the prices of copper, lead, tin and zinc, which more than offset declines in the prices of silver and antimony. The Non-Metallic Minerals group declined, mainly because of lower prices for gasoline and kerosene. The Fibres, Textiles and Textile Products group, the Iron and its Products group, and the Chemicals and Allied Products group were practically unchanged.

**STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1929**

THE number of strikes and lockouts in existence in Canada during February was nine, as compared with eight during the previous month. The time loss for the month was much greater than in either January, 1929, or February, 1928, the increase being due chiefly to a strike of textile workers in Hamilton.

and shoe factory workers, Toronto, Ont., August 13, 1928.

Information has reached the Department as to two minor disputes also, one involving five employees in a women's clothing factory in Montreal for one half day on February 7, the strikers securing an increase in wages and working conditions as before the stoppage. The second dispute of this nature involved bricklayers, four in number, on a construction job in Toronto, who ceased work on February 22, complaining that the scaffolding was such that working conditions were dangerous and claiming that a previous protest had been ignored. Work was resumed within four hours when these conditions were remedied. In a cotton factory at Hamilton, during a strike in another factory, a small number of spinners ceased work for a short time but returned to work with a promise of an increase in wages.

A cessation of operations in a coal mine near Princeton, B.C. on January 9 was reported in the press, fifty miners having ceased work because their wages had not been paid on the previous pay day. Information received by the Department indicates that this was due to financial difficulties and not to an industrial dispute. It was arranged to have the wages paid and the miners returned to work with arrangements for operations in future. Information reached the Department during February as to a dispute during January involving fifteen employees from January 15 to January 23 in a men's clothing factory in Montreal, protesting against an attempt of the management to operate an open shop. Work was resumed under union conditions.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

**TIE CUTTERS, ONION LAKE, ONT.**—At the end of the month no settlement had yet been reached in this dispute, commencing January 28, 1929, and involving approximately 200 workers. The union claimed that the employer was paying lower wages than in other camps in the district and that some men on piece rates were making only \$2 per day, out of which they had to pay \$1 per day for board. The strikers demanded \$50 per month for men on time rates and 15 cents per tie for men on piece rates. In negotiations for a settlement the employer is reported to have offered to increase the piece rate from 12½ cents per tie to 14 cents and the monthly rate to \$35 with board. The employer asked for

Date	Number of disputes	Number of employees involved	Time loss in working days
Feb., 1929.....	9	1,480	28,946
Jan., 1929.....	8	754	5,724
Feb., 1928.....	10	889	5,853

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eight disputes, involving 1,330 workpeople, were carried over from January and one dispute commenced during February. Five of these disputes terminated during the month, two being in favour of the employer, one in favour of the workers, and two resulting in a compromise. At the end of February, therefore, there were on record four disputes involving strikes or lockouts, as follows: tie cutters, Onion Lake, Ont.; textile factory workers, Hamilton, Ont.; photo engravers, Toronto, Ont.; and plumbers at Kingston, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Information is available as to six such disputes, namely: electrotypers, Toronto, Ont., Dec. 20, 1926; bakers, Montreal, P.Q., May 1, 1927; stoncutters, Montreal, P.Q., June 10, 1927; sheet metal workers, Montreal, P.Q., September 21, 1927; fur workers, Toronto, Ont., April 10, 1928,

police protection, alleging that he had been threatened and that his employees had been interfered with by union pickets. The provincial police investigated the matter and warned the pickets against disorderly conduct. Early in March it was reported that the strikers had accepted the employer's offer.

**COAL MINERS, WAYNE, ALTA.**—By the end of February this strike was reported terminated. As reported in the February issue of the *LABOUR GAZETTE* two of the operators involved signed agreements with the Mine Workers' Union of Canada, one on February 4 and the other on February 18, the settlement providing for payment per ton on a screened coal basis with an increase of 4 cents per ton to offset the loss on the screenings as recommended by the Board of Conciliation and Investigation established under the Industrial Disputes Investigation Act, 1907 (*LABOUR GAZETTE*, August, 1928, pages 827-832), but also provided for recognition of the union, which the Board had not recommended in its report but had suggested to the operators during the hearings. One other operator involved in the strike, and one operator not involved, had previously signed such agreements with the Union. The two remaining operators involved in the strike are reported to have signed agreements about the end of February with the United Mine Workers of America providing for the wages and working conditions recommended by the Conciliation Board. One of these companies had previously signed an agreement with a committee of employees but secured only a small number of workers under such agreement.

**MEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.**—During the progress of this strike, which began on August 21, 1928, the workers involved have from time to time secured work elsewhere and at the end of the month the dispute appeared to have lapsed.

**CLOTHING FACTORY WORKERS, TORONTO, ONT.**—Information has reached the Department that by the middle of February a number of workers on strike had returned to work and the dispute was terminated.

**TEXTILE FACTORY WORKERS, HAMILTON, ONT.**—As stated in the February issue of the *LABOUR GAZETTE* the employees in the spinning department of a cotton factory ceased work on January 30 against the introduction of changes in methods of work, alleging that this would involve the dismissal of some of the employees. The complaints were also against the arrangements by which each spinner attended to more machines than formerly, and against cleaning being required

to be done while the machines were in operation, although a provincial inspector had forbidden it. The management denied the latter statement and stated that the new methods were in force in other cotton factories and were necessary for efficient operation under competitive conditions. At the request of the Trades and Labour Council of Hamilton conciliation officers of the Department of Labour proceeded to Hamilton and arranged conferences between the parties. Officers of the United Textile Workers of America came to Hamilton and organized the workers into a local of that union. Negotiations between the parties were carried on from time to time but did not result in a settlement. The employees suggested that the case be referred to a Board under the Industrial Disputes Investigation Act, 1907, but as the employer refused no proceedings were initiated. The management had opened the factory on each Monday but the workers in other departments did not return to work, being on strike in sympathy with the spinning department. In connection with picketing, two pickets were arrested on a charge of intimidation and were remanded for trial on March 7. On February 18 a number of employees resumed work and by the end of the month about 300 had returned. Early in March the dispute was called off and the management undertook to take on all strikers without discrimination whenever there were places for them.

**PHOTO ENGRAVERS, TORONTO, ONT.**—In this dispute the photo engravers, members of the union, had been dismissed and replaced with workers who had been brought from Europe, and the employer announced that the plant would be operated under open shop conditions. Through the Minister of Labour and officers of the Department negotiations were carried on between the employer and the union until early in March when a settlement was reached. The employer undertook to take back all former employees who had not secured positions elsewhere or who did not secure permanent positions in Toronto within a week at the same wages and conditions as prior to their dismissal. The employer also agreed to secure any additional staff required through the union.

**PHOTO ENGRAVERS, VANCOUVER, B.C.**—In the February issue of the *LABOUR GAZETTE* it was stated that employes in a number of establishments had ceased work on January 28 to secure shorter hours and increased wages. Work was resumed on January 29. An agreement was reached providing for the forty-hour week during July and August in 1929, this period increasing each year until the

sixth year when the forty-hour week would prevail for the full year. The rate of wages was increased from \$55 per week to \$57.50 during 1929, increasing each year to \$63 per week in the fifth year. The union reports that the workers were not called out on strike, but that a special meeting was held that day to ratify any settlement reached between the employer and the agreement committee. This action was taken because the previous agreement had expired on December 3, and anyone who wished was free to work.

**MEN'S CLOTHING FACTORY WORKERS, HAMILTON, ONT.**—Employees in a men's clothing factory ceased work on February 20, demanding recognition of the union and union wages and working conditions. On February 27 a settlement had been reached providing for these conditions which involved a ten per cent increase in wages and forty-four hours per week, time and one-half for overtime and arbitration of any disputes arising.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1929

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts Occurring prior to February, 1929.</b>			
LOGGING— Tie cutters, Onion Lake, Ont..	200	4,500	Commenced Jan. 28, 1929, for increase in piece rates and in the monthly rate. Unterminated.
MINING— Non-ferrous Smelting and Quarrying— Coal miners, Wayne, Alberta..	300	7,500	Commenced Aug. 13, 1928, for recognition of union and against payment per ton on a screened basis with an increase of 4c. per ton. Terminated Feb. 28, 1929. Partially successful.
MANUFACTURING— Clothing (including knitted goods): Men's clothing factory workers Toronto, Ont.....	6	30	Commenced Aug. 21, 1928, against alleged violation of agreement for employment of union members only. Lapsed during February, 1929.
Clothing factory workers, Toronto, Ont.....	24	200	Alleged lockout, commencing Nov. 28, 1928, for union agreement. Terminated Feb. 15, 1929, in favour of employer.
Textiles— Textile factory workers, Hamilton, Ont.....	750	15,000	Commenced Jan. 30, 1929, against changes in working conditions, involving reduction of staff. Unterminated.
Printing and Publishing— Photo-engravers, Toronto, Ont.	41	500	Alleged lockout, commenced Jan. 7, 1929, of union employees. Unterminated.
Photo-engravers, Vancouver, B.C.....			Commenced Jan. 28, 1929, for increase in wages and shorter hours. Terminated Jan. 29, 1929. Compromise.
CONSTRUCTION— Buildings and Structures— Plumbers, Kingston, Ont.....	9	216	Commenced April 2, 1928, for increase in wages. Unterminated.
<b>(b) Strikes and Lockouts Occurring during February, 1929.</b>			
MANUFACTURING— Clothing (including knitted goods)— Men's clothing factory workers, Hamilton, Ont.....	150	1,000	Commenced Feb. 20, 1929, for union wages and working conditions. Terminated Feb. 27, 1929, in favour of workers.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1929, in the review of Strikes and Lockouts in Canada and Other Countries in 1928. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

### Great Britain

The number of disputes which began during January was 21, and 7 were still in progress from the previous month, making a total of 28 disputes in progress in January, involving 9,700 workpeople and resulting in a time loss of 97,000 working days. Of the 21 disputes beginning in January, 3 arose out of a proposed reduction in wages, 8 on other wage questions, one on a question of working hours, 5 on questions respecting the employment of particular classes or persons, and 4 on other questions. Settlements were reached in 17 disputes, of which one was in favour of workpeople, 9 in favour of employers and 7 ended in compromise; in two other disputes, work was resumed pending negotiations.

During January, a dispute occurred in various centres in Scotland and England involving 3,000 moulders and other workpeople. This dispute began on January 1, against a proposed reduction in the wage bonus, and terminated February 4, on the understanding that the reduction would take effect in two installments and that wages would be stabilised until the end of the year. Another dispute involving 1,500 workers in the wrought iron manufacturing industry in Lanarkshire, Scotland, began on January 28, against a proposed reduction in wages. No settlement had been reported at the end of the month.

### France

A strike of 8,000 coal miners in the Loire coal region began on December 31, 1928, for an increase in wages. Work was generally resumed January 16, after large numbers of workers had already returned to work.

### Germany

About the middle of January a strike began in some of the weaving mills of the weaving industry of Saxony-Thuringia; the demand of the strikers was for increases in wages. Following this strike, the employers declared a lockout covering the whole district and involving from 35,000 to 40,000 workers. No settlement of this dispute has been reported.

### Australia

During February several thousand timber workers became involved in a dispute when they refused to accept the award of the Arbitration Court substituting a 48-hour week for a 44-hour week in this industry.

### United States

The number of disputes which began during December was 22 and 42 were still in effect at the end of the month. With 45 disputes carried over from November the total number of disputes in progress was therefore 67, involving 39,713 workers and resulting in time loss of 1,016,427 working days for the month.

The strike of dressmakers in New York City which was reported in the last number of the LABOUR GAZETTE continued during February, no general settlement having been reached at the end of the month. A number of demonstrations took place and a number of arrests were made when strikers refused to disband.

The Ontario Government has been invited by the Agriculture committee to consider the question of making advances of \$1,500 or \$2,000 to graduate students of the Ontario Agricultural College for the purpose of enabling them to enter upon farm work immediately on graduation. Dr. A. J. Christie, the president of the college, pointed out that many men leaving college were unable to begin active farming at once.

"The weakest point of our agriculture college system is we haven't any way of looking after our graduate students." Dr. Christie said. "Most students who go through the college have to borrow money to complete their education. When they graduate they are in debt. On top of that, each graduate needs \$1,500 or \$2,000 to start farming. Contrary to the opinion held by some, most of our students do go back to the farm."

## REPLIES OF PROVINCES ON UNEMPLOYMENT INSURANCE

IT will be recalled that the House of Commons, on June 6, 1928, adopted a report presented by the Select Standing Committee on Industrial and International Relations, accepting and endorsing the principle of unemployment insurance based on compulsory contributions derived from the State, the employer and the employee. The committee recognized that such legislation was primarily within the competency of the provincial legislatures, but that it would be within the power of the Parliament of the Dominion to further provincial legislation by means of contributions or grants. They recommended therefore that the matter should be referred to the several provinces, in order to ascertain which of them would be prepared to consider the question of adopting legislation of this character. Accordingly, the Minister of Labour addressed letters to the provincial governments during the parliamentary recess, enclosing copies of the Committee's report, and inviting an expression of the views of each government on the proposals contained therein. The replies of the provincial governments were as follows:—

*Nova Scotia.*—The Hon. E. N. Rhodes, premier of Nova Scotia, said:—

"The whole subject matter will have to be studied with great care by the Government, and for that purpose we will await the printed report of the minutes of proceedings and evidence. Meantime I have to point out that while the Government is sympathetic toward all modern measures of similar character which have for their object the betterment of living conditions, the limiting factor in the Province of Nova Scotia is that of finance. For practically fifteen years this province has not had a balanced budget, and before we can take up the subject matter of industrial and international relations we are immediately confronted with a very heavy obligation which would arise with the adoption of the Old Age Pension system."

*New Brunswick.*—The Hon. J. A. Baxter, premier of New Brunswick said:—

"Your letter of 31 ult. received with reference to insurance against unemployment, sickness and invalidity. Of course, I recognize the desirability of some such provisions as these, but I think you will understand that, faced with the question of Old Age pensions and what I regret to say seems to be the probable withdrawal by your government of the assistance to technical education, it is utterly

impossible for a province with such limited means as New Brunswick to consider, at all, the subject about which you write. These things are simply matters of financial ability to do things, and when we have not got the money we cannot, and should not, undertake the responsibility."

*Quebec.*—The Hon. A. Galipeault, Minister of Public Works and Labour, Quebec, said:—

"I duly received yours of the 31st ult. drawing my attention to the report of the Select Standing Committee on Industrial and International Relations with respect to Insurance against Unemployment, Sickness and Invalidity, adopted by the House of Commons on June 6th, last, and wish to state, in answer, that it will be duly submitted to the attention of my colleagues of the Cabinet."

*British Columbia.*—In a letter dated August 6, 1928, the Hon. A. M. Manson, retiring Minister of Labour of British Columbia, wrote:—

"This matter is one of very considerable importance and in view of the fact that the present Government of the Province will be retiring from office within a few days I feel that any expression of governmental opinion in so far as this Province is concerned should be made by the new Government rather than by the outgoing one. Constitutional points are involved which are important in themselves and the policy to be pursued is a vital one to a large number of people. I shall therefore leave your letter with my Deputy in order that he may bring it to the attention of the incoming minister upon his taking office."

Subsequently a letter dated September 25, 1928, from the Hon. W. A. Mackenzie, the incoming Minister of Labour, was received as follows:—

"As the Government of the day has not given consideration to the question of unemployment insurance I would be glad to accept your kind offer to furnish me with a report of the minutes of proceedings and evidence laid before the Select Standing Committee of the House of Commons on Industrial Relations with respect to insurance against unemployment, sickness and invalidity; also the report that was adopted by the House on June 6th last. At the present time I have no views to offer on the report of the Committee."

*Manitoba.*—The Hon. W. J. Major, Attorney General of Manitoba, replied as follows:—

"I have the letter written by you to the Premier under date of 31st July last, and also

copy of the report of the Select Standing Committee on Industrial and International Relations. This report covers particularly the item of unemployment insurance, and I note that the committee experienced great difficulty in arriving at any definite conclusion owing to the lack of data as to amount of unemployment either constant or occasional character. While the committee accepts and endorses the principle of unemployment insurance, based on compulsory contributions from the state, the employer and the employee, it recommended to Parliament that the question be again referred to the committee at the next session.

"I presume the suggestion of the Committee, that the Government obtain from Great Britain expert advice on the subject, has been followed and much additional evidence will be before the Committee when they reconsider the matter.

"While we have not in this province given serious consideration to unemployment insurance we had a special committee examine into and report on the unemployment situation. A copy of this report is enclosed for your information.\*

I cannot at this moment give expression to any positive views on adoption of the unemployment insurance plan in this province. The matter is one to which very serious consideration will have to be given before coming to any definite conclusion and personally I think it wise to wait until the matter has received more complete attention by the Industrial and International Relations Committee. I shall welcome any additional material that you may be able to supply."

*Ontario.*—The Hon. Dr. Forbes Godfrey, Minister of Health and Labour of Ontario, wrote as follows:—

"I received your letter of the 31st ult. in which you direct my attention to the report of the Select Standing Committee on Industrial and International Relations.

"On looking over this report I find that it deals almost exclusively with the question of unemployment insurance. The question of unemployment insurance in Canada is one that has not received a great deal of attention in this country because it has been felt that employment conditions in conjunction with public opinion did not warrant any action being taken on it. The report points out that the question of unemployment in-

insurance is primarily a provincial responsibility. There may be a divergence of opinion regarding this aspect of the matter, but the fact is that provincial governments have not as yet made any decided pronouncement on the question of unemployment insurance.

"I am anxious that every consideration be given to the conclusions arrived at by the Select Standing Committee on Industrial and International relations, and will be glad to direct the attention of the Ontario Government to the subject matter of this report.

"It seems to me however that before anything tangible is accomplished in the matter of unemployment insurance, it will be necessary for the representatives of Provincial Governments to meet in conference and give this question their most serious consideration. It is probable that at some future date such a meeting will take place, and the merits or otherwise of having unemployment insurance and other forms of social insurance made applicable in the respective provinces, carefully gone over.

"I shall look forward to receiving the published report of the minutes of proceedings and evidence to which your letter refers and will peruse same with very great interest."

*Alberta and Saskatchewan.*—Letters were received from the secretaries of the premiers of Alberta and Saskatchewan acknowledging receipt of the communications sent by the federal Minister of Labour.

The finance committee of Vancouver City Council have approved a proposal made by the Amalgamated Association of Street and Electric Railway Employees that the British Columbia Superannuation Act should be amended to provide that the establishment of a pension fund should be obligatory on public utility companies on the petition of a certain percentage of the employees concerned. The act now provides for the establishment of such funds by public utility companies only on the mutual consent of the employer and the employees. It is stated that the proposed arrangement would be similar to that existing in regard to civic employees, which provides for contributions from employees wages and a similar amount contributed by the employer.

\*The recommendations contained in this report were given in the LABOUR GAZETTE, May, 1928, page 495.

## Pension Scheme of Royal Canadian Mounted Police

The Royal Canadian Mounted Police Act (Revised Statutes of Canada, 1927, Chapter 160) provides for the payment of pensions to officers and constables on their retirement from the force on the following terms:—

*Officers' Pensions.*—In cases of compulsory retirement for any cause other than misconduct or inefficiency after ten years service, officers are entitled to a pension for life, not exceeding one-fiftieth of the pay and allowances of his rank or permanent appointment at the time of retirement for each completed year of service. An officer who retires voluntarily is entitled to a life pension 20 per cent less than that which he would have been entitled to were he retired compulsorily, but voluntary retirement carries the same pension as compulsory retirement after thirty-five years service. No addition is made to any pension for any service beyond thirty-five years service. Breaks in the service are not counted, but an officer's service in the Dominion Police Force or in the Civil Service is included for pension purposes.

A contribution of five per cent is deducted from the pay of every officer, but such deduction ceases after thirty-five years of service.

Provision is made for the payment of a gratuity of one month's pay for every year of service when an officer is constrained from any infirmity of body or of mind to quit the force before being eligible for a pension. A gratuity of three months pay for every two years of service may be paid in cases where an officer has to quit the force owing to severe bodily injury sustained in discharge of his public duty.

Subject to certain conditions, the Governor in Council may grant a pension to the widow,

and a compassionate allowance to each of the children, of every officer who, having completed ten years' service was at the time of his death in full pay, or who, having completed ten years' service, is at the time of his death in receipt of pension. The pension to a widow amounts to one half of the husband's pension, and the rates of allowance to children, the rates being graduated from \$30 to \$65. The total amount paid to the widow and children of an officer during any year shall not exceed the amount of the pension of which the officer was in receipt, or to which he would have been entitled.

*Constables' Pensions.*—Pensions to constables are payable on completion of not less than twenty years' service, or of not less than ten years' service if incapacitated by infirmity of mind or body. Constables pensioned after ten years may be recalled to the Force if the incapacity ceases.

The scale of pensions to constables is as follows: (a) for ten but less than twenty years' service, one-fiftieth of annual pay and allowances for every year of service; (b) for 21 but less than 25 years' service, an annual sum equal to twenty-fiftieths of annual pay and allowances, with an addition of two-fiftieths of such pay and allowances for every completed year of service above twenty years; (c) For twenty-five years' service, an annual sum equal to thirty-fiftieths of annual pay and allowances with an addition of one-fiftieth of such pay and allowances for every completed year above twenty-five years. It is stipulated, however, that the pension shall not exceed two thirds of annual pay at retirement.

No provision is included in the Act for the payment of a pension to the widow or other dependant of a deceased constable.

## Dominion Telegraph Employees Petition for Superannuation

A petition signed by employees of the telegraph service of Canada to be permitted to come under the provision of the Superannuation Act (Revised Statutes of Canada, 1927, chapter 24) was presented to the House of Commons on February 27, by Mr. A. W. Neill (Comox-Alberni). The petition stated as follows:—

1. That we are employed in the telegraph department of the government service as telegraph agent operators, telegraph messengers, linemen, foremen, operator-linemen, agent linemen, etc.

2. That it has been ruled that we are not eligible for superannuation as we are said to be paid at "prevailing rates."

3. That this is only a technical distinction, as our salaries do not fluctuate, but remain constant for many years at a time. In this connection we may mention that those who are classified as "telegraph operators" are entitled to superannuation. This will apply to subordinate operators in a town, while in small towns and in country places where the telegraph operator has the responsibility of action as agent, he is then classified as "telegraph agent operator" and is not eligible.

4. That Parliament has decided that it is in the interest of the public that permanent experienced officials should be encouraged to stay in the service by the prospect of superannuation in their old age and that the same argument applies with equal force to our case.

## CO-OPERATIVE MANAGEMENT ON CANADIAN NATIONAL RAILWAYS

### Extension of Plan to Maintenance of Way Employees

AN offer of co-operative arrangements, recently extended by the Brotherhood of Maintenance of Way Employees, has been accepted by the Canadian National Railways and the plan will go into effect immediately on the Moncton Division, after which the organization will be extended to Eastern and Western Divisions until the entire territory in which the National System operates will be covered. This agreement follows the successful operation of the Union Management Co-operative policy in the Maintenance of Equipment Department (LABOUR GAZETTE, May, 1924; September, 1925; May, 1928, page 489, etc.).

A survey was made by Mr. O. S. Beyer, Jr., consulting engineer of the American Federation of Labour, assisted by Mr. A. J. Thomas, of the Operating Department of the Canadian National Railways. At the conclusion of this survey, and following the preparation of a report upon the conditions, meetings were arranged of special committees representing the employees on the one hand and the company on the other. As a result of the meetings which followed the representatives of the Brotherhood and the Management agreed to accept each other's help in the solution of each other's problems and the furtherance of one another's legitimate aims and tasks.

This arrangement implies full co-operation of the Brotherhood with the Management in maintaining the safety of its way and structures, and the improvement of the transportation service to the public. One of the important matters discussed during these gatherings was stabilization of employment, while other subjects dealt with the co-ordination of co-operative endeavour, with such allied features as first-aid, safety first, fire protection and education and staff meetings of various kinds where advocated.

#### Details of Plan

The operation of the plan will be as follows:

Divisional Co-operative Committees will meet during the first ten days of the months of February, April, June, August, October, and December.

The representation of the Divisional Maintenance of Way Employees will be on the basis of one selection by the local lodges from the forces of each Roadmaster's territory and from each Bridge and Building Master's territory.

Owing to the more or less isolation of the workers, it is necessary to provide means of contact between Maintenance of Way Employees and their representative, and this can best be done by the employee representative visiting the members in his territory at a convenient time once every two months prior to the Divisional Meeting. Two methods were discussed, one was that the representative should accompany the Roadmaster on his last inspection trip prior to the date set for the divisional meeting, the other was that the representative should make the trip independently. The latter might involve either the use of the Roadmaster's gas car or the passage from section to section with the assistance of the section foreman's car. It was finally decided that this problem would have to be worked out locally according to local conditions.

*District Co-operative Meetings.*—Employee representatives or delegates to District Meetings will be selected from the Divisional Road representatives by the Local Joint Protective Board who will in addition select for the District Meeting at least one Bridge and Building representative.

*Regional Co-operative Committees.*—The proposed Regional Co-operative Committees will, of necessity, be of two types owing to the natures, respectively, of the Atlantic and Grand Trunk Western Regions on the one hand, and the Central and Western Regions on the other. The first type, applying to the Atlantic and Grand Trunk Western Regions, will be organized as follows:—

*Representing Management.*—One Regional Chief Engineer (Chairman); four to six Members Regional Engineering and Maintenance of Way Staff; one Regional Storekeeper.

*Representing Employees.*—One General Chairman having jurisdiction over region; one Asst. General Chairman assigned to region; three to six Members designated by the Local Joint Protective Board.

*Serving in Secretarial Capacity.*—One Secretary to be furnished by management.

The employee representatives of this particular type of Regional Co-operative Committee designated by the Local Joint Protective Board will be selected one from each of the Divisions composing the Region. As far as possible they should be the respective chairmen of the local or divisional grievance committees.

The second type of Regional Co-operative Committee, designated for the Central and Western Regions, would be organized as follows:

Representing Management.—One Regional Chief Engineer (Chairman); four to six Members, Regional Engineering and Maintenance of Way Staff; one Regional Storekeeper.

Representing Employees.—One General Chairman having general jurisdiction over territory of region in question; one Vice-Chairman for Regional Territories in question; four Assistant General Chairmen assigned to districts composing region in question.

Serving in Secretarial Capacity.—One Secretary furnished by Management.

#### *System Co-operative Committee*

At least once a year regularly, and upon call if necessary, the System Co-operative Committee, constituted as follows should convene:

Representing Management.—One System Chief Engineer (Operating); one Assistant System Chief Engineer; one General Store-

keeper; one Staff Officer in charge of Maintenance of Way Co-operative program.

Representing Employees.—Two System Federation General Chairmen; two Assistant General Chairmen from Atlantic and Grand Trunk Western Regions respectively.

Serving in Secretarial Capacity.—One Secretary to be furnished by Management.

*Minutes of Co-operative Meetings.*—It is considered essential that the same plan in respect to the keeping of co-operative meeting minutes developed for the Co-operative Program of the Maintenance of Equipment Service be used for the Maintenance of Way program. Each subject brought up at the division meetings will be given a symbol indicating first the month of the year at which proposition was submitted, i.e., 1, 2, 3, 4, to 12; second, whether submitted by management or employee representatives (designated respectively by an M. or an E.) and finally the serial number of the item starting with 1 for the first item of the year. Thus the 39th proposition submitted for discussion, in this case let us say by an employee representative during the meeting of May, would be designated by the symbol 5-E-39.

## PROVISIONS EXISTING IN CANADA FOR THE REHABILITATION OF INJURED WORKMEN

**I**N previous issues of the *LABOUR GAZETTE* (October, 1924, pages 833-836; and July 1927, page 702) reference has been made to the rehabilitation of disabled civilian workers and ex-service men.

The problem of re-establishing men severely wounded as a result of war service focussed attention on the problem of re-habilitation, and consequently, in Canada as in several countries, involved in the great war, efforts were directed towards fitting these war cases to resume some active part in industrial life. Vocational training courses were established in Canada under the auspices of the Department of Soldiers Civil Re-establishment (now the Department of Pensions and National Health) by Order in Council (P.C. 1472) issued on June 29, 1916. Accordingly this work has been since carried on under the Vocational Training Branch of the Department. From time to time the *LABOUR GAZETTE* has reviewed the progress of this work in the annual reports of the Department of Soldiers' Civil Re-establishment, the last report for the year ending March 31, 1928, being summarized on page 286 of this issue. According to information supplied by the

Department, the total number of ex-service men who have completed courses of vocational training since the inception of this work is 43,284. There are no definite figures available indicating the number of these ex-service men who have been permanently absorbed into industry.

Previous to the fiscal year 1923-24, any specialized employment work affecting men having physical handicaps, due to service in the late war, was carried on by the Department of Soldiers' civil Re-establishment. The Employment Service of Canada sought in a general way to serve the needs of this deserving class, but obviously in only two or three centres was the specialization of the functions of the employment office sufficiently developed to permit of that detailed attention being given to the handicapped ex-soldier which his needs demanded. The desirability of centralizing employment activities led the Ralston Commission on Pensions and Re-establishment and the Employment Service Council of Canada to recommend, in 1923, that this work be taken over by the Employment Service of Canada.

Accordingly this recommendation was carried out, and in drafting the federal-provincial agreements for 1924-25, a new section, No. 14, was inserted, which embodied the principle contained in the supplementary agreement of the year before. The purpose of section 14 was declared to be "for the purpose of providing necessary and adequate facilities for registering and placing in employment employable handicapped ex-service men whose disability is due to war service." Eight co-operating provinces signed the agreement, and consequently undertook to make special efforts to secure employment for these disability cases.

Since the taking over of this work by the Employment Service of Canada, the numbers of disabled ex-service men who have been placed in jobs of varying duration are as follows: year ending March 31, 1926, 7,688; 1927, 7,775; 1928, 7,355.

The Employment Service of Canada in its last annual report points out that even with the best federal-provincial co-operation the work is difficult of satisfactory accomplishment. Certain classes of war disability are practically precluded from being placed in employment, for positions suitable to the needs of such men are not sufficiently numerous to care for the substantial number of men so situated making application. This means that casual employment has to be relied upon to a considerable extent to meet the requirements of such workers, and it is felt by those in close association with this work that the percentage of handicapped ex-service men who desire to secure employment and who can only secure casual work is increasing. Thus, while during the fiscal year 1927-28, there were 7,355 placements of handicapped ex-service men made by the different employment offices 5,100 or over two-thirds, were in casual employment. However, of the remaining 2,255 placements in regular employment, a substantial number were permanently established and may be considered as removed from the employment office field indefinitely.

In addition to this service Rehabilitation Committees have been in operation during the past few years at Montreal, Toronto, and Edmonton, and these have contributed to the work of placing disabled men in employment. The Toronto Rehabilitation Committee, it is understood, has ceased operations, while in Edmonton the Citizens' Committee has only found it necessary to function during the winter and early spring months. The Montreal Rehabilitation Committee placed a total of 2,271 disabled ex-service men dur-

ing the fiscal year ending March 31, 1928. Of this number, 351 were permanent placements, 464 were semi-permanent, and 1,456 were temporary. During the fiscal year 1926-27, its total number of placements was 2,685, of which 528 were permanent, 520 semi-permanent and 1,637 were temporary. For the fiscal year 1925-26, the committee had a total of 2,091 placements. In that year the Department of Soldiers' Civil Re-establishment turned over the Montreal district to the Rehabilitation Committee though it continues to look after the placements of disabled ex-service men in Quebec city, placing 76 in employment during the fiscal year 1926, 65 in 1927, and 79 in 1928.

The Employment Division of the same Department maintains a close liaison with the Civil Service Commission and all federal departments for the purpose of assisting disabled former members of the forces to obtain employment in the Federal Civil Service. All applications from ex-service men for employment in the Civil Service received by the Employment Service of Canada are dealt with through the department.

The Department continues also to operate Sheltered Employment Workshops wherein Canadian pensioners who are unfitted for employment in the general labour market are admitted subject to certain conditions.

The employers of handicapped ex-service men who sustain injury in the course of their employment are reimbursed by the State. Under the authority of an Order in Council passed on December 29, 1921, (reference to which was made in the *LABOUR GAZETTE*, March, 1922, pages 310-312), the Dominion Government assumed the liability imposed upon employers on account of industrial accidents sustained by disabled ex-service men to whom a pension of 20 per cent or over is payable in respect to disabilities received in or attributable to war service. Acting upon this Order in Council, the Department of Soldiers' Civil Re-establishment has since paid compensation through Workmen's Compensation Boards, and to employers direct in respect to accidents sustained by such pensioners. It has also, in certain cases when application therefor has been made, repaid to employers premiums paid to Workmen's Compensation Boards in respect of such pensioners. The Order in Council expired in 1927, and a new Order in Council was passed, effective with the commencement of the fiscal year 1927-28, which practically re-enacted the former provisions with slight modifications, the principal changes being that accident liability is assumed in respect to pensioners rated as 25

per cent disability, and that no repayment is now made to employers for premiums. During the year 1927-28, the number of claims was 247 and the total amount of compensation paid in the same period was \$69,968.56.

### Workmen's Compensation

As noted in the LABOUR GAZETTE for October, 1924, page 834, the application of the principle of rehabilitation to seriously injured workmen, other than ex-soldiers, was first made in Canada by the province of Ontario. The importance of rehabilitation work was officially recognized by Legislation in the session of 1924 when the Workmen's Compensation Act was amended whereby the Board was authorized to aid in getting injured workmen back to employment, and to assist in lessening or removing any handicaps resulting from their injuries. For this purpose the Board was empowered to take such measures and make such expenditures as deemed necessary, provided that the total expenditure shall not exceed \$100,000 in any calendar year.

Dealing with the progress of rehabilitation work and the problems it presents, the Board in its last report (for the year 1927) states that rehabilitation is a good deal more limited than is ordinarily supposed, because out of 61,078 cases allowed during 1927 only 2,349 were permanent partial disability cases, and the greater percentage of these are cases of minor injuries which do not disable sufficiently to cause the injured workman to seek new employment. The last completed figures are for the year 1926, where it is shown that out of 2,421 cases of permanent disability, 2,116 were less than 10 per cent disabled, and 2,307 were less than 30 per cent disabled, and in most cases of less than 25 or 30 per cent of disability rehabilitation is not necessary. This would limit the number of cases in which rehabilitation would be necessary to very few. Quite a number of these return to their former occupation, and many are men who are incapacitated by age or foreign nationality or lack of education from taking any course to fit them for some other method of earning their livelihood, so that the number of cases is again very substantially reduced. Therefore, it is stated, in very few cases in each year, can rehabilitation be successfully applied.

Where young men of fair education suffer a severe injury they can be frequently rehabilitated by being sent to a business college or by a course in telegraphy, radio work, or electrical work of different kinds, and the Board is paying the expenses where the in-

jured workman is capable of undertaking such a course. Occupational therapy is used in cases where the injury can be improved by treatment and by graduated exercise of different limbs which may be injured, and certain work can be taught them. The Board finds great difficulty in the rehabilitation of men of advanced years and those who have no education or who speak a foreign language, and the only successful method of rehabilitation in such cases is by the use of different plants where these men can be placed at work. The Board has adopted the plan of paying part of the wages of men so that while the employer pays what the man is worth to him the Board supplements this by sufficient to enable him to carry on and earn a living wage until he becomes used to new conditions. Arrangements are also made with the Ontario Government Employment Agency so that its services can be used to help injured men to get into suitable employment.

In addition to Ontario five other provinces—Alberta, Manitoba, Nova Scotia, Quebec and Saskatchewan—have also made provision for rehabilitation of handicapped workmen.

In 1925 the Legislature of Manitoba amended its Workmen's Compensation Act, whereby the Board may set aside a sum out of the reserve for each individual case.

The Nova Scotia Workmen's Compensation Act was amended in 1927 to provide for rehabilitation, the limit being \$20,000 annually.

Alberta, in 1928, similarly amended its Act, providing for an annual limit of \$20,000 for rehabilitation.

Workmen's compensation legislation was enacted in Quebec in 1928, and the Workmen's Compensation Commission Act charges the Commission with the duty of promoting the rehabilitation of injured workmen, authorizing it to take such measures as it may deem proper to aid in their industrial re-establishment in the Province.

The Saskatchewan Compensation Act, now in process of amendment, empowers the Board to make such expenditures as may seem just and expedient.

With the exception of its Toronto office, the Employment Service of Canada does not maintain separate records of the placements of disabled civilian workmen. During the fiscal year 1926-27 the Toronto office placed 127 civilian workmen, while during the same period 1,913 handicapped ex-service men were placed by this office. In 1927-28, the placements in Toronto were 126 civilian cases and 2,409 ex-service men with disability rating.

### United States

The progress of vocational rehabilitation in the United States was reported in the *LABOUR GAZETTE* for July 1927, page 702. In 1920 Congress enacted the Fess-Kenyon law, providing for federal-state co-operation in a program of rehabilitation. The federal government's principal part in this program is to stimulate rehabilitation work in the States

through financial aid, while the responsibility for the administration of the system is placed upon the States themselves, the administrative agencies being the respective State Boards for vocational education. At the present time 41 States have enacted legislation accepting this national rehabilitation act and are now co-operating with the Federal Government in this program of restoring the injured to industry.

## SOLDIERS' CIVIL RE-ESTABLISHMENT IN CANADA

### Report of Department of Pensions and National Health for 1927-28

THE annual report of the Department of Pensions and National Health for the fiscal year 1927-28, describes the operations of the Department on behalf of disabled ex-service men. During the year an important administrative change became effective when by Order in Council passed on December 12, 1927, the Department of Soldiers' Civil Re-establishment and the Department of Health were merged as one department.

The medical service supplied by the Department expanded considerably during the fiscal year. At the commencement of the year there were 2,839 patients on strength receiving treatment. At the end of the year the number had increased to 3,257. The number of men who received in-patient treatment during the year was 11,030 and clinical treatments were given by officers of the Department in 102,580 cases. Of the number remaining in hospital at the end of the fiscal year 1,764 were receiving treatment in departmental institutions, and the balance in other institutions in Canada, the United States and Great Britain.

The manufacture and distribution of artificial limbs and other prosthetic appliances was continued during the year with excellent results. Owing to the experience acquired by the staff of the department engaged in this work it is stated that few complaints are now received. All-metal limbs are gradually being supplied to all wearers. Steady work is also being carried on in connection with the after-care of the blind through the Canadian National Institute for the Blind.

As regards rehabilitation and sheltered employment, the report points out that the Department continues to provide vocational training for a certain limited number of cases in which there has been an increase in the service disability, or for other special causes.

Canadian pensioners, who are unfitted for employment in the general labour market are

taken into sheltered employment workshops operated by the Department, and are employed in the manufacture of poppies, and wreaths, etc., which had an increasing sale.

Satisfaction is expressed in the operation of the arrangement whereby the employment service of Canada is conducting the work formerly done by the Department in finding employment for disabled ex-service men. The placements of ex-service men under this arrangement during the period under review were 7,435. Credit is given also to the Rehabilitation Committee of Montreal for the service rendered in this respect, this body having placed 2,271 disabled ex-service men in employment in the Montreal district during the fiscal year 1927-28.

Relief was granted during the winter of 1927-28 to 4,182 men. This relief which is not given in cash but by an issue of orders payable by the Department, on grocers, coal dealers, etc., was given 38,373 times or an average of 9.18 times per man. The actual expenditure amounted to \$390,004.

*Returned Soldiers' Insurance Division.*—This division during the past year was concerned with the collection of the premiums payable on account of the insurance in force, the various adjustments necessary in policies and the settlement of death claims. The number of death claims admitted during the year was 210, being 41 less than the previous year. The death rate was lower than the rate for the previous year, being 8.4 per thousand as against 9.33. There was a net increase of 378 in lapses during the year, bringing the total net lapses to 6,992. A decrease is noted in the number of policies which have been surrendered for cash, while the total number of surrenders to the end of the year from the commencement of the Returned Soldiers' Insurance Act was 2,329. There was a considerable increase in the balance of the fund, the bal-

ance at the end of the year March 31, 1927, being \$5,090,041.62, while at March 31, 1928, it was \$5,964,246.99.

*Workmen's Compensation in Respect of Pensions.*—The report states that the demand for reimbursement by Workmen's Compensation Boards and employers in respect of pensioners suffering injury or disease in industrial establishments showed an increase, notwithstanding that by Order in Council (P.C. 358), operative from the beginning of the

fiscal year, the department could only assume liability in respect of pensioners of twenty-five per cent and upwards. Previously the pensionable limit was twenty per cent disability and upwards. The number of individual cases dealt with was 247, against 203 in the previous year, and the amount expended was \$69,968.56 as against \$57,113.19 in the previous year. The total number of cases dealt with since this legislation was enacted is 1,211, involving a total expenditure of \$274,026.84.

## TENTATIVE REGULATIONS GOVERNING APPRENTICESHIP IN THE BUILDING TRADES IN ONTARIO

THE following draft regulations under the Ontario Apprenticeship Act\* have been prepared. Mr. A. W. Crawford, Inspector of Apprenticeship, points out that these regulations are only tentative and are likely to be altered considerably before final adoption. They are, however, being used as a guide for the present.

### General Regulations Governing Apprenticeship in Designated Trades

1. *Definitions.*—In the following regulations,

(a) "Apprenticeship" means the relationship between the employer and the apprentice by which the apprentice, with the consent of his parent or guardian, and in accordance with the Apprenticeship Act, engages himself for a certain minimum period to the employer for the purpose of learning the trade.

(b) "Apprentice" means any person at least sixteen years of age who enters into a contract of service in accordance with the Apprenticeship Act, whereby he is to receive from or through his employer, in whole or in part, instruction in the designated trade.

(c) "Employer" means any person, firm or corporation or municipal, provincial or other public authority to whom an apprentice is bound by contract, in accordance with the Apprenticeship Act.

(d) "Provincial Apprenticeship Committee" means the Committee appointed by the Lieutenant-Governor in Council in pursuance of section 5, subsection 1, of the Apprenticeship Act.

(e) "Trades Apprenticeship Committee" means an advisory committee from industry composed of an equal number of employers and employees in a designated trade or trades, together with an independent chairman who may also act as secretary. Committees may consist of from three to seven members.

(f) "Inspector of Apprenticeship" or "Inspector" means the person appointed by the Lieutenant-Governor in Council in pursuance of section 5, subsection 2, of the Apprenticeship Act.

\* The provisions of this Act were outlined in the LABOUR GAZETTE, March, 1928, page 269.

(g) "District Inspector of Apprenticeship" or "District Inspector" means a person appointed by the Lieutenant-Governor in Council in pursuance of section 5, subsection 2, of the Apprenticeship Act to assist and act for the Inspector in a district allotted by the Minister.

(h) "District" means the area or territory assigned to a District Inspector.

(i) "Temporary Transfer" means the removal of the apprentice from one employer to another without relieving the first employer of his obligations under the contract.

(j) "Permanent Transfer" means the removal of the apprentice from one employer to another involving the transfer of the employer's obligations, also the signature and registration of the apprenticeship contract.

2. *Obligations of an Apprentice:* (a) To render faithful service during the period of apprenticeship.

(b) To show due regard for the tools and goods of the employer and not to damage or waste the same.

(c) To furnish to his employer satisfactory reasons for absence from work.

(d) To attend regularly such classes in related trades training as may be required by the Provincial Apprenticeship Committee.

(e) To suffer loss of pay for non-attendance at day classes in related trade training, and to incur the cancellation of his apprenticeship contract for wilful failure to attend such classes.

(f) To make up all lost time for which he is responsible in any year, including time lost through illness if it exceeds ten working days, before the next year of his apprenticeship shall begin.

(g) To notify the District Inspector immediately when, for any reason, he ceases to be employed with the employer to whom he is indentured.

(h) To be subject to and obey the regulations made by the Lieutenant-Governor in Council governing his employment and training as an apprentice.

3. *Obligations of an Employer:* (a) To provide adequate training in all branches of the trade in so far as his facilities and the character of his work will permit.

(b) To provide continuous employment for the apprentice during each year of the apprenticeship period.

(c) To pay the wages set forth in the apprenticeship contract.

(d) To co-operate with the District Inspector in the transfer of an apprentice if for any reason such transfer is deemed necessary, and to pay the apprentice's wages in full until such transfer has been effected.

(e) To submit an annual report on the progress and conduct of the apprentice to the Provincial Apprenticeship Committee.

(f) To abide by and carry out the regulations made by the Lieutenant-Governor in Council, governing the employment of an apprentice.

4. *The Number of Apprentices:* The number of apprentices to be trained in the designated trades shall be set forth in special regulations for each trade and shall be based on the total number of journeymen employed in each trade.

5. *Entrance Requirements:* (a) No person shall commence apprenticeship until he has passed his sixteenth birthday.

(b) Persons applying for apprenticeship may be required to furnish proof of age.

(c) Every person entering apprenticeship shall have completed the work of the junior fourth book in public school, or its equivalent.

(d) Any person applying for apprenticeship may be required to produce a medical certificate or pass a medical examination showing that he is in good health and possesses the physical requirements to successfully carry on the work of a journeyman.

(e) Every application for apprenticeship shall be made on a form to be supplied by the Minister.

(f) Applications shall be forwarded to the nearest District Inspector.

(g) No person may be employed as an apprentice until his application has been approved by the District Inspector.

6. *Probationary Period.*—The first three months of employment shall be regarded as a probationary period during which either the boy or the employer may terminate employment at will. Where an apprenticeship contract has been entered into, notice of termination must be sent to the Inspector.

7. *Registration.*—(a) No minor may be employed for a longer period than three months without being indentured in accordance with the provisions of the Act. Those boys who have previously served three months at the trade and whose employment record is satisfactory to the District Inspector, must be placed under contract within one month after date of commencement.

(b) Triplicate copies of each apprenticeship contract shall be forwarded by the employer to the office of the Inspector of Apprenticeship for approval and registration, immediately after being drawn up. One copy will be retained by the Inspector, one copy returned to the employer and the other given to the apprentice.

(c) Each registered apprentice shall be given an identification card, furnished by the Minister, and this card shall be carried by the apprentice at all times.

