a matter of admission in that case, is here the chief bone of contention. In that case the question was whether the Court should imply a covenant in order to give mutuality to an otherwise one-sided bargain; here the question is whether we should imply terms which will destroy mutuality and give the bargain one-sidedness.

In *Caven v. Canadian Pacific Railway* (1924), 3 W.W.R. 33, 725, 21, Alta., L.R. 256, a railway conductor sued in Alberta for wrongful dismissal. He claimed that an agreement which had been made by a Brotherhood of railway conductors, of which he was a member in good standing, formed part of the terms of his hiring contract, and his claim on this point was admitted by the defendant. One of the terms of that agreement provided for an investigation into any charge of misconduct against conductors. Charges having been laid for some misconduct an investigation was begun in which he took part, but finding the decision adverse he abandoned further proceedings thereunder and resorted to the Courts. The trial judge found in his favour, but this judgment was reversed by the Appellate Division and the reversal was sustained by the Judicial Committee of the Privy Council, as reported in 1925, 3 W.W.R., p. 32, 95, L.J.P.C. 23. The only point of that decision which is really helpful to us is that it concedes that the terms of such an agreement may be embodied into the individual hiring *by admission*. What the courts would have done in the absence of that admission we have no hint or means of ascertaining.

In the United States there are a few decisions almost directly in point. It was held in *West v. Baltimore & C. Rly.* by the Supreme Court of West Virginia, in 1927, 137 S.E.R. 654, that "the rule seems to be that individual members of a labour union are not bound by contracts between the union and employers, unless such agreements are ratified by the members of the unions as individuals, and that in the absence of evidence of such ratification by a member, no rights accrue to him which he can enforce against the employer." This proposition is supported by several American authorities of weight, including 24 Cyc. p. 824. There it is laid down that "A labour union ordinarily has no authority to make a contract with employers of its members in respect to the performance of work and the payment of it. In order to bind the individual members they must expressly assent to the terms of the contract. Such assent will not be implied from the fact that they have knowledge, at the time, of the contract."

The latter portion of this quotation is, I think, qualified by the case of *Hudson v. Cin-*

cinnati &c. Rly., a decision of the Supreme Court of Kentucky, in 1913, 154 S.W.R., 47, where it is stated that if the employee "knew and assented to the provisions of the said agreement, or if they were so generally known among enginemen as to justify the presumption that he did know of them, and made no express contract in conflict with any of its provisions, the agreement in question became part of his contract—as if fully incorporated therein."

This suggests that the rules and regulations might constitute a custom or usage; but "a custom cannot be read into a written contract, unless, to use the language of Lord Denham, C. J., in *Reg. v. Stoke-upon-Trent*, ([1844] 5 Q.B. 303, 13, L.J.M.C. 41). It is "so universal that no workman could be supposed to have entered into the service without looking to it as part of the contract."; per Lord Alverstone, C. J., in *Devonald v. Rosser & Sons*, at p. 741.

Seniority rights are not a custom or usage in the machinist trade in general. In the particular field of railway shops in Canada even if because of their generality or universality they could fairly be said to constitute a custom, the plaintiff, I have found, did not know of them, and so there can be no justification for presuming or supposing that he entered into his hiring having them in mind. What is true of the Rules relating to Seniority Rights, is equally true of all other Rules in those wage agreements.

Several other defences are raised but these may be disposed of in short compass. It is said that the wage agreements are unenforce-

able for illegality—the Trade Unions which negotiated them having never been registered under the Trade Unions Act, R.S.C. (1927) c. 202. The want of registration is established. It is also claimed that the plaintiff must fail in this action because of maintenance. Beyond doubt this action has been promoted, managed and financed by the One Big Union, in the name of the plaintiff, who is a mere figurehead in it, but who, if he succeeds, is to retain any surplus over and above that required to reimburse the O.B.U. for all advances to him both in respect to wages and costs. It is also urged that the contract of hiring, assuming that plaintiff's contention as to its duration is correct, is for more than a year and should be in writing to be enforceable—see *Master & Servants Act*, R.S.M., 1913, ch. 124, s. 2. These and other defences are mentioned only to be dismissed from consideration because of the disposition which I make of the case on other grounds already indicated.

The plaintiff has submitted full evidence as to the loss he has suffered through several months of idleness consequent upon his suspension, as well as for his loss of the benefits he expected to accrue to him from continued employment in defendant's service. I refrain from making any present or conditional assessment of damages.

The plaintiff's action is dismissed. The defendant not insisting there will be no order as to costs.

*Young versus Canadian Northern Railway Company* (Manitoba) 1929. *Western Weekly Reports*, Vol. 2, Part 9, page 385.

### Legal Standing of Quebec Workmen's Compensation Commission

Mr. Justice Surveyer gave judgment early in June in the Superior Court at Montreal on three petitions, asking that awards of the recently-established Workmen's Compensation Commission be homologated or confirmed so that they might be given thereby the force of a court judgment and rendered executory. His ruling was that the awards of the commission might be challenged in the Court on the ground of jurisdiction, but not on the ground of fact. Each of the three petitions was met by a "contestation" on the part of the insurance company concerned, the argument being advanced that the award could not be homologated by the courts without their first examining the circumstances of each case. The attorney general of the province then intervened in the proceedings, taking the stand that the Commission alone was master of the facts of each individual case, but that

the Superior Court was entitled to examine the record and determine whether or not the Commission had exceeded its jurisdiction.

The position assumed by the attorney general on behalf of the Commission was then challenged by the original petitioner on the ground that the law specifically took from the courts the right to act in any capacity in connection with such cases and deprived the parties of the right of going into the courts by way of writs of *certiorari*. The contentions of the attorney general were upheld by the judgment of Mr. Justice Surveyer.

In addition to his judgment, His Lordship quoted a letter from Sir François Lemieux, Chief Justice of the Province of Quebec, addressed to Mr. Charles Lanctot, K.C., deputy attorney general, in which the attitude of the courts in general to the new Workmen's

Compensation Act is set forth. The letter of the Chief Justice reads as follows:

"Our custom is to second in all possible measure the action of the Executive and the Commissions appointed by the Government. But we cannot without any proof in the record homologate, that is to say confirm, and approve *in toto* the decisions of the Workmen's Compensation Commission, that is to say, to declare that an accident has taken place and that this accident has caused the victim a reduction of his earning capacity of so much per cent.

"We believe, however, that we are meeting your views and the exigencies of the law in homologating the award and the indemnity in holding that the award had been rendered according to law, that is to say, within the limits of the jurisdiction of the commission.

"My colleague, Judge Gibson, is disposed to follow the same plan."

The principal case before the courts was that of Mrs. Tilly Berman Fogel, who asked that an award of \$6,000 of the Workmen's Compensation Commission for the death of her husband, be homologated. When the petition was presented the insurance company concerned contested the proceedings on the ground that the Workmen's Compensation Commission had exceeded its jurisdiction in making an award to the woman, in view of the fact that her husband was formerly a commercial traveller. In this connection, it was argued that a commercial traveller does not fall under any of the categories to which the new Workmen's Compensation Act applies, and that in consequence the Commission had exceeded its jurisdiction in allowing the claim.

To bring to a head the relation of the courts generally to the Workmen's Compensation Commission the latter body intervened through the Attorney General's department, taking the stand that while the courts were not entitled to look into the circumstances surrounding each case, they were empowered to consider the question as to whether the Commission had acted within the limits of its power as defined by the law. In this connection the intervention stated

"According to the law, the Superior Court on demand of homologation of an award of the Commission, must homologate, unless it finds an absence of jurisdiction on the part of the Commission, the merit of any other question as to law or fact being left to the final decision without appeal, of the Commission."

This position of the Commission was at once attacked on behalf of Mrs. Fogel on the ground that the section of the law which gave the Commission final adjudication without appeal of all claims, applied also to the

question of jurisdiction. To interpret the law otherwise, it was submitted, would be equivalent to allowing the right of review, by writ of "certiorari," a remedy which is expressly denied by the act.

### Text of Judgment

Mr. Justice Surveyer's judgment was as follows:

Considering that the insurer contests claimant's petition for homologation of the award given in her favour by the Commission and claims that the Commission in making said award has exceeded its jurisdiction.

"(a) because claimant's late husband was a travelling salesman and not a workman employee or apprentice engaged in one of the enterprises subjected to the provisions of the Act.

"(b) because the accident which caused the death of the claimant's husband happened in the Province of Ontario and the victims of accidents happening outside of this province, or their representatives, are only entitled to compensation under the Act when the law of the place where the accident occurred grants them no indemnity, which has not been and cannot be established.

"(c) because the accident whereby claimant's husband met his death did not happen when the deceased was under the control of his employer nor did it occur by reason of, or in the course of his work;

"Considering that assuming the Commission to be a regularly constituted tribunal, legally substituted to the Superior, district or county courts, a question which has not been raised in the present case, its jurisdiction is limited to cases falling within the four corners of the Act and must be interpreted restrictively;

"Considering that under Section 28 of the Act the court may upon summary petition of the Commission or of any interested party homologate the Commission's award;

"Considering that the word 'may' is to be construed as permissive not as imperative;

"Considering that the said award is to be assimilated to an arbitrator's award which may be only declared inadmissible on the ground of irregularity or of some other cause of nullity; that such is the interpretation accepted by the Commission itself in its intervention;

"Considering that the insurer's contestation raises questions of jurisdiction of the Commission and cannot be dismissed *in toto*;

"Considering that the claimant's inscription in law is unfounded.

"Doth dismiss claimant's inscription in law with costs."

The two other cases in which identical judgments were rendered by His Lordship, were those of Adolph Lewis and Frank Goldstein against the Style Brand Clothing Co., Ltd. In both cases the claimants were commercial travellers who were injured in an automobile accident.

### \$10,000 Damages in Trade Restraint Case

Wholesale dealers in builders' supplies in Montreal who had formed an illegal combination in restraint of trade in gypsum products were ordered on May 31 to pay \$10,000 damages to a former Montreal builders' supplies wholesaler who alleged that he had been forced out of business by the combination.

An association of six wholesalers or dealers in builders' supplies existed in Montreal in January, 1925. These six dealers constituted a Dealers' Association which had entered into an arrangement with the Ontario Gypsum Company, Limited, and three companies located in New Brunswick and Nova Scotia, which were also manufacturers of gypsum products. According to the terms arranged, the above four manufacturers, forming a Manufacturers' Association, had agreed to sell their products in Montreal exclusively to the members of the Dealers' Association. The dealers in turn had agreed to buy such gypsum products exclusively from the members of the Manufacturers' Association. The association of dealers was dissolved on January 13, 1925, and immediately reorganized with one of the former members excluded. Hyde and Sons, the excluded firm, were thus no longer able to purchase gypsum products at the same prices as the remaining members of the association, and later this firm was obliged to discontinue its business.

A complaint and information was laid on February 26, 1925, by George Hyde, charging the Stinson-Reeb Builders' Supply Company, Limited, the W. and F. P. Currie Company, Limited, and the Ontario Gypsum Company, Limited, with conspiring to restrain trade in gypsum products in violation of section 498 of the Criminal Code. The accused were convicted and each sentenced to pay a fine of \$2,000, by Mr. Justice Wilson in the Court of King's Bench at Montreal on January 29, 1926. Two appeals were entered against this judgment. On March 14, 1928, in the Court of King's Bench, Appeal Side, the former sentence was affirmed and the appeals dismissed, Mr. Justice Howard dissenting. The judgment of the Court, delivered by Mr. Justice Rivard, was review in the *LABOUR GAZETTE*, April, 1928, page 435. An application for leave to appeal to the Supreme Court of Can-

Subsequently, on June 15, Mr. Justice Survever, gave a formal decision to the effect that the Superior Court cannot be called upon automatically to homologate awards of the Workmen's Compensation Board, but that it has powers of judicial discretion in regard thereto.

ada on the question of whether section 498 of the Criminal Code was within the legislative jurisdiction of the Dominion Parliament was dismissed by Mr. Justice Mignault on April 20, 1928 (Dominion Law Reports, 1928, vol. 3, p. 700). The Stinson-Reeb Builders' Supply Company, Limited, W. and F. P. Currie and Company, Limited, and the Ontario Gypsum Company, Limited, then appealed to the Supreme Court of Canada from the judgment of March 14, 1928, of the Court of King's Bench, Appeal Side, which had affirmed their conviction under section 498 of the Criminal Code. This appeal was dismissed by the Supreme Court on February 5, 1929 (Supreme Court of Canada Reports, May, 1929, p. 276).

The present action for damages was instituted by the sole owner of Hyde and Sons against the companies which were members of the second Dealers' Association. The action was taken on the grounds that through an illegal conspiracy of the defendants he had been prevented from obtaining supplies of building materials and that as a result he had been obliged to discontinue his business.

The defendants entered a general denial and a plea that the action had not been commenced within a period of two years from the time the alleged injury had been caused, and consequently was not valid. It was also alleged that the plaintiff's claims were vitiated by the fact that he himself had been a member of the combine previous to January 13, 1925.

In awarding damages to the plaintiff, Mr. Justice Boyer pointed out that damages were sought, not because the plaintiff had been excluded from the original association of dealers, but because of the injury to his business caused by members of the second combine, of which he was not a member. On this point Mr. Justice Boyer said:—

"It is clear that the plaintiff's claim cannot be vitiated because of his previous conduct for though the two crimes may not be on a par, to deny his claim because at one time he himself was a member of an illegal combine, would be the same as to hold that a man who had once committed a theft could have no redress if subsequently he was himself the

victim of a theft. Such would be an untenable proposition of law."

The plaintiff had estimated the amount of his loss on the basis of his former annual net revenue multiplied by the remaining number of years which he might normally be expected to live. This estimate was rejected by the judge as excessive in consideration of the contingencies of business, and an amount of \$10,000 was fixed as reasonable damages to be paid to the plaintiff by the defendant companies.

### Department Store Not Subject to Early Closing Bylaw

A city by-law in London, in Ontario, compels all retail shops or stores to observe Wednesday afternoon as a half holiday. Schulte United, Limited, a department store dealing in general merchandise, was charged in the Police Court with operating a retail shoe shop on Wednesday afternoon contrary to the by-law. Magistrate Scandrett, in his decision, said:—

"I have considered the argument that insofar as the defendant company sells shoes, it is a retail shoe shop, but the sections of the Factories and Shops Act provide that where the prohibited trade is the principal trade carried on in any shop that shop must close during the hours designated by law and must refrain from carrying on a retail selling in any branch of the business. I do not think it can be contended that the shoe trade is the principal business of the defendant company, and I do not think in the ordinary and liberal acceptance of the term the defendant company is a retail shoe shop within the meaning of the by-law. The defendant company operates a general or variety store, and is not, in my opinion, operating a shoe store, merely because of the fact that it sells shoes in connection with its general business."

Mr. Scandrett pointed out "if evidence had been presented to show a complete line of shoes at all seasons had been carried it might have been difficult in finding the company was not a retail shoe shop within the by-law."

### Limiting Apprentices held Unconstitutional in Washington State

The State of Washington amended the "Barber Law" in 1927 to provide, among other things, "that not more than one student or apprentice shall be employed in any one barber shop"; and further that "no barber school or college shall be issued a permit by the director of licenses unless such school or

college requires. . . as a prerequisite to graduation a course of instruction of not less than one thousand hours to be completed within six months of not more than eight hours in any working day."

The law placed the enforcement of the statute in the hands of the State director of licenses, a person not necessarily qualified in the science of barbering, hygiene, bacteriology or the sundry other mysteries prescribed by the statute as requisite to the learning and education of a barber. Challenging the validity of this legislation, a master barber and owner of a school for barbers and several barber shops, brought this action to enjoin the enforcement of the statute on the ground that it contravened constitutional rights guaranteed by the federal constitution in that the provision limiting apprentices was an arbitrary interference with contract, and the provision as to the school was so arbitrary as to be without due process of law.

The United States District Court held that the practice of barbering was so intimately related to the public health that its regulation in the interest of health and sanitation was reasonable, but that there was no evidence of any other basis for its regulation within the police power, and that the limitation of apprentices and the regulation for barbers' schools here imposed, to be enforced by the director of licenses, were not pertinent to the protection of the public health.

Concerning the limitation of apprentices, the court said: "If the limiting of the number of apprentices to one to each barber shop, whether the number of barbers in a particular shop be one, or a dozen, or more, has even a remote bearing upon public health, it is so remote we are unable to see it. We think it an unreasonable and arbitrary interference with the liberty of the citizen.

"Section 14 sets forth an imposing array of subjects to be covered by a course of instruction in barber schools and colleges. While section 14 on its face appears to make elaborate provision to guard the health of patrons of barber shops, it is difficult to avoid the impression that its practical effect is to limit the number of barber schools or colleges, and the number of students, graduates, or apprentices. What, if any, reason could exist why the course is 'to be completed in six months', is not apparent. Nor is it apparent how the public health is to be protected by the age restrictions. The entire section, we think, has no real or substantial relation to the public health, is unreasonable

and unnecessary, and an invasion of rights secured by the Constitution."

The Court granted an injunction restraining the director of licenses from interfering with

the number of apprentices in plaintiff's employ in any one barber shop and from enforcing against him the provision of the Act quoted relating to barbers' schools.

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 29]

AUGUST, 1929

[NUMBER 8

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**E**MPLOYMENT in industry in Canada at the beginning of July showed a further pronounced increase, according to a statement by the Dominion Bureau of Statistics, which tabulated returns from 6,819 firms (each employing a minimum of 15 persons) in all industries except agriculture, fishing, hunting and highly specialized business. The staffs of these firms aggregated 1,069,700 workers, or 23,109 more than the number they employed on June 1. The index number (based upon the average for the calendar year 1926 as 100) rose from 122.2 in the preceding month, to 124.7 in the month under review, as compared with 117.7, 109.7, 105.0, 98.0, 97.1, 100.7, 92.2 and 88.6 at the beginning of July in 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. At the beginning of July, 1929, the percentage of unemployment reported by local trade unions stood at 2.9, compared with percentages of 4.0 at the beginning of June and 3.2 at the beginning of July, 1928. The percentage for July was based on the reports received by the Department of Labour from 1,688 local trade unions, embracing a membership of 198,849 persons. Reports received by the Department of Labour from the offices of the Employment Service of Canada showed a slight decline in the volume of business transacted by these offices in June as compared with that in the preceding month, but a gain over the business transacted in June last year.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.98 at the beginning of July, as compared with \$10.92 for June; \$10.80 for July, 1928; \$10.92 for July, 1927; \$11.07 for July, 1926; \$10.49 for July, 1925; \$9.91 for July, 1924; \$10.17 for July, 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.84 for July, 1920; and \$7.42 for July, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was substantially higher at 96 for July, as compared with 92.6 for June; 96.1 for July, 1928; 98.6 for July, 1927; and 100.2 for July, 1926.

The loss in working time caused by industrial disputes in Canada in July was less than half that in June, and was also much less than in July last year. Nine disputes were in existence at some time during the month, involving 427 workers, and resulting in a loss of 3,139 working days. Corresponding figures for June, 1929, were 15 disputes, 647 workers, and 6,625 working days; and for July, 1928, 19 disputes 3,333 workers, and 22,672 working days.

### Industrial Disputes Investigation Act

During the month of July, the Department received reports from two Boards of Conciliation and Investigation in connection respectively with disputes involving the conductors on the Eastern Lines of the Canadian Pacific Railway Company, and the locomotive engineers of the Canadian National Railways. Two new applications for the appointment of Boards were received, and Boards were established in connection with two earlier applications. A full account of the recent proceedings under the Act appears on page 855.

### Use of Industrial Disputes Act in Industrial Agreements

The agreement which is outlined elsewhere in this issue between the City of Calgary and the Calgary Federation of Civic Employees, contains a clause which binds both the parties concerned to make use of existing statutory provisions for the conciliation and arbitration of any disputes that may arise in the future. In such an event, if the parties are unable to reach a new agreement within 60 days, they agree to allow the dispute to be dealt with under the Industrial Disputes Investigation Act, or under any act of Alberta that may be similar to the federal act in its intent.

### Annual Western Harvest Labour Conference

The annual conference of representatives of those chiefly interested in the harvest labour problem of the Prairie Provinces was held in Winnipeg on July 25, 1929. The meet-

ing, which was presided over by Mr. Osborne Scott, general passenger agent of the Canadian National Railways, Western Lines, had in attendance representatives of the following authorities: the Canadian National Railways; the Canadian Pacific Railway; the Employment Service of Canada; the Governments of the Provinces of Manitoba, Saskatchewan and Alberta; the Department of Immigration; the Department of Labour of Canada; the Winnipeg Board of Trade; and the United Farmers of Manitoba.

After carefully reviewing the situation the following estimates as to the numbers of men required with the numbers available locally were accepted:

	No. of Men Required	Available within Province
Manitoba .....	5,000	5,000
Saskatchewan.....	15,000	9,000
Alberta.....	10,000	9,000

It was estimated that the Province of British Columbia would have available for harvesting purposes 5,000 men, 1,000 of whom would be directed to Alberta and 4,000 of whom would proceed to Saskatchewan. It was further estimated that the Province of Manitoba would furnish approximately 2,000 men for employment in Saskatchewan over and above the number estimated to be available locally for work in Manitoba.

The situation being that the supply of labour available in the four western provinces would satisfy the requirements of the prairies, it was decided that no harvest excursions from Eastern Canada would be necessary, this being the first year in a quarter of a century that it was unnecessary to introduce eastern labour into the western harvest fields. It developed from the discussions that many factors had combined to produce a situation where eastern workers were not required, chief among these being the short crop, a rather heavy immigration movement this year into the western provinces, the introduction of the combined harvester and threshing machine, and the surplus labour available by reason of the influx of workers, due to the general industrial and mining development of Western Canada.

**Combines Investigation Act**  
An alleged combine of plumbing contractors and dealers in Toronto, London, Windsor and other centres in Ontario is being investigated under the Combines Investigation Act. Following a preliminary inquiry, Mr. Gordon Waldron, K.C., has been

appointed a Commissioner by the Governor General in Council to investigate the businesses of the Amalgamated Builders' Council, the Canadian Plumbing and Heating Guild, the Dominion Chamber of Credits, Limited, and the businesses of any other persons believed to be members of the alleged combine.

An article outlining the progress of the investigation appears on another page of this issue of the LABOUR GAZETTE. This issue also contains the report of a judgment delivered by Mr. Justice Raney of the Supreme Court of Ontario on a motion by the Amalgamated Builders' Council for an interlocutory injunction restraining the Minister of Labour and the Registrar of the Combines Investigation Act from investigation of the Amalgamated Builders' Council. The motion was dismissed with costs.

**The Death of Mr. Théophile Bertrand**

The Department of Labour heard with deep regret of the death of Mr. Théophile Bertrand, a valued member of its staff, which occurred at Montreal on

August 14, in his 58th year. Mr. Bertrand had been employed as Wage Investigator and Mediator at Montreal for the past twelve years, during which time he rendered faithful and useful service in the conciliation of labour disputes and otherwise. Prior to his employment by the Department of Labour he had taken an active part in labour union activities and had gained a wide knowledge of wage matters and of labour questions in general.

**Entry into Canada of contract labour forbidden**

Announcement was made by Hon. Peter Heenan, Minister of Labour, on August 10 that an Order in Council has been passed amending the regulations

under the Immigration Act so as to prohibit the landing in Canada of contract labour. This Order in Council grows out of representations made to the Government showing that within recent months labour had been brought into Canada under contract or promise of employment, which was not needed, and resulted in the displacement of Canadian workers.

**Social Insurance Inquiry in Quebec**

As reported on another page of this issue, the Hon. Antonin Galipeault, Minister of Labour and Public Works of the Province of Quebec, informed the

Federation of Catholic Workers of Canada, at their recent annual convention at

Chicoutimi, that the provincial government was prepared to make an exhaustive study of social insurance under its various aspects, including old age pensions, unemployment insurance and mothers' allowances, and that it was likely that a special commission would be named to investigate these subjects.

The Minister further intimated that his government was prepared to consider the question of amending the Workmen's Compensation Act so as to provide for establishing a system of collective insurance, and that such an amendment would be made if it should prove to be necessary. It may be noted in this connection that some uncertainty exists as to the legal standing of the present act in view of a recent decision by Mr. Justice Surveyer in the Superior Court at Montreal (LABOUR GAZETTE, July, 1929, page 838).

### Canada Year Book for 1929

The Dominion Bureau of Statistics has just issued the Canada Year Book, 1929, being the official statistical annual of the resources, history, institutions and social and economic conditions of the Dominion. The new volume contains the latest information, and is an indispensable work of reference for students of social life in Canada. An interesting feature of the 1929 edition is a study of the occupations of the people as shown by the Census of 1921. This study shows that since 1881, agricultural workers had declined from 48.1 per cent to 32.8 per cent of the gainfully occupied population, or from nearly one-half to less than one-third; however, they were still by far the largest single group in the population. The manufacturing group was the next largest, increasing from 12.6 per cent in 1881 to 18.1 per cent in 1911 and 17.5 per cent in 1921, the decline in the latter year being probably attributable to the great depression. "Doubtless the decrease in agriculture and the increase in other employments are largely due to the dividing off from agriculture of many employments formerly carried on by the farmer as a necessary part of his operations, e.g., the slaughtering of animals, the transportation of produce to market and the sale of it there, etc. Thus, under present day conditions of specialization in industry, many of those employed in trade, transportation and manufacture are doing work which formerly was performed by the agriculturists and other primary producers for themselves."

Chapter 19 of the Year Book deals with the subject of "Labour and Wages," reviewing the work of the Federal and Provincial Departments of Labour and their various branches.

It also outlines recent labour legislation, describes the standing of organized labour in Canada, and gives statistics of industrial accidents, strikes and lockouts, employment and unemployment, old age pensions, co-operation, etc. The wage section gives index numbers of rates of wages for various classes of labour in Canada, 1901-1928; rates of wages and hours of labour of employees of steam railways; representative daily wages of employees in the mining industry; and typical wages and hours in various cities. This information is supplemented by full statistics of prices, showing recent changes in the cost of living in Canada.

The Canada Year Book may be obtained from the King's Printer, Ottawa, for \$2.

### Association of Workmen's Compensation Boards of Canada

The Association of Workmen's Compensation Boards of Canada will meet in the City of Quebec on September 9. For the first time in the history of the Association, the meeting this year will include representatives from all the provinces of Canada, Prince Edward Island alone excepted, Quebec and Saskatchewan having been recently added to the list of provinces having Workmen's Compensation Boards. The agenda of the Conference will include matters of common interest to all the Boards, recent legislative amendments and problem cases forming the chief basis for the discussions.

The medical officers of the various Boards will likely meet this year at the convention as a medical section of the Association, and such matters as compensable hernia, sacro-iliac injury, the effects of injury or other strain on cardiac disease, bone joint tuberculosis and other disabilities will be matters for discussion by the Medical Officers present.

The officers of the Association are as follows:—

Chairman: J. A. Kinney, Commissioner of the Workmen's Compensation Board, Province of Alberta.

Vice-Chairman: Robert Taschereau, K.C., President of the Workmen's Compensation Commission, Province of Quebec.

Secretary-Treasurer: W. S. Rose, Claims Officer of the Workmen's Compensation Board, Province of Alberta.

### Overcoming Compressed Air Sickness in Ontario

Since caisson or compressed air sickness was added to the list of compensable industrial diseases in Ontario (LABOUR GAZETTE, November, 1926, page 1079), a marked improvement has been shown in the

recorded cases. Compressed air is used in construction work, especially in the excavation of shafts, and to an increasing extent on sewer construction work. In the *Contract Record and Engineering Review*, July 31, Mr. F. A. Swarbrick describes the results of the regulations instituted by the Workmen's Compensation Board. "Before the regulations were put into force," he says, "very little provision was made for the care of workmen stricken with caisson sickness, and numerous cases became claims on the Workmen's Compensation Board, involving considerable expenditure. Since the enforcement of the regulations in January, 1927, there has been a remarkable decrease in the cases of sickness and no deaths have been reported.

"It is expected," the writer continues, "that considerable construction work will be commenced in the near future necessitating the employment of men under compressed air. The regulations respecting the protection of persons working in compressed air requires that 'any person, firm, corporation, municipal council or other public authority, before commencing work in the construction of which men are employed in compressed air, shall notify in writing the inspector appointed to administer these regulations.' If such work is carried on in accordance with the regulations under the supervision of the inspector, elements of danger may be reduced to a minimum." Further reference to this subject is made on page 884 of this issue.

#### **Compensation committee appointed in Manitoba**

In conformity with a resolution adopted by the Legislature of Manitoba at its recent session, a special committee has been appointed by the provincial government to investigate the subject of Workmen's Compensation in the province. The committee comprises 15 members, five representing the legislature, five the employers and five the employees. It is instructed to investigate and report upon the question of compensation to the families of persons killed while employed in any industry, and to the persons injured in such employment; and also to report upon the existing provisions of the Workmen's Compensation Act, its application and administration, and all matters incidental to this subject. The committee is empowered to summon witnesses to its sittings, to administer oaths or take affirmations, and to require the production before it of books, papers and records to aid it in its proceedings. The members of the committee are as follows:—

Representing the legislature: Messrs. H. G. Beresford, H. A. Robson, John Queen, Joseph Bernier, and the Hon. W. J. Major, K.C. (chairman).

Representing the employers: Messrs. H. B. Lyall, L. J. Reycraft, K.C., Charles F. Roland, G. H. Elliott, and A. M. S. Ross.

Representing the employees: Messrs. J. T. Williams, J. G. Hutchison, J. L. McBride, F. W. Nicks, and F. MacIntosh.

#### **Unemployment and the decennial census**

The House of Commons, at the recent session, adopted a report of the Industrial and International Relations Committee, which included the recommendation "That in the forthcoming census provision should be made for the securing of the fullest possible data regarding the extent of unemployment and sickness, and that this should be compiled and published at as early a date as possible" (*LABOUR GAZETTE*, June, 1929, page 603).

The Census Bill recently passed by the United States Congress also makes provision for the measuring of unemployment by means of the coming census. On this subject the *American Federationist* says: "For the first time in our history we shall have data showing the number of persons unemployed. This will be a measuring rod that will help us to estimate other situations. Cumulative unemployment records are of course essential to full understanding of the unemployment problem and its control. This first unemployment census should be carefully planned to disclose the causes of unemployment as well as the numbers unemployed. The American Federation of Labour regards this unemployment census as a most important step forward."

#### **Public health investigations in Canada**

The subject of public health is now engaging the attention of various legislative authorities and public bodies throughout Canada. The House of Commons Committee which made the recommendations mentioned in the preceding note suggested also that the federal Department of Pensions and National Health should make a survey of the field of public health, with special reference to a national health program. The committee believed that the provincial and municipal health departments and the organized medical profession would co-operate in such an undertaking.

As already noted in the *LABOUR GAZETTE* (April, 1929, page 400), the Dominion Council of Health, at a meeting held at Ottawa last December, requested the Dominion government to further the establishment of full-time country health units by voting an annual grant of money for this purpose. (The Dominion Council of Health was established in 1919 under the Department of Health Act. It consists of the Deputy Minister of Health as chairman; the chief executive officer of the Provincial Department or Board of Health of each province, and five other members appointed by the Dominion Government.)

The Labour Educational Association of Ontario, at their recent convention at St. Thomas, proposed that the federal, provincial and municipal authorities should co-operate in making each county throughout the province a unit for the purposes of public health (June, 1929, page 634). The Ontario Registered Nurses' Association adopted a resolution last April on the subject of group nursing, and reports on this subject are to be made at the next meeting by the representatives in the various districts (May, 1929, page 541).

In British Columbia a provincial commission is to investigate, before the next session of the provincial Legislature, the subject of maternity and public health with a view to the establishment of a system of benefits provided jointly by employers, prospective beneficiaries and the province (*LABOUR GAZETTE*, June, 1929, page 609). In the province of Quebec a "Health Units Act" was passed last year, an amendment being made at the session of 1929 to give the medical officer of the unit the powers of an inspector under the Quebec Public Health Act.

The outline given on another page of this issue of the labour legislation enacted this year in Manitoba mentions the provision made under the Public Health Act for the organization of health districts, each with a board of health, supported by a medical staff.

A similar movement is in progress in the United States. The U.S. Public Health Service recently issued a report dealing with the extent of rural health service throughout the country. On January 1, 1929, 467 counties or districts were reported to be provided with whole-time health officers. The report states that "experience indicates that the best foundation for rural health service in the United States is the county health department under the direction of a qualified whole-time county health officer. It becomes more and more evident to those concerned with practical experience in the public health field that agencies concerned with the promotion

of specialized health activities can perform most effectively and economically by combining their specific activities, and making them a part of a well-balanced comprehensive program of local official health service under the immediate direction of qualified whole-time local health officers."

### **Poverty recognized as leading cause of disease**

The *Health Bulletin*, issued fortnightly by the Ontario Department of Public Health, discusses in a recent issue the "vicious circle" of disease and poverty, poverty and disease, "the breaking of which is a primary essential in public health administration. . . . The information gained by our doctors, public health nurses and social workers," the *Bulletin* says, "has convinced us more and more, year by year, that many of our people are sick, and many die, as a result of poverty. When we speak of poverty we mean a condition in which is found a lack of some considerable part of the necessities of life, the economic goods and services essential for wholesome living. Energy is one of the most valuable assets of man and yet this cannot be had without proper living conditions.

"Obviously, then, sickness and poverty are intimately woven into the social fabric as cause and effect. Therefore, the efficient solution of our social problems in the homes, especially those affecting the revenue, is the very foundation of the prevention of diseases and the developing of a fitter and nobler race. Insufficient revenue means under-nutrition, improper housing, lowered resistance, increased susceptibility to disease, and oft times physically subnormal children."

The provincial Department of Health gives much consideration to social work. Its Division of Social Welfare, which is staffed by thoroughly trained social workers, dovetails its work with that of private social agencies, and also acts as an advisor to this and other civic departments regarding social welfare matters. All nurses on the staff of the Public Health Nursing Division of the Department are given an elementary training in social science, through the public health course, from which they are required to graduate.

### **Work of Social Service Council in Northern Ontario**

During the past year the Social Service Council of Canada made a special study of social organization in the mining and pulpwood areas in Ontario and in the adjacent areas in Quebec and of the social needs, resources and methods now

followed in Timmins, Cochrane, Iroquois Falls, Ansonville, Kirkland Lake, Noranda, P.Q., Rouyn, P.Q., Englehart, New Liskeard, Haileybury and Cobalt. These local studies were followed by conferences, discussions and researches into social experiments. Some of the results of this work are seen in increased interest in the types of municipal and social organizations suitable to New Ontario. One result of the study has been to cast doubt upon the idea hitherto prevailing that the patterns of municipal organization in older Ontario should be applied in the extensive areas of the New North.

Other activities carried on by the Council in Northern Ontario include the following: general community studies at various points; efforts to establish new juvenile courts; organization of councils of social agencies; development of public health areas; rendering of consulting service on various social questions; surveys of family relief work; promotion of community nursing services; delivery of addresses on social topics.

These varied services were given by the agents of the Social Service Council in the various centres of population throughout the northern parts of the province.

#### **Minimum wages for women in Ontario**

A review of the eighth annual report of the Minimum Wage Board of Ontario is given on another page of this issue. The

existing orders of the Board now cover practically all the trades in the province employing women. They do not, however, include domestic service or occupations in agriculture, which were expressly excluded from the provisions of the Minimum Wage Act of 1920. Each of the orders was framed by the Board, itself a representative body, with the assistance of representative employers and employees. To this co-operation the Board attributes the peaceful and amicable observance of the various orders by the parties concerned. The Board has often called attention to the fact that the orders have not been drawn up for the purpose of establishing actual rates of wages, but rather in order to fix a limit, based on the cost of living in the district, below which wages must not fall. In the words of the Board, "they protect wages from becoming subnormal, while leaving the whole region above these lines for the free play of wage-bargaining and the opportunity for promotion." An important result of the Board's activity, it is stated, is to protect firms of the better sort from those competitors who would cut wages below the line of living costs if they were allowed to do so.

#### **Recommendations of Minnesota Old Age Pensions Committee**

In 1927 the Senate of the State of Minnesota appointed a committee to examine into the subject of poor relief, with a view to the possible establishment of a system of old age pensions in the State.

This committee, in its report just published, strongly recommends that such a system should be set up. It points out that the aged poor are citizens who in the past have made valuable contributions to the building up of the State, and that the State owes them something more than treatment as paupers and recipients of charity.

After an examination of the existing conditions in regard to the relief of aged persons in the State the committee reaches the conclusion that the most humane and economical method of relief is by means of a pension system. As to the question of the form that this system should take, it points that national systems of a contributory nature work out with most satisfactory results in European countries with smaller areas and centralized governments, but that for constitutional reasons such a general system is not feasible in the United States. In the latter country, it is stated, old age pensions are still in the experimental stage, and it is still a "seriously debatable question" whether at this time the State should bear the burden of the cost of operation of such a system. However, the committee recommends legislation which shall provide:—

1. For favourable action by the County Board before it can be operative.

2. That after operation for one year or more, the county may abandon the system.

3. That the maximum amount shall not exceed \$1 per day.

4. That a pensioner must be 70 years old, a citizen of the United States, and a resident of the county for at least 15 years.

5. That inmates of state institutions, felons, habitual tramps, and beggars shall not receive pensions.

6. That persons having property of value of more than \$3,000 shall not receive pensions.

7. That persons entitled to support from relatives shall not receive pensions.

8. That the District Judge shall pass upon the necessary qualifications of all applicants and fix the amounts of pensions.

9. That the amount of pensions paid, together with a small rate of interest, shall upon the death of the pensioner, be allowed and deducted from such estate as the pensioner may have possessed.

10. That proper penalties be provided for violation of the law by pensioners and others.

The committee concludes that the foregoing provisions are well embodied in the Wisconsin law and that a bill modelled thereafter could be operated successfully in the State of Minnesota.

### Schoolmasters as juvenile employment agents

An employment committee representing the association of head masters of public secondary schools was appointed in Great Britain in 1918 with the co-operation of the Ministry of Labour. Its activities were at first confined to the London area, but it is now recognized as being national in its scope. The objects of the committee include (1) the establishment of a central exchange for boys who had completed definite courses of post-primary instruction; (2) the visitation of the public secondary schools by an officer of the Ministry of Labour to interview and advise boys in conjunction with their head masters, on the choice of a suitable career; (3) the canvassing of employers for vacancies; (4) the provision of a central organization to which head masters might apply for information; and (5) the provision of a common centre to which applicants already in employment could apply for further advice.

The annual report for 1928 shows that the committee has upon its employers' register the names of some 3,000 employers, of whom approximately half may be called large firms. The number of registrations during the year 1928 was 2,432; the number of interviews, 13,206; and the number of boys placed in employment 1,289.

### Review of trade of Canada in 1928-9

The Dominion Bureau of Statistics has published in a condensed preliminary report of the trade of Canada during the fiscal year ending March 31, 1929. Corresponding statistics for the previous two twelve-months periods also are included. The report shows that Canada steadily maintains her high place among the leading commercial nations. During the calendar year 1928 she occupied fifth position in import and export trade, second place in export and total trade *per capita*, third position in favourable trade balance, and second position in favourable trade balance *per capita*. Canada also leads the world in exports of wheat, news-print paper, nickel and asbestos; occupies second place in exports of wheat-flour, and third place in the export of wood-pulp; as well as occupying a very high place in the exports of many other

staple products, such as lumber and timber, automobiles, fish, copper, barley, cheese, raw furs, whisky, meats, rubber tires, farm implements, pulpwood, cattle, raw gold, silver, lead, rye, oats, rubber footwear, leather and hides. While the Dominion's total trade for the fiscal year 1929, compared with that for 1928, shows an increase of \$295,040,000 (imports \$156,723,000 and exports \$138,317,000), there is every reason to anticipate that her position in international trade during the calendar year 1929 will be well maintained.

Allowing for the price changes, the physical volume of Canada's imports and exports was greater for the fiscal year 1929 than for any previous year, the decrease in the declared value of imports compared with the calendar year 1920 and exports compared with the fiscal year 1918, being entirely due to lower average import and export prices.

The legislature of Prince Edward Island at its recent session enacted legislation enabling cities and towns in the province to make grants or concessions or otherwise to aid the Canadian National Institute for the Blind, or any other organizations formed for the purpose of assisting, training and employing adult blind or partially blind persons who have legal settlement within the province.

The International Educational Cinematographic Institute, an organization having its headquarters at Rome, has completed for public exhibition a series of moving pictures illustrating the manifold activities that are carried on in the field of labour. These pictures are the outcome of studies undertaken with the approval of the International Labour Organizations, Mr. Albert Thomas, director of the organization, being also a member of the executive committee of the institute. A pictorial labour review is thus made available for presentation to the public, the descriptive matter being in five languages, namely, English, French, German, Italian, and Spanish.

The International Nickel Company of Canada has adopted a housing policy for its employees at Sudbury, Ontario. Mr. J. •L. Agnew, the vice-president, announced recently that the Board of Directors had authorized the expenditure of an amount up to half a million dollars to be loaned on approved properties to *bona fide* employees desiring to own their own homes in Sudbury. The money will be loaned at 6 per cent, and re-payments made monthly through the pay roll over a period of years. The details are now being worked out, and it is expected an announcement will be made soon to employees.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of July was reported by the superintendents of the Employment Service of Canada to be as follows:—

The agricultural industry in the Province of Nova Scotia was seasonally busy. The fishing industry reported rather favourable catches. Logging work especially that relating to the pulp and paper industries, was rather brisk for the summer season, although few applicants were anxious to take bush employment. Manufacturing continued at a normal pace, with some improvements being recorded. The building and construction industry, particularly in Halifax, was noticeably active, and building mechanics were well employed. Transportation was reported as heavy, while trade was stated to be somewhat improved. The usual shortage of women domestic workers was reported.

In the Province of New Brunswick the agricultural industry showed the usual seasonal activity. Temporarily, the fishing industry in this province was not receiving very good catches at the end of the month. Although some orders for workers in the logging industry were being received at the employment offices, applicants were not anxious to take this work. Manufacturing industries were normally active. Building and construction showed a good volume of work in hand throughout the province, with the city of Moncton being specially mentioned in this connection. Retail trade was reported as good, while a similar comment was made with reference to transportation.

The Quebec employment offices reported numerous farm placements. There was still some demand in this province for logging workers. Reports on manufacturing industries throughout the province were decidedly favourable: Montreal reported conditions as very good in textiles, rubber, leather, and printing; Quebec city reported similarly on boots and shoes; Sherbrooke reported improvement in the metal and textile groups; while Hull and Three Rivers showed factories to be operating normally. Building and construction of the various sorts were being carried on in considerable volume at all of the larger centres throughout the province. The transportation group was active, while retail trade was stated to be very favourable. Women applicants for household domestic work continued to fall short in numbers of orders being received.

With continued fine weather throughout the Province of Ontario, the demand for farm

help was at its peak and numerous placements were being made by the different employment offices. A large program of building and construction was being carried out throughout this province, practically every centre of importance contributing its quota, but while skilled tradesmen appeared to be very well employed, there were some local surpluses of unskilled building and construction labourers, the situation at Toronto being particularly noticeable. With the exception of two or three centres, manufacturing industries continued at an unabated pace, judging by the demands for workers being registered with the employment offices. In the northern section of the province vacancies in the lumbering and logging industries were not particularly numerous, and there was no shortage of applicants. Although few additional workers were being taken on, the mining industries showed a continuance of activity at a relatively high level. Generally speaking the demand for women domestic workers greatly exceeded the supply available.

With general harvesting operations in the Province of Manitoba about two weeks away, crop prospects were quite unfavourable, although light rains toward the end of the month had helped to some extent. This situation reacted on the demands for farm workers, which while fairly heavy were noticeably light for the time of year, and no difficulty was being experienced in securing sufficient applicants to take jobs offering. Some railway and highway construction labour was being placed throughout the province, although building seemed to centre chiefly in the city of Winnipeg, where the volume of the construction program of this year continued to run well ahead of 1928. Mining in the north central section of the province was still a prominent feature of the employment situation in the Province of Manitoba. An increased demand for logging workers was met with difficulty, owing to the desire of the men to await harvest employment. Manufacturing remained unchanged. Generally speaking, there was no shortage of women domestic workers. Casual calls for unskilled labour were readily met by the different employment offices.

Continued hot weather in Saskatchewan had further decreased the prospective yield of the harvest, and this situation was having its effect at the employment offices in reducing substantially the number of vacancies in the agricultural industry being notified, with the result that no difficulty was being

experienced in supplying suitable workers. Building and construction were fairly active throughout the province. Work of a miscellaneous character offering was not very extensive and there was no difficulty in supply-

ing suitable applicants. For the season of the year the employment situation in Saskatchewan was not unfavourable, though it was rendered somewhat uncertain by the difficulties involved in the harvest outlook.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA  
(Official Statistics except where noted)

	1929			1928

(1) Calculated from yields of Ontario bonds. (6) Excluding lines east of Quebec.  
 (2) For group figures see articles elsewhere in this issue. (7) Including lines east of Quebec.  
 (3) Bradstreet. (8) MacLean's Building Review.  
 (4) Figures for end of previous months. (9) Life Insurance Sales Research Bureau, Hartford Conn.  
 (5) Figures for four weeks ending July 27, 1929, and corresponding previous periods.  
 (10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughtering of cattle, sheep, and hogs; storage holdings of butter and cheese.

Continued dry and hot weather in Alberta caused the harvest outlook to be less encouraging as the season advanced, with the result that, as in Manitoba and Saskatchewan, demands for workers were not so numerous as usual at this season, and no difficulty was being experienced in filling vacancies that occurred. While there was no shortage of workers for the construction industry, the program in this group was quite extensive and was affording a considerable volume of employment. There was a fair demand for sawmill hands being reported. The coal mining industry reported very little activity. The general situation in Alberta was quite favourable for the time of year, although the harvest situation gave rise to some little anxiety in so far as future employment conditions were concerned.

The logging and lumbering industries in the Province of British Columbia showed a rather favourable volume of employment, and normal demands for workers were being registered with the different employment offices with no noticeable surplus of experienced workers available. Mining continued active, and some additional workers were being taken on with local shortages reported. Building and construction were active and it appeared that most mechanics in this line were engaged at their trade. Manufacturing remained normal. Reviewing the situation generally in the Province of British Columbia it appeared that conditions were rather favourable, with no unusual surpluses of the different classes of labour reported.

There were further pronounced increases in employment at the beginning of July, according to statements tabulated by the Dominion Bureau of Statistics from 6,819 firms employing 1,069,700 workers, or 23,109 more than on June 1. This advance brought the index number (based upon the average in the calendar year 1926 as 100), to 124.7, as compared with 122.2 in the preceding month, and with 117.7, 109.7, 105.0, 98.0, 97.1, 100.7, 92.2 and 88.6 at the beginning of July in 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Thus the situation continued decidedly better than in any other month of the years since 1920.

The trend was more favourable in all provinces, the most noteworthy expansion taking place in the Prairie Provinces and Quebec. In the Maritime Provinces, construction recorded the greatest improvement, but there were also gains in mining, transportation and trade; on the other hand, manufacturing was slacker. In Quebec, construction, manufacturing, transportation and services reported

the largest addition to staffs, but logging registered seasonal declines. In Ontario, considerable gains were shown in construction, transportation, mining, services and trade, while logging and manufacturing were seasonally quiet. In the Prairie Provinces, the most noteworthy advances were in construction, manufacturing, transportation, services, trade and communications. In British Columbia, manufacturing, particularly of lumber products, was slacker, as was logging, but trade, transportation and communications recorded gains, while there was an especially large increase in construction.

Seven of the eight cities for which separate tabulations are made reported heightened activity, the gains in Montreal and Toronto being most extensive, while there were reductions in Windsor and the Adjacent Border Cities. In Montreal, employment continued to advance, particularly in construction. In Quebec City, manufactures, construction, services and transportation registered practically all the gain. In Toronto, construction, services and trade reported increased activity. In Ottawa, most of the expansion took place in construction. In Hamilton, construction, transportation, services and trade were busier, while manufacturing showed practically no change. In Windsor and the Adjacent Border Cities, further curtailment was noted, mainly in automobile plants. In Winnipeg, manufacturing and transportation registered advances that brought employment to its maximum for July 1 in this record. In Vancouver, the greatest gains were in construction, communications and trade.

There was a large increase in manufacturing, particularly in food canneries, lumber, pulp and paper, building material, electric current, mineral product, boot and shoe and electrical apparatus factories, while seasonal curtailment was shown in textile and iron and steel plants. Outside the manufacturing industries, there were especially pronounced gains in construction, and also important advances in trade, transportation, services, communications and mining. On the other hand, logging was seasonally slacker.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of July, 1929.

A continued advance in the employment afforded local trade union members was manifest at the close of June, the 1,688 labour organizations from which reports were tabulated with a membership totalling 198,849 persons showing 2.9 per cent of idleness, compared with 4.0 per cent in May. A large factor in the im-

#### EMPLOYERS' REPORTS

#### TRADE UNION REPORTS

proved situation was the expansion indicated by Quebec unions, due chiefly to better conditions in the garment establishments of the province; Nova Scotia, Ontario, Manitoba and Saskatchewan unions also contributed slightly to the total advancement. In Alberta the same situation prevailed in both months of the comparison, while the reductions in employment recorded by New Brunswick and British Columbia unions were nominal only. The level of activity among local trade unions was also slightly higher than in June of last year when 3.2 per cent of the members reported were without work. In this comparison, Quebec and British Columbia unions were wholly responsible for the improved situation recorded, the gains in the former province being the most noteworthy, and these were offset in part by the reductions in employment reported from the remaining provinces.

Elsewhere in this issue will be found a more detailed article on the unemployment situation among local trade unions at the close of June.

**EMPLOYMENT OFFICE REPORTS** During the month of June, 1929, the offices of the Employment Service of Canada referred 35,239 persons to employment and made a total of 34,010 placements. Workers placed in regular employment numbered 22,062, of whom 17,624 were men and 4,438 were women. Placements in casual work numbered 11,948. Employers notified the Service of 36,744 vacancies, of which 24,997 were for men and 11,747 for women. The number of applicants for work was 31,446 men and 12,919 women, a total of 44,365. A slight decline in the business transacted was shown when the figures were compared with those of the preceding month, but a gain was recorded over those of the corresponding period of last year, there being reported during May, 1929, 42,793 vacancies, 50,395 applications for work, and 39,542 placements effected, while the registration in June, 1928, showed 36,273 opportunities for service, 42,834 applications made and 33,869 placements in regular and casual employment. A report in detail of the work of the offices for the month of June, 1929, and for the quarterly period April to June, 1929, may be found elsewhere in this issue.

**BUILDING PERMITS AND CONTRACTS AWARDED** According to a report prepared by the Dominion Bureau of Statistics the value of permits issued by 61 cities during June was \$27,637,491, as compared with \$24,007,371 in the preceding month, and with \$22,751,960 in June, 1928.

The *Maclean Building Review* reports that the total value of the construction contracts awarded in Canada in July was the greatest on record for the month; it exceeded that for the previous month by 14 per cent, and that for July, 1928, by 51 per cent. The total for the month was \$57,940,700, of which \$24,687,100 was for business buildings; \$17,583,100 was for engineering undertakings, (bridges, dams and wharves, sewers and watermains, roads and streets, and general engineering); \$11,478,000 was for residential buildings; and \$4,192,500 was for industrial purposes. The apportionment of the contracts awarded, by provinces, was as follows: Ontario, \$28,073,600, or 48.5 per cent; Quebec, \$15,137,300 or 26.1 per cent; Prairie Provinces, \$9,193,000 or 15.8 per cent; British Columbia, \$4,052,600 or 7 per cent; and Maritime Provinces, \$1,484,200 or 2.6 per cent.

### Production and Trade

**INDUSTRIAL PRODUCTION** Figures showing the volume of production in certain industries during the recent months and also in the corresponding months in the previous year are given in the table on page 851.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that moderate recession was apparent in some lines during June, the general result being that industrial production was at a slightly lower level than in the preceding month. Since June was a 30-day month with five Sundays, adjustment for the number of days in the month would modify this statement to a certain extent. The employment situation continued strong, the index being 124.7 on July 2 compared with 122.4 at the beginning of June. After seasonal adjustment, the working forces of the Dominion were practically maintained. Newsprint production at 255,055 tons was less than in May after seasonal adjustment, but was greater than in any month of 1928. After heavy production in the early months of the present year, the output of motor cars was considerably less in June than in the preceding month, the decline being much in excess of the normal slackening for the season. The total output in June was 21,492 cars and trucks, compared with 31,559 in May. The iron and steel industry was well maintained, the production of iron showing an increase over May. Imports of crude rubber showed an increase, and petroleum in crude form was imported in heavier volume, indicating strong demand for tires and gasoline. Imports of raw cotton in June, on the other hand, showed a marked decline from the levels of the first five months of the year.

## EXTERNAL TRADE

A summary of Canadian trade prepared by the Department of National Revenue shows that in June, 1929, the merchandise entered for consumption amounted to \$111,949,272, as compared with \$125,615,364 in the preceding month and with \$110,703,773 in June, 1928. The chief imports in June, 1929 were: Iron and its products, \$32,925,066; non-metallic minerals and products, \$17,225,910; fibres, textiles and textile products, \$15,158,588.

The domestic merchandise exported during June, 1929, amounted to \$112,176,179 as compared with \$107,472,827 in May, 1929, and with \$107,121,091 in June, 1928. The chief exports in June, 1929, were: Agricultural and vegetable products, mainly food, \$39,873,541; wood, wood products and paper, \$26,548,874; non-ferrous metals and their products, \$14,302,527.

## Strikes and Lockouts

The time loss due to industrial disputes in July, 1929, was less than half of that occurring during June, only three new disputes commencing during the month none of which involved large numbers of workpeople. As compared with July, 1928, the figures for July, 1929, are very much lower, less than half as many strikes being in existence and only about one-eighth of the number of workers involved. There were in existence during the month nine disputes, involving 427 workers, and resulting in a time loss of 3,139 working days, as compared with 15 disputes involving 647 workers and resulting in a time loss of 6,625 working days in June. In July, 1928, there were on record nineteen disputes, involving 3,333 workers, and resulting in a time loss of 22,672 working days. At the end of July there were on record three disputes affecting forty-six workers, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

## Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.98 for July as compared with \$10.92 for June; \$10.80 for July, 1928; \$10.92 for July, 1927; \$11.07 for July, 1926; \$10.49 for July, 1925; \$9.91 for July, 1924; \$10.17 for July, 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.84 for July, 1920; and \$7.42 for July, 1914. The most important change was a substantial increase in the price of potatoes, while slight advances occurred in

the prices of beef, mutton, fresh and salt pork, eggs and rolled oats. The prices of bacon, butter, evaporated apples and prunes were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.26 at the beginning of July, as compared with \$21.18 for June; \$21.01 for July, 1928; \$21.10 for July, 1927; \$21.30 for July, 1926; \$20.70 for July, 1925; \$20.30 for July, 1924; \$20.65 for July, 1923; \$20.67 for July, 1922; \$21.53 for July, 1921; \$26.92 for July, 1920 (the peak); \$20.66 for July, 1918; and \$14.17 for July, 1914. Fuel was practically unchanged. Slight increases in rent were reported from Charlottetown, Brockville, and Trail.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was substantially higher at 96 for July as compared with 92.6 for June; 96.1 for July, 1928; 98.6 for July, 1927; and 100.2 for July, 1926. In the classification according to chief component materials five of the eight main groups were higher, two were slightly lower and one was unchanged. The Vegetables and Vegetable Products group was very much higher, due to substantial increases in the prices of grains, milled products, raw rubber and sugar, which more than offset declines in the prices of foreign fruits and coffee. The other groups which advanced showed only fractional increases. These were: the Animal and their Products group, due mainly to higher prices for hogs, calves, butter and eggs, which more than offset declines in the prices of fish, furs, steers and lambs; the Wood, Wood Products and Paper group, due to higher prices for some lines of lumber; the Non-Metallic Minerals group, because of increased prices for fuels and cement; and the Chemicals and Allied Products group. The Fibres, Textiles and Textile Products group was slightly lower, declines in the prices of raw cotton, hessian and rayon yarn more than offsetting higher prices for jute and silk fabrics. The Non-Ferrous metals group also showed a small decrease due to declines in the prices of lead and antimony, which more than offset higher prices for silver and tin. The Iron and its Products group was unchanged.

A coroner's jury investigating the death of a workman who was killed by falling from an engine at Toronto, July 29, recommended that safety belts should be provided by the railway companies for men working along the narrow footboards high up on locomotives.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF JULY, 1929

**D**URING the month of July the Department of Labour received the reports of two Boards of Conciliation and Investigation established to deal with disputes between (1) The Canadian Pacific Railway Company (Eastern Lines) and certain of its employees, being conductors, members of the Order of Railway Conductors, and (2) The Canadian National Railways and certain of its employees, being locomotive engineers, members of the Brotherhood of Locomotive Engineers.

### Applications Received

Two applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department during July from the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, both applications being made on behalf of checkers and freight handlers on the Montreal wharf. The employer named in the first application was the Canadian National Railways, and in the second case, the Canadian Pacific Railway Company. About 250 workers were stated to be directly affected by each dispute. The applications were under consideration at the close of the month.

### Other Proceedings under the Act

An application for the establishment of a Board of Conciliation and Investigation was reported in the June issue of the *LABOUR GAZETTE* (page 592) as having been received from certain employees of the Winnipeg Electric Company, being trackmen engaged in repairing, maintaining and building street railway car tracks and switches. The cause of the dispute was stated to be an alleged reduction in wages, 120 employees being directly

affected, and 1,000 indirectly. A Board was established by the Minister of Labour on July 6, and members were appointed as follows:—on the employees' recommendation, Mr. Allan Meikle, of Winnipeg, and on the company's recommendation, Mr. C. E. Dafeo, of Winnipeg. At the close of the month the Board had not been completed by the appointment of a chairman.

In the July number of the *LABOUR GAZETTE* (page 712) reference was made to the receipt in the Department of Labour of an application from conductors, trainmen, and yard service employees on Eastern Lines of the Canadian Pacific Railway and Canadian National Railways, being members of the Order of Railway Conductors and Brotherhood of Railroad Trainmen. The dispute grew out of the employees' request for increased compensation, 6,000 men being directly affected, and 10,000 indirectly. A Board was established by the Minister of Labour on July 5, composed as follows:—The Honourable Mr. Justice A. K. Dysart, of Winnipeg, chairman, appointed on the joint recommendation of the other Board members, and Messrs. Isaac Pitblado, K.C., and David Campbell, K.C., both of Winnipeg, members appointed on the recommendation of the employers and employees respectively.

In the July issue of the *LABOUR GAZETTE* (p. 712), there appeared the text of the report of the Board of Conciliation and Investigation which dealt with a dispute between the Canadian Marconi Company, Limited, and certain of its employees, being Canadian Marconi telegraphers, members of Division No. 59, Commercial Telegraphers' Union of North America. Word was received in the Department towards the close of the month that both the employees and the company were willing to abide by the findings of the Board.

### Report of Board in Dispute Between the Canadian Pacific Railway Company (Eastern Lines) and Its Conductors

On July 9, the Minister received the report of the Board of Conciliation and Investigation to which had been referred for adjustment certain matters in dispute between the Canadian Pacific Railway Company (Eastern Lines) and certain of its employees being conductors, members of the Order of Railway Conductors. The Board was composed of Mr. George C. McDonald, C.A., Montreal, chairman, appointed on the joint recommendation

of the other members; Mr. George A. Campbell, K.C., Montreal, the employer's nominee; and Mr. A. Cyril Boyce, K.C., Ottawa, the employees' nominee. The dispute grew out of the employees' request for a separate agreement covering conductors as a class on the eastern lines of the railway and involving wage increases. Eight hundred employees were stated to be directly affected by the dispute and 2,000 indirectly.

The report of the Board was unanimous, and upheld the right of the Order of Railway Conductors to negotiate with the railroad company for a schedule of rates of pay and rules governing the service of conductors only, separate and apart from any other organization of railway labour. The Board made its report and adjourned to allow the parties concerned to negotiate a separate schedule. These negotiations were successful and an agreement was reached, effective July 16th, providing for an increase of 5.6 per cent in the wage rate for passenger conductors. The services of the Board, therefore, were not further required.

### Report of Board

IN THE MATTER of the *Industrial Disputes Investigation Act, R.S.C. 1927, Chap. 112, and of a Dispute between The Canadian Pacific Railway Company (Eastern Lines), and certain of its employees, being Conductors, Members of the Order of Railway Conductors.*

To the Hon. PETER HEENAN, a Member of His Majesty's Privy Council for Canada, and Minister of Labour.

The Report of the Board of Conciliation and Investigation constituted for the investigation of the said dispute by the Minister on the 23rd day of May, 1929, respectfully sets forth as follows:—

The nature and cause of the dispute, and the claims and demands by either party upon the other, to investigate which this Board was constituted, are, as stated in the application for such Board, as follows:—

"The employees concerned have requested increases of pay as per attached schedule, and also a separate schedule for the Conductors as a class employed on the Eastern Lines of the Canadian Pacific Railway.

"On account of the Trainmen's Organization through their General Committee on the territory having filed a protest against the Company negotiating a separate schedule for Conductors with the representatives of the Order of Railway Conductors, the Company's officers have hesitated and have finally declined to enter into negotiations on the new schedule presented until the matter of the aforesaid protest in its relations to the Industrial Disputes Investigation Act is cleared up."

The schedule of proposed increases in the rates of pay and changes in rules covering the service of Conductors, does not become involved as a matter to be investigated by this Board, unless and until the subject matter above set forth, namely, the refusal

of the Company to negotiate such a schedule at all is disposed of. In other words, the Company will not deal with the Conductors separately until the question as to its right so to do, is decided. The Board was informed by both parties to the dispute that if the difficulty in the way of any negotiation for a separate schedule for Conductors could be disposed of, in such a way as to permit of negotiation of such a separate schedule between the two parties concerned in it, it was not anticipated that there would be any such a dispute arising in the settlement of any disagreement then outstanding as would necessitate any reference to, or intervention of, this Board for its adjustment. The schedule of rates of pay is nevertheless involved, secondarily, in the dispute referred to the Board, if the parties ultimately fail to agree thereon.

The right to enter into such a schedule as is proposed, must first be disposed of before any question as to the propriety of what is proposed in the schedule can be dealt with.

Necessarily, therefore, this Board must deal with the question raised by the protest of the Trainmen to the Company, because of which the Company declined to consider a separate agreement or schedule for Conductors. Whether it is competent and permissible for the Conductors and the Company to negotiate for, and, if they agree, make effective, a schedule covering rates of pay and rules covering the service of Conductors, separate and apart from Trainmen and any other class of employees of the Railway Company, is, therefore, a question to be first decided.

This Board is of the opinion that the action of the Railway Company in declining to negotiate the proposed schedule, for the reasons stated in its reply, dated 16th May, 1929, to the application, was justified and proper. This constituted, therefore, the subject matter of a dispute under the Act, for which a Board was properly applied for and granted by the Minister. The Railway Company were confronted with a protest from another Body of Organized Railway Labour, namely, the Brotherhood of Railroad Trainmen, to the effect that it was not competent for the Company to negotiate or make effective such a schedule as was asked by the Conductors, without the concurrence of the Trainmen, and that if any change of present schedule was made or negotiated, it should apply to the pay, rules and working conditions of the Trainmen, jointly with the Conductors, and not otherwise. The Railway Company was bound by the provisions of Section 58 of the Industrial Disputes Investigation Act, and, therefore, no settlement of the protest being found possible, after negotiation to that end, a dispute within

the meaning of the Act existed between the Company and its Conductors, and this Board resulted.

In its reply the Company states that, while it "would hope to be able, by negotiation, to reach an agreement with its Conductors in respect of rates of pay and working conditions, as it has usually been able to do with its various classes of employees, in view of the protest received from its Trainmen to the negotiation of such a revision of agreement as that proposed on behalf of its Conductors, the Company felt compelled to decline to proceed in the matter until the question raised on behalf of the Trainmen was disposed of, and thus the dispute at issue was brought about."

At the first meeting of the Board it was decided to hear Representatives of the Trainmen's Organization as witnesses (they not being parties to the dispute), and to give them every opportunity to establish any relevant facts in support of the contention that the Applicants, the Conductors, had no power to negotiate a separate schedule, and that it would be improper for the Company to enter into an agreement therefor.

On the occasion of the subsequent public meetings of the Board, therefore, held at Montreal on the 13th and 14th days of June last, representatives of all the parties were heard. The Honourable James Murdock, P.C., Vice-President of the Brotherhood of Railroad Trainmen, and Mr. A. McGovern, General Chairman of that Order, were heard as witnesses, as representatives of the Trainmen, and gave evidence and dealt exhaustively with all matters involved in the Trainmen's protest. These representatives of the Trainmen frankly and distinctly conceded and admitted that there was nothing in the constitution of the Order of Railway Conductors to prevent the Conductors negotiating the separate schedule asked for in the application, and they each frankly admitted that the Conductors' Organization had power to do so, just as they, the Trainmen's Organization, also had that power.

Representatives of the Order of Railroad Conductors called to the attention of the Board that under Section 64 of the Statutes or Constitution governing that Order provision was made for withdrawing from previously existing joint schedule relations with other classes of Railway Employees. This section reads as follows:—

"When joint schedule relations have once been established on a line of railroad, such joint relations may be severed at any time by a two-thirds vote of the full General Committee in session."

It was established in evidence that the necessary two-thirds vote of the full General Committee in session had been obtained and there was no challenge by the representatives of the Trainmen of the regularity in all respects of the procedure by the Order of Railroad Conductors in reaching the decision to sever the previously existing joint relations as between Conductors and Trainmen on the Eastern Lines of the Canadian Pacific Railway Company.

While conceding this right, the Representatives of the Trainmen's Organization did express their regret that the Conductors should see fit to exercise such right of separate negotiation, but this regret did not detract from the admissions of the Trainmen's Representatives that the Conductors had the right and power to enter into a separate schedule with the Company, if they chose to exercise it.

It is clear that the Conductors' decision was not taken hastily, but after the observance of all due formalities and for reasons which the Order of Conductors deemed sufficient, and this Board was informed that there was no likelihood whatever of the Conductors' decision being modified, should consideration of the matter be further postponed.

The Board is of opinion that it is not within its functions to investigate and decide upon the merits of any differences between these two organizations, as fellow-employees, and in view of the admission as to the legal right and capacity of the Conductors to negotiate a separate agreement and schedule, the Board is of opinion that the primary objection which brought about, and was the cause of, the dispute between the Company and the Conductors, is now removed.

Upon the primary objection, therefore, this Board is of opinion that the Order of Railway Conductors has the power under its Constitution to negotiate with the Railway Company for a separate schedule of rates of pay and rules governing the service of Conductors only, separate and apart from any other organization of Railway Labour, and that, if and when the Company agrees thereto, such schedule may be made effective, as and when it is thought proper to do so.

And the Board so finds and reports to the Honourable, the Minister.

Having in view the fact that, following this finding of the Board, the parties to this investigation may now proceed to negotiate for the separate schedule asked for, and which is set forth in full in the application, the Board is of opinion that its functions might be continued and maintained pending the conclusion of such negotiations, so that should any dis-

pute between the parties arise in such negotiations, the matter of such dispute may be investigated and dealt with by this Board. In the meantime the Board suggests that any further enquiry with respect to matters involved in the said proposed schedule should be postponed sine die, subject to call by the Chairman should its offices be further required in the settlement, adjustment or conciliation of any matters of difference arising between the parties in their subsequent negotiations.

And the Board so recommends to the Honourable, the Minister.

All of which is respectfully submitted.

Dated at Montreal, this 3rd day of July, 1929.

GEORGE C. McDONALD,  
*Chairman.*

GEORGE A. CAMPBELL.  
A. C. BOYCE.

## Report of Board in Dispute Between the Canadian National Railways and Its Locomotive Engineers

The Minister of Labour received on July 23 the unanimous report of the Board of Conciliation and Investigation which had been established to inquire into a dispute between the Canadian National Railways and certain of its employees being locomotive engineers, members of the Brotherhood of Locomotive Engineers. The dispute grew out of the employees' desire to amend certain rules governing their service, the number of workers concerned being given as 4,000. The personnel of the Board was as follows: The Hon. Mr. Justice W. E. Raney, of Toronto, chairman, appointed on the joint recommendation of the other Board members; Mr. J. L. Counsell, K.C., of Hamilton, the employer's nominee, and Mr. A. Cyril Boyce, K.C., of Ottawa, the employees' nominee. The text of the Board report follows:—

### Report of Board

IN THE MATTER of the *Industrial Disputes Investigation Act, R.S.C. 1927, Chap. 112, and of a Dispute between The Canadian National Railways and certain of its employees, Members of the Brotherhood of Locomotive Engineers in the employ of the said The Canadian National Railways under agreement and Locomotive Engineers represented by the said Brotherhood.*

To the Hon. PETER HEENAN, a Member of His Majesty's Privy Council for Canada, and Minister of Labour.

The Report of the Board of Conciliation and Investigation constituted for the investigation of the said dispute by the Minister the 2nd day of April, 1929, respectfully sets forth as follows:—

The nature and cause of the dispute, and the claims and demands by either party upon the other to investigate which this Board was constituted, are, as stated in the application for such Board, as follows:—

Memorandum of changes in schedule rules covering all lines of the Canadian National Railways as desired and requested by the general committees of adjustment of the brotherhood of locomotive engineers, representing all engineers in the employ of the Canadian National Railways.

1. Where joint schedules are in effect, request is made that separate schedules be compiled to govern Locomotive Engineers, and that with specific reference to the clauses in the various schedules or supplements thereto relating to Representation, Promotion and Hiring of Locomotive Engineers, Establishment of Seniority, and Mileage Regulations, same be eliminated, and the following rules substituted therefor.

2. REPRESENTATION.—The General Committee of adjustment of the Brotherhood of Locomotive Engineers will represent all Locomotive Engineers in the making of contracts, rules, rates and working conditions, and the interpretation thereof, and will handle all controversies or grievances arising thereunder.

3. ESTABLISHMENT OF SENIORITY.—Engineers shall rank on the Engineers' Seniority lists from the date of their first service as engineers when called for such service, with the following understanding.

No Engineer shall be promoted while there are demoted engineers back firing on the Seniority District, except in cases where it can be shown that the number of qualified engineers being used is in excess of demoted engineers back firing, in which case an adjustment will be made and the proper number of men shall be promoted and will be placed on the Engineers' Seniority list. In making such adjustment the following definitions and examples will be used.

### DEFINITION OF QUALIFIED AND PROMOTED ENGINEERS

1. A qualified engineer is one who has passed the necessary qualifying examinations and may be used as such.

2. A promoted engineer is one who has passed the necessary qualifying examinations and has been placed on the Engineers' seniority list, in accordance with the rules.

### EXAMPLES OF ESTABLISHMENT OF SENIORITY DATE OF AN ENGINEER

Example 1. All engineers on the seniority district are in service as engineers, no demoted engineers back firing. Four qualified engineers are regularly placed on the Engineers' Spare Board. The four senior qualified engineers on the seniority district will be placed on the Engineers' Seniority list and thereby become promoted and will rank on the Engineers' Seniority list in relation to each other as they stood on the Firemen's Seniority list.

Example 2. There are ten demoted engineers back firing on the seniority district, fourteen qualified engineers are being used as engineers on the seniority district. The four senior qualified engineers will be placed on the engineers' seniority list in accordance with the principle outlined in the last sentence in example 1.

4. When engineers are to be hired the same shall be approved by the General Chairman of the Brotherhood of Locomotive Engineers, and one Engineer may be hired to every five men promoted.

5. The provisions of this section will not prevent the Brotherhood of Locomotive Engineers' Committees from having discharged engineers re-employed or reinstated on their former seniority districts at any time, provided their cases are pending, and in the hands of the Brotherhood of Locomotive Engineers' Committee.

6. Seniority lists of engineers will be revised not later than April 1st, of each year and copies of same posted at all terminals on the seniority district. Protests against seniority standing must be made in writing within sixty (60) days after the posting of the list. Protests received after the sixty days have elapsed will not be considered.

7. MILEAGE REGULATIONS.—When, from any cause, it becomes necessary to reduce the number of engineers on the engineers' working lists on any seniority district, those taken off may, if they so elect displace any fireman their junior on that seniority district under the following conditions:—

First: No demoted engineer will be permitted to hold a run as fireman on any

seniority district while a junior engineer is working on the engineers' extra list or holding a regular assignment as engineer on such seniority district. An engineer having to move under this rule, will be permitted to return to his home station when he stands for work on the engineers' list at that station.

Second: When reductions are made, they shall be in reverse order of seniority.

Third: No reduction will be made so long as those in assigned or extra passenger service are earning the equivalent of 4,000 miles per month, in assigned, pooled, chain gang or other service, paying freight rates are averaging the equivalent of 3,200 miles per month; on road extra lists, are averaging the equivalent of 3,200 miles per month, and those on the extra lists in switching service are averaging 28 days per month.

Fourth: When regulating working lists in the respective classes of service, each list will be handled separately.

7a. Engineers taken off shall be returned to service as engineers in the order of their seniority as Engineers as soon as it can be shown that Engineers in assigned or extra passenger service can earn the equivalent of 4,800 miles per month, in assigned, pooled, chain gang, or other service paying freight rates, the equivalent of 3,800 miles per month; on road extra lists, the equivalent of 3,800 miles per month, and on the extra lists in switching service, are averaging 35 days per month.

7b. In the regulation of assigned and extra passenger service, a sufficient number of men may be assigned to keep the mileage or equivalent thereof within the limitation of 4,000 and 4,800 miles per month; in assigned, pooled, chain gang, or other service paying freight rates, a sufficient number of men may be assigned to keep the mileage or equivalent thereof within the limitations of 3,200 and 3,800 miles per month. In assigned yard service, regulation will be made by requiring each regularly assigned man to lay off when he has earned the equivalent of 35 days per month.

7c. It is understood that after all engineers who have been taken off have been returned to service as engineers, these mileage regulations shall not apply with respect to further additions.

7d. When hired engineers are laid off on account of reduction in service, they will retain all seniority rights, provided they return to service within sixty days from date their services are required.

7e. Arrangements for keeping record of the mileage of engineers will be made between the railway officials and the engineers' com-

mittees, and all engineers will be required upon the completion of each trip to register in ink the total mileage made from their starting date in their respective 30 day working periods. When an engineer has made the maximum mileage for his 30 day working period he will advise the foreman so that arrangements for his relief can be effected. Engineers who fail to book their correct mileage will not be called for service until such time as they comply with this rule, unless other engineers are not available.

7f. Engineers on work on other trains laid up away from points where spare engineers are stationed will advise their foreman in sufficient time to permit him to get spare engineers to point where they are working by the time they have made the stipulated mileage in their thirty day period.

7g. When engineers are used in combination service, they will be permitted to make the equivalent of 3,800 miles in freight service.

7h. Mileage made by engineers part of which is made as engineer and part as fireman, total mileage made in both classes of service will be taken to total his mileage in a thirty day working period.

7i. If any engineer exceeds his maximum miles or days in any thirty day working period, the excess will be charged to his mileage or days in his following working period, this not to apply to men who are required to exceed their maximum, due to a shortage of engineers.

7j. The Local Committee of the Brotherhood of Locomotive Engineers will arrange starting dates for the working periods of all engineers at their respective terminals, and will also arrange for checking periods, which will be on the basis of ten, fifteen, or thirty days.

7k. The railway will furnish the necessary co-operation and information to ensure the successful application of these regulations.

8. All rules in the present schedules which are in conflict with the above to also be eliminated, and other clauses changed where necessary in order to conform to a separate schedule for Locomotive Engineers.

The Board opened the investigation committed to it by a sitting in Montreal on April 26, last, and at that meeting the parties to the dispute were represented as follows:—

For the railway company—

Mr. A. J. Hills, Assistant to the Vice-President in charge of operation and construction.

Mr. A. E. Crilly, Chief of Wage-Bureau.

For the Brotherhood of Locomotive Engineers—

Mr. R. H. Cobb, Assistant Grand Chief Engineer for Canada.

Mr. H. B. Chase, General Chairman.

Mr. W. G. Dewar, General Chairman.

Mr. M. Mackenzie, General Chairman.

Mr. G. A. Stone, General Chairman.

The Board at that meeting heard the statements of both parties outlining the facts and circumstances involved in the dispute and endeavoured to bring about a settlement thereof—and, after discussion with the parties, adjourned the proceedings to a later hour of the same day to permit of a conference between the parties with a view to settlement, which conference, however, was not productive of results, and the Board proceeded, by sittings at Montreal and Ottawa, to investigate all facts and circumstances relating to or involved in the dispute, and heard the evidence of all persons called by both parties, and herein will deal with the several items of the dispute, and will submit its findings and recommendations for the settlement thereof according to the merits and substantial justice of the case, as the same have been presented and made to appear to the Board.

For the purposes of convenience in dealing with the several clauses of the proposed revisions constituting the cause of the dispute, the numbering of the paragraphs in the schedule attached to the application has been changed, and such paragraphs will be identified in this report by the figures and letters in the margin opposite the same as shown in the foregoing copy of the schedule.

The first clause of the schedule contains a request by the applicants that where—as in this case—joint schedules are in effect, the Brotherhood of Locomotive Engineers may negotiate for and compile, and the Railway Company may put into force, separate schedules to govern the terms of their (the Engineers') employment.

There appears to be no obstacle or objection to this. It was not objected to nor opposed by the Railway Company, and the right clearly appears in the joint schedule now in force, and sought to be amended. Article 52 of the present joint schedule of Rates of Pay and Rules governing service of Engineers, Firemen, Helpers and Hostlers, effective December 1, 1925, contains the following clause, agreed to by the Brotherhood of Locomotive Firemen and Enginemen:—

“The right to make and interpret contracts, rules, rates and working agreements for locomotive engineers shall be vested in the regularly constituted committee of the Brotherhood of Locomotive Engineers.”

The same Article, in the next paragraph thereof, reserves and vests, in similar language, a similar right to the Brotherhood of Locomotive Firemen and Enginemen. It is, therefore, an express reservation and term of the present schedule, these two Brotherhoods chose to make jointly with the Company, that each body may do its own bargaining.

The two Brotherhoods referred to are quite separate and distinct from one another, each having separate rights and interests peculiar to its own working conditions, and, apart from the reservation referred to, each would possess the right to make separate agreements with the Company, relative to and governing conditions of work of its own members.

The Board, therefore, is of opinion, that the Brotherhood of Locomotive Engineers does possess the independent power to enter into any such agreements as are within the scope of its general powers as an independent organization, and to negotiate and contract with the railway company with respect to rules, rates, and working agreements governing the terms of employment of its members, independent of any other organization of railway labour, and that the railway company may put such contracts, rates, and terms into effect, when agreed to.

The proposed rules to govern the working conditions and service of locomotive engineers represented by the applicants may now be considered.

The Railway Company argued that the changes proposed by the Engineers should not be made effective because of certain protests filed in the proceedings, on behalf of another organization of railway labour—namely, The Brotherhood of Locomotive Firemen and Enginemen, whose protests were contained in the following correspondence, filed as part of the railway company's case, namely:—

1. Letter from W. G. Graham, General Chairman of B. of L. F. & E. to Mr. S. J. Hungerford, Vice-President C.N.R., dated Lindsay, Ontario, May 23, 1928.

2. Letter from R. E. Linden, General Chairman of B. of L. F. & E. to Mr. Hungerford, dated, Moncton, N.B., May 21, 1928.

3. Letter from T. M. Spooner, General Chairman of B. of L. F. & E. to Mr. Hungerford, dated Winnipeg, Manitoba, May 15, 1928, and the memoranda thereto attached.

In support of the railway company's case the company called as witnesses the following officers of the Brotherhood of Locomotive Firemen and Enginemen:—

1. Mr. H. H. Lynch, Canadian Vice-President of the Brotherhood of Locomotive Firemen and Enginemen, and

2. Mr. T. M. Spooner, General Chairman of the same Brotherhood, for Western Region, Canadian National Railways.

These witnesses dealt exhaustively with the matters included in the letters, or protests, above referred to, addressed to the Company, and, as witnesses on behalf of the Company, presented to the Board the grounds of their objections to the application of the Engineers, dealing with each clause of the proposed rules, as to which there was controversy.

It appeared that the Firemen's Organization (Brotherhood of Locomotive Firemen and Enginemen), prior to the first sitting of this Board, had applied for a Board under the Industrial Disputes Act, for adjustment of the matters of complaint dealt with and presented to the Railway Company in the three letters from Messrs. Graham, Linden and Spooner above referred to, as matters in dispute between the Firemen and Enginemen and the Railway Company.

CLAUSE 2—REPRESENTATION.—An amendment should be made of the last line after the word "thereof," making the following words to read "and will represent any Locomotive Engineer having a controversy or grievance arising thereunder, when requested so to do by such Engineer."

Clauses 4, 5 and 7 were objected to, in whole or in part, and the Board makes the following observations and recommendations with respect to them.

CLAUSES 4 AND 5.—The Board is of the opinion that these two clauses should be eliminated. Present rule now in force, Rule 38, section H, will, the Board thinks, provide substantially for what is proposed by these amended sections. There should, however, be an amendment of the last sentence of Clause H, Rule 38, by changing the word "enginemen" to "engineers" to make the clause applicable to the engineers in the proposed new schedule.

CLAUSE 7—MILEAGE REGULATIONS.—After hearing and considering the evidence submitted on the contentious matter involved in the mileage regulations from every point of view, including that of the Officers of the Firemen's Organization called by the railway company, the Board finds that there is much in these regulations as proposed to commend them. Apart from other considerations they make for simplicity as regards the classification of engineers on passenger and freight trains; they would cover and be applicable to the whole of this large railway system, and tend to uniformity of regulations, in this respect, on both the Canadian National and

Canadian Pacific Railway systems, elements much to be desired in the maintenance of suitable working conditions of so large and important a class of skilled labour.

That part of this section marked sub-clause "Third" may be more clearly stated as follows:—

"Third. No reduction will be made so long as

- (a) Those engineers in assigned or extra passenger service are earning the equivalent to 4,000 miles per month;
- (b) Those in assigned, pooled, chain gang or other service paying freight rates are averaging the equivalent of 3,200 miles per month;
- (c) Those on road extra lists are averaging the equivalent of 3,200 miles per month; and
- (d) Those on the extra lists in switching service are averaging 28 days per month."

As to sub-clause (d) of the above, the Board finds no great difference between the 25 days in the present rule and the 28 days proposed. No change appears to be desirable, and sub-clause (d) ought, in the Board's opinion, to be eliminated from above clause.

In the application of the mileage regulations there may be instances where local conditions render some changes necessary to meet those conditions. The Board has before it no evidence as to such local conditions, and therefore is unable to specify any exceptions to meet such instances, but is of the opinion that if there are found to exist local conditions which render necessary any exceptions to sub-clause (c), such exceptions should, in the new rules to be compiled, be plainly set

forth in a rule or rules subjoined to the article specifying the above regulations.

Clause 8 should be eliminated.

The remaining clauses of the changes proposed by the Engineers in their memorandum were not in dispute.

With the above changes the Board approves the proposed amendments and recommends that they be put into force, if, and when, accepted by the parties, and that upon such acceptance, a new rule book should be compiled and made effective governing the service, mileage, pay and working conditions of Locomotive Engineers.

And the Board is of the opinion that substantial justice will be done to all parties concerned in the dispute, according to the merits thereof, by acceptance by the parties of the above findings as a settlement thereof, and so recommends.

It was made to appear to the Board that a new rule book had been compiled between the Brotherhood of Locomotive Engineers and the Canadian Pacific Railway Company, and in the interests of uniformity it seems to the Board to be advisable that an effort should be made by the Brotherhood of Locomotive Engineers and the Canadian National Railways to make the new rules, as between those organizations, conform as nearly as may be to the rules that have been adopted between the Brotherhood of Locomotive Engineers and the Canadian Pacific Railway Company.

(Sgd.) W. E. RANEY,  
*Chairman.*

(Sgd.) A. C. BOYCE.

(Sgd.) J. L. COUNSELL.

TORONTO, 22nd July, 1929.

## LABOUR DISPUTES ACT OF ALBERTA

### Third Annual Report Covering Transactions During 1928

THE third annual report of the minister (the Hon. J. E. Brownlee, premier) charged with the administration of the Labour Disputes Act of Alberta, forms part of the annual report of the Commissioner of Labour of the Province which is reviewed on another page of this issue. Reports of Boards appointed under the Act were given in the LABOUR GAZETTE, September, 1928, and in previous issues. The provisions of the Act were outlined in the LABOUR GAZETTE, May, 1926, page 447. The enactment followed the judgment of the judicial Committee of the Privy Council declaring invalid those sections of the federal Industrial Disputes Investigation Act, 1907, which deal with matters prop-

erly coming under provincial jurisdiction (LABOUR GAZETTE, February, 1925, page 241.)

#### Report for 1928

Applications were received for the appointment of Boards of Conciliation and Investigation as follows:—

1. From the Brotherhood of Painters, Decorators and Paperhangers, Local No. 583, of Calgary, in respect of an alleged dispute between the Local Union and the Master Painters' Association of Calgary, April 19, 1928;

2. From the International Association of Machinists, Local No. 1004, of Edmonton, in respect of an alleged dispute between the

Local Union and the Edmonton Automobile Dealers' Association, of Edmonton, May 4, 1928;

3. From the International Association of Machinists Local No. 1006, of Calgary, in respect of an alleged dispute between the Local Union and the Calgary Automobile Dealers' Association, of Calgary, May 4, 1928;

4. From the International Association of Machinists, Local No. 1057, of Lethbridge, in respect of an alleged dispute between the Local Union and the Lethbridge Automobile Dealers' Association, May 5, 1928;

5. From the International Brotherhood of Boilermakers, Iron Ship Builders and Helpers, Local No. 392, of Calgary, in respect of an alleged dispute between certain of its members and the Riverside Iron Works, of Calgary, June 23, 1928.

The applications were in accordance with the provisions of the Act, and Boards were appointed as follows:

1. W. G. Carpenter, chairman; Manley J. Edwards, representing employers, and T. B. Riley, representing employees;

2. T. S. Magee, chairman; Stuart Matheson, representing employers, and A. Farmilo, representing employees;

3. L. W. Brockington, chairman; H. A. Howard, representing employers, and A. Davison, representing employees;

4. John Dow, chairman; R. C. Farris, representing employers, and W. Alford, representing employees;

5. L. W. Brockington, chairman; A. H. Goodall, representing employers, and F. J. White, representing employees.

The persons appointed were, in respect of the representatives of employers and employees, those suggested by the parties affected, and in respect of chairman, those suggested by the representatives of employers and employees respectively.

In respect of the dispute between the Brotherhood of Painters, Decorators and Paperhangers, and Master Painters, the Board was able to persuade the two parties to agree upon wages and working conditions and an agreement was signed between the two parties, to be operative until March 31, 1930.

In respect of the dispute between certain members of the Boiler-makers, Iron Ship Builders and Helpers, and the Riverside Iron Works, as a result of the activities of the Board an agreement was signed between the company and the employees affected.

In respect of the dispute between the Machinists' Union and the Calgary Automobile Dealers' Association, the Board submitted an unanimous report, in which were incorporated minimum wage rates and working

conditions. The recommendations of the Board were accepted by both parties, but no agreement was signed.

In respect of the dispute between the Machinists' Union and the Lethbridge Automobile Dealers' Association, the Board submitted an unanimous report, recommending minimum wage rates and working conditions. The recommendations of the Board were accepted by the members of the Union, but while individual employers put into operation a number of the recommendations of the Board, no general acceptance was made.

In respect of the dispute between the Machinists' Union and the Edmonton Automobile Dealers' Association, the Board submitted an unanimous report in which was a recommendation that each party appoint representatives to meet jointly with a view to an agreement being made fixing wages and working conditions for the industry in the city. The recommendations of the Board were accepted by the members of the Union, but the employers stated that they were not prepared to meet with a committee of the Union, but were ready to discuss any grievance with members, or a committee of their individual staffs.

A copy of each report was published in the *Alberta Gazette*, in accordance with the provisions of the Act.

#### Inspection of Scaffolding at Toronto

Reference was made in the *LABOUR GAZETTE*, May, 1929, page 505, to a by-law approved by the Montreal City Council, providing for the inspection of scaffolding. A similar by-law has since been approved at Toronto. Several months ago, representatives of the Toronto Building Trades Council appeared before the Toronto Board of Control, urging the appointment of an inspector of derricks, scaffolding and hoisting apparatus in order to secure greater safety to workmen in certain classes of the building trades. The Board conferred with the city architect, who, in order to meet the wishes of the deputation, re-wrote Chapter 4 of the existing building by-law, inserting therein several new paragraphs relating to the strength and erection of scaffolds and protection to workmen. These paragraphs, which have been approved by the civic authorities and are now part of the building code, have to do with the following phases of construction in addition to the general problem of scaffolding: covered ways, narrow passageways, fences or barricades, storage of material, strength of temporary structures, protection of workmen, ropes and cables, well hole protection, flooring, temporary stairs, centering, permissible floor loading, etc.

## STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1929

THE number of strikes and lockouts in existence in Canada during July was nine, as compared with fifteen during the previous month. The time loss for the month also was less than during June. Only three disputes began during July, none of which involved large numbers of workers. As compared with July, 1928, the figures for July, 1929, show that less than half as many strikes occurred, and that these involved approximately only one-eighth of the time loss occurring during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
*July, 1929.....	9	427	3,139
*June, 1929.....	15	647	6,625
July, 1928.....	19	3,333	22,672

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Six disputes, involving 284 work-people, were carried over from June, and three disputes commenced during July. Of these nine disputes, six terminated during the month, one being in favour of the workers, two in favour of the employers, two resulting in compromises and the result of one being recorded as indefinite. At the end of July, therefore, there were three disputes recorded as strikes or lockouts, as follows: plumbers, Kingston, Ont., shoe factory workers, Toronto, Ont., and moulders at Lachine, P.Q.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Information is available as to three such disputes, namely; electrotypers, Toronto, Ont., December 20, 1926;

fur workers, Toronto, Ont., April 10, 1928; and photo engravers, Toronto, Ont., January 17, 1929.

A minor dispute involving fourteen labourers employed in the operation of hand derricks in connection with a contract for a building at Toronto occurred on July 9, the employees demanding an increase in wages. The rate being raised from 50 cents per hour to 55 cents work was resumed within one-half hour.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

**GLOVE FACTORY WORKERS, WINNIPEG, MAN.**—In connection with this dispute, commencing May 25, 1929, the employer reported that by July 8 a number of the strikers had returned to work and that the rest had been replaced. It was reported that two of the union pickets were arrested, but were released on bail pending trial.

**MEN'S CLOTHING FACTORY WORKERS, WINNIPEG, MAN.**—A settlement of this dispute, commencing on June 25, 1929, was effected July 10, the piece work system proposed by the employer being accepted by the workers, with an increase in piece rates.

**MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—Employees ceased work on June 27, 1929, to enforce a demand for an increase in wages of \$2 per week for the cutters and trimmers, a change agreed upon between the Montreal clothing manufacturers and the union, to become effective June 1, 1929. Following a conference between the employer and the union representatives it was agreed to refer the dispute to a conference between the international president of the union and the head of the firm, and work was resumed about July 10.

**MOULDERS, LACHINE, P.Q.**—It was reported by the employer that during July a number of the strikers returned to work, but at the end of the month the union reported twenty-six still on strike.

**COAL MINERS, WESTVILLE, N.S.**—In support of a driver whose working place was changed and who ceased work, forty-five miners ceased work also on July 10, 1929, and 118 other miners indirectly affected were unable to work also. A committee of workers took up the question with the management and decided that the driver was in the wrong; the strikers returned to work on July 11.

PLUMBERS, NIAGARA FALLS, ONT.—Employees ceased work on July 2, 1929, to secure an increase in wages and also an agreement providing for the employment of union members only. Work was resumed on July 5, an agreement having been signed which provided for an increase in wages from 90 cents per hour to \$1, with \$1.10 for foremen, forty-four hours per week, and employment of union members only.

SHIP BUILDERS AND HELPERS, MONTREAL, P.Q.—Employees ceased work on July 4, 1929, demanding an increase in wages for ship builders from 65 cents per hour, nine hours per day, fifty hours per week, to 75 cents per hour with a similar increase for helpers. Work was resumed on July 9, an increase of 5 cents per hour having been granted.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1929

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts occurring prior to July, 1929.</b>			
<b>MANUFACTURING—</b>			
<i>Boots and shoes—</i>			
Shoe factory workers, Toronto, Ont.....	10	250	Commenced April 23, 1929, against reduction in wages. Unterminated.
<i>Clothing (including knitted goods)—</i>			
Glove factory workers, Winnipeg, Man.....	40	150	Commenced May 25, 1929, against institution of piece work system. Terminated July 8, 1929; replacement and partial return of strikers.
Men's clothing factory workers, Winnipeg, Man.....	65	455	Commenced June 25, 1929, against introduction of piece work system. Terminated about July 10, 1929. Compromise.
Men's clothing factory workers, Montreal, P.Q.....	125	875	Commenced June 27, 1929, for increase in wages for cutters. Terminated July 10, 1929. Indefinite.
<i>Iron, steel and products—</i>			
Moulders, Lachine, P.Q.....	33	780	Commenced May 2, 1929, for increase in wages. Unterminated.
<b>CONSTRUCTION—</b>			
<i>Buildings and structures—</i>			
Plumbers, Kingston, Ont.....	9	234	Commenced April 2, 1928, for increase in wages. Unterminated.
<b>(b) Strikes and Lockouts occurring during July, 1929.</b>			
<b>MINING—</b>			
<i>Non-ferrous smelting and quarrying—</i>			
Coal miners, Westville, N.S..	45	45	Commenced July 10, 1929, in support of driver given change of place. Terminated July 11, 1929. In favour of employer.
<b>CONSTRUCTION—</b>			
<i>Buildings and structures—</i>			
Plumbers, Niagara Falls, Ont.	50	150	Commenced July 2, 1929, for union wages and working conditions. Terminated July 5, 1929, in favour of workers.
<i>Shipbuilding—</i>			
Ship builders and helpers, Montreal, P.Q.....	50	200	Commenced July 4, 1929, for increase in wages. Terminated July 9, 1929. Compromise.

A waiter in a hotel at Toronto sued the proprietor for \$38 as wages for the month, the latter having deducted from his wages the amount of a bill which the waiter had failed to collect from a customer. His Honour Judge Morson, in giving judgment in the Divisional Court, ruled that waiters

cannot be assessed for bills on which they are unable to obtain payment unless a stipulation to this effect is set out in the contract signed by the waiter. The court gave judgment to the waiter for the amount claimed, and dismissed the proprietor's counter claim of \$50 for the uncollected bill.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1929, in the review of Strikes and Lockouts in Canada and Other Countries, 1928. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

### Great Britain and Northern Ireland

During June, 25 new disputes began and 15 were still in progress from the previous month, making a total of 40 disputes in progress, involving 16,300 workpeople and resulting in a time loss of 188,000 working days for the month. Of the 25 disputes beginning in June, 4 arose out of proposed reductions in wages, 6 on other wages questions, 8 on questions respecting the employment of particular classes or persons, 3 on questions of trade union principle and 4 on other questions. Settlements were reached in 23 disputes, of which 6 were in favour of workpeople, 9 in favour of employers and 8 ended in compromises.

The dispute involving 1,900 woollen mill workers at Sowerby Bridge and Calder Valley who went on strike on May 17, against a proposed reduction in wages, was settled by July 6, when work had been resumed by some at the old rates of wages and by others at the reduced rate.

*Cotton Mill Workers, Lancashire.*—Alleging that a reduction in wages was necessary owing to the continued depression in the cotton manufacturing industry, which had been more marked during the last year, the Federation of Master Cotton Spinners' Association and the Cotton Spinners and Manufacturers' Association in Lancashire gave notice during July that a reduction in wages of 12.82 per cent would be put into effect on July 29. The three unions involved, the Operative Spinners' Amalgamation, The Amalgamated Weavers' Association and the Card Room Amalgamation, all refused to accept the reduction. Through the mediation of the Ministry of Labour the parties sent delegates to a joint meeting on July 19, but no progress towards

a settlement was made. Officers of the Ministry of Labour continued their efforts to avert a stoppage of work, but were unsuccessful, and on July 29, work ceased at all the mills, numbering about 1,600, belonging to the employers' associations and about 500,000 workers were out of employment; a small number of independent mills remained in operation. Up to August 13, no basis of negotiations had been reached, but the Ministry of Labour was continuing its attempt to bring about a settlement.

### British India

A dispute was in progress during July in the jute industry in the Calcutta district, where 120,000 workers were out of employment in a protest against the introduction of the 60-hour week.

### United States

Statistics for the year 1928 have recently been published. The total number of disputes beginning in the year was 629, involving 357,145 employees with an average of 568 employees per dispute. The three industries involving the largest number of employees in disputes were: coal mining, in which 195,876 workers were involved, clothing, with 65,686 workers and the building trades, with 19,965 workers involved. Of the 656 disputes terminating in the year, 272 were in favour of employers, 197 in favour of employees, 160 ended in compromise and 27 were indefinite or result not reported.

Up to July 27, no settlement was reported of the strike of several thousand shoe workers in Massachusetts, which was mentioned in the *LABOUR GAZETTE* for July.

After a two weeks' strike of about 30,000 ladies' garment workers in New York City, a settlement was reached on July 13. An agreement was signed between the employers' association and the union and about 19,000 workers returned to work on July 16. The union withdrew its demand for increased wages, but it was agreed to establish a joint control commission to secure and maintain standard union conditions for all workers in the industry. About 9,000 workers from independent shops, who had not signed the agreement, were still on strike at the end of July.

Eighteen hundred street and electric railway employees at New Orleans, Louisiana, went on strike July 2, for shorter hours, higher wages and union recognition. The strike, which was still in effect at the beginning of August, was featured by a number of riots and disorders when an attempt was made to operate cars with strikebreakers.

## PROGRESS OF INDUSTRIAL PEACE IN CANADA AND OTHER COUNTRIES

THE subject of "Peace in the Industrial World" with particular reference to the machinery for arbitration and conciliation in Canada, is discussed by Mr. Gerald H. Brown, Assistant Deputy Minister of Labour of Canada, in a bulletin (No. 84) recently published by the Council for Social Service of the Church of England in Canada. The writer regards the Canadian institutions for industrial peace as typically British in their spirit, and he shows how British ideals have spread throughout other industrial countries, particularly since the foundation of the League of Nations. "The great principles of freedom and democracy underlying the British Constitution", he says, "have gradually won their way into the political institutions of other states of the world. . . . Slowly the whole world is becoming united in its thought on these subjects, and it is being recognized that labour cannot be regarded merely as commodity or article of commerce, and that the well-being—physical, moral and intellectual—of wage earners is of supreme importance."

The characteristic feature of British law and practice in regard to industrial relations is considered by Mr. Brown to lie in the voluntary principle, which is followed in Great Britain, Canada and most of the other countries of the British Commonwealth of Nations, in the institutions they have established to govern these relations. In regard for example to the settlement of industrial disputes, "under the Industrial Courts Act of the British Parliament," he says, "reference to arbitration can only take place by consent of the parties, nor can the Minister of Labour refer a matter to arbitration unless existing joint machinery has failed. Even then there is no statutory obligation to observe the awards. It is assumed, that is to say, that all that should be done is to provide machinery as elastic and adaptable as possible to facilitate discussion between the parties, reinforced by arrangements for their reconciliation by impartial outsiders, and in the last resort, for the review of the question in dispute by a semi-judicial tribunal. It is assumed that there will be enough good sense and fair dealing in the parties concerned to take advantage of this machinery, and enough honour in them to maintain and support the agreements or decisions which are thus adopted. There can be little doubt that through the apparatus herein described a ventilation of grievances has been secured at an early stage fuller consultation, freer expressions of points of view, and above all, a clearer grasp by both parties. The area

of disputes has been reduced and many quarrels have been nipped in the bud. Doubtless also there are fewer disputes which arise out of mere misunderstanding."

The arbitration machinery existing in Canada is framed in accordance with this voluntary principle. Mr. Brown describes fully the various Canadian measures which aim at the maintenance of industrial peace without having recourse to state compulsion. This machinery includes the federal Industrial Disputes Investigation Act, the Conciliation and Labour Act, and the Canadian Railway Boards of Adjustment. Moreover, he continues, "in the principal industries working conditions in the widest sense, including wage rates, hours of labour, and terms of employment generally, are normally adjusted and settled by some form of direct discussion, negotiation or bargaining between the parties concerned. The state has by legislation laid down certain limits in respect of working conditions, applying to such matters as safety, method of payment, conditions of work and work places, compensation in case of accident, and in the case of certain classes of employees, hours of labour. Broadly, working conditions are settled by the parties concerned, and public policy in Canada has tended to encourage collective bargaining by means of discussion and negotiation. The voluntary principle is deeply rooted in British practice, and although suspended in England during the war, was promptly restored. In the main there can be little doubt but that this system works well and that the state has been wise in allowing the parties concerned in industry to work out their own problems."

The pamphlet makes note of the strong impetus given to the spread of democratic ideals throughout the world by the incorporation in the Peace Treaty on the conclusion of the Great War of the principle that a permanent peace must be based on social justice, and by the subsequent formation of the International Labour Organization. An immense amount of legislation has already been passed in the member countries based on the recommendations of the successive International Labour Conferences. As a result of this movement, "notwithstanding all the dissension which has existed in the labour ranks in the decade which has now almost lapsed since the close of the European war, it is generally recognized that the cause of industrial peace has made, and is making, steady progress, with resultant benefit to all classes of the community."

The bulletin contains tables which show the comparative immunity enjoyed by Canada from industrial losses due to strikes and lock-outs. One table gives figures for industrial disputes in Canada for each year from 1901 to 1928, showing the number of such disputes, the number of the employers involved, and

the amount of time loss in working days. Another table gives for comparison the figures for strikes in the leading countries of the world during the past three years, these records showing clearly the favourable position of Canada with respect to industrial peace.

## COMBINES INVESTIGATION ACT

### Investigation Into Amalgamated Builders' Council and Canadian Plumbing and Heating Guild

**A**N investigation of an alleged combine of plumbing and heating and other contractors and dealers in Toronto, Windsor, and other centres in Ontario has been instituted under the Combines Investigation Act. Among the reported activities of the alleged combine are the boycotting, by its members, of wholesalers and manufacturers of plumbing supplies who fail to support the organization now under investigation; similar blacklisting of plumbing contractors who refuse to join the alleged combine; the lessening of competition in the industry; and the enhancement of prices to the detriment of the public.

Following a preliminary inquiry by the Registrar, Mr. Gordon Waldron, K.C., of Toronto, Ontario, was appointed by the Governor in Council (P.C. 1311, dated July 19, 1929) a Commissioner under the Combines Investigation Act to investigate the businesses of the Amalgamated Builders' Council and the Canadian Plumbing and Heating Guild, the businesses of the members of these two organizations, the business of the Dominion Chamber of Credits, Limited, and the business of any other person believed to be a party to the alleged combine. Mr. F. W. Griffiths, K.C., of Niagara Falls, Ontario, was named by the Minister of Justice as counsel to conduct the investigation before the Commissioner.

The first action taken by the Commissioner occurred on July 22, when he visited the offices of the Amalgamated Builders' Council and called upon Mr. Louis Singer, K.C., Commissioner of the A. B. C. and of the Canadian Plumbing and Heating Guild and President of the Dominion Chamber of Credits, to produce the books of these organizations. Mr. Singer, on advice of his counsel, Mr. W. F. O'Connor, refused to produce any of the records, which he admitted were in his possession, refused to answer questions, and refused to be sworn. Thereupon, the Commissioner, exercising the powers conferred upon him by section 22 of the Combines Investigation Act, committed

Mr. Singer to the common jail of the County of York for contempt of court, to be detained until such time as he purged his contempt. Subsection 1 of section 22 of the Act reads as follows:

"The Registrar and every commissioner may order that any person resident or present in Canada be examined upon oath before, or make production of books, papers, records or articles to, the Registrar or commissioner as the case may be, or before or to any other person named for the purpose by the order of the Registrar or commissioner, and may make such orders as seem to the Registrar or commissioner to be proper for securing the attendance of such witness and his examination, and the production by him of books, papers, records or articles, and the use of the evidence so obtained, and may otherwise exercise, for the enforcement of such orders or punishment for disobedience thereof, all powers that are exercised by any superior court in Canada for the enforcement of subpoenas to witnesses or punishment of disobedience thereof."

Mr. Singer was released the following day by order of Mr. Justice McEvoy of the Supreme Court of Ontario, on bail of \$100,000. On July 24, by an order of Mr. Justice Jeffrey, the books and papers of the three organizations under investigation were sequestered and transferred to Osgoode Hall. An application for a writ of *habeas corpus* was argued before Mr. Justice Jeffrey on July 25, 30 and 31. In his judgment, delivered on August 1, Mr. Justice Jeffrey declared that the Commissioner's entry into the premises of the A. B. C. "was perfectly justified; it was not irregular, and it caught nobody by surprise, and it was in my humble opinion the only way an entry of that kind should be made." He found further that Mr. Singer had committed a wilful contempt, studied and deliberate; and that the Commissioner had jurisdiction and had properly exercised it. Accordingly he refused the application and remanded Mr. Singer in custody. Application was made on the same day to Mr. Justice Orde, who refused to grant bail. Application to Mr. Justice Newcombe of the Supreme Court of Canada was also refused, on August

S. on the ground that the Supreme Court Act did not contemplate the Supreme Court exercising jurisdiction in a case of the kind.

Hearings before the Commissioner, it was announced, would be opened in Windsor on Monday, August 12.

Of the three organizations named in the Order in Council, the first to be formed was the Canadian Plumbing and Heating Guild, which was organized in the summer of 1927, and which originally included in its membership manufacturers and wholesalers as well as plumbing and heating contractors. Later its membership was limited to plumbing contractors, while manufacturers and wholesalers were represented in the Dominion Chamber of Credits, an allied organization, formed in the fall of 1927. It would appear that the failure of these organizations to be as effective as their members had hoped led to the formation of the Amalgamated Builders' Council on April 30, 1928, and its subsequent registration as a trade union, on June 8, 1928, under the Trade Unions Act (R.S.C. 1927, c. 202), an act passed by the Dominion Parliament in 1872. The Amalgamated Builders' Council aimed to extend its membership beyond the plumbing and heating industry to all branches of the building trades in Canada. Through registration under the Trade Union Act its sponsors sought to place the members beyond the jurisdiction of the Combines Investigation Act and to secure for a body of employing contractors acting otherwise than in their capacity of employers, the immunity from criminal prosecution for conspiracy in restraint of trade which section 29 of the Trade Unions Act extends to registered trade unions. Section 29 is as follows:

"The purposes of any trade union shall not, by reason merely that they are in restraint of trade, be deemed to be unlawful, so as to render any member of such trade union liable to criminal prosecution for conspiracy or otherwise, or so as to render void or voidable any agreement or trust."

Since the formation of the A. B. C. four local sections of plumbing and heating contractors have been established under it, at Toronto, London, Windsor, and Port Arthur and Fort William. Resolutions have been passed by certain of these sections agreeing to refuse to purchase from wholesalers who sell to contractors outside of the A. B. C., and agreements have been made with certain local unions of the United Association of Plumbers and Steamfitters of the United States and Canada under which members of the union agreed to work only for members of the A. B. C. In Toronto such an agreement came into

effect on May 1, 1929, and a strike of the employees of plumbing and heating contractors who were not members of the A. B. C. took place on May 1.\* The strike was terminated on May 23, when a new agreement was signed between the plumbers' union and the Toronto Plumbing and Heating Contractors' Union, a new association of employers, acting only as employers, registered under the Trade Union Act and including in its membership the members of the Toronto section of the A. B. C. and the Toronto plumbing contractors who had not joined the A. B. C.

Following the formation of the A. B. C. and the other organizations related to it, information concerning their operations was sought by the Registrar of the Combines Investigation Act. Formal inquiries were not commenced until the Supreme Court of Canada delivered its judgment, on April 30, 1929, in favour of the constitutional validity of the Combines Investigation Act. Requests for detailed information were then addressed to the Commissioner of the A. B. C., but the requested information was not furnished. Interviews with the members of the A. B. C. and others in Toronto, London and Windsor were followed by advice from the Commissioner to A. B. C. members that they should refuse to give information. Later, the A. B. C. applied for an interlocutory injunction restraining the Minister of Labour and the Registrar from proceeding with the investigation, and for a declaration that neither the A. B. C. nor any of its members was subject to investigation under the Combines Investigation Act. The motion for the injunction was heard in Weekly Court at Osgoode Hall before Mr. Justice Raney on June 17. The injunction was refused, in a judgment given, delivered on June 28. The text of this judgment appears on another page of this issue.

The New York City Department of Health recently decided that certain occupational diseases and industrial poisonings should be considered reportable diseases. Physicians and hospitals are consequently required to notify the city authorities of any cases of the following occupational illnesses; caisson disease (compressed air illness), poisoning by arsenic bisulphide of carbon, brass, carbon monoxide, dinitrobenzene, lead, mercury, methyl alcohol (wood alcohol or wood naphtha), natural gas and phosphorus.

\*LABOUR GAZETTE, June 1929, pp. 596, 598 and 679.

## "THE NATION'S BUSINESS" AS CARRIED ON BY THE DEPARTMENT OF LABOUR OF CANADA

*Address by the Hon. Peter Heenan, Minister of Labour, over the Canadian National Railways Radio System, on July 25, 1929\**

CANADA was one of the first countries in the world to establish a separate department of the national government devoted to labour matters. The Canadian Department of Labour was founded by Act of Parliament in 1900 with a view to aiding in the prevention and settlement of industrial disputes and to provide for the publication of a monthly periodical, known as the *LABOUR GAZETTE*, containing information concerning the state of the labour market and kindred subjects, together with statistics of wages, hours, prices, cost of living, strikes and lockouts, industrial accidents and employment. The industrial situation in Canada is reviewed each month, and laws and judicial decisions concerning the employment relation are summarized. During the succeeding years the activities of the Department of Labour have been gradually increasing, and at the present time the following statutes are administered:—The Conciliation and Labour Act, the Industrial Disputes Investigation Act, the Employment Offices Co-ordination Act, the Technical Education Act, the Government Annuities Act, the Combines Investigation Act, and the Old Age Pensions Act. In addition the Department administers the Fair Wages Policy of the Dominion Government.

I now purpose giving my hearers a picture of what is being accomplished under these statutes.

### **Industrial Disputes Investigation Act and Conciliation Work**

One of the most important parts played by the Labour Department is in harmonizing the relations between capital and labour in Canada, and the Department has done and is doing a great deal to study and to solve the complex problems associated with the relations between these two bodies, and to mitigate and allay industrial unrest. The chief agency for carrying out the adjustment of industrial disputes is the Industrial Disputes Investigation Act, by which employers and

employees in certain public utility industries are required to submit their differences to a Board of Conciliation and Investigation before a strike or lockout occurs.

A review of proceedings under the Industrial Disputes Investigation Act from its enactment in March, 1907, shows that during the twenty-two years applications for the establishment of Boards of Conciliation and Investigation numbered 706; Boards were granted in 485 cases, leaving 221 disputes which were either settled by departmental intervention or were cases in which it was felt that the machinery of the statute could not be utilized. In only 38 cases was the cessation of work which threatened not averted or the strike which had been already entered upon not ended.

Disputes in industries other than those falling within the scope of the Industrial Disputes Investigation Act come before the Department also in countless ways, and the cause of industrial peace is promoted by the mediation and friendly offices of the departmental officials who are stationed at various points throughout Canada. In many cases where settlements have been secured by conciliation through the assistance of these officers, it is not considered desirable to give the matters publicity and, as a result, much of the work of the Labour Department in this direction has often been known only to those directly concerned. During the past year the conciliation officers have been invited to meditate in some forty industrial controversies.

### **Employment Service**

Through its Employment Service Branch the Department of Labour co-operates with the provinces to maintain public employment offices to give free service to the residents of the country. These offices are located in the sixty-four centres of chief industrial importance, and while their maintenance is primarily a provincial responsibility, the Department of Labour pays approximately one-third of their upkeep. Due to this latter fact the Federal Employment Service Branch is able to link up the public employment offices of the several provinces into a co-ordinated and unified Dominion-wide system. All classes of workers, both men and women, are at liberty to make free use of the facilities provided for securing jobs, while any employer who

\*This address, which in the Minister's unavoidable absence from Ottawa was delivered by Mr. H. H. Ward, Deputy Minister of Labour was one of a series of addresses on "The Nation's Business" delivered over the Canadian National Railways radio system by members of the Dominion Government. Previous addresses in the series were given by the Right Hon. W. L. Mackenzie King, Prime Minister; the Hon. Charles Stewart, Minister of the Interior; and the Hon. Peter Veniot, Postmaster General.

desires to secure the services of any class of worker is likewise entirely welcome to go to the public employment office. As indicating the volume of work carried on by these offices, it is interesting to observe that during the fiscal year which ended with March 31st last, jobs were found for 472,977 applicants. Through a special arrangement with the railways, applicants at offices of the Employment Service who are being sent to employment at a distance are granted a reduced transportation rate, and this extra assistance was afforded to 33,203 persons during the last fiscal year. Incidentally, it should be pointed out that the number of placements in employment made by the Employment Service during the last fiscal year was the largest number made in any fiscal year since the offices were first established more than ten years ago.

Remembering the substantial part that Canada played in the late war, it is not surprising that we have to-day, eleven years after the close of hostilities, a considerable number of those who served in our armed forces who are handicapped in securing in forces who are handicapped in securing employment by reason of disabilities due to war service. Through the Employment Service of Canada the Department of Labour makes special provision of facilities for assisting these men into employment suitable to their needs and aptitudes. In the larger employment offices the Department of Labour has placed special officers to cope with this problem. During the last fiscal year there were 8,959 handicapped ex-service men placed by the Department of Labour, in co-operation with the provincial governments, through these public employment offices.

### Fair Wages Policy

The Fair Wages Policy of the Government of Canada, which has been in effect since 1900, is applicable to federal public works involving expenditures of millions of dollars each year, and aims at the protection of the legitimate interests of the workpeople employed by securing for them wages, rates and hours equal to those which, are generally observed by other employers in the districts in which the works are being carried on.

The Fair Wages Branch of the Department of Labour is charged with the preparation of schedules of current wage rates, which are inserted in Dominion Government contracts and must be adhered to by contractors in the execution of such works. The number of fair wage schedules prepared from the adoption of the Fair Wages Resolution in 1900 up to March 31, 1929, was 4,786. Fair wage conditions are also inserted in contracts for the

manufacture of certain classes of government supplies and in contracts for all railway construction to which the Dominion Government has granted financial aid, either by way of subsidy or guarantee.

The Department of Labour is frequently consulted by other departments of the Government regarding the wages rates to be observed in connection with works undertaken on the day labour plan.

More recently still the Government has adopted the practice of including fair wages conditions in licenses for the cutting of pulpwood on Dominion lands and the development and operation of water-powers in Western Canada.

The example set by the Dominion Government in this policy for the legitimate protection of workers engaged in the execution of Federal contracts, has been copied in the several provinces and has been widely adopted by municipal and other public bodies throughout Canada. The experience gained in its operation shows that the policy has been of the utmost value to labour in establishing standard conditions both of wages and of working hours in the different branches of employment.

### The Combines Investigation Act

The Combines Investigation Act declares in a general way against combines "which have operated or are likely to operate to the detriment or against the interest of the public, whether consumers, producers or others." While it provides means of protecting the public against combinations which may use their power to fix or enhance prices or to stifle competition, it does not interfere with changes and developments in the organization of modern business which are in the interest of the public as a whole.

The Act enables the public to co-operate in safeguarding its own interests, by providing that any six adult citizens may have an investigation started, and carried on at government expense, if they have reason to believe that a combine against the public interest exists or is being formed. Once such an application is made, it is the duty of the Registrar under the Act to make preliminary inquiries. Frequently in these preliminary inquiries, complaints are found to be without sufficient grounds, in which case they get no farther and receive no publicity. In a number of cases tendencies in wrong directions have been checked by means of these preliminary inquiries, which are conducted for the most part without publicity, without litigation and at a minimum of expense. If, however, the complaint turns out to be well

founded, a special commissioner, with wide powers in the way of examining records and compelling attendance of witnesses, may be appointed to make a more exhaustive investigation and bring in a finding which is made public. The publicity which is given to these reports provides a valuable corrective influence. Prosecution may or may not follow; but if it does, anyone who is found by the courts to be a party to a combine or who knowingly assists in its formation or operation "is guilty of an indictable offence and liable to a penalty not exceeding ten thousand dollars or to two years imprisonment, or if a corporation to a penalty not exceeding twenty-five thousand dollars."

It is obvious from this that the usefulness of the Combines Investigation Act is not to be measured by the number of prosecutions conducted under it, nor even by the frequency with which its activities get into the newspaper headlines. Both methods, of penalty and publicity, have been employed. But for the most part the usefulness of the Act is *preventive* rather than punitive. Publicity and penalty are used when necessary, but the mere existence of the statute, the ease with which its investigative machinery can be set in motion in a particular case, and the constant activity of that machinery, provide a public safeguard which of necessity cannot be fully appreciated.

### Canadian Government Annuities

The Government Annuities Act, under which is operated the Canadian Government Annuities System, was passed during the year 1908. The system is designed to encourage and aid the people of Canada to make provision for old age.

A Government Annuity, which is a fixed yearly income paid by the Government of Canada, may be purchased by persons resident or domiciled in Canada between the ages of 5 and 85. The minimum amount of annuity purchasable is \$10 a year, and the maximum amount \$5,000 a year. The system is, therefore of interest to both young and old, the working man who has only his earnings to keep him and make provision for old age, as well as persons who have accumulated savings and who desire to retire and provide themselves with a safe form of investment which will yield them a good return and a steady income as long as they live.

The cost of an annuity varies with the age of the applicant, the plan of annuity for which application is made, the amount of annuity desired, and the age at which the annuity is to begin.

The government provides the cost of administration, and there is no charge made against the annuitant for profits.

Rapid strides are being made in furthering the sale of these annuities. During the fiscal year ending March 31, 1928, more than four and one-quarter million dollars was received towards the purchase of annuities, and 1,328 new contracts were issued. Since the inception of the Annuities Branch in September, 1928, annuity contracts total 10,264, and purchase money received amount to approximately twenty-two million dollars.

A free booklet descriptive of the Canadian Government Annuities System may be obtained by writing to the Superintendent of Annuities, Department of Labour, at Ottawa, or upon application at your nearest Post Office.

### Old Age Pensions

The Old Age Pensions Act was passed by the Parliament of Canada at its Session in 1927. This Act provides for the payment of a pension to all British subjects who have reached the age of seventy years have been resident in Canada for the past twenty years and in the province in which application is made for the past five years. Pensions are payable to persons whose income does not exceed \$365 per year. The maximum pension is \$240 yearly and is reduced by the amount of the pensioner's income exceeding \$125; in other words, the amount paid for pension, if the pensioner has an income of \$125 or more, will add to his income so that it will amount to \$1 a day.

The scheme provided by the Act is a co-operative one between the Government of Canada and such provinces as adopt the scheme by provincial legislation. Up to the present time all the provinces west of Quebec have adopted the Dominion Old Age Pensions scheme. Administration and payment of pensions is vested in the provincial authority and the Dominion Government repays to the province one-half the amount paid for pensions.

British Columbia has been paying pensions since the 1st day of September, 1927, and on the 31st March last there were in British Columbia 3,867 pensioners. The administration and payment of old age pensions in this Province is vested in the Workmen's Compensation Board of British Columbia.

The Province of Saskatchewan commenced to pay old age pensions as from the 1st day of May, 1928, and on March 31st last the number of pensioners in Saskatchewan was 2,763. The Bureau of Child Welfare at Regina is the body charged with the administration of pensions in that Province.

The Province of Manitoba commenced to pay pensions from the 1st day of September, 1928, and on the 31st March last the number of pensioners in Manitoba was 3,953. The

administration of old age pensions in Manitoba is vested in the Workmen's Compensation Board of that Province.

On the 31st March last there were 10,588 persons receiving pensions in the three provinces mentioned, namely, British Columbia, Saskatchewan and Manitoba.

Recently the Provinces of Ontario and Alberta have adopted the Old Age Pensions scheme. Pensions will be payable in Alberta from the beginning of next month, and the administration is vested in the Workmen's Compensation Board of that Province. In Ontario pensions will be payable from the 1st day of November next.

The Governments of the Provinces of Nova Scotia and New Brunswick are making inquiries as to the prospective number of pensioners in these Provinces with the view of estimating the cost, and at the last session of the Quebec Legislature the Government announced that the matter was under consideration.

### International Labour Organization

The Department of Labour is also concerned with the proceedings of the International Labour Conference established in connection with the League of Nations. The Minister of Labour is a member of the Governing Body of the Conference and the Dominion Government has been represented at all but one of the meetings of the Governing Body. The International Labour Conference meets annually and is attended by rep-

resentatives of the Dominion Government and of the employers' and workers' organizations. The Conference has discussed a large number of subjects on many of which draft conventions have been agreed upon or recommendations adopted. Canada's membership of the Conference has necessitated the compilation of information on many matters connected with labour in Canada. In addition, the Department of Labour acts as a central agency for the collection from the Provincial Governments and distribution to them of information in connection with the International Labour Office.

### Conclusion

In addition to the features of the work of the Department of Labour outlined above, comprehensive reports are compiled and published annually on Labour Organization, Organization in Industry, Commerce and the Professions, and Co-operative Associations; also a report containing the text of the labour laws of the Dominion Parliament and of the Provincial Legislatures, as well as annual bulleting on wages and hours of labour, prices and cost of living, and strikes and lockouts. All of these reports are much in demand and are given a wide distribution.

I shall now conclude by thanking my hearers for the kind attention they have given to my remarks, which I trust have been of interest and have given an insight into the phases of the nation's business as carried on by the Department of Labour.

### International Industrial Relations Association

A conference of the International Industrial Relations Association (I.R.I.) was held at Schloss Elman, in Upper Bavaria, Germany, from June 26 to July 3, and was attended by 63 representatives from 15 different countries. The subject of discussion was the methods of promoting satisfactory human relations in industry which is rationalized or scientifically managed. Every section of industrial thought and experience was represented—production managers, research workers, employers and employees. These were brought together by their keen interest in the world-wide need for raising the standard of life by increased production and wider distribution of goods and services.

Rationalization under various forms and names held the central place in the discussion. The fear of unemployment as a consequence of rationalization was evident on the employees' side. Scientific management, however, was described as that management which best co-ordinates all activities in the

workshops and in an industry to the end of producing goods and services with the least waste of human effort and material resources; and the evils resulting from various systems of intensifying labour and increasing speed were shown to be due to misapplied or unscientific methods of management. It was pointed out that the economic crisis in which all industrial countries are more or less involved can only be met by a fuller application of science to industrial problems. The conclusion reached by the conference was that higher standards of life, protected against the unemployment and insecurity at present found in all countries, can only be attained by a thorough-going application of technical skill combined with understanding of human relations.

The association has its headquarters at The Hague, Holland. Its president is Mr. C. H. Van der Leeuw, of Amsterdam, and the vice-presidents include Dr. George H. Miles, of London, Miss Mary Van Kleek, New York, etc.

## LABOUR LEGISLATION IN NOVA SCOTIA, NEW BRUNSWICK AND MANITOBA IN 1929

### Nova Scotia

The first session of the Thirty-ninth Legislature of the Province of Nova Scotia opened on February 27 and concluded on May 8, 1929. The chief legislation affecting labour that was enacted consisted of amendments to the Workmen's Compensation Act.

The opening speech from the Throne called attention to the increased responsibilities devolving upon the House of Assembly owing to the constitutional change involved in the abolition of the Legislative Council last year. Reference was made to the stabilization of metal mining in the province, partly due to the establishment of a "national fuel-steel policy," and to the opening of at least one base metal mine in the province. It was announced that the Department of Education was giving particular attention to rural schools. The Speech referred with regret to the withdrawal of the Dominion Government grant to the provinces for technical education. A further feature of the session was the presentation of a preliminary report on the proposed adoption by the province of the federal Old Age Pensions Act (the interim report of the provincial commission of inquiry on this subject was outlined in the *LABOUR GAZETTE*, May, 1929, page 501).

#### Workmen's Compensation

The basis used in computing the amount of compensation was changed so as to increase payments in respect to accidents which occur after January 1, 1930, in industry generally and after May 1, 1930, in the industry of lumbering (including saw mills), the limit of compensation allowable in cases of death, of permanent total disability, and of permanent partial disability being raised from 55 to 60 per cent of the average earnings of deceased or injured workman. In a death case this amount is exclusive of burial expenses. The amount allowed for the burial expenses of a deceased workman was increased from \$75 to \$100.

The definition of "employer" as used in the Act was modified in respect of Crown industries, the inclusion of provincial government industries, being made permissive instead of obligatory. The official designation of the Workmen's Compensation Board was changed by the addition of the words "of Nova Scotia."

The scope of the Act was enlarged so as to make personal injury by lightning compen-

sable, and to provide that such injury occurring in the course of employment shall be presumed to have arisen out of employment.

The section relating to the reciprocal provision of compensation for a workman residing in another province was recast, and the subsection added in 1927 to provide for the payment of compensation to a widow residing outside Nova Scotia was amended so as to include dependants also, reading as follows:—

"Where the dependents are a widow or an invalid widower and one or more children, the board may upon application grant leave to such dependents or any of them to reside out of Nova Scotia and may order that payments of compensation under this chapter may be made to any of such dependents while residing out of Nova Scotia without reducing the amount of such compensation below what it would have been if such dependent or dependents remained within the Province of Nova Scotia."

The limit of one year within which a claim for compensation must be lodged with the Board was made applicable also to a claim for medical aid. In connection with the medical aid services, provision was made for the supply of artificial limbs and other apparatus to workmen who have sustained loss of natural limbs, these to be kept in repair for a year; and also for the supply of spectacles made necessary through an accident. The provision regarding the supply of artificial limbs that was added to the Act in 1927 is now repealed (the latter provision had authorized the Board to supply artificial limbs where an injured workman's disability would be lessened by such action). Where a workman or dependant dies before compensation is paid, the amount due for compensation is made payable to the person who cared or provided for the deceased before death (previously this provision applied only to a dependant dying under such circumstances).

In the section defining the employer's duty after an accident has occurred, that is, in regard to the furnishing of reports, etc., it was provided that these duties are to be performed in connection with all accidents entitling injured workmen to medical aid for thirty days.

To the section which provides penalties for employers who fail to report the amount of their pay-roll, a subsection was added providing that in the event that the employer has failed to furnish such a report, or represents the amount at too low a figure, the Board may itself make an estimate of the pay-roll which estimate will be final and conclusive.

The cost of recording a certified copy of an assessment in the Registry of Deeds, in addition to the assessment itself, was declared to be a first lien upon the property on which an employer is assessed.

The existing provision which relieved the Board of responsibility for medical aid where such is already supplied by an employer, was modified so as to permit the Board to supply treatment by an eye, ear, nose or throat specialist where a physician considers such treatment necessary.

### Mechanics' Liens

The Mechanics' Lien Act was amended to provide that where the Act refers to "land" in connection with mechanics' liens, the word is to be understood as including all the forms of property upon which a lien may arise.

### Teachers' Pensions

The Nova Scotia Teachers' Pension Act, enacted last year, was amended by the addition of a provision bringing teachers in the schools for the blind and deaf at Halifax within its scope. It was also provided that recognition would be made, for pension purposes, of time spent by a licensed teacher of the Province teaching elsewhere in the British Commonwealth in a public school, or as an instructor in a recognized university. Such teachers, however, will be required to pay contributions covering the period of their absence from Nova Scotia. The Nova Scotia Teachers' Pension Act of 1928 provided for payment

of a pension to a teacher who has served (a) for not less than 35 years; (b) for not less than 30 years, and has attained the age of sixty years; (c) for not less than 15 years, and has become mentally or physically incapacitated as a teacher. Such periods of service are not contingent upon the consecutiveness of teaching periods. The annual pension derived from the pension fund is equivalent to a sum three times the annual amount of the Provincial Aid (the sum which a teacher is entitled to receive annually from the provincial treasury under the provisions of the Education Act). The amount of the annual pension must be at least \$365. One half the amount of a pension continues to be paid to the widow of a pensioner during her lifetime or until re-marriage.

### Teachers' Qualifications

The Education Act was amended in regard to the qualifications required of teachers, so as to provide that the "time spent by a duly licensed teacher of Nova Scotia as a teacher in any other part of the British Commonwealth, or as an instructor in a recognized university in any part of the British Commonwealth, shall be regarded as time spent in teaching in the public schools of Nova Scotia, provided that the maximum period of such teaching service outside the province, so regarded, shall not exceed five years."

An Act was passed to incorporate the Nova Scotia Farmers' Association and County (or District) Farmers' Associations.

## New Brunswick

The fourth session of the Ninth Legislature of the Province of New Brunswick opened on February 21 and terminated on March 27. The opening Speech from the Throne intimated that a commission would be appointed to investigate the subject of Old Age Pensions in view of the existing uncertainty as to the cost of such a scheme. The principal measure affecting employment conditions was one providing for the establishment of a pension system for members of the Provincial Police force.

*Provincial Police Pensions.*—The Provincial Police Pension Act authorizes the provincial commissioner of police to deduct 3 per cent from the pay of members of the force under 50 years of age at the time of enlistment and 5 per cent from the pay of those over that age, as a contribution towards the Pension Fund. Members of the existing force have the option of coming under the scheme. The

payment of retirement allowances will be paid to policemen as follows:—

On the retirement or death of a member after a service of more than seven but less than twelve years, an allowance of one month's pay for each completed year of service, to be computed at the rate, or the average rate of pay of such member in the year of his retirement. After a service of twelve but less than fifteen years the allowance is one and one-half months' pay for each complete year of service; and for service over fifteen, but less than twenty years, it is one and two-third months' pay for each year of service. After service of twenty but less than twenty-five years, retiring policemen are entitled to an annual pension for life equal to half pay at the time of retirement; and after service of twenty-five years or over the amount of the pension is three-fifths of the annual pay on retirement. If, however, a pensioner has not served three years in the rank at which

he retires he will be paid according to the average annual pay he received during the last three years.

The Act also makes provision for the payment of sickness or injury allowance on a scale rising according to years of service from \$200 after one year's service, to \$300 after five years. For six years' service or more the allowance will be up to two months' pay for each complete year of service, based on the average pay of the last three years. Provision is made also for granting allowances in special cases. No sum payable as a pension, allowance, or benefit, is assignable at law or otherwise attachable for debt or liability. The commissioner of police may use his discretion as to the person to whom the pension or allowance will be paid in cases where the ex-member of the force is judged incapable of properly expending it.

*Landlord and Tenant.*—The provisions of the Landlord and Tenant Act were limited by

the definite restriction of the word "trader" as used in the act to persons whose principal business is that of buying and selling merchandise, those who do so only incidentally being excluded from the definition.

*Miscellaneous.*—The Act passed in 1925 to provide for the purchase, sale and free distribution of school books was amended by the removal of the former limit of the free distribution to pupils not in advance of Grade V or Ungraded Standard III of the public schools, and by leaving the field of distribution to be determined by the Governor in Council.

Numerous amendments to the Motor Vehicle Act were made, including some minor changes in the sections relating to chauffeurs' licenses.

Among the private and local acts of the session was an Act to incorporate the Gloucester County Fishermen's Association for the purpose of cooperation among the numbers.

## Manitoba

The second session of the Eighteenth Legislature of Manitoba opened on February 11, continuing until May 17, 1929. Several measures of interest to labour were enacted, including amendments to existing acts.

### Old Age Pensions

The Old Age Pensions Act was amended to provide for the administration of the Act being transferred by order in council to any branch or department of the government, or to a board or body of persons designated by the Lieutenant-Governor in Council to administer Act. Provisions is also made for payment of pension cheques to such person as the board may direct in case the pensioner dies or for any reason is unable, or refuses, to endorse his cheque.

The legislature adopted the report of a special committee recommending the passing of an Act to provide for a living wage to all blind workers working in institutions receiving government aid in Manitoba, and that all work carried on in such institutions be under the supervision of the Fair Wage Board. Special provision in the Old Age Pensions Act for the inclusion of blind persons was also recommended, the committee making the following statement on this subject:—

"Your Committee has been impressed with the work of the Canadian National Institute for the Blind in an attempt to make blind persons measurably independent and self-supporting. We realize, however, that there is a large number of blind persons, who, through age or other infirmities, cannot be employed in the regular work of the institute, and the

existence of these men and women in our midst constitutes a very serious problem, and one which we consider will become more acute unless a pension is provided for such persons. We would recommend that the Government embrace the first opportunity to impress upon the Dominion authorities the necessity for making provisions for such pensions."

### Employment Agencies

The Employment Bureau Act was amended in the section relating to the prohibition of private employment agencies, its provisions being extended to any persons who carry on an employment bureau as a partial vocation.

### Workmen's Compensation

The following resolution on this subject was adopted. (The names of the members of this committee subsequently appointed by the Government are given on page 846).

1. That it is expedient in the interests of both the employers and the employed in the Province, that there be appointed by the House a special committee of fifteen members, of which five shall represent employers, five represent employees and five represent the Legislature, with instructions and authority to investigate and report upon the question of compensation to the families of persons killed while employed in any industry and to the persons injured in such employment in this Province, and upon the present legislation regarding the same being the Workmen's Compensation and the application and administration thereof and all matters incidental thereto, and to report to this House at the next Session thereof, with power to sit and act in the recess, and to summon witnesses, administer oaths or take affirmations, and to require the production before the Committee, of books, papers

and records, and generally to proceed to the above end as to the said Committee shall seem proper.

2. Your Committee further recommends that pending the report of such Committee, Bills 71 and 72 be not proceeded with, except as to Section 1 of Bill 72.

Section 1 of Bill 72, mentioned in the foregoing resolution, was subsequently passed. It provides that the Lieutenant-Governor may appoint an acting director during the temporary absence of a director for any cause. (The Workmen's Compensation Board of Manitoba is composed of a commissioner and two directors appointed by the Lieutenant-Governor in Council).

Bill No. 71, introduced by Mr. John Queen, one of the Winnipeg representatives in the legislature, proposed, among other changes, to increase the amount of compensation payable to injured workmen from a sum equal to 66 $\frac{2}{3}$ % to 75 per cent of average yearly wages, and that in calculating the average earnings, account should be taken only of actual working periods, unemployed time not being reckoned.

#### Mines Act

The Mines Act was amended to provide that general rules made thereunder by the Lieutenant-Governor in Council shall be observed in every mine except so far as the chief inspector of mines may consider any rule to be inapplicable.

#### Child Welfare

The Child Welfare Act was amended by widening the definition of "neglected child" to include any child whose parents have not been legally married to each other and whose mother refuses to maintain such child. Municipalities to which the neglected child is alleged to belong are required to be notified of the investigation before the juvenile court or police magistrate. No child under the age of twelve years can now be sent to an industrial school.

The owners of places of amusement must take out permits to employ juvenile performers, the fee in each case being fixed at \$20 per annum.

#### Public Health

The Public Health Act was amended so as to permit the minister to prepare a scheme for the organization of health districts consisting of a number of municipalities having an aggregate population of at least 10,000 persons. The scheme includes the appointment of district boards of health, with medical, clerical and sanitary staffs, who will devote their whole time to promoting health and sanitation in the district. One half the

expense will be paid by the municipality and the other half by the Department of Health and Public Welfare.

By a further amendment to the Act the Board of Health is empowered to order the vaccination against small-pox and inoculation against typhoid of all employees in lumbering, wood-cutting, timber, mining or construction camps and any person refusing to comply with such an order shall be discharged from his employment. The section does not apply to members of the running trades or telegraphers, or to persons treating human ailments by prayer or spiritual means as an exercise of religious freedom. Conscientious objectors, are also excepted if they file an affidavit but are subject to isolation for four weeks.

The Municipal Act was amended to permit the Council of an incorporated town to engage a salaried physician.

The title of the Manitoba Association of Graduate Nurses was changed to the Manitoba Association of Registered Nurses. The Vital Statistics Act was amended to provide for its administration by the Department of Health and Public Welfare. Provision was also made for the establishment of an Adopted Children's Register and copies of decrees of absolute adoption are to be forwarded by the Director of Child Welfare to the recorder of vital statistics.

#### Education

Among other amendments to the Public Schools Act it was provided that town and village school boards should have power to grant leave of absence to any teacher or officer, and to make an allowance per month during such leave of absence.

The School Attendance Act was amended to provide for a statutory form of certificate of non-attendance, which shall be *prima facie* evidence in regard to all statements therein.

#### Miscellaneous Acts

The Warehousemen's Lien Act was amended to provide that the notice of lien to be given to certain persons by the warehouseman shall be given within two months after he has knowledge of the owner, instead of (as formerly) within two months of the date of the deposit of the goods.

The Distress Act was amended to provide that on every copy of demand there shall be stamped in conspicuous type and in red ink the sections of the Act enumerating the Statutory exemptions etc., and to provide that where a tenant has made an authorized assignment or has had a receiving order made against him, the assignee or trustee in the distribution of his property shall first pay the

wages and salaries of clerks and servants in respect of services rendered to the tenant during three months before the date of the assignment or receiving order.

The Manitoba Magistrates Act was amended by adding to the jurisdiction of justice of the peace cases arising under the Masters and Servants Act, the Public Schools Act, and the School Attendance Act.

## REGULATIONS UNDER THE OLD AGE PENSIONS ACT, ALBERTA

**T**HE following Regulations dated July 10, 1929, for the Administration of Old Age Pensions in Alberta were published in the *Alberta Gazette*, July 15.

His Honour the Lieutenant-Governor, by and with the advice of the Executive Council, has been pleased to order that (a) the Workmen's Compensation Board be and is hereby appointed as the Pension Authority, with the power and duty to administer and carry out the provisions of The Old Age Pensions Act, 1927, being Chapter 156 of the Revised Statutes of Canada, 1927, and of The Old Age Pensions Act, Alberta, being Chapter 24 of the Statutes of Alberta, 1929, the Chairman of the Board to be the Chief Executive Officer of the Authority; and (b) that the following Regulations be and are hereby made for the administration of the said Act:

1. The Regulations made by the Governor in Council by Order in Council dated the 21st day of December, 1928,\* being P.C. 119-2298, are hereby adopted as Regulations under The Old Age Pensions Act, Alberta.

2. For the purpose of ascertaining whether a pensioner is residing in a Municipality or an Improvement District, the pensioner shall be required to furnish such information from time to time as the Pension Authority may from time to time determine.

3. In determining the fact of the place of residence of an applicant for a pension, the Pension Authority shall be guided by the following principles:

(1) If the applicant is at the time of application, or has been at any time within the preceding period of twelve months in receipt of relief as an indigent, or as an indigent sick person, the applicant shall be deemed to be a resident of the Municipality, or Improvement District, chargeable with such relief pursuant to the appropriate Municipal Act.

\*The Dominion Regulations were given in the *LABOUR GAZETTE*, February, 1929, page 164; those for Ontario, July 1929, page 731; Saskatchewan, May, 1928, page 467; British Columbia, September, 1927, page 926; October, 1927, page 1050.

The Act incorporating the Manitoba Wheat Producers Limited was amended by changing the name of the company to the Manitoba Wheat Pool, and to provide that the company shall not have either capital stock, or shares or shareholders, the existing issued shares becoming memberships and any person signing a marketing contract becoming a member.

(2) If the applicant is not at the time of application, and has not been within the preceding period of twelve months, in receipt of relief as an indigent or an indigent sick person from a Municipality or an Improvement District, and is not the inmate of any charitable or public institution, he shall be deemed to be a resident of the Municipality or Improvement District in the Province in which he last had his home for a period of six consecutive months.

(3) If the applicant does not come within the provisions of either of the two preceding paragraphs he shall not be deemed to be a resident of any Municipality or Improvement District, so as to render any Municipality or Improvement District Fund liable for contributions under the provisions of Section 6 of the Act.

4. The Pension Authority shall give notice in writing to the Clerk or Secretary-Treasurer in the case of a Municipality, or to the Deputy Minister of Municipal Affairs in the case of an Improvement District, of any pension allowed which the Pension Authority proposes to make a charge against such Municipality or District. If the Municipality does not dispute its liability in writing to the Pension Authority within ninety days of the date of the notice, the pensioner shall be deemed conclusively to be a resident of the Municipality. If liability is disputed, the Municipality or Deputy Minister shall, within the said period of ninety days, submit to the Pension Authority, in writing, the facts and circumstances relied upon to avoid liability, and as soon as may be after the expiration of the said period the Pension Authority shall, after such enquiry into the matter as it deems proper, decide whether or not the Pensioner was a resident of the Municipality, or Improvement District, as the case may be, at the time the application for the pension was made, and such decision shall be final and conclusive and there shall be no appeal therefrom.

5. For the purpose of investigation into any circumstances relating to any application for any pension or any pensioner, the Pension

Authority may request any Department of the Government to cause enquiries to be made, and upon such request being made, such enquiry shall be made if and when reasonably possible, and the results of such enquiry shall be reported to the Pension Authority; and the cost of such enquiries shall be borne by the Department making such enquiry.

6. The Pension Authority shall keep full and accurate accounts of all its financial transactions, in such form and manner as may be from time to time prescribed by the Treasury Board, and the same shall at all times be open to inspection and audit by the Provincial Auditor.

7. The Pension Authority shall prepare and deliver, in each month, to the Provincial

Treasurer, a voucher for the total of all Pensions payable for that month, and thereupon a cheque will be issued for the amount of the voucher and will be deposited to the credit of the Provincial Treasurer in a chartered bank in an account entitled: "Provincial Treasurer A/C *The Old Age Pensions Act, Alberta.*" Pension cheques shall be prepared by the Pension Authority, and shall be signed by one of the members of the Authority and shall be countersigned by the Provincial Auditor.

8. The Board shall be entitled to receive from the Bureau of Vital Statistics any information and copies of any entry or certificate recorded therein, which may be required by the Board in connection with any pension or application for a pension, without charge.

### REPORT OF COMMISSIONER OF LABOUR OF ALBERTA, 1928-9

THE Commissioner of Labour of the Province of Alberta, in his annual report submitted to the Provincial Legislature at its recent session, reviews the activities of the Bureau of Labour during the fiscal year ending March 31, 1929. The report also contains an account of the proceedings under the Labour Disputes Act during 1918. (This report is reprinted on page 862 of this issue). In addition to statistics of trade and industries, the publication of which are entrusted to the Bureau under the Bureau of Labour Act of 1922, the Bureau also conducts the provincial Employment Offices and administers the Factories Act, the Minimum Wage Act, the Boilers Act and the Theatres Act.

#### Trade and Industries

The report records general expansion of business in the province during the period 1928-9. Returns from 2,274 firms covered 48,834 male employees over eighteen, 935 males under eighteen, 7,291 females over eighteen, 371 females under eighteen and 699 apprentices. The total payroll for wages and salaries was \$69,304,803.13, of which sum \$60,917,887.17 was paid to wage earners. The returns, when considered as to employment by months for males, show a greater difference than in pre-

vious years. This is due to the heavy construction program carried on during the summer and fall, with no counter-balancing extra employment during the other months. April was the month of least employment, 33,900 workers being employed, and August the month of greatest employment, 45,181 being employed. There was a marked increase in the numbers employed during the last six months of the year over those employed for the first six months. It is pointed out that "as in previous years, the returns, when considered by individual industries, show great fluctuations and when this is considered with the grouped totals, it is apparent that for the unskilled work in the various industries, men interchange from one to another, thereby maintaining a better general balance."

The returns of monthly employment of females show an increase in the number employed throughout the year. January was the month of least employment, when 6,088 were employed; following this there was a steady increase each month to September, when 7,500 were employed, and then a slight decrease for the remaining three months.

The accompanying table, based on returns from 2,274 firms, classifies the employees by wage groups and weekly wage rates.

#### STATISTICAL TABLE OF TRADES AND INDUSTRIES IN ALBERTA 1928-29

##### PAY ROLLS

**Factories Act**

The services of all the inspectors within the Bureau's control are used for general inspections under the Factories Act and the Minimum Wage Act. The returns from the inspectors under the former Act showed marked expansion in business. New industries were established and practically every one of the existing industries increased its staff. The increase in male employees was 5,016, or 24 per cent, and in female employees 2,026, or 32 per cent.

Recommendations relative to safety, sanitation, hours and wages and the employment of children to the number of 1,269 were made, all of which were fully carried out by employers. All places within the scope of the Act received at least one inspection visit during the year, subsequent visits being for the purpose of checking up on recommendations, on complaint, or where there is a varying element of risk.

Elevators were also inspected, numerous recommendations being made with the view to their safer operation. Inspectors issued a number of permits for overtime for reasons of trade during the year. These were for stocktaking, for seasonal occupations, etc.

**Minimum Wages for Women**

The sixth annual report of the Minimum Wage Board refers to the application by employers during the year for permission to work

their employees overtime. Such requests were connected with the Christmas and other season rushes, and were granted by the Board on condition that the provisions under the various orders in regard to payment for overtime should be observed.

Five requests were received for permission to employ a greater number of apprentices than is permitted by the regulations. Investigations showed that experienced help was not available; permission was therefore granted for the number necessary to meet the requirements of the industries.

A new order, that governing the canning of fruit and vegetables was issued during the year (LABOUR GAZETTE, August, 1928, page 854).

The number of businesses employing female help that were inspected during the year was 2,693. These businesses employed 7,903 experienced helpers and 945 learners. As the result of the inspections, 252 orders for adjustment of wages, 59 for adjustment of hours, and 31 for adjustment of staff, so that not more than 25 per cent would be in receipt of apprentice wages, were made.

There was an increase in the total number of females employed under all orders. The total increase under all orders was 1,908, or 27 per cent.

The inspectors found a number of females in receipt of wages less than the minimum rate and a number who were working longer hours than the maximum fixed by the Board. All

wages and hours were adjusted by employers when the infractions were brought to their attention by the inspectors.

Three court cases were taken against proprietors of restaurants for failing to pay minimum wages. Two convictions were obtained and the employer was ordered to pay back wages; one case was dismissed.

The number of employees coming under each of the seven orders of the Board were as follows:—

	Experienced	Apprentices
Order No. 1—		
Manufacturing.....	1,065	265
Order No. 2—		
Laundries, dyeing and cleaning...	355	101
Order No. 3—		
Hotels and Restaurants.....	1,241	67
Order No. 4—		
Personal Service.....	278	18
Order No. 5—		
Office occupation.....	3,324	186
Order No. 6—		
Retail establishments.....	1,639	177
Order No. 7—		
Fruit and vegetable canning.....	1	131
Totals.....	7,903	945

### Boiler Inspection

The report of the chief boiler inspector describes the work of his branch, which showed a marked expansion during the year, not only in the older industrial districts but in the new north country. The increased activity in the sawmills and mines entailed more work for the branch. The report outlines the various boiler accidents which occurred during the year, none however resulting in fatalities or serious bodily injuries.

## WORKMEN'S COMPENSATION IN ALBERTA IN 1928

The eleventh annual report of the Workmen's Compensation Board of Alberta describes its activities during the calendar year 1928. The payroll figures and the number of persons employed during the year in the various industries within the scope of the Act were not available at the time of publication but the indications were that they would show a decided increase over those of 1927. This increase in the number of workmen is accounted for by amendments to the Act whereby all employees (except conductors and trainmen) of the various railways previously excluded from the Act were brought within its scope. Provision was also made to include hotels and commercial greenhouses, and to extend to those engaged in farming

### Employment Offices

An account is given of the work of the Alberta Government Employment Offices during the year. The industrial activity in the province was reflected in the increased business transacted by these offices. There was an increase in the vacancies for building construction, domestic and personal, general labouring, miscellaneous and casual employment, agriculture. Railway construction and operation, mining, and manufacturing were practically equal, while there was a material reduction in the vacancies for lumbering. Of the 72,924 vacancies filled, 63,723 were for males and 9,201 for females.

The director draws attention to the high percentage of vacancies that were filled and of applicants who were found employment, showing that the requirements of industry are now being met by the Employment Service.

Referring to the experiment of bringing men from Great Britain to help in the harvest operations in 1928, the director states that it was not so successful as was expected. "These men were strange to the customs of the country, required individual attention in placement, which is not possible during the heavy rush of this period, and did not adapt themselves very readily to the work."

### Theatre Inspection

This section of the report refers to the decided impetus received by the motion picture of the industry from the introduction of synchronized sound pictures. Projection room regulations were revised to meet the new conditions. Information is given as to the number of inspections carried out, certificates issued, etc.

and ranching the right to make voluntary application for protection under the Act.

Net assessments levied during the year, together with those outstanding at December 31, 1927, totalled \$1,190,531.27, as compared with \$1,010,616.29 for the year 1927. Of this amount \$1,175,806.77 was collected, leaving \$14,724.50 unpaid as at December 31, 1928.

Contributions on account of medical aid totalled \$240,083.38, while payments for medical services amounted to \$207,601.63.

The administration expense (excluding that made on account of mine rescue) was \$84,233.85, or 5.17 per cent on cash receipts, a reduction of 68 per cent as compared with the year 1927.

Of the 13,400 accidents reported during the year, 74 proved fatal, 148 resulted in some permanent disability, and 13,178 were of a temporary nature. Compensation covering temporary disabilities totalling \$456,525.91 was paid; \$418,706.59 was transferred to the Pension Fund to cover awards in the case of permanent disabilities and fatal accidents; and \$141,115 was set up as a liability to cover pending claims. The balance at the credit of the disaster reserve now stands at \$252,472.31.

The transfer from the Accident Fund to the Pension Fund of \$418,706.59, together with the interest \$94,902.84 earned by the fund, less the amount paid to pensioners, \$306,029.55, brings the balance at the credit of this fund at December 31, 1928, to \$2,046,019.31, out of which 222 widows and 442 children of deceased workmen, as well as 285 workmen who met with permanent disabilities are receiving monthly payments.

The principal statistics for 1928 are summarized as follows:—

Number of employers within the scope of the Act as at December 31, 1928. . . . .	4,953
Number of accidents reported during the year 1928. . . . .	13,400
Number of accidents and claims not finally disposed of as at December 31, 1927. . . . .	2,034
Number of claims disposed of by award of pension or payment of compensation. . . . .	6,636
Number of claims disposed of by payment only on account for medical aid. . . . .	3,206
Number of accidents disposed of for which no application for compensation was received. . . . .	284
Number of accidents disposed of on which no compensation was due. . . . .	2,536
Number of claims on which further payments have to be made. . . . .	577
Number of accidents awaiting further reports and on which no payments have been made. . . . .	2,195

*Accidents.*—The number and severity of accidents reported during the year 1928 by classes is shown in the accompanying table.

*Accident Prevention and First Aid.*—The report states that accident prevention continued to be one of the main activities of the Board during 1928. Nearly 2,900 plants were inspected, and many employers made changes in their plant equipment so as to conform with regulations. As a result, working conditions in places where safety methods have the whole hearted support of the management are reported as being much less hazardous.

The Board has encouraged the formation of accident prevention committees among workmen. At present 334 of these committees are active and forward monthly reports on conditions in the plants where they are employed. The Board heartily compliments

the Exshaw plant of the Canada Cement Company on winning the safety trophy presented by the Portland Cement Association. This plant, operating with a payroll of 120 workmen, had no loss time accident in 1928.

First Aid classes are conducted by the Board, and during the year 217 first aid certificates were issued to workmen. Since the Board first undertook to institute first aid training, 2,311 employees have been granted first aid certificates.

The Board has, at the present time, four mine rescue cars operating in the Crow's Nest Pass, Mountain Park, Drumheller, and Edmonton fields, and mine rescue stations in the Lethbridge, Coalhurst, Nordegg and Canmore districts. The cars and stations are in charge of superintendents, who, in addition to keeping the mine rescue equipment in order, train and retrain mine rescue teams and conduct first aid training.

On the subject of safety work the report concludes as follows:—"We are aware that the human element is the chief factor in a large proportion of the accidents occurring, and safety methods in doing work should be cultivated by both employer and workman. It is found that where the employer manifests a definite safety policy and requires his workmen to observe safety rules and make use of all mechanical safety appliances, it is reflected in the working habits of those in his charge, and a lessening of his accident cost."

ACCIDENTS IN ALBERTA DURING 1928 BY CLASSES

## LABOUR AND INDUSTRY IN ONTARIO IN 1928

### Ninth Annual Report of Provincial Department of Labour

THE ninth annual report of the Department of Labour of Ontario, recently published, reviews industrial conditions during the fiscal year ending October 31, 1928, and outlines the activities of the Department in the administration of the following Acts: The Sanitary and Hoisting Engineers' Act; The Factory, Shop, and Office Building Act; The Employment Agencies Act; The Steam Boiler Act. The operations of the Ontario Government Offices of the Employment Service of Canada are also described.

Of industrial conditions during the year, it is stated that Ontario had the greatest expansion in the volume of employment since 1920. In every industry improvement was indicated by advances in employment ranging from 1.4 points in communication to 25.5 points in the mining industry as compared with 1927.

The remarkable increase in the value of building permits issued during the year is regarded as being indicative of a decided expansion in the building industry and of general prosperity throughout the province.

*Factory Inspection.*—During the year, 18,565 inspections were made of factories, mercantile establishments and office buildings, in which the employees numbered 313,595. In addition to these regular inspections, investigations were made of accidents and complaints, and during the Canadian National Exhibition the various buildings on the grounds were under the constant supervision of the factory inspectors in the interest of those employed there. The number of orders relating to the various requirements of the Factory, Shop and Office Buildings Act totalled 6,691 and 1,244 permits were issued, of which number 697 were permits for overtime. Reports of 1,345 violations of the Acts in enforcement of which the inspectors have a responsibility were submitted, the great majority of which were due to negligence in the posting of the orders of the Minimum Wage Board.

The complaints received during the year numbered 124. Upon investigation 63 were upheld, 28 not upheld, 22 are pending investigation, and one does not come within the jurisdiction of the branch. Of the 124 complaints the chief causes were as follows: hours of labour, 24; lavatories, 17; elevators, 17; boilers, 16; ventilation and fumes, 12; and overtime, 10.

Proceedings were taken against five firms for violations of the Ontario Factory, Shops and Office Building Act. In two of the cases fines amounting in all to \$110 were imposed;

one case was withdrawn upon compliance with the regulations; and one case is still pending.

*Employment.*—The accompanying tables show the number of employees by sex and age in industrial and mercantile establishments and office buildings, together with hours of work during 1927 and 1928:

NUMBER OF EMPLOYEES IN FACTORIES IN ONTARIO			
	Employees	1928	1927
Males over 16 . . . . .		226,331	202,417
Males 14-16 . . . . .		556	699
Females over 18 . . . . .		81,737	69,420
Females 14-18 . . . . .		4,971	2,821
Children under 14 dismissed		24	38
Total . . . . .		313,595	275,357

HOURS OF LABOUR IN FACTORIES IN ONTARIO		
	Males	No. of Employees
45 hours per week . . . . .		92,122
50 hours per week . . . . .		51,960
54 hours per week . . . . .		32,832
58 hours per week . . . . .		3,821
60 hours per week . . . . .		23,438
Females		
45 hours per week . . . . .		53,670
50 hours per week . . . . .		14,707
54 hours per week . . . . .		6,945
58 hours per week . . . . .		564
60 hours per week . . . . .		3,938

In addition to the numbers mentioned in above table there were also 29,598 employees, male and female, working approximately 50 hours per week.

*Accidents.*—The report of the chief inspector of factories also details the accidents which occurred within his jurisdiction. During the year 5,809 accidents were reported, 35 of which were fatal, as compared with 5,425 reported in 1927, of which 34 were fatal. Of the 35 fatal accidents, 7 were due to electricity, 6 to falls, and 4 to falling substances.

*Employment Service.*—It is pointed out that the work of the employment offices reflects the general improvement in industrial conditions. The number of placements effected during the year was 153,783, being an increase of 12.3 per cent over the previous year; the number of vacancies reported, 175,870, was an increase 10.1 per cent and the number of applications for employment, 212,422, was an increase of 6.5 per cent. Of these applicants, 77.1 per cent were placed, and 87.4 per cent of the vacancies were filled. Of the number placements reported, 97,217 or 63.2 per cent, were regular, that is, involved employment of two weeks' duration or longer,

and 56,566 or 36.8 per cent, were of a casual or temporary nature. At various times during the year the demand for workers, especially skilled workers, was greater than the supply.

Handicapped ex-service men were placed in employment during the year in increased numbers. These totalled 6,831 of whom 4,306 or 58.6 per cent were placed permanently. Handicapped ex-service applicants numbered 6,863 and 62.7 per cent were placed. In the employment offices in the city of Toronto separate divisions are maintained for this special phase of employment work, and in the remaining offices every consideration is given the employment needs of the handicapped ex-service men.

*Private Employment Agencies.*—The total number of placements by these agencies during the year was 37,899. It is stated that while the public employment offices placed 12.33 per cent more men and women in positions during 1928 as compared with 1927, the increase in the business of the private employment agencies was less than 6 per cent for the same period.

*Steam Boiler Branch.*—According to the regulations under the Steam Boiler Act, all steam boilers, air receivers and other pressure vessels constructed for use in Ontario must be built from designs that have been approved and allotted a registration number by the Steam Boiler Branch. During the fiscal year 1928, 567 such designs were surveyed, registered and re-registered as compared with 483 in 1927, or an increase of over 17 per cent and 28 designs were returned to manufacturers for revision. The new pressure vessels inspected numbered 582, as compared with 462 in 1927, or an increase of nearly 26 per cent, and of this number 398 were manufactured in Ontario or eighty more than last year; 1,332 firsts, second and final inspections were made on these pressure vessels. Used pressure vessel which have been extensively repaired or which have been sold or exchanged for use in the province must be inspected and 903 such pressure vessels were inspected during the year, and 658 annual inspections were made or a total of 1,566 as compared with 1,534 in 1927. The number of certificates issued totalled 3,229 or 203 more than last year. The expansion in the work in every department of the Steam Boiler Branch resulted in an increase of nearly 16 per cent in the revenue for the year. The amount of moneys transmitted to the Treasurer of Ontario was \$22,152.90 as compared with \$19,102.16 for the fiscal year 1927.

*Stationary and Hoisting Engineers.*—Every person operating in Ontario as an engineer in

charge of a stationary boiler of more than 25 horsepower and of which the safety valve is set to blow off at a pressure exceeding ten pounds; or of a portable boiler, the safety valve of which blows off at a pressure exceeding twenty pounds, must hold a certificate of competency issued upon examination by the Board of Stationary and Hoisting Engineers. Four grades of certificates for stationary engineers are issued. The holder of a fourth-class certificate may take charge and operate a steam plant of 50 horsepower or less; third class, 200 horsepower or less; second class, 600 horsepower or less; and first class a plant of any capacity. During the year, 1,373 certificates were issued upon examination and of this number twenty-four more than last year were for second-class certificates. "To qualify for a higher grade certificate requires study and increasing efficiency in the management of steam plants", the report notes, and this expert knowledge is being recognized by employers in higher remuneration. Altogether 1,851 candidates sat for examination, 667 at the office of the Board in Toronto and 1,184 at outside examining centres arranged for the convenience of the candidates. In addition to 1,373 certificates by examination, there were issued 23 provisional, 30 duplicate, 114 plant owners' certificates, and 15,085 by renewal, making a total of 16,625 issued during the year. The revenue of the board amountd to \$23,474.02 as compared with \$23,126.61 in 1927.

*Inspection of Caisson Work.*—The inspector of caisson work, administering the regulations respecting the protection of persons working in compressed air, reported a decided decrease in the cases of sickness due to employment in compressed air during the past year. It is stated that before these regulations became effective very little provision was made for the care of workmen stricken with caisson disease and numerous cases became claims on the Workmen's Compensation Board, involving considerable expenditure. During the six months before the enforcement of the regulations eighty-eight cases of sickness and three deaths from caisson disease were reported with \$16,521 paid out in compensation. During the corresponding six months of the next year when the regulations were in force twelve cases of sickness were reported, no deaths, and only \$998 paid out in compensation. The report outlines the measures to be taken when workmen are strickekn with caisson disease.

*Industrial Disputes.*—During 1928 the number of strikes and lockouts totalled 52, as compared with 25 in the previous year. The number of persons involved in the 52 strikes and lockouts was 5,622, or 27.6 per cent more than in 1927, while the aggregate duration in working days was 5.6 per cent greater than in 1927, being 59,889 days.

## MINIMUM WAGES FOR WOMEN IN ONTARIO IN 1928

THE eighth annual report of the Minimum Wage Board of Ontario reviews its activities during the year 1928. The Board considers that "it has succeeded in building a wall of protection about the working women of the province," attributing this success to its defence of standards which had been set by the industries and the public opinion of the community. It has found the conviction "already ingrained in the social conscience that a business should support its working force." To show the strength of this public sentiment it is stated that "a report that a firm paid starvation wages was enough to drive off customers." In the course of its investigations, however, the Board found many aberrations from prevailing standards. These are of three kinds and are described as follows: "First, there is the 'shyster' employer. He wants to sell his products to the workers in other plants, while these other plants can sell little or none to his workers. He wants other industries to support his, as other members of the families to which his workers belong carry the burden of their homes. He is a parasite in the industrial organism, and should be compelled to play fair with his neighbours and competitors. Second, there is the inefficient employer. He is generally without much capital or business experience. His venture is often short-lived and ends in disaster. His most desperate efforts are directed towards lowering wage-cost, without assessing the relation between wages and production. There is a constant succession of these employers, for as one goes down another leaps into his place. One happy effect of minimum wage administration often is to improve this man's management of his business, so that he has a better chance to succeed. Third, there are the wages which are inadvertently low. Especially in the large establishments, individuals and groups of workers are overlooked. Some foreman or accountant is negligent or the piece-rates for some operation are set unduly low, or some other blind spot occurs, and the wages drop below the intended level. In such cases the management is frequently grateful to have these things pointed out."

The Board determines the minimum wage levels by studying the cost of living in the various sections of the province. The cost of living budget of an average working woman in Toronto is first estimated as a basis for these calculations, the budget of the workers in other localities being adjusted in proportion to a recognized variation in the cost of living as

between large and small cities, towns, villages and country districts. The budget for Toronto as reviewed to October, 1928, allows \$364 per year, or \$7 per week, for board and lodgings; \$127 per year for clothing; \$162 for sundries (including laundry, doctor, dentist, carfare, amusements, church, etc.), making a total of \$653 for the year. The weekly budget for Toronto is, therefore, as follows: board and lodging, \$7; clothing, \$2.44; sundries, \$3.06, making a total \$12.50 per week. The figure thus arrived at is taken as the minimum wage required to provide a female worker at Toronto with the necessities of living.

In enforcing the provisions of the Act the Board employs three chief methods. The first is to require the posting of cards, containing the wage orders of the Board in all factories, stores, laundries, hotels and theatres. It is the duty of the factory inspectors while on their inspections to report whether these cards are properly displayed. The second method of enforcement is through the investigation of complaints. Regular meetings attended by the chief factory inspector, are held to review these complaints. During the year 26 such meetings were held and 372 complaints were dealt with and satisfactorily settled. The third method is based on an analysis of wage returns from firms employing women. Any apparent lack of conformity to the orders is taken up with the firm concerned. There were 318 such cases during the year out of a total collection of 2,935 wage sheets. All of these were either explained or rectified.

The Board collected during the year arrears of wages due to a number of female workers. Seventy-five firms made such payments to 136 employees. The total amount collected was \$7,384.15, of which the largest to any one worker was \$350, the average being \$54.29.

The Board is accustomed to issue special permits for lower wages to handicapped workers, or for variations or suspensions of its orders in certain emergencies. The number of firms to which such permits were issued in 1928 was 54. It is stated that the proportion of such permits is so small that the standards of wages are not affected, and at the same time the system of special permits provides a valuable degree of flexibility, enabling a number of women to be steadily employed who otherwise would be excluded from remunerative work.

The accompanying table shows the average weekly wages and hours worked by female employees in the various industries in Ontario during the period covered by the report.

AVERAGE WEEKLY WAGES AND HOURS OF FEMALE EMPLOYEES IN VARIOUS INDUSTRIES  
IN ONTARIO, 1928

\*Figures are for 1929.

The *Monthly Journal of Social Reform*, published at Tokyo, Japan, in its issue for July, 1929, comments on the recent increase in the number of industrial disputes that have been settled through mediation or arbitration. The total number of the disputes arising during 1928 and the first three months of 1929 were terminated through the intervention of arbitrators appointed by the government. It is noted that the number of workers' groups

applying for arbitration exceeded that of the employers so applying. During 1928 a total of 43 applications for arbitration were made by workers and 19 by employers, while 22 applications were made by employers and workers jointly. The number of disputes settled through mediation or arbitration includes 136 strikes and 8 lockouts in 1928, and 39 strikes and 1 lockout in 1929.

## MOTHERS' ALLOWANCES IN ONTARIO IN 1928

THE eighth annual report of the Mothers' Allowances Commission of Ontario describes the administration of the Act during the year ending October 31, 1928. It will be recalled that the Mothers' Allowances Act of 1920 provided for the establishment of a provincial board of five persons to consider the applications received from local boards on behalf of mothers of two or more dependent children. The municipality in which a beneficiary has resided for one year is required to contribute one-half the amount of the allowance granted in each case, the remainder being paid by the province. The cost of administration of the Act also is borne by the province. The amount of the allowance is determined by the Board within limits fixed by regulation under the Act. The rate in cities is \$40, \$45, \$50 and \$55 per month for mothers with 2, 3, 4 and 5 children; in towns and country districts the rates are lower. The commission may grant an additional allowance for larger families. The commission is now composed of the following members: the Hon. David Jamieson, M.D., M.C.P.S. (former speaker of the provincial legislature) chairman; Miss Belle Thompson, vice-chairman; Mrs. Minnie Singer; Lieutenant-Colonel T. J. Murphy, K.C.; and Mr. A. J. Reynolds.

The number of beneficiaries is reported as steadily increasing from year to year in spite of the carefulness with which every application is scrutinized. A part of the increase is explained as being due to "what might reasonably be expected in a growing population," but, it is emphasized, that "the number of cases of desertion and of incapacitated husbands has been increasing to an alarming extent and calls for the closest and most critical consideration of every case".

Dealing with two of the chief problems encountered—desertion and incapacitation—the report states as follows:—

"The desertion cases present a serious problem, and much suffering is entailed on account of our regulation that if a man's whereabouts are known his wife is held ineligible for assistance. The majority of deserters go to the United States, and even if they can be located, there are no public funds provided for securing their return to Ontario. If the deserted wife asks to have her husband returned to Ontario where he can be brought to court, all expenses in connection therewith must be borne by her, who is in need herself, and has no money to spare for this purpose. Even if these deserters are brought home and a court order secured against them for a stated weekly or monthly

payment, our experience shows these payments are seldom made and the man again disappears. A jail term does not appear to do any good in these cases, and it is a difficult question to decide whether or not a more liberal interpretation should be placed on the regulation covering these cases.

"The number of applicants under the incapacitation condition shows a very large increase and the Commission has given these cases the most careful consideration, and has been obliged to refuse a large percentage as not being totally and permanently disabled within the meaning of the Act. Blindness might be regarded in some cases as totally unfitting a man for any earning capacity, but in the case of a young man who is otherwise physically and mentally fit, we strongly advise and insist he should take training in some useful occupation with the Canadian National Institute for the Blind, and thus enable him to assist to some extent in the maintenance of his family. The Commission grants the allowance to his wife while he is taking this course of training."

As regards the attendance of children at school, the report indicates that this problem has been met by the adoption of a monthly system of attendance cards, which must be signed by the teachers. This method is said to have effected a wonderful improvement in the regularity of attendance. One of the features of the educational program is the dispatching of railway cars by the Department of Education to outlying districts "where no other educational facilities are available, and where children are gathered in from great distances and given a start, and then carried on by a correspondence course." This method of travelling schools is commended in the report, which states that children of mothers drawing the allowance "have made wonderful progress."

*Beneficiaries.*—The number of families on the allowance list during the year was 5,976 and the number of children under sixteen in those families was 17,328, the average number of children per family being 2·899. The number of beneficiaries varies from month to month. On October 31, 1928, the last month of the financial year, there were 5,139 beneficiaries, and the amount disbursed was \$187,936, representing an increase of 410 in the number of beneficiaries and \$15,977 in disbursements over the corresponding month of the previous year. The average monthly increase in the number of beneficiaries was 34·16. The disbursements during the financial year 1927-28 amounted to a total of \$2,190,407,

being an increase of \$182,850 over the previous year.

As already stated, half the disbursements for mothers' allowances are borne by the province, the payments by the various municipalities amounting to \$986,486.50. In addition the province bears the full amount in unorganized districts, and this total for the year was \$197,180. The province also assumes full charge of any amounts granted to those lacking one year's continuous residence in any municipality.

The percentage cost of administration of the Act was again reduced. For the past year it was 3.5 per cent, as compared with 3.7 per cent in the previous year, and 3.93 per cent in 1925-26.

Tribute is paid in the report to the 19 investigators and to the members of the office staff for efficiency in the performance of duty.

Of the 5,976 families on the pay list, 2,895 were in cities, 2,997 were in the country, and 84 in towns. The average number of children in these families was 2.72 in the cities, 2.98

in the countries, 3.42 in judicial districts, and 2.71 in the towns.

In addition to the 4,340 cases where the dependency was caused by the father's death, there were 1,644 cases where the father was totally incapacitated, the chief causes of such incapacitation being tuberculosis and insanity. Desertion was the cause of dependency in 351 cases, while in 241 cases both parties were dead, and the children were in charge of a foster parent.

Of the total number of families benefitting, 64.5 per cent were Canadian, 26.6 per cent were British, and 8.9 per cent were of foreign birth.

The Commission expresses its appreciation "of the services of the splendid men and women to the number of over 500 members of local boards who devoted so much of their time to the administration of the Act." Acknowledgment is also made of the willing co-operation from all the Churches, the Salvation Army, and the various social service organizations.

## REPORT OF BRITISH MINISTRY OF LABOUR FOR 1928

THE recent activities of the British Ministry of Labour are described in its annual report for 1928, which has appeared recently. The year was notable for the movement towards industrial reorganization on the basis of co-operation between the workers and the employers. This movement culminated in the acceptance by the Trade Union Congress of proposals for the formation of a national industrial council to consider industrial questions from both sides. The full acceptance of these proposals by the employers' organizations was still under consideration at the end of the year (LABOUR GAZETTE, November, 1928, page 1178; October, 1928, page 1037; August, 1928, page 846 etc.).

The Department took an active part in the conciliation of labour disputes. Only 103 cases, however, came under the Conciliation Act of 1896 for settlement, the year being exceptionally free from industrial disputes. The Industrial Court issued 52 awards on cases referred to them under the Industrial Courts Act, 1919.

The employment situation in 1928 is described in one section of the report. There had been a substantial improvement during 1927 and this was maintained during the first quarter of 1928, the percentage of unemployment in that period among insured workers being lower than at any time since 1920. From April, however, up to the end of November a decline in employment set in, though the

seasonal influences in the second half of the year were less pronounced than in 1927. The increased unemployment in Great Britain after April, apart from seasonal unemployment, was confined almost entirely to five industries: coal mining, shipbuilding and ship repairing, cotton, woollen and worsted, and boots and shoes. These five industries represent about one-fifth of the insured population, and at the end of November they represented one-third of the unemployment.

The report describes the work carried on during the year by the Industrial Transference Board in transferring large numbers of unemployed workers, particularly coal miners, to other districts and other employment. Apart from the ordinary use of the Employment Exchanges, special facilities for transfer were offered to various classes through juvenile unemployment centres, domestic training centres (for girls and young women), "handymen" training centres (for young men), household removal schemes, etc. The Ministry's scheme for the training of young unemployed men provides for two kinds of training; one for giving those who desire to settle in the Dominions preliminary training in the rudiments of farm work; the other for improving the employability of men seeking industrial work in this country. (These schemes were outlined in the last issue of the (LABOUR GAZETTE, page 705).

Another feature of the year was the coming into force of the Unemployment Insurance Act, passed in the previous year, in July, 1928. The Act abolished the distinction between "standard" and "extended" benefit; and, since April 19, 1928, the only condition relating to the payment of contributions has been that 30 contributions shall have been paid in respect of the applicant during the two years preceding the date of his application. During a transitional period, moreover, a greatly reduced contributory condition is in force for persons aged 18 years and over, namely the payment of eight contributions in the last two years, or alternatively, of thirty contributions at any time. The administration of unemployment insurance was also affected during the year by the coming into force, as from January 2, 1928, of Section 37 (1) of the Widows' Orphans' and Old Age Contributory Pension Act, 1925. By virtue of that subsection, the title to unemployment benefit ceased on January 2, 1928, in the case of every person who had reached the age of 65 on that date; in the case of persons subsequently becoming 65, title to benefit ceased on their reaching that age.

There was no change during the year in the list of trades to which the Trade Boards Acts are applied, but provision was made for the establishment of a separate trade board for the keg and drum branch of the hollow-ware making trade. During the year there were 37 meetings of full trade boards, and 141 meetings of various committees of boards; 27 boards did not meet at all. The meetings of the boards were chiefly occupied with questions of minimum rates. The report contains a brief review of the varying use which Boards have made of their general rate fixing powers. All the boards, as required by the Acts, have fixed general minimum time rates; all but two have fixed overtime rates although in a further four trades the overtime rates do not apply to piece workers. All the boards, again, have fixed special rates for juveniles, based either on age alone or on experience alone, or on a combination of the two. Twenty-one boards have made it a condition of payment at the juvenile or learner's rate that the worker should have definite facilities for learning the trade; in nearly all these cases he or she must be the holder of a learner's certificate issued by the board.

## PROFIT SHARING AND LABOUR CO-PARTNERSHIP IN GREAT BRITAIN

THE results of a recent inquiry made by the British Ministry of Labour into schemes of profit sharing and labour co-partnership are published in the *Ministry of Labour Gazette*, July, 1929. The movement has made almost continuous progress during the years since the war. The years of greatest progress in the establishment of new schemes were 1919 and 1920, when there was a net addition of 94 schemes and of 33,000 participating employees. During the succeeding years progress was slower, but in the last two years there was a net increase of twelve schemes and of 21,000 workpeople participating.

The inquiry showed that profit sharing has been tried in a wide variety of industries; in nearly every industry, however, the number of schemes is small in comparison with the total number of firms engaged in the industry; and in all industries taken together nearly one-half the schemes started have come to an end. The most conspicuous exception is the gas industry, in which a large proportion of the principal company-owned undertakings have introduced schemes; comparatively few of these schemes have been discontinued, and a number have been in operation for twenty years or longer.

The number of workpeople employed by 308 firms with schemes in operation at the end of 1928 was approximately 485,000, of whom about 222,000 were eligible to participate in the benefits conferred by the schemes. In the previous year the number entitled to participate in the schemes then in force was approximately 209,000, out of a total of about 422,000 persons employed. The large proportion of employees of the firms concerned who did not come within the profit-sharing arrangements is in part due to the fact that participation in many schemes rests upon certain qualifications, such as the attainment of a certain age, or employment with the firm for a minimum number of years; but to a much greater extent it results from the fact that the figures given include a considerable number of schemes which admit employees to participation in profits only to the extent that they are able and willing to deposit savings with the firm, and to purchase shares in the undertaking.

In many schemes profit-sharing is only available to those employees who are prepared to purchase shares in the undertaking or to deposit savings with the firm. In the case of the share-purchase schemes the employee is usually offered shares on terms more

favourable than those offered to the ordinary investor. The mere holding of shares by an employee is not in itself regarded, for the purpose of the Department's statistics, as an example of profit-sharing, but where special favourable terms are accorded to the employee-investor the scheme is included in the statistics as being an example of profit-sharing, although of a rather special and limited kind. Similarly those schemes which give to employees who deposit money with the firm a guaranteed minimum rate of interest together with a further dividend varying with profits are treated as examples of profit-sharing, although not of a normal type. These two special types of arrangement account for 90 of the existing schemes and for 27 of the defunct schemes.

The most prevalent type of scheme is the simple arrangement under which a cash bonus is paid to the employees, the amount of the bonus representing a specified proportion of the net profits, or of the profit remaining after a fixed minimum rate of interest or dividend has been paid on capital; in some cases the bonus is a sum which automatically rises or falls with the rate of dividend on the capital.

Cash bonus schemes (including schemes where the bonus is placed in a deposit or savings account from which an employee may freely withdraw) represent about 40 per cent of the existing and about 65 per cent of the discontinued schemes.

In the gas companies' schemes the bonus usually takes the form of a percentage on wages varying inversely with the price charged for gas, which itself usually regulates the rate of dividend payable on capital; but in a number of the more recent gas companies' schemes the bonus varies directly with the rate of dividend on capital, or is a fixed percentage of the amount paid in such dividends.

*Co-partnership Schemes.*—Schemes which encourage employees to acquire shares or other capital in the undertakings with which they are connected, and in this and in other ways to obtain some share in the control of the business, are frequently referred to under the description "co-partnership." Among the 316 schemes in operation included in the statistics, there are 132 which provide for some form of shareholding by employees; while of the 289 defunct schemes, 49 provided such arrangements.

One form of shareholding has already been mentioned; that in which shares are issued

to employees on specially advantageous terms. This type of arrangement has become prominent in recent years; 83 such schemes are known to have been introduced, of which 62 are still in force.

An entirely different type of shareholding scheme, and one in which a substantial majority of the workers employed normally participate, is that in which a share of profits is set aside for the employees, but is wholly retained for investment in the firm's capital, or is so retained for a prescribed period or until the employees have acquired a prescribed amount of capital. Of such schemes 52 are known to have been started; 36 of these are still in operation, and 23 of them date from after the war. Gas companies provide much the largest section of these "bonus-capitalization" schemes, accounting for 25 out of the 36 schemes of this type; and practically all of the pre-war schemes of this type are those in gas companies.

*Amount of Bonus.*—In 1928, as in 1927, the highest amount of bonus was paid in the small group of insurance, banking, etc., businesses, the bonuses in this group averaging £26 per head in both years. As was the case in 1927, a high rate of bonus was paid by firms engaged in merchanting and dealing, and the next highest rates, by undertakings engaged in paper manufacture, printing, bookbinding, etc.; while for the few agricultural schemes the bonuses paid were almost negligible, as they were in the two previous years. The most noteworthy changes as between 1927 and 1928 were in the group of firms engaged in the textile industry, in which bonuses averaged £4 11s. 1d. in 1928, as compared with £2 7s. 11d. in 1927, and in the group of firms engaged in merchanting and dealing, in which bonuses averaged £14 2s. 8d., as compared with £17 13s. 7d. in 1927.

An important section of the report deals with the 163 co-operative societies having definite profit-sharing systems, these societies employing about 29,000 persons. The schemes adopted by the majority of productive societies provide for a specified proportion of the profits to be set aside for the workers, but in a number of cases the employees receive a bonus on wages at a rate which varies with the rate of dividend declared upon the customers' purchases. A large proportion of the schemes in the productive societies are of the co-partnership type.

## CANADIAN GOVERNMENT ANNUITIES

*Address given by Mr. E. G. Blackadar, Superintendent, before Canadian Postmasters' Association, Ottawa, June 21, 1929*

THE Department of Labour has been exerting every effort to bring the advantages of the Canadian Government Annuities System to the attention of the Canadian people. For this purpose thousands of lines of space have been used in newspapers, magazines, etc., and full advantage has been taken of the chain of Canadian National Railway broadcasting stations which extend from Halifax to Vancouver. In all this advertising reference is made to the fact that complete information, literature, etc., may be obtained upon application to the nearest postmaster, and as it is our experience that many persons find upon application at the post office they are unable to obtain the information and literature which should be on hand at every post office throughout Canada, I desire to point out that if you have not already done so, you should familiarize yourself with the various plans of annuity available and obtain a supply of our literature, in order that you may be in a position to intelligently deal with enquiries received.

Apparently many of the postmasters who have not made themselves acquainted with this splendid means of making provision for old age are unaware that they are neglecting one of the best means of increasing the revenue which may be derived from their offices. In this connection I may say, however, that many postmasters who have familiarized themselves with the Canadian Government Annuities System have substantially increased their personal revenue, by the transaction of Annuities business. This statement is borne out by the fact that commissions paid to postmasters for the sale of Annuities during the last fiscal year increased more than 200 per cent over the amount paid during the preceding fiscal year. Some of the postmasters have been particularly active in promoting the sale of Government Annuities in their vicinity. Mr. Kolb of Herbert, Saskatchewan, the president of the Saskatchewan Postmasters' Association, who is present, is one of these, also Mr. Charles D. Griffiths of Estevan, Saskatchewan, has been successful in securing a number of applications, and I could also mention many others.

Postmasters who are on a commission basis are allowed commission at the rate of one per cent on applications secured or payments received for the purchase of Immediate Annuities (in this connection I may say that we frequently receive payments as large as

\$75,000, which would give you a commission of \$750 for the one transaction); postmasters receive commission at the rate of 5 per cent on applications secured or payments received for the purchase of Deferred Annuities; and when you consider that more than four and a quarter million dollars was received during the last fiscal year for the purchase of these annuities, with every expectation of an even larger amount being received during the present year, you will realize just why it would be to the personal advantage of the postmaster to make every endeavour to have as much of this business as possible transacted through his office.

It is also a patriotic gesture for the postmaster to lend assistance towards the sale of Canadian Government Annuities which, when fully taken advantage of by the Canadian people, will materially reduce the number of indigents, thus relieving the state, province and municipality of this burden; and in this connection I may say that if many of our older citizens had begun a regular, systematic saving under the Government Annuities System during their earlier years, they would not now find it necessary to make application for an old age pension.

As the necessary machinery has been created enabling all postmasters employed on a commission basis to act as our representatives, I would strongly urge that you officers of the various provincial Postmasters' Association draw the attention of your membership to the foregoing facts, and with the prestige in the community generally enjoyed by the postmasters, they should experience little difficulty in furthering the Government system of making provision for old age. There are plans of annuity suitable for both the young and old, the poor as well as persons of moderate wealth.

In order to increase his sale of annuities, the postmaster should, by reading the descriptive booklet and consulting the printed tables of rates, familiarize himself with the various plans of annuity available as well as the rates charged therefor, in order that he may advise persons making enquiry of the plan of annuity which will best meet his particular requirements. Copies of our advertising posters should be placed on display where they may be seen by persons transacting other business at the post office; copies of our descriptive booklet should be handed to persons who the postmaster feels might be interested in the

purchase of an annuity, and copies could be placed in the rented post office boxes.

The Department of Labour will co-operate with the postmaster by furnishing him with literature, posters, tables of rates, etc., and when the postmaster desires to have any special information on behalf of a person with whom he is negotiating, all he need do is to write to the superintendent of Annuities for the particulars required.

Once a postmaster has made himself familiar with the System, enabling him to solicit and secure applications, arrangements could be made so that all persons who write direct to the Department of Labour for information regarding the purchase of an annuity could be referred to the postmaster in order that the enquiry might be followed up by a personal interview in an endeavour to secure the application. I may say here that one of the postmasters who had been actively promoting the sale of Government Annuities along these lines for about ten years,

was retired within the last year or so, and is now devoting his full time to the sale of Government Annuities on a commission basis, and I am pleased to say that he is doing exceedingly well.

I have mentioned previously that the Government is carrying on an active campaign to increase the sale of annuities throughout Canada, and during the present fiscal year it is intended that a national display newspaper advertising campaign shall be carried on, which should result in a very large number of enquiries being received, and the present would be a most favourable time for those postmasters who have not been doing so to devote the small amount of time necessary to familiarize themselves with the various plans of annuity and the rates charged therefor, in order that they may endeavour to secure applications from those persons who will be advised in our advertisements to make application to the postmaster for copy of our descriptive booklet and information regarding Annuities.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Province of Quebec Safety League

In a recent address at Montreal, Mr. Arthur Gaboury, secretary of the Province of Quebec Safety League, outlined the activities of this organization. Its program is divided into three different branches, namely, home and school safety, traffic, and industrial safety. The aid of school children is enlisted by weekly displays of accident hazards, and ways and means to avoid them. The traffic section has been instrumental in bringing about helpful developments and amendments to existing civic by-laws regarding the compulsory stop of all autobuses at railway crossings; the examination for competency of the applicant for first driving license; and the compulsory stop at all railway crossings. Last but not least the round-table committee of the industrial section looks after the welfare of the workers. At fortnightly sessions the members discuss safety problems and spread the gospel of co-operation in the prevention of suffering from accidents. First aid committees educate the masses to render aid wherever and whenever possible, members of the industrial hygiene section consistently advocate the principles of clean living, and through the construction committee the first annual industrial safety conference in the province of Quebec was made possible.

### Aims of Industrial Medicine

Dr. A. R. Pennoyer, of Montreal, writing in the *Canadian Medical Association Journal*, April, 1929, estimates the annual loss in Montreal due to industrial disease at nine million dollars. He states that medical service has justified its inclusion in the program of "big business" and that its potentialities for doing good to workers, employers, and society in general can scarcely be overstated. The aims of industrial medicine are enumerated as follows:

Pre-employment examination to select a suitable personnel.

To do all that is reasonably possible to prevent illness and maintain health, and when sickness comes, to make sure that proper treatment is provided, so that restoration may be as early and complete as it should be.

To use every means to avoid the occurrence of accidents, and, when these arise, to see that they are treated skilfully.

To make provision for the disabilities of old age, when this has been arrived at through long service, and to do what is possible for the dependants when death comes.

### Extent of "Uninsured" Accidents

A recent bulletin of the Lumberman's Safety Association, Ottawa, points out that the extent of the loss connected with acci-

dents is not often recognized. In the course of an analysis by an insurance company it was found that the incidental cost of accidents, against which the employer cannot insure, is about four times the cost of compensation and medical aid, against which the employer is insured. Unless constantly reminded, workmen tend to grow careless and will violate safety rules, and even sometimes remove safeguards that seem to be in the way. The strict maintenance of safety devices with the constant educational campaign and insistence on carefulness is much cheaper than accidents.

### Accident Prevention Rules for Bituminous Coal Mines

Mr. George S. Rice, chief mining engineer, United States Bureau of Mines, in a recent statement, declared that disasters from mine explosions may be prevented by proper ventilation and systematic rock dusting. Precautions that should be taken to prevent explosions in bituminous coal mines are outlined as follows:—

Thoroughly ventilate every part of the mine. Use enough splits of the air current, divide near the intake shaft if possible, and avoid working places being on the return air.

In any mine, gassy, or slightly gassy, control the ventilation, through knowledge obtained by sampling and analysing the return of each split daily; moreover, see that the inspectors use safety lamps, Burrell gas indicators, or other permissible equivalent.

Seal all abandoned working places with strong fireproof stoppings; also seal those that may not be worked for a long time and cannot be thoroughly ventilated and inspected. This latter recommendation of the Bureau of Mines, presented as a formal decision of policy, is a very important part of any program of mine safety.

A very large proportion of the mines of the country keep open old working places which are not or cannot be properly inspected and are moreover practically impossible to adequately ventilate and rock dust. They are therefore places of great danger, as fine float coal dust collects on the roadways and ribs and gas perhaps accumulates in pockets in the roof.

The advantages of rock dusting and of good ventilating currents in the active working places are likely to be lost through the condition in such places.

Use electric trolleys and bare power lines or imperfectly insulated electric conductors in gassy mines or slightly gassy mines in pure intake air only and never in the return air.

Employ thorough rock dusting in all bituminous and sub-bituminous mines. Rock dust should be distributed in every entry, air course, and room. In rooms that have been stopped the rock dusting should extend to the face and over the gob. In active workings rock dusting should extend at least to within 40 feet of the face.

It is desirable that the miners in every working place be supplied with a pile of rock dust so that they may distribute it from time to time

as the face advances in addition to the rock dust that may be scattered periodically by rock-dusting machines or rock-dust crews.

### Report on Health of Australian Miners

The report on an investigation into the health and working conditions of employees in the mining industry of Victoria and Tasmania in 1928 has been published by the Department of Health, Commonwealth of Australia. This investigation was undertaken at the request of the Commonwealth Court of Conciliation and Arbitration which had heard a claim by the Australian Workers' Union for a reduction of hours of men engaged in the mining industry of Victoria and Tasmania. The survey went extensively into industrial diseases of the mining industry such as miners' phthisis, pulmonary tuberculosis and tuberculo-silicosis, plumbism, copper poisoning, arsenical poisoning, miners' nystagmus (miners' beat knee, beat hand, beat elbow). The general health of employees was also investigated. At each mine a study was made of the atmospheric conditions during working hours, including temperature, air movement, humidity and dust content; also of the measures adopted for minimizing dust production, and of hygienic provisions generally. As regards the incidence of pulmonary diseases, the report states that the total percentage of all examinees affected was 7.1 per cent. It was noted that silicosis is rarely caused by less than ten years' underground work in Tasmania, and does not occur among examinees who have not worked underground. In Victoria, the minimum period worked underground by any silicotic examined was over sixteen years. Drilling, either by hand or machine, was found to be the occupation which has caused almost all the cases of silicosis detected, other underground occupations, such as trucking and shovelling, being apparently almost devoid of risk in this respect.

Pulmonary tuberculosis was found to occur in 3.9 per cent of all employees examined. The incidence of simple pulmonary tuberculosis observed in the total is reported as being similar to that which would be found in many industrial communities. The excess, as represented by tuberculosis with silicosis, was ascribed as specifically due to the nature of the occupation.

Although lead-poisoning was not observed, definite evidence of its absorption by workers was discovered among miners and surface employees in certain districts where silver—lead—zinc ores are handled. The incidence was considerably higher at the treatment works where lead concentrates are handled than in the mines.

The recommendations for underground operations included among others, the following safety measures:—

The circulation of air through the stopes should receive more consideration, and be made more effective. Where it is not practicable to send an air current through the stope, the stope should be treated as a dead-end and be provided with artificial ventilation.

Dependence should not be placed on the machine man's hose for wetting the broken heaps of ore during shovelling. A separate hose should be supplied for the use of the shovellers. Where two or more parties are

working near one another one extra hose should be sufficient.

The use underground of rock drills which depend on exhaust air to blow out borings should be prohibited.

Firing, whenever practicable, should be restricted to such times as the mine will be empty of workers. When two shifts are worked, this should occur at the end of the second shift; when one shift is worked, at the end of that shift. In other cases return to work should not be permitted until there is no visible dust or fume. The hosing down of every working place when first entered after a firing should be more strictly enforced.

## NOTES ON LABOUR UNION ACTIVITIES

### Federation of Catholic Workers of Canada

The Federation of Catholic Workers of Canada held its 8th annual Congress at Chicoutimi on July 20-24. Four federations of trade-unions, namely: The Federation of Pulp and Paper Workers; the Federation of Textile Workers; the Federation of Building Trades Workers; the Federation of Printing Trades and 105 labour unions, were represented at this Congress by 102 delegates from different centres in the Province of Quebec.

The report of the auditors showed receipts amounting to \$9,305 and expenses to \$8,563.75, leaving a balance on hand of \$741.55 for the year 1928-29.

The number of members, according to the report of the secretary, on May 31, 1929, stood at 25,500.

The result of the election of officers was as follows:—President, Mr. Pierre Beaulé, Quebec; 1st vice-president, Mr. O. Filion, Montreal; 2nd vice-president, Mr. A. Guay, Three Rivers; general secretary, Mr. Ferd. Laroche, Quebec; 1st director, Mr. Gérard Tremblay, Montreal; 2nd director, Mr. J. E. A. Tremblay, Chicoutimi. The personnel of the Executive Council is the same as that leaving office.

A number of invited guests attended the opening of the Congress on Sunday afternoon, including the Hon. Antonin Galipeault, Minister of Labour and Public Works for the Province of Quebec; Mr. Simon Lapointe, member of Workmen's Compensation Board; Mr. A. Crowe, secretary of the Minimum Wage Board for Women; Mr. O. Filion, representative of the Department of Labour, and Monsignor Lamarche, Bishop of Chicoutimi.

The Hon. Mr. Galipeault stated that his government was prepared to make an ex-

haustive study of social insurance, including Old Age Pensions, unemployment insurance and mothers' allowances. It is likely that a special commission will be appointed to investigate these different matters. As to the Workmen's Compensation Act, the Minister stated that if, after a trial, it was found that collective insurance was necessary, the Government would not hesitate at granting it.

A large number of resolutions were adopted at the meeting, the following being the principal requests:

An amendment to the Workmen's Compensation Act on the lines already defined in the stipulations made by the Catholic Unions, the International Unions and the Railway Employees' Organizations; State Collective Insurance, Annuities, etc.\* The Executive Council is authorized to take all the steps necessary to insure the adoption of these amendments.

The inauguration of a course in sociology in schools and universities.

A labour code which will include, in particular, legislation on individual and collective contracts of labour.

Establishment of a Superior Economic Council.

The adoption of Unemployment Insurance legislation.

The adoption of the Old Age Pensions Act.

The establishment of a scale of fair wages not fixed according to the wages accepted as current in the district, but in keeping with the cost of living in said districts.

\*These proposals include the establishment of a provincial Accident Fund as in Ontario and other provinces (LABOUR GAZETTE, Jan. 1928, page 40, etc.)

More methodical inspection of manufactures as well as all other industrial works.

Amendment to the Provincial Arbitration Act concerning Firemen and Policemen rendering arbitration compulsory and the decision of the court equally binding on both parties.

Compulsory establishment of the double shift system for firemen in all large municipalities.

Enforcement of Lord's Day Act; abolition of the privileges granted the Hebrews under the Provincial Act.

Investigation of conditions in the textile industry which the workers, according to the earlier reports furnished by Rev. Father A. Coté, find unbearable; inauguration of a campaign with a view to organizing the workers of both sexes in this industry.

Adoption of a draft constitution for a Federation of Study Circles.

Ratification by the Federal and Provincial Governments of the International labour conventions, especially that of the 8 hour day (Washington, 1919).

Greater precautions in the use of paint spraying machines.

Prohibiting Sunday work in bakeries and the regulating of night work.

Establishment of minimum wages for day labourers.

Extension of the Minimum Wage Act for females to commercial workers.

Besides these resolutions, the most of which concern legislation, the Federation adopted several resolutions relating to its own administration, that is, amendments to some of the clauses of the constitution.

### All-Canadian Congress of Labour

The third annual convention of the All-Canadian Congress of Labour will be held at the Fort Garry Hotel, Winnipeg, commencing on November 4, 1929. The notice of the convention, issued from the general office of the Congress at Ottawa, directs the attention of all affiliated and chartered unions to Articles 5 and 10 of the constitution, with regard to the basis of representation at conventions and the introduction of resolutions. The Executive Board of the Congress urges all eligible unions to exert effort to send a full quota of delegates, in order that the convention may be completely representative of national labour movement both geographically and industrially.

In order to facilitate the intelligent discussion of resolution submitted at the convention, the Board strongly recommends that, as far as possible, copies of the resolutions be furnished to the secretary-treasurer not later than the fourth of October, for circulation among the unions, to enable the membership at large to instruct the delegates on the questions that will arise. It is also recommended that all unions notify the secretary-treasurer by that date the number of delegates expected to be in attendance at the convention. Accommodation can be arranged by writing to the hotel preferred by the delegate or to the secretary-treasurer of the Winnipeg Labour Council, F. G. Pengelly, 325 Wardlaw Avenue, Winnipeg.

### Dominion Railway Mail Clerks' Federation

The biennial convention of the Dominion Railway Mail Clerks' Federation was held in Toronto, June 10-13, delegates being present from all locals except Prince Edward Island and Edmonton. In his opening address, Mr. J. P. O'Farrell, president of the Federation, reviewed the efforts put forth by the executive officers from June 3, 1927, to February 21, 1929, to secure a new salary schedule for members of the organization. As a result of these efforts the members are now receiving an increase in salary. The president said that there were many questions of importance to come before the convention, including the proposal for a time paid organizer at Ottawa; Civil Service councils; superannuation; and increased mileage payments for clerks in grade "A".

The total revenue for the two years ended March 31, 1929, as shown by the report of the secretary-treasurer, amounted to \$7,339.14, expenditures, \$8,267.68, leaving a deficit of \$928.54.

A recommendation was made by the committee on Officers' Reports, and concurred in by the convention, that efforts be made to secure an upward revision of salaries on the basis of establishing a maximum of \$2,280. The committee agreed with the view of the president that it would not be to the advantage of the Federation to affiliate with the Civil Service Federation. It was also recommended that immediate action should be taken by the Federation to create the position of a paid whole-time secretary or organizer, and that the appointing of a suit-

able man be proceeded with as speedily as possible.

The convention adopted a recommendation of the Finance Committee that the yearly *per capita* tax be raised from \$1.75 to \$2.25, and that the *per diem* allowance of the convention delegates be raised from \$10 to \$12 per day. The approval of the convention was given to a proposal that steps be taken by the incoming executive to secure a referendum vote on the appointment of a full-time paid organizer.

Among the resolutions adopted were those following:—

That after 1930 all cars used for railway mail service shall be of steel construction and in accordance with specifications laid down by the Postmaster General;

That railroad companies be held responsible for the unloading of all mail carried in baggage or storage cars at points where no transfer agents are employed;

That mail clerks be not required to report for duty at cars prior to one hour previous to the scheduled departure of trains;

### Provincial Federation of Ontario Fire Fighters

The tenth annual convention of the Provincial Federation of Ontario Fire Fighters was held in St. Catharines on June 26-27, only five branches in the whole jurisdiction being without representation. According to the report of the directors, under the heading "organization", there is only one organized fire department in Ontario not in the federation, namely, Owen Sound. Special stress was laid on the necessity of a Superannuation Act for every permanent paid department, and the federation desires an Act making this compulsory, with rules suitable to each municipality's local conditions. The question of the three platoon system had been brought before the provincial cabinet by the officers of the federation, and the directors were of the opinion that it would not be long before this system was established. The report of the auditing committee showed total receipts amounting to \$22,357.01, with a cash balance of \$6,162.97.

Among the resolutions adopted were the following—

Urging the members to interview members of municipal councils and local representatives of the Ontario legislature with a view of having them endorse an Act for compulsory superannuation funds;

Recommending that sulphuric acid containers as supplied to fire departments be made smaller;

That suitable fans be installed in working end of postal cars;

That railway mail clerks be allowed actual expenses while assigned to duty away from their headquarters;

That forty minutes shall constitute one hour's duty between 6 p.m. and 8 a.m., and thirty minutes one hour's duty on Sundays and holidays;

A forty-four hour or less work week, with overtime paid for in cash;

Half-fare transportation for railway mail clerks and their families, and that identification cards be honoured;

That all clerks be allowed four days sick leave without producing a doctor's certificate.

The officers elected were: President, G. Dennehy, Winnipeg, Man.; First vice-president, A. R. Buckler, Halifax, N.S.; Second vice-president, F. A. Morin, Toronto, Ont.; Third vice-president, K. C. McDonald, Ottawa, Ont.; Secretary-treasurer, H. A. Clarke, Calgary, Alberta.

Montreal was selected as the next convention city, but Ottawa was made the permanent convention city after 1931.

Recommending that a referendum vote be taken relative to the opening again of the V.D.B. Fund;

Approving of the investing of \$1,500 in bonds.

Officers elected were: President, R. Lyons, Toronto; Vice-presidents, J. A. McEwen, Fort William and Sep. Shuttleworth, Windsor; Secretary-treasurer, D. H. Lamb, Toronto.

The 1930 convention will be held in London.

In the half year ending June 30, the Workmen's Compensation Board of Ontario awarded benefits amounting to \$3,991,646.78, of which \$681,432.39 was for medical aid. The total awards for the half year are nearly half a million dollars higher than for the same period in 1928. There were 41,515 accidents, including 225 fatal cases, reported to the Compensation Board for the half year, as compared with 35,202 for the first half of 1928 with 276 fatalities.

Mr. R. B. Morley, general manager, Industrial Accident Prevention Associations, states that the executive committee of the associations have planned a more intensive campaign for the balance of 1929 and have lately admitted the Construction Safety Association to membership, indicating that the construction industries are endeavouring to lower their bad record of the past several years.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Questionnaire Concerning Forced Labour

The Twelfth International Labour Conference at its recent session, the proceedings of which were outlined in the last issue of the *LABOUR GAZETTE*, adopted the text of a questionnaire on the subject of forced labour. The replies of the government will be taken as the basis for the drafting of a Convention to be brought before the conference next year. A report on forced labour recently published by the International Labour Office stated that the question is one which affects for the most part, though not exclusively, the working conditions of subject peoples who are under the administration of races alien to themselves. The report pointed out that it would be of little use to abolish slavery if conditions of employment analogous to slavery were still to be maintained in the form of forced labour. For this reason the Assembly of the League of Nations in 1926, after adopting an international Slavery Convention, passed a formal resolution drawing attention to the importance of the work being undertaken by the International Labour Office with a view to studying the best means of "preventing forced or compulsory labour from developing into conditions analogous to slavery."

The studies which have since been made, and the advice of the Committee of Experts which assisted the Office in its task, have made it possible to formulate a certain number of principles which would seem eminently fitted for embodiment in international agreements. The final aim to be kept in view is the complete suppression of forced labour. According to the report already mentioned, the system is a survival of bygone times, and its continuance is in contradiction with all modern conceptions of the relationship between man and man. If, however, there are districts where it may be difficult to bring to an end immediately all forced labour, it is indispensable that recourse to this form of labour should be very carefully regulated, in order to prevent any form of abuse. In any case, if for important reasons of public policy, forced labour should be resorted to, it is essential that the authority responsible should be the highest central authority of the territory concerned, or, when considered desirable, an authority of the metropolitan country. Another principle follows logically. In no case whatever should the competent authority impose or permit the imposition of forced labour for the benefit of private individuals, companies or other entities than the

general community. Where such forced labour exists, every effort should be made to bring it to an end as soon as possible. The illegal exaction of forced labour should be punishable as a penal offence.

### Minimum Wage Fixing Machinery

On June 14, the formal ratification by Great Britain of the convention concerning the creation of Minimum Wage Fixing Machinery, which was adopted last year by the 11th International Labour Conference (*LABOUR GAZETTE*, July, 1928, page 751) was registered with the Secretariat of the League of Nations.

This announcement marks the completion of the first stage towards the conversion of the Minimum Wage Convention from a "draft" into an instrument which has a definite international binding force. By Article 7 of the Convention it is provided that its provisions shall come into operation twelve months after the date on which the ratifications of two members of the International Labour Organization have been registered. The British ratification is the second, the first being that of Germany, which was registered a fortnight earlier. So far, therefore, as these two countries are concerned, the Convention will take effect in June of next year. Before that date it may be anticipated that other ratifications will have been communicated, including that of the French Government, which has already introduced legislation to authorize ratification; in such cases, however, since the interval of twelve months between ratification and coming into force still operates, the date on which the Convention takes effect will be correspondingly later.

It is interesting to note that, although the methods of minimum wage fixing in the three countries named are in some respects widely different, in none of these countries does the ratification of the Convention necessitate the amendment of existing law and practice, though it may entail extension of the application of the present machinery. This, however, does not in any way detract from the value of their ratifications, having regard not only to the fact that the Convention binds them to maintain such machinery for at least ten years, but also to the stimulus which must be given to other countries, perhaps less well equipped in this respect, by the example of three of the leading industrial countries of the world.

### Wage Levels in Various Countries

A periodical survey of changes in the general wage level in various countries has been commenced by the International Labour Office at Geneva, the first article of the series having appeared in the *International Labour Review*, July, 1929. It is intended to publish these statistics twice a year, in the January and July numbers of the *Review*.

The series given are limited to those statistics which are representative of the general changes of wages as a whole or in a group of important industries. Certain countries publish statistics of wages showing the movement separately for various industries. These series are not included (except for agriculture in the United States and Canada). It is hoped that the publication of the series showing the general wage movement will encour-

age countries which compute series for separate industries to combine the data into a general average. So far as possible the series given are national in scope, being based on information not only for different industries, but also for different districts. For one or two countries in the tables, however, no national figures are available, but general averages for an important district of the country (e.g. the capital) are given.

It should be emphasized that these statistics are primarily intended to show fluctuations over a period of time within each country. Owing to differences in scope and methods of compilation, it is not possible to compare with any accuracy the statistics between the different countries.

Further references to these tables will be made in a future issue.

### Co-operative Policy of Coal Company in Colorado

Reference was made in the *LABOUR GAZETTE*, to the new policy adopted last year by the Rocky Mountain Fuel Company of Colorado. This policy was inaugurated by Miss Josephine Roche on obtaining the controlling interest in the company after a long period of unrest in the industry. Miss Roche announced that the company would henceforth follow a policy of cooperation with the employees based on the recognition of labour's right to organize independently in an organization of its own choice and to deal collectively and on equal terms with capital.

The company's report for the first six months of 1929, as outlined in the *New Republic*, August 14, 1929, shows the immediate effects of the new policy. The report shows that its sales for the first six months of 1929 were 16 per cent greater than for the first half of last year, and the production per man per day was over a ton greater than in the former period—an increase of 18 per cent. The average daily wage paid all men employed in and around the mines was \$7.95 during the first quarter of this year; the second quarter has not yet been computed. This rate of wages is considerably higher than the average wage for the coal industry at the present time. Mr. Vincent, the president of the company writes: "While the wage contract increased the earnings of the men as we desired it should, it has not resulted in increased production costs because of the cooperation and increased efficiency which have characterized the new relationship." Meanwhile grievances of the men are at a minimum, most complaints being satisfactorily settled by the pit com-

mittees and mine superintendents, without any appeal. This experience, concludes Mr. Vincent, "demonstrates that the demoralized coal industry will respond to the same intelligent treatment to which other industries have responded and by which they have been stabilized."

Mr. H. E. Foex, superintendent of the factory of the Dominion Sugar Company at Chatham, Ontario, sustained fatal injuries on July 29 while he was directing operations in connection with the construction of a new flume. He was struck by the dipper of a crane which crushed him against a post. The coroner's jury which investigated the circumstances of the fatality found that the accident was purely accidental, and made no recommendations.

The by-laws of the Pilotage District of British Columbia were published as a supplement to the *Canada Gazette*, August 10, 1929. This district was established by an Order in Council dated March 22, 1929, the Minister of Marine and Fisheries being appointed to be the Pilotage authority. In addition to rules governing pilotage dues and rates at the several ports, the by-laws contain the regulations governing the licensing of pilots, their examinations, period of probation, physical tests, duties, periods of leave, etc. The pilots of the district are required to appoint in April each year from among their number, a committee of three, which will be recognized by the Pilotage Authority as representing the pilots in all matters affecting them collectively and individually.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JUNE, 1929

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in June was 6,819, their employees numbering 1,069,700 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for

June was 1,688, having an aggregate membership of 198,849 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### Employment Situation at the Beginning of July as Reported by the Employers

There were further pronounced increases in employment at the beginning of July, according to statements tabulated by the Dominion Bureau of Statistics from 6,819 firms employing 1,069,700 workers, or 23,109 more than on June 1. This advance, which was rather smaller than that recorded on July 1, 1928, brought the index number to 124.7, as compared with 122.2 in the preceding month, and with 117.7, 109.7, 105.0, 98.0, 97.1, 100.7, 92.2 and 88.6 at the beginning of July in 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The situation continues decidedly more favourable than in any other month of the years since 1920, as may be seen from Charts 1 and 2.

Considerable improvement was registered in all industries except manufacturing and logging, which showed seasonal curtailment. The largest gains were reported in construction, transportation and services, but the advances in mining, trade and communications were also noteworthy.

#### Employment by Economic Areas

The trend was favourable in all provinces, the greatest expansion taking place in the Prairie Provinces and Quebec.

*Maritime Provinces.*—Statements were tabulated from 558 firms employing 79,196 workers, as against 75,316 in the preceding month. This increase of nearly 4,000 persons brought employment to a slightly higher level than in any other month in the last nine years, the index standing at 117.9, as compared with

116.2 on July 1, 1928. Construction recorded the greatest improvement, but there were also gains in mining, transportation and trade; on the other hand, manufacturing was slacker, chiefly in the iron and steel and fish-preserving industries.

*Quebec.*—Construction, manufacturing, transportation and services reported the largest additions to staffs in Quebec, while logging was seasonally dull with the end of river-driving. The forces of the 1,532 co-operating employers aggregated 296,148 persons, compared with 287,320 on June 1. This advance involved more workers than that registered on the same date last year, when the index was rather lower; employment at the beginning of July, 1929, was, in fact, at the highest level so far recorded.

*Ontario.*—Continued expansion was noted in Ontario, where the 3,040 firms whose statistics were tabulated reported 446,270 employes, or 4,323 more than on June 1. Considerable gains were shown in construction, transportation, mining, services and trade, but logging and manufacturing, especially of iron and steel products, were seasonally quiet. Rather larger increases were indicated on July 1, 1928, when the index was nearly ten points lower.

*Prairie Provinces.*—The most noteworthy advances in this area were in construction, manufacturing, transportation, services, trade and communications. Data were compiled from 970 employers with an aggregate staff of 156,113 workers, as against 150,749 in their

last report. This increase of 5,364 workers was smaller than that registered on the same date last year, but the level of employment was higher on July 1, 1929, than in any other month of the record.

*British Columbia.*—Moderate improvement was reported in British Columbia, where the index, at 118.2, was at its maximum since the series was instituted in 1920. A total working force of 91,973 persons was employed by the 719 firms whose data were received, and who had 91,259 workers in the preceding month. Manufacturing, particularly of lumber products, was slacker, as was logging, but trade, transportation and communications recorded gains, while there was a particularly large increase in construction.

occurred in the other groups. A combined working force of 144,617 persons was indicated by the 819 co-operating employers, who had 143,402 on June 1. The gains noted on July 1, 1928, were less extensive, and the index then was considerably lower, as it was on the same date in every other year of the record.

*Quebec.*—Further improvement was reported in Quebec, where statements were tabulated from 110 firms with 12,761 employees, compared with 12,052 in the preceding month. Manufacturing, construction, transportation and services registered practically all the gain. The index was rather lower than at the beginning of July, 1928, when the improvement was on a somewhat larger scale.

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Table I gives index numbers by economic areas.

#### Employment by Cities

Seven of the eight cities for which separate tabulations are made reported heightened activity, the gains in Montreal and Toronto being most noteworthy, while there were reductions in Windsor and the adjacent Border Cities.

*Montreal.*—Employment in Montreal continued to advance, particularly in construction, while, on the whole, only small changes

*Toronto.*—Construction, services and trade reported increased activity, while only slight general changes were noted in other industries. The 879 employers furnishing data enlarged their staffs by 1,792 workers to 126,186 at the beginning of July. A smaller advance was reported on the same date last year, when employment was in less volume.

*Ottawa.*—Statistics were received from 140 employers with 13,721 persons on their paylists, compared with 13,668 in the preceding month. Most of the gain took place in con-

<sup>1</sup>Corrected figure.

brisker, while manufacturing showed practically no change, losses in electrical appliance plants being offset by increases in the food and other industries.

*Windsor and the Adjacent Border Cities.*—Further curtailment in employment, mainly in automobile plants, caused a loss of 1,453 persons in the staffs of the 124 reporting employers, who had 19,175 in their employ on the date under review. The index was higher than on July 1, 1928, although large increases were then reported; the situation was, in fact, better than at the beginning of any other July since the record for this city was commenced in 1925.

*Winnipeg.*—Manufacturing and transportation registered advances that brought employment to its maximum for July 1 in the years for which data have been compiled. An aggregate working force of 33,986 employees was reported by the 330 co-operating firms; this was 756 more than on June 1. The improvement shown on the same date a year ago involved rather more persons, but employment then was not so active.

*Vancouver.*—The trend of employment in Vancouver continued favourable, according to information from 270 establishments employing 30,167 workers, as against 29,573 in the preceding month. The greatest gains were

NOTE: The "relative weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

<sup>1</sup>Corrected figure.

in construction, communications and trade. A smaller increase was recorded by the firms making returns for July 1, 1928, when the index stood at 107.6, as compared with 112.8 on the date under review.

Index numbers by cities are given in Table II.

### Manufacturing Industries

Canneries and other food, lumber, pulp and paper, building material, electric current, mineral product, boot and shoe and electrical apparatus factories registered heightened activity, but seasonal curtailment was shown in

textile and iron and steel plants. The 4,151 co-operating manufacturers employed 573,911 operatives, as against 577,285 in the preceding month. Increases were indicated in this division on July 1, 1928, but the index then was several points lower.

*Animal Products, Edible.*—Additions to staffs were again recorded in this group, 674 persons being taken on by the 243 establishments making returns, which had 20,160 in their employ. Much of the improvement took place in fish-canneries in British Columbia, but gains were also noted in the dairy, meat-packing and other divisions of the in-

<sup>1</sup> The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

\*Corrected figure.

dustry. The index on July 1, 1929, was slightly higher than on the same date in any other year of the record.

*Leather and Products.*—Statements were received from 177 manufacturers in this division, employing 16,455 workers, as compared with 16,168 in the preceding month. The

bulk of the advance took place in Quebec. The situation was not so favourable as on the same date in 1928, although losses were then indicated.

*Lumber and Products.*—Rough and dressed lumber mills showed heightened activity, while there were reductions in vehicle fac-

atories. The gains were much smaller than those noted on July 1, 1928, when the index was, however, rather lower. A combined working force of 62,297 employees was reported by the 706 co-operating firms; this was 891 more than at the beginning of June. All provinces, except British Columbia, shared in the upward movement.

*Plant Products, Edible.*—The resumption of operations in canneries, together with increases in personnel in chocolate and confectionery factories, caused an advance which considerably exceeded that registered on July 1 a year ago. Returns were received from 345 manufacturers of vegetable foods, having 32,034 operatives, as against 30,085 in their last report. There was improvement in all provinces, Ontario showing most noteworthy gains. The index was some ten points higher than it was early last summer.

*Pulp and Paper Products.*—There was continued expansion in the pulp and paper group, particularly in pulp and paper mills, but also in printing and publishing establishments. The 535 co-operating employers reported 67,841 workers, compared with 67,065 on June 1. Smaller additions to staffs were indicated on July 1, 1928, when the index of employment was slightly lower. The trend was generally favourable, but especially so in Quebec.

*Rubber Products.*—Minor declines were registered in rubber factories, chiefly in Ontario, while the tendency in Quebec was upward. The index continued higher than in the summer of any other year of the record. Statistics were tabulated from 37 firms with 18,171 employees on the date under review, as compared with 18,198 in the preceding month.

*Textile Products.*—Seasonal curtailment of operations, mainly in Quebec and Ontario, was reported by the 560 co-operating textile manufacturers, who employed 80,776 workers, or 2,022 less than at the beginning of June. The largest losses were in cotton, silk, garment, woollen, headwear and knitting mills. Rather smaller declines were indicated on the corresponding date in 1928, but the level of employment then was lower than on the date under review.

*Tobacco, Distilled and Malt Liquors.*—Employment in this division improved slightly, according to statistics from 143 establishments, whose staffs rose from 16,010 persons on June 1 to 16,136 at the beginning of July. There were minor increases in Ontario and the Western Provinces. An upward movement had also been shown on the same date

last year, when the index was nearly eight points lower.

*Clay, Glass and Stone Products.*—Continued advances on a decidedly larger scale than in July, 1928, were noted in building material plants, the 144 co-operating establishments enlarging their forces by 727 persons to 13,799 on the date under review. The bulk of the gain was in Quebec, Ontario and the Prairie Provinces. Conditions continued much better than in other summers of the record.

*Electric Current.*—Further improvement involving practically the same number of workers as that noted on July 1, of last year, was registered in electric current plants, mainly in Ontario and the Prairie Provinces. A combined working force of 16,487 persons was recorded by the 91 producers whose returns were received, and who employed 15,952 in the preceding month. Activity was greater than in any other period since the series was instituted in 1920.

*Electrical Apparatus.*—There was an increase of 381 in the staff of the 47 manufacturers furnishing data, who had 14,419 employees on July 1. Ontario reported practically all this gain, which exceeded that shown at the beginning of July, 1928. The number engaged in the production of electrical apparatus, as indicated in these returns, was at its maximum for the record.

*Iron and Steel.*—The trend of employment in iron and steel factories was seasonally downward in all provinces, the losses being larger than on July 1 a year ago. The greatest falling-off was in automobile factories, although the railway rolling stock, rolling mill, machinery and foundry and machine shop divisions also showed contractions, while improvement was indicated in agricultural implements, shipbuilding and a few other groups. Returns were compiled from 656 employers whose forces aggregated 162,998 workers, as against 171,118 in the preceding month. The situation was better than on the same date in any other year since 1920.

*Non-Ferrous Metal Products.*—Reductions were registered in non-ferrous metal products, all divisions of which, except smelters and refineries, were rather slacker. The 108 co-operating manufacturers employed 20,501 operatives, or 183 less than in the preceding month. An advance was reported on the same date last year, when the index, as at the beginning of July in other years of the record, was lower.

*Mineral Products.*—Further gains were shown in this division, mainly in Ontario and

the Prairie Provinces, resulting in a more favourable situation than in any other period since 1920. Statistics were received from 80 employers whose staffs rose from 13,156 on June 1 to 13,572 on July 1.

### Logging

The conclusion of river-driving operations in many logging camps, chiefly in Quebec and Ontario, caused a seasonal falling-off in employment, while curtailment was also shown in British Columbia; 2,993 persons were released from the staffs of the 200 reporting firms, who employed 20,170 at the beginning of July. The decline involved a rather larger number of workers than that noted on the corresponding date a year ago, when the index was lower.

### Mining

*Coal.*—There was an increase in employment in coal mines, 77 of which employed 26,373 men, as compared with 25,454 in their last report. Practically all the gain was in the Maritime Provinces. Curtailment had been noted at the beginning of July last year, and the situation then was not so favourable.

*Metallic Ores.*—Continued advances were reported in metallic ore mines, mainly in Ontario. Statements were tabulated from 68 operators employing 16,151 workers, or 305 more than on June 1. The index, at 140.3, was at the highest point yet reached in this record.

*Non-Metallic Minerals, other than Coal.*—Additions to payrolls on a greater scale than on July 1, 1928, were made in non-metallic mineral mines, 69 of which reported 9,482 employees, or 484 more than in their last report. Firms in Quebec and the Prairie Provinces absorbed most of the extra workers. Employment was in greater volume than in any other month of the record.

### Communications

Further increases were registered on telephones and telegraphs, 638 persons being added to the forces of the 169 companies and branches making returns. They had 29,686 on their staffs, a larger number than has ever before been indicated in this record.

### Transportation

*Street Railways and Cartage.*—Employment in the local transportation group again advanced, 131 firms reporting 25,131 workers in their employ, as against 24,423 in the preceding month. Quebec and the Prairie Provinces registered the gain. Smaller advances had been noted on July 1, 1928, when the index was some fourteen points lower.

*Steam Railways.*—Statistics tabulated from 106 companies and divisional superintendents in the steam railway operation group, showed that they employed 88,929 workers at the beginning of July, or 2,540 more than in the preceding month. The advance was not so pronounced as that reported on July 1 of last year, when employment was below its level at the time of writing. All provinces shared in the upward movement, which, however, was most noteworthy in Ontario.

*Shipping and Stevedoring.*—There was an increase in employment in water transportation on the date under review; 69 companies enlarged their staffs by 838 employees, bringing them to 18,107. The situation was better than at the beginning of July, 1928, when curtailment had been indicated. Ontario and the Maritime Provinces reported practically all the advance.

### Construction and Maintenance

*Building.*—Continued, important advances in employment were noted in building construction, the gains exceeding those of the same date in any other year of the record, while the index, at 148.8, was at its peak for the beginning of July in the years since 1920. The 625 co-operating contractors employed 56,851 workers, as compared with 51,093 in the preceding month. All provinces except British Columbia reported expansion, but Quebec recorded the largest gains.

*Highways.*—The number of men engaged on road construction and maintenance was greatly augmented on the date under review, when the 212 firms furnishing data had 33,454 employees, or 11,098 more than at the beginning of June. Marked advances were shown generally, those in Quebec being largest.

*Railway.*—A combined working force of 63,161 persons was reported by the 46 contractors and divisional superintendents whose statistics were tabulated, and who had 60,606 employees on June 1. All provinces shared in the increase, which was most noteworthy in Ontario. Larger additions to staffs were noted on July 1 a year ago, but the index then stood at 159.8, compared with 160.4 on the date under review.

### Services

Continued and greater expansion was shown in the service group, according to returns from 209 employers with 23,747 persons on their staffs, as compared with 21,479 in the preceding month. The opening of the summer-hotel season caused most of the gain, which exceeded that reported on July 1 of any other

year for which data are available, while employment was at the highest level so far reached. The tendency was favourable in all provinces, but the largest increases were in Ontario and the Prairie Provinces.

**Trade**

Further pronounced improvements was noted in trade, in which both retail and wholesale establishments afforded heightened employment. Statements were tabulated from 687 firms having 84,547 persons in their employ, or 1,365 more than at the beginning

of June. The additions to staffs in Ontario were most marked. The index, at 127.7, was higher than in the summer of any other year of the record.

**Tables**

Index numbers of employment by economic areas, leading cities and industries are shown in the accompanying tables, in which the columns headed "relative weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada on the date under review.

**Unemployment in Trade Unions at the Close of June, 1929**

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the num-

ber of the members reported were idle. The percentage for the month under review was based on the returns received by the Department of Labour from a total of 1,688 unions with a membership aggregate of 198,849 persons, 5,723 of whom were without employment on the last day of the month. In comparing the returns for June with those for May this year, when

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

ber of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The steady improvement which has been indicated among local trade unions since the close of February continued throughout June, the unemployment percentage at the end of June standing at 2.9, the smallest percentage on record for that month in any year since 1920, when at the close of June 2.1 per cent

4.0 per cent of unemployment was registered, activity in Quebec, particularly in the garment trades, was largely responsible for the better situation obtaining during the month under review, while the increases in employment reported from Nova Scotia, Ontario, Manitoba and Saskatchewan were in each case less than 1 per cent. In Alberta the same percentage of idleness was recorded in both months of the comparison. In New Brunswick and British Columbia, on the other hand, nominal reductions in employment occurred. When a comparison is made with the returns

for June last year, when 3.2 per cent of the members reported were idle, Quebec, as in the previous comparison, indicated the most noteworthy improvement during the month under review, and in British Columbia also a somewhat higher level of employment was shown. On the contrary, Nova Scotia unions reported a reduction of around 3 per cent, followed by contractions of lesser magnitude among New Brunswick, Ontario, Manitoba, Saskatchewan and Alberta unions.

Each month the records of unemployment from the largest city in each province with the exception of Prince Edward Island are tabulated separately. Of these Montreal reported the most pronounced expansion at the close of June when compared with the returns for the previous month, while notable reductions in employment were indicated from Regina. In addition Halifax and Edmonton unions registered moderate advances in employment, and from Saint John and Winnipeg the improvement reported was nominal only. Vancouver and Toronto unions, on the other hand, reported very slight declines in activity. Comparing with the returns for June last year, Regina, Toronto, Edmonton, Halifax and Winnipeg reported contractions in employment during the month under review, ranging from 4.8 per cent in Regina to .2 per cent in Winnipeg, while of the gains in employment shown by Montreal, Vancouver, and Saint John unions that of 4.5 per cent in Montreal was the greatest.

The chart accompanying this article illustrates the trend of unemployment from January, 1923, to date. The curve during the first month of the present year projected in a downward direction from that of December, indicative of a slightly improved situation, but in February it changed its course showing an opposite trend. From the close of February, however, the projection has been steadily downward, indicating a gradual improvement in conditions until at the close of June it rested at a level lower than that which has been attained at the close of June in any year since 1920.

Workers in the manufacturing group of industries were busier during June than in the previous month, as manifested by the reports tabulated from 469 unions with 56,387 members. Of these 1,309 or 2.3 per cent were idle on the last day of the month, contrasted with 4.8 per cent of unemployment in May. An outstanding feature in the better situation shown during June was the improvement registered by garment workers, who, while indicating considerable part-time work only, reported very little actual unemployment, compared with a fairly substantial percentage in

May. General labourers and fur workers also recorded marked advances in employment, while small gains only were shown by paper-makers and cigar makers. The situation for iron and steel workers remained unchanged from that of May. Glass, leather and wood workers, printing tradesmen, metal polishers and bakers suffered curtailment of employment from that afforded in May. The improvement in the manufacturing industries reported over June last year, when 6.4 per cent of idleness was registered, was, as in the previous comparison, largely due to increased activity for garment workers, though iron and steel, fur and wood workers, papermakers and cigar makers also contributed in a smaller way to the group expansion. Reductions in

employment, which, however, involved but a small number of workers, were shown by glass workers, metal polishers, bakers and printing tradesmen.

Reports were tabulated at the close of June from 47 unions of coal mines with 18,223 members, and of these 797 or a percentage of 4.4 were idle at the close of the month, contrasted with 5.8 per cent of unemployment in May and 2.6 per cent in June a year ago. Both Nova Scotia and Alberta unions participated in the slight increase in available employment reported over May, while in British Columbia no change was indicated, all members being reported at work in both months of the comparison. Nova Scotia unions reported a slightly lower level of employment during June than in the same month last year, while in Alberta employment conditions showed small improvement and British Columbia unions indicated a fully engaged situation in both months.

The upward movement that employment in the building and construction trades has experienced for several months continued to be in evidence during June, the 208 unions from which reports were tabulated with 30,032 members indicating 7.5 per cent of idleness compared with 8.2 per cent in May. Activity increases were reported during June by bricklayers, masons and plasterers, tile layers, lathers and roofers, plumbers and steamfitters and electrical workers, but the largest gains were apparent among bricklayers, masons and plasterers. Carpenters and joiners did not maintain the steady improvement which has been manifest for several months and showed a slightly less favourable situation, while the tendency among bridge and structural iron workers, granite and stonecutters, painters, decorators and paperhangers and hod carriers and building labourers was toward lessened employment. The volume of unemployment in the building trades as a whole during June exceeded that indicated in the same month of last year by nearly 4 per cent, carpenters and joiners and bricklayers, masons and plasterers being important factors in the increase in idleness reported, though declines on a smaller scale were manifest by bridge and structural iron workers and hod carriers and building labourers. On the other hand, employment for granite and stonecutters, painters, decorators and paperhangers, plumbers and steamfitters, tile layers, lathers and roofers, and electrical workers was on a higher level than in June a year ago.

The transportation industries showed only slight variation during June from the May conditions, the tendency, however, being favourable. This was indicated by the re-

turns tabulated for June from an aggregate of 721 unions, embracing a membership of 67,822 persons, 1,047 of whom were without employment on the last day of the month, a percentage of 1.5, contrasted with 2.1 per cent in May. Navigation workers, steam railway employees, and teamsters and chauffeurs all participated in this slightly upward employment movement, during June, while among street and electric railway employees the decline was so slight as to be almost negligible. Practically the same situation prevailed in the transportation industries during the month under survey as in June of last year when 1.4 per cent of inactivity was registered. In this comparison steam railway employees, navigation workers, teamsters and chauffeurs, and street and electric railway employees all indicated minor declines in activity.

From Longshore workers whose returns are tabulated separately each month 13 reports were received in June, covering 7,294 members, and of these 850, or a percentage of 11.7 were idle at the close of the month, contrasted with percentages of 15.1 in May and 15.6 in June of last year.

The level of activity for retail clerks remained almost unchanged during June from both that of the preceding month and the corresponding month last year, the 7 unions from which reports were received at the close of June with 1,455 members indicating an unemployment percentage of .5 compared with .6 per cent in May and with .4 per cent at the end of June, 1928.

From unions of civic employees 63 reports were received during June, including a membership of 6,637 persons, 36 or .5 per cent of whom were idle at the end of the month, compared with .7 per cent of unemployment in May and with a fully engaged situation in June a year ago.

Somewhat better conditions were reported by unions in the miscellaneous group of trades during June than in the previous month, as shown by the returns tabulated from a total of 114 unions with 5,531 members. Of these 194 were without work on the last day of the month, a percentage of 3.5, compared with 4.6 per cent of unemployed members in May. Hotel and restaurant employees showed substantial improvement over May, and gains in employment on a smaller scale were recorded by stationary engineers and firemen, and barbers. On the other hand, employment for theatre and stage employees showed a considerable falling off. In making a comparison with the returns for June of last year in the miscellaneous group of trades when 3.8 per cent of idleness was registered, hotel and

restaurant employees and stationary engineers and firemen registered increases in the employment volume which were partially offset by the contractions reported among theatre and stage employees. Barbers indicated an unchanged situation from June of last year.

Reports were received from 3 unions of fishermen during June with 784 members, 2.6 per cent of whom were idle at the end of the month in contrast with 3.7 per cent in May and with no unemployment in June a year ago.

Adequate work was provided during June for the 881 lumber workers reported by 2

unions. In May also no inactivity was registered while in June of last year the percentage of idleness stood at 16.6.

Table 1 shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1928 inclusive, and also the percentage of unemployment by provinces for June of each year from 1919 to 1926 inclusive, and for each month from January, 1927, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### Employment Office Reports for June, 1929

The volume of business transacted by the offices of the Employment Service of Canada as shown by the average daily placements effected during the month of June, 1929, recorded a decline of 7 per cent when a com-

parison was made with the work carried on during the previous month, but a gain of nearly 5 per cent over that of the corresponding period a year ago. All industrial divisions, except farming, showed declines from May while gains over June, 1928, were shown in manufacturing, logging, services, transportation and trade. In construction and maintenance, farming and mining, fewer placements were made.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ———— Vacancies - - - - - Placements o-o-o-o-o-o

parison was made with the work carried on during the previous month, but a gain of nearly 5 per cent over that of the corresponding period a year ago. All industrial divisions, except farming, showed declines from May while gains over June, 1928, were shown in manufacturing, logging, services, transportation and trade. In construction and maintenance, farming and mining, fewer placements were made.

The accompanying chart shows the trend of employment from January, 1927, as repre-

that the curve both of vacancies and placements in relation to applications varied but little throughout the month, each showing a slight decline during the first half, followed by a slight upward trend during the latter half of the period under review. In neither instance, however, did the curve attain the level reached at the close of June, 1928, there being a decline of about three points in each case. The ratio of vacancies to each 100 applications was 82.3 during the first half and 83.4 during the second half of June, 1929, in con-

trast with the ratios of 82.9 and 86.6 during the corresponding periods of 1928. The ratios of placements to each 100 applications during the periods under review were 76.4 and 76.9 as compared with 78.7 and 79.5 during the corresponding month of 1928.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during June, 1929, was 1,531, as compared with 1,646 during the preceding month and with 1,451 in June a year ago.

The average number of applications for employment received daily by the offices during the month under review was 1,849, in comparison with 1,939 in May, 1929, and with 1,714 during June last year.

The average number of placements made daily by the offices of the Service during June was 1,418, of which 920 were in regular employment and 498 in work of one week's duration or less, as compared with a total daily average of 1,521 during the preceding month. Placements in June a year ago averaged 1,355 daily, consisting of 905 placements in regular and 450 in casual employment.

During the month of June the offices of the Employment Service referred 35,239 persons to vacancies and effected a total of 34,010 placements. Of these the placements in regular employment were 22,062, of which 17,624 were for men and 4,438 for women, while placements in casual work totalled 11,948. The number of vacancies reported by employers was 24,997 for men and 11,747 for women, a total of 36,744, while applications for work numbered 44,365, of which 31,446 were from men and 12,919 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522

1929 (6 months).....	113,887	65,811	179,698

### Nova Scotia

There was a decrease of over 25 per cent in the number of positions offered through employment offices in Nova Scotia during June, when compared with the preceding month, but a gain of nearly 7 per cent in comparison with the corresponding month last

year. Placements declined nearly 29 per cent from May but were over 4 per cent higher than in June, 1928. Construction and maintenance, services and trade showed increased placements over June of last year, and the manufacturing industries a nominal gain only. The declines in all other groups were small. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 80; logging, 47; construction and maintenance, 77; trade, 80; and services, 387, of which 257 were of household workers. During the month 117 men and 51 women were placed in regular employment.

### New Brunswick

Employment opportunities as indicated by orders received at employment offices in New Brunswick during June were over 10 per cent less favourable than in the preceding month, but nearly 3 per cent in excess of the corresponding month last year. There was a decline of over 18 per cent in placements from May, and of nearly 4 per cent when compared with June, 1928. Construction and maintenance showed the largest reduction in placements from June of last year, but logging and transportation also reported minor declines. Services, farming and trade showed improvement, the gains in services being the most noteworthy. The changes in other groups were nominal only. Placements by industrial divisions included: manufacturing, 33; logging, 55; farming, 22; construction and maintenance, 150; trade, 26; and services, 588, of which 391 were of household workers. Regular employment was found for 244 men and 66 women.

### Quebec

During the month of June positions offered through employment offices in the Province of Quebec were nearly 28 per cent less than in the preceding month and 8 per cent fewer than during the corresponding month last year. There was a decline also in placements of nearly 28 per cent when compared with May and of nearly 14 per cent in comparison with June, 1928. The manufacturing industries and transportation showed increased placements over June last year, but these gains were more than offset by declines in all other groups, the most noteworthy being in construction and maintenance. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 168; logging, 121; farming, 68; transportation, 177; construction and maintenance, 557; trade, 73; and services, 671, of which 307 were of household workers. Placements in regular employment numbered 1,377 of men and 403 of women.

### Ontario

There was a decrease of 9 per cent in the number of positions offered through employment offices in Ontario during June when compared with the preceding month, but a gain of over 13 per cent in comparison with the corresponding month last year. Placements were nearly 10 per cent less than in May, but nearly 12 per cent higher than June, 1928. Increased placements in the manufacturing industries, construction and maintenance, and services were responsible for the gains over June of last year, although improvement was also recorded in farming, trade and finance. Logging showed the only decline of importance. Placements by industrial groups included: manufacturing, 2,558; logging, 1,236; farming, 1,143; mining, 79; transportation, 578; construction and maintenance, 3,752; trade, 633; and services, 5,479, of which 2,771 were of household workers. During the month 8,576 men and 1,805 women were placed in regular employment.

### Manitoba

The demand for workers as indicated by orders received at employment offices in Manitoba during June was nearly 16 per cent less than in the preceding month, and over 12 per cent less than during the corresponding month last year. Placements also were over 13 per cent lower than in May and nearly 12 per cent below June last year. The manufacturing industries, logging, transportation and trade were the only groups in which more placements were made during the month under review than in June last year, and these gains were more than offset by declines in other groups, the most noteworthy being construction and maintenance and farming. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 182; logging, 276; farming, 457; transportation, 63; construction and maintenance, 355; trade, 239; and services, 2,072, of which 1,595 were of household workers. There were 1,111 men and 923 women placed in regular employment.

### Saskatchewan

During June orders received at employment offices in Saskatchewan called for nearly 32 per cent fewer workers than in the preceding month, and over 8 per cent less than during the corresponding month last year. There was a decline of nearly 32 per cent in placements when compared with May and of nearly 12 per cent in comparison with June, 1928. The manufacturing industries, logging, transportation, and services showed gains in place-

ments over June last year, while reductions were reported in all other groups, the most noteworthy being in farming and construction and maintenance. Placements by industrial divisions included: manufacturing, 146; logging, 64; farming, 802; transportation, 112; construction and maintenance, 505; trade, 139; and services, 1,279, of which 718 were of household workers. During the month 1,384 men and 521 women were placed in regular employment.

### Alberta

Orders listed at employment offices in Alberta during June called for nearly 19 per cent fewer workers than in the preceding month and nearly 13 per cent less than during the corresponding month of last year. Placements also declined nearly 14 per cent in comparison with May, and over 6 per cent when compared with June, 1928. All groups except services, trade and transportation participated in the declines in placements from June of last year, the largest reduction being in farming. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 274; farming, 1,468; mining, 58; transportation, 55; construction and maintenance, 659; trade, 163; and services, 1,010, of which 641 were of household workers. There were 2,440 men and 428 women placed in regular employment.

### British Columbia

Opportunities for employment as indicated by orders received at employment offices in British Columbia during June were slightly over 1 per cent less favourable than in the preceding month, and over 3 per cent below the corresponding month last year. Placements also were nearly 2 per cent less than in May, and over 1 per cent fewer than in June, 1928. Increased placements were made in the manufacturing industries, mining, transportation, services and trade over June of last year, but these gains were offset by declines in farming and construction and maintenance, the latter showing the most substantial decrease. There were minor changes only in the other groups. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 718; logging, 405; farming, 834; mining, 148; transportation, 236; construction and maintenance, 916; trade, 224; and services, 1,098, of which 525 were of household workers. Placements in regular employment numbered 2,375 of men and 572 of women.

### Movement of Labour

During the month of June, 1929, the offices of the Employment Service of Canada effected 22,062 placements in regular employ-

ment. of which 12,295 were of persons for whom the employment located was outside the immediate territory of the offices at which they were registered. Of the latter 1,802 were granted the Employment Service reduced transportation rate, 1,300 going to centres within the same province as the despatching office and 502 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec offices granted 109 certificates for reduced transportation during June, 43 of which were provincial and 66 interprovincial. The former were issued at Montreal to 37 saw-mill labourers and 6 river drivers travelling to employment within the same zone. All the transfers outside the province were effected by the Hull office, which despatched 36 bushmen to Pembroke and surrounding districts; 29 bushmen to Cobalt; and 1 cook general to Sudbury.

The labour movement both within and from the Province of Ontario during June included the transfer of 534 persons, and of these 475 went to points within the province and 59 to outside centres. Provincially the North Bay office granted certificates to 170 construction labourers travelling to Toronto; 31 pulp cutters to Cobalt; 1 paperhanger, 1 lineman, 1 pulp cutter and 1 edgeman to Timmins; 2 stonemasons to Ottawa; and 1 bushman to Toronto, while from Sudbury 9 bushmen were transferred to Sault Ste. Marie; 1 farm hand to Toronto; 1 wood cutter to Ottawa; 1 farm hand to London; and 91 bushmen and 34 saw-mill labourers to employment within the Sudbury zone. From Port Arthur 38 loggers, 22 power construction workers, 8 railroad construction labourers, 2 farm hands, 1 clerk, 1 cook, 1 labourer, and 7 survey workers secured certificates for reduced transportation to various points within the Port Arthur zone. In addition, the Port Arthur zone was the destination of 2 muckers journeying from Cobalt and of 6 carpenters despatched from Timmins. The Ottawa zone received 3 stonemasons from Hamilton; the Sudbury zone 1 cook from Pembroke; and the London zone 1 cook from Ottawa. From Fort William 21 bushmen were carried at the special rate to centres within the same zone. The remaining provincial transfers were from Toronto, which office granted certificates to 5 riveters, 1 caulker, and 1 kitchen worker travelling to Sarnia; 1 stonemason, 2 linemen, and 1 hotel

cook to Kingston; 4 stonemasons to Ottawa; and 1 welder to Port Arthur. Of those going outside the province 43 were destined to the Winnipeg zone, including 17 carpenters sent from Cobalt and 21 from North Bay; 2 glove cutters from Kitchener; and 3 shaft miners from Sudbury. From Ottawa 4 plumbers were transported at the reduced rate to Regina and 3 plumbers and 2 steamfitters to Prince Albert; and from Sudbury 7 rockmen went to employment in the Hull zone.

Transfers at the special rate from Manitoba offices during June totalled 512, of which 207 were to employment within the province and 305 to other provinces. The bulk of the movement within the province was from Winnipeg, from which centre 10 farm generals, 4 hotel workers, 4 ward maids, 1 housekeeper, and 1 practical nurse went to Brandon; 4 miners and 2 hotel workers to Dauphin; and 107 farm hands, 22 railroad construction workers, 17 lumber mill workers, 10 highway construction workers, 8 carpenters, 7 mine workers, 1 steam shovel operator, 1 construction labourer, 2 camp cooks, 1 hotel porter, 1 kiln setter, and 1 dental mechanic to employment within various parts of the Winnipeg zone. The remaining 3 transfers provincially were of mine workers who travelled from Dauphin to points within the same zone. Of the workers going to employment in other provinces 300 were despatched from Winnipeg. Included among these were 122 bushmen, 6 lumber workers, 4 farm hands, 3 hotel workers, 2 cooks, 1 housekeeper, and 1 town general going to Port Arthur; 43 bushmen to Fort William; 5 carpenters, 14 railroad construction workers, 2 farm hands, and 1 labourer to Prince Albert; 7 railroad construction teamsters and 3 farm household workers to Moose Jaw; 11 railroad construction teamsters and 4 farm hands to Saskatoon; 16 farm hands, 2 farm household workers, 1 hotel cook, 2 plasterers, and 1 railroad construction foreman to Regina; 7 farm hands, 3 farm domestics, and 2 hotel workers to Estevan; 29 railroad construction workers to Nelson; 5 railroad construction teamsters to Edmonton; and 1 farm hand each to the Weyburn, Swift Current and Calgary zones. In addition, the Portage la Prairie office transferred 1 farm hand and 1 farm domestic to Regina; while Dauphin despatched 2 bricklayers to Calgary, and Brandon 1 hotel cook to Regina.

Persons travelling by the reduced transportation rate from Saskatchewan centres during June numbered 80, and of these 76 went to provincial employment and the remainder to points outside. Provincially several of the offices were instrumental in the transfer of 53 farm hands and 5 farm house-

hold workers to various agricultural centres. In addition the Regina office granted certificates to 1 domestic going to Swift Current and 1 hotel porter to Yorkton; and the Moose Jaw office to 4 elevator carpenters and 2 highway construction workers travelling to Swift Current, and 4 railroad construction teamsters within the territory covered by the Moose Jaw office. To points within their respective zones Prince Albert despatched 2 saw-mill workers and 2 river drivers, and Saskatoon 2 railroad construction labourers. The movement outside the province included 2 hospital attendants going from Weyburn to Hamilton, 1 butcher from Moose Jaw to Medicine Hat, and 1 mine motorman from Regina to Pentiction.

Reduced transportation rate certificates granted by Alberta offices during June were 312 in number, 294 of which were issued to stations within the province and the balance to centres outside. Provincially the transfers from Edmonton included 99 farm hands, 1 baker, and 1 engineer going to Lethbridge; 2 farm hands to Calgary; 1 fireman and 1 hotel cook to Drumheller; and 30 mine workers, 22 farm hands, 1 farm housekeeper, 7 highway construction workers, 27 saw-mill labourers, 8 building construction workers, 6 bush workers, 2 cooks, 2 labourers, 1 blacksmith, 2 laundry workers, and 6 hotel employees to centres within the Edmonton zone. From the Calgary office 71 farm hands and 2 farm household workers secured certificates to various rural points, and the same office in addition transferred 1 cook each to the Lethbridge and Drumheller zones. To points outside the province the Calgary office effected transfers of 2 berry pickers, 1 farm housekeeper, and 1 hotel worker to Cranbrook; 1 farm hand to Revelstoke; and 1 stone cutter to Saskatoon. The Cranbrook zone was also the destination of 2 berry pickers travelling from Lethbridge. The 10 remaining transfers were of farm hands proceeded from Edmonton to employment in the Saskatoon zone.

Of the 255 workers who received certificates for reduced transportation from British

Columbia offices during June 205 were bound for provincial points and 50 for centres in other provinces. A large share of the transfers within the province were effected by the Vancouver office, which despatched 23 station men, 7 carpenters and 5 construction workers to Nelson; 26 mine workers, 5 carpenters and 1 cook to Revelstoke; 3 farm hands, 5 mine workers, 12 railway building and general construction workers, 1 engineer, 1 laundry man, and 1 waitress to Kamloops; 9 mine workers, 2 gardeners, and 1 farm hand to Pentiction; 4 saw-mill workers and 1 farm hand to Prince George; 4 mine workers to Cranbrook; 2 farm hands and 1 engineer to Kelowna; 1 flunky to Vernon; and 25 tunnel construction workers, 3 power construction flunkies, 2 millwrights, 6 labourers, 5 mine workers, 1 driller, 1 engineer, and 1 waitress within the Vancouver zone. To points within their respective zones Prince Rupert transferred 1 farm hand, 1 farm domestic, 1 cook, 12 mine workers, 2 carpenters, 6 bush workers, and 1 survey worker; Prince George 5 bush workers, 1 engineer, and 1 cook; and Nelson 14 bush workers. The one remaining provincial certificate was issued at Victoria to a farm hand travelling to Vernon. The transfers to other provinces from Vancouver included 11 farm hands, 1 farm cook, and 5 plasterers going to Calgary; 6 farm hands and 2 farm household workers to Edmonton; 1 farm hand and 1 plasterer to Regina; 1 farm household worker to Drumheller; 1 farm hand to Saskatoon; 4 millwrights to Lethbridge; and 10 mine carpenters to Winnipeg. From New Westminster 3 farm hands were carried at the special rate to Edmonton and 1 to North Battelford. In addition the Edmonton, Winnipeg and Brandon zones each received 1 farm hand from Victoria.

Of the 1,802 workers who availed themselves of the Employment Service reduced transportation rate during June, 992 travelled by the Canadian National Railways, 715 by the Canadian Pacific Railway, 60 by the Timiskaming and Northern Ontario Railway, and 35 by the Pacific Great Eastern Railway.

### Building Permits Issued in Canada in June

The value of the building permits issued by 61 cities during June was \$27,637,491; this was an increase of \$3,630,120 or 15.1 per cent as compared with the May total of \$24,007,371, while in the more significant comparison with June, 1928, there was also an increase of \$4,885,531 or 21.5 per cent, the value for that month having been \$22,751,960. The aggregate for the first half of 1929 also exceeded

that for the first half of any other year on record for these cities; with a total of \$124,188,614, it was 21.7 per cent higher than in the period January-June, 1928, the previous high level. The wholesale costs of building materials this year have averaged lower than in most of the last nine years.

Some 50 cities furnished detailed statements showing that they had issued over 1,600 per-

<sup>1</sup> Corrected total. <sup>2</sup> Includes Point Grey and South Vancouver formerly given separately. From Jan. 1, 1929, when the amalgamation of these cities was effected, the total for the 35 cities includes the "Greater Vancouver" aggregate, instead of that for the area formerly known as Vancouver. <sup>3</sup> Report not received.

mits for dwellings valued at more than \$8,700,000 and some 3,300 permits for other buildings estimated at approximately \$17,000,000. During May, authority was given for the erection of over 1,900 dwellings and some 4,300 other buildings, valued at approximately \$8,400,000 and \$14,000,000, respectively.

Improvement over May, 1929, was reported in New Brunswick, Ontario, Saskatchewan, Alberta and British Columbia, the gain of \$3,886,284 or 215.2 per cent in the last named being most pronounced. Of the declines elsewhere, that of \$1,474,058 or 21.1 per cent in Quebec was greatest.