(d) Whenever an apprentice is permanently transferred from one employer to another, all three copies of the contract must be signed by the parties concerned and the transfer registered in the same manner as a new contract.

8. *Period of Apprenticeship.*—(a) The period of apprenticeship shall be set forth in the contract of apprenticeship as provided in special regulations for each designated trade.

(b) Allowance of time may be granted to boys who have had previous experience in the trade. The time to be allowed shall be determined by the Provincial Apprenticeship Committee on the recommendation of the District Inspector.

9. *Hours of Employment.*—(a) The hours of employment for apprentices shall be the same as those for journeymen.

(b) An apprentice may work overtime, but such time shall not reduce the period of apprenticeship except that the actual number of hours of overtime may be deducted from any period of training required to make up for time lost due to illness.

10. *Wages.*—(a) The wages to be paid to an apprentice shall be set forth in the contract of apprenticeship as provided by special regulations for each designated trade.

(b) Wages of apprentices shall be increased for overtime in the same proportion as those of journeymen, except that where an apprentice works extra hours, of his own volition, and with the consent of the employer for the purpose of making up lost time, he shall receive the regular wages for all such overtime.

11. *Trade Training.*—An apprentice shall be taught the common practice of the trade. A schedule of the operations and processes to be covered shall be prepared by the Inspector and when approved by the Provincial Apprenticeship Committee it shall be appended to the regulations.

12. *School Training.*—(a) Apprentices in designated trades shall attend at least eight weeks of five eight-hour days, or three hundred and twenty class hours, during each of the first two years of apprenticeship. The time and place for such classes shall be arranged for each designated trade as determined by local facilities and conditions. The employer shall pay for such time at the rate set forth in the contract of apprenticeship.

(b) Apprentices shall be encouraged to attend evening classes when not in attendance at day classes.

(c) The courses in these day and evening classes must be approved by the Provincial Apprenticeship Committee.

(d) Where day or evening classes cannot be arranged, apprentices shall be required to follow approved correspondence courses.

(e) An annual report on each apprentice shall be submitted to the Provincial Apprenticeship Committee by the school or institution from which instruction is being received. Forms for this report shall be furnished by the Minister.

(f) Apprentices shall be reimbursed by the employer for fees in connection with approved classes, provided they attend at least seventy-five per cent of the class sessions.

(g) Weekly attendance records shall be furnished by the school to the employer for each boy in attendance at day classes.

13. *Supervision of Training.*—(a) All minor disputes between the employer and employee, except those involving policy, shall be settled by the District Inspector.

(b) Disputes of a major character and those involving policy shall be referred to the Provincial Apprenticeship Committee.

(c) Transfers from one employer to another may be arranged by the District Inspector, but must be approved by the Provincial Apprenticeship Committee.

(d) Contracts may be cancelled or terminated in accordance with section 15 of the Act.

(e) An inspection visit shall be paid to each apprentice at least once each year and a written report submitted to the Provincial Apprenticeship Committee by the District Inspector.

(f) The employer shall notify the District Inspector before making any change affecting the contract of apprenticeship and all such changes must be approved by the Provincial Apprenticeship Committee.

(g) The employer shall submit an annual report to the Provincial Apprenticeship Committee on each apprentice in his employ. Forms for this report will be furnished by the Minister.

14. *Examinations and Tests.*—(a) Every apprentice shall receive a practical test at least once each year. This test must be passed to the satisfaction of the District Inspector before the apprentice is advanced to the next year of his apprenticeship.

(b) Every apprentice shall be required to pass an annual examination or theoretical test in each subject or branch of the trade taught in the school classes.

(c) Apprentices receiving instruction by correspondence must produce proof that they have successfully completed the course before being granted a diploma.

15. *Certificates and Diplomas.*—(a) Every apprentice who serves the prescribed term of apprenticeship and completes the school training to satisfaction of the Provincial Apprenticeship Committee will be granted a diploma.

(b) Those apprentices who show exceptional ability and application in connection with the trade and school training will be granted a diploma with honour standing.

### Trade Regulations Governing Apprenticeship in Plumbing and Steamfitting

1. *The Number of Apprentices.*—(a) The ratio of apprentices to journeymen in the plumbing and steamfitting trades throughout the province shall not exceed 1.5, except that those boys employed as apprentices when the Act is put into operation in any district may be allowed to complete their apprenticeship in accordance with the provisions of the Act, regardless of this ratio.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the number of journeymen reported in each district. The figures shall be obtained by the District Inspector of Apprenticeship, and shall

include all journeymen regardless of their affiliations.

(c) Each employer who is approved by the District Inspector of Apprenticeship may have one apprentice. He may also employ one additional apprentice for each five journeymen regularly employed, provided the number of apprentices in the district does not exceed the ratio of 1.5.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

2. *Term of Apprenticeship.*—(a) The term of apprenticeship shall be five years, including the probationary period. The first four years shall be served under contract with an employer in accordance with the provisions of the Act. The fifth year shall be served as a junior mechanic, subject to the regulations governing apprentices except for the following provisions.

- (1) The employer shall not be obliged to keep the junior mechanic employed during slack periods.
- (2) The junior mechanic shall not be obliged to remain with the employer during a strike or lockout but, under other conditions shall continue to serve the employer with whom he was last indentured.
- (3) Time lost due to illness or lack of employment must be made up by the junior mechanic before he receives his diploma.
- (4) Where a trade agreement exists between employers and the local union, the conditions of employment for the junior mechanic shall be those set forth in the agreement.

3. *Wages.*—The wages paid to apprentices in the Toronto district shall be as follows:

For the first year . . . .	\$ 8 per week
For the second year . . . .	10 per week
For the third year . . . .	12 per week
For the fourth year . . . .	16 per week

### Trade Regulations Governing Apprenticeship in Painting and Decorating

1. *Number of Apprentices.*—(a) The ratio of apprentices to journeymen in the painting and decorating trades shall not exceed 1.5.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the total number of journeymen in each district. The figure shall be obtained by the Inspector of Apprenticeship.

(c) Each employer who is approved by the District Inspector of Apprenticeship may have one apprentice. He may also employ one additional apprentice for each five journeymen regularly employed, provided the ratio of apprentices in the district does not exceed 1.5.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

2. *Term of Apprenticeship.*—(a) The term of apprenticeship shall be three years, including the probationary period.

3. *Wages.*—The wages paid to apprentices in the Toronto district shall be as follows:—

For the first year . . . .	25c per hour
For the second year . . . .	30c per hour
For the third year . . . .	40c per hour

## THE TRAINING OF SKILLED MECHANICS IN THE BUILDING INDUSTRY IN CANADA

*Paper read by Mr. J. M. Pigott at the annual convention of the Canadian Construction Association, Hamilton, January, 1929*

THE following paper was read before the eleventh annual convention of the Canadian Construction Council held at Hamilton, Ontario, in January, by Mr. J. M. Pigott, of the Pigott-Healy Construction Company, Hamilton. An account of this convention was published in the last issue of the *LABOUR GAZETTE*, page 185. Mr. Pigott opened his address with a tribute to the work of Mr. J. P. Anglin, the first president of the Association, and one of the originators of the present apprentice training movement, and also to the invaluable services of Mr. J. Clark Reilly, the secretary of the Association. He proceeded as follows:—

This Association commenced its study of apprenticeship in 1920, and the work has grown constantly from year to year. In January, 1923, at the Quebec Convention, after a thorough investigation and survey of the country, the situation was made known and remedies suggested. A new plan devised to restore apprenticeship was adopted. I think that without attempting to cover the same ground, it would be well just at this point to set out the conditions as they existed at that time. A decided scarcity of building mechanics existed in 1922, and contractors generally were somewhat alarmed at the outlook for 1923 and the years to come. It was pointed out that if the building program showed a tendency to increase, it could not do so beyond certain limits because trained workmen did not exist to do the work.

### Decline of Apprenticeship

It seemed quite evident that building in the United States and Canada from the year 1850 down to 1910 had depended on immigration to supply mechanics and it had done so very easily. In fact, to-day in Canada a large majority of our mechanics particularly in the mason trades, were trained in the Old Country. During all that time no one took any interest in apprenticeship or the training of skilled men. You probably know that it was not always so, that from the year 1690 down to the year 1830, apprenticeship in Canada and United States flourished. It flourished and was encouraged because it was the only means at the disposal of people of ordinary means of having a boy educated or taught some life work. You must understand our present school system is a comparatively

recent development in our history. Down to the year I mention, only the children of the wealthy were able to get an education. Down to that time, as authorities have established, "the master worked side by side with his journeyman and apprentice, and was not sharply distinguished from them by either his earnings or his social position."

Naturally the reasons for the disappearance of the world old system of apprenticeship on this continent must be sought in the United States, for down to the year mentioned and for long after, it was the United States that enjoyed nearly all the growth and activity. Following the American Civil War, the United States went through a period known as the "Industrial Revolution," when invention and machinery revolutionized methods both in the factory and in the field. Hand in hand with this went the exploitation of apprentices to a point where it became nothing but child labour. This was followed by the organization of trade unions. These trade unions had their foundation in an organized resistance to what was really child labour. The agitation these labour organizations started brought about legislation in nearly all the states in the union, and they made it very difficult for a master to apprentice a boy, for the new laws set out that by taking on a boy he made himself responsible to feed and clothe him, and see to his morals, health, lodgings, etc. and neglect or failure to do any of these things was serious. This stopped apprenticeship very effectively. An agitation then started in about 1890 to bring back apprenticeship in some form, but immigration flowed into the United States and Canada from that time on, so that what little life there remained in the apprenticeship activities of the early days to all intents and purposes disappeared. Then in 1910 when immigration practically ceased, that is, immigration of skilled mechanics of the building trades, it did not take many years to bring about a shortage.

### Shortage of Building Mechanics

That shortage is pretty clearly established by the census figures of 1911 and 1921 in Canada, and 1910 and 1920 in the United States. The census for Canada, as taken in 1911 and again in 1921, was not taken with an eye to the importance of the numbers of

men engaged in these different trades. However, it is interesting to note, where comparisons can be made, that in spite of the growth of Canada during those ten years, in 1911 we had 245,990 men in the building trades and in 1921 we had 184,577, a loss of 60,000 men, or one-third, in spite of a greatly increased demand for mechanics and a substantial growth of Canada generally during that time.

Looking at the few classifications that are comparable, we see that in 1911 there were 60,203 carpenters; in 1921 we had 51,256 carpenters. In 1911 we had 18,660 bricklayers, stonemasons and stone-cutters; in 1921 we had 8,052. In 1911 we had 5,815 plasterers and in 1921 we had 2,660. In 1911 we had 11,244 plumbers and steamfitters, and in 1921 we had 8,408 and so on. How the figures would compare if we had a census made to-day, it would be hard to say, but we can safely assume that the falling away of that ten-year period did not stop in 1921, and that it is very doubtful if we have anything like the numbers in these trades to-day that we had in 1921—*but 1921 is bad enough.*

Let us look at the figures for the United States covering this same period, for some might seek an answer to this falling off, in the drifting of these men over the line. The census was taken in the United States in 1910 and again in 1920. There we find that in 1910 there were 169,402 brick and stone masons; in 1920, 131,264, a decrease of 23.6 per cent. Painters 273,441 in 1910 and in 1920, 248,479. Plasterers in 1910, 47,682 and in 1920, 38,225, a decrease of 20 per cent. Sheet metal workers 14,078 in 1910 and 11,378 in 1920. These shrinkages in the United States average about 20 per cent in the face of the simply staggering increase in population and growth of that country during that period.

In 1923, when this report was made, how many apprentices were being trained to help this situation out? Very few. Every city of any importance in Canada was investigated by us and the number of apprentices listed, with the result that we ascertained that in all the trades covered by the building industry in the whole of Canada, there were 140 boys in training. If we had had in training at that time, a ratio of one in ten, that is one apprentice to ten journeymen (and the best authorities lay down a ratio of five to one) we should have had thousands of boys in training. Do you realize that apart from the men who drop their trades and go into other business and those who graduate into the ranks of employers and who have gone to the United States, *over 2,500 of these mechanics die every year?* We have in the Province of Ontario—dealing

for example with the trades of carpentering, bricklaying and plastering—6,000 carpenters, and these are the carpenters who belong only to trade unions, and approximately 2,000 bricklayers and plasterers affiliated with trade unions. The census figures for 1921 for Ontario give 17,000 carpenters and 3,834 bricklayers. So you will realize that in most of these trades, the mechanics connected with trade unions represent but a portion of the men engaged in the trade. If we take as an example the Ontario figures for carpenters of 6,000, and the bricklayers and plasterers who number approximately 2,000, and apply a ratio of ten to one, you will realize that it would require roughly 1,000 apprentices in training to take the places of these men and to meet the demands of the industry. Just think in the case of these two trades only, and in Ontario alone 1,000 needed, and yet for *all* the trades not in Ontario but for the *whole Dominion*, we had, as I said, in 1923, 140 boys in training. These are startling figures but they are authoritative. They have been obtained from the proper Departments in Canada and in Ontario.

In 1925 when another survey was made, after we had put in two years of speech making, apprenticeship contests, publicity stunts wherever we could put them on to encourage apprenticeship and start the system again,—after two years of this effort, we had increased the number of apprentices from 140 for the whole of the Dominion to 443. Not a great change, it is true, but it showed it could be done. All we needed was enabling legislation to put our plan in operation and with that we felt sure of final success.

### Increase in Building Activities

We felt the shortage of mechanics acutely in 1922. Our building total for that year was 325 million. The situation was eased somewhat in 1923, 1924 and 1925 by a falling off in volume, 1925 being 298 million. From 1925, however, we have been swinging back into greater volume—1926 being 372 million; 1927, 418 million, and the record for all time in 1928 of 490 million.

In 1922 with a total building program of 325 million the percentage of unemployment for the whole 12 months averaging winter and summer, was only 6 per cent. This means not enough for I consider an average of 12 per cent over the 12 months represents the proper percentage of unemployment in the building trades when all mechanics are employed to normal capacity, after making allowances for

the difficulties due to winter season; changing jobs; sickness and accidents; bad weather, etc.

In 1925-26 the unemployment percentage was about 11.4 per cent, but in 1927-28, as the volume of work increased, the percentage dropped from 13 (the average for 1927) to the lowest in record of 2.9 in September last. But note this—if we were short of men in 1922 with a total of 325 million, how is it we handled nearly 500 million in 1928? How can we, furthermore, do it with fewer men? The shortage in 1927 was not felt as acutely as in 1922. What is the explanation of this? I offer two reasons—

1. More of this building total was made in the factory and less in the field.

2. The program of 1928 is heavily overhanging 1929.

Both of these are due to lack of trained building mechanics and both are of the greatest importance to us. It is apparent that in contracting for 500 million last year, having employed all available mechanics, and having a good slice of the work hang over into the next year, that we have reached our limit. Who is there that can contemplate that with indifference?

I wonder if we really understand how the shortage of trained men has been slowing us up? I can show you a building not far from here where the cut stone is just finished and is two months behind time, due to scarcity of trained men. On that same building neither the passer-by nor the other trade contractors, all engrossed in their own troubles, realize that if we had waited for the *carving* of the stone it would not be ready until spring. The carving is now being done on the building from outside scaffold by men who have been brought here under substantial inducements from Montreal, and they will be working on this for two months yet. Do people realize, do we realize ourselves, that these things and hundreds of these things that exist in all trades all over are due to the lack of properly trained mechanics? The delays for bronze, iron, structural steel, interior trim, elevators, roofing, plastering, sheet metal, etc.—it has become a constant condition. Give us trained men and the volume of business will grow and still grow. Avoid your responsibility to train these men and your market will not only “not increase,” but will “contract.”

### Factory Made Buildings

Bearing on this phase of the question, let me read a paragraph recently written in reference to the Apprenticeship Act by a well

known newspaper editor and a shrewd business man as well:—

“It undoubtedly has occurred to some that there is a possible danger in the over-creation of mechanics through this apprenticeship plan. After a careful consideration and survey of all the possibilities that present themselves to my mind, I am convinced that no such danger can arise. It seems to be an economic law that the creation of plentiful labour resources is invariably attended by an increase in the volume of trade. When labour begins to limit its resources and restricts its numbers, this policy provokes those who are dependent upon such a source of supply, to make alterations to combat and offset the restrictions imposed. Advanced and altered methods of construction are soon introduced, and some of the trades have already fallen under the machine which they themselves were responsible for creating. With the certain knowledge that there is a plentiful supply of mechanics, and that building operations can be safely carried on, capital is encouraged to embark upon important building programs. The law of supply and demand, if not improperly hampered, usually provides that stability and harmony indispensable to successful operating.”

Let us elaborate on this somewhat. We have already seen that when bricklayers grew scarce—for we had about three times as many bricklayers 20 years ago as we have to-day—their market shrunk proportionately. Other materials and new structural designs took the place of brickwork. The scarcity of plasterers makes gyproc possible—is responsible in a large measure for new wall treatments now finding a ready market, like Craftex-Moresco. Hyrib roofs have given way to gypsum slabs and so on. Isn't it logical to argue that a general scarcity means a substitute for buildings. It is fact not theory. More of the buildings are being made in factories every day. The contractors job is becoming less of a field manufacturer of buildings from raw materials, and more of a business of assembling ready-made parts.

*If you don't do your duty you are going to go too.* No doubt of that! Walk across the valley like the boy and look back at the conditions which surround you.

### Obstacles to Apprentice Training

With all these conditions—with all the knowledge that is abroad of the countless difficulties we are up against through scarcity of properly trained men, how is it that contractors overlook the importance of train-

ing boys for these trades? There are many reasons. They can be listed as follows:

1. They have become accustomed to the condition and accept it as part of their daily worries.

2. Those who want to train boys and make inquiries regarding it, drop it when they find they must take the boy on for four years' steady employment under an indenture. Why do they drop it on that account? (1) Because, generally speaking, our business is seasonal and all contractors are slack in the winter during which they would have to carry the boy; (2) Because they look upon the training of a boy as an expense and a responsibility and they do not propose to shoulder this for the other fellow, for once the apprenticeship is completed *the boy is free*.

### Principles Adopted

When this Association sought a solution to this problem they knew that they had to meet the difficulty of the winter season or continuity of employment and the objection that the employer raised that he was training men for the other fellow. After a very careful analysis of all the factors an apprenticeship plan was worked out which provided that—

1. All boys engaged in trades should be indentured.

2. For the winter months in the first and second year of their indenture, the boys should be put into the Technical School under pay in a class confined to indentured apprentices, each trade separately, and receive during those months technical training related to his trade.

3. That the boys instead of being indentured to the employer direct should be indentured to a Provincial Apprenticeship Board; they should be paid by the Board at a rate of about \$500 per year during the first two years, and the money required for this purpose would be raised by an assessment on the particular trade at large just as is done at present to pay for accidents under the Workmen's Compensation Act.

It was considered that boys in third and fourth years offered no difficulty as they were well worth their rate and sure of employment.

This plan was laid before the Association in January, 1923.\* The Dominion Government took a great interest in it, and at one time offered to co-operate with any province that would undertake it. Later in 1925 it was decided at one of our conventions that we should concentrate on the province of

Ontario; get enabling legislation and get the plan into operation in Ontario first, then having established the merit of it in this province, the task of spreading the work over the rest of the country would be fairly easy.

### Ontario Apprenticeship Act

On three different occasions we met the Ontario Government; once under Honourable E. C. Drury, and on the last two occasions we presented our arguments and our plan to the Honourable G. Howard Ferguson. During the last year we had the great pleasure of seeing our plan become law, at least in so far as enabling legislation will make it, this being sponsored by the Prime Minister himself, and on April 3, 1928, the Ontario Apprenticeship Act gained Royal assent and is now law.

This Act briefly provides,—

1. That all boys under the age of 21 engaged in any trade must be indentured to their employers and their periods of training are brought under the inspection of the Ontario Apprenticeship Board.

2. Uniform contracts and conditions governing the relationship drawn up by the Board become part of the arrangement and govern the relations of master and apprentice.

3. The Act provides the necessary machinery for removing all abuses of apprenticeship such as exist in some trades to-day where many boys are engaged in the trade, none of whom are indentured and none of whom ever really learn a trade. In fact only a proper number of these minors can be employed and they must be indentured. In the case of other trades like carpentering, bricklaying and plastering, officers appointed by the Government promote and really organize apprenticeship work and supervise the training of boys.

4. The Act gives authority to the general committee or Board with the consent of the Lieutenant Governor to lay down further regulations from time to time affecting this work including regulations as to assessment.

### Organization

For the time being the Board is devoting its efforts to getting the Province organized by ascertaining,—

1. The number of employers in each trade.

2. The number of journeymen in each trade.

3. The number of apprentices which the market can be reasonably expected to absorb.

Until this material is obtained and studied, the Board is carrying on the Apprenticeship work as it really exists now, simply insisting that all indentures be made on the regulation

\*LABOUR GAZETTE, March, 1923, page 275.

forms and filed with the Board. The Board's inspectors are working on certain trades where too many boys are engaged in ordinary labouring work, and on other trades where employers cannot be prevailed upon to take boys on at all. They are working in close harmony with the Technical Schools who are entering upon the work with real enthusiasm.

### Employers Urged to Co-operate

The Act involves a tremendous amount of work before all its possibilities can be realized. It is not practical yet to have all the boys indentured to an Apprenticeship Board, nor is it practical at the moment, to put in force the assessment feature by which all the employers shall pay their share towards the training of the boys, but that is the end toward which we are driving. That is the task which we hope in the very near future to complete. We anticipate a certain amount of resistance and objection when building work as a whole will be used for the training of boys under Government supervision and when the plan is announced for the payment to the Board by each employer of his proper share of the cost. We propose between now and then to seek every opportunity to explain to the employers generally the need of this work and the benefits they will derive from it, for when that time comes we want the co-operation and active support of every employer in the building trades in Ontario. We have been tremendously encouraged in our work by the enthusiastic co-operation not only of progressive contractors but in many cases of manufacturers of building materials who realize the necessity of working out this problem. A group of some twelve or fifteen general contractors and certain branches of the Canadian Construction Association and a few manufacturers have made the organizing of this work possible. It has taken a lot of time and cost a lot of money. As you know we had the services of a high class man for a year and we have conducted apprenticeship contests from time to time to stimulate interest, and have even had occasion, as we did at the National Exhibition in Toronto, to have a building erected by these boys so as to attract attention to the advantages of a trade.

As this work is understood and as the necessity for it is realized, we know we will receive the hearty co-operation of every employer.

### Attitude of Organized Labour

In regard to the attitude of organized labour, it is to their everlasting credit that they are absolutely behind our efforts in this

direction. From time to time uninformed people make the statement that the labour unions object to the training of mechanics and are seeking in every way to restrict the number of mechanics entering their trade. Whether this was true years ago or not I am not prepared to say, but I state most emphatically that at the present time the whole difficulty lies with the employer. The labour unions are not only willing but they are doing everything they can to encourage the indenturing of boys. The boys are willing. There are hundreds of boys who wish to learn these trades. It remains for the employers, and that means You, to find the means and that means lies here at your hand in the whole hearted acceptance of the new work as it will be laid down by the Apprenticeship Board.

In conclusion let me urge upon you all that you visit the Technical School this afternoon between 4 and 5 o'clock. There you will see something you will probably never forget—some sixty boys ranging in age from 16 to 20 years, indentured under three trades, namely—carpentry, bricklaying, and plastering, entered by their employers in a competition. The work that these boys do will be judged by competent men this afternoon and prizes will be presented to the winners. If you have ever attended on of these Apprenticeship Contests and had the pleasure of having one of your apprentices striving in his boyish way to head the list, you will never forget the feeling of having actually created and built up something worth while. You will never quite get over the little glow, more or less sentimental, that comes from seeing one of your boys with a prize or acquit himself with credit.

### The Apprenticeship Board

Premier Ferguson has taken a chance on the men in the building industry. He has put at the head of this work a man of outstanding ability, Mr. A. W. Crawford, formerly Director of Technical Education for the Dominion Government, who because of a serious illness from which he is now fortunately recovering, is not with us to-day. He has appointed four assistants, Mr. Jas. Johnson in Ottawa, Mr. Fred Hawes in Hamilton and Messrs. M. Evans and W. Thorne in Toronto, all of whom are here to-day. He has also named the Board consisting of Messrs. H. J. Mero, Geo. Oakley, M.P.P., J. B. Carswell, H. Jennings, for the employers and Jas. Marsh, E. Ingles, Jno. Bruce, and M. Jenoves representing labour, and myself as chairman. The Board has been meeting regularly since last summer, but the actual

field work was only started under the assistant inspectors a month ago.

I have purposely put the case from the standpoint of the building industry and from the employers' standpoint only. It is not necessary to add that as much again and more can be said of the benefits of this Act and its work to the community at large. Just think of the young men about you to-day looking in vain to learn a good trade, ready to go at something worth while, and denied

an opportunity by those older men on whom surely some responsibility rests. I could say much too of the wealth you were adding to the nation, of the useful splendid type of citizens you would be adding to the population—I have purposely avoided these considerations because I want to justify the plan, first as a business venture that promises great returns by way of increasing markets and the elimination of serious handicaps we are operating under to-day.

### Railway Employment in United States in 1928

In a review of railway operations in the United States in 1928, Mr. Julius H. Parmelee, director of the Bureau of Railway Economics, states that the average number of railway employees in 1928 was 1,677,000, compared with 1,760,999 in 1927. This was a reduction of about 5 per cent.

Aggregate compensation paid to employees in 1928 was less than in 1927, the comparative figures being \$2,859,000,000 in 1928 and \$2,953,211,375 in 1927. This was a decrease of about 4 per cent compared with the reduction of 5 per cent in number of employees.

Average compensation per employee was higher in 1928 than in 1927, a progressive increase in annual employee compensation having occurred each year since 1924. The average for 1928 was approximately \$1,705 per employee. The corresponding average for 1927 was \$1,677, while that for 1926 was \$1,656. Had employees received the same average compensation in 1928 as in 1927, the total payroll of the railways would have been approximately \$58,000,000 less than it was.

Mr. Parmelee states that the railways have now had three years of fairly good freight traffic. "The year 1926 broke all records for ton-miles of freight movement. The second highest year in railroad history was 1928, while the third largest was 1927. Yet with these three they were unable to earn a rate of 5 per cent on their investment in any one of the years, and the average for the three years was only 4.63 per cent. In the meantime, railway wages have shown a steady upward trend, and the freight rate levels have, if anything, been tending downward.

"The roads have maintained their net income only by increasing the economy and efficiency of their operations to the greatest possible extent. It is manifest that such a process cannot continue indefinitely. Their passenger revenue is still declining. Their freight revenue cannot always maintain its

present levels. They cannot indefinitely introduce savings into their operations through fuel conservation, elimination of waste, and other similar factors. They cannot indefinitely meet the rising tide of wages and taxes. In the large, the railway problem involves adjustment of rate levels to operating expenses and fixed charges, such as will produce the greatest possible return, the price of the service to the public being, of course, fixed at a reasonable level. This is a real problem, and calls for the application of the broadest principles of economics and of sound public policy."

The Toronto Board of Control has instructed the city architect to prepare draft regulations governing the demolition of buildings, this work involving serious hazards. This action was taken in accordance with the recommendation of a coroner's jury which investigated the circumstances of the death of a workman who was killed on February 9, while engaged in the wrecking of the old Bank of Commerce building at Toronto.

The Workmen's Compensation Commission of Quebec is stated to be encouraging the formation of local committees in the industrial districts of the province for the purpose of safeguarding the interests of hospitals and doctors, and also those of the insurance companies and self-insurers under the Act. These committees would keep in constant touch with the hospitals where injured workmen are being treated, and with the commission itself. The proposal, it is said, has the approval of the employers, the insurance companies, the hospitals and the commission, but since the workmen are not concerned in the matter of who pays for their hospitalization or what amounts are paid, labour organizations will not be represented on the committees.

## CANADIAN NATIONAL SAFETY LEAGUE

### Report on the Work of the National and Provincial Leagues in 1928

THE tenth annual report of the Canadian National Safety League details the operations of the League and its affiliates during the year 1928. Co-ordinating the activities of the various provincial leagues, the central body conducts general safety work throughout the Dominion. The provincial affiliates of the Canadian National Safety League are as follows:—The Ontario Safety League (now in its sixteenth year); Province of Quebec Safety League; Manitoba Safety League; British Columbia Safety League; Saskatchewan Safety League; Maritimes Safety League (covering the provinces of New Brunswick, Nova Scotia and Prince Edward Island).

In presenting its report the League "gratefully acknowledged the support of the Dominion Government," which made a contribution of \$10,000 to the funds of the organization.

The activities of the central organization consisted of the distribution throughout the Dominion of 22,500 safety calendars, 10,000 circulars and reports, 25,000 industrial, traffic and special bulletins, 20,000 school bulletins, 5,500 campers' bulletins and 10,500 hunters' bulletins. This distribution was made possible by the co-operation of the General Passenger Agents of the Canadian National and Canadian Pacific Railways, Tourists Agents, Provincial and District Foresters, Fire Rangers, the different Fire and Police Chiefs, Libraries, the Chambers of Commerce and Boards of Trade, the Ontario, Quebec, Maritimes, Manitoba and British Columbia Safety Leagues.

*Ontario Safety League.*—Completing fifteen years of activity, the Ontario Safety League, in its annual report, declares that the results of its work "are evident in the greater care being experienced all along the line in connection with the hazards to which our people of the province are subjected." The League expressed its thanks and earnest appreciation for the confidence, financial support, and co-operation accorded it by the various governmental departments, municipalities and organizations.

School safety work is emphasized as one of the most prominent features of the 1928 campaign, and to carry the message of safety to the younger generation the campaign in the public and separate schools of the province was conducted "with greater determination than ever before." A working itinerary was drafted and the school authorities in the communities to be visited were asked to give their fullest co-operation to

the field secretary of the League. Talks on local hazards were given by the field secretary, and suitable motion pictures on accidents and accident prevention were shown. During the year 148,000 children in 465 schools in 115 cities, towns and villages were reached by this method. In addition, the League conducted school children's essay competitions and drawing contests on safety subjects. A noteworthy feature of this part of the campaign was a letter addressed to the "Mothers and Fathers of Ontario" in which each prominent hazard was stressed. This letter had a distribution of 200,000 copies.

The safety program also included a service to industrial plants, dealing with special hazards of industry, while safety bulletins were issued in regard to electric railway work, and also in connection with forest fires and aquatic hazards, 5,000 of the latter being circulated over camping grounds, summer resorts and railways throughout the province. Another feature of the general campaign dealt with the motoring hazard, and the promotion of the Safety Drivers' Club, the membership of which continues to increase. The League also had a spectacular safety exhibit at the Canadian National Exhibition. In all, the League distributed one million pieces of literature throughout the year.

During 1928 the Ontario Safety League records indicate that the province had a total of 1,823 fatal accidents from all causes, as compared with 1,548 fatalities in the previous year. Deaths caused by automotive vehicles head the list with 477 fatalities as compared with 422 in 1927. Drownings again are second with 382 fatalities as compared with 318 deaths from this hazard during the previous year. There were 5,397 non-fatal accidents in Ontario during 1928, and 3,976 in 1927.

*Province of Quebec Safety League.* The annual report of the Province of Quebec Safety League outlines the work of that Association under its three main divisions—legislation, organization, and education. The legislative features of its activities consisted chiefly in the forwarding of resolutions and recommendations to the various governments and municipalities. In the field of organization, the League had an active year. Safety work in schools progressed favourably, and among the chief features along this line were the demonstrations of safety bicycle riding in 86 schools in Montreal and the promotion

of the teaching of swimming. Concentrating on traffic hazards, the League launched a campaign to warn motorists of the dangers of level crossings, advocated a safety-zone system, and offered a reward to persons aiding in the arrest and conviction of "hit-and-run" motorists. The coming into effect of the new Workmen's Compensation Act gave the Industrial Safety Section a new impetus, and it is expected that the membership of this section will be greatly increased.

As regards education, the League prepared and distributed a great amount of illustrated posters, leaflets and bulletins to homes, industrial plants, and public institutions. It is estimated that the industrial posters were seen by over 100,000 working men fortnightly. In addition to illustrated lectures and addresses, the radio was used to great advantage, eight French and English radio talks to school children being given.

*Manitoba Safety League.* The traffic hazard in Manitoba during 1928 accounted for 27 fatalities and 500 non-fatalities, and industrial hazards resulted in 67 fatalities and 13,282 lesser accidents. The League is endeavouring to reduce and prevent accidents, and is also directing its activities in fire prevention work.

*Saskatchewan Safety League.* Decision to organize a Saskatchewan Safety League was reached on September 5, 1928, when on the invitation of Hon. S. J. Latta, Provincial Secretary and Minister of Municipal Affairs, representative citizens from every large centre in the province met in conference in Regina. The discussion concentrated upon highway safety and means of preventing highway accidents, industrial safety work being less imperative in this province than in the more highly industrialized eastern provinces. Various schemes were suggested whereby the de-

sired objective might be achieved and, as an initial step, it was decided to organize a central or provincial executive.

Organization of local branches has progressed favourably, and these branches have presented to the Legislature several recommendations in regard to existing traffic laws.

*British Columbia Safety League.*—The report of the British Columbia Safety League indicates the extent of activity entered upon by the organization. A total of over 100,000 "warning notices" were distributed through various agencies during the year. The school children were reached through an effective motion picture service as well as by speakers, who addressed directly over 45,000 school pupils on the subject of safety at play, in the streets, and in the home. Touching on the results of all the methods utilized, the report states that for the three months of July, August and September, 1928, there was a reduction 32 in all types of fatal accidents as compared with same period in 1927. Quite significant was the fact that in this period 20 fewer children were accidentally killed than in 1927.

*Maritimes Safety League.*—The Maritimes Safety League conducted a campaign in accident and fire prevention during 1928 in school, among industries, and in summer resorts and hunting grounds as well as an intensive program in traffic accident prevention. Motion pictures depicting traffic and sundry hazards, were shown to school children in connection with lectures on accident prevention. The following is a summary of the literature distributed: 20,500 school safety bulletins, 12,000 industrial safety bulletins, 12,000 special safety bulletins, 12,000 traffic safety bulletins, 3,370 circulars and circular letters, 2,300 special campers' safety bulletins and 2,300 special hunters' safety bulletins.

### General Motors Employees' Stock Ownership

A statement issued by President A. P. Sloan, Jr., of General Motors Corporation, showed that this company recently distributed to 12,033 of its employees through the Corporations and Investment Fund, Class of 1923, the sum of \$13,968,800, consisting of \$2,194,000 in cash and 147,185 shares of General Motors new common stock. The employee who during the year 1923 paid into the fund \$300 of his wages is now receiving in cash approximately \$415, being his original savings plus interest; and in addition 27 shares of General Motors new common stock having a current market value of approximately \$80 a share.

General Motors has several plans which have for their object the promotion of the welfare of its employees, of which the saving plan is one. The other plans include housing of employees, seven per cent preferred stock investment plan, group insurance, bonus for salaried employees, and managers' securities plan for senior executives.

References have been made in previous issues to the welfare work carried on by General Motors. (LABOUR GAZETTE, January, 1927, page 63; April, 1925, page 367; March, 1925, page 269, etc.).

## SURVEY OF INDUSTRIAL WELFARE IN ONTARIO

THE Province of Ontario is widely known both throughout Canada and in other countries for its advanced labour legislation, but hitherto little has been known of the various non-official agencies existing in the province for the purpose of promoting co-operation between employers and workers. An attempt to fill this gap in the public knowledge of the economic life of the province has been made by the Ontario Department of Labour in the form of a useful pamphlet recently published under the above title. The provincial Deputy Minister of Labour, Mr. J. H. H. Ballantyne, points out in an introductory note that the industrial welfare movement is a recent development which has come with the immense advances of science as applied to industry in the fields of engineering, chemistry and electricity, and medicine and sanitation. "Until a few years ago," he says, "the contract of service between employer and employee was almost exclusively founded on the 'cash nexus.'" Buying in the cheapest market and selling in the dearest one, in the matter of wages, was carried on practically without any modification. It was inevitable that a better estimate of values, especially of human values, should be forthcoming. To-day the onward march of industrial progress is best symbolized by employers and employees working together for the stability of industry, security of employment and the good and development of their country. Security of employment for workers who are able and willing to maintain their obligations as good citizens, in my opinion, is the greatest accomplishment that modern industry can achieve. Many excellent schemes have been formulated and are practised by different firms in order to promote an achievement of this character."

The pamphlet, which is largely the work of Miss Marion Findlay, brings together a mass of information which was collected after an investigation of about three hundred representative manufacturing firms, public utilities and department stores. The employees in these firms numbered 185,187, and of these, 42,813, or 23 per cent, were female workers. The subjects on which information was sought included accident prevention; health measures, including medical and nursing service; lunch rooms and cafeterias; forms of recreation engaged in by employees under the auspices of employers; holidays, with or without pay; joint councils or shop committees; bonus and insurance plans; pensions, annuities, savings and profit-sharing systems; sale of stock to

employees; number of male and female employees with the firms to whom questionnaires were sent; hours of labour wrought and such other schemes of welfare as may be detailed by employers.

### Physical Welfare

Under this heading the pamphlet groups the provisions made in the various industries for accident prevention; health; cafeterias; recreation; holidays with pay; plant publications; and joint councils and shop committees.

*Accident Prevention.*—It was found that expert mechanical knowledge is being brought to bear more and more in the equipment of dangerous machinery with the most adequate safeguards. Closer attention is being given the lighting and ventilation of plants as factors in safety, to good housekeeping methods and to the education of every employee in the necessity for safe methods and constant precaution. This last item is found to be perhaps the most important on any safety programme. The Workmen's Compensation Act of Ontario places compensation costs in case of industrial accidents as a charge upon industry. There is, therefore, an economic as well as an humanitarian motive in such preventive activities since it behooves employers in their own interest to reduce their liability under the Act as far as possible.

Some companies lay the responsibility for accident prevention upon the foremen, who hold frequent meetings to discuss safety methods. Others have a special safety department, with a safety supervisor. In some plants there are safety committees and sub-committees which meet at stated intervals. In individual plants where the work is of a more hazardous nature, a safety meeting lasting one or two days is held each year by the safety committee for employees in order to bring safety more closely to their attention. Another feature of the programme to reduce time loss due to accidents which has been receiving closer attention in recent years and for which still greater efforts should be put forth is the training of employees to seek first aid attention for minor accidents.

Many reports were received showing a decided improvement in accident experience as a result of these and other measures.

*Health.*—Practically all plants covered by the inquiry come under the jurisdiction of the Workmen's Compensation Act and are meeting the requirements under that Act

and regulations in the provision of first-aid kits, first-aid rooms, etc. Many firms go much further than these requirements in their hospital accommodation, provision of nurses for plant duty and visiting and of the services of doctors for general health purposes as well as in case of emergency.

The report gives details of the various types of work carried on under these heads.

*Cafeteria.*—Eighty-nine of the 300 firms, employing approximately 50 per cent of the workers, reported having a cafeteria at which might be obtained a hot full-course dinner practically at cost, and twenty other firms report lunch rooms where tea, coffee and milk are served free or at a nominal charge. In the smaller industrial centres where the great majority of workers live near enough the plant to go home for the mid-day meal the provision of a cafeteria is unnecessary, and in certain sections of the larger centres plants report that adequate provision is made by independent restaurants which are willing to cater to the needs of their workers. In such cases it is felt that employees appreciate the freedom of choice in making their arrangements and that the necessity of going out-of-doors even for a short time is beneficial.

*Recreation.*—Approximately 41 per cent of these firms in which are employed three-quarters of the workers make some provision for the recreation of their employees. The majority have athletic associations or recreation clubs with membership fees, and the firms often make an annual contribution to the funds or undertake the responsibility of equipment or of any deficit which may occur.

Mention is made of employees' orchestras, glee clubs and dramatic clubs, annual picnics, athletic fields and club houses, etc., the expenses in most of these undertakings being defrayed by the employers.

*Holidays with Pay.*—Within the last few years the giving of holidays with pay to production workers and other wage-earners has come to be recognized by an increasing number of firms as a possible and a desirable arrangement. Of the 300 firms questioned, over 20 per cent, in which are employed 32 per cent of the 185,187 workers concerned, allow annual holidays with pay to all workers after a stated length of service, and in the majority of cases the benefit to employees receiving holidays and to the firm in improved production is considered a fair return on the money expended.

A usual holiday plan is to have the length of the holiday vary with length of service as one week's holiday after one, two or three

years' service, and two weeks after two or five years of service, and in a few cases the allowance of one week after five years and two after ten, and the proportion eligible under this scheme for one week varies from 8 to 50 per cent of the total number of employees.

*Plant Publications.*—The plant paper is considered by some firms as a most important factor in improved industrial relations. Through it a point of contact may be established between employees and management to the benefit of all concerned and cordial relations fostered among the various departments. Approximately 14 per cent of these 300 firms have plant papers published at regular intervals and five additional firms report the paper discontinued as an expense not justified by the results. In the case of branch plants the papers are sometimes published from the head office with several columns or pages reserved for news from each plant.

*Joint Councils and Shop Committees.*—One of the most important manifestations of the desire for co-operation between management and workers is stated in the pamphlet to be the establishment of joint industrial councils or shop committees in various large firms in the province. These councils and committees are found to be valuable media for the interchange of ideas on matters of mutual interest, fostering the spirit of partnership in business with a clearer understanding of the problems of the management and the difficulties of the employees. This opportunity has been afforded by 21 per cent of the 300 firms, employing approximately 48 per cent of the workers, about one-fifth of which have well-organized works councils. In addition to these firms, many have active safety committees working in conjunction with foremen and superintendents for the prevention of accidents throughout the plant. The allocation of certain responsibilities and the giving of some voice in the arrangement of working conditions in the plant are said to have proved beneficial to both sides.

While the aims of the joint councils are practically identical, probably no two are exactly alike as to constitution. Broadly speaking, joint councils are composed of a certain number of employee representatives elected to membership by the workers and an equal number of representatives of the management appointed by the management and with equal voting powers. The basis of elected membership usually varies with the total number of employees or the representation may be according to groups. Meetings are held at regular intervals, usually monthly,

either in the firm's time or after working hours, in which case some companies pay employee members for time occupied in council business. Matters concerning working conditions, wages, hours, safety, recreation, education, general welfare and such questions of mutual interest receive consideration at these meetings, and an opportunity is afforded for the presenting of complaints, requests or suggestions, with a fair discussion of such. Provision is made for the carrying out of recommendations of the council and for procedure in case of tie vote on any question.

Particulars are given in the report as to the usual procedure in electing joint councils. Their success is stated to depend upon the wisdom with which they are conducted as much as upon the nature of their constitution.

### Financial Welfare

A large number of firms were found to make no financial provision for their employees beyond paying them prevailing rates of wages and endeavouring to stabilize employment. Most of the employers who were questioned, however, have one or more of the arrangements mentioned in the following paragraphs.

*Sickness and Disability Insurance.*—In addition to the provisions under the Workmen's Compensation Act many firms encourage the formation of employees' benefit associations to which the firm makes contributions. Twenty-six per cent of the firms investigated covering almost one-half of the employees, have some form of insurance other than group insurance. Approximately two-fifths of this number have sickness insurance in addition to group insurance, and in the remainder insurance in case of sickness and accidents, other than industrial, is the only benefit accruing to employees in emergencies of this nature.

The great majority of schemes of sickness insurance are contributory on the part of the employees and in many cases these contributions alone form the fund from which benefits are paid. Amounts of contribution may be based on earnings, age or may be set at a flat rate for all members or for all members of each class and amounts vary in different firms from five to twenty-five cents a week, and in rare cases where life and sickness insurance come under the one plan the levy is as high as one dollar per week.

A great variation was found in the extent to which employing firms assume responsibility for the success of benefit associations. Many firms contribute annually a sum equal to the total amount or a certain proportion of the total amount collected from employees, others contribute a sum sufficient to

bring the fund up to a stated amount after the benefits for the year have been paid, while others hold themselves responsible for any deficit that may occur or for expenses of administration only. Some associations are operated entirely by employees without any support, material or moral, from the firm. On the other hand, some firms provide sickness disability and death benefits without any expense to employees.

An important feature of sickness insurance is the provision of medical care, the complete cure in as short a time as possible being the chief aim of such insurance.

*Group Insurance.*—Judging by numbers, the form of financial welfare most popular with industrial firms is that of group insurance. Approximately 35 per cent of the firms, covering 28 per cent of the 185,187 workers, have installed some system of group insurance, and the opinion generally held is that considerable benefits have accrued therefrom to both employees and employers.

*Pensions and Annuities.*—Sixty-one of the 300 firms, employing 56 per cent of the 185,187 employees, make provision for employees who have grown old in the company's service and several others report that the matter of establishing a pension plan is receiving consideration at the present time. The majority of firms with regular pension funds have the non-contributory system, the pensions being granted as voluntary rewards for long and faithful service and as an incentive to such service. Under ordinary circumstances from twenty to twenty-five years' continuous service is required before employees are eligible for pensions, and many firms make provision for pension in case of incapacity for further duty after a shorter term, ten to fifteen years. The retiring age is usually 65 years for men and 55 for women and the limit may sometimes be lowered by five years at the discretion of the pension board or if the length of service has exceeded the required term by five years. The amount of superannuation is usually calculated on a certain per cent (one to two, of the average earnings for the last five or ten years of employment for each year of service with a stated minimum and maximum amount.

*Bonus and Profit Sharing.*—Approximately one-quarter of the 300 firms report having a bonus system of some kind. In many cases this is a simple "attendance bonus" of a stated amount or a certain percentage of wages per week for all employees, or for all female employees having perfect time cards. This has been found to be a satisfactory

method of dealing with the problem of unpunctuality and irregularity of attendance and in a few instances where punctuality is rewarded a fine is imposed for lateness.

*Saving Plans.*—Many firms have established some form of thrift plans in order to encourage systematic saving among employees. A simple method is sometimes employed of deducting a stated sum from the pay of each employee so desiring and depositing it to his account in a chartered bank. According to another method such deductions from pay are in the nature of a loan to the firm on which interest up to seven per cent is allowed.