As compared with June, 1928, there were increases in Nova Scotia and the four Western Provinces, British Columbia again reporting the greatest advance of \$3,851,602 or 209.3 per cent, while of the decreases in the remaining provinces, that of \$829,552 or 7.8 per cent in Ontario was most noteworthy.

Of the larger cities, Vancouver recorded important increases in the value of the permits issued, as compared with both the preceding month and the corresponding month

in 1928; the advance was mainly due to the granting of a permit for a large hotel. Winnipeg showed a loss in the former and a gain in the latter comparison, while in Montreal and Toronto there were declines in both comparisons. Of the other centres, New Glasgow, Quebec, Fort William, Guelph, Hamilton, Niagara Falls, Ottawa, Port Arthur, Stratford, Sarnia, Windsor, Riverside, Saskatoon, Calgary, Edmonton, Lethbridge, Kamloops and North Vancouver reported improvement over May, 1929, and June, 1928.

Table I gives the value of the building permits issued by 61 cities during May and June, 1929, and June, 1928; the 35 cities for which records are available since 1910 are marked with asterisks.

*Cumulative Record for First Half Year, 1920-1929.*—The following table gives the value of the building authorized by 61 cities during June and in the first six months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the

first six months of the same years are also given (average 1926=100).

Year	Value of permits issued in June	Value of permits issued in first six months	Indexes of value of permits issued first six months (1920=100)	Average indexes of wholesale prices of building materials in first six months (1926 average = 100)
	\$	\$		
1929.....	27,637,491	124,188,614	201.4	99.6
1928.....	22,751,960	102,036,987	165.2	97.0
1927.....	18,363,239	80,842,719	130.9	96.6
1926.....	18,718,050	78,760,419	127.5	101.0
1925.....	14,915,884	65,899,717	106.7	103.1
1924.....	13,957,006	60,674,154	98.2	110.8
1923.....	11,286,252	73,047,496	113.3	111.4
1922.....	17,052,582	71,281,674	115.4	108.0
1921.....	14,240,934	55,771,684	90.3	132.0
1920.....	14,113,794	61,754,710	100.0	144.5

The aggregate for the first half year of 1928 was higher by \$22,151,627 or 21.7 per cent than in 1928, the previous high level of this record; although the average index number of wholesale prices of building materials is this year slightly higher than it was last year, the advance in the volume of construction is proportionately considerably greater.

#### Provincial Totals of Building Permits Issued

Table II is a record by provinces of the building permits issued by 61 cities during the first six months of each year since 1920; it also shows the totals for the same years, the proportion that the six months' aggregates bear to the yearly totals, and the average index numbers of wholesale prices of building materials and of wages in the building trades.

All provinces, except Ontario, reported higher aggregates of building permits issued than in the first six months of last year; in Nova Scotia, Quebec, Saskatchewan, Alberta and British Columbia the totals were, in fact, larger than in any other year since 1920, while the Ontario and Manitoba aggregates were exceeded only once in the ten years, by the 1928 and the 1926 figures, respectively. Nova Scotia and Saskatchewan registered the greatest proportionate gains of 147.5 per cent and 85.7 per cent respectively, over 1928, while there was a reduction of less than one per cent in Ontario.

During the first six months of this year, the 31 cities furnishing returns in Ontario re-

ported 37.0 per cent of the total value of the building authorized, as compared with 45.5 per cent in the same months of 1928. In Quebec, the proportion increased from 22.5 per cent last year to 26.3 in the elapsed months of 1929, and in British Columbia, from 12.4 per cent to 13.1 per cent.

#### Totals of Permits Issued by Four Leading Cities

In Table III are given the aggregates of permits issued in the four largest cities in the first half of each year since 1920, together with the proportion that their totals are of the yearly and half-yearly totals for the 61 cities. The building authorized was valued at \$66,190,652 in the first six months of 1929; this was 35.2 per cent higher than in the same months of last year; it also considerably exceeded the aggregate for any other year of the record, in most of which the cost of building materials was higher. The increase in these four cities was substantially greater than the general increase in the 61 cities, and the ratio to the total for the 61 cities was the highest on record.

Except in Toronto, the total for each of these cities was greater than in 1928, Montreal and Vancouver showing the marked increases of 77.9 per cent and 71.8 per cent, respectively, over the 1928 figures. The aggregate for the first half of 1929 was higher in these two cities than in any other year since 1920, while the aggregates for Toronto and Winnipeg were each exceeded only once in the same ten years.

*Contracts Awarded.*—According to the *MacLean Building Review*, the value of construction contracts awarded throughout the Dominion during the January-June period, 1929, was \$278,121,700 as compared with \$256,257,300 in 1928 and \$191,323,800 in 1927. Of the total contracts awarded this year, \$69,513,300 was classed as residential building, \$94,255,300 as business, \$37,719,600 as industrial, and \$76,633,500 as engineering. In 1928, the total was divided as follows: residential, \$72,531,000 business \$91,713,300, industrial \$38,290,500, and engineering \$53,722,500. There were thus large increases during the first half of 1929 as compared with last year in the engineering and business building classes, the latter being heavily represented in the building permits statistics.

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD APRIL TO JUNE, 1929

THE volume of business transacted by the offices of the Employment Service of Canada during the quarter April to June, 1929, was slightly more than that effected during the corresponding quarter of 1928, as there was an increase of 2 per cent both in vacancies offered and in placements effected in regular and casual employment. Manu-

facturing, logging, transportation, services, trade and finance showed gains under both comparisons, the most noteworthy being in services, while farming, mining, communication and construction and maintenance reported declines in each instance. The Prairie Provinces recorded declines both in vacancies

and placements, gains showing in both cases in all other provinces except Nova Scotia, where a nominal increase in vacancies and a negligible decline in placements occurred. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various

provinces during the period April to June, 1929.

From the chart on page 911 which accompanies the article on the work of the employment offices for the month of June, 1929, it will be seen that the trend of the curves representing the ratio of vacancies and of placements to applications was upward during the month of April, followed by a decline during May and the first half of June, but again showing a slightly upward tendency during the latter half of the month. During the period April to June, 1929, there was a ratio of 84.5 vacancies and 77.9 placements for each 100 applications for employment, as compared with 85.5 vacancies and 78.8 placements during the corresponding period a year ago. The average number of applicants registered daily during the quarter under review was 1,911, of positions offered 1,615, and of placements effected 1,489, in contrast with a daily average of 1,880 applications, 1,606 vacancies, and 1,481 placements in regular and casual employment during the same quarter of 1928.

During the three months April to June, 1929, the offices of the Service reported that they

had made 115,760 references of persons to positions, and had effected a total of 111,670 placements, of which 72,634 were in regular employment and 39,036 in casual work. In the placements in regular employment 58,982 were of men and 13,652 of women, while casual work was found for 21,288 men and 17,748 women. A comparison with the same period of 1928 shows that 109,550 placements were then made, of which 71,834 were in regular employment and 37,716 in casual work. Applications for employment during the period under review were received from 103,007 men and 40,276 women, a total of 143,283, in contrast with a registration of 139,075 persons during the same period of 1928. Employers notified the Service during the quarter April to June, 1929, of 121,094 vacancies, of which 82,419 were for men and 38,675 for women as compared with 118,844 opportunities for work offered during the corresponding period a year ago.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of June, 1929.

## EMPLOYMENT AND UNEMPLOYMENT IN OTHER COUNTRIES

**D**ETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during June. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the July issue relates to the situation existing in May, 1929. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for May and previous months taken from the July, 1929, issue of the *American Federationist*, the official publication of the organization, are reproduced below.

### Great Britain

Employment showed little change, on the whole, during June. There was a continued improvement in the building trade, in public works contracting, and in the brick, tile, artificial stone, and cement industries. The other principal industries in which improvement occurred included fishing, shipping service, coke oven and by-products works, glass manufacture (including glass bottles), pig-iron manufacture, general and marine engineering, textile bleaching, dyeing and finishing. On the other hand, there was some decline in the iron and steel, motor vehicle, pottery, woollen and worsted, and lace industries.

Among workpeople, numbering 11,880,000, insured against unemployment in Great Britain and Northern Ireland and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 24th June, 1929 (including those temporarily stopped as well as those wholly unemployed), was 9.8, as compared with 9.9 at 27th May, 1929, and with 10.7 at 25th June, 1928. For males alone the percentage at 24th June, 1929, was 10.9, and for females 6.8; at 27th May, 1929, the percentages were 11.1 and 6.8. The percentage wholly unemployed at 24th June, 1929, was

7.4, as compared with 7.6 at 27th May, 1929. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 1st July, 1929, was approximately 1,176,000, of whom 912,000 were men and 209,000 were women, the remainder being boys and girls; at 27th May, 1929, it was 1,165,000, of whom 909,000 were men, and 198,000 were women, and at 2nd July, 1928 it was 1,264,000, of whom 997,000 were men, and 209,000 were women.

### United States

Employment in the United States increased 0.2 per cent in May, 1929, as compared with April, and pay-roll totals increased 0.7 per cent, according to reports made to the Bureau of Labour Statistics. Increases in employment were shown in May in manufacturing, anthracite mining, metalliferous mining, public utilities, wholesale trade and retail trade, while bituminous coal mining, hotels, and canning and preserving showed decreased employment. The increase in employment in manufacturing industries is the first increase in employment reported in May since May, 1922, although pay-roll totals have increased in May four times since 1922.

Employment in manufacturing industries increased 0.1 per cent in May, 1929, as compared with April, and pay-roll totals increased 0.2 per cent, this being the first time since the Bureau of Labour Statistics, in July, 1922, began its enlarged survey of manufacturing industries that employment has been greater in May than in April, but the fourth time that pay-roll totals have increased in May as compared with April.

All industries in the iron and steel group, except steam fittings, continued to expand in May, as did the cotton, hosiery, and woolen goods industries, and also the sawmill, millwork, printing, petroleum refining, cement, brick, car repairing, electrical goods, rubber tire, shipbuilding, slaughtering, ice cream, and baking industries. The outstanding decrease in employment in May was the drop of 46 per cent in the fertilizer industry, marking the end of its spring season.

This May report is based upon returns made by 12,588 establishments in 54 of the leading manufacturing industries of the United States. These establishments in May had 3,518,362 employees, whose combined earnings in one week were \$99,022,456.

The Bureau of Labour Statistics' weighted index of employment in manufacturing industries for May, 1929, is 99.2, as compared with 99.1 for April, 1929, and 93 for May, 1928; the weighted index of pay-roll totals for May, 1929, is 104.8, as compared with 104.6 for

April, 1929, and 94.1 for May, 1928. The monthly average for 1926 equals 100.

*Unemployment percentage.*—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 11 per cent.

### Street Labour in the United States

The United States Department of Labour recently published Bulletin No. 484, showing the entrance wage rates and hours of labour of unskilled street labourers directly hired by more than 2,600 cities and towns throughout the country. The work of these labourers consists in the construction, repairing or cleaning of streets. The Bureau of Labour Statistics obtained the information presented in the bulletin by means of a questionnaire addressed to all cities and towns having a population of 2,500 or more. In a table giving the classified entrance wage rates by municipalities it is shown that of the 2,626 municipalities reporting, 593, or 23 per cent, were paying 40 and under 45 cents per hour, and 553, or 21 per cent, were paying 50 and under 55 cents per hour. While 896, or about 34 per cent, paid under 40 cents per hour, only 15 per cent paid 55 cents or more.

Another table shows the classified working hours per week for the same class of labour. Of the total cities and towns reporting, 1,053, or 40 per cent, had a 48-hour week, and 13 per cent a working week of less than 48 hours. On the other hand, 46 per cent had a working week of over 48 hours. While the street labourers in 9 per cent of the cities worked 44 hours or less a week, in 13 per cent of the cities such labourers had a 60-hour week.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Food, Drink and Tobacco

VICTORIA, BRITISH COLUMBIA.—A CERTAIN BREWERY COMPANY AND THE INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS, LOCAL No. 280.

Agreement to be in effect from May 1, 1929, to December 31, 1931.

Present employees to be admitted to the union and any competent men employed afterwards to join the union. No discrimination to be shown employees on account of union activity.

Hours: 48 per week with Saturday afternoons off if possible, except for engineers and firemen who shall work seven days a week. After one year's service, engineers and firemen to be given two weeks vacation with pay every year.

Overtime: time and one-half; work on Sundays and holidays (except for engineers and firemen) double time.

Wages per week: brewhouse, workhouse and cellarmen \$29.50; bottlers, machine operators and packers, \$29; spare help first six months, \$26; apprentices first year, \$19; apprentices second year, \$21; truck drivers, \$29.50; helpers on trucks, \$28.50; firemen, \$28.50; second engineer, \$33.50; third engineer, \$29.

One apprentice allowed for every ten men regularly employed.

If staff is being reduced, the last men employed are to be laid off first.

Union made materials to be given preference, the union label to be furnished by the union and placed on barrels, to be optional on bottles.

In case of any dispute between the parties, a board of arbitration to be formed consisting of two members of each party. If unable to agree they shall select a fifth disinterested party, the decision of such board to be final. If unable to agree on a fifth party, either party may ask the Federal Minister of Labour to appoint one, the decision of such board to be final and binding. No strike or lockout pending such decision.

### Manufacturing: Wood Products

VANCOUVER, BRITISH COLUMBIA.—THE MILL-WORK SECTION OF THE CANADIAN MANUFACTURERS' ASSOCIATION, BRITISH COLUMBIA, AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1599 (MILL AND FACTORY WORKERS).

In addition to the above employers' association, an independent factory at New Westminster signed the same agreement with the union, following a two day strike mentioned in the *LABOUR GAZETTE*, July, 1929, page 723.

Agreement to be in effect from June 24, 1929, to June 24, 1930, and thereafter unless ninety days notice is given by either party.

Hours: a week's work to be 48 hours ending at 12 noon on Saturday except in cases of emergency.

Overtime: time and one-half; Sundays and holidays double time.

Wages per hour: benchmen, 75 cents; shapermen and stickermen (detail), 75 cents; layout men (detail), 80 cents; layout men (S. & D.), 75 cents; general machinemen (detail), 75 cents; glazier, 70 cents; tennoner, 65 cents; all other machine men, 60 cents; helpers (adult), 50 cents.

Apprentices to come under the operation of the Vancouver Apprenticeship Council, as soon as details can be arranged.

A joint committee consisting of three members of each party to be formed, to which any dispute will be referred. If this committee is unable to agree, they shall appoint a neutral chairman, and the decision of this committee will be final and binding.

### Manufacturing: Pulp, Paper and Paper Products

KENORA, ONTARIO.—KENORA PAPER MILLS, LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF PAPERMAKERS, LOCAL No. 238.

This agreement, which came into effect on May 1, 1927, was summarized in the *LABOUR GAZETTE*, October, 1927, page 1100. From May 1, 1928, an increase in wages was granted of 3 cents per hour to boss machine tenders, machine tenders and back tenders, and an increase of 2 cents per hour to third hands. The agreement incorporating these wage changes has been renewed to April 30, 1930.

### Manufacturing: Printing and Publishing

SAINT JOHN, NEW BRUNSWICK.—A CERTAIN PUBLISHING COMPANY AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 36.

Agreement to be in effect from September 1, 1928, to September 1, 1930, and from year to year until either party gives notice 60 days prior to September 1, of any year.

Only union members to be employed if any available.

Hours: 8 per day or night.

Overtime: time and one-half; work on Sundays, July 1, Labour Day and Christmas, double time.

Wages per week from September 1, 1928, to September 1, 1929: Man in charge, \$36 for day work and \$39 for night work; stereotypers, \$34 for day work and \$37 for night work; journeymen pressmen, \$34 for day work and \$37 for night work; assistants, \$31 for day work and \$34 for night work. From September 1, 1929, to September 1, 1930, an increase of \$1 per week for each of these classes, both for day and night work.

The number of apprentices shall not exceed one to each four journeymen and not exceed two to six journeymen. Apprentices to serve four years.

Wages per week for apprentices: \$16 for day work and \$18 for night work during first six months, with an increase of \$2 per week every six months.

Any dispute over this agreement to be settled by a board of arbitration consisting of one representative of each party and a third chosen by them, the award of this board to be binding.

**MONTREAL, QUEBEC.—PUBLISHERS OF FRENCH NEWSPAPERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 145 (JACQUES CARTIER).**

Agreement to be in effect from September 15, 1928, to September 15, 1931.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE, July, 1925, page 724, with the following exceptions:

St. Jean-Baptiste Day is now included among the holidays on which double time is paid for all work.

Wages per week for journeymen: from September 15, 1928, to September 15, 1929, \$42 for day work and \$46 for night work; from September 15, 1929, to September 15, 1931, \$43 for day work and \$47 for night work.

Wages per week for apprentices: for first half of third year, \$16, second half \$17.50; for first half of fourth year, \$19.50, second half, \$23.50; for first half of fifth year, \$27, second half, \$30.50. For apprentices working on morning newspapers, \$1 extra per week.

**TORONTO, ONTARIO.—CERTAIN JOB OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 91.**

Individual agreements with certain job offices are at present in effect, but will become void and will be succeeded by any general agreement between the union and employing printers. Only union members to be employed.

Hours: 44 per week for both day and night work.

Wages per week: \$35.20 for day work; \$40.48 for night work.

Two apprentices will be allowed for first five journeymen and one additional for each succeeding four journeymen.

International Typographical Union law to be recognized by the employer.

**TORONTO, ONTARIO.—THIRD SHIFT PUBLICATIONS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 91.**

This agreement covers members of the above union employed on all publications of a daily

character, in hours which conflict with those of the regular day and night shifts.

Agreement to be in effect from April 1, 1928, to March 31, 1931.

The regular agreement with the publishers of Toronto Daily Newspapers, which stated that the day shift should be worked between the hours of 7 a.m. and 6 p.m. and the night shift between the hours of 6 p.m. and 5 a.m., was summarized in the LABOUR GAZETTE, July, 1928, page 784.

This agreement is similar to the regular newspaper agreement with the following exceptions:

Hours: 7½ hours to be a day's work, to be worked between 11 a.m. and 9 p.m. (except as mutually agreed). If necessary, extra employees may be employed for 7½ hours between 8 a.m. and 5.30 p.m.

Overtime: all work in excess of 7½ hours per day to be paid at overtime rate of time and one-half for first three hours and double time for each succeeding hour.

Wages per week for journeymen members of the union: those employed on the shift which is worked between 11 a.m. and 9 p.m. to be paid \$50.00 per week from April 1, 1928, to March 31, 1929; \$51.00 from April 1, 1929, to March 31, 1930; \$52.50 from April 1, 1930, to March 31, 1931. For those employed on these publications for 7½ hours between 8 a.m. and 5.30 p.m., the weekly wage will be the same at that paid to employees on the day shift of regular daily newspapers, that is: \$45.50 from April 1, 1928, to March 31, 1929; \$46.50 from April 1, 1929, to March 31, 1930; \$47.50 from April 1, 1930, to March 31, 1931.

No apprentice to be employed unless he has had at least two years' experience in a job printing office. Present apprentices to be taken on the regular staff as journeymen after their term is up, before another apprentice may be employed.

Wages per week for apprentices: \$16.00 for first half of third year, \$19.00 for second half; \$22.00 for first half of fourth year, \$25.00 for second half; \$29.00 for first half of fifth year, \$33.00 for second half.

**Construction: Buildings and Structures**

**HALIFAX, NOVA SCOTIA.—THE CONSTRUCTIVE MECHANICAL TRADES EXCHANGE, INCORPORATED, AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS, LOCAL No. 425.**

Agreement to be in effect from May 1, 1929, to April 30, 1930, and from year to year until notice is given by either party, 60 days prior to May 1 of any year.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE, May, 1928, page 529, with the following exception:

Wages per hour: 73 cents.

**MONTREAL, QUEBEC.—CERTAIN ELECTRICAL CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 563.**

Agreement to be in effect from August 1, 1929, to April 30, 1932, and from year to year until either party gives notice 60 days previous to April 30 of any year.

Union members to have preference of employment.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: to 10 p.m. time and one-half; after 10 p.m. on other days, after 5 p.m. on Saturdays and all work on Sundays and holidays, double time.

Wages per hour for journeymen electrical workers: from August 1, 1929, to April 30, 1930, 80 cents; from May 1, 1930, to April 30, 1931, 90 cents; from May 1, 1931, to April 30, 1932, \$1.00. Foremen, 10 cents per hour extra.

Wages per hour for apprentices: first year 25 cents; second year, 35 cents; third year, 45 cents; fourth year, 60 cents.

For work outside the city, fare, board and travelling time to be paid.

No member to be permitted to work after regular working hours, either for or without remuneration, without the permission of the union and his employer.

#### OTTAWA, ONTARIO.—OTTAWA STONE CONTRACTORS AND THE OTTAWA JOURNEYMEN STONE-CUTTERS' ASSOCIATION.

Agreement to be in effect from June 11, 1929, to April 30, 1930, and year to year until either party gives notice three months prior to April 30 of any year, subject to any agreement that may be reached between the International Cut Stone Contractors and Quarrymen's Association of North America, Incorporated, and the International Association of Stone Cutters of North America.

Only union members to be employed if available. If none available and other stone-cutters are employed, they must join the union. Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: for first two hours, time and one-half; after two hours, double time.

Wages: \$1.05 per hour.

One apprentice allowed for every five journeymen, but not more than three apprentices in any one shop. Apprentices to serve four years. The wages of apprentice shall be as mutually agreed upon.

Any disputes are to be referred to a board of arbitration consisting of three representatives of each party. If unable to agree they shall select an umpire, whose decision shall be final and binding.

#### TORONTO, ONTARIO.—SHEET METAL CONTRACTORS AND THE INTERNATIONAL ASSOCIATION OF SHEET METAL WORKERS, LOCAL No. 30.

Agreement to be in effect from May 1, 1929, to April 30, 1931, and for another year, unless 30 days' notice is given by either party prior to the expiration of the agreement.

Only union men to be employed, if available. Hours: 8 per day, 4 on Saturdays.

Overtime: up to 10 p.m. including Saturday afternoons, time and one-half; after 10 p.m. and work on Sundays and holidays double time.

Minimum wages for journeymen sheet metal workers: from May 1, 1929, to April 30, 1930, \$1.07½ per hour; from May 1, 1930, to April 30, 1931, \$1.15 per hour. The amount of the increase (7½ cents per hour) will be granted to all members of the union.

The rules of apprenticeship were submitted to and adopted by the Apprenticeship Council.

All apprentices to be registered with the union and serve four years, the full term to be served under contract with an employer in accordance with the Act, and it is further agreed that the Ontario Apprenticeship Act and Regulations pertaining to this trade shall be considered as part of this agreement. No apprentice to be permitted on outside work during the first three years of apprenticeship except under the supervision of a journeyman. Wages for apprentices from 22½ per cent of journeyman's wage for first six months to 65½ per cent for last six months.

Fare and board and travelling time during day to be paid for work out of town.

All disputes to be referred to a board of arbitration consisting of three representatives of each party, whose decision shall be binding.

#### HAMILTON, ONTARIO.—EMPLOYING PLASTERERS AND THE OPERATIVE PLASTERERS AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION, LOCAL No. 298.

Agreement to be in effect from May 1, 1929, to April 30, 1930.

This agreement is the same as the one previously in force and summarized in the LABOUR GAZETTE, November, 1928, page 1263, with the following exception:

Wages for journeymen plasterers and cement finishers, \$1.25 per hour.

#### WINNIPEG, MANITOBA.—MASTER PLASTERERS' SECTION OF THE BUILDERS' EXCHANGE AND THE OPERATIVE PLASTERERS AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION, LOCAL No. 334.

Agreement to be in force from June, 1929, to December, 1931.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE, August, 1927, page 891, with the following exception:

Wages: \$1.45 per hour.

#### SASKATOON, SASKATCHEWAN. — SASKATOON BUILDERS' EXCHANGE AND THE BRICKLAYERS AND MASONS' INTERNATIONAL UNION, LOCAL No. 3.

Agreement to be in effect from June 1, 1929, to April 30, 1930. Both parties are to meet in January to formulate a new agreement.

Hours: 8 per day, 4 on Saturdays, but when consecutive shifts are worked, 7½ hours to be a day's work. For work outside the city, not more than 9 hours per day to be worked.

Overtime: time and one-half to 10 p.m., after 10 p.m. on other days and after 12 noon on Saturdays and all work on Sundays and holidays, double time.

Wages: \$1.45 per hour. Foreman (who must be a union member) to receive 15 cents more than journeyman's rate.

For work out of city, fare to be paid, and 15 cents per hour extra to cover extra expenses.

Any dispute is to be referred to an arbitration committee consisting of three members of each party, whose decision shall be binding.

**REGINA, SASKATCHEWAN.—CERTAIN CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1867.**

Agreement to be in effect from June 1, 1928, to June 1, 1929, and from year to year until either party gives three months notice of change.

Hours: 9 per day, 5 on Saturdays.

Overtime: time and one-half including work on New Year's Day, Dominion Day and Christmas Day.

Wages: \$1.00 per hour.

**VANCOUVER, BRITISH COLUMBIA.—CERTAIN EMPLOYERS AND THE GRANITE CUTTERS' INTERNATIONAL ASSOCIATION.**

Agreement to be in effect from April 1, 1929, to April 1, 1930, and from year to year until three months notice of change is given by either party.

Employers wanting cutters or sharpeners are to notify the secretary of the Association.

Hours: 8 per day for first five days of week; no work on Saturdays.

Overtime and work done on certain holidays: double time (except for sawyers, who shall be paid time and one-half for overtime).

Wages for cutters, sharpeners, machine and lathe men, polishers and sawyers, \$9.00 per day. No contractor may work men outdoors except in cases of emergency, when they will be paid \$9.50 per day. With the consent of the union, a man incapacitated by old age or disability may work for less than the union wage.

All cut stone contractors to be allowed one apprentice for each gang or fraction thereof, said apprentice to serve three years cutting granite, and one apprentice tool sharpener for three tool sharpeners, said apprentice to serve two years.

In case of scarcity of stone, or inclement weather, one man off, all off, except in case of emergency.

**VICTORIA, BRITISH COLUMBIA.—MASTER PLUMBERS' ASSOCIATION AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 324.**

Agreement to be in effect from February 1, 1929, until 30 days notice is given by either party.

None but local union members to be employed, except with the consent of the union, and no union members are to work for anyone not a member of the Master Plumbers' Association, except with the consent of the Association.

The union reserves the right to withdraw its members from the employ of anyone who fails to observe and respect the best interests of the trade and also reserves the right to refuse to instal or handle plumbing or heating supplies furnished through a wholesaler who is, by methods detrimental to the trade, menacing trade conditions, but no such action is to be taken except after full consideration of both parties to this agreement.

Hours: 8 per day.

Overtime: time and one-half to 10 p.m. including Saturday afternoon; after 10 p.m. and work on Sundays and holidays, double time.

Wages: from February 1, 1929, to April 1, 1929, \$1 per hour; from April 1, 1929, \$1.12½

per hour, except that all work signed up before January 15, 1929, shall be completed at \$1 per hour.

For work out of town, travelling expenses and board and travelling time to be paid.

Apprentices must be registered by the union and must serve three years, when they will be examined by a joint board; if found competent, they shall be given a permit to work as improvers for a further period of two years. The wages of such improvers shall be \$4.00 below the recognized scale and shall be increased at the rate of \$1.00 each half year until the full scale is reached.

**Construction: Shipbuilding**

**ST. JOHN, NEW BRUNSWICK.—ST. JOHN DRYDOCK AND SHIPBUILDING COMPANY AND THE BLACKSMITHS AND HELPERS EMPLOYED THEREIN.**

Agreement to be in effect from May, 1929, to March 1, 1930, and year to year thereafter unless either party gives 30 day's notice.

Hours: 9 per day, 4½ on Saturdays. If a regular night shift is employed, 10 hours per night for five nights per week.

Overtime: Time and one-half from regular stopping time to midnight; after midnight and work on Sundays and holidays, double time.

Minimum wages per hour: general blacksmiths, 60 cents; helpers on general fires, 40 cents; skilled helpers, 45 cents.

If any employee feels that he is unjustly dealt with, he will take the matter up with the foreman, but if no adjustment is made, he shall refer the matter to a duly elected committee of employees, who will take the matter up with the foreman or higher officials. If no agreement is reached, both parties agree to arbitrate. No strike or lockout pending these negotiations. No member of this duly elected committee to be discriminated against.

**Transportation and Public Utilities: Street and Electric Railways**

**CALGARY, ALBERTA.—CORPORATION OF THE CITY OF CALGARY AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES LOCAL No. 583.**

This agreement is included in the agreement between the city of Calgary and the Calgary Federation of Civic Employees, summarized below under the heading, Service: Public Administration.

**Service: Public Administration**

**CALGARY ALBERTA.—CORPORATION OF THE CITY OF CALGARY AND THE CALGARY FEDERATION OF CIVIC EMPLOYEES AND ITS AFFILIATED UNIONS.**

*General Preamble*

Agreement to be in effect from March 1, 1929, to December 31, 1929, and thereafter until either party gives 60 days' notice of change. If unable to reach a new agreement within the 60 days, both parties agree to allow the dispute to be dealt with under any act (Federal or Provincial) similar in intent and object to the Industrial Disputes Investigation Act, 1907, that may be in force within the Province of Alberta.

The City Commissioners will at all times receive a grievance committee and the City will not show discrimination against any employees on account of their connection with trade organizations.

All permanent employees to be given two weeks holiday with pay each year after one year's service.

Hours: except where otherwise mentioned in the different agreements and except in cases of double, running or revolving shifts, 44 hours shall constitute a week's work.

Overtime: time and one-quarter for first hour, time and one-half for next three hours; double time thereafter and for work on Sundays and holidays or regular day off; double time for calls after 10 p.m. or emergency work and not less than two hours' pay for any one call. In case of men on running, double or revolving shifts, if a legal holiday occurs during regular shift, they shall be paid one quarter of a day's pay extra, or if Sunday occurs during regular shift, one hour's pay extra.

Permanent employees, unless affected by the Workmen's Compensation Act, shall come under the city sickness and accident pay scheme and shall contribute 75 cents per month toward this fund, the city contributing the balance needed. If an employee is incapacitated by an accident while engaged in the City's service, the City will pay the difference between the compensation received from the Workmen's Compensation Board and his regular pay, but the City Commissioners may terminate this pay at their discretion.

As far as possible, promotions to be made from the staff and seniority and efficiency to be considered.

Permanent employees to be given one month's notice or pay when dismissed, except for cause, and permanent hourly employees two week's notice or pay.

A summary is given below of the separate agreements with the various unions.

*Agreement with the Amalgamated Association of Street and Electric Railway Employees of America, Local No. 533.*

This agreement covers motor conductors and conductors, trackmen, point cleaners and greasers, barn men and office staff in the employ of the Street Railway Department.

Wages: Motormen and conductors—first six months, 57½ cents per hour; second six months, 60 cents; third six months and thereafter, 65 cents; Motor conductors—first six months, 60 cents; second six months, 65 cents; third six months and thereafter, 70 cents. Shop and barnmen: general construction shop foreman, \$200 per month; maintenance shop day foreman, \$185 per month; maintenance shop night foreman, \$180 per month; carpenters, 90 cents per hour; blacksmiths, 85 cents; machinist, air brake and wheel lathe operators, 85 cents; foreman painter, 90 cents; painter, 80 cents; plumbers, \$170 per month; cleaners, washers and yardmen, 54 cents per hour; truck and car repairers—first six months, 60 cents, second six months, 65 cents, third six months, 70 cents. Leading hand while so acting, 5 cents per hour extra. Foreman while so acting, 10 cents per hour extra. Track maintenance: track foremen, \$165 and \$147.25 per month; switch repairmen, 60 cents per hour, trackmen, 57½ cents per hour, greasers and switch cleaners, 54 cents. Office staff: accountant, \$190 per month, cashier and timekeeper, \$140 per month, stenographer and clerk, \$100 per month, advertising manager,

\$165 per month, chief inspector, \$185 per month, ticket agent, \$170 per month, inspectors, \$170 per month, claims agent, \$175.75 per month, night clerk and timekeeper, \$155 per month.

Men operating cars on Sundays to be paid one hour's pay extra and working on legal holidays, one quarter of a day's pay extra. If called on to work on regular day off, double time. Motor conductors training students to be paid 5 cents per hour extra.

Motor conductors and conductors.—Hours: 8 per day as far as possible, but if necessary to work 8½ hours, straight time to be paid. As far as possible, 48 hours to be a week's work to be worked in six days. All regular runs to be in two shifts and completed within 12 hours.

Runs are to be selected by seniority. Promotions to inspectorship to be made from motor conductors with over one year's service. Spare men to be given preference of eight hours work per day according to seniority. Spare men reporting at or before 6 a.m. and not allotted a run, to be paid 1½ hours for reporting and one hour for reporting after 6 a.m.

The city will pay the full cost of uniforms for men with over one year's service and half the cost for men with under one year's service.

One month's leave of absence in a year to be the maximum, except in special cases. Application for leave to perform the duties of any office in the union to have priority and seniority rights are to be retained during such absence. Sick leave up to six months may be granted if necessary.

Any employee suspended or discharged may if he wishes have his case investigated through the grievance committee of the union who may refer the matter to the superintendent or the city commissioners. If satisfactory settlement is not reached, the union may have the matter referred to a Board of Arbitration.

Barn staff.—Hours: 8 per day for 5½ days, a 44-hour week. One hour's pay extra to be allowed for all Sunday work. Seniority to be considered in reducing staff or reemploying them.

Track Maintenance Men.—Hours: 8 per day, 6 days per week, a 48-hour week which may be changed to a 44-hour week at the discretion of the city commissioners. One hour's pay extra to be allowed greasers working on Sunday except when Sunday is regular day off, when regular overtime rate will be paid. Trackmen and switch repair men to be paid time and one-half for all Sunday work.

*Agreement with the International Union of Steam and Operating Engineers, Local No. 838.*

Hours of work, overtime, holidays and other working conditions are covered by the General Preamble.

Wages for engineers, hospital, 3rd class, \$150 per month.

Wages for temporary steam engineers on construction and maintenance: engineers in charge of and operating derricks, cranes, orange peels, clam shells, cable ways, dragline, pile drivers and hoists irrespective of motor power used, \$1 per hour; engineers in charge of steam rollers, steam tractors, steam concrete mixers, and stone crusher operated by steam, 87½ cents per hour; engineers in charge of portable boilers and steam pumps, 80 cents; firemen, 67½ cents.

*Agreement with the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, Local No. 528.*

Hours: 8 per day, 4 on Saturdays.

Overtime: double time for work on Sundays

and holidays, except when working on their regular shift.

No reduction of pay for loss of time through inclement weather. The necessary care to be given horses morning and evening.

Wages: teamsters, 61 cents per hour; truck drivers, 61 cents; truck helpers, 57 cents; motor broom operators, 64 cents; Garage men: foreman mechanic, \$170 per month; mechanic, \$150 per month.

*Agreement with the City Hospital Employees' Association, Local No. 8.*

Wages per month: accountant, \$150; collector and investigator, \$125; admission and discharge clerks, \$100; switchboard operators, \$90; stenographers, female experienced, \$100; storekeeper and purchasing agent, \$180; stores bookkeeper (schedule \$118.75), \$110; storeman—butcher, \$125; painters, \$150; laundry foreman, \$139.50; washerman, \$115; floor polisher, \$110; elevator men and porters, \$110; orderlies, \$110 to \$130; chef, \$139 with board; first cook, \$103 with board, second cook, \$90 with board, kitchenmen, \$80 with board, maids, \$55 with board, head ironer and mangle in laundry, \$16 per week, other experienced help, \$15 per week.

Any employee whose regular duties require work on a legal holiday to be given another day off instead of extra pay.

Hours: 44 per week for plumber and helper, carpenter, painters, floor polishers, laundry staff and butcher foreman; 47 hours for clerical or office staff; 48 hours for orderlies, cooks, kitchenmen, elevator operators, porters, corridor cleaners and maids, with one day off in seven; storekeeper, laundry foreman and chef as their duties require.

Orderlies to be supplied with uniforms.

*Agreement with the International Brotherhood of Electrical Workers, Local No. 348.*

Wages in cable department: foreman cable splicer, \$8.90 per day; journeyman cable splicer, \$8.20 per day.

Wages per day for line, repair and testing, maintenance and trouble, welding, trolley station, inside and car wiring, armature winders: foreman, \$8.30; journeyman, \$7.55; apprentice—first year, \$3.00; second year, \$3.75; third year, \$4.75; fourth year, \$6.00; journeyman in charge of rig of two or more journeymen, \$8.05; groundman, \$5.35; arc trimmers, \$6.10.

Wages per month for station and operating department: chief operator, \$210; class "A" operator, \$175; class "B" operator, \$165; class "C" operator, \$158; apprentice operators—first year, \$75; second year, \$85; third year, \$100.

Wages, miscellaneous: assistant chief wiring inspector, \$200 per month; man in charge of police signal system, \$200 per month; track welders (temporary), 80 cents per hour; motor and controller men, 80 cents per hour.

Hours: 8 per day, 4 on Saturday; except for shift work, when 8 hours shall be a day's work to be worked within 10 hours. If not possible to work shift within 10 hours, \$5.00 extra per month to be paid.

Overtime: time and one-quarter for first hour; time and one-half for next three hours and double time thereafter; double time for work on Sundays and holidays (except when it is regular shift), and for calls after 10 p.m. with at least two hours' overtime pay for all calls.

Men working on the regular day off, double time. Maintenance men and arc trimmers to be given one-half day holiday on the day previous to their regular day off, instead of Saturday afternoon.

For work at height of 80 feet from ground, double time.

Apprentices to serve four years before being considered journeymen. One apprentice allowed to every three journeymen except inside wiremen, where one apprentice will be allowed for every journeyman.

*Agreement with the Calgary Civic Employees' Association, Local No. 37.*

Wages for park employees: caretakers—cemetery, \$142.10 per month; park caretakers, \$125 and \$130 per month (one park \$110 and house); assistant caretaker, \$120.90; tool repairman, 72½ cents per hour; tree specialists, 67½ cents, gardeners, average 62½ cents; permanent labour, 54 cents. Wages for paving workers: concrete finishers, 72½ cents per hour; permanent labour, 54 cents. Wages for public works: specialists (average rate), 80 cents per hour; sub-foreman, 62½ cents; permanent labour, 54 cents; street cleaners, 50 and 48 cents. Sewer maintenance: service men, 61½ cents per hour; pipe layers, timbermen, catch basin and manhole builders, thawing machine and repairmen, 60 cents; permanent labour, 54 cents. Water works: hydrant foreman, 66½ cents; pipe layers, hydrant men, caulkers and metermen, setter, 62½ cents; maintenance diggers, 56½ cents; permanent labour, 54 cents.

Any permanent employee paid by the hour or day, who works two or more hours in any one half day, will be paid for full half day if unable to continue owing to inclement weather.

Hours: 48 per week when two or more shifts are in operation. One month's work shall consist of twenty-five and one-half days for revolving shifts.

*Agreement with City Hall Staff Association, Local No. 38.*

Hours: from 8.30 a.m. to 5 p.m. with 1½ hours off for lunch; Saturday from 8.30 to 12.45 p.m.

Uniforms to be supplied to inspectors.

The wage schedule gives the salaries or wages of each employee, but is not meant to establish a minimum or maximum wage for the positions named.

*Agreement with the Calgary Police Protective Union, Local No. 6.*

Hours: 8 per day, 6 days a week, with one day off in seven. If called to work during other than regular hours, a corresponding time off will be allowed.

Seniority and efficiency to be considered in promotions.

Full pay for first three days' sick leave; when on sick leave for more than 60 days, special consideration may be given by the city commissioner.

Wages per month: constables—first year, \$120; second year, \$130; third year, \$140, fifth and sixth years, \$145; seventh year and thereafter, \$150; sergeants, patrol, \$160; sergeants, station, \$175; detectives, acting first year, \$155; second year, \$160; third year and thereafter, \$165; detective sergeants, \$185; telephone operators, \$120; master mechanic, \$160; identification officer, \$170. Chauffeurs, same schedule as for constables.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Contractor to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair

and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the customs of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decisions has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams).

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of

opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

### Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "A" (Construction, etc.)*

Construction of caretaker's quarters at Sarcee Camp, Calgary, Alta. Name of contractor, Chas. S. Newcomb, Calgary, Alta. Date of contract, July 20, 1929. Amount of contract, \$4,324. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages Not less than	Hours per day
	Per hour	
Bricklayers and masons.....	\$ 45	8

FAIR WAGES SCHEDULE FOR WINNIPEG AND DISTRICT FOR 1929-30

UNDER the provisions of Section 10 of Chapter 69, Consolidated Amendments, 1924, being "An Act to establish and Protect the Wages of Workmen Employed on Public Works," the Minister of Public Works of Manitoba, has approved of the rate per hour and working hours set forth in the following schedule, as the minimum rate per hour payable to any employee engaged in the respective trades, and the maximum number of hours during which any employee engaged in the respective trades shall be required to work. The

schedule will apply and be effective for employees engaged on Public Works on or at the building, from May 1, 1929, until April 30, 1930, or until such time as another order may be made by the Minister of Public Works.

Last year's schedules, that is, for Winnipeg and for the remainder of the province, were given in the LABOUR GAZETTE, June, 1928, page 671. The new schedule for the remainder of the province has not yet been published.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JULY, 1929

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in retail prices during the month was slight, the weekly family budget in terms of retail prices being slightly higher. In wholesale prices the Dominion Bureau of Statistics index number was substantially higher.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$10.98 at the beginning of July, as compared with \$10.92 for June; \$10.80 for July, 1928; \$10.92 for July, 1927; \$11.07 for July, 1926; \$10.49 for July, 1925; \$9.91 for July, 1924; \$10.17 for July, 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.84 for July, 1920; and \$7.42 for July, 1914. The most important advance was a substantial increase in the price of potatoes, while the prices of beef, mutton, fresh and salt pork, eggs and rolled oats were slightly higher. The prices of butter, bacon, and evaporated apples were slightly

lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.26 at the beginning of July, as compared with \$21.18 for June; \$21.01 for July, 1928; \$21.10 for July, 1927; \$21.30 for July, 1926; \$20.70 for July, 1925; \$20.30 for July, 1924; \$20.65 for July, 1923; \$20.67 for July, 1922; \$21.53 for July, 1921; \$26.92 for July, 1920 (the peak); \$20.66 for July, 1918; and \$14.17 for July, 1914. Fuel was unchanged, while a slight increase occurred in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was substantially higher at 96 for July, as compared with 92.6 for June; 96.1 for July, 1928; 98.6 for July, 1927; and 100.2 for July, 1926. Eighty-three prices quotations were higher, fifty-one were lower and three hundred and sixty-eight were unchanged.

In the grouping according to chief component materials five of the eight main groups advanced, two declined and one was unchanged. The Vegetables and Vegetable Products group was substantially higher, due to higher prices for grains, milled products, raw rubber and sugar, which more than offset declines in the prices of foreign fruits and coffee. The other groups which advanced showed only fractional increases. These were the Animals and their Products group, due chiefly to higher prices for hogs, calves, butter and eggs, which more than offset declines in the prices of fish, furs, steers and lambs; the Wood, Wood Products and Paper group, due to higher prices for some lines of lumber; the Non-Metallic Minerals group, because of higher prices for fuels and cement; and the Chemicals and Allied Products group. The Fibres, Textile and Textile Products group was slightly lower, declines in the prices of raw cotton, hessian and rayon yarn more than offsetting higher prices for jute and silk fabrics. The Non-Ferrous metals group also showed a small decrease, due to declines in the prices of lead and antimony, which more than offset higher prices for silver and tin. The Iron and its Products group was unchanged.

In the grouping according to purpose both consumers' goods and producers' goods advanced, the former due to higher prices for cured meats, butter, eggs, sugar, fuel and silk fabrics, which more than offset declines in the prices of coffee, fresh foreign fruits, fresh meats and poultry, and the latter due mainly to higher prices for materials for the milling and other industries. Advances occurred also in the prices of materials for the furs and leather goods industries, for the chemical using industries, as well as for miscellaneous producers' materials. Materials for the textile and clothing industries, for the metal working industries and for the meat packing industries were lower.

In the grouping according to origin, raw or partly manufactured goods increased, due to higher prices for grains, sugar, rubber and jute, while the prices of fresh fruits, livestock, and raw cotton were lower. Fully or chiefly manufactured goods also advanced slightly, due to higher prices for meats, flour, butter and paint materials. Domestic farm products, articles of marine origin and articles of mineral origin were higher, while articles of forest origin were unchanged.

#### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of July, of seventy-one staple foodstuffs, groceries, coal,

wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and

(Continued on page 944)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

(Continued from page 936)

this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces. While no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number

covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

#### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6; 1927, 73.4; 1928, 71.7; 1929, 71.4.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318) and bringing the figures down to 1929. The figures are unweighted.

The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

The advance in beef prices in progress since the beginning of the year while less marked than in the previous months was continued. Sirloin steak was up from an average of 38.1 cents per pound in June to 38.2 cents in July; round steak from 33 cents per pound to 33.2 cents; rib roast from 30 cents per pound to 30.6 cents; and shoulder roast from 24.1 cents per pound to 24.3 cents. Mutton rose from an average price of 31.2 cents per pound in June to 31.7 cents in July. Both fresh and salt pork were higher, the former being up from an average of 31.2 cents per pound in June to 31.6 cents in July and the latter from 27.5 cents per pound to 28 cents. Bacon was slightly lower, averaging 39.4 cents per pound.

The price of eggs which had declined since early in the year showed a slight upward tendency in July, fresh averaging 36 cents per dozen, as compared with 35.1 cents in June, and cooking averaging 32.1 cents per dozen, as compared with 31.1 cents in June. Milk was unchanged at an average price of 12 cents per quart. Butter was again slightly lower, dairy averaging 39.7 cents per pound in July, as compared with 40.6 cents in June and creamery averaging 44.1 cents per pound in July, as compared with 44.7 cents in June.

\*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 13%; Clothing 18%; Sundries 20%.

Bread at the beginning of July was unchanged at an average price of 7·7 cents per pound. Flour also showed little change, averaging 4·8 cents per pound. Onions were down from an average price of 8·6 cents per pound in June to 8 cents in July. Potatoes were substantially higher, averaging \$1.45 per ninety pounds in July, as compared with \$1.31 in June. Prices in the Maritime Provinces and in Quebec showed little change but substantial increases occurred in the western provinces. Evaporated apples were slightly lower at an average price of 21·3 cents per pound. Tea and coffee showed little change. Anthracite coal was practically unchanged at an average price of \$16.09 per ton. Decreases were reported from Quebec and St. John's while slight increases were reported from Orillia and Toronto. Increases in rent were reported from Charlottetown, Brockville and Trail.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged \$1.598 per bushel in July, as compared with \$1.178 in June. The higher prices were said to be due to the unfavourable weather conditions in the Canadian west. Other grains also showed marked appreciation in prices. Western barley advanced from 69·7 cents per bushel to 83·4 cents; American corn from 94 cents per bushel to \$1.16; flax from \$2.12 per bushel to \$2.54; rye from 87·4 cents per bushel to \$1.10; and western oats from 51·1 cents per bushel to 63·1 cents. Milled products also advanced, flour being up from \$7.23 per barrel to \$8.507, oatmeal from \$3.63 per ninety-eight pound bag to \$3.85 and bran from

\$27.65 per ton to \$30.25. Oranges were down from \$5.53 per case to \$5.06. Ceylon rubber advanced from 20·7 cents per pound to 21·3 cents. Raw sugar at New York was substantially higher, averaging \$2.125 per hundred pounds, as compared with \$1.719 in June. Coffee declined from 30 cents per pound to 28½ cents. Good steers at Toronto were down from \$11.47 per hundred pounds to \$11.15 and at Winnipeg from \$10.62 per hundred pounds to \$10.15, while hog prices advanced sharply, the price at Toronto being up from \$12.95 per hundred pounds to \$13.90 and at Winnipeg from \$11.61 per hundred pounds to \$13. The price of lambs at Toronto declined from \$17.35 per hundred pounds to \$15.10. In dressed meats beef showed little change, while fresh pork showed advances of from 1 to 3 cents per pound. Fur prices in some cases were lower. Beef hides rose from 15½-16½ cents per pound to 17½-18½ cents and calf skins from 17½-18½ cents per pound to 18½-19½ cents. Creamery prints at Toronto rose from 40 6 cents per pound to 41·6 cents and at Winnipeg from 38 cents per pound to 40 cents. Fresh eggs showed advances of from 1 to 4 cents per dozen. Raw cotton at New York was slightly lower at 18·6 cents per pound. Raw jute at Montreal advanced from \$8.38 per cwt. to \$8.68, while hessian declined 25 cents per hundred yards to \$9.50. Sulphuric acid advanced from \$14 per ton to \$15 and red lead from \$8.50 per hundred pounds to \$9.50. In non-ferrous metals copper prices were unchanged while lead declined from \$6.70 per cwt. to \$6.55 and spelter from \$7 per cwt. to \$6.94. Tin advanced from 46 cents per pound to 50 cents. Anthracite coal at Toronto rose from \$13.12 per ton to \$13.17. Portland cement at Toronto advanced 12 cents per barrel to \$2.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 135·6 for June, a decline of 0·1 per cent from May. Foods as a whole fell 0·1 per cent, declines in cereals, meat and fish being

offset by an advance of 2·1 per cent in other foods. Industrial materials declined 0·2 per cent due to lower prices for textiles.

The *Economist* index number, on the base 1927=100, was 91·7 at the end of June, an advance of 0·2 per cent for the month. Cereals and meat rose 2·7 per cent due to a substantial advance in Canadian wheat and in flour and beef; other foods declined 0·2 per cent. Textiles declined 2·3 per cent, minerals advanced 0·6 per cent and miscellaneous products declined 0·2 per cent.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-77=

100, was 113.1 at the end of June, an advance of 0.1 per cent over May. The food group advanced 1.3 per cent owing to a rise of 3.1 per cent in animal foods and a small increase in groceries due to higher prices for sugar, while vegetable foods fell 0.8 per cent with a seasonal decline in the price of potatoes. Industrial materials declined 0.9 per cent due to declines in textiles, chiefly jute, and in sundries, principally leather, timber and olive oil; minerals, on the other hand, rose 1.0 per cent with advances in tin, iron and coal.

**COST OF LIVING.**—The index number of the Ministry of Labour, on the base July, 1914=100, was 161 at July 1, an advance of one point over the previous month. This was due to an increase of two points in food, owing to higher prices for potatoes (new), eggs and butter. Rent, clothing, fuel and light and sundries remained unchanged.

#### Austria

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base, prices in gold, first half of 1914=100, was 132 for July, as compared with 134 for June. Food declined two points and industrial materials one point for the month.

**COST OF LIVING.**—The official index number, on the base, prices in gold, July, 1914=100, was 112 for July, as compared with 111 for June, due to lower prices for food, drink and tobacco, partly offset by an advance in sundries.

#### France

**WHOLESALE PRICES.**—The index number of Statistique Générale, on the base July, 1914=100, was 623 for June, continuing a steady decline since March. The food group declined due to lower prices for vegetable foods which was partly offset by advances in animal foods and groceries. Industrial materials also declined and showed lower index numbers for every group.

**COST OF LIVING.**—The official index number of the cost of living, Paris, on the base 1914=100, was 556 for the second quarter of 1929, as compared with 547 for the first quarter. The advance was due to increases in foods, heat and light and clothing, while rent and sundries were unchanged.

#### New Zealand

**WHOLESALE PRICES.**—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1546 for May, as compared with 1544 for April. Foodstuffs of vegetable origin advanced slightly, as also did wood and wood products, metals and their products and non-metallic minerals and

their products. Declines were noted in animal products and chemicals and manures. There was no change in textile manufactures.

**COST OF LIVING.**—The official index number of retail prices on the base July, 1914=1000, was 1608 for May, as compared with 1612 for February. In this period, food declined owing to a fall in groceries, although dairy produce and meat were higher; clothing, drapery and footwear and miscellaneous commodities also declined slightly, while rent and fuel and light were unchanged.

#### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 96.4 for June, an advance of 0.6 per cent over May. The most marked increase for the month was in fuel and light, which advanced 2.7 per cent due to higher prices for crude petroleum, fuel oil and gasoline. Farm products, foods, hides and leather products, miscellaneous products also advanced. All other groups declined.

The *Annalist* index number, on the base 1913=100, was 149.1 for July, an increase of 3 per cent over June, due principally to marked advances in farm products and food products. All other groups were practically unchanged from the previous month.

Bradstreet's index number (which is the sums total of the prices per pound of 96 articles of common consumption) was \$12.6309 at August 1, an advance of one per cent over the previous month. All groups advanced with the exceptions of fruits, building materials and chemicals and drugs.

**COST OF LIVING.**—The index number of the Massachusetts Commission on the Necessaries of Life, on the base 1913=100, was 159.6 for June, as compared with 160.2 for May. There were slight declines in food and in sundries, but clothing, shelter and fuel and light were unchanged.

#### Amalgamated Civil Servants of Canada

The fifth biennial convention of the Amalgamated Civil Servants of Canada is to be held in the Prince George Hotel, Toronto, Ontario, on September 10. This is the first convention of this body to be held east of the Great Lakes, and it is expected that about fifty-four delegates will attend. The convention is to be opened by the Mayor of Toronto. Invitations have been issued to the Hon. Peter Heenan, Minister of Labour, Dr. Roche, chairman of the Civil Service Commission, and several government officials. Many matters affecting the Civil Service of Canada will be discussed.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1929

THE number of fatal industrial accidents, including such fatalities from industrial diseases as are included with fatal accidents by workmen's compensation boards, etc., which were recorded in the Department as occurring during the second quarter of 1929, was 367, there being 123 in April, 109 in May and 135 in June. (The report for the first quarter of 1929 was given in the *LABOUR GAZETTE*, May, page 554.) In the second quarter of 1928, 374 fatal accidents were recorded. (*LABOUR GAZETTE*, August, 1928, page 925.)

In this report it is the custom to record industrial accidents under the dates of the occurrence of the accidents and fatal industrial diseases under the dates on which they prove fatal. The supplementary lists of fatal industrial accidents on pages 956-957 contain 14 for 1928 and 19 for the first quarter of 1929.

Reports were received from the provincial workmen's compensation boards, the Board of Railway Commissioners of Canada, and certain other official sources; and from the correspondents of the *LABOUR GAZETTE*. Information as to accidents is also secured from newspapers.

Classified by groups of industries, the fatalities occurring during the second quarter of 1929 were as follows: Agriculture, 45; logging, 45; fishing and trapping, 9; mining, non-ferrous smelting and quarrying, 52; manufacturing, 55; construction, 50; transportation and public utilities, 83; trade, 5; service, 23.

Of the mining accidents, 27 were in the "metalliferous mining," 17 in "coal mining," 3 in "non-metallic mineral mining and quarrying, n.e.s.," and 5 in "structural materials."

Of the accidents in manufacturing, 1 was "vegetable foods, drink and tobacco," 1 in "textiles and clothing," 2 in "rubber products," 13 in "saw and planing mill products," 4 in "wood products," 17 in "pulp, paper and paper products," 12 in "iron, steel and products," 4 in "non-metallic mineral products," 1 in "miscellaneous products".

In construction, there were 21 fatalities in "buildings and structures," 7 in "railway construction," 1 in "shipbuilding," 10 in "highway and bridge," and 11 in "miscellaneous construction".

In transportation and public utilities, there were 33 fatalities in "steam railways," 2 in "street and electric railways," 19 in "water transportation," 5 in "air transportation," 13 in "local transportation," 2 in "storage," 6 in "electricity and gas," and 3 in "telegraphs and telephones".

In trade, there was 1 fatality in "wholesale" and 4 in "retail".

Of the fatalities in service, 12 were in "public administration," 2 in "laundering, dyeing and cleaning," 1 in "custom and repair," 4 in "personal and domestic" and 4 in "professional establishments".

The most serious disaster during the period under review occurred on June 30, when five men employed at a paper mill at Rivière du Loup, Quebec, were drowned when a bridge gave way beneath them, while they were attempting to open the gate of the locks.

On May 30, a ranch owner and three of his employees were killed when the truck in which they were riding plunged over an embankment near Medicine Hat, Alberta.

On April 4, a collision of a radial car with a truck, near Simcoe, Ontario, resulted in the death of three men, namely, the truck driver and two tinsmiths who were riding in the truck.

On April 3, three men were buried in a muck slide following blasting operations at Levack Mine, near Sudbury, Ontario.

On June 14, two nurses and a carpenter employed at a hospital near Vancouver, B.C., were killed when the car in which they were riding to work overturned.

On April 6, a train engineer near Bowmanville, Ontario, and another engineer near Darlington, Ontario, were killed when their trains were derailed owing to washouts.

On April 29, two labourers lost their lives when they were buried by a cave-in of a sewer trench when a support gave way.

Two paper mill workers were asphyxiated while repairing a tank at a paper mill near Three Rivers, Quebec, about May 25.

On June 13, two pressmen at a rubber plant in Toronto were crushed between a stone wall and a steel door which was hurled open by steam pressure.

On June 8, two quarry workers were crushed to death by fall of rock near Sydney, N.S.

On June 20, a pilot and a member of the aeronautical staff of a factory in Montreal were killed when an aeroplane in which they were making test flights crashed into the St. Lawrence River.

On June 25, two river drivers were drowned at Van Bruyssel, Quebec, while driving logs.

It may be mentioned that during this quarter a fatality occurred in Canadian waters which is not included in this list, owing to the fact that the man killed was employed by another country, being a steward on the British Steamship *Laurentic*. He was thrown into Montreal harbour and drowned when the gangway slipped from the wharf on May 8.

**Supplementary List of Accidents**

The supplementary list of fatal accidents occurring in 1928, to be found after the main table of accidents, contains fourteen fatalities, of which 1 was in agriculture, 2 in logging, 7 in mining, 1 in manufacturing, 1 in construction, 1 in transportation, and 1 in service.

One accident occurred in August, 2 in September, 4 in October, 5 in November and 2 in December.

Concluding the lists is a supplementary list of fatal industrial accidents occurring during the first quarter of 1929. This includes 19 fatalities, of which 1 was in agriculture, 5 in logging, 1 in fishing and trapping, 4 in mining, non-ferrous smelting and quarrying, 3 in manufacturing, 2 in construction and 3 in transportation and public utilities. Three of these accidents occurred in January, 5 in February and 11 in March.

**FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1929**

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE AND STOCKRAISING—</b>				
Farmer.....	Near Chilliwack, B.C.....	April 4	.....	Injured when milk train collided with his truck.
Farmer.....	St. Joseph, Que.....	" 8	56	Kicked by horse in barn.
Farmer.....	Near Maryfield, Sask.....	" 9	30	Truck he was driving overturned, throwing him into slough and breaking his neck.
Farmer.....	Near Briercrest, Sask.....	" 17	68	Run over by wagon wheel. Crushed chest.
Farmer's son.....	Near Lindsay, Ont.....	" 18	19	Strangled while oiling windmill when his clothing became caught in it.
Farmer.....	Almonte, Ont.....	" 20	.....	Killed by train when horses took fright and ran on tracks.
Farmer.....	Near Jellyby, Ont.....	" 22	About 65	Pole on top of load of hay snapped and threw him to floor of barn. Fractured skull.
Farmer.....	Near Mackinson, B.C.....	" 24	55	Tree fell on him while clearing land.
Farmer.....	Near Tillsonburg, Ont.....	" 26	50	Fell into buzz saw while sawing wood.
Farmer's son.....	Lakefield, Ont.....	" 29	16	Thrown from load of wood when team bolted.
Man engaged in clearing stumps.....	Dryden, Ont.....	May 5	.....	Injured when dynamite caps carried in his pocket were jarred.
Farmer.....	Near Morewood, Ont.....	About May 6	60	Collapsed while at work.
Farmer.....	St. Ephraim, Que.....	" 7	.....	Crushed under barrels of syrup when load was displaced while descending a hill.
Farmer.....	Elma Township, Ont.....	" 15	66	Crushed beneath stone slab while straightening fence. Died May 16.
Farmer.....	Near Craigmyle, Alta.....	" 16	44	Load fell on him when horses became frightened.
Farmer.....	Red River, near Winnipeg, Man.....	About May 20	47	Drowned when his boat loaded with potatoes was swamped.
Farmer.....	Alexandria, Ont.....	" 21	.....	Killed by delayed dynamite blast while clearing out rock.
Woman farmer.....	Near Meeting Creek, Alta..	" 23	.....	Crushed beneath drive wheel of tractor.
Farmer.....	Near Plum Coulee, Man.....	" 24	24	Struck by lightning.
Farmer.....	Riverhurst, Sask.....	" 24	.....	Dragged under disc harrow when horses ran away on being frightened by thunder.
Ranch owner.....	Near Medicine Hat, Alta...	" 30	.....	Killed when truck in which they were riding plunged over embankment.
Ranch employee.....				
Ranch employee.....				
Ranch employee.....				
Farmer.....	Near Peterborough, Ont....	" 30	47	Collapsed from heat while working in fields.
Farmer.....	North Cayuga, Ont.....	" 30	47	Overcome with heat. Died May 31.
Farmer's son.....	Barton Township, Ont.....	" 31	11	Thrown against land roller when he attempted to control a heifer.
Farmer.....	Grenville Co., Ont.....	" 31	60	Accidentally shot while shooting crows.
Farmer.....	North Augusta, Ont.....	About June 1	47	Dragged when horses attached to harrow ran away. Fractured skull. Died June 9.
Farmer.....	Near Watson, Sask.....	" 1	.....	Gored by bull.
Farmer.....	Cartwright, B.C.....	" 3	30	Caught in machinery of tractor and dragged to death.
Farmer's son.....	Near Shaunavon, Sask.....	About June 3	15	Dragged when team ran away. Died June 4.
Farmer.....	Near Coronation, Alta.....	" 4	77	Shotgun he was carrying accidentally discharged.
Farmer.....	Mountain Station, Ont.....	About June 6	.....	Injured when attacked by bull. Died June 20.
Farmer.....	Near Elora, Ont.....	" 6	45	Thrown from wagon when horses ran away.
Farmer.....	Near Port Hope, Ont.....	" 7	43	Kicked by horse.
Farmer.....	Near Domremy, Sask.....	" 7	.....	Fell from wagon load of oats breaking his neck.
Farmer.....	Ceylon, Sask.....	" 10	.....	Struck by lightning.
Farmer.....	Near Sudbury, Ont.....	" 11	60	Killed while blasting stone.
Farmer.....	Near Sarnia, Ont.....	" 14	61	Struck by beam and fell 30 feet at barn raising.
Farmer.....	Near Cornwall, Ont.....	" 14	77	Struck by auto while going from house to barn.
Farmer.....	Sand Hill, Que.....	" 19	67	Heavy iron roller passed over his body.
Farmer.....	Near Otterville, Ont.....	" 19	49	Burned when house was struck by lightning.
Farmer.....	Harrowsmith, Ont.....	" 19	.....	Burned when barn was struck by lightning.
Farmer.....	Snelgrove, Ont.....	" 21	29	Fell from roof of barn. Died June 25.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER  
OF 1929—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—				
Logger.....	Restigouche Co., N.B.....	April 1	34	Struck by pole in stomach. Hemorrhage. Died April 5.
Rigging slinger.....	Allco, B.C.....	" 1	48	While turn was coming in, a piece flew and hit him on neck.
Faller.....	Harrison Mills, B.C.....	" 1	24	Struck by line.
Boom man.....	Reid Bay, B.C.....	" 1	.....	Pulled dolphin on top of him.
Boom man.....	Alice Arm, B.C.....	" 4	41	Slipped from boom striking head on log and drowned.
Logger.....	Port Renfrew, B.C.....	" 9	26	Block on top of high rigger spar broke and fell on his head.
Rigger.....	Theodosia Arm, B.C.....	" 10	54	Haulback sideswiped snag.
Labourer.....	Seguin River, Ont.....	" 13	35	Fell from log boom and drowned.
Logger.....	Victoria, B.C.....	" 13	38	Fell from boom of logs and drowned.
Logger.....	Blubber Bay, B.C.....	" 16	69	Crushed beneath logs while loading logs.
Teamster.....	Near Mattawa, Ont.....	" 17	69	Kicked by horse. Fractured skull.
Bridgeman.....	Menzies Bay, B.C.....	" 24	39	Injured finger. Blood poison. Died June 14.
River driver.....	Moose River, Cumberland Co., N.S.....	" 27	22	Drowned while crossing a run of pulp logs.
Loader.....	Port Alberni, B.C.....	" 29	21	Struck by log while loading logs.
River driver.....	Near Chicoutimi, Que.....	" 30	.....	Fell from logs and drowned.
Labourer.....	Near Quebec, Que.....	May 9	22	Struck on head by log.
Labourer.....	Flanders, Ont.....	" 10	66	Thrown from horse against rock when it bolted. Died May 17.
Cook.....	Port Renfrew, B.C.....	" 13	57	Crushed between run away car and flat car.
Loader.....	Hammond, B.C.....	" 14	42	Fell and fractured skull while loading logs.
Boatman.....	Near Bathurst, N.B.....	" 14	29	Drowned from boat in rough water.
River driver.....	Rimouski, Que.....	" 15	21	Fell from logs and drowned.
Logger.....	New Denver, B.C.....	" 16	27	Fractured skull.
River driver.....	Field, Ont.....	About May 16	36	While working on skidway some logs broke away crushing his skull. Died May 17.
River driver.....	Montreal River, Que.....	" 17	.....	Drowned while driving logs.
Labourer.....	Mile 67, Westgate, Man.....	" 18	19	Struck by log when it broke loose from skidway. Fractured skull.
Logger.....	Ocean Falls, B.C.....	" 20	38	Crushed head and spine.
River driver.....	Near Bathurst, N.B.....	" 20	30	Drowned from boat in rough water.
Logger.....	Terrace, B.C.....	" 23	37	Neck broken in logging accident.
Logger.....	Duncan, B.C.....	" 31	28	Struck by sapling. Fractured skull. Died June 1.
Loader.....	Waldo, B.C.....	" 31	18	Struck by rolling log. Fractured leg and pelvis.
Logger.....	Squamish, B.C.....	" 31	32	Struck by rolling log. Fractured skull.
Logger.....	Bloedel, B.C.....	June 1	34	Head, arm and chest injured in logging accident.
Chokerman.....	Theodosia Arm, B.C.....	" 6	.....	Fractured skull and leg.
Logger.....	Near Lindsay, Ont.....	" 7	.....	Crushed by piece of timber when chain broke while loading it on flat car.
Logger.....	Lake Cowichan, B.C.....	" 7	26	Injured in logging accident.
Logger.....	Slocan River, B.C.....	" 8	.....	Swept over falls and drowned when he slipped off log jam.
Rigging slinger.....	Deep Bay, B.C.....	" 10	27	Struck by log while loading logs.
Bushman.....	Near Kenora, Ont.....	About June 12	.....	Perished in forest fire.
Logger.....	High Falls, Que.....	" 12	.....	Drowned from log drive.
Logger.....	Allco, B.C.....	" 18	30	Crushed chest.
Boom man.....	Cascade, B.C.....	" 20	19	Drowned from log boom.
River driver.....	Van Bruyssel, Que.....	" 25	.....	Drowned while driving logs.
Logger.....	Near Powell River, B.C.....	" 26	.....	Killed while rolling logs to tide water.
Logger.....	Campbell River, B.C.....	" 27	.....	Injured chest.
FISHING AND TRAPPING—				
Fisherman.....	Bay of Fundy, N.S.....	April 2	33	Drowned when his boat capsized in heavy storm.
Supt. of fishing Co.....	Sooke, B.C.....	" 4	52	Drowned.
Pile driver.....			19	
Fisherman.....	Clarks Harbor, N.S.....	" 13	.....	Drowned when skiff filled while setting lobster traps.
Fisherman.....	Sheet Harbor, N.S.....	" 17	35	Fell overboard from skiff and drowned.
Skipper on fish packer.....	Off Green Island, N.S.....	" 25	36	Drowned when dinghy filled and swamped during gale.
Trapper.....	Petawawa River, Ont.....	" 29	50	His craft was swamped and he was drowned.
Fisherman.....	Off Alberton, P.E.I.....	" 30	32	Drowned from dory.
Fisherman.....	Near Pictou, N.S.....	June 5	17	Drowned while setting lobster traps.
Trapper.....	Rabbit River, B.C.....	About June 25	.....	Shot when his cabin was looted of fur pelts.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous Mining—				
Helper.....			29	
Drill runner.....	Levack Mine, Ont.....	April 3	28	Buried in muck slide following blasting.
Drill runner.....			27	
Helper.....	Moyle, B.C.....	" 13	41	Blow over heart.
Process labourer at nickel refinery.....	Port Colborne, Ont.....	" 15	29	Fell from platform, fracturing skull. Died April 20.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER  
OF 1929—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—Con.</b>				
<i>Metalliferous Mining—Con.</i>				
Miner.....	Creighton Mine, Ont.....	" 16	36	Fell from platform in mine. Died about Apr. 26.
Miner.....	Kalso, B.C.....	" 26	31	Premature explosion.
Mill worker.....	Anyox, B.C.....	May 4	29	Drawn on to belt.
Miner.....	Anyox, B.C.....	" 4	28	Crushed by fall of rock in chute.
Teamster.....	South Porcupine, Ont.....	" 7	51	Miner's phthisis. Incapacitated since May 5, 1927.
Driller.....	Flin Flon, Man.....	" 9	31	Explosion from drilling into missed hole. Died June 5.
Miner.....	Kimberley, B.C.....	" 12	.....	Dropped into conveyor pit when he jumped to ground. Broken neck.
Labourer.....	Flin Flon, Man.....	" 18	20	Drowned when canoe upset.
Shaftman.....	Kirkland Lake, Ont.....	" 31	38	Crushed in mine shaft. Died June 1.
Drill helper.....	Near Cochrane, Ont.....	" 31	27	Drowned when pointer struck a rock in river and broke in two.
Miner.....	Vipond Mines, Ont.....	June 6	28	Injured during blasting operations.
Carpenter.....	Trail, B.C.....	" 8	.....	Injured when he fell in shaft. Died June 11.
Nozzleman.....	French Creek, B.C.....	About June 10	.....	Injured when he slipped in mine. Died few days later.
Labourer.....	Flin Flon, Man.....	" 10	28	Caught between conveyor and mixer.
Miner.....	McDame Creek, B.C.....	" 11	.....	Killed in mine accident.
Miner.....	Silverton, B.C.....	" 13	34	Slipped on rock of foot-wall from face to raise.
Timberman.....	Silverton, B.C.....	" 13	40	Crushed by fall of earth in mine.
Miner.....	Nipissing Mine, Ont.....	" 17	42	Injured during blasting operations.
Treater man in reduction plant.....	Tadanac, B.C.....	" 18	20	Electrocuted when he walked into treater while power on.
Miner.....	Copper Creek, B.C.....	" 20	80	Fell down shaft.
Mechanic.....	Collins, Ont.....	" 21	.....	Drowned when canoe upset.
Mucker.....	Britannia Beach, B.C.....	" 22	36	Struck by falling muck.
<i>Coal Mining—</i>				
Miner.....	New Waterford, N.S.....	April 8	20	Crushed by fall of coal.
Miner.....	Coal Creek, B.C.....	" 11	75	Crushed by falling rock.
Shift man.....	Glace Bay, N.S.....	" 24	65	Crushed between a box of coal and the rib.
Labourer.....	Blakeburn, B.C.....	" 26	49	Cars ran over him.
Mucker.....	Cadomin, Alta.....	May 11	26	Hit by rock and timbers.
Miner.....	Canmore, Alta.....	" 27	42	Struck by and pulled under compressed air motor.
Miner.....	Coleman, Alta.....	" 28	32	Buried by fall of rock.
Miner.....	Glace Bay, N.S.....	June 14	.....	Struck by fall of stone.
Timberman.....	Fernie, B.C.....	" 15	33	Buried when roof caved in.
Fire boss.....	Naomine, Alta.....	" 16	51	Crushed by fall of rock in mine.
Helper.....	Comox, B.C.....	" 17	61	Run over by car which became detached from trip.
Miner.....	Bellevue, Alta.....	" 21	36	Coal fell from roof breaking his neck.
Miner.....	Coal Creek, B.C.....	About June 25	.....	Face scratched while working in mine; blood poisoning. Died July 3.
Machine runner.....	Glace Bay, N.S.....	" 26	About 45	Struck by fall of coal.
Miner.....	Lantzville, B.C.....	" 27	.....	Crushed by run away mine car.
Miner.....	Coal Valley, Alta.....	" 28	62	Pinned between cars and engine.
Miner.....	Coalhurst, Alta.....	" 28	24	Jammed between car and props when car jumped track. Died June 30.
<i>Non-metallic mineral mining and quarrying—</i>				
Quarry worker.....	Sydney, N.S.....	June 8	22	Crushed by fall of rock.
Quarry worker.....			27	
Oil well driller.....	Turner Valley, Alta.....	" 24	27	Struck on head by pipe tongs.
<i>Structural Materials—</i>				
Labourer in gravel pit.....	Galt, Ont.....	June 4	.....	Struck by a yard engine.
Gravel pit worker.....	Guelph Junction, Ont.....	" 17	About 30	Mangled when coat caught in clutch of crusher shafting.
Brakeman.....	Hawk Lake Quarry, near Kenora, Ont.....	" 29	19	Crushed beneath steam carrier.
Miner.....	Near St. Catharines, Ont.....	" 3	22	Caught by drive wheel of stone crusher and thrown to floor.
Worker in gravel pit.....	Near St. Thomas, Ont.....	" 24	42	Crushed when wall of gravel caved in.
<b>MANUFACTURING—</b>				
<i>Vegetable foods, drink and tobacco—</i>				
Painter at brewery.....	Montreal, Que.....	June 8	34	Fell from scaffold.
<i>Textiles and clothing—</i>				
Oiler and cleaner.....	Hamilton, Ont.....	April 5	48	Got hand caught in gears. Died of pneumonia April 12.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER  
OF 1929—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MANUFACTURING—Con.</b>				
<i>Rubber products—</i>				
Pressman.....	Toronto, Ont.....	June 13	38	Crushed between stone wall and steel door hurled open by steam pressure.
Pressman.....				
<i>Saw and planing mill products—</i>				
Sawmill worker.....	Near Nipawin, Man.....	April 5		Struck in abdomen by board which flew from saw.
Saw mill worker.....	Mistawis, Sask.....	" 9		Injured when he fell against revolving saw blade. Died April 10.
Labourer.....	West Guilford, Ont.....	" 12	19	Kicked in face by horse when it was frightened by blast. Died April 17.
Saw cleaner.....	St. Louis de Ha-Ha, Que.....	" 15	21	Fell on saw, arm torn.
Mill hand.....	Fitzroy Harbour, Ont.....	" 23	60	Mutilated when he fell against circular saw.
Pond Man.....	Whitecourt, Alta.....	May 22	26	Drowned.
Mill hand.....	Souris, P.E.I.....	" 24	22	Run over by train.
Splitter.....	Near St. John, N.B.....	" 31	30	Fell on saw.
Stacker.....	Fort Frances, Ont.....	June 8	53	Crushed between lumber pile and load of lumber.
Sawyer.....	Nanaimo, B.C.....	" 10	35	Crushed between flying slab and machine frame.
Fireman.....	Extension, B.C.....	" 12	18	Killed while at work.
Tailing edger.....	Birch Point, Man.....	" 14	36	Cut by saw on elbow. Pneumonia. Died June 24.
Mill foreman.....	Amherstburg, Ont.....	" 28	55	Fell from pile of lumber fracturing skull.
<i>Wood products—</i>				
Worker in wood preserving plant.....	Calgary, Alta.....	May 8	35	Crushed by load of timber. Died May 9.
Chair driver at furniture factory.....	Hanover, Ont.....	" 9	51	Hand cut by chisel. Infection. Died May 20.
Machine operator in box factory.....	L'Ephiphanie, Que.....	" 27		Burned when iron bar touched electrical contacts while in his hand. Died May 30.
Chief Engineer.....	New Westminster, B.C.....	June 27	66	Suffocated in saw dust bin.
<i>Pulp, paper and paper products—</i>				
Labourer.....	Timiskaming, Que.....	April 6	22	Crushed by collapse of trench during excavation.
Mill worker.....	Limoilou, Que.....	May 10		Chain of loaded conveyor gave way allowing its load to fall on him.
Labourer.....	Port Arthur, Ont.....	About May 13	25	Struck by train. Fractured spine.
Repairman.....	Hull, Que.....	May 20	66	Fell from beam to concrete floor. Died May 26.
Mill worker.....	Near Three Rivers, Que.....	About May 25	35	Asphyxiated while repairing tank at mill.
Mill worker.....				
Trucker.....	Powell River, B.C.....	May 29		Slipped and fell into dock and drowned.
Brakeman.....	Kapuskasing, Ont.....	June 4	23	Crushed head when caught in winder rolls.
Mill worker.....	Joliette, Que.....	" 4	23	Drowned while attempting to smash a log jam.
Mill worker.....	Dalhousie, N.B.....	" 16		Struck on head by falling plank.
Mill worker.....	Ocean Falls, B.C.....	" 21	26	Electrocuted.
Electrical foreman at paper plant.....	Three Rivers, Que.....	" 21	38	Electrocuted by high tension wire.
Mill hand.....				
Mill hand.....				
Mechanic.....	Rivière du Loup, Que.....	" 30	32	Drowned when bridge gave way beneath them while attempting to open gate of locks.

<b>MANUFACTURING—Con.</b>				
<i>Non-metallic mineral products—</i>				
Locomotive engineer at cement plant....	Port Colborne, Ont.....	April 12	.....	Injured when his locomotive jumped track and sideswiped a car. Died some days later.
Driller at stone yard	Quebec, Que.....	" 19	23	Derrick fell on him.
Labourer.....	Belleville, Ont.....	May 26	45	Arm torn off when clothing became caught in gears of elevator.
Oiler at cement works.....	Marlboro, Alta.....	June 1	22	Caught in shaft and drawn into pulley.
<i>Miscellaneous products—</i>				
Handyman.....	Vancouver, B.C.....	April 15	.....	Crushed between moving crane and wall.
<b>CONSTRUCTION—</b>				
<i>Buildings and structures—</i>				
Labourer.....	Chicoutimi, Que.....	April 1	61	Fell 50 ft. while demolishing old church. Died April 4.
Labourer.....	Near Milton, N.S.....	" 2	.....	Run over by engine.
Apprentice machinist	Hamilton, Ont.....	" 3	25	Fell 100 ft. when scaffolding gave way. Died April 4.
Painter.....	Montreal, Que.....	" 3	62	Fell from roof of building.
Plasterer.....	Sault Ste. Marie, Ont.....	" 13	40	Fell from ladder which broke while he was carrying mortar.
Labourer.....	Longueuil, Que.....	About April 15	30	Fell from scaffold, fracturing spine. Died May 23.
Painter.....	Toronto, Ont.....	About April 16	.....	Fell when scaffolding gave way. Fractured skull.
Labourer.....	Montreal, Que.....	April 26	33	Fell while carrying lantern and can of gasoline and burned by blazing gasoline.
Tinsmith.....	Kingston, Ont.....	" 22	22	Fell from roof, fracturing skull. Died April 23.
Engineer.....	Winnipeg, Man.....	" 29	42	Crushed under pile driver on which he was working when it slipped from its supports.
Painter.....	Toronto, Ont.....	May 9	62	Fell 40 ft. when flag pole broke.
Cashier with paving contractors.....	Toronto, Ont.....	" 13	31	While cleaning revolver it accidentally exploded.
Sheet metal roofer.....	Sydney, N.S.....	" 14	36	Fell 25 ft. from ladder fracturing skull.
Steel worker.....	Victoria, B.C.....	" 20	44	Fell 100 ft. from elevator shaft, fracturing skull.
Painter.....	Springhill, N.S.....	" 31	47	Lead poisoning. Ill several weeks.
Labourer.....	Port Colborne, Ont.....	June 3	58	Struck by locomotive. Died June 4.
Labourer.....	Montreal, Que.....	" 11	31	Crushed by heavy beam which fell when it was being hoisted. Fractured spine.
Contractor.....	Moyie, B.C.....	" 25	70	Crushed by falling wall.
Plumber.....	Sydney, N.S.....	" 28	21	Burned in explosion of gas ignited by plumber's candle. Died June 29.
Foreman.....	Merrickville, Ont.....	June 28	74	Fell 30 ft. from wall.
Labourer.....	Sarnia, Ont.....	About June 29	26	Struck on head by hoisting bucket.
<i>Railway—</i>				
Labourer.....	Mile 23, Sherritt Gordon Line, The Pas, Man.....	April 2	40	Premature dynamite explosion. Died April 4.
Brakeman.....	Mile 412, Hudson Bay Rly., Man.....	" 7	47	Fell from box car and was run over by train.
Rockman.....	Sherritt Gordon Line, Man.....	" 22	32	Struck by piece of rock during blasting operations. Fractured skull.
Labourer.....	Mile 68, Hudson Bay Railway, Man.....	May 4	32	Slipped and fell and car ran over him.
Labourer.....	Hudson Bay Junction, Man.....	" 4	.....	Injured while at work. Died May 5.
Labourer.....	Near The Pas, Man.....	June 4	.....	Struck by wire cable when it snapped under heavy load while loading gravel train.
Teamster.....	Near Moose Jaw, Sask.....	" 19	.....	Struck by lightning.
<i>Shipbuilding—</i>				
Rigger.....	Lunenburg, N.S.....	May 8	49	Scratched thumb on wire rope.—Blood poisoning. Died May 18.
<i>Highway and bridge—</i>				
Labourer with contractors.....	Mersey River, N.S.....	April 3	28	Struck by locomotive.
Iron worker.....	Near Port Colborne, Ont.....	" 6	22	Thrown against bridge while riding on hoist.
Grader operator.....	Near Robson, B.C.....	" 18	42	Injured when grader he was riding crashed through bridge.
Bridge worker.....	Charlemagne, Que.....	May 1	32	Fell from bridge into river and drowned.
Labourer.....	Near Lindsay, Ont.....	" 15	62	Fell beneath wheels of dump truck.
Painter.....	Montreal, Que.....	" 30	22	Struck by train.
Labourer.....	Guelph, Ont.....	" 30	47	Collapsed from heat. Died May 31.
Crane tender.....	McNamara's Siding, near Dunnville, Ont.....	June 3	.....	Crushed between car and crane while unloading car.
Labourer.....	Near Nelson, B.C.....	June 19	.....	Carried over cliff by rock slide.
Teamster.....	Near Mitchell, Ont.....	" 24	27	Load of crushed stone overturned on him when it went off road.

<i>Water Transportation—</i> Longshoreman	Vancouver, B.C.	Jan. 8	25	Bruised shoulder. Died June 3.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Action by Association of Employers Registered Under Trade Unions Act

A MOTION was made by the Amalgamated Builders' Council in the Weekly Court, at Toronto, on June 28, for an interlocutory injunction restraining the Registrar under the Combines Investigation Act and the Minister of Labour from exercising, as against the Association or any of its members, any authority under the Act. The circumstances of this case are outlined on page 868 of this issue of the *LABOUR GAZETTE*.

Mr. Justice Raney, in a written judgment, said that the plaintiff association described itself as a trade union, registered under the Trade Unions Act of the Dominion of Canada, and described the defendants as Frederick A. McGregor, registrar of the Combines Investigation Act of Canada, and the Hon. Peter Heenan, Minister of Labour. The Amalgamated Builders' Council is an association, not of workmen, but of building contractors, and among its declared objects are the imposition of desirable restrictive conditions on the conduct of the various building trades and the establishment and maintenance of lawful codes of usages or of trade ethics in the various building trades.

Translated into action, this language, according to the material filed on the motion, means that the association claims and exercises over its members, with their consent, the right among other rights, to forbid them purchasing say, bath-tubs from any manufacturer of bath-tubs who sells his product to persons who are not members of the association and the right to fix uniform prices to be paid by the public for services of members of the association.

No attempt is made to conceal the fact that the objects of the association are in restraint of trade—the argument being that the plaintiff association, having been registered under the Trade Unions Act, became entitled to the protection of that Act, and is therefore free to do anything it pleases in the way of restraint of trade, invoking sec. 29 of the Act, which is R.S.C. 1927 ch. 202, which reads: "The purposes of any trade union shall not, merely by reason that they are in restraint of trade, be deemed to be unlawful, so as to render any member of such trade union liable to criminal prosecution for conspiracy or otherwise, or so as to render void or avoidable any agreement or trust."

And the plaintiff argues that this section protects it and its members, not only from prosecution under the Criminal Code, but

from investigation under the Combines Investigating Act, R.S.C. 1927 ch. 26.

The plaintiff association, by the endorsement of the writ of summons, claims, first, a declaration that neither it nor its members are subject to investigation by the defendants or either of them under the authority of the Combines Investigation Act; and, secondly, an injunction restraining the defendants from proceeding to investigate it.

On the argument of this motion for an interim injunction the plaintiff association was met with the preliminary objection that it has misconceived its remedy. It is clear that the action of the defendants which the plaintiff association seeks to restrain is pursuant to a deliberate policy of the Minister of Labour. But the jolicy and the official acts of the Minister are, not only the policy and acts of his department, but are the policy and acts of the Government of Canada, which is merely an executive committee of Parliament; and, so long as the Government enjoys the confidence of Parliament, the acts and policy of the Government are the acts and policy of Parliament. In that view, an injunction restraining the Minister of Labour from executing his office would be an injunction restraining Parliament.

Reference to *Regina v. Lords Commissioners of the Treasury (1872)*, L.R. 7 Q.B. 387, 394; *Short and Mellor's Crown Practice*, 2nd ed., p. 202.

An individual having a grievance against a department of the Government is not without remedy. He may proceed by petition of right or perhaps by an action for a declaratory judgment.

If an injunction could be granted the material before the Court did not show that it would be "just and convenient." There is no pretence that, apart from the Trade Unions Act, there is not a violation by the plaintiff association of the Combines Investigation Act. The Trade Unions Act is obviously a flimsy foundation for an interlocutory injunction.

Reference to *Polakoff v. Winters Garment Co.\* (1928)*, 62 O.L.R. 40.

It may be that the Court in this case will reach the conclusion that the Canadian Act applies, not only to trade unions of workmen, but also to trade unions of employers, and that the restraint of trade mentioned in sec. 29 refers, not only to restraints of trade inci-

\* (*LABOUR GAZETTE*, February, 1928, p. 233).

dental to strikes and picketing by trade unions of workmen, but to restraints of trade incidental to combines and monopolies of trade unions of employers—but until the Court so decides no case is made out for an injunction.

Moreover, the plaintiff association does not make out a *prima facie* case for an interlocutory injunction. The defendant McGregor has gone no further than to issue invitations to certain persons to meet him and tell him what they are doing. There cannot be an injunction against an invitation.

It was contended for the plaintiff association that the defendants were not sued as servants of the Crown but, being servants of the

Crown, were merely described as such. Clearly the action is brought to restrain the defendants from doing things in their official character. If it does not mean that, it means nothing. Then counsel, as an alternative, asked for leave to amend by deleting the words of description of the defendants from the style of cause. That would be to enable to plaintiff associations to set up a new cause of action altogether different from the present claim. That request is refused, as was a similar one in *Raleigh v. Goschen* (1898), 1 ch. 73.

Motion dismissed with costs. Ontario Weekly Notes Volume 36, pages 344-346.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada at the beginning of August continued to show a pronounced improvement, resulting in a more favourable situation than in any other period in the years for which comparative data are available. This statement is based on reports from 6,840 of the larger firms throughout the Dominion, the reports being tabulated by the Dominion Bureau of Statistics. The employers making returns are representative of all industries except agriculture, fishing, hunting and highly specialized business. They employed 1,097,812 workers, compared with 1,070,817 on July 1. The index (the average in the calendar year 1926, being the base=100) stood at 127·8 on August 1, compared with 124·7 in the preceding month, and with 119·3, 110·5, 105·5, 97·5, 95·8, 101·4, 94·2 and 90·0 on August 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921 respectively. At the beginning of August, 1929, the unemployment percentage reported by local trade unions stood at 3·0 in contrast with percentages of 2·9 at the beginning of July and with 2·5 at the beginning of August, 1928. The August percentage was based on the returns tabulated by the Department of Labour from a total of 1,690 unions, with a membership of 200,115 persons. Reports received by the Department of Labour from the offices of the Employment Service of Canada showed that the volume of business, as indicated by the average placements effected, was slightly less than that of the previous month and also somewhat below the corresponding daily average recorded during July a year ago.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.63 at the beginning of August, as compared with \$10.98 for July; \$11.08 for August, 1928; \$10.93 for August, 1927; \$11.10 for August, 1926; \$10.84 for August, 1925; \$10.19 for August, 1924; \$10.53 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); \$13.41 for August, 1918; and \$7.68 for August, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Sta-

tistics, based upon prices in 1926 as 100, was again substantially higher at 98·1 for August, as compared with 96 for July; 95·4 for August, 1928; 98·3 for August, 1927; and 99·1 for August, 1926.

The loss in working time caused by industrial disputes in Canada during August was slightly greater than that in July, but was less than half the loss incurred in August last year. Ten disputes were in existence at some time during the month, involving 1,094 workers, and resulting in the loss of 3,713 working days. Corresponding figures for July, 1929, were nine disputes, 427 workers, and 3,139 working days; and for August, 1928, 13 disputes, 2,016 workers, and 9,231 working days.

### Industrial Disputes Investigation Act

During August the Department of Labour received reports from three Boards of Conciliation and Investigation in connection respectively with disputes involving the Canadian National Railways and its locomotive engineers; the same company and its firemen and enginemen; and the Winnipeg Electric Railway and its trackmen. A new application was received for the appointment of a Board, and Boards were established in connection with four disputes, applications in these cases having been made previously. A full account of recent proceedings under the Act is given on page 975.

The Right Hon. J. H. Thomas, Lord Privy Seal and Minister for Unemployment in the British Government, arrived in Canada early in August, returning to England during the present month. The purpose of his visit was to discover whether action could be taken in this country that would tend to increase trade between Great Britain and Canada. During his visit Mr. Thomas expressly stated that the British Government had no intention of sending British unemployed workmen to Canada to compete with Canadian workmen and create a surplus of labour in the Dominion.

During his visit the Minister for Unemployment conferred with members of the Dominion Government and with the heads of the principal railways and industrial organizations. In company with the Hon. Peter Heenan, Minister of Labour, he visited the annual convention of the Trades and Labour Congress of Canada at Saint John, New Brunswick, delivering an address to which reference is made in the account of the proceedings of the Congress appearing on another page of this issue.

### **B. C. Male Minimum Wage Commission Appointed**

A Board to administer the Male Minimum Wage Act of British Columbia was appointed during August. It consists of Messrs. J. D. McNiven, Deputy Minister

of Labour of the Province (chairman), George H. Cowan, K.C., of Vancouver, and Adam Bell, of Revelstoke. An outline of the new Act was given in the LABOUR GAZETTE, June, 1929, page 607. Under its provisions the Board has authority to fix a minimum wage rate for any occupation on receipt of a request from at least ten of the employees concerned, but the Board may also fix minimum rates on its own initiative. The first application for the establishment of minimum rates of wages was from members of the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers. Appeals against rulings of the Board may be taken in the Courts.

It will be recalled that the earlier Act became inoperative when the Supreme Court of Canada declared certain orders issued by the Board of Adjustment to be invalid (LABOUR GAZETTE, November, 1928, page 1310).

### **Unemployment and the census of population**

Reference was made in the last issue of the LABOUR GAZETTE to recent proposals both in Canada and the United States, that fuller

information in regard to unemployment should be obtained by means of the forthcoming censuses of population. On June 18, 1929, the United States President signed an act providing for the taking of the Fifteenth Census of the United States, the first sentence of which provides that "a census of population, agriculture, irrigation, drainage, distribution, unemployment, and mines shall be taken by the Director of Census in the year 1930."

Dr. Ethelbert Stewart, the Commissioner of Labour Statistics, in the hearing before the Committee on Education and Labour of the United States Senate, said "that in the nature of things there can be no statistics of unemployment without a census. If the census

were taken so that we had the number of unemployed at any given time, then the Bureau of Labour Statistics, with its volume of employment, could apply that index at a given time and show the number of unemployed."

### **International Labour Conference at Geneva**

The Governing Body of the International Labour Office decided last year that two sessions of the International Labour Conference should be held in 1929—a general session, and a session confined exclusively to the study of maritime questions. The first of these sessions took place from May 30 to June 21. The second will open at Geneva on October 10; its agenda is given on another page of this issue. In accordance with the so-called double-discussion procedure, this year's Conference will make a preliminary examination of these four questions, and will decide whether they should be placed on the Agenda of a future session, when definite decisions will be taken after consultation between the various governments. The questions to be considered, and the names of the Canadian delegates to the Conference, are given on another page.

### **American Federation of Labour Convention in October**

The American Federation of Labour has issued a call to the 49th annual convention which will be held in the Royal York Hotel, Toronto, beginning on October 7. Representation in the convention will be on the following basis: From national or international unions, for less than 4,000 members, one delegate; 4,000 or more, two delegates; 8,000 or more, three delegates; 16,000 or more, four delegates; 32,000 or more, five delegates; 64,000 or more, six delegates; 128,000 or more, seven delegates, and so on; and from central bodies and state federations and from local trade unions not having a national or international union, and from federal labour unions, one delegate. Organizations to be entitled to representation must have obtained a certificate of affiliation (charter) at least one month prior to the convention; and no person will be recognized as a delegate who is not a member in good standing of the organization he is elected to represent. Only *bona fide* wage-workers, who are not members of or eligible to membership in other trade unions are eligible as delegates from federal labour unions.

The future policies of the American Federation of Labour are formulated and adopted at each succeeding convention. The action of the conventions upon all questions presented

and considered becomes the official expression of the organized labour movement, as represented by the A.F. of L. Industrial, social and economic problems are also considered in connection with policies and official expressions. The call states that "our conventions are open forums, democratic in character, where the widest opportunity is given for full, free and open discussion. Delegates attending conventions have faced every problem courageously and have considered their action upon all questions intelligently and constructively. We wish to continue the traditional policy of the American Federation of Labour in this regard. For these reasons we urge that all national and international unions, state federations of labour, city central bodies, and local unions; in fact, all organized units which are entitled to representation, send their representatives to this Forty-ninth Annual Convention of the American Federation of Labour."

**Tribute to  
Nova Scotia  
miners**

The government of Nova Scotia made a presentation of \$1,500 on August 22 to the men of the Rescue Corps of the Acadia Coal

Company in recognition of their work in connection with the reopening of the Allan Mine following a recent severe explosion. The presentation was made in the rooms of the United Mine Workers at Stellarton by the Hon. Gordon S. Harrington, Minister of Mines of the Province, who described the risks undertaken by the men in entering and working in a mine that was filled with deadly gasses. He said that one had to go into the mine to get any adequate idea as to the enormous damage that had been done, and to grasp the magnitude of the task that confronted the men of the Rescue Corps. He was proud of the men who could measure up under such conditions and the Acadia Coal Company had every just reason to be proud of them too.

Mr. Harrington then referred to the colliery explosions which have occurred in Nova Scotia, commencing with that at the Drummond Colliery on May 13, 1873, when 60 lives were lost. The next was at the Albion, November 12, 1880, when 44 men laid down their lives. On February 10, 1885, there was an explosion at the Vale Colliery and 13 lives were lost. Then came the Springhill explosion, on February 21, 1891, when 125 lives were lost, the record number to date of fatalities in one disaster, and it was to be hoped a record that would never be broken. On June 15, 1899, at Caledonia Mines, C.B., 11 lives were lost. On July 25, 1917, the New Waterford explosion claimed 65 lives. The

last was the Allan Mine explosion on January 23, 1918, when 88 lives were lost. A smaller explosion took place in the Allan Mine on June 30, 1924, when four lives were lost. During the past 56 years 432 lives had been lost through explosions in the mines of Nova Scotia. It was very fortunate, he said, that the recent explosion occurred when there were no men in the mine.

Mr. Harrington said that the government only wished that the gift could be larger, but the demands of the province from all quarters made further expenditure inadvisable.

**A. F. of L.  
and labour  
injunction  
legislation**

The Executive council of the American Federation of Labour has been considering, for submission to the Judiciary Sub-Committee of the United States

Senate, a bill to restrict the use of injunctions in labour disputes. The bill was drafted by the Senate sub-committee, consisting of Senator Walsh of Montana, Norris of Nebraska, and Blaine of Wisconsin, and was sent by them to the Federation for revision. According to a statement by President William Green, of the A.F. of L., the new injunction bill will be regulatory rather than revolutionary in its principles. It will place labour in the same position as farmers' associations, which are now exempt from the anti-trust law. It will declare that labour is not a "commodity", and provide for trial by jury in cases of alleged contempt of court arising from disregard of labour injunctions.

The labour injunction measure introduced last year but rejected by the Senate was drafted by the Federation. This was the Shipstead bill, which attempted to change the principles on which injunctions were granted in all equity cases by limiting them to the protection of tangible and transferable property. The Senate Judiciary Committee decided that the Shipstead bill was too broad in its provisions, and that it probably violated the Federal Constitution.

**Technical  
students  
secure  
positions**

According to a recent announcement made by Principal H. B. Beal, more than 400 students at the Technical and Commercial School at London, Ontario,

have secured positions and 251 local firms have been supplied with their services through the work accomplished this year by the placement department of the school. As many as 404 students were placed this year, while the number for 1928 was 368. Local firms have co-operated with the department

of the school and this accounts for the large number which have secured their help from the ranks of the pupils. Many of the larger establishments in the city filled all their junior positions with technical school students. Two firms took more than 20 students each, while seven others added numbers varying from 10 to 15 and 20 to their staffs.

Speaking of the advantages of the placement department to employers in the city, Mr. Beal stated that a great deal of time and expense were saved by employers in that they had not to go over a large number of applicants before deciding whom they would employ. The placement department exercised great care in selecting the students for positions that were open. When they were recommended to the employer, there was little further work occasioned the firm to which they had been sent.

In a report to the advisory vocational committee of the school, Mr. Beal stated that "the response of the business firms of the city to the efforts of the school to supply them with selected help is most gratifying. The time has come when every boy and girl attending the Technical School, who takes advantage of the training provided, and earns a reputation in the school for industry and dependability, may confidently expect to be placed in a position by the placement department for which his or her training suits and in which there is opportunity for advancement."

### **General Motors to give special training to technical students**

Boy pupils at the Windsor-Walkerville Technical School are to have an opportunity of receiving training for executive positions with the General Motors of

Canada, Limited, in conse-

quence of an arrangement just completed between the motor company and the school authorities.

The plan provides for the instruction of boys for such offices as plant superintendent, shop foremen, and other work of a managerial character. A certain number of boys, recommended by the school as suitable for the specialized lines of endeavour, will be taken by the motor company at the close of each June term, just as groups are now selected by the Ford Motor Company of Canada. In the Ford factory the boys are placed in the shops, where they are taught trades. With the General Motors Company some of the boys will at first do machine and other practical work, and will go into the offices for a stated period of management training; others first attending the company's school of instruction at

Flint, Michigan, and later coming to the Walkerville plant for shop and office knowledge.

At the Flint school the boys will attend in groups of three or so, thus allowing some to be at work in the plant while others are getting academic training. It is planned to have each group spend one or two months in the plant at a time and an equal period at the school. The school has been in operation for some years, but up to the present no boys from the Border Cities have had the privilege of attending.

The extension of the system to the Border Cities was brought about largely through the efforts of S. R. Ross, C.E., director of the Windsor-Walkerville technical school. He took the matter up with the General Motors Company more than a year ago, and made a special trip to Flint for the purpose of inspecting the school and its manner of operation. He was well impressed with what he saw and heard, with the result that he made still greater efforts to get the privileges for the Border boys.

The General Motors Company gave sympathetic consideration to the representations of Mr. Ross, with the result that O. C. Callender, employment manager in connection with the Walkerville plant, visited the technical school a few days ago, and advised that the company had agreed to include the Border Cities in its "plant-to-school" arrangement. He intimated that the company would like to have eight or ten boys from the technical school in September of this year. Mr. Ross, however, is not sure that he will be able to send any pupils to the plant until a year from now, practically all of his June graduates having been placed in good positions.

### **Administrative cost of workmen's compensation in Quebec**

The Self Insurers' Association of the Province of Quebec, an organization composed of employers who undertake full responsibility for the payment of compensation for industrial

accidents in their plants under the Workmen's Compensation Act, is asking for a revision of the rule that was adopted early this year for the apportionment as between the self insurers and the insurance companies, of the expenses of the Workmen's Compensation Commission.

When the Act became effective on September 1, 1928, it was decided that these expenses should be divided between the "self-insurers" and the insurance companies, the latter companies covering the accident risk for the majority of the employers in the province. A

tentative basis for the division was laid down in an order issued last January, each insurance company being required to pay \$500, in addition to an assessment determined by the number of claims dealt with by the commission on its behalf. "Self-insurers" were required to pay towards the expenses of the Commission one per cent of the amount of the deposit which the act requires them to make as a guarantee of their ability to pay compensation awards together with an assessment based on the number of compensation awards in respect of the several employers.

The Self Insurers' Association now points out that this basis for the division of the burden of the expenses of the Commission was adopted tentatively for one year, and that in practice it bears too heavily on its members. Representations to this effect have been made to Mr. Robert Taschereau, K.C., the chairman of the Commission.

#### Accident problem in smaller plants

The field officer of the Workmen's Compensation Board of Nova Scotia refers in a recent report to the small plant as "the unsolved industrial accident problem." He illustrates the importance of the problem to Nova Scotia by stating that out of a total of 1211 operators in the "lumbering" class, which has a high percentage of accidents, 1077 had an annual payroll of less than \$2,000 each, with a compensation assessment less than \$80 yearly. The secretary treasurer of the Nova Scotia Accident Prevention Association, in its publication *Industrial Safety News*, refers to the difficulty experienced in securing the co-operation of the smaller employers of labour, who are found unwilling to spend the necessary money to correct physical or mechanical hazards. "The problem of accident prevention in the small plants," it is stated, "is one which is causing safety leaders everywhere a great deal of worry, and we find that safety publications generally are giving this matter greater attention than heretofore. Where organized safety work is feasible, accidents are steadily declining, but the same trend is not apparent to the same degree in the smaller industries."

#### Increase in industrial accidents in Ontario

Recent reports from the Ontario Workmen's Compensation Board show that industry in the province has broken all previous records in the number of accidents reported to the Board, there having been 8,538 accidents reported in July, or an increase of 1,150 over July a year ago, and 260

more than the number reported for October, 1928, which was the highest previous record since the commencement of the Act in 1915. The fatal cases numbered 43 for July as against 40 in July, 1928. The total benefits awarded in July amounted to \$716,649.28, of which \$592,615.36 was for compensation to injured workers or their dependants and \$124,033.92 for medical aid. In July, 1928, the total benefits awarded amounted to \$513,600.48.

This increase may be partly explained by the increased industrial activity in the province. Moreover, as Mr. R. B. Morley, general manager, Industrial Accident Prevention Associations, stated recently, many of the reports to the Board relate to minor injuries which, in former years, were considered only as "first aid" cases. On the other hand the records of the Board show that while 49 per cent of allowed claims involved payment for medical aid only, the total benefits included some increase also in "severity," and Mr. Morley points out that industry generally must give more attention to safety work. He states that many of the larger firms employing from 250 employees and upwards are giving close attention to accident prevention and are getting results that are satisfactory both to executives and workers. "Attributing accidents to the carelessness of workers," he says, "is no longer accepted as a good excuse because the so-called carelessness of employees is simply an admission of lax supervision in the plant."

#### Further conferences of employers and workers in Great Britain

Some progress towards joint action between employers and workers in Great Britain has been made since the rejection by the employers' organizations early this year of the report of the Conference on Industrial Reorganization and Industrial Relations (the "Melchett-Turner" conference) for the establishment of a Joint National Industrial Council (LABOUR GAZETTE, March, 1929, page 265). The National Confederation of Employer's Organizations and the Federation of British Industries (representing the organized employers) subsequently corresponded with the General Council of the Trades Union Congress (representing the organized workers) on the subject of the proposals which had been laid before the three bodies by the Conference. The two employers' organizations invited the General Council to meet them in order to consider how far the three bodies "might usefully consult together upon matters of common interest to British industry."

A preliminary meeting was held on April 23, at which it was decided to set up a joint committee to examine the best methods for consultation and co-operation between the three organizations. The joint committee held its first meeting in London on July 24 under the chairmanship of Sir Ralph Wedgwood. After a full discussion and exchange of views the meeting adjourned to allow of a further and more detailed examination by a joint sub-committee before the next meeting.

### British policy on unemployment

Two important measures adopted by the Parliament of Great Britain in July, aim principally at the relief of unemployment during the coming winter. The first of these is the Development (Loan Guarantees and Grants) Act, authorizing the Treasury to guarantee certain loans for meeting capital expenditure by a public utility undertaking in Great Britain incurred under a scheme for development, reconstruction or re-equipment, providing that the aggregate capital amount of the loans shall not exceed £25,000,000. The Treasury is to have regard to the extent to which the loan is calculated to promote employment in the United Kingdom. Apart from the power to guarantee loans, the Treasury is given power to make grants towards meeting interest charges on development loans in connection with public utility undertakings such as those engaged in providing means of transport or communication, gas, electricity, water or power. This provision, however, does not apply to any such undertaking carried on by a local authority. However, the Minister of Labour, with the approval of the Treasury, and on the recommendation of a committee appointed by the Minister, may make grants to local authorities and such bodies as carry on undertakings under statutory powers otherwise than for profit, towards any expenditure incurred for the purpose of carrying out works of public utility calculated to promote employment in the United Kingdom.

The second measure to which reference is made above authorizes the Treasury to make advances either by way of grant or of loan to the governments of certain colonies, protectorates and mandated territories for the purpose of aiding and developing agriculture and industry in those colonies or territories, and thereby promoting commerce with or industry in the United Kingdom. The House of Commons authorized the payment of sums not exceeding one million pounds in any one year and of any expenses incurred in connection with the committee.

Two other measures have an incidental bearing on unemployment. One is the decision of the Government to raise the school-leaving age to 15 as from April 1, 1931. Another is the decision of Parliament not to reduce the housing subsidy for the building of certain houses, and thus to reverse the decision arrived at by the previous Parliament. The new measure provides for the maintenance of the subsidy at its present rate on all houses, built under the 1924 Act. The Government moreover is considering a comprehensive housing and slum clearance policy.

### British Government's coal-mining policy

The Government of Great Britain will introduce legislation at the autumn session of Parliament dealing with hours of work and other factors in the coal industry. The Right Hon. William Graham, President of the Board of Trade, announced that the government had requested the colliery owners to organize district marketing arrangements and to develop a central scheme for co-ordinating the activities of the district organizations. The government, he stated, would take powers to enable them, if necessary, to compel colliery owners to conform to the rules of a district organization inaugurated with the approval of owners of collieries producing the majority of the output of the district. The government, he said, would also take power to enable them to constitute an organization having the approval of the majority, and would take similar power to set up a central co-ordinating authority, if one was not constituted voluntarily. As regards details of the selling schemes, those details would be left to the owners in the preparation of their plans, but they would be in constant consultation, and the government must approve the scheme in the long run.

After discussion in private sessions spread over three days, the delegate conference of the Miners' Federation decided on July 25 to press for the immediate repeal of the Eight Hours Act and instructed the executive committee to take such steps as they deem necessary to secure repeal. The wages question was also discussed privately, and it was resolved that the time had come to press for a higher standard of living for the miner and a return to a national wages agreement. Resolutions were carried urging nationalization of the mining industry and reiterating a claim for international regulation of the coal trade, with uniform hours.

### Union co-operation in men's clothing industry

Recent developments in the joint union control system which has existed for some years in the men's clothing industry conducted by the Hart, Schaffner and Marx Company, were described in the *New Republic* (New York), August 7, 1929. This company, stated to be the largest manufacturer of men's clothing in the world, was crippled five years ago by a change in the purchasing habits of the public, which was demanding clothes of a cheaper kind than formerly. For fifteen years previously the company and the Amalgamated Clothing Workers union had had a joint system under which the company could make no important changes in the lay-out of the factories, types of machinery, etc., without consulting the officials of the union, nor could any change in wage rates be made without action by the rate committee, a joint body composed of an equal number of representatives of each party. The crisis in 1924 called for still closer co-operation if the industry was to survive. Accordingly a conference was held at the suggestion of the president of the union and the labour manager of the company, the union agreeing to look into the question of costs, to participate in the reorganization of the shops on more economical lines, to co-operate in the settlement of union issues, and to restrict practices that had proved to be burdensome and costly. Subsequently it was agreed to set up a small shop to experiment in the production of suits at the lowest possible cost consistent with the interest of both parties. The opening of this shop, in the spring of 1925, marked a new phrase in the development of the relations between the company and the Amalgamated Union.

When the "X Plan" was put into effect, both the company and the union made generous concessions, in their common desire to bring production and employment back to a healthy condition. The company recognized the union as a co-operating agent in production by giving it control in many matters that had always been associated with management. The job of keeping discipline among the workers was practically taken over by the union officials. The company cut down its staff of quality examiners, and turned over to the union the task of maintaining the established standards. The union also helped the company to design the new X-construction garment, and plan the lay-out of the X-shop. The company and the union together agreed upon the total labour cost of the X-garment, and the union distributed this sum among the operators as it saw fit. The union also made

concessions to the company to promote efficiency in the new X-shop. Cherished customs of working were given up, and a generally lower level of piece rates was established, although it was hoped that the increase in production would keep the weekly earnings of the workers at their former level.

The first return to the union for its share in the experiment was steady work and increased earnings. In fixing the piece rates on the new garment, the union officials generally recast the rates that had been previously in force. The rates on some operations were reduced by the union deputies and others were raised. But on the whole, increased production has meant higher weekly earnings.

Unlike the situation in the tailor shops, where the increased volume of work more than compensated the men for the readjustment required by the X system, the increase in efficiency in the cutting room was so effective in saving labour that only half as many cutters were needed as before. Consequently a large part of the cutting force had to be eliminated, and the Trade Board, in a decision on March 18, 1926, permitted the discharge of 150 men. Each cutter discharged was paid \$500 from a fund to which the company contributed \$50,000 and the union \$25,000, from its unemployment insurance fund.

### Old Age Pensions in Australia

The Commonwealth of Australia recently published the annual report on the operation of the Invalid and Old Age Pensions Act, 1908-1926, relating to the work carried on during the 12 months ended June 30, 1928. Note was made in the *LABOUR GAZETTE*, November, 1928, page 1214, of a bill introduced by the Commonwealth government last year to make new provision for national insurance in regard to old age and invalidity, but the new measure is still under consideration.

The credit for introducing old age pensions into the southern hemisphere belongs, not to the Commonwealth, but to the Dominion of New Zealand, where pensions have been payable since April 1, 1898. The first State of the Commonwealth to make provision for the payment of old age pensions was Victoria, where legislation on the subject came into operation in January, 1901. Later in the same year the pension system of New South Wales came into force, while in Queensland old age pensions became payable in July, 1908. Finally, an Act providing for the payment of old age pensions throughout Australia, was passed by the Commonwealth Parliament in 1908, pension payments thereunder commencing on July 1, 1909.

This Act superseded the State Acts in so far as provision for old age is concerned.

The general administration of the Act is, subject to the control of the Minister, placed in the hands of the Commissioner of Pensions, who is assisted by a Deputy Commissioner appointed in each State. Each State is divided into districts, each district being in charge of a registrar, whose duties consist in receiving and investigating pension claims and in keeping such books and registers as are required for carrying out the provisions of the Act.

For an old age pension the age qualification is similar to that previously in force in New South Wales under the State Act, that is, attainment of the age of 65 years, or, in the event of permanent incapacitation for work, attainment of the age of 60 years. The age qualification for women is at 60 years. The residential qualification for an old age pension is 20 years, and for an invalid pension, 5 years, allowance being made for occasional absences up to one-tenth of the total period of residence.

The rate of pension payable, whether for old age or invalidity, is required by the Act to be determined by the Commissioner or one of the Deputy Commissioners, and is to be fixed at such amount as he deems reasonable and sufficient, having regard to all the circumstances of the case, but must not exceed £25 per annum in any event, or be at such a rate as will make the pensioner's income, together with pension, exceed £52 per annum. With a view to restricting the pensions to pensions actually needing assistance, provision was made in all the State Acts reducing the payment when the applicant already possessed income or property above a given amount. This principle is also embodied in the Commonwealth Act. In the case of independent income the pension payment must be so modified that the aggregate income, inclusive of pension, does not exceed £52 per annum.

The number of old age pensioners in 1928 was 139,367, and that of invalid pensioners was 55,517. The amount paid in old age pensions during the year was £9,601,837. The number of pensioners for each 10,000 of the population is given as 224 for old age, and 89 for invalid pensioners.

#### Old Age Pensions in Soviet Russia

Since the promulgation of the Code of Labour Laws in 1922 the Soviet Union has extended by stages the benefit of old age insur-

ance. Information on this subject was recently published in the newspaper *Izvestia* (Moscow), and was summarized in *Industrial and*

*Labour Information* (August 5), the weekly publication of the International Labour Office, Geneva.

In 1925 a system of pensions was set up for school teachers, the cost being borne by the social insurance budget and the Commissariats for Education. An Act of July, 1927, extended the pension system to persons of special merit in the sphere of production, science, or the public services, who had worked for 35 years or more ("Labour heroes"). The rate of these pensions with partial reversion to the survivors is three-quarters of the wage received before ceasing to be employed. By a Decree of January 5, 1928, the Federal Social Insurance Council extended the benefits of old age insurance to wage earners in the textile industry. This was done in order to remove the burden of elderly workers from this branch of industry, and was expected to facilitate rationalization measures.

During 1928, particularly during the Eighth Trade Union Congress, the extension of old age insurance to all workers was carefully examined. The Congress recognized that it was necessary to increase considerably the number of beneficiaries of old age pensions without lowering the level of the other social insurance benefits. The legislation which has now been adopted was drafted by the Central Social Insurance Board, and examined by all the bodies concerned, including the General Council of Trade Unions. The new legislation applies to workers in the metal industry, electrical undertakings, mining, and railway and water transportation, who cease to be engaged in remunerative employment after January 1, 1929, and to workers in the textile industry who ceased work after December 1, 1927. Salaried employees are excluded from the benefit of old age pensions. Old age insurance will be extended to other branches of the national economic system by decision of the Social Insurance Council in accordance with the general program (five-year forecast) of economic development.

All men over 60 years of age who have been in remunerative employment for 25 years or more are entitled to a pension. For women, the corresponding figures are 55 years of age and 20 years of work, while for underground miners the limits are respectively 50 years and 20 years, of which ten years must be underground work. The age limits and working periods may be lowered for other unpleasant occupations if the Social Insurance Council thinks fit. The pension is granted irrespective of the pensioner's ability to work. It is fixed at one-half the average wage earned during the twelve months preceding the

cessation of work (the Order of January 5, 1928, referring to textile workers allowed only four-ninths of the wage), but it may not be less than 20 roubles or more than 112.50 roubles per month. No old age pension is granted to persons who, on the date on which they apply for a pension, are employed in remunerative work or engaged in a trade or industry subject to a tax on turnover, or who have been deprived of civic rights, etc. The pension may be reduced, suspended or suppressed if the holder is in receipt of wages or has some other source of income. With the agreement of the person concerned, the pension may be replaced by admission to a hospital.

### Employment in airplane manufacture

The extent of employment and production in the manufacture of airplanes in the United States is described in the August issue

of the *Monthly Labour Review*, published by the United States Department of Labour. It is pointed out that modern industrial development is creating an increasing amount of labour saving machinery which is displacing men. The development and expansion of any new industry, therefore, is of great importance in giving employment to the men displaced by the improved machinery. Among the new industries which have developed rapidly during the last few years is the making of airplanes and airplane motors. A survey by the Bureau of Labour Statistics of the United States Department of Labour shows that there are now nearly 25,000 people employed directly in the manufacture of airplanes and airplane motors. Aside from manufacturing the industry also gives employment to much labour both directly and indirectly. Factories and hangars must be built; pilots both for mail and commercial work must be employed; schools of instruction are coming into existence; and many mechanics and other ground employees are needed at air fields. Employment also is given to persons engaged in the manufacture of material (metal, wood, cloth, rubber, etc.) used in planes. Airplanes also have their effect on the production, distribution, and consumption of gasoline.

During the month of August a total of 7,250 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 42 of which were fatal cases; in Schedule 2 industries, 660 were reported, including 8 fatal cases; and 551 Crown, 6 of which were fatal, were reported during the month, making in all 8,461, of which 56 were fatal.

The special committee on Workmen's Compensation recently appointed by the government of Manitoba in conformity with a resolution adopted by the Legislature at its last session, held a preliminary meeting in August, and will meet again during the first week in November, when consideration will be given to any suggestions that may be received for the improvement of the Workmen's Compensation Act. The names of the fifteen members composing the committee were given in the last issue (page 846).

For the past six years the foundry of the International Harvester Company, Chatham, Ontario, has been run without an accident, although many hazards are presented in the handling daily of many tons of molten metal, and the operation of drills, presses and high-speed machinery. More than 30 men are employed in the foundry.

The annual report of the Commissioner of Education of the United States reports marked progress in the field of industrial education during the past year. "During the year," he says, "there was a growing recognition of the fact that efficient work can not be carried on without adequate shop rooms and equipment. The housing facilities for shop work and other industrial courses have been improved in many places. New vocational buildings and technical high-school buildings have been erected, additions have been made to present vocational building, and shops have been included in the plans for new high-school buildings. In some sections of the country new gymnasium buildings have included shop rooms in their plans, and have found them satisfactory in operation."

Legislation enacted in the State of New York in 1929 created a temporary State Commission to study the industrial condition of aged men and women and most practicable method of providing security against poverty in old age.

The Right Hon. Margaret Bonfield, Minister of Labour of Great Britain, announced during August that she was submitting for the consideration of English and Scottish national advisory councils on juvenile employment the proposal that the age for entry to unemployment and insurance benefits should be lowered from 18 to 15 years, the latter age being the new age at which children are to leave school. Young persons who are unable to find employment on leaving school would thus receive unemployment benefits.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation throughout the country was reported by the superintendents of the Employment Service of Canada at August 31 to be as follows:—

In the Province of Nova Scotia the agricultural industry was making satisfactory progress with the harvesting, and crops were reported as being fairly light. Fair catches of fish were being turned in in the fishing industry. With logging operations not very general, the pulp and paper industry seemed to be the chief branch experiencing activity. Manufactures showed normal activity, with some branches of a seasonal nature being rather busy. Building and construction, particularly in the City of Halifax, showed a fair volume of work in progress. Production in the coal mining industry was about normal. Transportation, particularly in freight, was heavy, while trade was reported as improving.

In the Province of New Brunswick agriculture, likewise, showed rather fair progress with harvesting, and crops were rather fair. Very satisfactory catches of fish were reported by the fishing industry. Activities in the logging industry were rather quiet, and not many calls for workers were being registered at the employment offices. The manufacturing industry throughout the province was quite satisfactory. Quite a program of construction work was being proceeded with, giving employment to a substantial number. Trade was fairly good as was also transportation. The usual shortages of women domestic workers were noted.

Although the demand for farm workers in Quebec showed a decrease, quite a number of placements were being made. A large number of placements were reported in the logging industry due to the opening up of activity in this branch. Manufacturing throughout the province appeared to be quite satisfactory, and conditions in the boot and shoe industry were reported as improving, as were also conditions in the pulp and paper industry. Building tradesmen were fully engaged in practically every industrial centre of the province, while municipal street work, particularly in the City of Montreal, was affording a large volume of employment to unskilled labour. The transportation industry was active, particularly as regards water transportation at the port of Montreal. Trade was commented upon as being satisfactory. The demand for women domestic workers showed a further increase with a consequent further shortage of workers.

The demands for farm workers in the Province of Ontario were not so heavy as at this time in other years, and the offices were not experiencing the same difficulties in meeting them. With increased activity in the logging industry expected shortly, demands for workers in this line were already in excess of the supply, although men are usually reticent in accepting such employment so early in the season. The normal volume of work in the mining industry continued, and several orders were filled by offices in the northern part of the province. Some curtailment in manufacturing industries was noted which, together with stock taking, had caused some reductions in plant staffs. The large volume of building and construction throughout the province continued, and most skilled mechanics and building tradesmen were fully employed. The usual shortage of women domestic workers was being emphasized by the re-opening of city homes after the summer.

With cutting almost finished and with threshing well started, the demands for farm hands registered at the employment offices in the Province of Manitoba were not particularly numerous, and no shortage of any consequence of competent workers was reported. While the grain was turning out better than had been anticipated, the short crop had very drastically curtailed the requirements of the farmers for the usual harvest help. Tradesmen in the City of Winnipeg in the building and construction industries were all still busy, and in that centre there were prospects of considerable work throughout the winter. In other districts building and construction continued fairly well with considerable numbers employed. Some slight demand for workers for the logging industry was being received. Mining in the north central portion of the province although interrupted to some extent by bush fires continued to experience considerable activity. Manufacturing plants continued working steadily. It was still difficult to secure competent women houseworkers, but no particular shortages were reported.

Toward the close of the month owing to the increase in the number of threshing outfits in operation, heavier demands for farm workers were reported, although the shorter crop had had very serious influence in lessening the demand for farm workers throughout the harvest season to date. While some local shortages were reported by a few offices, generally speaking there were plenty of farm hands to take up the work offered. Construction continued at a rather steady pace, and quite sub-

stantial numbers of men were engaged in this industry. The employment situation throughout this province, generally speaking, was rather fair, taking account of the fact that the lessened yields of the farms were bound

to influence employment conditions in industries other than agriculture.

As in Saskatchewan the prevalence of threshing throughout the Province of Alberta had increased demands for farm workers

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep, and hogs; storage holdings of butter and cheese.

notified to the employment offices toward the close of the month, but here again the short crop had very seriously cut into the number of placements normally made by the employment offices with the agricultural industry during the harvest period. The building trades at the different centres continued to be well employed as satisfactory programs of construction were being carried out. Very few orders for coal were being received at the mines, and this continued the quiet condition in so far as employment in the coal mining industry was concerned. Manufacturing industries were running rather favourably. Demands for women domestic workers were not particularly heavy although applicants were reported as being scarce in some localities.

There were not many calls for men in the logging and allied industries in the Province of British Columbia, and in some districts the necessity for fire-fighting was interfering with operations. Although activity in the metal mining industry continued there were plenty of men available to meet all requirements. Building construction throughout the province appeared rather fair, and most tradesmen were fully employed. Manufacturing plants were running rather steadily, but there was no difficulty in meeting any requirements of plants which were registered with the employment offices. Throughout the Coast Province employment conditions were reasonably satisfactory, and the prospects for a continuance of this condition on into the fall months were bright.

#### EMPLOYERS' REPORTS

Employment at the beginning of August showed a further important increase, according to statements tabulated by the Dominion Bureau of Statistics from 6,840 firms, whose payrolls aggregated 1,097,812 persons, as compared with 1,070,817 on July 1. This advance involved an unusually large number of workers for the season of the year, while the index number, at 127.8 on the date under review, continued higher than in any other month since the series was instituted in 1920; on July 1, 1929, it stood at 124.7 and on August 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 119.3, 110.5, 105.5, 97.5, 95.8, 101.4, 94.2 and 90.0, respectively.

Greater activity was shown in all provinces, the improvement in the Maritime and Prairie Provinces being the most noteworthy. In the Maritime Provinces, construction showed the greatest gains, but manufacturing was also brisker, particularly in iron and steel plants, while the trend of employment was downward in transportation and logging. In Quebec, considerable expansion was shown in manufacturing, construction and services, while ship-

ping and logging were slacker. Employment was in greater volume than at the beginning of August a year ago, or, in fact, than in any other month of the record. In Ontario, the greatest improvement was in construction, transportation, mining and communications, while manufacturing, logging and trade registered reductions. In the Prairie Provinces, the most pronounced expansion was shown in highway construction, but manufacturing, trade and mining were also more active. In British Columbia, continued gains were registered, chiefly in manufacturing, but also in transportation, construction, mining, logging and services.

Employment advanced in Montreal, Quebec, Hamilton, Winnipeg and Vancouver; the tendency was unfavourable in Toronto and Windsor and the adjacent Border Cities, while no general change was noted in Ottawa. In Montreal, the gain exceeded that recorded on August 1, 1928, when the index was many points lower. Manufacturing and construction registered decided improvement; transportation released employees, while the fluctuations in other industries were slight. In Quebec, the situation continued to improve, particularly in construction. In Toronto, the level of employment was much higher than on the same date of other years of the record in spite of the reduction recorded on August 1. Manufacturing, especially of iron and steel and textile products, services and trade were slacker, but construction, transportation and communications recorded heightened activity. In Ottawa, employment on the whole, remained practically stationary. In Hamilton, manufacturing registered general improvement, that in iron and steel plants being most pronounced; activity in that city was greater than in any other period of the record. In the Border Cities, further curtailment was noted, largely in automobile works, which have had an unusually active season, while only small changes took place in other industries. In Winnipeg, there were general increases in manufactures, construction and trade. The improvement evidenced on the corresponding date last year was less pronounced, and the index then was lower. In Vancouver, manufacturing, transportation and services reported heightened activity.

Further gains were made in manufacturing establishments; the most marked increases were in food, pulp and paper, mineral products and lumber factories, but improvement was also registered in leather, rubber, tobacco, building material, electric current, electrical apparatus and non-ferrous metal plants, while the textile and iron and steel industries were seasonally slacker. Employment also showed

decided gains in mining, communications, construction and maintenance and services, while seasonal dullness continued to affect employment in logging camps, and there were also losses in trade and water transportation.

An article elsewhere in this issue gives in greater detail the employment situation as at the beginning of August.

**TRADE UNION REPORTS**

The situation among local trade unions during July remained much the same as in the previous month, the 1,690 unions from which reports were tabulated with 200,115 members indicating 3.0 per cent of unemployment as compared with 2.9 per cent in June. Curtailment of employment in comparison with June was apparent among Quebec and British Columbia unions, which was practically offset by the improvement recorded from Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta unions. The variations, however, were not particularly noteworthy in any province. In Manitoba the situation remained unchanged from that of June. Compared with the returns for July of last year when 2.5 per cent of the members reported were without employment, Ontario, Alberta and British Columbia unions registered nominal gains in activity during the month under review, while in Nova Scotia, New Brunswick, Quebec, Manitoba and Saskatchewan employment was at a somewhat lower level.

On another page of this issue will be found an article in greater detail on unemployment among local trade unions at the close of July.

**EMPLOYMENT OFFICE REPORTS**

During the month of July, 1929, the offices of the Employment Service of Canada made 35,865 references of persons to positions and effected a total of 34,447 placements. Of these the placements in regular employment were 23,093, of which 18,275 were of men and 4,818 of women. The placements in casual work numbered 11,354. The offices of the Employment Service were notified of 36,852 vacancies, of which 25,712 were for men and 11,140 for women. Applications for work were registered from 32,672 men and 13,511 women, a total of 46,183. A slight increase is shown in the business transacted when the above figures are compared with those of the preceding month, but in the comparison with July last year, vacancies and placements show a decline, while applications record a gain, the reports for June, 1929, showing 36,744 vacancies offered, 44,365 applications made and 34,010 placements effected, while in July, 1928, there were re-

ported 39,684 opportunities for employment, 44,711 applications for work and 36,551 placements in regular and casual employment. A report in detail of the work of the offices for the month of July, 1929, may be found elsewhere in this issue.

**BUILDING PERMITS AND CONTRACTS AWARDED.**

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued by 61 cities during July was \$22,826,034, as compared with \$27,652,866 in the preceding month and with \$25,761,956 in July, 1928. Details for the month are given on another page of this issue.

The *Maclean Building Review* reports that the total value of the construction contracts awarded in Canada in August was 48 per cent greater than in August a year ago and on a par with the corresponding total for July, 1929. The total for the month was \$58,622,300, of which \$23,304,800 was for engineering undertakings (bridges, dams, wharves, sewers and water mains, roads and streets and general buildings); \$20,504,600 was for business buildings; \$11,462,800 was for residential buildings; and \$3,350,100 was for industrial purposes. The apportionment of the contracts awarded by provinces was as follows: Quebec, \$24,508,800; Ontario, \$19,972,100; Saskatchewan, \$4,790,800; British Columbia \$3,336,000; Alberta \$2,403,800; Manitoba, \$2,045,200; Nova Scotia, \$1,106,800; New Brunswick, \$457,600; Prince Edward Island, \$1,200. The total new construction throughout Canada during the first eight months of 1929 is greater than that in the corresponding period of 1928 by 18 per cent.

**Production and Trade**

**INDUSTRIAL PRODUCTION.**

Figures showing the volume of production in certain industries during the recent months and also in the corresponding months in the previous year are given in the table on page 971.

Business operations showed moderate expansion in July over the preceding month, according to the *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics. The index of the physical volume of business was 178 in the month under review, compared with 175 in June. Most lines of manufacturing expanded further and the output was considerably increased over June when the shortness of the month placed operations at a disadvantage. According to inspected slaughterings, the meat packing companies were active during the summer. Imports of raw cotton and wool were at a

moderately higher level than in June, though the unsettled outlook in regard to prices tended to curtail purchases for the time. The export of lumber and the output of newsprint indicate that activity in the paper and lumber industries was moderately greater. The output of iron and steel was at a high level indicating that demand continues strong despite the outlook for a reduced grain crop this year and the slackening in automobile production to a greater extent than normal for the season. Though the production of motor cars during the last two months represent a marked reduction from the pace set in the early part of the year, further expansion was apparent in the rubber and oil industries. Judged by the imports of raw material both of these industries operated at a higher level in July than in the preceding month.

Car-loadings continued heavy, a moderate improvement being shown over June. The gross revenues of the two large railway systems were on a somewhat greater basis than in the same month of 1928.

The rise in grain prices due to the adverse weather conditions in the grain areas of several countries including the Canadian West, was one of the features of the early summer. Owing to the heavy carry-over from last year wheat prices had been reduced to a low level and the unfavourable crop prospects resulted in a spectacular rise in prices to the maximum in several years. The gain in grain prices was the chief factor in raising the general index number of wholesale prices no less than 3.5 per cent in a single month.

#### EXTERNAL TRADE.

A summary of Canadian trade prepared by the Department of National Revenue shows that in July 1929, the merchandise entered for consumption amounted to \$114,200,854 as compared with \$111,949,272, in the preceding month and with \$103,403,649 in July, 1928. The chief imports in July, 1929, were: Iron and its products, \$30,426,695; Non-metallic minerals and products, \$18,125,213; Fibres, textiles and textile products, \$16,941,214.

The domestic merchandise exported during July, 1929, amounted to \$102,219,440 as compared with \$112,176,179 in June, 1929 and with \$125,530,791 in July, 1928. The chief exports in July were: Agricultural and vegetable products, mainly foods, \$30,962,965; Wood, wood products and paper, \$24,973,368; Animals and animal products, \$13,506,569.

#### Strikes and Lockouts

The time loss due to industrial disputes in August, 1929, was slightly greater than during July, over twice as many workers being in-

involved during the month. As compared with August, 1928, however, the figures for August, 1929, show less than half the time loss occurring last year with only about one-half as many workers involved. There were in existence during the month ten disputes, involving 1,094 workers, and resulting in a time loss of 3,713 working days, as compared with nine disputes, involving 427 workers, and resulting in a time loss of 3,139 workers in July. In August, 1928, there were on record thirteen disputes, involving 2,016 workers, and resulting in a time loss of 9,231 working days. At the end of the month there were on record four disputes involving approximately 350 workers, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

#### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$11.63 at the beginning of August, as compared with \$10.98 for July; \$11.08 for August, 1928; \$10.93 for August, 1927; \$11.10 for August, 1926; \$10.84 for August, 1925; \$10.19 for August, 1924; \$10.53 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); \$13.41 for August, 1918; and \$7.68 for August, 1914. The most important change was a substantial seasonal advance in the price of potatoes with the marketing of the new crop. Less important increases occurred in the prices of veal, mutton, fresh and salt pork, bacon, eggs, butter, bread and flour. No declines of importance occurred. Including the cost of fuel and rent with that of foods the total budget averaged \$21.90 at the beginning of August, as compared with \$21.26 for July; \$21.31 for August, 1928; \$21.11 for August, 1927; \$21.32 for August, 1926; \$21.05 for August, 1925; \$20.57 for August, 1924; \$21.03 for August, 1923; \$20.88 for August, 1922; \$21.98 for August, 1921; \$26.60 for August, 1920; \$26.92 for July, 1920 (the peak); \$21.20 for August, 1918; and \$14.41 for August, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again considerably higher at 98.1 for August, as compared with 96 for July; 95.4 for August, 1928; 98.3 for August, 1927; and 99.1 for August, 1926. The Vegetables and Vegetable Products group was much higher. The prices of wheat, barley, raw rubber and raw sugar

declined, but these were more than offset by increases in the prices of foreign fruits, flax, oats, rye, flour, bread and potatoes. The Animals and their Products group also advanced considerably, due to higher prices for veal, pork, smoked meats, butter and eggs, which more than offset declines for steers, beef lambs, cheese and sole leather. The Chemicals and Allied Products group showed a frac-

tional advance. The Fibres, Textile and Textile Products group was slightly lower, due mainly to lower prices for woolen fabrics and hemp, which more than offset advances in the prices of raw silk and sisal. The Wood, Wood Products and Paper group, the Non-Metallic Minerals group, the Iron and its Products group, and the Non-Ferrous Metals group were practically unchanged.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING MONTH OF AUGUST, 1929

**D**URING the month of August the Department of Labour received the reports of three Boards of Conciliation and Investigation established to deal with disputes between (1) The Canadian National Railways and certain of its employees being locomotive engineers, members of the Brotherhood of Locomotive Engineers; (2) The Canadian National Railways and certain of its employees being locomotive firemen and engine-men, members of the Brotherhood of Locomotive Firemen and Enginemen, and (3) The Winnipeg Electric Company and certain of its employees being trackmen.

### Application Received

An application for the establishment of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was received in the Department during August from certain employees of the Gatineau Power Company, being power house, substation and system operators, wheelmen, mechanics, electrical fitters, helpers and cleaners, members of the Ottawa Branch of the Canadian Electrical Trade Union.

### Other Proceedings under the Act

A Board of Conciliation and Investigation was established by the Minister of Labour on August 6th to deal with a dispute between the Hydro Electric System of the Corporation of the City of Winnipeg and certain of its employees being linemen and cable splicers. The application in this matter was received in the Department from the employees during October, 1927. The dispute related to the men's request for the abolition or modification of the agreement governing appointment in the city's service, which prevented the applicants from associating themselves with a trades union organization. Feeling that the matter should be possible of adjustment by direct negotiations, the Minister urged upon the parties concerned the desirability of their conferring together with a view to reaching an amicable settlement without resort-

ing to the establishment of a board. Communications were exchanged from time to time with the city authorities, who intimated that the question would be gone into carefully by a special committee of Council which was being appointed to study the whole situation relating to conditions of service of civic employees, and the Minister accordingly withheld action under the statute in the hope that favourable advice would come to hand in due course. Upon word being received from His Worship the Mayor of Winnipeg that nothing had been done by the committee appointed in 1928 and that the matter had not been revived this year, and further advising that the last pronouncement of the City Council was against reopening the question, there appeared no alternative for the Minister but to accede to the employees' application. A Board of Conciliation and Investigation was accordingly established, constituted as follows:—The Honourable Mr. Chief Justice D. A. Macdonald, Winnipeg, chairman, appointed on the joint recommendation of the other board members; Mr. R. F. MacWilliams, K.C., Winnipeg, appointed by the Minister in the absence of a recommendation from the Corporation of Winnipeg; and Mr. Ralph Maybank, Winnipeg, nominated by the employees.

Three Boards of Conciliation and Investigation were established during August to deal with disputes which had been made the subject of applications during recent months by members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, the disputes in question being as follows:—

(1) Between the Dominion Atlantic Railway Company and certain of its employees being clerks, freight handlers, station and stores department employees. Ninety employees were stated to be directly affected by this dispute, which concerned wages and working conditions. The Minister of Labour established a board on August 21 and appointed

members thereof as follows: on the employees' recommendation, the Honourable John McDonald, Kentville, N.S.; in the absence of a recommendation from the employing company, Mr. L. A. Lovell, K.C., Halifax, N.S. A chairman had not been appointed at the close of the month.

(2) Between the Canadian Pacific Railway Company and certain of its employees on eastern and western lines being clerks, freight handlers, station and stores department employees, etc. Two applications had been received in this case, one covering employees on the eastern lines of the company and the second application relating to employees on western lines. The number of employees on eastern lines directly affected by the dispute was given as 3,000, and indirectly, 4,000; on western lines, 2,500 directly affected and 3,000 indirectly. The employees' request for increased wages and changed working conditions was stated to be the cause of the dispute. A Board of Conciliation and Investigation was established on August 6th and members thereof were appointed as follows:

the Honourable Charles Laurendeau, K.C., Montreal, chairman, appointed on the joint recommendation of the other board members; Messrs. Errol M. McDougall, K.C., and John T. Foster, both of Montreal, nominated by the company and employees, respectively.

(3) Between the Canadian Pacific Railway Company and the Canadian National Railways on the one hand and certain of their employees on the other hand, being checkers, etc., on the Montreal wharf. Two applications had also been received in this case, one from the employees of each company. The cause of the dispute was given as the employees' request for increased wages, 250 men being directly affected in each case. A board was established by the Minister on August 27 to deal with the two disputes in question and board members were appointed as follows: on the employers' recommendation, Mr. Errol M. McDougall, K.C., Montreal; on the employees' recommendation, Mr. J. T. Foster, Montreal. At the close of the month the board had not been yet completed by the appointment of a chairman.

## Report of Board in Dispute Between the Canadian National Railways and Its Locomotive Engineers

The Minister received on August 12 the report of the Board of Conciliation and Investigation which had been established to deal with a dispute between the Canadian National Railways and certain of its employees being locomotive engineers, members of the Brotherhood of Locomotive Engineers. Four thousand employees were stated to be directly concerned in this dispute, which grew out of the employees' desire to secure certain changes in the so-called "Montreal Agreement" of May 1, 1926. The personnel of the board was as follows: His Honour Judge Albert Constantineau, Ottawa, chairman, appointed on the joint recommendation of the other board members; Mr. J. L. Counsell, K.C., Hamilton, nominated by the employer; and Mr. A. Cyril Boyce, K.C., Ottawa, nominated by the employees. The report of the board was unanimous and was accompanied by a signed agreement between the parties.

### Report of Board

*Re Industrial Disputes Investigation Act, R.S.C. 1927, Chapter 112, and in the Matter of a Dispute between the Canadian National Railways and certain of its employees being locomotive engineers, Members of the Brotherhood of Locomotive Engineers relating to the so-called Montreal Agreement, dated May 1, 1926.*

To the Honourable PETER HEENAN,  
A Member of His Majesty's Privy Council  
for Canada, and Minister of Labour.

The Report of the Board of Conciliation and Investigation constituted under the said Act by the Minister on the 7th day of May, 1929, respectfully sets forth as follows:—

1. The matter forming the subject of the dispute referred to this Board, is the failure of the parties interested, to agree upon certain amendments to the so-called Montreal Agreement, dated May 1, 1926. Amendments claimed by the Brotherhood of Locomotive Engineers are set forth in full in the schedule attached to the application of the said Brotherhood to the Minister for this Board. The said Montreal Agreement, on which the matter of dispute centred, is an agreement between the Canadian National Railways and the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen, Enginemen, Hostlers and Hostler helpers, made necessary by the consolidation of lines comprising the Canadian National Railways. The history of the dispute, abstracted from the submissions made to the Board, is as follows:—

Many years ago the Canadian Government acquired a number of lines of railway in Canada. The Government, then owning and operating the Intercolonial Railway and the National Transcontinental Railway, acquired in 1917, the whole Canadian Northern Railway system, and these co-ordinated railways were, in 1918 and thereafter, designated as the Canadian National Railways. In 1919 the Grand Trunk Pacific Railway and in

1921 the whole of the Grand Trunk Railway system were acquired and later were amalgamated and became part of the Canadian National Railway System. After these co-ordinations were effected the management of the Canadian National Railways, and as a natural result of such amalgamations, and in order to most efficiently and economically manage the consolidated National Railway to the best interests of the Canadian people, changed terminals and diverted traffic to the routes of the lines acquired offering most favourable conditions for hauling large tonnage, or to shorten distance of haul, etc.

As a result of co-ordination and amalgamation, therefore, conditions of traffic on the various lines acquired and co-ordinated were materially changed, and the interests and working conditions of locomotive engineers on the various acquired lines were so much affected as regards their seniority that the situation was well-nigh chaotic. Parts of some of the lines acquired and consolidated were abandoned altogether, and engineers holding long seniority dates were confronted with the danger of being supplanted by or postponed to those having junior dates. The whole situation called for rectification and reclassification. As a result, after much negotiation, extending till 1926, the Montreal Agreement, dated May 1, 1926, was reached. This Agreement combined seniority districts which were separate prior to amalgamation of the various roads. It was submitted by applicants that the Montreal Agreement did not in operation and application afford the remedy it was hoped it would afford. Engineers on the different roads were placed on a consolidated list on a ratio basis, which did not hold for them the privilege of exercising their seniority on the road on which that seniority had been earned and established. In many cases engineers junior in service on other roads found themselves, by the working out of the agreement, able to displace or have preference over men having earned, by length of service, seniority over them, and to take the preferential runs from the senior men. The Montreal Agreement did not work satisfactorily, and resulted in discord and dissatisfaction amongst the Engineers, and, after conferences in their own organization and, through their own organization with the National Railways, it was found to be impossible to agree upon a basis which would afford justice to Engineers in each situation in which they were prejudicially affected. At the 1927 Convention of the Brotherhood of Locomotive Engineers in pursuance of its right under section 10 of that agreement the Engineers adopted a resolution rescinding the Montreal Agreement and served notice of such rescission upon the railway and the

Brotherhood of Locomotive Firemen and Enginemen, for themselves and as representing Hostlers and Hostler helpers, in due form and time. Tentative propositions were then exchanged. The National Railways certainly appeared to have met these in a conciliatory spirit and with a desire to go as far as possible to do justice and create industrial peace and satisfaction, but, unfortunately, found themselves unable to go far enough to satisfy the wishes and claims of the large aggregate body of Engineers affected and, therefore, no new terms were agreed upon, and hence this Board.

Now the applicants, the Engineers, claimed that while the Brotherhood of Firemen and Enginemen, and Hostlers and Hostler helpers were parties to the Montreal Agreement, they had separate seniority lists and while the Montreal Agreement included other classes of employees there was no reason why the interests of the parties could not be covered by agreements separate and apart from each other. The Firemen, through their representatives, claimed that no disturbance of the terms of the Montreal Agreement should be made without their concurrence and consent. In other words that the Engineers should not be permitted to negotiate for themselves a different schedule from that contained in the agreement without the consent of the Firemen, Hostlers and Hostler helpers.

The Board fully considered and weighed this contention and heard and considered all that was presented to it in argument and evidence by the several representatives of the Firemen, Enginemen, Hostlers and Hostler helpers. They appeared as witnesses on behalf of the Railway Company. They were restricted and restrained in no way in the presentation of their case in support of their protest. It clearly appeared to the Board that the applicants had and have the individual right to contract with reference to and in respect of their own men and their own interests, as a separate entity, distinct and apart from the Firemen, Hostlers, Hostler helpers, and any and every other class of railway labour, organized or not organized. This right exists in law and is emphasized and made clear by Article 52 of the Engineers' Schedule, which reads as follows:—

"The right to make and interpret contracts, rules, rates and working agreements for locomotive Engineers shall be vested in the regularly constituted committee of the Brotherhood of Locomotive Engineers." This Article was agreed to by the Firemen's Organization and the Company in writing so that, apart from general law, there can be no doubt as to its application.

The Board anxiously examined and scrutinized the rights of the Firemen, Enginemen,

Hostlers and Hostler helpers in the Montreal Agreement presented before it in order that nothing that was done in the adjustment of this dispute would, in any way, infringe, trench upon or affect the rights of any parties to that Agreement other than those of the Brotherhood of Locomotive Engineers and The Canadian National Railways. The Firemen contended for this and it has been conserved to them in the adjustment of the dispute now presented by the Board.

The Board early realized that the intricacy, complexity and unusual nature of the problem presented for its solution would and could not be settled by any report of the Board which did not have behind it the good will and consent of both parties to the dispute. No award or report of this Board, unsupported by those elements, could be productive of ought but continued dissatisfaction and, therefore, the Board in the exercise of its powers and duties set itself to the task of mediation and conciliation between the contending parties, taking up each situation as it was presented—and endeavouring to exercise its good offices in the direction of conciliation and compromise.

Throughout the proceedings the Board continually and persistently urged upon the Railway Company and the Engineers the absolute necessity of coming to an agreement because, without such an agreement being reached, the report of the Board to the Minister, under the circumstances, would be barren of any benefit to either party and would only accentuate dissatisfaction.

This was the more imperative owing to the fact that not only was there dispute between the Company and the Engineers as to the basis of adjustment of the complexities involved, but the Engineers (applicants) were not entirely in accord as to that basis, due to the fact that different conditions had to be dealt with in each seniority district for the adjustment of which no common basis of adjustment could be found.

For the above reasons the Sessions of the Board were protracted, necessarily, over a long period of time. The Board sat always in Montreal. At its last Session on 27th July instant, the labours of the Board, and of all parties to the dispute, were happily ended by the consummation and execution of an agreement between the parties covering the matters of dispute referred to this Board, and a copy of which Agreement of settlement is now herewith presented and attached hereto.

And the Board recommends the adoption of the said Agreement of Settlement according to the tenor and terms thereof.

The parties to the dispute reached an understanding before the Board as to the necessity of certain rules being formulated to cover the exercise of seniority rights on the fifth Seniority District, which matters were referred to in the schedule attached to the application, but as these are largely local in their application they have not been dealt with by the Board.

The Agreement between the parties submitted herewith as a settlement of the dispute referred to the Board, deals generally and broadly with the principles to be applied in each seniority district. There undoubtedly will be many local conditions in all the seniority districts that require to be ironed out and adjusted in the spirit of the agreement.

The Board therefore makes the following recommendations to facilitate the carrying out of the New Agreement, which for the purpose of future reference may be conveniently called "The Cobb Agreement", according to its true intent and meaning:—

The Board recommends that to facilitate and simplify the carrying out of the New Agreement presented herewith the general committees of the Brotherhood of Locomotive Engineers charged with the duty of applying and administering the provisions of this agreement in the several seniority districts, should immediately reorganize the several committees, so that the territory under the jurisdiction and management of each committee will, as far as possible, conform to and be co-terminous with the territory within the general managerial districts of the Company. Negotiations with the Company will, it is thought, readily accomplish this object to the best advantage.

And the Board further recommends that the Company co-operate as far as possible with such general committees of the Brotherhood of Locomotive Engineers in their respective seniority districts as and when reorganized, in formulating rules and regulations to adjust local conditions in their respective territories and independent of any other labour organization.

Respectfully submitted,

(Sgd.) A. CONSTANTINEAU.  
J. L. COUNSELL.  
A. C. BOYCE.

OTTAWA, August 3, 1929.

AMENDMENTS TO MONTREAL AGREEMENT OF  
MAY 1, 1926, AGREED UPON BETWEEN THE  
CANADIAN NATIONAL RAILWAYS AND THE  
BROTHERHOOD OF LOCOMOTIVE ENGINEERS

The Agreement of May 1st, 1926, between the Canadian National Railways and the Brotherhood of Locomotive Engineers, covering the reorganization of seniority Districts of Engineers made necessary by consolidation of lines comprising the Canadian National Railways is hereby amended as follows:

(1) Engineers in the employ of the Canadian National Railways who, in respect to territory now covered by seniority Districts 1, 2, 3, 4 and 6, were shown on the various corporate Seniority lists included within this territory on June 1st, 1920, and, in respect to Seniority Districts 7 and 9, who were shown on such corporate seniority lists September 1st, 1920, will be accorded prior rights to all new runs or vacancies on assigned passenger and mixed trains operating over their former corporate lines, but only within the limits of their present Seniority Districts and subject to the following provisions:

(2) Five former corporate roads will be recognized as follows: Intercolonial Railway, National Transcontinental Railway, Grand Trunk Railway, Canadian Northern Railway and Grand Trunk Pacific Railway.

(3) All engineers whose names are now shown on the Engineers seniority lists for Districts 1, 2, 3, 4 and 6 with dates prior to June 1st, 1920, will have shown opposite their names on such lists the initials of the former corporate road on which they formerly held seniority. The same rule to apply to the men shown on the seniority lists for the 7th and 9th seniority districts with dates prior to September 1st, 1920.

(4) When vacancies occur on, or when new passenger or mixed runs are put on, the following example will govern:

*Example:* On the Third Seniority district the line between Montreal and Brockville being formerly Grand Trunk Railway a new run going on, or a vacancy occurring between these points, application from former Grand Trunk Railway men whose date of seniority is prior to June 1st, 1920, would receive preference over applications from men from the other corporate line within the confines of that Seniority District. The same principle to apply on other districts."

(5) Former Riviere du Loup engineers whose names appear on seniority lists for District 1 and District 2 with dates prior to June 1st, 1920, will have the right to exercise their seniority to passenger and mixed service previously held by them between Mont Joli and Charny also between Monk and Quebec.

It is understood in selecting assignments east and west of Riviere du Loup the percentage of engineers needed to take care of the regular service referred to will be maintained for District 1 and District 2 and continue thereafter on the same ratio.

Spare Boards will be separately maintained east and west of Riviere du Loup for District 1 and District 2, and manned from the consolidated lists for each district.

(6) Second District men will have the right to operate their trains between Ste. Rosalie Junction and Montreal.

(7) Former Grand Trunk engineers will hold priority rights to all passenger runs assigned between Toronto and Brockville.

(8) Former Canadian Northern engineers will hold priority rights to all passenger runs assigned between Ottawa and Toronto.

(9) Former St. Clair tunnel engineers, including motormen, will hold priority rights to service as engineers or motormen in the St. Clair Tunnel. The seniority list for this purpose shall be as prepared by agreement with the engineers Committee and the Management. When additional engineers or motormen are required over and above those holding priority rights, such men will be drawn from the consolidated seniority list of engineers in the 4th seniority district. When engineers are required to fill temporary vacancies in the Tunnel, such vacancies will be filled by qualified engineers on the Spare Board at Sarnia, if there are no men available holding priority rights.

(10) On the Seventh Seniority District runs operating from Regina towards or to Riverhurst or Dumblane via Moosejaw, will, as far as priority rights are concerned, be considered as Grand Trunk Pacific runs and conversely, runs operating from Regina towards or to Radville or Neidpath via Moosejaw will be considered as Canadian Northern runs.

(11) Canadian Northern engineers shall continue to hold priority rights to trains 3 and 4 between Winnipeg and Sioux Lookout with the understanding that should a similar service be again established on the former Canadian Northern Railway between Port Arthur and Winnipeg, the priority right first mentioned would cease to exist.

(12) On the Ninth Seniority District runs operating from Edmonton and extending beyond Red Pass Jct. to or towards Prince Rupert will as far as priority rights are concerned be considered as Grand Trunk Pacific runs and conversely, runs operating from Edmonton and extending beyond Red Pass Jct. to or towards Vancouver will be considered as Canadian Northern runs.

(13) Where service operates on or over two or more former corporate lines within a seniority district and the question of priority rights becomes involved the General Committee of Adjustment and Management will determine the proper assignment of engineers.

(14) No engineer will be permitted to displace another engineer in any service on the merged territory, provided he (the engineer desiring to make displacement) can hold the same class of service on the lines where employed as of May 1st, 1928, in the Western region and December 15th, 1926, in the Central or Atlantic regions. This same principle shall apply as between men on separate seniority districts of the same line where such seniority districts have been combined.

(15) New runs, jobs or permanent vacancies created after the date of the application of this amendment, will be filled by the senior engineer making application therefore, in accordance with his rank on the consolidated seniority list; it being understood that when assignments are advertised they will be bulletined in accordance with scheduled rules, or such rules as may be agreed upon between the General Committee of Adjustment and Management.

(16) Passenger and mixed runs which have been filled by engineers not holding priority rights under this Agreement will be bulletined in accordance with schedule rules within thirty days subsequent to the effective date of this agreement. Engineers unable to hold such assignments will be returned to their former corporate lines within their respective seniority districts, unless they can exercise their seniority on runs or service to which priority rights do not obtain without violating the provisions of Section 14 of this Amendment.

(17) Sections (2) to (16) inclusive of this Amendment are subject to the provisions of Section (1) hereof.

(18) It is understood that the Montreal Agreement and this Amendment supersede the Johnston Hopkins Agreement of 1920. Therefore former Canadian Northern engineers who were placed at Biggar under the terms of the Johnston Hopkins Agreement will no longer have the right to remain at Biggar, but may exercise their seniority under the terms of the Montreal Agreement as herein amended.

(19) All provisions of said Agreement of May 1st, 1926, as applicable to engineers, not

inconsistent with the provisions of this Amendment, are hereby renewed and confirmed.

(20) This Agreement shall become effective as soon as possible, as between the representatives of the Brotherhood of Locomotive Engineers representing the Engineers and the Canadian National Railways and shall continue in effect until thirty (30) days notice of a desire to amend or rescind same is given by either party thereto to the other.

Dated this 27th day of July, 1929.

For the Canadian National Railways,  
(Signed) S. J. HUNGERFORD.

For the Brotherhood of Locomotive Engineers,

(Sgd) A. C. Boyce,

Members of the Board of Conciliation).

## Report of Board in Dispute Between the Canadian National Railways and Its Locomotive Firemen and Enginemen

On August 15 the Minister received the report of the Board of Conciliation and Investigation which had been established to deal with a dispute between the Canadian National Railways and certain of its employees being locomotive firemen and enginemen, members of the Brotherhood of Locomotive Firemen and Enginemen. The dispute, which directly affected 4,500 employees, arose out of the men's failure to reach an agreement with the management on the perpetuation and application of certain rules governing their service. The board was composed of Mr. John G. Gauld, formerly County Court Judge, Hamilton, chairman, appointed on the joint recommendation of the other board members; Mr. J. L. Counsell, K.C., Hamilton, nominated by the employer; and Mr. J. M. Godfrey, K.C., Toronto, nominated by the employees. The report was signed by the chairman and Mr. Godfrey; Mr. Counsell, the employer's nominee, dissented from the conclusion reached.

### Report of Board

IN THE MATTER of the *Industrial Disputes Investigation Act, R.S.C., 1927, Chapter 113, and in the matter of a Dispute between the Canadian National Railway System and the Brotherhood of Locomotive Firemen and Enginemen.*

To the Hon. PETER HEENAN,  
Minister of Labour,  
Ottawa.

The report of the Board of Conciliation and Investigation constituted for the investigation

of the said dispute by the Minister on the Twenty-sixth day of April, 1929.

The nature and cause of the dispute in respect of which this Board was granted by the Minister is stated in the application for such Board to be as follows: Failure to reach an agreement with the management (of the Railway) on the perpetuation and the application of rule governing representation, promotion of firemen to engineers, and also rules governing conditions under which demoted engineers may take and hold firemen's jobs. Copy of the rules involved were attached to the application and submitted to the Board.

In November, 1928, the grand officers of the Brotherhood of Locomotive Firemen and Enginemen and the Brotherhood of Locomotive Engineers met in Cleveland for the purpose of arriving at a settlement of the various matters involved in this dispute. After a discussion extending for a period of two weeks the representatives of both organizations arrived at a settlement of the dispute. The agreement on the part of the Brotherhood of Locomotive Engineers was subject to ratification by their chairmen. The agreement was not ratified by the General Chairman of the Engineers and therefore did not become operative. This Board is of opinion that the principles of the Cleveland agreement would be a fair settlement of this dispute and recommends their adoption.

Respectfully,

(Sgd.) JOHN G. GAULD,  
Chairman of the Board.

(Sgd.) J. M. GODFREY,  
Member of the Board.

I agree with my colleagues on this Board that the Cleveland Agreement would have at that time been a fair solution, nevertheless it was not acted upon and the undoubted right of the Engineers and Firemen to make separate agreements should they so desire prevents

any application of the Cleveland Agreement at the present time.

Respectfully,  
(Sgd.) J. L. COUNSELL,  
Member of the Board.

Dated at Hamilton this 13th day of August, 1929.

### Report of Board in Dispute Between the Winnipeg Electric Company and Its Trackmen

Shortly after the close of the month a report was received from the Board of Conciliation and Investigation which had been established to deal with a dispute between the Winnipeg Electric Company and certain of its employees being trackmen. The board had been completed on August 6 by the appointment of the Honourable Mr. Justice W. H. Trueman, Winnipeg, as chairman, the appointment being made in the absence of a joint recommendation from the other two members of the board, Messrs. C. E. Dafeo and Allan Meikle, both of Winnipeg, nominated by the company and employees, respectively. The cause of the dispute was stated to be an alleged reduction in wages, 120 employees being directly affected and 1,000 indirectly. The report of the board was unanimous and was accompanied by a statement signed by a committee on behalf of the Winnipeg Electric Company, by which, "without abating their contention and in the interests of peace," they undertook to pay the men the higher rate of wages from the date of the dispute to the date of the expiration of the agreement.

Cents  
per  
Hour

Ordinary labourers first four months.	35
After four months, and second season.	38
Third season. . . . .	40
Fourth season, or after 24 months of continuous service. . . . .	42
Switch cleaners. . . . .	45

The dispute relates to thirty-one labourers who, prior to August 1, 1928, had all been in the Company's service for many years, and since May, 1922, had been paid 44 cents per hour. Several of these men, both before and after the foregoing wage agreement became operative, acted temporarily as sub-foremen, when they were paid 50 cents per hour. The 45 cent rate under the foregoing schedule was paid from August 1, 1928, until April 15, 1929, when it was reduced to 42 cents, except as to men retaining their position as switch cleaners; the Company posting up the following notice:

" Notice

"April 15, 1929

"Owing to the summer schedule of switch cleaning going into effect on 15th of April and switch cleaning in general to be handled by truck, a number of men who have been classed as switch cleaners will revert back to different track gangs and consequently these men will be reduced to the highest rate of track labour, as covered in the agreement of August 31st (sic 28th), 1928.

"The following men are affected:

"(The names of the 31 men in question.)"

Evidence given before the Board for the men is that their representatives, in the negotiations which resulted in the wage agreement in question, demanded an increase from 44 cents to 45 cents, and that this was agreed to by the Company. The submission is made that the agreement provided for this increase under the head "switch cleaners". While all of these men do switch cleaning in winter, it appears that but a portion of them are engaged in switch cleaning throughout all seasons.

#### Report of Board

IN THE MATTER of the *Industrial Disputes Act, R.S.C., 1927, and of a dispute between the Winnipeg Electric Company and certain of its employees, being trackmen.*

To the Hon. PETER HEENAN, a Member of His Majesty's Privy Council for Canada, and Minister of Labour.

The Board of Conciliation and Investigation constituted under date of August 6, 1929, for the investigation of the dispute above mentioned, respectfully submit the following report:—

A wage agreement in writing entered into between the Company and the several classes of workmen in its track department, dated August 28, 1928, effective from August 1, 1928, until August 31, 1929, and to continue in force thereafter unless determined by notice by either party, provides, *inter alia*, as follows:—

The Company denies that in the negotiations it was agreed that the 44 cent men should have an increase, and it is insisted that they are subject to the 42 cent rate when not engaged in switch cleaning.

For the purpose of further assisting the Board to determine whether or not it was the intention of both parties to the agreement that the men who were then being paid 44 cents should be paid 45 cents, and were therefore comprehended within the designation "switch cleaners," a memorandum prepared by the Company a short time before the final negotiations in the making of the wage agreement were entered upon, was admitted in evidence, subject to the Company's objection. This memorandum is a record of adjustments in wages and working conditions verbally suggested by the Company to a committee of employees representing the Track Department. Included therein is the suggestion that "switch cleaners and men now receiving 44 cents per hour to be continued at 44 cents".

The Chairman pointed out to the representatives of the Company that while the onus was upon the employees to establish to the satisfaction of the Board that an agreement was arrived at that the men in question were to be paid 45 cents, and that the expression "switch cleaners" was intended by both parties to cover them, the evidence, with its implications, was such that, in his opinion, the Company should take time to give the dispute fresh consideration. In making the suggestion it was observed that it could not have been the view of the men that by the agreement they were assenting to a reduction in their pay. Opposed to this result was the fact that in the Company's preliminary proposals it was provided that the men should continue to receive 44 cents, and that many of these men, by reason of their length of service with the Company, were from time to time put temporarily in charge of gangs of men at increased pay. Emphasis was also laid upon the document of April 15, 1929, in which the men are all classed by the Company as switch cleaners, and to the circumstance that following the execution of the agreement the men were paid 45 cents from August 1, 1928, to April 15.

The Company took the foregoing suggestion under advisement, and have now submitted the attached memorandum, by which it will be seen that without abating their contention and in the interest of peace they undertake

to pay the men at the rate of 45 cents per hour from the date of the dispute to August 31, 1929, when, it is intimated, the agreement expires.

Respectfully submitted,

(Sgd.) W. H. TRUEMAN,  
*Chairman.*

(Sgd.) C. E. DAFOE,  
*Member.*

(Sgd.) ALLAN MEIKLE,  
*Member.*

Dated, August 29, 1929.

*To the Chairman and Members of the Board of Conciliation.*

GENTLEMEN,—In pursuance of the Chairman's suggestion that we endeavour to find a method of reaching an agreement with the Men's committee on the question in dispute before your Board, we have given further careful consideration to the whole problem for the purpose and with an earnest desire to find some middle course which might be acceptable to the men. There appears to be no middle course. Their original complaint as set forth in their application for a board of conciliation was that 31 men classified as switchmen and receiving 45 cents an hour under their agreement with the Company were reduced to trackmen's wages—42 cents an hour, when they stopped switch cleaning and worked as trackmen, but that no reduction had been made by the Company when making this change in previous years. The men apparently did not distinguish between working without any classification whatever as they had done previously and working under an agreement where there was a fixed classification and fixed rates of pay for each.

In applying for this board they challenged the Company's right to reduce employees' wages when a change was made from switch cleaning to track work. That right is recognized universally and is so obviously just and fair that it should need no argument to support it. There can be no compromise with this principle. The Company could not and would not forego it, hence this board of conciliation.

The Chairman of the Board, however, has now expressed the opinion that the men when they signed the agreement providing for a rate of 45 cents per hour for switch cleaners believed the expression "switch cleaners" would cover the men in dispute, whether they were doing switch cleaning or not, and that there was reasonable justification for them believing this. So far as the Company is concerned, it must most emphatically deny that anything was said or done by it knowingly or designedly to give rise to such a belief.

To interpret the agreement in this manner would be most unusual and extraordinary. The Company contends that "switch cleaners" should be interpreted in this agreement in the same manner that the terms "carpenters", "blacksmiths", "welders", "motormen" and "bus drivers" would be interpreted in any wage agreement, and if the agreement is to be interpreted literally and as the representatives of the Company understood it the Company's contention would be unquestionably upheld.

Nevertheless, in view of the Chairman's suggestion, and as the Company has always been anxious to, and has tried to deal fairly and generously with its employees, and while not conceding in any degree its right to enforce the principle of reducing or increasing wages according to the nature of the employment, and while disagreeing with the contention that the men believe that the expression "switch cleaner" would include the thirty-one men in dispute whether working as switch cleaners or not, at the same time realizing that possibly the men may have thought that the Company would continue paying them the same wages irrespective of the classification contained in the agreement, the Company now signifies its willingness to continue to pay the men in ques-

tion 45 cents per hour from the time that the dispute arose, April 16th, to the expiration of the present wage agreement, which is August 31st, 1929.

It must be understood, of course, that the Company in taking this action does so for the purpose of satisfying its employees in this instance and not by way of any admission of error on its part, and consequently its action must not be considered as establishing any precedent.

(Sgd.) C. H. DAHL,  
 (Sgd.) L. PALK,  
 (Sgd.) R. R. KNOX  
*Committee on behalf of the  
 Winnipeg Electric Company.*

### SUMMARY OF PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THE tables presented below summarize the proceedings under the Industrial Disputes Investigation Act for the fiscal year ending March 31, 1929, and from March 22, 1907, to March 31, 1929.

TABLE SHOWING PROCEEDINGS BY INDUSTRIES FROM MARCH 22, 1907, TO MARCH 31, 1929

Industries affected	Number of applications for Boards received	Number of strikes not averted or ended
I. Disputes affecting mines, transportation and communication, other public utilities and war work—		
(1) Mines—		
(a) Coal.....	78	11
(b) Metal.....	20	5
(c) Asbestos.....	1	0
(2) Transportation and communication—		
(a) Steam railways.....	212	7
(b) Street and electric railways.....	116	7
(c) Express.....	12	1
(d) Shipping.....	35	0
(e) Telegraphs.....	24	1
(f) Telephones.....	8	0
(3) Miscellaneous—		
(a) Light and power.....	27	3
(b) Elevators.....	1	0
(4) War work.....	30	1
II. Disputes not falling clearly within the direct scope of the Act.....	142	2
Total.....	706	38

TABLE SHOWING PROCEEDINGS BY INDUSTRIES FROM APRIL 1, 1928, TO MARCH 31, 1929.

Industries affected	No. of applications for Boards	No. of Boards established	No. of strikes not averted or ended
I. Disputes affecting mines, transportation and communication and other public utilities—			
(1) Mines—			
Coal.....	3	2	1
(2) Transportation and Communication—			
(a) Steam railways.....	7	3	0
(b) Street and electric railways.....	5	4	0
(c) Shipping.....	1	0	0
(3) Miscellaneous—			
Light and power.....	2	0	0
II. Disputes not falling clearly within the direct scope of the Act.....	7	4	0
Total.....	25	13	1

On March 31, 1929, results were still pending in connection with two applications concerning disputes between (1) the Corporation of the City of Winnipeg and certain of its employees being linemen and cable splicers employed by the Hydro Electric System of the city, and (2) the Canadian National Railways and certain of its employees being locomotive engineers, members of the Brotherhood of Locomotive Engineers.

The Women's Minimum Wage Commission of Quebec intimated during August that they would investigate the cigar, cigarette and tobacco industries. Following the taking of evidence, minimum rates will be set for the female employees in these industries. It was further stated that the investigation commenced some time ago into wages to women and girls in the paper box and bag industries would be re-opened. It is intended to apply to those establishments the salary minimum rates at present in effect for printing, lithographing, bookbinding and envelope establishments.

## STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1929

THE number of strikes and lockouts in existence in Canada during August was ten, as compared with nine the previous month, and the time loss for the month was also slightly greater than in July. As compared with August, 1928, the figures for August, 1929, show that fewer strikes occurred, involving only one-half as many workers and resulting in about one-third of the time loss in the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Aug., 1929.....	10	1,094	3,712
*July, 1929.....	9	427	3,139
Aug., 1928.....	13	2,016	9,231

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Four disputes, involving 59 workpeople were carried over from July, and six disputes commenced during August. Of these ten disputes, six terminated during the month, two being in favour of the employers, one in favour of the workers, two resulting in compromises and the result of one being recorded as indefinite.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Information is available as to three such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926; fur workers, Toronto, Ont., April 10, 1928; and photo engravers, Toronto, Ont., January 17, 1929.

A dispute has been reported involving the mechanics on the maintenance staff of a hotel in Toronto in August to secure an increase in wages. Particulars as to the dispute have not yet been received in the Department.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

PRINTERS, NELSON, B.C.—On July 18, 1929, compositors in a printing office ceased work complaining that the management had employed apprentices in excess of the number provided for under the agreement with the union. The management claimed that this had been approved by the union and that the employees in ceasing work had violated the provisions of the agreement in connection with disputes. In August information reached the Department that strike-breakers had been brought from the United States under contract contrary to the Alien Labour Act. The western representative of the Department proceeded to Nelson and attempted to bring the parties together, but was unable to do so. The complaint as to the admission of aliens under contract was also investigated, and it appeared that one of the new employees was a Canadian by birth, another had entered Canada prior to the dispute, and the others had returned to the United States. The management denied that they had been brought in under contract. At the end of the month the dispute was still unterminated.

FISHERMEN, VANCOUVER ISLAND, B.C.—Pilchard fishermen working for reduction plants on the west coast of Vancouver Island at Nookta Sound demanded an increase in pay, and on August 6 a small number of men, out of the 1,200 affected, ceased work. At a meeting on August 7 an increase in wages was agreed to by the operators of the reduction plants, and work was resumed the following day.

COAL MINERS, GLACE BAY, N.S.—On August 21 eighty boys ceased work on the afternoon shift in sympathy with a boy employed as a donkey engine runner, who had asked for other work but was refused on the ground that no other opening was available. The remainder of the employees on the shift worked that day and the next shift worked without interruption, but the following afternoon the mine was idle, the dispute involving 440 men. Officers of the union advised the employees to return to work and this was done. The dispute was then dealt with by the management of the mine and the union committee, with the result that the decision of the management was sustained.

COAL MINERS, NEW WATERFORD, N.S.—In protest against the suspension of a boy who

had refused to do certain work, the boys in a mine at New Waterford ceased work on August 31, and the miners on learning of this also ceased work. Operations were not resumed until early in the following month.

**RUBBER SHOE FACTORY WORKERS, GUELPH, ONT.**—A number of the employees in a rubber shoe factory ceased work on August 28 in protest against a reduction in wages for piece workers. The employees who remained at work assisted in bringing the strikers and the management together, with the result that a compromise was effected.

**PLUMBERS, HAMILTON, ONT.**—To secure an increase in wages from \$1 per hour to \$1.07 per hour until May 1, 1930, and \$1.12½ per hour for the ensuing twelve months, plumbers and steamfitters went on strike on August 16. The master plumbers had offered \$1.05 per hour until May, 1930, and \$1.10 thereafter. Negotiations having been resumed at the instigation of a third party, a settlement was reached and a union agreement signed providing for \$1.07 per hour until May, 1930, and \$1.10 thereafter, but also that no work would be done Saturday morning after May

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1929

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
-----------------------------------	------------------------------	---------------------------	---------

(a) Strikes and Lockouts Occurring prior to January, 1929.

<b>MANUFACTURING—</b>			
<i>Boots and Shoes—</i>			
Shoe factory workers, Toronto, Ont.....	10	250	Commenced April 23, 1929, against reduction in wages. Unterminated.
<i>Printing &amp; Publishing—</i>			
Compositors, Nelson, B.C....	6	156	Commenced July 18, 1929; alleged violation of agreement re employment of excess apprentices. Unterminated.
<i>Iron, Steel &amp; Products—</i>			
Moulders, Montreal, P.Q.....	33	850	Commenced May 2, 1929, for increase in wages. Unterminated.
<b>CONSTRUCTION—</b>			
<i>Buildings and Structures—</i>			
Plumbers, Kingston, Ont.....	9	100	Commenced April 2, 1928, for increase in wages. Lapsed during August, 1929.

(b) Strikes and Lockouts Occurring during January, 1929.

<b>FISHING AND TRAPPING—</b>			
Fishermen, Vancouver Island, B.C.....	100	200	Commenced August 6, 1929, for increase in wage rates. Terminated August 7, 1929; in favour of workers.
<b>MINING—</b>			
Coal miners, Glace Bay, N.S...	440	520	Commenced August 21, 1929, for change of place for boy worker. Terminated August 23, 1929; in favour of employer.
Coal miners, New Waterford, N.S.....	300	300	Commenced August 31, 1929; against suspension of boy for disobedience. Unterminated.
<b>MANUFACTURING—</b>			
<i>Rubber Products—</i>			
Rubber shoe factory workers, Guelph, Ont.....	100	350	Commenced August 28, 1929; against reduction in wages. Terminated August 31. Compromise.
<b>CONSTRUCTION—</b>			
<i>Buildings and Structures—</i>			
Plumbers, Hamilton, Ont.....	65	950	Commenced August 17, 1929; for increase in wages. Terminated August 31. Compromise.
<b>TRADE—</b>			
<i>Retail—</i>			
Drivers (milk wagons), London, Ont.....	36	36	Commenced August 24, 1929; for signed agreement with improved working conditions. Terminated August 24, 1929. Indefinite.

1, 1930, except where necessary and then at straight time. One of the master plumbers having work in Windsor, Ont., a sympathetic strike there was also threatened but was obviated by the above settlement.

**MILK DRIVERS, LONDON, ONT.**—Milk drivers employed by a number of dairies went on strike on August 24 to secure a signed agree-

ment with the union providing for better working conditions, and to put in writing the terms of a verbal agreement made some weeks previously providing for an increase in wages. Later in the day work was resumed, one of the dairy companies having signed an agreement with the union while the others replaced the strikers.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1929, in the review of Strikes and Lockouts in Canada and other countries, 1928. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

### Great Britain

In the month of July, the number of disputes which began was 20, and 14 were still in progress from the previous month, making a total of 34 disputes in progress during the month, involving 367,200 workpeople and resulting in a loss during July of about 1,188,000 working days. Of the 20 disputes beginning in July, 4 arose out of proposed reductions in wages, 6 on other wages questions, 5 on questions respecting the employment of particular classes or persons, 2 on other questions of working arrangements and 3 on questions of trade union principle. Settlements were reached in 22 disputes, of which 4 were in favour of workpeople, 6 in favour of employers and 12 were compromised; in another case, work was resumed pending negotiations.

*Cotton Mill Workers, Lancashire.*—A short account of this dispute, which began on July 29, was given in the last issue. The British Ministry of Labour estimates that the number of workers involved was 350,000. Through the continued efforts of the Prime Minister and the Ministry of Labour, a joint conference was arranged and on August 15, both parties agreed to refer the dispute to a board of arbitration, consisting of two representatives of each party and an independent chairman. Pending their decision, work was resumed on August 19, at the old wage rates. The ar-

bitration board gave its decision on August 23, by which wages were reduced 6.41 per cent instead of 12.82 per cent which the employers originally demanded.

### Irish Free State

About 2,000 employees of the street railway in Dublin went on strike on August 15, against a reduction of five shillings per week from an average wage of about 60 shillings per week. Up to August 26, no settlement had been reported.

### British India

The dispute of jute mill workers in the Calcutta district which was mentioned in the last issue of the *LABOUR GAZETTE*, is reported to have been called off about August 20.

### New Zealand

During the first half of 1929, the number of industrial disputes reported was 30, involving 33 firms and 3,623 workers. The number of working days lost was 10,126 and the approximate loss in wages £10,371.

### Rumania

During the first week of August, a strike was reported involving about 4,000 coal miners in the Lupeny district. The government called out troops, and it was reported that between twenty-five and fifty people were killed in riots.

### United States

The number of disputes beginning in June was 59, while 86 were in effect at the end of the month. The number of workers involved in disputes which were in effect at the end of the month was 55,795, and the time loss for the month 1,536,098 working days.

On August 19, a settlement was reached of the strike of shoe workers at Haverhill, Massachusetts, which had been in progress for eleven weeks. No increase in wages was granted and the strikers returned to work on the 48-hour week basis.

At the end of August, no settlement had been reported of the strike of street railway employees at New Orleans, Louisiana, which was mentioned in the last issue.

OLD AGE PENSIONS IN CANADA

Statistics for British Columbia, Manitoba, and Saskatchewan to the End of the Second Quarter of 1929

THE accompanying tables give particulars of the operation of the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156), up to June 30, 1929. Similar tables, bringing the statistics up to March 31, 1929, were given in the May issue. The text of this Act was given in the LABOUR GAZETTE, April, 1927, page 375. The Act makes provision for the establishment of a Dominion-Provincial pension system to be effective in such provinces as have enacted special legislation for this purpose. The Act is now in full operation in the provinces of British Columbia, Manitoba and Saskatchewan. On March 1, 1929, the Act took effect in the North West Territories, payments being made by the Dominion government. Legislation to give effect to the Act has been enacted also in Ontario and Alberta. The Old Age Pensions Act of Alberta took effect on August 1, and statistics relating to that province will be included in the next quarterly statement. The Ontario Act will become fully operative on November 1, 1929.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year, and who has resided in Canada for the 20 years preceding, and also has resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds \$125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments. The Department of Labour of Canada pays quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months.

STATISTICAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT JUNE 30, 1929

	British Columbia		Manitoba		Saskatchewan		Three Provinces

## Old Age Pensions in Saskatchewan in 1928-9

The annual report of the Bureau of Child Protection of the Province of Saskatchewan for the fiscal year ending April 30, 1929, contains an account of the administration of the Old Age Pensions Act of the Province up to the end of that period. This Act came into force on May 1, 1928. In order to organize the work efficiently it was found necessary to increase the staff of inspectors employed by the Bureau of Child Protection, and two additional inspectors were added to the staff. From June to November these inspectors were engaged entirely in investigating applications for old age pensions, but after this time the inspectorates were reorganized and each new inspector was given a district, with instructions to make the necessary investigations into all phases of the work of Child Welfare, Mothers' Allowances and the Old Age Pensions.

The administration of the Act involved a large amount of correspondence in connection with applications, of which 5,620 were received during the year, requiring the despatch of 17,683 pieces of mail. Application forms are sent only to those who wish to make application in person; they are registered before leaving the office and also on their return, in order

that the date of each application may be preserved. This is important, as pensions become payable from the day after an application has been returned to the office properly completed. The number of application forms returned during the year was 3,963. Fifty-eight applications were rejected, the claimants being under the required age; 132 applications were rejected through non-compliance with the residence qualification; 12 were rejected because the applicants were not naturalized British subjects; 26 were rejected because applicants' annual income exceeded \$365; and seven applications were withdrawn. Sixty-two applicants died before authorization of payments was made.

The total number of persons in receipt of pensions during the year was 3,343, while 323 applications were awaiting necessary proofs in regard to age, etc., at the close of the year. Of the 3,343 pensioners, 1,100 were married male and 493 were married female persons; 884 were widows; 640 were widowers; 173 were single male, and 53 were single female persons. The total amount paid out in pensions during the fiscal year was \$461,950.95. A table is given showing the country or province in which the pensioners had formerly resided.

## Ontario Municipal Association and Old Age Pensions

The Ontario Municipal Association, at the 31st annual convention held at Toronto in August, adopted the following resolution in reference to the Old Age Pensions Act of Ontario:—

Resolved, that whereas the Old Age Pension Act of Ontario provides that on the death of a pensioner the Provincial Commission shall be entitled to recover from the estate of such deceased pensioner the sum of the pension payments made to such pensioner from time to time, together with interest at the rate of five per cent per annum;

And whereas the said Act makes no provision for the division of such sum so recovered between the Provincial Commission and the local municipality which has contributed toward such pension,

Be it resolved that the Legislature be petitioned to so amend the Old Age Pension Act (Sec. 10, Subsection 2) that the local municipality may share in such sum so recovered.

The section of the Act to which the foregoing resolution refers is as follows:—

10. (1) Where a pensioner is the owner of an interest in a dwelling house in which he resides and the Commission accepts a transfer to it of such interest, the pension payable to the pensioner shall not be subject to any reduc-

tion in respect of the annual value of such interest, but the Commission shall, on the death of the pensioner or upon his ceasing to use such dwelling house as his place of residence, be entitled to sell the pensioner's interest therein and to retain out of the proceeds of such sale the amount of all payments made to the pensioner by way of pensions in excess of the amount he would have received if such interest had not been transferred to the Commission, together with interest on the said payments at the rate of five per centum per annum, compounded annually.

(2) The Commission shall be entitled to recover out of the estate of any deceased pensioner, as a debit due by the pensioner to the Commission, the sum of the pension payments made to such pensioner from time to time, together with interest at the rate of five per centum per annum compounded annually.

No claim shall be made by the Commission for the recovery of such debt directly or indirectly out of any part of the pensioner's estate which passes by will or on an intestacy to any other pensioner or to any person who has, since the grant of such pension or for the last three years during which such pension has continued to be paid, regularly contributed to the support of the pensioner by the payment of money or otherwise to the extent, which having regard to the means of the person so having contributed, is considered by the Commission to be reasonable.

## TEACHERS' PENSIONS IN BRITISH COLUMBIA

**I**N addition to the measures that were outlined in the *LABOUR GAZETTE*, June, 1929 (page 607), the Legislature of British Columbia at its late session passed an Act respecting Teachers' Pensions. This Act, which became effective on April 1, provides for the establishment of a teachers' pension fund composed of contributions made by the teachers, supplemented by annual grants by the provincial government of \$25,000 each year for the next ten years.

Four per cent of the amount of the salary of each teacher is to be deducted for pension purposes. Teachers who are 35 years of age or over may arrange to increase the amount of their contributions up to 8 per cent of their salaries. On the teachers' request deductions may be discontinued after payment of contributions for thirty-five years. Teachers may also make additional voluntary contributions to the fund. Interest at five per cent per annum will be credited to each contributor's separate account, and to the "Reserve Account," that is, the account composed of contributions for the first five months in the case of teachers employed at the commencement of the act, and for ten months in the case

of those subsequently employed. The Teachers' Pension Fund is in custody of the Provincial Treasurer, account being kept of all moneys received and paid out under the provisions of the Act.

Pensions are payable on incapacitation through disability, or on retirement after at least fifteen years' service, on attainment of the age of 65 years in case of men, and of 60 years in case of women. The amount of the pension payable to a teacher is equal to such sum as "double the amount at his credit in the Teachers' Pensions Fund, arising from deductions from his salary and the accrued interest thereon, would entitle him to according to the prescribed tables then in force". The regulations prescribing the tables for determining the value of teachers' pensions were published in the *British Columbia Gazette*, August 8, 1929. These tables, which are the same as those used in connection with the system of Dominion Government Annuities, would give to a male teacher, for example, who at the age of 65 years, has \$10,000 to his credit in the Pensions Fund, a retiring allowance for life of \$1,127. The retiring teacher with \$10,000 to his credit would have therefore

an allowance of double that amount. The life annuity of a female teacher retiring at the age of 60 years, and having a similar sum to her credit, would be double \$865. In the case of teachers who have made special contributions the pension would be proportionately greater. An additional allowance in respect of service is made to teachers who were employed and became contributors at the commencement of the Act, at the rate of \$25 for each year's employment as a teacher prior to the commencement of the Act. The time spent in active naval or military service in the Great War in any capacity (provided the pensioner was engaged in teaching before the war) is reckoned as being part of the time of service. Special arrangements are made also for granting an additional allowance in cases where teachers owing to sickness, etc., were temporarily unemployed at the time of the passing of the Act. No such additional allowance, however, may exceed \$750 per annum.

The teachers' pensions may be granted in accordance with the prescribed tables on any of the following plans:—

(a) Single life, payable for the life of the contributor.

(b) Guaranteed pension, payable for the life of the contributor, or for any term of years certain, whichever period shall be the longer.

(c) Joint life and last survivor, payable during the joint life of the contributor and any person nominated by him prior to the granting of the teacher's pension, and during the life of the survivor.

If a teacher dies after completing fifteen years' service a monthly allowance may be granted, on application therefor, to any dependant relative who had been nominated

by him, of the allowance being what the late teacher's pension would have been if retired just before his death, payment being on the "joint life and last survivor" plan.

Teachers' Pensions are paid monthly. No teacher's pension or other allowance under the Act may be assigned or charged, or is subject to be seized or attached by process in any court.

When a teacher dies before the pensionable age, the total amount at his credit in the Pension Fund is paid to his widow or representative and this amount is not subject to the control of the creditors, not forming part of the estate of the deceased. A refund of the amount of credit in the fund is also made to a teacher who retires voluntarily from the teaching service, on his signing of a disclaimer of any further right to pension.

The Teachers' Pension Board consists of the Superintendent of Education (as chairman), a member of the Civil Service Commission, and a representative of the teachers named by the British Columbia Teachers' Federation. This Board serves without remuneration.

The board has power to judge the standing of each teacher in regard to the Pension Fund. Its orders are binding on the contributors, including orders for permanent retirement from the teaching service.

No pension is paid unless a teacher has made contributions to the fund, by deductions from his salary, in addition to the amount to his credit on the Reserve Account.

If a pensioner is judged incapable of managing his own affairs the pension may be paid by the Commission for the benefit of his dependants as they think fit. Pensions may be suspended in the event of a pensioner resuming work as a teacher.

## EMPLOYEES' RETIREMENT SYSTEM OF ATLANTIC REFINING COMPANY

"THE pension practice of the Atlantic Refining Company" is the title of a pamphlet written by P. W. Wharton, assistant general auditor of the firm, and recently published as General Management Series, No. 90, by the American Management Association. As early as January 1, 1903, the board of directors of this company (which has Canadian branches at Montreal and Saint John, employing about 800 workers) adopted a resolution providing for the payment of annuities to superannuated employees. In August, 1918, existing plans were superseded by the action of the board of directors in adopting an annuity plan. In March, 1919, the directors sup-

plemented the annuity plan of 1918 with a death benefit plan for employees and pensioners. All the above schemes were non-contributory on the part of the employees, discretionary, and on a cash disbursement basis. The increasing costs of these plans resulted in the appointment of a committee to study the existing pension and death benefit plans and to submit recommendations. The committee in 1926 engaged a consulting actuary, and on the basis of his report, the discontinuance (effective July 1, 1927) of both the 1918 annuity plan and the 1919 death benefit plan was announced. It was also announced that a committee was preparing a

new plan, to be effective July 1, 1927, and that under this plan special consideration would be given to past history with the company, and that a special benefit would provide for the accrued liability to July 1, under the death benefit plan and for all pensions already granted. The chief features of the new scheme, known as the "Employees' Retirement System" are outlined in the following paragraphs from the bulletin:—

All employees in the service of the Company on July 1, 1927, were eligible to join the system as charter members. Marine Department employees were not admitted, due to need for a closer study of the records; and employees of those subsidiary companies that did not accept the plan were not admissible. After July 1, 1927, the completion of six months' service is required. Membership in the system terminates on resignation or dismissal from the service of the Company; also (if temporarily out of employment on account of layoff or a similar cause) contributions are withdrawn. Absence from service for a period of one year, except on account of personal illness, terminates membership, whether contributions are withdrawn or not. When absent on account of illness without pay, the loss of service for the absent period occurs; but there is no effect on the employee's membership.

Each member is required to contribute, until age 65 and may contribute thereafter, a certain percentage of his wages or salary, fixed according to his age at the time of joining the system. This rate does not change so long as the employee is a member of the system. It has been so planned that this rate will provide the average employee at the age of 65 an annuity of  $\frac{1}{4}$  of his own average earnings for the 10 years preceding retirement, provided he has had 35 years of service. The employees' contributions are credited to his account, and the procedure, in effect, is a saving fund account with 4 per cent compound interest added annually. The balance on deposit for an employee's account may be ascertained upon his own inquiry to the secretary.

The following benefits are provided under the system:—

- 1, Old age or service retirement; 2, Ordinary disability retirement; 3, Accidental disability retirement; 4, Ordinary death; 5, Accidental death; 6, Termination of employment.

At the age of 65, a member may apply to the Board of Trustees for a service retirement. Retirement at the age of 70 is compulsory, unless the Board of Directors shall approve a request to the contrary. The al-

lowance paid to the member consists of an annuity resulting from his own contributions, plus a pension provided from the Company's contributions. For the average employee with a service credit of 35 years the two equal an allowance of approximately one-half of the average compensation for the last 10 years. A proportionate retirement allowance is paid for service less than 35 years.

For service that may be creditable prior to July 1, 1927, the company assumes the entire cost; whereas for service after July 1, 1927, the member contributes about one-half of the final retirement allowance. A credit allowed for such prior service, plus service subsequent to July 1, 1927, must not be in excess of 35 years.

The company at present contributes the cost of a Special Benefit, which provides a graduated scale of adjustment between the old and new plan for those employees who are entitled to a service retirement by July 1, 1932. Subject to approval by the Board of Directors, individuals with 20 or more years of service to July 1, 1927, and who were 65 years of age on that date, receive, in place of the Retirement System Pension, a pension equal to 2 per cent of the average annual compensation for their services previous to July 1, 1927, to a maximum of 35 years, and 1.9 per cent if becoming age 65 before July 1, 1928. There is a decrease of .1 per cent for each year thereafter to July 1, 1932, when the calculations of the new plan apply. To such special pension benefit is added the annuity arising from the members' own contributions and the regular pension on account of service after July 1, 1927.

In addition to the foregoing special pension benefit, the company has also assumed the cost of allowing employee's service credit for all years of employment up to July 1, 1927, if they were 65 years of age before July 1, 1927, and had 10 years of service as of that date, instead of stopping service credit at the age of 65 as provided under the system.

If a member becoming totally and permanently disabled from any cause, other than from accident while employed, has had 10 years of creditable service and is recommended by the Medical Board of the Trustees, there is paid an allowance of approximately 9/10 of the amount payable under a service retirement. A minimum of 20 per cent of the average final pay applies, if the member was employed before 50 years of age.

Accidental disability, while in active service of the company, on the recommendation of the Medical Board, results upon approval of the Board of Trustees in an allowance made up of a pension equalling  $\frac{2}{3}$  of the

average final annual earnings plus the annuity equivalent of the member's contributions. The pension is offset by any benefit required under any law, including the Workmen's Compensation Act, in such a manner as to pay the member the larger benefit.

The ordinary death benefit provides for the member's beneficiary to receive all his contributions plus interest, together with a lump sum payment equal to 25 per cent of his annual average salary for the last 10 years or of the whole term of service when less than 10 years.

The credit as of July 1, 1927, existing under the 1919 Death Benefit plan is paid if same exceeds the 25 per cent result. No benefit shall exceed \$3,000 excluding the employee's contribution with interest.

Accidental death while in service results in a payment to the member's beneficiary of an amount equal to twice the member's average final compensation in such installments as the Trustees shall decide. No benefit shall exceed \$5,000, excluding the member's total contributions with interest. The benefit is offset by any benefit required by law, the larger amount being paid.

On termination of employment the member's contributions are returned to him with interest at 4 per cent per annum, compounded annually.

A member at the time of retirement has several optional benefits that he may select. Unless provision is made by the selection of one of certain options, there is no death benefit paid to an individual on the retirement

roll. The member may elect to receive all the benefit for himself during his life, or he may elect to take a reduced benefit to provide for payments to a beneficiary at his death. Thirty days must elapse, after signing the application for optional selection, before the arrangement becomes effective.

Pensioners paid on the roll as of July 1, 1927, together with their death benefits under the old plan, were taken over without change by the System.

The administration of the plan is vested in the Board of Trustees consisting of seven persons, as follows: The Chairman of the Board of Directors of The Atlantic Refining Company, ex-officio, three members appointed by the Chairman of the Board at his discretion, and three members appointed by the Chairman of the Board to represent the members of the system, one representing the manufacturing employees, one the sales employees, and one the office employees. All costs of administration are borne by the Company, except as interest earnings in excess of the 4 per cent required to maintain reserves are available to meet expenses.

General provisions cover the forbidding of assignments by members, the right of discontinuance by the Company of its contributions, the adjustment of the Company's contribution based on actuarial findings, the manner of liquidating the fund in case of discontinuance and amendments.

The plan provides for the termination of benefits for engaging in any business in competition to the Company and its subsidiaries.

## PENSION AND WELFARE PLANS OF CADBURY BROTHERS, LIMITED (ENGLAND)

THE pension, provident and benevolent fund schemes in operation at Cadbury Brothers, Limited, Bourneville, England, are detailed in a pamphlet prepared by the firm's publication department. It is pointed out that "it is almost impossible for any business concern, however prosperous it may be, to deal with all aspects of this problem at one time, and it was only gradually, as the business grew and the firm's resources allowed, that they were able to develop successively the pension, unemployment, welfare, and schemes, which are the constituents of a broadly co-ordinated plan." In 1928 the firm employed 9,039 workers (4,574 men and 4,465 women). Two general facts relating to the business are emphasized: (1) That a number of trades, apart from cocoa and chocolate making, are carried on at Bourneville and its

subsidiary factories, e.g., tin-box making, card-box making, saw milling, and case and wood-box making, printing, engineering, building, etc. (2) That although to some extent the main trade is a seasonal one it is possible by careful organization to ensure fairly steady employment throughout the year.

A summary of all the schemes is given as follows:—

1. Those which protect the employee against loss of earning capacity in old age.

(a) *Men's Pension Fund*.—A joint (Employee and Company) contributory fund from which a pension, based on aggregate wages, is payable at the age of 60.

(b) *Women's Pension Fund*.—From which a pension is payable at the age of 55 (joint contributory).

2. Those which protect the employee's family against the loss of the breadwinner:—

(c) *Pensioners' Widows' Fund*.—From which a pension (normally about half the employee's pension) is payable to the widow of a deceased pensioner (joint contributory).

(d) *Dependants' Provident Fund*.—From which a lump sum is payable to the widow or other dependants of a male employee deceased before attaining pension age (joint contributory).

3. Those which protect the employee against loss of earning capacity through (e) sickness (f) accident (g) unemployment, (i) whole— or ii partial):—

(e) *Sick benefit, Auxiliary Sick Benefit, and Junior Sick Benefit Funds*, the first being contributory, and the other two provided by the Company.

(f) *Supplementary Accident Benefit*, payable in certain cases in addition to legal compensation.

(g) (i) *Unemployment Scheme*, supplementary to State Funds, and

(ii) *Short Time Scheme*, payments being made from the *Welfare Fund*.

4. That which make provision against distress through long continued illness, etc.:—

(h) *Benevolent Fund*.—Provided by Company and Works Councils, making gifts in kind, or in money according to a definite scale of family income.

5. Those which provide, wholly or in part, for (j) hospital treatment, (k) funeral expenses, (l) benevolent payments in cases of distress or illness, supplementary to (h):—

(j) Company and Employees subscribe to the Birmingham Hospital Contributory Fund.

(k) Grants made by the Company in accordance with fixed scales.

(l) Funds started and maintained by the workers as a body (Workers' Fund), or by members of certain departments (Shop Benevolent Funds).

Also included among the Schemes described are the *Prosperity Sharing Scheme*, through which a sum, based on the dividends paid on the Company's Ordinary Shares, is payable annually to employees of a certain length of service, and the measures adopted for the encouragement of Thrift. Incidentally, it has been found possible to offer encouragement to House Purchase by means of advances at low rates of interest by the Pension Funds and Bourneville Finance, Ltd. Facilities for effecting Life Insurance are also afforded.

## LABOUR AND INDUSTRY IN BRITISH COLUMBIA IN 1928

THE administrative activities of the Department of Labour of British Columbia are described in the annual report for the calendar year 1928. Established under the Department of Labour Act of 1917, the Department has authority to require the trade unions, industrial societies and other organizations to supply information as to their rules and practices; to require employers to furnish reports as to their employees with respect to wages, hours of work, etc.; and to obtain from any available source information as to the cost of living, the relations of prices to labour and industrial conditions in the province. Under departmental administration are the employment offices and the Factories Act. The Deputy Minister of Labour is *ex officio* chairman of the Board of Adjustment under the Hours of Work Act, 1923, which provides for an eight hour working day in the industries of the province with the exception of those expressly exempted by the Board.

*Industrial Situation*.—Dealing with trade and industry, the report indicates that during the year the province made a new record in its industrial payroll, which reached a total

for the year 1928 of \$183,097,781.72 as compared with \$177,522,758.14 for the year 1927, or an increase of \$5,575,023.58. The questionnaire which is sent to industrial employers at the beginning of each year, was replied to in 1928 by 4,846 firms, this being a record number. These firms reported a combined payroll of \$136,784,484.18, as compared with a total of \$130,074,921.91 reported by 4,597 firms in 1927. The total payroll of \$183,097,781.72 for all industries includes, in addition to the figures returned by employers, the calculated totals of employers who failed to report, the totals in delayed returns, and a number of supplementary items such as the payrolls in British Columbia of the transcontinental railway systems, wholesale and retail firms, and the salaries of employees of Dominion and Provincial Governments. Of the total payroll, payments to wage earners amounted to 81.40 per cent, the balance being salaries paid to superintendents, managers, salesmen, clerks and stenographers.

The total estimated payroll of the province in 1928 is divided by districts as follows: Greater Vancouver, \$65,585,625.41; rest of

Mainland, \$80,746,121.74; Vancouver Island, \$36,766,034.57.

Indicating in what groups payrolls have increased or decreased, the report states that, comparing the wage payments of 1928 with 1927, there are a few striking increases, the largest being that of the lumbering industries, where the pay-roll increased \$1,750,000 followed by metal-mining with an advance of \$1,000,000. This fulfilled general expectations of both these groups. Food products continued its rise, increasing by \$500,000, as did also the utility group and the manufacture of wood. Coast shipping made an advance of \$880,000, due doubtless to the greatly increased tourist travel sponsored by the larger shipping companies. Miscellaneous metal trades again increased this year by \$600,000. The contracting and builders' materials group had advances of \$250,000 and \$340,000 respectively. The oil-refining group, which includes crude oil and fish-oil, showed an increase of \$370,000; miscellaneous trades and industries, \$200,000; laundries, cleaning and dyeing, again advanced \$110,000; garment-

making, house-furnishing, leather and fur goods by \$100,000 in each group. Gains were also recorded in cigar and tobacco manufacturing, explosives and chemicals, jewellery-manufacturing, printing and publishing, and smelting. The five groups suffering a reduction of the annual pay-roll are headed by pulp and paper manufacturing with a loss of \$420,000. This is the second year with a heavy reduction in the pay-roll of this industry, although reports would seem to indicate a probable bottom having been reached. Ship-building and repairing again showed a loss of \$190,000. The pay-roll of breweries decreased \$119,000 for the year 1928. Coal-mining suffered drop of \$70,000, due to one of the mines in the island area having closed down for part of the year. The drop of \$9,000 in paint-manufacturing is reported as being difficult to account for considering the increase in several groups which should benefit the paint-manufacturing industry.

A comparison of the pay-roll in the various industries for the past three years is given in the accompanying table:—

COMPARISON OF PAYROLLS IN BRITISH COLUMBIA INDUSTRIES IN 1926, 1927, 1928

*Weekly Wage Rates.*—The average industrial wage for all adult male employees during the year 1928 was \$28.96 per week—the highest since the peak year of 1920, when it stood at \$31.51 per week. This average is arrived at from the figures supplied by each employer covering the week of the employment of the greatest number.

The tabular summaries indicate that there has been a steady increase in the number earning \$25 a week and upwards since 1925. In that year the percentage of employees paid a weekly wage of \$25 and more was 54.07; in 1926 it was 54.46; in 1927, 56.41; in 1928, 58.96. A comparison of the tables also shows that there has been a further reduction in low-

paid workers (those receiving less than \$19 per week), though not to the same extent as during the two previous years. In 1926, the number of such workers was 9,498; in 1927 this number was reduced to 4,409, while in 1928 there was another reduction so that at the time of the publication of the report the number stood at 4,391. The difference between the figures for 1927 and 1928 is regarded as a fair gauge of the movement in this class of workers because the pronounced decrease in the figures of 1927 from 1926 was explained as being possible partly through the enforcement of the Male Minimum Wage Act. The report adds, however, that the general tendency has been to increase rather than decrease the wages of those receiving less than \$19 per week.

Changes in wage rates during the year were not very pronounced although in some groups there was a good advance. In sixteen of the groups there was an average increase in the weekly rates, and in nine groups an average decrease. Those showing the greatest advances were: Printing and publishing, \$4.22; coast shipping, \$2.10; smelting, \$1.39; metal trades, \$1.28; breweries, \$1.23. The largest decreases were in the following groups: Manufacturing, leather and fur goods, \$1.54; paint manufacturing, \$1.33; builders' materials, 68 cents; manufacturing wood, 58 cents.

The report details, in tabular form, the number of wage earners in each industry, grouped

according to the weekly wages received. The accompanying table is a summary of all such tables, and shows the number of employees by weekly wage groups in 1928.

*Increase of Apprentices.*—Another increase in the number of apprentices was registered during the year, there being a total of 1,628 apprentices in industry during 1928. This is almost double the number for 1924, which was 898, advancing to 1,115 in 1925; 1,281 in 1926 and 1,554 in 1927. These figures would seem to indicate, the report observes, that "the youth of the province is determined to learn, in all its phases, the industry he has selected as his life's work, and suggests that in the near future the apprentices of the last few years may be expected to assume greater responsibilities in their native province."

*Employment Service.*—The report of the British Columbia Branch of the Employment Service of Canada indicates that although there was a surplus of labour in every part of the Province throughout the year, employment was available in larger volume than during any part of the last decade. Newcomers, however, continued to arrive in the province faster than opportunities for their employment developed, with the result that 10,812 workers were sent to employment in the Prairie Provinces, these consisting, in the main, of harvest-labourers and experienced farm-labourers for spring work, with a sprinkling of building-trade mechanics.

The work of the Employment Service, measured by placements, showed an improvement of 23 per cent, reflected in part by the larger number placed in other Provinces and the steady growth of business within the Province. It is also pointed out that by close co-operation with the Immigration Department many positions were retained for citizens of Canada which would otherwise have gone to imported aliens.

It is stated that the Handicap Sections in Vancouver and Victoria carried on the work of securing employment for handicapped workers under difficulties due to the fact that when employment is most plentiful, the men who are least handicapped are not available, and during the winter months when work is scarce and the competition of physically fit unemployed workers is keen, the "handicaps" then register in large numbers.

Detailing the work accomplished on behalf of handicapped men, both ex-service and "industrial handicaps," it is shown that situations were found for 1,715 such men, 535 going to regular employment the duration of which was known to be in excess of one week and

in many cases permanent, and 1,180 to casual work lasting less than one week. Of the total number, 233 were "industrial handicaps," 77 being placed in regular positions, and the balance, 156, in casual employment.

The total business transacted by the British Columbia offices in 1928 is summarized as follows: Applications, 109,474; employers' orders, 45,859; placements, 43,155; transfers in British Columbia, 2,272; transfers out of British Columbia, 10,812.

*Inspection of Factories.*—The report of the chief inspector of factories (who is charged with the inspection of all factories under the Factories Act, industrial plants designated by the Workmen's Compensation Board, passenger and freight elevators and all laundries) covers the work of this branch. Dealing with the progress of accident prevention, the chief inspector comments on the non-occurrence of any fatal or serious accidents on passenger elevators during 1928.

During the past year, 229 permanent and 71 temporary elevator operators' licenses were issued to female operators, and 603 permanent and 106 temporary licenses to male operators. Seventeen requests for permission to employ children under the age of 15 years in canneries were granted, subject to the conditions of the Factories Act, and permission given to twelve firms to work their employees overtime. Many complaints were received alleging unhealthy working conditions and excessive hours. All such were promptly investigated, and when found to be substantiated, were ordered to be remedied. Many of these complaints were lodged against employers who are not British subjects.

*Nationality of Workers.*—The report presents a detailed analysis of the nationality of the workers in the various industries. Native born Canadians and Newfoundlanders show a decided increase with 38·07 per cent of the total as compared with 36·01 per cent in 1927. Natives of Great Britain show a slight decrease, the percentage being 30·85 as compared with 31·87 in 1927. The total of all employees who claim the English language as their mother-tongue is 72·65 per cent as against 72·51 per cent in 1927. The natives of Continental Europe retrieved the percentage loss of 1927, when their proportion of the total employed was 15·05, with an increase to 17·02 per cent.

The percentage of Asiatics showed a further reduction in 1928, the percentage being 9·33, as compared with 10·20 per cent in 1927, 11·56 in 1926, 11·30 in 1925, and 11·97 in 1924.

The actual number of Chinese employed during 1928 was 5,918, a reduction of 467 over

the previous year. The number of Hindus employed was 779, a reduction of 60 from the number shown in 1927. The number of Japanese, however, increased by 194, from 3,859 in 1927 to 4,053 in 1928.

The number of Asiatics employed during 1928 was 10,750, a reduction of 333 from the figures of 1927. The groups which show an increase in the number of Asiatics employed are: Coal-mining, laundries, cleaning and dyeing, metal-mining, miscellaneous trades and industries, the utility group, and the manufacture of wood (miscellaneous). The groups showing a decrease in the number of Asiatics engaged are headed by the lumber industries with a reduction of 316 from 1927, followed by the food products group, printing and publishing, garment-making, pulp and paper, and shipbuilding.

The groups in which native Canadians show a majority of employees are: Creameries, builders' materials, cigar and tobacco manufacturing, contracting, manufacture of food products, house-furnishing, manufacture of jewellery, leather and fur goods, lumber industries, metal trades, metal-mining, miscellaneous trades and industries, oil-refining, paint-manufacturing, printing and publishing, and the manufacture of wood. The groups having a preponderance of those born in Great Britain and Ireland are: Coal-mining, Coast shipping, explosives and chemicals, garment-making, laundries, cleaning and dyeing, pulp and paper mills, ship-building, smelting, and the public utility group. Comparing these groups with the corresponding statement for 1927, it is found that garment-making, builders' materials, miscellaneous trades and industries, and oil-refining have swung from the Canadian to the British group, and the manufacture of jewellery from the British to the Canadian group.

*Labour Disputes.*—The disturbance caused by labour disputes in the industrial life of the Province was again comparatively slight. During 1928 there were nine disputes entailing a stoppage of work, affecting 2,644 employees and resulting in a loss of 20,791 working days. In 1927, there were 1,668 workers involved in the disputes of that year, and the working time lost was 17,006 working days. In no case during 1928 was there a dispute resulting from any attempt by employers to reduce wages, though in one instance the strikers, who were engaged in the shingle industry, contended that new conditions had been introduced which made it difficult for them to earn as much as formerly. Most of the disputes were caused by demands for higher pay or a shorter working week, and in one or two cases the

observance or non-observance of closed shop conditions.

*Male Minimum Wage Act.*—A chapter of the report is devoted to the decision of the Supreme Court of Canada which declared this Act invalid (LABOUR GAZETTE, November, 1928, page 1310) and also to the new Male Minimum Wage Act adopted at the last session of the Legislature (LABOUR GAZETTE, June 1929, page 607). Owing to the introduction of the new measure resulting from the Supreme Court's

judgment on the original legislation, the Act was inoperative for the greater part of the year.

The report gives a review of the labour legislation enacted during the last session of the Legislature. These new measures have already been published in the LABOUR GAZETTE for June, 1929, pages 607-610.

The report includes also a useful directory of associations of employers and also of trade unions in British Columbia.

### Hours of Work Act in 1928

The operations under the Hours of Work Act, 1923, during 1928, are outlined in the report of the provincial Department of Labour. That the Act has now become a part of the industrial life of the Province; that it is being observed by both employers and employees; and that the smooth-working of this legislation is proof that the majority of those affected are in sympathy with its provisions, are the chief features emphasized in the report.

Among the amendments to the Act adopted at the last session of the Legislature (LABOUR GAZETTE, June, 1929, page 608) was one providing that the prescribed limit of hours may be exceeded "in case of accident, actual or threatened, or in case of urgent work to be done to machinery or plant, or in case of *force majeure*, but only so far as may be necessary to avoid serious interference with the ordinary working of the undertaking." Accordingly, exemptions of a temporary nature in urgent cases are granted by the Board of Adjustment which administers the Act. During 1928 there were 161 temporary permits issued. The overtime covered by these permits varied from a total of one hour to one hour per day for a week or longer. Lumbering accounted for 105 of these permits. The report states that the chief reason for the granting of exemptions to this industry is that overtime is required because of the arrival of steamships from one to three days earlier than expected, and that in such cases the granting of overtime becomes a necessity, otherwise shipping would become disrupted and other industries suffer as a result. Other branches of industry re-

quiring temporary permits at certain seasons of the year are the printing firms to take care of rush orders for Christmas cards and other special work; general contractors, especially when pouring concrete; and garment-manufacturing during the rush season.

In 1928, the average working hours for all industrial occupations was further reduced to 48.43 hours weekly, from 48.55 in 1927, and an average of 48.84 in 1926.

The accompanying table shows the trend of average weekly hours in all industries covered by the report for the past three years.

## Minimum Wages for Women in British Columbia in 1928

The eleventh annual report of the Minimum Wage Board of British Columbia for the year 1928 is incorporated in the annual report of the Department of Labour, the Minimum Wage Act being administered by a Board of three members, the chairman of which is the Deputy Minister of Labour.

Under the British Columbia Act nine Orders respecting minimum wages have been put into force, and these include practically all women and girl employees coming within the scope of the Act. The total number during 1928 as indicated from the returns received from employers was 19,377 workers. However, the statute does not cover domestic servants, fruit pickers, farm labourers or their employers.

The report points out that considering the number of workers affected by the rulings of the Board, the percentage of employers who evaded the regulations is comparatively small. Through pay-roll inspections, personal visits by the officials, and complaints of employees some discrepancies were found during the year. In the majority of cases employers paid the girls the arrears due them without recourse to court proceedings. Adjustments were effected through friendly negotiations, conducted by correspondence or interviews between employers, employees, and officials of the Board. By these methods the sum of \$3,202.11 was paid during 1928 to employees throughout the Province. This amount represents the difference between what they should have received under the various Orders and what they were paid by employers who were not complying with the law.

In fairness to the employers it is stated that this non-compliance was not always wilful. In some cases a slight misunderstanding of an order led to an inadequate wage being paid. In other instances employers coming into British Columbia from outside points failed to acquaint themselves with the regulations governing their particular industry or occupation.

Collections for the girls were effected from proprietors of laundries, hotels, cafés, commercial and professional offices, bakeries, garment, candy, and other factories, beauty-parlours, retail stores, fruit-canneries, and packing-houses. The beneficial protection of the Act, therefore, was felt by women and girls of many and varied callings.

During the period under review eight convictions for violations of the Act were obtained, two cases were dismissed, and one case withdrawn owing to the serious and continued illness of the material witness.

A summary of the minimum wage orders in force is as follows:—

Mercantile industry, \$12.75 (hourly rate, 26 $\frac{9}{16}$  cents).

Laundry, cleaning and dyeing industries, \$13.50 (hourly rate, 28 $\frac{1}{2}$  cents).

Public housekeeping, \$14 (hourly rate 29 $\frac{1}{2}$  cents).

Office occupations, \$15 (hourly rate 31 $\frac{1}{2}$  cents).

Personal service occupation, \$14.25 (hourly rate, 29 $\frac{1}{16}$  cents).

Fishing industry (canneries), \$15.50 (hourly rate, 32 $\frac{1}{4}$  cents).

Telephone and telegraph occupation, \$15 (hourly rate, 31 $\frac{1}{2}$  cents).

Fruit and vegetable industry, \$14.40 (hourly rate, 30 cents).

Manufacturing industry, \$14 (hourly rate, 29 $\frac{1}{2}$  cents).

The annual request for pay-roll data was answered by 3,425 individual employers or firms. While this is 30 less than the number who responded in 1927, the employees under the Act in 1928 totalled 19,377 as against 17,507 in 1927.

Of the total number of women and girls employed in the nine occupations and industries under the Act, 3,692, or 19.05 per cent, were reported as receiving the actual minimum for their respective classes of work. In the higher scales of pay, it is noted that 11,904, or 61.44 per cent of all those reported, were listed as being in receipt of wages in excess of the legal minimum, leaving 3,781, or 19.51 per cent, who were paid below the minimum. This latter group, however, includes young girls and inexperienced workers for whom lower rates are set, and employees of experience whose working week was shorter than 48 hours, with a *pro rata* reduction in their remuneration.

The average weekly wage of all occupations for experienced employees over 18 years of age during 1928 was \$17.52, as compared with \$17.06 in 1927, and \$17.05 in 1926.

Figures compiled from the employers pay-rolls for 1928 indicate that increases in average wages of the experienced workers occurred in the laundry industry (which also includes dry cleaning and dyeing establishment), in public house-keeping, in office occupation, and in telegraph and telephone occupation. In addition to these callings the seasonal fruit and vegetable industry and the fishing industry also recorded higher average wages than those prevailing in 1927. The outstanding increase was in the office occupation wages in which there was a marked rise of \$1.05 per week, bringing the average weekly rate to \$20.21, a peak figure in this occupation since records have been kept.

Of the nine groups, covered by the orders of the Board, there were three in which the average wages for experienced women and girl employees were lower than in the previous year. The mercantile and personal service classes registered decreases, but coupled with the drop in wages was a corresponding decrease in the length of the average working week. In the manufacturing industry, states the report, the decrease of a cent per week in average rate for skilled employees, was so slight that the figures might be deemed to have remained stationary.

Table I shows the wage rates in 1918, before any wage rates had been in effect and in 1928, after eleven years of practical testing of the orders.

TABLE I.—AVERAGE WEEKLY WAGES BEFORE AND AFTER MINIMUM WAGE ACT

<i>Mercantile Industry</i>		
Average weekly wages—	1918	1928
Employees over 18 years...	\$12 71	\$14 95
Employees under 18 years..	7 70	9 60
Percentage of employees under 18 years.. . . . .	15.49	15.91
<i>Laundry Industry</i>		
Average weekly wages—	1918	1928
Employees over 18 years...	\$11 80	\$14 59
Employees under 18 years..	9 78	9 64
Percentage of employees under 18 years.. . . . .	21.80	11.74
<i>Manufacturing Industry</i>

Experienced employees.. . .	\$12 54	\$16 62
Inexperienced employees.. . .	9 57	10 00
Percentage of inexperienced employees.. . . . .	28.64	18.74
<i>Telephone and Telegraph</i>		
Average weekly wages—	1918	1928
Experienced employees.. . .	\$15 55	\$18 32
Inexperienced employees.. . .	11 90	11 91
Percentage of inexperienced employees.. . . . .	8.70	13.61
<i>Personal Service Occupation</i>		
Average weekly wages—	1918	1928
Employees over 18 years...	\$13 83	\$17 02
Employees under 18 years..	6 96	11 67
Percentage of employees under 18 years.. . . . .	15.38	7.45

<i>Office Occupation</i>		
Average weekly wages—	1918	1928
Employees over 18 years...	\$16 53	\$20 21
Employees under 18 years..	10 88	12 99
Percentage of employees under 18 years.. . . . .	7.45	3.51

<i>Public Housekeeping Occupation</i>		
Average weekly wages—	1918	1928
Employees over 18 years...	\$14 23	\$16 52
Employees under 18 years..	11 77	13 67
Percentage of employees under 18 years.. . . . .	5.51	3.73

Commenting on the figures in Table I the report states that "while the Minimum Wage Board does not take all the credit for the substantial increase in wages during this period, to the Orders is largely due this noticeable rise. Other economic factors have contributed in a lesser degree to these increases, but the wage level has been raised and maintained chiefly by this protective legislation." The report observes that "as employees are also buyers, the higher their wages the more they can spend, and thus their money goes into circulation to give impetus to trade."

The highest individual weekly wages recorded for 1928 in the nine industries were as follows: Mercantile industry, \$65; laundry industry, \$32.25; public housekeeping occupation, \$40; office occupation, \$75; manufacturing industry, \$43; personal service occupation, \$50; telephone and telegraph occupation, \$65; fishing industry, \$26.54; and fruit and vegetable industry, \$49.30. These peak wages were paid by firms in Victoria, Vancouver, Prince Rupert and Penticton.

Dealing with the marital state of employees under the various Orders, the report states that the relative proportion of married, widowed and single employees has not altered very materially in the past few years in the Province. From the returns for 1928 the following percentages in this regard are indicated: Married, 19.79; widowed, 3.73; single, 76.48.

Tables II and III give a statistical summary of all occupations covered by the regulations, and the labour turn-over in each group according to years of continuous service:—

TABLE II.—SUMMARY OF ALL OCCUPATIONS

	1928	1927	1926	1925	1924

## FACTORIES AND WORKSHOPS IN GREAT BRITAIN IN 1928

THE annual report of the Chief Inspector of Factories and Workshops of Great Britain for 1928 draws attention to the continued growth of industry in the south of England, particularly in the district of London. It notes an increase in the number of larger factories and a corresponding decline in the number of workshops. This change is stated to be due to the economic advantages arising from the concentration of work in large establishments well equipped with machinery and with other aids to cheap production. For example, many small tailoring and dressmaking workshops have been closed owing to the cheapness of ready-made clothing manufactured on wholesale lines; while similar changes are being witnessed in other trades, such as brewing and flour milling, which used to be largely carried on in small units in the country districts. Changes in fashion, and in the habits of the people, are also constantly causing disturbances in industry, curtailing some branches and expanding others. For example, the increasing use of ready-made garments has reduced the business of many small tailors and dressmakers; the small rooms in modern houses have created a demand for diminutive furniture, and some firms specializing in the manufacture of such furniture have been busy; the disuse of metal household fittings which require polishing, in order to reduce domestic work, is partly responsible for the "slump" in metal plating and polishing.

*Accidents.*—Fatal industrial accidents numbered 953 in 1928, as compared with 973 in 1927. Fatal accidents were most numerous in building construction (152), docks (100), shipbuilding (85), conversion of metals (79). It is suggested in the report that the fatality rates

per thousand accidents afford some indication of the relative severity of the accidents in the various industries. On this basis the highest fatality rates for 1928 were: buildings, 40; electrical generating stations, 19; docks, 14; gas works, 12; clay, stone, and cement works, 12; paper making, 8; woollen and worsted, 8; shipbuilding, 8.

It is pointed out that, as in previous years, over 70 per cent of the total number of accidents, and over 50 per cent of the fatalities, were due to causes unconnected with machinery of any kind. Thus 18,411 accidents, including 99 fatalities, were due to persons being struck by falling bodies; and 18,343 accidents, including 322 fatalities, were due to persons falling. The fatality rate of the latter class of accidents—17 per 1,000—is particularly high. The majority of the accidents in both these classes are not preventable by safeguards of any kind, but by the education of the workers in the exercise of care and forethought and in safe methods of working.

*Accident Prevention.*—The Report for 1928 again devotes a large amount of space to this subject. A discussion on the subject of safety organization took place at the International Labour Conference in June, 1928, when a resolution was passed to the effect that "the time has come to attempt to reach a higher standard of safety, by the development of new methods" on the lines of the "Safety First" movement. The matter has been taken up in this country with the various employers' associations, in those industries in which the incidence of accidents is high; and it is stated that, on the whole, satisfactory progress has been made. For example safety organizations have been established in about 80 per cent of

the ironworks which have blast furnaces in blast; in all the iron and steel rolling mills in Lincolnshire, and in 48 out of 50 of those in Scotland. In the engineering industry, a considerable impetus has been given to the safety movement; in some districts over 90 per cent, and in most districts over 80 per cent of the larger firms have either established a safety organization or have the matter well in hand.

New agreements in regard to safety precautions have been concluded both in the spinning and in the weaving branches of the cotton trade. The new agreements amend the agreements previously in force in various points of detail, and in addition provide for the setting up of a joint Standing Committee, which is to meet twice a year to review the agreement.

*Hours of Work.*—It is observed in the Report that there is little change to record in the hours worked in the principal industries throughout the country, where in the majority of cases the week of 47 or 48 hours is established. Reference is made, however, to cases in which longer hours are worked; it is mentioned that, if trade is good, the cotton doublers in Nottinghamshire, and certain hosiery firms in Scotland and in the Midlands, work the full legal period of 55½ hours a week, and that in bakehouses, especially those in which flour confectionery is made, the normal working week is often 54 hours or even more.

*Five-day Week.*—There has been no marked increase in this method of working during the past few years. Individual firms, in a great variety of industries, have adopted the system; and, once established, it appears to remain as the normal working system. In some areas where workers do not reside near the works it is arranged in order to avoid long journeys on Saturday mornings; in others to enable maintenance work to be done on Saturdays, or to save expense in overhead charges. In a few cases in which Saturday employment has been discontinued temporarily owing to bad trade, improved output on the five days has been noticed, and has resulted in adoption of the five-day week as a permanency. In some cases in which the five-

day week is a settled policy employment takes place on Saturday morning at times of seasonal pressure.

*Two-shift System.*—The employment of women and young persons over 16 years of age on two-day shifts is permitted by the Employment of Women, Young Persons and Children Act, 1920, provided an order authorizing such employment has been granted by the Home Secretary. Careful inquiries made by the Factory Inspectors show no very decided feeling generally among the workers either for or against the system; and an investigation conducted by the Industrial Fatigue Research Board disclosed no advantage over the other in either system (two-shift or normal day shift) as regards sickness experience.

Orders have been of considerable use in enabling firms to increase the total number of hours worked in the factory, without increasing them for the individuals concerned. Interesting examples of this are found in fruit preserving, where at times of seasonal pressure women were formerly employed during about four months of the year for any length of time between 6 a.m. and 10 p.m. It is stated that the advantage of the shift system, in avoiding the necessity for excessive overtime, seems obvious.

*Works Committees.*—In some areas works committees are declining in numbers; in others, and notably in the Midlands, there are a considerable number, and the number is steadily increasing. They vary greatly in size and in scope. There is a steady, if slow, increase in the number of smaller factories which are adopting the committee system. The report observes that, although the committee movement in industry is extending, at any rate in some parts of the country, the extension has taken place in isolated factories, and there is no evidence of a general movement towards it in any one trade. Even in the pottery industry, where a systematic attempt was made to set up works committees generally, on a uniform basis, it is believed that not more than six are really functioning at the present time.

## New Labour Legislation in the United States

*Injunctions Act in Minnesota.*—The Legislature of the State of Minnesota, at its 1929 session, adopted the following provisions relating to injunctions:

"No restraining order or injunction shall be granted by any court of this State, or any judge or judges thereof, in any case between

an employer and employees, or between employees, or between persons employed and persons seeking employment, involving or growing out of a dispute concerning terms or conditions of employment, except after notice and a hearing in court and shown to be necessary to prevent irreparable injury to

property, or to a property right of the party making the application, for which injury there is no adequate remedy at law, and such property or property rights must be described with particularity in the application, which must be in writing and sworn to by the applicant or by his agent or attorney, provided that a temporary restraining order may be issued without notice or hearing upon a proper showing that violence is actually being caused or is imminently probable on the part of the person or persons sought to be restrained; and provided that in such restraining order all parties to the action shall be similarly restrained."

*Non-Union Contracts Act in Wisconsin.*—The following measure came into force in Wisconsin on May 24, 1929:

"Every undertaking or promise hereafter made, whether written or oral, express or implied, constituting or contained in either (1) a contract or agreement of hiring or employment between any employer and any

employee or prospective employee, whereby (a) either party to such contract or agreement undertakes or promises not to join, become or remain a member of any labour organization or of any organization of employers, or (b) either party to such contract or agreement undertakes or promises that he will withdraw from the employment relation in the event that he joins, becomes or remains a member of any labour organization or of any organization of employers; or (2) in a contract or agreement for the sale of agricultural, horticultural or dairy products between a producer of such products and a distributor or purchaser thereof, whereby either party to such contract, or agreement undertakes or promises not to join, become or remain a member of any co-operative association or of any trade association of the producers, distributors or purchasers of such products, is hereby declared to be contrary to public policy and wholly void and shall not afford any basis for the granting of legal or equitable relief by any court."

## BRITISH COMMISSION'S REPORT ON ECONOMIC AND LABOUR CONDITIONS IN AUSTRALIA

AT the time of the Imperial Conference held at London in 1926 the suggestion was made by the Prime Minister of the Commonwealth of Australia that a commission composed of four independent business men from Great Britain should confer with the representatives of the various Australian governments and business men on the development of Australian resources, the increase of settlement, and other matters of mutual economic interest to Great Britain and the Commonwealth. A commission was appointed later, composed by Sir Arthur Duckham, Sir Hugo Hirst, Sir Ernest Clark and Mr. D. O. Malcolm. The commissioners opened their inquiry in September, 1928, and held numerous conferences with governments and their officials, with representative public bodies, with labour organizations and with associations of producers and traders of every kind concerned both with primary and with secondary industries.

The report of the commission, published early this year, states that the guiding principle followed in the inquiry was to ascertain what was best for Australia. "Given the maximum possible prosperity and wealth production in Australia, the ties between Australia and Great Britain are sufficiently close, and the sentiments of common loyalty

which bind the one to the other are sufficiently strong to secure that the maximum commercial intercourse will follow." The main problems dealt with are those concerning finance, migration, scientific and technical research, the protective tariff, the Arbitration Act or legislative enactments, both of the Commonwealth and of the States, for the fixing of wages and conditions of labour.

*Finance.*—The commissioners reach conclusions and make recommendations on all these subjects. They find that while the financial condition of Australia is sound, her national income and sources of public revenue being amply sufficient to pay for her government and to provide for the service and repayment of her public debt; but on the other hand Australia has, in past years, spent too much unprofitably on development schemes which have been undertaken either without sufficient regard to their probable financial and economic results or without adequate preliminary investigation of the schemes themselves. "She has been mortgaging the future too deeply and would do well to restrict her expenditure of borrowed money for development, notwithstanding the inconveniences that must follow from deflation, and to leave the field more widely open to private enterprise."

*Immigration.*—In regard to the problem of immigration the commissioners found that present circumstances in Australia are not favourable to migration, and recent figures of assisted migration show a sensible decline, but good work is being done to promote it, especially in regard to the migration of children, young people and women for domestic employment.

Criticism is made of the existing agreement between Great Britain and Australia known as the "£34,000,000 Agreement" as being too narrow, and because those states that are mainly concerned with primary production are likely to be embarrassed in fulfilling their obligation to accept a specific quota of migrants in respect of each scheme. "We consider," they state, "that the Agreement might be amended and the period of its operation extended so that the funds available under it might be used for work calculated to promote migration into Australia generally, without conditions as to specific numbers of migrants into any State, e.g., for scientific research and for large scale experiments to test its results before they are adopted."

*Scientific Research.*—The commissioners declare that the more intensive use of land already in occupation in Australia is a matter of the greatest importance. This should be promoted by scientific research and will increase the country's wealth more surely and rapidly and more cheaply than further extensive development is likely to do.

*Effect of Tariff.*—After dealing with the "vicious circle" of increased prices due to the tariff, and of increased costs of labour due to arbitration awards, the commissioners state that it is urgently necessary to break the vicious circle without lowering the standard of living, i.e., real wages. "Efficiency," they declare, "should be a condition of protection, and protected industries should be liable to furnish the government with the fullest information as to their prices, costs, and conditions generally." They recommend that a full inquiry and investigation should forthwith be instituted by the Commonwealth Government into the whole question of the economic effect of the tariff and the incidence of its duties. Pending this enquiry there should be no avoidable increase of duties.

*Industrial Relations.*—In regard to the question of industrial relations the commissioners find that the system of settlement of industrial disputes by awards of the courts set up under the Arbitration Acts has failed, has involved overlapping jurisdiction and conflicting decisions, and has tended to divide

employer and employed into two opposing camps. There should, they consider, be the minimum of judicial and governmental interference with the relations between employer and employed; and industrial disputes should be settled by way of discussion and frank interchange of views between the parties concerned.

The report contains the following paragraphs dealing with this subject:—

"In every capital city of Australia we have had the advantage of meeting the leaders of the Trade Union movement. We have been much struck by the strength of that movement, reinforced as it doubtless is by the homogeneity of the people and by the active and intelligent interest which they take in all matters affecting their welfare. We have had frank and interesting discussions with the leaders of the movement; and we have found that practically on every occasion the subject of the Arbitration Acts and of the courts established thereunder has come up during the course of these discussions. By workmen's representatives, not less emphatically than by representatives of the employers, it has been consistently represented to us that the Arbitration courts are not achieving their purpose and that a system designed to arrive by judicial decisions at fair and prompt settlement of industrial disputes such as could be freely accepted by both sides must be held to have failed.

"The most important of the reasons which have been advanced for this view are that experience has shown that there arises between the two parties who appear before the Arbitration court judge or Arbitrator the spirit of antagonism inseparable from litigation, and that the object of prompt settlement is defeated by the delay occasioned by the necessity for the collection and presentation of detailed evidence in a form acceptable to a court. It is complained that the procedure of the court occasions the expenditure of much time and money by the litigants, and involves very long absences from their ordinary occupations for a large number of persons whose time might be more profitably employed; that the subject matter of the questions which are brought before the courts is not of a nature with which judicial tribunals, necessarily unversed in the practical problems of industry or in the economic questions to which they give rise, are best fitted to deal; and that the overlapping jurisdictions of the Federal and State Arbitration courts have led to an almost inextricable tangle of conflicting decisions so complicated that large staffs have to be maintained to keep track of

them and to endeavour to guard against involuntary contravention of any of them in the course of every-day business.

"If the settlement of industrial disputes must continue to be referred to Arbitration courts, we think that the faults of the system will continue to be intensified unless an end can be put to overlapping and conflict between the spheres of Commonwealth and State jurisdiction, and the courts themselves are laid under an unqualified statutory instruction to have regard to the economic effects of their awards both on the industry with which the awards may be immediately concerned and on other industries which may be indirectly affected by them. We think, too, that it should be a condition of access to an Arbitration Court that the parties should first have made a *bona fide* attempt to arrive at a settlement of their dispute by way of conference with each other, and that a full statement of the points in regard to which they have failed to arrive at an agreement should be laid before the court. This procedure should secure that if either side has shown itself unreasonable the court shall be made aware of it."

*The Basic Wage.*—In regard to the question of the wage basis it is found that the system of fixing wages by reference to a basic money wage which rises and falls with a varying index figure of the cost of living is open to the

gravest criticism as giving no interest to the workers in the reduction of the cost of living.

"A system of wage fixation resting upon a basic money wage which rises or falls with a varying index figure of the cost of living is open to the gravest criticism, as tending to deprive employees of any interest in the prosperity of the industry with which they are connected. Let us assume that by better, more energetic, and more willing work on the part of all concerned from the highest to the lowest, the output of Australian industries were increased with no increase in overhead cost. The natural economic effect would be that prices all round would fall and that consumption and profits would rise; but as the cost of living would fall the basic wage would also fall, and with it all wages fixed by the Arbitration Courts in relation to the basic wage with margins for special skill and the like. Thus the system is such as to give the worker in industry no interest in a cheaper cost of living, and no inducement to that increased efficiency which would tend to bring it about. In such a case as we have imagined it would be only right that wages should rise and that the workmen should share in the increased prosperity so largely attributable to them. It is only if all concerned in industry genuinely feel that their own fortunes are bound up with its success or failure that that solidarity in industry which is essential to its prosperity can be achieved."

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Shop Safety Rules

The Province of Quebec Safety League recently compiled the following "shop safety rules." Each rule was suggested by a serious accident which called attention to the need of a rule.

1. In case of sickness or injury, no matter how slight, go to the plant hospital or First Aid at once. In no case should you treat your own or another worker's serious injuries nor remove foreign particles from the eye.

2. Report any unsafe condition to your foreman at once. Don't wait for the other fellow to do it, as someone may be injured in the meantime. Safety suggestions are always welcome. Give them to your foreman, superintendent or to the Safety Organization.

3. Never operate any machine, crane, tractor, elevator or other piece of moving machinery unless you have instructions from your foreman.

4. Shut down your machine before cleaning, oiling or adjusting and wait until it stops.

5. Never distract the attention of another worker, as you might cause him to be injured.

6. Do not attempt to lift nor push objects

which may be too heavy for you—ask for help when you need it. Learn to lift the right way and avoid strains; bend your knees; keep your body erect; then push upwards with your legs. It is much easier.

7. All chemicals and gas containers should have prominent labels. Always read and obey instructions on label.

8. When handling acids, alkalis, or other caustic materials, always wear goggles and rubber gloves.

9. Never climb through, over, under, nor between railroad cars. Wait until the train passes or walk around the end of the train, giving yourself plenty of room. Stop! Look! and Listen!

10. Running, horse-play, throwing things, scuffling and fooling in the plant are very dangerous and cannot be tolerated.

11. If your hands become soiled with paint, lead or any other poisonous substance, be sure to wash them before eating lunch. Do not touch lips nor put anything into the mouth without this precaution.

12. Always make an air test before entering tanks, bins or other places where there may be dangerous fumes. Wear a life line and have someone stationed outside to help in an emergency.

13. Intoxicating liquors are not permitted on the plant premises at any time.

#### *Plant House-keeping*

14. Keep the places about you clean, and put all oily waste, rubbish, or papers in the containers provided for that purpose.

15. All overhead platforms or scaffolding should be provided with toe-boards to prevent small tools or other objects from rolling or being kicked onto persons below.

16. When you see boards with projecting nails, pull the nails, turn them over, or put the boards where they can do no harm. Pick up all loose nails.

17. All excavations, open manholes and other places where persons might fall should be suitably protected.

18. Pile materials properly. Do not block aisles, exits, power panels or valves by materials, tools or equipment.

#### *Tools and Equipment*

19. Safety guards are for your protection, and must not be removed except to make adjustments or repairs. Never operate your machine unless all the guards provided are in place. If a guard is not in proper condition report this at once to your foreman or superintendent.

20. Before using any ladder see that it has good safety feet and is free from cracks, broken rungs and other defects. When necessary, to prevent slipping, have another worker hold the bottom of the ladder.

21. Never use "make-shift" or defective scaffolding, rigging or stages.

22. Never use defective punches, wrenches or other tools. Flying chips from tools with mushroomed or split heads cause many injuries. Exchange or see that defective tools are repaired.

23. When handling molten metal, wear goggles, leggings and safe footwear.

24. Never use your fingers for removing chips from machines. Use a brush or hook.

25. Adjust tool-rests on grinders within one-eighth inch of the grinding wheels. Be sure to stop your machine while doing so.

26. Use compressed air only for the job which it is intended. Do not clean your clothes with it; do not fool with it; do not blow the air against any one, as it might enter his body and possibly kill him.

27. Welding equipment must not be used nor tampered with by any but the regular operator. Protective screens should be properly placed.

28. Wear the respirators provided for your protection when working where there are dangerous fumes or dust.

29. When working in unguarded high places wear a life belt, properly secured, to prevent falling.

#### *Safe Clothing*

30. If you are provided with goggles, wear them, as instructed.

31. When working around moving machinery, do not wear knitted jackets, flowing ties, or other loose clothing. Roll or cut off loose sleeves at the elbow.

32. Do not wear gloves when operating any machine unless their use has been O.K.'d by the foreman.

33. Close fitting caps or hair nets should be worn around moving machinery to prevent the hair from becoming caught.

34. Celluloid eye-shades are not to be worn either separately or as a part of a shop cap, because celluloid is very easily ignited and may cause serious burns and eye injuries.

#### *Elevators, Cranes, etc.*

35. Under no circumstances, enter elevator shaftway nor permit head or body to project into shaftway, unless special arrangements have been made for shutting off power in advance.

36. Do not tamper with elevator equipment (for example, elevator gate interlocks are for your protection). Report any defects at once to someone in authority.

37. Never attempt to enter nor leave an elevator while it is in motion.

38. Do not put your head over or under gate to look for car. Make sure your feet do not project into shaftway when riding on elevator.

39. Never stand nor walk under a crane load. Obey the floor man; listen for the crane bell or other signal.

40. Chains, slings and hooks should never be over-loaded and should be inspected periodically. Use correct tackle, as a safety sling load will save time and material, and will prevent accidents.

#### *Fire Prevention*

41. Learn the location of all the fire exits and alarm boxes in the vicinity. Under no circumstances use a pail of water where extinguishers are provided.

(a) In case of fire in electrical equipment, pull the switch, call electrician and use carbon tetrachloride extinguisher—other types may cause death by electrocution.

(b) For common fires, such as with rubbish, paper, rags, etc., use any form of extinguisher.

(c) For fire in flammable liquids, use foam type extinguishers or other special extinguishers provided for that purpose.

42. Fire doors must be kept clear. Learn the location and proper use of any fire fighting equipment in your vicinity.

43. Do not use gasoline for cleaning purposes, unless it is first mixed with carbon tetrachloride, using three parts gasoline and two part carbon tetrachloride. Never pour any coal-oil, gasoline, oil or other inflammable liquids into any sewer or drain.

#### **Construction Safety Association for Ontario**

The Ontario Workmen's Compensation Act contains a clause permitting the industries to set up associations for the prevention of accidents and authorizes the Compensation Board to pay the expenses of those organizations out of the accident fund. Recently the general contractors of the province with pay-rolls of \$30,000 a year or over set up the Construction Safety Association and elected as provisional directors, Messrs. A. R. Holmes, A. R. Holmes Ltd., Toronto; N. M. Brydon, Wilde and Brydon, Toronto; Chas. Robertson, Schultz Construction Co. Limited, Brantford; J. M. Pigott, Pigott Construction Co. Ltd., Hamilton; S. E. Dinsmore, S. E. Dinsmore Co. Ltd., Windsor; J. F. Meagher,

Ross-Meagher Limited, Ottawa; and H. J. Ball, Ball Brothers, Kitchener. Mr. Holmes was elected chairman and R. B. Morley of Industrial Accident Prevention Associations is secretary-treasurer. The movement to establish a safety association for the construction industry was noted in the *LABOUR GAZETTE*, February, 1929, page 117.

It is the intention of the committee to carry on an aggressive campaign, as the accident experience of the group has occasioned both the Compensation Board and the general contractors a good deal of concern. The Construction Safety Association will work in harmony with various authorities and J. J. Woolnough, City Architect for Toronto, has already promised full co-operation.

At the present time a survey of the whole situation is being made in Toronto, Hamilton, Ottawa and the Border cities under the direction of V. L. Mummery, chief inspector, Industrial Accident Prevention Associations, and a full report will be presented at the meeting of directors of the Construction Safety Association in September.

### Social Importance of Industrial Hygiene

Dr. E. G. Pedley, of the Industrial Clinic, McGill University, Montreal, contributes to the August issue of the *Social Welfare* (published by the Social Service of Canada) an article in which he shows the value of industrial hygiene to the life of the community. "Since the industrial population," he says, "is gathered together in rather large groups, and is, therefore, capable of approach, industrial hygiene bears a similar relation to adult health that school hygiene bears to child health."

Summarizing the past results of preventive medicine Dr. Pedley points out that "thirty years ago the expectation of life of an infant at birth was about 48 years, now it is nearly 58 years. There has been a gain here of about 10 years. This gain, however, has been effected for the most part by a great saving in

infant deaths and affects adults very slightly. Actually, as a matter of fact, the expectation of life at older ages appears to be decreasing. One large insurance company has recently reported that in its experience the expectation of life of adults, say at 35 years of age, has actually decreased in the last six years. The causes of adult mortality have altered somewhat, such diseases as tuberculosis and typhoid fever have very definitely decreased, but other diseases have increased and the net result is a slight increase in mortality in the older ages."

Turning to the connection between poverty and disease, Dr. Pedley quotes the statistics compiled by the Registrar General of England and Wales as showing that "if the death rate from all causes among industrial workers in England and Wales be taken as 100, that of the best paid group is 81, while that of the worst paid group is 126. In the case of tuberculosis an even more impressive contrast is afforded for the worst paid group has a mortality nearly three times that of the best paid group.

"It is generally accepted," Dr. Pedley says, "that the community can demand proper working conditions as we understand them for its people. This means adequate wages, suitable hours of labour, proper conditions of ventilation, seating, illumination and the like. Many industries exceed the demands imposed by the community, and under the theory that the best workman is the healthy one provide lunch rooms, recreation facilities, and medical service to the employees. It is felt that perhaps the most important single force in the improvement of industrial or adult health is the industrial medical department, not only from the standpoint of the prevention of disease, but also from the standpoint of the early recognition and cure. Dr. Dublin has stated that the next great reduction in the tuberculosis death rate must come from the activities of the industrial hygienist and this might be said of other diseases, too."

## Safety Regulations for Grain Elevators in Saskatchewan

The following regulations for the prevention of accidents in the grain elevators have been made by the government of the Province of Saskatchewan under the provisions of the Factories Act.

### PART I—General

#### Horizontal Shafting.

1. Every driveshaft which is not more than seven feet from the ground, floor or working platform, or which is in an exposed position,

and can be approached while in motion, shall be guarded on the sides and bottom or protected by a standard railing ensuring not less than fifteen inches and not more than twenty inches horizontal clearance from the nearest moving part.

#### Fly Wheels or Pulleys.

2. Where a fly wheel or pulley runs in a pit there shall in each case be a handrail and toe board around the pit.

*Projecting Shaft Ends or Keys.*

3. (1) All projecting shaft ends or keys shall be cut off or properly protected with stationary casing.

(2) Where a gas engine is used and it is impracticable to comply with the provisions of subsection (1), the projecting shaft ends or keys shall be covered with a metal cap made of cast or malleable iron with smooth surface and fitting to the hub of the wheel.

*Couplings and Collars.*

4. Shaft couplings and set collars shall be of a safety type without projecting bolts, set screws or other dangerous projections, or shall be securely guarded.

*Grain Bins.*

5. (1) Grain bins shall have a substantial covering securely fastened or shall have a runway across the bins constructed of two inch planking supported on not more than an eight-foot centre. Each runway shall be at least twenty inches wide and shall have a toe board on each side and a substantial hand-rail.

(2) Drive belts or ropes passing through the main floor of an elevator shall be encased by a substantial housing or guard to a height of not less than six feet.

6. (1) Grain bins shall be equipped with substantial ladders or braces of iron or wood. Where a wooden ladder is used, the rungs shall be not more than thirty-six inches apart and shall be constructed of two by four-inch material rounded on the top and built in one corner of the bin, the ends of each rung being securely fastened to the sides of the bin where they form the angle. A rope not less than three-quarters of an inch in diameter shall be securely fastened to the bottom rung of the ladder by double U clips and shall reach to the outlet in the bottom of the bin. A rope shall be securely anchored at the top of each bin, of sufficient length to reach the bottom of the bin.

(2) Grain hoppers shall be provided with a ladder securely fastened to the side of the hopper within six inches of its top and extending to the outlet at the bottom of the hopper.

*Floor Openings.*

7. All stairways and raised platforms over four feet high shall be provided with suitable hand rails and, where practicable, with toe boards.

*Ladder.*

8. Elevators shall be equipped with a ladder reaching to the top, in addition to the manhoist.

*Hinges on Trap Doors.*

9. Trap doors or floor openings shall be fitted with suitable hinges.

*Engine Fly Wheel.*

10. The bottom part of an engine fly wheel shall be at least four inches from the floor or concrete base.

*Belt Shifters.*

11. Air compressors driven from the fly wheel of the main engine, shall be equipped with an efficient belt shifter, so as to avoid accident to the operator.

*Idler Pulleys.*

12. Idler pulleys on rope-driven elevators shall be so anchored as to prevent them falling in the event of the rope breaking.

*Report of Unsafe Conditions.*

13. Elevator operators shall report to an inspector of the Department of Railways, Labour and Industries, any condition which is deemed unsafe.

## PART II

## Manhoists

*Cable.*

1. (1) Manhoists shall be equipped with a cable not less than three-eighths of an inch in diameter.

(2) Where fastened to the manhoist and weight, the cable shall be secured with not less than two U clips of proper size or shall be otherwise securely fastened.

(3) Cables shall be of such length that the counterweights will rest on the bottom floor when the manhoist is level with the top floor.

(4) Cotton hemp or manilla rope shall not be used in the operation of a manhoist, except as a hand rope.

*Sheave.*

2. The sheave for a manhoist cable shall not be less than eighteen inches in diameter.

*Hand Ropes.*

3. Hand ropes shall be securely fastened at the top and bottom and shall not be less than three-quarters of an inch in diameter.

*Counterweights.*

4. Counterweights shall be entirely enclosed by a substantial casing of wood or other material, and shall be fastened to the cable in such away that there is no possibility of their becoming detached.

*Guide Rails.*

5. Manhoist guide rails shall be so braced that they will not spread and that there will be no danger of pinching. Cables shall not be used for manhoist guides.

*Safety Catch.*

6. Manhoists shall be equipped with an efficient device which will stop the manhoist in the event of the cable breaking or becoming detached at either end.

*Load on Manhoist.*

7. One man only shall ride on a manhoist. Manhoists shall not be used for carrying lumber, parts of machinery or any other load other than that of a man.

*Under Age.*

8. No person under sixteen years of age shall operate a manhoist.

*Catch.*

9. Manhoists shall be equipped with a catch or self-acting lock at the bottom floor of the elevator and also at each floor where a man may step off the hoist.

*Brake.*

10. Manhoists shall be equipped with a foot brake capable of holding the hoist, without load, against the pull of the counterweight.

## The Qualifications of Foremen

The need for training foremen was urged by Mr. George Cadbury, of Cadbury Brothers, Limited, chairman of the Bourneville Works Council, in a recent address to the conference of Industrial Administrators held at Oxford, England. He showed that the foreman is a vital link in any scheme of industrial organization. "It is the foreman who is responsible for seeing that everything goes on according to plan. He must know just the capacity of his machinery and plant, and just what is expected of it. He must know something about costs, for he will have to sign time cards, and unless he grasps the significance of the whole scheme the time cards, to him will only be a ridiculous superfluity.

"He should understand wages and piece-rates, and in my opinion he should be consulted when these are set. He will probably have to discuss the question of their fairness with the men under him, and he cannot do this unless he is acquainted with all the relevant factors. In modern costing various overhead charges are placed against various processes in various departments—in many cases, for example, the overheads are placed against the labour costs. But the foreman should know how the overheads are built up. Unless he has an intelligent understanding of the principles on which his own shop is being costed, he cannot possibly do his utmost to keep costs down."

The foremen of the future, in Mr. Cadbury's opinion, will require to be trained in a very wide range of subjects, as follows:—

(1) They should understand the Factory Acts.

(2) They should have some acquaintance with trade union laws and customs.

(3) They should have a clear idea of the principles underlying costing, the wage-scale, piece-rates, and kindred subjects. In short, they should understand the financial aspect

of the production in which they are engaged.

(4) They should be initiated into methods of checking materials and products at various points in production.

(5) They should understand the functions of the technical experts who examine and supervise what is turned out by various departments at the various stages of production. Those experts may be chemists, or they may be skilled engineers; the foreman is a link between his own department and whatever expert assistance it requires.

### Winter School for Women in Industry

The *New Republic*, July 3, 1929, contained the following announcement: "A new step in labour education will be taken with the opening, this fall, of the first winter school for women in industry—the Vineyard Shore School, at West Park on the Hudson. The school is an outgrowth of the summer-school movement which started at Bryn Mawr College in 1921, and aims to provide the means whereby women of the rank and file of industry can devote full time, for a school year, to courses of study planned especially for them, something the public schools and colleges have so far failed to provide. The subjects to be taught in the first year are English, science, history and economics. Experimental methods of teaching will be used; plans are also being developed for the future training of teachers for workers' classes. To be eligible for admission to the school, students must be between the ages of twenty-one and thirty-five, must have had at least three years in industry and must be able to read and write English fairly well. The school does not aim to take workers out of industry or to help them to get better jobs. Instead, it aims definitely at sending workers back into industry filled with a desire to open educational doors to other workers."

## TRADES AND LABOUR CONGRESS OF CANADA

### Synopsis of the Proceedings of the 45th Annual Convention

**T**HE 45th annual convention of the Trades and Labour Congress of Canada was held in Saint John, New Brunswick, commencing on August 26, the sessions being held in the Georgian ball room of the Admiral Beatty Hotel. (The previous meeting of the congress in Saint John was in the year 1914, a few weeks after the beginning of the world war.) The opening session of the 1929 convention, which was opened by an invocation by Rev. J. Cracknell, preceded by musical selections by the Saint John branch of the American Federation of Musicians, was presided over by Mr. J. A. Whitebone, president of the Saint John Trades and Labour Council, who welcomed the delegates on behalf of local organized labour. The first speaker was His Worship Mayor W. White, who welcomed the delegates to Saint John on behalf of the municipality.