*Sale of Stock to Employees.*—The sale of company's stock to employees has not yet become a common practice in Ontario. However, 15 per cent of the 300 firms, covering 18 per cent of the 185,187 employees, have instituted plans with considerable success. In all cases it is purely voluntary matter on the part of the employees, no pressure being brought to bear on them.

*Other Plans.*—Among other schemes for industrial welfare are mentioned the employment departments maintained by many firms.

Others have also education, welfare, personnel, industrial relations, co-operative or employee's service departments.

### Hours of Labour

The report states that the length of the working day and week has an important bearing on the welfare of employees. From reports of 276 firms, having 167,634 employees, it is found that 122,908 of the employees, or over seventy-three per cent, work a 48-hour week or less; 37,786 or over twenty-two per cent work from forty-nine to fifty-four hours per week and 6,940, or over four per cent work fifty-five hours per week or longer. Of the 41,988 female workers in these 276 firms, approximately seventy-five per cent work a 48-hour week or less twenty-three per cent work forty-nine to fifty-four hours per week and less than two per cent work a 55 hours week or longer.

An appendix to the report gives the number of firms reporting on each of the welfare schemes, with the number of their male and female employees, and also the number of firms classified according to industrial groups reporting on each scheme.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Labour Demand for Inspection of Scaffolding in Ontario

THE coroner's jury which investigated the circumstances of the death, on February 18, of a workman who fell from a defective scaffold on a new building at Toronto, recommended that the city building bylaws should include the provision that "every plank that goes into a scaffold to be used above ground level should be tested to see that it will bare double the weight for which it is used."

The workman died two hours after falling about 76 feet, when the plank of the scaffold on which he was working broke. The evidence showed that the plank had been in constant use since November 20 without having been inspected during that time. Commenting on this case the secretary of the Toronto Bricklayers' and Stone Masons' Union stated that the union intended to renew its demand that provisions should be made for the better protection of workmen engaged in building construction. "We have made frequent requests for a scaffolding Inspector," he said. "Neither the city nor the Provincial Government has taken action on our suggestions.

On frequent occasions union officials have threatened to call strikes to secure the enforcement of building regulations, while foremen have been summoned before the union and received warnings to be more careful."

### Safety Work in Metal Mines

Metal mines in general do not carry safety measures so far as coal mines, according to a paper by D. D. Muir, Jr., presented at the recent meeting of the National Safety Council, and quoted by the *Engineering and Mining Journal*, of February 16, 1929. The necessity for safety measures is not so great in a metal as in a coal mine. However, Mr. Muir goes on to say, many metal-mining enterprises are equipped with hospitals and medical service, and have oxygen helmets and trained crews. The use of helmets or hard hats is becoming more general and is decreasing not only severity of head injuries but the number of accidents. The practice of wearing wire screen goggles of a comfortable pattern is increasing. Blasting powder in a red wrapper, owing to its great visibility, has decreased to a marked extent drilling into missed holes. Strict enforcement of a rule that all accidents,

no matter how trivial, be reported and treated, decreases infection. The provision for containers for drill steel filled on surface not only gets steel to the desired point but saves many figures and bruised heads.

Mr. Muir claims that the welfare of a mining camp is of paramount importance in matter of safety, although many operators fail to recognize this fact. Given a safe place to work in, a decent place in which to live, schools for his children, and some form of diversion for his leisure hours and the result is a satisfied employee, who will be permanent. A large labour turnover is directly responsible for many needless accidents through unfamiliarity with the mine and working conditions.

### **Sandstone Workers and Silicosis**

A report on the occurrence of silicosis among sandstone workers written by Dr. C. L. Sutherland and Dr. S. Bryson, members of the Medical Board appointed in Great Britain under the Refractories Industries (Silicosis) scheme, has been published by H. M. Stationary Office. The report states that silicosis was found to arise in the occupations of mason, rock-getter, quarryman, planer and wallstone dresser. Where silicosis was demonstrated by radiographic examination the disease appeared to become more common after 40 years of age and after 20 years in the stone industry. The majority of these cases were in the first stage. The later stages were represented by fewer cases, owing, no doubt, to incapacity for work. No evidence could be gathered to show that there was any gritstone that could be said to be innocuous to the workman.

Dr. E. L. Middleton, H. M. Medical Inspector of Factories who also deals with this subject states that, in machine processes of drilling, sawing and turning, the use of steam or water can be applied in many cases. In others, exhaust draught can be applied. Experiments have been made by the Home Office in association with the Mines Department and H.M. Office of Works with a device for the application of localized exhaust draught for removal of dust produced by pneumatic surfacing tools, in which the removal of dust is very effective. The use of exhaust draught, if adopted for cleaning the surface of stone in dressing and carving operations, might help to remove the dangers attendant on brushing.

### **Increase in Occupational Diseases**

At a recent conference held by the Industrial Survey Commission of New York State, Miss Frances Perkins, State Industrial Com-

missioner stated that industrial diseases are on the increase, emphasizing especially the effect of chemicals in producing disease. She mentioned the dangers of menthol chloride, emanations from retroactive substances, dust from chemicals and other poisoning agents which affect the lungs and other parts of the body. The Commissioner condemned the "bargain table methods" in medical examinations to determine a claimant's injuries.

John M. O'Hanlon, secretary of the State Federation of Labour, agreed with Miss Perkins' statements as to the increase of occupational disease. He declared that bruises and callous conditions suffered by cleaners and other workmen from constant kneeling often set up irregularities in the body which result in disease and general disability.

### **How to Interest Employees in Industrial Safety**

A recent address delivered by Mr. R. B. Morley, General Manager Industrial Accident Prevention Associations of Ontario, has been reprinted in a leaflet form. Mr. Morley's address was in part as follows:—

Making safety interesting to the man on the job is the problem of the operating executive. The employer must give the employee a reasonably safe place to work, and, whether this be mechanical or hand, equipment that is suited to the job. He must see that proper maintenance is given to tools and equipment; he can insist on adequate supervision; he can make, in most cases, reasonable selection of the workers, and take extreme care in the selection of the supervisory force. He can provide First Aid, as called for by the Compensation Act. When these things have been done, he is then ready to take a hand in the interest that must be developed for the men on the job.

When working conditions have been made reasonably good and safeguarding carried out, the employer is faced with the problem of getting the interest of the worker. Assuming you have interested a reasonable number of key men, the next logical step is an intimation to the workers that they are now called upon to step in and take a hand in this problem.

Mr. Morley suggests the following lines of procedure:—

1. Issue a general statement to all workers over the written signature of the chief operating official.
2. Call a meeting of employees in company time for the purpose of telling them that there are too many accidents happening, that

the employer has done all he can to prevent them and now looks for their co-operation.

3. Having gone so far, let us bring out our carefully prepared book of rules and see that these are thoroughly understood by everybody in the plant.

4. The establishment of safety committees provides a definite step in the progress of safety in any plant.

5. Insistence must be placed on the use of the First Aid facilities provided.

6. Bulletin boards should be provided at reasonable points throughout the plant and periodic checks made of the interest taken by the employees in the literature posted on these boards. Bulletins must be changed periodically to avoid loss of interest, and a properly kept and clean bulletin board as a background is essential to success.

7. Pay envelopes printed with safety slogans and pay envelope inserts have a definite place, but they should not be used continually, as the surprise element is important.

8. Use the other forms of safety literature, such as the Safety Calendar, which are of great value and assist in advertising the problem to the workers.

9. Periodic meetings, with or without motion pictures or lantern slides, serve to remind everyone in the plant of the idea and all for which it stands.

10. Last, but by no means least, adequate supervision must be maintained.

### Health Records in 1928

The *Statistical Bulletin* published monthly by the Metropolitan Life Insurance Company states in its issue for January that health conditions among the industrial population of Canada and the United States during 1928 were good. In only three years have they been excelled. The death rate among the more than eighteen million industrial policy holders of the company indicates this clearly. This rate was 8.6 per 1,000, and was only 2.4 per cent in excess of that for 1927, which in turn was the lowest ever recorded among this large cross-section of the population of the two countries. But this slight rise was entirely limited to the states east of the Rockies. Among the Canadian policyholders, and among insured persons living in California, Oregon, Washington, Utah, Idaho, Montana and Colorado, the 1928 health record surpassed that of 1927.

The extent to which health conditions have improved among Canadian and American wage-earners, within a period of less than two decades, is clearly shown by comparison of the death rates now and seventeen years ago. In 1928, there occurred 156,630 deaths among

Metropolitan Industrial policyholders aged one year and over. If the same death rate had prevailed in 1928 as obtained in 1911, the deaths would have numbered 227,636—or 71,006 more than actually occurred. The deathrate in 1928 was 31.2 per cent lower than in 1911.

All fatal accidents, considered as a group, caused 11,137 deaths in 1928, with a deathrate of 61.3, a 4.1 per cent decline compared with 1927, and a drop of 20.8 per cent over the deathrate in 1911. Accidental falls, machinery accidents and railroad accidents all recorded lower death rates than the preceding year, and registered large declines over the rates in evidence seventeen years ago.

### Hamilton Plants win Safety Contests

The Hamilton factories of the International Harvester Company of Canada, Limited were the winners in a safety contest carried on among the company's eight plants in 1928. The contestants are all leaders in the safety movement in their respective districts. The hours lost during the year at the Hamilton plant on account of accidents, per 1,000 hours worked, fell from 13.7 in 1923 to 5.52 in 1928. In 1923 there were 82 lost time accidents, while in 1928, with nearly twice the number of employees, there were 34 such accidents, only two being of a serious nature. The grey iron foundry went through the year without an accident, the last mishap having occurred September 20, 1926. The malleable foundry had a perfect record from December 15, 1925, to August 23, 1928, terminated then only by a minor injury. More remarkable yet, perhaps, is the fact that 29 departments of the Hamilton works went through 1928 without a single accident. Outstanding these were the tool room, the building and repair, and the malleable finish departments. One of the machine shops has not experienced an accident for over five years.

The Hamilton branch of the Canadian Iron Foundries, Limited, won the Hughes Memorial Shield in competition with the other three plants of this company, which are at Three Rivers, Quebec, Fort William and St. Thomas, respectively. The plant at Hamilton had only two lost time accidents during the year.

During the Month of February a total of 5,898 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 40 of which were fatal cases; in Schedule 2 industries 398 were reported including 2 fatal cases; and 344 Crown, 7 of which were fatal, were reported during the month, making in all 6,640, of which 49 were fatal.

## LABOUR LEGISLATION IN THE UNITED STATES IN 1928

THE *American Labour Legislation Review*, the quarterly publication of the American Association for Labour Legislation, gives in its current issue an outline of the various laws affecting labour which were enacted by Congress and in the various states during the past year.

Some of the new measures of the year are outlined in the following paragraphs:—

*United States.*—The Secretary of Labour was directed to investigate unemployment and the method of making unemployment reports.

The Senate Committee on Education and Labour was directed to investigate the causes and relief of unemployment.

Extra compensation was provided for night work for postal employees; certain salaries were raised, and the salaries of customs employees were classified.

A child labour law was enacted for the District of Columbia.

An investigation was ordered of conditions in the coal fields in Pennsylvania, West Virginia and Ohio, especially in regard to injunctions issued, eviction of miners and families from their homes, and abrogation of wage contracts.

*Alabama.*—Provision was made for aid in rehabilitation of the blind.

*Arizona.*—Labourers on public works must be residents in the State.

*Florida.*—State employees who have served for 45 or more years and are 65 years of age or over may retire on half pay.

*Georgia.*—An annual tax for each county of \$50 on all employment agents and \$1,000 on all immigration agents may be levied.

Provision is made for the retirement on half pay of municipal employees.

*Kentucky.*—All emery wheels, polishing and grinding machinery must have specified type of suction or exhaust systems.

Only competent engineers may be in charge of engines used for hoisting employees at coal mines. Only persons designated by the operator may interfere with any part of the machinery. Each person riding on a cage or car must have three square feet of floor space and all persons are forbidden to ride in a loaded cage or car.

Parents are entitled to sue for loss of child's wages.

A commission was created to investigate the Workmen's Compensation Act.

A State teachers' retirement system was established, and the existing provisions in regard to pensions of policemen and firemen were amended.

*Louisiana.*—Police juries may make necessary regulations to provide for the support of the poor and necessitous within their respective parishes.

Retention of more than 10 per cent of all moneys collected from employees as physician's fees, or payment of less than 90 per cent of said amount to the physician employed, is forbidden; firms contributing toward the maintenance of a conveniently located hospital, or whose employees are cared for gratis in such hospitals, are exempted. Employees on public works are to elect or appoint their own physicians.

Claims of labourers for wages may be assigned in writing to any person for the purpose of collection.

One half of all employees' wages under \$250 per month is made exempt from seizure or garnishment; not less than \$75 per month, and wages of farm labourers and domestic servants, are entirely exempted; courts of competent jurisdiction to deal with said cases.

Labour unions may amend their charters or articles of incorporation as provided.

Any municipality allowing the operation of filling stations within a zoned area may not regulate the hour of closing said business.

Labour agents or employment bureaus must furnish the commissioner of labour and industrial statistics a well secured \$5,000 bond, to be filed in the latter's office, and must pay all damages incurred as labour agents or employment bureaus; anyone injured or damaged may sue on said bond to recover damages. The commissioner of labour is authorized to supervise the business of labour agents and employment bureaus.

Only mechanics who are *bona fide* citizens and voters may be engaged on public works, except under special conditions.

Provision under Workmen's Compensation for hernia was eliminated, and compensation for death was limited to 300 weeks.

A state board for the blind was created to act as a bureau of information and industrial aid, provide vocational training and establish workshops.

*Massachusetts.*—The schedule under Workmen's Compensation for loss of members was made more specific and the amount of compensation for certain members was increased. The separate act providing for the payment

of compensation to policemen killed in the performance of duty was extended to include firemen. The annuity was increased if dependent children survive.

The law providing for the retirement of state employees for permanent disability was amended, as was also that in reference to group life insurance for employees and trade union members.

*Mississippi.*—A mechanics' lien law was enacted.

Any person knowing that a labourer has contracted with another person for a specified time is forbidden to employ, without the employer's consent, said labourer before the expiration of his contract.

A commission was ordered for the investigation of teachers' pensions, and commission for the blind was created.

*New Jersey.*—The penalty for failure to pay wages every two weeks in lawful money changed to \$50 for the first offense and \$100 for each subsequent offense. District courts, justices of the peace, and police magistrates are empowered to have jurisdiction over cases of violation.

A commission was appointed to revise the law on mechanics' liens.

Except in cases of emergency, uniformed members of paid police departments in any municipality of over 20,000 inhabitants shall not be employed for more than six days a week.

Completion by children of six yearly grades, instead of five, is necessary in order to receive age and schooling certificates.

The weekly maximum accident compensation is raised from \$17 to \$20 and the minimum from \$8 to \$10. The number of weeks for which compensation is payable for the loss of a thumb, a first finger, a hand or an arm is increased. Certain compromises in cases of minors must be approved by the workmen's compensation bureau instead of the court of common pleas. Representatives for certain incompetent persons entitled to compensation may be appointed. The employer is required to furnish artificial limbs or appliances in certain cases. Municipalities and fire districts are authorized to provide compensation insurance for volunteer firemen.

In regard to vocational rehabilitation a "physically handicapped" person is re-defined as anyone incapacitated for education, as well as for remunerative occupation, and includes any person, instead of only those over sixteen years of age.

Group life insurance for employees was authorized.

*New York.*—Liens for labour furnished for a public improvement may be continued for one year, instead of six months, after the expiration of three months following the filling of a notice of said lien.

In regard to workmen's compensation, compulsory coverage is extended to all employments in which there are engaged four or more workmen even though not carried on for pecuniary gain. Occupational disease is made compensable when due to "direct contact with" the poisonous substances enumerated, and the period in which notice must be given is extended from thirty to ninety days. Amputation of arm or leg above the wrist or ankle is compensated proportionately to loss of arm or leg. Changes of referee in successive hearings on a claim is forbidden except for good cause when the board may designate another referee. The board is empowered to increase or decrease rate of award from date of injury, any excess in case of decrease to be deducted from future payments. Any party may apply to the board within twenty days for review of referee's decision but the board is empowered to penalize for frivolous appeals. The board by unanimous vote may extend the time in which to file a claim to two years.

A committee, already appointed for the study of the aged poor, was continued with a doubled appropriation.

*Philippines.*—A workmen's compensation law was enacted.

*Rhode Island.*—Night work for children under sixteen was prohibited after 7 P.M. instead of after 8 P.M. Children under sixteen are forbidden to work in any industrial establishment more than forty-eight hours a week, or more than nine hours a day, instead of fifty-four hours a week and ten hours a day.

Boys under twelve and girls under sixteen are forbidden to engage in street trades in cities of over forty thousand, instead of over seventy thousand, inhabitants.

In regard to workmen's compensation, the commissioner of labour is empowered to decide the merits of a controversial case in the first instance, instead of the superior court. Appeal from the decision of the commissioner may be taken within five days to the superior court which hears the case *de novo*.

The state commissioner of finance was directed to investigate the general subject of old age pensions and the various state old age pension systems with a view to their practical adaptability in Rhode Island, and must report to the general assembly by January 15, 1929.

*Texas.*—In workmen's compensation cases, certain injuries are conclusively presumed to cause total permanent disability. The seven days waiting period is made retroactive after four weeks. The provision in respect to notice on appeal is modified. The act regulating motor bus transportation specifically requires the owner or operator to take out workmen's compensation insurance.

The provisions of the Sheppard-Towner Maternity Act were accepted. The state board of child health is directed through its bureau of child hygiene to co-operate with the federal children's bureau in the administration of said act.

*Vermont.*—Under workmen's compensation, the pecuniary liability of employers for hospital services was increased.

Provision was made for establishing a bureau of information and aid to the blind.

*Virginia.*—Review by the full workmen's compensation commission of a decision of one

commissioner is required before an appeal may be taken to the court.

#### Suggested Lines for New Legislation

The American Association for Labour Legislation recommends the following subjects to the consideration of State legislatures during the year 1929, and also proposes that voluntary organizations for social welfare should concentrate their efforts on the same legislative program.

1. Universal rock dusting of coal mines.
2. Total abolition of fee-charging agencies.
3. Accident compensation in the remaining five non-compensation States.
4. Compensation protection for all victims of occupational disease.
5. Vocational retraining of the permanently disabled.
6. Universal provision for the "veterans of industry" now discarded in old age.

### British Opinion of Industrial Disputes Act

The Industrial Disputes Investigation Act of Canada, and its possible adaptation to meet conditions in Great Britain, are discussed in a new report issued by the Committee on Industry and Trade, a body composed of leading industrialists, detached economists, and representatives of labour, which was originally appointed by the labour government in 1924, "to inquire into and report upon the conditions and prospects of British industry and Commerce" (a previous report by this Committee was outlined in the LABOUR GAZETTE, June, 1926, page 582; April, 1927, page 412).

The new report, which was published during March this year, is mainly concerned with the export trade of Great Britain, but it includes a wide survey of existing industrial conditions. In connection with labour relations the committee states that the evidence before them was practically unanimously opposed to any prohibition by the state of industrial stoppages, such as the Canadian Act provides for. In most industries the evidence showed that relations between employers and employees were close and friendly and there was a striking absence of any general demand for a change in the existing machinery of industrial negotiations.

The earlier report, as noted in the LABOUR GAZETTE, June, 1926, contained the following

reference to the Industrial Disputes Investigation Act:—

"The Canadian law is much less ambitious than the Australian, and does not go beyond the compulsory submission of disputes of certain classes or in certain circumstances to conciliation or investigation, with a provision for deferring a stoppage in the meantime. In the limited number of cases in which the Canadian Act has been invoked, it has generally operated successfully, but it is to be noted that its main success has been in conciliation. It has not prevented the occurrence of strikes and lockouts."

The 1929 Safety Convention of the Industrial Accident Prevention Associations of Ontario will be held at Windsor, Ontario, on May 2 and 3. The various committees, including those on programme, attendance, annual meetings, etc., have been set up and will commence work at once. The headquarters for the Convention in Windsor will be the Prince Edward Hotel. Mr. W. C. Coulter of Toronto is the chairman of the Industrial Accident Prevention Associations and Mr. R. B. Morley, is the general manager.

## REQUESTS OF ORGANIZED LABOUR IN CANADA FOR NEW LEGISLATION

### British Columbia Executive of the Trades and Labour Congress of Canada

THE legislative proposals of the British Columbia Executive of the Trades and Labour Congress of Canada was presented to the Provincial Cabinet on February 15, by a delegation composed of P. R. Bengough and W. J. Bartlett of Vancouver and E. S. Woodward of Victoria. The most important proposals submitted were as follows:—

*Workmen's Compensation.*—(a) That excluded persons, as set out in Part 1, Section 4, paragraph B, engaged in undertakings costing in excess of \$50, be brought under the provisions of the Act; (b) All compensation to be based on rate of wages being paid to workman at time of injury; (c) That the rate of compensation be increased from 62½ per cent to 66⅔ per cent of wages, or loss of wages, as in Ontario and Manitoba; (d) That there be a more liberal interpretation of the Act in connection with hernia cases; (e) That when an injured workman has been awarded total disability compensation this shall be continued until he is able to resume his former occupation or has been offered other suitable and equally remunerative employment, and that if a workman has suffered a permanent partial disability, but upon the report of the attending physician is able to take light work, the total disability payments should be continued until suitable employment is provided; (f) That medical inspection and professional treatment be provided when workers are employed in occupations where they are subjected to the dangers of poisonous gases.

*Mothers' Pensions.*—(a) That arrangements be made with the government of any other province in the Dominion of Canada making similar provision for the payment of allowances to mothers for the purpose of paying such an allowance to a person who has resided in another province and in British Columbia for a period equal to the term of residence required by this Act in the case of a resident of British Columbia only; but that no such arrangement shall be entered into, nor any such payment made, except where the other province concerned has passed legislation enabling reciprocal action to be taken with regard to beneficiaries; (b) That the regulations be amended by changing the definition of "indigent person" to one having less than

\$1,000 instead of less than \$500, and by increasing from \$1,500 to \$2,000 the amount of real estate holdings permitted; (c) That when a mother in receipt of a pension owns her own home, there be no deduction made in her pension for this reason.

*Education.*—(a) That all text books and other supplies should be supplied at cost to pupils by school boards, such books and supplies to be standardized in order that all children of the province should be on a uniform basis; (b) That all text books should be printed at the government printery wherever possible; (c) That frequent revision of books should be avoided in order that parents should not be put to unnecessary expense; (d) That home work should be reduced or eliminated, and the same time now spent by teachers in assigning and revising home work should be devoted to direct instructions in school hours.

Other proposals were as follows:

Health insurance legislation;

That all workers within the province be included in the scope of the Hours of Work Act;

Establishment of a minimum wage and the limitation of the hours of work for boys employed within the province;

Automobile owners to be compelled to carry insurance against physical and property injury to others;

Unemployed insurance legislation;

Establishment of conciliation boards to consider disputes of municipal and civic employees;

Legislation to compel electrical distribution companies to have at least two men on shift in power houses and sub-stations;

Legislation providing an eight-hour day for firefighters;

Abolition of the five-dollar license fee for chauffeurs, or that licenses be made good for the lifetime of the holder;

That no taxi or stage company be allowed to keep drivers employed for a longer period than eight hours at any one time;

Legislation whereby municipal elections in the Vancouver area shall be held in conformity with the Municipal Elections Act;

Abolition of the property qualification for all elective offices in cities and municipalities, or as an alternative five years' residence and endorsement by 150 electors.

## National Labour Council, Toronto

A delegation from the National Labour Council, an affiliated organization of the All-Canadian Congress of Labour, interviewed members of the government of Ontario during February for the purpose of presenting requests for legislation in the interests of labour. The delegates were received by the Hon. G. S. Henry, Minister of Public Works and Highways, the Hon. Dr. Forbes Godfrey, Minister of Health and Labour, and the Hon. W. H. Price, Attorney-General. The views of the union were stated by the chairman of the National Labour Council, Mr. W. J. McPherson, of the Canadian Brotherhood of Railway Employees. The délégalation included also Messrs. John Daggett and G. Hodgson, of the Amalgamated Carpenters' Union, W. J. Fogarty, of the Printing Pressmen's Independent Union; E. H. Reeve, of the National Painters' Union, and others, with D. Spencer, vice-chairman, and G. W. McCallum, secretary-treasurer of the National Council.

On behalf of the National Unions of Ontario, satisfaction was expressed at the announcement that the provincial government proposed to introduce legislation giving effect within the province to the federal Old Age Pensions Act.

In reference to the question of unemployment, a protest was made against the alleged practice of "dumping immigrants into this country with very little effort made to assimilate them according to the requirement of industry," and it was recommended that representation be made to the federal Departments of Immigration and Labour, and to the shipping companies, that no more immigrants be admitted until the unemployed of Ontario have been absorbed into industry. It was proposed also that wherever possible all public works should be carried on during the slack period in winter, spreading construction over the whole year. The adoption of unemployment insurance in the province was recommended, as being just as necessary as accident, death, or fire insurance.

Among other proposals submitted by the delegation were included:—

(1) The abolition of private employment offices "in view of the splendid free service being supplied to unemployed workers and employers of labour through the Employment Service of Canada";

(2) A minimum wage law applicable to men as well as to women. In this connection it was requested that the provincial Department

of Labour should undertake a survey of the wages now being paid throughout the province;

(3) In regard to workmen's compensation it was pointed out that the unskilled worker was at a considerable disadvantage as compared with the organized skilled worker. "The unskilled, poorly paid labourer, in many instances, does not average more than \$15 per week throughout the year; this means that under the Act as at present constituted he is only entitled to about \$12.50 per week if he is unfortunate enough to meet with an accident." It was therefore recommended that all workers whose average wage is \$25 or less per week, should be paid full wages for the period of their disability;

(4) Stricter enforcement of the Ontario Building Trades Protection Act was requested. It was pointed out that efforts had been made from time to time by organized labour to get municipalities to appoint properly qualified scaffolding and derrick inspectors, but without success. It was suggested that in future the Provincial Department of Labour should appoint such inspectors.

(5) In view of the fact that the Industrial Disputes Investigation Act had been the means of settling many disputes between public bodies and their employees, it was suggested that the federal Act should be made fully applicable within the province. In this connection it was pointed out that "it is not inconceivable that the Ontario Government might wish to keep to itself as a matter of public policy the control of the relations of industry within the province rather than surrender any part of their jurisdiction. If they took this view the National Labour Council would urge that the Government draft a new Provincial Act, embodying the best features of the Dominion Act as well as any improvements that may be suggested."

(6) Legislation was proposed having for its purpose the elimination of unfair competition against Canadian contractors by insisting that all United States contractors doing business in Ontario shall be subject to federal, provincial and municipal taxes as paid by Canadian contractors, and that it shall be made illegal for an American company to discriminate against a Canadian workman who belongs to a purely Canadian union.

(7) It was asked that paint spraying machines be made illegal within the province.

## All-Canadian Number of "American Federationist"

The February issue of the *American Federationist*, the monthly publication of the American Federation of Labour, was an "All-Canadian number," devoted almost entirely to the affairs of the Dominion. The existing industrial and labour situation is described under its various aspects of Canadian writers who are specially qualified to speak of these subjects with authority.

President William Green, in an introductory editorial note, claims that "those who organized the trades union movement of North America showed far-sighted wisdom when they organized unions on an international basis having jurisdiction over workers engaged in the same work whether in the United States or Canada. . . . The problems of the workers of Canada are inter-related with those of the wage-earners of the United States, and *vice versa*. New high standards established in one country set the pace for the other. A menace to work standards on one side the border is a danger signal to those on the other side. International unionism is based upon recognition of this interdependence of economic interests and problems. International unionism parallels the development of industries and commerce and the flow of capital.

"Over half the foreign investments in Canada are American," President Green continues. "The twenty-five leading industries ranked according to the value of their products are: pulp and paper; flour and grist-mill products; slaughtering and meat packing; saw-mills; butter and cheese; automobiles; electric light and power; rubber goods including footwear; cotton yarn and cloth; sugar refineries; castings and forgings; bread and other bakery products; electrical apparatus and supplies; non-ferrous metal smelting; printing and publishing; railway rolling stock; petroleum; hosiery, knit goods and gloves; clothing (women's factory); biscuits, confectionery and chewing gum; cigars and cigarettes; leather boots and shoes; planing mills, sash and door factories; breweries; men's clothing factory clothing. Where industries of Canada and the United States are so closely interwoven, there is need for corresponding organization of all groups working together in the industries."

Mr. Green argues that "there is obvious need for an international organization of workers employed in industries which are owned and controlled by stock owners of both countries and which sell their products in the markets of both countries. International

unions are necessary as stabilizing agencies and to equalize work standards so that the workers will not be competing against each other. As the industries of Canada become increasingly important it is correspondingly necessary that union strength grow in proportion."

The various chapters of the "All-Canadian" number, and the names of the contributors, are as follows:—"The Canadian Labour Movement," by Tom Moore, president of the Trades and Labour Congress of Canada; "Labour Legislation in Canada," by P. M. Draper, secretary-treasurer, Trades and Labour Congress of Canada; "The Employment Service of Canada," by James Simpson, vice-president, Trades and Labour Congress of Canada, and chairman of the Employment Service Council of Canada; "The Canadian National Railways," president, Canadian National Railways; "Personally Conducted Printers' Tour to Canada," by W. R. Trotter, Bureau of Statistics, International Typographical Union; "The Newsprint Paper Industry in Canada and its Growth," by G. A. F. McLeod, Canadian vice-president, International Brotherhood of Paper Makers; "Old Age Pension Legislation in Canada," by J. A. P. Haydon, *Labour's* Canadian correspondent; "Wage Earners' Progress in Canada since the War"; Canadian Labour Legislation," by A. Farmilo, secretary of Edmonton Trades and Labour Council; "Labour Problems of Quebec," by John T. Foster, vice-president, Trades and Labour Congress of Canada; "Canada and the I.L.O.," by Leifer Magnusson, Washington representative, International Labour Organization; "Vocational Training in Canada," by H. H. Ward, Deputy Minister of Labour, Ottawa; "One of Our Problems," by Robert Hewitt, Grand Lodge Deputy, Brotherhood Railway Carmen of America; "Boot and Shoe Industry in Canada," by E. W. A. O'Dell, organizer, Boot and Shoe Workers' Union; "Barbers of Canada Optimistic," by Leon E. Worthall, international representative, Journeymen Barbers' International Union of America; "Electrical Workers in Canada," by E. Ingles, vice-president, International Brotherhood of Electrical Workers; "The Fifth University the Greatest of Them All," by Alfred Fitzpatrick, principal, Frontier College, Toronto, Canada; "Canada, Today, as an Industrial Centre," by R. J. Tallon, vice-president, Canadian Trades and Labour Congress, and president, Division No. 4, Railway Employees' Department, American Federation of Labour.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### National Co-operation in Work of Organization

*Industrial and Labour Information*, the weekly publication of the International Labour Office, in its issue of February 11, publishes an account of the first meeting of the Permanent Committee on International Labour Questions which has been set up by the Italian Government. The setting up of this Committee is an indication of the growing importance which the various States attach to active participation in the work of the International Labour Organization.

With a view to the study and discussion of the questions of the agenda of the Conference, the ratification of Conventions and adoption of Recommendations and the carrying on of enquiries and research work, several Governments recognized from the first the necessity of following the work of the Organization in a continuous and systematic manner, and set up special bodies for this purpose. Delegations or permanent representatives in Geneva accredited to the International Labour Office have been appointed by Canada, Columbia, Cuba, Denmark, Finland, Hungary, the Irish Free State, Japan, Latvia, Poland, Portugal, Rumania, the Serb-Croat-Slovene Kingdom and Sweden. Other States have entrusted this work to their diplomatic or consular representatives.

But, apart from the question of permanent and direct representation in Geneva, several governments have instituted special services, sometimes on a large scale, in their respective administrations. These bodies, which now exist in Chile, France, Great Britain, Italy, Portugal, Spain and Sweden, are called on to examine the problems which are being studied by the Organization, and to carry out the necessary enquiries or other steps desired; in some cases they are responsible for the selection of delegations to the Conference, and they also serve to keep the national authorities informed of the activities of the International Labour Office.

It may also be recalled that periodical conferences are held by the four Northern countries of Europe in order to discuss the work of the Organization as it affects them.

All these methods of collaboration are of great value to the Organization and to the States Members, and contribute largely to the development of international labour legislation.

### Forced Labour

In preparation for the general discussion of the question of forced labour, one of the items on the agenda of the Twelfth Session of the International Labour Conference, which will open in Geneva on May 30, 1929, the International Labour Office has just submitted to the Governments of the States Members of the International Labour Organization a report and draft questionnaire on the subject. The Report is the result of lengthy investigations, in which the Office has profited by the assistance of a Committee of Experts on Native Labour. It begins by recalling how the question of forced labour became an urgent international problem as a result of the adoption of the Slavery Convention by the Assembly of the League of Nations. An account is then given in detail of the law and practice of the various States as regards forced labour in their colonial possessions, protectorates or mandated territories. This is followed by a number of opinions expressed by competent observers on the economic value and social effects of forced labour. Finally, an attempt is made to deduce from the foregoing material the principles which should underlie the international regulation of forced labour, with the object of removing the abuses connected with it and providing for its total abolition as soon as possible.

The Draft Questionnaire relates to the possibility of adopting a Draft Convention and a number of Recommendations on the subject.

At this year's Session, the Conference will be called on merely to carry out an exchange of views, and the Report and Questionnaire have been drafted by the Office as a basis for discussion. In accordance with the procedure which has been adopted, the Conference will then decide as to the action to be taken, particularly as regards the circulation of the Questionnaire and its contents.

The question of forced labour raises a great variety of points concerning not only the regulation of working conditions in the narrow sense, but also the nature of the work, the categories of persons from whom the work may be exacted, and the circumstances under which recourse to this form of labour should be permissible. The problem is consequently one which has called and calls for particularly thorough study, and the Office is fortunate in having been able to commence by a report based on the advice of such a distinguished body of experts.

### Asiatic Workers and the Organization

The Japanese trade unions which participate in the election of the Workers' Delegate to the International Labour Conference recently approved an agreement, signed in London on July 17, 1928, by the Indian and Japanese Workers' Delegates to the Eleventh Session of the Conference, the object of which is to promote meetings of labour representatives of Asiatic countries to discuss matters of common interest.

The agreement provides that an Asiatic Labour Conference is to be held annually in China, India, Japan or another Eastern country, in turn, some five or six weeks before the opening of the Session of the International Labour Conference. The Asiatic Conference will be attended by labour representatives from China, India, Japan and other Eastern countries, and its agenda will include any items on the Agenda of the International Labour Conference which presents aspects of common interest to the countries represented, together with other labour questions which require the co-operation of the countries concerned for their solution. It is further provided that reports are to be submitted on the situation with regard to Conventions in each country represented.

The first meeting of the Asiatic Labour Conference is to be held in 1929, preferably in India, under the chairmanship of Mr. Suzuki (Japan).

### Hours of Work of Salaried Employees

In the Preamble to Part XIII of the Peace Treaty the "establishment of a maximum working day and week" is placed first among the measures stated to be urgently required. Since no one class of workers is mentioned, it would seem reasonable to infer that the authors of the Treaty intended the limitation of working hours to apply to manual and non-manual workers alike. At the Washington Session in 1919, the International Labour Conference dealt with hours of work in industrial undertakings. At Genoa in 1920 it took up the question of hours of work of seamen, and it will resume the consideration of this problem at the special Maritime Session, to be held next October. The question of the extension to salaried employees of provisions for the regulation of hours of work was raised at Washington, but was not then proceeded with. For some time past, a strong movement has been manifest in favour of a fresh endeavour to tackle this problem.

In June, 1927, the International Labour Conference adopted a resolution on the subject, and following on this, the Governing Body of the International Labour Office decided to

place the subject on the agenda of the Twelfth Session of the Conference. In accordance with the established procedure, the Office has prepared a report on the Hours of Work of Salaried Employees, which is the third item on the agenda of the Conference, and it will be published shortly. It will deal mainly with the law and practice in various countries. The first chapter will give a general survey of the origin and development of regulation, including its economic basis and practical scope. Statistics will be given in regard to the groups of workers concerned. The second chapter will explain the various methods of defining the scope of existing systems of regulation, which are applied variously to undertakings or individuals or occupations. The third chapter deals with the various methods of regulating hours of work normally in force. The fourth chapter treats of exceptions and special provisions. The last chapter will give an analysis of the principal methods of enforcement and of the collective agreements on the subject.

A draft questionnaire will be attached to this report, for consideration by the Conference, which will decide whether and in what form it should be sent to the different governments in order to elicit their opinions on the possibility of international regulation.

### Fluctuations in the Purchasing Power of Gold

The Council of the League of Nations, at its last session, held in Lugano on December 14, 1928, approved a proposal put forward in the report of the financial committee to the effect that a special committee should be appointed to study the causes of variations in the purchasing power of gold and their effect upon the economic life of the nations, and to submit a report on the question. It was suggested by the Financial Committee that this special committee should include several members of the Financial Committee and other persons of recognized international standing, about eight or nine in all. The Financial Committee had stated in its report that it recognized that this great problem is of an international character, and it found that there are serious differences of opinion in regard to its essential elements, there being very often even a want of exact knowledge of them. In these circumstances it considered that the best way of approaching the question was by means of a systematic international enquiry.

### Publications of the Office

The International Labour Office has published a further set of brochures in connection with its "Occupation and Health," an encylo-

paedia of hygiene, pathology and social welfare, studied from the point of view of labour, industry and trades. The brochures in question consist of articles on: basic slag; basket weav-

ing; bones industry; manufacture of boots and shoes; brass, brooms, building trade. These articles complete the subjects coming under the letter "B".

## EMIGRATION FROM CANADA TO THE UNITED STATES IN 1928

A CONTINUED decrease in the number of emigrants from Canada to the United States during the fiscal year ending June 30, 1928, is shown in the annual report of the United States Commissioner of Immigration for the past year. The report states that "immigration from Canada has decreased from year to year since the present quota law became effective July 1, 1924, requiring visas of all immigrants seeking admission to the United States. In 1925 immigration through Canadian border land ports was 102,496; in 1926, 91,786; in 1927, 81,982; and in 1928, 73,605. The successive decreases were 98,338, 10,710, 9,804, 8,377, a total drop in immigration during four years of 127,227. In 1924, the peak year of immigration from Canada, 200,834 immigrants came in over the northern-land border.

"During the fiscal year covered by this report 73,154 immigrants, who gave Canada as their last permanent residence, were admitted to the United States, mainly at the land-border stations, comparatively few newcomers from Canada entering at the sea-ports. Of this number 62,229, or 85.1 per cent, were of the English, French, Irish, and Scotch races. In the same period 72,616, or 98.6 per cent, of the 73,605 immigrants coming in via the Canadian border gave Canada as their last permanent residence; and 99.3 per cent of the immigrants giving Canada as their last permanent residence came in over the northern land border. Therefore it may be stated that with few exceptions all the immigrants admitted from Canada came in via the Canadian border and all the immigrants coming in that way gave Canada as their last permanent residence.

"About one out of every seven immigrants admitted along the Canadian border was a child; 11,009, or 15 per cent of the total for the past year, being under 16 years of age; while 17,045 ranged in age from 16 to 21 years, 21,181 from 22 to 29 years, 10,111 from 30 to 37 years, 5,450 from 38 to 44 years, and 8,809 from 45 to 55 years and over. The male immigrant aliens numbered 39,397 and the female 34,208; the single males, 25,283; single females 20,069; married males, 13,309; married females, 12,196; widowers, 740; widows, 1,813; male divorced, 65; and female divorced, 130.

"Among these immigrants 18,730 gave skilled occupations, 6,510 were common labourers, 2,838 were farm labourers, 4,127 servants, 3,181 farmers; and 5,072 were of the mercantile and miscellaneous classes. The number listed as having no occupation, largely women and children, was 29,263. Only 3,884 gave a professional occupation.

"About four-fifths of the new-comers entering from Canada settled in the States along the border. Michigan received the largest number, 18,294; New York State, 14,096; Massachusetts, 10,830; Washington, 3,716; Maine, 3,453; Connecticut, 1,637; New Hampshire, 1,371; Vermont, 1,415; Minnesota, 969; and North Dakota, 379.

"About four-fifths of the immigrant aliens admitted at the Canadian border-land stations during the fiscal year ended June 30, 1928, were born in Canada. The major portion of the remainder were found to be natives of European countries, principally Great Britain and Ireland."

## 8-Hour Day Inquiry in Alberta

The Hon. J. E. Brownlee, premier of Alberta, stated in the provincial legislature early in March that the government did not intend to proceed with "eight-hour day" legislation at the present session. A careful survey of the industrial situation in Alberta will, however, be made during the coming year, and the various industries will be examined in detail in order to secure more information on a number of relevant points, among which will be the seasonal nature of certain industries claiming to be adversely affected by such legislation, if passed. One of the main reasons for the government's decision, as stated by the premier is the fact that there is strong competition between some of the Saskatchewan cities and some of the Alberta cities and since there is no eight-hour law in Saskatchewan its enactment in this province would possibly put Alberta business at a disadvantage.

Labour organizations in the province recently asked for the enactment of legislation similar to the British Columbia Hours of Work Act (LABOUR GAZETTE, January, 1924, page 24).

## MINERAL PRODUCTIONS OF CANADA IN 1928

**A** PRELIMINARY report on the mineral production of Canada during the calendar year 1928, has been published by the Dominion Bureau of Statistics. Canada's mining industry represents a capital investment of more than 700 million dollars; this includes only the money actually spent on the properties, for lands and plants, equipment of mines and smelters, and the working cash assets of the operating companies. Nearly 85,000 men are employed in the operating mines and their associated enterprises, exclusive of prospecting and outside development workers, of whom no record is kept.

In few previous years has the mining industry shown such phenomenal growth as in 1928. Advances were general in all fields: metals, non-metals, fuels, and structural materials. The following table shows the value of production for metals, fuel and non-metals, clay products and other structural materials, in each of the past seven years.

Year	Metallics	Non-Metallics		Total
		Fuels and other non-metallics	Structural materials and clay products	
	\$	\$	\$	\$
1922.....	61,785,707	82,976,794	39,534,741	184,297,242
1923.....	84,391,218	91,936,732	37,751,381	214,079,331
1924.....	102,406,528	71,796,009	35,380,869	209,583,406
1925.....	117,082,298	71,851,801	37,649,234	226,583,333
1926.....	115,237,581	85,240,144	39,959,398	240,437,123
1927.....	113,561,030	88,986,246	44,809,419	247,356,695
1928.....	131,904,603	91,660,026	49,882,235	273,446,864

Coal produced from Canadian mines was the largest item in the mineral record. Never before was so great a tonnage reported. Gains were made mostly by western Canada mines, but Nova Scotia and New Brunswick production was close to the figures for 1927. Saskatchewan mined about the same tonnage as in the preceding year but Alberta's output rose to a record tonnage.

In 1928 Ontario produced 83.46 per cent of the gold obtained from Canadian sources; British Columbia contributed upwards of 10.43 per cent; Quebec yielded 3.17 per cent; the Yukon, nearly 1.82 per cent; and the remainder was made up by Nova Scotia and Manitoba.

One half of Canada's copper is derived from the mines of British Columbia; Ontario contributes a little more than one-third of the total; and Quebec yields about half as much as Ontario. Nickel is an Ontario monopoly, or nearly so. Developments in the Sudbury district, where the International Nickel Company of Canada and the Mond Nickel Com-

pany have their mines and smelters, were watched with the greatest interest through the year.

Cement production reached a new high record at 10,954,184 barrels, valued at \$16,583,703. Quebec and Ontario are the principal producers, but more than a million dollars' worth is produced annually in each of the three western provinces, Manitoba, Alberta and British Columbia.

Lead is derived from mines in the Yukon, British Columbia, Ontario and Quebec, but 95 per cent of the Dominion output is obtained from British Columbia.

Silver production dropped a little below the total for 1927. British Columbia produced nearly half of the Dominion output; Ontario came second and the Yukon third, these two areas together contributing nearly as much as British Columbia; Quebec was the only other important source but other provinces produced small amounts.

Clay products, including brick of all kinds, sewer pipe and pottery, represent a much more important section of the mining industry in Canada than is often supposed. In 1928 the output value of these products was about \$12,682,780.

Slightly lower tonnages but greater total values marked the figures for asbestos mined in Canada in 1928. In the eastern townships of Quebec around Thetford, Quebec produces more than 85 per cent of the world's supply of asbestos. Crude asbestos is now being worked up in Canada into articles of commerce, instead of being wholly exported as in earlier years.

In British Columbia increasing tonnages of electrolytic zinc pour out of the great refinery at Trail; every pound is a token marking the achievement of the research workers at Trail whose ingenuity and perseverance led to the development and commercial application of the process there in use for the recovery of zinc from the refractory ore of the Sullivan mine. At Notre Dame des Anges in Quebec, the Tétreault property yields zinc. These are the only two presently producing sources.

The local sheet metal workers' union, with the support of the Vancouver Building Trades Council, have requested the Vancouver City Council to appoint a qualified sheet metal inspector. They allege that fires are caused by defective sheet metal and furnace work. It was pointed out that the city had plumbing inspectors, electrical inspectors and building inspectors, but not a single inspector who specialized in heating and ventilation.

## STEAM AND ELECTRIC RAILWAY STATISTICS FOR 1927

**S**TATISTICS of the steam and electric railways of Canada for the year ended December 31, 1927, have been published recently in separate reports, by the Dominion Bureau of Statistics, Department of Trade and Commerce.

*Steam Railways.*—The report on steam railways shows that the gross revenues from railway operations in 1927, amounting to \$499,064,207, were the largest ever earned by the railways in Canada, but the operating expenses were also heavy, exceeding those of the previous year by \$18,142,828, while net operating revenue was less than in 1926 by \$12,678,375. Deductions from the income were also larger than in 1926; interest charges increased by \$2,950,303, and the net deficit of the railways as a whole amounted to \$28,713,951, as against a deficit of \$14,496,882 for 1926. Increases in wages accounted for \$14,892,478 of this greater deficit, but this larger wage bill was for an average of 2,072 employees more than in 1926. The wages charged to operation increased by 6.6 per cent and the total pay roll by 5.4 per cent for an increase in the number of employees of 1.2 per cent.