The Lieutenant-Governor of the Province of New Brunswick, General H. H. McLean, in welcoming the delegates to the province offered his sincere wishes for a successful convention. He was pleased last year, he said, to learn that the Congress had set its face against communism by refusing a seat to a delegate identified with the Communist Party.

The Hon. J. B. M. Baxter, premier of the province, stated that New Brunswick was particularly happy in having the opportunity to entertain the delegates. Referring to compensation laws the premier said: "We have recognized the principle that industry collectively shall bear the burden of collective injury." The Government for some time had been endeavouring, he said, to provide good roads, free school books and other things of that character and were also considering a commission to inquire into the practicability of an old age pension act.

The Hon. Dr. H. I. Taylor, Minister of Health and Labour, in joining the premier in welcoming the delegates, said: "Labour's future looms very brightly now; so many men have given their best efforts for the cause, and now their ideas are respected by all. Fair and considerate treatment and adequate remuneration are required and are being obtained as a result of the efforts of these men." The Hon. L. P. D. Tilley, President of the Executive Council of the province, and Dr. Murray MacLaren, one of the local members in the House of Commons, also added words of welcome.

#### The Minister of Labour

The Hon. Peter Heenan, Federal Minister of Labour, speaking on behalf of the Dominion Government, said he was pleased to be present to meet the delegates and to discuss with them matters which they wished to bring to his attention. Referring to the visit to Canada of the Right Hon. J. H. Thomas, Lord Privy Seal and Minister of Unemployment in the British Labour Government, Mr. Heenan said: "Mr. Thomas does not desire to deprive any man in Canada of an hour's work, neither is he trying to undermine the Canadian standard of living by shifting British unemployment problems to Canada's shoulders." Referring to the work of the labour organizations Mr. Heenan said that labour had done more than was generally known in its fight for three things particularly—compensation acts, mothers' allowances and old age pensions—legislation that called for the expenditure of vast sums of money. Mr. Heenan complimented the premier of New Brunswick on the appointment of a commission to investigate the question of old age pensions, which body, he felt sure, would recommend the adoption of the legislation. He also referred to the passage of the Order in Council prohibiting contract labour being brought into Canada. (A copy of the order appears elsewhere in this report.) The minister paid a tribute to the manner in which organized labour had conducted its affairs, and stated that labour had shown that it was not selfish and that its demands were not for itself alone but for the benefit of the country at large.

#### British Minister of Unemployment

The Right Hon. J. H. Thomas expressed his appreciation of the welcome extended to him. "The cabinet of which I am a member," he said, "is not necessarily composed of manual workers, for we refuse to confine ourselves to that definition of labour. We include all who work with hand or brain." The history of labour had been an evolution, and he warned his audience against the man who advocated taking a short cut to bring about needed improvements in conditions. Revolution and bloodshed had never accomplished any good purpose and in the end gained nothing for the worker. The government of which he was a member was working along those lines, bearing in mind all the time that power brought with it responsibility and that power when prostituted was a danger.

The Labour Government, he continued, was not saying much at present. They wanted to wait until there was something definite to offer as to why they were engaged in an effort to have a real reduction made in the armaments of the world. The record of the British nation in pouring out of blood and treasure was one that none need be ashamed of, and that was why Philip Snowden had stood up at The Hague and demanded that greater justice be done Great Britain. The Motherland had paid to the last dollar all her debts and felt that others should do the same. The commonwealth of nations which formed the British Empire was more than a farce, and no act of the Labour Government would destroy that commonwealth. Mr. Thomas then gave a few statistics showing the problem facing the government in dealing with unemployment. In the years 1914 to 1918 Great Britain had lost 1,000,000 men, killed and permanently disabled, yet despite that loss last year there were 800,000 more in industry than in 1914. To-day there were registered 1,250,000 of unemployed and the births outnumbered the deaths by 200,000 a year. From 1918 to to-day there had been paid out in relief £800,000,000 and an additional £109,000,000 spent in relief works of various kinds. The debt of the country was £700,000,000,000, yet despite all this such was the blood and breed of the race that they were prepared to carry on and go through. The country was not down and out by any means.

Mr. Thomas declared that it was not the intention of the government to solve the employment problem by sending the idle to Canada, but it was the intention to help real migration that would be of benefit to both countries. Their object was to solve the employment problem by providing work in Britain for the idle and if the Canadian people would remember that England was still their best customer and would buy goods now being bought elsewhere this would be accomplished.

Any proposition he had made to the Canadian government or to any provincial government, Mr. Thomas stated, would not cost the taxpayers of this country one cent. Neither would he ask them to buy anything from Britain that was being manufactured in Canada.

#### President's Address

The president of the congress, Mr. Tom Moore, on assuming the chair, thanked the speakers for the hearty welcome extended to the delegates. He outlined the connection of the congress with the trade union movement in the United States and declared that

the Canadian movement was entirely free from United States influence or control in all cultural, social and legislative matters, and was not dominated by any party outside of Canada.

#### Credentials

The first business was the report of the Credential Committee, which was presented by the chairman, E. W. A. O'Dell, of Hamilton, who stated that in accordance with the constitution as amended in 1928 all delegates had signed the declaration that they were not affiliated with any dual organization. Credentials for 230 delegates had been received, the representation being as follows:—Forty-four delegates represented a similar number of international organizations which had paid *per capita* on their entire Canadian membership, two represented provincial federations of labour; 25 represented 14 trades and labour councils; 157 represented 108 local branch unions and two were fraternal delegates, representing respectively the British Trades Union Congress and the American Federation of Labour. The report was adopted, after which the various convention committees were appointed. Ald. Rod Plant, of Ottawa, was appointed associate secretary, J. J. Morrisey, of Saint John, sergeant-at-arms, and Alphetus Mathieu, of Montreal, translator, all of the reports and resolutions being read in both the English and French language.

#### Report of the Executive Council

The report of the executive council opened with a statement in regard to the annual interview with the Dominion Cabinet at which the following matters were submitted by the congress representatives: (1) Old age pensions; (2) re-enactment of Technical Education Act; (3) Fair wage regulations; (4) Criminal Code amendments; (5) Curtailment of veto power of Senate; (6) British North America Act; (7) Unemployment and unemployment insurance; (8) Immigration and emigration; (9) Union Labour Act; (10) International arbitration as a substitute for war; (11) Cadet training; (12) Militia Act amendments; (13) International Labour Organization; (14) Letter Carriers' conditions; (15) Federal office cleaners; (16) Marine matters; (17) Pensions; (18) Industrial Disputes Act; (19) Tariff; (20) Marking Act; (21) Taxation; (22) Electoral reform; (23) Eight-hour day; (24) One day's rest in seven; (25) Co-operative legislation; (26) Prison reform; (27) Bankruptcy Act.

Section 2 of the report contained a review of the third session of the sixteenth Par-

liament, during which, in addition to the requests of organized labour introduced by the Government, a number of matters included in the legislative program of the congress were brought to the attention of the House either through introduction of bills by private members or resolutions submitted.

Section 3 dealt with the work of the provincial executive committees and federations of labour, the executive stating that every possible assistance had been rendered towards securing a greater degree of uniformity of social and labour legislation throughout the Dominion. The executive also referred to several matters which had been dealt with in a number of the provinces.

Section 4 referred to the affiliations of the congress and its representation on other bodies, included in which are the International Federation of Trade Unions; Womens' Trade Union League; American Association for Labour Legislation; Child Welfare Council; League of Nations Society in Canada; International Labour Organization; Employment Service Council of Canada; National Research Council; Dominion Council of Health; Canadian Council on Immigration of Women; Canadian Engineering Standards Association; Dominion Fire Prevention Association; The Frontier College and the Canadian Social Hygiene Council.

Section 5 dealt with the international relations of the congress and informed the delegates that invitations had been received to send fraternal delegates to conventions of the national trade union centres in Ceylon and Yugoslavia, but financial considerations would not permit of extending this practice beyond the American Federation of Labour and the British Trades Union Congress. Reference was also made to the International Labour Organization and the part taken in its deliberations by the Canadian workers' representatives, who have been nominated by the congress as the most representative labour body in the Dominion.

Section 6 made reference to the registration of an employers' trade union under the Trade Unions Act, the executive quoting a letter to the Minister of Labour in which it was stated the congress is strongly opposed to granting registration as trade unions to employers' associations, and expressed the hope "that the Government will protect the interests of wage earners in this matter by refusing to grant any further registration of such a character."

Section 7, under the heading of "Migration and Contract Labour," stated that "this complete program of legislative proposals incorporating the decisions of previous conventions respecting emigration and immigration was

again presented to the Government for consideration." It was stated that a number of other organizations had adopted resolutions favouring many of the items included in the migration program of the congress. It was also stated that the displacement of workers by imported contract labour had been the subject of numerous conferences with the Department of Labour and the Department of Immigration with a view to securing amendments in the laws to prevent such practice.

Section 8 under the head of "Old Age Pensions" stated that all of the provinces of Canada west of the Quebec boundary had adopted the Old Age Pension law, and that the Maritime Provinces had taken steps towards the enactment of this legislation by the appointment of special commissioners to report on the cost and how the necessary revenue might be raised.

Section 9 reported that very little actual progress had been made during the past year towards securing legislation providing for the payment of unemployment insurance. The executive urged that every possible effort be made to influence the members of the Federal Parliament and the Provincial Legislatures to support the enactment of such legislation.

Section 10, under the caption "Age Limit for Employment," called attention to the strong tendency towards refusal of employers to give employment of any kind to those who have passed a fixed age limit, and stated that the practice is developing a social problem.

Section 11 made reference to the question of family allowances, a proposal which the executive did not believe is in the best interests of the workers of the Dominion. After giving reasons for this opinion, the executive recommended that the convention declare itself as opposed to the payment of family allowances in Canada.

Section 12 outlined the development of holidays with pay. The executive concurred in the opinion of the International Federation of Trade Unions "that the granting of holidays with pay must no longer be left to chance, but should be recognized in all countries as the right of the workers," but stated that the demand for legislation must first be preceded by the more general application of the practice through collective agreements.

Section 13—Union Labels—gave an outline of the work of the Canadian Advisory Committee on Union Labels, and reported as to how the congress was co-operating with the representatives of union label trades in arousing interest in favour of the purchase of products bearing the union labels.

Section 14 reported on the progress of the *Congress Journal*, the deficit on which had

been wiped out, and urged a greater support for the publication.

Section 15 dealt with this proposal for calendar reform, and the executive stated that careful study had been given to the entire subject since November, 1927, when an invitation of the Fixed Calendar League to cooperate in its work had been received, and that they were of opinion that in any national committee which may be established organized labour should be represented.

Section 16 gave an account of the suspension of the charter of Federal Labour Union, No. 30 (Civic Employees) of Edmonton over a jurisdictional dispute with another local union, and the executive asked that the convention revoke the charter.

Section 17 contained some proposed amendments to the constitution which the 1928 convention had instructed the executive to submit to the 1929 meeting with a view to protecting the congress against organizations hostile or antagonistic to the general policy of the organization.

Section 18 contained reference to a number of matters of concern to the labour movement, included in which were statements in regard to (1) Publicity and organization, (2) Radio broadcasting, (3) Matters brought to the attention of the Government Departments, (4) Compensation Acts, (5) Support for the Co-operative Union of Canada, (6) Empire shopping week, (7) Economic councils, and (8) Commendation of the special Canadian number of the *American Federationist*.

The executive also submitted the reports from the provincial executive committees and the provincial federations of labour showing the matters which had been presented to the various provincial governments and the legislation of interest to labour which had been adopted.

Reports were presented by the fraternal delegate to the British Trades Union Congress and the fraternal delegate to the American Federation of Labour.

The above reports were referred to the Committee on Officers' Reports, except section 13, which was referred to the Committee on Union Labels, and section 17, which was handed to the Committee on Constitution and Laws.

### Report of Committee on Officers' Reports

The Committee on Officers' Reports in submitting its report referred to the activities of the executive council and commended the work which had been performed, and stated that the number of questions which had been dealt with was but a reflection of the ever-expanding influence of the organized

labour movement in Canada as expressed through the Trades and Labour Congress.

The committee approved of the various recommendations of the executive, and requested the executive to continue to press for legislation or amendments to existing legislation in order to secure results. The committee also had referred to it a resolution in favour of family allowances, but the committee recommended non-concurrence, upholding the recommendation of the executive in regard to the proposal. The committee commended the provincial executive committees and the provincial federations for their activities and the fraternal delegates for their reports. The report of the committee was adopted.

### Statement of Mr. John Bruce

Following the adoption of the report of the Committee on Officers' Reports Mr. John W. Bruce, representative of the United Association of Plumbers, Gas and Steam Fitters, some local branches of which organization have agreements with the registered employers' trade union, known as the Amalgamated Builders' Council, was permitted to make a statement, the full text of which was as follows:—

In the matter of the registration of employers under the Trade Unions Act my position has been well known since this matter has been under review, and whilst I have no desire to reopen the question, but so as there shall be no public misunderstanding of our interest and connection with the Amalgamated Builders' Council, I want to make this submission of our position, as our organization is vitally affected by the registration of this organization by the Government.

Upon registration of this body, believing, as I still do, that such registration is not inimical to our best interests and should be recognized as they are in Great Britain. With this thought in mind it encouraged the idea of establishing closer relations with our employers and the building up of a co-operative agreement to bring about a better understanding of our mutual problems with a co-operative agreement and a new spirit in our industry. So, we entered into negotiations with the master plumbers of several cities in Ontario so as to bring peace within the industry and a better understanding with those who have the responsibility of conducting the same. Therefore, we entered into agreement with the Amalgamated Builders' Council, based upon conditions that we had previously established, and similar to many agreements held by other organizations, acting in good faith and believing as we do that they are good in law and not the subject of attack or prosecution.

These agreements at all times recognizing our desire for the establishment and maintenance of an absolute union shop and perpetuating the conditions that have been built up by the efforts of our membership for years and fully in accord with the constitution of our organization.

These agreements bringing as they did improved working conditions and better wages were fully concurred in by our general office and I as their representative willingly endorse same.

We were completely surprised when the Minister of Labour, the Hon. Peter Heenan ordered an investigation into the operation of the Amalgamated Builders' Council, especially in view of the fact that in the serious situation which occurred in Toronto in May when a strike occurred for the enforcement of an agreement with the A. B. C., the Minister of Labour in his efforts to bring about an adjustment, consented to the further registration of a group of employers on the expressed understanding that we would make a similar agreement as with the A. B. C., in so far as all the conditions governing our employment in Toronto were concerned. This our organization adopted, believing that it was perfectly legal, having had the approval of the Minister of Labour.

I wish to declare emphatically as far as our organization is concerned, that having entered into our agreements in good faith with the desire of improving our relationship as between employer and workmen in the terrific struggle we are undergoing to save our industry from the evil effects of a destructive condition that is destroying our means of livelihood that they will be fully observed until such time as the courts of competent jurisdiction have ruled upon their legality if necessary. However, at this time I am not going to permit to go unchallenged the express declarations of Gordon Waldron, Royal Commissioner appointed under the Combines' Investigation Act, to inquire into the operation of the A. B. C., in his sweeping declarations made during the course of the present inquiry.

And I wish to protest against the scathing denunciation of the labour movement on the validity of our agreements and the conduct of our officers in carrying out the terms of same.

During the many years I have been in office I have at all times done all in my power to see that the conduct of our organization was fully in accord with the law, and before the consummation of agreements at times accepted legal advice if necessary.

One would expect that if the course of justice was to be pursued and the investigation into the Amalgamated Builders' Council was for the purpose of determining if a combine were existing in restraint of trade that the Commissioner would be fair and impartial in his efforts to secure the necessary evidence,

but we are faced with this fact: that the Commissioner, long before his inquiries were completed and a full report made to the Minister of Labour for his disposition of the evidence, has shown by his unprecedented declarations, insulting references and denunciations of our movement and its agreements, a completely biased attitude of our unfair investigator.

With no desire to attempt to understand by his attitude he has tried to create the impression by innuendo and declaration that an outrageous, irresponsible organization exists contrary to law and was practicing unfair methods to the detriment of the public.

This, in so far as we are concerned, we absolutely deny and wish to inform this convention that we are determined to carry out our agreements in the same manner as we have always done and in the accepted spirit of the labour movement; and that we are at all times under our agreements fully desirous of obeying the law and receiving the protection of the Trade Union Act.

We feel that the strictures and comments of the commissioner are unwarranted and uncalled for and not even supported by any evidence produced as we know the prejudiced sources from which the evidence in some instances comes, and I feel fully confident that when the commissioner has completed his inquiry and understands the conditions of operation of the industry, that there will not be found any organization for the purpose of wrongdoing or violation of the law or unnecessarily enhancing the price of the installation of work. He will find, however, an organization honestly trying to solve the problems that so vitally affect the whole of our economic life in the plumbing and heating industry.

I have every faith in the honesty and integrity of those connected with our industry and believe they will be vindicated irrespective of the unfair statements of the commissioner, but we will, at all times, live in the spirit of the labour movement, faithfully guard all our conditions won under trying circumstances and live up to the letter and law of our agreements and see they are fully observed, even if it does lead to industrial conflict, which we earnestly hope will not materialize because of the attitude of the commissioner in his efforts to have the employers in Windsor renounce the existing agreement and establish non-union shops and defy the trade union movement by his unjust, impassioned and unreasonable declarations.

We, as an organization, are prepared to do all we can to justify our position and have nothing to conceal and are still confirmed in our belief that the A.B.C. is for the best interest of our membership and a means of solving many of our problems and fully in accord with the law established for our protection.

The convention did not discuss the above statement, but passed to the next order of business without comment.

### Report of the Secretary-Treasurer

Mr. P. M. Draper, the secretary-treasurer, reported that the receipts from all sources, including the balance from the previous year and the revenue from the congress headquarters, amounted to \$30,186.86. The total expenditure, including the cost of maintenance of the congress building, was \$21,723.62, leaving a balance of \$8,463.24. The paid-up membership at the close of the fiscal year was 126,638, an increase over 1928 of 7,395. The secretary pointed out that if the members of trade unions who were on strike or out of employment, and for whom no *per capita* had been received were counted, the membership would be increased by approximately 24,000. The secretary also reported that during the year the International Jewellery Workers' Union and the United Textile Workers of America had affiliated their Canadian memberships, and since the opening of the convention the International Ladies' Garment Workers' Union had re-affiliated. The report was referred to the Audit Committee, which subsequently reported having found the accounts correct and commended the work of the secretary. The report of the committee was adopted without discussion.

### Appropriations

On the recommendation of the Ways and Means Committee the convention voted \$800 to the delegate to the convention of the British Trades Union Congress and \$400 to the delegate to the convention of the American Federation of Labour. The executive council was instructed to pay the usual convention expenses.

### Amendments to Constitution

The committee on Constitution and Law, to which was referred Section 17 of the report of the executive council, recommended adoption of the suggested amendments, one of which precludes as delegates to congress conventions persons who hold membership in or allegiance to any other body hostile or dual to the congress or its affiliated organizations. The other amendment tightens up the admittance of delegates to bodies chartered by the congress. The report was unanimously adopted.

### Union Labels

The Committee on Union Labels which considered the reference to union labels in the report of the executive council expressed approval of the steps taken to further the demand for goods bearing the union label. The committee referred to the registration of

union labels under the Trade Mark and Design Act, and urged that a watch be kept by the unions which have registered their labels to the end that no violation of the act shall pass uncontested. It was stated that a case of infringement in Toronto had been successfully prosecuted by the Toronto Allied Printing Trades Council. The committee strongly urged the creating of a deeper interest in the question of buying union labelled goods and patronizing label shops, and was in accord with the various means taken by the executive council to develop such a demand. The committee recommended re-affirmation of the position taken by the congress in regard to label propaganda issued by the Label Trades Department of the A.F. of L. for distribution in Canada—that this printing should be done in the Dominion. Endorsation was given to a proposal that the congress compile and issue in both English and French a booklet containing facsimiles of all labels in use by affiliated organizations with appropriate information in regard thereto. The committee recommended continued effort in the organizing of union Label Leagues, suggesting that the demand for union labelled goods is one of the most effective checks on prison made products. In this connection the committee recommended that the Quebec executive committee press the Provincial Government to discontinue the manufacture of products which come into competition with free labour. The committee finally recommended that all delegates in reporting back to their respective organizations give particular attention to the question of union labels. The report of the committee, which was discussed at some length, was adopted.

### Proposed Amendment to British North America Act

The Resolutions Committee reported that there were a number of resolutions received too late for incorporation in the printed list. All the matters to which they referred, except the question of protection of workers on vessels submitted by the International Longshoremen's Association of Halifax, being covered by resolutions regularly presented, the committee recommended that the belated resolutions be not considered. This recommendation being adopted, the committee reported on resolution No. 1 by the Quebec Provincial Council of Carpenters as follows:

Whereas, the idea of an eight-hour-day and forty-four-hour-week is steadily gaining ground, being applied in almost all large Canadian and American industries; and whereas, the five-day week, already established in several places, has given very satis-

factory results to the interested parties; and whereas, unfortunately, there are, throughout the country, a number of places where the eight-hour-day is not yet in operation; and whereas, it is of the utmost importance for the betterment of the condition of the workers throughout the Dominion to secure uniformity respecting the eight-hour-day, unemployment insurance, and other labour legislation; and whereas, the Dominion Government has stated that it is unable to pass such legislation, because the provisions of the British North America Act place all these matters under the jurisdiction of the Government of the various provinces. Therefore, be it resolved, that this convention go on record as favouring an amendment to the British North America Act for the purpose of facilitating the passing of such legislation by our Dominion Government and especially giving effect to the conventions of the International Labour Office concerning the eight-hour day, and that the Trades and Labour Congress urge this request upon the Dominion Government.

The committee recommended concurrence in the proposal and the convention approved.

The convention also, under the heading of "Hours of Labour and Conditions of Employment" adopted resolutions in favour of (13) An act establishing the eight-hour-day and the abolition of all unnecessary Sunday labour, (2) Amendment to the Civil Service Act so as to place in the hands of the Postmaster General the matter of classification and the fixing of salaries for letter carriers; (3) Federal office cleaners to be paid on an annual salary basis and accorded the privileges of permanent employees: (4) Making the amended sections of the Canada Shipping Act apply to all vessels fitted with Internal combustion engines, and that the ratio used in determining the nominal horse-power of such engines be that used by the British Board of Trade, viz:—560 brake horse-power, equal to 100 nominal horse-power, and that this ratio be incorporated in the rules and regulations for the examination and licensing of motor engineers. (5) Amendment to the Railway Act requiring the Board of Railway Commissioners to deal with matters affecting the interests of railway employees upon application from the employees; (6) All workers being paid once weekly on a regular pay day; (7) A six-hour day and a five-day week for all miners in the Dominion.

Three resolutions from a Quebec lodge of Maintenance-of-Way Employees asking for Canadian National Railway employees (1) annual pass after five years' service; (2) fifteen days' annual vacation with pay, and (3) ten cents per hour increase for all who earn

less than \$4 per day, were referred to the affiliated railway employees' unions.

### Safety and Hygiene

Under this heading the convention approved of a resolution asking that the various provincial governments and the Federal Government make an early and thorough investigation into the health hazards of spray painting. A second resolution adopted on the same subject asked that the Governments be petitioned to (1) enact such laws as will adequately protect the workers, and (2) provide efficient supervision of all shops using spray painting machines with a view to having the regulations observed by the employers and the workmen.

Other resolutions in this group which were adopted were: (1) In favour of legislation making it compulsory to have the cars of all passenger elevators equipped with safety doors distinct from and in addition to doors leading from landings into elevator shafts; (2) Asking the provincial executive committees to seek legislation governing the erection, operation and supervision of mechanically operated hoisting appliances; (3) In favour of the appointment of scaffolding inspectors in the provinces where such officers are not now provided for; (4) In favour of the appointment in the province of Quebec of a foundry inspector; (5) Asking that the Quebec Stationary Engineers' Act be amended to include cheese and butter factories and that additional inspectors be appointed to visit places where stationary engineers are employed, and also that there be only one charge for certificates for stationary engineers and electricians; (6) In favour of provincial legislation compelling close planking over workmen who are employed in the erection of steel frame construction with a view to protecting them from falling hot rivets, tools, etc.; (7) In favour of highways being 100 feet wide; (8) That no person under 18 years of age be allowed to drive a commercial automobile or aeroplane; (9) That all railway crossings within city limits be protected by a watchman and all crossings have warning signs 300 feet away, and that crossing watchmen be provided with premises not less than 135 cubic feet inside, with proper toilet accommodation; (10) That proper health conditions be provided in cars in which railway employees have to live; (11) That all motor buses be equipped with an emergency exit at the rear of the bus; (12) That in the provinces where such laws are not in force that legislation be passed providing for the proper adjustment of headlights on automobiles;

(13) That the Dominion Government be asked to appoint a Royal Commission, with labour represented, to investigate the speeding-up practices in the port of Halifax with a view to framing legislation to protect the workers employed in the loading or unloading of ships.

The convention referred to the New Brunswick Federation of Labour a resolution asking that the New Brunswick mining regulations be amended to provide that all shafts in mines be braced, that air and water pumps be installed where miners are employed and that no refuse remain in the mines over night.

A resolution respecting the issuing of licenses in the province of Quebec to moving picture machine operators and outlining the points on which examinations of operators should be based was referred to the International Alliance of Theatrical Employees and Moving Picture Machine Operators and the International Brotherhood of Electrical Workers, the question being considered to be one of jurisdiction. A resolution, by a branch of the Maintenance-of-Way Employees, requesting that it be made compulsory for the Canadian National Railways to supply first-aid kits and goggles to employees was referred to the union of railway employees affected.

#### **Against Private Employment Bureaus**

A resolution which declared that the employment bureaus conducted by the provinces of the Dominion have proven eminently useful to the workers as well as to the employers, asked that the provincial executive committees of the congress continue to secure the abolition of fee-charging employment bureaus wherever they exist. The convention approved of the proposal, and also concurred in a demand for legislation providing that where a strike exists and the employer advertises in the press for labour he shall be required to set out in the advertisement that a strike exists.

#### **Conference on Fair Wages**

The convention adopted a resolution instructing the executive council to call a conference of accredited representatives of organizations interested to study the question of the fair wage policy of the Dominion Government with a view to formulating such changes as may seem desirable in the light of the general experience to improve its form and strengthen its operation. A resolution, which set forth that there were evasions of the fair wage regulations, asked that the Fed-

eral and Provincial Governments be requested to appoint a sufficient number of inspectors to enforce the regulations. This resolution, together with one much similar, was adopted.

The convention approved requests (1) That the Government of New Brunswick be urged to adopt a fair wage clause for Government contracts; (2) That the Federal Government be asked to adopt legislation to compel observance of the Dominion fair wage regulations by the Federal District Commission. A resolution which stated that the Harbour Commissioners of Montreal are not paying the prevailing rates of wages to their employees was referred to the unions whose members are affected.

#### **Apprentice Training**

A resolution which set forth that the technical schools of the province of Quebec are training many youths for various trades, and as the training is inadequate to meet modern shop practice, causing the pupils to accept any wage offered by employers to the detriment of qualified craftsmen, asked the congress to approach the Minister of Education for Quebec to confer with representatives of labour as to proper training and numbers being trained. The convention endorsed the principle of apprentice training and referred the resolution to the Quebec executive committee.

#### **Against Seven Day Labour**

The convention adopted a resolution which declared that certain large industries continue to ignore the legislation providing for one day's rest in seven, and urged that the attention of the various Provincial Governments be called to these violations and that those known to be deliberately violating the law be prosecuted.

The convention also approved of a demand for legislation in the province of Quebec to provide for one day's rest in seven for employees engaged in the mechanical departments of all theatres operating seven days a week.

#### **Against Contract Labour**

A resolution introduced set forth that the Rapid Grip Engraving Company of Toronto had on January 17, 1929, discharged without notice, their entire staff of Canadian and British skilled workers and replaced them with workers from Europe, secretly imported under contract, at longer hours and lower wages, and also that many workers from the United States were allowed entry to take the places of the employees mentioned. The convention was asked to go on record as being absolutely

opposed to the entry of such persons described above and to instruct the executive council to urge upon the Government an amendment to the immigration laws for regulations so as to give to the Departments of Immigration and Labour full power to protect Canadian workers from such occurrences in the future. The chairman of the Resolution Committee explained, following the reading of the resolution, that the evil complained of had been remedied by the Order in Council which had previously been referred to by the Minister of Labour and the Postmaster-General when they had addressed the delegates. Mr. Moore, the President, stated that the matter came directly under the Immigration Department, and he mentioned that several conferences had been held in bringing the matter to the attention of the Government. The executive council had been alive to the situation and he declared that at no time had the Minister of Labour relaxed his efforts on behalf of the men. He then read the Order in Council, as follows:

Whereas the Minister of Immigration and Colonization reports that within recent months, labour has been brought into Canada under contract or promise of employment, which was not needed in Canada and which resulted in the displacement of Canadian labour;

Therefore the Deputy of the Administrator in Council, on the recommendation of the Minister of Immigration and Colonization and under the authority of Section 38 of the Immigration Act, Chapter 93, R.S.C. is pleased to order and it is hereby ordered as follows:—

From and after the seventh day of August, 1929, and until otherwise ordered, the landing in Canada of any immigrant of the following specified class, viz., contract labour, is prohibited:

Provided that the Minister of Immigration and Colonization may admit any contract labourer if satisfied that his labour or service is required in Canada;

And Provided further that the provisions of this Order in Council shall not apply to the exclusion of farmers, farm labourers and house-workers.

The term "contract labour" as used in this Order, means and includes any immigrant seeking entry to Canada under contract or agreement, express or implied, to perform labour or service of any kind in Canada.

The convention unanimously adopted the resolution.

A number of other resolutions growing out of the Toronto Photo-engravers' trouble were presented, one of which requested a court action against the Rapid Grip Company with a view to securing the deportation of the imported Europeans and of ascertaining with definiteness the competency of existing legislation to adequately protect the workers of Canada. This proposal was not adopted, it being stated by the committee that upon inquiry it was believed that there was little like-

lihood of a successful case. A resolution alleging that the engraving company had reported that they had Government permission to bring in the imported engravers, a statement denied by the Department of Labour, asked that the Government be requested to declare that no such permission was given. This was adopted, as was also a resolution that the Minister of Labour shall compel the company to live up to the settlement of the dispute which arose as a result of the discharge of the employees. The convention also approved of all possible efforts being continued to have the discharged engravers reinstated. In connection with the same matter six resolutions were introduced seeking amendments to the Alien Labour Act with a view to having the enforcement of the act placed under some Government department. The convention adopted one of these resolutions which covered the subject matter of the remaining five.

### Immigration

The convention concurred in a resolution asking that as a means of ascertaining the available supply of labour in any one year, a complete survey be made of the labour requirements, both in agriculture and manufacturing industries, and that such a survey be made upon the same lines as the Employment Service of Canada has adopted in Western Canada to ascertain the available supplies of labour to harvest the annual wheat crop; and also, that these surveys be made annually with a view to regulating immigration in harmony with the labour needs of the Dominion, irrespective of its effect upon the earnings of steamship and railroad companies.

In regard to another resolution dealing with the immigration policy of the Government it was decided to urge that restrictive regulations be adopted by the Government to the end that the number of immigrants admitted to the country after a survey shall only be sufficient to meet the needs of the country. Approval was also given to a demand that in any colonization plans to settle immigrants on the land that the same inducements be offered to residents of the Dominion.

The convention also approved of instructions to the Executive Council to insist that in any negotiations between the British Labour Government and the Federal Government of Canada for the settling of unemployment in this country in industrial areas or mining districts, with financial or any other assistance or help or without the same, provision be made for similar schemes or help to be available to persons already resident in Canada; and, that no agreement dealing with the admission of

labour shall be put into effect without the consent of a committee to be formed, upon which organized labour shall have equal representation with employers or any other parties interested, the said representative of labour to be selected by the Executive Council of the Congress; and further, that under no circumstances shall labour be imported from any country to take the place of any worker where there is a dispute pending or a strike or lockout operative in any trade; and that any penalties for the infringement of this shall be enforced by the Minister of Labour, but in default, any person or society may act and that the power of deportation shall rest as at present, but no person shall be deported for any political reason or without right of appeal to the courts.

#### Old Age Pensions

Seven resolutions were introduced asking that the provinces which have not yet adopted old age pensions be urged to do so as speedily as possible. A resolution requesting the executive council to seek amendments to the present Old Age Pension Act "with a view to having all clauses objectionable to organized labour removed from the act" was not approved, it being felt that amendments should not be sought until such time as the present law had been adopted by all the provinces.

The convention adopted a request that the Saskatchewan Government be asked for a law providing for superannuation for civic employees.

#### Unemployment Insurance

Three resolutions were introduced on the subject of unemployment and sickness insurance. The convention adopted one of them which covered all of the demands, the adopted resolution declaring that the introduction of modern machinery is so displacing labour that it is imperative that immediate measures should be taken to relieve this situation until better means are created to guarantee every one an opportunity of earning a livelihood. The sponsors for the resolution, believing that it is the duty of the Federal Government to undertake the full responsibility of this work, requested that the convention petition the Federal Government to immediately bring down a bill providing for sick and unemployment insurance, and also that the British North America Act be so amended that the Federal Government would have full jurisdiction in the matter.

#### Minimum Wage

The convention adopted a resolution instructing the Ontario executive committee to request the Minimum Wage Board of the province to strictly enforce the provisions of the act against employers who dismiss or discriminate against employees who lay charges against employers for violations of the Minimum Wage Act. The convention also approved of a resolution asking that the Quebec Minimum Wage Act be amended so as to include women and girls employed in commercial as well as industrial establishments.

#### Mothers' Allowances

The convention approved of a request to be made on the Quebec Government to enact legislation providing for Mothers' allowances and maternity benefits, as well a demand that all provinces where such law is not in force be asked to adopt same.

#### Workmen's Compensation

Resolutions dealing with the question of workmen's compensation were adopted as follows: (1) In favour of amendments to the Quebec act with a view to (a) the elimination of the anomalous clauses in the law, and (b) the institution of the collective liability of industry; (2) In favour of the Quebec Workmen's Compensation Act applying to all employers; (3) In favour of the Quebec Act being amended so that the compensation for partial or permanent disability be paid according to the occupation of the injured worker and his ability to earn his living and support his family; (4) In favour of compensation in Quebec being continued after death to the orphans until they are of age and to the widow as long as she does not remarry; (5) In favour of the rates of the New Brunswick Compensation Act being raised to 75 per cent, but in the case of a posthumous child that the amount for the child shall not be less than \$10 per month until the child is 12 years of age, and after that age regular rates to apply.

The convention referred to the executive council a resolution asking that some definite understanding be arrived at in regard to the railway companies conforming to the purpose and spirit of the various compensation acts.

#### The Right to Organize

A resolution introduced declared that many companies, firms and individual employers were disregarding the Order in Council of the Dominion Government which sets forth "That all employees have the right to organize into trade unions and this right shall

not be denied or interfered with in any manner whatsoever and through their chosen representatives should be permitted and encouraged to negotiate with employers concerning working conditions, rates of pay or other grievances, that employers should not discharge or refuse to employ workers merely by reason of membership in trade unions or for legitimate trade union activities outside working hours." The convention decided to assist any *bona fide* trade unions in their efforts to secure the right to organize.

It was decided on resolution to assist in the formation of unions of police and also to investigate the whole field of aviation with a view to giving aid to pilots organizing and affiliating with the congress, provided there is no infringement of jurisdiction of affiliated unions.

The convention also adopted a resolution in favour of a penalty being imposed on employers who ignore the provision in the election law granting employees the right to exercise their franchise without loss of pay.

### Industrial Dispute Investigation Act

Resolutions were submitted asking that enabling legislation be enacted in the provinces of Ontario and Quebec so as to legalize the Industrial Disputes Investigation Act in those provinces. The main resolution which was adopted was as follows:

Whereas, by decision of the Privy Council, the Industrial Disputes Investigation Act, 1907, has been declared *ultra vires* when applied to public utilities and corporations holding incorporation and operating within provincial boundaries; and whereas, in the interest of industrial harmony it is desirable that the said legislation should be permitted to function universally throughout the Dominion without hindrance; and whereas, pending suggested amendment to the British North America Act that would permit of such a course, enabling legislation is being sought from the Provincial Governments that will allow of such action; and whereas, up to date all provinces, with the exception of Ontario and Quebec, have agreed and enacted such enabling legislation; Therefore, be it resolved, that the incoming Executive Committee of both these provinces be instructed to press upon their legislators for the enactment of the necessary legislation.

### Railway Rates and Wages

The Resolution Committee recommended non-concurrence in the following resolutions:

Whereas, there are now several wage disputes involving the railway workers; and whereas, demands are also being made upon the Board of Railway Commissioners for a reduction of rates. Be it, therefore, resolved,

that this Congress, in convention assembled, urge the said Railway Commissioners when considering the matters of railway rates, that same should be fixed so as to enable a proper recompense in wages to be paid to the workers employed, and be it further resolved, that the incoming Executive Council of the Congress use their best endeavours to place the views of the wage earners employed on the railways of this Dominion before the said commissioners.

Strong objection was raised to the report of the committee, which was rejected and the resolution was subsequently adopted.

### Motor Transportation

The convention approved of a governmental investigation being made into the motor transportation industry, with a view to establishing the eight-hour day, not less than one day's rest in seven, wages that will provide a decent Canadian standard of living, and that the "highway box cars and young freight trains" be reduced to a reasonable size and weight or the entire extra expense necessary to maintain highways and bridges for carrying the heavy loads be charged against the motor truck transportation companies, and also approved of the International Teamsters and Chauffeurs' Union organizing the various classes of motor transport workers.

### Miscellaneous Resolutions

In favour of a customs duty on all patterns entering Canada, whether being loaned for the purpose of making castings or for permanent use.

In favour of the membership of the congress supporting the *bona fide* labour press.

In favour of workers' claims ranking first under the Bankruptcy Act.

In favour of amendment to Ontario Mechanics' Lien Act giving priority to liens filed by wage earners within the specified time for wages earned and not collected.

In favour of legislation providing that the legal profession through its society, carry a blanket bond for its membership or such other safeguards as may be requisite to ensure the protection of the public.

In favour of having all further leases for development of new coal fields cancelled until such time as an investigation is made by the Government to ascertain the conditions in the mining fields caused by the shortage of coal markets which affects the whole Dominion.

In favour of the abolition of capital punishment.

In favour of increasing witness fees.

Against changing the name of the Maritimes to Atlantic.

In favour of retaining trade within the empire.

In favour of the sale of beer and wine in licensing taverns in the province of Quebec.

A resolution asking that the Government take steps to provide a Canadian flag was tabled indefinitely.

### Fraternal Greetings

Mr. John B. Haggerty, of Washington, D.C., president of the International Brotherhood of Bookbinders, fraternal delegate from the American Federation of Labour, in extending greetings to the delegates referred to the work of the federation, the shortening of the hours of labour which had been secured by the organized workers and the lead the American Federation of Labour had given in maintaining the living standards which had been set up. The speaker stated that the United States had the greatest corporations with the greatest aggregation of capital which the world has ever known. These huge corporations, by substituting co-ordination for competition have made possible mass production with its resultant economies. Mass production, however, the speaker stated, must always be dependent upon mass consumption, and unless the wage-earners have incomes sufficient for them to consume the products there will be an over supply on the market and prosperity will be checked. Organized labour, the delegate declared, "demands a re-adjustment of conditions in industry arising from the introduction of labour-saving machinery and efficiency methods, so that the workers will receive a fair share in the benefits. Logically these benefits should come to him in the form of increased pay, reduction in hours and improved working conditions." Through the efforts of organized labour, the speaker stated, millions of children had been taken out of the workshop and placed in schools and labour was still fighting for more stringent laws for their protection.

Reference was made to the issuance of injunctions in labour disputes in the United States, and to the development of the investment trust, both of which were declared to be a menace to the interests of the workers. Mr. Haggerty felt that there never had been a time when it was more urgent for the trade unionists of the United States and Canada to co-operate wholeheartedly with a genuine spirit of friendship and understanding to assume their part in strengthening their organizations and in being alert to take advantage of opportunities which come with economic changes in order that the interests not only of the organized workers but of society generally may be protected. There must be

something more than mere sentimental attachment between the workers of the United States and Canada. There must be a common will and purpose and a common conception of the ends to be served.

Mr. Peter Lee, of Durham, England, fraternal delegate from the British Trades Union Congress, said it gave him a great deal of pleasure to convey the greetings of his organization. In listening to the speeches in the convention and in reading the labour literature he found that the problems of the workers in Canada and the United States were the same as those of the workers in Great Britain, where for over 100 years the unions had been fighting for better conditions and a fair share of the results of their toil. For a time efforts had been made to suppress the unions, but these had failed and had only bound labour closer together in union. Mr. Lee paid a tribute to the women of Durham, who though not eligible for membership in the Durham Miners' Union, had seen that the men folk became members. Dealing with the County Council of Durham, of which Mr. Lee has been a member for 20 years, he said this body administered for a population of about 1,000,000 and had the handling of about \$15,000,000 a year in municipal enterprises. The board was composed of 74 councillors and 25 aldermen and of these 72 represented labour and 27 all other parties. One of the achievements of the council since labour had secured control was the extension of the free school system to include the secondary schools, and now the child of the cottage was on an equal footing with other classes in this respect. The Labour Party had made its impression also on the British House of Commons and to-day formed the Government of the country. They had, he felt, been placed in power because of the belief of the voters of Britain that labour had the right idea of what was needed to improve conditions in that country. There had been a great deal of talk as to what would happen if labour secured control. It had been charged that they were Socialists and would destroy the home and religious life of Britain. This was far from the truth, the delegate declared, and if anything was destroying the home life to-day it was the massing of great wealth in the hands of a few. Labour stood for true home life and true religion.

Mr. W. L. Best, of Ottawa, legislative representative of the Brotherhood of Locomotive Firemen and Enginemen, presented the fraternal greetings of the brotherhood and wished the congress success in its legislative work. He expressed the hope that all of the railway organizations would some day be affiliated with the congress as organized labour

must co-operate in the securing of legislation. Mr. Best favoured the shortening of the work day as a means of giving employment to more workpeople who are as a result of the mechanizing of industry losing their positions.

Mr. John F. McNamara, of Boston, president of the International Brotherhood of Firemen and Oilers, spoke at the Friday morning session of the convention and gave an account of the progress of his organization in Canada and thanked the members of the Canadian labour movement for the assistance rendered to the firemen and oilers.

The Hon. Peter Veniot, Postmaster-General, who was unable to accept the invitation of the local committee of arrangements to be present at the opening session, addressed the convention at a later session and extended a welcome to the delegates as the New Brunswick Minister in the Federal Government.

Letters were received from H. B. Adshead, member of the House of Commons for Calgary East, and the London Trades and Labour Council conveying greetings to the congress.

A cablegram was received from the International Federation of Trade Unions in Amsterdam with wishes for a successful convention and success for the Canadian organized workers as represented by the congress.

#### Gifts for Fraternal Delegates

Subsequent to the delivery of the fraternal messages the delegates from the British Trades Union Congress and the American Federation of Labour, in addition to gold badges presented at an earlier session, were made the recipients of gold watches on behalf of the delegates. The members of the local arrangements committee each received a vest-pocket knife and chain, while the two members of the ladies' entertainment committee were presented with handsome hand bags.

#### Officers Elected

The election of officers took place on Thursday afternoon, and resulted in the former members of the executive council being re-elected as follows:—

President, Tom Moore, Ottawa;

Secretary-treasurer, P. M. Draper, Ottawa;

Vice-presidents, John T. Foster, Montreal, R. J. Tallon, Calgary, James Simpson, Toronto.

Provincial Executive Committees—

Nova Scotia—D. W. Morrison (chairman), Glace Bay; M. D. Coolen, Halifax; H. Langley, Point Tupper; F. C. Craig, Halifax.

Quebec—Joseph Pelletier (chairman), Mont-

real; Omer Fleury, Quebec; Phil. Corriveau, Montreal; A. F. McLeod, Three Rivers.

Ontario—H. S. Mitchell (chairman), Hamilton; Rod Plant, Ottawa; James Watt, Toronto; Rod Hessel, London.

Manitoba—F. Mackintosh (chairman), W. B. Lowe, Winnipeg; R. Glen, Winnipeg; J. G. Hutchinson, Winnipeg.

Saskatchewan—H. A. Perry (chairman), Regina; W. E. Stephenson, Moosejaw; H. A. Davis, Prince Albert; A. Eddy, Saskatoon.

British Columbia—C. E. Herriott (chairman), Vancouver; the trades councils in Victoria, Vancouver and Prince Rupert are to name the other members of the committee.

The provinces of New Brunswick and Alberta having federations of labour, no committees are named by the congress.

Fraternal delegate to the American Federation of Labour, J. A. Whitebone, St. John, N.B.

Fraternal delegate to the British Trades Union Congress, Chas. Dickie, Montreal.

Regina, Sask., was chosen as the convention city for 1930.

#### Presentation to the President

Following the re-election of Mr. Moore to the presidency, Mr. P. M. Draper, who presided, on behalf of Toronto branch No. 35 of the International Photo-Engravers' Union, presented the re-elected president with a golden intaglio, made by one of the skilled members of the union. It was stated that only four of these works of art have ever been made, and this is the only one ever presented for services rendered.

#### History of Saint John Unions

In connection with the convention the Saint John Trades and Labour Council issued a booklet entitled "History of Saint John Labour Unions," which among other features contained a sketch of each of the unions in the city, the earliest of which was the Saint John Labourers' Benevolent Association, which was formed in 1849, and in 1904 became identified with the International Longshoremen's Association.

The Mine Workers' Union at Sudbury, Ontario, at a meeting on August 13, passed resolutions in favour of (1) A 7-hour day; (2) Minimum wage of \$7 per day for high-grade workers and \$6.50 for low-grade workers; (3) Abolition of the bonus system; (4) Establishment of union mineworker safety inspectors.

## NOTES ON LABOUR UNION ACTIVITIES

### Ontario Provincial Council of the United Brotherhood of Carpenters and Joiners

The eighteenth annual convention of the Ontario Provincial Council of the United Brotherhood of Carpenters and Joiners was held in Guelph, on June 27-29, President Fred Hawes of Hamilton presiding. About twenty-five delegates were present, representing locals in the principal cities of the province. The Executive Board reported that a board meeting had been held at Toronto for the purpose of taking up the question of regulations governing carpenters' apprentices throughout the province. At this meeting draft regulations were adopted and submitted to the Apprentice Council of Ontario, which body accepted the recommendations with the exception of two clauses, one dealing with wages, and the other with the ratio of apprentices to journeymen. The ratio was changed from one apprentice to ten journeymen to one in eight, while the rate of wages of apprentices was placed on a percentage basis, with a minimum to cover the entire province in every trade, first year, 20 per cent; second year, 25 per cent; third year, 35 per cent; fourth year, 50 per cent.

Another question dealt with by the report was the organizing of millmen and furniture workers, and it was recommended that a movement should be started to get these men into the organization. The executive expressed their regret that the proposal to increase the *per capita* tax so as to take care of the Brotherhood's old age pension scheme had been defeated by the referendum vote, and suggested that a committee be appointed by the convention to look into this question further and prepare a draft amendment to this section of the general constitution which could be submitted later to a referendum vote.

The delegates were urged to give the question of the five-day week their serious consideration and to educate the members with a view to having it embodied in all future agreements.

Reference was made to the forthcoming convention of the American Federation of Labour at Toronto and it was suggested that during the time of the convention the general officers of the Brotherhood be invited to address meetings at various points; failing this, that delegates from the various locals throughout the province be sent to Toronto.

The financial summary as presented by the secretary-treasurer showed total receipts of

\$4,632.92; expenditures, \$3,154.51, leaving a balance on hand of \$1,498.44.

Mr. Tom Moore, president of the Trades and Labour Congress of Canada, in his address to the delegates, referred to the presentation of a silk Union Jack to the Carpenters' Home at Lakeland, Florida, in the unfurling of which he had been assisted by W. L. Hutchison, general president of the Brotherhood. Speaking on the five-day week, President Moore stated "that the labour-eliminating machines, often called the labour-saving machines, had so speeded up production that we had to have increased consumption and less hours of labour to meet the situation." The speaker also referred to the Old Age Pension scheme in Ontario and to Workmen's Compensation laws. He considered that labour should be represented on all old age pension boards and hoped the delegates would work toward this end.

The special committee appointed by the convention to go fully into the question of the pension scheme and the various propositions that had been voted upon by the members at different times, as well as the proposition now being advocated, brought in the following recommendation: That in view of the unsettled condition of the pension fund at the present time that this council take no action. After a short discussion the report of the special committee was adopted.

Resolutions were adopted asking the Trades and Labour Congress of Canada to bring pressure to bear on the Federal Government to amend the Alien Labour Act so as to prevent the importing of foreign labour to take the places of union men; recommending that the Trades and Labour Congress of Canada petition the Federal Government to bring in a bill providing for sick and unemployment insurance; and giving instructions that the American Federation of Labour be asked to appoint an organizer for the province of Ontario.

The officers elected were: President, John Cottam, Toronto; vice-presidents, Charles R. Nichols, Ottawa, Bert McSween, Niagara Falls, William A. Woods, Kingston; secretary-treasurer, T. Jackson, Toronto.

Hamilton was selected as the convention city for 1930.

President-elect J. Cottam was elected as delegate to the Trades and Labour Congress of Canada, while P. Green was elected as fraternal delegate to the Quebec Provincial Council.

## International Stereotypers and Electrotypers' Union of North America

The twenty-eighth annual convention of the International Stereotypers and Electrotypers' Union of North America was held in New York city, July 15-20, 1929, with approximately one hundred delegates in attendance. After the opening address by president W. T. Keegan and the appointing of the various committees, William Green, president of the American Federation of Labour addressed the convention. The objectives of the A.F. of L. as set forth in the president's address, were: better wages; a greater degree of leisure; a more happy social life; a better community and civic atmosphere in every section of the land where people dwell. In speaking of the shorter work week, the president informed the delegates that the New York Building Trades Council had signed an agreement with the employers' organization which provided for the inauguration of the five-day week for the building trades in New York City. The brick-makers of Chicago also had secured the shorter work week recently. The delegates were further informed that a bill had been introduced in Congress for the purpose of correcting alleged injunction abuses.

The recommendation of the insurance committee that arrangements be made to raise the death benefit from \$300 to \$1,000 by group insurance in the Union Labour Life Insurance Company, and when the cost had been ascer-

tained, the whole scheme to be submitted to referendum vote, was adopted and referred to the incoming executive board for consideration and report to the next convention, together with their recommendations.

Vice-president Frey presented the report of the International Technical Education Committee, in which the activity of the committee was recorded since its inception following the St. Louis convention last year. This report described the arrangement made between the International Union and the Newspaper Machinery Corporation by which stereotypers could be trained in the proper use of autoplate machinery in a technical school established in the company's factory in Plainfield, N.J. The policy of the school will be under the control of the International Union.

Resolutions were adopted favouring the reduction of the federal tax on earned incomes; recommending that a committee be appointed to gather statistics pertaining to old age pensions and report at next convention for further action; protesting against injunctive abuses in industrial disputes; approving the five-day work week for all members of the union.

The 29th annual convention will be held in Indianapolis, Ind., while Toronto, Ont., was selected as the convention city for 1931.

## Boot and Shoe Workers' Union

With one hundred and sixty-seven delegates in attendance the seventeenth convention of the Boot and Shoe Workers' Union was held in Rochester, N.Y., on June 17-20, 1929, with President Collis Lovely in the chair. The reports of the president and secretary-treasurer reviewed the activities of the Union since its inception in 1895, and showed how the organization, for the first four years had failed to make any considerable progress owing to low dues and no benefits. In 1899, in the city of Rochester, the delegates met in convention and adopted a new constitution which provided for higher dues and benefits. From the year 1900, the total receipts amounted to \$9,898,627.16, expenditures totalled \$9,773,663.71, leaving cash on hand April 30, 1929, of \$124,963.45. The report stated that the organization was in favour of the five-day week in principle, but that the time had not come for it in the industry.

A letter was read from William Green, President of the American Federation of La-

bour, in which he asked the organization to take as their slogan "Double Union Membership in 1929." The union was urged to pass a strong resolution favouring the enactment of legislation that would prohibit the issuance of injunctions in labour disputes, and to see that organized labour was represented on all state educational agencies and on the boards of directors of the various universities.

Resolutions were adopted recommending that charters be issued to groups of women relatives of members of the Boot and Shoe Workers' Union forming women's auxiliaries; and pledging the resources of the union to combat at every opportunity the program of the Communist Party.

Officers elected were: President, John J. Mara, Cincinnati, Ohio; Gen. Vice-President, G. Martindale, Rochester, N.Y.; Secretary, Chas. L. Baine, Boston, Mass.

The next convention will be held in Toronto.

## American Flint Glass Workers' Union

The fifty-third convention of the American Flint Glass Workers' Union was held at Toledo, Ohio, July 1-11, 1929, with 118 delegates present representing 86 local unions. In responding to the various addresses delivered during the opening session, one of which was by Mr. Ed. J. Barry, president of the National Association of Manufacturers of Pressed and Blown Glassware, president William J. Clarke referred to the introduction of new machinery in the industry, which had been spoken of previously by Mr. Barry, and informed the delegates that the Window Glass Workers, an organization which at one time had taken a prominent part in the trade union movement in America, was disbanded on July 4, 1928, as a result of machinery taking the place of the members. The delegates were further informed of the situation confronting the Glass Bottle Blowers' Association, where, the president stated, 97 per cent of their production is made either by semi-automatic or automatic machines. President Clarke referred also to the American Bank, a financial institution owned and controlled by the union. He reviewed the difficulties encountered in opening up the bank, having been required to compete with several old established bankers and banks. The president stated that the resources of the bank now

total over \$2,000,000, having increased from \$250,000 in less than four years.

Vice-president M. J. Gillooly, who has charge of the union's affairs while President Clarke directs the management of the bank, reviewed the many difficulties with which the membership had been confronted since the previous convention. He referred to a number of strikes that had taken place, some of which had been terminated, while others were still in progress. For the benefit of the delegates the vice-president presented a lengthy report setting forth the general condition in the glass manufacturing industry.

According to the report of the secretary-treasurer, Chas. J. Shipman, the total receipts for the year ended May 31, 1929, amounted to \$126,121.13, expenditures totalled \$161,798.46, leaving a deficit of \$35,677.33.

The various committees, representing the branches of the trade, presented their reports and recommendations, and these were dealt with by the convention.

The officers, all of whom were re-elected, are: President, William P. Clarke, Toledo, O.; Vice-president, Jos. M. Gillooly, Toledo, O.; Secretary-treasurer, Charles J. Shipman, Toledo, O.

Toronto was selected as the convention city for 1930.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Thirteenth Session of the International Labour Conference

THE Thirteenth Session of the International Labour Conference (League of Nations) is to open in Geneva, Switzerland, on October 10th next. This is the second session of the Conference to be held this year, the Twelfth Session having been held in May last. The Treaty of Peace requires that "the meetings of the general conference of representatives of the members shall be held from time to time as occasion may require, and at least once in every year." This is only the second time that two sessions have been held in one year, the other occasion being in 1926.

The Thirteenth Session will devote its time exclusively to the consideration of maritime questions. The Agenda is as follows:—

1. Regulation of hours of work on board ship.
2. Protection of seamen in case of sickness (including the treatment of seamen injured on board ship), i.e.,
  - (a) The individual liability of the ship-owner towards sick or injured seamen;
  - (b) Sickness insurance for seamen.
3. Promotion of seamen's welfare in ports.

4. Establishment by each maritime country of a minimum requirement of professional capacity in the case of captains, navigating and engineer officers in charge of watches on board merchant ships.

#### Canadian Delegation

The Canadian delegation will be composed of representatives of the Dominion Government, of the employers, and of the workers of Canada.

*Government Delegates.*—The Dominion Government will be represented by Dr. W. A. Riddell, Geneva, Switzerland, and by an official of the Department of Marine and Fisheries.

*Employers' Delegate.*—Mr. A. L. MacCallum, manager and secretary of the Shipping Federation of Canada, Montreal, P.Q.

*Workers' Delegate.*—Mr. R. J. Tallon, vice-president, Trades and Labour Congress of Canada, Mimico, Ont.

*Technical Adviser to the Workpeople's Delegate.*—Mr. W. A. MacDonald, secretary-treasurer, National Association of Marine Engineers of Canada, Halifax, N.S.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JULY, 1929

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in July was 6,840, their employees numbering 1,070,817 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for

July was 1,690, having an aggregate membership of 200,115 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### (1) Employment Situation at the Beginning of August, 1929, as Reported by Employers

Employment at the beginning of August showed a further large increase, according to statements tabulated by the Dominion Bureau of Statistics from 6,840 firms, whose pay-rolls aggregated 1,097,812 persons, as compared with 1,070,817 on July 1. This advance involved an unusually large number of workers for the season of the year, while the index number, at 127·8, continued higher than in any other month since the record was instituted in 1920; on July 1, 1929, it stood at 124·7, and on August 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 119·3, 110·5, 105·5, 97·5, 95·8, 101·4, 94·2 and 90·0, respectively.

Construction and manufacturing reported the largest gains, while the tendency was also favourable in mining, communications and services. On the other hand, logging continued seasonally quiet, and there were also losses in trade and water transportation.

#### Employment by Economic Areas

Greater activity was shown in all provinces, the improvement in the Maritime and Prairie Provinces being most noteworthy.

*Maritime Provinces.*—Statements were tabulated from 545 firms in the Maritime Provinces employing 85,597 persons, as compared with 79,272 in the preceding month. This increase was much larger than that indicated on August 1 in other years of the record, in all of which the index was lower than on the date under review. Construction showed the greatest gains, but manufacturing was also brisker, particularly in iron and steel plants;

on the other hand, the trend of employment was downward in transportation and logging.

*Quebec.*—Considerable expansion was shown in Quebec, according to returns from 1,562 employers with 302,036 workers, as against 297,146 on July 1. Manufacturing, construction and services reported larger pay-rolls, but shipping and logging were slacker. Employment was in greater volume than at the beginning of August of a year ago, or, in fact, than in any other month of the record.

*Ontario.*—There was an advance in employment in this province on August 1, when the 3,047 co-operating firms increased their staffs by 2,502 persons to 448,193. The greatest improvement was in construction, transportation, mining and communications, while manufacturing, logging and trade registered reductions. A large increase was recorded on the same date last year, but the index number was then some nine points lower than at the beginning of August, 1929, when it reached 128·0, the highest since the record was commenced in 1920.

*Prairie Provinces.*—An important increase in employment was indicated in the Prairie Provinces, where 953 employers reported 166,380 workers, or 9,829 more than at the beginning of July; this exceeded the gain noted on August 1 in other years of the record, while the index, at 144·8, was at the maximum so far reached. The most pronounced expansion on the date under review was in highway construction, favourable labour and weather conditions facilitating work on an extensive

program of road and bridge improvement, particularly in Saskatchewan. Manufacturing, trade and mining were also more active, but railroad construction released workers.

*British Columbia.*—Continued improvement was registered in British Columbia, chiefly in manufacturing, but also in transportation, construction, mining, logging and services. Returns were compiled from 733 firms employing 95,606 persons, as against 92,157 in the preceding month. Smaller increases were indicated at the beginning of August of last year, when the situation was not so good.

Table I gives index numbers by economic areas.

*Quebec.*—Employment continued to advance in Quebec City, particularly in construction; statements were received from 115 employers whose staffs aggregated 13,557 workers, compared with 12,913 in the preceding month. A minor decline had been indicated on August 1 a year ago, when conditions were not so favourable.

*Toronto.*—For the first time since the beginning of this year, there was a falling-off in employment in Toronto, according to data from 881 employers of 125,437 persons, or 721 less than at the beginning of July. The level of employment, however, was much higher than on the same date in other years of the

**EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS**

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

**Employment by Cities**

Employment advanced in Montreal, Quebec, Hamilton, Winnipeg and Vancouver; the tendency was unfavourable in Toronto and Windsor and the adjacent Border Cities, while no general change was noted in Ottawa.

*Montreal.*—Employment in Montreal showed a further and larger gain, exceeding the increase recorded on August 1, 1928, when the index was many points lower. A combined pay-roll of 147,155 employees, or 2,305 more than on July 1, was reported by the 831 co-operating firms. Manufacturing and construction registered decided improvement: transportation released employees, while the fluctuations in other industries were slight.

record. Manufacturing, especially of iron and steel and textile products, services and trade were slacker, but construction, transportation and communications recorded heightened activity.

*Ottawa.*—On the whole, employment remained practically stationary in Ottawa, where the 140 co-operating firms employed 13,733 workers on August 1. There were small gains in construction, and similar losses in trade. An increase was indicated at the beginning of August, 1928, but the index then was rather lower.

*Hamilton.*—There were further additions to staffs in Hamilton, 214 employers reporting 40,632 persons on their pay-lists, as against

40,110 in their last return. Manufacturing registered general improvement, that in iron and steel plants being most pronounced. Activity was greater than in any other period of the record.

*Windsor and the Adjacent Border Cities.*— Further curtailment was noted in the Border Cities; statistics were received from 122 firms employing 17,458 workers, or 1,662 less than on July 1. Automobile works largely decreased

NOTE: The "relative weight" in Table I shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada on the date under review.

their working forces, following an unusually active season, while only small changes took place in other industries.

*Winnipeg.*—Continued advances were shown in Winnipeg, according to 312 firms who had 34,377 employees, as compared with 33,392 at the beginning of July. There were general increases in manufactures, construction and trade. The improvement evidenced on the corresponding date of last year was rather less pronounced, and the index then was lower.

*Vancouver.*—Manufacturing, transportation and services reported heightened activity in Vancouver, while construction was slacker.

Returns were compiled from 277 employers whose staffs aggregated 30,579 persons, compared with 30,316 in the preceding month. A larger gain was indicated on August 1, 1928, but the level of employment then was lower.

Index numbers by cities are given in Table II.

**Manufacturing Industries**

Further gains were made in manufacturing establishments, 4,145 of which reported 579,852 operatives on their pay-rolls, as compared with 573,998 on July 1. The most marked increases were in food, pulp and paper, mineral product and lumber factories, but improvement was

NOTE. The "relative weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

also shown in leather, rubber, tobacco, building material, electric current, electrical apparatus and non-ferrous metal plants, while the textile and iron and steel industries were seasonally slacker. A larger increase was registered on the same date last year, when the index was over six points lower.

*Animal Products.*—Meat packing plants registered gains, while other groups showed only slight changes on the whole, reductions in fish canneries in the Maritime Provinces being offset by gains in British Columbia. Statistics were received from 237 firms employ-

ing 20,433 workers, as compared with 20,221 in the preceding month. The trend on August 1 in other years of the record has usually been downward, and on the date under review activity was at its midsummer maximum.

*Leather and Products.*—An increase in employment was shown in boot and shoe works, 252 persons being added to the staffs of the 176 co-operating leather manufacturers, who employed 16,704 on August 1. The situation was not as favourable as on the corresponding date last year, when minor losses were noted.

NOTE: The "relative weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE CALENDAR YEAR 1926=100)

Relative weight of employ- ment by Industries as at Aug. 1, 1929.		100.0	52.8	1.7	4.8	2.8	12.0	16.2	2.2	7.5

*Lumber and Products*.—Rough and dressed lumber mills continued to take on help, while the furniture, match and other branches of the lumber industry were also busier. The advance involved rather fewer workers than that recorded on August 1, 1928, when the index was slightly lower. The pay-rolls of the 722 firms furnishing data aggregated 63,865 oper-

atives, as against 62,935 in their last report. There were large increases in all except Ontario, where a reduction was indicated.

*Plant Products, Edible*.—Continued additions to staffs were registered in fruit and vegetable canning, sugar, biscuit and other factories coming under this classification; 348 employers reported 33,338 workers, or 1,783

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	<sup>1</sup> Relative Weight	Aug. 1, 1929	July 1, 1929	Aug. 1, 1928	Aug. 1, 1927	Aug. 1, 1926	Aug. 1, 1925	Aug. 1, 1924

<sup>1</sup>The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

more than at the beginning of July. The gains were made chiefly in Ontario and British Columbia. Employment was in greater volume than on August 1 in other years for which data are available.

*Pulp and Paper Products.*—All branches of this group recorded heightened activity. Statistics were received from 518 manufacturers whose pay-rolls were increased by 1,278 persons to 68,715 on August 1. Most of the improvement took place in Ontario and Quebec. Much smaller advances were noted in the same month last summer; the index at 115.1 on the date under review, was at the highest point so far reached in this record.

*Rubber Products.*—There was a gain in rubber factories, 37 of which had 18,400 persons on their pay-rolls, compared with 18,171 on July 1. The advance, which took place chiefly in Quebec, involved rather fewer persons than that on August 1, 1928, when employment was at a decidedly lower level.

*Textile Products.*—Cotton factories recorded reduced working forces, while there was an increase in clothing and underwear plants. The result was a decrease of 221 workers in the staffs of the 563 co-operating manufacturers, who employed 80,861. The tendency was upward in Quebec and British Columbia, but downward in Ontario. Advances were noted at the beginning of August, 1928, but the index then was slightly lower.

*Tobacco, Distilled and Malt Liquors.*—Data were received from 143 establishments in these industries, whose pay-rolls rose from 16,090 on July 1, to 16,401 workers on the date under review. Most of the improvements took place in tobacco factories. The situation on August 1 last year was not so favourable; the increase then recorded was on a much smaller scale.

*Clay, Glass and Stone Products.*—There was a further advance in building material plants, according to 146 employers with 14,122 workers, or 267 more than in their last report. The bulk of the gain was in Quebec. Employment was in greater volume than on the same date last summer.

*Electric Current.*—Another large increase took place in electric current works, 91 of which reported 16,804 employees, as against 16,494 on July 1. There was general improvement throughout the country, except in British Columbia where a decline was noted. The index number on the date under review was at the highest point reached since 1920, when the series was instituted.

*Electrical Apparatus.*—Employment in 48 electrical apparatus works showed a further in-

crease at the beginning of August; they employed 14,842 operatives, or 368 more than in the preceding month. The situation was better than on August 1 of last year, or of any other year of the record.

*Iron and Steel Products.*—Automobile, agricultural implement and wire factories reported reductions, while machinery, shipbuilding, structural steel and tool plants were busier. A combined working force of 162,357 persons was indicated by the 658 co-operating manufacturers, who had 162,964 on July 1. Ontario reported curtailment, but employment advanced in the other provinces. Although improvement had been noted on August 1, 1928, the index then was several points lower than on the date under review.

*Non-ferrous Metal Products.*—There was an increase in employment on the date under review, 277 workers being added to the staffs of the 104 firms furnishing data, who employed 20,718. Practically all the expansion took place in Quebec and British Columbia. Employment was in slightly greater volume than in any other month of the years since 1920.

*Mineral Products.*—Statistics tabulated from 79 manufacturers of mineral products showed that they employed 14,253 workers, or 686 more than in the preceding month; most of these additional employees were taken on by establishments in Quebec and Ontario. The index was at its maximum for the record.

### Logging

Seasonal dullness continued to affect employment in logging camps in all provinces except British Columbia, where improvement was noted. Statements were tabulated from 203 firms, employing 18,668 men or 1,679 less than in the preceding month. Smaller losses were reported on August 1, 1928, but employment then was not so active.

### Mining

*Coal.*—There was an increase of 322 employees in the staffs of the 75 operators furnishing returns, bringing them to 26,362 on August 1, 1929. This gain, which took place in the Prairie coal fields, was smaller than that registered on the same date last year, when the index was slightly lower than on the date under review.

*Metallic Ores.*—Further large expansion was recorded in metallic ore mines, bringing employment to its highest level in this record. Returns were received from 71 mines, with 16,525 workers, as compared with 16,010 in their last report. The improvement was shown chiefly in Ontario and British Columbia.

*Non-Metallic Minerals (Other than Coal).—*Continued expansion was noted generally in this division, in which 68 employers enlarged their pay-rolls by 310 persons to 9,800 at the beginning of August. Employment was maintained at an exceptionally high level.

### Communications

There was another advance in the personnel of telegraph and telephone companies on August 1, the 171 co-operating branches having 30,295 employees, as against 29,724 in the preceding month. The number engaged in this group was at its maximum for the last ten years.

### Transportation

*Street Railways and Cartage.*—Further additions to pay-rolls were registered in this division, according to data received from 129 employers with 25,256 workers, as against 24,930 on July 1. Curtailment had been recorded on August 1 of last year, when the index was several points lower.

*Steam Railway Operation.*—The trend of employment in steam railway operation was favourable, except in the Maritime and Prairie Provinces. The 104 companies and divisional superintendents furnishing data reported 89,314 employees, compared with 89,165 in their last report. Improvement was also recorded on the same date in 1928, when the index was rather lower.

*Shipping and Stevedoring.*—Statements were tabulated from 74 companies in this group, employing 17,442 workers, or 765 less than on July 1, 1929. There were reductions in the Maritime Provinces and Quebec. Advances had been noted at the beginning of August a year ago, but the index number then was lower.

### Construction and Maintenance

*Building.*—Considerable improvement was again reported in building construction, 643 contractors adding 8,131 persons to their staffs, bringing them to 64,953 at the beginning of August. There were increases in all provinces. Conditions were better than in any other month of the record, the above stated gain being the largest yet reported.

*Highway.*—The number engaged on highway construction and maintenance showed a further

important increase in all provinces. Data were received from 229 employers, with 51,867 workers on their pay-rolls, as compared with 35,175 at the beginning of July. Employment generally in this industry has been very active in recent months; much of the expansion at the date under review was in Saskatchewan where favourable weather and labour conditions furthered extensive road improvement undertakings.

*Railway.*—As on August 1 in most years of the record, there was a decline in this industry on August 1, 1929, when 46 companies and divisional superintendents reduced their staffs from 63,238 on July 1, to 60,639 men at the beginning of August. The index number was lower than at the beginning of August, 1928, when improvement had been indicated. The greatest contractions were in the Prairie Provinces.

### Services

Hotels reported further additions to their pay-rolls; 211 firms employed 24,183 persons, or 279 more than at the beginning of July. This increase was rather smaller than that indicated on August 1, 1928, when the situation however, was not so favourable; in fact, employment on the date under review was at its maximum for this record.

### Trade

Activity in wholesale houses again advanced, but there was a falling off in retail stores, according to 671 trading establishments, which employed 82,656 workers, as compared with 83,767 on July 1. Ontario registered most of this decrease. Gains were recorded at the beginning of August last year, but the index then was much lower.

### TABLES

Index numbers of employment by economic areas, leading cities and industries, are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of July, 1929

Unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle due to illness are not considered as unemployed while unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Practically no change was indicated in the local trade union situation in Canada as a whole at the close of July from that of the previous month, the 1,690 labour organizations

slightly lower during July than in the corresponding month of last year when 2.5 per cent of unemployed members was reported. In this comparison Nova Scotia, New Brunswick, Quebec, Manitoba and Saskatchewan unions reflected slightly less favourable conditions during the month reviewed, while in Ontario, Alberta and British Columbia nominal gains in employment were shown.

Unemployment in the largest city in each province with the exception of Prince Edward Island is tabulated separately each month. During July, Regina, Toronto, Edmonton and Vancouver unions registered a better situation than in the preceding month, while employment for Montreal, Halifax and St. John unions was in somewhat lesser volume. The changes, however, were not pro-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

from which reports were tabulated with a total membership of 200,115 persons, showing 3.0 per cent of idleness, compared with 2.9 per cent in June. Fluctuations, however, occurred in various provinces and industries which were of an offsetting nature. From Quebec a reduction in employment of nearly 2 per cent was manifest during July, due chiefly to inactivity in the manufacturing industries, particularly the metal trades, while in British Columbia slight variation in conditions only was shown, the tendency, however, being adverse. Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta unions, on the contrary, reported some slight improvement. In Manitoba the unemployment percentage remained unchanged from that of June. The level of employment for union members was

announced. In Winnipeg the same percentage of idle members was reported in both months of the comparison. When making a comparison with the returns for July of last year all cities with the exception of St. John and Vancouver reported some falling off in the employment afforded during the month under survey, the changes for the most part being small. In Vancouver nominal gains in activity were recorded, and in St. John the situation remained the same as in July a year ago.

Accompanying this article is a chart which represents the unemployment trend by months from January, 1923, to date. The level of the curve at the close of July showed practically no divergence from that of the previous month, indicating an almost unchanged employment volume, though in comparison with July of

last year the trend as indicated by the curve was toward somewhat greater inactivity.

A slight slackening of industrial activity was shown in the manufacturing division by the reports tabulated at the close of July from an aggregate of 472 unions, with a membership of 58,159 persons. Of these 2,080 were idle on the last day of the month, a percentage of 3.6, contrasted with 2.3 per cent of unemployment in June. Iron and steel workers, especially railway carmen, were chiefly responsible for the downward employment trend indicated during July, though general labourers, papermakers, garment workers, metal polishers and jewellery workers also contributed to the group recession. On the other hand, slight expansion was noted by leather

and glass workers. The changes throughout, however, were small. Among printing tradesmen, brewery workers and bakers the same situation obtained as in June. A nominal advance in employment only was indicated in the manufacturing industries during July over the same month of last year when 3.8 per cent of the members reported were without work. In this comparison the improvement reflected by pulp and papermakers over July of last year was noteworthy, and gains in employment of much lesser magnitude appeared among wood workers, cigarmakers, printing tradesmen, iron and steel and fur workers. Of the contractions which were almost sufficient to offset these gains, the most substantial was reported by general labourers, particularly in the province of Quebec.

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month.	N. S. and Pr. Edward Island.	New Brunswick.	Quebec.	Ontario.	Manitoba.	Saskatchewan.	Alberta.	British Columbia.	Canada.
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4
Average 1920.....	1.3	2.0	7.2	3.4	3.1	3.2	2.8	11.2	4.4
Average 1921.....	11.3	8.5	16.6	9.7	8.5	7.8	7.8	23.5	12.7
Average 1922.....	7.1	4.3	8.6	5.0	8.9	5.4	6.1	12.4	7.1

July, 1929.....	2.0	8	4.8	2.2	3.1	1.8	2.7	2.7	3.0

The coal mining industry reported a more favourable situation during July than in either the previous month or July of last year, as was shown by the reports received from 45 unions with a membership aggregate of 17,553 persons. Of these 312 were unemployed on the last day of July, a percentage of 1.8, contrasted with 4.4 per cent at the end of June and with 4.7 per cent in July, 1928. Alberta unions indicated the most marked expansion during July, both as compared with the returns for the preceding month and July of last year, while employment available to Nova Scotian miners slightly exceeded that indicated in June though minor reductions in activity were apparent in comparison with July a year ago. In British Columbia no members were reported idle at the end of July as in June, while at the close of July last year the unemployment percentage reported was fractional only. Short time among coal miners was in evidence to a considerable extent during July.

The building and construction trades showed but nominal advancement during July when compared with the preceding month, the 208 unions from which reports were tabulated with 29,341 members indicating 7.0 per cent of unemployment, compared with 7.5 per cent in June. Bricklayers, masons and plasterers, carpenters and joiners, plumbers and steamfitters, tile layers, lathers and roofers, and hod carriers and building labourers were somewhat busier than in June, while among painters, decorators and paperhangers, and bridge and structural iron workers the employment volume was considerably reduced during July, and slight recessions occurred among electrical workers and granite and stonecutters. The situation in the building trades, as a whole, was less favourable than in July of last year, when 3.3 per cent of inactivity was recorded,

a large proportion of the decline occurring among carpenters and joiners, bricklayers, masons and plasterers, and painters, decorators and paperhangers. Substantial contractions in employment were registered also by bridge and structural iron workers and hod carriers and building labourers, who, however, formed but a small share of the total membership reported in the building trades. Activity for electrical workers was also slightly reduced. On the other hand, tile layers, lathers and roofers were much busier than in July a year ago, and employment for plumbers and steam-fitters, and granite and stonecutters showed minor increases.

Reports were tabulated at the close of July from 717 unions of transportation workers, covering a membership of 68,394 persons. Of these 1,297, or a percentage of 1.9 were idle on the last day of the month compared with 1.5 per cent in June and with 1.1 per cent in July of last year. The very slight decline in employment reported over June was shared by both navigation workers and steam railway employees, while among teamsters and chauffeurs the same situation prevailed in both months. Among street and electric railway employees the improvement recorded was nominal only. In making a comparison with the returns for July of last year in the transportation industries, navigation workers and steam railway employees, as in the previous comparison, were less actively engaged during the month under review; the unemployment percentage reported by street and electric railway employees remained unchanged, and employment for teamsters and chauffeurs was at a slightly lower level.

A separate tabulation is made each month of unemployment among longshore workers, reports having been received at the close of July from 14 associations of these workers, embracing a membership of 6,957 persons, 13.4 per cent of whom were without employment on the last day of the month in comparison with 11.7 per cent in June and with 16.7 per cent in July last year.

The retail trade situation showed but nominal improvement during July over the previous month, the 8 unions from which reports were tabulated with 1,426 members indicating .3 per cent of inactivity, compared with .5

per cent in June. Minor grains in employment were indicated also over July of last year when 1.1 per cent of the members reported were idle.

Reports were tabulated at the end of July from 61 unions of civic employees with 6,835 members, .5 per cent of whom were out of work, the same percentage as was recorded in June, compared with a fully engaged situation in July of last year.

The trend of employment in the miscellaneous group of trades at the close of July was about the same as in June, as shown by the reports received from 124 unions with 6,092 members. Of these 217, or a percentage of 3.6, were idle compared with 3.5 per cent in June. Hotel and restaurant employees, barbers, and theatre and stage employees all reported a more favourable situation than in June, but employment for stationary engineers and firemen eased off slightly. In comparison with the returns for July of last year when 4.4 per cent of unemployment was recorded in the miscellaneous group of trades as a whole, theatre and stage, and hotel and restaurant employees as in the previous comparison registered somewhat heightened activity during the month under review while the contractions shown by stationary engineers and firemen were nominal only. Among barbers no change in condition was indicated.

Of the 770 fishermen reported by 3 unions at the close of July only 10 or a percentage of 1.3 were idle compared with 2.6 per cent of unemployment in June, while in July of last year all members were reported busy.

Lumber workers and loggers with 3 unions embracing 921 members at the close of July indicated an unemployment percentage of 1.1 in comparison with no inactivity in June and with 1.0 per cent of unemployed members in July of last year.

Table II shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1928 inclusive, and also the percentage of unemployment by provinces for July of each year from 1919 to 1926 inclusive, and for each month from January, 1927, to date. Table I summarizes the returns in the various groups of industries for the same months as in Table II.

### (3) Employment Office Reports for July, 1929

The volume of business transacted by the offices of the Employment Service of Canada during the month of July, 1929, showed a decrease of more than 6 per cent in the average daily placements from the preceding period and also a decrease of 9 per cent when a com-

parison was made with the average daily placements effected during the corresponding period of 1928. The total placements for the entire month under review were slightly higher, however, due to the fact that there were two more working days in July than in June.

Gains over last month were recorded in farming, manufacturing, construction and maintenance, mining and trade, the highest being in farming, while in mining and trade improvement was slight. Minor declines occurred in services, logging and transportation. In comparison with July last year, all groups except services, transportation and trade, recorded declines and in these groups the gains were small. The largest decrease was in farming.

The accompanying chart shows the trend of employment since January 1926, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations

responding periods of 1928. The ratios of placements to each 100 applications during the periods under review were 72.5 and 76.5 as compared with 81.5 and 82.0 during the corresponding month of 1928.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during July, 1929, was 1,418, as compared with a daily average of 1,588 during the corresponding month a year ago, and with 1,531 recorded daily in June, 1929.

The average number of applications for employment received daily by the offices of the Service, during the month under review was 1,777, in comparison with 1,789 in July, 1928.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o-o

being made semi-monthly. It will be seen that the curve both of vacancies and of placements in relation to applications declined during the first half of the month, but during the latter half of the period the curve of vacancies showed a slight upward trend, while that of placements rose until it regained practically the same level as that shown at the close of the preceding month. At the end of July both curves, however, were respectively nearly 9 and 6 points lower than those registered during the latter half of July, 1928. The ratio of vacancies to each 100 applications was 79.1 during the first half, and 80.4 during the second half of July, 1929, in contrast with the ratios of 88.3 and 89.1 during the cor-

responding periods of 1928.

The average number of placements made daily by the offices of the Service during July, 1929, was 1,325, of which 1,888 were in regular employment and 437 in work of one week's duration or less, as compared with a total daily average of 1,418 during the preceding month. Placements in July a year ago averaged 1,463 daily, being 1,009 in regular and 454 in casual employment.

During the month of July, 1929, the offices of the Service referred 35,865 persons to vacancies and effected a total of 34,447 placements. Of these the placements in regular employment were 23,093, of which 18,275 were

for men and 4,818 for women, while placements in casual work totalled 11,354. The number of vacancies reported by employers was 25,712 for men and 11,140 for women, a total of 36,852, while applications for work numbered 46,183, of which 32,672 were from men and 13,511 from women.

The following table gives the placements effected to date by the officers of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929 (7 months).....	136,980	77,165	214,145

#### NOVA SCOTIA

Employment opportunities as indicated by orders received at employment offices in Nova Scotia during July were 20 per cent greater than in the preceding month and nearly 25 per cent in excess of the corresponding month of last year. There were gains also in placements of nearly 12 per cent over June and of more than 20 per cent when compared with July, 1928. Increased placements in building construction were responsible for the gain over July last year, although the manufacturing industries also showed improvement. Placements in logging, transportation and services showed declines, while small changes only were indicated in all other groups. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 77; logging, 36; farming, 68; construction and maintenance, 211; trade, 64; and services, 307, of which 199 were of household workers. Regular employment was found for 304 men and 76 women.

#### NEW BRUNSWICK

During July positions offered through employment offices in New Brunswick were slightly less than in the preceding month, but nearly 33 per cent in excess of the corresponding month of last year. Placements were over 6 per cent higher than in June and nearly 28 per cent above July, 1928. All groups except logging and transportation showed gains in placements over July last year, those in construction and maintenance and services being the most pronounced and mainly responsible

for the improvement indicated under this comparison. Placements by industrial divisions included: manufacturing, 64; logging, 42; farming, 44; construction and maintenance, 209; trade, 39; and services, 507, of which 359 were of household workers. During the month 343 men and 83 women were placed in regular employment.

#### QUEBEC

There was an increase of 38 per cent in the number of positions offered through employment offices in the Province of Quebec during the month of July when compared with the preceding month and of over 11 per cent in comparison with the corresponding month last year. Placements also were over 36 per cent higher than in June and over 8 per cent above July, 1928. Placements in logging and construction and maintenance were less than in July last year, but these declines were more than offset by gains in other groups, of which those in manufacturing, transportation, services and trade were the most pronounced. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 248; logging, 386; farming, 288; transportation, 79; construction and maintenance, 702; trade, 75; and services, 735, of which 378 were of household workers. Regular employment was found for 1,914 men and 566 women.

#### ONTARIO

The demand for workers as indicated by orders listed at employment offices in Ontario during July was 5 per cent less than in the preceding month and over 3 per cent lower than during the corresponding month last year. There was a decline also in placements of nearly 4 per cent when compared with June and of nearly 2 per cent in comparison with July, 1928. Services and trade were the only groups in which more placements were made during the month under review than in July last year. The manufacturing industries, construction and maintenance, and logging showed the largest reductions. Placements by industrial groups included: manufacturing, 2,520; logging, 935; farming, 1,965; mining, 105; transportation, 521; construction and maintenance, 3,492; trade, 632; and services, 4,710, of which 2,478 were of household workers. There were 8,586 men and 1,904 women placed in regular employment during the month.

#### MANITOBA

During July orders received at employment offices in Manitoba called for nearly 13 per cent more workers than in the preceding

month, but nearly 13 per cent less than during the corresponding month last year. There was an increase of nearly 13 per cent in placements over June, but a decline of over 7 per cent when compared with July, 1928. Placements in logging, services and trade were higher than during July of last year, but these gains were more than offset by declines in other groups. Farming and construction and maintenance showed large reductions in placements. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 195; logging, 134; farming, 1,050; construction and maintenance, 364; trade 252; and services, 2,077, of which 1,501 were of household workers. During the month 1,472 men and 696 women were placed in regular employment.

#### SASKATCHEWAN

Orders listed at employment offices in Saskatchewan during July called for over 3 per cent less workers than in the preceding month and 25 per cent less than during the corresponding month last year. There was, however, a gain of over 1 per cent in placements when compared with June, but a decline of over 24 per cent in comparison with July, 1928. All industrial groups except transportation participated in the declines in placements from July last year, those in farming, construction and maintenance and services being the most noteworthy. Placements by industrial divisions included: manufacturing, 144; farming, 758; transportation, 134; construction and maintenance, 654; trade, 169; and services, 1,211, of which 707 were of household workers. There were 1,397 men and 580 women placed in regular employment.

#### ALBERTA

Opportunities for employment as indicated by orders received at Alberta offices during July were nearly 10 per cent less than in the preceding month and 29 per cent fewer than during the corresponding month last year. Placements also declined nearly 13 per cent from June and were 27 per cent less than during July, 1928. Transportation, services and trade were the only groups in which more placements were made during the month under review than in July last year, but these gains did little to offset the heavy reductions in placements on farms and in construction and maintenance. There was also a large reduction in placements in the manufacturing industries. Placements by industrial divisions included: manufacturing, 262; farming, 984; mining, 60; transportation, 67; construction and main-

tenance, 566; trade, 190; and services, 1,075, of which 697 were of household workers. During the month 1,789 men and 467 women were placed in regular employment.

#### BRITISH COLUMBIA

There was a gain of nearly 2 per cent in the number of positions offered through employment offices in British Columbia during July when compared both with the preceding month and with the corresponding month last year. Placements also were 3 per cent higher than in June and nearly 4 per cent above July, 1928. There were increased placements over July last year in manufacturing, mining, transportation and services. Logging and construction and maintenance showed the only declines of importance. Placements by industrial divisions included: manufacturing, 748; logging, 369; farming, 736; mining, 194; transportation, 344; construction and maintenance, 935; trade, 167; and services, 1,217, of which 570 were of household workers. Regular employment was found for 2,470 men and 446 women during the month.

#### Movement of Labour

During the month of July, 1929, the offices of the Employment Service of Canada made 23,093 placements in regular employment, of which 12,721 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,381 were granted the Employment Service reduced transportation rate, 949 going to points within the same province as the despatching office and 432 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Reduced transportation rate certificates were granted by Quebec offices during July to 219 persons, 55 of whom went to provincial employment and 164 to situations in other provinces. All the transfers within the province were of bushmen who were conveyed at the special rate from Montreal to points within the same zone. Of those going outside the province, the Hull office transferred 45 bushmen to Pembroke, 2 hospital employees to Timmins and 1 waitress to Sudbury, while from Montreal 112 bushmen were despatched to centres in the Sault Ste. Marie zone. The balance of the interprovincial movement was from Quebec, from which centre 4 masons proceeded to Ottawa.

Transfers from Ontario offices involving the reduced transportation rate during July were 364 in number, 353 of which were provincial, the balance representing an interprovincial movement. Of the workers travelling at the special rate to points within the province the Port Arthur office was responsible for the transfer of 100, including 7 carpenters bound for Toronto; 2 stonemasons for Ottawa; and 39 bush workers, 24 highway construction workers, 12 power construction workers, 9 railway construction workers, 3 cooks, 3 mine workers, and 1 farm hand for various centres within the Port Arthur zone. At the Ottawa office 58 bushmen secured certificates for transportation to Sudbury, and 7 sawmill workers for Pembroke. From North Bay 71 construction labourers went to Toronto; 20 bush workers and 1 cook to Timmins; 6 bushmen, 5 general labourers and 1 cook to Sault Ste. Marie; 7 bush workers to Cobalt; and 2 stonemasons to Ottawa, while from Sudbury 14 bushmen proceeded to Sault Ste. Marie; 2 bushmen and 1 cook to Timmins; and 3 bush workers and 2 sawmill labourers within the Sudbury zone. The Sudbury zone was also the destination of 4 paving construction workers who travelled from Sault Ste. Marie. To points within their respective zones, Fort William despatched 11 bushmen, 4 miners and 1 cookee, and Timmins 10 carpenters. The Ottawa zone received 4 stonemasons from Windsor. From Toronto 1 wood pattern maker was transferred at the special rate to Port Arthur, and 1 sign writer to Kingston. The remaining provincial certificates were issued at Cobalt to 1 blacksmith travelling to Port Arthur and to 16 mine workers going to employment within the Cobalt zone. Of the 11 transfers outside the province 9 were for the Hull zone and included 8 rockmen despatched from Sudbury and 1 diamond drill runner from Timmins. In addition 2 tile setters travelled from Toronto to employment in the Prince Albert zone.

In Manitoba 415 certificates for reduced transportation were issued during July, 219 to points within the province and 196 to stations in other provinces. All of these were granted by the Winnipeg office which despatched provincially 15 farm household workers, 9 hotel workers, 3 teamsters, 1 laundress, 1 construction labourer, and 1 housekeeper to Brandon; 1 waitress to Dauphin; and 100 farm hands, 1 farm housekeeper, 50 carpenters, 11 bushmen, 11 road construction workers, 7 general construction labourers, 3 electricians, 2 railroad construction workers, and 3 hotel workers to various parts of the Winnipeg zone. Of the transfers outside the province from Winnipeg 41 were for the Port Arthur zone,

including 21 bush workers, 11 railroad construction workers, 2 farm hands, 5 hotel workers, 1 marceller, and 1 housekeeper, while the Fort William zone received 34 bush workers; Sault Ste. Marie 12 bushmen and 9 construction labourers; and Ottawa 9 stonemasons. Destined to the Regina zone were 1 plasterer and 1 cook; to Estevan 2 hotel workers and 1 blacksmith; and to Saskatoon 3 boiler makers, while to various Saskatchewan rural districts 38 farm hands and 7 farm household workers were transferred from Winnipeg. In addition 1 farm hand travelled to the Lethbridge zone. The balance of the interprovincial movement was to British Columbia points, the Nelson zone receiving 31 railroad construction workers and the Victoria zone 6 tile setters.

Saskatchewan offices granted 79 certificates for reduced transportation during July, 66 of which were provincial and the remainder interprovincial. The latter were issued at Moose Jaw to 13 mine carpenters going to employment in the Dauphin zone. Included in the provincial movement from Regina were 6 road construction teamsters travelling to Estevan; 1 highway construction cook to Yorkton; 1 welder, 1 baker, 1 blacksmith and 1 domestic to Swift Current; 1 hospital employee and 1 hotel worker to Moose Jaw; 1 cook to Weyburn; 1 railroad construction labourer to Saskatoon and 4 highway construction workers within the Regina zone, while from Moose Jaw 4 cement workers were despatched to Saskatoon and 10 railroad construction workers and 1 blacksmith within its own zone. The Saskatoon office transferred 2 teamsters within the territory covered by that office and 1 bushman to the Prince Albert zone, which zone was also the destination of 1 river driver journeying from Prince Albert. In addition, 26 farm hands and 2 farm household workers travelled to employment at various rural points, the majority of whom secured their certificates at Saskatoon and Regina.

The movement of labour both within and from the province of Alberta during July, comprised the transfer of 133 persons, 108 of whom were carried at the special rate to centres within the province and 25 to points outside. The bulk of the provincial transfers were from Edmonton, which office despatched 2 cookees and 1 farm hand to Calgary; 1 farm hand to Drumheller; and 22 sawmill labourers, 17 mine workers, 17 road construction workers, 16 farm hands, 1 farm household worker, 5 power line workers, 1 teamster, 1 rod man, 1 baker, 1 hospital maid, 1 store clerk, 2 hotel workers, 2 building construction workers, and 1 blacksmith to employment within its own zone. From Calgary 5 farm hands and 1

flunky travelled to Lethbridge; 2 farm hands to Medicine Hat; 2 farm hands and 1 farm housekeeper to Drumheller; and 5 farm hands within the Calgary zone. Of the workers going outside the province 10 were mine carpenters and 1 a dairy man for the Cranbrook zone who were transported at the special rate from Calgary, from which centre also 1 road grader went to Swift Current. In addition, the Edmonton office effected transfers of 5 farm hands, 2 farm housekeepers and 2 hotel waitresses to Saskatoon; 2 farm hands to Prince Albert; and 1 farm hand each to the Moose Jaw and North Battleford zones.

Workers benefiting by the Employment Service reduced transportation rate in British Columbia during July numbered 171 and of these 148 were destined to employment within the province and 23 to points in other provinces. Provincially the movement from Vancouver comprised the transfer of 6 construction labourers, 3 plasterers, 1 painter, 1 farm housekeeper, 1 steel sharpener, 1 dishwasher, and 1 log loader to Kamloops; 12 mine workers, 10 carpenters, 2 rock men, 1 cook, and 1 flunky to Revelstoke; 10 rock men and 1 engineer to Nelson; 4 mine workers, 7 saw-mill workers, 2 hotel clerks, and 1 mechanic to Penticton; 9 farm hands, 2 miners, and 1 sawyer to Prince George; 6 mine workers and 2 carpenters to Cranbrook; 2 cooks and 1 flunky to Vernon; 1 hotel clerk to Kelowna; and 11 tunnel construction workers, 4 mine

workers, 7 power and railroad construction workers, 2 survey helpers, 2 hotel waitresses, 1 electrical engineer, 1 compressor man, 1 farm hand, and 1 cook to centres within the Vancouver zone. From Prince George 2 cooks were sent to Prince Rupert, and 2 highway construction labourers within the Prince George zone. Certificates were secured at the Prince Rupert office by 7 mine workers, 4 bush workers, 3 building labourers, and 1 cook who proceeded to points within the territory covered by that office. The remaining provincial transfers were effected by the Nelson office which despatched 4 miners, 5 bush workers, and 1 cook to points within its own zone. The bulk of the interprovincial movement was of agricultural workers for the Prairie Provinces, Alberta receiving 5 farm hands and 1 farm household worker; Saskatchewan 7 farm hands and 5 farm domestics; and Manitoba 1 farm hand. The majority of these travelled on certificates received at Vancouver. From Vancouver also 2 construction engineers were carried at the special rate to Calgary, while from Nelson 2 stonemasons travelled to employment at Ottawa.

Of the 1,381 persons who profited by the Employment Service reduced transportation rate during July, 599 travelled by the Canadian National Railways, 696 by the Canadian Pacific Railway, 56 by the Timiskaming and Northern Ontario Railway, and 30 by the Pacific Great Eastern Railway.

#### (4) Building Permits Issued in Canada During July, 1929

The value of the building authorized during July showed a seasonal decrease of \$4,826,832 or 17.5 per cent as compared with the preceding month, while there was also a decline of \$2,935,922 or 11.4 per cent as compared with the exceptionally high total of July, 1928. The aggregate for the 61 cities in July, 1929, was \$22,826,034, as against \$27,652,866 in June, 1929, and \$25,761,956 in July, 1928. With the exception of July of last year, the total for the month under review is the highest for July in the years since the record was commenced in 1920.

Some 50 cities furnished detailed statistics, showing that they had issued nearly 1,500 permits for dwellings valued at approximately \$7,000,000, and some 2,900 permits for other buildings estimated at about \$15,000,000. In June, authority was given for the erection of some 1,600 dwellings and 3,300 other buildings, valued at approximately \$8,700,000 and \$17,000,000, respectively.

Increases as compared with June, 1929, were reported in Nova Scotia, where there was a

gain of 181.7 per cent. Of the reductions elsewhere, that of \$2,991,563 or 52.4 per cent in British Columbia was most pronounced.

In comparison with July, 1928, Quebec, Manitoba, Alberta and British Columbia, registered improvement, the gain of \$1,169,922 or 131.1 per cent in Alberta being especially noteworthy. The largest decrease in this comparison was that of 37.9 per cent in Ontario, where the total in July of last year had been unusually high.

Of the larger cities, Toronto reported an increase over June, 1929, but a decline as compared with July, 1928, while Montreal, Winnipeg and Vancouver recorded losses in the former, and increases in the latter comparison. Of the other centres, New Glasgow, Sydney, Shawinigan Falls, Sherbrooke, Westmount, Belleville, Brantford, Galt, Oshawa, Sault Ste. Marie, York Township, Welland, Walkerville, St. Boniface, Calgary, Lethbridge, Medicine Hat and New Westminster showed gains as compared with both June, 1929, and July, 1928.

*Cumulative Record for First Seven Months, 1929.*—The following table gives the value of the building authorized by 61 cities during July and in the first seven months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first seven months of the years since 1920 are also given (1926 average=100).

The aggregate for the first seven months of this year was greater by 15 per cent than in 1928, the previous high level of the record, while the average index numbers of wholesale prices of building materials continued lower than in most of the years since 1920.

Table 1 gives the value of the building permits issued by 61 cities during June and July, 1929, and July, 1928. The 35 cities for which

records are available since 1910 are marked with asterisks.

Year	Value of permits issued in July	Value of permits issued in first seven months	Indexes of Value of permits issued, first seven months (1920=100)	Average indexes of wholesale prices of building materials in first seven months 1926 average =100

<sup>1</sup>Including Prince Rupert not shown in the June report. <sup>2</sup>Report not received. <sup>3</sup>Includes Point Grey and South Vancouver formerly given separately. From Jan. 1929, when the amalgamation of these cities was effected, the total for the 35 cities includes the "Greater Vancouver" aggregate, instead of that for the area formerly known as Vancouver.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

**D**ETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary is reproduced below showing the employment situation during July. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the August issue relates to the situation existing in June, 1929. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for June and previous months taken from the August, 1929, issue of the *American Federationist*, the official publication of the organization, are reproduced below.

### Great Britain

There was little change in the general state of employment in Great Britain and Northern Ireland during July. There was an improvement in river, dock and harbour service, and in the tinsplate, jute, brick, tile, cement and artificial stone industries. On the other hand, there was some decline in the building trade and public works contracting, in steel manufacture, in shipbuilding and ship repairing, and in the motor vehicle, woollen and worsted, textile bleaching, dyeing and finishing, and clothing industries.

Among workpeople, numbering 11,880,000, insured against unemployment in Great Britain and Northern Ireland and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 22nd July, 1929 (including those temporarily stopped as well as those wholly unemployed) was 9.9, as compared with 9.8 at 24th June, 1929, and with 11.6 at 23rd July, 1928. For males alone the percentage at 22nd July, 1929, was 11.0, and for females, 7.1; at 24th June, 1929, the percentages were 10.9 and 6.8. The percentage wholly unemployed, at 22nd July, 1929, was 7.4, the same as at 24th June, 1929. The

total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 29th July, 1929, was approximately 1,188,000, of whom 914,000 were men and 208,000 were women, the remainder being boys and girls; at 1st July, 1929, it was 1,176,000, of whom 912,000 were men, and 209,000 were women; and at 30th July, 1928, it was 1,354,000, of whom 1,058,000 were men, and 223,000 were women.

### United States

Employment in the United States decreased 0.3 per cent in June, 1929, as compared with May, and pay-roll totals decreased 1.9 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of April and May, 1929, and therefore cannot be included in the general statement for the month of June. The number of employees in Class I railroads as at May 15 totalled 1,697,400, representing an increase of 2.9 per cent since April 15. The amount of pay-roll in the entire month of May was \$242,765,789, representing an increase over the previous month of 4.1 per cent.

Employment in manufacturing industries was little changed in June as compared with May, the percentage decrease having been 0.4 only, while pay-roll totals were 1.9 per cent smaller. Despite this small, and nearly regular curtailment in June, employment has shown a total gain since January of 3.8 per cent.

The Bureau of Labour Statistics' weighted index of employment in manufacturing industries for June, 1929, is 98.8, as compared with 99.2 for May, 1929, and 93.1 for June, 1928; the weighted index of pay-roll totals for June, 1929, is 102.8, as compared with 104.8 for May, 1929, and 94.2 for June, 1928. The monthly average for 1926 equals 100.

All industries in the food group, except confectionery, reported more employees in June than in May, while in the textile group the results were reversed, only one industry (men's clothing) having shown increased employment. The textile decreases, however, were small, except in the two women's apparel

industries. The iron and steel industry and four others in the iron and steel group continued their upward trend, as did the two lumber industries. Other industries showing increased employment were paper and printing, petroleum refining, cement, brick, glass, tobacco, and electrical machinery.

Automobile factories reported a drop in employment of 7.2 per cent, fertilizer plants a drop of 29.4 per cent, and shipbuilding yards a drop of 1.1 per cent.

The rayon and radio industries, which are not yet included in the bureau's indexes, both added to their employees in June; the rayon increase was 2.6 per cent and the radio increase 20.1 per cent.

The report for June is based upon returns from 12,514 establishments in 54 of the chief manufacturing industries of the United States. These establishments in June, 1929, had 3,524,964 employees whose combined earnings in one week were \$97,954,378.

Six of the nine geographic divisions had more employees in June than in May, the New England, West South Central, and East

North Central divisions alone reporting decreased employment. The last-named division, which is most affected by the automobile industry, showed decreased employment for the first time in seven months.

*Unemployment percentage.*—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 9 per cent.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence

of such standard conditions, fair and reasonable rates and hours. The conditions above mention are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wages Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may

in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rate so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable

hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the

Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

### Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in group "A" (Construction, etc.)*

Construction of Competitors' Pavilion, Sarcee Camp, Calgary, Alta. Name of contractor, Chas. S. Newcomb, Calgary, Alta. Date of contract August 3, 1929. Amount of contract, \$4,327. The General Fair Wages Clause was inserted in the contract.

Construction of Signals Experimental Building, Ottawa, Ont. Name of contractor, Wm. D'Aoust, Carlington P.O., Ontario. Date of contract August 12, 1929. Amount of contract \$7,020. The General Fair Wages Clause was inserted in the contract.

Construction of Light Railway Buildings, etc., Joint Service Magazines, Bedford Basin, N.S. Name of contractor, MacMillan & MacNearney, Halifax, N.S. Date of contract, August 13, 1929. Amount of contract, \$85,734. The General Fair Wages Clause was inserted in the contract.

Renewal of Armoury Roof, Windsor, Ontario. Name of contractor, Pennington & Laing, Windsor, Ont. Date of contract August 26, 1929. Amount of contract, \$4,980. The General Fair Wages Clause was inserted in the contract.

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in group "A" (Construction, etc.)*

Deepening channel between piers and approach to Lake Ontario, western channel, Toronto, Ontario. Name of contractors, The Great Lakes Dredging and Contracting Com-

pany, Limited, Ottawa, Ont. Date of contract, August 6, 1929. Amount of contract, approximately \$56,332.50. The General Fair Wages Clause was inserted in the contract.

Deepening berths on the westerly and easterly side of the pier, Little Lameque. Name of contractor, Miramichi Dredging Co. Ltd., Newcastle, N.B. Date of contract, August 8, 1929. Amount of contract, approximately \$9,062.50. The General Fair Wages Clause was inserted in the contract.

Reconstruction in concrete of wharf at St. Placide, County of Two Mountains, P.Q. Name of contractors, A. Laeroix, St. Lambert, P.Q. Date of contract, July 23, 1929. Amount of contract, unit prices, approximately \$5,742. The General Fair Wages Clause was inserted in the contract.

Construction of a terminal warehouse, Sydney, Nova Scotia. Name of contractors, E. C. Doyle, Arichat, Nova Scotia. Amount of contract, unit prices, approximately \$9,894. The General Fair Wages Clause was inserted in the contract.

Deepening the area in vicinity of Government wharf, Parry Sound, Ontario. Name of contractors, The Randolph Macdonald Company, Limited. Date of contract, August 2, 1929. Amount of contract, approximately \$14,352. The General Fair Wages Clause was inserted in the contract.

Deepening channel 1,270 feet long and widening to sixty feet, Mitchell Bay, Kent County, Ontario. Name of contractors, O. F. Cumming and W. H. Robinson, Toronto, Ont. Date of contract, August 11, 1929. Amount of contract approximately \$19,980. The General Fair Wages Clause was inserted in the contract.

Cleaning and sweeping the approaches at the New Ontario wharf and at the Algoma Central Railway Coal Wharf, Sault Ste. Marie, Ontario. Name of contractor, Soo Dredging and Construction Co. Ltd. Date of contract, August 6, 1929. Amount of contract, approximately \$5,400. The General Fair Wages Clause was inserted in the contract.

New roofing, three corner towers, Public Building, Hamilton, Ontario. Name of contractor, Thomas Irwin and Son Limited, Hamilton, Ontario. Date of contract, August 7, 1929. Amount of contract, \$4,475. The General Fair Wages Clause was inserted in the contract.

Repairs and extensions to protection walls in Rivière du Gouffre, Baie St. Paul, County of Charlevoix, P.Q. Name of contractor, David Simard, Baie St. Paul, P.Q. Amount of

contract, approximately \$14,980. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
Foreman.....	50	10
Carpenter.....	40	10
Blacksmith.....	40	10
Blacksmith helpers.....	30	10
Labourers.....	30	10
Driver (one horse and cart).....	40	10
Driver (two horses and waggon).....	50	10

Construction of extension to breakwater at Meteghan, Digby County, Nova Scotia. Name of contractors, J. W. Comeau, E. J. Gaudet, and S. F. Comeau, Comeauville, N.S. Date of contract, August 8, 1929. Amount of contract, unit prices, approximately, \$4,966.47. The General Fair Wages Clause was inserted in the contract.

Magnesite composition flooring for National Research Building, Ottawa. Name of contractor, Hochmeister-Lind Company, Toronto, Ont. Date of contract, August 19, 1929. Amount of contract, \$7,273. The General Fair Wages Clause was inserted in the contract.

Wharf repairs, Ste. Famille, County of Montmorency, P.Q. Name of contractor, E. F. Gravel, Chateau Richer, P.Q. Date of contract, August 10, 1929. Amount of contract, unit prices, approximately \$9,761.50. The General Fair Wages Clause was inserted in the contract.

Dredging outer and inner harbour, Port Stanley, Ontario. Name of contractor, The Frontenac Dredging Company, Limited, of Toronto, Ont. Date of contract, August 12, 1929. Amount of contract, approximately \$20,250. The General Fair Wages Clause was inserted in the contract.

Construction of a wharf, Brantville, Northumberland County, N.B. Name of contractor, J. W. McManus Co. Ltd., Memramcook, N.B. Date of contract, August 6, 1929. Amount of contract, unit prices, approximately \$9,095. The General Fair Wages Clause was inserted in the contract.

Plastering National Research Building, Ottawa. Name of contractor, James McLaughlin, Ottawa. Date of contract, August 16, 1929. Amount of contract, \$5,321.64. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	Per hour	
Plasterers.....	\$1 00	8
Plasterers' helpers.....	0 50	8-9
Common labourers.....	0 45	8-9

Deepening several areas from Traverse St. François to Notre Dame de Pierreville, River St. Francis, P.Q. Name of contractor, A. Laperriere, Pierreville, P.Q. Date of contract, August 19, 1929. Amount of contract, approximately \$13,916.38. The General Fair Wages Clause was inserted in the contract.

Deepening basin at North Side of wharf, Shelter Bay, P.Q. Name of contractor, National Dock and Dredging Corporation, Limited. Date of contract, August 19, 1929. Amount of contract, approximately \$16,000. The General Fair Wages Clause was inserted in the contract.

Agreements were recently concluded providing for a five-day week with an increase in daily wages in the building trades in New York. Negotiations for a five-day week were begun by the Bricklayers' Union, which succeeded in concluding an agreement providing for a five-day week, and an increase in wages from \$14 to \$15 a day, as from 1 May, 1929. The Mason Builders' Association concluded a similar agreement on 24 April. The five-day week has now been extended to other workers in the building trades. It is estimated that the total number of workers covered is about 150,000. Work done on Saturdays will in future be paid for at the rate of time and a half.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and Schedules of Wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Printing and Publishing

**ST. JOHN, NEW BRUNSWICK.—A CERTAIN JOB PRINTING OFFICE AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 36.**

Agreement to be in effect from September 1, 1928, to September 1, 1930, and from year to year until either party gives notice 60 days prior to September 1, of any year.

Only union men to be employed if competent union men available.

Hours: 8 per day or night.

Overtime: time and a half for all overtime and work on July 1, Labour Day and Christmas Day; double time for work on Sundays.

Wages per week: cylinder pressmen, \$32.80, cylinder feeder and assistants, \$22.54, platen pressmen on four presses \$32.80, platen pressmen on under four presses, \$30.75.

Apprentices are to serve four years. Wages per week for apprentices to be \$12.00 during first half of second year, \$14.00 during second half of second year, \$16.00 during third year and \$19.00 during fourth year.

Any dispute over this agreement is to be settled by a board of arbitration consisting of a representative of each party and a third chosen by them, the award of such board to be binding.

**KITCHENER, ONTARIO.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 366.**

Agreement to be in effect from January 1, 1928, to December 31, 1929.

Hours: 8 per day; 4 on Saturdays.

Overtime, including work on Sundays and holidays: time and one-half.

Wages per week for hand compositors, operators, make-ups, proofreaders and other journeymen, \$32.12 for day work and \$40 for night work; machinist operators, \$35 per week.

The number of apprentices limited to one to every four journeymen; apprentices to be

at least 16 years old, must have a common school education and be examined by the local apprentice committee. They shall serve five years and must complete the course in printing given by the International Union and will take yearly examinations to show if they are entitled to the increased wage rate.

Wages per week for apprentices: first year, \$6; second year, \$7; third year, \$9; first half of fourth year, \$12; second half, \$14; first half of fifth year, \$16; second half, \$18.

Foremen to have right to employ and discharge help for certain specified reasons.

The union reserves the right to refuse to execute struck work received from or destined for unfair employers or publications.

**WINNIPEG, MANITOBA.—CERTAIN NEWSPAPER PUBLISHERS AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS UNION, LOCAL No. 59.**

Agreement to be in effect from March 11, 1928, to March 11, 1931, and thereafter until either party gives the other 30 days' notice of change.

Hours: 8 hours to be a day's work and 7 hours a night's work.

Overtime: time and one-half for first three hours; after three hours and all work on Sundays and holidays, double time. If called back to work after leaving, one hour's extra time in addition to regular overtime to be paid.

Wages per week for journeymen stereotypers: \$45.00 from March 11, 1928, to March 11, 1929; \$45.50 from March 11, 1929, to March 11, 1930; and \$46.00 from March 11, 1930, to March 11, 1931.

Wages per week for apprentices: \$18.00 for first year with a \$5.00 per week raise every year until scale is reached or apprenticeship served.

The provisions of the Arbitration Agreement between the International Stereotypers and Electrotypers' Union and the American Newspaper Publishers' Association with regard to local conciliation and arbitration are to be binding on the parties to this agreement with the exception that any such board will consist of only one representative of each party and a third chosen by them.

**SASKATOON, SASKATCHEWAN.—A CERTAIN PRINTING OFFICE AND THE INTERNATIONAL BROTHERHOOD OF BOOKBINDERS, LOCAL No. 85.**

Agreement to be in effect from November 1, 1927, to October 3, 1929.

Only union members to be employed.

Hours: 44 per week.

Overtime: time and one-half for first three hours; thereafter and all work on Sundays and holidays, double time.

Wages per week for journeymen bookbinders: \$40.35 per week.

One man apprentice allowed to every four journeymen or major fraction thereof. Men apprentices to serve four years and to be paid a scale beginning with 35 per cent of journeyman's wage for first six months with an increase every six months till 90 per cent of journeyman's wage for eighth six months.

No girl to be allowed to do any part of journeyman's work.

Wages per week for journeywomen: \$17.00.

Women apprentices to serve two years and be paid from \$10.00 per week for first six months to \$14.50 for fourth six months.

If staff is reduced, those last employed to be laid off first.

In case of dispute, it shall be settled by a board of arbitration consisting of one representative of each party and a third chosen by them, the decision of such board to be final.

VANCOUVER, BRITISH COLUMBIA.—VANCOUVER PHOTO ENGRAVERS' ASSOCIATION AND THE INTERNATIONAL PHOTO ENGRAVERS' UNION, LOCAL No. 54.

Agreement signed on conclusion of the strike reported in the March issue of the Labour Gazette, page 276, to be in effect from January 1, 1929, for a period of six years to December 31, 1934, and thereafter from year to year unless notice is given 90 days prior to expiration of the agreement.

Only union members to be employed or applicants for membership holding permits from the union.

Hours: the five day week of 40 hours to be introduced for two months in the year 1929, for three months in 1930, four months in 1931, five months in 1932, six months in 1933 and for the whole year in 1934.

Overtime: time and one-half for first three hours including work on Saturday mornings while 40-hour week is in effect; overtime over three hours and all work on Sundays and holidays including Saturday afternoons, double time. While the 40-hour week is in effect, any man called to work on Saturday morning is to be paid for full four hours at the time and one-half rate irrespective of the time actually worked.

Wages per week for journeymen photo engravers: \$57.50 for first two years, \$60.00 for next two years and \$63.00 for fifth and sixth years. Night shift, \$5.00 per week extra.

One apprentice allowed for every five journeymen employed. An apprentice must be at least sixteen years old and must serve a term of five years in one shop.

Wages per week for apprentices: first year, \$12.00; second year, \$15.00; third year, \$25.00; fourth year, \$30.00; fifth year, \$40.00.

Union members will not be required to perform any work which has not been performed in its entirety by members of this union, nor will they be required to do work coming from employers concerned in a strike or lockout against this union. They also reserve the right to refuse all struck work considered unfair by the Allied Printing Trades Council.

Employers agree to have all engraving made in their establishments stamped with the union label, dyes for stamping cuts to be supplied free by the union.

Employees to give a week's notice if leaving and employers to give a week's notice before discharging or laying off employees.

A local joint industrial council to be formed consisting of three representatives of each party for the settlement of all disputes. If unable to agree the dispute will then be referred to the Photo Engravers' Joint Industrial Council of the American Photo Engravers' Association and the International Photo Engravers' Union.

VANCOUVER, BRITISH COLUMBIA.—CERTAIN JOB OFFICES AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 69.

Agreement to be in effect from February 1, 1928, to January 31, 1931, and may be extended from year to year provided mutually satisfactory arrangements as to wages and hours can be settled by local arbitration and conciliation.

Union members to be employed if available.

Hours: 44 per week.

Overtime: time and one-half for first six hours; thereafter and all work on Sundays and holidays, double time.

Wages per week: from February 1, 1928, to January 31, 1929, journeymen pressmen on cylinder and offset presses, \$43.50; feeders, \$26.95; on platen presses journeymen pressmen, \$40.40; feeders, \$24.85. From February 1, 1929, to January 31, 1931, journeymen pressmen on cylinder and offset presses, \$45.00; feeders, \$28.45; on platen presses, journeymen pressmen, \$41.90; feeders, \$26.35. Night work: pressmen, 8 cents per hour over day rate; feeders and apprentices, 5 cents per hour over day rate.

One apprentice allowed for every four journeymen employed. Apprentice pressfeeders to serve two years and receive \$12.00 per week after one year's service and \$14.00 per week after eighteen months' service. Apprentice pressmen on cylinder or platen presses to be paid \$1.00 per week more than the respective feeders' scale with an increase of \$1.00 per week each year thereafter until entitled to a journeyman pressman's card.

The union reserves the right to refuse struck work received from or destined for unfair offices.

Conciliation and arbitration to govern the adjustment of any dispute arising under the terms of this contract. Provided an arbitration agreement is later arrived at, the individual employer signing this agreement agrees to become a party to one arbitration proceeding representing the employing commercial printers of Greater Vancouver, and the findings of this arbitration shall be binding on him.

VICTORIA, BRITISH COLUMBIA.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 201.

Agreement originally in effect from October 1, 1927, to June 30, 1929, has been renewed to June 30, 1930, and is to run from year to year thereafter until either party gives notice 60 days prior to June 30 of any year.

Only local union members to be employed.

Hours 8 per day and 4 on Saturdays.

Overtime: time and one-half until midnight; after midnight and all work on Sundays, Labour Day and Christmas Day double time; work on other holidays, time and one-half.

Wages per week for journeymen including linotype operators, \$45.00 for day work and \$48.52 for night work. Machine-tenders and machinist-operators to receive 50 cents per day over the regular scale. Foremen of offices employing two or more compositors to receive at least 75 cents and assistant foremen 50 cents per day over the journeyman scale.

Apprentices limited to one for an office where from two to five journeymen are employed; two apprentices allowed where six to ten

journeymen employed; not more than two apprentices in any one office.

Apprentices must be 16 years of age, have a fair education, and must serve five years. They must also complete the course in printing of the International Union.

Wages per week for apprentices: third year, \$15.00; fourth year, \$22.50; fifth year, \$30.00. Apprentices must be examined by the Examining Board before each increase in wages and at the end of their term before being admitted as journeymen members of the union.

The union reserves the right to refuse to execute struck work received from or destined for unfair offices or publications.

### Manufacturing: Miscellaneous Products

**TORONTO, ONTARIO.—A CERTAIN MATTRESS MANUFACTURING AND UPHOLSTERING ESTABLISHMENT AND THE UPHOLSTERERS EMPLOYED BY THEM.**

Agreement to be in effect from January, 1929, to January, 1930, and from year to year unless notice of change is given by either party.

Only union members to be employed.

Hours: 8 per day; 4 on Saturdays, a 44-hour week. No work on Sundays or holidays unless otherwise arranged by the shop committee.

Wages: all work done on a day-work basis, \$1.00 per hour. New prices to be arranged between the firm and the shop committee.

Four apprentices to be added to staff and to serve two years.

Wages per week for apprentices: first six months, \$10.00; second six months, \$15.00; third six months, \$20.00; fourth six months, \$23.00.

A shop committee elected by the employees shall be responsible for giving out work and for production. This committee may also arrange hours during the slack season and for rush work. The laying off or taking on men shall be done by arbitration between the firm and the shop committee.

All disputes to be settled by arbitration; no cessation of work during negotiations.

### Construction: Buildings and Structures

**HALIFAX, NOVA SCOTIA.—CONSTRUCTIVE MECHANICAL TRADES EXCHANGE, INCORPORATED, AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL NO. 83.**

Agreement to be in effect from May 1, 1929, to April 30, 1930, and from year to year until either party gives notice 60 days before April 30, in any year. If such notice is given, the Joint Committee will meet to discuss a new agreement.

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one-half to 10 p.m.; after 10 p.m. and all work on Sundays and holidays, double time.

Wages for carpenters: 73 cents per hour and no carpenter to work for less, except by permission of the union.

**QUEBEC, P.Q.—CERTAIN CONTRACTORS AND THE NATIONAL AND CATHOLIC UNION OF PAINTERS OF THE CITY OF QUEBEC, INCORPORATED.**

Agreement to be in effect from May 1, 1929, to May 1, 1930.

This agreement is the same as the one previously in force and summarized in the **LABOUR**

**GAZETTE** for August, 1928, page 905, with the following exception:

Wages for painters: 50 cents per hour.

**MONTREAL, QUEBEC.—CERTAIN CONTRACTORS AND THE SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL NO. 116.**

Agreement to be in effect from September 1, 1929, to August 31, 1930.

Only members of local union to be employed.

Hours: 9 per day and 5 on Saturdays, a 50 hour week.

Overtime: from 5 p.m. to midnight other days and from 12 noon to 5 p.m. on Saturdays, time and one-half. Other overtime and work on Sundays, Christmas Day and New Year's Day, double time. No work on Labour Day.

Wages for journeymen sheet metal workers: 80 cents per hour.

One apprentice allowed for every three journeymen. Helpers not to use tools to do a journeyman's work.

Travelling and boarding expenses and travelling time up to 10 p.m. to be paid by employer for work out of the city.

Union members not to take sub-contracts or work for persons taking such contracts.

**OTTAWA, ONTARIO.—THE OTTAWA MASTER SHEET METAL WORKERS' ASSOCIATION AND THE SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL NO. 47.**

Agreement to be in effect from May 1, 1929, to April 30, 1932, and from year to year until either party gives notice three months before April 30.

Only union members to be employed if available.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half until midnight including Saturday afternoons; after midnight and work on Sundays and holidays, double time.

Wages: two increases of five cents per hour to be given, making the rate for journeymen sheet metal workers 95 cents per hour from May 1, 1929, to April 30, 1930; from May 1, 1930, to expiration of agreement, \$1.00 per hour. Improvers are to receive the same increase per hour until being advanced to the classification of journeymen.

The question of apprentices is to be referred to the Joint Committee to draft rules governing apprenticeship plans and submit same for approval. When adopted they will become part of the agreement.

After serving four years, and if satisfactory to both the union and employers, an apprentice will become a journeyman.

For work outside city, fare, board and travelling time to be paid by employers.

No union members to sub-contract or do work after regular working hours when employed by a Master Sheet Metal Worker.

Any dispute is to be referred to a board of arbitration consisting of three members of each party. If not settled by this board, no action is to be taken until the matter has been referred to the General Office of the Sheet Metal Workers' International Association and a decision rendered.

**HAMILTON, ONTARIO.—HAMILTON MASTER PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 67.**

Agreement signed at the conclusion of the strike reported in this issue on page 985 to be in effect from September 3, 1929, to April 30, 1931.

Only union members to be employed and union plumbers will not work for anyone but an established Sanitary and Heating Engineer.

Hours: 8 per day, 4 on Saturdays from September 3, 1929, to April 30, 1930. From May 1, 1930, to April 30, 1931, hours to be 8 per day for first five days and no work on Saturdays, with the provision that if necessary, work on Saturday morning between 8 a.m. and noon will be worked at single time.

Overtime: time and one-half to midnight; after midnight and all work on Sundays and holidays, double time. If doing absolutely necessary repairs or finishing a repair job, if this will not take more than one hour's time, it may be done at the regular rate.

Wages per hour for journeymen plumbers and steamfitters: \$1.07 from September 3, 1929, to April 30, 1930; \$1.10 from May 1, 1930, to April 30, 1931.

Any apprentice having served four years at the trade and having passed the examination, shall be paid 70 per cent of the journeyman's wage for the first year and 80 per cent for the second year; after that he will be paid the minimum journeyman's rate.

One apprentice allowed for every five plumbers or steamfitters. For any additional help required, labourers will be used.

For work out of the city, fare, board and travelling time to be paid.

If sent to cities where higher wages are paid, they will receive the higher rate. If sent to a place where wages paid are lower, they will receive the rate stated in this agreement.

Members of the union are not to make rules which in any way curtail the work.

A joint conference board consisting of three employers and three journeymen will meet when necessary to settle any dispute. If unable to come to a decision, the dispute will be referred to the General Office of the union who shall give a decision before any strike or lockout occurs.

**SASKATOON, SASKATCHEWAN.—ELECTRICAL CONTRACTORS' ASSOCIATION OF SASKATOON AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 248.**

Agreement to be in effect from May 1, 1929, to May 1, 1930, and from to year until notice is given by either party 90 days before May 1, of any year.

Only union members to be employed as long as satisfactory men are available.

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one-half to midnight; after midnight and all work on Sundays and holidays, double time.

Wages for licensed journeymen: \$1.00 per hour.

Not more than one helper to one journeyman. A contractor, journeyman and apprentice shall be defined as by the Electricians' Licensing Act of Saskatchewan.

Wages for apprentices: first year, \$6.00 to \$8.00 per week; second year, \$10.00 to \$12.00 per week; third year, \$15.00 to \$18.00 per week.

No union member to take any contract or assist in doing any electrical work for anyone else when in the employ of a contractor under this agreement.

For work out of the city, fare, board, and travelling time up to eight hours to be paid.

A Joint Conference Board to be established consisting of three contractors and three journeymen who shall have power to make recommendations for improving the general conditions of the trade and any disputes are to be referred to this board.

**SASKATOON, SASKATCHEWAN.—THE MASTER SHEET METAL WORKERS AND THE SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL No. 758.**

Agreement to be in effect from May 1, 1929, to May 1, 1930, and from year to year until either party gives notice two months prior to May 1, of any year.

Only union members or those eligible and willing to become members are to be employed. No journeyman may do work pertaining to his trade for anyone but a registered sheet metal worker.

Hours: 9 per day, 4 on Saturday. Men working out of town where there is no local union may work 10 hours per day at single time on working days.

Overtime: time and one-half to midnight; after midnight and all work on Sundays and holidays, double time.

Wages for journeymen sheet metal workers: \$1.10 per hour.

Men working out of town to have fare, expenses and travelling time paid by employers.

Any grievance to be referred to a committee consisting of three journeymen and three employers, said committee to meet within 48 hours and have power to settle such grievance.

**REGINA, SASKATCHEWAN.—ASSOCIATION OF CONSTRUCTION INDUSTRIES AND THE OPERATIVE PLASTERERS INTERNATIONAL ASSOCIATION, LOCAL No. 393.**

The agreement which was summarized in the LABOUR GAZETTE for July, 1927, page 791, has been renewed to April 30, 1930. Under this agreement, wages for journeymen plasterers are \$1.30 per hour for a 44-hour week.

**REGINA, SASKATCHEWAN.—REGINA ASSOCIATION OF DOMESTIC, SANITARY AND HEATING ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 179.**

Agreement to be in effect from April 1, 1929, to December 31, 1929. Both parties are to meet in November to negotiate a new agreement for the year 1930.

Only union members or men eligible and willing to become such are to be employed if available. No union member shall do any work pertaining to his trade for anyone but a registered employing plumber.

Hours: 8 per day, 4 on Saturdays. If a double shift is worked, 8 hours to constitute a day's work. When working out of town where

there is no local union, 10 hours per day may be worked at single time on working days.

Overtime: time and one-half to midnight; thereafter, and all work on Sundays and holidays, double time.

Wages for journeymen plumbers and steam-fitters: \$1.20 per hour.

For work out of town, fare, board and travelling time to be paid by employer.

In each trade one apprentice allowed for every three journeymen employed. No fitter to be allowed more than one helper.

Any grievance to be referred to a joint committee of three employers and three journeymen who will have power to settle it. No journeyman to be dismissed or withdrawn from job until such committee has rendered a decision.

VICTORIA, BRITISH COLUMBIA.—GENERAL CONTRACTORS' ASSOCIATION AND THE INTERNATIONAL BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1598.

Agreement to be in effect from May 1, 1929, to May 1, 1930. A committee to meet three months before the date of expiration to consider this or any new agreement.

Hours: 8 per day, 4 on Saturday.

Overtime: time and one-half for first four hours; thereafter and Sundays and holidays, double time.

Wages for journeymen carpenters: \$8.00 per day.

Transportation to be paid to all work outside the city.

### Transportation and Public Utilities: Electric Railways

OTTAWA, ONTARIO.—THE OTTAWA ELECTRIC RAILWAY COMPANY AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, LOCAL No. 279.

Agreement to be in effect from May 1, 1929, to April 30, 1930. If either party desires a change, notice will be given 30 days prior to May 1, 1930.

This agreement was signed on July 24, 1929, following the report of the Board under the Industrial Disputes Investigation Act, 1907. The report of the Board was published in the LABOUR GAZETTE for June, page 593.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for July, 1926, with the exception that men on the spare list will be given runs in order of seniority. The first man on the spare list will be given the first vacant run each day, whether it be as a one-man car operator, motorman or conductor, if qualified. The original standing of spare men as motormen or as conductors is no longer considered, but single seniority prevails. The other changes from the old agreement are of minor importance.

## Hours of Labour in the Steel Industry

The Social Service Council of Canada has undertaken to make a survey of steel industries operating blast furnaces in Canada, and Dr. Charles W. Gordon "Ralph Connor" as chairman of its industrial committee, who has had wide experience in industrial questions in this Dominion, will visit these centres to ascertain what can be done to lessen the hours of labour.

The Ministerial Association of Sydney, N.S., made the following recommendation in a recent report:—

"We recommend that representation be made immediately to the Federal Department of Labour and to the Prime Minister of Canada, urging that if and when the steel companies of Canada are allowed a protective tariff, provision be made for the men receiving the standard hours of labour adopted by the Parliament of Canada, namely, the eight-hour day."

The annual report of the United States Steel Corporation, dated December 31, 1923, stated that by December 1 of that year, broadly speaking, the twelve-hour day had been totally eliminated, except for one subsidiary company in which the change was accomplished by February 1, 1924. "The revised plan adopted," the report said, "estab-

lished the hours for employees connected with continuous processes on an eight-hour day basis and all other employees on a ten-hour day. The wage rates of employees whose working day was reduced from 12 to 8 hours were so adjusted as to afford earnings equivalent to an increase of 25 per cent in the hourly and base rates previously paid and the wage rates on all employees reduced to or continued on the ten-hour basis were advanced 10 per cent."

A party of five British grocers' apprentices, accompanied by a conductor, is touring the principal food-producing centres of Ontario and Quebec this summer. The tour has been organized by the Department of Trade and Commerce as a travelling scholarship awarded as a result of an essay competition conducted by the British Institute of Certificated Grocers. The itinerary of the party will include a visit to the Canadian National Exhibition at Toronto and to the Central Experimental Farm at Ottawa. It will also include visits to pulp and paper mills, dairies, cheese and condensed milk factories, stock farms, live stock yards, abattoirs, cold storage plants, greenhouses, produce and market gardens, fruit farms, canneries, wineries, power houses and chain grocery stores and warehouses.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, AUGUST, 1929

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was toward higher levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being substantially higher.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.63 at the beginning of August, as compared with \$10.98 for July; \$11.08 for August, 1928; \$10.93 for August, 1927; \$11.10 for August, 1926; \$10.84 for August, 1925; \$10.19 for August, 1924; \$10.53 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); \$13.41 for August, 1918; and \$7.68 for August, 1914. The most important advance was a seasonal increase in the price of potatoes with the marketing of the new crop, while less important increases occurred also in the prices of eggs, butter, bread, flour, rolled oats, veal, mutton, fresh and salt pork and bacon. Slight decreases occurred in the prices of beef and cheese. Including the cost of fuel and rent with that of foods the total budget averaged \$21.90 at the beginning of August, as compared with \$21.26 for July; \$21.31 for August, 1928; \$21.11 for August, 1927; \$21.32 for August, 1926; \$21.05 for August, 1925; \$20.57 for August, 1924; \$21.03 for August, 1923; \$20.88 for August, 1922; \$21.98 for August, 1921; \$26.60 for August, 1920; \$26.92 for July, 1920 (the peak); \$21.20 for August, 1918; and \$14.41 for August, 1914. In fuel anthracite and bituminous coal were slightly lower. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again substantially higher at 98.1 for August, as compared with 96 for July; 95.4 for August, 1928; 98.3 for August, 1927; and 99.1 for August, 1926. Sixty-seven prices quotations were higher, forty-seven were lower and three hundred and eighty-eight were unchanged.

In the grouping according to chief component materials three of the eight main groups were higher, one was lower, while four were practically unchanged. The Vegetables and Vegetable Products group and the Animals and their Products group both advanced, the former due to higher prices for foreign fruits, flax, oats, rye, flour, bread and potatoes,

which more than offset declines in the prices of wheat, barley, raw rubber and raw sugar, and the latter due to higher prices for veal, pork, smoked meats, butter and eggs, which more than offset declines in the prices of steers, beef, lambs, cheese, and sole leather. The Chemicals and Allied Products group showed a slight increase. The Fibres, Textiles and Textile Products group was lower, due mainly to lower prices for woollen fabrics and hemp, which more than offset higher prices for raw silk and sisal. The Wood, Wood Products and Paper group, the Iron and its products group, the Non-Metallic Minerals group, and the Non-Ferrous Metals group were practically unchanged.

In the grouping according to purpose consumers' goods advanced, due to higher prices for bakery products, foreign fruits, potatoes, cured meats and eggs, which more than offset declines in the prices of silk and wool fabrics and in fresh meats. Producers' goods were slightly lower, decreases in the price of leather, live stock, grains and raw rubber more than offsetting increases in the prices of linseed oil, flax fibre, raw silk, and flour and other milled products.

In the grouping according to origin raw or partly manufactured goods advanced, due to higher prices for eggs, raw silk, foreign fruits and potatoes, which more than offset declines in the prices of live stock, meats, raw rubber and raw sugar. Fully or chiefly manufactured goods also advanced slightly, increases being recorded in the prices of flour, bakery products, vegetable oils, grain, sugar, cured meats and butter.

#### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of August, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-

thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups, gas and electricity have been included.

### Cost of Electric Current and Gas for Household

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6; 1927, 73.4; 1928, 71.7; 1929, 71.4.

(Continued on page 1064)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

Table with columns for Commodities, Quantity, and years from 1900 to 1929. Rows include Beef, Veal, Mutton, Pork, Bacon, Lard, Eggs, Milk, Butter, Cheese, Bread, Flour, Rice, Beans, Apples, Prunes, Sugar, Tea, Coffee, Potatoes, Vinegar, All Foods, Starch, Coal, Wood, Coal oil, Fuel and light, Rent, and Totals.

AVERAGE COST OF STAPLE FOODS BY PROVINCES

Table showing average costs for various commodities across provinces: Nova Scotia, Prince Edward Island, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia.

†December only. §Kind most sold. \*For electric light and gas see text.

\*\*An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent. See text.

(Continued from page 1056)

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318) and bringing the figures down to 1929. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

Beef prices showed little change, sirloin steak averaging 38.4 cents per pound in August, as compared with 38.2 cents in July; round steak 33.1 cents per pound in August and 33.2 cents in July; and shoulder roast 24 cents per pound in August and 24.3 cents in July. Both veal and mutton advanced, the former from an average of 24.4 cents per pound in July to 24.6 cents in August, and the latter from 31.7 cents per pound in July to 32.1 cents in August. Fresh pork increased from an average price of 31.6 cents per pound in July to 32.6 cents in August and salt pork from 28 cents per pound in July to 28.2 cents in August. Bacon also advanced, averaging 41 cents per pound in August, as compared with 39.4 cents in July. Lard was unchanged at an average price of 22 cents per pound.

Eggs showed a seasonal advance in most localities, fresh being up from an average of 36 cents per dozen in July to 39.4 cents in August, and cooking from 32.1 cents per dozen in July to 34.8 cents in August. Milk was unchanged at an average price of 12 cents per quart. Dairy butter rose from an average of 39.7 cents per pound in July to 40.2 cents in August and creamery from 44.1 cents per pound in July to 44.9 cents in August. Higher prices were reported from many localities in Ontario and the eastern provinces but prices in the western provinces for the most part showed little change. Cheese was slightly lower at an average price of 33.1 cents per pound.

Bread was up in the average from 7.7 cents per pound in July to 7.8 cents in August. Higher prices were reported from Truro, Three Rivers, St. John's, Belleville, Oshawa, Orillia, Toronto, Galt, Kitchener, Chatham, North

Bay, Winnipeg, Saskatoon, Edmonton, Calgary, Lethbridge, New Westminster and Vancouver. Flour was up from an average price of 4.8 cents per pound in July to 5.3 cents in August. Higher prices were reported from most localities. Rolled oats also were slightly higher, averaging 6.4 cents per pound. Onions were down from an average price of 8 cents per pound in July to 7.7 cents in August. Potatoes were very much higher, the price being up from an average of \$1.44 per ninety pounds in July to \$2.83 in August. Higher quotations were given from all localities. Evaporated apples and prunes increased slightly, the former averaging 21.4 cents per pound and the latter 13.9 cents per pound. Granulated sugar was unchanged at an average price of 7.1 cents per pound. Anthracite coal averaged \$16.03 per ton. Hardwood was little changed at an average price of \$12.25 per cord. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics. The movement in grain prices was mixed, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged \$1.58 per bushel as compared with \$1.598 in July. The slight decreases from the high levels of July were said to be due to the better European crop prospects and to the increased shipments from the Argentine and to the increase in the visible supplies in the United States. Western oats advanced from 63.1 cents per bushel to 68.1 cents; rye from \$1.105 to \$1.115; and flax from \$2.544 per bushel to \$2.608. Western barley declined from 83.4 cents per bushel to 79 cents. Flour advanced from \$8.507 per barrel to \$8.782; oatmeal from \$3.85 per ninety-eight pound bag to \$4.40; and rolled oats from \$4 per ninety pound bag to \$4.50. Bran and shorts at Montreal both advanced, the former being up from \$30.25 per ton to \$34.25 and the latter from \$32.25 per ton to \$36.25. Bread prices advanced in most of the larger cities. Ceylon rubber was down from 21.3 cents per pound in July to 20.6 cents in August. Raw sugar at New York fell from \$2.125 per hundred pounds to \$2, while granulated was slightly higher, the price advancing from \$5.03 per hundred pounds to \$5.18. The prices of good steers at Toronto fell from \$11.15 per hundred pounds to \$10.11 and at Winnipeg from \$10.15 per hundred pounds to \$9.41. Hogs at Toronto also were slightly lower, the price being down from \$13.90 per hundred pounds to \$13.85. Lamb prices at Toronto were substantially lower, being down from \$15.10 per hundred pounds to \$13.83. In dressed meats

\*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 13%; Sundries 20%.

beef was slightly lower, while pork showed little change from last month, the price ranging from 22 cents per pound to 24½ cents. Butter in eastern markets was higher, prints being up from 40-41 cents per pound to 41-42 cents. Cheese at Montreal declined from 20 cents per pound to 19½ cents. Eggs showed a substantial seasonal advance, increases for fresh eggs ranging from 6 cents per dozen to

13 cents. Raw cotton at New York was unchanged at an average price of 18.6 cents per pound. Flax fibre rose from 24-25 cents per pound to 25-26 cents. Wool prices were unchanged. Sulphuric acid advanced from \$15 per ton to \$16 and muriatic acid from \$24 per ton to \$25. Iron and steel prices showed little change from the quotations of the past two months. Anthracite coal at Toronto advanced from \$13.17 per ton to \$13.27.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 137.4 for July, an advance of 1.3 per cent over the June level. Foods rose 3.7 per cent due principally to a rise of 8.9 per cent in cereals, chiefly wheat. Industrial materials as a whole were unchanged as declines in metals and minerals and in textiles were offset by an advance in miscellaneous products.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-77=100, was 115.2 at the end of July, an advance of 1.9 per cent over the previous month. Foodstuffs rose 3.1 per cent due to a rise of 14.5 per cent in vegetable foods, in which group the chief advance was in wheat and flour. Animal foods declined 3.6 per cent due to lower prices for mutton and beef. Industrial materials rose 0.9 per cent; advances in minerals and in sundries were partly offset by a decline in textiles, chiefly wool and flax.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 163 at August 1, an advance of two points over July 1. The increase was due to a rise of four points in food, mainly due to higher prices for bread, flour and eggs. Bacon and butter also rose in price and milk in some districts; potatoes were cheaper. The other groups, rent, clothing, fuel and light, and sundries were unchanged.

### France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July, 1914=100, was 626 for July, as compared with 623

for June. The food group advanced due to higher prices of vegetable foods and sundries; animal foods showed a slight decline. Industrial materials as a whole were practically unchanged, a decline in textiles being offset by a rise in miscellaneous products.

### Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 137.8 for July, a rise of 2.0 per cent over the June level. Agricultural products advanced 6.2 per cent, showing substantial increases in all groups, the most notable being a rise of 9.4 per cent in foods of vegetable origin. Provisions rose 3.8 per cent. Raw materials and semi-manufactured goods fell 0.2 per cent and manufactured goods fell 0.1 per cent.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 154.4 for July, an advance of 0.7 per cent over June, due chiefly to an increase of 1.1 per cent in food prices. Other groups showed only slight variations.

### Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce of Milan, on the base of 1913=100, was 477.27 for July. This is the lowest monthly figure since 1921. The decline from the previous month was due to lower prices for both animal and vegetable foods. Industrial materials were practically unchanged.

### British India

WHOLESALE PRICES.—The index number of the Labour Office, Government of Bombay, on the base of July, 1914=100, was 143 for June, an increase of two points over May. Food rose 6 points, showing advances in all groups, the most marked being in cereals. Non-foods as a whole were unchanged, none of the groups showing any marked variation from the June level.

**COST OF LIVING.**—The working class cost of living index number, Bombay, on the base July, 1914=100, was 148 for July, an advance of one point for the month. Food and clothing each advanced one point, while fuel and lighting and house rent were unchanged.

**New Zealand**

**WHOLESALE PRICES.**—The index number of the Census and Statistics Office, on the base 1909-13=1,000, was 1,547 for June, an increase of one point over May. There were advances in foodstuffs of vegetable origin, metals and their products, and in non-metallic minerals and their products; the other groups, textile manufactures, wood and wood products, animal products and chemicals and manures declined

**United States**

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 98.0 for July, an increase of 1.7 per cent over June. The greatest in-

crease was in farm products, chiefly grains, eggs and potatoes. Foods also showed an advance of about 4 per cent. Hides and skins and leather, cattle feed, raw materials, semi-manufactured articles and finished products all were higher. Textile products, fuel and lighting materials showed decreases.

The *Annalist* index number, on the base 1913=100, was 148.6 for August, a decline of 0.3 per cent from July. Farm products and food products and building materials all rose slightly but were more than balanced by declines in textile products, fuels, metals, chemicals and miscellaneous commodities.

**COST OF LIVING.**—The index number of the Bureau of Labour Statistics, on the base 1913=100, was 170.2 for June, a decline of 0.6 per cent from December, 1928, but an increase of 0.1 per cent over June of last year. Compared with a year ago, food increased 1.4 per cent, clothing decreased 0.8 per cent, rents 2.5 per cent, fuel and light 1.1 per cent, house furnishing goods 1.3 per cent, while miscellaneous items increased 0.9 per cent.

**IMMIGRATION TO CANADA DURING THE THREE MONTHS ENDED JUNE, 30, 1929**

**T**HE accompanying tables prepared by the Department of Immigration and Colonization show the nature and extent of immigration into Canada during the three months ended June 30, 1929, with some comparative figures for the corresponding period in 1928. Out of a total of 77,750 immigrants 34,967 or 45 per cent were British, 11,290 or 15 per cent were from the United States and 31,493 or 40 per cent from other countries. During the period 9,043 Canadians returned from the United States, as compared with 10,672, the number previously reported for the three months ending June 30, 1928.

# THE LABOUR GAZETTE

PREPARED AND EDITED BY  
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 29]

OCTOBER, 1929

[NUMBER 10

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

A MODERATE decline in industrial employment throughout Canada was shown at the beginning of September, according to returns received by the Dominion Bureau of Statistics from 6,908 firms, each with a minimum of 15 employees, representing practically every industry except agriculture, fishing, hunting and highly specialized business operations. These firms employed 1,093,735 persons, as compared with 1,102,033 in the preceding month. The employment index number (with the average for the calendar year, 1926, as the base =100), stood at 126·8 on September 1, as compared with 127·8 on August 1, 1929, and with 119·1, 111·0, 106·2, 97·8, 94·2, 101·2, 94·8 and 89·8 on September 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922, and 1921, respectively. At the beginning of September, 1929, the percentage of unemployment reported to the Department of Labour by local trade unions stood at 3·5, in comparison with percentages of 3·0 at the beginning of August and 2·4 at the beginning of September, 1928. The September percentage was based on the returns received by the Department of Labour from a total of 1,709 unions with a combined membership of 204,547 persons. Reports received by the Department of Labour from the office of the Employment Service of Canada showed that the volume of business, as indicated by the average daily placements effected, was higher than that of the previous month, but considerably below that recorded daily during the corresponding month last year.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.64 at the beginning of September, as compared with \$11.63 for August; \$11.15 for September, 1928; \$10.87 for September, 1927; \$10.94 for September, 1926; \$10.81 for September, 1925; \$10.28 for September, 1924; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statis-

tics, based upon prices in 1926 as 100, was lower in September at 97·3, as compared with 98·1 for August; 95·5 for September, 1928; 97·1 for September, 1927; and 98·5 for September, 1926.

The loss in working time caused by industrial disputes in Canada during September was more than double that in August, but was practically the same as in September, 1928. Nine disputes were in existence during the month, involving 864 workers, and resulting in the loss of 9,788 working days. Corresponding figures for August, 1929, were: ten disputes, 1,094 workers, and 3,712 working days; and for September, 1928, eleven disputes, 1,433 workers, and 9,849 working days.

### Industrial Disputes Investigation Act

During September the Department received a report from the Board of Conciliation and Investigation in connection with the dispute between the Canadian Pacific and Canadian National Railways, on one side, and their conductors, trainmen and yard service employees on the western lines of these companies on the other side. The Board established in connection with the dispute between the Dominion Atlantic Railway Company and its clerks and other employees was completed during the month. The dispute in the printing industry at London, Ontario, in connection with which a Board had been applied for in the preceding month, was settled by the mediation of the chief conciliation officer of the Department. A full account of the proceedings under the Act during the month appears on page 1081.

### Report on Labour Legislation in Canada

The Department of Labour is issuing this month its third consolidated report on labour legislation in Canada, giving the text of the labour laws enacted by the Dominion Parliament and by the several provincial legislatures as on December 31, 1928. An article dealing with this publication is given elsewhere in this issue. The first

volume in this series was published in 1915, and the second in 1920, supplements containing new legislation being issued annually between the consolidations. The new volume comprises the material contained in all the preceding issues, and presents in convenient form the labour and social legislation with which Canadian workers are specially concerned. Its usefulness as a work of reference is much increased by a full index which enables the reader to see at a glance how far each subject group has been covered by federal or provincial legislation.

The legislation printed in this report is taken from the latest Revised Statutes of the Dominion or of the several provinces and from the subsequent yearly volumes of statutes up to the end of 1928. In the case of Quebec certain articles from the Civil Code and Code of Civil Procedure are included. Only the abridged text or a summary is given of certain statutes which as a whole cannot be regarded as labour legislation, certain sections however affecting workmen as employees.

The volume may be obtained from the King's Printer, Department of Public Printing and Stationery, Ottawa, the price being one dollar.

Another important publication of the Department issued during the present month, on "Labour Organization in Canada," is reviewed on another page.

### **Industrial Conciliation in South Africa**

The Registrar of Trade Unions and Employers' Organizations of the Union of South Africa, in a recent report, states that since the passing of the Industrial Conciliation Act in 1924 the number of strikes and lockouts in the Union has been negligible. He attributes this peaceful condition to the fact that a large measure of self government in industry has been brought about by the industrial councils that have been established under the Act. The provisions of this Act were outlined in the LABOUR GAZETTE, June, 1924, page 495. It applies to every industry, trade and occupation, except farming and government service, and provides for the establishment of industrial councils for the regulation of matters affecting both parties, and for the prevention and settlement of disputes. The councils are formed of an equal representation of employers' organizations and registered trade unions. Provision is made for the appointment of trade conciliation boards where there are no industrial councils. Further, the Minister of Labour appoints a mediator

on application by both parties to a dispute under consideration, or if he considers that the appointment would further a settlement. A majority of representatives of employers and workers on a council or board may appoint one or more arbitrators, with an umpire to act in the event of a disagreement. The awards made by arbitrators or umpires are binding.

It is unlawful to strike or lock-out when agreement has been arrived at as a result of the appointment of an arbitrator or umpire, or during the period of operation of any award made as the outcome of such appointment. The Minister may declare, on application by the parties to a council or board, that any agreement arrived at shall be binding upon the parties thereto; or may, if he is satisfied that the applicants are sufficiently representative of the industry concerned, declare that the agreement shall be binding upon all employers and employees in that industry, in the area over which the council or board has jurisdiction. The Minister may likewise, at the request of the parties, extend the application of any award of an arbitrator or umpire. One calendar month's notice of any alteration, or demand for alteration, in the terms of employment must be given by any employer or employee, unless shorter notice is mutually agreed to.

Special provision is made for the settlement of any dispute between a local authority and its employees engaged upon work connected with the supply of light, power, water, sanitary, transportation, or fire extinguishing services which has remained unsettled notwithstanding the efforts of any industrial council or conciliation board. It is unlawful to declare any strike or lock-out until the matter at issue has been investigated by an industrial council, or where there is no such council by a conciliation board, and until any further period stipulated in any agreement between the parties as a period within which a strike or lock-out shall not be declared shall have lapsed. Up to the end of 1928 five industrial councils on a national basis had been set up, but in all other cases the scope of the agreements arrived at was limited to provincial or national areas.

### **Tribute to officials of railway union**

Mr. Grant Hall, vice-president of the Canadian Pacific Railway Company discussed the company's relations with its employees in the course of an address to the general chairman of the Brotherhood of Railroad Trainmen at Montreal. "I have had many

years of close relationship with the general chairmen of organizations," Mr. Hall said, "and apart from such differences of points of view as have occasionally arisen in the matter of general wage revisions, seldom have I had a question that became so serious that, when both sides of it were laid bare, settlement satisfactory to both sides could not be reached. When employees have a question with the Canadian Pacific Railway I always take the view that one of the two conditions exist—namely, either that a real grievance exists or that all the facts were not known to the general chairman. If I could not satisfy the general chairman that he had the wrong angle of the matter I would always be willing to inquire further into our own phase of the case and see if I myself had all the facts. In many cases the principle of 'give and take' has been resorted to to mutual advantage. Our general chairman, and I believe also officers of the railway in Canada, have accomplished a great deal in developing that broad sense of good-fellowship that should exist between the railways and their employees by being fair, and not the least element in securing this result in my mind is that general chairman, as a rule, as well as railway officers, are prepared to look on both sides of the case."

#### **Purposes of International Labour Organization**

An illustrated pamphlet describing the work and aims of the International Labour Organization (the I. L. O.) has been published by the World Peace

Foundation (Boston, U.S.A.).

"The International Labour Organization," it is stated, "is an organization of governments, employers and workers to study working conditions in all parts of the world and to further measures which promise security and well-being. No one really prefers to employ child labour, keep employees at work over long hours, provide work irregularly, pay insufficient wages or otherwise conduct business in ways that are inefficient and socially harmful. But most producers must compete in a world market and only a few can risk doing anything that may, momentarily, increase costs while their competitors may be producing at the lowest possible figure. The I. L. O. has, within the last ten years, provided a means whereby representatives from all countries can meet and set up such minimum standards as governments, employers and workers are all agreed can everywhere be lived up to.

"The International Labour Organization is the first medium through which capital and labour, as well as governments, have ever

been able to discuss and guide international action affecting the conditions under which the work of the world is done. It is the first effective practical embodiment of the principle, long realized, that the workers of any nation cannot for long prosper if the labour conditions of the workers of other nations are burdensome, and that the industrialists of any nation cannot for long profit in world competition at the expense of lower living conditions for their employees. In all its councils three parties are represented—governments, employers and workers—and no policy is adopted without a substantial measure of consent of all three. This combination of governmental with direct economic representation distinguishes the Organization from any other body in history. The government representatives bring to the deliberations and the decisions their experience as administrators, the views of their peoples as consumers, and a wide perspective of general public advantage; the employers present and sustain the views of investors and managers; the workers express the aspirations of the individual human being engaged in the work of the world."

#### **Death of a pioneer labour leader**

One of the early organizers of trade unions in Ontario, Mr. J. S. Williams, died at Toronto on September 27, in his 92nd year. Mr. Williams, as a member of Typo-

graphical Union No. 91, was prominent in the organization in 1871 of the Toronto Trades Assembly, the first central labour body organized in Canada. Mr. Williams was the first recording-secretary of this organization, holding this office from May, 1871, to January, 1872, when he was elected president. In 1873 he again became recording-secretary and in subsequent years held other offices. Mr. Williams was one of the printers who took part in the strike for a nine-hour day in Toronto early in 1872. With others he was arrested on a charge of conspiracy. A hurried passage through Parliament of the Trade Unions Act, removing from labour organizations the liability to prosecution on the ground of criminal conspiracy, led to the release of Mr. Williams and his friends.

One of the activities of the Toronto Trades Assembly was the organization of a co-operative printing society for the publication of a labour paper. The society appears to have been short-lived and the *Ontario Workmen* was taken over by Mr. Williams in partnership with Messrs. Sleeth and Macmillan. After about three years it suspended publication. Some years ago Mr. Williams presented a

file of this paper to the Toronto Reference Library, where it renders available a great deal of information regarding the nine-hour movement and the trade unions in Hamilton and Toronto in the sixties.

#### **Co-operation of labour in accident prevention**

The economic benefits of accident prevention from the manufacturers' standpoint are stated on another page of this issue in an outline of a recent paper by

Mr. A. F. Blake, of the Atlantic Sugar Refineries, Limited. On the other side the interest of labour in the safety movement is stated by Mr. E. E. Owen, president of the Edmonton Trades and Labour Council, in an article contributed to the *Alberta Labour News*, September 2, 1929. Referring to the amendments to the Alberta Workmen's Compensation Act obtained through the efforts of organized labour, Mr. Owen points out that "while we have been securing amendments to the Act which provide more financial consideration to injured workmen, I am not sure that we have been giving enough consideration to the question of accident prevention. I am of the opinion that had more interest been taken in the past a percentage of accidents that are taking place to-day would be prevented, and in a number of homes where the widow and children are receiving a pension the husband and father would be with his family, and happiness would prevail where sorrow and despair exist at present. In other homes we find workmen disabled for life as the result of accidents which should never have happened. The questions we are confronted with are: How do these accidents take place? Who is responsible? What can be done to prevent them?"

Mr. Owen describes a number of accidents, particularly in the building trades, which might not have occurred if the workmen concerned had used ordinary care, and concludes as follows: "One could name hundreds of accidents that take place every year in a similar way to the ones I have enumerated, and I think it will be seen that it is only by more care being exercised by workmen that these accidents can be eliminated. I think it will be agreed that the great percentage of these accidents can be prevented, and if employer and employee will co-operate and carry on continually a campaign whereby all will become interested in accident prevention, it will be a work in which we will be able to feel that the time and effort thus expended will prove to be a sound investment."

#### **Male Minimum Wages in British Columbia**

The Male Minimum Wage Board, appointed under the provisions of the Male Minimum Wage Act, 1929, of British Columbia, held investigations during September at various centres throughout the province for the purpose of containing information regarding the wages paid to persons engaged in the occupation of pharmacy. The inquiry was held in response to a complaint from employees who considered that the wages paid to them in this occupation were insufficient. The meetings of the Board were open to the public, but the Board specially invited employers and employees interested in the matter of a minimum wage for drug clerks and other employees in the occupation of pharmacy. The provisions of the Male Minimum Wage Act, 1929, were outlined in the *LABOUR GAZETTE*, June, 1929, page 607. The members of the Board are Messrs. J. D. McNiven, Deputy Minister of Labour (chairman), George H. Cowan, and Adam Bell.

#### **Benefits of old age pensions in British Columbia**

Evidence on the effects of the Old Age Pensions Act of British Columbia was given during September at the first session of the New York State Commission on Old Age Security. Mr. E. S. H. Winn, K.C., chairman of the provincial Workmen's Compensation Board, which administers the Act, stated that the pension of \$20 a month, though slight, was sufficient to give the old people an independent standing in the homes of their relatives, who are often hard pressed to earn a living for themselves. Many of the older men and women have been enabled to leave the almshouses and have returned to the homes of their children since the payment of pensions began. A surprisingly large number of the pensioners, it is found, are eager to engage in some work despite the fact that such earnings are automatically deducted from their pensions. Mr. Winn denied the allegation that old age pensions tend to discourage thrift. He declared that the Old Age Pension Act was "the only piece of legislation about which I have heard no complaint." Mr. Winn referred to the increasing difficulty experienced by middle aged men in obtaining work, stating that men under 50 years of age are refused employment and are compelled to become public charges or to live on the bounty of their children.

### Annual census of Canadian industries

On another page of this issue will be found tables containing figures for the years 1926 and 1927 as to employment, wages, and hours of labour and other information concerning the various industries in Canada. These figures are quoted from the report of the Census of Industry that is taken each year by the Dominion Bureau of Statistics under the provisions of the Statistics Act, 1918. The methods followed by the Bureau in classifying industries are described in a recent report as follows:—

“The scheme of classification used in the Census of Manufactures splits up the country's industries into nine main groups. The basis of this classification is the chief component raw material used in each industry; that is, industries using a common raw material are grouped together for convenience of observation and record. In other analyses made in the Bureau of Statistics whose products serve a common purpose, e.g., food, clothing, personal utilities, house furnishings, producers' materials, are grouped. In still other analyses, manufacturing industries are grouped according to the origin of the raw material, the farm, the forest, the mine, the fisheries, etc. The principle of classification by chief component raw material cannot be applied with absolute precision in the highly complex organization of modern industry. It is easy to group the primary industries about their chief materials used, and such industries as fish-packing, lumbering and fruit-canning are easily sorted into their respective groups of animal or vegetable products. But with the secondary manufacturing industries the problem is more difficult.”

### Unemployment insurance contributions in Great Britain

An article in a recent issue of the *Economist* (London), describes the effects of the British Governments' action last July in raising the amount of the State contribution to the unemployment insurance fund. When the resolution to give effect to the new policy was introduced in the House of Commons, the Minister of Labour explained that it was intended only to afford temporary relief to the fund, and that the situation would be more fully examined after adjournment. The so-called “Blanesburgh report,” mentioned below, was outlined in the *LABOUR GAZETTE*, June, 1926, page 582.

“The Government,” the *Economist* said, “has decided to increase the contribution of the State to the unemployment (insurance) fund to one-half of the aggregate contribu-

tion of the employer and the employed person. This will bring the payment from the State into line with the recommendation of the Blanesburgh Committee, which advocated that each of the three parties, the State, the employer and the workman, should contribute one-third of the total amount. The late Government departed from the proposal of the committee on this point, arguing that the Treasury could not in the circumstances bear so heavy a burden. Miss Margaret Bondfield, the Minister of Labour in the new Government, was a member of the Blanesburgh Committee, whose report was unanimous. The 1927 act fixed the weekly contribution in respect of a man at 1s. 9d., of which the employer pays 8d., the workman 7d., and the State 6d., until the debt to the Treasury should have been paid off. The effect of raising the exchequer contribution from 6d. to 7d. will be to increase the annual payment from the State from £12,000,000 to £15,500,000, and the annual revenue of the fund from £43,000,000 to £46,500,000. The fund balances itself when about 1,000,000 persons are on the live register, but the present figure is still more than 100,000 above that, and at the end of last month (June), the debt of the fund amounted to £36,620,000.”

### Problem of displaced industrial workers

The Institute of Economics of the Brookings Institution of Washington recently held an inquiry with a view to ascertaining “whether the industries and the service trades which have experienced so phenomenal a growth in recent years have been reabsorbing those workers who have been discharged from other industries and those who have migrated from the farms to the cities.” The results of the inquiry were submitted to the U.S. Senate Committee on Education and Labour, whose conclusions on the subject of unemployment were outlined in the *LABOUR GAZETTE*, June, 1929, page 617.

The conclusions of the Institute were based on data collected in a special survey in which 754 workers in Baltimore, Chicago and Worcester, Massachusetts, who had been discharged because their services were no longer required, were interviewed. The group surveyed is small, but it forms a fairly representative section of workers in the industrial centres of the United States. The findings of the investigation are summarized in the report of the Institute of Economics as follows:—

(1) The dispossessed workers do not easily find new employment. Forty-five per cent of those interviewed had not found employment when seen by the investigators.

(2) Even those workers who finally secured new employment had difficulty in finding it. Only 11.5 per cent were idle for less than one month and more than one-half had been idle for more than three months before being re-absorbed by industry.

(3) Workers discharged from industry are moving in large numbers to plants which produce products different from those made in the industries with which they were formerly associated. Less than 10 per cent of those surveyed were re-employed at their old jobs. Two-thirds went into entirely different industries.

(4) The rapidly growing "newer" industries and service trades are not absorbing the dispossessed workers as quickly as is generally believed. Approximately 15 per cent of those surveyed went into these lines of activity.

(5) Although labour is mobile as regards its movements from industry to industry, approximately one-half of those who found new jobs succeeded in getting employment at tasks similar to those they had formerly held. That is to say, the general requirements as to skill and training were like those of their earlier jobs. The remaining half of those who found work became employed at tasks which bore no relationship to their former work.

(6) A large majority of dispossessed workers supported themselves and their families during the earlier period of unemployment by accumulated savings. Approximately one-third found temporary work of one sort or another to supplement their income before getting a permanent position.

(7) The transition from one type of employment to another was in most cases made with a sacrifice of income. Almost one-half of the workers received lower wages at their new jobs than at their old. Only about 19 per cent benefited by the change and were earning more. Less than one-third experienced no change in income.

(8) The age of the worker is a significant factor in affecting the ease with which labour is reabsorbed. As compared with the younger workers relatively fewer of those over 45 years of age were able to secure new employment as a whole for longer periods of time than was true in the case of workers below the age of 45.

**Junior  
instruction  
centres in  
Great Britain**

Note was made in the LABOUR GAZETTE, April, 1928, page 342, of the appointment early last year by the British Minister of Labour of a National Advisory

Council for Juvenile Employment for England and Wales, which was to be followed by a

similar appointment for Scotland. The first reports of both committees have now been published. The Minister of Labour has accepted the recommendations in these reports for general guidance in the administration of Centres for an experimental period from January 1, 1930, to March 31, 1933, and has written to Local Education Authorities inviting them to submit proposals to her for the establishment of Centres in areas where they are required.

The principal feature in both reports is a scheme for the establishment on a more permanent basis of what in the past have been known as Juvenile Unemployment Centres, and in future are to be termed "Junior Instruction Centres." The object of the Centres is stated by the Scottish Council to be "to prevent the deterioration of unemployed boys and girls and by maintaining or re-establishing habits of discipline and self-respect, and giving training and education, to facilitate their re-absorption into industry." The Council for England and Wales defines the general purpose of the Centres in similar terms. The Centres are to be administered by the Local Education Authorities, but they are to be guided by the regulations of the Ministry of Labour; and the closest co-operation is to be maintained between the Centres and the local placing agency (i.e., the Juvenile Employment Bureau of the Local Education Authority, or the Juvenile Department of the Local Employment Exchange, as the case may be). In areas where there are not enough unemployed boys and girls to justify the establishment of a Centre, it is suggested that the Ministry of Labour should, under certain conditions, be prepared to consider the establishment of a separate class for unemployed juveniles in connection with an existing educational institution.

The schemes also suggest regulations as to the staffing of the Centres, the hours of attendance, finance, curriculum and the methods of securing attendance. Both Councils recommend that the training provided should in the main be practical in character, but should not take the form of training for any specific occupation. The Council for England and Wales appends a separate memorandum on the curriculum, in which they make detailed suggestions as to the type of instruction which they think might be given.

Both Councils recommend that the Ministry of Labour should normally contribute 75 per cent of the cost of the Centres, but add that in the special circumstances of distressed areas, so long as these continue, a higher rate of grant should be payable in respect of Centres in those areas.

### Uninterrupted working week in Soviet Russia

The Soviet Government is at present considering the possibility of carrying on work in state industrial undertakings continuously without any general weekly rest day, but without any alteration in the present hours of work of individuals. An account of the proposed rearrangement of working days is given in *Industrial and Labour Information*, (Geneva), August 26, from official information published at Moscow. The new system is calculated to make possible an increase in production of 20 per cent without involving the construction of any new undertakings or any appreciable improvement of existing equipment. Incidentally, it would also relieve unemployment, and reduce overtime.

A plan for the introduction of a six-day week has been published by Mr. Larin, a well known publicist of the Communist Party. Mr. Larin's plan calls for a schedule of five seven-hour working days for individual workers, followed by one rest day. Two other plans have been proposed, involving, respectively, five eight-hour working days for each individual, followed by two consecutive rest days, and the maintenance of the present weekly system, with the engagement of an extra shift for Sunday work.

The management of State industry and the Ukraine trade unions favour the continuance of the seven-day week, consisting of five eight-hour working days and two rest days for each worker. The management of industry is of the opinion that this system would be much more favourable to production, discipline and better utilization of the working day. Mr. Larin's plan for a six-day week is supported by many trade unionists on the grounds of its anti-religious significance and the possibility of longer annual holidays. The schedule calling for two days' rest weekly, it is stated, would not affect the present system of annual holidays (15 days on an average), but the schedule calling for one rest day weekly and reducing the week to six days makes provision for annual holidays of one month, the two extra weeks representing the two hours of work which industrial workers are not at present required to perform on the eves of holidays, but which they would be required to perform under the proposed system.

The uninterrupted week has already been introduced in some sawmills and paper factories, as well as in the peat bogs in Northern Russia. Provisional results show that production has been increased in general by 15

per cent, but it is estimated that in the course of time the increase will reach 20 per cent. Mr. Larin and other supporters of the uninterrupted week consider that in builders' yards, for example, production can be increased by 50 per cent, and in some cases by 100 per cent.

The Calgary Council on Child Welfare, at a meeting in September, resolved to submit the following requests to the Alberta Government: for a child welfare survey of the province; to give effect to the Child Welfare Act, and to bring the child labour laws of the Province into conformity with the child labour conventions of the International Labour Conference.

During the month of September a total of 6,333 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 36 of which were fatal cases; in Schedule 2 industries 499 were reported including 5 fatal cases; and 406 Crown, 6 of which were fatal, were reported during the month, making in all 7,238, of which 47 were fatal.

Dr. D. Jamieson, chairman of the Old Age Pensions Board of Ontario, stated at Toronto early in October that he anticipated that about \$400,000 would be paid in old age pensions in the province during November, the first month of the full operation of the provincial Act. This figure is based on the estimate that 20,000 aged persons will receive pensions.

The British *Board of Trade Journal*, August 15, 1929, analyses the results of a census of seamen in sea going vessels under British regulations, other than yachts and fishing vessels, who were employed on March 31, 1928. The employees in all departments in sea trading vessels numbered 200,113 on that date, of whom 132,377 were British, 15,291 were foreign, and 52,445 were Lascars. The corresponding total on March 31, 1927, was 200,525, composed of 132,384 British, 16,079 foreigners and 52,062 Lascars.

Volume IV of the Sixth Census of Canada, 1921, dealing with the occupations of the people, was issued recently by the Dominion Bureau of Statistics. Some of the facts brought out by the last census in regard to occupations were mentioned in the *LABOUR GAZETTE*, August, 1929, page 845, in a note on the Canada Year Book for 1929.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation throughout Canada was reported by the Superintendents of the Employment Service of Canada at the end of September to be as follows:—

Although most of the harvesting of the various groups in the Province of Nova Scotia had been completed, some work remained to be done and the agricultural industry was fairly busy as a consequence. The fishing industry reported only fair catches for the most part. Manufacturing plants continued to operate normally, although there was some falling off in production in industries of a seasonal character. Coal mining reported fairly heavy production and rather full working time. Some small orders for workers for the logging industry were being received, but no extensive operations had yet opened up. Building and construction, particularly in Halifax, continued to be busy and additional workers were being taken on at that city. Transportation and trade were reported as good. The usual shortage of women domestic workers was apparent.

Owing to the fact that harvesting in the Province of New Brunswick was late some orders were being registered with the offices in this province for farm workers. Substantial numbers of vacancies for workers in the logging industry were being reported, but men were hesitant about taking this work, as is customary at the opening of the season. Excellent catches of fish were reported. Manufacturing industries showed no material change, and their condition was rather favourable. Construction, especially in the city of Saint John was fairly busy and quite a volume of this class of work was in hand. Transportation and trade were both stated to be fair. The usual demands for women domestic workers were being reported to the offices.

Although farm orders had fallen off at most of the offices in the Province of Quebec, Montreal and Sherbrooke were still making a number of placements. A heavy demand for bushmen was reported by the different offices in this province and hundreds of placements were being effected. Montreal reported manufacturing as normal, a resumption of activity in the boot and shoe industry being recorded. Sherbrooke and Three Rivers showed continuing activity in the manufacturing industry, with the improvement in the pulp and paper group of some weeks ago being maintained. Considerable activity in building and construction continued, with brisk demands and

numerous placements in this industry, particularly in Montreal. Trade was reported as quite satisfactory throughout the province. Once again the number of applications for situations at domestic service were fewer than the vacancies listed.

In the agricultural industry in the Province of Ontario the dryness of the soil was seriously interfering with fall ploughing. With pulp cutters and general bushmen in heavy demand, and some local shortage reported, lumber camps were rapidly being filled up. There was no noteworthy demand for workers in the mining group in the northern part of the province, although a few men were being taken on. While showing some falling off by comparison with the earlier months of the year, manufacturing production throughout Ontario continued to maintain a relatively high level. Very considerable building and construction was in progress throughout the province and numerous workers were being engaged. In common with the other eastern provinces the Ontario employment offices reported a continued shortage of women domestic workers.

A noticeable decline in the number of vacancies for farm workers was reported by the employment offices in Manitoba, with an ample supply of men seeking such work. Apart from Winnipeg, where quite a number of men were being placed in logging, there were no calls for workers in this industry throughout the province. Considerable construction was going ahead, particularly at Winnipeg. Reports from the mining section of the northern part of the province indicated a continuance of activity in that section. There was a fairly good demand for women domestic workers.

In Saskatchewan threshing was practically finished and consequently there were few calls for farm hands. Vacancies for the building and construction industries were fairly numerous, but no difficulty was being experienced in securing sufficient applicants. While there was no difficulty in securing sufficient general labour to meet all requirements, in this group quite a number of vacancies were being notified to the employment offices. A few openings for bushmen were being notified. Demands for women domestic workers were not heavy and no shortage of applicants was reported.

As in Saskatchewan, threshing in Alberta was almost completed, and few vacancies for workers of any sort for the agricultural industry were in evidence, with no difficulty being met with in supplying men where re-

quired. The approach of winter weather was causing a speeding up in the building and construction industries, with the result that a few more workers were being taken on and staffs were being steadily engaged. A fair de-

mand for competent pick miners accompanied the re-opening of some of the smaller mines in the Drumbheller district. The logging industry continued quiet. Except for the early cessation of threshing in different districts,

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

	1929			1928		
	September	August	July	September	August	July
Trade, external, aggregate..... \$		210,025,520	219,887,028	217,921,943	228,079,568	230,772,272

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep, and hogs; storage holdings of butter and cheese.

there was no unusual feature in the employment situation in this Province, and conditions appeared to be about normal for the time of year.

In the Province of British Columbia the condition of the logging industry was somewhat uneven, many sections reporting it to be quiet, while there seemed to be fair activity in other districts. Metal mining in this province continued active, but there were few calls for workers. The building and construction group showed a fair amount of activity, except in the City of Vancouver, but in this latter centre it was stated that some projects of some proportions would be put in hand in the not distant future. Production in mining industries throughout the province remained at a normal level. The general situation in British Columbia was not unfavourable for the time of year, and prospects for the immediate future appeared to be reasonably favourable.

#### EMPLOYERS' REPORTS

There was a slackening of industrial activity at the beginning of September, when the 6,908 firms which reported to the Dominion Bureau of Statistics showed a combined working force of 1,093,735 persons, as compared with 1,102,033 in the preceding month. The index number (average calendar year 1926=100) stood at 126.8, as compared with 127.8 on August 1, 1929, and with 119.1, 111.0, 106.2, 97.8, 94.2, 101.2, 94.8 and 89.8 on September 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

All provinces reported contractions, that in Ontario being most pronounced. In the Maritime Provinces, the reduction was chiefly in logging and construction, while gains were noted in transportation and trade. In Quebec, there were further losses in manufacturing and transportation, but mining and construction were brisker. In Ontario, manufacturing as a whole employed fewer operatives, while logging camps, communications and trade showed improvement. In the Prairie Provinces, mining, transportation, communications, and wholesale trade afforded more employment, but railway construction was seasonally slacker, and there were also losses in manufacturing. In British Columbia, there was a decline in employment, chiefly in construction, while communications, mining, transportation and logging reported improvement.

An analysis of the returns by cities shows that employment advanced in Quebec, Toronto, Windsor and the Adjacent Border Cities and Vancouver, while in Montreal, Ottawa, Hamilton and Winnipeg curtailment was registered. In Montreal, manufactures showed general contractions; transportation was also

slacker, while improvement was shown in construction. In Quebec, most of the gain took place in construction, trade, transportation and manufacturing. In Toronto, manufacturing, communications and trade recorded heightened activity, while only small changes were noted in other industries. In Ottawa, declines were noted in manufacturing, but construction was brisker. In Hamilton, manufacturing reported contractions. In Windsor and the Adjacent Border Cities, automobile plants afforded slightly greater employment, and services were also more active. In Winnipeg, manufacturing, construction and trade registered most of the reduction. In Vancouver, reductions in personnel were reported in manufacturing factories, while only small changes took place in other groups.

Within the manufacturing group in the Dominion as a whole, there were declines in iron and steel, lumber, pulp and paper, textile, tobacco, non-ferrous metal, rubber and edible animal product factories, while vegetable food, electrical apparatus, leather, fur and some other divisions recorded improvement. Logging, mining, communications, local and water transportation, building, construction and trade also reported increased employment.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of September.

#### TRADE UNION REPORTS

Unemployment reported by local trade unions showed a nominal advance only at the close of August over the preceding month as indicated by the returns tabulated from a total of 1,709 organizations with an aggregate membership of 204,547 persons. Of these, 7,078 were without employment on the last day of the month a percentage of 3.5 contrasted with 3.0 per cent of inactivity in July and 2.4 per cent in August, 1928. Alberta unions reported a contraction in employment of 3 per cent when compared with July largely due to inactivity in the coal mines of the province while reductions, on a smaller scale, were apparent among Nova Scotia, Ontario and British Columbia unions. Quebec and Manitoba unions, on the other hand, were afforded a slightly greater volume of work. In New Brunswick and Saskatchewan the same level of employment was maintained as in July. The percentages of unemployment reported in all provinces during the month under review exceeded those registered during August of last year, Alberta unions as in the previous comparison showed the most extensive declines in activity.

A review in greater detail of the unemployment situation at the close of August as indicated by trade unions is printed elsewhere in this issue.

**EMPLOYMENT OFFICE REPORTS** During the month of August, 1929, the offices of the Employment Service of Canada referred 52,581 workers to positions and made a total of 51,313 placements. Of these the placements in regular employment were 39,361, of which 33,829 were of men and 5,532 of women. The placements in casual work numbered 11,952. Employers notified the service of 55,254 vacancies, of which 42,774 were for men and 12,480 for women. The number of applicants for work was 61,317, of whom 47,302 were men and 14,015 were women. A marked increase is shown in the business transacted when the above figures are compared with those of the preceding month, due to harvest operations in the west, but a decline is registered when a comparison is made with the corresponding month of last year, the reports for July, 1929, showing 36,852 vacancies offered, 46,183 applications made and 34,447 placements effected, while in August, 1928, there were recorded 76,342 vacancies, 81,280 applications for work and 74,234 placements in regular and casual employment. A report in detail of the work of the officers for the month of August, 1929, may be found elsewhere in this issue.

**BUILDING PERMITS AND CONTRACTS AWARDED** According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued by 61 cities during August was \$21,560,361, as compared with \$22,826,034 in the preceding month and with \$17,448,542 in August, 1928. Details for the month are given on another page of this issue.

The *MacLean Building Review* reports that while the total value of construction contracts awarded in Canada in September was 19.9 per cent lower than in August, there was an increase over September last year of 3.3 per cent. The total for the month was \$46,959,200, of which \$21,162,800 was for engineering purposes (bridges, dams, wharves, sewers and water mains, roads and streets and general buildings); \$12,278,200 was for business buildings; \$10,184,300 was for residential buildings; and \$3,333,900 was for industrial purposes.

The apportionment of contracts awarded by provinces was as follows: Quebec, \$21,828,500; Ontario, \$16,753,800; British Columbia, \$2,065,700; Alberta, \$1,836,200; Saskatchewan, \$1,387,200; Manitoba, \$1,344,100; Nova Scotia, \$956,800; New Brunswick, \$774,700; Prince Edward Island, \$12,200.

### Production and Trade

**INDUSTRIAL PRODUCTION.** Figures showing the volume of production in certain industries during the recent months and also in the corresponding months in the previous year are given in the table on page 1077.

Despite recession in some lines, the level of productive operations in Canada was practically maintained in the latter part of the summer, according to comprehensive indexes compiled by the Dominion Bureau of Statistics. Construction records reflecting in part the large contract for a portion of the Beauharnois canal and power development showed further expansion in August, the cumulative total for the year to date being 18 per cent greater than in the same months of 1928. Most divisions of mining production were at a higher level, coal production being 4.5 per cent greater than in July. The export of lumber revived in August compared with the reduced level of June and July. Newsprint production showed recession from the total for the preceding month, but was about 12.5 per cent greater than in the same month last year. Imports of raw cotton showed further reduction and crude rubber was imported in lesser volume than in July. The reduction in the production of automobiles was 18 per cent below the preceding month to the lowest level reported for any month of the year to date. The cumulative total for the 8-months period however, was 21 per cent greater than in the same months last year, and is larger than in any similar period in the history of the industry. The output of pig-iron, at 112,528 long tons, was greater than in any previous single month, showing an increase of 13 per cent over July. One additional furnace was blown in at Sydney, resulting in 9 furnaces being in blast on August 31. The active furnaces have a capacity of 86 per cent of the total capacity of all blast furnaces in Canada. The output of steel was 120,282 tons, showing a moderate decline from the preceding month. Imports of crude petroleum were at a new high point, reflecting the expanding demand for gasoline and other petroleum products.

The official report published on September 10 estimated the wheat crop for all Canada at 293,792,000 bushels. This compares with 566,726,000 bushels harvested last year, the largest crop in the history of the Dominion. The yield of wheat was the smallest since 1924 when 262,097,000 bushels were produced. The lack of moisture was the chief factor in the reduction of the yield this year, the drought persisting during June and July in the greater part of the grain-growing area.

**EXTERNAL TRADE.** A summary of Canadian trade prepared by the Department of National Revenue shows that in August, 1929, the merchandise entered for consumption amounted to \$111,630,924 as compared with \$114,200,854 in the preceding month, and with \$114,075,346 in August, 1928. The chief imports in August, 1929, were: Iron and its products, \$27,463,295; Non-metallic minerals and

products, \$18,566,100; Fibres, textiles and textile products, \$17,385,099.

The domestic merchandise exported during August, 1929 amounted to \$96,264,517 as compared with \$102,219,440 in July, 1929, and with \$112,493,026 in August, 1928. The chief exports in August were: Wood, wood products and paper, \$27,848,312; Agricultural and vegetable products, mainly foods, \$21,371,974; Animals and animal products, \$13,287,812.

### Strikes and lockouts

The time loss due to industrial disputes in September, 1929, was over twice as large as in August, although there were fewer strikes and fewer workpeople involved. A strike of steel car riveters at Hamilton caused considerable time loss. As compared with September, the figures show very little difference in time loss but a smaller number of disputes, involving smaller numbers of workers. There were in existence during the month nine disputes, involving 864 workers, and resulting in a time loss of 9,788 working days, as compared with ten disputes in August, involving 1,094 workers and resulting in a time loss of 3,712 working days. In September, 1928, there were on record eleven disputes, involving 1,433 workers, and resulting in a time loss of 9,849 working days. At the end of the month there were on record five disputes involving approximately 445 workers, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities showed little change at \$11.64 at the beginning of September, as compared with \$11.63 for August; \$11.15 for September, 1928; \$10.87 for September, 1927; \$10.94 for September, 1926; \$10.81 for September, 1925; \$10.28 for September, 1924; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. The most important decline was a seasonal fall in the price of potatoes, while less important decreases occurred in the prices of beef, mutton, and lard. These decreases, however, were offset by increases in the prices of eggs, milk, butter, cheese, bread, flour, rice, prunes, salt pork and bacon. Including the cost of fuel and rent with that

of foods the total budget was unchanged at \$21.90 for August and September, as compared with \$21.38 for September, 1928; \$21.05 for September, 1927; \$21.15 for September, 1926; \$21.02 for September, 1925; \$20.65 for September, 1924; \$20.97 for September, 1923; \$20.90 for September, 1922; \$22.37 for September, 1921; \$26.38 for September, 1920; \$26.92 for July, 1920 (the peak); \$21.11 for September, 1918; and \$14.33 for September, 1914. In fuel coal was slightly higher, while wood was down somewhat. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was somewhat lower at 97.3 for September, as compared with 98.1 for August; 95.5 for September, 1928; 97.1 for September, 1927; and 98.5 for September, 1926. In the classification according to chief component materials five of the eight main groups were lower, two were higher and one was unchanged. The Vegetables and Vegetable Products group and the Animals and their Products group were considerably lower, the former due to lower prices for wheat, barley, rye, raw rubber and fresh foreign fruits, which more than offset higher prices for flax, oats and vegetables, and the latter due to substantial declines in the prices of live stock and fresh and cured meats, which more than offset higher prices for milk, butter and eggs. Three other groups showed minor declines, the Wood, Wood Products and paper group because of lower prices for certain lines of lumber; the Non-Ferrous Metals group, due to lower prices for tin and zinc, and the Non-Metallic Minerals and their Products group due to lower prices for certain lines of building materials. The Fibres, Textiles and Textile Products group advanced, because of higher prices for raw cotton and raw silk. The Chemicals and Allied Products group was also slightly higher. The Iron and its Products group was unchanged.

A study of the provisions of the various State Workmen's Compensation laws in the United States in regard to compensation for occupational diseases is given in the current issue of the *Monthly Labour Review*, published by the United States Department of Labour. Fourteen of the 48 States and Territories having compensation laws make such provision. Some of the laws cover occupational diseases in general, while others specify the diseases that are compensated.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, DURING THE MONTH OF SEPTEMBER, 1929

**D**URING the month of September the Department received the report of a Board of Conciliation and Investigation which had been established under the provisions of the Industrial Disputes Investigation Act to inquire into a dispute between the Canadian Pacific Railway Company (Western Lines), and the Canadian National Railways (Western Lines), on the one hand, and certain of their employees on the other hand being conductors, trainmen and yard service employees, members of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen. The dispute, which related to the employees' request for increased compensation, affected 6,000 employees directly and 10,000 indirectly. The personnel of the Board was as follows: The Honourable Mr. Justice A. K. Dy-sart, Winnipeg, chairman, appointed on the joint recommendation of the other board members, Messrs. Isaac Pitblado, K.C., and David Campbell, K.C., both of Winnipeg, nominated by the companies and employees, respectively. The report of the board was unanimous and recommended certain wage increases for the classes of employees concerned. The text of the report is given on page 1082.

### Other Proceedings under the Act

Reference was made in the September issue of the LABOUR GAZETTE to the establishment of a board to deal with a dispute between the Dominion Atlantic Railway Company and certain of its employees being clerks, freight handlers, station and stores department employees, represented by the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. On September 16 the board was completed by the appointment of Mr. M. B. Archibald, barrister, Halifax, N.S., as third member and chairman, the appointment being made on the joint recommendation of the other board members,

Mr. L. A. Lovett, K.C., Halifax, N.S., and Hon. John McDonald, Kentville, N.S. Mr. Lovett had been appointed as a member of the board by the Minister in the absence of a recommendation from the employing company, and Hon. Mr. McDonald had been appointed on the employees' recommendation. The dispute relates to wages and working conditions and directly affects 90 employees.

An application for the establishment of a Board of Conciliation and Investigation was reported in the July issue of the LABOUR GAZETTE as having been received during June from certain employees of *The London Free Press* and *The London Advertiser*, being members of the London Typographical Union No. 133. The employees' request to negotiate a new wage scale was given as the cause of the dispute, 85 men being directly affected and 25 indirectly. These employees had been on strike for three days during January, 1928, owing to the refusal of the newspaper establishments to grant an increase in wages or to refer the differences to arbitration. On that occasion, at the request of the union, the Minister of Labour sent the Chief Conciliation Officer, Mr. M. S. Campbell, to London to assist in negotiations, and a settlement was reached. Under the new agreement the scale of wages existing prior to the strike was continued and a clause was added, reading as follows: "If requested by either party to this agreement on June 30, 1929, the clause relating to scale of prices, Section 3, may be submitted to a Board of Conciliation, appointed by the Minister of Labour of the Dominion of Canada." When the employees applied in June of this year for a board to deal with their request for a new wage scale, the managements of both companies declined to be a party to the proceedings. Under the circumstances the employees withdrew their application.

## Report of Board in Dispute Between Canadian Pacific Railway and Canadian National Railways and Their Conductors, Trainmen and Yardmen on Western Lines

IN THE MATTER of The Industrial Disputes Investigation Act and a dispute between Canadian Pacific Railway Company (Western Lines) and the Canadian National Railways (Western Lines) (Employers) and certain of their employees being conductors, trainmen and yard service employees, members of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen (Employees)

To The Honourable,  
The Minister of Labour,  
Ottawa, Ont.

SIR,—The Board of Conciliation and Investigation established by you on July 25, 1929, under the above-mentioned Act, to deal with the above dispute, has now completed its task and begs leave to submit herewith its unanimous report.

The members of the Board comprise Mr. Isaac Pitblado, K.C., Mr. David Campbell, K.C., both of the City of Winnipeg, in Manitoba (who were appointed on the recommendation of the employers and of the employees, respectively) and the Honourable Mr. Justice Dysart, also of Winnipeg, who was appointed on July 18 third member and chairman on the joint recommendation of Mr. Pitblado and Mr. Campbell.

On July 22 a preliminary meeting was held, and on the following day the Board began its public sittings for the reception of evidence and argument in support of, as well as in opposition to, the requests of the employees. Those sittings, held in the City of Winnipeg, continued almost daily till August 3, and were concluded, after an interval, by a sitting held in the City of Montreal on September 9. During that interval, and since, the Board held many private sessions devoted to a close and careful examination of all the material submitted to it by the disputants, as well as to a comprehensive survey of other grounds for any factor that might assist the Board in reaching just and proper conclusions. Apart from a few short and unavoidable delays, the Board has carried its work forward with all reasonable energy and expedition.

At the Winnipeg public sessions, the following representatives were present:—

For the Employees:

S. N. Berry, Vice-President, O.R.C.,  
W. J. Babe, Vice-President, B. of R. T.,

W. G. Chester, General Chairman, O.R.C. (C.P.),

B. L. Daly, General Chairman, O.R.C. (C.N.L.W.),

R. H. Urquhart, General Chairman, B.R.T. (C.P.L.W.),

W. G. Cunningham, General Chairman, B.R.T. (C.N.L.W.),

S. H. Carson, Secretary, O.R.C. (C.P.),

H. B. Patterson, Secretary, O.R.C. (C.N.L.W.),

J. McLaughlin, Secretary, B.R.T. (C.P.L.W.),

W. F. Wendt, Secretary of the Committee,

and for the employers:

*Canadian Pacific Railway Company:*

A. Halkett, General Superintendent, Calgary, Alta., Chairman, Joint General Manager Committee.

Geo. H. Baillie, Chief Clerk to the Vice-President and General Manager, Winnipeg, Man.

*Canadian National Railways:*

A. A. Tisdale, Assistant to General Manager, Winnipeg, Man.,

A. Wilcox, Assistant to General Manager, Winnipeg,

S. McElmoyle, Assistant Chief Clerk, General Manager's Office, Winnipeg.

At the Montreal meeting the representatives were:

For the employees:

Thos. Todd, General Chairman, O.R.C., C.N.R., Central Region.

James Sutherland, General Chairman, O.R.C., C.N.R., Atlantic Region,

John Maloney, General Chairman, B. of R.T., C.N.R., Central Region,

and S. N. Berry, W. G. Chester, J. McLaughlin, and B. L. Daly, all four of whom had been present at the Winnipeg meetings.

For the employers:

George Hodge, Assistant General Manager of C.P.R., Eastern Lines,

A. E. Grilly, Chief of Wage Bureau, C.N.R., as well as A. Halkett and A. Wilcox, both of whom had attended the Winnipeg meetings.

A spirit of courtesy and good-feeling characterized the proceedings throughout; and while the opposing sides contended and con-

tested with all the skill, vigor and knowledge they could command, they nevertheless adhered scrupulously to their professed desire to deal with the issue on purely business grounds.

Nevertheless, neither party could be induced to yield from its position. So tenaciously did they both cling to their ground, that they resolutely, though pleasantly, declined the invitations and suggestions repeatedly thrown out by the Board with a view to bring about a compromise, or other amicable settlement. A final last effort, made by the chairman treating with each side separately and confidentially, to secure mutual concessions, and to discover common ground, likewise proved unavailing.

At the first public session, the employees, through their representatives, submitted as Exhibit 1, a lengthy statement setting forth in detail their present rates of pay and their proposed increased rates of pay. These proposed rates were on the average about six and a half per cent higher than the existing rates.

This same demand for increased rates had several weeks earlier been submitted on behalf of the employees to their employers, and after being considered in a conference of representatives of the employees and employers on May 28 and 30, 1929, had been wholly rejected by the employers. The increases, if granted, will, it is claimed, affect about 6,000 employees directly and 15,000 indirectly, and will entail, so the employers estimate, an increase in the pay-roll of about one million dollars a year. The territory affected includes Western Ontario, all of the Provinces of Manitoba, Saskatchewan, Alberta and British Columbia.

It is to be noted that the only question before the Board is this demand for increased rates of pay. No other issue was raised or dealt with.

The lengthy history of the evolution of the present wage schedules from pre-war days was recounted, examined and explained. But in view of the unanimity at which the members of the Board have arrived in their recommendations, it will be neither profitable nor expedient to dwell upon that history.

The grounds and arguments advanced in support of the employees' claims were met by opposing considerations and arguments submitted by the representatives of the employers. Without attempting to appraise the weight or value of the opposing contentions, it may be advisable here to recapitulate them, and in so doing, to follow each one by the employers' reply thereto.

1. For the employees it is argued that no prior wage agreement can fairly be taken as a "starting point" from which present rates

might justly be fixed by comparison, for the reason that in no such agreement did the employees secure all that they believed they were entitled to, being pressed by circumstances into compromising and accepting less than they deserved. To this the employers reply that almost every agreement is the result of negotiations and compromise, and while perhaps not entirely satisfactory to the employees, should be accepted unless and until they discharge the onus of showing that the agreement is not fair; and especially do the employers rely on the present wage schedule which was made by the employers granting the entire demand then made by the employees.

2. The employees claim that they are entitled to sufficient compensation to enable them to maintain themselves, their homes and their families in decency and comfort, and that the mere "cost of living" is not the only—indeed, at this date, not even a material factor. To this it is answered that conceding the contention for decent and comfortable homes and family conditions, the cost of living has always, or nearly always, been a dominant, sometimes, as in the McAdoo and some subsequent Awards, the chief or only factor in granting increased rates; and that since 1926 the cost of living has not increased.

3. The hazards of the employees' work; the severe climatic conditions of Western Canada; the responsibilities laid upon them; the necessity of being physically fit; the inconvenience of being subject to call to duty at unseasonable times and hours; the extra expense and the frequent inconvenience to trainmen of living away from home while on their runs—all these and such other considerations, they claim, entitle them to more compensation. The answer put forward is that these considerations have always been incidental to railroading and have been taken into account in the making of all previous schedules.

4. The ever-increasing length and weight of trains carry corresponding increases in work, responsibility and hazards for these employees. These increases are declared by the employers' representatives to be so trifling as to entail in their net results nothing that calls for increased pay.

5. Because of increased size of trains and increased hauling power of locomotives, the train crews produce through their work more revenue for the employers than formerly, and therefore should share in these gains. Against this the employers maintain that much, if not all, of the alleged improvement is due to invested capital, and not to labour.

6. Comparisons between the earnings of

these employees and other workmen was largely confined to employees engaged in similar work on the railways in the Western States. There it is shown wages are about six and a half per cent higher than in Western Canada. It is on this ground that the employees lay most stress. Their present demand is to have their wage raised to the level of those on Western American railways. In reply, the employers attempt to show that the conditions are not the same in the two areas, and also that general wage levels for all industrial workers are higher in the United States than here.

On this important ground neither party would commit itself to the principle of accepting and applying at all times the rates that might obtain in Western United States.

7. The prosperity of the employers in recent years easily enables them to grant and really demands that they do grant the increases requested.

But, argue the employers, if employees are to share in fat years, they must do likewise in the lean years, and so might find themselves in times of great depression or adversity with little or no wages—which is unthinkable. Besides, they prophesy that the incoming year will be a very lean one.

The foregoing seven points, as well as several others of lesser importance, were presented and argued as thus summarized.

One other factor of great importance:

The Canadian Pacific Railway Company, as a result of direct negotiating with its train conductors on Eastern lines, reached an agreement with them, whereby the rates of pay for passenger conductors were increased, effective July 16, 1929, from \$4.47 to \$4.72 per 100 miles, but the rates of pay to other conductors were not increased. The reasons for this seeming preferential treatment were given at the Montreal meeting. Neither trainmen nor yardmen had at that time applied for increases. The Canadian National Railways and their employees of the classes now before this Board, by an agreement effective June 1, 1929, revised and consolidated their working rules in a manner alleged to be favourable to the employees, but that agreement made no changes in the rates of pay, there being no application then pending for an increase in rates.

The reasons why neither party before this Board referred to these new eastern agreements were entirely honourable. Each had resolved to let the present application stand or fall on its own merits, irrespective of what was taking place in the east. But your Board, in studying the many comparisons made between

wages of these employees and employees similarly occupied on other railroads, felt obliged to compare Eastern Canada with Western.

Having given most careful thought and study to all the facts and circumstances connected with this entire application, we have come to the unanimous conclusion that some increase in the rates of pay should be granted to all these employees, and that passenger conductors should have special consideration, and we accordingly recommend that the present rates be increased to the rates hereinafter set forth for the respective classes—the increases to become effective October 1, 1929.

#### ON THE CANADIAN PACIFIC RAILWAY (WESTERN LINES)

##### RATES FOR PASSENGER SERVICE

(a) Rates for trainmen on trains propelled by steam or other motive power shall be:

Conductors.. . . .	4.72 cents per mile
Baggagemen... . .	3.29 cents per mile
Brakemen.. . . .	3.18 cents per mile

A minimum of \$219.65, \$153.32 and \$145.55 per month respectively will be paid regularly assigned passenger trainmen, exclusive of overtime, switching and detention. The above minima are based upon a monthly mileage equivalent to the monthly rate divided by the mileage rate.

*Exception.*—On the Revelstoke and Nelson Divisions, for monthly mileage of 4,200 miles or less, exclusive of overtime, switching and detention, regularly assigned passenger trainmen shall be guaranteed:

Conductors.. . . .	\$219.65 per month
Baggagemen.. . . .	153.32 per month
Brakemen.. . . .	145.55 per month

All mileage in excess of 4,200 miles to be paid *pro rata*.

##### RATES FOR THROUGH FREIGHT, WORK (CONSTRUCTION), HELPER (PUSHER) SERVICE

###### *East of Lake Louise and Crowsnest*

Conductors.. . . .	\$6.25 per 100 miles
Baggagemen.. . . .	4.91 per 100 miles
Brakemen.. . . .	4.91 per 100 miles

###### *West of Crowsnest to Kootenay Landing*

Conductors, Baggagemen and Brakemen will be paid a differential of 11 cents per 100 miles in addition to the above through freight rates, making rates for:

Conductor.. . . .	\$6.36 per 100 miles
Baggagemen.. . . .	5.02 per 100 miles
Brakemen.. . . .	5.02 per 100 miles

*From Lake Louise West, and from Kootenay Landing West through the Kootenays, the basing rate is:*

(These rates only apply to mixed trains except on the Arrow Lake and Okanagan Subdivisions, where the way freight rates will apply).

Conductors.. . . .	\$6.25 per 100 miles
Baggagemen.. . . .	4.97 per 100 miles
Brakemen.. . . .	4.97 per 100 miles

On the Mountain Subdivision (Lake Louise to Revelstoke) Conductors will receive a differential of \$1.05 per 100 miles; Baggagemen and Brakemen a differential of \$1.04 per 100 miles in addition to the above rates, making rates for:

Conductors.. . . .	\$7.30 per 100 miles
Baggagemen.. . . .	6.01 per 100 miles
Brakemen.. . . .	6.01 per 100 miles

On the Nakusp and Slocan Subdivision and on all subdivisions West of Columbia River on the Nelson Division, Conductors will receive a differential of 90 cents per 100 miles and Baggagemen and Brakemen a differential of 76½ cents per 100 miles, in addition to the basing rates, making rates for:

Conductors.. . . .	\$7.15 per 100 miles
Baggagemen.. . . .	5.73½ per 100 miles
Brakemen.. . . .	5.73½ per 100 miles

*For all Mixed and Way Freight Service East of Lake Louise and Crowsnest*

Conductors will receive a differential of 52 cents per 100 miles, Baggagemen and Brakemen a differential of 40 cents per 100 miles in addition to the through freight rates, making rates for:

Conductors.. . . .	\$6.77 per 100 miles
Baggagemen.. . . .	5.31 per 100 miles
Brakemen.. . . .	5.31 per 100 miles

*For Mixed and Way Freight Service from Crowsnest West to Kootenay Landing*

Conductors will receive a differential of 51½ cents per 100 miles and Baggagemen and Brakemen a differential of 41 cents per 100 miles, in addition to through freight rates, making rates for:

Conductors.. . . .	\$6.87½ per 100 miles
Baggagemen.. . . .	5.43 per 100 miles
Brakemen.. . . .	5.43 per 100 miles

*For Way Freight Service West of Lake Louise and Kootenay Landing*

On way freight trains on all subdivisions, Conductors will receive a differential of 52 cents per 100 miles, Baggagemen and Brakemen a differential of 41 cents per 100 miles, in

addition to the through freight rates for the subdivision on which the mileage is earned:

The Way Freight Rates will be:—

Where Mountain Rates apply (Lake Louise to Revelstoke):

Conductors.. . . .	\$7.82 per 100 miles
Baggagemen.. . . .	6.42 per 100 miles
Brakemen.. . . .	6.42 per 100 miles

Where Semi-Mountain Rates apply (on the Nakusp and Slocan Subdivision, and on all subdivisions west of the Columbia River on the Nelson Division):

Conductors.. . . .	\$7.67 per 100 miles
Baggagemen.. . . .	6.14½ per 100 miles
Brakemen.. . . .	6.14½ per 100 miles

Where the basing rate applies:

Conductors.. . . .	\$6.77 per 100 miles
Baggagemen.. . . .	5.38 per 100 miles
Brakemen.. . . .	5.38 per 100 miles

SPECIFIED ASSIGNMENTS

1. On the Westminster Subdivision for crews in assigned passenger, mixed and other service combined, 100 miles or less, eight consecutive hours or less to constitute a day's work. Conductors to be paid not less than \$219.65 for calendar month, and Trainmen not less than \$154.53 for calendar month. All Time in excess of 224 hours in any month to be paid as overtime *pro rata*.

*Rates for Yard Service.*

Yard Foremen... . . .	\$6.74 per day
Yardmen.. . . .	6.25 per day
Switch tenders.. . . .	4.79 per day

ON THE CANADIAN NATIONAL RAILWAYS (WESTERN LINES)

PASSENGER SERVICE

Rates for Trainmen on all trains propelled by steam or other motive power will be:

Conductors.. . . .	\$212.40 per month
Baggagemen.. . . .	148.05 per month
Brakemen.. . . .	143.10 per month
Flagmen.. . . .	143.10 per month

The above rates being based upon a monthly guarantee of four thousand five hundred miles or less (4,500).

All mileage in excess of 4,500 miles per month to be paid at a *pro rata* rate, as follows:

Conductors.. . . .	4.72 cents per mile
Baggagemen.. . . .	3.29 cents per mile
Brakemen.. . . .	3.18 cents per mile
Flagmen.. . . .	3.18 cents per mile

WAY FREIGHT AND MIXED TRAIN SERVICE

Conductors.. . . .	\$6.77 per 100 miles
Brakemen.. . . .	5.39 per 100 miles

THROUGH FREIGHT, WORK TRAINS, CONSTRUCTION, HELPER, PUSHER, AND PILE DRIVER SERVICE

(a) On lines east of Edmonton, including Sangudo and Athabaska Subdivisions:

Conductors.. . . \$6.25 per 100 miles  
Brakemen.. . . 4.91 per 100 miles

(b) On lines west of Edmonton, except trains operating from and upon Sangudo and Athabaska Subdivisions:

Conductors.. . . \$6.38 per 100 miles  
Brakemen.. . . 5.07 per 100 miles

YARD SERVICE

Foremen.. . . Rate per day.. \$6.74  
Helpers.. . . Rate per day.. 6.25  
Switch tenders ..Rate per day.. 4.79

All of which is respectfully submitted,

(Sgd.) A. K. DYSART,  
Chairman of the Board.

(Sgd.) I. PITBLADO,  
Member of the Board.

(Sgd.) D. CAMPBELL,  
Member of the Board.

Winnipeg, Man., September 30, 1929.

## CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

### Summary of Recent Proceedings

REPORTS have been received of ten cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. An account of previous cases dealt with by this Board was given in the *LABOUR GAZETTE*, October, 1928, page 1064, and in previous issues; and a general summary of the proceedings of the Board from the date of its inception, September 1, 1925, to December 31, 1927, was given in the same issue, page 1060. This Board was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application, or interpretation of the schedule of working conditions for "Clerks and Other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees.

The members of the Board are appointed for a term of one year, subject to reappointment, and it is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award, but it has seldom been found necessary to appoint an arbitrator.

#### Case No. 39—Traffic Department.

A temporary ticket clerk at Montreal was laid off on a reduction of staff after occupying this position for six months. On being laid off he applied for a post as fourth bookman at Bonaventure station, but the company

filled this post with an employee who was junior to him in service. The employees claimed that the clerk should have been permitted to exercise his seniority in accordance with the provisions of Article 3, Rule (k), of the schedule for "clerks and other classes of employees." The company contended that temporary summer positions in station ticket offices were not included in this schedule, and stated further that the applicant had been given a trial at the position for which he applied, and had been found unsatisfactory. The Board sustained the employees' claim, finding that the clerk had acquired seniority under the terms of the schedule, and that he should be given the position applied for.

#### Case No. 40.—Sleeping, Dining and Parlour Car Department.

A porter in charge of a sleeping car was dismissed by the company on a charge made by a lady that he had used unbecoming language to her when she was engaging a berth. The lady's evidence not being corroborated, the employees asked that the porter be reinstated, while the company contended that he had been dismissed for sufficient cause. The Board did not sustain the employees' claim, but in view of the conflicting statements by the parties concerned they recommended to the company that consideration be given to the employment of the porter in some other capacity.

#### Case No. 41.—Stores Department—Atlantic Region.

The position of checker and tallyman having been awarded, after examination, to one of the junior applicants for the position, a

senior applicant claimed that he should have been appointed. The employees contended that the practice of the department in requiring employees to pass an examination in order to qualify for promotion was not in accordance with the spirit and intent of the agreement. The company claimed that the examination covered the line of work required by the appointment and that it was a fair test of ability to tally lumber. They stated further that the successful applicant made 80 marks on the examination while the claimant made only 20 marks, and that the former had special experience fitting him for the work. The Board denied the employees' claim, holding that the test given the applicants was the determining factor in the appointment, and that the senior qualified applicant had in fact secured the position.

#### **Case No. 42.—Stores Department—Atlantic Region.**

On a reduction of staff of the reclaim plant two employees were laid off, while two junior employees were retained in the service and given full-time employment. The employees contended that the two dismissed men should be restored to their positions, citing Article 3, Rule (k) of the agreement, which provides that when a reduction in forces takes place the senior employees with sufficient ability to perform the work shall be retained. The management stated that the men actually appointed had been considered by the foremen to be the best fitted to fill positions as permanent employees. They pointed out that a conference was held in 1928 to discuss the matter, and that they understood it had been arranged by compromise that the new men would be employed and they were accordingly admitted as members of the Provident Fund and Insurance Association. No exception was taken to this step at the time by the Canadian Brotherhood of Railroad Employees, and the men were returned as permanent employees. The Board sustained the claim of the employees.

#### **Case No. 43.—Operating Department.**

An advice note messenger at Sydney, N.S., received \$5 below the maximum rate to which it was claimed he was entitled as from May 1, 1927, the maximum rate not being paid to him until February 1, 1928. The employees claimed that he should receive full arrears for that period. The company contended that notwithstanding that Rule D of Article 16 of the schedule provides that the settlement of a dispute shall not under any

circumstances involve retroactive pay beyond a period of 45 days prior to the date that such grievance was submitted in writing by the employee, this messenger was allowed the increased rate from February 1, 1928, or a period of 4½ months prior to the time grievance was submitted.

The Board considered that back time payments should not be retroactive for an indefinite period, and that the employees should bring matters of this kind to the attention of the officers of the railways within a reasonable time. The claim of the employees was however sustained.

#### **Case No. 44.—Sleeping, Dining and Parlour Car Departments.**

Dining car employees in the Toronto district asked for the assignment of an additional crew on the Montreal-Toronto-Chicago dining-car run, making a total of seven crews on this run, in order to give them the amount of rest and layover per month at the home terminal that is required by the schedules. Prior to May 7, 1929, the dining car run operating between Montreal, Toronto, London and Windsor was manned with five standard crews. On that date the run was extended to Chicago, one additional crew being assigned. The employees desired equal privileges in regard to rest as they had enjoyed under the old arrangement. The evidence showed that under the arrangement which existed prior to May 7, the employees on this run had six periods of rest at the home terminal every month, and that under the new arrangement they had five only—a difference of 42 hours in the month. It was shown further that the management had offered the crews assigned to the run an additional 48 hours of rest each month at the home terminal. The Board held that these additional two days would place the crews on a par so far as rest periods were concerned, with the conditions existing prior to the changes. The Board therefore, denied the employees' claim for a seventh crew, but requested the company to give the crews on this run the accumulated days of rest, on the basis of the company's offer of 48 hours per month additional layover at home terminal, for the entire period since the change in the run was made, or payment in lieu thereof.

#### **Case No. 45.—Sleeping, Dining and Parlour Car Department.**

A sleeping car conductor at Toronto claimed that he had been improperly displaced by a former conductor who had been transferred to the clerical staff. The employees contended that the latter employee, on being so transfer-

red to office work, had forfeited his seniority as conductor. The company claimed that even though the name of the transferred employee had disappeared from the conductors' seniority list, his right to exercise seniority rights was not affected on his return to a position as conductor. The Board denied the claimant's contention, holding that when the position of the transferred employee in the office staff was abolished he was entitled to return to his former position as a sleeping car conductor.

#### Case No. 46.—Operating Department—Central Region.

Two employees, classed as messengers, in the superintendent's office, Saguenay Division, Quebec, applied to have the schedule rate for mail room clerks applied to their position. On the removal of the division to new quarters the former mailing clerk was assigned to other duties and the work was done by the two messengers successively. It appeared, however, that when the division in Quebec was removed to new quarters there was no mail room in the superintendent's office, and the Board therefore denied the employees' claim.

#### Case No. 47.—Sleeping, Dining and Parlour Car Department.

A dining car steward at Halifax, N.S., claimed that he was unfairly dealt with by being demoted from his position, this punishment having been inflicted on him for alleged lack of courtesy to passengers. After hearing the evidence in the case the Board decided that while the employee was at fault the discipline

administered to him was too severe for the alleged offence, and that he should be returned to duty as a steward forthwith, without loss of seniority, the time he was off to count as suspension.

#### Case No. 48.—Sleeping, Dining and Parlour Car Department.

A train from Halifax arrived at Montreal at 4 a.m. on a certain date, or 8 hours and 10 minutes behind the scheduled hour of arrival, a sleeping car porter on the train was required to stay on duty until 8 a.m. He was compensated for late arrival by overtime payment for an additional twelve hours in accordance with Article 6, clause A, the schedule for sleeping, dining and parlour car employees. He submitted a further claim for terminal detention time under Clause B of Article 6, covering detention to four hours overtime at *pro rata* rate on the basis of a twelve hour day. The company contended that the four hour period for which the employee was held on his car was within the twelve hour period paid for as overtime, and that any further payment within this period would involve payment for two different classes of overtime within the same period of time. The company pointed out further that it had not at any time recognized or paid more than one class of overtime within the same period, this principle having been established for many years for all classes of railway employees. The Board denied the employees' claim, holding that it had never been contemplated that payment for overtime should be made twice for the same period of time.

## STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1929

THE number of strikes and lockouts in existence in Canada during September was nine, as compared with ten the previous month, but while fewer workers were involved the time loss for the month was more than twice that for August. As compared with September, 1928, the figures for September, 1929, show that practically the same time loss occurred although fewer strikes were in existence.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Sept., 1929.....	9	864	9,788
*Aug., 1929.....	10	1,094	3,712
Sept., 1928.....	11	1,433	9,849

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Five disputes, involving 347 workpeople, were carried over from August, and four disputes commenced during September. Of these nine disputes, four terminated during

the month, two being in favour of the workers, one in favour of the employer and the result of one being recorded as indefinite. At the end of September, therefore, there were five disputes recorded as strikes or lockouts, as follows: moulders, Montreal, P.Q.; compositors, Nelson, B.C.; bakers, Montreal, P.Q.; factory workers (knitted silk goods), Toronto, Ont.; and factory workers (steel car), Hamilton, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet

declared terminated. Information is available as to two such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926; and photo engravers, Toronto, Ont., January 17, 1929. The dispute of fur workers in Toronto, Ont., commencing April 10, 1928, and carried in this list for some months, was declared off by the union by the end of August, 1929.

A strike of milk drivers at London, Ont., was described in the September issue of the LABOUR GAZETTE, it being stated that one employer had reached an agreement with the strikers and the other employers had replaced the strikers by August 24. During September an agreement was reached with all the employers except one, providing for the em-

#### STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1929

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress prior to September, 1929.</b>			
<b>MINING—</b>			
Coal miners, New Waterford, N.S.....	300	600	Commenced Aug. 31, 1929; against suspension of boy for disobedience. Terminated Sept. 6, 1929; in favour of employer.
<b>MANUFACTURING—</b>			
<i>Boots and Shoes—</i>			
Shoe factory workers, Toronto, Ont.....	5	100	Commenced April 23, 1929; against reduction in wages. Terminated Sept. 23, 1929; indefinite.
<i>Clothing (including knitted goods)—</i>			
Cap factory workers, Montreal, P.Q.....	20	140	Commenced Aug. 6, 1929; against reduction in wages. Terminated Sept. 11, 1929; in favour of workers.
<i>Printing and Publishing—</i>			
Compositors, Nelson, B.C....	2	48	Commenced July 18, 1929; alleged violation of agreement re employment of excess apprentices. Underminated.
<i>Iron, Steel and Products—</i>			
Moulders, Montreal, P.Q.....	20	450	Commenced May 2, 1929; for increase in wages. Underminated.
<b>(b) Strikes and Lockouts Commencing during September, 1929.</b>			
<b>MANUFACTURING—</b>			
<i>Vegetable Foods—</i>			
Bakers, Montreal, P.Q.....	57	1,250	Commenced Sept. 7, 1929; alleged lockout of workers demanding union working conditions. Underminated.
<i>Clothing (including knitted goods)—</i>			
Factory workers (knitted silk goods), Toronto, Ont.....	110	550	Commenced Sept. 25, 1929; against lower piece rates on new type of work. Underminated.
<i>Iron, Steel and Products—</i>			
Factory workers (steel railway cars), Hamilton, Ont.....	280	6,440	Commenced Sept. 4, 1929; for higher piece rates on new type of work. Underminated.
<b>CONSTRUCTION—</b>			
<i>Buildings and Structures—</i>			
Construction labourers, Halifax, N.S.....	70	210	Commenced Sept. 20, 1929; for increase in wages. Terminated September 24, 1929; in favour of workers.

ployment of union members only, all the strikers except six resuming work by September 28.

A strike of employees in a boot factory in Montreal during September has been reported in the newspapers but no particulars have yet been received.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

**COAL MINERS, NEW WATERFORD, N.S.**—As reported in the September issue of the *LABOUR GAZETTE*, 300 employees on the night shift in a mine at New Waterford ceased work on August 31 in protest against the suspension of a boy who had refused to do certain work. The day shift was not affected and both shifts worked on Tuesday, September 3. Work was resumed by the strikers on September 6, the demands of the strikers not being conceded.

**SHOE FACTORY WORKERS, TORONTO, ONT.**—This strike, beginning on April 23, 1929, against a reduction in wages, piece rates, was declared off on September 23, the employer having made an assignment.

**CAP FACTORY WORKERS, MONTREAL, P.Q.**—Employees in a cap manufacturing establishment ceased work on August 6, 1929. The agreement with the union having expired on August 1, the union demanded an increase in wages, the employer making a counter demand for a decrease in wages as the conditions in the industry were not favourable. The employer secured some non-union workers, and later made a proposal to the union that work be resumed at the same wages and on the same conditions as existed prior to the strike. This was refused unless the new non-union employees were dismissed. On September 11 work was resumed with the same wages and working conditions as before the strike, the non-union employees being retained.

**BAKERS, MONTREAL, P.Q.**—Employees in a number of bakeries became involved in a dispute between certain employers and the union when it attempted to organize the shops and secure union conditions, a lockout being alleged. A strike of bakers had occurred in May, 1927, not being called off until May, 1929, although the strikers had returned to work or had been replaced by May, 1928. Negotiations for an agreement were reported to be in progress since May this year. In September four employers are reported to have signed such an agreement, leaving seven employers still involved in the dispute with thirty-five employees. In connection with picketing one striker was arrested for assault.

**FACTORY WORKERS (KNITTED SILK GOODS), TORONTO, ONT.**—A number of employees in a

knitted silk goods factory ceased work on September 25 against a reduction in piece rates from 9 cents per pound to 7 cents on a new type of work. It was reported that the employer had first reduced the rate from 9 cents per pound to 6 cents, stating that the new kind of yarn used was in a longer skein, the lower rate would not decrease earnings. When the employees objected to this a new rate was set at 7 cents per pound, but the employees ceased work. At the end of the month no settlement had been reached.

**RAILWAY CAR FACTORY WORKERS, HAMILTON, ONT.**—Employees in the erection department of a car manufacturing establishment ceased work on September 4, demanding higher piece rates on a new order for cars alleging that they were of a different type from the cars in the previous order and similar to those in an earlier order on which higher rates were paid. The employer stated that the methods of production on the new order make the same rates as on the last order quite fair. The strikers are reported to have been organized as the National Steel Car Industrial Union. The employer has reported that there are only 280 workers involved, but the strikers claim that 700 are on strike, some being indirectly involved.

**CONSTRUCTION LABOURERS, HALIFAX, N.S.**—Labourers engaged on the construction of a railway station and hotel ceased work on September 20, demanding an increase in the minimum rate of wages from 35 cents per hour to 40 cents. The employer stated that he was paying 35 cents, 40 cents and 45 cents per hour, that the work was being done under the labour conditions of his contract with the Canadian National Railways, and that if the Department of Labour gave a ruling that the prevailing rate for labourers was 40 cents per hour the minimum would be raised to that figure. The employees demanded the increase immediately and ceased work. The fair wages officer of the Department took the matter up with the employer, advising him that a survey of conditions in Halifax indicated that 40 cents per hour was the prevailing rate and that he had so advised the Minister. The contractor thereupon put the 40 cent rate in force as from September 21. In the meantime a number of other workers had been secured and the strikers refused to return to work unless all strikers were taken back. The contractor stated that he had no employment for all at that time, but that he would give employment to the strikers as soon as work was available. By the end of the week it was estimated that seventy-five per cent of the strikers were again employed and the balance were employed within a few days.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1929, in the review of Strikes and Lockouts in Canada and Other Countries, 1928. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

### Great Britain and Northern Ireland

The number of disputes beginning in August was 28, and 13 were still in progress from the previous month, making a total of 41 disputes in progress during the month, involving 401,400 workpeople and resulting in a time loss of 5,538,000 working days for the month. This includes the dispute of Lancashire cotton workers mentioned the last issue of the LABOUR GAZETTE, which alone involved 388,000 workers and accounted for most of the time loss for the month. Of the 28 disputes beginning in August, 4 arose out of proposed reductions in wages, 4 on other wages questions, one on a question of working hours, 9 on questions respecting the employment of particular classes or persons, 4 on other questions of working arrangements and 6 on questions of trade union principle. Settlements were reached in 28 disputes, of which 5 were in favour of workpeople, 15 in favour of employers and 8 ended in compromises.

A strike of about 1,000 shipyard joiners at Belfast which indirectly affects 2,000 other shipyard workers, has been in progress since April 23, no settlement having been reached at the end of September. The object of the strike was to secure an increase in wages.

About 2,000 coal miners at Ashington, Northumberland, went on strike October 1, as a protest against the use of steel props and coal cutters for cutting stone.

### Australia

During the year 1928, the number of disputes reported was 287, involving 82,349 workers directly and 14,073 indirectly, making a

total of 96,422 workers involved. The time loss for the year was 777,278 working days, and the estimated loss in wages £775,359.

For the first quarter of the year 1929, the number of disputes was 75, directly involving 41,832 workers and indirectly 2,391. The time loss was 692,700 working days and the estimated loss in wages £691,990.

No settlement has yet been reported of the dispute in the coal mining industry in New South Wales, which has been in progress since March 31, and involves about 12,000 workers.

### France

Statistics for the last quarter of the year 1928 show that 116 disputes began in October, involving 21,503 workers, 93 in November involving 15,970 workers and 61 in December involving 27,093 workers. Of the total number of 270 disputes beginning in the period, 186 were due to demands for increased wages, 31 were for the reinstatement of discharged employees and the other for various other causes.

### Japan

The number of industrial disputes in the year 1928 was 397, involving 46,252 workers with a time loss of 578,465 working days. Corresponding figures for the year 1927 are 383 disputes involving 46,672 workers and a time loss of 791,599 working days.

### Poland

Preliminary figures for the year 1928, give the number of disputes beginning in the year as 729 affecting 5,167 establishments. The number of workers involved in all disputes in progress during the year was 346,140 and the total time loss for the year was 2,734,062 working days.

### Switzerland

During the year 1928, the number of disputes reported by the Federal Labour Bureau was 44, involving 273 establishments and 5,339 workers. The time loss for the year was 95,855 working days.

### United States

In the month of July, the number of disputes which began was 67, while 87 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 30,626 and the time loss for the month 1,334,160 working days.

The strike of street car employees at New Orleans, Louisiana, which began on July 2, was still in effect at the end of September. A proposed settlement reached by the international union and employers was rejected by the strikers as the reinstatement of all strikers was not guaranteed. A number of disorders occurred in connection with this strike.

An account of various strikes in textile factories in the Southern States was given in the LABOUR GAZETTE for April, May and June. Although most of these strikes were settled in May, disturbances continued during the summer at Gastonia, North Carolina, where the strikers were organized by and relief given by the National Textile Workers' Union, a Communist union. On June 7, in a clash between the police and strikers, one policeman was fatally shot and three others injured. In

September, anti-Communist mobs are reported to have kidnapped and injured two strike leaders, and one woman striker was killed when such a mob attempted to prevent a number of strikers from attending a mass meeting. At Marion, North Carolina, about 600 workers at one mill went on strike July 11, for shorter hours, increased wages and other demands; later another mill at the same town employing about 1,000 workers was also closed. An agreement was reached and work resumed September 11. A small number of these workers again went on strike on October 2, against the alleged discharge of union members, and a riot occurred in which the police were involved, when this group of strikers attempted to prevent other employees from going to work. In this riot, five strikers were fatally injured.

### Coal Statistics of Canada for Second Quarter of 1929

According to a report prepared by the Dominion Bureau of Statistics on the coal statistics of Canada for the second quarter of 1929, the coal production during this period amounted to 4,153,904 tons as compared with 3,761,379 tons for the corresponding three months in 1928, an increase of 10 per cent. All coal producing provinces except British Columbia showed increases in production over the same period in 1928.

Total imports of coal into Canada during April, May and June, were 15 per cent greater than during the second quarter of 1928. The figures were 4,056,953 tons, comprising 3,842,992 tons from the United States, 211,315 tons from Great Britain, and 2,646 tons from Russia; as against 3,521,857 tons of which 3,377,597 tons were from the United States, 144,259 tons from Great Britain and one ton from Belgium during the second quarter of 1928.

Exports of Canadian coal during April, May and June amounted to 174,323 tons as against 150,956 tons during the corresponding period in 1928. Exports through the ports of Nova Scotia, New Brunswick, and Quebec amounted to 80,018 tons as against 58,858 tons during the second quarter of 1928 while Manitoba, Saskatchewan, Alberta and British Columbia cleared 94,305 tons as against 92,098 tons during the second quarter of last year.

Computed from figures on output, imports and exports, the quantity of coal made available for consumption in Canada during the second quarter of 1928 was 8,036,534 tons

or 12 per cent greater than the tonnage for the corresponding period of 1928.

The average number of men employed in the coal mines of Canada during the second quarter of the year was 25,848. Of these, 6,014 worked on the surface and 19,834 underground. The average production per man for the period was 160 tons and the average output per man day was 2.5 tons. Tonnage lost during the period was largely due to "lack of orders".

The Women's Minimum Wage Board of Quebec has appointed Mr. A. Gariépy, of Montreal, as Minimum Wage Inspector for the Province. Mr. Gariépy is a well known trade unionist, being a member of the Cigar Makers' International Union, of which he was Canadian vice-president. He was also actively connected with the Montreal Trades and Labour Council, serving in the office of treasurer of that body for several terms.

"Rock-dusting is an effective means of preventing coal dust from propagating an explosion in a coal mine," states G. S. McCaa, district engineer, U.S. Bureau of Mines, in Information Circular 6144, "but it will not prevent gas from igniting explosively and with much attendant damage locally. Ventilation must be effective at all times, regardless of the employment of other explosion-preventing methods."

## LABOUR LEGISLATION IN CANADA UP TO DECEMBER 31, 1928

### Third Consolidated Report Published by Department of Labour

THE Department of Labour has just issued a compilation of labour legislation in Canada as of December 31, 1928. This volume, which comprises 733 pages, contains the text, in full or abridged, of the statutes directly affecting workmen as employees which have been enacted by the Dominion Parliament by the legislatures of the nine provinces. Certain other statutes which affect chiefly working people but are primarily social rather than labour legislation are summarized briefly, such as those providing for mothers' allowances.

This is the third report of the kind published by the Department of Labour. The first volume of the series was issued in 1915. It was followed in each of the four succeeding years by smaller volumes dealing with the labour legislation enacted in that year. The second consolidated report was issued in 1920 and subsequent annual reports cover the laws passed during the years 1921-26 inclusive.

The present report is thoroughly indexed and is designed to furnish in convenient form information concerning labour legislation in Canada and to enable a comparison to be made between the laws of the different provinces. There has been a considerable demand for information of this sort, both in Canada and in other countries, and particularly in connection with the work of the International Labour Office at Geneva.

A new feature of the 1928 report is the information given regarding the regulations issued under the authority of statutes. Many laws empower the Dominion or Provincial Governments to regulate certain matters by Orders in Council. In other cases, the Minister charged with the administration of the Act is authorized to issue regulations. Wherever such orders or regulations provide protection or impose obligations on employees or define general terms used in the statute, their provisions are indicated in foot-notes. Regulations dealing with procedure are omitted. For example, in some provinces rules for the protection of miners are laid down in the Mines Acts. In others, these rules are drawn up by the Lieutenant-Governor in Council, in the latter case, the provisions of the Order-in-Council are appended to the Act.

Chief among the federal statutes included in the report are the Trade Unions Act, Labour Department Act, Conciliation and Labour Act, Industrial Disputes Investigation Act, Employment Offices Co-ordination Act, Technical Education Act, Alien Labour Act, Old Age Pensions Act, Railway Act, Canada

Shipping Act, sections of the Trade Mark and Design Act regarding trade union labels and sections of the Criminal Code dealing with trade unions and intimidation and violence in industrial disputes.

The Industrial Disputes Investigation Act passed by the Dominion Parliament to aid in the settlement of industrial disputes has been brought into force through provincial legislative action, in all provinces but Ontario, Quebec, and Prince Edward Island.

An analysis of the various provincial laws in the report indicates a certain degree of uniformity in the Canadian laws providing for factory inspection, the regulation of mines, mechanics' liens, workmen's compensation, minimum wages for women and others. In the case of the two last named, similar methods of administration have been adopted. With the enactment of the new Saskatchewan Workmen's Compensation Act in 1928, to come into force on proclamation, all the provinces, except Quebec and Prince Edward Island, will have a collective liability system of compensation administered by a provincial board. The Quebec Act, which came into force in 1927, is administered by a provincial commission but provides for individual liability on the part of the employer. There are differences among the compensation laws in the other provinces but the tendency appears to be towards greater uniformity.

There are, however, important points on which the labour provincial laws vary. The minimum age for employment in factories is 14 in the eastern provinces and 14 or 15 in the western. The hours of labour permitted to young persons and women vary with the definition of a "young person" and from the 48-hour week in Saskatchewan and British Columbia to the 10-hour day and 60-hour week in the eastern provinces. Certain provisions for health and safety are fairly general throughout the provinces but some legislatures have imposed more stringent regulations than others. There is even more variation in the legislation on employment in shops.

The Old Age Pensions Act of the Federal Parliament is a new development in Canadian legislation. This statute provides for federal assistance to the provinces for the payment of pensions to indigent persons over 70 years of age. In Alberta, British Columbia, Manitoba, Ontario and Saskatchewan, legislation has been passed taking advantage of the Dominion statute. Pensions are also payable in the Northwest Territories.

Other recent developments in the field of labour legislation include the British Columbia Hours of Work Act providing for an 8-hour day for all workers in industrial undertakings with limited exceptions and the Male Minimum Wage Act of the same province.

These are the first laws of the kind in Canada. Earlier legislation restricting hours was applicable only to women and young persons in certain classes of work or to such occupations as mining. Similarly, laws to establish minimum rates of wages applied only to female employees.

## ORGANIZED WAGE EARNERS IN CANADA

### Synopsis of the Eighteenth Annual Departmental Report on Labour Organization

THE Eighteenth Annual Report on Labour Organization in Canada, being for the calendar year 1928, which has just been distributed by the department, divides the trade union movement of the Dominion into the following classes:—

(1) Local branches of international craft organizations, having headquarters in the United States;

(2) The One Big Union, an international industrial union, with headquarters in Winnipeg;

(3) Local branches of the Industrial Workers of the World, a revolutionary industrial union which seeks to abolish the wage system, with headquarters in Chicago;

(4) Canadian central labour organizations;

(5) Independent trade union units, and

(6) National Catholic unions.

The international craft union group consists of the Canadian members of 83 organizations, two less than in 1927, and has 1,873 branches in the Dominion, a gain of 4, with a combined membership of 186,917, an increase of 6,162. The One Big Union reported 46 local units in Canada, a loss of 4, with a membership of 20,029, an increase of 784. The Industrial Workers of the World reported the same standing in the Dominion as in 1927, viz., seven local branches, with a combined membership of 4,400. The Canadian group, consisting of 27 central organizations, a gain of three, have between them 586 local branches, an increase of 49, with an aggregate membership of 51,858, a gain of 3,423. The independent units number 36, a loss of one, the combined membership of which is 11,398, a decrease of 1,049. The national Catholic group of unions number 105, a gain of one, their combined membership being reported at 26,000, an increase of 1,000. The net increase in branches for 1928 was 49, and the gain in membership was 10,320, making a grand total of 2,653 branches of all classes of unions in

Canada, with a combined reported and estimated membership of 300,602. The accompanying chart, which is taken from the report, indicates the fluctuations in the number of trade unionists in Canada from 1911 to 1928, the period covered by these annual reports on labour organization.

Another chart published in the report shows that the 300,602 trade union members in the Dominion are divided by trade groups as follows:—

Railroad employees, 93,258 members, or 31.02 per cent of the total;

Public employees, personal service and amusement trades, 32,266 members, or 10.73 per cent;

Building trades, 31,627 members, or 10.52 per cent;

Mining and quarrying, 26,260 members, or 8.74 per cent;

Other transportation and navigation trades, 24,255 members, or 8.07 per cent;

Metal trades, 18,052 members, or 6.01 per cent;

Printing and paper making trades, 16,350 members, or 5.44 per cent;

Clothing, boots and shoes, 12,774 members, or 4.25 per cent;

All other trades and general labour, 45,760 members, or 15.22 per cent.

The report points out that the railroad employees' group contains a large number of metal trades workers who are not employed in railroad shop work, and who should be included in the metal trades group, but it was impossible to secure separate figures.

#### *Trade Union Membership by Provinces.—*

The division by provinces of the 2,653 local branch unions of all classes is as follows: Ontario, 1,024; Quebec, 485; Alberta, 270; British Columbia, 262; Saskatchewan, 189; Manitoba, 175; Nova Scotia, 127; New Brunswick, 111, and Prince Edward Island, 10.

*Trade Union Membership in Canadian Cities.*—Thirty-two cities in Canada have not less than 20 local branch unions, and represent approximately 59 per cent of the total number of branches in the Dominion and con-

tain about 51 per cent of the total trade union membership. Montreal stands first in the list of cities, and (including the national Catholic unions) has 200 local branches of all classes of unions, 148 of which reported 39,218 mem-

MEMBERS

bers; Toronto ranks second with 141 branches, 107 of which reported 25,384 members; Winnipeg occupies third place with 107 branches, 70 of which reported 11,468 members; Vancouver is fourth with 99 branches, 82 of which reported 15,407 members. The remaining 28 cities in order of number of branches are: Calgary, 74 branches, 57 reporting 5,916 members; Edmonton, 69 branches, 59 reporting 5,678 members; Quebec, 67 branches, 44 reporting 5,575 members; Ottawa, 61 branches, 49 reporting 4,043 members; Hamilton, 60 branches, 53 reporting 4,534 members; London, 55 branches, 50 reporting 4,467 members; Victoria, 44 branches, 37 reporting 2,126 members; Regina, 40 branches, 31 reporting 1,701 members; Saskatoon, 40 branches, 33 reporting 1,978 members; St. John, 38 branches, 35 reporting 2,760 members; Windsor, 38 branches, 20 reporting 1,839 members; Halifax, 36 branches, 24 reporting 2,553 members; Moose Jaw, 32 branches, 24 reporting 1,875 members; St. Thomas, 30 branches, 29 reporting 2,418 members; Fort William, 28 branches, 25 reporting 1,673 members; Lethbridge, 28 branches, 23 reporting 1,653 members; Brandon, 27 branches, 18 reporting 841 members; Port Arthur, 27 branches, 22 reporting 1,643 members; Sherbrooke, 25 branches, 15 reporting 686 members; North Bay, 24 branches, 21 reporting 1,661 members; Moncton, 23 branches, 21 reporting 2,898 members; St. Catharines, 23 branches, 17 reporting 578 members; Sault Ste. Marie, 22 branches, 16 reporting 716 members; Guelph, 21 branches, 15 reporting 434 members; Stratford, 21 branches, 20 reporting 1,713 members; Brantford, 20 branches, 17 reporting 786 members; Kingston, 20 branches, 16 reporting 697 members; Peterborough, 20 branches, 13 reporting 248 members.

Of the 2,042 unions which reported their membership seventeen have 1,000 or more members, the largest reporting union having 3,536 members.

*Union Co-ordination.*—The Trades and Labour Congress of Canada, which was originally established in 1873, is the recognized head of the internationally organized wage-earners in the Dominion. The American Federation of Labour and 55 of its more important affiliates have affiliated the whole of their Canadian membership by paying to the congress the regular per capita tax. A number of local branches of international organizations which had affiliated individually also paid per capita tax. The congress has under direct charters three Canadian central organizations, two provincial federations of labour, 39 trades and labour councils, and 45 local unions, the total membership being 143,582.

The All-Canadian Congress of Labour, which was organized in March, 1927, and which absorbed the Canadian Federation of Labour is in direct opposition to the old-established congress. At the close of the year 1928 the congress had under charter thirteen central organizations including the Canadian Brotherhood of Railroad Employees and the One Big Union, and 20 local unions, the combined membership being reported at 51,643.

A chapter is devoted to the National Catholic unions, which so far as Canada is concerned had their inception in 1902 in the province of Quebec, where, with the exception of one union in Ontario, all of such bodies are located.

The report makes extended reference to the various classes of delegate bodies which have been formed as a part of the plan of labour organization in North America with a view to co-ordinating the activities of unions of closely allied or particular trades in dealing with matters of like concern to all members of the bodies represented.

*Organized Workers in Various Countries.*—Besides the information given in the report as to the membership of labour organizations in Canada and the United States figures are included indicating the standing of organized workers in 60 other countries, the aggregate for the 62 countries being 45,748,094. Of this number about 19,330,835 located in 59 countries, though not in direct affiliation, are sympathetic towards the International Federation of Trade Unions, with which organization the Trades and Labour Congress of Canada, with its 119,243 members, is affiliated. The following are the latest revised figures for the various countries as taken from the report:—

Argentina.. . . . .	164,874
Australia.. . . . .	911,652
Austria.. . . . .	963,550
Belgium.. . . . .	762,886
Bolivia.. . . . .	5,000
Brazil.. . . . .	22,562
British Guiana.. . . . .	1,073
Bulgaria.. . . . .	2,485
Canada.. . . . .	300,602
Ceylon.. . . . .	40,000
Chili.. . . . .	204,000
China.. . . . .	2,800,000
Colombia.. . . . .	11,400
Corea.. . . . .	123,000
Cuba.. . . . .	250,000
Czechoslovakia.. . . . .	1,696,897
Denmark.. . . . .	309,885
Dutch East Indies.. . . . .	24,021
Egypt.. . . . .	60,000
Esthonia.. . . . .	14,331
Finland.. . . . .	75,846
France.. . . . .	1,218,250
Germany.. . . . .	8,217,923
Great Britain.. . . . .	4,908,000
Greece.. . . . .	98,470
Gautemala.. . . . .	3,000
Holland.. . . . .	407,665

Honduras.. . . . .	6,000
Hungary.. . . . .	185,337
Iceland.. . . . .	4,540
India.. . . . .	300,000

Switzerland.. . . . .	254,992
Uruguay.. . . . .	28,484
United States.. . . . .	3,792,256
Jugoslavia.. . . . .	57,717

*Revolutionary Labour Organizations.*—The report points out that the chief revolutionary political body is the Third (Communist) International, which was established in Moscow on March 6, 1919, with the object of organizing the working class for the overthrow of capitalism, the destruction of the bourgeois state and the establishment of the dictatorship of the proletariat. The theses of the Communist International declare that the trade unions represent the most important form of mass organization of the proletariat, and with a view to having a medium through which to propagate the communist doctrine among the organized workers the Moscow organization in July, 1921, set up the Red International of Labour Unions, the official representative of which in the United States and Canada is the Trade Union Educational League, with head office in New York City. The Canadian representative of the Communist International is the Communist Party of Canada, which was established on February 17, 1922, with head office in Toronto. An adjunct of the Communist Party is the Young Communist League, which was formed in July, 1922, and which with its children's section, known as the Young Pioneers, declares its mission to be to penetrate the mass of working class youth with communist agitation and education, for which purpose the league favours the establishment of schools by the parent Canadian party. This section of the

report, among other events, notes the expulsion from the Communist Party of Maurice Spector, the chairman, owing to his alliance with the group which desire the re-admittance of Trotzky to the Communist International; and the refusal of the Trades and Labour Congress of Canada to seat John MacDonald, secretary of the Communist Party of Canada, at the Toronto Convention.

*International Federation of Trade Unions.*—Reference is made in the report to the International Federation of Trade Unions, a body established in 1901 and re-organized in 1919, with the object among others of uniting the international working class and the promotion of the interests and activities of the trade union movement. The labour movement of the Dominion as represented by the Trades and Labour Congress of Canada is affiliated with the federation, and the president of the congress is a member of the general council. The disagreement which arose in 1927 over the election of the British member of the executive of the I.F.T.U. has been quietly settled, and Mr. Wm. Citrine, who in 1928 was named as the British member by the general council of the British Trades Union Congress, was subsequently selected as the president of the federation. The I.F.T.U. has the trade union centres of 27 countries in affiliation with a combined membership of approximately 13,000,000. Mention is made of the attacks on the I.F.T.U. by the Red International of Labour Unions, which, it is averred, was created by the Third (Communist) International for the purpose of destroying the federation. The report also points out how the International Federation has steadfastly refused to meet with the All-Russian Central Council of Trade Unions, an affiliate of the Red International of Labour Unions, for the purpose of effecting a "united front of labour against war and Fascist reaction," until the All-Russian body made application for admission to the federation. Following such application the I.F.T.U. declared that a conference would be convened with a view to an exchange of opinions. In 1928 the Norwegian and Finnish national trade union centres proposed a conference between representatives of the I.F.T.U. and the Red International of Labour Unions, the subject for discussion to be the question of a basis for complete international trade union unity. The federation, however, declared that the foundation for a conference with the Russian unions did not exist at present, and still less for a meeting with the Red International.

*Industrial Workers of the World.*—The report makes reference to the Industrial Workers of the World, commonly known as the I.W.W., which is the advocate of what is termed revolutionary industrial unionism with its objective the abolition of the wage system. In 1905, when the organization was formed, a membership of 400,000 was reported, but the dissension which has from time to time occurred in its ranks, combined with the prosecution of a large number of its members by the United States Government under a charge of having interfered with the carrying out of certain war-time measures of the republic, has had the effect of curtailing the activities of the organization. At the close of 1928 the reported membership of the I.W.W. was 36,500, the same as in 1927, of which 4,400 belong to the seven Canadian branches.

*Labour in Politics.*—The early demand for independent political action on the part of organized labour is discussed in the report, which also points out how the Canadian Labour Party was formed at the suggestion of the Trades and Labour Congress of Canada. There are now provincial sections of the party in Nova Scotia, Quebec, Ontario, Alberta and British Columbia. That in the latter province was somewhat weakened during 1928 by the withdrawal of affiliation of the Vancouver-New Westminster and District Trades and Labour Council over the question of the enfranchisement of Orientals, the provincial branch of the C.L.P., which it is claimed is dominated by communists, having early in the year adopted such a proposal. There are independent labour parties in Manitoba, British Columbia and Ontario, the party in the last-named province being organized as a protest against the revolutionary character of the resolutions which were adopted at an earlier convention of the Ontario Section of the C.L.P. Two candidates of the Canadian Labour Party contested a two-seat constituency in the Nova Scotia election, but both were defeated, as was also a Labour Party nominee in a by-election for a seat in the Alberta Legislature. Of nine candidates of the Independent Labour Party for seats in the British Columbia Legislature, one was elected. In seventeen localities 64 candidates were nominated or endorsed for municipal office by labour political parties or organized labour bodies, of whom 41 were elected to the following positions: mayors, 2; controller, 1; aldermen, 31; school trustees, 6; hydro commissioners, 1.

*Trade Union Beneficiary Features.*—The report indicates that for 1928 fourteen Canadian central labour organizations made payments for benefits, the total disbursements being \$35,344, a decrease of \$8,329 as compared with the preceding year. Of the 85 international organizations with branches in Canada, 65 had expenditures for one or more benefits, payments on account of death benefits being made by 59, unemployed and travelling benefits by 7, strike benefits by 36, sickness and accident benefits by 20, and old age pensions by 9. The total expenditure for benefits of central organizations was \$24,797,368, an increase of \$341,833 as compared with 1927. The 1928 disbursements for the various classes of benefits were as follows:—

Death benefits . . . . .	\$14,737,140
Unemployed and travelling benefits . . . . .	806,632
Strike benefits . . . . .	1,251,111
Sickness and accident benefits.	4,660,672
Old age pensions and other benefits . . . . .	3,341,813

Besides the disbursements made by the headquarters of the international organizations the report shows that 566 of the local branch unions in Canada made benefit payments to their own members, as did also 88 branches of Canadian bodies, 13 independent and 35 national Catholic unions, the total expended being \$406,041, an increase of \$142,780 as compared with the outlay by 629 local branches in 1927. The expenditures for 1928 by the local branches were for the following benefits:—

Death benefits . . . . .	\$162,289
Unemployed benefits . . . . .	10,638
Strike benefits . . . . .	26,211
Sickness benefits . . . . .	145,098
Other benefits . . . . .	61,805

*Non-Trade Union Organizations.*—In addition to the trade unions whose names appear in the report, space has been given to a class of associations which are in no way identified with the labour movement, but are in the main composed of wage-earners and are considered to be of sufficient importance to warrant reference being made to them. There are 85 of such bodies, the principal ones being composed of school teachers, government employees and commercial travellers, with a combined membership of 107,624.

The Eighteenth Annual Report on Labour Organization in Canada, like its predecessors, forms a complete labour directory, containing as it does not only the names and addresses of the chief officers of local branch unions and delegate bodies in the Dominion, but also those of the central organizations with which the Canadian organized workers are identified.

## TRADES UNION CONGRESS OF GREAT BRITAIN

THE 61st Annual Trades Union Congress was held at Belfast during September. The President was Mr. Ben Tillett, M.P., Chairman of the General Council.\*

The number of delegates appointed to attend the Congress as shown in the statistical statement compiled by the General Council was 595; the number of organizations affiliated to the Congress (including those organizations, with a membership of about 59,000, which did not appoint delegates) was 162, with a membership of approximately 3,673,000. There was a large decrease in the number of trade union members represented in the mining group. Eight other groups showed relatively small decreases, and one group remained stationary. The remaining five groups had increases in memberships, the largest increase, viz., that in the textile group, being due to the re-affiliation of the Card and Blowing Room Operatives' amalgamation.

### Inter-Dominion Labour Conferences

The chairman in his opening address reviewed the progress of the trade union movement since the Congress was last held in Belfast, 36 years ago. He voiced the need for a closer association with the Dominions and Colonies, and suggested that there should be periodical inter-Dominion conferences of organized labour throughout the Empire.

The principal business of the Congress was the consideration of the General Council's comprehensive report, covering their work during the past twelve months; also the agenda containing resolutions, with amendments, on various labour questions, which had been submitted by the trade unions affiliated. In addition, there was an emergency resolution dealing with relations with Russia.

### Conference with Employers

The subject of industrial relations secured attention at the Edinburgh Congress in 1927, following which the General Council expressed a willingness to confer with employers with a view to closer co-operation. The result was a series of conferences with certain employers, amongst whom Lord Melchett was prominent. At the Swansea Congress last year some criticism was submitted as to these conferences with employers continuing, but the General Council's policy was

approved by a large majority. This year the General Council devoted 24 pages of their report to this matter and drew special attention to it by stating: "An important development has taken place, as a result of which the General Council are now in consultation for the first time with the National Confederation of Employers' Organizations and the Federation of British Industries. The conferences . . . unquestionably have proved that there is a large amount of common ground for agreement on outstanding problems of industry."

The continuance of the conferences was challenged by the following resolution submitted by the National Amalgamated Furnishing Trades Association and the Amalgamated Engineering Union:—

"That this Congress receives the report of the Mond-Turner Conferences as information, but declares its opposition to the false cry of industrial peace and to the policy of collaboration with the enemies of labour, who are vigorously and ruthlessly attacking the standard of living of the working class at the very time they are conferring with the General Council, and instructs the Council to put an end to such conferences forthwith, as they are a serious menace to the interests of the working class movement."

After debate the General Council's policy for continuing the conferences was endorsed.

### Unemployment Insurance

Three resolutions and five amendments had been submitted dealing with unemployment insurance. These were reduced to one composite resolution, which urged the Government to extend the scope of unemployment insurance so as to include out-workers and home-workers; that it should be made compulsory upon employers to notify vacancies to the Employment Exchanges; that maintenance should be guaranteed where work cannot be obtained; and that the payment of State unemployed benefit by trade unions desiring to do so should be allowed. The resolution was carried.

### Industrial Unions

The Miners' Federation submitted a resolution seeking for the appointment of a committee to deal with trade union reorganization in the principal industries on the basis of one union for each industry. The resolution was defeated by 1,933,000 votes to 1,668,000.

\*This account of the proceedings is based on a report in the British *Ministry of Labour Gazette*, September, 1929.

### Cost of Living Index

A resolution was proposed calling for the appointment of a special commission to investigate and report upon the establishment of a new standard of the cost of living in order to provide a new basis for the official index number. The General Council submitted reasons why caution should be exercised in pressing this proposal during a period of trade depression, and it was agreed that the question should be referred to the General Council.

### Trade Unions Act, 1927

A resolution calling for the removal of the restrictions imposed upon the Trade Union movement by the Trade Disputes and Trade Unions Act, 1927, was carried.

### Relations With Russia

The following resolution dealing with relations with Russia was passed:—

"That this British Trades Union Congress, representing approximately 4,000,000 organized workers, views with anxiety the trade depression in the staple industries of the nation, and having regard to the vast potentialities for trade between this country and Russia, urges upon His Majesty's Government to take immediate steps to secure the resumption of diplomatic relations between Russia and this country, believing that such action would stimulate trade and thus secure the placing of orders in this country for the products of those industries, thereby alleviating unemployment.

"Further, that the Trade Facilities Act should be re-enacted and extended to British-Russian trade."

### Social Insurance

The following resolution with regard to social insurance received vigorous support and was carried:—

"This Congress resolves that the Government be requested to appoint a Commission of Inquiry, with a view to consolidating and merging the various contributory schemes of social insurance, to be administered by a department charged with the special duty of social insurance administration. Further, that the Commission should also inquire into the various non-contributory social services for the purpose of reporting upon the possibility of reorganizing same."

### Other Resolutions

A resolution calling upon the Parliamentary Labour Party to press forward the 48-hour bill for distributive workers and to make representations to the Government to in-

corporate all other sections of workers, including agricultural workers, in a bill formulated on the lines of the Washington Hours Convention was carried.

A resolution calling upon the labour movement to use its powers to secure payment for all statutory and customary holidays and two weeks' annual holiday was carried.

Resolutions asking the General Council to approach the International Labour Office with a view to protecting the workers against anthrax was carried; as was also a resolution to the effect that His Majesty's inspectors of Factories should see that regulations aiming at protecting the workers against industrial diseases should be rigidly enforced. Another resolution on the same lines which aims at protecting the workers against tuberculosis was also carried.

A comprehensive resolution was carried calling upon the whole labour movement to use its power to demolish slums and erect new houses, which should have complete lavatory accommodation, bathroom, and all modern conveniences and amenities.

A resolution was passed calling attention to the necessity for a more effective observance of Trade Board decisions.

A resolution instructing the General Council to urge upon the Government the necessity for a complete investigation into conditions of employment of seamen, and that the Government should support an International Convention for the eight-hour day for seamen, was carried.

The Transport and General Workers' Union submitted a resolution which sought for a declaration from Congress that the present state of the transport services was unsatisfactory, and urged that representations be made to the Ministry of Transport for complete reorganization.

A resolution calling upon the Ministry of Labour to enforce the same restrictions on foreign musicians entering this country as are placed on British musicians entering other countries was referred to the General Council.

A resolution was submitted by the National Union of General and Municipal Workers to the effect that the Congress approved all measures for the more scientific organization of industry, but directed attention to the danger imminent in rationalization unless labour is fully organized.

### New Officers

Mr. C. T. Cramp, Mr. A. Shaw, and Miss Loughlin were elected to the General Council in the places vacated by the Rt. Hon. J. H. Thomas, M.P., Mr. Ben Turner, M.P., and the Rt. Hon. Margaret Bondfield, M.P., who are now members of the Government.