The number of passengers carried decreased by 845,616, or 2 per cent, but the passenger miles increased by 1.8 per cent, the average journey being 72.9 miles as against 70.3 miles in 1926.

It is stated that during the year 14 passengers were killed on steam railways, 6 of these fatalities being in train collisions, 5 getting on and off trains and 3 struck by trains at stations. There were 160 employees killed, 59 of them being trainmen and 31 trackmen. Collisions accounted for 16 of these casualties and derailments for 14 of them while 9 were killed coupling and uncoupling cars, 20 fell off cars and 37 were struck by trains. Besides passengers and employees, trespassers and other persons numbering 248 were killed in train accidents. From other causes 34 persons were killed, making a total of 401 persons killed by railways during the year. The total injured amounted to 2,942 in train accidents and 9,379 from other causes, making a total of 12,321 persons, of whom 11,057 were employees and 58 were postal clerks, etc. The casualties at highway crossings were fewer than in 1926, amounting to 36 at urban crossings and 60 at rural crossings, as against 48 and 96 respectively in 1926. The number of persons injured at rural crossings increased from 171 to 200, those to persons riding in automobiles increasing from 147 in 1926 to 174.

The number of persons killed and injured at rural highway crossings has more than

doubled since 1919, whereas persons killed at urban highway crossings have fluctuated but have not materially increased, although those injured increased from 95 in 1919 to 147 in 1927. The automobile was stated to have been mainly responsible for these increases in accidents, the registration of motor vehicles having almost trebled since 1919.

In a tabular summary the total of all classes of steam railway employees for 1927 was given as 176,338, the total of wages and salaries for the year being \$267,067,048.

*Electric Railways.*—The report on electric railways in Canada states that these lines carried 781,398,194 fare passengers during 1927, which was an increase over the previous year of 32,687,358, or 4.4 per cent. There was practically no change from 1926 in the average fare which was 6.25 cents, and, with heavier traffic, passenger revenue increased by \$1,993,038. Other sources of revenue did not show so high rates of increase, and freight and other car earnings showed decreases, so that total revenues were larger by only \$1,733,202, or 3.4 per cent. Operating expenses were heavier than in 1926 by \$1,162,358, the increase including \$823,249 expended in operation of cars, which includes wages of conductors, motormen, car house employees, and also the operators of motor buses.

It was also pointed out that although the railways as a whole showed a net income, before deducting dividends and reserves and special charges, of \$9,419,592, there were 26 railways which showed losses aggregating \$1,212,796, and only 6 railways paid dividends.

Referring to accidents, it was stated that for the first time in the past 27 years no passengers were killed in electric railway accidents, but 7 employees and 71 other persons were killed. "Other persons" include trespassers on railway right-of-way, pedestrians on the streets and persons in vehicles, etc. The numbers of other persons both killed and injured were larger than for any year since 1920 which is probably due it was stated, to the increased congestion of traffic on the streets caused mainly by automobiles and motor trucks.

The total number of employees on all electric railways in Canada from 1922 to 1927 was given as follows: 18,099 in 1922; 17,779 in 1923; 17,379 in 1924; 16,933 in 1925; 16,961 in 1926; 18,090 in 1927.

The total salaries and wages paid from 1919 to 1927 were as follows: \$20,211,576 in 1919; \$24,235,932 in 1920; \$23,976,728 in 1921; \$24,988,119 in 1922; \$25,039,286 in 1923; \$24,964,441 in 1924; \$24,543,856 in 1925; \$24,686,549 in 1926; \$25,891,020 in 1927.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA DURING JANUARY

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in January was 6,391, their employees numbering 933,943 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for January was 1,697, having an aggregate membership of 188,152 persons. It should be understood that the report on the number of unemployed workers refers only to organ-

ized labour, no figures being available as to the number of unorganized workers who were without employment;

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction. In previous reports the number of cities was given as 63, but Point Grey and South Vancouver being now amalgamated with the city of Vancouver this number is reduced by two, the area and population covered by the reports remaining the same as before.

### Employment Situation at the Beginning of February, 1929, as reported by Employers

There was an increase in industrial employment in Canada at the beginning of February, although the situation was still affected to some extent by inventory shut-downs, and more so by continued seasonal slackness in the out-of-door industries. Employment was, however, in considerably greater volume than on the same date in any other year of the record. The Dominion Bureau of Statistics tabulated returns from 6,391 firms, whose staffs aggregated 933,943 persons, as compared with 921,404 on January 1. This increase, which was rather more extensive than on the same date in the three preceding years, caused the index to stand at 110.5, while on January 1, 1929, it was 109.1, and on February 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 102.0, 96.6, 91.8, 87.1, 91.7, 90.6, 79.9 and 91.2, respectively.

Unusually pronounced recovery was shown in manufacturing, and logging and mining also reported improvement. On the other hand, there were important seasonal declines in construction, trade and transportation.

#### Employment by Economic Areas

Reductions were recorded in the Prairie Provinces and British Columbia, while elsewhere the tendency was upward.

*Maritime Provinces.*—Construction and trade reported a falling-off in the Maritime Provinces, where logging, mining and trans-

portation were brisker. The seasonal advance in transportation was especially marked. Statistics were received from 511 firms, employing 69,752 workers, compared with 69,171 at the beginning of January. Contractions had been indicated on the same date in 1928, when the index was lower.

*Quebec.*—The recovery in Quebec caused the reinstatement of a greater number of workers than on February 1 of last year, when employment was in smaller volume. Manufacturing, (particularly of iron and steel, pulp and paper, textiles, lumber and tobacco products) showed much improvement, as did also logging. On the other hand, transportation and construction recorded decided seasonal curtailment. The working forces of the 1,427 co-operating employers aggregated 258,177 persons, as against 251,897 in the last report.

*Ontario.*—Important gains were made in manufacturing, notably in the iron and steel, textile, lumber, non-ferrous metal, leather and pulp and paper divisions. Logging also reported heightened activity, while there were seasonal reductions in trade and construction. According to data received from 2,920 firms, their staffs rose from 391,925 at the beginning of January, to 405,166 on the date under review. This advance exceeded that indicated on February 1 of the four preceding years,

while the index was higher than in any other winter since 1920.

*Prairie Provinces.*—The contraction in the Prairie Provinces involved a rather smaller number of workers than that noted at the beginning of February of 1928, while the situation continued better than on the same date in any other year for which statistics are available. Statements were tabulated from 877 employers, whose staffs declined by 4,383 persons to 127,761 on February 1. Manufacturing and logging were more active, but shrinkage was recorded in trade, construction, transportation and communications.

*Montreal.*—Manufactures registered substantial recovery, especially in the iron and steel, tobacco, textile and building material groups, but heavy seasonal losses were indicated in transportation and construction. On the whole, however, there was a large increase in Montreal, according to the data received from 752 firms employing 124,849 workers, as compared with 121,918 in the preceding month. This gain exceeded that of February 1 in 1928 or in 1927, while the index on the date under review was higher than in any other winter since the record for Montreal was instituted in 1922.

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS.

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year, 1926 as 100.

*British Columbia.*—Further reductions were registered at the beginning of February, but employment continued more active than on the same date of last year. The working forces of the 656 reporting firms aggregated 73,087, a decrease of 3,180 as compared with their staffs as on January 1. There was considerable improvement in mining, but logging, construction and transportation were slacker.

Index numbers of employment by economic areas are given in Table I.

#### Employment by Cities

The trend of employment was upward in Montreal, Toronto, Hamilton, Ottawa and Windsor and the adjacent Border Cities, while Quebec City, Winnipeg and Vancouver showed reductions.

*Quebec.*—Returns tabulated from 104 employers in Quebec showed that they had reduced their staffs by 97 persons to 10,597 at the beginning of February. Manufactures reported improvement, while trade and construction were seasonally slacker. The index was higher than on the corresponding date last year, although employment had then advanced.

*Toronto.*—Heavy seasonal losses took place in trade, but there were greater gains in manufacturing, especially in textiles and iron and steel. The result was an increase of 436 in the number employed by the 839 co-operating firms, who had 116,415 employees. A similar gain had been indicated on February 1 a year ago; the index then stood at 105.4, compared with 115.9 on the date under review.

Ottawa.—Manufacturing was busier, especially in the pulp and paper and iron and steel divisions, while trade was seasonally quiet; 135 employers had 11,224 workers, or 254 more

than on January 1. Employment was in greater volume than at the beginning of February, 1928; rather smaller additions to staffs had then been indicated.

Note: "Relative Weight" in Tables I, II, III and IV shows the proportion of employees in the indicated area or industry to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS, (AVERAGE 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
1921						
Feb. 1.....	91.2	108.1	86.2	93.8	93.0	77.4
1922						
Feb. 1.....	79.9	88.2	71.1	84.7	82.4	74.8
1923						
Feb. 1.....	90.6	101.4	83.6	95.9	90.9	78.4

Relative weight of employment by Districts as at Feb. 1, 1929.....	100.0	7.5	27.6	43.4	13.7	7.8

*Hamilton.*—The situation in Hamilton showed decided improvement, particularly in the manufacture of iron and steel products. Textiles, on the other hand, registered curtailment. Statistics were tabulated from 204 firms employing 35,364 persons, compared with 34,375 in the preceding month. The index was many points higher than on February 1 a year ago, when the movement was also upward.

*Windsor and the Other Border Cities.*—Recovery, chiefly in automobile plants, was indicated in the Border Cities, where 2,707 workers were taken on by the 123 co-operating employers, whose staffs aggregated 19,658. Employment was more active than on the same date in 1928 or in any other year for which data are available.

*Winnipeg.*—The number employed in Winnipeg showed a contraction, mainly in trade, while manufactures were busier. Returns were compiled from 302 firms with 31,035 employees, as compared with 31,525 in the preceding month. Conditions were better than at the beginning of February last year, when greater curtailment had been noted.

*Vancouver.*—The manufacturing industries reported slight expansion, while construction and transportation were slacker. A combined working force of 25,833 persons was recorded by the 255 employers furnishing data, who had 26,575 in their last report. Employment was better than on February 1 a year ago, although improvement had then been registered.

Index numbers of employment by cities are given in Table II.

### Manufacturing

The revival in manufacturing was more marked than on February 1 in most years of the record, while the index was higher than on the same date in any other year since 1920. Statements were tabulated from 3,830 manufacturers employing 526,798 operatives, compared with 501,234 in the preceding month. Particularly noteworthy recovery took place in the iron and steel industries, but the textile, lumber, pulp and paper, leather, tobacco and non-ferrous metal divisions also registered important gains, while there were losses in food, rubber and musical instrument factories.

Relative weight of employment by cities as at Feb. 1, 1929....	13.4	1.1	12.5	1.2	3.8	2.1	3.3	2.8

*Animal Products—Edible.*—There was a further decline in employment in this group at the beginning of February; the reduction involved slightly more workers than that noted on the corresponding date last year, when however, the index was nearly eight points lower. Statements were tabulated from 164 firms employing 15,883 workers, as compared with 16,630 in the preceding month. Fish-preserving and meat-packing plants reported the largest losses which took place to a considerable extent in the Maritime Provinces.

*Leather and Products.*—Employment in boot and shoe factories showed an increase exceeding that noted on February 1, 1928. The situation then, however, was more favourable than on the date under review. A combined working force of 16,323 persons was reported by the 177 co-operating manufacturers, who had 15,246 employees at the beginning of January. Most of the gain took place in Ontario.

*Lumber and Products.*—Considerable improvement was indicated in furniture, vehicle and other lumber-using factories, while only a slight advance was made in the rough and

dressed lumber group; 1,713 workers were taken on by the 679 firms making returns, who had 43,652 on their staffs. This increase was smaller than that registered at the beginning of February 1928, when the index, as in earlier years of the record, was lower than on the date under review. The gains in Ontario and Quebec were most extensive.

*Musical Instruments.*—There was a further curtailment in employment in musical instrument works, 43 of which reduced their payrolls from 3,390 persons on January 1 to 3,149 on February 1. Practically all the decrease was in Quebec. Somewhat smaller contractions were noted on February 1, 1928, but the index number then was rather lower.

*Plant Products—Edible.*—Continued losses were registered in this division at the beginning of February, when the 311 reporting establishments reduced their payrolls by 386 employees to 26,584. Sugar and syrup, chocolate and confectionery factories showed declines. General advances were noted on the corresponding date last year, but the index then was several points lower.

*Pulp and Paper.*—The additions to staffs recorded in pulp and paper plants were larger than on February 1 in most years of the record, employment on all of these dates having been at a lower level. Data were received from 478 employers of 64,042 workers, as against 62,055 at the beginning of January. The greatest increases were in pulp and paper

mills, but other branches of this group also were busier. There were general gains throughout the Dominion, but the improvement in Quebec and Ontario was the most extensive.

*Rubber Products.*—Further decreases were shown in rubber factories, 37 of which laid off 445 employees bringing their pay-rolls to 17,620 at the beginning of February. Despite

\*The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by firms making returns on the date under review.

this decline, (which was chiefly confined to Quebec), the index was much higher than in the winter of any other year of the record.

*Textile Products.*—The advance in employment in the co-operating factories was not so large as on February 1, 1928, but activity continued greater than on the same date in previous years since 1920. Silk, woollen, knitting, headwear, garment and personal furnishing and other textile establishments registered important increases in personnel. The working force of the 492 co-operating firms aggregated 78,692 persons, as compared with 75,162 in their last report. Ontario showed the most noteworthy improvement.

*Tobacco, Distilled and Malt Liquors.*—The gain in employment in this group was larger than had been the decline recorded at the beginning of January, while the index number was higher than in any other month of the record, standing at 127·3, as against 118·3 on February 1, 1928. Returns were tabulated from 141 manufacturers with 16,191 employees, or 1,820 more than in the preceding month. The bulk of the increase was in Quebec and Ontario.

*Chemicals and Allied Products.*—Statements were compiled from 117 firms in this group, whose staffs rose from 7,140 on January 1 to 7,341 at the beginning of February. Much of this improvement took place in Ontario. Employment was in greater volume than in the winter of earlier years of the record.

*Clay, Glass and Stone Products.*—There was an increase in this group on the date under review, according to 130 manufacturers, whose labour forces included 10,816 workers, or 120 more than in the preceding month. Employment was more active than in any other winter for which data are available.

*Electric Current.*—Partial recovery from the losses indicated in the preceding month was noted in electric current plants at the beginning of February, when 181 persons were added to the staffs of the 91 co-operating manufacturers, who had 13,960 employees. Employment was in greater volume than on February 1 of earlier years of the record.

*Electrical Appliances.*—Employment in electrical appliance works showed a further advance and the situation continued decidedly better than on the same date a year ago. Data were received from 45 establishments, employing 13,141 operatives, as against 12,928 on January 1. Practically all this gain was registered in Quebec.

*Iron and Steel Products.*—There were exceptionally large increases in employment in

iron and steel factories, greatly exceeding the losses noted at the beginning of January. The expansion was particularly noteworthy in vehicle, agricultural implement, plant machinery, structural and other iron and steel works and in rolling mills. The improvement in Ontario and Quebec was most pronounced, but the trend was generally upward. Statistics were tabulated from 642 firms, whose staffs stood at 162,360, compared with 147,273 on January 1. The index was higher than in any other month of the record.

*Non-ferrous Metal Products.*—Aluminum, precious metal, lead, tin, zinc and copper works recorded heightened activity. The general gain was greater, and the index was higher, than on February 1 in other years for which statistics are available. The working forces of the 104 co-operating manufacturers included 18,895 employees, or 970 more than at the beginning of January. Practically all the increase was in Ontario.

*Mineral Products.*—Eighty-one establishments in the mineral products group reported 12,339 workers, as compared with 12,030 in the preceding month. Gas, ice and other divisions of this group showed advances. Activity was generally greater than in the winter of other years since 1920.

### Logging

Seasonal expansion was recorded in logging camps at the beginning of February; the increase was larger than on the same date in 1928, when the index was several points lower. Statements were received from 243 operators employing 45,596 workers, as against 43,578 on January 1. The trend of employment was downward in British Columbia, but upward in the remaining provinces.

### Mining

Coal and metallic ore mines afforded increased employment, but a decline was noted in the mining of non-metallic minerals, other than coal; on the whole, there was an increase of 674 persons in the forces of the operators furnishing returns, who numbered 213. Their staffs aggregated 51,416 employees, of whom 29,155 were engaged in the mining of coal, 14,891 in metallic ores and 7,370 in non-metallic minerals, other than coal. Activity had shown a moderate increase on February 1, 1928, when the index, as in the winter of other years of the record, was several points lower than on the date under review.

### Communications

The working force of the 188 companies and branches reporting stood at 26,879 persons, compared with 27,289 in the preceding month, most of the reduction taking place on telegraphs. The number employed was greater than on the same date in any of the last nine years, in all of which the tendency was unfavourable.

### Transportation

*Street Railways and Cartage.*—There was an upward trend in employment in this division on February 1, repeating the movement noted on the corresponding date of 1928. The index was higher than in the winter of other years of the record. The 126 co-operating employers had 22,223 persons on their payrolls, or 202 more than in the preceding month. Quebec registered most of the increase, which as usual at the time of year, was partly due to the removal of snow from street railway lines.

*Steam railways.*—Seasonal contractions involving a much smaller number of workers than on February 1 a year ago were noted in steam railway operation; employment continued at a rather higher level than on the same date in any other year since the record was instituted in 1920. Returns were compiled from 103 companies and branches in this group, whose staffs aggregated 81,147 persons, as compared with 81,918 on January 1. There were large decreases in the Prairie Provinces and smaller losses in Quebec, while elsewhere improvement was indicated, that in the Maritime Provinces being especially noteworthy.

*Shipping and Stevedoring.*—Employment in water transportation showed a small reduction, as is usually the case at the beginning of February; 64 employers released 721 workers from their payrolls, bringing them to 11,162 on the date under review. There were gains in Maritime Provinces, but the trend was downward in other provinces.

### Construction and Maintenance

*Buildings.*—Employment in building construction showed a decline on February 1, as is customary during the winter. The index

was higher than at the beginning of February in any other year of the record. Statistics were received from 563 contractors, with 35,021 persons in their employ, as against 36,855 on January 1. The greatest contractions were in Ontario and British Columbia.

*Highways.*—The number of persons employed by 164 firms in the highway construction and maintenance group were 6,423, or 4,295 less than in the preceding month. The seasonal losses in Ontario and the Western Provinces were especially pronounced. Employment was not so brisk as on February 1, 1928.

*Railways.*—Continued, but smaller contractions were noted in railway construction and maintenance; the decline was rather more extensive than on the same date in 1928, but the number employed was greater than in other years for which statistics are available. Statements were tabulated from 42 employers in this group, with 31,469 persons on their payrolls, as compared with 33,495 in the last report. Reductions in personnel were registered in all provinces.

### Trade

Following the unusually marked increases in employment reported at the Christmas and holiday season, there was a considerable falling-off in the number employed in trade on February 1. The losses were slightly smaller than those noted on the same date in 1928, and employment continued at a higher level than in the winter in the other years of the record. The 660 trading establishments furnishing data reduced their payrolls from 83,282 employees on January 1, to 77,464 at the beginning of February. There were general decreases, mainly in retail stores, although wholesalers were also slacker.

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on February 1, 1929.

## Unemployment in Trade Unions at the Close of January, 1929

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades or who are idle because of illness are not considered as unemployed, while unions involved in industrial

disputes are excluded from our tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the reporting organizations.

Slight variation only in the unemployment level among local trade unions was shown at the close of January from that of the preceding month, the tendency, however, being in a favourable direction. This was manifest by the returns tabulated for January from an aggregate of 1,697 labour organizations including 188,152 members, of whom 6.3 per cent were unemployed on the last day of the month contrasted with 6.6 per cent of idleness in December. The most substantial increase in activity over December was registered from Quebec where recovery from former depression was indicated in the garment trades. In Nova Scotia and Alberta also some improvement was evident. From the remaining provinces employment curtailment was reported, which combined, however, would not involve

cent in Regina to .6 per cent in Toronto, while in Edmonton the improvement shown was slight. When a comparison is made with the returns for January, 1928, Halifax, Montreal, Toronto, Edmonton and Vancouver unions all reflected more favourable conditions during the month under review, while in Regina, Winnipeg and St. John unemployment appeared in somewhat greater volume.

Accompanying this article is a chart which illustrates the trend of unemployment from January, 1923, to date. It will be noticed that the curve at the close of January showed little divergence from the December level of unemployment, the projection, however, tending slightly downward, indicative of small increases in the amount of work afforded during January. The point reached by the curve at

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

sufficient members to offset the gains in the three provinces mentioned. Compared with the situation shown in January, 1928, when 6.8 per cent of idleness was registered Nova Scotia, Ontario and British Columbia unions reported moderate advances in available work during the month under review, while in Quebec the same percentage of idleness was reported in both months of the comparison. Of the declines in employment Manitoba reported the most outstanding, followed by reductions on a smaller scale from Saskatchewan, Alberta and New Brunswick.

Each month a separate tabulation is made of unemployment existing in the largest city in each province with the exception of Prince Edward Island. During January all of these except Edmonton indicated a lower level of unemployment than in the previous month, the declines in activity ranging from 6.1 per

the close of January was also somewhat below that indicated at the end of the same month in 1928.

Some improvement was registered in the manufacturing industries during January from the previous month as shown by the returns tabulated from 474 unions, embracing a membership of 52,832 persons. Of these 2,942 were without employment on the last day of the month, a percentage of 5.6 contrasted with 8.3 per cent of unemployed members in December. Garment workers were in a large way responsible for the better situation obtaining in January, together with activity increases among leather, iron, steel and wood workers and general labourers. Textile workers, hat and cap makers and metal polishers also shared in lesser extent in the employment advance. On the other hand, a considerable falling off in employment was evident among

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS IN CANADA BY GROUPS OF INDUSTRIES

pulp and paper makers, fur workers and cigar makers, while the situation in the printing trades showed but a nominal adverse change. In comparison with the returns for January, 1928, when 8.2 per cent of unemployment was reported in the manufacturing industries, wood and fur workers registered the most pronounced improvement during the month under review, with contributing gains in employment for garment, leather and iron and steel workers, cigar makers, printing tradesmen, general labourers and metal polishers. Pulp and paper makers and glass workers, on the contrary, were less fully engaged than in January a year ago.

Returns were tabulated at the close of January from a total of 44 unions of coal miners with 17,633 members, 1.5 per cent of whom were idle at the end of the month compared with 3.6 per cent in December and 2.9 per cent in January, 1928. Alberta unions reflected heightened activity during January when compared with the previous month, while in Nova Scotia there was practically no change in the situation. In British Columbia all members were reported at work during January, contrasted with a fractional unemployment percentage in December. The

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

increase in activity over January, 1928, was wholly attributable to the better conditions prevailing in Nova Scotia mining regions during the month under review. Alberta unions were afforded slightly less employment than in January last year, and in British Columbia no idleness was reported in either month of the comparison.

Employment in the building and construction trades continued to be rather depressed, the 215 unions from which reports were tabulated at the end of January, with 26,427 members, indicating 19.0 per cent of the members idle as compared with 15.5 per cent in December. All tradesmen in the group with the exception of bridge and structural iron workers and hod carriers and building labourers reported curtailment of operations during January, the declines among carpenters and joiners involving the largest number of workers. The improvement in the first named trades were substantial when viewed from a percentage basis, but these tradesmen formed but a small proportion of the total membership reported in the group as a whole. The situation in the building trades was somewhat more favourable than in January, 1928, when 23.2 per cent of the members reported were idle. In this comparison employment for bridge and structural iron workers, bricklayers, masons and plasterers, painters, decorators and paperhangers, tile layers, lathers and roofers and hod carriers and building labourers was in considerably greater volume during the month under review, and in addition plumbers and steamfitters reported some slight advancement. Among granite and stone cutters, electrical workers and carpenters and joiners, however, small reductions in activity were apparent.

In the transportation industries 4.7 per cent of the members represented by the returns during January were unemployed, as compared with 3.8 per cent in both the previous month and the corresponding month last year. The percentage for January this year was based on the returns tabulated from 725 unions of transportation workers, with a total of 65,943 members. The slight contraction in employment shown over December was shared by steam railway employees, navigation workers and street and electric railway employees, while teamsters and chauffeurs indicated nominally improved conditions. Steam railway employees were responsible for the increase in idleness reported over January a year ago. On the contrary, navigation workers, teamsters and chauffeurs and street electric railway employees all registered slightly greater activity.

From longshore workers whose returns are tabulated separately each month 16 reports were received for January covering a membership of 7,608 persons. Of these 940 were without employment at the end of the month, a percentage of 12.4 compared with 15.9 per cent in December. Considerable improvement was recorded over January a year ago when the unemployment percentage stood at 19.3.

Reporters were tabulated at the close of January from 7 unions of retail clerks combining a membership of 759 persons, .8 per cent of whom were idle at the end of the month, contrasted with percentage of .4 in December and 1.3 in January, 1928.

Civic employees with 68 unions reporting 6,802 members in January indicated practically no change in unemployment from December, the percentage standing at 1.5 as against 1.6 per cent in December. The situation was slightly more favourable than in January, 1928, when 2.2 per cent of idleness was recorded.

In the miscellaneous group of trades a small decline in activity was reported during January over the previous month, as shown by the returns tabulated from 110 unions with 5,654 members. Of these 352 were idle at the close of the month, a percentage of 6.2, contrasted with 5.1 per cent in December. Stationary engineers and firemen registered a reduction in employment of 3 per cent when compared

with December, and among hotel and restaurant employees and barbers small increases in unemployment were apparent. Theatre and stage employees, on the other hand, were afforded a slightly greater volume of work than in December. In comparison with the returns for January last year, when 9.8 per cent of idleness was reported, barbers and hotel and restaurant employees registered the most extensive gains in employment during the month under review, followed by improvement in lesser degree among theatre and stage employees and stationary engineers and firemen.

Fishermen were decidedly busier during January than in December, the 2 unions from which reports were received with 755 members indicating 6.6 per cent of unemployment compared with 19.9 per cent in December. The situation was, however, less favourable than in January, 1928, when 2.6 per cent of the members reported were idle.

Among lumber workers and loggers all members were reported at work during January as in both the preceding month and in January, 1928.

Table II summarizes the returns by provinces for January in each year from 1919 to 1926 inclusive, and for each month from January, 1927, to date. Table I indicates the percentage of unemployment registered in the various groups of industries for the same months.

### Employment Office Reports for January, 1929

During the month of January, 1929, the volume of business as shown by the offices of the Employment Service of Canada was 3 per cent less than that transacted during the previous month, but a gain of nearly 5 per cent was shown when a comparison was made with the records of January, 1928. While the daily average was slightly less than in December, the total volume of business transacted during January was somewhat more, due to the fact that there were more working days in the period under review than during the previous month. Gains under this comparison were recorded in construction and maintenance, manufacturing, farming and logging, while services, transportation and trade registered declines. The gain over last year was primarily due to increased placements in services, although gains were also shown in trade, manufacturing and transportation.

The accompanying chart shows the trend of employment since January, 1927, as represented by the ratio of vacancies notified and of placements effected for each 100 applications

for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curves of vacancies and applications in relation to placements declined sharply during the first half of the month, but showed a decided upward trend during the latter half of the period under review. In both instances the ratios of vacancies and placements to applications were higher than those shown during January last year. The ratio of vacancies to each 100 applications was 62.6 and 67.3 during the first and second halves of January, 1929, in comparison with the ratios of 58.2 and 66.0 during the same periods of 1928. The ratios of placements to each 100 applications during the periods under review were 56.9 and 62.2 as compared with 52.7 and 61.1 during the corresponding month a year ago.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during January, 1929, was 957 as compared with 949 during the preceding month and with 915 in January, 1928.

The average number of applications for employment received daily by the offices during the month under review was 1,475 in comparison with 1,278 in December, and with 1,470 during January last year.

The average number of placements made daily by the offices of the Service during January, 1929, was 877, of which 528 were in regular employment and 349 in work of one week's duration or less, as compared with a total daily average of 902 during the preceding month. Placements in January a year ago averaged 839 daily, consisting of 521 placements in regular and 318 in casual employment.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	855,756
1922.....	297,827	95,685	393,522
1923.....	347,165	115,387	462,552

1928.....	334,604	135,724	470,328
1929 (1 month).....	13,738	9,062	22,800

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

During the month of January, 1929, the offices of the Service referred 24,238 persons to vacancies and effected a total of 22,800 placements. Of these the placements in regular employment were 13,738, of which 10,058 were of men and 3,680 of women, while placements in casual work totalled 9,062. The number of vacancies reported by employers was 15,360 for men and 9,505 for women, a total of 24,865, while applications for work numbered 33,328, of which 26,685 were from men and 11,643 from women.

NOVA SCOTIA

There was an increase during January in the number of positions offered through employment offices in Nova Scotia of over 19 per cent when compared with the preceding month, and of nearly 32 per cent in comparison with the corresponding month last year. Gains also were shown in placements, there being nearly 22 per cent more than in December, and nearly 35 per cent more than during January, 1928. Manufacturing and services showed

\* 7 placements effected by offices since closed.

the most substantial gains in placements over January last year, although there were increases in all other groups except farming. Placements by industrial groups included: manufacturing, 107; logging, 57; transportation, 36; construction and maintenance, 30; trade, 60 and services, 337, of which 257 were of household workers. During the month 120 men and 65 women were placed in regular employment.

#### NEW BRUNSWICK

The demand for workers, as indicated by orders received at employment offices in New Brunswick during January, was over 5 per cent less than in the preceding month, but nearly 24 per cent in excess of the corresponding month last year. There was a decline in placements of nearly 7 per cent when compared with December, but a gain of nearly 21 per cent in comparison with January, 1928. Increased placements in construction and maintenance, services, and trade were responsible for the gains over January a year ago, although these increases were offset in part by a decline in logging placements. The changes in other groups were small. Industrial divisions, in which most of the placements were effected during the month, were: logging, 22; transportation, 23; construction and maintenance, 69; trade, 42 and services, 483, of which 384 were of household workers. Regular employment was procured for 61 men and 81 women during the month.

#### QUEBEC

During January, employment offices in the province of Quebec received orders for over 4 per cent more workers than in the preceding month, and nearly one per cent more than during the corresponding month last year. There was a decline in placements of over 11 per cent when compared with December, but a gain of over 11 per cent in comparison with January, 1928. All industrial divisions except construction and maintenance participated in the gains in placements over January of last year, those in logging and services being the most noteworthy. Placements by industrial divisions included: manufacturing, 110; logging, 340; construction and maintenance, 279; trade, 54 and services, 485, of which 407 were of household workers. There were 730 men and 493 women placed in regular employment during the month.

#### ONTARIO

Orders received at Ontario offices during January called for over 12 per cent more workers than were requested in the preceding

month, and over 19 per cent more than during the corresponding month last year. There were gains also in placements of nearly 10 per cent over December, and of over 18 per cent when compared with January, 1928. The manufacturing industry, services and trade showed the most noteworthy gains in placements over January of last year, although there were increases in all groups except logging, mining, communication and construction and maintenance. The latter group showed the largest decline in placements. Industrial divisions, in which most of the placements were effected during the month, were: manufacturing, 1,765; logging, 1,736; farming, 403; mining, 83; transportation, 218; construction and maintenance, 2,346; trade, 610 and services, 3,848, of which 2,401 were of household workers. During the month 5,437 men and 1,519 women were placed in regular employment.

#### MANITOBA

Opportunities for employment as indicated by orders received at employment offices in Manitoba during January were only slightly less than in the preceding month, but were nearly 4 per cent less than during the corresponding month last year. Placements also declined under both comparisons, being over 4 per cent below December, and less than one per cent below January, 1928. Services and trade showed gains in placements over January of last year, but these increases were offset by reductions in farm and bush placements. The changes in other groups were nominal only. Industrial divisions, in which most of the placements were effected during the month, included: manufacturing, 92; logging, 560; farming, 307; transportation, 45; construction and maintenance, 226; trade, 183 and services, 1,736, of which 1,403 were of household workers. There were 1,129 men and 530 women placed in regular employment during the month.

#### SASKATCHEWAN

There was a decline of 16 per cent in the number of positions offered through employment offices in Saskatchewan during January when compared with the preceding month, and of nearly 5 per cent in comparison with the corresponding month last year. Placements were nearly 22 per cent less than in December, and nearly 8 per cent fewer than in January, 1928. The manufacturing industries, services and trade were the only groups to show gains in placements over January last year, and these increases were more than offset by declines in other divisions. Farming showed the largest reduction in placements

Industrial divisions, in which most of the placements were effected during the month, included: manufacturing, 80; logging, 236; farming, 255; transportation, 95; construction and maintenance, 103; trade, 131 and services 911, of which 553 were of household workers. During the month 713 men and 387 women were placed in regular employment.

#### ALBERTA

Employment opportunities, as indicated by orders received at employment offices in Alberta during January, were slightly less favourable than in the preceding month, and nearly 18 per cent less than during the corresponding month last year. Placements also declined, being 2 per cent less than in December, and nearly 19 per cent below January, 1928. Services and trade were the only groups to show gains of importance in placements over January last year, and these increases were more than offset by declines in farming, logging and construction and maintenance. The changes in other groups were small. Placements by industries included: manufacturing, 141; logging, 411; farming, 251; mining, 114; transportation, 38; construction and maintenance, 130; trade, 125 and services, 720, of which 595 were of household workers. Placements in regular employment numbered 1,017 of men and 307 of women.

#### BRITISH COLUMBIA

During January, positions offered through employment offices in British Columbia were over 2 per cent more than in the preceding month, and nearly 15 per cent in excess of the corresponding month last year. There was a gain of over 4 per cent in placements when compared with December, and of nearly 19 per cent in comparison with January, 1928. All industrial groups except construction and maintenance and farming showed gains in placements over January of last year. The decline in farm placements was nominal only. Placements by industrial divisions included: manufacturing, 269; logging, 438; farming, 82; mining, 30; transportation, 94; construction and maintenance, 184; trade, 153 and services, 941, of which 503 were of household workers. Regular employment was found for 851 men and 298 women during the month.

#### Movement of Labour

During January, 1929, the offices of the Employment Service of Canada made 13,738 placements in regular employment, of which 6,487 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered.

Of the latter, 1,657 were granted the Employment Service reduced transportation rate, 1,344 travelling to points within the same province as the dispatching office, and 313 to other provinces.

The offices in Quebec granted 88 certificates for reduced transportation during January, 54 to workers going to provincial situations and 34 to persons travelling to points outside the province. The provincial movement included 47 bushmen, 2 cooks and 1 teamster transported from Quebec City, and 4 bushmen from Montreal to employment within their respective zones. All the certificates for points outside the province were issued at Hull, from which centre 32 bushmen went to North Bay and 2 bushmen to Cobalt.

Transfers at the special rate from Ontario offices in January totalled 392, of which 380 were to provincial centres and 12 to outside districts. Provincially, 284 were of bushmen for employment in Northern Ontario logging regions, the majority of these going to points in the vicinity of Port Arthur, Sudbury and Timmins, and recruited for the most part by the northern offices. Of the remainder, North Bay transferred 1 engineer to Cobalt and 1 mill hand to Sudbury; Ottawa, 2 machinists and 1 boiler maker to Brantford and 1 hospital orderly to Timmins; Kitchener, 2 linemen to Kingston, and Fort William, 1 cookee within its own zone. From Sudbury 1 brewer and 1 bottler were destined to employment at Timmins, 1 teamster to Ottawa, and 38 construction labourers, 10 teamsters and 1 cookee to points within the Sudbury zone, while from Port Arthur 29 teamsters, 1 foreman, 1 clerk, 1 tractor operator and 1 cookee were bound for centres within its zone. To North Bay, 1 paper hanger travelled from Cobalt and 1 farm hand from Toronto. Of the workers conveyed to points outside the province, the Sudbury office was instrumental in transferring 5 miners to Winnipeg and 1 steel sharpener to Hull. In addition, Pembroke dispatched 4 construction labourers to Quebec; Cobalt, 1 machine miner to Winnipeg; and Ottawa, 1 steam fitter to Hull.

From Manitoba centres 625 persons benefited by the Employment Service reduced transportation rate, 389 of whom went to employment within the province and 236 to other provinces. With the exception of one bushman, one camp cook, one rock man and one mechanic going from Dauphin to points within the same zone, all the transfers to provincial points were effected at Winnipeg, from which centre 20 hotel and household workers were carried at the reduced rate to Brandon, 1 waitress and 1 hotel cook to Dauphin, and 105 bushmen,

96 construction labourers, 78 rock men, 55 farm hands, 8 station men, 7 cooks, 4 teamsters, 3 carpenters, 1 steel sharpener, 1 mechanic, 1 hotel porter, 1 blacksmith, 1 domestic, 1 lineman, and 1 cookee within the Winnipeg zone. Of the persons going outside the province, 207 were for the Port Arthur zone, including 170 bushmen, 27 teamsters, 3 farm hands, 2 cooks, 1 store clerk, 1 blacksmith, 2 hotel waitresses, and 1 town general. All of these were issued reduced rate certificates at Winnipeg. The Winnipeg office also transferred 11 farm hands to Regina, 4 farm hands and 1 farm general to Estevan, 4 bushmen to Prince Albert, 3 farm hands and 1 cookee to Yorkton, 1 farm housekeeper to Saskatoon, and 1 farm hand each to the Moosejaw, North Battleford and Swift Current zones. The one remaining transfer interprovincially, was of a hotel porter who travelled from Brandon to Estevan.

The certificates issued by offices in Saskatchewan during January were 198 in number, 174 of which were provincial and the remainder interprovincial. Of the former, 109 were issued to bushmen going to points chiefly in the vicinity of Prince Albert who were granted their certificates for the most part at Saskatoon and Prince Albert. From Saskatoon also the North Battleford and Prince Albert zones each received one camp cook. Included in the remaining provincial transfers from Saskatoon were 20 teamsters travelling to Yorkton, 1 farm hand to North Battleford, and 4 farm hands within the Saskatoon zone. From Regina 4 farm hands and 1 domestic were conveyed to Moosejaw, 1 cook to Estevan, 1 farm hand to each of the Weyburn, Swift Current and Saskatoon zones, and 5 teamsters and 1 lineman within its own zone. The Prince Albert office in addition, transferred 15 sawmill labourers, 4 teamsters, 1 handy man and 1 restaurant cook to employment in the same zone. From Weyburn, 1 police sergeant was carried at the special rate to Prince Albert and from Moosejaw, 1 hotel waitress travelled to a point within the same zone. Of the 24 transfers to other provinces, 23 were of bushmen for the Dauphin zone, 20 journeying from Regina and 3 from Saskatoon, while from Regina also, 1 domestic was sent to Calgary.

Alberta offices transferred 258 workers at the special reduced fare during January, 254 to

provincial situations and 4 to centres outside the province. A large percentage of the transfers within the province were from Edmonton, 148 bushmen, 13 farm hands, 2 farm domestics, 13 camp cooks, 2 cookees, 1 waitress, 1 flunkey, 1 kitchen maid, 1 handy man, 1 mining engineer, 8 miners, 1 trimmer man, 4 lumber pilers, 2 building labourers, 1 teamster, 1 mill hand, 2 saw filers, 2 bridge men, 2 tractor men, 1 saw setter, 3 sawyers, 1 edgerman and 2 carpenters going to points within the territory covered by the Edmonton office, and 19 miners and 2 farm hands to Drumheller. From Calgary, 13 teamsters, 1 carpenter and 1 cook were carried at the special rate to Lethbridge, 1 farm hand and 1 cook to Edmonton, and 3 farm hands to Drumheller. The interprovincial movement included 1 farm hand and 1 farm domestic travelling from Edmonton to Saskatoon, 1 florist from Lethbridge to Toronto, and 1 farm hand from Calgary to Prince Albert.

In British Columbia 96 certificates for reduced transportation were granted during January, 93 to centres within the province and the balance to points outside. The latter were issued to 1 farm domestic and 2 farm hands who travelled from Vancouver to employment in the Edmonton zone. The provincial movement from Vancouver comprised the transfer of 4 farm hands, 1 farm domestic, 1 sawyer, 1 cook, 1 teamster, 2 pole scalers, 1 housekeeper and 1 domestic to Kamloops, 1 miner, 2 carpenters, 1 cook and 2 flunkies to Penticton, 2 miners and 1 carpenter to Nelson, 1 miner to Revelstoke, 1 miner to Cranbrook, 1 electrician to Vernon, and 6 miners, 1 farm hand, 3 cooks, 2 flunkies, and 1 waitress to points within the Vancouver zone. In addition, Nelson dispatched 18 bushmen, 12 sawyers, 3 teamsters, and 2 flunkies. Prince George, 16 bushmen, 1 engineer, and 1 farm hand, and Prince Rupert, 1 blacksmith, 1 bushman and 1 bricklayer to employment at points within their respective zones.

Of the 1,657 workers who took advantage of the employment service reduced transportation rate during January, 1,172 were transported by the Canadian National Railways, 471 by the Canadian Pacific Railway, 12 by the Pacific Great Eastern Railway, and 2 by the Temiskaming & Northern Ontario Railway.

### Building Permits issued in Canada in January, 1929

There was a seasonal decline in the value of the building permits issued by 61 cities during January as compared with the preceding month, but the aggregate was rather higher

than in January, 1928, and was also greater than in the same month of any other year since this record was instituted in 1920. The co-operating municipalities reported permits

for building estimated to cost \$8,364,670, as compared with \$16,095,160 in December, 1928, and \$7,716,587 in January, 1928. There was, therefore, a reduction of 48.0 per cent in the former, but an increase of 8.4 per cent in the latter more significant comparison.

Some 50 cities furnished detailed statements showing that they had granted nearly 400 permits for dwellings valued at about \$2,600,000 and over 900 permits for other buildings estimated to cost approximately \$5,000,000. In December, authority was granted for the erection of some 600 dwellings and 1,400 other buildings, estimated to cost approximately \$3,000,000 and \$12,000,000, respectively.

Nova Scotia and Manitoba reported increases of 375.6 per cent and 80.3 per cent, respectively, in the value of the building authorized during January as compared with December. Of the declines recorded in the remaining provinces, those of \$4,819,125 and \$2,585,012 in Ontario and Quebec respectively were most pronounced.

As compared with January, 1928, there were increases in Nova Scotia, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia. The most marked advance was in Ontario, where the value of the building authorized increased by \$658,033 or 15.6 per cent. The chief reduction was recorded in Quebec.

In Montreal, there were decreases in the value of the building permits granted as compared with the preceding month, and with the corresponding month of last year. Winnipeg showed an advance in both comparisons, while in Toronto and Vancouver the January totals were lower than in December, but higher than in January, 1928. The following cities reported increases in both comparisons: Halifax, Galt, Hamilton, York Township, Welland, Windsor, Sandwich, Moose Jaw, Edmonton, Lethbridge, Prince Rupert, and Victoria.

The value of the permits issued by 61 (1) cities in January in each of the years 1920-29 is shown below:—

Year	Value
	\$
1929.....	8,364,670
1928.....	7,716,587
1927.....	5,676,537
1926.....	4,719,534
1925.....	5,447,270
1924.....	4,460,579
1923.....	4,139,498
1922.....	3,326,537
1921.....	2,595,564
1920.....	4,017,024

<sup>1</sup> Point Grey and South Vancouver being amalgamated with Vancouver as from January 1, 1929, the number of co-operating cities is reduced by two, but the areas and population covered remain the same.

<sup>1</sup> Reports not received. <sup>2</sup> Includes Point Grey and South Vancouver amalgamated with Vancouver as from January 1, 1929.

Note:—From January 1, 1929, there will be only 61 cities shown in this record owing to the amalgamation of Point Grey and South Vancouver with Vancouver. The areas and population covered, however, remain the same.

As previously stated, the 1929 figure for January was the largest in the record of ten years, exceeding by 8.4 per cent the figure of 1928, the previous high level.

The accompanying table gives the value of the building permits issued by 61 cities in January, 1929, and December and January, 1928. The 35 cities for which statistics are available since 1910 are indicated by asterisks.

## EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

**D**ETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during January. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the February, 1929, issue relates to the situation existing in December, 1928. The employment situation in the United States is further indicated by unemployment percentage based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for December and previous months taken from the February, 1929, issue of the *American Federationist*, the official publication of the organization, are reproduced below.

### Great Britain

In the week after Christmas there was the usual decline in employment, but this was followed by a steady improvement throughout January. At the end of the month, however, employment in all but a few industries was worse than in the third week of December, and was about the same, on the whole, as at the end of November.

The principal decline occurred in the group which includes the building trade, public works contracting, and the brick and tile, artificial stone and cement industries. Other industries in which there was an increase in unemployment included the pottery, glass bottle, tinplate, general and constructional engineering, and the miscellaneous metal trades; together with the woollen and worsted, silk and artificial silk, hosiery, lace and carpet industries,

textile bleaching, dyeing and furnishing, the leather trades, tailoring and dressmaking, boot and shoe manufacture, the food, drink and tobacco industries, other than grain milling, the furniture and woodworking, printing and paper industries, and the distributive trades.

On the other hand, there was a further improvement in shipbuilding and ship repairing, marine engineering, the linen textile industry, and in hat and cap manufacture.

In the coal mining industry there was little change, on the whole. The numbers wholly unemployed showed a decline, which was, however, counterbalanced by a rise in the number temporarily stopped.

Among workpeople numbering approximately 11,880,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 21st January, 1929 (including those temporarily stopped as well as those wholly unemployed), was 12.3 as compared with 11.2 at 17th December, 1928, and 10.7 at 23rd January, 1928. For males alone the percentage at 21st January, 1929, was 13.8, as compared with 12.6 at 17th December, 1928; for females the corresponding figures were 8.5 and 7.5. The percentage wholly unemployed at 21st January, 1929, was 9.8, as compared with 9.1 at 17th December, 1928. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 28th January, 1929, was approximately 1,434,000, of whom 1,113,000 were men and 236,000 were women, the remainder being boys and girls; at 31st December, 1928, it was 1,565,000, of whom 1,211,000 were men and 275,000 were women; and at 30th January, 1928, it was 1,199,000, of whom 949,000 were men and 171,000 were women.