## NOTES ON LABOUR UNION ACTIVITIES

### Canadian Brotherhood of Railway Employees

The fifteenth regular and fifth biennial meeting of Grand Division of the Canadian Brotherhood of Railway Employees opened in the City Hall at Moncton, N.B., on September 9, and continued during the week. The report of the Credential Committee, which was adopted, showed that credentials had been received from 155 delegates. Telegrams of greeting were read by secretary-treasurer Maclean, together with a letter from Edo Fimmen, secretary of the International Transportworkers' Federation, expressing regret that the Federation had been unable to send a delegate to the Convention. As a token of the feelings of the I.T.F. toward the Brotherhood, and of international unity, the Federation sent a banner bearing the emblems of the I.T.F. and of the C.B. of R.E.

#### President Mosher's Address

President Mosher, in his address, recalled the historic meeting at Moncton on October 12, 1908, when the representatives of a few hundred employees on the Intercolonial Railway met in Moncton and organized the Brotherhood. Although the United States-controlled craft unions, he continued, had made no effort to organize the classes which first comprised the membership of the Brotherhood, those organizations had exerted every effort to oppose a Canadian labour union. In spite of their opposition, however, the Brotherhood had carried on, and to-day took second place to no other labour organization in Canada, and, in the year in which it was celebrating its twenty-first anniversary, it was able to record the largest membership and the greatest increase in local divisions of any in its history. The president looked forward to seeing large groups of railway employees who were now unorganized, or "inadequately represented by American organizations," come into the Brotherhood, both as individuals and as organized lodges.

Briefly reviewing general economic conditions, President Mosher referred to the displacement of labour by the application of machinery to industry, and stated that this was a problem which should be studied by labour unions, governments and private organizations, inasmuch as it was a matter of vital importance to the workers and to the public in general.

Mr. Mosher also referred to the concentration of industrial and financial power through the formation of mergers and holding com-

panies, with the result that small employers were being driven out of business and unemployment was increasing. In this connection, he mentioned the policy of large corporations in lowering the age limit for their workers, and emphasized the importance of labour organization as one of the chief agencies by which the status of the workers might be improved. Strongly organized and well-directed labour unions, he said, must use their power in the industrial field to increase wages and improve working conditions. They must use their influence in the political field, not only by representation to governments but also by promoting direct representation of the workers in all legislative assemblies, and they must educate public opinion in order to obtain support for what they are trying to accomplish.

*The Railway Industry.*—President Mosher went on to deal with the railway industry, referring to the extension of railway lines and the improvement of roadbeds and rolling-stock. The efficiency of the Canadian railways, he said, had been greatly increased within the past few years, and it was to the interest of the railway workers that this should be the case. The earnings of transportation companies had been affected by the competition of motor and air transport, and he believed that it would be found desirable for the railways to undertake the establishment of motor bus and truck service, using them as feeders and auxiliaries to their regular lines. "As railway workers, we have a large stake in the industry;" he said, "we should be prepared to make suggestions, or co-operate in any other practical way for the maintenance and the improvement of the industry. I hope that it may be possible to achieve for labour a higher status through the sharing of responsibility for policy and direction, as well as a more equitable division of the profits of the industry among those who are engaged in it."

*All-Canadian Congress of Labour.*—President Mosher then dealt with the All-Canadian Congress of Labour and the International Transportworkers' Federation, and the pride which the Brotherhood took in its affiliation with them. Speaking of the value of the congress as a means for the expression of the common aims and purposes of the national unions of Canada, he said that it had promoted and encouraged the establishment of new unions in various industries, and made

good use of the resources at its disposal for the development of public sentiment and the strengthening of the forces which make the Canadian labour movement active and progressive. The Congress, he continued, had been particularly effective in exposing the anti-Canadian policies of American labour unions, and in bringing to the Canadian public a greater conception of the actual situation. It had definitely adopted the industrial basis of organization, thus indicating the soundness of the basic principles of the Brotherhood. The Brotherhood was, however, more than merely a national organization, since it was affiliated with labour organizations in thirty-four countries, through the International Transportworkers' Federation. Inasmuch as the Brotherhood was the only labour union on this continent represented in the Federation, its position was analogous to that of Canada in the League of Nations. President Mosher, in restating the international policy of the Brotherhood, pointed out that the term "international" had been wrongly applied to American unions which maintained branches in Canada. Those branches, he contended, had no influence upon organization or wage policies, and their function was chiefly that of dues-collecting agencies. The Brotherhood, on the other hand, took the stand that labour unions should be established on a national basis, by industries, and that these should be affiliated in international federations for the purpose of promoting the general welfare of the workers in the industry the world over. Such federations would leave the national unions free to deal with purely national problems, but would provide the means for co-operation in all matters of a wider scope.

*Progress of the Brotherhood.*—Reviewing the progress of the Brotherhood during the past two years, President Mosher referred particularly to the organization of maintenance-of-way-employees, which had been extremely successful, and which was indicative, in his opinion, of a revulsion of sentiment against foreign control. He also dealt with the work of the general grievance committees, and the negotiations of schedules on the Temiskaming & Northern Ontario Railway, the Canadian National Express Company, and the Canadian National Railways.

President Mosher dealt at length with the organizing policy of the Brotherhood, and emphasized the value of industrial unions as compared with craft unions. He also referred to the policy of the Brotherhood in schedule negotiations, which was made the basis of constructive recommendations, providing for a

closer co-operation between the various negotiating committees with a view to increasing the effectiveness of the representations of the negotiating committees in their dealings with railway managements. Referring to the Brotherhood's policy in the matter of labour representation President Mosher urged that greater local efforts be made to elect labour candidates in municipal, provincial and federal elections.

President Mosher's address was referred to the Committee on Officer's Reports, and was later approved in its entirety.

### Reports by Secretary-Treasurer

Secretary-Treasurer M. M. Maclean reported that, for the two-year period ending April 30, 1929, the revenues of the Brotherhood amounted to \$266,694.53, an increase of \$30,619 over that of the previous period, while the expenditures amounted to \$263,095.64. The assets of the Brotherhood were shown by the report to have increased from \$49,627.55 at April 30, 1927, to \$52,191.45 at April 30, 1929.

The various funds administered by Grand Division showed normal increases during the period. The report on membership indicated that there was an increase of 49 local branches over the previous period, while 7 local divisions had been amalgamated with other Divisions in the same territory. The total number of locals in good standing was shown as 228. The gross membership of the Brotherhood had increased from 14,267, as on April 30, 1927, to 22,393 on April 30, 1929, giving the Brotherhood the largest number of members of any labour union in Canada.

Secretary-treasurer Maclean also reported as editor and manager of the official journal, the *Canadian Railroad Employees' Monthly*, emphasizing its importance as an agency for the promotion of interest in the Brotherhood and the education of the membership in political and economic questions.

The Secretary-treasurer, who in 1927 was appointed delegate to the 1928 Congress of the International Transport Workers' Federation, held in Stockholm, Sweden, gave a report of the meeting, dealing with the various matters which had been considered.

### Constitutional Amendments

The chief business at the second and third days' sittings of the Convention was the report of the Constitution and Laws Committee, of which J. P. O'Toole, of Truro, was chairman. An important general amendment to the Constitution was approved, providing for the substitution of the word "Railway" for the word "Railroad" wherever it ap-

peared in the Constitution. This was done in order to conform more closely with the Canadian usage, and involves a change in the name of the organization to "The Canadian Brotherhood of Railway Employees."

It was decided that future meetings of the Brotherhood should be held in the city of Ottawa, and that all the expenses of delegates from local Divisions to Grand Division conventions should be paid out of the convention expense fund, the contribution *per capita* to this fund being increased from 5 cents to 10 cents per month.

An amendment which gave rise to considerable discussion, proposed that the name of the Brotherhood be changed to "The Canadian Brotherhood of Railway and General Transport Workers." It was felt that this was not opportune, and the matter was referred to the incoming Executive Board for a report at the next Convention.

The basis of representation was amended to provide that local Divisions should be entitled to one delegate for each 100 members instead of 75.

#### Executive Board Report

On the fourth morning, the report of the Executive Board was submitted by Secretary-Treasurer Maclean. The report dealt with a number of resolutions which had been referred to the Board by the 1927 Convention, and the work which had been done during the two-year period under review. Among these resolutions one of the most important was that regarding pensions for Grand Division officers and employees. The recommendation of the Board was given careful consideration by the Convention, but was tabled until the next Grand Division meeting.

Another recommendation provided that the incoming Executive Board be given authority to erect a building in Ottawa, to provide accommodation for Grand Division offices and the printing plant owned by the Brotherhood and known as the Mutual Press, Limited. This recommendation was later concurred in by the Committee on Officers' Reports, with the proviso that the expenditure on land and building be not greater than \$50,000, and was approved by the Convention.

A number of appeals against decisions by President Mosher had been dealt with by the Board, and its action in each case was later approved by the Convention.

The report of the Board of Trustees was read by the Chairman, Mr. T. McGregor of Winnipeg, and this was also met with approval.

The report of the Constitution and Laws Committee was then resumed, dealing with a number of important constitutional amendments.

#### Committee on Resolutions

On the fourth afternoon, following the report of the Committee on Officers' Reports, the report of the Committee on Resolutions was received. In view of the large number of resolutions which had been submitted, the report was resumed on September 13. Many of the resolutions were referred to the Executive Board for consideration. Among those which received the approval of the Convention was one requesting that efforts be made to have Section 501 of the Criminal Code amended in such a manner as to legalize peaceful picketing during strikes. The Convention also approved a resolution in favour of requesting the Canadian National Railways to dispense with the services of married women whose husbands held permanent positions on or off the railway. It was decided that the Brotherhood should endeavour to secure the distribution of school books free of charge to the pupils by the governments of all provinces where such legislation is not now in effect, and a resolution was passed requesting that the British North America Act be amended in such a manner as to make it possible for the Parliament of Canada to enact legislation with respect to hours of labour, and that a 44-hour week be made the standard instead of 8 hours per day, without involving a reduction in wages.

#### Election of Officers

At the tenth sitting of the Convention, held on Saturday morning, the election of officers took place. President A. R. Mosher, vice-president M. McLeod, and secretary-treasurer M. M. Maclean were re-elected without opposition, and secretary-treasurer Maclean was also re-elected by acclamation as editor and manager of the official journal.

Several nominations were made for the two additional members of the Executive Board, C. H. Minchin, of Calgary, and Wm. Allen, of Halifax, being re-elected. For the three members of the Board of Trustees, a large number of delegates were nominated, but the three former members, T. McGregor, Winnipeg (chairman), J. McDonogh, of Toronto and R. A. Dumais, of Montreal, were also re-elected. C. H. Minchin, of Calgary, was elected delegate to the 1930 Convention of the International Transport Workers' Federation, to be held in Great Britain, and J. A. Robinson of Winnipeg, and J. P. O'Toole of Truro,

were elected as Grand Division delegates to the All-Canadian Congress of Labour Convention to be held in Winnipeg in November next. The Executive Board was authorized to appoint delegates to the 1930 Convention of the All-Canadian Congress. The eleventh and twelfth sittings on Saturday afternoon and evening were devoted to the completion of the report of the Committee on Resolutions and the other standing committees of the Convention.

### Special Convention Issue

A special number of the *Canadian Railroad Employees' Monthly* was issued, in which

### Mine Workers' Union of Canada

The fourth annual convention of the Mine Workers' Union of Canada was held at Calgary, Alberta, on September 9-13, 1929, with over twenty-five delegates in attendance, representing twenty local unions. The reports of the president, W. F. Wheatley, and the secretary-treasurer were received and referred to the Committee on Officer's reports. The report of this committee reviewed the activity of the union in the various sections under its jurisdiction and made recommendations in regard to organization, unemployment, wage scale convention and representation to the All-Canadian Congress of Labour convention. The date of the wage scale convention was set for the second Monday in February, 1930.

Resolutions were adopted making the following recommendations:—

A six-hour day and a five-day week;

A minimum wage for all miners in the Province;

That boys eighteen years of age, holding miners' certificates, be paid the minimum rate of pay;

That the amount of shifts or parts of shifts worked be inserted in each and every contract miner's pay statement;

Payment in compensation cases on a basis of a seventy-five percentage of average wages, with a \$2,000 minimum wage basis;

Amendment to the Workmen's Compensation Act to cover members of inspection committees;

Payment of injured workmen from the day of accident;

special prominence was given to illustrated articles of the City of Moncton and the railways of Canada. Among the other interesting features were an article by President Mosher on the early days of the Brotherhood and a "Who's Who" section, including photographs and biographical sketches of a large number of delegates to the Convention.

Among the entertainment features for the delegates was a banquet tendered by the Moncton City Council and a picnic at Point du Chêne provided by the local reception committee.

Restriction of immigration until industry can absorb the men now unemployed;

That the Dominion and Provincial governments be asked to enact legislation providing for a decent standard of living for all unemployed workers;

Legislation to provide for an unemployment insurance scheme;

A government investigation into living conditions in the mining camps of the Crow's-nest Pass;

Abolition of closed villages or towns within the Province;

That no more miners' certificates of competency be issued for a period of two years, except to boys on coming to the age of eighteen who are working in the mines, and to miners holding certificates in other provinces of the Dominion;

That the Workmen's Compensation Board supply to all miners duplicate books for the reporting of accidents;

That a mine rescue supervisor shall be a practical miner with at least five years experience in the province and holding a certificate in first aid and mine rescue work;

Sustenance for miners with permanent partial disability and their dependants until suitable employment can be procured;

That the district officers endeavour to secure the affiliation of local units with the Canadian Labour Party and to send delegates to the convention of the Party.

### International Photo-Engravers' Union of North America

The thirtieth annual convention of the International Photo-Engravers Union of North America was held at New Orleans, La., on August 19-24, with forty-five delegates in at-

tendance, representing twenty-five affiliated local unions and approximately eighty per cent of the total membership of the international organization.

Early in the year president Mr. Matthew Woll tendered his resignation to the executive council. The resignation was accepted and first vice-president Edward J. Volz became president. In his address the president called upon the delegates to keep abreast of the changing industrial conditions in the craft. It was the duty of the members, the president stated, to keep fully informed of the problems and conditions which confronted the industry in the various localities. Last year was one of general progress, he continued, but the greatest accomplishment of the union was in bringing about a reduction in the working hours, and a recognition of the five-day week principle in commercial establishments which, prior to the termination of existing contracts, would be definitely established for all weeks of the year.

### **Metal Polishers' International Union**

The sixteenth convention of the Metal Polishers International Union was held at Cincinnati, Ohio, on September 16-21, with over fifty delegates in attendance. President Britton, in his address, touched upon the subjects of the injunction, child labour, the "yellow dog" contract and the Gompers Memorial Fund.

Mr. Matthew Woll addressed the convention, discussing the introduction of machinery, which was replacing not only skilled labour but unskilled, and the importation from foreign countries of commodities which has been manufactured in factories owned and controlled by capital from the United States. He also spoke at considerable length on the Union

The report of secretary-treasurer Schmal showed total receipts for the past year of \$359,584, disbursements, \$303,245, a net increase of \$56,339.

Resolutions were adopted: seeking amendments to the Canadian Immigration and Alien Labour laws, or new laws substituted which would accord Canadian workers the protection intended; and instructing the executive council to ascertain the feasibility of creating an out-of-work fund and to report to the next convention.

The officers elected were: president, Edward J. Volz, New York, N.Y., vice-presidents, Matthew Woll, Washington, D.C., Frank H. Glenn, Philadelphia, Pa., and Lavant V. Caukin, Los Angeles, Calif., secretary-treasurer, Henry F. Schmal, St. Louis, Mo.

Boston, Mass., was selected as the convention city for 1930.

Labour Life Insurance Company, of which he is president.

Resolutions were adopted: pledging support to the Old Age Security Commission appointed to investigate and report on Old Age Pensions for New York State; endorsing the five-day week, eight-hour day and forty-hour week; and giving the executive board, on a two-third vote, authority to levy an assessment on the general membership to meet extreme emergencies.

The constitution was amended so as to combine the offices of president and secretary-treasurer under the heading president-secretary-treasurer.

### **Brotherhood of Painters, Decorators and Paperhangers of America**

The fourteenth general assembly of the Brotherhood of Painters, Decorators and Paperhangers of America was held at Denver, Colo., on September 2-11, Mr. John M. Finan, acting general president, in the chair. Over seven hundred delegates were in attendance. Following the opening addresses and the appointing of the various committees, the finance committee presented their report which covered the period July 1, 1925, to June 30, 1929. This report showed a balance on hand at the beginning of the period of \$600,836, receipts \$3,688,837, expenditures, \$3,441,064, leaving a balance on hand of \$848,609. The acting president in his report referred to the death of president Geo. F. Hedrick, which took place on December 19, 1928, and to the meeting of the general executive board on January 7, 1929, at which he was selected to

fill the vacancy until the election of a president at the general convention. The acting president discussed, among other things, the five-day week, strikes and lockouts, and the spray machine. The report of secretary-treasurer Clarence E. Swick covered the activities of the organization for a period of four years, and contained details of the conduct of its business affairs.

Resolutions were adopted: endorsing a bill, introduced in the Senate of the United States, to prohibit the use of spraying machines wherein lead or other poisonous materials are used; petitioning Congress to repeal or modify the Volstead Act; recommending that the Brotherhood join the American Wage Earners' Protective Conference; favouring the establishment of an auto-aircraft department in the American Federation of Labour; calling for

the unconditional release from prison of Thomas Mooney and Warren K. Billings; favouring a fair and impartial method of selecting persons for jury service in all federal courts.

Officers elected were: president L. P. Lindelof, Chicago; vice-presidents, J. M. Finan, Chicago, Jos. F. Kelly, Philadelphia, Chas. A.

Cullen, Worcester, Mass.; Jos. F. Clark, Tacoma, Wash., William Rander, Port Chester, N.Y., Jos. P. Hunter, Niagara Falls, Ont.; secretary-treasurer, Clarence E. Swick, Memphis, Tenn.

Buffalo was selected as the convention city for 1933.

### International Union of Mine, Mill and Smelter Workers

The twenty-sixth convention of the International Union of Mine, Mill and Smelter Workers was held at Salt Lake City, Utah, on August 5-10, 1929. President Rankin, in his opening address, reviewed the activities of the union since the last convention. Secretary-treasurer E. E. Sweeney gave an outline of conditions prevailing in the various locals, and stated that the membership had been maintained notwithstanding the fact that some of the larger mines were closed down.

Resolutions were adopted: favouring the enactment of legislation prohibiting issuance of injunctions in labour disputes; urging the American Federation of Labour to place an organizer in Canada to organize the miners

and millmen; recommending an increase in the tariff on all imports containing ten per cent or more of manganese; protesting against the continued imprisonment of Thomas Mooney and Warren K. Billings; opposing the entry into the United States of any foreign immigrants, Canadian citizens not included, for a period of ten years.

Officers elected were as follows: president, Jas. B. Rankin, Anaconda, Mont.; vice-presidents, Homer Whitmore and W. K. B. McCarthy; and secretary-treasurer, Edward E. Sweeney, 531-32 Judge Building, Salt Lake City, Utah.

The convention in 1930 will be held in Salt Lake City, Utah.

### Employee Saving Plans in U.S.A.

A mimeographed memorandum on employee savings plans, prepared by the Industrial Relations section of Princeton University, has recently been received in the Department.

Various types of plans are outlined including those purely for the purpose of encouraging savings and entailing no financial responsibility upon the part of the company; those which not only encourage but actually aid savings by contributions to various savings funds; those which involve stock ownership, profit sharing, building and loan associations, the purchase of investment certificates, credit unions, pensions, etc.

The most widely used savings scheme is that known as the "Worcester Plan," embodying what are described as "the three characteristics necessary for a successful thrift plan—simplicity, flexibility and safety." Under this plan an amount which may be increased or decreased at will is, upon the authorization of the employee, deducted from weekly wages. The amounts to be deposited are sent to a savings bank in accordance with an agreement previously made between the bank and the

company. The money may be withdrawn upon presentation of the pass book by the employee.

### Electrical Regulations in Saskatchewan

Regulations issued in Saskatchewan under the Power Commission Act, 1929, were published in the *Saskatchewan Gazette*, September 21, 1929. The provisions of this act were outlined in the *LABOUR GAZETTE*, April, 1929, page 381, in an account of the labour legislation enacted at the recent session of the provincial legislature. The new regulations consist of:—

(1) Regulations for securing the safety of workers engaged in the operation or maintenance of electrical generating stations and transmission and distribution systems:

(2) Regulations governing operation, maintenance and service conditions of electrical works and undertakings, together with an appendix containing definitions of terms used in the said Regulations.

Certain Regulations for the protection of Electrical Workers approved by an Order made in Council of the second day of August, 1928, are rescinded.

**WORKMEN'S COMPENSATION IN MANITOBA DURING 1928**

THE report of the Workmen's Compensation Board of Manitoba for the year 1928 indicates that the administrative work of the Board has shown a marked increase until it "is now greater than ever before in its history." The number of fatal accidents reported during the year totalled 67 as compared with 46 in 1927. This fact "gives cause for serious reflection," the report observes; "an increase from 7 fatalities, reported for the general body of employers in 1924, to 35 reported from the same group in 1928 is altogether out of proportion to the increased industrial activity as indicated by payroll returns." If accidents are to be reduced, it is stated, "greater vigilance is required on the part of both employers and workmen. . . . Industrial Manitoba requires a vigorous and liberally-supported accident prevention campaign with hearty co-operation from all concerned."

During 1928 the Board received 13,282 reports of accidents, as compared with 10,982 accidents reported during 1927, an increase of 2,300, or 21 per cent. Figures comparing the accidents reported by the different groups for the last two years indicate that the largest increase in the number of accidents occurred in Class "G" (General Body of Employers). The comparative figures for the various classes are as follows:—

Class	Group	1927	1928
"A" "B" and "C"	Steam Railways.....	3,528	3,772
"D"	Province of Manitoba.....	91	131
"E"	City of Winnipeg.....	250	284
"G"	General Body of Employers.....	6,132	8,085
"H"	Winnipeg Electric Company.....	138	127
"DA"	Dominion Government.....	842	883
		10,982	13,282

Of the 67 fatal accidents reported in 1928 the General Group, Class "G," reported 35 as compared with 26 during 1927, and the other classes 32 during 1928 as compared with 20 during 1927.

During 1927 10,977 accidents occurred. Of these accidents 70 per cent entailed the payment of compensation either for medical aid only or for compensation for time loss and medical aid, while in 30 per cent of cases no expense was entailed.

On December 31, 1928, the Board had on its books 490 dependents of workmen killed in industry during the period March 1, 1917 to December 31, 1928, a net addition of 21 dependents during the year.

The actual ascertained payroll of the employers in Class "G" for the year 1927 was

\$36,721,610, and the assessment paid by this class of employers on the 1927 payroll totalled \$578,626.09.

During 1928 the Board assessed 4,788 employers in Class "G" as compared with 4,431 assessed during 1927.

The payroll for the year 1928, as reported by employers in Class "G," amounted to approximately \$44,000,000, but the exact sum could not be determined until audit had been completed.

The total payrolls for all classes for 1927 (actual) and 1928, (estimated are as follows:—

Class	Actual Payroll (1927)	Estimated Payroll (1928)
"A"—Canadian Pacific Railway Co.....	\$10,840,712 77	\$11,000,000 00
"B"—Grand Trunk Pacific Railway.....	1,000,000 00	1,000,000 00
"C"—Canadian National Railways.....	9,139,704 27	10,000,000 00
"D"—Province of Manitoba.....	2,233,001 22	3,400,000 00
"E"—City of Winnipeg.....	2,737,196 77	2,800,000 00
"G"—General Body of Employers.....	36,721,610 00	44,000,000 00
"H"—Winnipeg Electric Company.....	2,524,944 37	2,700,000 00
	\$65,197,169 46	\$74,900,000 00

During 1928 employers to the number of 48 had their operations brought under Part I of the Act by application approved by the Board. As of December 31, 1928, there were 228 employers whose operations had been brought under the Act in this manner.

Fourteen employers made application to the Board during 1928 and were permitted self-coverage for themselves and their dependants. At December 31, 1928, there were 94 employers carrying this protection.

During 1928 some 474 cases of minor injury were treated by the Board's chief medical officer. The aggregate days of disability for all cases so treated in 1928 was 916, or an average of 1.9 days per case.

During 1928 the actual cash disbursed by the Board amounted to \$941,029.78 as compared with \$853,235.27 disbursed during 1927, an increase of \$87,794.15.

The number of cheques issued by the Board during the year totalled 35,794 as compared with 29,874 issued during 1927, an increase of 5,920.

The value of Board orders during 1928 for the payment of compensation, which includes orders respecting Dominion Government employees, and covers amounts transferred to

General Unclassified Reserve to provide for future payments in fatal and permanent disability cases, was \$968,209.89, as compared to \$862,933.41, an increase of \$105,276.48.

Statistical tables are included in the report analysing the accidents compensated in 1927, including cause, nature of disability, time loss, average age, average wage, etc.

## CHILD PROTECTION AND MOTHERS' ALLOWANCES IN SASKATCHEWAN

THE annual report of the Bureau of Child Protection of Saskatchewan describes the administration of The Child Welfare Act and The Old Age Pensions Act during the fiscal year ended April 30, 1929. The Mothers' Allowances Act of Saskatchewan is administered by the Commissioner of the Bureau of Child Protection, who is appointed under the Children's Protection Act. Under the provisions of the Mothers' Allowances Act of 1922 the legislature makes an annual grant, to be spent in monthly payments in order to provide support or partial support for the dependent children, under sixteen years of age, of any woman who by reason of poverty is unable to take proper care of her child or children. The commissioner has authority in regard to all applications for allowances, subject to the minister in charge of the Act.

The policy of administration of the Child Welfare Act is stated as being "based upon the principle that any philanthropic movement that lessens the sense of parental responsibility and destroys self-respect is disastrous to the state and a direct crime against the individual. . . . We try to differentiate between poverty and neglect and hold responsible local communities to adjust matters if possible. What appears to be the concern of municipal officials is referred to them and they are asked to co-operate, all of which involves the preservation of home ties. The paramount importance of preventive work in dealing with family problems and the general superiority of the foster home as a substitute for the natural home over any type of institutional service is at all times uppermost in our endeavour."

Since the inception of this work in the province, 3,486 children have been made permanent wards of the Bureau by court orders and legal surrenders where it was not possible to make parents or relatives responsible for their care. This total does not include those made wards of Children's Aid Societies.

On April 30, 1929, the number of wards, including those of Children's Aid Societies, was 1,577, of whom 164 were in various institutions. During 1928, there was a total of 438 wards discharged, while the commitments for the year were 237.

*Mothers' Allowances:*—The work of the Mothers' Allowances Branch of the Bureau was recently brought into conformity with that of the other departments in the Bureau, closing the annual period at the end of the fiscal year ending April 30 rather than the calendar year. Accordingly, the statistics for this branch are compiled from January 1, 1928, to April 30, 1929—a fifteen month period. Every class of mother is covered under the legislation except the deserted wife and mother and the unmarried mother. It is noted that "the cost of supporting indigent widows and dependants has continually increased since The Mother's Allowance Act became law until the present time, and that it is becoming a problem that is hard to control."

As at April, 1929, the number of widows receiving allowances was 1,214; the number of dependents 268; the number of guardians 5; while the total number of children under 16 years of age was 4,657. During the fifteen month period, the amount paid in allowances totalled \$521,880. The average paid per recipient was \$23.99, and the average paid per child was \$7.63.

Other phases of child protection dealt with by the Bureau included: juvenile offenders, feeble-minded and other defective children, legal adoption of children, children of unmarried parents, and blind and deaf children.

That part of the report concerning The Old Age Pensions Act, which is also administered by the Bureau of Child Protection, was reviewed in the last issue of the LABOUR GAZETTE, page 988.

## MATERNITY GRANTS IN SASKATCHEWAN

ACCORDING to information recently received from the Department of Public Health of Saskatchewan, there was expended during 1928 in that province a total of \$12,137.50 in assistance to 521 mothers. Part of the accounts of 396 doctors and 36 nurses were paid, as well as part of the accounts of 30 hospitals in connection with these cases.

Allowances are made by an order in council issued at Regina in 1920, under the authority of Section 10 of the Public Health Act (Statutes of 1919-20, chapter 12), which provides that the Commissioner of Public Health may, subject to the approval of the Lieutenant Governor in Council, make and issue such rules, orders and regulations consistent with the law as he may deem necessary for the relief of destitution.

The grant is intended for expectant mothers in outlying districts of the Province of Saskatchewan, who for financial reasons are unable to procure the medical, hospital, or nursing attendance, or services necessary for expected confinement, or necessaries for the event.

The applicant (the expectant mother or the husband) is required to make a personal written application to the Deputy Minister of Public Health indicating that financial circumstances constitute reasonable grounds for the allowance of the grant. In addition to stating time of residence in the province, locality and distance to the nearest doctor, the applicant, if farming, is required to set forth by a statement, the amount of land, stock and implements owned, the amount of acreage under cultivation and the harvest re-

sults. If the applicant or husband is not farming the conditions of employment are to be given.

Every application is required to be recommended by one of the responsible officials of the district or municipality in which the applicant resides, such as the Reeve, the Secretary-Treasurer, the Registrar of Vital Statistics, or Member of the Legislative Assembly.

These officials are particularly requested to lend their co-operation by not giving recommendations without careful inquiry into the merits of each case.

The full amount of the grant is \$25 given (at the discretion of the Deputy Minister of Public Health) either wholly or in part as he may consider will reasonably meet the requirements of each case. The money granted may be paid out as follows: to the hospital which cares for the patient; or to the physician in attendance; or to the nurse who attends the case (when distance prevents the applicant from obtaining a doctor or if the doctor is unable to attend); or to the mother herself; or the amount may be divided between the mother and the doctor or nurse attending the confinement. However, the \$25 grant is usually allocated as follows: \$10 is sent to the mother previous to the time of confinement in order to allow her to procure the necessities for the event. Then the balance of \$15 is given to the doctor or hospital as the mother recommends, or where it is impossible to secure either medical or hospital service, this portion of the grant is paid to the nurse assisting at the confinement.

---

## Workmen's Compensation in Alberta

The inclusion of railway employees in the Alberta Workmen's Compensation Act, which resulted from an amendment of the Act in 1928 (LABOUR GAZETTE, June, 1928, page 584), has resulted in an increase in the number of accidents reported to the Board during the first six months of 1929. A further increase is attributed to the greater industrial activity in the province as compared with the corresponding period last year. This year 6,914 accidents, including 37 fatalities, were reported, as compared with 5,955 accidents and

32 fatalities at the end of June, 1928. The total amount of compensation paid during the first six months of 1929 was \$272,830, as against \$239,729 for the same period in 1928. The sum of \$220,852 was transferred to the pension fund to take care of permanent disability and fatal accident cases, while \$135,815 was paid out by the Board for medical and hospital treatment. The corresponding figures of last year were: transferred to pension fund, \$205,528; and paid out for medical treatment, \$105,472.

## INTERNATIONAL ASSOCIATION OF PUBLIC EMPLOYMENT SERVICES OF THE UNITED STATES AND CANADA

### Seventeenth Annual Convention, Philadelphia, September, 1929

THE seventeenth annual convention of the International Association of Public Employment Services was held from September 24 to 27, 1929, in the Benjamin Franklin Hotel, Philadelphia, Pa. There were in attendance about 100 delegates representing some twenty of the States of the American Union and four provinces of Canada, as well as representatives from the Federal Departments of Labour of both countries. The Canadian delegates were Mr. R. A. Rigg, director, and Mr. A. J. Odam, statistician, Employment Service Branch, Department of Labour, of Canada, Ottawa; Mr. A. Crowe, superintendent, Employment Service of Canada, Quebec; Mr. F. Payette, superintendent, Employment Service of Canada, Montreal; Mr. H. C. Hudson, Ontario superintendent, Employment Service of Canada, Toronto; Mr. W. S. Dobbs, superintendent, men's division, Employment Service of Canada, Toronto; Miss L. O. R. Kennedy, superintendent, women's division, Employment Service of Canada, Toronto; Mr. J. A. Bowman, Manitoba superintendent, Employment Service of Canada, Winnipeg; and Mr. G. E. Tomsett, Saskatchewan superintendent, Employment Service of Canada, Regina.

Morning, afternoon and evening sessions were held daily. The first morning session was taken up in the registration of delegates, an address by the vice president, Mr. H. C. Hudson, in the absence of Mr. A. L. Urick, the president, and the appointment of committees. On the afternoon of September 27, a business session was held at which reports of the vice president, the secretary-treasurer and committees, were received. At this session also officers for the year 1930 were elected. All other sessions were devoted to the reading of papers and discussion thereon, of subjects relating to employment service work. The subjects, together with the names of the delegates presenting addresses on them, were as follows:

"Some facts and reflections regarding employment and unemployment statistics," by Mr. R. A. Rigg, Director, Employment Service of Canada, Ottawa.

"Fee charging employment agencies," by Hon. John B. Andrews, Secretary, The Association for Labour Legislation, New York City.

"The relation of the public employment services to the handicapped workers," by Mr.

H. C. Hudson, general superintendent, Employment service of Canada, Toronto.

"The efficiency of public employment services," by Mr. A. J. Odam, statistician, Employment Service of Canada, Ottawa.

"Intangible values in employment service," by Hon. Eugene C. Foster, Indianapolis Foundation.

"Importance of unemployment statistics," by Dr. Joseph H. Willits, University of Pennsylvania.

"Is the public employment service a direct responsibility of government?" by Hon. Charles A. Waters, auditor-general, Commonwealth of Pennsylvania; former secretary of the Department of Labour and Industry.

"A woman's viewpoint as to the value of employment service," by Mrs. L. C. Morgart, superintendent of employment, Pittsburgh, Pa.

"The value of a standardized system of employer visitation by accredited employees of the public employment service," by Mr. Will T. Blake, director, Department of Industrial Relations, Columbus, Ohio.

"Employment opportunities for women in the Province of Ontario," by Miss L. O. R. Kennedy, superintendent, Women's Division, Employment Service of Canada, Toronto.

"Placement work as a profession," by Mr. Sydney W. Wilcox, University of Pittsburgh, School of Business Administration.

"Why persons in public or fee charging employment offices should be properly trained," by Prof. F. G. Davis, Bucknell University.

"Public employment services and what they can accomplish," by Judge Risley.

The election of officers for the ensuing year resulted as follows:—

*President*, Mr. H. C. Hudson, Ontario General Superintendent, Employment Service of Canada, Toronto, Ont.

*Past President*, Mr. R. A. Rigg, director, Employment Service of Canada, Ottawa, Ont.

*First Vice-President*, Mr. John S. B. Davie, commissioner, Bureau of Labour, Concord, N.H.

*Second Vice-President*, Mr. Francis I. Jones, director general, U.S. Employment Service, Washington, D.C.

*Third Vice-President*, Mr. Emanuel Kovel-eski, examiner, U.S. Employment Service, Rochester, N.Y.

*Secretary-Treasurer*, Mr. B. C. Seiple, superintendent, State City Employment Service, Cleveland, Ohio.

*Executive*, Mr. Walter J. Lloyd, director, Bureau of Employment, Harrisburg, Pa.; Mrs. M. L. West, asst. federal director, U. S. Employment Service, Richmond, Va.; Mr. J. A.

Bowman, Manitoba general superintendent, Employment Service of Canada, Winnipeg, Man.; Mr. Harry Lippart, assistant federal director, U.S. Employment Service, Milwaukee, Wis.; Mr. Russell J. Eldridge, U.S. Employment Service, Newark, N.J.

Toronto, Ont., was selected as the Convention City for 1930.

## THE EFFICIENCY OF PUBLIC EMPLOYMENT SERVICES

*Paper Read by Mr. A. J. Odam, Statistician, Department of Labour of Canada, at the 17th Annual Convention of the International Association of Public Employment Services of the United States and Canada, September, 1929.*

IF the expenditure of public funds for employment offices is to be continued and extended, the services rendered by these offices must be of such value that they are a real benefit to the public. This, of course, it is difficult to figure in dollars and cents, but still the expenditure involved should be in proportion to the activities, and it is upon a cost basis principally that I shall endeavour to show the Efficiency of Public Employment Services. The question then immediately presented is, how are these activities to be measured? Should the number of employers seeking workers be considered as a standard, or should the number of requests for employment from persons desirous of securing work be the criterion? Or again, should the number of persons for whom employment is found be taken? Or might any other means be suggested for adoption in order to ascertain whether the services performed represent full value for the expenditure involved? It is generally recognized that the number of placements effected gives a fair indication of the services rendered since placements really represent where both employer and worker are brought together, and, further, the adoption of this method makes possible a comparison between the expense entailed in operating public offices and the fees charged by private agencies. If, then, in dealing with the question of "The Efficiency of Public Employment Services" it may be assumed that placement cost is a fair indication of the price factor in services rendered, may I in this analysis be pardoned for confining my remarks to Canadian offices.

### Cost of Placements in Canada

The public employment offices of Canada, operating in all provinces except Prince Edward Island, are controlled by the Provincial Governments, but they are linked together into a co-ordinated system, known as

the Employment Service of Canada, under the Employment Offices Co-ordination Act, a law passed by the Federal Parliament in 1918. There are at present, operating under this Act, offices in the 65 centres of chief industrial importance distributed among the provinces of Canada as follows:—Nova Scotia 3, New Brunswick 3, Quebec 6, Ontario 25, Manitoba 3, Saskatchewan 9, Alberta 5, British Columbia 11. Although there were public employment offices in Canada prior to 1918, the Province of Ontario being the first to move, and that as early as 1907, it was not until March, 1919, that the present nationwide system of public employment offices commenced to function. In these circumstances it is possible to take a ten-year period as a basis for comparison. During the years from April 1, 1919, to March 31, 1929, over four million persons (4,093,478) were placed in employment through the offices of the Employment Service of Canada, at an average cost of \$1.11 per placement. As might be expected there were considerable variations in the average cost for each year, the amounts ranging from 98 cents in 1919-20 and 99 cents in 1928-29 to \$1.32 for each of the years 1921-22 and 1924-25. It is interesting to note that the two high cost years were years of industrial depression, while low costs are maintained when opportunities for employment are plentiful. This, of course, is what might be expected, as the cost of operating varies very slightly from year to year, with the result that the placement cost is governed almost entirely by the number of placements effected. Owing to the fact that in the case of transfers one office only, the shipping office, gets credit for the placement, although two or more offices may contribute to the work involved, no figures have been prepared showing the cost of placement for each individual office. Costs for each province, however, are

computed, and these, too, show marked variation, attributable for the most part to the nature of the employment in which the worker is ordinarily placed. In the Prairie Provinces, where farm placements predominate, the costs are low, the minimum being reached last year by Alberta, where the average was only 57 cents per placement. It should not be assumed from this that farm placements entail small effort on the part of officials. Most of the farm placements are made during rush periods, at seeding and harvest, and it is necessary, particularly during the later period, for officials of the service to be on duty for long hours in order to cope with the work involved.

### Public and Private Offices Compared

Mainly owing to the activities of the Employment Service of Canada, there are at the present time only about 25 fee-charging private employment agencies in Canada, chiefly located in the provinces of Ontario and Quebec. The fees charged by these agencies are at the present time \$2 in Ontario and from \$2 to \$3 in Quebec, although amounts considerably in excess of these were frequently taken before public offices were a factor in the employment market and fees restricted by government regulation. In 1919 there were over 50 private fee charging agencies in Canada, there then being such offices in Alberta, Nova Scotia and New Brunswick, as well as in Ontario and Quebec. Offices were, however, abolished by provincial legislation in the three former provinces very shortly after the passing of the Employment Offices Co-ordination Act, and as stated previously they are now largely confined to Ontario and Quebec, and their number has been reduced to less than half. Reports from private agencies for all months not having been received, it is impossible to give exact figures for the ten years, but during that time less than five hundred thousand persons were placed by all such agencies, in contrast with over four million placed by public offices. The cost for the public offices was \$1.11, against a minimum of \$2 for the private agencies, or a saving to the public at large of at least 89 cents per placement.

In order to be quite fair in these comparisons some analysis of the placement work is necessary. Some private agencies claim that as a matter of policy they make no charge when placing a man in a "short time" job, in order to retain his patronage. Reports collected from agencies by the Provincial Governments of Ontario and Quebec, however, show that

they make few such placements, which represent less than one per cent of the total, and in this number are included nurses from whom it is probable that an annual or term fee is collected. The Employment Service of Canada, on the other hand, make a considerable number of placements in casual employment, that is, in work of one week's duration or less, and such placements are included in the computation of the average cost. During the 10 years 1,011,583 casual placements were effected, this representing a little under 25 per cent of the total. Should these casual placements be excluded and the entire cost of operation allocated to regular placements only, the average cost would be \$1.47 or 53 cents less than the minimum charged by private agencies. It is not, however, reasonable to consider that no service has been rendered to a person for whom casual employment has been found; quite the contrary is the case, as very frequently placements of this nature lead to permanent employment, and one of the most decided advantages the public office has to offer over the private is that it is ready to assist persons in securing temporary employment when they are incapable, either due to domestic obligations or physical disability, of undertaking work of a more permanent character. Should it be assumed, moreover, that the services rendered in placing a person in casual employment is not equal to that given when permanent work is found and an amount of, say fifty cents, arbitrarily fixed as a fair charge for casual placements, the average cost for placements other than casual would be \$1.31 or 69 cents less than the minimum charged by private agencies. From a monetary standpoint then, from the point of view of costs to the public, these figures clearly demonstrate that the public offices of Canada are giving more efficient service than the private agencies.

Unfortunately, owing to lack of detailed information with regard to private agencies, it is impossible to compare their work with that of public offices in many of its phases, but upon an occupational and an industrial basis the public offices cover a much wider field. It should likewise be remembered that one of the most important functions of a public office—the transfer of workers from localities where their services are not in demand to a point where there is a shortage, commonly known as "clearance"—is not touched by the private agency. During the year ended March 31 last—and these figures would be approximately the same for preceding years—the offices of

the Employment Service of Canada made 31,939 placements through "clearance," all of which entail work for at least two offices. Of these, 12,704 were provincial transfers, 19,235 interprovincial. Added together they represent nearly seven per cent of the total placements effected. Nearly 48 per cent of all placements are in work outside the immediate locality in which the office making such placements is situated, and although in many cases a placement of this kind requires no more attention than a local placement, a large number of these workers receive a certificate which entitles them to a reduced transportation rate. This rate, which is 2.7 cents per mile, with a minimum fare of \$4, has been secured by the Employment Service of Canada from the railway companies for the benefit of *bona fide* applicants travelling to distant employment, for which no workers are available locally. During the last fiscal year there were 42,235 of these certificates issued which means that one out of every eleven persons placed benefited by this special transportation rate.

### Principles of Public Employment Service

Some indication of the general principles observed by the public offices in Canada in their dealings with the public is revealed in the conditions embodied in the annual agreements between the Federal and Provincial Governments under which subventions are paid by the Federal Government to the provinces for their assistance in financing employment service work. These conditions include:

- (1) To provide a free service to all patrons of the offices;
- (2) To endeavour to place any applicant, whether male or female, without any discrimination;
- (3) To endeavour to fill vacancies in any trade or occupation;
- (4) To notify workers being despatched by the offices to employment affected by an industrial dispute that a dispute exists;
- (5) To adopt a neutral attitude with respect to wages in employment office transactions;
- (6) To establish provincial clearance systems for the transfer of unemployed labour from district to district as may be necessary;
- (7) To co-operate with the Federal Clearing Houses for the interprovincial transfer of labour.

These conditions which are so essential to the efficient operation of an employment office are very closely adhered to by every public

office in Canada, and it is the deficiency of such guiding principles in the private offices that emphasizes the advantages of the public office.

### Service to Handicapped ex-Soldiers

The Great War left Canada with more than sixty thousand ex-soldiers suffering from war disabilities of varying degrees, most of whom find it necessary to supplement their pensions by engaging in gainful employment. The physical handicaps of these men, however, make it particularly difficult to place them in industry. Lack of industrial training before becoming handicapped, loss of efficiency at their normal tasks due to their physical disabilities, and the inherent prejudices on the part of some employers against engaging workers not one hundred per cent physically fit, have all militated against the rapid and permanent absorption of this relatively large number of workers into industry. Since 1923 the work of placing these men has devolved upon the Employment Service, and special provision has been made in the larger centres to handle the situation. Special officers for interviewing and placing handicapped ex-service men have been engaged, with the result that nearly nine thousand (8,959) of these workers were placed in jobs of varying duration last year. As a result of the additions to staff made necessary in connection with the placement of handicapped ex-service men, the average cost for all placements during the past five years has been increased by about 5 cents. That this small amount only was necessary is due to the low ratio which this work bears to the activities of the service as a whole. The cost of placing handicapped ex-soldiers during the year ending March 31 last was approximately \$2.85 and it is of interest to compare these figures with the cost incurred by a committee which undertook work of a similar kind. About five years ago, there was established in one of the largest Canadian cities, a committee composed of the leading business men, for the purpose of endeavouring to permanently place in employment handicapped ex-service men. The thought at the back of this move was that through the contacts of the committeemen, places would be found in industry for the applicants where they would be sympathetically fitted into permanent work. Quite substantial subsidies were paid by the Federal Government to enable the Committee to engage staff and conduct its office. After three years of effort, the Committee was dissolved, and the work was transferred to the Employment Service of Canada. The most interesting feature of the experiment was this, that while

the handicap section of the Employment Service of Canada in that city was handling and continued to handle almost precisely the same work at a cost of \$2.85 per placement the comparable cost of the committee's work was over One Hundred Dollars (\$100). This illustration is given, of course, without any reflection on the efficiency of the Rehabilitation Committee, which had of necessity to carry on its work along lines different from those followed by the Employment Service, but it serves to further emphasize the efficiency of public employment offices, when considered from a monetary viewpoint.

### Conclusion

As the majority of the delegates present have direct charge of Employment Offices, or are closely associated with their management, it would be presumption on my part to offer any suggestions with regard to organization, supervision, selection and training of personnel, publicity, clearance, etc. These questions are, however, very important and strict attention to them is essential to the efficient operation of any Employment office. That they play an important part in the work of the public offices of Canada has, I believe, been demonstrated by the figures given. It is not claimed that the Employment Service of Canada is perfect by any means. There are, however, many offices functioning very efficiently, and were it not so, the placement cost for the whole service would not be so low, but what

is more important, it has firmly established for itself a place in the economic life of the country, it possesses the confidence of the public which it serves, and its eleven years of continuous operation are but the forerunner of a long and useful career. Lest statistical comparison with private employment offices might be misleading, there is another viewpoint that should not be overlooked when considering the Efficiency of Public Employment Services. The private agency, being operated for profit cannot serve the employment market in all its phases to the same extent as the public office, where service is the governing principle. There are, moreover, very few services which the State can make to its citizens which are more important than that of providing a means through which they can obtain employment. No system of Employment Service can be regarded as satisfactory which denies to those who are unable to pay a fee—no matter how small—full information as to where work is available for them, and any community, with a true sense of its responsibilities, should place its collective strength at the disposal of its weakest members for the purpose of aiding and encouraging them in their direst hour of need. It is therefore incumbent on each of us, individually and collectively, to use every means in our power to extend the scope of public employment offices so that they may be available to everyone desirous of assistance in securing employment in the countries represented at this meeting.

## THE RELATIONSHIP OF THE PUBLIC EMPLOYMENT SERVICE TO THE HANDICAPPED WORKER

*Paper presented by H. C. Hudson, General Superintendent, Ontario Government Offices of the Employment Service of Canada, at the 17th Annual Convention of International Association of Public Employment Services, Philadelphia, September, 1929.*

**I**F governments are justified in spending money to assist able-bodied citizens in securing employment with the minimum of delay, they are doubly justified in providing special facilities for assisting those who are disabled, either mentally or physically. Handicap placement work is, or should be, one of the most important phases of public employment activity.

The Ontario government operates twenty-six public Employment Offices, serving a population of approximately 3,000,000 persons. Toronto is the only city with more than one-half a million residents, and Toronto, naturally, is the Mecca for the disabled who believe that the city's size is in itself a guarantee of greater opportunities for employment. Re-

cognizing the situation, the Ontario government has provided a separate section for handicapped workers in connection with the Men's Department of the Toronto Office. The staff consists of nine workers, eight of whom are themselves handicapped physically, seven as the result of war service, and one as a result of an industrial accident. The fact that the interviewers are handicapped cases establishes an immediate feeling of confidence in the mind of the applicant and once this confidence has been established it can be, and I believe is, maintained by the sincerity of the efforts put forth by the staff to assist disabled men.

As the disabilities of at least 65 per cent of the men registered in this section are the result of war service, the Federal Government

has recognized its responsibility towards the ex-soldiers and has placed in the office under the full control and direction of the superintendent, five special scouts or canvassers who devote their entire time to the ever-increasing problem of assisting the disabled men. This action on the part of the Dominion government and the successful carrying out of the plan, indicates clearly the intimate and satisfactory nature of the co-operation between federal and provincial authorities engaged in employment work in Canada.

You may be surprised at my reference to the fact that the problems pertaining to the handicapped ex-service man are increasing each year instead of growing less, as one not entirely familiar with the facts might expect. The explanation however, is a very natural one and hinges upon the advancing years of the men who served in the Canadian Expeditionary Forces. Fifteen years have elapsed since recruiting offices were first opened in Canada to call men to the colours for service overseas and a man who was then in his prime, say between 40 and 45 years of age, is now between 55 and 60, and the results of what may have seemed at the time like minor wounds are now making their imprint felt on the constitution and the physique as major ailments.

In placing disabled ex-service men and also in seeking employment for disabled civilians, it is an invariable rule that the appeal to the employer shall not be made on the basis of sympathy. Sympathy probably was a factor for a short time after the war but in the eleven years which have elapsed since the Armistice was signed, competition has become so keen and the war has become such a dim memory to some employers, that an appeal to the feelings would be largely a waste of time. The emphasis is, accordingly, laid upon the applicant's ability to perform a certain task to the entire satisfaction of the prospective employer. It is not what a man has lost but what he has left that counts from an employment standpoint, and a man with two artificial legs may be able to perform an ordinary bench operation quite as well as the worker who possesses no apparent disability.

In dealing with applicants for employment who are normal in every way and who are in full possession of all their faculties, the interviewer's approach can be strictly on a business basis. You either have a job for a man and send him to it or else you haven't and a sincerely expressed regret terminates the interview. Knowledge of psychology is by no means essential, but the successful interviewer in a handicap department must be a psycholo-

gist, a father confessor and general big brother to men who sadly need a helping hand.

I am convinced that handicapped men are entitled to very special courtesy and consideration if only to offset the curt treatment which they often receive from busy executives, employment managers and time keepers, when in search of work on their own initiative. We should endeavour to raise their morale which is too often broken down by the attitude adopted towards them.

Earning a living in these days of keen competition is difficult enough for the able-bodied. It is no wonder, then, that men who have been made to feel their short-comings by abrupt and unsympathetic prospective employers, come to us with the feeling that the world's hand is indeed lifted against them. I believe that the success of a handicap department should be judged as much by the success of its efforts to remove this inferiority complex as by columns of figures showing actual vacancies and placements. Canvassing for jobs and selecting the proper men to fill the different vacancies which are secured is child's play compared to the difficulty which arises in many instances of removing from a man's mind a sense of his own disability, but until this objective has been successfully obtained, the man is not thoroughly and finally placed, in our opinion.

The process of re-establishing a man's confidence in himself does not end with the interview in the Employment Office. Every disabled worker who is placed in a job promising permanency is followed up periodically by the canvassing staff of the Handicap Section, and many minor adjustments which might have developed into major difficulties have been effected by this means.

In Toronto the municipal authorities have erected, or have permitted to be built, street corner shelters originally meant for crippled men and women. Investigation made by the Handicap Section disclosed the fact that some of the stands had been sold or rented to men who were perfectly capable of earning their livelihood by manual labour, and after somewhat strenuous efforts, the situation was cleaned up by co-operation with municipal authorities and when the Employment Service Convention meets in Toronto next year you may feel certain that any newspapers purchased at any of the shelters will be bought from men whose handicaps are so severe that they could not possibly earn a living in any other way. The disabled pencil-seller who appears periodically on the streets of every large city is interviewed by a handicap scout as he meets him on his travels and if he has

the slightest ambition to engage in some legitimate form of employment, he is given every assistance in that direction. Unfortunately, however, the average man selling pencils and shoe laces is a beggar at heart, and beggars are extremely difficult persons to redeem.

If it were not for the activities of a splendid organization known as the Canadian National Institute for the Blind, the Employment Service would undoubtedly have been forced to organize a special section for the sightless. The Institute in question, however, does such splendid work that the Handicap Section does not register men who are totally blind although we do deal with the cases of men whose vision has been seriously impaired.

So far I have referred to our work in more or less general and abstract terms. I may tell you that the Handicap Section of the Toronto Office dealt with 1,061 new cases during the twelve months ending October 31, 1928. Of this number 80 per cent were disabled ex-service men and 20 per cent disabled civilians. There were 3,348 placements made and of this number 1,187 were in regular employment—i.e. jobs which would last longer than two weeks. Ninety-two per cent of the placements were ex-service men. In reporting on the year's business, Mr. Marsh, who is in charge of the Handicap Section, commented upon the increase in the number of men who have passed middle age and who find it difficult to secure employment under present highly competitive conditions. The progressive nature of heart and chest disabilities is responsible for an increase in the number of medical cases as compared with the previous fiscal year.

Despite the volume of placements made by this section during the fiscal year in question, the difficulties met with in placing chronic "problem cases" suffering from tuberculosis mental or nervous disorders and various medical cases who are unable to work more than a very limited number of hours each day, still remain. The situation affecting ex-service problems who are in receipt of disability pensions has been slightly eased since the formation of the Industrial Problem Board, which consists of representatives of the Employment Service of Canada and the Department of Pensions and National Health. This Board has been in operation for thirteen months and deals with cases selected by the Handicap Section of the Government Employment Service, which is responsible for the submission of the recommendations in each case. As a result of these recommendations, a number of applicants have been placed in the Vetcraft Shop under Order-in-Council P.C. 2328, some for sheltered employment and others for a limited

period only in order to determine their adaptability for competitive industry. A number have also been admitted to the indigent men's ward at Christie Street Hospital under Order-in-Council P.C. 1197. These applicants were in receipt of a very small pension for disability but owing to premature old age in many cases, had become unemployable in the general labour market.

Correctness in classification is essential to the successful placement of disabled men. It would be impracticable to have a staff of medical men attached to the Employment Service, but arrangements have been made with the medical and neurological clinics of the General Hospital under which applicants are examined by experts, and a confidential report furnished as to their conditions. The elimination of guess work in classifying handicapped cases is one of the first steps towards effective placement work.

A considerable volume of employment is furnished each year in connection with the parking of cars at the race tracks and the Canadian National Exhibition. There are four tracks in or near Toronto and they each have fourteen days racing every year. The Exhibition—the largest annual exhibition in the world—lasts for two weeks and the earnings of the 166 men who were selected for the car-parking and gate-keeping jobs range from \$3 to \$15 per day. Formerly the parking privileges were monopolized by fit men who naturally resented the loss of the privilege, but co-operation between the Police Department and the Handicap Section has been effective in this case as in the case of the newspaper stands.

The following typical examples of actual cases is presented to you in order to give you a concrete idea of the type of placement work which we are carrying on:—

(1) This applicant was employed as a mechanic prior to the war, and was discharged from the Army in 1917 suffering from gun shot wounds, head and leg. He returned to his pre-war occupation subsequent to his discharge until 1927, when the leg broke down and was amputated in a military hospital, with the result that he was unable to return to his previous occupation. He was tried out in several capacities and was finally placed as a routine clerk in a civic department, where he is making good.

(2) This applicant is 32 years of age, and was engaged as a sailor prior to the war. He was discharged in 1918 as a result of an amputation of the left arm and gun shot wounds in the head. For many years he was employed in several temporary capacities.

none of which were of long duration. He was advised by this office to attend a business college in his spare time, at the conclusion of which he was placed as an Inspector with one of the local public utilities where he is making good. He was born in Newfoundland and supports a wife and family.

(3) This applicant is a widower and supports two children. He was employed as a farm hand before the war and is unable to carry on in that line owing to a spine disability, incurred on service. He was placed with a local business machine concern as an assembler, where he is able to sit down at the bench all day, and where he is not called upon to handle anything but the very lightest of material. He is making good.

(4) One applicant of 25 years of age, who is in receipt of an allowance from the Workmen's Compensation Board, owing to a partially ankylosed spine, caused by a fall whilst employed as a steeplejack, was placed with an electrical appliance manufacturing concern, as an improver on assembly work, and arrangements were completed with the Workmen's Compensation Board to provide the man's necessary income during the training period. As in the case of ex-service trainees, this Department obtained a written agreement from the firm whereby this young man will be placed on a permanent establishment following three months' probation.

(5) This applicant was employed as a labourer prior to the war, and was discharged from the army in 1919, being in receipt of a small pension as a result of gunshot wounds in the right leg. He endeavoured unsuccessfully to re-establish himself in various ways before registering in the Handicap Department. He had very little industrial experience to assist in correct classification, but during the interview it was learned that he had considerable ambulance experience during his

army service. He was placed as a first-aid man in a large rubber factory, where he is making good.

(6) This applicant is 33 years of age and was employed as a labourer prior to the war. He was discharged in 1919 as a result of a heart disability, for which he is in receipt of a pension. He has tried to re-establish himself, but was unfortunate in not obtaining work which was suitable to his disability, with the inevitable result that he was unable to continue for any length of time in employment. He was tried out in several temporary capacities and was finally placed with a local glass manufacturing company as glass beveller. This firm arranged to teach this applicant and guaranteed to place him in steady employment. The follow-up system in vogue in this Department shows that he is measuring up to all requirements to date.

Recently we commenced the first of a series of weekly broadcasts regarding the work of the Employment Service. It is my intention to use this valuable means of propaganda to increase the scope of our activities, and particularly to bring before the radio audience the importance of our activities on behalf of handicapped workers.

In conclusion I hardly need to emphasize the importance of handicap placement work. It is a job which should be done well if attempted at all and it calls for high degrees of perception and sympathy. The only question that arises in my mind in connection with it is whether or not the efforts of Handicap Section, and indeed Public Employment Work generally, receive the recognition to which they might properly be considered as entitled. As this situation prevails, however, in all public service work, we who are engaged in it must consider the lack of appreciation as more or less inevitable.

### Types of Farm Labour in Ontario

The annual report of the Statistics Branch of the Ontario Department of Agriculture for 1928 states that the farm labour problem has for some years been developing definite regional features. "These have, in the main" it is stated, "been created by the local character of production. Not only demand but also rates of wages and nature of contract are affected by local conditions. It means of course, that producers must meet local circumstances. But the supply of labour suffers from an increasing percentage of the unskilled sort. There are two outstanding difficulties in the situation

that seems to be making for a deadlock. In the first place, the supply of labour is inadequate, and in the second, the farmer feels his financial inability to increase the pay. Where special crops are grown, the supply of labour offered, although unskilled, is more readily absorbed. It is a slower process to adapt the unskilled man to the tasks of mixed farming. Wages are going up in tobacco and bean-growing sections. In the busy season help must be had. Foreign labour is more adaptable to the needs of the specialist than for general farming because it is required only in

summer months. Scandinavians have been employed in greater number and are found to be good workers. On the other hand, in counties where mixed farming is the mainstay, the farmers will go without help even in the busy season, rather than meet the rates of wages demanded by the few labourers available, no matter how inexperienced. No domestic help is obtainable anywhere. Both foreign and English-speaking immigrant women are absorbed in the labour market of the cities. An increasing effect of the scarcity of domestic help on the average Ontario farm is the tendency to buy food for the family after the example of city dwellers. Few suggestions looking to better conditions come from the farmers, who take the position that wages are at the top and that prices for all products must advance before experienced farm help can be commanded in anything like adequate supply."

Reporting on the farm labour situation in Ontario at the end of August, 1929, the Statistics Branch states that "good farm help is as hard to obtain as in past years. In the Western Ontario special crop producing areas \$2 to \$3.50 per day or \$60 per month with Board, represents the higher rates of wages for hired help according to ability. The less selective kind get \$35 to \$45 per month with meals. Qualified labour is scarce, but taking one sort with another the farmers are finding men to supply their needs. Harvest help was in better supply than in 1928, but was not all experienced. The conditions of the season were not as pressing as at previous harvests. The disposition of farmers to rely on their own labour is strong, and they are in a measure kept from giving attention to necessary repairs, weed control and other problems of their business."

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Advisory Committee for Ontario Accident Prevention Associations

The quarterly general meeting of directors of the Industrial Accident Prevention Associations of Ontario was held on September 26, at Toronto. Directors were present from all parts of the Province. Mr. F. M. Kimbark, first vice-chairman of the Associations, said that it seemed desirable to set up an Advisory Committee consisting of the executive heads of some of the largest industries in Canada and that after the discussion at the last quarterly meeting at Hamilton, the following had been approached and had agreed to act as an Advisory Committee:—

Messrs. J. E. Atkinson, president, Star Printing and Publishing Co.; Thos. Bradshaw, vice-president, Massey-Harris Company; W. R. Campbell, president, Ford Motor Co. of Canada; C. H. Carlisle, president, Goodyear Tire and Rubber Co.; A. O. Dawson, president, Canadian Cottons; G. H. Duggan, president, Dominion Bridge Company; D. C. Durland, president, Canadian General Electric Co.; W. C. Franz, president, Algoma Steel Corporation; R. S. McLaughlin, president, General Motors of Canada; J. S. McLean, president, Canada Packers; R. H. McMaster, president, Steel Co. of Canada; P. J. Myler, president, Canadian Westinghouse Company; A. C. Tagge, president, Canada Cement Company; John M. Taylor, president, Taylor-Forbes Company; D. M. Wright, president, McLagan Furniture Company.

Application of the Construction Safety Association representing the large general contractors in this Province for membership in the

Industrial Accident Prevention Associations, was received and approved. The formation of this association was noted in the last issue, page 1005.

### Quebec Safety League's Bulletin Series

A series of bulletins dealing with various aspects of industrial safety practice is in course of publication by the Province of Quebec Safety League. Some of these bulletins have been noted in previous issues. The series is a very valuable contribution to the study of safety methods in industry. The titles of the first nineteen bulletins in the series are as follows:—

1. Illustrated bulletins and bulletin boards.
2. Safety committees in industrial plants.
3. The well-ordered plant.
4. Initiating the new man.
5. Habit breeds carelessness.
6. Handling men.
7. A safety program for your plant.
8. The foreman's place in accident prevention.
9. First aid in accidents.
10. Value of co-operation and suggestions.
11. Recording of accident cost.
12. Selling safety to new employees.
13. Maintaining interest in safety.
14. The value of accident prevention.
15. Eye protection.
16. Competition: The soul of accident prevention work.
17. The care of the injured.
18. Necessity and thoroughness of safety inspections.
19. Shop safety regulations.

### Work of a Safety Inspector

Bulletin No. 18 of the Province of Quebec Safety League, recently published, deals with the subject of the necessity for thorough safety inspections of industrial plants. The scope of the inspector's work is outlined as follows:—

The inspection should cover the buildings, the whole equipment, the operations of the plant, the working methods and practices, even the mental attitude of the workers.

The inspector should have a detail form, on which the different objects of his inspection will be carefully listed. There is, of course, no general form that will apply to all plants. Each plant should make out its own form and have it printed. We can only suggest here the headings.

1. Buildings (comprising walls, foundations, floors, floor openings, platforms, doors, windows, etc.);
2. Yards and approaches (comprising the pavement, tracks, derricks, etc.);
3. Machinery and tools;
4. Elevators and cranes;
5. Fire and explosion hazards;
6. Safety equipment and clothing;
7. Sanitation and lighting conditions;
8. First Aid;
9. Working methods;
10. Workers' attitude (negligence, recklessness, inexperience, ignorance, etc.)

Under each of these headings should be listed the sections, parts, accessories, details of operations and of working practices, of which the inspector should never lose sight. The inspector may recommend improvements, necessary or urgent repairs, partial or total reconstruction or replacement, better training or better education of the workers, etc.

When emergency situations arise, a verbal report should be made directly to those in authority. When a piece of machinery or some part of the equipment has become unsafe, the inspector should have it tagged immediately as dangerous, generally with the consent and co-operation of the man in charge, and a special report should be sent to the head of the department or to the general manager, as the case may be. When a worker, by his recklessness, inexperience, ignorance or gross negligence, constitutes a real danger to his co-workers and to himself, he should be immediately reported to those who have authority to suspend his work or even, if the situation warrants such a drastic procedure, to dismiss him.

The general plant inspector may also have to give his "O.K." to new or overhauled equipment, although this is generally attended to by special men. The new machinery should not, of course, be put into operation unless it is safely equipped with the necessary gears, belts, reciprocating parts, etc.

### Health Conditions in Provinces of Canada

The *Statistical Bulletin* published by the Metropolitan Life Insurance Company states in its issue for August that health conditions in Canada, are, in general, about the same as in the United States. This is indicated by a mortality rate of 8.9 per 1,000 in 1928, for about one and one-quarter million Canadians insured in the Industrial Department of the company, as compared with a rate of 8.1 for the millions of insured white persons in the United States. But the several provinces of Canada it is pointed out, show very marked variations in their death rates. In each of the four western provinces (Manitoba, Saskatchewan, Alberta and British Columbia) the condition of the public health is extraordinarily good, as would be expected with relatively new and prosperous populations. In Ontario, also, the mortality rate averages well under that for white persons in the United States. It is due entirely to the much higher death rates in Quebec, New Brunswick and Nova Scotia that the mortality for Canada as a whole is a little higher than in the United States. It is in these three provinces that the more serious health problems of Canada are largely centred.

It is the high prevalence of diseases associated with primitive sanitation, the *Bulletin* continues, that accounts for the high death rates in the three provinces. Typhoid fever, measles, diphtheria, tuberculosis, pneumonia and the diarrhoeal complaints are conspicuous examples. These conditions are, fortunately, subject to control and therein lies the promise for future health progress in Canada.

"Recent plans of the provincial health authorities in Quebec, however, justify the hope that the improvement will soon be registered in the mortality of the province. Plans have been perfected for the organization of full-time county health units in all parts of the province. In fact, greater progress has been made in this regard in Quebec than in any other province of the Dominion. In the summer time, the emphasis of the service is laid upon improving conditions for mothers and children. During the winter the health staffs visit the schools. The health units are all located in the larger towns and their influence radiates to all parts of the counties. It is hoped that the aid of the clergy will be enlisted in the health campaign, and that this will be a powerful factor in bringing about better sanitary conditions, and consequently longer life in Quebec.

"The new health movement enjoys the cordial support of the Government and the people of Quebec and has received the co-operation of the Rockefeller Foundation and the Metropolitan Life Insurance Company."

### Avoidance of Lead Poisoning

It has been stated by Surgeon-General H. S. Cumming of the United States Public Health Service that lead poisoning is one of the great problems of industrial hygiene. In the early part of the nineteenth century, experimental investigations of the action of lead were begun; but it is only during the past 25 years that much progress has been made in methods of preventing lead poisoning. The application of knowledge of how to prevent it together with improved methods in the handling of poisonous materials, will greatly reduce the incidence of this and other industrial poisonings in the future.

The following are some of the principal industries and trades in which workers are exposed to lead: Lead mining and smelting; making white or red lead; the manufacture of paint storage batteries, glazes, enamels, pottery, and most lead objects; painting, brass founding, and polishing cut glass and brass. In general all of those who handle lead-containing materials, even such diverse things as putty and window-shades, are exposed more or less to lead poisoning.

When a person is exposed to a dangerous amount of lead, he begins to absorb it and his system will show evidence of it very early. There are many people who absorb lead and show its disabling effects and yet have no acute poisoning. If the amount of lead is insufficient to produce acute poisoning and the worker continues in the occupation offering exposure, he may develop lead poisoning in a chronic form, which is at times harder to overcome than the acute condition.

In lead poisoning, as in other conditions, prevention greatly outweighs cure in importance. The responsibility for the prevention of industrial poisoning rests largely on the manufacturer. The worker however, is also responsible. There are many instances in which the safety measures and devices that are provided are ignored or misused by the employee. The manufacturer should provide adequate safety appliances and educate the employee in their use as well as the results of their abuse or disuse, but it devolves upon every worker to help in making the shop a safe work-place, and to minimize the chances of the other fellow, as well as himself, getting dangerous doses of the poisonous substance. Particular care must be used to avoid dustiness, since the most dangerous cases of lead poisoning are those in which the lead has been breathed in. Personal hygiene and habits are factors in health in any occupation, but they are especially so where the worker is exposed to industrial poisons and other unfavourable conditions in industry.

### Reduction of Machinery Accidents in Massachusetts

The last annual report of the Division of Industrial Safety of the Department of Labour and Industries of Massachusetts points out that "the introduction of machinery and frequent changes in the processes of industry unite in presenting one of the leading problems affecting the welfare of employees," and that constant vigilance is necessary to prevent exposure to occupational dangers in the operation of machinery. It is regarded as a tribute to the efficiency of the inspection service provided by the state and to the safety movement in general that in spite of increasing risks the number of accidents due to machinery was reduced from 18,490 in 1919 to 8,566 in 1927. That the severity degree of injury has been reduced in accidents on machinery is well established, the report states. In 1919, out of a total of 67,240 tabulatable injuries, 1,750 or 2.6 per cent, resulted in permanent partial disability; in 1927, there were 64,167 tabulatable injuries and 1,232 or 1.9 per cent, caused permanent partial disability. These included amputation or loss of use of phalanges, fingers, thumbs, hands, toes, feet, limbs and the loss of sight of eyes.

Reduction of time lost by employees through machinery accidents has taken place, the report continues. From July 1, 1919, to June 30, 1920, contact with machinery was responsible for 29.1 per cent of all days lost because of injuries to employees in the industrial establishments of Massachusetts. Gradual decrease in the percentage of such accidents came with each succeeding year until it fell to 22.5 per cent in the twelve months ending June 30, 1927.

Another favourable result of inspection work in the safeguarding of machinery is found in the reduction which has taken place in permanent partial disability injuries.

The annual report of the Commissioner of Maternity Allowances, Commonwealth of Australia, for the year ended June 30, 1928, recently received by the Department, reviews the administration of the Commonwealth Maternity Act, 1912, during this period. An outline of this act was given in the *LABOUR GAZETTE*, April, 1928, page 414.

During the year, total of 135,784 claims were paid, and 1,261 claims were rejected. The amount paid in maternity allowances was £678,920, while the cost of administration was £15,490. Since the Act became effective on October 10, 1912, the number of claims paid totalled 2,088,424, with a total of 9,816 rejections. During the same period, the total amount paid in allowances was £10,442,118, while the total cost of administration was £218,221.

## ACCIDENT PREVENTION IN RELATION TO WORKMEN'S COMPENSATION

A PAPER on the above subject was read last May before the Maritime Division of the Canadian Manufacturers Association by Mr. A. F. Blake, of the Atlantic Sugar Refineries, Limited, Saint John, N.B. This address has been reprinted in pamphlet form. It is a plea for a concerted attempt on the part of manufacturers in Canada to reduce the costs of workmen's compensation by preventing or reducing the number of industrial accidents.

### The Real Economic Problem

Mr. Blake considers that in seeking to reduce the costs of production by means of a reduction in the rates of assessment levied for compensation purposes the manufacturers have been approaching the problem from the wrong direction. "Suppose our Boards," he says, "were not economically operated and an improvement in this respect could be accomplished, what would it amount to? One or two per cent of the total assessment. Capital and labour can debate forever the question as to the correct relative distribution between them of the cost of injuries; but after all, with accidents occurring as they do, our assessments would still be a burden if the payments to injured workmen were reduced from 55 per cent, as at present in New Brunswick, to 50 per cent, and the workmen would still feel that they were not properly compensated if payments were increased from 55 to 60 per cent as in Nova Scotia. Boards cannot reduce rates if payments to injured workmen increase, and it is surely not a satisfactory solution of the problem for one powerful group to influence the Board not to raise its rate, despite mounting accident costs, and thereby force the Board to pay its costs out of the surpluses and reserve funds of other groups. There is only one way to make a real saving in compensation costs and that is to stop them at the source—prevent accidents. Why not stop trying to shift the burden on to the government, on to labour, or on to other groups of fellow manufacturers and instead lighten the burden until we no longer mind carrying it? Let us cure the disease instead of the symptoms."

### Causes of Indifference

The writer contends that only by means of intensive accident prevention campaigns can compensation rates be made a negligible factor in the cost of industry. He suggests that the present indifference of manufacturers on the subject is due to the following causes:—

(1) A belief that no important results would follow an intensive campaign, that conditions are fairly good as they are, and that accidents are bound to happen anyway.

(2) A belief that the only important benefit to a manufacturer, even if injuries could be reduced, would be a reduction in the compensation rate, and whereas many manufacturers are grouped together in a single unit, the savings effected by one as a result of a campaign, would, in the absence of similar action by others, be distributed over all, reducing the benefit to the one to a negligible amount.

(3) A belief that a campaign would require a serious amount of effort and expense.

(4) Lack of knowledge of exactly how to go about instituting a safety campaign.

### Results of Safety Campaigns

In order to prove that safety campaigns may produce remarkable results in eliminating accidents Mr. Blake cites the experience of several large companies in Canada and the United States. Some of these examples are as follows:—The United States Steel Corporation in thirteen years decreased its accidents 86 per cent.

The Union Pacific Railroad shop employees have only one-fifth as many accidents as the shop employees on other railroads.

Five plants of the Canadian Cement Company reduced their accidents 75 per cent in eight years, or from 17.92 to 4.45 per 100,000 man hours.

The Bell Telephone Company of Eastern Canada reduced the number of lost time accidents from forty-five per thousand employees in 1922, to twenty per thousand in 1928, in spite of the taking on of a large number of new employees during these years. In 1922 there were 3.75 accidents, serious and minor, per 100 employees, and in 1928 the rate was reduced to .60 per 100 employees, the company recently had a 155-day period without one lost time accident.

The Atlantic Sugar Refineries, Limited (the writer's company) reduced the number of accidents resulting in compensation from 104 in 1926 to 32 in 1928, resulting in a reduction in the amount of compensation by 86.3 per cent.

The Dominion Iron and Steel Company reduced its accidents 80 per cent in five years, this being, in the writer's opinion, a remarkable achievement.

Concluding his analysis of past safety efforts Mr. Blake sums up as follows: "Fully effective safety programs, when compared with ordin-

ary good management but without any special safety program, usually result in a reduction of about 75 per cent in accident costs. Savings of this sort are not limited to large factories as you will have noted from some examples which I gave. And I question if there is any industry with conditions so peculiar that accidents cannot be prevented. Accident prevention is based on a study of human behaviour, and human nature is the same everywhere. Is it worth while to reduce accident costs 75 per cent? And what of the humanitarian aspect?"

#### Extent of Losses Due to Accidents

Discussing the second cause of indifference on the part of employers to safety campaigns, as stated above, Mr. Blake refers to the current belief that savings effected through accident prevention will accrue to the entire industrial group and thus be dissipated so far as the individual employer is concerned. He points out that the group rate would be considerably lowered if every member were to conduct a safety campaign. "However," he continues, "it is an error to assume that the financial benefits of accident prevention to the employer are limited to a reduction in compensation assessments. You will probably disbelieve me when I assert that the total cost of accidents to employers averages four times the amount of the payments by the Boards for compensation and medical and hospital aid. Yet this statement is based on an exhaustive investigation by the American Engineering Council which is composed of eminent engineers, whose findings with statistics from a survey of 13,898 plants employing 2,464,413 employees are published in a 414-page book entitled 'Safety and Production' which I commend to your attention. Every time there is an accident other workmen gather around, the whole work of the department is demoralized, time and expense are required for first aid, etc. The Engineering Council measured all this and also compared production records of days when there were no accidents with days when there were. And it should not be forgotten that for every injury involving compensation payments there are approximately 29 which do not involve these payments but do result in all these other losses. But more important than this is the consideration that every accident indicates that there is something wrong with either the factory conditions, the workmen, or the factory management. Correct what is wrong and you not only decrease accidents but you will increase production."

#### Safety Campaigns Inexpensive

Mr. Blake remarks on the anomaly that practically all progressive employers are will-

ing to incur expenditure for mechanical safeguards, the most expensive factor in safety work, but neglect the cheaper but more effective measures to cope with the more intangible risks. It is found in practice that only about 25 per cent of accidents are mechanical in nature, the remaining 75 per cent being due to conditions that are physiological or psychological in their origin. "The workman is either not alert as a result of poor health, lack of sleep, poor ventilation in the factory, improper temperature, poor lighting, etc., or his mental attitude is at fault. He is not really trying to prevent accidents. It is the psychology of the thing that is important. Once the men and foremen are thinking about safety and determined not to have accidents, then the astounding results illustrated in the beginning of this paper begin to appear. Men's minds are influenced by propaganda, bulletin boards, pay envelope enclosures, addresses, personal persuasion by foremen and safety committee members, and safety competitions, above all by competitions. These things do not cost much. You can get all the information, instruction, posters and literature you need for the ordinary campaign from the large safety societies especially from the National Safety Council, merely on payment of dues, which vary, for that organization, from \$12.50 per year for small firms with less than 50 employees up to \$100 per year for firms employing over 1,200 employees. Special material can be obtained by making small additional payments. So the monetary cost is trifling."

Mr. Blake deals lastly with the employer who lacks the knowledge required to undertake a safety campaign. The methods of preventing accidents have, he points out, been worked out by thousands of engineers and reduced to a science, practically the same methods being used everywhere. The necessary information may be obtained almost immediately by any manufacturer desiring guidance.

#### Humanitarian Aspect

The humanitarian aspect of the safety movement is considered by the writer in the following concluding paragraph:—

"After you have first justified your accident prevention campaign from financial considerations, then put the program into effect, and then at the end of the first year compare your results with those of the previous years, you will find tremendous satisfaction in the realization that you have saved one or two lives, a dozen or more permanent bodily mutilations and a tremendous amount of temporary suffering and worry amongst the men for whom you are responsible."

CANADIAN GOVERNMENT ANNUITIES

The rapid growth recently made in the volume of the sales of Canadian Government Annuities is indicated in the above graph. During recent years a steady increase has been noted in the interest displayed by the people of Canada in making provision for old age.

The number of contracts issued and the amount of purchase money received each year has been steadily increasing, particularly during the fiscal years ending March 31st, 1928, and March 31st, 1929.

EMPLOYEE THRIFT AND INVESTMENT PLANS IN THE UNITED STATES

THE National Industrial Conference Board of New York has recently published the results of another of its studies into industrial relations problems in a book entitled "Employee Thrift and Investment Plans." The Board was organized in May, 1916, for the purpose of bringing the important associations of industrial producers throughout the country into harmonious and effective relationship and co-operation on all matters of economic character, and of timely, important concern to American industry. From time to time, the activities of the National Industrial Conference Board have been reviewed in the LABOUR GAZETTE, the last reference being in May, 1929, issue, page 507.

It is stated by way of introduction that "thrift is not an inherent American characteristic" and that "living conditions and habits that have come to prevail in the United States have also tended to encourage the free spending of money." Actuated by the feeling that that employee is more efficient whose "peace of mind is fortified by the knowledge of a financial reserve to meet emergencies" many employers have encouraged the practice of systematic thrift. In the great majority of cases the various schemes offered to employees are optional, but in three the saving was compulsory. In one of these the firm requires that employees save at least 10 per cent of their wages or salary, and invest this portion in a manner approved by the company.

The scope of the latest survey is limited to three general types of plans that are designed specifically for the purposes of inculcating thrift among employees. Accordingly, employee stock purchase schemes are not included, though such have been dealt with in a separate study. The data upon which the survey was based were supplied by 319 companies which together employ approximately 1,322,500 wage earners.

The three types of plans most generally in use and the results of their utilization are summarized in the survey as follows:

"Probably the most general form of savings plan is that which provides for regular, authorized payroll deductions by the employer, who turns over the amount deducted to a savings institution for crediting to the individual accounts of participants in the plan. Bank books

may be held by the company or by the employee, withdrawals may or may not be made through the employer, the savings fund may run for an indeterminate period or may mature at the close of a fixed period. There may be any number of variations upon the main theme, but all plans of this character are readily recognizable as belonging to the same general group.

"A second and more pretentious type of plan aims to bring to the employees the full investment return from their combined savings. Usually by means of authorized payroll deductions, a fund is accumulated which is invested by a committee chosen for the purpose, and periodic dividends are declared on a pro rata basis. This method offers the wage earner a more lucrative investment for his savings than the deposit of them in a savings bank, since dividends of from 6 per cent to 8 per cent are frequently paid. Such plans are dangerous, however, unless rigidly supervised by men who are financial experts. Injudicious investments resulting in loss of employees' savings can do incalculable harm. A plan of this character is better not undertaken unless means are available for its sound administration.

"The third main group of plans for stimulating thrift combines saving with the privilege of borrowing, and includes as its main divisions credit unions and building and loan associations. The introduction of this borrowing feature makes these plans of double benefit to the employee, and helps to solve one of the most difficult problems of domestic financing on small incomes. Not only do these plans provide the means for borrowing small amounts to meet special emergencies, but they also permit long-term financing for home ownership.

"In any or all of these plans, provision may be made for assistance in the form of contributions to the savings fund on the part of the employer. In some cases the employer pays an extra interest dividend on what the employee saves, while in other instances an amount equal to a certain proportion of the savings may be added to the fund, or a more general contribution to the aggregate savings fund may be made on the basis of a share in the profits of the company or on some other basis. While such contributions undoubtedly add to the attractiveness of the savings plan, they are not necessarily essential to its success.

"Employers generally seem to be satisfied that their sponsorship of these thrift plans is a step in the right direction. The benefit to the employee of a savings fund which can be relied upon for emergencies or for old age is obvious. But the employer also realizes a gain in a reduction of the petty annoyances

associated with granting personal loans or advances on wages, and, in a broader and much more important way, gains in the improved morale of his working force. The feeling that prevailed to a certain extent in an earlier generation—that a working force not entirely dependent upon current earnings was likely to get out of hand—has largely disappeared, to be replaced by the conviction that the worker who possesses some property in the form of a home or bank account has a greater respect for his employer's property and becomes a more reliable and more permanent asset to the company.

"Beyond and above the immediate advantage of these savings plans to employer and employee is their social significance. Any agency which can make the person of small income less likely in time of emergency to be forced to choose between privation and charity is a benefit to the community."

### Iron and Steel Industry in Canada in 1927

The annual report of the Dominion Bureau of Statistics on the iron and steel industry in Canada for the year 1927 states that favourable conditions again prevailed throughout the iron and steel industry in Canada during 1927 and production showed a substantial advance. Production in 1927 was valued at \$525,921,839, an increase of 4 per cent over the figure for 1926, and the highest value on record since 1920. There were 1,148 different plants engaged in the manufacture of iron and steel products during 1927, 691 of these establishments were in Ontario, 219 in Quebec, 93 in British Columbia, 44 in Manitoba, 34 in Nova Scotia, 27 in Alberta, 26 in New Brunswick, 8 in Saskatchewan and 6 in Prince Edward Island.

The number of employees in 1927 was 106,293 as compared with 103,510 employed in the preceding year. The plants in Ontario employed 65,942 persons, followed by 25,844 in Quebec, 6,052 in Manitoba, 2,583 in Nova Scotia, 2,079 in British Columbia, 2,130 in New Brunswick, 1,255 in Alberta, 198 in Saskatchewan and 171 in Prince Edward Island. The maximum of employment was attained in April when there were 98,622 persons on wages in the various plants. This number was reduced to 86,159 wage earners in December, the month of least employment in this industry. Railway rolling stock furnished the greatest amount of employment with 21,436 employees in 1927, Castings and Forgings came next with 19,149 workers, and the automobile industry was third with 11,063 persons on the payrolls.

## NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

### Trade Courses at Montreal

Close co-operation between McGill University, the Board of Trade, the Cost Accountants Association and the Chartered Institute of Secretaries has led to the inauguration of trade courses in commercial education. Mr. George C. McDonald, president of the Montreal Board of Trade, in a recent interview, stated that these courses should be of the utmost assistance to young men in aiding them to advance in the commercial world. The classes are conducted by professors from the university, having commenced on September 30.

"Aside from the development of the centres of commerce in the various Canadian universities," said Mr. McDonald, "this, I think, is the first venture by a university to directly hold a course for business education, and it is also the first venture of the kind of the Board of Trade. Both institutions are alive to the opportunity and are very glad to help in furthering the movement. Of course, this is not the first instance, by any means, of a commercial organization entering into the field of education for the benefit of young business men. I have particularly in mind the London Chamber of Commerce, their commercial courses having a registration of about 28,000 students.

"The scheme has been inspired by the thought that young men not having the advantage of a university education, in some cases not even that of a high school, should be given their chance of making progress in the world of commerce. One of the most valuable features of the courses is that they deal only with subjects of practical value, and therefore it is to the interest of every employer who has promising young men on his staff to urge them to join. It is possible to qualify for membership in the Chartered Institute of Secretaries, to become a cost accountant, or to take the general course and to receive the Board of Trade diploma for commercial education. Naturally these courses are meant to extend over a period of two or three years. "There will be no profit for any of the organizations behind the movement and if there should be a surplus of funds it will be used to reduce the fees. In the case of students unable to pay the entire sum at the beginning of the term, arrangements will be made for the acceptance of part payments, extending over the entire term. Employers are urged to aid the young man who shows promise by advancing the fees temporarily. Several firms by way of encour-

agement are offering members of their staff who successfully pass the courses a refund of part of their fees."

The cost of a complete course per year is about \$70, a sum which Mr. McDonald characterized as being barely enough to cover the expenses. A wide range of subjects is covered by the courses, including book-keeping, partnership and manufacturing accounting, cost accounting and factory organization, commercial arithmetic and mathematics of investment, psychology, elements of commercial law and sale of goods, trusts and executors, company law, conduct of meetings, banking and exchange, commercial correspondence, secretarial practice, economics and industrial organization and administration.

### Demand for Technical School Graduates at Montreal

The assistant principal of the Montreal Technical School recently made the following statement: "For the past five years, at the Montreal Technical School, we have had such a big demand for our technically trained graduates that we have been unable to meet it, much to our regret. Although a few days ago we sent out the largest group of graduates in the history of the school, these young men were all spoken for months before their final examinations. At the present time we could place many more if we had them. Indeed, so great is the demand for technically trained men that some of our Canadian industries are beginning to send to Europe for them. And there is no competition from girls as there is in the commercial field."

### Aircraft Instruction in Technical School at Toronto

Classes in Aircraft Mechanics were started at the Central Technical School, Toronto, in connection with the evening classes which opened on October 1. Principal W. S. Kirkland reported a very brisk demand for this course. In order to enter upon the work a candidate must possess a good educational foundation. For those who do not possess this essential foundation the school offers various preparatory courses, both theoretical and practical. The course includes cable splicing; fuselage construction; wing construction, covering and doping; rigging propellers, instruments and controls; aeroplane engines, classes: radial, air-cooled, water-cooled; carburetion; ignition and oiling systems. Visits will be made to aircraft manufacturing plants and various hangars to inspect commercial machines of different types.

## Training Older Workers for Continued Employment

The American Management Association recently published Bulletin No. 93, in its General Management Series, dealing with the subject of training older employees for continued employment. The writers, Mr. C. R. Dooley and Miss Helen Washburn, of the Standard Oil Company of New York, point out that the problem of the middle aged employee, that is, one between the ages of 40 to 55 years, is among the most acute in the field of industrial research. Some of the difficulties confronting the middle-aged worker in the search for work are stated to be as follows: pension plans (which are often the cause of age limits); mergers; the policy of promotion from within; the difficulties of a middle-aged man or woman who has spent years with one company and who knows only one line of work, when he has to find a new place; and the effect on initiative and independence of the growing feeling that it is getting harder and harder for a person past youth to find a position.

Employers also are called upon to solve the problem presented by long service employees when positions are abolished through reorganization or through new machinery or methods, or in the case of general lay-offs; or when the older employees have grown ineffective. They have also to consider the loss to business in turning away capable people who must have a good deal to contribute from their experience and judgment.

The inquiry conducted by the writers of the bulletin showed that there were few definite solutions offered for these problems. Some suggestions were made as to what employers might do, such as: modifying pension plans; abolishing age limits; developing open-mindedness on the question of age; realizing that older employees can learn as well as younger people, that an older employee's knowledge of the business is a great factor in his favour, and that he is frequently steadier and has better judgment than a younger man. Several companies stated that they give training to older employees, but when their replies were analysed it was found that their training was general and not specifically for older employees. However, it was believed that general training would go far toward solving the problems connected with older employees, and make them more efficient, less "set" and more transferable.

About forty companies replied to the request of the authors for information as to their methods of special training for older employees. The following conclusions were

drawn from the information obtained in this way.

There were some points upon which all 40 companies agreed. One was the custom of putting employees on lighter or simpler work as they grow older, often at the same rate of pay. Another, and a very gratifying point, was that older employees can learn readily.

The replies also showed that consideration for older employees was general among all industries—the companies from whom answers were received all reported that they either pension older employees or find suitable work for them, and that they practically never release them.

While but few concerns are conducting training as an aid to this adjustment problem, still the evidence is clear that they represent a trend in dealing with the older worker, whether by general or special training, which is both economical and social. "No man," it is stated, "wants to get in a rut, yet we all do. Training for older workers is but a form of the present movement for adult education, which is merely a dignified means of keeping our minds plastic and out of ruts—of prolonging the enthusiasms and curiosities of youth—of keeping efficient through interest rather than through pressure. From the evidence collected this training for older employees increases their efficiency on present work, prepares them for transfer to other work, and improves the spirit of co-operation. But in connection with the details of such a program many questions are doubtless open for discussion."

The "Planned Prosperity League" or the "Prosperity Reserve League" will be the title of a national organization in the United States, formed for the purpose of planning in advance for the construction of public works so as to diminish unemployment in slack periods. Plans for the new organization were drawn up by the Institute of Politics at a meeting at Williamstown, Massachusetts, in August. It was also suggested that as States and cities did not realize that the time selected by them for expanding public works had any effect on stabilizing or unbalancing general business it might be necessary to have a Federal stability commission, similar to the Law Enforcement Commission, which would focus public attention on the necessity of a construction program in which the States would join. The new organization has the approval of President Hoover.

## Fifty Years Progress in Canadian Mining

The fiftieth anniversary number of the *Canadian Mining Journal* (August, 1929), contained a valuable series of historical and descriptive papers contributed by prominent authorities in the various branches of mining and mineralogy in Canada. The introduction points out that "fifty years ago the mining industry of this country was of very small proportions; to-day it is the third basic industry of this land". Some record of this progress is given in the issue, which is dedicated "to the memory of the pioneers, of the prospectors, of the engineers, and of the geologists, who pointed the way and showed us the promise, and who have passed on; and to the men of the industry to-day, who have taken up the burden; and who are bringing Canada to the forefront of the mineral producing nations of the world."

The Hon. Charles Stewart, Minister of Mines, contributes a general introduction, showing the extent and importance of the industry in Canada. "Canada's mineral industry to-day," the minister says, "represents an investment amounting to nearly \$75 for every man, woman, and child in the Dominion. Not only is the main strength of the industry built upon the foundation of invaluable basic minerals, some of which are in large measure confined to Canada, but discoveries of rare minerals, such as platinum, have rewarded the efforts of the prospector and indicate the possibility of future industrial developments."

"While Canada produces about 70 different metals or mineral products of economic value, 18 of these constitute about 98 per cent of the total annual output value. The world's production and consumption of the base metals, copper, lead, and zinc, have reached enormous proportions and Canada's resources in these metals will increasingly contribute to the world's needs."

Mr. Stewart anticipates that "Canada's progress in the past is as nothing compared with its future through the exploitation of its mines. Its resources of base metals will give employment to many workers and add to the industrial activity and prosperity of the Dominion."

Federal activities in mining are described in the first section of the Anniversary Number which contains the following papers:—

"Half a Century in Canada's Minerals industry, 1879-1927," by S. J. Cook, chief of the Mining Metallurgical and Chemical Branch of the Dominion Bureau of Statistics.

"The Dominion Department of Mines," by Charles Camsell, Deputy Minister of Mines, Ottawa.

"The Geological Survey of Canada," by W. H. Collins, Director, Geological Survey of Canada.

"The Mines Branch and its Functions," by John McLeish, Director of the Mines Branch of the Department of Mines.

The Provincial Historical section contains the following papers:—

"Fifty Years of Mining in Ontario," by Hon. Charles McCrear, Minister of Mines.

"A History of Mining in British Columbia," by Robert Dunn, Deputy Minister of Mines.

"Historical Sketch of Mining in Quebec," by Hon. J. C. Perrault, Minister of Mines.

"A Record of Mining Enterprise in Manitoba," by J. P. de Wet.

"Mining Development in Alberta," by Hubert Norbury.

"Mining in Nova Scotia," by the Hon. Col. Harrington, Minister of Mines.

The Technical Progress section is made up as follows:—

"Developments in Mining Practice," by W. G. McBride, Professor of Mining Engineering, McGill University.

"Fifty Years of Development in Ore Dressing," by C. S. Parsons, Engineer in Charge of Ore Dressing, Dept. of Mines, Ottawa.

"The Development of the Flotation Process," by Robert Lord.

"Half a Century of Cyanidation," by A. Anable.

The Transportation section contains the following papers:—

"The Canadian National Railways and Natural Resources Development," by Arthur E. Kelsey.

"The Development Branch of a Railway and How it Works," by G. G. Ommanney.

"Temiscaming and Northern Ontario Railway Development,"

"The Development of travel in the Canadian North," by R. C. Rowe.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### 46th Session of Governing Body

The 46th session of the Governing Body of the International Labour Office was held at Geneva early in October, when the following subjects were discussed:—

The agenda of the 1931 International Labour Conference;

Proposals to establish committees on handicraftsmen, on automatic coupling, and on salaried employees;

A report on the working of the Convention on the minimum age for the admission of children to industrial employment;

Effect to be given to the Resolutions adopted by the Conference at its Twelfth Session;

Proposals concerning the reports to be furnished by the governments under Article 408;

Consideration of the decisions of the Assembly of the League affecting the International Labour Organization;

Report of the committee on working conditions in the textile industry;

Record of the meeting of the safety sub-committee.

### Historical Study of Migration Statistics

The September issue of the *International Labour Review* (Geneva), opens with the first section of an article describing the work of the 12th session of the International Labour Conference. This is followed by a historical study of migration statistics, by Dr. Imre

Ferenczi, of the Research Division of the International Labour Office. The inquiry into immigration was undertaken by the Office on a suggestion emanating from the United States, that it should collect migration statistics for every country in the world since the beginning of such figures, and more especially since the beginning of the nineteenth century, and that all the data as far as possible should be summarized in international tables. The inquiry was intended to cover all migration movements, both continental and intercontinental, irrespective of the nationality, class, or race of the migrants. The proposal, accompanied by an undertaking to cover the cost of the inquiry was accepted by the Governing Body; the Director entrusted Dr. Ferenczi with the task, the results of which have recently been published in a substantial volume of over 1,100 pages, containing 641 national tables and 36 international tables.

The author gives in the *Review* a short account of migration movements and of the development of the statistics in the 19th and 20th centuries. The inquiry suggests the possibility of a development of national statistics on more uniform lines and subsequently of the compilation of really comparable international statistics of migration. It has also led to the discovery of numerous official sources and records stretching back over a long period concerning modern migration movements, which may well be of service in other spheres than that of statistics.

### Laws Relating to the Work of Women

The International Labour Office has issued from Geneva the results of a comparative study of the legislation relating to the employment of women in the countries that are members of the "I. L. O.," with appendices containing tables and a summary of the State laws in the United States of America.

The aim of the present study is to give a general view of the laws by which the principal aspects of women's employment are regulated and to enable these laws to be compared with each other and with relevant Conventions. National laws were searched for provisions relating to every kind of employment outside of agriculture and domestic service. "This examination," it is stated, was not limited to provisions relating to women as distinct from other workers; the provisions relating to hours, for example, in most cases apply to both women and men. The study is not one of discriminatory legislation in

favour of women, though that aspect was not overlooked, and the work can be used to ascertain which laws are discriminatory and which are not."

The following features of employment are considered; hours, rest intervals, overtime, night work, weekly rest, dangerous and unhealthy occupations, industrial home work, and special accommodation, i.e., the provision of seats and service facilities. The principal aspects not touched on are wages, annual holidays, and hygiene and safety provisions concerning all workers. Some doubt was felt about wages as a few laws contains minimum wage provisions for women. But the practical utility of such provisions is probably small seeing that wages are usually fixed by agreements or orders, or industrial awards; it was therefore decided to omit them.

All laws found up to the end of February, 1929, are included.

### Canada

The general summary of Canadian laws is in part as follows:—

“The only province which has passed legislation to apply any of the Washington Conventions relating to women is British Columbia; the laws do not come into force until similar legislation has been passed by other Provinces. The Dominion Government has adopted the Berne Phosphorous Convention, and it is everywhere applied.

*Hours.*—Only the Province of British Columbia prescribes an 8-hour day and 48-hour week for women in factories. In Saskatchewan there is a statutory 48-hour week for such women. In Manitoba the Minimum Wage Board orders limit hours for women to nine in the day and 48 in the week with a weekly half holiday in most factories. In Ontario, Quebec, and New Brunswick the only legal limitation on hours of women in factories is that imposed by the factory legislation—a 10-hour day and 60-hour week (55-hour week in Quebec cotton and woollen factories). There is no limitation in the Nova Scotia Factories Act on the hours of women in normal times. All the Provinces but New Brunswick and Prince Edward Island have enacted minimum wage laws. No administration board has been appointed in Nova Scotia. The Quebec Minimum Wage Act gives the Board no power to regulate hours of labour, and in Ontario the Board is authorized only to specify the hours for which the specified rates of pay are to be paid and to fix other rates for longer hours.

*Overtime.*—All provincial Factory Acts permit working hours in excess of statutory limit under specified circumstances and with the permission of the inspector, but a further limit is placed on such overtime by all the laws except that of Alberta.

*Night Work.*—All Provinces except Alberta place some restriction on the employment of women at night in industry. By-laws under the Early Closing Acts regulate hours in shops, and Nova Scotia, Ontario, Manitoba, Alberta, and British Columbia have statutes governing the hours of women in retail shops. Saskatchewan and Manitoba Minimum Wage Orders further restrict hours for women in shops.

*Weekly rest and holidays.*—Work on Sundays is forbidden in all provinces by the Acts relating either to work in factories and shops or to Sunday observance.

*Dangerous, unhealthy and prohibited occupations.*—As regards mines, a statement made by the Dominion Department of Labour is quoted to the effect that it is very improbable that any woman was ever employed below ground in Canada. The Alberta, Ontario and Quebec laws prohibit the employment of women in or about any mine except in office work, and the employment of women underground has never occurred in the first two. It is unlikely to have occurred in Quebec unless in the very early days before Confederation in 1867. The Province of Saskatchewan has no deep mines.

The prohibition of the use of white phosphorus in the manufacture of matches prevails everywhere.

In Saskatchewan employers in laundries, restaurants, etc. are required before employing women to procure a license, and in British Columbia no person may employ a woman in any hotel, restaurant, laundry or place of business where the chief of the police of the municipality thinks it undesirable.

The Manitoba statute prohibiting the employment of white women by Orientals is to come into force on proclamation to that effect. Such proclamation has not been issued, but the Winnipeg City Charter contains a clause enabling the City Council to pass a by-law requiring licences for the employment of women in a hotel, restaurant or laundry owned or conducted by Chinese. In Ontario (subject to the proclamation of this section as being in effect), no person may employ any white woman in any factory, restaurant or laundry owned or conducted by Chinese. Alberta, Quebec, New Brunswick, Nova Scotia, and Prince Edward Island have no similar legislation.

The fifteenth annual report of the Commissioner of Co-operation and Markets of Saskatchewan for the twelve months period ended April 30, 1929, reviews the activities of the co-operative organizations of that province which are administered under the Co-operative Associations Act, 1928. During the year reports were received from 216 associations, as compared with 243 in the previous year. The number of shareholders in these 216 associations was 13,819, and the paid up capital invested was \$569,829.17. During the year, 11 associations marketed live stock, shipping 167½ cars, the receipts of which amounted to \$249,767.55. The value of farm products marketed through the associations amounted to \$17,749.30, while the total value of supplies sold amounted to \$3,621,256.16. The total sales of the associations amounted to \$3,879,773.01, the net savings being \$135,963.33.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN AUGUST, 1929

The following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in August was 6,908, their employees numbering 1,093,735 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for

July was 1,709, having an aggregate membership of 204,547 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

### (1) Employment Situation at the Beginning of September, 1929, as Reported by the Employers

As often happens in the early autumn, there was a slowing-up of industrial activity at the beginning of September, but the situation continued considerably more favourable than in any month of the years 1920-28. The Dominion Bureau of Statistics received data from 6,908 firms with a combined working force of 1,093,735 persons on September 1, as against 1,102,033 in the preceding month. The index number (based upon the average for the calendar year 1926 as 100) stood at 126.8, compared with 127.8 on August 1, 1929, and with 119.1, 111.0, 106.2, 97.8, 94.2, 101.2, 94.8 and 89.8 on September 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922, and 1921, respectively.

Logging, mining, communications, transportation and trade showed heightened activity, while there were heavy seasonal losses in construction, and manufacturing was also quieter.

#### Employment by Economic Areas

All provinces reported contractions, that in Ontario being most pronounced.

*Maritime Provinces.*—For the first time since the beginning of January, there was a slight slackening in employment in the Maritime Provinces, but this reduction involved a much smaller number of workers than that registered on September 1, of other years of the record. Most of the loss took place in logging and construction, while gains were noted in transportation and trade. Statistics were received from 531 firms, whose staffs aggregated 85,373 workers, compared with 85,468 in the preceding month. The index

was many points higher than on the same date in any year since 1920.

*Quebec.*—A contraction was noted in manufacturing and transportation, while logging, mining and construction were brisker. Within the manufacturing group, the largest decreases were in iron and steel, textile, pulp and paper, lumber and tobacco factories. The working force of the 1,579 co-operating employers stood at 302,038 persons, as against 303,910 on August 1. Advances were registered at the beginning of September, 1928, but the index then was several points lower.

*Ontario.*—In this province, 3,114 firms reported that they had reduced their staffs by 3,724 employees to 445,631. Manufacturing as a whole employed fewer operatives, largely on account of losses in iron and steel, and construction, chiefly railway construction, released employees. On the other hand, logging camps recorded considerable seasonal activity, and communications and trade also showed improvement. The situation was decidedly more favourable than in the early autumn of 1928, or in that of any other year since the series was commenced.

*Prairie Provinces.*—Following five months of uninterrupted expansion, there was a reduction in employment in the Prairie Provinces, where the index continued much higher than on the same date last year. Returns were tabulated from 958 employers of 166,018 workers, as compared with 167,734 at the beginning of August. Mining, transportation, communications and wholesale trade afforded

heightened employment, but railway construction was seasonally slacker, and there were also losses in manufactures, notably in iron and steel, lumber and pulp and paper plants.

*British Columbia.*—Employment in British Columbia showed its first decrease since the winter; this took place chiefly in construction, while communications, mining, transportation and logging showed improvement, and no general change occurred in manufacturing. The working force of the 726 firms furnishing data declined from 95,566 persons on August 1 to 94,675 at the beginning of

the pay-lists of the 840 co-operating firms, who employed 146,654. Manufacturing (except of electrical apparatus, leather, food and rubber products) reported general contractions; transportation was also slacker, while improvement was noted in construction. The index continued higher than on the same date in any other year for which statistics are available.

*Quebec.*—Heightened activity was indicated in Quebec, according to 117 employers of 13,737 persons, as compared with 13,614 in the preceding month. The gain took place mainly

**EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS**

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

September. The contraction involved about the same number of workers as that indicated on September 1, 1928, when employment was in smaller volume.

Table I gives index numbers by economic areas.

**Employment by Cities**

Employment advanced in Quebec, Toronto, Windsor and the Adjacent Border Cities and Vancouver, while in Montreal, Ottawa, Hamilton and Winnipeg curtailment was registered.

*Montreal.*—Employment in Montreal showed its first falling-off since the beginning of the year, 2,363 workers being released from

in trade, transportation and manufacturing. Employment was at its maximum for the five years' record of this city.

*Toronto.*—Manufacturing, communications and trade afforded more employment, while only slight changes were noted in other industries. Statements were received from 908 firms with 128,173 workers, or 2,085 more than on August 1. Much smaller increases had been indicated on the same date of a year ago, but employment then was below its present level; on the date under review it was, in fact, at its peak in the record for this city.

*Ottawa.*—There was a small decline in Ottawa, chiefly in manufacturing, while con-

NOTE: The "relative weight" in Table 1 shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS (AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Sept. 1.....	126.8	127.3	120.5	126.9	143.3	121.5
Relative Weight of Employment by Districts as at Sept. 1, 1929.....	100.0	7.8	27.6	40.7	15.2	8.7

struction was brisker. The 138 firms furnishing returns reported 13,482 employees, compared with 13,643 in the preceding month. On September 1, 1928, a reduction involving almost the same number of workers had been noted, but the index then was rather lower.

*Hamilton.*—Manufacturing, particularly of iron and steel and textile products, reported contractions in Hamilton, while other industries showed little general change; 222 employers recorded 39,415 persons on their pay-

rolls, as against 40,816 on August 1. Employment was in much greater volume than at the beginning of September a year ago, or at the same period in any other year for which data are available.

*Windsor and the Adjacent Border Cities.*—An advance was registered in the Border Cities, where the 131 co-operating firms reported 17,770 workers, as against 17,646 in the preceding month. Automobile plants afforded slightly increased employment, and services

NOTE. The "relative weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by cities as at Sept. 1, 1929	13.4	1.2	11.7	1.2	3.6	1.6	3.1	2.8

were also more active. A large gain had been indicated on the same date last year and the index number then was considerably higher.

Winnipeg.—Employment in Winnipeg showed a decline following a period of steady expansion during the summer; the situation was practically the same as on September 1, 1928. Manufacturing, construction and trade recorded most of the reduction. An aggregate working force of 34,061 persons was reported by the 313 employers whose returns were received; these firms had 34,660 employees in the preceding month.

Vancouver.—There was a slight gain in activity in Vancouver, according to the statements received from 269 firms employing 30,592 workers, as against 30,440 on August 1. Manufacturing and communications reported increases in personnel, while only small changes took place in other groups. Employment was in greater volume than on the same date a year ago, when smaller additions to staffs had been noted.

Index numbers by cities are given in Table II.

NOTE: The "relative weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE CALENDAR YEAR 1926=100)

**Manufacturing**

Iron and steel, lumber, pulp and paper, textile, tobacco, non-ferrous metal, rubber and edible animal product factories showed curtailment, in some cases of a seasonal character, while the vegetable food, electrical apparatus, leather, fur and chemical divisions recorded improvement. Statements were received from 4,173 manufacturers employing 571,744 operatives, as compared with 580,295 at the beginning of August. Employment on

September 1, 1928, had advanced slightly, but the index then was several points lower than on the date under review.

*Animal Products—Edible.*—Declines were shown in meat-preserving and fish canneries, chiefly in the Maritime and Western Provinces, while other divisions reported only slight changes. The payrolls of the 223 co-operating factories aggregated 19,905 employees, as compared with 20,437 in the preceding month. Employment on September 1, 1923,

<sup>1</sup>The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

had also increased, and the index number then was higher.

*Leather and Products.*—A further gain was shown in leather factories, in which it largely exceeded that noted at the beginning of September last year, when the level of employment was rather higher. Statements were received from 173 manufacturers having 16,962

persons in their employ, as against 16,630 on August 1. Quebec and Ontario firms reported most of the increase.

*Lumber and Products.*—The commencement of seasonal inactivity in sawmills caused a reduction in employment, and furniture and vehicle factories also released help. The decrease, which was reported to a considerable

extent in Ontario, was greater than that noted on September 1, 1928; the index then was practically the same as on the date under review. A combined working force of 61,837 persons was registered by the 716 establishments from which returns were received, which had employed 63,459 in their last report.

*Plant Products—Edible.*—Biscuit, confectionery, chocolate, cocoa, fruit and vegetable factories reported heightened activity; the improvement was on a much larger scale than on the same date last year. Data were compiled from 365 firms in the vegetable food group, whose payrolls rose from 33,808 on August 1, to 35,421 at the beginning of September. All provinces reported advances, that in Ontario being most pronounced.

*Pulp and Paper Products.*—Employment in this group showed a reduction, mainly in pulp and paper mills and printing shops; the tendency was also downward on September 1 last year, when the index was several points lower than on the date under review. The forces of the 529 co-operating establishments included 67,752 persons, as compared with 68,948 in the preceding month. A large proportion of this decline took place in Quebec and Ontario.

*Rubber Products.*—Contractions were indicated in rubber factories, 37 of which employed 17,825 workers, or 575 less than in their last report. Practically all the decline took place in Ontario. A gain had been registered on September 1, 1928, when the index was lower than on the date under review.

*Textile Products.*—Continued decreases were noted in textile factories, 565 of which had 79,579 employees, as against 80,384 on August 1. Most of the reduction took place in Quebec. Woollen, cotton and cordage factories registered the bulk of the loss, while knitting mills were busier. Employment on the same date last year was in practically the same volume.

*Tobacco, Distilled and Malt Liquors.*—A loss was noted in this industry on September 1, when 928 persons were released from the payrolls of the 149 co-operating factories, which employed 15,494 operatives. A large share of the decline took place in tobacco plants in Quebec, on account of repairs. The level of employment was slightly lower than at the beginning of September, 1928, when a gain had been indicated.

*Chemical Products.*—Employment in this division showed improvement, according to statistics from 116 employers of 8,102 persons, compared with 7,914 on August 1. On-

tario plants absorbed most of these extra workers. The situation was better than on the same date a year ago.

*Clay, Glass and Stone Products.*—Stone works released some employees, while the other divisions showed only small changes. Statements were received from 144 plants, having 14,003 workers, as against 14,186 in the preceding month. The Prairie Provinces registered a large proportion of the decrease. An advance had been noted on the same date last year, but the situation then was not so favourable.

*Electric Current.*—For the first time since the beginning of this year, a reduction was shown in electric current plants, 93 of which employed 16,543 persons, compared with 16,831 in their last report. Quebec recorded most of the decline. The index was higher than on September 1, 1928.

*Electrical Apparatus.*—Employment in this group increased substantially at the beginning of September, when 890 workers were added to the forces of the 49 co-operating establishments, which had 15,694 employees. This gain occurred mainly in Quebec and Ontario; it was considerably larger than that noted on the corresponding date in 1928, when the index was many points lower.

*Iron and Steel Products.*—Agricultural implement, railway car, shipbuilding, rolling mills and some other branches of the iron and steel group recorded contractions in employment; there was a reduction of 5,188 in the forces of the 669 co-operating iron and steel manufacturers, who employed 157,727 persons. activity decreased chiefly in Quebec and Ontario. The trend on September 1, 1928, was also unfavourable, but the index number then was lower than on the date under review.

*Non-Ferrous Metal Products.*—The precious metal division reported lowered employment, while there were only small general changes in other branches of this group; 104 manufacturers employed 20,207 operatives, as against 20,682 on August 1. Although an advance had been indicated on the same date last year, employment then was in much less volume.

### Logging

The commencement of seasonal operations in logging camps caused a large increase in employment, chiefly in Ontario. The 198 co-operating firms reported 20,983 workers, compared with 18,729 in the preceding month. Employment was rather more active than on September 1, 1928, when smaller gains had been reported.

### Mining

*Coal.*—Data were received from 79 operators having 27,185 men on their payrolls, as compared with 26,756 at the beginning of August. The expansion was largely confined to the Prairie Provinces. Advances had also been registered on the same date a year ago, but the index number then was slightly lower.

*Metallic Ores.*—Employment in metallic ore mines continued to improve, according to returns from 69 firms whose forces rose from 16,623 persons on August 1 to 16,991 at the beginning of September. Ontario and British Columbia recorded most of the increase. A smaller gain had been shown on September 1, 1928, when the index number was some 16 points lower.

### Communications

Further large additions to staffs were noted in both telegraphic and telephonic communications. Statistics were compiled from 171 companies and branches employing 30,957 workers, as against 30,275 in their last report. Employment continued in greater volume than on the same date in 1928 or any other year of the record.

### Transportation

*Street and Electric Railways and Cartage.*—Considerable expansion was shown in local transportation on the date under review, when 819 employees were added to the forces of the 125 firms furnishing data, who had 26,433 in their employ. A large proportion of this advance was in the Prairie Provinces. The index number was many points higher than at the beginning of September, 1928, when a smaller gain was indicated.

*Steam Railways.*—There was a decrease in the number employed in steam railway operation on September 1, according to the 105 companies and branches from which returns were received, and which reported 88,463 employees, compared with 89,372 on August 1. Employment was at a higher level than on the same date last year, when contractions were also noted. Practically all the loss took place in the Prairie Provinces, while elsewhere the changes were slight.

*Shipping and Stevedoring.*—There was another marked increase in employment in water transportation, in which activity was rather greater than on the same date in 1928. Statements were received from 72 employers of 19,436 workers, as against 19,044 in the preceding month. Most of the advance was

reported in British Columbia, and the Maritime Provinces.

### Construction and Maintenance

*Building.*—Further important expansion was shown in building construction, bringing the index number to 174.8, its maximum since this series was instituted in 1920. Data were received from 676 contractors, whose payrolls rose from 65,412 on August 1 to 67,695 persons on the date under review. The trend was particularly favourable in Quebec.

*Highway.*—There was a shrinkage in this group, 594 men being released from the forces of the 239 co-operating employers, who had 51,525 workers; there were declines in all provinces. Activity was greater than on September 1 of last year.

*Railway.*—A large, seasonal contraction in employment was indicated by the 45 firms furnishing data in this division, who employed 54,242 persons, as against 60,632 in the preceding month. Practically all the curtailment was in Ontario and the Western Provinces. Although more pronounced losses had been noted on the corresponding date of 1928, the index number then was some points higher.

### Services

No general change was registered in the service group, which has shown unusual activity this year. Employment on the date under review was at the maximum so far reached in this record. The 211 establishments furnishing returns reported 24,171 assistants, as against 24,131 on August 1.

### Trade

There was an increase in staffs in both retail and wholesale trade; employment continued at a higher level than in the autumn of any other year of the record, which was instituted in 1920. Returns were received from 675 establishments employing 84,024 persons, compared with 83,161 at the beginning of August.

### Tables

Index numbers of employment by economic areas, leading cities and industries, are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of August, 1929

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed while unions which are involved in industrial disputes are excluded from our tabulations. As the number of unions making returns varies from month to month, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

shared in the reductions reported during August over the same month last year, Alberta unions as in the previous comparison reporting the most noteworthy declines.

A separate compilation is made each month of unemployment in the largest city in each province with the exception of Prince Edward Island. Of these, Halifax, Winnipeg and Regina unions during August reported a greater volume of work available to their members than in July, while employment for Saint John, Montreal, Toronto and Vancouver unions was somewhat curtailed. The changes, however, were not particularly noteworthy in any city.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The unemployment volume among local trade unions at the close of August, showed a nominal increase when compared with the returns for the previous month, the 1709 organizations from which reports were received with a total membership of 204,547 persons indicating 3.5 per cent of inactivity compared with an unemployment percentage of 3.0 in July. The situation was also less favourable than in August last year when the percentage of idle members stood at 2.4. Alberta unions with a decline in employment of 3 per cent over July showed the most substantial change during August, due chiefly to dullness in the coal mines of the provinces, while from Nova Scotia, Ontario and British Columbia lesser contractions in employment were registered. In New Brunswick and Saskatchewan employment remained at the same level as in July, while Quebec and Manitoba unions reflected nominally improved conditions. All provinces

When compared with the returns for August of last year the tendency in all cities, with the exception of Halifax, was toward lessened employment the contractions ranging from 3.3 per cent in Edmonton to .3 per cent in Saint John while the improvement recorded from Halifax was very slight.

The accompanying chart illustrates the trend of unemployment from January 1923 to date. The projection of the curve during August was slightly upward from that of July indicating a reduction in the volume of employment afforded and at the end of the month the curve rested at a level somewhat above that shown at the close of August last year.

The manufacturing industries showed very slight change during August from the previous month the tendency, however, being unfavourable. Reports were tabulated at the close of the month from an aggregate of 479 unions with 59,557 members, and of these

2,326, or a percentage of 3.9, were idle, compared with 3.6 per cent in July. Among pulp and paper makers, leather, glass, jewelry and garment workers increased activity, on a small scale, was registered during August. This was, however, slightly more than offset by the reductions reported among printing tradesmen, iron, steel and textile workers, bakers and metal polishers. Compared with the situation shown in August, 1928, in the manufacturing industries, when 3.5 per cent of idleness was recorded, employment for iron and steel workers, printing tradesmen, textile and glass workers, hat and cap makers, metal polishers and bakers was at a somewhat lower level dur-

ing the month under survey. On the other hand, wood, garment and leather workers were rather more fully engaged.

From unions of coal miners 46 returns were tabulated during August showing a membership of 16,590 persons, 845 of whom, or a percentage of 5.1, were without work on the last day of the month, compared with 1.8 per cent of inactivity in July, and with 1.3 per cent in August 1928. Unemployment among Alberta miners accounted largely for the unfavourable situation reported in comparison with July, although Nova Scotia miners, in a much smaller measure, contributed to the total decline. In British Columbia all miners were reported at work as in July. In making a comparison with the returns for August last year Alberta and Nova Scotia unions as in the preceding comparison reflected a lower employment level during the month under review, while in British Columbia no miners were reported idle, compared with a fractional unemployment percentage in August last year. A large number of coal miners continued to show greatly reduced time.

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month.	N. S. and Pr. Edward Island.	New Brunswick.	Quebec.	Ontario.	Manitoba.	Saskatchewan.	Alberta.	British Columbia.	Canada.
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4
Average 1920.....	1.8	2.0	7.2	3.4	3.1	3.2	2.8	11.2	4.9
Average 1921.....	11.3	8.5	16.6	9.7	8.5	7.8	7.8	23.5	12.7
Average 1922.....	7.1	4.3	8.6	5.0	8.9	5.4	6.1	12.4	7.1

Aug., 1929.....	2.2	8	4.6	2.5	2.5	1.8	5.7	3.9	3.5

The situation in the building and construction trades during August remained much the same as in the previous month, as indicated by the reports received from a total of 208 unions embracing a membership of 30,451 persons. Of these 2,201, or a percentage of 7.2, were without employment on the last day of the month, compared with 7.0 per cent of unemployed members in July. Moderate reductions in activity were reported during August by carpenters and joiners, electrical workers, tile layers, lathers and roofers and hod carriers and building labourers. These reductions were in a large way offset by the improvement shown among bricklayers, masons and plasterers, granite and stone cutters, bridge and structural iron workers, painters, decorators and paper hangers and plumbers and steam fitters. The building trades, as a whole reflected less favourable conditions during August than in the same month a year ago, when 3.5 per cent of the members reported were without work. In this comparison unemployment among bricklayers, masons and plasterers and carpenters and joiners was more prevalent during the month reviewed, while contractions of lesser magnitude were manifested by electrical workers, granite and stone cutters, painters, decorators and paper hangers, plumbers and steam fitters, tile layers, lathers and roofers and hod carriers and building labourers. Bridge and structural iron workers alone reported a better situation than in August last year, the im-

provement being fairly substantial when viewed from a percentage basis though involving a small number of workers.

The unemployment level in the transportation group during August was unchanged from that of July, the 723 unions from which reports were tabulated with 70,574 members indicating 1.9 per cent of idleness in both months. Fluctuations occurred, however, in the various divisions of the group. Steam railway employees (whose returns constitute about 80 per cent of the entire group membership reporting) were scarcely so fully engaged as in July, and street and electric railway employees and teamsters and chauffeurs also registered nominal employment recessions. These were, however, offset by the expansions recorded among navigation workers. Comparing with the situation in the transportation industries during August last year, when 1.7 per cent of inactivity was registered, employment for navigation workers was at a considerably higher level during the month under review. Among steam railway employees moderate declines in work available were registered and teamsters and chauffeurs and street and electric railway employees showed nominal curtailment of activity.

The returns on unemployment from long-shore workers, owing to the casual nature of their employment are tabulated separately each month. Reports for August were received from 14 associations of these workers, covering a membership of 6,914 persons, of whom 932, or a percentage of 13.5 were idle at the end of the month, contrasted with an unemployment percentage of 13.4 in July. Some slight improvement was noted in comparison with August last year, when the percentage of idle members stood at 17.2.

A very favourable situation was indicated by retail clerks at the close of August, the 7 unions with 1413 members from which reports were tabulated, showing .1 per cent of idleness compared with .3 per cent in July and with .8 per cent in August last year.

Adequate work was supplied for civic employees during August, as indicated by the

reports received from 69 unions embracing 7,220 members, while in the previous month and in August, 1928, fractional unemployment percentages only were recorded.

From unions in the miscellaneous group of trades 119 reports were received during August, combining a membership of 5,969 persons, of whom 277, or a percentage of 4.6, were idle at the end of the month, contrasted with 3.6 per cent in July and with 3.3 per cent in August last year. Hotel and restaurant employees, barbers and stationary engineers and firemen reported slight reductions in activity when compared with July, while conditions for theatre and stage employees were somewhat improved. As compared with August last year stationary engineers and firemen and hotel and restaurant employees were not so fully engaged. Slight advances in employment were, however, indicated by theatre and stage employees and barbers.

Fishermen reported very little change in the level of activity in the three months used here for comparison, the 3 unions reporting at the close of August, with 765 members, indicating 1.6 per cent of idleness compared with 1.3 per cent in July and with .7 per cent in August last year.

Unemployment for lumber workers and loggers showed a noteworthy increase during August over the previous month, although a much improved situation was manifested when compared with August last year. Returns for August were supplied by 4 unions of these workers, with 991 members, of whom 6.9 per cent were idle on the last day of the month, in contrast with 1.1 per cent in July and with 12.5 per cent in August, 1928.

Table II shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1928 inclusive, and also the percentage of unemployment by provinces for August each year from 1919 to 1926 inclusive, and for each month from January, 1927, to date. Table I summarizes the returns in the various groups of industries for the same months as in Table II.

### (3) Employment Office Reports for August, 1929

During the month of August, 1929, the reports from the offices of the Employment Service of Canada showed an increase of nearly 44 per cent in the average daily placements over those of the preceding period, while a decrease of 31 per cent was registered when a comparison was made with the average daily placements effected during the corresponding month a year ago. This loss was

almost entirely due to decreased farm placements, though lesser declines were registered in all other groups, except logging, where a 15 per cent gain was shown. In comparison with the preceding month farming showed the highest gain, followed by smaller increases in logging, services, construction and maintenance, and trade, while fewer placements were made in manufacturing, transportation and mining.

The accompanying chart shows the trend of employment since January, 1927, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen that the curve of vacancies in relation to applications rose steadily throughout the month, and at the close of the period under review was practically on the same level as that shown at the close of the corresponding period last year. The curve of placements, however, recorded a nominal decline during the first half of August, but during the latter

was 2,047, as compared with 1,418 during the preceding month and with 2,828 in August a year ago.

The average number of applications for employment received daily by the offices of the Service during the month under review was 2,271, in comparison with 1,777 in July, 1929, and with 3,011 during August last year.