### United States

Employment in the United States increased 0.5 per cent in December, 1928, and pay-roll totals increased 1.2 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining

metalliferous, public utilities, trade (wholesale and retail) and hotels.

Employment in manufacturing industries increased 0.1 per cent in December, 1928, as compared with November, and pay-roll totals increased 1.6 per cent, as shown by returns from 11,752 establishments in 54 of the principal manufacturing industries of the United States. These establishments in December had approximately  $3\frac{1}{2}$  millions of employees whose combined earnings in one week were more than  $88\frac{1}{2}$  millions of dollars. These employees represent one-half of the employees in the 54 industries considered and 40 per cent of the total number of employees in all manufacturing industries in the United States.

The Bureau of Labour Statistics' weighted index of employment in manufacturing industries for December, 1928, is 87.8, as compared with 87.7 for November, 1928, and 88.1 for October, 1928, and 85.1 for December, 1927; the weighted index for pay-roll totals in December, 1928, is 93.6, as compared with 92.1 for November, 1928, 94.8 for October, 1928, and 89.3 for December, 1927. The monthly average for 1928=100.

Twenty of the fifty-four separate industries and 6 of the 12 groups of industries had more employees in December than in November.

Notable industry increases in employment were shown in shipbuilding, slaughtering and meat packing, agricultural implements, machine tools, fertilizers, structural ironwork, electrical machinery, carpets, cotton goods, and printing. Group gains were shown in food, textiles, iron and steel, chemicals, non-ferrous metals, and the group of miscellaneous industries.

The decreases reported in employment were practically all of a seasonal character.

The New England geographical division and the two North Central divisions showed slightly increased employment in December; the pronounced decreases among the six remaining geographical divisions were in the Pacific, Mountain, and West South Central divisions.

*Unemployment percentage.*—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States. The method of compiling as described in the *American Federationist*, March, 1928, is as follows:—

"The local unions in the 23 cities under review report monthly their membership and the number of unemployed members at the

first of the month or the nearest possible date. From these reports the percentage of unemployed members is calculated for identical unions in the current and the previous month. Thus for every month there are two percentage figures—that is for identical unions in December and January—and for identical unions in January and February, and so on. The final figure for January, then, is calculated by taking the simple arithmetical average of the two January percentages. It may be noted that the reports cover all trades which are organized, factory workers as well as teachers and building trade workers."

By the above method the proportion of unemployed members to the total membership of the local unions reporting, is computed. According to the December issue of the *American Federationist*, the most recent unemployed percentages during the various months in the 23 cities work out as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent.

#### Prizes for Articles on Social Work

The Harmon Foundation, New York, is offering a series of awards for articles written from the point of view of interesting the public in social work. The awards, ranging in value from \$300 to \$50, are offered for unpublished articles written for magazines of general circulation and presenting social conditions and social work in popular style. The Foundation suggests child guidance, child welfare, the public health nurse, probation and various fields as offering rich sources of potential material. The contest is open to writers anywhere in the United States or Canada who may submit manuscripts before September 16. There are to be two main awards and a number of others at the discretion of the judges, all carrying cash considerations.

Four awards will be made for the best planned and most intelligently executed year-round programs of public information concerning social or health work during 1929. These are for the best programs submitted by a national, state or regional, city or county agency of 200,000 or more population and a city or county agency of less than that figure. Inquiries regarding full information about the awards may be addressed to the Harmon Foundation, 140 Nassau Street, New York, N.Y.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition, to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Construction: Building and Structures

WINDSOR AND VICINITY, ONTARIO.—AMALGAMATED BUILDERS' COUNCIL, LOCAL SECTION 112 AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 552.

Agreement to be in effect from September 26, 1928, to April 30, 1929, and from year to year until notice is given by either party one month prior to April 30, in any year. When such notice is given a joint committee shall be formed to negotiate a new agreement. This agreement cancels the one previously in force which was to be in effect until April 30, 1929.

Only local union members to be employed if available and union members to work only for the Local Building Council if work available.

Hours: 8 per day, 4 on Saturdays.

Overtime and work on Sundays and holidays, double time, except in the case of finishing up a repair job on a regular work day, when such work does not take more than one hour overtime, it shall be worked at the regular rate of pay.

Wages per hour: from September 26 to 30, 1928, \$1.25 for journeymen plumbers and steamfitters; from October 1, 1928, \$1.35. Foremen to receive 10 cents per hour extra.

For work outside the Border Cities which are covered by this agreement, fare and board to be paid and travelling time to be paid for up to 10 p.m.

Plumbers not to do steamfitters work when steamfitters are available. Helpers are not to be allowed to do journeymen's work except in the case of helpers who have worked at the trade for four years who may continue to be employed but must work under direction of journeymen.

One helper, apprentice or improver allowed on each job; where more than five journeymen plumbers or five journeymen steamfitters are employed, an additional helper, apprentice or improver will be allowed for each additional five journeymen plumbers or five journeymen steamfitters.

A joint conference board will be formed consisting of four members of each party who shall meet regularly for the settlement of any disputes or grievances.

WINDSOR AND VICINITY, ONTARIO.—LOCAL SECTION OF THE AMALGAMATED BUILDERS' COUNCIL AND THE INTERNATIONAL ASSOCIATION OF SHEET METAL WORKERS, LOCAL No. 456.

Agreement to be in effect from February 11, 1929, to April 30, 1930 and from year to year until notice of change is given by either party one month prior to April 30, of any year for any change except in wages and ninety days notice if a change in wages is asked. When such notice is given, a joint committee shall be appointed to negotiate a new agreement.

Only local union members to be employed if available and union members to work only for members of the Building Council if work available.

Hours: 8 per day, 4 on Saturdays.

Overtime: overtime from 6 to 10 p.m. on ordinary working days and from 1 to 5 p.m. on Saturdays, time and one half; all other overtime including work on Sundays and holidays, double time.

Wages of journeymen sheet metal workers and roofers: from May 1, 1929 to August 31, 1929, \$1.06½ per hour; from September 1, 1929 to April 30, 1930, \$1.12½ per hour. Foremen to receive 10 cents per hour extra.

Wages of apprentices: after six months trial, first year 40 cents per hour, second year 50 cents, third year 60 cents, improvers 80 cents.

After serving three years and passing an examination before the Joint Examining Board, an apprentice shall be termed an improver; after one year as an improver, he shall pass the final examination for a journeyman. One apprentice allowed to every three journeymen, or majority faction thereof.

For work out of the Border Cities which are covered by this agreement, fare and board to be paid and travelling time up to 10 p.m.

A joint conference board will be formed consisting of four representatives of each party and all disputes shall be referred to them.

### Service: Public Administration

CALGARY, ALBERTA.—CITY OF CALGARY AND THE INTERNATIONAL ASSOCIATION OF FIRE FIGHTERS, LOCAL No. 255.

Agreement to be in effect from June 18 to December 31, 1928, and thereafter until sixty days' notice of change is given by either party.

No discrimination to be shown employees on account of their connection with trade organizations. The City Commissioners will at all times receive a grievance committee of the union.

Hours: the Fire Department to be operated on the "two-platoon" system. Fire alarm operators to work eight hours per day, a 48-hour week. Members of the active fire fighting force to have three weeks holidays with pay per year, the third week to be in lieu of

statutory holidays. Other employees of the Fire Department who are given the statutory holidays will have two weeks' holidays per year with pay.

Full time pay will be allowed in case of sickness contracted as the result of the occupation of a fireman; and in the case of an accident to an employee while engaged in the city's service, the city will pay an amount which, in addition to the amount received from the Workmen's Compensation Board, will equal his regular wage. Provision is made for pay for permanent employees during other sickness and during time off after a non-occupational accident, the city agreeing to pay the premium required under a sick and accident benefit scheme.

Promotions to be made as far as possible from the staff and seniority and efficiency to be considered in promotions and in reductions

of staff. Except for cause, when a permanent employee is dismissed, a month's notice or one month's salary to be given.

Uniforms to be provided by the city.

Wages per month: fire alarm superintendent \$175, senior captain at headquarters \$170, captains \$160, carpenter \$150, painter \$150, chauffeurs and firemen—first class \$140, second class \$130, third class \$120; master of mechanics \$170, motor mechanic \$165, lieutenants \$150, plumber \$150, assistant motor mechanic \$150; fire alarm operators—first class \$117.50, second class \$115, third class \$110.

If in the case of the sixty days' notice being given to change the agreement, the parties fail to reach an agreement in that period, both parties agree to allow the dispute to be settled under the provisions of any act (federal or provincial) which is similar to the Industrial Disputes Investigation Act, 1907, which may be in force in the Province of Alberta.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortifications, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such

wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the

Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is re-

quired to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

#### Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules

as shown below, or the general fair wage clause above mentioned:—

#### DEPARTMENT OF MARINE AND FISHERIES

##### *Contracts in Group "A" (Construction, etc.)*

Erection of combined power and operating house at Digby Island Radio Station, Prince Rupert Harbour, B.C. Name of contractors, Messrs. J. R. Mitchell and John Currie, Prince Rupert, B.C. Date of contract, January 29, 1929. Amount of contract, \$6,850. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages: Not less than	Hours per day
Electricians.....	\$0 90 per hour	8
Labourers.....	0 55 "	8
Carpenters.....	0 87½-1.00	8
Plasterers.....	1 25 per hour	8
Cement Finishers.....	1 00 "	8
Painters.....	1 00 "	8
Plumbers.....	1 00 "	8
Sheet metal workers.....	1 00 "	8

Ice-remedial operations in the river St. Lawrence between Montreal and Sorel. Contract awarded to Dr. Howard Barnes, McGill University, Montreal, P.Q. Date of contract, January 23, 1929. Amount of contract, approximately \$60,000. The General Fair Wages Clause was inserted in the contract.

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "A" (Construction, etc.)*

Construction of vehicle shed, Ordnance Depot, Esquimalt, B.C. Name of contractor, Robert Hetherington, Victoria, B.C. Date of contract, February 11, 1929. Amount of contract, \$5,580. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages: Not less than	Hours per day
Bricklayers.....	\$9 00 per day	8
Plumbers.....	8 00 "	8
Sheet metal workers.....	8 00 "	8
Electricians.....	7 20 "	8
Carpenters.....	7 00 "	8
Concrete workers.....	4 00 "	8
Labourers.....	4 00 "	8

Levelling of certain grounds at Admiralty House, Halifax, N.S. Name of contractors, Boone & Voye, South Devon, N.B. Date of contract, February 12, 1929. Amount of contract, \$6,595. The General Fair Wages Clause was inserted in the contract.

#### DEPARTMENT OF PUBLIC WORKS

(The contracts under this head are unavoidably held over until next month).

#### DEPARTMENT OF RAILWAYS AND CANALS

##### *Contracts in Group "A" (Construction, etc.)*

Repairs to C.N.R. timber crib wharf at Levis, P.Q. Name of contractors, The Kennedy Construction Co., Ltd., Montreal, P.Q. Date of contract, November 8, 1928. Amount of contract, approximately \$49,835. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages: Not less than	Hours per day
Bricklayers.....	\$0 90 per hour	9
Masons.....	0 85 "	9
Plasterers.....	0 85 "	9
Carpenters and joiners.....	0 55 "	9
Plumbers and steamfitters.....	0 55 "	per week
Electricians.....	0 55 "	55
Sheet metal workers.....	0 50 "	55
Roofers (tar and gravel).....	0 40 "	55
Terrazzo layers.....	0 70 "	55
Marble setters.....	0 90 "	55
Structural steel workers.....	0 65 "	55
Concrete workers.....	0 40 "	per day
Labourers.....	0 35 "	9
Driver (1 horse and cart).....	0 60 "	10
Driver (2 horses and cart).....	0 80 "	10
Lathers.....	3 00 per thousand	

Construction of baggage and express building for Canadian National Railways, Saint John, N.B. Name of contractors, Collett Freres, Ltd., Montreal, P.Q. Date of contract, October 9, 1928. Amount of contract, \$196,000. The General Fair Wages Clause was inserted in the contract.

#### POST OFFICE DEPARTMENT

Following is a statement of payments made in February, 1928, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

Nature of orders	Amount of orders
	\$ cts.
Making metal dating stamps and type also other hand stamps and brass crown seals....	654 73
Making and repairing rubber stamps, daters, etc.	435 61
Making up and supplying letter carriers' uniforms, etc.....	7,703 46
Stamping pads, ink, etc.....	578 07
Bag fittings.....	7,218 51
Scales.....	178 95

## PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1929

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being somewhat lower, while the Dominion Bureau of Statistics index number of wholesale prices was higher.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.15 at the beginning of February, as compared with \$11.30 for January; \$11.03 for February, 1928; \$11.23 for February, 1927; \$11.50 for February, 1926; \$10.93 for February, 1925; \$10.75 for February, 1924; \$10.53 for February, 1923; \$10.61 for February, 1922; \$14.08 for February, 1921; \$16.92 for June, 1920 (the peak); \$12.54 for February, 1918; and \$7.75 for February, 1914. The decline was due mainly to a seasonal fall in the price of eggs, while less important declines occurred in the prices of bacon, flour, and yellow sugar. The prices of beef, veal, mutton, fresh pork, lard, beans, evaporated apples and potatoes were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$21.41 at the beginning of February, as compared with \$21.55 for January; \$21.25 for February, 1928; \$21.46 for February, 1927; \$21.87 for February, 1926; \$21.19 for February, 1925; \$21.18 for February, 1924; \$21.17 for February, 1923; \$21.07 for February, 1922; \$24.85 for February, 1921; \$26.92 for July, 1920 (the peak); \$19.80 for February, 1918; and \$14.54 for February, 1914. Fuel was practically unchanged, while no changes were reported in rent.

In wholesale prices the revised index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was somewhat higher at 95.7 for February, as compared with 94.5 for January and 96.8 for February, 1928. One hundred and nine price quotations were higher, forty-eight were lower and three hundred and forty-five were unchanged.

In the classification according to chief component materials four of the eight main groups were higher, one was lower and three were unchanged. The groups which advanced were: the Vegetables and their Products group, due mainly to higher prices for grains, flour and other milled products, apples, bananas, tea, rubber, linseed oil and canned vegetables; the Animals and their Products group, due to higher prices for furs, poultry, meats, butter, cheese and eggs, which more than offset lower prices for fish, hides, leather, live-

stock, milk and lard; the Wood, Wood Products and Paper group, mainly because of advances in the prices of some lines of lumber; and the Non-Ferrous Metals group, due to higher prices for copper, lead, tin and zinc, which more than offset declines in the prices of silver and antimony. The Non-Metallic Minerals group declined chiefly because of lower prices for gasoline and kerosene. The Textiles and Textile Products group, the Iron and its Products group and the Chemicals and Allied Products group were practically stationary.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of February of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts, extensively occupied by workingmen.

The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the *LABOUR GAZETTE* since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps, two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Index Number of Changes in the Cost of Living

In March, 1921, the Department published in the *LABOUR GAZETTE* a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with

preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the *LABOUR GAZETTE*, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

#### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1926. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7. This index number is weighted according to consumption in each city. When the above index number, 1900-1926, is weighted according to population in each city covered for the years 1923, 1924, 1925 and 1926, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1927 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6;

1925, 131.6; 1926, 131.1; 1927, 129.4; Natural 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 1927, 165.9. For the years 1900 to 1913 two index numbers of gas costs calculated for the 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, (Continued on page 348)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

The advance in the price of beef continued, sirloin steak being up from an average of 34.7 cents per pound in January to 34.9 cents in February; round steak from 29.6 cents per pound in January to 29.9 cents in February; shoulder roast from 21.6 cents per pound in January to 21.7 cents in February; and stewing beef from 17.1 cents per pound in January to 17.3 cents in February. Veal and mutton were also higher, the former being up in the average from 23.9 cents per pound in January to 24.3 cents in February and the latter from 30.1 cents per pound in January to 30.5 cents in February. Fresh pork rose from 27.2 cents per pound in January to 27.5 cents in February. Bacon was down from an average price of 38.4 cents per pound in January to 37.8 cents in February and ham from 59.3 cents per pound in January to 58.8 cents in February. In fresh fish cod steak advanced slightly, while halibut and whitefish were somewhat lower. Lard was slightly higher, averaging 22.5 cents per pound.

Eggs showed a substantial seasonal decline in all localities, fresh being down from an average of 60.2 cents per dozen in January to 49.7 cents in February and cooking from 48.4 cents per dozen in January to 41.4 cents in February. Milk was unchanged at an average price of 12.5 cents per quart. Butter and cheese were steady.

No changes were reported in bread, the price averaging 7.7 cents per pound. Flour was slightly lower at an average price of 4.9 cents per pound. Canned vegetables showed little change. Beans were again higher, averaging 11.1 cents per pound in February, as compared with 10.6 cents in January. Onions rose from an average of 7.1 cents per pound in January to 7.5 cents in February. Potatoes were slightly higher, averaging \$1.32 per ninety pounds, as compared with \$1.28 in January. Increases in the western provinces were substantial but these were partly offset by lower prices in Ontario and the eastern provinces. Evaporated apples were slightly higher at an average price of 20.8 cents per pound. Prunes, raisins and currants showed little change. Anthracite coal was unchanged at an average price of \$16.34 per ton. Bituminous coal was also little changed, averaging \$10.09 per ton. No changes were reported in rent.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to substantially higher levels during February, No. 1 Manitoba northern cash wheat, Port Arthur and Fort William basis, averaging \$1.27½ per bushel, as compared with \$1.21 in January. The low price for the month was \$1.24½, reached on the 5th, and the high \$1.31¼ reached on the 20th. A strong European demand was said to be the chief factor tending toward higher prices. Coarse grains followed the trend in wheat, western barley at Winnipeg advancing from 72½ cents per bushel to 77½ cents; western oats from 68½ cents per bushel to 73½ cents; rye from \$1.03¼ per bushel to \$1.12½;

corn at Toronto from \$1.07 per bushel to \$1.11; and flax seed at Winnipeg from \$1.92 per bushel to \$2.05. Flour prices moved in sympathy with wheat, advancing at Toronto from \$7.23 per barrel to \$7.50. Oatmeal at Toronto rose from \$4.13 per ninety-eight pounds to \$4.46 and rolled oats from \$3.75 per ninety pounds to \$4.05. Bran was up from \$34.09 per ton to \$34.25 and shorts from \$34.09 per ton to \$35.50. Raw sugar at New York fell from \$2.03 per hundred pounds to \$1.97. Oranges at Toronto declined from \$5.90 per case to \$4.97. Ceylon rubber advanced from 20½ cents per pound to 24 cents. Prince Edward Island potatoes at Charlottetown fell from 50-60 cents per bag to 35-40 cents. Ontario potatoes at Toronto were down from 74 cents per bag to 71½ cents. Baled hay at Toronto was down from \$14.50-\$16 per ton to \$13-\$15. Raw linseed oil advanced from 75 cents per gallon to 84 cents. Turpentine at Montreal declined from 95.6 cents per gallon to 91.1 cents. Good steers at Toronto fell from \$9.93 per hundred pounds to \$9.27 and at Winnipeg from \$8.73 per hundred pounds to \$8.20. Good calves at Toronto declined from \$16.10 per hundred pounds to \$15.49. Hogs rose from \$10.31 per hundred pounds at Toronto to \$11.08 and at Montreal from \$10.90 per hundred pounds to \$11.41. Dressed pork at Montreal advanced from 17½ cents per pound to 18½ cents and bacon at Toronto was up from 24 cents per pound to 25½ cents. The long downward movement in the price of hides continued, beef hides being down from 17-19½ cents per pound to 14-15½ cents; calf skins from 20-21 cents per pound to 16-17 cents; and sheep skins from \$3.25-\$3.40 per skin to \$2.50-\$2.60. Harness leather fell from 53 cents per pound to 52 cents. In butter prices creamery prints at Montreal were slightly higher at 43.9 cents per pound and at Toronto at 44.7 cents per pound. Eggs at Montreal advanced from 47.6 cents per dozen to 49.4 cents and at Toronto from 46.7 cents per dozen to 47.9 cents. Raw cotton at New York averaged 20.2 cents per pound, the same price as in January. In non-ferrous metals copper rose from \$18.42 per hundred pounds to \$19.64, copper sheets from 29.9 cents per pound to 31.7 cents, and copper wire from \$16.15 per hundred pounds to \$18. Lead rose from \$6.43 per hundred pounds to \$6.58 and tin ingots from 51½ cents per pound to 52 cents. Silver was down from 57 cents per ounce to 56.2 cents. Gasoline was down 1 cent per gallon, at Montreal to 20½ cents, at Toronto to 19½ cents, at Winnipeg to 21½ cents and at Calgary to 22½ cents.

\*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number on the base 1913=100, was 138·3 for January, an advance of 0·1 per cent over the previous month. Foods declined 0·4 per cent owing to a decline in meat and fish, while cereals and other foods were practically unchanged. Industrial materials advanced 0·4 per cent with slight advances in all groups with the exception of cotton which fell slightly.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-77=100, was 117·0 at the end of January, a decline of 0·8 per cent from December. Food declined 0·8 per cent owing to a drop of 2·6 per cent in animal food, reductions being shown in the prices of mutton, butter and bacon, although beef and pork were somewhat advanced. Vegetable and other foods advanced with higher prices for maize, oats and wheat. Industrial materials declined 0·7 per cent, falls in textiles and sundries being partly offset by an advance in minerals, chiefly copper.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 165 at February 1, a drop of two points or 1·2 per cent from the previous month. Food declined 1·9 per cent due chiefly to lower prices for eggs, bacon, fish, butter and cheese. There was a small advance in fuel and light. Other groups were unchanged.

### Irish Free State

COST OF LIVING.—The official index number on the base July, 1914=100, was 177 for January, a rise of one point from October. Food rose two points owing chiefly to a higher price for butter. There was also a slight increase in fuel and light; clothing was practically unchanged.

### Denmark

WHOLESALE PRICES.—The official index number on the base 1913=100, was 151 for January, which is the same figure as for December. The only notable change was a decline of 5 per cent in animal foods. Other groups showed only slight variations.

### France

WHOLESALE PRICES.—The index number of *Statistique Générale* on the base July, 1914=100, was 644 for January, an advance of 1·1 per cent over the December level. Both foods and industrial materials rose slightly. In foods, the chief advance was in the vegetable group, in industrial materials, textiles showed the greatest advance.

### Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan, on the base 1913=100, was 496·35 for January, as compared with 496·57 for December. Foods were practically unchanged. Of the industrial materials, chemical products, minerals and metals and construction materials advanced, while textiles, miscellaneous vegetable products and miscellaneous products declined.

### India

WHOLESALE PRICES.—The index number of the Labour Office, Government of Bombay, on the base July, 1914=100, was 149 for November, a decline of one point from October. Foods declined from 157 to 153, showing declines in all groups except pulses. Non-foods as a whole were unchanged, advances in textiles other than cotton, hides and skins and miscellaneous industrial materials being offset by declines in raw cotton and metals; oilseeds and cotton manufactures were unchanged.

COST OF LIVING.—The working class cost of living index number, Bombay, on the base prices in July, 1914=100, was 148 for December, an advance of one point for the month. Foods advanced one point, advances in cereals being partly offset by a small decline in pulses and other articles of food; clothing advanced slightly while fuel and lighting and house rent were unchanged.

### United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 97·2 for January as compared with 96·7 for December. The most notable advance was in farm products which showed an advance of over 2 per cent, owing to increases in grains, hogs, sheep and lambs, poultry and potatoes, although beef cattle, cotton and eggs were cheaper. Foods also advanced. There were small declines in hides and leather products, fuel and lighting, building materials

and chemicals and drugs; on the other hand, textile products, metals and metal products, house-furnishing goods and miscellaneous products advanced.

The *Annalist* index number of wholesale commodity prices, on the base 1913=100, was 146.7 for February, showing a slight decline for the month. There were no marked changes; advances in food products, metals, building materials and miscellaneous products were offset by declines in farm products, textile products, and fuels; chemicals were unchanged.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 160.9 for January, a decline of 0.7 per cent. Every group showed slight decline, the principal ones being in food and clothing.

The index number of the Massachusetts Special Commission on the Necessaries of Life, on the base 1913=100, was 160.6 for January, as compared with 160.0 for December. Food and clothing declined, while shelter, fuel and light and sundries advanced.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1928

THE accompanying tables provide an analysis of the fatal accidents to work-people in Canada in the course of their employment during the calendar year 1928, according to causes, provinces and months, as well as by industries. Quarterly statements giving a list of the accidents occurring during the period covered and certain particulars as to each, appeared in the *LABOUR GAZETTE* for May, August and November, 1928, and February, 1929. The tables include such fatalities from industrial diseases as are listed with fatal accidents by workmen's compensation boards, etc.

The record is compiled from reports from the following governmental authorities: The Board of Railway Commissioners, the Explosives Division of the Department of Mines, Ottawa; the Workmen's Compensation Boards of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Alberta and British Columbia; the Ontario Factory Inspector; the Ontario Railway and Municipal Board; the Saskatchewan Bureau of Labour and Industries; and the British Columbia Department of Mines. Reports were also received from the correspondents of the *LABOUR GAZETTE*, resident in the principal industrial centres throughout Canada.

Industrial accidents reported in the press are also included in the record after inquiry has been made to avoid duplication. Most of the accidents in agriculture are recorded from press reports, and while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete. On the whole, however, most of the information obtained from this source is used merely to supplement information received from official sources.

### Fatalities by Industries

The total number of fatalities recorded for the year was 1,632, the fatalities being attributed to the various industries in the following proportions: transportation and public utilities, 381, or 23.3 per cent of the total; mining, non-ferrous smelting and quarrying, 250, or 15.3 per cent; construction, 246, or 15.1 per cent; agriculture, 193, or 11.8 per cent; manufacturing, 192, or 11.8 per cent; logging, 166, or 10.2 per cent; service, 99, or 6.1 per cent; trade, 62, or 3.8 per cent; fishing and trapping, 43, or 2.6 per cent.

The tables also include summary figures for 1927, being a final revision of the figures published in the *LABOUR GAZETTE* for March, 1928, by the inclusion of accidents occurring in 1927, reported too late for incorporation into the annual statement. These accidents were shown in detail in the supplementary lists in the *LABOUR GAZETTE* for May, August and November, 1928, and February, 1929. The figures for 1928, being to some extent still incomplete, are accordingly to some extent not comparable with the completed figures for 1927. In some industries where considerable changes in the figures from year to year appear, these can be attributed to particular occurrences. For example, in the mining, non-ferrous smelting and quarrying group, the increase in the number of fatalities to 250 include 39 miners who were suffocated in a fire at Hollinger mine in February. On the other hand the decrease in fatalities to 43 in fishing and trapping is explained by the fact that the 125 fatalities in 1927 included 90 fishermen who were lost in a storm off Nova Scotia. In agriculture there was an increase from 162 to 193 fatal accidents; in manufacturing from 153 to 192; in construction from

(Continued on page 354)

(Continued from page 351)

189 to 246; in transportation and public utilities from 322 to 381; in trade from 27 to 62; all of which may be attributed in part to an increase in employment in these industries for the year.

### Fatalities by Causes

The classification of fatal accidents according to causes shows that the largest number, 502, came under the category "by moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as accidents caused by moving implements (both those impelled by power and those drawn by horses), by moving watercraft and by aircraft. The largest number of ac-

cidents thus caused, 126, were due to persons being struck or run over by or crushed by or between cars and engines (82 of these victims being engaged in the industry steam railways); 99 were in connection with water craft (25 of which being in fishing and trapping and 37 in water transportation); 67 were due to derailments and collisions (35 in steam railways); 14 to falling from or in cars or engines (11 in steam railways); while mine and quarry cars caused 19; 91 were caused by automobiles and other power vehicles and implements; while animal-drawn vehicles and implements caused 76 (accidents primarily caused by animals being classified elsewhere); and aircraft caused 10 fatalities.

Next in order as a cause of fatalities came "falls of persons," which caused 287, including 103 falls into pits, shafts, harbours, rivers, etc.

(some of which resulted in drowning), 99 falls from elevations, 17 from ladders, 9 into holds of vessels, 10 falls on the level, 19 from loads, etc., 14 due to collapse of support, 4 on sharp objects, 6 down stairs and inclines, and 6 into tanks, vats, kilns, etc.

“Dangerous substances” caused 259 fatalities, of which 87 were due to explosive substances, 49 to electric current, 44 to hot and inflammable substances and flames, 39 to gas fumes, etc., 31 to conflagrations, and 12 to steam escapes, boiler explosions, compressed air.

Fatalities numbering 163 were caused by “falling objects,” of which 66 were due to falling trees and limbs, 39 to objects falling in mines and quarries, 25 to objects falling from elevations, loads, piles, 15 to breaking or loosening of straps, cables, etc., 7 to col-

lapse of structures, and 11 to other falling objects.

There were 38 fatalities caused by striking against or being struck by objects, of which 5 were due to striking against objects and 33 to being struck by objects. There were 58 due to working machines, 36 to prime movers, and 28 to hoisting apparatus. There were 55 accidents caused by handling of heavy or sharp objects and 6 by the use of tools. Animals caused 28 fatalities including 19 caused by horses.

The category “other causes” includes 172 fatalities, of which 17 were deaths following infection, 53 due to industrial diseases, 12 to drowning, of which no particulars were available, 4 to shooting and violence, 50 to cave-ins, landslides, ice-jams, etc., 26 to lightning, frost, storms, sunstroke, and 10 accidents of which no particulars were available.

(a) These fatalities include accidents to fishermen and seamen outside Canadian waters and such accidents to the province in which the various ships were registered and exclude accidents to Canadian fishermen and seamen on boats registered in another country. (b) Revised figures for 1927.

For particulars of accidents, see quarterly statements in The Labour Gazette for May, August, November 1928 and February 1929.

**Fatalities by Provinces**

The classification of fatal industrial accidents according to provinces shows that the largest number, 620, occurred in Ontario. There were 302 in Quebec, 281 in British Columbia, 104 in Nova Scotia, 98 in Alberta, 84 in Manitoba, 76 in Saskatchewan, 57 in New Brunswick, 8 in Prince Edward Island and 2 in Yukon and North West Territories. In Ontario, the largest proportion of fatalities occurred in the group, transportation and public utilities, where there were 139, with 114 in construction, 98 in mining, non-ferrous smelting and quarrying, 88 in manufacturing, 59 in agriculture, 43 in service, 40 in logging, 26 in trade and 13 in fishing and trapping. In Quebec, the largest number, 93, was also in transportation and public utilities, with 68 in construction, 46 in manufacturing, 25 in logging, 23 in mining, non-ferrous smelting and quarrying, 21 in service, 11 in trade and 3 in fishing and trapping. In Nova Scotia and Alberta, there were respectively 32 and 27 mining fatalities, and no other industry suffered so many fatalities in these provinces. In British Columbia, there were 81 fatalities in logging, 60 in transportation and public utilities, 53 in mining, etc. In Saskatchewan the greater proportion of accidents, 47, occurred in agriculture, while in Manitoba the largest number, 25, was in transportation and public utilities.

**Accident Frequency in Certain Industries**

The table of fatalities by months shows the highest point to have been in October, when there were 180, the average per month being 136. The low point for the year, 87, was reached in March. This table gives estimates of the number of employees in certain industries, the latest figures available being given in each case. The frequency of fatalities for the industries for which estimates were available was highest for logging, being 4.2 per thousand for the year, and second for mining, non-ferrous smelting and quarrying, being 3.0 per thousand. Construction accidents showed a frequency of 1.3 per thousand, and manufacturing 0.3 per thousand. The total number of employees in the group transportation and public utilities, is not available, but for water transportation the ratio was 3.8 per thousand, for steam railways 1.0, for street and electric railways 0.9, for local transportation 0.9, and for electricity and gas 2.0 per thousand.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Non-incorporated Unions May Not be Sued

In the Superior Court, Montreal, on March 5, Mr. Justice Constantineau dismissed three actions instituted by clothing firms against the Amalgamated Clothing Workers of America and three of its officers, on the ground that no provision exists in law for taking action against an unincorporated body. The actions arose out of the clothing workers' strike of 1926, when the clothing manufacturers claimed damages because of the actions of picketing strikers. Notice of appeal has been given by the plaintiffs.

The three actions were entered on August 27, 1926, Society Brand Clothes Limited, claiming \$15,000; Samuel Hart and Company, Limited, claiming \$10,000, and the International Tailoring Company, Limited, \$3,000. The allegations in each case were to the effect that the plaintiffs, doing business in Montreal as clothing manufacturers, were subjected to a strike organized on July 24, 1926, by the Amalgamated Clothing Workers of America. It was claimed that by intimidation the union prevented employees of the plaintiffs from going to their work; that the union organized a picketing system near the factories and houses of employees, and that the employees, in going to and from their work, were molested and intimidated by the agents of the union. At the same time the plaintiffs sought an injunction to restrain the union from using such methods. The issue was really the right of the union to "picket" the factories during a strike.

The union and its officers, who were sued personally, pleaded in defence that the workers had the right to strike and that this strike was conducted peacefully. If there was trouble, they claimed, it was due to the action of the plaintiff's employees.

An interim injunction was issued by Mr. Justice P. Demers on August 27, 1926, and on October 4 an interlocutory injunction was issued enjoining the union from "picketing." The hearing was delayed for some time because it was necessary to send a rogatory commission to New York to take the evidence of Joseph Schlossberg, treasurer of the union, and others, and on February 4 and 5 of this year the case was argued before Mr. Justice Cousineau.

In this judgment Mr. Justice Cousineau reviewed the facts of the case, pointing out that the Amalgamated Clothing Workers of America is a union comprising 125,000 members in Canada and the United States. When

the strike was declared, His Lordship stated, it was incumbent upon the local officers of the union to further it and to take steps towards its success. The plaintiffs employed a considerable number of men without caring whether they were members of the union or not. "None of the employees," he continued, "had complained about the conditions of their work and the strike was declared without any notice being given to the plaintiffs. In order to bring about the success of the strike, the members of the union organized a system of pickets on the streets and avenues leading to the factories of the plaintiffs. As the plaintiffs did not want to see their employees molested, they had recourse to the protection of Montreal and Outremont police. During the first days of the strike, towards the end of July and the beginning of August, when the picketing system was in full activity, there was trouble between the police and the strikers, and a great number of arrests ensued, the strikers were taken before the criminal courts and convicted in many cases of the offences charged. At the same time a number of public meetings were held in the strikers' quarters and there the heads of the union incited the strikers to continue their operations.

"Two questions arise out of these actions: the first is to discover if, under the circumstances, the plaintiffs had a right to an injunction against the defendants. The circumstances of these cases are absolutely the same as those mentioned in the decision of the Court of King's Bench in the case of International Ladies Garment Workers Union and Rothern, in which it was said that 'employees have a right not to work and they have also a right to join a trade union. But if a combination not to work is lawful, a combination to prevent others from working is prima facie unlawful. A workman has a right in his own interest peaceably to persuade another workman or a body of workmen legally to terminate their contracts of employment, and to cease work, but he has no right, by coercion or intimidation, to persuade workmen not to work or to cease working. During a strike, if things done or words spoken or written are such that they will excite fear or a reasonable apprehension or fear of danger and so influence those for whom they are intended as to prevent them from freely doing what they desire and the law permits, they may be restrained and the courts are entitled to look beyond the mere letter of the act or word into its spirit and intent. Picketing during a strike for the purpose of peaceable persuasion is legal, but it is

not legal for the purpose of compulsion by coercion and intimidation, where means adopted are not lawful, for example, the massing of a large number of pickets to intimidate the workers, the strong, persistent and organized picketing, accompanied by threats, abusive and offensive language, assaults and personal violence.'

"In the presence of this decision," Mr. Justice Cousineau continued, "this court is convinced that the plaintiffs in the present cases have a right to the remedy demanded.

"There remains the second means invoked by the defendants, a means resulting from a lack of civil status." His Lordship here cited the jurisprudence on the point, remarking that a judgment of the Court of King's Bench would make it appear conclusive that there was a right of action against a union, even though the union might not be legally incorporated. But in the case of Local Union No. 1562, United Mine Workers of America, vs. William Williams, and W. H. Rees, a majority of the Supreme Court of Canada decided in 1919 that, "No action lies against an unincorporated and unregistered body in an action of tort such as the present one."

The Court reviewed other jurisprudence, both of Canada and the United States, then reverted to the Civil Code, which does not provide for actions against unincorporated bodies. In the present case, His Lordship pointed out, the plaintiffs took action against "the Amalgamated Clothing Workers of America, an unincorporated association," and against "S. D. Genis, H. Schneid and J. Holtsman," officers of the union. It was true that some of the defendants were assigned personally, but the proof relative to their participation in the strike was not conclusive. Therefore, because there is no provision in the law for action against an unincorporated body, His Lordship quashed the interlocutory injunction and dismissed the plaintiffs action, each party paying its own costs.

#### Unforeseen Risk Cannot be Assumed by Workmen

A trainman employed by the New York, Chicago and St. Louis Railroad Company was standing on a train of twelve cars with the engine attached, signaling to the engineer in connection with the backing of the train on a side track. The weather was very cold, and it required a series of hard bumps to move the cars. After about a dozen bumps had been made, during which the cars were

moved about 150 feet, the engineer gave the cars an unusually hard bump, with the result that the trainman was thrown down between the cars and severely injured. Action being taken on behalf of the injured man for compensation, the jury returned a judgment against the company for \$30,000. This amount was reduced by the trial court to \$21,500, on the ground that the trainman was 57 years of age. On appeal by the company this judgment was affirmed by the Court of Appeals. The company next carried the case to the United States Supreme Court, alleging that the employee had assumed the risk when he gave the signal, and that that circumstance gave the engineer the right to bump the cars as much as he judged to be necessary.

The Supreme Court decided the case in favour of the injured trainman without leaving their seats. The Court took the view that when the trainman signaled to the engineer he expected an ordinary movement and not a violent jerk, which, as the man himself expressed it, "came so quick that it took the car right out from under me". Commenting on the company's plea that the employee had assumed the risk the Court pointed out that the employee assumed the risk of what ought to be expected under such circumstances, but that what actually happened was "an unexpected, unusual, and extremely dangerous thing".—(*United States Supreme Court—New York, Chicago and St. Louis Railroad Company versus E. M. Grenfell.*)

The executive council of the American Federation of Labour, in session at Miami, Florida, in February, considered the draft programme to be submitted at the next convention. According to press reports, the principal proposals will include the absolute suspension of immigration to the United States for ten years; a federal public building programme to be carried out largely during periods of unemployment; and a systematic plan for reducing working hours and days.

A bill was introduced in the Ontario Legislature early in March by the provincial Minister of Health to require that men employed at granite cutting shall wear compressed air masks as a preventive of silicosis. This disease was added in 1926 to the list of occupational diseases which are compensable under the Workman's Compensation Act (*LABOUR GAZETTE*, May, 1926, page 450). The rates of compensation were given in the *LABOUR GAZETTE*, April, 1928, page 341.

APRIL, 1929

[NUMBER 4

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

INDUSTRIAL employment in Canada at the beginning of March showed a moderate increase, according to returns received by the Dominion Bureau of Statistics from 6,422 employers of labour, each with a minimum of fifteen workers and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 944,681 persons, as compared with 936,108 in the preceding month. This increase caused the index number (average, 1926=100) to rise from 110.5 on February 1, to 111.4 at the beginning of March, as compared with 102.6, 97.5, 92.6, 88.1, 91.8, 91.0, 82.9 and 89.1 on March 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921 respectively. At the beginning of March, 1929, the percentage of unemployment reported by local trade unions stood at 6.8, as compared with percentages of 6.3 at the beginning of February, and 7.0 at the beginning of March, 1928. The percentage for February was based on the reports tabulated by the Department of Labour from a total of 1,673 local trade unions with a combined membership of 188,888 persons. Reports received by the Department of Labour from the offices of the Employment Service of Canada showed a small decline from the previous month in the volume of business transacted in February, as indicated by the average daily placements effected, but an increase was shown in the comparison with the volume of business at the corresponding period last year.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.23 at the beginning of March, as compared with \$11.15 for February; \$10.92 for March, 1928; \$11.05 for March, 1927; \$11.46 for March, 1926; \$10.74 for March, 1925; \$10.58 for March, 1924; \$10.79 for March, 1923; \$10.54 for March, 1922; \$13.23 for March, 1921; \$16.92 for June, 1920 (the peak); \$12.66 for March, 1918; and \$7.68 for March, 1914. In wholesale prices the index number of the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was 96.1 for March, as compared with 95.7 for February; 97.7 for

March, 1928; 97.3 for March, 1927; and 101.3 for March, 1926.

The loss in working time caused by industrial disputes in Canada was less during March than in the preceding month, and was also less than in March, 1928. Eleven disputes were in existence during the month involving 1,363 workpeople and resulting in a time-loss of 3,079 working days. Corresponding figures for February, 1929, were nine disputes, 1,480 workpeople, and 28,946 working days; and for March, 1928, thirteen disputes, 1,095 workpeople and 7,806 working days.

### Industrial Disputes Investigation Act

During the month of March the Department received two applications for the establishment of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, a Board being appointed in one of these cases before the close of the month. Particulars of the proceedings under the Act during the month are given on page 373.

### Quebec to consider Old Age Pensions

The Hon. L. A. Taschereau, premier of the Province of Quebec, stated in legislature on March 22 that the provincial government desired to reach an understanding with the Federal Government on the subject of old age pensions. The Government did not wish, he said, to adjourn the question indefinitely, for it was a social question which had to be met, and the solution which the Federal Act offered did not meet the views of this province.

"Since this is a joint federal and provincial matter that we are dealing with," the premier said, "we should talk the matter over again. That it is a joint matter is shown in the fact that Ottawa has asked us to pay 50 per cent of the cost, plus all the cost of administering the law. We are not ready to accept this. We do not think it to be the proper method to handle the old age problem, but the problem of old age is before us, and we must settle it."

### 8-hour day inquiry in Alberta

Among the labour measures recommended to the Alberta government by the Alberta Federation of Labour before opening of the present session of the legislature the general provision of an 8-hour day for industry occupied a prominent place (LABOUR GAZETTE, February, 1929, page 191). The government undertook to give consideration to this and to the other suggestions submitted by the Federation. In the meantime the Canadian Manufacturers' Association, as well as individual employers in the province, by means of telegrams and interviews with members of the provincial government, protested strongly against the adoption of general eight-hour day legislation, chiefly on the grounds that the three prairie provinces were competing for new industries, and that such restrictive legislation would place Alberta under a severe handicap as compared with Manitoba and Saskatchewan. The government conceded that there was some force in this contention, and on March 8 the Hon. J. E. Brownlee, the provincial premier, informed the Legislature that the government did not intend to bring down an eight-hour day measure during the current session. He intimated however that during 1929 a complete industrial survey would be made in Alberta, in order to secure information as to the seasonal nature of many industries and other material relating to the question of a legal limitation of the hours of labour in the province.

### B. C. Male Minimum Wage Act amended

The legislature of British Columbia at its recent session passed a new Male Minimum Wage Act, the former Act having become inoperative when the orders issued under its authority were declared invalid by the Supreme Court of Canada (LABOUR GAZETTE, November, 1928, page 1310). Under the new Act the Board administering the law will fix a minimum wage rate if an employee in any industry asks for such intervention. In such a case the Board would fix a minimum wage for the class of work affected and not for any other class of labour employed in the industry. However, the Board has authority also to intervene and to fix wages on its own initiative. The identity of workmen applying for the Board's intervention will be kept secret. The Act provides that appeals may be taken in the courts against decisions of the Board, whose rulings under the original Act were final. The Board has author-

ity to fix wages on a weekly, daily, or hourly basis. Under the original Act the minimum hourly rate only could be fixed, and this arrangement was said to involve a hardship in connection with the payment of wages to employees on duty for long hours but not actually working all this time. An outline of the labour legislation enacted at the recent session of the provincial legislature will be given in the next issue.

### Workmen's compensation in Saskatchewan

The provisions of the new Workmen's Compensation Act of Saskatchewan are outlined on another page of this issue in the account of the work of the session of the Legislature recently concluded. The Act is to take effect on January 1. The Hon. J. G. Gardiner, the premier of the province, in a speech at Moose Jaw on March 18, intimated that a special session of the Legislature would probably be called before the end of the current year for the purpose of making any required amendments to the Act in the interests of the labour men of the province. He invited all parties interested to send delegations to the government during the summer to submit any proposals they might have for improving the Act.

In regard to the exclusion of the six railway brotherhoods from the scope of the new Act it was stated in the Legislature when the bill was under discussion that one of the chief reasons actuating the railwaymen in desiring to remain under the old act was that under its provisions they might receive up to 100 per cent compensation for the losses incurred through industrial accidents, whereas the new Act provided only 66 $\frac{2}{3}$  per cent compensation. In this connection Mr. W. G. Baker, representing Moose Jaw, pointed out that under the old Act common law rights prevailed, which meant that the employer was responsible for the acts of his employees. He illustrated the point by stating that if he, as a conductor, sent a brakeman out to flag a train and the brakeman failed to do so, and he, as conductor, was killed, his widow could bring suit against the company. He said further that in all provinces of Canada except Alberta and Saskatchewan, the widow would be compelled to sue the brakeman under such circumstances. Railwaymen are similarly excluded from the scope of the Alberta Act, unless by a vote of their respective organizations they have expressed their wish to be brought under its provisions (LABOUR GAZETTE, November, 1928, page 1179).

**Purpose of  
compensation  
"reserve fund"**

Misunderstanding having resulted from the use of the name "reserve fund" as applied to the fund accumulated by the Workmen's Compensation Board for the payment of compensation, the Select Standing Committee on Public Accounts of the British Columbia Legislature, after hearing the evidence of Mr. E. S. H. Winn, chairman of the Board, recommended to the Legislature on March 12 that the name of the Fund should be changed. "It was felt," the committee stated, "that the title Reserve Fund was a misnomer and gave a wrong impression. The name leads the public to believe the fund is a general one accumulated for no special purpose, and one which the Board has on hand as an emergency fund. The fund, in reality, is created to meet the obligations incurred by the Board through awards to workmen, but which obligations are for future payment. When a person is injured or has a claim, his case is established on an actuarial basis, and this fund provides the means of meeting his claim during the time that claim exists, whether for a period certain or for the term of the life of the recipient. In other words, it is a pension fund. It was felt that, at the earliest possible moment, the name should be changed to 'Pension Fund' or some other suitable name."

**Alberta Coal  
Miners' Wages  
Security Act**

The provisions of the Coal Miners' Wages Security Act, which became law at the 1928 session of the Legislature of Alberta, were outlined in the LABOUR GAZETTE, June, 1928, page 582. This Act requires mine owners, when requested to do so, to make a return to the Department showing their assets and liabilities, etc. Owners must furnish a bond or other security in an amount equal to the largest sum paid in wages in one month during the previous year. In reply to a question in the legislature on February 5, the minister stated that the number of coal mining companies which had complied with these provisions before December 31, 1928, was 159, of which number 112 did so by securing exemption, filing security or bonds, and 47 were working in partnership and did not employ help. Eighty-eight mines, he said, had failed to comply with the Act at the end of 1928. The total of mines operating at the end of the year were 247. Eight mining companies or operators failed to pay wages during 1928, of which number three were delinquent prior

to the passing of the Act. Since January 1, 37 additional mines have complied with the Act.

**Unemployment  
relief in  
Alberta**

In reply to a question in the Alberta Legislature on February 5, it was stated that up to January 31, 1929, 758 men had been furnished with unemployment relief, the total expenditure being \$5,588.75. Of the men who were relieved, 415 were in Canada for less than two years; 178 were in Canada for less than one year; 76 were Canadian born; 170 were British born; 355 were central European, while the origin was not stated in 157 cases. Seventy-three of the men came into Alberta from other provinces since October 1, 1928. These figures do not include any of the men for whom the colonization and transportation companies were responsible. There were 500 unemployed persons for whom the companies were responsible; these men were directed to the local offices of the transportation companies, and it was understood that the companies issued tickets on various rooming houses and restaurants covering meals and lodging. It was further understood that 300 of these men were placed in positions, leaving 200 still obtaining relief from the companies.

**Child welfare  
in Manitoba**

Among the legislation enacted in Manitoba in 1928 was an Act establishing a Department of Health and Public Welfare (Statutes of 1928, chapter 21). This new department has charge of the administration of the Child Welfare Act and other Acts relating to social welfare in the province. It will be recalled that the Mother's Allowance Commission was abolished in 1924, its functions being transferred to the Child Welfare Bureau established under the Child Welfare Act (LABOUR GAZETTE, May, 1924, page 373; August, 1924, page 626, etc.). The administration of this Act was the subject of a commission of inquiry whose report was presented to the provincial legislature at its recent session. An outline of this report is given on page 383 of the present issue. Miss Gertrude Childs, formerly secretary of the Social Welfare Commission of Winnipeg, was recently appointed as supervisor of Mothers' Allowances in the province. Visitors in connection with this work are in future to be stationed at central points throughout the province, including Dauphin, Brandon and Portage la Prairie, instead of working out from Winnipeg.

### Protective legislation for female workers

A letter stating the reasons underlying special protective legislation for female workers has been addressed to the English press by a group of labour women in England, the signatories including Miss Margaret Bondfield, M.P., Miss Ellen Wilkinson, M.P., Miss Gertrude Tuckwell and many others. The letter is suggested by the coming amendments to the factory legislation which, it is stated, will be among the earliest legislation in the next Parliament of Great Britain. Advocates of complete sex-equality in matters of social legislation have opposed special laws on behalf of female workers (LABOUR GAZETTE, December, 1927, page 1277, etc.). On the other side, the reasons for special legislation are stated in the letter as follows:—

“First, the youth of the majority of women industrial workers. A very large proportion of these workers are under 25; for the purposes of the Factory Act every girl who has attained her 18th birthday is a woman.

“Secondly, the fact that women outside the cotton trade are not, like their male fellow-workers, in industry for life, but commonly leave their occupation on marriage.

“This industrial impermanence leads to a third disability of their industrial position; they are (again excluding the cotton workers) for the most part unorganized. While marriage in the case of a man helps to keep him a steadfast trade unionist, the prospect of marriage at the end of a few years of employment makes the young women hard to recruit and harder to hold for organization. It is idle, in the fact of the constitution of modern industry, to talk of the ‘freedom’ of an unorganized girl or woman to bargain, as an individual, on the extent of her overtime or her willingness to undertake night-work, with an employer who has not only the primary advantage of being the work-giver, but can oppose to her all the additional weight of his employers’ association.”

A summary of the bulletin recently issued by the Women’s Bureau of the United States Department of Labour dealing with this subject is reviewed on another page of this issue.

### Validity of women’s protective laws in U.S.A.

The validity of State legislation on the subject of the hours of labour of women and minors is now established in the United States by a series of legal decisions in cases where various acts of this character had been challenged. The present

standing of the laws relating to female employees is stated in the *Monthly Labour Review*, published by the United States Department of Labour, in its issue of February, 1929, as follows:—

The constitutional power of the State to fix a reasonable maximum on the number of hours which women may be employed is no longer open to question. This power, first recognized in 1908 in a case involving a 10-hour law for women, was based on the difference between the sexes, the physical welfare of women being considered an object of public interest. Nine years later reasonable hours of labour legislation was upheld upon the basis that the physical well-being of both men and women was an object of public interest.

In regard to legislation for the protection of minors it is found that “the State stands in the position of *parens patriae* as to minors and may exercise practically unlimited supervision and control over their contracts and occupations. Considering the physical, moral, and intellectual well-being of minors it can and does make regulations concerning their attendance at school, prohibits their employment absolutely when under stated ages or until a fixed degree of education has been acquired, limits the hours of labour when employment is permitted and prohibits altogether employments in certain occupations which it considers dangerous to their safety, health, or morals.”

### Labour views of employers’ welfare plans for workers

A criticism by organized labour of employers’ schemes for the welfare of their workers is made in the *Canadian Congress Journal*, March, 1929. After a reference to the work of trade unions as pioneers in schemes of mutual benefit for their members, the *Journal* proceeds as follows:—

“During the past few years there has been developed within the ranks of employers a number of similar measures under their own control; group insurance, pension schemes, etc. having been put into effect by an ever-increasing number of large corporations. Whilst these undoubtedly bring benefits to many individuals they are tending to the creation of new social and industrial problems. As the administration of these schemes is usually retained by the management they create an additional autocratic power in industry and, being based usually upon years of continuous service, tend to restrict the free movement of workers from one job to another. Again, both group insurance and old age pensions, when administered by private industry, have led to the establishment of a policy of refusing to employ men who have passed the age of

forty or forty-five in order to keep the cost of such schemes at the minimum. A still worse feature is the moral effect upon employees who are subject to the paternalism of the employer, throughout the entire period of their working life . . .

"It would appear to be good policy for employers to frankly seek the co-operation of workers' organizations in their welfare plans and, in that way, remove the strong suspicion which at present exists that many of these are created to provide a substitute for trade union organization and to secure new means of dominating labour. This failure to recognize labour as an equal partner does not lead to permanent industrial stability.

"Through the extension of welfare schemes of the kind above referred to employers are, however, still further demonstrating the practicability of insuring large groups against sickness, etc., and of providing death benefits in the same way as trade unions have done for so many years, without particular regard to the individuals physical condition, or age within certain limits, and are thus bridging the gap between the voluntary efforts of the trade unions and the time when the State will assume fully its responsibility in this matter."

#### Another view of industrial pension schemes

Industrial pensions in the United States were discussed in a paper contributed by Mr. Murry W. Latimer, of Industrial Relations Counselors, Inc., at a

joint meeting of the American Association of Labour Legislation and the American Statistical Association, held recently at Chicago. Mr. Latimer finds that pension schemes established by employers fail to provide an adequate solution of the problem of old age dependency. "From the point of view of employees," he says, "the chief disadvantage of the industrial plans is that they require a very long period of service to qualify for the pension roll. This fact, coupled with the lowering of the maximum hiring age, makes it impossible for many workers to receive an industrial pension. Thus far, there is no evidence to indicate a tendency on the part of industrial corporations to lower service requirements or to arrange for interchange of pension credits. Although the stability of employment has undoubtedly increased in the last few years, and although this condition may be permanent, one would hardly be justified in saying that there is much chance for industrial pension plans to provide any large proportion of industrial workers with protection against old-age dependency for some time to come."

Industrial pensions, Mr. Latimer points out, have come to be looked on by employers as being mainly a reward for service and "an aid in stabilizing the personnel". Three other agencies providing old age pension systems, in addition to employers, are mentioned in the paper, namely, the state, as a social body; private charity; and trade unions and fraternal organizations.

#### Displacement of labour by mechanical devices

Further references were made during the past month by industrial and labour leaders to the unemployment problem resulting from the progressive mechanization of industry. The extent of this problem is indicated in the statement quoted in the LABOUR GAZETTE, July, 1928, page 682, to the effect that industries in the United States, with 11 per cent fewer manual workers, produced in 1927 26 per cent more goods than they produced in 1919. President William Green, of the American Federation of Labour, in an address at New York on March 15 suggested that the federal government should establish some agency to make plans for dealing with the existing crisis of "technological unemployment". He made it clear that labour accepted further mechanization as inevitable, and on the whole advantageous, but pointed out that special measures must be taken to protect the workers during the period of transition to the mechanical age.

"Compared with the labour movements in many other countries, the American Federation of Labour has taken a most advanced position in its acceptance of this great industrial change. Although the organized labour movements of some of these countries have set themselves in opposition to the introduction of mechanical and use of mechanical processes in industry because of the widespread unemployment which ensued, the A. F. of L. has accepted it, has adjusted itself to it, and will be found co-operating with management in its extended and efficient use of mechanical technique and mechanical improvements."

In the *New Republic*, March 20, 1929, the question of "Men and Machines" is discussed by Mr. Stuart Chase, who reaches the following conclusions:—

"Machinery saves labour in a given process; one man replaces ten. A certain number of these men are needed to build and service the new machine, but some of them are permanently displaced. Now if the articles called for remain the same, and the financial set-up remains the same, sooner or later, half

the workers (let us say) in the country can produce what once required the labour of all the workers. The other half are on the park bench. But as an alternative all can continue to work for half as many hours in the day. Or all can combine to work a full day and produce twice as much. There are thus three possible choices. No one of these clean-cut alternatives has, of course, been taken. The ideal result would be something in the nature of hours reduced a third, and output of sound necessities and comforts increased two-thirds. This would end hard work and poverty forever. Instead, hours have fallen a little, output has increased considerably, but the present financial control neither releases sufficient purchasing power to enlarge output as far as the machine is readily capable of enlarging it unhindered, nor promotes the kind of output which necessarily makes for the good life. If purchasing power has reached its limits of expansion because mechanization is progressing at an unheard-of rate, only accelerating unemployment can result. Meanwhile, the better able we are to produce, the worse off we shall be. Even if the zero hour for acceleration has not yet arrived, the misery of normal unemployment continues unabated."

#### Labour age limits in industry

One of the effects of mechanization has been to reduce the maximum age limit at which the workmen in various industries are retained in employment. The National Association of Manufacturers (United States), recently referred this subject to a committee for investigation. The report of this committee, as outlined in the *New York World* (March 21) showed that maximum age limits are in effect in 30 per cent of the manufacturing plants of the United States.

"Among this 30 per cent, the limits range from twenty-five to seventy years for unskilled and semi-skilled workers, and from thirty-five to seventy years for skilled workers. The most frequent limits are forty-five for the unskilled and semi-skilled, and fifty for the skilled. In employing semi-skilled and unskilled workers, 25 per cent of the companies with hiring age limits use the forty-five year limit, with 50 per cent setting the limit higher and 25 per cent lower than forty-five. Of companies having maximum limits for skilled men only 18 per cent place the limit below forty-five, 63 per cent, use forty-five or fifty years and 19 per cent place the limit at about fifty years.

"The majority of companies having maximum hiring age limits set such limits for a

number of different reasons. Twenty-two per cent relate to physical condition of the workers or the work; plant pension plans are given as the cause for 21 per cent of the establishment of maximum age limits, and the tendency of older employees to slow up at their tasks is given as the cause of 19 per cent.

"The heavy cost of workmen's compensation insurance, the liability of older employees to injuries, and added danger to other employees when working with older men, is given as the cause in 14 per cent of the cases where such limits exist. Existence of group life insurance plans is the cause for 11 per cent of the maximum age hiring limits, since the addition of large numbers of aged employees would heavily increase the cost of insurance premiums."

#### Old age and invalidity insurance in Finland

A bill to establish a compulsory and contributory system of old age and invalidity insurance was introduced in the Parliament of the Republic of Finland towards the end of 1929. Under this legislation the obligation to insure applies to all Finnish citizens of 21 years of age or over. No distinction is made between men and women, or between wage earners and independent workers. The only persons excluded are those persons of 21 years or over who have lost their capacity for work as a result of physical or mental disability. The financial resources of the scheme will be made up of contributions from insured persons, the State and the local authorities. The rate of contribution of insured persons varies according to their income, those with a weekly income less than 100 marks contributing 2 marks per week (the exchange value of a Finnish mark is about 2½ cents), while those with 400 marks and over per week contribute 6 marks per week. There are three intermediate grades between these extremes. The State and the local authorities increase the individual contributions by a maximum sum of 1,500 marks for each person eligible for a pension whose other annual income does not exceed 1,000 marks a year. No public contribution is payable if the property of the insured person is liable to income tax. When pensions are paid to both husband and wife, the contribution from the public authorities is reduced by 20 per cent. The Bill contains provisions for increasing the participation of the State and the local authorities when the person in receipt of a pension has dependent children. The age at which old-age pensions are payable is fixed at 65 years.

The amount of the basic pension constituted by the insured person's contributions varies according to the number of years of payment. Thus, a person in the poorest class, that is, with a weekly income less than 100 marks, who has paid contributions for ten years, will receive 147 marks, supplemented by the contributions of the State and the local authorities. Persons who are 65 years of age or over at the moment of coming into force of the new insurance system will be eligible for a pension after 10 years of participation in the scheme.

The administration of invalidity and old-age insurance will be undertaken by committees appointed by the local authorities, a State Insurance Office under the supervision of the Ministry of Social Affairs, and five inspectors appointed by Parliament.

### **Reduction in migration of farm labour in United States.**

The rural exodus in the United States appears to be losing momentum rapidly, according to the report of the United States secretary of Agriculture for the year 1927, recently published. During the year the movement of population away from farms was smaller than in several previous years, while the movement back to farms was larger, the net loss of farming population having been 192,000, the smallest loss in recent years.

The following figures are given as to the movement of population to and from farms. The gross number of persons leaving farms for cities since 1922 is estimated at about 2,000,000 a year. Simultaneously an opposite movement from cities to farms is estimated at about 1,000,000 to 1,400,000 persons a year; in other words the net annual loss of farm population has ranged between 1,000,000 and 600,000 persons. This loss has been partly counter-balanced by an increase of births over deaths; making allowance for this, the estimated absolute annual loss in recent years must have ranged between 650,000 and 200,000 persons.

The Secretary of Agriculture points out that "some relative loss of population from the country to the town is apparently a normal characteristic of our agriculture, by reason of the comparatively high natural rate of increase in the country and because of the progressive substitution of mechanical power for man power. A readjustment of farm personnel to a diminishing labour requirement need give us no concern. It is an evidence of health and progress rather than of deterioration in agriculture. Continuance of present tendencies in the movement of farm population may bring us within a few years to

a point at which the annual loss will not exceed the proportion necessary to allow for draining off the excess in natural increase and for the drop in labour requirements."

The report points out that the following groups can be distinguished among the persons leaving farms—young adults just ready to enter various occupations, older persons seeking better earnings or jobs more interesting to them than farming, a fair sprinkling of prosperous adults desiring the comforts of urban life, and a group forced to leave agriculture through the disabilities of age.

As regards the movement of adolescents away from the farm, it is, in the opinion of the Secretary of Agriculture, "quite compatible with the well-being both of agriculture and of the nation." They probably leave farming either because they do not take to farm life, and therefore seek other occupations or because in any case more children are born on farms than can find a suitable place in farming.

The employees' pension of the New York Central Railway spent \$2,591,000 in pensions in 1928, an average of \$722 a pension. It has spent \$19,504,000 on 9,655 pensions since the system was started in 1910. There were 4,469 on the pension list at the close of 1928, of whom 2,722 were retired under the provisions of the age limit, 1,362 for disability and 385 voluntarily.

A resolution favouring the adoption of Mothers' Allowance legislation in Nova Scotia was adopted at a public meeting held under the auspices of the Children's Aid Society at Halifax on March 13.

Provincial legislation to require that all restaurant attendants and other handlers of food in Manitoba shall undergo periodical medical examination was recommended in a resolution adopted by a meeting held under the auspices of the Winnipeg Board of Trade in February. The meeting was attended by leading hotel and restaurant keepers and members of the public health committee of the Board.

The labour legislation recently recommended to the New York State Legislature by Governor Franklin D. Roosevelt included the prohibition of the granting of temporary injunctions in industrial disputes without notice of hearing, and provision for trial before a jury of any alleged violations of injunctions. Governor Roosevelt also recommended that workmen's compensation be extended to cover all occupational diseases.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of March was reported by the Superintendents of the Employment Service of Canada to be as follows:—

*Nova Scotia.*—Although not many requests for farm workers had been received as yet, spring work was about to open up. Fishing catches were reported as good, and the fish industry appeared to be quite busy. While logging was held up pending river driving, some progress was reported. The coal mining industry was fairly well engaged, and, although short time at the mines was fairly prevalent, fair production was reported. Manufacturing was stated to be normally active. Apart from the City of Halifax, where considerable building and construction work was proceeding, and the pulp mill project near Liverpool, very little work in the construction industry was being carried on throughout the province. Transportation was reported as being rather heavy, while trade was good for the season. There was an increase in the demand for women houseworkers, with a sufficient number of applicants available locally.

*New Brunswick.*—The agricultural industry was very quiet, although spring work would be opened up shortly. The fishing industry was reported as quiet, with only light catches. Logging was seasonally slack, in anticipation of river driving. The customary volume of production was reported from the manufacturing industry. Not much construction work was being carried on, although the volume of building was not unfavourable for the season. Transportation was fairly active, with port activities at St. John continuing quite brisk. There were the usual demands for women domestic workers with fair numbers of applicants to the offices.

*Quebec.*—Orders for farm workers were beginning to be received by the employment offices. Requests for river drivers for the logging industry were being received, and men were being placed. Manufacturing industries, generally, appeared to be maintaining, and in some cases increasing, activity, except in the city of Montreal where textiles and boots and shoes were reported as rather quiet. Although building and construction had not yet opened up to any considerable extent, orders for different building tradesmen were being received and filled. Transportation was active, while trade was commented upon as being good. There were many calls for all classes of

female domestic help, with plenty of applicants reporting.

*Ontario.*—At the different employment offices there was a noticeable and general increase in the demand for farm labourers, with single men particularly being sought. Manufacturing conditions were quite good, with orders for skilled mechanics of various sorts being relatively numerous; the automobile trades in Toronto, Oshawa and Windsor were specially mentioned as being active. In view of the fact that even at this early date building tradesmen were well employed, and in view of the further fact that substantial building programs were in prospect for the forthcoming season, particularly in the Sudbury mining field, there was some indication that the supply of workers of this class would be sufficient to cope with the situation during the summer months. The logging season seemed to be fairly well over, and only cleanup work was proceeding. The mining industry presented the usual phenomenon of considerable activity but very few vacancies for additional workers. Orders for women domestic workers were not difficult to satisfy, except in so far as competent cooks-general were concerned.

*Manitoba.*—The demand for farm help was rapidly increasing, but sufficient applicants to fill all vacancies were available. The demand for logging workers had practically terminated for the season. While some building work was proceeding in Winnipeg, construction was awaiting finer weather before being begun; a rather promising building program was in prospect. Manufacturing continued active. The demand for casual labourers was almost negligible. There was good demand for women domestic workers, orders from the country increasing, with a fair number of applicants presenting themselves.

*Saskatchewan.*—The demand for farm hands showed a decided increase, and, while actual shortages of these workers had not yet developed, some difficulty was being experienced in filling orders in some cases. Construction work was beginning to open up, although not many workers were being taken on yet. The demand for general labour was fairly quiet, being as usual much in excess of the number of such applicants. The demand for women houseworkers was increased, with some difficulty in securing sufficient applicants in all cases.

*Alberta.*—The demand for farm help for spring work showed a substantial increase, with applicants rather plentiful at the different

centres. Building activity was good for the time of year, and, with fair sized programs in contemplation, further development in this line was anticipated with the oncoming warmer weather. There was practically no demand

for workers for the logging industry nor for the coal mining industry. The demand for women workers for domestic services, particularly for country district, continued brisk, with a shortage of applicants.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA  
(Official Statistics except where noted)

	1929			1928

(10) Life Insurance Sales Research Bureau, Hartford Conn.

(11) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep, and hogs; storage holdings of butter and cheese.

*British Columbia.*—There were only a few orders for farm workers notified to the employment offices, and some difficulty was being encountered in securing suitable applicants in all cases. Judging by the demand for workers for it, the logging industry was quiet, although from other indications it appeared fairly active in some districts. Mining appeared quite busy, and some orders for additional workers were being listed. Though the number of building tradesmen unemployed did not seem unduly large for the time of year, the construction group for the most part was awaiting the advent of more favourable weather before building programs were proceeded with. Manufacturing showed a slight improvement. General conditions in this province seemed quite favourable.

There was a moderate gain in employment at the beginning of March, according to monthly statements furnished to the Dominion Bureau of Statistics by 6,422 of the larger employers of labour throughout Canada. The working forces of these firms aggregated 944,681 persons, as compared with 936,108 in the preceding month. This increase caused the index number (average, 1926=100), to rise from 110.5 on February 1 to 111.4 at the beginning of March, as compared with 102.6, 97.5, 92.6, 88.1, 91.8, 91.0, 82.9 and 89.0 on March 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The trend was upward in the Maritime Provinces, Ontario and British Columbia, but in Quebec and the Prairie Provinces contractions were indicated. In the Maritime Provinces, improvement was registered in manufactures, particularly in iron and steel works, and transportation and construction were also busier. Logging and mining, however, reported seasonal losses. In Quebec, the decrease was due to seasonal curtailment, mainly in transportation, construction, logging and trade. Manufacturing, on the other hand, was decidedly brisker. In Ontario, manufacturing recorded considerable recovery, and construction, services and communications were also more active, while transportation, mining, logging and trade were seasonally slack. In the Prairie Provinces, manufacturing and railway construction showed increases, while mining and transportation reported reduced activity. In British Columbia, manufacturing, particularly of lumber products, recorded important advances in employment, as did logging, mining, transportation and construction, while only small changes were noted in other industries.

Employment advanced in Montreal, Toronto, Hamilton, Windsor and the adjacent Border Cities and Vancouver, while the trend was unfavourable in Quebec City, Ottawa and Winnipeg. In Montreal, there were continued gains, chiefly in manufactures; on the other hand, trade and construction showed seasonal curtailment. In Quebec, manufacturing afforded more employment, while construction and transportation were slacker. In Toronto, iron and steel and textiles reported a considerable increase, but there was a seasonal falling-off in construction. In Ottawa, manufactures were more active, but trade was seasonally dull. In Hamilton, manufacturing, especially of iron and steel and textiles, afforded more employment. In the Border Cities, pronounced improvement was indicated, mainly in automobile factories. In Winnipeg, the decline was largely in trade, while manufactures were somewhat busier. In Vancouver manufacturing, construction and transportation recorded substantial increases.

A review of the returns by industries shows marked improvement in manufactures, notably in iron and steel, lumber and textile factories; construction, communications and services also recorded increased employment. On the other hand, logging, mining, transportation and trade showed seasonal curtailment.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of March, 1929.

#### TRADE UNION REPORTS

According to the reports tabulated at the close of February from a total of 1,673 local trade unions, with a membership aggregating 188,888 persons, 12,834 or a percentage of 6.8 were without work on the last day of the month, compared with an unemployment percentage of 6.3 in January. The situation, however, showed slight improvement over February a year ago when the percentage of idle members stood at 7.0. Nova Scotia, New Brunswick, Quebec, Ontario and Alberta unions all contributed during February to the total increase in unemployment recorded over January, the bulk of which occurred in Nova Scotia and Quebec, while the declines in the other provinces were nominal only. Of the gains in employment registered from Manitoba, Saskatchewan and British Columbia unions none were particularly outstanding. In comparing with the returns for February of last year, Nova Scotia unions reported a more favourable situation during the month under review, and advances in employment of much lesser degree were manifest by Quebec, Ontario and

British Columbia unions. On the other hand, contractions in activity were indicated from New Brunswick, Manitoba, Saskatchewan and Alberta unions, which in part offset the gains in the other provinces.

An article elsewhere in this issue gives in some detail the unemployment situation reported by trade unions at the close of February, 1929.

#### EMPLOYMENT OFFICE REPORTS

During the month of February, 1929, the offices of the Employment Service of Canada made 21,445 references of persons to vacancies and effected a total of 20,184 placements, of which 11,744 were in regular employment and 8,440 in casual work. Of the placements in regular employment 8,353 were of men and 3,391 of women. Applications for work were received from 31,932 workers, of whom 21,908 were men and 10,024 women, while employers notified the Service of opportunities for 13,350 men and 8,549 women, a total of 21,899 vacancies. A decline was shown in the volume of business transacted when the above figures were compared with those of the preceding month, but an increase was indicated when a comparison was made with the corresponding month last year, the reports for January, 1929, showing 24,865 vacancies offered, 38,328 applications made, and 22,300 placements effected, while in February, 1928, there were recorded 21,092 vacancies, 30,733 applications for work, and 19,690 placements in regular and casual employment. A report in detail of the work of the offices for the month of February, 1929, will be found elsewhere in this issue.

#### BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during February, 1929, was \$10,318,338 as compared with \$8,364,670 in the preceding month and \$10,318,338 in February, 1928.

The *MacLean Building Review*, estimated the total value of the construction contracts awarded in Canada in March at \$27,125,300. Of this amount, \$9,458,200 was for business buildings, \$8,802,700 was for residential buildings, \$6,607,500 was for engineering undertakings. The apportionment of the contracts awarded during March, 1929, by provinces, was as follows:—Ontario, \$13,917,600; Quebec, \$6,694,100; New Brunswick, \$53,000; Nova Scotia, \$125,500; Prince Edward Island, \$16,100; British Columbia, \$2,592,800; Alberta, \$983,700; Saskatchewan, \$1,444,800; Manitoba, \$1,297,700.

#### Production and Trade

**INDUSTRIAL PRODUCTION** Figures showing the volume of production in certain industries during recent months and also in the corresponding months in the previous year are given in the table on page 369.

Active business conditions have prevailed in Canada since the beginning of the present year, according to indexes of physical volume maintained by the Dominion Bureau of Statistics and published in the *Monthly Review of Business Statistics*. The physical volume of business averaged greater in January and February than in any other two-month period during the ten years under observation. Automobile production was at a specially high level in February, surpassing all previous records for the month. The output of the primary iron and steel industry indicated the marked activity in this group, and reflected in turn the expansion in plant and equipment which is fairly general throughout Canadian industry and transportation systems. The production of newsprint and the export of lumber showed recession in February from the levels of the preceding month. Crude rubber, petroleum and cotton were imported in lesser volume than in January, after the usual adjustment for seasonal tendencies. Coal production was greater in February than in January, notwithstanding the shorter month. Exports of the better grades of asbestos were greater than in January, while judged by experts and receipts at the Royal Mint the production of metals showed a recession.

**EXTERNAL TRADE** A summary of Canadian trade prepared by the Department of National Revenue shows that in February, 1929, the merchandise entered for consumption amounted to \$97,042,055 as compared with \$96,959,301 in the preceding month, and with \$86,006,897 in February, 1928. The chief imports in February, 1929, were: Iron and its products, \$26,619,257; fibres, textiles and textile products, \$18,451,058; non-metallic minerals and products, \$11,080,683.

The domestic merchandise exported during February, 1929, amounted to \$82,259,345, as compared with \$94,942,041 in January, 1929, and with \$88,565,196 in February, 1928. The chief exports in February, 1929, were: Agricultural and vegetable products, mainly foods, \$25,482,643; Wood, wood products and paper, \$19,871,478; Non-ferrous metals and their products, \$9,482,681.

In the eleven months ending February, 1929, exports of domestic merchandise totalled \$1,248,848,550 and imports \$1,130,350,273.

### Strikes and Lockouts

The time loss due to industrial disputes in March, 1929, was very much less than in February, none of the disputes occurring during the month involving large numbers of workers or lasting for any length of time. The time loss in man working days was also less than in March, 1928. There were in existence during the month eleven disputes, involving 1,363 workpeople, and resulting in a time loss of 3,079 working days, as compared with nine disputes involving 1,480 workpeople, and resulting in a time loss of 28,946 working days in February. In March, 1928, there were on record thirteen disputes, involving 1,095 workpeople, and resulting in a time loss of 7,806 working days. At the end of March there were on record three disputes affecting 141 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was slightly higher at \$11.23 at the beginning of March, as compared with \$11.15 for February; \$10.92 for March, 1928; \$11.05 for March, 1927; \$11.46 for March, 1926; 10.74 for March, 1925; \$10.58 for March, 1924; \$10.79 for March, 1923; \$10.54 for March, 1922; \$13.23 for March, 1921; \$16.92 for June, 1920 (the peak); \$12.66 for March, 1918; and \$7.68 for March 1914. The increase was due to slightly higher prices for eggs, butter, beef, veal, fresh pork, beans and evaporated apples. Slight declines occurred in the prices of lard, rice, granulated sugar, tea and coffee. Including the cost of fuel and rent with that of foods the total budget averaged \$21.52 at the beginning of March, as compared with \$21.41 for February; \$21.15 for March, 1928; \$21.29 for March, 1927; \$21.77 for March, 1926; \$21 for March, 1925; \$21 for March, 1924; \$21.42 for March, 1923; \$20.96 for March, 1922; \$23.87 for March, 1921; \$26.92 for July, 1920 (the peak); \$20 for March, 1918; and \$14.35 for March, 1914. Rent was slightly higher.

In wholesale prices the revised index number of the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again slightly higher at 96.1 for March, as compared with 95.7 for February; 97.7 for March, 1928; 97.3 for March, 1927; and 101.3 for March, 1926. In the grouping according to chief component materials five of the eight main groups were higher, two were lower and one was unchanged. The groups which advanced

were: the Animals and their Products group, due mainly to higher prices for live stock, meats, fowl, butter and cheese; the Wood, Wood Products and Paper group, due mainly to higher prices for some lines of lumber; the Iron and its Products group, chiefly because of higher prices for scrap iron; the Non-Ferrous Metals group, because of advances in the prices of copper, lead, spelter and silver; and the Chemicals and Allied Products group, due mainly to advances in some lines of paint materials. The Vegetables and their Products group and the Fibres, Textiles and Textile Products group declined, the former due to lower prices for grains, mill feed, foreign fruits, sugar, potatoes, rubber, naval stores and some vegetable oils, which more than offset higher prices for flour, tea, coffee, apples and hay, and the latter due to lower prices for jute, hessian and wool, which more than offset advances in the prices of cotton, silk, flax fibre, hemp, sisal, and manila rope. The Non-Metallic Minerals and their Products group was unchanged.

### Accidents in Ontario in March

In March, 1929, 6,236 accidents were reported to the Ontario Workmen's Compensation Board, and of these thirty-four were fatal. These figures showed a small decline from February, when there were 6,640 accidents including 49 fatalities, but the figures for March, 1929, are higher than those for March, 1928. The total benefits awarded to injured workers and their dependents in March, 1929, were \$626,806, of which \$105,768 was for medical aid. These figures show very little change from February when total benefits were \$626,148, including \$102,002 for medical aid.

Speaking recently of the upward tendency in the number of accidents reported to the Board, Mr. R. B. Morley, general manager of the Industrial Accident Prevention Associations of Ontario, pointed out that this may be explained to some extent by the increase in payroll in the province in 1928 and to the growing practice of reporting the most minor type of accident to the Workmen's Compensation Board. Mr. Morley states that the growing interest of executives in accident prevention has already begun to produce results. There are all told about 25,000 plants under compensation in Ontario, of which 8,000 are under the jurisdiction of the Industrial Accident Prevention Associations. The payroll of these eight thousand, however, is about two-thirds of the total.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF MARCH, 1929

**D**URING the month of March the Department received two applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act, as follows:—

(1) From locomotive engineers employed by the Canadian National Railways and being members of the Brotherhood of Locomotive Engineers. The dispute grew out of the employees' desire to amend certain rules governing the service of the applicants. The number of employees directly concerned was given as four thousand. The Minister of Labour established a Board of Conciliation and Investigation shortly after the close of the month and

appointed Board members as follows: On the company's recommendation, Mr. J. L. Counsell, K.C., Hamilton, Ontario; on the employees' recommendation, Mr. A. Cyril Boyce, K.C., Ottawa, Ontario.

(2) From certain employees of the Dominion and Atlantic Railway Company being clerks, freight handlers, station and stores department employees, represented by the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. Ninety employees were stated to be directly affected by this dispute, which concerned wages and working conditions. The application was under consideration at the close of the month.

### Labour Courts in Germany

A system of Labour Courts was established in Germany in 1927 by an act passed in December in the preceding year, the new tribunals consisting of (1) local labour courts; (2) State labour courts; and (3) the Federal Labour Court. The work of these courts since they began to function on July 1, 1927, down to the end of that year, is described in a recent report from Berlin (*Wirtschaft und Statistik*, No. 21, 1928).

The local courts consist of a chairman appointed by the State and of two members respectively representing the employers and workers. State labour courts and the Federal labour court are presided over by specially qualified judges, assisted by assessors representing employers and workers appointed by the Federal government from nomination lists submitted by the respective National trade organizations.

The great majority of the cases heard by the local tribunals arose out of disputes between employees and workers regarding their contractual relationships as employers and employed, or out of unlawful acts connected with the employment. Of the total number of 164,618 cases filed for hearing 136,264 were disposed of by the end of the year 1927, of which 38,942 cases were settled by amicable agreement in conciliation proceedings before the chairman of the Court, as provided for under the Act with a view to the settlement of a dispute without recourse to legal proceedings. A further 16,859 cases were settled by amicable arrangement during the course of the formal proceedings before the Court. A total of 50,716 further cases were disposed

of by decision of the chairman alone, who has power to pronounce judgment in cases where no formal hearing takes place either by default or on account of the withdrawal of the claim or the abandonment of the case by one of the parties. Thus the Courts were called upon to pronounce judgment after process of trial in only 21.8 per cent of all cases disposed of.

Appeal against the findings of a local court were made to the State Labour Courts in 4,545 cases.

Further appeals to the Federal Labour Court are permitted in cases where the judgment of the lower court is claimed to rest on the non-application or incorrect application of a legal provision or a clause of a collective agreement affecting the terms of individual contracts of employment. During the six months ending December 31, 1927, 123 such appeals were filed.

The second edition of a descriptive pamphlet on old age pensions in Austria, by Dr. Fritz Rager, secretary of the Vienna Bureau for Wage Earners and Salaried Workers, was published recently. Dr. Rager, in a preface to this edition, calls attention to the remarkable growth in public sentiment in favour of social insurance during the past half year. The benefits of old age pensions were extended to agricultural workers at the beginning of the present year. This and other recent developments are described in the second edition, which also contains an outline of the most important problems arising in the administration of old age pensions.

## STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1929

THE number of strikes and lockouts in existence in Canada during March was eleven, as compared with nine during the previous month. The time loss for the month was very much less than in February, none of the disputes reported involving large numbers of workers for any length of time. As compared with March, 1928, while a larger number of workers were involved, the time loss in man working days was only about one-half as great.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Mar., 1929.....	11	1,363	3,079
*Feb., 1929.....	9	1,480	28,946
Mar., 1928.....	13	1,095	7,806

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Four disputes, involving 515 workpeople, were carried over from February, and seven disputes commenced during March. Eight of these eleven disputes terminated during the month, five being in favour of the workers, two in favour of the employer and one resulting in a compromise. At the end of March, therefore, there were on record three disputes involving strikes or lockouts, as follows: plumbers, Kingston, Ont.; shipwrights, Vancouver, B.C.; and musicians, Ottawa, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Information is available as to six such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926; bakers, Montreal, P.Q., May 1, 1927; stonecutters, Montreal, P.Q., June 10, 1927; sheet metal workers, Montreal, P.Q., September 21, 1927;

fur workers, Toronto, Ont., April 10, 1928, and shoe factory workers, Toronto, Ont., August 13, 1928.

Information has reached the Department as to a dispute at Edmonton, Alta., involving bricklayers engaged in sewer construction, owing to a dispute as to the class of labour which should be employed on the work and consequently the rate of wages. The employer secured other workmen to proceed with the job. Only three employees being affected, the dispute is recorded as a "minor dispute" as defined in a previous paragraph.

Information has also reached the Department that a strike involving telegraph operators employed by stock-brokers in the United States, commencing about March 18, 1929, involved small numbers in certain cities in Canada including Montreal and Vancouver. No particulars as to this dispute have been received.

A strike of painters in Victoria, B.C., was reported about March 25, but an increase of 10 cents per hour was agreed to in about ten days. Particulars have not yet been received.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

**TIE CUTTERS, UNION LAKE, ONT.**—As reported in the last issue of the *LABOUR GAZETTE* tie workers on strike for an increase in wages had been offered a partial increase by the employer early in March, approximately one hundred out of the three hundred originally on strike returning to work on the employer's terms, the other two hundred having secured work with other employers.

**TEXTILE FACTORY WORKERS, HAMILTON, ONT.**—As stated in the March issue of the *LABOUR GAZETTE* the strike of textile workers in a cotton factory in Hamilton was called off on March 4, the employer agreeing to take back the workers still on strike without discrimination, whenever there were places for them, under the same conditions as before the strike. A small number of the strikers had secured work with other employers.

**PHOTO ENGRAVERS, TORONTO, ONT.**—Employees involved in this dispute, having been dismissed on January 7, agreed to return to work on March 11, the employer having undertaken to give positions to all former employees who had not secured work elsewhere, or who did not secure positions within a week, with the same wages and working conditions as before the dispute. On March 11, when the

workers reported at the plant, a dispute arose as to a change in conditions. One of the workers was arrested for trespass but the charge was withdrawn in court after the evidence for the prosecution was given. The workers involved have since secured work elsewhere, but the union has not declared the dispute terminated.

PLUMBERS, KINGSTON, ONT.—At the end of March the union reported nine workers still on strike receiving strike pay, and eighteen other strikers not employed, while eleven had secured work with other employers since the beginning of the dispute, April 2, 1928, which was due to a demand for an increase in wages of \$1.00 per hour.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1929

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts Occurring prior to February, 1929.</b>			
LOGGING— Tie cutters, Union Lake, Ont..	100	200	Commenced Jan. 26, 1929, for increase in piece rates and in the monthly rate. Terminated Mar. 4, 1929. Compromise.
MANUFACTURING— Textiles— Textile factory workers, Hamilton, Ont.....	400	800	Commenced Jan. 30, 1929, against changes in working conditions involving reduction of staff. Terminated Mar. 4, 1929; in favour of employer.
Printing and Publishing— Photo engravers, Toronto, Ont.	6	48	Alleged lockout, commenced Jan. 17, 1929, of union employees. Work to be resumed Mar. 11, 1929, on previous conditions; a dispute arising, workers secured employment elsewhere.
CONSTRUCTION— Buildings and Structures— Plumbers, Kingston, Ont.....	9	216	Commenced April 2, 1928, for increase in wages. Underminated.
<b>(b) Strikes and Lockouts Occurring during February, 1929.</b>			
MANUFACTURING— Clothing (including knitted goods)— Women's clothing factory workers, Winnipeg, Man....	15	75	Commenced Mar. 4, 1929, for increase in wages and abrogation of piece work system. Terminated Mar. 11, 1929 in favour of workers.
Iron, Steel and Products— Auto. factory workers (tool and die makers), Oshawa, Ont.....	25	450	Commenced Mar. 5, 1929, against appointment of foreman. Terminated Mar. 27, 1929; in favour of employer.
Auto. factory workers (assemblers), Toronto, Ont.....	40	20	Commenced Mar. 20, 1929, against change in piece work system. Terminated Mar 21, 1929; in favour of workers.
CONSTRUCTION— Buildings and Structures— Certain building trades, Murray Bay, P.Q.....	600	400	Commenced Mar. 6, 1929, for increase in wages. Terminated Mar. 7, 1929; in favour of workers.
Shipbuilding— Shipwrights, etc., Vancouver, B.C.....	125	750	Commenced Mar. 25, 1929, for increase in wages. Underminated.
TRANSPORTATION— Electric Railways— Trackmen, Winnipeg, Man....	36	36	Commenced Mar. 13, 1929, against a new working condition. Terminated Mar. 14, 1929; in favour of workers.
SERVICE— Recreational— Musicians, Ottawa, Ont.....	7	84	Commenced Mar. 25, 1929, to maintain union working conditions. Underminated.

**WOMEN'S CLOTHING FACTORY WORKERS, WINNIPEG, MAN.**—Employees in a women's clothing factory ceased work on March 4, demanding an increase in wages for the lower paid employees and the abrogation of piece work. Work was resumed on March 11, the demands of the workers having been conceded.

**AUTO FACTORY WORKERS (TOOL AND DIE MAKERS), OSHAWA, ONT.**—A number of employees, tool and die makers, ceased work on March 5, protesting against the appointment of a certain man as foreman and also against the employment of workmen brought from foreign countries when Canadian workmen were available. The employer stated that the strikers would have been laid off in a short time as their services were not required until the autumn. Through the intervention of the Minister of Labour negotiations were carried on between the parties and the employer agreed to give employment to the strikers without discrimination, and at the end of March five had been re-engaged. The remainder of the strikers who had not secured work elsewhere were re-employed early in April.

**AUTO FACTORY WORKERS (ASSEMBLERS), TORONTO, ONT.**—Assemblers in an automobile factory in Toronto ceased work on March 20, objecting to a change from individual piece work to group piece work, a system which the workers believed would cause a reduction in their earnings. The employer agreed to return to the old system and work was resumed within a few hours.

**CERTAIN BUILDING TRADES, MURRAY BAY, P.Q.**—Labourers engaged on the construction of a building ceased work on March 6, demanding an increase in wages from 30 cents per hour to 40 cents per hour, and the following day were joined by carpenters and plumbers, the carpenters demanding an increase to 75 cents, an increase previously from 50 cents to 65 cents per hour not being considered

satisfactory. On March 7 the employer conceded the demands of the strikers and work was resumed at one o'clock that afternoon.

**SHIPWRIGHTS, ETC., VANCOUVER, B.C.**—Shipwrights, joiners, caulkers and boat builders ceased work on March 25, demanding increases in wages from \$6.50 to \$7.50 per eight-hour day. The employer had offered to pay \$7 per day but this offer was not accepted. At the end of the month no settlement had been reported.

**TRACKMEN, WINNIPEG, MAN**—Workers were involved in a dispute resulting from the provision by the employer of white belts to wear when working on the street at night in order to prevent accidents, owing to a number of instances where trackmen had been struck by motor cars. The electric railway company secured information as to what measures were in use elsewhere, and decided to have the trackmen wear a shoulder strap and belt made of white canvas covered with luminescent paint. The trackmen refused to wear these and were told that they must do so or be discharged. Their representative brought the matter to the attention of the Minister of Labour, and at his suggestion the men resumed work next day pending discussion with the employer as to a suitable device. The employer also lifted the order to wear the belts pending such discussion, and asked the employees to submit suggestions.

**MUSICIANS, OTTAWA, ONT.**—Musicians employed at a theatre ceased work on March 25, demanding the employment of seven persons in the orchestra instead of five as desired by the management. The union claimed an agreement had been signed providing for seven persons. Work was resumed on April 8, the management having agreed to the terms of the union when the stage hands gave notice of a strike in accordance with their agreement with the musicians' union.

The transitional period named in connection with the British Unemployment Insurance Act of 1927, which was to have ended on April 18, 1929, has been extended for one year. The Act provides that, after the transitional period it will be a condition for the receipt of unemployment benefit that at least 30 contributions (or in the case of disabled ex-service men, 10 contributions) have been paid in the two years preceding the date of the applicants claim for benefit. During the transitional period greatly reduced contribu-

tions are required. The Minister of Labour announced in the House of Commons on March 7, that while there had been an improvement in employment in the depressed areas the change had come too late to affect materially the circumstances of a number of claimants to benefit. A bill to extend the transitional period was introduced on March 13. An outline of the provisions of the Unemployment Insurance Act of 1927 was given in the *LABOUR GAZETTE*, November, 1927, page 1146.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1929, in the review of Strikes and Lockouts in Canada and Other Countries, 1928. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

### Great Britain and Northern Ireland

During February, 15 new disputes were reported. The total number of disputes in progress during the month was 24, involving 9,100 workpeople and resulting in a time loss of 78,000 working days for the month. Of the 15 disputes beginning in February, 2 arose out of proposed reductions in wages, 4 on other wages questions, 2 on questions of working hours, 5 on questions respecting the employment of particular classes or persons and 2 on other questions. Settlements were made in 12 disputes, of which 2 were in favour of workpeople, 4 in favour of employers and 6 ended in compromise. In the case of three other disputes, work was resumed pending negotiations.

The dispute involving 1,500 workers in the wrought iron manufacturing industry in Lanarkshire, Scotland, which began on January 28, terminated on March 2, when it was agreed to refer the matter of working hours and tonnage rates to arbitration.

### Irish Free State

During the year 1928, the number of disputes which began was 52, as compared with 53 in the previous year. The number of workpeople involved in all disputes in progress was 2,190 and the time loss 54,292 working days. Of the 52 disputes which began during the year, 36 were over wages questions, 3 concerning hours of labour, 11 concerning the engagement or dismissal of workers and 2 on other matters concerning conditions of employment.

Settlements were reached in 54 disputes. Workers' claims were wholly admitted in 5 cases, admitted in part in 16 and rejected in 8; employers' claims were wholly successful in 11 cases, successful in part in 6 and rejected in 5; in addition, 3 disputes ended with an indeterminate result.

The principal disputes for the year include paper box makers at Dublin from July to November, causing a time loss of 13,000 working days and builders' labourers at Cork in October and November with a time loss of 9,000 working days.

Table I gives a classification of the disputes for the year by industries.

TABLE I.—INDUSTRIAL DISPUTES IN THE IRISH FREE STATE DURING 1928, BY INDUSTRIES

Industries	Number of disputes	Work-people involved	Working days lost
Food, drink and tobacco.....	7	266	4,416
Mining and quarrying.....	2	86	1,378
Building and allied trades.....	8	364	10,371
Engineering and shipbuilding.....	4	282	3,288
Textile.....	3	113	1,817
Clothing, boot and shoe.....	2	61	582
Printing and paper.....	1	168	13,360
Furniture and woodworking.....	1	18	90
Chemical.....			
Railway, tram and omnibus.....	1	6	48
Other transportation (dock labour, etc.).....	3	155	960
Retail trades.....	2	52	3,528
Gas, water and electricity.....			
Public utility services.....	17	559	8,814
General and miscellaneous trades.....	1	60	5,460
Total.....	52	2,190	54,292

### Belgium

2,254,424 working days as compared with 1,658,836 in 1927.

Of the 192 disputes, 132 were over wages questions, 20 concerning discharge of workers, 13 on trade union questions and the others on various other questions. The results of the disputes were: 59 in favour of workers, 72 in favour of employers, 57 ended in compromise and the others had an indeterminate result.

Statistics for the year 1928 show that the number of disputes which terminated during the year was 192, of which 191 were strikes and one a lockout. The number of establishments concerned in these disputes was 528 and the number of workpeople involved 77,785, of which 74,707 were directly and 3,078 indirectly involved. The time loss for the year was

Table II gives an analysis of the disputes by industries.

TABLE II.—INDUSTRIAL DISPUTES IN BELGIUM DURING 1928, BY INDUSTRIES

Industries	Disputes terminating	Establishments	Workpeople affected	
			Directly	Indirectly
Mining.....	16	16	14,883	471
Quarrying.....	9	27	4,685	213

Commercial establishments.....	9	13	724	11
Total.....	192	528	74,707	3,078

### Germany

Revised figures for the year 1927 have recently been published. These show the number of disputes which terminated to be 857, directly involving 490,115 workers and resulting in a time loss to those directly involved of 5,896,108 working days. Corresponding figures for the year 1926 were 365 disputes terminated, directly involving 91,205 workers with a time loss to those directly involved of 1,353,780 working days.

### Netherlands

Preliminary figures for the year 1928 give the number of disputes beginning in the year as 187, involving 1,211 establishments and 15,000 workers.

### United States

The number of disputes which began during December was 42 and 44 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 40,317 and the time loss was 967,822 working days.

About 3,000 rayon factory workers were involved in a strike at Elizabethton, Tennessee, from March 12 to 22. The demand of the strikers, who were not organized at the beginning of the strike, was for increases in wages. During the course of the dispute,

large numbers of strikers joined the union and a settlement was reached granting a partial increase in wages and no discrimination to be shown against union employees.

A strike occurred in San Francisco, California, of 3,000 Chinese laundry workers from January 30 to February 4, for a reduction in the hours of work on Saturdays from 15 to 10. It was reported that the strikers were successful and that the new schedule of working hours which was agreed on provided for 15 hours a day for the first five days of the week, 10 hours on Saturday and 12 hours on alternate Sundays.

### Australia

During the third quarter of 1928, the number of disputes reported was 67, directly involving 25,358 workers and resulting in a time loss for all workers involved of 259,461 working days for this period.

At the end of March, no settlement had been made of the strike of several thousand timber workers against the acceptance of the award of the Arbitration Court increasing the hours from 44 to 48 per week in this industry.

### New Zealand

Table III is taken from the Monthly Abstract of Statistics, New Zealand, and is an analysis of the disputes for the year 1928.

TABLE III.—INDUSTRIAL DISPUTES IN NEW ZEALAND DURING 1928

Industry	Number of disturbances	Number of firms involved	Number of workers affected	Total duration (days)	Average duration (days)	Working days lost	Approximate loss in wages

Totals.....	41	53	9,822	253	5-88	22,817	23,244

## LABOUR LEGISLATION IN SASKATCHEWAN IN 1929

A NUMBER of measures of labour interest were enacted during the session of the Saskatchewan Legislature which opened on December 4, 1928, and closed on February 2, 1929. These measures included a new Workmen's Compensation Act, a new Electrical Licensing Act, and amendments to the Minimum Wage Act, the Mechanics' Lien Act, the Old Age Pension Act and The Telephone Department Superannuation Act.

### Workmen's Compensation

The Workmen's Compensation Act, which comes into force on proclamation, embodies the majority of the recommendations of the Workmen's Compensation Commission which was appointed in March, 1928. (LABOUR GAZETTE, April, 1928, page 344; February, 1929, page 182). Part I of the Act applies to all employees and workmen in the industries set forth in Schedule 1, including those carried on by provincial and municipal authorities, public utilities commissions and boards, and school boards. Certain railway employees are not included within the scope of the law, but may be brought under its operation by order of the Board approved by the Lieutenant-Governor-in-Council after a majority of the members of their organization have voted for such inclusion. These employees are members of the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, the Brotherhood of Railway Trainmen, the Order of Railway Telegraphers and Maintenance of Way Employees. Casual labourers, outworkers, farm labourers, and domestic servants are not included. An industry or workmen not within the scope of Part I may be admitted by Order in Council on recommendation of the Board or by the Board on application of the employer. 'Workmen' is defined to include the driver of a vehicle doing work for another and to exclude school teachers, persons whose work is mainly clerical and telegraph and telephone operators.

Compensation is payable for accidents and for those industrial diseases mentioned in the Schedule to the Act. An 'accident' is defined to include a wilful and intentional act not being the act of the workman, and a fortuitous event occasioned by a physical or natural cause. No compensation is payable for hernia unless it is a clinical hernia of a disabling character and of recent primary demonstrability and its onset can be shown to have been immediately preceded by a strain or other accident. The workman must at the time of the occurrence of the strain or other injury

report his condition immediately to his employer or cease work and report within twenty-four hours. If the workman does not submit to an operation within two weeks of the occurrence, compensation will cease. The period of disability is deemed to end at the expiry of forty-two days from the date of the operation unless extended by the Board.

The industrial diseases for which compensation is payable are anthrax; poisoning by lead, mercury, phosphorus, arsenic and benzol; ankylostomiasis, miners' phthisis, stone worker's or grinders phthisis; silicosis, pneumonconiosis, and compressed air illness.

In case of the death of worker, the compensation to a widow or invalid widower is a monthly payment of \$40 together with an additional payment of \$10 per month for each child under 16 years of age. Orphan children receive \$15 per month to the age of 16 years. When there is no widow, or the widow dies, a suitable foster mother is entitled to the same payment as if she were the widow, the children's payments then remaining at the same rate as during their mother's lifetime. The widow or foster mother is also entitled to a lump sum of \$100 in addition to compensation payments. Where the dependants are persons other than the foregoing, a sum reasonable and proportionate to their pecuniary loss, to be determined by the Board. Alien dependents residing outside of Canada may be awarded a lesser sum which according to the conditions and cost of living in their country of residence will maintain them in the same degree of comfort as dependants of the same class residing in Canada. Compensation to an invalid child is continued as long as, in the opinion of the Board, the workman, if he had lived, would have continued to support the child. Funeral expenses of the workman are paid up to the amount of \$125. Exclusive of such burial expenses the compensation payable may not exceed 66 2-3 of average monthly earnings of the workman, but this provision may not operate to reduce the total monthly compensation to a widow or invalid husband with one or more children below \$12.50 per week. A dependent widow who marries receives a lump sum equal to the monthly payments for two years.

Permanent total disability is compensable at the rate of 66 2/3 per cent of the average weekly earnings of the workman during the twelve months preceding the accident if he has been so long employed, and if not, for such lesser period as he has been in the employment of his employer.

Compensation for permanent partial disability is paid at the rate of 66 2/3 per cent of

the diminution of average earnings. If, however, the impairment of earning capacity does not exceed 10 per cent the Board may award a lump sum in lieu of periodical payments. Temporary total and temporary partial disability are for their duration compensable at the same rate as permanent total and permanent partial disability respectively.

Compensation for temporary total, or permanent total disability may not be less than \$12.50 per week, or, where the average earnings of the workman are less than this amount, it must equal the amount of such earnings. The minimum compensation for partial disability, whether temporary or permanent, is a corresponding amount in proportion to the impairment of earning capacity.

In computing average earnings, \$2,000 is the maximum amount taken into account. No compensation is payable for disability lasting less than seven days but where it is payable, payment is made as from the date of disability.

In addition to the compensation payments an injured workman is entitled to medical and surgical aid and hospital and skilled nursing services and, if necessary, to an artificial member or members and apparatus and to the repairs thereon for one year. Medical aid is to be furnished by the Board and paid for out of the accident fund, and no deduction from the wages of the workman may be made therefore. Exception is made, however, in cases where an employer establishes or has established an arrangement for medical aid which is as favourable to the workman as that provided under the Act. Such arrangement, if approved by the Board, may be continued, in which case the employer is entitled to reimbursement out of the accident fund or a reduction of his rate. The employer must furnish at his own expense, immediate transportation to the workman's home or to a hospital. He may also be required by the Board to maintain first aid services.

The Board may take such measures and make such expenditures as may be necessary for the rehabilitation of the injured workmen.

Work which is performed partly in Saskatchewan and partly in an adjoining province or country is considered to be performed in Saskatchewan and a workman engaged thereon and his dependants are entitled to compensation provided that the employer has included or ought to have included the workman in his returns to the board. Workmen and dependants who are entitled to compensation under the law of the place where the accident happens must elect whether they will claim compensation under such law or under the Saskatchewan Act.

A dependant who is not a resident of Canada is not entitled to compensation unless the law of the country or place in which he resides gives reciprocal benefits to Canadians. The amount of the compensation paid under the Saskatchewan law to such dependants may not be greater than that payable in a like case under the law of their country or place of residence.

The workmen of a contractor or sub-contractor are deemed to be the workmen of the principal unless such contractor or sub-contractor is assessed as an employer under Schedule I or is individually liable for payment of compensation, or unless and until the Board is satisfied that the responsibility of such contractor or sub-contractor is sufficient protection to his workmen for the benefits provided by the Workmen's Compensation Act.

*Workmen's Compensation Board.*—The Act is administered by a Board of three members appointed by the Lieutenant-Governor-in-Council who will hold office during good behaviour or for ten years, but may be removed at any time for cause. A member is eligible for reappointment on the expiration of his term. Members of the Board will receive such salaries as may be fixed by the Lieutenant-Governor-in-Council. They may not have any interest in any accident or employers' liability insurance company or in any device for the prevention of accidents.

The Board may, of its own motion or at the request of employer or workmen review any award of compensation.

The Board is empowered among other things to inspect premises and to investigate employments and places of employment, and to determine the safety devices or other means to be adopted for the prevention of accidents and industrial diseases, and to make regulations for the same purpose; to establish and maintain museums for the exhibits of safety devices etc., to arrange for the delivery of lectures and to publish and distribute bulletins for the information of employees, workmen and the public; and to appoint advisory committees on which employers and workmen are represented to assist in establishing standards of safety and to recommend rules and regulations. Before adopting any such rule or regulation the Board may hold a conference with a committee of not more than five employers, representatives of the industries affected and a committee of an equal number of the workmen in these industries.

A sum not exceeding \$25,000 may be paid out of the Consolidated Revenue Fund to assist in organizing the work of the Board and meeting its initial expenses.

The accident fund is provided, as in the other provinces having a state scheme of workmen's compensation, by contributions from employers in the classes or groups of industries in Schedule I of the Act.

### Other Legislation

*Power Commission Act.*—The Power Commission Act makes provision for a commission of one, two or three members appointed by the Lieutenant-Governor in Council to manufacture and supply electrical power. The Commission may, with the approval of the Lieutenant-Governor in Council, make regulations for the safety of persons who may be in the vicinity of, or using or working on, the works or undertakings of any corporation, and may also order investigations into accidents which are directly or indirectly due to electrical hazards.

*Electrical Licensing.*—The Electrical Licensing Act, which comes into force on May 1st, 1929, provides for the licensing of supply houses, contractors journeymen and electricians. The Saskatchewan Power Commission is charged with the duty of appointing a Board consisting of not less than one or more than three members qualified in electrical engineering and construction, to examine candidates for licensing. Any person wishing to carry on business as a contractor must furnish a guarantee bond of \$500 for himself and \$500 for each journeyman on his payroll. On furnishing such bonds and complying with the conditions of the Power Commission he will be granted an interim permit; and on production to the Board of twenty-five service connection permits, of which at least five are for buildings other than residences, duly signed by inspectors, he will be granted a license. Contractors incorporated in Saskatchewan at the date of the coming into force of the Act (May 1, 1929), or unincorporated contractors who have paid a business tax, are entitled to receive a contractor's license on depositing the necessary bond. A contractor's license may not be granted to an individual unless he holds a journeymen's license or to a firm unless one of its members holds such a license or employs at least one journeyman. An interim permit, renewable at the option of the Commission, may be issued for a period not exceeding one year, during which period the holder of the permit may work as a journeyman without a journeyman's license. Journeymen and electricians must satisfy the Board that they have served at least three years' apprenticeship to the trade and are conversant with the requirements of the Act and regulations or must pass an examination as re-

quired by the Commission. A candidate for a journeyman's license must satisfy the board that he is competent to do work on a new or existing electrical installation, in renewing, repairing, or changing electrical wires, conduits or apparatus for light, heat or power on an employer's account, and that he is conversant with the Act and the regulations. Failure to pass the required examination debars a candidate from presenting himself again for a period of six months. An apprentice may not do any electrical work or install any electrical material or appliances except as an assistant to, in the presence of or under the supervision of a licensed journeyman or electrician employed upon the same piece of work or contract. Penalties are provided for breaches of the law. The Power Commission may appoint the necessary inspectors for the purposes of the Act and may make regulations for carrying out its provisions. All electrical work done in Saskatchewan must conform to the requirements of the latest authorized edition of the Canadian Electrical Code, and any amendments and additions thereto made from time to time by the Commission. Municipal by-laws regulating the installation, erection or use of electrical equipment or apparatus or the licensing of electricians are only effective in so far as they are not repugnant to the Act.

*Minimum Wages for Women.*—An amendment (effective on May 1, 1929) to the Minimum Wage Act provides that prosecutions for offences created by the Act shall be instituted within six months after the commission of the alleged offence. A section is added to the Act forbidding an employer to discharge an employee who has been in his service continuously for six months or more without giving her at least one week's written notice of the termination of her employment. This provision does not apply however to cases in which an employee is discharged for any of the causes set forth in Section 3 of the Master and Servant Act. These causes are:—

(a) drunkenness; (b) absenting himself by day or night without leave from his proper service or employment; (c) dissipating his employer's property or effects.

*Mechanics' Liens.*—The Mechanics' Lien Act was amended by the repeal of the section dealing with the transfer of proceedings from one district court to another and the substitution of new provisions. The new section provides that where an action has been entered in a judicial district other than that in which the land in question is situated the judge shall order the transfer of the record

before the trial of the action. Formerly the order for transfer might be made at any stage of the proceedings. The amendment comes into force on May 1, 1929.

*Old Age Pensions.*—A section was added to the Old Age Pension Act to provide for the payment, to such person as the pension authority may direct, of sums payable at the death of a pensioner. Where a cheque issued to, or on behalf of, a pensioner remains undorsed at the date of his death and has been returned to the Provincial Treasurer, another cheque for the same amount is to be issued to such person as the pension authority may direct.

*Telephone Department Superannuation.*—A number of changes were made in the Telephone Department Superannuation Act by an amending Act which comes into force on May 1, 1929. Provision is made for the payment of superannuation allowances to any person who, in the opinion of the Minister of Telephones and Telegraphs, is not physically qualified for the requirements of his employment. A new section provides that, in computing an allowance or payment to be made to the employee, his widow or other person, the period of previous employment with the government shall be taken into account. This will be done in the case of an employee who left the Department at any time prior to May

1, 1928 and has again become an employee, and in the case of any person who was employed in a permanent position in any other department of the government and has become an employee of the Department of Telephone and Telegraphs. This provision will not apply however, to an employee whose previous service did not cover a continuous period of three years or more, nor to one who on leaving the employment of the government received a gratuity, unless he repays the same.

*Child Welfare.*—The Child Welfare Act was amended to provide for the payment of an allowance to a married woman acting as foster mother to orphan children. Formerly an allowance was only payable to a foster mother who was unmarried or a widow. This amendment comes into force on May 1, 1929.

*Vehicles Act.*—An amendment to the Vehicles Act which comes into force on May 1, 1929, provides that a license may be suspended or revoked when the owner or operator has been convicted of an infraction of any of the provisions of the Act, the regulations made thereunder the Public Vehicles Act, the Criminal Code or the Liquor Act.

*Companies Act.*—In the revision and consolidation of the Companies Act the section which deals with the liability of directors for the wages of employees remains unchanged.

## THE MINING INDUSTRY OF NOVA SCOTIA IN 1928

THE annual report on mining in Nova Scotia, describing the work carried on during the twelve-months' period ending September 30, 1928, has been published by the provincial Department of Public Works and Mines. The Minister, in an introductory note, comments on a slight decline evident during the year in the largest producing industry of the province, that of coal mining. "It is clear," he says, "that remedial measures towards this industry are requisite and that when taken they will require a lapse of some time before showing beneficial results. On the other hand, further developments are promised in metal mining, and already it appears certain that a lead-zinc industry will shortly be started. The principal facts in connection with the mining industry during the past year are summarized in the following paragraphs.

The average number of men employed at the coal mines show the total to be 13,431, as compared with 13,253 of the previous year.

The total number of man-days worked was 3,093,584, as compared with 3,204,753 in the fiscal year of 1927, which is decrease of 111,169 days.

The coal output for the year was 6,020,203 tons of 2,240 pounds, as compared with the previous year's output of 6,643,205 tons, a decrease of 623,002 tons.

The coal sales for the year were 5,518,535 tons of 2,240 pounds, as compared with the previous year's sales of 5,948,099 tons, a decrease of 429,564 tons.

The quantity of coal distributed for consumption in Nova Scotia during the fiscal year was 1,794,137 tons of 2,240 pounds, as compared with the previous year 1,859,144 tons, a decrease of 65,007 tons.

Shipments to the United States were 39,474 tons during the fiscal year, as compared with 3,551 tons for the previous year.

The shipments to the St. Lawrence markets in the fiscal year were 2,444,709 tons of 2,240 pounds, as compared with 2,459,702 tons for the previous year, a decrease of 14,993 tons.

The coal industry last fall again reached large proportions showing great improvement since the settlement of labour difficulties and the prospects for steady work at the collieries during the winter of 1928-1929 were then very promising.

The quantity of coal supplied the Dominion Iron and Steel Company was 874,490 tons as against 864,341 tons in 1927, an increase of 10,149 tons.

The total output of coal used by the coke ovens in the province last year was 577,652 tons—568,502 tons by the Dominion Iron and Steel Company and 9,150 tons by the Nova Scotia Light and Power Company, while this year a total of 591,045 tons were used—580,733 tons by the Dominion Iron and Steel and 10,312 tons by the Nova Scotia Light and Power Company.

The total quantity of coke manufactured in the province this year was 395,843 tons—388,426 tons by the Dominion Iron and Steel Company and 7,417 tons by the Nova Scotia Light and Power Company. Last year there was a total of 393,537 tons produced—387,270 tons by the Dominion Iron and Steel Company and 6,267 tons by the Nova Scotia Light and Power Company.

The quantity of tar manufactured from coal during the fiscal year was 6,419,681 imperial gallons, as against 6,655,699 gallons manufactured during the previous year.

The benzol gas from coal, manufactured for motor fuel, etc., during the year was 1,174,928 imperial gallons, as against 1,102,543 in the previous year, showing a decrease of 27,615 gallons.

One thousand four hundred and forty ounces of gold were produced during the year,

showing a decrease of 867 ounces, as compared with last year.

While no shipments of arsenical concentrates were made from the Province during the fiscal year, a large quantity was recovered from the mill tailings of the operating companies.

2,071,301 silicate brick were manufactured during the past year. This is an increase of 1,143,042 as compared with the previous year.

The mining and shipment of crude and calcined gypsum reached 972,211 tons for the fiscal year. This is an increase of 120,258 tons over the previous year.

Mr. Norman McKenzie, inspector of Mines for the province, expresses the Department's appreciation of the important assistance rendered to the Province by the federal Department of Mines through the Canadian Geological Survey.

The report contains a detailed description of the various operations in each mine during the year. Annual examination for certificates of competency were held during the year for mine managers underground managers, overmen, mine examiners, and stationary engineers, the results being given, along with the names of local boards for granting certificates. A directory of mines in the province is included in the report, which is a substantial illustrated volume, and a complete guide to the mining industry in Nova Scotia.

## REPORT OF CHILD WELFARE COMMISSION IN MANITOBA

THE report of the Royal Commission appointed by the Manitoba Legislature in June, 1928, to enquire into the administration of The Child Welfare Division of the provincial Department of Health and Public Welfare, has recently been made public. The commissioner was Miss Charlotte Whitton, secretary of the Canadian Council of Child Welfare.

The report covers all the activities carried on under the Child Welfare Act, dealing with questions connected with the administrative machinery of the department, and with juvenile courts and delinquency; bereaved and dependent children (mothers' allowances); neglected children; children of unmarried parents; feeble-minded children; handicapped children; immigrant children; child welfare organizations; adopted children; and children under guardians.

### Mothers' Allowance

That part of the report dealing with the administration of Mothers' Allowances contains the general finding that beyond a limited advocacy of the extension of the classes of

beneficiaries at present eligible under the Act, the criticism encountered in the course of the inquiry was directed almost entirely towards the efficiency of administration rather than towards the terms of the statute. As regards the efficiency of the administration, the recommendations of the Commissioner are as follows:

1. That administrative organization of the Mothers' Allowance legislation in Manitoba should be substantially recast along the lines of decentralization of visitors throughout the province, and delegation to a thoroughly competent and experienced supervisor of all supervision and administrative detail.

2. That when this has been effected, all cases at present in receipt of allowance should be submitted to the most thorough investigation and review, and adjusted accordingly. This review should not ignore the fundamental instruction of the Statute that the allowance is to be paid only where the child is "likely to suffer because of the lack of adequate means to supply proper care for such child."

3. It is suggested that in order to effect reorganization and review, upon the appointment of a supervisor all applications for admission to allowance should be held in abeyance for a minimum period of sixty days until the present volume of cases carried could be given at least cursory review, classification and assignment, and the details of internal administrative policy and procedure be adjusted accordingly.

4. That, thereafter no family be admitted to allowance in Manitoba without the most thorough prior investigation and verification by personal inquiry of the facts of the case as represented in the application.

With reference to the standards adopted for determining the amount of allowances, the chief recommendation was as follows:—  
 "That the whole budgeting principle as at present applied to the computation and payment of allowances in Manitoba should be substantially revised along the lines of establishing, by regulation, a maximum standard allowance, periodically reviewed, and calculating within these limits a grant affording a decent minimum of living to each family, with due consideration of their individual needs."

The commissioner considered that special allowances for house repairs, etc., should not be granted, but that the mothers in receipt of allowances should be taught to plan and save for such extras. The report also declares that payments on principal for the acquisition of property are not a justifiable charge on public funds voted for mothers' allowances.

*Adequacy of the allowance.*—The report makes a comparison between the standard allowance and (1) living costs; (2) wages; (3) Workmen's Compensation; (4) military pensions; (5) Winnipeg City relief.

Under the first head the Commissioner found that the standard allowance for a woman and three children namely, \$69 (where earnings were deducted, and in all other cases \$74), tested against three theoretical cost of living budgets, compiled in the Dominion Department of Labour on the basis of current prices in Winnipeg, was found to compare as follows:—

Manitoba Standard allowance, \$69 or \$74 per month.  
 Budget on Poverty level, \$61.70 per month.  
 Budget on minimum subsistence, \$88.30 per month.  
 Comparative health and decency budget, \$104.18 per month.

"That is, the Manitoba standard allowance (\$74 per month) under the present schedule for city cases contemplated a standard of

living roughly about one-fifth above the poverty line budget (19.9%), but still about (16.2%) one-sixth short of the minimum subsistence budget calculated by the Dominion Department of Labour. It is far short (29%) of the comparative health and decency budget. With the earnings deductions made, it is still sustained at about one-eighth (11.8%) above the poverty line; about a fifth (21.8%) below the minimum subsistence line, but about a third (34%) short of the comparative health and decency budget. It should be recorded, however, that no less an authority than Paul Douglas states that "only the skilled classes of labour with steady employment secure the Health and Decency Budget; very many workmen in various classes, skilled, without steady employment, semi-skilled and unskilled in fairly regular employment live on the minimum subsistence level; and the unskilled labourer, except when he has a good job, and many other classes, when out of steady employment, live on the 'poverty level.'"

When compared with wages the standard allowance was regarded by the commissioner as "exceedingly generous." "The Manitoba standard," she states, "tested against actual wages and earnings, in the chief industries, and in agriculture in Manitoba showed that in comparison with the actual income of thousands of struggling wage-earners' families the allowance is exceedingly generous and that the greatest care must be given to any increase in the latter, lest the indirect additional burden thus placed on to the low-paid wage-earner as a taxpayer should depress further a minimum standard of life being laboriously and courageously maintained."

Commenting on the situation as thus indicated by the above two main comparisons, the commissioner points out that the relations thus revealed between the earnings of the low-paid wage-earner in Manitoba and actual living costs indicate the "utter necessity" of some such measure of social assistance as mothers' allowances in case of the incapacitation or death of the wage-earner; but that they also raise in very definite form the question of the application of a minimum living wage consistent with decent minimum standards of life. The comparison further suggests that consideration should be given to some form of compulsory, contributory insurance against dependency, resulting from the sickness, death or unemployment of the bread-winner.

The comparison of the standard allowance with workmen's compensation also revealed a favourable scale, according to the commissioner, who found that the standard mothers'

allowance is \$74 or \$69 as against \$61 payable to the same family under Workmen's Compensation, that workmen's compensation families have actually been subsidized by mothers' allowances, and that the whole present scale of mothers' allowance in Manitoba compares favourably with, and in general exceeds, the workmen's compensation rates, though the latter bear an ascertained relationship to actual earnings.

Having regard to the quite different nature and basis of the military pension (designed both as an allowance and pension) the Commissioner found that the regulations and schedules governing the Manitoba allowances bear reasonable comparison with the schedules and actual payments of military pensions in

Manitoba. Similarly, the standard allowance did not suffer in comparison with Winnipeg City Relief, the Commissioner stating that "the standard mothers' allowance tested was \$74 and \$69, as against \$61.25—the maximum amount payable under the Winnipeg Social Welfare Commission, while the greater adequacy of the grant, the comparative freedom in its disbursements, and the different basis of payment all were found to have a profoundly beneficial psychological effect on the mother. It should be remembered also, however, that the mothers' allowance families come on the allowance directly, generally without the long strain of penury and hardship which so many city relief families have borne for long years."

### Mothers' Allowances in Ontario

Dr. Gertrude Lawlor, chairman of the Toronto board of the Ontario Mothers' Allowances Commission, outlined the work of the Commission in the course of an address delivered at the annual meeting of the local board on March 4. She strongly recommended that the Act should be amended to provide for a mother of one child, and for a mother whose husband is confined to prison for a long period. Dr. Lawlor pointed out that at present mothers whose husbands are insane or totally and permanently incapacitated, or whose husbands have deserted them, and are presumed dead, are eligible for pensions.

Under the Act flat monthly payments are \$40 for a mother with two dependent children; \$45 for a mother with three children; \$50 with four; \$55 with five, and \$60 with six or more. Equitable reductions are made when beneficiaries own their own homes, have wage-earners or other assets not disqualifying. Allowances are paid to a widow, who has with her two or more of her own children

under 16 years of age, and who has not adequate means to provide for them. She may have \$500 in cash and an equity in her home of not more than \$4,000. She must have been a resident in Ontario at the time of the death of her husband and for the two years immediately prior to her application for the allowance, as well as at the time of the application. She must be a British subject by birth or by naturalization.

To the 1,074 mothers in Toronto receiving allowances under the Mother's Allowance Board, \$500,357 was paid during the year, and in the province payments reached \$2,190,407 for the year. The average number of children per family receiving pensions in Ontario is 2.67. Fifty per cent of the local payments are met by the city. Although the Toronto board handles one-quarter of the allowances paid in Ontario each year, the administration cost is less than \$900 per year.

At Hamilton there are 245 mothers receiving pensions.

### The Work of the Ontario Minimum Wage Board

Mr. H. G. Fester, a member of the Ontario Minimum Wage Board, gave an address at Hamilton on March 2, on "the question of a minimum wage." Outlining the progress of minimum wage legislation the commissioner stated that from Europe the movement spread to the United States, where for some years it has had a precarious existence owing to constitutional difficulties. Nevertheless the States of California, Massachusetts, Wisconsin and Minnesota have succeeded in surmounting this obstacle and very effective laws are being ad-

ministered in these States. In Canada, minimum wage legislation was first adopted by our Western Provinces, to be followed later by Ontario and Quebec. At present all Canadian provinces have such laws, excepting New Brunswick and Prince Edward Island. No board has so far been appointed under the Nova Scotia Act of 1920.

In Ontario, minimum wage legislation was passed early in the year 1920 and following closely upon the lines adopted in the United States, the law is confined to female labour.

In the fall of 1920, the Ontario Minimum Wage Board was appointed. The personnel of the Board consists of two employers' representatives, two employees' representatives, and an independent chairman who represents the general interests of the public at large. The Ontario Act is sufficiently wide in scope to admit of considerable flexibility in the administration of such regulations as the Board has seen fit to adopt. During the eight years of its existence, the Board has succeeded in covering about ninety per cent of all women who work for wages. The work of the Board consists of the issuing of orders and their enforcement; the collection of wage statistics from all firms employing female labour; the correction of any discrepancies which these returns reveal; inspecting payrolls; collecting arrears of wages where underpayments occur; and prosecuting such firms as deliberately flaunt the

orders of the Board, or otherwise seek to mislead the Board or its inspectors.

On the whole, Mr. Fester stated, the orders of the Board are well obeyed by employers. As a consequence, prosecutions are rare and collections of arrears very modest, considering that Ontario is a very highly industrialized province. The friendly attitude of employers and employees has made easy the task of enforcement. This has resulted in material economic advantages to the working women of the province. For employers, the law has tended to stabilize wages and to promote efficiency, all of which has been to the mutual advantage of industry as a whole.

Whatever the future may hold in store it is safe to assert that up to the present time, the Ontario Minimum Wage Board Act has been a complete success from every standpoint.

### MINIMUM WAGE LEGISLATION IN VARIOUS COUNTRIES

A STUDY of the minimum wage laws of various countries and of the results achieved by this legislation, is made in a bulletin (No. 467) recently published by the United States Department of Labour. The principal countries included in the investigation are Great Britain, the United States, Australia, New Zealand, Canada, South Africa, France, Germany, Austria, Hungary, Czechoslovakia, Poland, Italy, Norway, Switzerland, Argentina, Mexico, and Uruguay.

*Underlying Principles.*—Estimating the motives behind minimum wage laws it is stated that "the historic starting point of minimum wage legislation was the wish to abolish sweating. Its basic justification remains the guaranty of a minimum of existence to all workers. This goal is attainable, by its very definition, only through fixation of a living wage. Different underlying principles, however, have been followed in these countries in adopting the policy of fixing wages. The principle of ensuring payment of a living wage is stated to have been the starting point of the minimum wage laws of Australia, New Zealand, the United States (for females and minors), Canada, South Africa, Mexico, Argentina, and Hungary. The ability of industry to pay increased wages was the preponderant consideration in Austria and in less degree in Germany. In Great Britain, the agricultural wage board policy was the outcome of a wish to increase the efficiency of the workers. The latter motive operates also in Russia, where provision is made for an increase in wages, to correspond with an increase in production." The writer remarks that "bargaining and opportunism rule in Great Britain, Czechoslovakia and largely also in Germany. While in Great Britain it

has worked well, elsewhere it may be dangerous to proceed without principles."

*Administration.*—Wage Boards are the most usual machinery employed for administering the minimum wage policy. It is pointed out, however, that the direct fixation of wages is not practised in connection with employments where strong unions are able to take care of the problem of sweating. In such occupations the policy of industrial arbitration is preferred. New South Wales and several other Australian States, New Zealand, Italy, and Rumania, have chosen that method. The example of Australia and New Zealand shows that this way also is practicable, but the purpose of elimination of strikes has been better attained, it is thought, by the wages boards of Victoria, which settle all matters prior to a conflict.

*Results.*—Direct fixation of wages by the central state authorities is considered by the writer to be "less suitable for advanced industrial states than for a more primitive economy. No state which has reached high deferentiation in its industries applies it."

The conclusion of the report is that all reports from Australia, New Zealand, and England are positive on the point that sweating, among home workers particularly, has been eliminated. Reasonably good results have been obtained also in the home-work trades of Norway and Argentina. There was no "sweating," to a similar extent, in the United States and Canada, since home work as the sole means of livelihood is rare in these countries, but the difficult economic status of female workers in shops and stores who do not live with their families has been much relieved.

The effect of minimum wage legislation is found to have been in the direction of a general increase in wages. In this connection Mr. J. W. MacMillan, chairman of the Ontario Minimum Wage Board, is quoted as stating that in that province, as the result of minimum wage legislation, "the whole pillar of wage structure rises, although the top less than the bottom."

Discussing the question whether minimum wages tend to displace slow workers, and therefore lead to unemployment, the bulletin states that "reports from the United States and from Canada do not indicate that any great hardships have resulted for the women employed in stores and shops. The general situation of the labour market, the proportion of material resources to the human material, are so favourable to the workers that practically all are absorbed by the needs of industry."

The problem is different in Great Britain and in Australasia. Some home-work trades, the competitive strength of which was based on low wages, have been replaced by factories. Not all home workers have been absorbed in industry. No serious hardship, however, has resulted in Australasia, the general conditions of the labour market being favourable. Great Britain suffers from general unemployment, but most of the reports do not indicate a serious increase due to the shifting from home work to factory.

The evidence of the British "Cave" Committee and the reports of the Minimum Wage Board of British Columbia are quoted as showing the tendency of some employers to make up for the higher wages by better supervision and application of better technique. The point has its importance because of reducing the net cost of minimum wage to the industries.

Many states testify that the employers who pay fair rates of wages appreciate the elimination of the competition of "sweaters." It is recalled that the delegates of British employers at the recent Geneva conference favoured to a certain extent an international convention for minimum wage legislation. Great Britain has abolished sweating and wishes to exclude competition from nations which have neglected to do so. As to the effect of this legislation on industry it is stated that "the British and American experience furnishes no instance of any manufacturing industry or any mercantile trade being hurt in any perceptible way by minimum wage, as the increase in cost of production which these limited laws bring about is too small proportionately. The prosperity of the women-employing industries of Massa-

chusetts has grown since the introduction of minimum wage."

Australia applies far more general laws and is ready, on principle, to suppress an industry if it is unable to pay a living wage. "In practice accommodations have been found and the country continues to prosper." The same is true of New Zealand.

While home industries have been frequently put out of business through the application of minimum wage laws, that is the natural course of industrial progress.

*Canada.*—Chapter 7 of the Bulletin is devoted to the subject of "State interference with wages in Canada." Following the larger interpretation of minimum wages legislation as including provision for the settlement of industrial disputes, the writer discusses the Industrial Disputes Investigation Act and proceeds to enumerate the provisions of the various provincial acts which provide for the establishment of minimum wages for female employees, and of the Male Minimum Wage Act of British Columbia, the latter province being described as "the pioneer province of comprehensive minimum wage legislation."

The Bulletin quotes the reports of Boards in Canada as showing that minimum wage policy has not resulted in any deleterious loss of employment, and that employers have been led to adopt better methods of work.

"Summing up the Canadian minimum wage legislation it appears that such legislation has eliminated sweating of female employees, helped skilled employees further to increase their wages, has not led to any serious unemployment, and has been a factor for industrial peace and for greater efficiency in industry. There are no apparent efforts from responsible quarters opposing its maintenance or the extension of the legislation from women's to men's trades. The latter development began in British Columbia and is on the point of being extended by efforts of the Federal Parliament.\* Canada follows the same general trend which has manifested itself in her sister dominions, Australia and New Zealand, toward minimum wages for all workers."

\* This statement refers to the action taken by the House of Commons in 1926 in referring to the Standing Committee on International and Industrial Relations the subject of a resolution proposed by Mr. J. S. Woodsworth favouring the establishment of a legal minimum wage sufficient to provide for a reasonable standard of living. The committee recommended that a conference of provincial and Dominion representatives intimately in touch with labour conditions throughout Canada be held in the near future to consult as to the best means to be employed of giving effect to the labour provisions of the Treaties of Peace. No further action has yet been taken in this connection.

## BILL TO LEGALIZE LABOUR AGREEMENTS IN THE UNITED STATES

REFERENCE was made in the July, 1928, issue of the *LABOUR GAZETTE* (p. 704) to a draft Bill which has been prepared by the American Bar Association, to create a federal industrial council of the United States with power to legalize voluntary arbitration agreements between organizations of employers and workers and to make awards under such agreements binding. Public hearings were held in New York last year on this draft legislation in the course of which evidence was given by representatives of employers' organizations and of the American Federation of Labour. The hearings showed that there was general acquiescence in the principle that where groups of men voluntarily enter into contracts providing for arbitration of industrial disputes, there is no reason in public policy why these agreements should not be made enforceable at law and binding on the parties.

The Committee on Commerce of the American Bar Association, reporting to the Annual Meeting of the Association in Seattle in July last, observed that "no men knew better than lawyers that honourable men need no law or courts to enforce their contracts; yet whenever the stress of economic conditions puts one of the parties in the position of facing great loss, it is the law which stands in the way of the breach and holds the party to his contract. Millions of dollars of property pass on the exchanges on slips of paper, mere memoranda of obligations, and rarely do these transactions reach the courts; but the knowledge that they are legally binding furnishes the foundation for such transactions."

It is now announced that the American Bar Association will sponsor the introduction of legislation in the United States Congress at the regular session opening in December next on the lines of the above-mentioned draft bill. In a report urging the necessity for this measure, the Committee on Commerce of the Association points out that there is no statute providing for legal agreements between employers and workers such as the provision in the United States Arbitration Act which permits of binding agreements between business organizations. Declaring that the Bar Association was neither for nor against the closed shop, the report stated that it was important, however, to overcome suspicions concerning the fear that the committee would encourage the closed shop by making it clear that "the bill's entire purpose is to leave parties free to enter any form of trade or industrial organization they desire, letting each industry decide for itself what it deems desirable in that in-

dustry, applying only the well-established principles of the common law that so long as the contract is not against public policy nor the result of fraud or duress, it shall be valid in law.

"To the criticism that this may favour the company union, all that the committee can say is that the industry must decide for itself whether the company union is satisfactory or not," the report continues. "To the criticism that this favours organized labour, the committee answers that it neither favours nor disfavors organized labour. Each industry must decide for itself.

"But where, as in such cases as have been pointed out, in great industries like the clothing industry or others, there is necessity for continuous impartial arbitrational machinery to keep industry going, where dislocation or interruption of the industry affects the whole commercial structure of the nation, the committee is of the opinion that these methods of self-government should receive the sanction of law and that the present obstruction, namely, the rule that such contracts are revocable at the pleasure of the parties, should be removed from the law as an anachronism. To say that men shall solemnly enter into engagements intended to give stability to industry and be free to repudiate those engagements seems to us to be an intolerable condition in the law and one that should be remedied at the earliest opportunity."

In the opinion of the committee, if the various conflicting industrial interests could be brought together into a federal industrial council much good would be accomplished; from time to time, as a result of counsel and deliberation, recommendations could be made to Congress and to the public generally, "and out of such a council will come a real American labour policy." The committee was of the opinion that the council should have no power to make decisions, but should act only as an advisory body. In conclusion, the committee reported that the idea of establishing such a council "met with most enthusiastic approval from men who have given a large part of their lives to such work."

An employing company in the province of Quebec was found guilty, on March 12, of having violated the provisions of the Lord's Day Act, by causing their employees to work in a mill on Sunday, February 3. A fine of \$50 was imposed.

## EFFECT OF LABOUR LEGISLATION ON THE EMPLOYMENT OPPORTUNITIES OF WOMEN

REFERENCE was made in the *LABOUR GAZETTE*, December, 1928, page 1320, to the *Bulletin* (No. 68) recently published by the Women's Bureau of the United States Department of Labour on the "Effects of Labour Legislation on the Employment Opportunities for Women." This bulletin contains the findings of the inquiry undertaken by the federal department in 1926 as the result of a conflict of opinion which had developed at the Women's Industrial conference held at Washington in 1926, between those who favoured protective legislation, and on the other side the advocates of "equal rights", who denied the need for such special laws (*LABOUR GAZETTE*, April, 1926, page 308; June, 1926, page 531). The ground of the opposition of the latter group was that legislation applicable to women only handicapped women in securing and retaining employment.

It is pointed out that labour legislation is divided broadly into two parts—(1) laws definitely prohibiting employment of women: (2) laws regulating their employment. The laws which regulate their employment may become prohibitory in their actual effects. The total number of women in the United States whose working hours are regulated by labour legislation amounts to about two and three-millions, only one-third of the eight and one-half million gainfully employed. Business and professional women, those in supervisory positions, and in general in the higher ranks of opportunity, are not generally covered by labour laws. These laws have been directed towards the control of conditions in industrial, mercantile, and factory occupations.

The results of the investigation are summarized in the report as follows:—

In general, the regulatory hour laws as applied to women engaged in manufacturing processes of industry do not handicap the women, but serve to regulate employment and to establish the accepted standards of modern efficient industrial management. When applied to specific occupations, not entirely akin to the industrial work for which the laws were drawn, this regulatory legislation in a few instances has been a handicap to women.

Laws prohibiting night work for women in industry are chiefly a reflection of the usual attitude of employers regarding such practice, but occasionally they result in a limitation of women's employment. When applied indiscriminately to special occupations that are professional or semi-professional in type, night-work prohibition or regulation has resulted in restrictions of women's employment.

In almost every kind of employment the real forces that influence women's opportunity are far removed from legislative restriction of their hours or conditions of work. In manufacturing, the type of product, the division and simplification of manufacturing processes, the development of machinery and mechanical aids to production, the labour supply and its costs, and the general psychology of the times, all have played important parts in determining the position of women. These factors have varied with the different industries and localities, but everywhere they have been far more significant in their influence than has any law regulating women's hours of work.

In other occupations other influences have been dominant in determining the extent of women's employment. In stores a more liberal attitude and successful experimentation with women on new jobs; in restaurants the development of public opinion as to the type of service most suitable for women; in pharmacy a gradually increasing confidence in women's ability on the part of the public; in the metal trades a breaking down of the prejudices against women's employment on the part of the employers and of male employees, and demonstration of women's ability among certain lines—these are the significant forces that have influenced and will continue to determine women's place among wage earners. Such forces have not been deflected by the enforcement of legislative standards and they will play the dominant part in assuring to women an equal chance in those occupations for which their abilities and aptitudes fit them.

The financial year 1927 was the first year in which the effects of the Act of June 25, 1926, amending the German Federal Miners' Insurance Act, became fully apparent. The fourth report on the working of the Federal Miners' Insurance scheme shows that expenditure on benefits in all branches of insurance, and, consequently, the cost of insurance in respect of the individual member, have increased considerably. The average membership of Sickness Funds under the miners' insurance scheme for the year 1927 was 789,960, representing 750,528 manual workers and 39,432 non-manual workers. The membership of the Pensions Fund at December 31, 1927, was 734,543 in the Manual Workers' and 51,363 in the Non-manual Workers' Pension Fund. The number covered by invalidity insurance was 733,541 on December 31, 1927.

## PROBLEMS OF INDUSTRY AND TRADE IN GREAT BRITAIN

### Final Report of Committee of Inquiry

THE Committee on Industry and Trade, appointed by the Labour Government in Great Britain in July, 1924, recently published their final report. The Committee is composed of eighteen members, including leading industrialists, detached economists and well-known representatives of labour. (Previous reports were outlined in the *LABOUR GAZETTE*, June 1926, page 582; April, 1927, page 412). The Committee was instructed to inquire into the conditions and prospects of British industry and commerce with special reference to export trade and to make recommendations in regard thereto. The sections of the final report which concern labour are mostly contained in the section entitled "Conditions of Employment in Relation to Competitive Power."

*Wages.*—The Committee state that the central wages problem of the present time is "to combine the maintenance of a reasonable standard of weekly earnings with a maximum of output obtainable at a given wages cost," and give their opinion that on the whole the existing voluntary methods of settlement of wages questions are vastly preferable to any uniform system imposed by law. In particular, they found no substantial support for any proposal for compulsory arbitration. The Report expresses hopes that the leaders on both sides in the course of negotiations will succeed in satisfactorily solving the difficulties regarding the relations between wages in different industries, the relation between wages in "sheltered" and "exposed" trades, and the relation between wages in skilled and unskilled occupations.

Regarding methods of remuneration, the Committee associate the solution of the central wages problem with the principle of payment by results, and express the hope that no effort will be spared to overcome difficulties which stand in the way. They record with satisfaction the amount of success which has been achieved by profit-sharing and co-partnership, but express the opinion that such schemes will in the future, as in the past, be most successful in "sheltered" industries or public utility undertakings. They state that they see grave difficulty in attempting to fit the system of family allowances into the present framework of collective bargaining, but make the suggestion that, if a general desire for some such provision should become manifest it might be met by a scheme of compulsory insurance. While expressing approval of the use of the cost-of-living index figure for determining wages in times of fluctuating prices,

they look forward to the time when stability will render its use unnecessary.

*Collective Bargaining.*—Regarding the machinery of collective bargaining, the Committee consider the essentials to be that the voluntary negotiating machinery shall cover the whole field of industry, shall work smoothly and effectively, and shall make all possible provision for avoiding stoppages and ending such stoppages as occur. As to the limits of State action, the Committee record that their evidence was practically unanimously opposed to the prohibition by the State of stoppages, and express agreement with that view. Further, the Committee do not advise in this country similar legislation to the Canadian Industrial Disputes Investigation Act. Finally, the Committee state that their evidence showed that in most industries the relations between employers and employed are close and friendly, and that there was striking absence of any general demand for a change in the existing machinery for industrial negotiation.

*Hours of Labour.*—The Committee record their opinion that most employers regard the post-war reductions as a *fait accompli*, and that any general proposal to lengthen the normal working day would meet with the most strenuous resistance from the trade unions. The report emphasizes, however, the vital importance of elasticity.

On the subject of the international regulation of hours, the Committee examine the position in the light of the references to maximum hours and the 48-hour week in the Peace Treaties, and discuss the failure of the Washington Convention to meet with general acceptance. Having reviewed the evidence, they express the opinion that the weight of argument is in favour of adhesion to a revised Convention, but against unconditional ratification of the present instrument. The Committee feel that it is impossible to recommend either the unconditional ratification of the Washington Convention or the abandonment of any attempt to reach a more satisfactory international agreement. Even those members who are most sceptical of satisfactory revision do not dissent from the view that the attempt ought to be made. The report then suggests amendments required in a revised Convention; and also suggest, failing revision, the possibility of an agreement to exchange and publish full information as to actual hours.

*Joint Industrial Councils.*—The Committee consider it desirable that some form of Works

Committee should be established as a normal part of the administration of great industrial undertakings, and make a number of suggestions as to the essentials for the successful conduct of such Committees. They do not favour the proposal that the establishment of Works Committee should be made universal by law.

The Committee examine the proposal for the establishment of a National Industrial Council and express doubt whether there is sufficient ground for the immediate creation of a Council with a definite organization and regular meetings. They do not think however, that the same doubts apply to the convening at regular intervals of a national conference representing organizations of employers and employed. Such a conference, they think, would accomplish most of the valuable results that could fairly be expected from a National Industrial Council without incurring the risk of a failure.

*Unemployment Insurance.*—Regarding insurance against unemployment, the Committee point out the necessity for avoiding adverse effects on industrial mobility, and discuss the provisions of the latest Unemployment Insurance Act from this angle. They also discuss the effects of the unemployment insurance scheme on the will to work, and express the view that the mass of unemployment in this country is not the result of measures taken for mitigating the hardships of unemployment. They express the opinion that the unemployment insurance scheme represents one of the greatest advances in social amelioration during the past generation, and that it has amply justified its establishment.

The Committee then discuss the provision of work for the unemployed, and state that the only real cure for unemployment is the expansion of production and trade.

*Standard of Living.*—The Committee discuss the relations between the standard of living and wages, and express the hope that carefully conducted researches into the movement of the standard will be greatly extended and periodically repeated. Meantime, they say, the limited results already obtained confirm the conclusion to be drawn from the statistics of the movements of real wages that while there has been no marked upward or downward change in the general level of the standard of living since the immediate pre-war period, there has been a very appreciable improvement in the standard of life of the less highly paid sections of workers.

*Minority Report.*—The report is signed by fifteen out of the seventeen members. Seven members, however, including five of those who have also signed the Report, have signed a memorandum appended to it in which they express the view that the report is inadequate to the serious situation of the country, and indicate lines on which they think further action should be taken. In particular, they suggest the establishment of two new bodies, a National Economic Committee, whose function should be to know the facts and to draw up plans for industrial reorganization, and a National Employment and Development Board, whose function would be to see that these plans were actually carried through to the public interest.

## FURTHER CONFERENCE IN GREAT BRITAIN ON PROPOSED NATIONAL INDUSTRIAL COUNCIL

REFERENCE was made in the last issue (page 265) to the refusal of the two main employers organizations in Great Britain, namely the National Confederation of Employers' Associations and the Federation of British Industries, to accept the recent proposals of the conference on Industrial Reorganization and Industrial Relations (composed of a group of employers associated with Lord Melchett, formerly Sir Alfred Mond, and of the General Council of the Trade Union Congress) for the establishment of a joint National Industrial Council. The constitution and functions of the proposed council were outlined in the *LABOUR GAZETTE*, October, 1928, page 1037; August, 1928, page 846. The employers' organizations, while declining to accept the proposals of the confer-

ence as presented for their consideration, emphasized the importance of doing everything in their power to further the promotion of industrial peace, and with this object in view, they extended an invitation to the General Council to hold a new joint meeting to be attended by representatives of the two employers' organizations and of the General Council of the Trade Union Congress.

The General Council, in a reply sent on February 28, accepted the proposal to hold a further conference. The letter said: "Your decision that you cannot accept the interim report of the Conference on Industrial Reorganization and Industrial Relations is greatly regretted, but the Council are desirous of hearing your explanation of the difficulties in this connection and of obstacles which stand in

the way of consultation through a National Industrial Council. The Council would then consider whether, in the light of the proceedings at this conference, further steps could usefully be taken."

### Recommendations on Unemployment

A further meeting of the Conference on Industrial Reorganization and Industrial Relations was held on March 12, at which Lord Melchett proposed, and Mr. Ben Tillett (chairman of the Trades Union Congress General Council) seconded, the adoption of an interim joint report on unemployment. The report was adopted, with one dissentient. The following is a summary of the principal recommendations of the Report:—

An inquiry into the consolidation of existing pensions and insurance funds should be set up by the Government.

Largely increased funds should be provided for assisting emigration; and a scheme of settlement, aiming at a 20-year program, set up.

Unemployment in the mining industry should be considered as a special case, and relief measures and schemes continued at an accelerated rate.

Trade facilities should be re-instated under more liberal conditions. Export credits should also be extended "in reasonable cases."

Augmented pensions should be made available to workers of 65 and over who cease work.

The government should create and maintain a development fund capable of financing important national schemes. Further extension of constructional schemes should be undertaken, and existing schemes hastened in their application.

Rationalization should be pressed forward, with safeguards for the consultation of trade unions, and for the making of provision for displaced workers.

Serious consideration should be given to the question of raising the school-leaving age.

The Government should undertake immediately an inquiry into currency and banking policy. The Treasury and the Bank of England should make every effort to have the recommendations of the Genoa Conference put into operation.

### Origin of Proposal for National Council

The present proposal for a National Industrial Council arose out of an interim joint report approved by the Conference on Indus-

trial Reorganization and Industrial Relations on July 4, 1928. This report dealt with the gold reserve and its relation to industry with trade union recognition, victimization, and the prevention of disputes, and with rationalization. It also proposed the formation of a National Industrial Council, composed of the members of the General Council of the Trades Union Congress, as representing the workers, and of an equal number of representatives of the employers, nominated by the Federation of British Industries and by the National Confederation of Employers' Associations; and a Standing Committee of the National Industrial Council, nominated as to half of its members by the General Council representatives of the Council and half by the Confederation representatives, to act as the elective and executive authority for the provision of Joint Conciliation Boards for industrial disputes.

The Report further indicated that the necessary steps would be taken by the employers' and General Council sections of the Joint Conference respectively to bring the recommendations of the Conference to the consideration of the appropriate employers' organizations and before the Trades Union Congress.

The General Council of the Trades Union Congress brought proposals before the annual meeting of the Congress in September and a motion for the acceptance of the Report was carried by a majority of 3,075,000 against 566,000 (LABOUR GAZETTE, October, 1928, page 1098).

The announcement that a workmen's compensation law was adopted by the legislature of the State of North Carolina on March 6, has been received with interest as an indication that the "new industrial south" is falling into line with the rest of the United States in regard to progressive labour legislation. The enactment of a similar law is stated to be a leading issue in Arkansas and Florida. The other states without such provision are South Carolina and Mississippi. The new law of North Carolina, which goes into effect on July 1, provides compensation based on 60 per cent of wages with a weekly maximum of \$18 a waiting period of seven days, and a limit of \$5,500 for disability and \$6,000 in case of death. Administration is by a commission of three full-time members appointed by the Governor. Special provision is made for accident prevention.

## JOINT INDUSTRIAL CONTROL IN THE PRINTING INDUSTRY IN THE UNITED STATES

**I**NDUSTRIAL relations in the book and job printing industry in the United States are surveyed in a bulletin (No. 481), entitled "Joint Industrial Control in the Book and Job Printing Industry," recently published by the Bureau of Labour Statistics, United States Department of Labour. Describing the results of organization for joint control the writer finds that no broad generalizations are possible as to the value of different sorts of industrial relations organizations under all conditions, and the bulletin only summarizes the practical results of the typical organizations studied in their several fields of activity.

The chief fields in which industrial relations organizations work, and in which they exert varying degrees of control, are summarized as follows: (1) Establishing standards of wages, hours, and working conditions; (2) protection of individual workers; (3) promotion of co-operation for efficiency and production; (4) promotion of craftmanships by apprenticeship training; (5) education of both groups of the industry in policies and programs.

The bulletin summarizes the advantages and weaknesses of joint control in industry, as reflected in the various types of organization. As regards joint councils operating in open shop plants, it is claimed that these are more favourable to co-operation since they are established with that objective rather than of conflict, and accordingly emphasize the common interest of the two groups, although differences of interest are recognized and dealt with through the established machinery. Joint councils also considered favourable to satisfactory relationships within such plants because of their emphasis on shop committees to handle grievances and eliminate hindrances to good will and co-operation. They interest the employees by means of group insurance and the payment to skilled employees of wages equivalent to union rates. The chief source of strength of these plans is declared to be the personal confidence of the employees in the integrity and good faith of the leading employers, whether or not the plan specifically guarantees to employees freedom from discrimination or provides for the arbitration of differences.

Dealing with the elements of weakness in joint control schemes operating in open-shop plants, the writer says: "The chief weakness of these open-shop organizations is the narrow territory covered as the result of lack of interest of employing printers. The organizations are therefore unable to effect standards widely and follow the union standards for the

most skilled workers, while the open-shop scales, whether they are considered minimum scales or 'normal scales,' are not objectively defined and cannot be universally enforced even within the organization. In addition to the lack of continuous interest and support from the employers, there has been evident a striking lack of employee interest. Employees in these organizations with no outside support have shown no such vital, aggressive, and independent interest as would have forced more active interest on the part of the employers. The organizations have therefore not grown and have not called forth enough aggressive leadership among the employees to make fullest possible use of the organization for the interest of the workers. These organizations are at a disadvantage in having to compete for employee interest with the trade-unions which are the traditional form of organization in the industry. They attempt to substitute for the unions which developed from a momentum by the employees a new type of organization based upon a conscious theory and receiving its impetus from the employers. The employers have not been sufficiently interested to overcome this inherent disadvantage and establish a broad organization which could then appeal more successfully for employee interest. Since these organizations depend for their success fundamentally upon the active interest and consent of the employers they have developed no power to enforce widely their standards and policies."

The writer then proceeds to summarize the advantages and disadvantages of joint control in union shops, as follows:—

"Because both groups are strongly organized and possessed of considerable economic power, their relationship is characterized by a real vitality. The agreed upon standards of wages, hours, and conditions are to a large degree enforced in the local market, thus establishing in large sections of the industry an equality of labour costs as a basis for competition. The joint machinery gives to the individual worker a substantial measure of protection against discrimination or other grievances from failure of a firm to observe the agreed-upon conditions. A relationship which is on the whole friendly between the unions and the league makes possible constructive co-operation when a common interest is seen. Particularly in the field of apprenticeship, because of the recognition of common interest in craftmanship it has been possible to agree upon standards of training,

establish apprentice schools under joint control and support, and generally enforce training requirements which must in time materially affect the level of craftsmanship in the industry.

"On the other hand, there are several disadvantages in a relationship based upon strong organization of both groups. Since both the unions and the employing printers are organized separately, chiefly to protect their own interest in opposition to the other group, a fundamental antagonism exists which needs to be overcome before co-operation is possible. Moreover, this type of organization does not emphasize good shop relationships and does not therefore directly try to educate employers in methods of industrial relations within their plants, although the fact of union organization does not appear a barrier to satisfactory relations between the men and the management.

"The standardization by union rules is something of a hindrance to efficiency

in that the plant is restricted in its freedom to organize its production on the basis of experiment and its own experience. It is possible for very strong unions, moreover, to make unreasonable use of their power and enforce rules which are to the disadvantage of the industry and therefore ultimately of the employees themselves. Another serious weakness is in the local character of the standards enforced, although the widening competition in the industry makes differences between localities in hours, complement of men on machines, and wages a disadvantage to the employers in those cities where the unions are very strong. Finally the fact that the unions are organized on the craft basis results in a lack of unity of action between the various unions, to the detriment of their interests, and although the strength of the chief unions affects the wage scales of the others who are less strong, this power is not used to help enforce standards for groups which find organization difficult to maintain."

### CANADIAN GENERAL ELECTRIC COMPANY'S EMPLOYEES' INVESTMENT PLAN

**T**HE Canadian General Electric Company Limited gave effect on April 1, 1929, to "Employees' Savings and Investment Plan No. 3." Fifty-four per cent of the employees of the company who were eligible to subscribe have already done so, their subscriptions averaging 3.6 shares each. The company report that the employees have found the plan to be of great benefit to them, and that it has also been instrumental in building up good will towards the company. The following information is taken from a circular issued by the company to its employees:

#### Employees' Savings and Investment Plan No. 3

In response to many requests by employees that the Savings and Investment Plan be continued, and to further encourage the habit of saving, as well as affording the employees an additional opportunity of investing their savings in the Company in which they are employed, it has been decided to offer Employees' Savings and Investment Plan No. 3, which will become effective April 1, 1929.

The purchase of shares under this plan is entirely voluntary and inability of an employee to subscribe will not in any way affect his status or position with the Company.

*Description of Stock.*—Cumulative Preference Stock of the Company. Par value \$50 per share.

*Dividends.*—7 per cent per annum, cumulative; paid on the first day of January, April, July and October.

*Extra Payment.*—(a) So long as the employee remains in the service of the Company and continues to hold shares acquired under this plan, in addition to the 7 per cent dividends, the Company will pay in each year an amount equal to  $\frac{1}{2}$  of 1 per cent of the par value of the said shares for every 1 per cent of the net earnings of the Company in such year over and above 8 per cent on the sum of its average Common Stock outstanding and the average balance in surplus account during such year, after all deductions and charges including the 7 per cent preference dividend, such extra payment to be made as soon as possible after the close of the year. (b) The Company will make an extra payment of 1 per cent on the par value of the shares acquired under this plan for any year in which said earnings are not of sufficient amount to provide, under the preceding clause, for an extra payment of 1 per cent or over. (c) The Company reserves the right to modify or cancel these provisions for extra payment at any time upon one year's written notice mailed to the address of the employee as shown by the records of the Trustees hereinafter referred to.

#### Terms and Conditions

*Employees Eligible to Purchase Stock.*—Any employee on the payroll of the Company who has been in the continuous service of the Company since September 30, 1928, or who has been in the continuous service of a subsidiary Company and the Company successively since said date, or who has been in the con-

tinuous service of the General Electric Company and/or its subsidiary companies and the Company successively since said date.

*Number of Shares an Employee May Purchase.*—One to Ten shares.

*Purchase Price.*—Fifty dollars per share.

*Terms of Payment.*—(a) Four dollars per share per month, or one dollar per share per week if paid weekly or bi-weekly, to be withheld from the employees' salaries or wages.

(b) If so desired any employee may make payment in cash in full for shares applied for, in which case remittance (payable at par in Toronto) must accompany the purchase agreement. Balances outstanding, if purchase made under (a), may be paid at any time.

(c) Dividends on the stock will be applied toward payment until such time as the shares are fully paid for.

(d) In addition, as early as possible in the year 1930, the extra payment, as hereinbefore provided, will be credited to the employee's account for payment on the stock, or paid direct to the employee if stock is fully paid for.

(e) Interest at the rate of 5 per cent per annum will be charged on unpaid balances.

*Rights of an Employee Before Stock Fully Paid For.*—(a) If Employment Terminated: The total amount paid in by the employee by means of deductions from pay will be refunded, plus interest at 5 per cent per annum. No allowance will be made for accrued dividends nor for the credit of extra payment, and no interest will be charged on unpaid balances.

(b) In Case of Death: The total amount paid in by employee by means of deductions from pay, and accrued dividends, less interest at 5 per cent per annum on unpaid balances, will be paid to the estate of the deceased employee.

(c) Withdrawal: Any employee may withdraw from the purchase agreement at any time, and in case of withdrawal refund will be made on same basis as if employment terminated.

*Rights of an Employee When Stock Fully Paid For.*—(a) Agreement Receipt: When the stock has been fully paid for it will be identified in the records of the Trustees as being held for the benefit of the employee, but will be carried in the names of the Trustees on the Share Register of the Company. As an evidence of the employee's interest in such shares the employee will be given an Agreement Receipt embodying the provisions of this plan.

(b) Turning Back to Trustees: Any employee may at any time turn the shares back to the Trustees at par plus unpaid accrued dividends at the rate of 7 per cent per annum, the Trustees to make payment for such shares within sixty days after the receipt of notice of desire to turn back the shares accompanied by the Agreement Receipt covering such shares.

(c) Transfer of Stock to Employee: At any time after the employee has held his interest

in the shares for a period of five years, he shall have the right to have the shares placed in his name in the Share Register of the Company and receive regular Certificates therefor, providing the then current market price be par or less. Should the then current market price be above par he shall have the right to have the shares placed in his name upon making payment of the difference between par and the market price. Upon the issuance of the Certificates the extra payment as hereinbefore provided shall cease.

*Trustees Option to Purchase:* The employee shall give to the Trustees or their nominee the right or option to purchase the shares at any time at par plus unpaid accrued dividends at the rate of 7 per cent per annum, and the employee shall agree that if for any reason he leaves the employ of the Company he will surrender the Agreement Receipt for par plus unpaid accrued dividends at the rate of 7 per cent per annum, or in case of his death such Agreement Receipt shall be surrendered by his personal representatives.

*Non-Transferable:* No assignment, transfer, pledge or sale of applications, payments accumulated, agreement receipts, or rights under this plan is permitted.

*Administration:* The Assistant General Manager, Treasurer and Secretary of the Company, or such other parties as may be named by the Company, will act as Trustees under this plan. The Trustees will purchase on behalf of the subscribing employees the number of shares required, and will receive the amounts to be applied against the purchase price of the stock.

*Method of Subscribing:* Any employee eligible to purchase stock under this plan, who desires to do so, will insert in the purchase agreement form the number of shares to be purchased, sign the form and file it with the Secretary at Toronto on or before March 27, 1929.

*Recording of Stock:* Stock purchased under this plan will be recorded as of April 1, 1929, and dividends will accrue from that date.

The annual report of the Canadian Pacific Railway Company for the year ended December 31, 1928, includes a statement regarding the pension department (an outline of the company's pension plan was given in the LABOUR GAZETTE for April, 1928, page 381). At the end of the year there were 1,612 pensioners on the roll. Of this number 870 were over 70 years of age; 708 between 60 and 70 years of age; and 34 were under 60 years of age. Pension allowances during the year amounted to \$860,673. The balance in cash and investments in the fund at the end of the year was \$1,454,458.

## Employees' Pensions on Canadian National Railways

Questions concerning the standing, in regard to pensions, of employees on railways taken over by the Canadian National Railways were answered by the Hon. Charles A. Dunning, Minister of Railways, in the House of Commons on March 18. An outline of the bills to establish pension system on the Canadian National Railways was given in the last issue of the *LABOUR GAZETTE*, Page 264. The questions were as follows:—

1. Will all employees at present engaged on railways being taken over by the Canadian National Railways be retained in as good positions as at present, and advanced in the service in accordance with their ability?

2. What will be done in so far as participating in the new Canadian National Railways' pension scheme for those employees working on railways now or hereafter acquired by the Canadian National Railways?

3. What maximum age limit will permit an employee, medically fit, to enter the service and participate in pension benefits?

4. How many years' service are required and at what age may an employee under the new Canadian National Railways' pension scheme apply for a retiring allowance?

5. What percentage of his pay will be receive if retired, owing to injury, or incapacity, before the expiration of the ordinary years of service required for pension?

Mr. Dunning's replies to these questions were as follows:—

1. Full consideration will be given to each individual and if retained in the service each will be given credit for seniority earned on the line on which employed.

2. Any employees of railways acquired by the Canadian National will participate in the proposed pension plan in the same way as employees now in the service of the railway.

3. Fifty years of age is the maximum.

4. The age at which an employee becomes eligible for pension is 65, and 15 years' continuous service are required to qualify.

5. All pension allowances are calculated at the rate of one per cent for each year of service on the highest average rate of wages or pay during any ten consecutive years of service.

Pensions to disabled or incapacitated employees are granted as follows:

To an employee of the age of 60 and under 65 years with 20 or more years of service to his credit retired by reason of permanent physical or mental disability upon the certificate of the company's chief medical officer that for such reason the employee is unfitted to follow his usual or any other suitable employment in the company's service.

To an employee who, after ten or more years of service to his credit, becomes incapable of continuing his service by reason of injuries received whilst actually at work in the employment of the company, but only for so long as his incapacity shall continue.

## Old Age Pension Administration in Northern Ireland.

The statutory conditions for the receipt of non-contributory old age pensions in Northern Ireland, the rates of pension payable and the causes which disqualify a person for receiving a pension are identical with those in force in Great Britain (*LABOUR GAZETTE*, December, 1928, page 1319) but certain changes in the method of administering the service have recently been introduced.

Since April 2, 1928, the administration of contributory and non-contributory old age pensions (including Blind Persons' Pensions) has been vested solely in the Ministry of Labour. As regards non-contributory old age pensions the machinery set up under the Act of 1927 is similar to that for dealing with claims for unemployment benefit, and may be summarized as follows:—

1. The claims are investigated at the homes of the claimants by investigating officers attached to the Employment Exchanges and reports of the investigations are submitted,

with suitable recommendations to the headquarters of the ministry.

2. The initial decisions on claims or questions are given by pension officers appointed by the Minister of Labour.

3. If the Pension officer decides to allow a pension at the full rate of 10 shillings per week, payment begins immediately. Where, however, the decision of the pension officer is to disallow a pension or to allow a pension at a lower rate than 10 shillings per week, the claimant is notified of the pension officer's decision and the grounds for it, and is advised of his right of appeal.

4. A claimant who is dissatisfied with the pension officer's decision has the right of appeal to the Local Pension Court for the district. This court consists of a chairman (who is generally a person with legal qualifications) appointed by the minister, and two or more members chosen from a panel established for the district by the Minister of Labour.

5. When an appeal is lodged against the decision of the pension officer, the claimant concerned is notified of the date, time and place of the sitting of the local pension court, and is afforded an opportunity of appearing before the court and of being represented by any other person (including counsel or a solicitor) that he may select.

6. The local pension court considers the appeal and makes a recommendation to the pension officer, who must give effect to the recommendation of the Court, unless he disagrees with it.

7. Where the pension officer disagrees with the recommendation of the local pension court, or where the claimant (by leave of the court) appeals against the court's recommendation, the matter is referred to the umpire, who is an independent person appointed by the Governor of Northern Ireland. The decision of the umpire is final and conclusive, and not subject to appeal to any court.

Payment of non-contributory old age pensions is made through the Post Office as heretofore.

## NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

### Fishermen's Course—Halifax

Nineteen Nova Scotia fishermen have taken advantage of the six-week course given by the Biological Board of Canada, which includes new methods of freezing fish in brine, instruction in preparation of dried fish, in navigation and care of motors.

### Technical-Commerce School—North Toronto

Erection of a million dollar technical-commercial school in North Toronto is favoured by the Advisory Vocational Committee and a recommendation to this effect is to be sent to the local Board of Education.

The proposed school would cost \$1,098,000 and would be of the same size and type as the recently completed Western Technical-Commercial School.

### Training School for Hotel-men

Creation of a training school for hotel-men was advocated by the Province of Quebec Hotel Association at a recent meeting in Montreal. The desirability of raising the standard of qualifications for those selecting hotel work as their vocation was stressed, and after the question was debated by those attending the meeting it was proposed that the Provincial Government be approached in connection with the projected establishment of a training school.

### Proposed Classes in Plumbing at Technical Schools

At a recent convention of the Association of Plumbing and Drain Inspectors of Ontario, held in Brantford, it was recommended that plumbing and drainage classes be established in all technical schools in the province, and

the Association intends to take the matter up with the Department of Education and the plumbing inspectors of municipalities which have such schools.

### Technical School for Brandon

The negotiations with a view to the establishment of a technical school at Brandon, under way for some time, have been successful, and it is understood that the new institution will be opened during the fall of the present year. A special committee from the school board is to look over the Ramsay Building on Pacific Avenue, with a view to converting it into the technical school.

### First Aid Work at Institute of Technology and Art—Calgary

The value of practical training in first aid work, especially to men engaged in the mechanical trades, was emphasized by Professor Corbett, director of the Department of Extension at the University of Alberta and honorary secretary of the St. John Ambulance Association, when he recently addressed a special meeting of students at the Institute of Technology and Art. Professor Corbett referred to the importance of a working knowledge of first-aid in meeting emergencies which might arise in the course of every day life. To a person working with machinery an acquaintance with the principles of first aid is of great importance, he said.

At the conclusion of the address, J. H. Ross, vice-principal of the Institute, announced that arrangements were being made to hold first aid classes at the school for the benefit of the students. At present the classes will only be open to students attending the institute, but it is thought that later it may be possible to offer the service to outsiders.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### "Safest Mill in Canada" Competition

The *Pulp and Paper Magazine*, March 14, 1929, announced the results of the "Safest Mill in Canada" competition that was conducted among pulp and paper mills throughout Canada from July 1, to December 31, 1928. (The results of previous competitions were given in the *LABOUR GAZETTE*, May, 1928, page 532; March, 1927, page 289, etc.). The results for 1928, are stated as follows:—

"The mills have been divided into two groups according to size, and again we have mills from the Atlantic to the Pacific striving to obtain perfect records, not merely, of course, for the honour of winning the trophy but particularly for the more worthy object of preventing injury and death. The winner in Class "A" is the Sturgeon Falls plant of the Abitibi Power and Paper Company, with an accident index of .221. This is the time lost in days per 1,000 hours exposure to hazard, and is arrived at by dividing the total time lost in days, which is 83, by the total pay-roll hours, which are 374,562. This figure is slightly higher than the record of .133 that was made in 1927 by the Laurentide Division of the Canada Power and Paper Company. This mill is a close second in the 1928 contest with a rating of .239; and the Hawkesbury plant of the Canadian International Paper Company is third with .248. The Sturgeon Falls plant was third in 1927. In the 1926 contest, Spruce Falls Power and Paper Company was first, Laurentide Division second, the Lincoln Pulp and Paper Company third, and the Hawkesbury mill fourth. This would seem to indicate that accident prevention is not a fad with our paper mills.

"In the "B" division, we again have three mills with perfect records. Bennett Limited of Chambly Canton, Que.; Garden City Paper Company of Merritton, Ont.; and Don Valley Paper Company of Toronto. The Don Valley mill won the contest in 1926 with a clear record, and last year the Lincoln mill of Lincoln Pulp and Paper Company, Garden City Paper Company, and Mansons Limited were the three no-accident mills for the six months' period. It will be seen from the tables that the pay-rolls hours of the winner are nearly 50 per cent greater than the mill given second position, and has more than twice the degree of hazard on this basis than the mill in the third position. This, however, does not detract from the satisfaction that should be felt by all of these plants.

Taken as a whole, it would appear that average rating for the non-fatal accidents is

better than it has been in previous years. The fatal accidents, unfortunately, have been more numerous in 1928, being nine in Class A and one in Class B, whereas in 1927 there were 3 in Class A and 1 in Class B and in 1926 ten in Class A and two in Class B."

### Safety Work of Dominion Iron and Steel Company

A recent issue of the *Nova Scotia Industrial Safety News*, published by the Nova Scotia Accident Prevention Association outlines the safety activities at the plant of the Dominion Iron and Steel Company, Sydney. The safety record indicates that this plant, with a working force of approximately 3,000 men, reduced the number of lost time accidents by 80 per cent during the past five years. In the year 1924 the plant had 351 lost time accidents, and in the intervening years the number of accidents has been gradually reduced, the company closing the year 1928 with only 125 lost time accidents, the lowest in its record.

A noteworthy feature of the record is the fact that while the number of accidents has been materially reduced the time worked has increased from 731,250 man-days worked in 1924 to 928,044 in the year 1928. Using 10,000 man-days worked as a basis of comparison the number of accidents has been reduced from 4.8 in 1924 to 1.3 in 1928. The accompanying table gives a summary of the accident experience of the plant for the years 1924 to 1928 inclusive:—

ACCIDENT REDUCTION RECORD AT SYDNEY STEEL PLANT, 1924-1928

Year	Number of accidents	Accidents per 10,000 man-days worked
1924	351	4.8
1925	222	3.1
1926	244	3.2
1927	141	1.7
1928	125	1.3

The number of dressings made at the plant emergency hospital during 1928 totalled 16,848, as compared with 9,121 in 1927, and in addition to the 125 lost time accidents during the year, 3,939 minor accidents involving no loss of time were treated at the emergency hospital. There were three employees fatally injured during the year. The report states that the importance of first aid training and its value in preventing minor accidents developing into serious cases is fully recognized in the safety activities of the company, very successful classes in the instructional course of the St.

John Ambulance Association being conducted by the company doctors. In addition, the mass meetings conducted by the Superintendent and the Safety Engineer, and the bulletin board reviews have been important factors in the educational campaign conducted throughout the plant. It is emphasized that an outstanding and gratifying feature of the accident prevention work is the interest manifested by the workmen and all the superintendents and foremen in the different departments.

**Safety Competitions in Nova Scotia Mines**

At a meeting held at Glace Bay, officials from all the mines of the British Empire Steel Corporation in Cape Breton and Pictou assembled to receive the results of the accident prevention competitions held at the various collieries of the corporation. General superintendent J. J. McDougall presided, while Martin L. Fraser, field secretary of the Accident Prevention Association of Nova Scotia, presented the trophies to the winners.

No. 22 colliery was awarded the President McNaught cup for having the lowest accident rate during the year 1928.

Four other silver cups were awarded to the winners of the different groups of collieries, the awards being based on the frequency rate of accidents. The group winners were: Group one, Caledonia colliery, No. 4;

Group two, Reserve collieries Nos. 5 and 10;

Group three, Acadia mine, No. 3;

Group four, Waterford mine, No. 14.

**Canadian Success in Railway Safety Contest**

In a statement issued recently Mr. P. E. Cowley, president of the New York Central Railway, announced that the 1929 safety campaign on all the various lines of the system was underway. The president also intimated that in order to create greater interest in accident prevention he would personally award a trophy to the railroad in each of two groups making the lowest casualty ratio for the entire year. In group "B" is the Michigan Central Railroad, the Canadian division of which won many safety first laurels. The car department of this division was particularly successful in accident prevention during 1928 having only two reportable accidents. President Cowley said:—"The information supplied by our safety bureaus still shows a wide variance in accident ratios between roads, divisions, departments, shops, yards, terminals, freight stations, etc., thus indicating there are weak spots in our safety program that should be corrected. We will look for substantial im-

provements in this regard. Our duty is plain. These accidents can and should be prevented. To succeed in accident prevention work we must recognize our personal responsibility. We must do our full part in removing the cause in so far as it is possible. To accomplish this, we must be active and have an intimate knowledge of accidents, their causes and remedies, remembering that good safety records can be achieved only by conscientious efforts on the part of everyone."

**Safety Trophy of Canadian Cement Company**

The Canada Cement Company plant at Exshaw, Alberta, recently won the safety trophy offered annually by the Portland Cement Association for perfect score in safety performance which means no accidents throughout the year.

The trophy is open to competition among practically all Portland cement manufacturers on the continent, and the victory of the Exshaw plant in 1928 gives the Canada Cement company a remarkable record, since five of its plants have now won this trophy in the past four years.

Between 1920 and 1927 the Canada Cement company reduced accidents by 76 per cent and increased man-hour efficiency by 86 per cent.

An address on "Getting results in accident prevention," by Mr. A. C. Tagge, president of the Canada Cement Company, was reprinted in the LABOUR GAZETTE, July, 1928, page 724.

**Reducing Accidents in Metal Mines**

An article contributed to the *Engineering and Mining Journal*, March 16, 1929, by J. T. Ryan, of the Mine Safety Appliance Company, (U.S.A.), called attention to the common mistake of placing the responsibility for safety on a few special men, rather than considering it as a major part of mining operations in which responsibility would fall on all operating officials. Analyzing the causes of the 3,135 underground metal-mine fatalities that occurred in the United States in the ten-year period 1917 to 1926, Mr. Ryan found that 81.6 per cent fall in five of the fifteen major classifications of causes as follows:—

Cause—	Fatalities.
1. Falls of rock or ore from roof or wall.....	1,301
2. Explosives.....	432
3. Haulage.....	314
4. Falling down chute, winze, raise, or stope.....	284
5. Mine fires.....	229

The fall of rock or ore which took such a large toll of lives is the principal cause of fatalities and non-fatal accidents, and is considered the most difficult to eliminate or to reduce materially. However, a great deal, he considers, can be accomplished in this direction by giving more attention to the timbering, by closer and more effective supervision, and lastly, and of equal if not greater importance, by a well-directed campaign of safety education for the face workers.

As to the second classification, explosives, "little can be said in the way of excusing this tremendous loss of lives, the second highest in the industry. These accidents can and should be reduced by improved blasting practices and more alert supervision in the handling and use of explosives. Consideration should also be given to the adoption of electric firing where it is not used."

Improvement in the haulage accident classification can be brought about by improved tracks, haulage equipment, and safety education.

*Mine Fires.*—The last classification, that of mine fires, is at present given scant attention, except by a few companies which have experienced disasters or expensive fires. "Few realize, Mr. Ryan states," that fires occupy fifth place in causes of fatalities in metal mines. We look upon fires as a greater hazard of coal mining because the combustible material is already there to fire. But as a matter of fact more fires occur in its metal mines than in the coal mines. Fortunately few of them cause loss of life; yet there are enough to class this as the fifth greatest cause of fatalities, with the total loss far greater than in the coal mines, which employ over four times the number of men. That this hazard is not generally appreciated is attributable largely to the fact that we are prone to look upon metal mines as being non-combustible. They should be, but they are man-made combustible by material taken in and left there, with not enough precaution taken to prevent ignition. The combustible material taken into and left in a mine, which is the source of many mine fires, is hay, straw, manure, explosive boxes, explosive wrappings, sawdust, partly used carbide, and trash in general."

The principal causes of metal-mine fires are open lights, electricity, smoking, and blasting. Open lights have been by far the most serious fire hazard. At present, several large metal-mining companies are trying electric cap lamps to eliminate this hazard and improve the safety and efficiency of their workers.

### Country Health Units for Canada

The March issue of the *Canadian Public Health Journal*, (Toronto) contains a series of contributions to the discussion of full time country health units with a view to their establishment in Canada. The Dominion Council of Health, at a meeting held at Ottawa in December, resolved to request the Dominion government to further the establishment of such units by voting an annual grant of money for the purpose and this resolution was endorsed later by the Canadian Public Health Association. The *Journal* contains an introductory note by the Hon. Dr. Montgomery, Minister of Health and Public Welfare of Manitoba, and among the contributors are Dr. McCullough, of the Department of Health, Ontario; Dr. A. Lessard, director of the Quebec Provincial Bureau of Health; Dr. H. E. Young, provincial health officer of British Columbia; Dr. F. C. Middleton, acting deputy minister, Department of Public Health, Saskatchewan, and others.

### Safety First Program in Alberta

Mr. J. A. Kinney, a member of the Workmen's Compensation Board of Ontario, addressed the Trades and Labour Council of Lethbridge recently in regard to the proposed adoption by the Council of a Safety-First program, consisting of classes for the members. Mr. Kinney stated that encouragement was shown by the Board to these classes, generally formed under the auspices of the St. John Ambulance Association, and that several such classes had been formed throughout the province and in the mining camps. The meeting received this suggestion very favourably, and as a consequence a class may be formed amongst the delegates of the Lethbridge Trades Council.

Speaking more particularly to workmen in the building industry, Mr. Kinney referred to the cause of many accidents through protruding nails, and mentioned that the Board had endeavoured to eliminate as much as possible this particular form of accident by having notices displayed on different buildings warning the workmen against this particular cause. Mr. Kinney also explained the urgent need for reporting each accident, no matter how slight, to the foreman or someone responsible and also getting medical attention for any injury.

One delegate stated that workmen are penalized by some employers when they report accidents, receiving demerit marks for alleged "carelessness," and that consequently many minor injuries go unreported through the fear of discharge.

## NOTES ON LABOUR UNION ACTIVITIES

### New Brunswick Federation of Labour

THE sixteenth annual convention of the New Brunswick Federation of Labour was held in Fredericton on March 5-7, 1929, with about fifty delegates in attendance. Mr. J. E. Tighe, president of the Federation, presided, and in his opening address complimented the government for increasing the grant for free school books and for the promise of a commission to enquire into the advisability of providing an Old Age Pension law for the Province. The president drew the attention of the delegates to the fact that the coming convention of the Trades and Labour Congress of Canada would be held in the city of Saint John, and urged that everything possible be done to have a large representation of locals at this convention.

Secretary-treasurer Melvin presented his report which showed a balance on hand at January 1, 1928, of \$256.83; receipts for the year, \$415.84; expenditures, \$308; leaving a balance at the close of the year of \$364.67. Secretary Melvin also read the report of the executive board, which dealt among other things, with the following subjects: appointment of a Fair Wage Officer for the Maritime Provinces; free school books; road construction pay; the Factories Act; the Technical Education Act. It was reported that the executive had submitted to the convention of the provincial command of the British Service League resolutions on old age pensions, mother's allowance and minimum wages for women, and that these resolutions were adopted by that body. The executive recommended that the convention continue to press for the adoption of Old Age Pensions, Mothers' Allowance and Minimum Wage Acts.

The Hon. J. B. M. Baxter, Premier of the Province, in an address to the convention spoke of the good financial position of New Brunswick, but pointed out that in order to maintain this position it was necessary for the government to be careful in undertaking new obligations. However, a commission of inquiry on Old Age Pensions would be appointed.

Mr. John A. Sinclair, chairman of the Workmen's Compensation Board, and Mr. Thomas Martin, Fair Wage Officer and eastern representative of the Department of Labour, also addressed the convention.

Among the resolutions adopted were the following:

Amendments to the Workmen's Compensation Act, so that a larger number of cases be included under the "permanent total disability" clause;

Return to the public of surplus earnings of privately owned and operated public utilities;

Insertion in any contract or agreement granting concession to industries of a clause providing for the payment of wages in keeping with Canadian standards of living;

Assistance from the government for the entertainment of the delegates to the Trades and Labour Congress of Canada convention to be held at Saint John;

Enforcement of the same regulations as apply to theatres, in the exhibition of moving pictures in churches, schools, etc., and that the installation and operation be in charge of licensed operators;

Abolition of the amusement tax on all theatre tickets of fifty cents and under;

Appointment of an industrial safety inspector;

An Old Age Pension Act for the Province, supplementing the federal Act, and if a commission is appointed that one member be a man approved by the Federation;

Enactment of legislation providing for the payment of a minimum wage of fifty cents per hour in all government departments, and that all government contracts contain a clause providing for the payment of this minimum to labourers;

That the male heads of families engaging in fishing operations be granted a fishing license for a small fee, while free permits be issued to adolescence members of such families.

The following officers were elected: President, E. R. Steeves, Moncton; First vice-president, S. Burns, Fredericton Jct.; Second vice-president, Robert H. Carlin, Saint John; Third vice-president, John H. Wallace, Reynolds; Secretary-treasurer, George R. Melvin, Saint John.

On the third day of the convention, adjournment was made in order that a delegation, composed of Messrs Simon Burns, G. A. E. Lister, J. A. Whitebone, J. S. MacKinnon, E. R. Steeves, together with President Tighe and secretary-treasurer Melvin, might wait on the government to present the legislative program of the Federation.

The requests presented were as follows:

Ratification of such of the decisions of the International Labour Body as have been considered to come within provincial jurisdiction;

Enactment of a provincial Old Age Pension Act;

Establishment of Mothers' Allowances and Minimum Wages for women and young persons;

Public ownership of public utilities;

Extension of the policy of providing free school books until all school books in the public schools are free;

Labour representation on public boards and commissions;

That the provincial government urge upon the Dominion government the need of renewing the Technical Education Act;

Amendments to the new Mining Act so as to provide for better regulation and inspection with reference to working conditions;

Establishment of a maximum nine-hour day in the lumber industry;

First Aid instruction in schools;

Amendment to the Provincial Elections Act so as to provide for advance polls in provincial elections for railway employees and others whose employment requires their absence from home on polling day;

Amendments to the Factories Act;

Amendments to the Workmen's Compensation Act;

That where industries are encouraged by the government grants or concessions the government should see that such industries pay wages assuring Canadian living standards;

Enactment of legislation providing the inclusion of a clause in all contracts let by the Government to provide for a minimum wage of fifty cents for all labourers and that the same minimum be paid by all departments of the government;

That surplus earnings of privately owned and operated public utilities be returned to the public;

That all moving pictures be governed by the regulations applying to theatres;

Elimination of the Amusement Tax from all tickets of a value of fifty cents and under;

Appointment of an inspector of scaffolding and staging on construction work;

Financial assistance to entertain the delegates to the Trades and Labour Congress of Canada convention;

Cancelling of all private fishing leases, and asking that a fishing license system similar to that used for hunting be inaugurated.

### **Nova Scotia Executive of the Trades and Labour Congress of Canada**

The legislative demands of the Nova Scotia executive of the Trades and Labour Congress of Canada were presented to the Hon. E. N. Rhodes, Premier of the Province, and members of his Cabinet on March 15, by a delegation composed of Messrs. P. J. Healey, M. D. Coolen, John A. McDonald and W. M. Halliday, members of the executive committee, together with representatives of the various local unions. The demands were as follows:—

The enactment of a provincial Act giving effect to the Federal Old Age Pension Act;

Amendments to the Workmen's Compensation Act;

Appointment of a Board under the provisions of the Minimum Wage Act;

A fair wage clause to be inserted in all government contracts;

Legislation providing for an eight-hour day;

Free school books;

Appointment of a stationary boiler inspector;

Sale of liquor under government control.

### **Labour Legislative Program in Manitoba**

Prior to the recent session of the Manitoba legislature representatives of the Provincial Executive of the Trades and Labour Congress of Canada and of the Winnipeg Trades and Labour Council laid before the Provincial Government proposals for labour legislation which included the following suggested measures:—

Raising the status of the Bureau of Labour to that of separate department;

Amendment to the Child Welfare Act to make it apply to one child, to children whose fathers are confined to public institutions or

are physically unable to support the family, and to children who have been deserted for two years; a substantial increase in the appropriation to admit of more liberal treatment for those coming under the act; prohibition of the employment of women for two months before and two months after child birth, maintenance to be paid out of the fund provided by the government; and entering into arrangements of a reciprocal nature with the governments of other provinces so far as extension of the benefits of the legislation is concerned;

Amendment of the Minimum Wage Act to make it apply to all boys under 18 years of age;

A liberal appropriation for the efficient carrying-out of the spirit of the Building Trades Protection Act;

An Act for compulsory public liability insurance for automobile owners, the government to collect and hold the policy at time of issuing the license;

More adequate protection of railway crossings;

A liberal appropriation to the Bureau of Labour for general safety-first inspection work;

A mining Act with adequate safety measures;

Amendments to the Act regarding the examination and licensing of electrical contractors and journeymen electricians.

### Amalgamated Building Workers of Canada

Following an invitation extended by the Canadian Federation of Bricklayers, Masons and Plasterers, and the Montreal Labour Council of the All-Canadian Congress of Labour, and endorsed by the Executive Board of the All-Canadian Congress of Labour, delegates representing various national and independent Canadian unions of building construction workers assembled at 1006 Beaver Hall Hill, Montreal, on March 17, 1929, and formed a new organization known as the Amalgamated Building Workers of Canada.

The memorandum issued prior to the inaugural conference set forth the purpose of the meeting as follows:—

With a view to establishing harmony among the various national organizations of workers in the building construction industry and to consolidating their position, it is agreed that a conference of all the national unions in the building construction industry will be held at 1006 Beaver Hall Hill, Montreal, on the seventeenth of March, 1929; the representatives of all the unions concerned to have authority to signify the adherence of their respective unions to a provisional organization of the nature of an amalgamated building workers' union of Canada, the branches of which shall have, wherever practicable, full provincial autonomy.

The unions represented by delegates at the conference were; the Amalgamated Carpenters of Canada; the Canadian Federation of Bricklayers, Masons and Plasterers; the Canadian Electrical Trades Union; the National Union of Painters, Decorators, and Paperhangers of Canada; National Lathers' Union; General Workers' Union of Canada and the Canadian Union of Cement Finishers.

Prior to the submission of the draft constitution, the following motion relative to the objects of the new body was adopted:—

Whereas, we, the representatives of the national and local unions of building construction workers affiliated with or chartered by the All-Canadian Congress of Labour, meeting in the city of Montreal, Quebec, on the 17th of March, 1929, are convinced that:—

(a) the Canadian workers in the building construction industry require a new organization through which they may collectively promote their general welfare and raise their economic and social standards;

(b) the rapid gathering of wealth and the centering of the management of the industry into fewer and fewer hands make craft unions unable to cope with the ever growing power of the employers, because craft unions permit one set of workers to be pitted against another set of workers in the same industry, thereby facilitating their own defeat;

(c) these conditions must be changed, the interests of the working class upheld, and all possible relief for the workers secured;

(d) this can be done only by an organization aiming steadily at the complete prevention of exploitation and formed in such a way that all its members in the industry may make common cause whenever any dispute as to conditions of work or wages occurs in any section of the industry; be it therefore

Resolved, that a national industrial union be and is here established under the following constitution.