The average number of placements made daily by the offices of the Service during August, 1929, was 1,901, of which 1,458 were in regular employment and 443 in work of one week's duration or less, as compared with a total daily average of 1,325 during the preceding month. Placements in August a year

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

half of the month showed a sharp upward trend; nevertheless, at the close of the period, it was still some few points lower than that reached at the close of August, 1928. The ratio of vacancies to each 100 applications was 82.6 during the first half and 95.3 during the second half of August, 1929, in contrast with the ratios of 90.8 and 95.8 during the corresponding periods of 1928. The ratios of placements to each 100 applications during the periods under review were 76.1 and 88.9 as compared with 87.6 and 93.5, respectively, during the corresponding month of 1928.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during August, 1929,

ago averaged 2,750 daily, consisting of 2,256 placements in regular and 494 in casual employment.

During the month of August, 1929, the offices of the Service referred 52,581 persons to vacancies and effected a total of 51,313 placements. Of these the placements in regular employment were 39,361, of which 33,829 were of men and 5,532 of women while placements in casual work totalled 11,952. The number of vacancies reported by employers was 42,774 for men and 12,480 for women, a total of 55,254, while applications for work numbered 61,317, of which 47,302 were from men and 14,015 from women.

#### NOVA SCOTIA

During the month of August, 1929, positions offered to employment offices in Nova Scotia were over 20 per cent lower than in July, but nearly 3 per cent higher than in August last year. Placements likewise showed a loss of almost 13 per cent in comparison with the preceding month and a gain of about 15 per cent over those of August, 1928. This latter gain was chiefly accounted for by increased placements in construction and maintenance, declines showing in all other groups, except logging and transportation, where increases were nominal only. Placements by industrial groups included: logging, 47; construction and maintenance, 258; trade, 52; and services, 257, of which 173 were of household workers. During the month regular employment was secured for 292 men and 52 women.

#### NEW BRUNSWICK

There was a decrease of almost 14 per cent in the number of positions offered through offices in New Brunswick during August, 1929, when compared with the preceding month, and of nearly 2 per cent in comparison with the corresponding month last year. Placements were about 10 per cent less than in July but over 3 per cent more than in August, 1928, all changes under the latter comparison being of minor importance. Industrial divisions in which most of the placements were offered during the month were: manufacturing, 65; construction and maintenance, 181; trade, 43; and services, 484, of which 400 were of household workers. Placements in regular employment numbered 289 of men and 35 of women.

#### QUEBEC

The demand for workers as indicated by orders listed at offices in Quebec during August, 1929, decreased more than 3 per cent from

the preceding month and declined 27 per cent from that of the corresponding month last year. Placements showed a gain of 8 per cent over July, but a decrease of nearly 20 per cent from those of August, 1928. Declines were shown in all divisions except logging and transportation, the higher gain being in the former group and the largest decline in construction and maintenance. Placements by industrial groups included: manufacturing, 113; logging, 1,062; farming, 66; transportation, 89; construction and maintenance, 699; and services, 638, of which 340 were of household workers. During the month under review, 2,228 men and 471 women were placed in regular employment.

#### ONTARIO

During August, 1929, orders received at employment offices in Ontario called for 11 per cent fewer workers than in the preceding month and over 23 per cent less than in the corresponding month last year. There were also decreases of 14 per cent and 23 per cent, respectively, in placements from July, 1929, and from August, 1928. Logging showed a substantial gain under the latter comparison, but this increase was more than offset by declines in all other groups, the most marked being in construction and maintenance, farming, manufacturing and transportation. The number of placements effected during the month under review by industrial divisions included: manufacturing, 2,070; logging, 1,217; farming, 1,120; mining, 75; transportation, 465; construction and maintenance, 2,751; trade, 592; and services, 4,533, of which 2,499 were of household workers. During the month regular employment was found for 7,091 male and 1,626 female workers.

#### MANITOBA

Orders listed at employment offices in Manitoba during August, 1929, called for nearly 88 per cent more workers than those of the preceding month, but there was a decline of about 34 per cent from the total of the corresponding month last year. There was also an increase of over 89 per cent in placements when compared with July, but a decrease of about 26 per cent when compared with August, 1928. This decline from last year was almost entirely due to fewer placements in farming, the decrease in that group representing over 84 per cent of the net loss. Logging and mining alone showed nominal gains. Industries in which most of the placements were effected were: farming, 4,518; manufacturing, 159; logging, 71; construction and maintenance, 494; trade, 243; and services,

2,253, of which 1,783 were of household workers. There were, during the month, 5,029 placements of men and 640 of women in regular employment.

#### SASKATCHEWAN

Opportunities for employment as indicated by orders received at offices in Saskatchewan during August, 1929, were 298 per cent higher than in the preceding month, but over 22 per cent less favourable than in the corresponding month last year. Placements increased more than 197 per cent over July, but declined nearly 22 per cent when compared with August, 1928. Though nearly 65 per cent of the entire placements for the province was in farming, yet the total effected was considerably less than in August last year, and was mainly responsible for the reduction under this comparison. Lesser declines were shown in all other groups except manufacturing, logging and construction and maintenance, where minor gains occurred. Placements by industries included: manufacturing, 246; farming, 5,960; transportation, 97; construction and maintenance, 1,205; trade, 200; and services, 1,468, of which 920 were of household workers. Regular employment was procured for 7,254 men and 876 women during the month.

#### ALBERTA

There was an increase of over 165 per cent in the number of positions offered through employment offices in Alberta during August, 1929, when compared with the preceding month, but a decrease of 51 per cent in comparison with the corresponding month last year. Placements showed an increase of 167 per cent when compared with July, but were over 46 per cent less than in August, 1928. The bulk of the placements during the month was in farming, though less than half the number recorded in August, 1928, were effected during the corresponding month this year. Construction and maintenance also showed a marked decline, as did all other groups, except transportation and services, which showed slight improvement. Industrial groups in which employment was found for the majority of the workers included: manufacturing, 376; farming, 5,899; mining, 83; transportation, 205; construction and maintenance, 704; trade, 183; and services, 1,175, of which 798 were of household workers. Placements in regular employment numbered 6,821 of men and 532 of women.

#### BRITISH COLUMBIA

Employment opportunities as indicated by orders received at employment offices in British Columbia during August, 1929, were

more favourable than those shown during the preceding month and the corresponding month last year, there being an increase in the demand for workers of 37 per cent and 21 per cent respectively. Placements showed an increase of nearly 79 per cent over July, but were 40 per cent lower than in August, 1928. A large part of the placements effected during the month were transfers of harvesters to the Prairie Provinces, but this number was considerably less than in August a year ago, and was responsible for the decline under this comparison. Losses were also noted in manufacturing, logging, mining, transportation, construction and maintenance, and trade, and these also contributed, though in a lesser degree, to the total decline registered above. Services alone showed a small increase. Placements by industrial divisions included: manufacturing, 924; logging, 337; farming, 3,712; mining, 116; transportation, 233; construction and maintenance, 1,109; trade, 272; and services, 1,722, of which 797 were of household workers. During the month 4,825 men and 1,300 women were placed in regular employment.

#### Movement of Labour

During the month of August, 1929, the offices of the Employment Service of Canada made 39,361 placements in regular employment of which 29,342 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 4,014 were granted the Employment Service reduced transportation rate 2,746 going to points within the same province as the despatching office and 1,268 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Of the 392 persons who were transferred by Quebec offices at the special reduced rate during August 96 went to provincial employment and 296 to points in other provinces. The provincial movement included 87 loggers and 6 saw mill labourers going from Montreal and 3 carpenters from Quebec to centres within their respective zones. The transfers outside the province were all of bush workers who received their certificates at Montreal for Sault Ste. Marie and vicinity.

Certificates for reduced transportation were granted by Ontario offices during August to 383 workers, 315 of whom travelled to provincial centres, the balance representing an interprovincial movement. Within the pro-

vince 259 of the transfers were of bush men, mainly for points around Sudbury and Timmins, the majority of whom secured their certificates for reduced transportation at the Toronto, Sudbury, Pembroke and North Bay offices. From Pembroke also 2 lumber workers went to Sault Ste. Marie and one cook to Sudbury, and from Toronto 10 labourers were conveyed to Peterboro. North Bay, in addition, shipped 2 lumber workers to Cobalt and 5 general labourers and 3 lumber workers within its own zone, while from Sudbury one saw mill hand proceeded to employment within that zone. Travelling from Port Arthur were 7 carpenters going to Guelph and 4 fire fighters and 3 cooks to employment within the Port Arthur zone. The Fort William office was responsible for the transfer of 5 construction labourers to Guelph and of 3 mill hands within its own zone. Kingdom received one stonemason from Hamilton; North Bay 5 bricklayers from London and 2 from Sault Ste. Marie; and Ottawa 2 stonemasons from Windsor. Of the persons transferred outside the province 64 were for the Winnipeg zone including 22 farm hands and one saw mill labourer travelling from Fort William, 22 farm hands and 3 construction workers from Port Arthur and 16 miners from Sudbury. In addition, 2 muckers were sent from Cobalt to the Quebec zone, one farm hand from Port Arthur to Brandon and one diamond drill runner from Timmins to Rouyn.

Manitoba offices effected transfers of 1,515 workers, during August, 1,048 of whom went to employment within the province and 467 to situations in other provinces. Within the province, the Winnipeg office despatched 19 farm generals, 5 farm hands, 8 carpenters, 5 hotel workers and one cook to the Brandon zone, 2 hotel employees, one farm domestic and one housekeeper to Dauphin and 900 harvest hands, 72 mine workers, 17 highway construction workers, 11 brickyard labourers, 3 hotel employees, one engineer and one blacksmith within the territory covered by the Winnipeg office. In addition, one farm hand travelled from Portage la Prairie to Brandon. The Saskatchewan harvest fields claimed a large share of the workers going to employment outside the province, 388 harvest hands and 2 farm household workers having secured certificates to various points of employment within that province. Of these 2 were granted their certificates for reduced transportation at Brandon and the balance at Winnipeg. From Winnipeg also 5 harvest hands and one farm domestic proceeded to Alberta rural districts. Port Arthur and vicinity was the destination of 12 saw mill labourers, 12 mine workers, 5 cooks, 3 cookees, 2

hotel employees, one farm housekeeper and one bush man conveyed from Winnipeg while from the same centre Sault Ste. Marie received 18 bushmen and 8 dam construction labourers, Ottawa 5 stonemasons, Calgary 2 electricians, Swift Current one hotel manager and Yorkton one cookee.

In Saskatchewan 315 certificates for reduced transportation were issued during August, 308 provincial and 9 interprovincial. Of the former 261 were granted to harvest workers, Moose Jaw transferring 67 harvest hands and 6 farm household workers, Regina 114 farm hands and one farm domestic, and Saskatoon 71 harvest workers and 2 farm household workers to employment at various centres throughout the province. To points within their respective zones Moose Jaw despatched 12 railroad construction workers, 4 highway construction teamsters, one carpenter and one hotel employee, and Saskatoon 4 teamsters. From Regina, in addition, 4 highway construction teamsters were conveyed to Swift Current, one miller to North Battleford, 5 highway construction teamsters to Estevan and 4 highway construction workers within the Regina zone. The remaining provincial certificates, 9 in number, were issued at Prince Albert to construction teamsters travelling to North Battleford. The movement outside the province was entirely from Moose Jaw, from which centre 7 carpenters were carried at the special rate to Dauphin, and one farm hand each to the Lethbridge and Edmonton zones.

The number of workers travelling at the reduced rate from Alberta centres during August was 1,113, of whom 716 went to points within the province and 397 to other provinces. Provincially the Calgary office transferred one cook to Drumheller, 2 mine workers and one cook to Edmonton, one flunkey to Lethbridge and 48 harvest hands and 6 farm household workers to the agricultural localities of the province. The labour movement from Edmonton comprised the transfer of one teamster, one engineer and one labourer to Calgary, one saw mill engineer to Lethbridge, one hotel cook to Drumheller, 23 mine workers, 11 highway construction labourers, 33 saw mill labourers, 3 loggers, one hotel employee, 4 labourers and one shoe repairer to points within the Edmonton zone, and of 573 harvest workers and 3 farm domestics to various provincial farm areas. With the exception of 2 stone masons who were carried at the reduced rate from Calgary to Ottawa the movement outside the province was of harvest workers going to Saskatchewan rural points, including 391 harvest hands

and one farm domestic despatched from Edmonton and 3 harvest workers from Calgary.

Offices in British Columbia issued 296 certificates for reduced transportation during August, 265 of which were to provincial points and the remainder to stations in other provinces. Included in the provincial movement from Vancouver were 58 bush workers, 9 railroad construction workers, 3 plasterers, one pipe fitter and one blacksmith going to Kamloops; 15 bushmen, 14 mine workers, 4 farm hands, 2 carpenters, one auto mechanic, 2 engineers, one hotel employee and one blacksmith to Penticton; 13 railroad construction workers, one steel sharpener and one engineer to Nelson; 8 mine workers and 3 building construction workers to Revelstoke; 4 farm hands and one miner to Cranbrook; 2 cooks and 2 flunkeys to Prince George; one fruit picker each to Kelowna and Vernon; and 22 bush workers, 12 railroad construction labourers, 8 tunnel construction workers, 6 mine workers, one shingler, 3 power construction flunkeys and one engineer to various points within the Vancouver zone. The Kamloops office transferred one labourer, Nelson 45 farm hands and one teamster, and Prince Rupert 2 cooks and one teamster to stations within their respective zones. From Prince George one logger went to Prince Rupert and 3 highway construction workers and 3 lumber workers within the Prince George zone. The remaining 6 transfers provincially were of fruit pickers who travelled from New Westminster to employment in the Kelowna zone. The interprovincial movement was of harvest workers for the Prairie Provinces, Alberta receiving 19 harvest hands and 3 farm domestics; Saskatchewan 5 farm hands and 3 farm household workers; and Manitoba one farm

hand. Several of the offices were responsible for the transfer of these workers.

Of the 4,014 persons who benefited by the Employment Service reduced transportation rate during August, 1,081 were transported by the Canadian National Railways, 2,884 by the Canadian Pacific Railway, 35 by the Temiskaming and Northern Ontario Railway, and 14 by the Pacific Great Eastern Railway.

In addition to the transportation facilities afforded workers at the 2.7 cents per mile rate referred to in the above, the railway companies granted a special harvest rate during August as in other years, from British Columbia points to the Prairie Provinces. The movement of harvest workers to the Prairie Provinces from British Columbia was recruited entirely by the offices of the Employment Service and this special rate was granted by the railway companies to all applicants upon presentation of a certificate furnished by the Employment Service. Such certificates entitle the holder to a rate of \$11 from Victoria and \$10 from Vancouver or other British Columbia points (with the exception of Cranbrook, Revelstoke and Nelson, where the 2.7 cent per mile rate was in effect) to Calgary or Edmonton, beyond which point the fare is one-half cent per mile. From August 19, the date on which this reduced rate became effective, until the close of the month, 3,040 persons availed themselves of the opportunities afforded through this special rate from British Columbia centres, 2,040 harvest hands and 276 farm household workers going to Saskatchewan centres, 541 harvest workers and 166 farm domestics to Alberta points and 10 harvest hands and 7 farm domestics to Manitoba rural districts. Of these 1,114 were carried by the Canadian National Railways and 1,926 by the Canadian Pacific Railway.

#### (4) Building Permits Issued in Canada During August, 1929

There was a slight seasonal decline in the value of the building permits issued during August, 1929, as compared with July, but in the more significant comparison with August last year there was a considerable increase; during the month under review the 61 co-operating centres authorized building estimated cost \$21,560,361, as compared with \$22,841,709 in July, 1929, and \$17,448,542 in August, 1928. There was, therefore, a decrease of 5.6 per cent in the first comparison, and an increase of 23.6 per cent in the second. The aggregate for the elapsed months of this year continued higher than in the same months of any other year since 1920, exceeding the previous high level in 1928 by 16 per cent.

Some 50 cities furnished detailed statistics showing that they had issued nearly 1,400 permits for dwellings estimated to cost approximately \$6,000,000 and over 2,800 permits for other buildings valued at about \$13,500,000. During July, authority was granted for the erection of some 1,500 dwellings and 2,900 other buildings, estimated at about \$7,000,000 and \$15,000,000, respectively.

New Brunswick, Saskatchewan and Alberta reported gains as compared with July, 1929, that of \$1,245,015, or 97.2 per cent, in Saskatchewan being most noteworthy. Of the reductions elsewhere registered, that in British Columbia of \$1,502,218 or 55.0 per cent was greatest.

New Brunswick, Ontario, Saskatchewan and Alberta reported higher aggregates of building permits issued than in August of last year, Ontario and Alberta showing the largest increases. Declines in this comparison were recorded in Nova Scotia, Quebec, Manitoba and British Columbia, that of \$424,416 or 9.2 per cent in Quebec being most pronounced.

Of the larger cities, Toronto showed improvement as compared with August, 1928, but the total was smaller than in July, 1929, while Montreal, Winnipeg and Vancouver reported decreases in both comparisons. Of the other centres, Moncton, Shawinigan Falls, Three Rivers, Brantford, Fort William, Galt, Hamilton, Kingston, Kitchener, Niagara Falls, Owen Sound, St. Catharines, St. Thomas, Moose Jaw, Regina, Calgary, Edmonton, Nanaimo and New Westminster registered gains in both comparisons.

*Cumulative Record for First Eight Months, 1929.*—The following table gives the value of the building authorized by 61 cities during August and in the first eight months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first eight months of the years since 1920 are also given (average 1926—100).

Year	Value of permits issued in August	Value of permits issued in first eight months	Indexes of Value of permits issued, first eight months (1920=100)	Average indexes of wholesale prices of building materials in first eight months (1926 average=100)
	\$	\$		
1929.....	21,560,361	168,606,059	195.4	99.6
1928.....	17,448,542	145,247,485	168.3	97.5
1927.....	29,478,378	126,690,292	146.8	96.8
1926.....	11,672,599	109,211,942	126.5	101.7
1925.....	9,511,008	88,223,328	102.2	104.3
1924.....	9,406,733	81,762,083	94.7	109.1
1923.....	11,425,031	97,551,074	113.0	111.7
1922.....	18,158,932	105,181,416	121.9	108.4
1921.....	10,928,039	77,665,614	90.0	128.6
1920.....	10,805,846	86,303,601	100.0	156.3

The aggregate for the first eight months of this year was 16.1 per cent greater than in 1928, the previous high level of the record, while the average index numbers of wholesale prices of building materials continue lower than in most years of the record. The accompanying table gives the value of the building permits issued by 61 cities during July and August, 1929, and August, 1928. The 35 cities for which records are available since 1910 are marked with asterisks.

TOTAL ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 61 CITIES

<sup>1</sup>Includes Prince Rupert not shown in the July report. <sup>2</sup>Report not received. <sup>3</sup>Includes Point Grey and South Vancouver formerly given separately. From Jan. 1929, when the amalgamation of these cities was effected, the total for Vancouver includes the "Greater Vancouver" aggregate, instead of that for the area formerly known as Vancouver

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during August is reproduced below. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the September issue relates to the situation existing in July, 1929. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for July and previous months taken from the September, 1929, issue of the *American Federationist*, the official publication of the organization, are reproduced below.

### Great Britain

There was little change in the general state of employment during August, apart from temporary fluctuations during the holiday period. There was an improvement in the coal-mining industry, in the jute industry, in the manufacture of boots and shoes, and in the cocoa, chocolate and sugar confectionery industry. On the other hand, there was a further decline in the building trade and in public works contracting, and there were increases in unemployment in the engineering and motor vehicle industries, in shipbuilding, in silk and artificial silk manufacture, in textile bleaching, dyeing and finishing, and in the clothing trades.

Among workpeople, numbering approximately 11,880,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 26th August, 1929 (including those temporarily stopped as well as those wholly unemployed), was 10·1, as compared with 9·9 at 22nd July,

1929, and with 11·6 at 20th August, 1928. For males alone the percentage at 26th August, 1929, was 11·0, and for females 7·6; at 22nd July, 1929, the percentages were 11·0 and 7·1. The percentage wholly unemployed at 26th August, 1929, was 7·7 as compared with 7·4 at 22nd July. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 26th August, 1929, was approximately 1,190,000, of whom 899,000 were men and 218,000 were women, the remainder being boys and girls; at 29th July, 1929, it was 1,188,000, of whom 914,000 were men and 208,000 were women; and at 27th August, 1928, it was 1,367,000, of whom 1,055,000 were men and 232,000 were women.

### United States

Employment in the United States decreased 0·2 per cent in July, 1929, as compared with June, and pay-roll totals decreased 3·8 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of May and June, 1929, and therefore cannot be included in the general statement for the month of July. The number of employees in Class I railroads as at June 15 totalled 1,719,274, representing an increase of 1·3 per cent since May 15. The amount of pay-roll in the entire month of June was \$237,758,344, representing a decrease over the previous month of 2·1 per cent.

Employment in manufacturing industries decreased 0·6 per cent in July as compared with June and pay-roll totals decreased 4·5 per cent. July in manufacturing industries is regularly the season for inventory taking and repairs, while pay-roll totals are further reduced by shutdowns on July 4. These shutdowns this year, in many instances, were prolonged over the following week-end, owing to the 4th falling on Thursday. The decrease in employment, however, was smaller than in any July since the bureau began the present series of reports in 1922.

The Bureau of Labour Statistics' weighted index of employment in manufacturing indus-

tries for July, 1929, is 98.2, as compared with 98.8 for June, 1929, and 92.2 for July, 1928; the weighted index of pay-roll totals for July, 1929, is 98.2, as compared with 102.8 for June, 1929, and 91.2 for July, 1928. The monthly average for 1926 equals 100.

The slaughtering, ice cream, and flour industries of the food group reported increased employment in July as compared with June, while each of the 10 industries of the textile group showed fewer employees. The outstanding decrease in this group was in women's clothing and was partly seasonal in character and partly the result of labour difficulties in certain sections. In the iron and steel group cast-iron pipe, structural ironwork, and machine tools gained in employment in July, while the iron and steel industry reported decreased employment of 0.7 per cent. Increased employment was shown also in furniture, leather, boots and shoes, paper boxes, book and job printing, fertilizers, petroleum refining, cement, brick, wagons, electric-railroad car repairing, electrical machinery, rubber boots, and ship-building. The automobile industry reported a drop in employment of 2.4 per cent, this being the third month of decreased employment since this industry reached its peak in April.

The rayon and radio industries, which are not yet included in the bureau's indexes, both added to their employees in July; the rayon increase was 4.1 per cent and the radio increase was 24.5 per cent.

The report for July, 1929, is based upon returns for 12,683 establishments in 54 of the principal manufacturing industries of the United States. These establishments in July had 3,526,174 employees, whose combined earnings in one week were \$93,576,416.

Five of the nine geographic divisions had more employees in manufacturing industries in July than in June—the Middle Atlantic, the West North Central, both the East and West South Central, and the Pacific. The West South Central division, however, alone reported a marked increase.

*Unemployment percentage.*—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 11 per cent; June, 9 per cent; July, 9 per cent.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Governments of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle range, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the

transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wages Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current

rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rate so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as

"B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the

wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

**Contracts Awarded Recently**

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

**DEPARTMENT OF INDIAN AFFAIRS**

*Contracts in Group "A" (Construction, etc.)*

Construction of a new Indian residential school at Brandon, Man. Name of contractor, J. H. Simmons, Winnipeg, Man. Amount of contract, \$147,742. A fair wages schedule was inserted in the contract as follows:

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour	
Bricklayers and masons.....	\$1 45	8
Carpenters.....	1 10	8
Electricians (inside wiremen).....	1 10	8
Painters.....	0 90	8
Plasterers.....	1 35	8
Plumbers and steamfitters.....	1 20	8
Roofers, felt and gravel.....	0 80	8
Sheet Metal workers.....	0 80	8
Concrete workers.....	0 45	9
Labourers, building.....	0 45	9
Labourers, common.....	0 35	9
Driver, two horses and wagon.....	0 70	10
Truck driver.....	0 40	10

Reconstruction of an Indian residential school on the Blackfoot Reserve near Gleichen, Alta. Name of contractors, Wyndels Construction Co., St. Boniface, Man. Amount of contract, \$43,178. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour	
Bricklayers and masons.....	\$1 45	8
Carpenters and joiners.....	1 00	8
Cement finisher.....	1 45	8
Cement mixers.....	0 50	3 to 10
Engineer—hoisting.....	1 00	8
Electricians.....	1 00	8

Stamping pads, ink, etc.....	316	96
Bag fittings.....	33,315	66
Scales.....	238	60

### Fair Wages Conditions in Harbour Commission Contracts

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" conditions, shall, as far as practicable, be observed by the department or departments of Canada, in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance, loan, or guarantee for any of the purposes mentioned." Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commissions throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and take the form of either the General Fair Wages Clause or a fair wages schedule.

Returns have been received in the Department of Labour showing that the following construction contracts have been executed recently by Harbour Commissions to which fair wages conditions applied:—

#### HALIFAX HARBOUR COMMISSIONERS

Construction of Transit Shed No. 27 at the Ocean Terminals, Halifax, N.S. Name of contractor, A. S. MacMillan, Halifax, N.S. Date of contract, September 7, 1929. Amount of contract, \$264,269.17. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours	
	per hour	Per day	Per week
Carpenters and joiners.....	\$0 73	8	44
Painters and decorators.....	0 73	8	44
Millwrights.....	0 73	8	44
Cement plasterers.....	1 00	8	44
Tile setters.....	1 00	8	44
Bricklayers.....	1 00	8	44
Sheet metal workers.....	0 77	8	44
Structural steel workers.....	0 75	8	44
Electrical workers.....	0 80	8	44
Plumbers and steamfitters.....	0 85	8	44
Blacksmiths.....	0 60	8	44
Blacksmiths' helpers.....	0 45	8	44
Roofer.....	0 65	8	44
Cement floor finishers.....	0 60	9	54
Concrete foreman.....	0 65	9	54
Labour foreman.....	0 45	9	54
Labourers.....	0 40	9	54
Certificated hoisting engineers.....	0 75	9	54
	per day		
Driver with horse and cart.....	\$5 00	9	54
Driver with team and wagon.....	7 00	9	54
	per month		
Steam shovel operator.....	\$200 00		

Time and a half for overtime up to midnight for foregoing, excepting steam shovel operators; double time after midnight, Sundays and holidays.

Restoration of concrete work at Transit Shed No. 2, Deep Water Terminals, Halifax, N.S. Name of contractors, the Metalkote Company (Maritime) Limited, Montreal, P.Q. Date of contract, August 20, 1929. Amount of contract, \$18,519. The General Fair Wages Clause was inserted in the contract.

Renewing the roofing of Transit Shed No. 2, at Deep Water Terminals, Halifax, N.S. Name of contractor, James Donohue, Ltd., Halifax, N.S. Date of contract, September 6, 1929. Amount of contract, \$11,685. The General Fair Wages Clause was inserted in the contract.

Additions to Grain Elevator and alterations to Track Shed at Ocean Terminals, Halifax, N.S. Name of contractors, the Folwell Engineering Co. of Canada, Ltd. Toronto, Ont. Date of contract, June 19, 1929. Amount of contract, \$395,000. The General Fair Wages Clause was embodied in the contract.

Installation of a car unloader at the Track Shed, Grain Elevator, Ocean Terminals, Halifax, N.S. Name of contractors, John S. Metcalf Co., Ltd., Montreal, P.Q. Date of contract, May 6, 1929. Amount of contract, \$50,000. The General Fair Wages Clause was embodied in the contract.

Additions to grain conveyers from the grain elevator at the Ocean Terminals, Halifax, N.S. Name of contractors, the Folwell Engineering Co. of Canada, Ltd., Toronto, Ont. Date of contract, September 10, 1929. Amount of contract, \$229,000. The Fair Wages Clause was inserted in the contract.

Paving of marginal roadway at Ocean Terminals, Halifax, N.S. Name of contractor, R. S. Allen, Halifax, N.S. Date of contract, July 27, 1929. Amount of contract, \$38,414.88. The General Fair Wages Clauses was inserted in the contract.

SAINT JOHN HARBOUR COMMISSIONERS

Construction of substructure for grain elevator and construction of piers at West Saint John, N.B. Name of joint contractors, Atlas Construction Co., Ltd., and the Standard Dredging Co., Ltd., Montreal, P.Q. Date of contract, July 27, 1928. Amount of contract, approximately \$2,000,000. The General Fair Wages Clause was inserted in the contract.

Construction of Grain Elevator at West Saint John, N.B. Name of contractors, The E. G. M. Cape Co., Ltd., Montreal, P.Q. Date of contract, October 5, 1928. The

General Fair Wages Clause was inserted in the contract.

Dredging work in harbour, West Saint John, N.B. Name of contractors, the Standard Dredging Co., Ltd., Montreal, P.Q. Date of contract, June, 1929. Amount of contract, approximately \$35,000. The General Fair Wages Clause was inserted in the contract.

Construction of timber grain conveyer galleries at West Saint John, N.B. Name of contractors, the MacDonald Engineering Co., Saint John, N.B. Date of contract, August 6, 1929. Amount of contract, \$123,572. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours	
	per hour	Per day	Per week
Carpenters.....	\$0 60	8	48
Painters.....	0 60	8	48
Blacksmiths.....	0 60	8	48
Electricians.....	0 60	8	48
Sheet metal workers.....	0 60	8	48
Riggers.....	0 60	8	48
Mechanics' helpers.....	0 45	8	48
Hoisting engineer.....	0 60	9	54
Labourers.....	0 35	9	54
Driver with horse and cart.....	\$5 00	9	54
Driver with team and wagon.....	7 00	9	54

HARBOUR COMMISSIONERS OF QUEBEC

Construction of a wharf in the estuary of the River St. Charles, in Quebec Harbour, Quebec, P.Q. Name of contractors, Messrs. Ludger Lemieux Ltee., of Ste Marie, Beauce County, P.Q., and associates, Messrs. Louis Letourneau of Quebec, and Louis Odilon Roberge, of Ste. Marie. Date of contract, April 20, 1929. Amount of contract, approximately \$400,000. The General Fair Wages Clause was inserted in the contract.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these important schedules of

wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

CALGARY, ALBERTA.—CERTAIN NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS UNION, LOCAL No 201.

Agreement to be in effect from May 27, 1929, to May 26, 1932, and from year to year until notice is given by either party 60 days prior to

the expiration date in any year. (A summary of this local union's agreement with job printing offices was given in the LABOUR GAZETTE for June.)

Only union members to be employed, if available.

Hours: 45 per week for day shift and 42 for night work.

Overtime: time and one half for first three hours; thereafter, double time; work on Sundays for day workers and work on Saturday night for night workers, double time. Work on national holidays also at the overtime rate. If called back to work after leaving, \$1.00 to be paid in addition to overtime pay.

Wages per week for journeymen pressmen: \$47.25 for day work from May 27, 1929, to May 26, 1931 and \$48.00 for day work from May 27, 1931, to May 26, 1932. Night scale \$3.00 per week extra; lobster shift (part day and part night) \$5.00 per week extra.

Wages for apprentice pressmen: one quarter of journeymen's scale for first year, one third for second year, one half for third year, two-thirds for fourth year and three fourths of journeymen's scale for fifth year.

Not more than one apprentice for every five journeymen employed.

Apprentices must be at least 16 years of age and be accepted by the apprenticeship committee. They are to serve five years.

The foreman to have the right to employ help and to discharge for certain specified reasons. If necessary to reduce the staff, the man last employed to be laid off first.

A joint standing committee to be formed consisting of two representatives of each party, to whom all disputes between the parties will be referred. If unable to agree, this committee will elect a fifth party and form a board of arbitration for the settlement of the dispute. If unable to agree on the fifth party, he shall be selected by the president of the International Union and the chairman of the special standing committee of the American Newspaper Publishers' Association.

Union members will not be required to execute struck work for unfair employing printers or publications.

### Construction: Buildings and Structures

OTTAWA, ONTARIO.—OTTAWA MASTER PLUMBERS ASSOCIATION AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 71.

Agreement to be in effect from May 1, 1929, to April 30, 1932, and from year to year until either party gives notice 30 days before the expiration date in any year.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for October, 1927, with the following changes:

Wages per hour for journeymen: from May 1, 1929, to April 30, 1930, \$1.00; from May 1, 1930, to April 30, 1932, \$1.05.

The clauses with regard to apprentices have been omitted. Improvers to be paid 55 cents per hour for first six months and 70 cents per hour for the second six months of the year.

BRANTFORD, ONTARIO.—GENERAL CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS, LOCAL No. 498.

Agreement to be in effect from May 1, 1929, to April 30, 1931, and from year to year until

90 days' notice is given by either party on or before May 1, of any year.

Union members only to be employed, if available.

Hours: 8 per day, 4 on Saturdays.

Overtime and all work on holidays, time and one half.

Wages per hour: from May 1, 1929, to July 31, 1929, 80 cents; from August 1, 1929, to April 30, 1930, 85 cents; from May 1, 1930 to April 30, 1931, 90 cents.

Any dispute to be referred to a board of arbitration consisting of two members of each party and a fifth selected by them.

NIAGARA FALLS, ONTARIO.—CERTAIN CONTRACTORS AND THE BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION, LOCAL No 27.

Verbal agreement to be in effect from May 1, 1929, to May 1, 1930. Three months notice to be given before expiration of agreement if any alteration is desired, and if requested a conference will be held to consider a new agreement.

Only union members to be employed. Foremen must be union members.

Hours: 8 per day.

Overtime, time and one half; work on Sundays and holidays, double time.

Wages for journeymen bricklayers, stonemasons and plasterers \$1.25 per hour. For all sewer and conduit work \$1.35 per hour; pit and tunnel work \$1.50 per hour.

Wages for apprentices: first year 40 per cent of journeymen's wage, second year 50 per cent, third year 70 per cent, fourth year 80 per cent.

Union men will not leave work until any dispute is brought before a joint committee, and in case of trouble with any other mechanics, union members will not be withdrawn from work without arbitration.

WELLAND, ONTARIO.—THE MASONS' SECTION OF THE BUILDERS' EXCHANGE AND THE BRICKLAYERS, MASONS AND PLASTERERS' UNION, LOCAL No. 32.

Agreement to be in effect from May 1, 1929, to May 1, 1931.

Hours: 8 per day, 4 on Saturday.

Overtime: time and one half to midnight; after midnight and all work on Saturday afternoon, Sundays and holidays, double time.

Wages for bricklayers, stonemasons and plasterers \$1.25 per hour.

No union member will be permitted to work for a private citizen unless he is paid 15 cents per hour above the union scale. This rate applies to the speculative contractor and real estate man, but not to bona-fide building corporations or municipal, provincial or federal works, subject to the approval of the joint arbitration board and the executive of the union.

Union members not to go on strike before a dispute has been brought before the Joint Arbitration Committee for settlement, and no sympathetic strike to occur except with authority of the international union. Any violation of the agreement to be dealt with by the Joint Arbitration Committee.

The Joint Arbitration Committee to consist of three members of each party and to meet at least every three months.

**WELLAND, ONTARIO.—EMPLOYING PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 595.**

Agreement to be in effect from May 1, 1929, to April 30, 1930, and for another year unless 60 days notice is given by either party before the expiration date.

Only union members to be employed.

Hours: 8 per day, 4 on Saturdays.

Overtime: all overtime and work on Saturday afternoons, Sundays and legal holidays, double time.

Wages per hour for journeymen plumbers and steamfitters: from May 1, 1929, to April 30, 1930, \$1.00; from May 1, 1930, to April 30, 1931, \$1.05.

One apprentice allowed for every six journeymen.

For work out of the city, fare and board to be paid and travelling time.

**ST. CATHARINES, ONTARIO.—ST. CATHARINES BRANCH OF THE MASTER PAINTERS, DECORATORS ASSOCIATION OF CANADA AND THE INTERNATIONAL BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS, LOCAL No. 407.**

Agreement to be in effect from April 1, 1929, to March 31, 1930, and from year to year until notice is given by either party by October 1, of any year.

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one half to midnight; after midnight double time; work on New Year's Day, Thanksgiving Day, Victoria Day, Dominion Day and local civic holidays, time and one half; work on Sundays, Christmas Day and Labour Day, double time.

Wages per hour: 80 cents.

No union member to take contracts or work for himself while employed by a member of the Master Painters' Association.

Any dispute to be referred to a committee of three members of each party. No strike to be called unless the agreement is persistently violated and if possible, no action to be taken until the dispute has been referred to the committee.

**SAULT STE. MARIE, ONTARIO.—CERTAIN CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 446.**

Agreement to be in effect from May 1, 1929, to April 30, 1930. If either party wishes a change, three months notice to be given.

Hours: 8 per day.

Overtime: time and one half; work on Sundays, Christmas Day and Dominion Day, Labour Day, double time.

Wages for journeymen carpenters and joiners: 85 cents per hour. If any man incapacitated by old age, accident or other cause, he may work at a rate mutually agreed on, subject to the approval of the union.

All foremen must be union members, except where contractor acts as foreman.

Any dispute which cannot be settled by the representatives of the parties, is to be referred to arbitration, the arbitrators to be selected as the occasion may arise.

No union member to undertake any work by wage or contract after regular days work for employer.

**FORT WILLIAM AND PORT ARTHUR, ONTARIO.—CERTAIN CONTRACTORS AND THE BRICKLAYERS AND MASONS' INTERNATIONAL UNION, LOCAL No. 25.**

Verbal agreement to be in effect from May 1, 1929, to April 30, 1930. If any change in wage schedule is desired, three months notice to be given by either party.

Hours: 8 per day and 4 on Saturdays. When working two or more shifts, no member to work more than 8 hours out of 24. On three shifts, 8 hours to be paid for 7 hours work.

Overtime and work on Saturday afternoons, Sundays and holidays, double time.

Wages for journeymen bricklayers and masons: \$1.25 per hour. If a contractor brings in men from other places, where wages are higher, the higher rate to prevail with all men on the job. For all out of town work, where members cannot get home daily, \$1.40 per hour to be paid.

Provision is made for the enforcement of safety rules.

**EDMONTON, ALBERTA.—EDMONTON MASTER PAINTERS ASSOCIATION AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS, LOCAL No. 1016.**

Agreement to be in effect from May 1, 1929, to May 1, 1932. If either party wishes a change, 60 days' notice to be given before the expiration of the agreement.

Only union members to be employed if available. If none available, non-union men who intend to join the union may be employed.

Union members will not work for anyone not a member of the Master Painters' Association or those who intend to become members, except in the case of public bodies, institutions or corporations regularly employing painters for maintenance work.

Hours: 8 per day, 4 on Saturdays.

Wages per hour: from May 1, 1929, to May 1, 1930, 95 cents; from May 1, 1930, to May 1, 1932, \$1.00.

Overtime to 12 p.m. time and one half; double time for work on Saturday afternoons, Sundays and holidays.

For work out of town, transportation to be paid and any excess in the cost of living not exceeding 50 cents per day.

One apprentice allowed for every four journeymen. Apprentices must not be over 21 years and shall serve at least three years.

A standing committee consisting of three members of each party to meet to discuss all matters pertaining to either organization.

**EDMONTON, ALBERTA.—CERTAIN EMPLOYERS AND THE INTERNATIONAL SHEET METAL WORKERS ASSOCIATION, LOCAL No. 371.**

Agreement to be in effect from May 1, 1929, to April 30, 1930.

The union agrees to discipline any of its members doing sheet metal work except in a legitimate shop, this clause not to apply to government work.

Hours: 44 per week, except during the months of December, January, February and March, when, at the option of the employer, it shall be determined that shorter hours shall prevail in accordance with the state of trade. For work out of the city, ten hours per day may be worked.

Overtime: time and one half for work from 5 p.m. to midnight and on Saturday afternoons to 5 p.m.; double time for overtime after midnight on other days and after 5 p.m. on Saturdays; double time also for work on Sundays and holidays.

Wages for journeymen sheet metal workers; \$1.10 per hour.

One apprentice to be allowed to every three journeymen employed. Apprentices must be registered with the union.

An improver is an apprentice who has served three years or more at the trade. One improver allowed to each shop and one improver to each additional two journeymen. After serving one year as improver, a man may be examined by a joint examining board whose decision shall be final as to whether he is competent to become a journeyman sheet metal worker.

Wages for improvers to be three quarters of journeymen's scale.

For work out of the city, fare and board to be paid.

The shop steward to try to settle with employers any dispute arising. If unable to do so, the dispute to be referred to a joint executive committee.

**VANCOUVER, B.C.—CERTAIN CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1875 (FLOORLAYERS).**

Agreement to be in effect from May 1, 1929, to April 30, 1930. If either party wishes to change wages or hours, 60 days notice to be given.

This agreement is similar to the one previously in force and summarized in the *LABOUR GAZETTE* for June, 1928, page 673, with the following exceptions:—

For the months of December and January, 7 hours per day to be worked, a 35-hour week. (The 40-hour week remains in force for the other months.)

The provisions that non-union members may be employed if they intend to join the union, and that any man working overtime must get permission from the business agent or shop steward have been omitted.

The wages remain unchanged at \$1.12½ per hour for floorlayers and scrapers and \$1.10 per hour for finishers.

**VANCOUVER, B.C.—CERTAIN ROOFING AND SHEET METAL FIRMS AND THE SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL No. 280.**

Agreement to be in effect from July 2, 1929, to June 30, 1930, until notice of change is given by either party ninety days prior to the expiration date in any year.

Only union members to be employed, if available, and union members are only to work for contractors or sheet metal firms who agree to the conditions of this agreement.

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one half for first four hours; thereafter and all work on Saturday afternoons, Sundays and holidays, double time.

Wages for journeymen sheet metal workers: \$1.12½ per hour.

One apprentice allowed for every three journeymen and one advanced apprentice to every four journeymen. Apprentices to be regulated by the Vancouver Apprenticeship Council.

For work out of the city, transportation, board and travelling time to be paid.

The contractor will not request union members to install any material that is considered unfair, unless same is covered by patent rights.

Any dispute shall be discussed, and if possible, settled by a meeting of the representatives of both parties. If unable to agree, the matter will be referred to a Board of Conciliation consisting of three members of each party. If this board is unable to agree, the dispute will then be referred to the President of the Building and Construction Industries Exchange and the general office of the international union who shall appoint representatives to settle it.

**Transportation and Public Utilities: Water Transportation**

**AMHERSTBURG, ONTARIO.—CERTAIN DREDGE OWNERS AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 504-1 (INTERNATIONAL SURFACE AND DRILL BOAT WORKERS' ASSOCIATION).**

Standard international agreement, accepted by three local dredge owners, to be in effect from April 1, 1929, to March 31, 1932. If either party desires a change, notice to be given on or before January 1, 1932, and a conference will later be held at Detroit, Michigan, to negotiate a new agreement.

This agreement is similar to the one previously in force and summarized in the *LABOUR GAZETTE* for June, 1928, with the following exception:

Wages: day foreman \$291 per month, night foreman \$275.25 per month; licensed engineer (who shall be employed where required by law) \$8.40 per day, blaster \$8.40 per day, driller \$8.35 per day, fireman \$7.60 per day, driller's helper, \$7.10 per day.

**Service: Hotel and Restaurant**

**VANCOUVER, B.C.—CERTAIN HOTELS AND RESTAURANTS AND THE INTERNATIONAL ALLIANCE OF HOTEL AND RESTAURANT EMPLOYEES, LOCAL No. 28.**

The agreement which was in force in 1928 and was summarized in the *LABOUR GAZETTE* for October, 1928, has been renewed without change to May 22, 1930.

**Service: Personal and Domestic**

**VANCOUVER, B.C.—EMPLOYING BARBERS AND THE JOURNEYMEN BARBERS' INTERNATIONAL UNION, LOCAL No. 120.**

This agreement, which has been in effect since May 12, 1924, has been extended to June 1, 1930.

No barber to be allowed to start work in a union shop without a permit from the union.

Hours: from 8 a.m. to 6.30 p.m. on Mondays, Tuesdays, Thursdays and Fridays with an hour off at noon; on Wednesdays, hours from 8 a.m. to 1 p.m.; on Saturdays from 8 a.m. to 8 p.m. with one hour at noon and one half hour for supper.

Wages: \$25 per week guaranteed and 60 per cent commission on all receipts over \$39.50 for each journeyman barber employed. Swing shift man (not more than one allowed in any one shop) to work 6 hours per day with a guarantee of \$17 per week and 60 per cent commission on receipts over \$26.50 per week. Full pay for specified holidays.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, SEPTEMBER, 1929

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being unchanged, while the Dominion Bureau of Statistics index number of wholesale prices was somewhat lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.64 at the beginning of September, as compared with \$11.63 for August; \$11.15 for September, 1928; \$10.87 for September, 1927; \$10.94 for September, 1926; \$10.81 for September, 1925; \$10.28 for September, 1924; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. Potato prices were substantially lower, while less important declines occurred in the prices of beef, mutton and lard. The prices of eggs, milk, butter, cheese, bread, flour, salt pork, bacon and prunes advanced. Including the cost of fuel and rent with that of foods the total budget was unchanged at \$21.90 for August and September, as compared with \$21.38 for September, 1928; \$21.05 for September, 1927; \$21.15 for September, 1926; \$21.02 for September, 1925; \$20.65 for September, 1924; \$20.97 for September, 1923; \$20.90 for September, 1922; \$22.37 for September, 1921; \$26.38 for September, 1920; \$26.92 for July, 1920 (the peak); \$21.11 for September, 1918; and \$14.33 for September, 1914. In fuel a slight increase in coal prices was offset by somewhat lower levels for wood. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, declined to 97.3 for September, as compared with 98.1 for August; 95.5 for September, 1928; 97.1 for September, 1927; and 98.5 for September, 1926. The decrease was due mainly to lower prices for grains and livestock. Sixty-eight prices quotations were lower, eighty-four were higher and three-hundred and fifty were unchanged.

In the grouping according to chief component material five of the eight groups were lower, two were higher and one was unchanged. The Vegetable and Vegetable Products group and the Animals and their Products group were considerably lower, the former due to decreases in the prices of wheat, barley, rye, raw rubber and fresh foreign fruits, which more

than offset higher prices for flax, oats and vegetables, and the latter due to lower prices for livestock and fresh and cured meats, which more than offset advances in the prices of milk, butter and eggs. Three other groups showed minor declines; the Wood, Wood Products and Paper group, because of lower prices for certain lines of lumber; the Non-Ferrous Metals group, due to declines in the prices of tin and zinc; and the Non-Metallic Minerals group, due to declines in the prices of crushed stone. The Fibres, Textiles and Textile Products group was slightly higher, due mainly to increased prices for raw cotton and raw silk. The Chemicals and Allied Products group also advanced somewhat. The Iron and its Products group was unchanged.

In the grouping according to purpose consumers' goods were lower, because of declines in the prices of footwear, flour, fresh foreign fruits, meats and rice, which more than offset increases in the prices of milk, butter, vegetables and fuel. Producers' goods showed a slight decline, due mainly to lower prices for materials for the meat packing industry and for the milling and other industries, while slight declines occurred also in materials for the metal working industries and for the chemical using industries. Materials for the textile and clothing industries, for the fur and leather goods industries, as well as miscellaneous producers' materials, advanced.

In the grouping according to origin both raw and partly manufactured goods and fully or chiefly manufactured goods were lower, the former due to declines in the prices of fresh foreign fruits, grains, livestock and lumber, and the latter due to declines in the prices of flour, cured meats, footwear, wool yarn and fuel oil. Domestic farm products, articles of forest origin and articles of mineral origin were slightly lower. Articles of marine origin advanced.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of September, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The

prices of foods, and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the **LABOUR GAZETTE**.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the **LABOUR GAZETTE** resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the **LABOUR GAZETTE** was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the **LABOUR GAZETTE** since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was

estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the **LABOUR GAZETTE** a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the **LABOUR GAZETTE**, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1926, and monthly since January, 1927. As stated in the above mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1;

(Continued on page 1172)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

(Continued from page 1164)

1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6; 1927, 73.4; 1928, 71.7; 1929, 71.4.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318) and bringing the figures down to 1929. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and

converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

Beef prices, which had advanced since the beginning of the year, were generally lower in September, sirloin steak being down from an average of 38.4 cents per pound in August to 37.6 cents in September; round steak from 33.1 cents per pound in August to 32.4 cents in September; rib roast from 30.7 cents per pound in August to 29.6 cents in September; and shoulder roast from 24 cents per pound in August to 23.3 cents in September. Mutton averaged  $\frac{1}{2}$ -cent per pound lower at 31.6 cents. Fresh pork was unchanged at an average price of 32.6 cents per pound, while salt pork was slightly higher at 28.6 cents per pound.

A substantial seasonal increase occurred in the price of eggs, fresh being up from an average of 39.4 cents per dozen in August to 47.4 cents in September and cooking from 34.8 cents per dozen in August to 41.5 cents in September. Increased prices were reported from most localities. Milk was slightly higher, averaging 12.1 cents per quart. Increases were reported from Sydney, New Glasgow, Toronto, Regina, Moose Jaw, Medicine Hat, Edmonton and Lethbridge. Butter prices were generally higher, dairy averaging 41.8 cents per pound, as compared with 40.2 cents in August, and creamery averaging 46 cents per pound, as compared with 44.9 cents in August. Cheese showed a slight increase, averaging 33.2 cents per pound.

\*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

Bread was up in the average from 7.8 cents per pound in August to 7.9 cents in September. Higher prices were reported from New Glasgow, Hull, Ottawa, Brockville, Sault St. Marie, Port Arthur, Fort William, Brandon, Regina, Moose Jaw and Lethbridge. Flour was again slightly higher, averaging 5.4 cents per pound. Onions were down from an average price of 7.7 cents per pound in August to 7 cents in September. Potatoes showed a seasonal decrease, the price being down from an average of \$2.83 per ninety pounds in August to \$2.25 in September. Increases were reported from most localities in the Maritime Provinces and in Quebec, while prices in Ontario and the western provinces were substantially lower. Prunes were up in the average from 13.9 cents per pound to 14.2 cents. Anthracite coal was slightly higher, averaging \$16.05 per ton. Increases were reported from St. John's, Quebec, Toronto and Hamilton. Hardwood declined from \$12.25 per cord to \$12.17.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics. Grain prices, for the most part, continued toward lower levels. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged \$1.495 per bushel in September, as compared with \$1.58 in August. The lower prices were said to be due to better crop prospects in the Argentine and to lessened export demand. In coarse grains barley declined from 79 cents per bushel to 74.7 cents and rye from \$1.115 per bushel to \$1.082, while oats advanced from 68.2 cents per bushel to 68.5 cents and flax from \$2.608 per bushel to \$2.837. Flour declined from \$8.78 per barrel to \$8.60, while rolled oats rose from \$4 per ninety pound bag to \$4.40. Bran and shorts were lower, the former at \$34.46 per ton and the latter at \$36.46 per ton. Linseed oil advanced sharply from \$1.04 per gallon to \$1.28. The decline in raw rubber continued,

Ceylon being down from 20.6 cents per pound to 20.3 cents. Raw sugar at New York was 25 cents per hundred pounds higher at \$2.25, while granulated rose from \$5.18 per hundred pounds to \$5.27. The increase was said to be due to prospects of a smaller crop in Cuba. Turpentine rose from 83.1 cents per gallon to 86.8 cents. Livestock prices were generally lower, good steers at Toronto being down from \$10.11 per hundred pounds to \$9.35 and at Winnipeg from \$9.41 per hundred pounds to \$8.26. Hog prices showed declines ranging from \$1.50 to \$1.69 per hundred pounds and quotations ranged between \$11.52 per hundred pounds and \$12.44. Lambs also were substantially lower, the price at Toronto being \$11.70 per hundred pounds, at Montreal \$10.82 and at Winnipeg \$10.43. Decreases in prices oc-

curred ranging from \$1.20 per hundred pounds to \$2.13. Meat prices showed a movement similar to that in livestock, beef being down from 2 to 2½ cents per pound, lamb from 3 to 4 cents per pound and pork from 2½ to 3½ cents per pound. Beef hides rose from 11½-12 cents per pound to 13-13½ cents, and calf skins from 18½-19½ cents per pound to 19½-20½ cents. Creamery butter at Toronto advanced 1 cent per pound to 43.5 cents. Egg prices showed an average increase of approximately 3 cents per dozen. The price at Montreal was 54.4 cents per dozen and at Calgary 43.5 cents. Raw cotton at New York rose from 18.6 cents per pound to 18.9 cents. Wool prices were down 1 to 2 cents per pound at 26-27 cents. American anthracite coal at Toronto rose from \$13.27 per ton to \$13.37.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 135.8 for August, a decline of 1.2 per cent. A fall of 2.9 per cent in foods was due chiefly to lower prices for potatoes, apples and oranges. There were no marked changes among industrial materials.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-77=100, was 113.9 at the end of August, a decline of 1.1 per cent for the month. Food-stuffs declined 1.8 per cent, showing declines in all three groups, the most important reductions being in maize, flour and American wheat prices. Animal foods declined, although there was a substantial increase in butter prices. Among industrial materials, the only group showing an advance was minerals, due to the seasonal rise in the price of household coal. Textiles and sundries both declined.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 164 at August 31, an advance of one point since the beginning of the month, due to a rise in the food group. Eggs, flour and bread, milk and butter contributed to this advance, which was partly offset by a fall in

prices of potatoes. Rent, clothing, fuel and light and sundries were unchanged.

### Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 138.1 for August, a rise of 0.2 per cent for the month, advances in cattle and foods of animal origin being partly offset by declines in foods of vegetable origin and fodder. Provisions advanced 1.0 per cent. Industrial materials varied only slightly, the only marked change being a decline of 5.6 per cent in rubber.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 154.0 for August, a decline of 0.3 per cent from July. There were no changes from the previous month of any importance in any of the groups.

### Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan, on the base 1913=100, was 474.05 for August, continuing the steady decline since March, and showing the lowest monthly average recorded since 1921. The chief declines were in animal and vegetable foods and in miscellaneous vegetable products.

### Australia

WHOLESALE PRICES.—The Melbourne index number on the base 1911=1000, was 1799 for June, as compared with 1784 for May. There were advances in metals and coal, agricultural produce, etc., dairy produce and meat,

(a) Quarter beginning in specified month. (b) Average for year. (c) Figures for previous month. (d) Following month. (e) Middle of month. (f) First of month. (g) End of month.  
(i) Monthly average. (j) For 1920 and 1921. (k) Quotations are included, and from January 1922, 100 quotations. (l) Gold prices hereafter on the base 100. (m) Revised figures for 1928.  
(n) New series. (o) New index number, base 1918=100, with 72 series of price quotations. (p) Index number discontinued. (q) New official index number, Labour Office. (r) End of 1926, "Gasplan." (s) New series based on 88 imports and 27 exports. (t) Revised series.

(Continued from page 1174)

while jute, leather, etc., groceries and building materials declined; the chemicals group was unchanged.

### New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1556 for July, as compared with 1547 for June. Advances were shown in foodstuffs, etc., of vegetable origin, textile manufactures, wood and wood products; on the other hand, there were declines in animal products, metals and their products, non-metallic minerals and their products and chemicals and manures.

### British India

WHOLESALE PRICES.—The index number of the Labour Office, Government of Bombay, on the base July, 1914=100, was 145 for July, an advance of two points over June. Foods rose five points showing increases in all groups except sugar, which was unchanged. Non-foods as a whole advanced only one point; substantial advances in oilseeds and hides and skins were offset by declines in raw cotton, textiles other than cotton, metals and miscellaneous products; cotton was unchanged.

COST OF LIVING.—The index number of the working class cost of living, Bombay, on the base July 1914=100, was 149 for August, an advance of one point over July. This was due to increases in the prices of cereals and pulses. Fuel and lighting, clothing and house rent were unchanged

### United States

WHOLESALE PRICES.—The *Annalist* index number, on the base 1913=100, was 147.6 for September, a decline of 0.7 per cent from August. There were declines in farm products, food products, fuels, metals, building materials, while there were advances in textile products and miscellaneous products; chemicals were unchanged.

Dun's index number, based on the estimated *per capita* consumption of each of the many articles included in the compilation was \$192,204 at October 1. There were advances in meat, dairy and garden produce and clothing. Declines were noted in breadstuffs, "other food," metals and miscellaneous products.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 162.9 for August, an advance of 0.8 per cent over July, due to small advances in all the groups viz. food, housing, clothing, fuel and light and sundries.

## Employment on Railways in the United States

The Bureau of Railway Economics of Washington, D.C., recently published a summary of statistics of railways in the United States of Class I, that is, railways with annual operating revenues above a million dollars. These railways operate about 91 per cent of the total railway mileage throughout the country, earning about 97 per cent of the total revenues. Switching and terminal company

statistics are not included in the return. The tabulations given are based upon official summaries of the Interstate Commerce Commission for the calendar years 1920 to 1928. The tables include the following information as to railway employees, their wages, hours, etc. The employees covered in the table are those working on an hourly or daily basis.

NUMBER OF RAILWAY EMPLOYEES, WAGES, HOURS, ETC., IN THE UNITED STATES

	Number of employees	Total hours paid	Average hours per employee	Aggregate wages	Average hourly pay per employee	Average yearly pay per employee
1920.....	2,022,832	5,446,740,533	2,692.6	\$3,681,801,193	\$ 0.676	\$ 1,820.12

## CENSUS OF INDUSTRY IN CANADA

### Summary Tables for Manufacturing Statistics and Hours of Labour in 1926 and 1927

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census covering statistics of fisheries, mines, forestry and general manufactures in Canada. Summary figures for all manufacturing industries for the year 1926 and 1927 have been issued recently, and the accompanying tables give these figures in some detail, by groups and for the principal sub-groups. They include information concerning the hours per day worked by employees on wages, that is, the number of persons, working eight hours or less, nine hours, ten hours and over ten hours per day.

In Table I a comparative summary of the principal statistics for all manufacturing industries of Canada in recent years is given back to 1923. Table II gives these statistics (a) by provinces and (b) by groups of industries for the years 1926 and 1927. Table III consists of a statement of the statistics of the industries for the principal sub-groups for the years 1926 and 1927, except manufacturing of minerals and chemicals, for which the figures were published in the LABOUR GAZETTE, November, 1928, pages 1305-1309, and electric current production for which the figures appear in table II under the heading "Central Electric Stations." Table IV shows the number and percentages of wage earners work-

ing specified hours per day in the manufacturing industries during 1926 and 1927.

In Table III the industries within the groups are listed approximately in the order of the number of wage-earners employed. It will be observed that in Table II the largest number of employees is in the wood and paper group, followed by the textile group and the iron and steel group. An examination of the figures in Table III, as to value of production, shows the pulp and paper industry to be the greatest, followed by flour and grist mills, slaughtering and meatpacking, central electric stations, sawmills, automobiles, butter and cheese, and rubber goods, all having a production exceeding one hundred million dollars in value. For the year 1927 the figures show an increase over 1926 in each item: the percentage increase in wages and in salaries paid, and in the numbers of wage earners being over six per cent; in capital invested approximately nine per cent; and in value added by manufacture nearly eight per cent. The figures by provinces and groups of industries also show increases in most of the items. Table IV indicates that approximately one-third of the employees on wages work eight and nine hours per day respectively, about one-fourth work ten hours per day, while less than five per cent of wage earners work more than ten hours per day.

TABLE I.—MANUFACTURING INDUSTRIES, PRINCIPAL STATISTICS COMPARED FOR 1923, 1924, 1925, 1926 AND 1927

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Employer must warn Employee undertaking dangerous work

A load of heavy lumber was being delivered by a firm of carriers at a door and window factory. The instructions given to the carriers was to place the lumber at the door of the factory. The factory foreman however asked the carriers' employees to place it inside the factory. One load was accordingly carried inside, but before the remainder was brought in the carters' helpers left for dinner. The factory foreman then ordered one of his men—the plaintiff in the case—to help the carters, and he himself went away to dinner. In order to make the work of unloading easier, the plaintiff brought out a bench from the factory, and this was used for the purpose, but in the handling of the heavy lumber the bench broke, the plaintiff being seriously wounded. He brought action against the factory owner, his employer, for personal injuries, and was allowed damages as a servant against his master by the trial judge, and subsequently also by the Quebec Court of King's Bench. On further appeal by the defendant in the Supreme Court of Canada, the original judgment was again affirmed.

The Supreme Court of Canada held with the lower courts that the foreman was guilty of imprudence in giving the order he gave to the plaintiff, who was without experience in such work, and was without the necessary tools, and in leaving the plaintiff to himself without the advice and direction of a superior. The work was unusual, difficult and dangerous, and should not have been turned over to a man without experience. In law, it was stated, the fault of the foreman involved the responsibility of the master. The foreman committed a fault in giving the order to one of his workmen to undertake this dangerous work without the instructions and aid that an inexperienced person should have. From the moment that he gave the order to one of the appellant's employees to help to unload, it was his duty to furnish the tools required, to direct the work, or at least, to give him proper instructions and warning in view of the hazardous nature of the work.

*Tremblay et al versus Proulx* (Supreme Court of Canada), Dominion Law Reports, 1929 (3), page 469.

### Independent Contractor may not claim for personal injuries as "employee"

A case involving the question of the proper definition of the term contractor, and of the claims of a person carrying on work for an

industrial firm under contract, for damages for personal injuries sustained by him in the course of this work, was the subject of a recent judgment by the Supreme Court of Canada, reversing an earlier decision by the Quebec Court of King's Bench. The Supreme Court found that a person is an independent contractor and not an employee, who contracts for the performance of certain work; who, under this contract, is to pay and have complete control over the selection and dismissal of the workmen employed by him, and as to the manner in which the work is to be done; and who is to be paid according to the amount of work done. The circumstances of the case were outlined in the course of the judgment by Mr. Justice Rinfret, as follows:—

"On November 7, 1927, G. Couture, the plaintiff respondent, was the victim of an explosion of dynamite which incapacitated him for life. He obtained from the Superior Court, sitting in the District of Beauce, a judgment ordering the company to pay him damages resulting from this accident. The majority of the Court of Appeal confirmed this judgment. . . .

"Couture had contracted with the company to mine the rock and to supply mineral rock of the required size in sufficient quantity to keep up the factory. For this purpose he employed many men. He engaged them, fixed their salary (except that he was not allowed to exceed for himself the maximum of salaries established by the factory); he paid them, managed them, and dismissed them. In order to carry out his contract, he was free to adopt any method which he chose. The only instructions that the foreman of the company would give him were to point out the places where he could mine. The company furnished the tools, the accessories and the dynamite. Couture received '20 cents a car.' He was responsible in damages if he failed in his contract to supply all the rock needed for the regular running of the factory.

"The mechanical shovel which loaded the rock on the wagon was worked by an employee of the company. When the latter came across block-holes too large to be sent to the mill, he put them to one side and there Couture was to blast them again. When Couture perforated one of the block-holes an explosion occurred; he was thrown into the air and seriously injured. . . .

"The judgments submitted to this court have considered Couture as an employee of the Asbestos Corp.; and it is in applying the

principles which govern the relations between employers and employees that they hold the appellant responsible for damages suffered by the respondent. They have found that the company failed in its obligations in regard to its employee, that it should have foreseen all the causes, not only the usual but also any possible cause of accidents and should have adopted all measures and necessary precautions in order to avoid them. They have specially declared that it was the duty of the company to make sure that there were no explosives in the piece of rock on which Couture was working at the time of the accident and that it had failed in this duty.

"But it is evident that the responsibility of the appellant ought to be considered from a different point of view if Couture, instead of having been its employee, was in reality an independent contractor.

"We are of the opinion that he was an independent contractor. We find in this case all the distinctive characteristics of the *contrat d'entreprise*: the method adopted for his remuneration; the right of choosing the men whom he employed, of fixing their salary, of directing and dismissing them; the responsibility in damages for failure to supply the factory; above all, the absence of a *lien de subordination* between Couture and the company and his independence in the management of the enterprise.

"The contract of lease and hire of work may be distinguished from the *contrat d'entreprise* principally by the subordinate character of the employee in the former contract. . . .

"Couture did his work independently of the direction and control of the company. All the latter had to do was to accept the work after it had been performed.

"The contract that we must interpret does not reserve to the Asbestos Corporation the right to give to Couture orders and instructions as to the manner of carrying out the duties that he had accepted. This right is the basis of the authority and subordination without which there can be no real employer.

"It is true that the company had insured the employees of the respondent against accidents; but they had done so as part of their contract with Couture. This stipulation itself, perhaps more than anything else, confirms the nature of the contract, since it had been made an express condition that the company assume the burden which otherwise would have fallen to Couture. He stated that it was he himself who had exacted this stipulation. Thus he fully realized his responsibility with regard to his employees,

concerning accidents, and, also his situation as an independent contractor."

After further discussion of the circumstances of the accident the judgment concluded:—

"Under these circumstances, we are of opinion that the Quebec Asbestos Corporation cannot be held responsible for the accident which happened to the respondent and that the action should be dismissed."

*Quebec Asbestos Corporation versus Couture* (Supreme Court of Canada), Dominion Law Reports, 1929 (3), page 601.

### Claim of "Servant" for Wages must follow Statutory Procedure

A mining engineer was employed by a coal mining company in Alberta to prepare plans and advise the company on its development work, on the understanding that he would be paid at a fixed rate for the time so spent, and also that he would be at liberty to work for other clients while he was not engaged on work for the company. Subsequently a new arrangement was made whereby the engineer was to devote his whole time to work for the company as superintendent of construction, being engaged at a monthly rate at the same annual salary as he was paid under the former agreement, his services being rendered wholly on the company's premises, subject to the managing director of the company. About seven months after the second agreement the engineer, not having received payment of his salary in full, made a claim for the balance under the provisions of section 113 of the Companies Act (Revised Statutes of Canada, chapter 27), which reads:—

113. The directors of the company shall be jointly and severally liable to the clerks, labourers, servants and apprentices thereof, for all debts not exceeding six months' wages due for service performed for the company whilst they are such directors respectively; but no director shall be liable to an action therefor, unless the company is sued therefor within one year after the debt becomes due, nor unless such director is sued therefor within one year from the time when he ceased to be such director, not unless an execution against the company in respect of such debt is returned unsatisfied in whole or in part.

2. The amount unsatisfied on such execution shall be the amount recoverable with costs from the directors. R.S., c. 79, s. 85.

The Alberta Supreme Court held that, as to the time the claimant was employed under the earlier agreement, he was not a "servant" within the meaning of section 113, but that he was a servant during the period of the second agreement.

Certain irregularities having occurred in the procedure followed by the claimant in connection with the service of the notice of his claim,

the Court dismissed his action. On this subject the judgment stated as follows:—

“Clerks, labourers, servants and apprentices of a company have an extraordinary right given them by statute to enforce against the directors of a corporation a liability for the payment of a limited amount of wages which is imposed upon them by statute, but the enforcement of that right is dependent upon the return of an execution unsatisfied in whole or in part. This is a condition precedent, the performance of which is within the power of

the person seeking to enforce the right. This class or any member of the class having been given extraordinary rights, rights which are not given to any other class of creditors of a corporation, to enforce the payment by the directors of the corporation's debts, must comply strictly with the statute and see that the condition precedent has been strictly performed.”

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL activity in Canada in September continued at a high level, though a slight seasonal decline from the record of the preceding month was evident. According to statements received by the Dominion Bureau of Statistics from 7,027 employers, each with a minimum of fifteen employees, the staffs of these firms aggregated 1,089,583 persons, as compared with 1,098,653 in the preceding month. Employment on the same date last year had also shown a reduction, but the situation then was not so favourable as on October 1, 1929, when the index (with the average for the calendar year 1926 as the base = 100) stood at 125.6 as compared with 126.8 on September 1, 1929, and with 118.8, 110.3, 106.5, 99.5, 95.0, 100.7, 95.8 and 91.3 on October 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. These returns are representative of all industries except agriculture, fishing, hunting and highly specialized business. At the beginning of October, 1929, the unemployment percentage recorded by local trade unions was 3.7 contrasted with 3.5 per cent of idleness at the beginning of September and with 2.2 per cent at the beginning of October, 1928. The October percentage was based on the returns received by the Department of Labour from 1,762 local unions with an aggregate membership of 206,617 persons. Reports received by the Department of Labour from the offices of the Employment Service of Canada showed a decline in the volume of business transacted, as indicated by the average daily placements effected, when a comparison is made with the preceding month and also with September of last year.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.68 at the beginning of October, as compared with \$11.64 for September; \$11.28 for October, 1928; \$10.99 for October, 1927; \$10.93 for October, 1926; \$10.89 for October, 1925; \$10.31 for October, 1924; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921;

\$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was lower at 96.7 for October, as compared with 97.3 for September; 95.4 for October, 1928; 97.2 for October, 1927; and 98.1 for October, 1926.

The loss in working time caused by industrial disputes in Canada during October was considerably less than that in the preceding month, and was also less than during October, 1928. Eleven disputes were in existence during the month, involving 771 workers and resulting in the loss of 6,219 working days. Corresponding figures for September, 1929, were: nine disputes, 864 workers, and 9,788 working days; and for October, 1928, sixteen disputes, 2,530 workers, and 36,838 working days.

### Industrial Disputes Investigation Act

During October the Department of Labour received an application for the establishment of a Board of Conciliation and Investigation in connection with a dispute between the Ottawa Electric Railway Company and its motormen, conductors, shopmen, barnmen and trackmen, the application being made by the employees. The recommendations contained in the report of the Board, printed in the last issue of the *LABOUR GAZETTE*, in connection with a dispute involving the conductors and trainmen on the western lines of the two railway systems, were accepted by the parties concerned and are now in effect. A summary of recent proceedings under the Act appears on page 1205.

### Fair wages in municipal contracts in Quebec City

An Act to consolidate and amend the charter of the City of Quebec was adopted by the legislature of the Province at its last session (Statutes of Quebec, 1929, chapter 95), Section 191, relating to the contracts let by the city, contains a new pro-

vision as follows:—"Whosoever executes a contract for the city of Quebec shall pay his workman the same salary as the said city pays its workmen of the same class."

The administrative committee of the Council decided on October 23, that under this provision a minimum wage clause should be included henceforth in all contracts undertaken by the City of Quebec. The scale of wages paid to the workmen employed under such contracts must be at least as high as the scale followed by the civic authorities in paying its tradesmen and day labourers.

A labour delegation which waited on the mayor to express labour's appreciation of this decision, asked that an inspector should be appointed by the city to see that contractors observed the "fair wage" provision. Mayor Auger stated in reply that a civic employee was already doing the work of an inspector in enforcing the conditions laid down in civic contracts.

#### **Workmen's compensation in Quebec**

Mr. Robert Taschereau, chairman of the workmen's Compensation Board of the Province of Quebec speaking at Montreal on October 15 referred to the satisfactory results already reached by means of the Act of 1928. "The fact," he said, "that more than 24,000 cases have been disposed of, speaks volumes as to the efficiency and rapidity of execution of the new organization. Employers have told us that they were satisfied that the new law was a vast improvement on the old one. The criticisms more often heard relate to the alleged preference given by employers to younger men, because, it is said, their responsibilities, in case of accidents, are less than they would be for older men. It happens that the age of employees, according to the law, has nothing whatever to do with the charges imposed on the employers and the insurance companies."

The Montreal Branch of the Canadian manufacturers' association held a meeting on the following day, when legislative changes were discussed in view of the forthcoming session of the Legislature of the Province. On the subject of workmen's compensation certain amendments were suggested, it being noted that the existing law differs from the older Act in making no specific provision for paying compensation to dependents living outside Canada. In the case of workers killed or permanently totally incapacitated, the provision in the old law was for a lump sum payment to dependents living abroad; and for widows, there was lump sum payment in case of remarriage. Under the law now in effect,

however, dependents abroad receive compensation in the same manner as those living in Canada. Moreover, widows outside Canada may remarry but nevertheless continue to receive periodical compensation. The Montreal Branch will also ask for the definition of "average weekly wage" on the basis of weekly earnings over a definite period, and not on the calculation of six times one day's earnings, the method now used by the Workmen's Compensation Commission.

#### **Recommendation of Union of British Columbia Municipalities**

The Union of British Columbia Municipalities, at its 26th annual convention held at Harrison Hot Springs during October, adopted a resolution recommending that the age at which persons become eligible for old age pensions shall be lowered from seventy to sixty-five years.

Among other resolutions the Union suggested the enactment of legislation to provide for the maintenance of hospitals and of public funds, hospital boards to be elected like boards of public school trustees in the various municipalities' districts. The action of the Provincial Government in appointing a committee to report on maternity and health insurance (LABOUR GAZETTE, June, 1929, page 609) was approved by the convention.

#### **Progress of the work of Frontier College**

The calendar of Frontier College for the years 1929-31 has been issued from the offices of administration at Toronto. The college has the full status of a university under an Act passed by the Dominion Parliament in 1922, with power to confer degrees; but besides making provision for higher education the college still carries on its original work of bringing education of a more elementary kind to the men on the job. It is claimed that the labourer teachers who have worked and taught in the camps during the past thirty years have made a unique contribution to educational methods. The system is described as follows:—

"Men, well equipped mentally and physically, are carefully selected from Canadian universities, supplemented by graduates from a few of the leading universities of the United States and those of the British Isles. These men possess, in addition; the human qualities that should make them important factors in their daily contact with their fellows. The instructor is known as a Labourer-Teacher. He works at lumber, mining, hydro, and other frontier camps, and railway extra gangs—in fact wherever large groups of men are segre-

gated. As a teacher in overalls he is employed at manual work during the day. He goes on the company's payroll simply as a labourer. In the evenings or at other convenient times he helps his fellow workers educationally, and for this phase of his effort he receives additional remuneration from the Frontier College. In his human relationships he is guide, philosopher, and friend to the men of the work group with whom he is employed. In this way the Frontier College has shown itself to be an effective and potent force not only in matters of general education, but also in Canadianization and welfare, particularly amongst the foreign-born, unreached by the usual agencies so generously provided in some of the larger cities and other urban centres".

The later activities of the College in promoting higher studies in the older communities are directed to assist men and women of mature years who because of the conditions of their life and work are unable to attend a centrally located university. All such persons having passed a provincial matriculation examination or its equivalent, may proceed by home study, and without attendance at college classes, towards a degree in Arts from Frontier College.

### Types of workers in lumber camps in Ontario

Mr. E. Appleton, of the Indian Lake Lumber Company, writing in the *Canada Lumberman*, November 1, states that one of the main causes of accidents in connection with lumbering in Ontario is the diversified character of the labour now employed in bush operations. "With us (that is, in the western portions of Ontario) the old-time Canadian lumberjack has almost entirely disappeared," he says, "and the crews of our logging camps are now almost entirely drawn from the ranks of immigrants from Central Europe. In the crews of camps in this part of the province the majority of the men will be found to be Russians, Poles, Austrians, Hungarians, Slovaks, Ukrainians, Finns—with some Swedes and Norwegians. It is safe to say that nowhere in the western part of Ontario would you find a camp manned entirely by French Canadians or Canadian lumberjacks. Then, too, as we are on the border of the western provinces, from whence large bodies of labourers from the harvest fields flock to the cities, the lumbering industry in the west has perforce to absorb a large number of these men. Our industry is a source of relief to the cities for the unemployment situation, which is as much aggravated by the length of our winters.

Fully 90 per cent of our bushmen are from the people I have named, and they become, after some years experience at the work, good and reliable workmen; but in the making they are the source of much tribulation to foremen and others. This you can readily understand—everyone is handicapped in the matter of language to begin with—tools are not what they have been accustomed to, and it is only by the exercise of lots of patience, and perhaps some impatience, that a foreman can keep up his standard of production to the satisfaction of the higher powers".

### Cost of sickness in Ontario

The Hon. Dr. Forbes Godfrey, Minister of Health of Ontario, speaking in connection with a "health week" at Orillia on October 15, stated that illness costs the people of Ontario \$33,385,100 a year, and that a total of 73,740 persons continuously are ill every day, of whom 64,740 are cared for in their homes. The minister based his cost estimates on reports which showed that 9,000 persons are in the hospitals of the province on any one day, the average cost per patient being three dollars. For patients treated at home the average cost per day was fixed at the low minimum of one dollar per day. In fixing the hospital rate the minister took into consideration the average costs of 111 public hospitals, 17 out-post Red Cross hospitals, six hospitals for incurables, 10 public sanitariums, 72 private hospitals, and four private sanitariums as well as houses of refuge, orphanages and convalescent homes. He gave estimates of the cost of the three principal diseases, namely diphtheria, pneumonia and cancer.

Dr. Godfrey pointed out that his estimates took no consideration of the amount of money lost through the illness of wage earners, nor did he take into account the time lost by the people who care for the sick where nurses are not employed.

### Problem of the unfit employee in industry

The problem offered by the unfit worker was discussed at a meeting of the "Round Table" committee of the province of Quebec Safety League held at Montreal on October 18. The question arose in connection with a conference on the medical standards that should be applied by employers in engaging help, and a committee is to be appointed to study the best method of dealing with the labourer who is unacceptable to employers. Mr. Louis Guyon, deputy minister of Labour of the province of Quebec, suggested that if the governments contemplate the care of

the old and feeble, they could also include the care of those unfit for work. "It is unfair", he considered, "to expect that an applicant for work who cannot pass the medical examinations and tests set by an employer will be given work by the employer just the same as a man who is fit. However, a man may be unfit to work in one shop and be well able to work in another. Factory life is a battlefield and the whole question narrows down to one of insurance". Mr. Guyon stated that he had 41 years of experience with employers and employees, and that he had found that employers generally found work somewhere in their plants for an employee who had been injured or disabled while in their employment. But he thought it was unfair to ask the employer to take on as new hands men who were unfit.

Employers in some of the leading industries in the province contributed to the discussion, stating their policy in regard to the medical standards they applied to their workers.

#### **Value of an efficient employment service**

The Industrial Survey Commission appointed in 1926 by the Legislature of the State of New York, in a report presented at the recent session, recom-

mended that the legislature should give more consideration in future to the subject of unemployment. The commission was "impressed by the fact that while a vast amount of attention has been devoted in recent years to the problems of the workers and to bettering the conditions under which the work is performed, reasonably and adequately protecting the workers as to their safety, health and general economic conditions and defining their rights under Workmen's Compensation Laws, comparatively little attention seems to have been given to the problem of those who are out of work and who are seeking work. The past twenty-five years have seen the greatest advances in the matter of labour legislation, and yet with all these advances in protection for the workers, there has been no improvement in this State in the laws relating to persons seeking work. We do not suggest that there has been an undue consideration of the problems of the workers as distinguished from the work-seekers, but we do find that there has been little if any attention given to the problems of the work-seekers. The reasons for this lack of consideration are not entirely clear. Possible reasons that suggest themselves, among others, are that the methods of obtaining employment are rather diverse and to a considerable extent uncontrollable; that these problems

deal with the weakest members of society; namely the unemployed and needy, and the fact that effective organization is impossible among the ordinary job hunters, and as a consequence, they are unable to make their demands coherent and articulate."

The commission expressed the belief that "the matter of procuring employment for the residents of the State and procuring employees for the industries of the State is a matter of concern to the state itself and should not be delegated to the various localities. It is just as much a matter of state concern as a factory inspection or the requirements for safe and decent working conditions. It is a matter as to which the State should have the greatest concern for it affects the welfare of the poor and needy and the most helpless of our people."

The commission recommended more stringent regulation of private employment agencies, and that the Employment Service of the State should be made more efficient.

#### **Employment stability committees in Australia**

The Australian States, on the recommendation of the recent Premiers' Conference, have set up industrial stability committees whose task is to bring industry,

labour and private organizations into closer touch with a view to relieving unemployment. In the parliamentary debates expression was given to a general desire to provide work for the unemployed by means of relief works and development schemes. Long discussions, which often turned on questions of detail, took place on what particular work could, and should, be undertaken and on conditions of work in these undertakings. It is stated that the Parliaments were partly influenced by the clearly expressed opinion of the British Economic Mission to Australia to the effect that the Australian governments should proceed cautiously in the matter of initiation of new schemes involving the expenditure of borrowed money, and should submit them before initiation to the most rigorous scrutiny from the point of view of the prospect of their being self-supporting at a reasonably early stage. The various parliaments therefore hesitated to vote supplies for several of the works suggested. The opposition in some States urged that relief work provided no solution to unemployment, and in other States urged the government to increase public works beyond the program they had suggested.

The main suggestion related to railway development (especially in South Australia), land settlement by the improvement of transport, cultivation and irrigation, the building

of roads as feeders to existing railways, the development of hydro-electric power and harbour work in Adelaide and Brisbane.

The work of the British Economic Commission to Australia, mentioned above, was briefly outlined in the LABOUR GAZETTE, September, 1929, page 1002.

### Building Industry Council in South Africa

Some account of the National Industrial Council for the Building Industry in the Union of South Africa was given in the LABOUR GAZETTE, July, 1925, page 648. The council is composed of representatives, in equal numbers, of the National Federation of Building Trade Employers and of various employees' organizations, selected from all parts of the country. One of the chief functions of this council, which operates under the Industrial Conciliation Act, is each year to consider and confirm or amend the National Agreement governing employer and employee relations, which is country-wide in its application.

The agreement does not expire until August each year, but some months before it lapses—that is, in May—the employers and employees composing the council get together to settle wages and working conditions so that an amended agreement may become operative without delay and without the possibility of disputes or strikes that are generally occasioned whenever an agreement terminates without a prior settlement.

The *South African Builder* points out in a recent issue that the results arrived at by the representatives of employers and employees composing the National Industrial Council of the Building Industry of South Africa serve to emphasize the value to industry of settling wages and working conditions at a time when no evil passions have been aroused by acrimonious disputes or any high-handed action has been taken by one side or the other. Matters affecting both employer and employee can thus be discussed in a spirit of compromise and with due regard to the opinions of either side, that must make for easier settlement of all difficulties.

The *Contract Record and Engineering Review* (Toronto), in its issue of October 23, has the following comment on the South African Council:—

“The existence of legislation making it possible to settle labour relations so effectively undoubtedly makes for industrial peace and harmony, and a better appreciation by one side of all the hardships under which the

other side works. Certainly, the freedom from industrial disputes that seems to exist in South Africa is a justification for the methods of solving labour problems that have been put into operation there, but what is of particular importance is that proposed changes in the working agreement are discussed well in advance.”

### Training British migrants for Canadian farms

The Overseas Settlement Department of Great Britain announced during October that, with the concurrence of the Canadian Government, arrangements had been completed for training 3,000 single men between the ages of 19 and 35 in farm work in Great Britain during the autumn and winter, with a view to their placement in farm employment in Canada next spring. Accepted candidates will go to residential training centres established by the British Government, where they will receive instruction in elementary agricultural work, including the handling of horses, ploughing and milking, and the care of live stock.

Hitherto similar training schemes have been restricted to unemployed men. A feature of the present scheme is that it is open to single employed and unemployed men on equal terms, provided that they are within the prescribed age limits, and are provisionally approved by a representative of the Dominion Government. Agricultural labourers who are being paid under the Agricultural Wages Acts are not eligible for the scheme.

The duration of the course will be not less than 12 weeks, and the centres have accommodation and facilities for not fewer than 1,000 men in October. Candidates who apply early will have the advantage of a longer course of training, i.e., until such time as they are given their embarkation leave. Moreover, men who complete their training in time to proceed to Canada in the early spring will thus be in a position to secure engagements at the start of the farming season.

Besides receiving free training and maintenance, the men will be paid 4 shillings a week pocket money, plus 1 shilling for each completed week of training, on leaving the centre, and free railway fares to and from the centre. On completion of training a few days embarkation leave will be given. The men will then receive a free railway fare to the port of embarkation, and a free ocean passage and railway fare in Canada to the station nearest to their final destination.

### Unity of command in Russian Soviet industry

The Central Committee of the Communist Party in Russia recently published an Order laying down principles for the management of State industry. The

Order, which is published not merely for the use of the Communist Organizations, but also as a formal instruction to trade unionists and managers, lays down the principle of complete authority and responsibility of managers in State industrial undertakings.

Commenting on this decision of the Communist Party, *Izvestia*, the official organ of the Soviet Government, expressed the following views in its issue of September 7:—

"The importance of the decision taken by the central Committee of the Communist Party lies in the categorical declaration that the responsibility for the satisfactory working of undertakings rests entirely on the administration, i.e. on the managers, who must be in a position to exercise all the authority conferred on them for the development of production. Appointments, transfers and dismissals of administrative and technical staff may be discussed by the organized workers in the undertaking, but are not dependent on their approval. Neither the Communist cell nor the trade union organization nor any other public body has the right to interfere with the execution of the manager's orders. The administration can thus no longer excuse bad management on the ground of intervention of outsiders or the presence of friction or any other hindrances. The principle of unity of command will undoubtedly help to develop initiative in managers, and further the application of measures of rationalization and improvement in industrial undertakings."

During the month of October a total of 7,124 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 32 of which were fatal cases; in Schedule 2 industries 512 were reported, including 9 fatal cases; and in Crown industries 403 cases, 3 of which were fatal, were reported during the month, making in all 8,075 cases reported, of which 44 were fatal.

The Perth (Ontario) County Council, at a meeting on October 12, ordered that the members of the Old Age Pension Board of the county be paid the sum of \$5 a day for their services at meetings, and that the secretary of the Board be paid 50 cents on each application accepted till the end of the current year.

The Government of Saskatchewan has appointed a commission under the Public Inquiries Act to inquire into the Civil Service of the Province with a view to making recommendations as to the classification of members of the Service and the fixing of grades with a minimum and maximum salary, and such other recommendations as the Commissioners consider will tend to stabilize and improve the status of the Civil Service. The commission is composed of the following members:—the Hon. James Fraser Bryant, Minister of Public Works; Major James Coldwell, school principal, Regina; and Mr. Arthur Hayworth, civil servant, Regina.

Announcement has been made by New York University that ten men will receive scholarships in its courses in accident prevention. Mr. Arthur Williams, president of the Museum of Safety, will finance the training of these men, who will be selected by ten metropolitan organizations. They will be chosen regardless of previous academic training, provided they have qualities of leadership. First-hand studies will be made of factories and communities which are able to show success in their safety campaigns. A record of their work will reveal in a few years whether the way to relieve a distressing state of affairs has been found.

The inspector of scaffolding for Montreal announced in October that the by-law governing scaffolding and other structures used by contractors and builders in the city would be strictly enforced in future. Recently the Recorder's Court condemned a contractor to pay \$5 for every day he had made use of improper scaffolding. The by-law contains full specifications for the construction of scaffolding.

The Industrial Hygiene Committee of the Province of Quebec Safety League has invited the owners of industries in the province to reply to the following questions:—number of employees (male and female); is there a first aid or safety committee? number of nurses, full time or visiting? number of physicians; is there a lunch room for employees? is there a rest room for female employees?

The Saskatchewan Retail Clerks' Association recently submitted a request to the Provincial Government for the enactment of legislation to require that all clerks throughout the province, and not only those working in cities, should have a half holiday each week.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation throughout Canada was reported by the superintendents of the Employment Service of Canada at the end of October to be as follows:—

In the Province of Nova Scotia all root and grain crops had been harvested and fall ploughing was well under way. Farmers reported an excellent yield of potatoes, both in size and quality, and a bumper crop of apples for the year. All fishermen reported fair catches. Logging, as yet, recorded little activity. Coal mining showed a very satisfactory output, with miners well employed. Manufacturing industries for the most part were busy, with some departments working to capacity. Seasonal curtailment occurred, however, in ice cream and mineral waters. Iron and steel were fully employed, while sawmills and woodworking factories were fair. All construction work was progressing favourably, with many skilled and unskilled workers engaged. Railroad transportation was steady, although steamship and automobile traffic showed the usual decline at the approach of winter. Seasonal trade continued good with collections fair. The demand for women domestics was up to the average, with a fair number of applicants registering and several satisfactory placements made.

As in Nova Scotia, farmers were busy with the usual fall work. Fishermen were well engaged and good catches of fish reported, though on some shores heavy storms hampered their activities. Logging in northern New Brunswick was brisk, with a good demand for woodsmen, and with wages satisfactory. Round about Saint John, woods operations were, as yet, scarcely under way. In the manufacturing industries, lumber, soft drinks, confectionery and foundry work were reported as fair, with pulp and paper brisk, and other manufacturing concerns showing some improvement. Building construction was particularly busy, with road work being rushed to completion during the period of favourable weather. Transportation showed considerable activity, while employment in the shipping industry was exceptionally heavy for this season of the year. Trade, both retail and wholesale, was good. There was the usual demand for women domestic workers.

The demand for farm workers still continued to show a considerable decline in the Province of Quebec, Montreal being the only office to report the request for workers in that industry to be fair. Marked activity was

maintained in logging, Quebec office stating that the call for bushmen was particularly brisk in their locality. Three Rivers was the only industrial centre where orders were received for quarry men, and where a few placements in mining were made. General conditions in manufacturing throughout the province were good. Boots and shoes, textiles, clothing, confectionery, printing and rubber were reported as busy, while in other lines conditions were normal. Those in paper, as reported by Three Rivers, were fair. Construction and maintenance continued steady throughout the month, with special mention of a period of increased activity for structural iron workers. Upon the approach of cold weather, there was a slackening in the municipal work in some of the larger centres, yet the amount of building going on continued to absorb in a satisfactory manner the surplus workers available. Water and rail transportation were fair, with several placements of longshoremen and railway maintenance workers in Montreal. The commercial situation was satisfactory, though somewhat less active than in previous weeks, owing to the close of the tourist season. Services continued steady, while there were many demands for women domestics, and a considerable number of placements were effected in household work.

Orders for farm workers in Ontario showed a decline, the majority of vacancies listed being for teamsters and plough men. An active demand continued for experienced bush workers, and though applicants were available, transportation to camps was somewhat handicapped through lack of funds on the part of those applying. Mining was quiet, as most of the mine operators were well supplied with workers. Manufacturing industries showed improvement, the textile group being particularly active in Belleville, Hamilton and London, while pulp mills were working to capacity in Northern Ontario. Leather shoe and rubber footwear remained steady. Building construction continued fairly active, due to favourable weather conditions, and work was available for the majority of building mechanics. Road construction was nearing completion, with the usual fall and winter surplus of unskilled labour on hand. Railroad labour was still in demand, as much unfinished work remained to be done. Calls for experienced women domestics were numerous and requirements were met with less difficulty.

Throughout the Province of Manitoba a continued decline was reported in the demand

for farm labour, the greater part of the orders being for winter choring. In logging, also, there was a noticeable falling off in the number of vacancies listed. Winnipeg stated that conditions in the manufacturing line were fair. With continued fine weather building

construction work was active, and nearly all local tradesmen were fully employed. Railway and road construction were somewhat quiet. Trade showed slight improvement. Women domestic workers were in demand with plenty of applicants available.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA  
(Official Statistics except where noted)

	1929			1928		
	October	September	August	October	September	August

The demand for farm workers in Saskatchewan, as in Manitoba, continued to show a decline, the majority of calls being for workers by the day or month until freeze-up. Prospects for employment for the season in the logging camps, especially in the district about Prince Albert, were very poor, with some camps closed until after Christmas and many men canvassing for work. Building construction was fair, but little activity was shown in the highway or railway groups. There was a fair call for women domestics, with sufficient applicants on hand.

With the exception of the harvesting of sugar beets, there was little activity in agricultural employment in Alberta. Several orders for chore men were listed, but few positions were offered with guaranteed winter employment. The outlook in logging appeared somewhat brighter, as several camps had decided to open. Conditions in the coal mining industry were fair, with little chance of improvement until early winter. The weather was favourable for out of door work in the building trades, and as this situation was temporary, full advantage of it was being taken. There was no demand for railway workers. Orders for women domestics were somewhat below the usual number, as was also the number of applicants for positions.

Farm orders in British Columbia were few, with an increased number of applicants for positions. In fruit and vegetable districts all work was about completed, as weather conditions had been ideal. Logging throughout the province was dull, few camps having opened up to the present time. Metal mining was less active in the larger camps, while coal mining showed little change. In both divisions a surplus of labour was reported. Building construction was only fair, though in some districts building tradesmen were more fully employed than in others. Railway orders were practically nil, and few men were sent out. Manufacturing was quiet, as was also shipping and longshoring in Vancouver. Trade showed little improvement. Victoria and Vancouver both reported a demand for women domestics with a shortage of applicants willing to take general household positions, many of the applicants available being immigrants who are unable to speak English, and thus difficult to place. Conditions throughout the province were for the most part very quiet, with little prospect of improvement as winter approaches, and in many districts the problem of the unemployed was already becoming acute.

#### EMPLOYERS' REPORT

Industrial activity showed a further slight curtailment on October 1, according to statements tabulated by the Dominion Bureau of Statistics from 7,027 employers, whose staffs aggregated 1,089,583 persons, as compared with 1,098,653 in the preceding month. Employment on the same date last year had also shown a slackening, but the situation then was not so favourable as on the date under review, when the index stood at 125.6, compared with 126.8 on September 1, and with 118.8, 110.3, 106.5, 99.5, 95.0, 100.7, 95.8 and 91.3 on October 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The average number of persons employed by the reporting firms in the calendar year 1926, is taken in every case as the base equal to 100.

Ontario firms afforded greater employment, while elsewhere there were contractions, of which the most marked was in the Prairie Provinces. In the Maritime Provinces, there were further and larger losses, involving many more workers than did those registered on the same date last year, when the index was, however, decidedly lower. Construction, transportation and manufactures reported the bulk of the decline, while the tendency was favourable in logging and trade. In Quebec, manufacturing, logging, mining and trade registered greater employment, but transportation and construction showed less activity. In Ontario, continued improvement was indicated, particularly in manufacturing, logging and trade. On the other hand, there were marked losses in construction and smaller reductions in transportation. In the Prairie Provinces, the falling-off in employment repeated the movement noted on the corresponding date last year; the index number then, however, was lower. The curtailment took place chiefly in construction, but also in services, manufacturing and trade, while transportation and mining were more active. In British Columbia, further contractions were noted, mainly in construction, manufacturing, transportation and services, while mining, logging and trade reported heightened activity.

The trend of employment was upward in Montreal, Toronto and Ottawa, but downward in Quebec City, Hamilton, Windsor and the Adjacent Border Cities, Winnipeg and Vancouver. In Montreal, manufacturing and trade reported the bulk of the reduction, while construction and transportation were slacker. In Quebec, practically all the loss took place in construction, services and transportation, while manufacturing showed improvement.

In Toronto, manufacturing was much busier, as were trade and building construction. In Ottawa, trade and manufacturing were more active, while other groups showed only small changes. In Hamilton, curtailment was registered in manufacturing, but construction was somewhat brisker. In Windsor and the Adjacent Border Cities, there was a falling-off in the number employed, mainly in automobile plants and construction. In Winnipeg, transportation was more active, but there were losses in manufacturing and building. In Vancouver, manufactures, transportation and services reported decreases.

An analysis of the returns of industries shows that there was an increase in manufactures, largely in vegetable food, textile, pulp and paper, tobacco, distilled and malt liquor, electrical appliance, electric current and leather factories. On the other hand, there were large seasonal losses in fish-preserving and saw-milling plants, as well as reductions in rubber, building material, iron and steel and non-ferrous metal works. Logging, mining and trade registered considerable gains, those in logging being particularly noteworthy, but in construction and services there were extensive seasonal contractions, and transportation was also slacker, chiefly owing to the delay in the movement of grain.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of October.

**TRADE UNION REPORTS** The employment conditions among local trade unions remained much the same during September as in the previous month, the 1,762

labour organizations from which returns were received including 206,617 members showing 3.7 per cent of unemployment contrasted with 3.5 per cent in August. Moderate declines in activity were reported over September a year ago when the percentage of idleness stood at 2.2. Nova Scotia and Quebec unions alone reflected a better employment trend during September than in the preceding month though the improvement indicated in each province was nominal only. Of the reductions registered in the remaining provinces none were outstanding, those in New Brunswick, Ontario, Saskatchewan, Alberta and British Columbia being less than one per cent and in Manitoba slightly larger. All provinces contributed a share to the unemployment increase shown over September of last year, the reductions ranging from 3.5 per cent in Manitoba to .4 per cent in Quebec.

A review in greater detail of the unemployment situation at the close of September as indicated by local trade unions is printed elsewhere in this issue.

**EMPLOYMENT OFFICE REPORTS** Reports from the offices of the Employment Service of Canada for the month of September, 1929, showed 44,580 references of persons to positions and a total of 43,056 placements, of which 30,196 were in regular employment and 12,860 in casual work. Regular placements totalled 24,810 for men and 5,386 for women. Vacancies reported to the Service numbered 46,099, of which 33,413 were for men and 12,686 for women. Applications for work were received at the offices from 40,423 men and 15,098 women, a total of 55,521. A marked decline was noted in the business transacted when the figures were compared both with those of the preceding month and with those of September a year ago, the report for August, 1929, showing 55,254 vacancies offered, 61,317 applications made, and 51,313 placements effected, while in September, 1928, there were recorded 86,503 vacancies, 84,545 applications for work, and 77,027 placements in regular and casual employment. In another section of this issue will be found a detailed report of the work of the offices for September, 1929, and for the quarterly period July to September of the current year.

**BUILDING PERMITS AND CONTRACTS AWARDED** According to a report prepared by the Dominion Bureau of Statistics the value of permits issued in 61 cities during September was \$17,107,963, as compared with \$21,560,361 in the preceding month and with \$20,374,149 in September, 1928.

The *MacLean Building Review* states that "October made a new record for contracts awarded when compared with that month in any previous year. It was an increase of 21 per cent over September last and of 28 per cent over October a year ago. Construction for the year to date stands 17.6 per cent ahead of the same period of 1928." The *Review* estimates the total value of construction contracts awarded in Canada in October, 1929, at \$57,083,600 which is an increase of 21 per cent over September last and of 28 per cent over October a year ago. Of the October total, \$27,326,900 was for engineering purposes; \$12,564,500 was for business buildings; \$11,113,400 was for residential buildings and \$6,078,800 was for industrial buildings. The apportionment of the contracts awarded during October by provinces was as follows: Quebec, \$23,859,600; Ontario, \$14,369,000;

Nova Scotia, \$7,294,600; British Columbia, \$4,730,800; Manitoba, \$3,288,200; Saskatchewan, \$1,583,000; Alberta, \$1,103,400; New Brunswick, \$493,700; Prince Edward Island, \$361,300.

### Production and Trade

**INDUSTRIAL PRODUCTION** Figures showing the volume of production in certain industries during the recent months and also in the corresponding months in the previous year are given in the table on page 1200.

Recession was shown in most lines of business activity during September compared with the preceding month, according to the *Monthly Review* published by the Dominion Bureau of Statistics. The decline in general production during September was accentuated by the occurrence of five Sundays in a 30-day month, while August was a 31-day month with four Sundays. Newsprint was a bright spot in the economic situation, the monthly output at 227,665 tons in September being only exceeded twice before in the history of the industry. The iron and steel industry showed recession, one blast furnace at Saulte Ste. Marie being closed down during September. The output of automobiles showed further decline in September and imports of rubber and petroleum were in lesser volume. The movement of revenue freight showed curtailment owing mainly to the slow demand for Canadian grain in European markets. Carloadings at \$335,000 cars, after adjustment for seasonal tendencies, were less than in August. The Bureau's index of the physical volume of business was 171.7 in September compared with 188.6 in the preceding month. The number employed in Canadian industries on October 1 was less than on September 1, the official index being 125.6 compared with 126.8, although a slight increase is normally shown during September.

### EXTERNAL TRADE

A summary of Canadian trade prepared by the Department of National Revenue shows that in September, 1929, the merchandise entered for consumption amounted to \$99,379,848, as compared with \$111,630,924 in the preceding month, and with \$106,066,189 in September, 1928. The chief imports in September, 1929, were: Iron and its products, \$22,049,621; Non-metallic minerals and products, \$16,393,069; Fibres, textiles and textile products, \$14,412,395.

The domestic merchandise exported during September, 1929, amounted to \$87,751,034, as compared with \$96,264,517 in August, 1929, and with \$109,828,366 in September, 1928.

The chief exports in September were: Wood, wood products and paper, \$24,737,651; Agricultural and vegetable products, mainly foods, \$16,406,175; Animals and animal products, \$15,081,955.

### Strikes and Lockouts

The time loss due to industrial disputes in October, 1929, was substantially less than that occurring in September, fewer workers being involved although two more strikes occurred. As compared with October, 1928, the figures for October, 1929, showed a considerable decrease, as in the earlier period a strike of carpenters at Vancouver and a dispute involving coal miners at Wayne, Alta., affected a large number of workers and caused a large time loss. There were in existence during the month eleven disputes, involving 771 workers and resulting in a time loss of 6,219 working days, as compared with nine disputes in September, involving 864 workers and resulting in a time loss of 9,788 working days. In October, 1928, there were on record sixteen disputes, involving 2,530 workers and resulting in a time loss of 36,838 working days. At the end of the month there were on record six disputes, involving approximately 330 workers. These figures do not include those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was little changed at \$11.68 for October, as compared with \$11.64 for September; \$11.28 for October, 1928; \$10.99 for October, 1927; \$10.93 for October, 1926; \$10.89 for October, 1925; \$10.31 for October, 1924; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. The prices of eggs, milk, butter, bread, prunes and sugar advanced, while the prices of beef, mutton, fresh and salt pork, bacon, lard, potatoes, evaporated apples and cheese were slightly lower. Including the cost of fuel and rent with that of foods the total budget was slightly higher at \$21.96 for October, as compared with \$21.90 for September; \$21.52 for October, 1928; \$21.18 for October, 1927; \$21.14 for October, 1926; \$21.11 for October, 1925; \$20.67 for October, 1924; \$21.16 for October, 1923; \$20.87 for

October, 1922; \$22.01 for October, 1921; \$26.46 for October, 1920; \$26.92 for July, 1920 (the peak); \$21.48 for October, 1918; and \$14.48 for October, 1914. Fuel was slightly higher, due to increases in the price of coal. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly lower at 96.7 for October, as compared with 97.3 for September; 95.4 for October, 1928; 97.2 for October, 1927; and 98.1 for October, 1926. In the classification according to chief component materials seven of the eight main groups were lower, while one was higher. The Vegetables and Vegetable Products group was substantially lower, due mainly to decreases in the prices of grains, vegetables, coffee and

rubber. The other groups which declined were: the Textile and Textile Products group, due to lower prices for raw cotton, raw jute, hessian, hemp, sisal, raw silk and raw wool; the Wood, Wood Products and Paper group, due to decreases in the prices of certain lines of lumber; the Iron and its Products group, because of lower quotations for black steel sheets; the Non-Ferrous Metals and their Products group, due to lower prices for copper, lead, tin and zinc; the Non-Metallic Minerals group, due to decreases in the prices of gasoline, kerosene and certain building supplies; and the Chemicals and Allied Products group, due mainly to a fall in the price of copper sulphate. The Animals and their Products group advanced, lower prices for live stock and meat being more than offset by increases in the prices of fish, milk, cheese and eggs.

### Canadian Number of "American Federationist"

The *American Federationist*, the monthly publication of the American Federation of Labour, celebrated the holding of the 49th annual convention in Canada last month by an issue devoted mainly to Canadian topics. (A report of this convention was given in the last issue of the LABOUR GAZETTE.)

The *Federationist* for October contained the following articles:—

"The 45th Annual convention of the Trades and Labour Congress," by Tom Moore, president, Trades and Labour Congress of Canada.

"Recent Industrial and Economic Progress in Canada," by Gilbert Jackson, University of Toronto.

"Old Age Pensions in Canada," by J. S. Woodsworth, M.P.

"Canadian Statistics Relating to Labour," by R. H. Coats, Dominion Statistician.

"Canadian Railway Workers Progressing," by R. J. Tallon, President, Division No. 4, Railway Employees Department, American Federation of Labour.

"Canadian Electrical Workers," by E. Ingles, vice-president, International Brotherhood of Electrical Workers.

"Federated Association of Letter Carriers," by John J. Reaves, president.

"In the Spot Light," by John W. Bruce, general organizer, United Association of Journeymen Plumbers and Steam Fitters of the United States and Canada.

"Public Employment Offices in the Dominion of Canada," by R. A. Rigg, director, Employment Service Branch, Canadian Department of Labour, Ottawa.

"The International Association of Machinists in Canada," by James Somerville, general vice-president for Canada.

"Firefighters in Canada," by Donald Dear, vice-president, 13th District (Eastern Canada).

"Trade Union Organization in Canada," by Lyle W. Cooper.

### Central Electric Stations in Canada

The Dominion Bureau of Statistics recently issued its annual report on the Central Electric Stations industry for the year 1927. The report states that the growth of the industry, as indicated by the output, has been rapid and fairly steady. In 1919, the first year for which the output was tabulated, 5,497,204,000 kilowatt hours were generated, in 1927, with an output of 14,549,099,000 k.w. hours it had increased by 165 per cent. The figures for the total output for the years 1926 and 1927 each show an increase of 20 per cent over the previous year's output.

Stations are required to report all employees with their total salaries and wages. During 1927 the number of employees on wages was 8,699, the number of salaried employees was 6,009. The number of employees on wages is the monthly average, and consequently gives the correct weight to seasonal employment. The number of employees increased 1,302, over ten per cent, for an increase in the payroll of \$3,003,315, or 15 per cent. The largest increase was in Quebec where 403 employees were added to the pay rolls. In British Columbia the increase was 368 employees and in Ontario 195 employees, whereas Alberta stations showed a small decrease. The number of power plants increased during the year by thirty-four.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF OCTOBER, 1929

**D**URING the month of October an application for the establishment of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was received in the Department of Labour from motormen, conductors, shopmen, barnmen and trackmen in the employ of the Ottawa Electric Railway Company and being members of Division No. 279, Amalgamated Association of Street and Electric Railway Employees of America. Three hundred and fifty men were stated to be directly affected by the dispute, which grew out of the dismissal from the service of the company of nine conductors and motormen who had reached the age of sixty-five years.

The October issue of the *LABOUR GAZETTE* contained the text of the report of the Board of Conciliation and Investigation which dealt with a dispute between the Canadian Pacific Railway Company (Western Lines) and the

Canadian National Railways (Western Lines) on the one hand, and certain of their employees on the other hand being conductors, trainmen and yard service employees, members of the Order of Railway Conductors and the Brotherhood of Railroad Trainmen. The Board was composed of the Honourable Mr. Justice A. K. Dysart, chairman, appointed on the joint recommendation of the other Board members, Messrs. Isaac Pitblado, K.C., and David Campbell, K.C., nominated by the companies and employees, respectively. The report of the Board was unanimous and recommended certain wage increases for the classes of employees concerned. Word reached the Department during October to the effect that the Board's findings had been accepted by the employees and the two railway companies concerned and were being put into effect.

### ALBERTA LABOUR DISPUTES ACT

#### Report of Board in Dispute between Edmonton Theatre Proprietors and certain of their Employees

**T**HE Board of Conciliation and Investigation appointed by the Hon. the President of the Executive Council, with reference to the dispute between the Proprietors of the Capitol and Empress Theatres, Edmonton, and Locals 210 and 360 International Association of Theatre Stage Employees, as to the employment of a member of the American Federation of Musicians at each of these theatres to operate the non-synchronous machine and to regulate the volume of sound, reports as follows:—

(a) Five formal sessions of the board were held at Edmonton.

(b) At these sessions the witnesses produced by the parties were questioned by members of the board and by representatives of the parties (this evidence was taken down in shorthand by Mr. W. E. Ellis, Court Reporter, and the transcription has been duly forwarded to the Hon. the President of the Executive Council).

(c) A number of informal discussions took place between members of the board and representatives of the parties, resulting in an agreement being reached by which the threatened strike of members of Locals 210 and 360 was averted.

(d) By this agreement the Empire Theatre, operated by the proprietors of the Capitol

and Empress Theatres, agreed to employ two additional members of the A.F. of M. in its orchestra and Locals 210, and 360 I.A.T.S.E. agreed not to press their demands for a member of the Musicians' Union to regulate the volume of sound, and not to object to the operator playing the National Anthem at the end of the performance.

In view of the settlement the members of the board did not consider it advisable to express any opinion as to the merits of the dispute.

Dated at Edmonton, October 10, 1929.

(Sgd.) F. G. JAMIESON, Chairman.

(Sgd.) G. B. O'CONNOR, Member.

(Sgd.) H. G. TURNER, Member.

#### Investigation in Automobile Industry at Calgary

A Board of Conciliation and Investigation appointed under the provisions of the Alberta Labour Disputes Act has been investigating recently a dispute between Local Union No. 1006, International Association of Machinists, Calgary, and Calgary Automobile Dealers' Association. The report of the Board in a dispute between the same parties last year was given in the *LABOUR GAZETTE*, September, 1928, page 952.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of Recent Decisions

**T**WO new decisions were recently given by the Canadian Railway Board of Adjustment No. 1. This Board was established by a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods; the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, the Brotherhood of Railway Trainmen, the Order of Telegraphers, and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. Earlier decisions were outlined in the *LABOUR GAZETTE*, May, 1929, and in previous issues. The third report of the proceedings of the Board, covering the decisions rendered from October 1, 1923, to September 30, 1927, was issued as a supplement to the issue of November, 1927.

#### Case No. 348.—Canadian National Railways (Atlantic Region) and Brotherhood of Railroad Trainmen.

A conductor was dismissed from the service as the result of a collision between his train and another. The employees contended that the dismissed employee had not violated any known rule in the standard code of operating rules or time table rules or instructions, and they demanded his re-instatement, with payment for the time he was held out of service. The evidence taken at the inquiry showed that while the conductor did not read to, or deliver to the engineer the order and clearance before giving a signal to proceed, he had made reasonable effort to do so while train was still in station limits. The evidence also showed that the engineer was aware that he had no right on the main line until after the arrival of the other train. It appeared further that had the conductor delivered the clearance and train orders to the engineer before he gave "proceed signal" to leave the station it was probable that the accident would not have happened.

The Board decided that under the circumstances discipline by dismissal was unduly severe, and that the conductor should be reinstated. The Board also recommended to the company further consideration of the extent to which the conductor should suffer loss of compensation while held out of service.

#### Case No. 349.—Canadian National Railways (Central Region) and Brotherhood of Locomotive Engineers.

An engineer was ordered for a "turn around" trip from Belleville to Cobourg and return. On arriving at Cobourg he was required to change from his passenger engine to a switching engine, and to switch all the cars for the return trip. The employees contended that as a yard crew was employed at Cobourg and the engineer performed yard service similar to the service performed by this crew, he should be paid for the yard switching separately from his payment for the road trip, claim being made for payment at the yard switching rates for 8 hours. The company contended that only one yard shift was being worked at Cobourg and it was occasionally necessary to require a crew in road service to perform the switching required at this point. During the season in question, it was stated by the company, only one yard shift was being worked at Cobourg, and it was occasionally necessary, in order to avoid delay to the car ferries, to require a crew in road service to perform switching required at this point, outside of the hours that the regularly assigned yard crew were on duty. The company maintained that the claimant was properly compensated, in accordance with a provision of the Schedule of Rates of Pay and Rules governing the services of Engineers, Firemen, Helpers, and Hostlers, effective December 1, 1925; his time had been computed continuously from time required to report for duty at Belleville until released from duty at Belleville, in accordance with Article 7, Rule A., and he had been allowed way freight rates in accordance with Article 7, Rule G. The Company's contention was that the employees' claim could not be sustained by any schedule, rule or practice and was in effect, a request for a new rule.

The Board did not sustain the employees' claim, being of the opinion that under the terms of the agreement between the railway and its locomotive engineers, the service was properly classified as "turn around" service, under the provisions of Article 7, and that the engineer should be paid on the basis of continuous time or mileage from time of departure from Belleville until arrival at designated track switch on return trip, plus allowances for preparatory time, initial terminal delay, final terminal delay and inspection time.

## STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1929

THE number of strikes and lockouts in existence in Canada during October was eleven, as compared with nine in the preceding month; but while there was only a slight difference in the number of workers involved, the termination in October of the dispute involving workers in a steel car factory in Hamilton caused a substantial decrease in the time loss for the month as compared with September. Compared with October, 1928, the figures for October, 1929, show a considerable decrease as a strike of carpenters at Vancouver and a dispute involving coal miners at Wayne Alta., affected large numbers of workers and caused a large time loss in October 1928.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Oct., 1929.....	11	771	6,219
*Sept., 1929.....	9	864	9,788
Oct., 1928.....	16	2,530	36,838

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Four disputes involving 410 workpeople, were carried over from September (the strike of bakers at Montreal having terminated on September 29, 1929) and seven disputes commenced during October. Of these eleven disputes, five terminated during the month, three being in favour of the employer, one in favour of the workers and one resulting in a compromise. Information received too late for inclusion in the October issue of the LABOUR GAZETTE reveals the result of the strike of bakers terminating on September 29, 1929, as indefinite. At the end of October, therefore, there were six disputes recorded as strikes or lockouts, as follows: composers, Nelson, B.C.; moulders, Montreal, P.Q.; pulpwood cutters and camp workers, Thunder Bay dis-

trict, Northern Ontario; coppersmiths, Toronto, Ont.; silversmiths, Toronto, Ont.; and stagehands, Ottawa, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Information is available as to two such disputes namely: electrotypers, Toronto, Ont., December 20, 1926; and photo engravers, Toronto, Ont., commencing January 17, 1929.

A strike of ten cap factory workers in Montreal on August 13, 1929, was recently reported to the Department, the employer refusing the demand of the union for the discharge of a non-union employee. The employer stated that this worker had been in his employ for four years and that the union could not secure a union worker to take his place. On October 26 the strikers returned to work and the union reported that negotiations as to a new agreement were pending.

A strike of labourers on a construction job at Alert Bay, B.C., on September 13, 1929, was also recently reported to the Department. It appeared the employees had not been paid their wages when due and that the rates for board had been increased from \$1.25 per day to \$1.50. The employer being a sub-contractor, the main contractor paid the wages due and restored the rate of board to the previous figure, and work was resumed on September 19. After the resumption of work a dispute arose as to some points in the settlement and these were settled through the mediation of the resident officer of the Department.

A strike of boot factory employees in Montreal on September 6, 1929, was referred to in the last issue of the LABOUR GAZETTE, particulars not having been available at that date. Information since secured shows that the strike was against a reduction in piece rates and that following a compromise on the rate work was resumed on September 17. Another question in dispute was the right of the union officer to collect dues on the premises, and it was arranged that this should be done in the hall of the building.

Strikes of employees in pulpwood camps west of Lake Superior towards the end of October have been reported, but full particulars have not yet been received by the Department. The information available in-

icates that these disputes are of the same nature as that in the vicinity of Thunder Bay.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

BAKERS, MONTREAL, P.Q.—In the dispute involving bakers in certain shops in Montreal, reported in the last issue of the LABOUR GAZETTE as causing a cessation of work on September 7, 1929, while four employers signed an agreement with the union, at the end of September the case was referred to arbitration and the employees involved were

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1929

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
-----------------------------------	------------------------------	---------------------------	---------

(a) Strikes and Lockouts in Progress prior to October, 1929.

MANUFACTURING— Vegetable Foods— Bakers, Montreal, P.Q.....			Commenced Sept. 7, 1929; alleged lockout of workers demanding union working conditions. Terminated Sept. 29, 1929; indefinite.
Clothing (including knitted goods)— Factory workers (knitted silk goods), Toronto, Ont.....	110	660	Commenced Sept. 25, 1929; against lower piece rates on new type of work. Terminated Oct. 8, 1929; compromise.
Printing and Publishing— Compositors, Nelson, B.C.....	2	54	Commenced July 18, 1929; alleged violation of agreement re employment of excess apprentices. Underminated.
Iron, Steel and Products— Moulders, Montreal, P.Q.....	18	430	Commenced May 2, 1929; for increase in wages. Underminated.
Factory workers (steel railway cars), Hamilton, Ont.....	280	2,000	Commenced Sept. 4, 1929; for higher piece rates on new type of work. Terminated Oct. 18, 1929; in favour of employer.

(b) Strikes and Lockouts Commencing during October, 1929.

LOGGING— Pulpwood cutters and camp workers, Thunder Bay district, Northern Ontario.....	200	2,000	Commenced Oct. 14, 1929; for increase in wages. Underminated.
MANUFACTURING— Clothing (including knitted goods)— Boot factory workers, Montreal, P.Q.....	25	50	Commenced Oct. 1, 1929; against working under a certain foreman. Terminated Oct. 3, 1929; in favour of employer.
Other Metal Products— Coppersmiths, Toronto, Ont...	16	432	Commenced Oct. 1, 1929; for increase in wages. Underminated.
Silversmiths, Toronto, Ont....	90	540	Commenced Oct. 25, 1929; for increase in wages and union agreement. Underminated.
CONSTRUCTION— Canal, Harbour and Waterway— Construction labourers, Halifax, N.S.....	19	19	Commenced Oct. 4, 1929; for increase in wages. Terminated Oct. 5, 1929; in favour of workers.
Construction labourers, Halifax, N.S.....	10	10	Commenced Oct. 12, 1929; against discharge of worker. Terminated October 13, 1929; in favour of employer.
SERVICE— Recreational— Stage hands, Ottawa, Ont....	6	24	Commenced Oct. 28, 1929; against decrease in wages. Underminated.

reported to have returned to work on September 29.

**FACTORY WORKERS (KNITTED SILK GOODS), TORONTO, ONT.**—The strike of employees in one factory on September 25, 1929, against a reduction in piece rates was settled on October 8, 1929, through the mediation of the Deputy Minister of Labour for the province of Ontario, a compromise in the piece rates being arranged, and the previous rate to be continued on the type of skein used before the change.

**FACTORY WORKERS (STEEL RAILWAY CARS), HAMILTON, ONT.**—This strike, begun on September 4, 1929, to secure the restoration of piece rates which had been changed owing to the introduction of new methods of production, terminated on October 18, being called off by the organization of the strikers. The employer stated that during the dispute many of the strikers were replaced and that when it was called off nearly all had returned to work under the same conditions as before the strike. The strikers, however, were reported as claiming that changes in working conditions were made which considerably increased the earnings of the workers. Three of the strikers were arrested in connection with the breaking of glass where a returned striker lived, were convicted, and early in November sentenced to imprisonment from three to six months.

**PULPWOOD CUTTERS AND CAMP WORKERS, THUNDER BAY DISTRICT, NORTHERN ONTARIO.**—Employees of pulpwood contractors ceased work on October 14 and following days in several camps, demanding increases in wages from \$4 to \$5 per cord and increases in the monthly rates. The number of strikers reported ranges from 185 to 360. At the end of the month the dispute was un-terminated.

**BOOT FACTORY WORKERS, MONTREAL, P.Q.**—The leather cutters in a shoe factory ceased work on October 1, 1929, refusing to work under a certain foreman. On October 3 the union ordered them back to work on the ground that the strike was not justified.

**COPPERSMITHS, TORONTO, ONT.**—Employees ceased work on October 1, 1929, demanding an increase in wages from a range of 55-80 cents per hour to a minimum of \$1. Negotiations between the employer and the union officials were brought about by the resident conciliation officer of the Department, but after several meetings no settlement was reached and at the end of the month the strike was un-terminated.

**SILVERSMITHS, TORONTO, ONT.**—Silversmiths in two establishments ceased work on October 25, 1929, because the employers refused to sign an agreement with the union which certain other employers had signed. This agreement called for increases in wages and provision for a shop committee. At the end of the month the dispute was un-terminated.

**CONSTRUCTION LABOURERS, HALIFAX, N.S.**—A number of labourers on a harbour construction job ceased work, October 4, for an increase in wages from 35 cents per hour to 40 cents which they claimed to be the prevailing rate required under the government fair wage provision in the employer's contract. The resident fair wages officer of the Department immediately interviewed the contractor, informing him that 40 cents was recognized as the prevailing rate, with the result that the contractor made the minimum rate for labourers 40 cents, but refused to re-employ the strikers on the ground that they were not efficient and replaced them with other workers.

**CONSTRUCTION LABOURERS, HALIFAX, N.S.**—Ten labourers engaged on harbour construction work at Halifax went on strike on October 12 against the discharge of a workman and were replaced.

**STAGE HANDS, OTTAWA, ONT.**—When all employees in a theatre were asked to accept a reduction in wages of twenty per cent, the stage hands ceased work and were replaced. At the end of the month the dispute was un-terminated and a sympathetic strike of the musicians was in prospect.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1929, in the review of Strikes and Lockouts in Canada and Other Countries, 1928. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the

several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

### Great Britain and Northern Ireland

The number of disputes beginning in August was 43, and 10 were still in progress from the previous month, making a total of 53 disputes in progress during the month, involving 21,100 workpeople and resulting in a time loss of about 137,000 working days for the month. Of the 43 disputes beginning in September, 5 arose out of demands for increases in wages, 5 out of proposed reductions in wages, 11 on other wages questions, 14 respecting the employment of particular classes or persons, 4 on other questions respecting working arrangements, 2 on questions of trade union principle and 2 on other questions. Settlements were reached in 33 disputes, of which 9 were in favour of workpeople, 13 in favour of employers and 11 ended in compromises; in 4 other disputes, work was resumed pending negotiations.

At the middle of October, no settlement had yet been reached in the dispute involving about 3,000 shipyard workers at Belfast which began on April 23, and was mentioned in the last issue of the *LABOUR GAZETTE*.

A coal mining dispute near Sunderland involved about 2,500 men from September 26 to September 30, owing to the alleged refusal to pay the minimum wage to certain men; work was resumed pending settlement.

### Belgium

During the month of August, 13 new disputes were reported and 10 were still in progress from the previous month, making a total of 23 disputes involving 5,498 workers. The time loss for the month was 56,772 working days.

About 15,000 coal miners in the Liège and Mons districts were involved in a five day strike from October 18, to secure increased wages. Later on October 24, it was reported that a 24-hour strike of miners throughout Belgium occurred as a demonstration for higher pensions and vacations with pay.

### Germany

For the second quarter of 1929, the number of disputes reported as terminating was 127, involving 2,139 establishments and 77,040 workers, with a time loss of 1,517,176 working days. Revised figures for the first quarter of the year show the number of disputes terminating as 76, involving 955 establishments and 111,942 workers, with a time loss of 1,469,735 working days.

### Sweden

For the year 1928, the number of disputes reported was 202, involving 777 establishments and 71,538 workers, with a time loss of 4,838,000 working days.

### United States

The number of disputes which began in the month of August was 53, while 81 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 15,189, and the time loss for the month was 524,099 working days.

During October, the strike of street car employees at New Orleans, Louisiana, which began on July 2, and was mentioned in the last three issues of the *LABOUR GAZETTE*, was terminated when the strikers voted to accept the tentative agreement which they had previously rejected.

The strike of textile workers at Marion, North Carolina, mentioned in the October issue of the *LABOUR GAZETTE*, continued during October. A number of strikers' families were evicted from company houses and troops were stationed at the town to maintain order.

Two short strikes of truck drivers occurred in New York City in October. The first involved about 2,000 produce truck drivers and resulted in an increase in wages. The second involved between 2,000 and 3,000 gasoline truck drivers.

### New British Widows' Pensions Bill

The British Government has introduced in the House of Commons a bill to amend the Widows', Orphans', and Old Age Contributory Pensions Act, 1925, and previous Old Age Pension Acts. More than 500,000 widows will ultimately benefit if the bill becomes law. It provides that widows between the ages of 55 and 70, whose husband's lives were covered by the Health Insurance Act but who died before January 4, 1926, when the Pensions Act became operative, shall be entitled to pensions. The same provision applies to widows of men, who though they survived January 4, 1926, were then more than 70 years old, and, as non-contributors, were unable to qualify their widows for pensions under the Act of 1925. The 1925 Act limited widows, who had children under the age of 14, to pensions ceasing when the youngest child reached the age of 14 years, six months. The new bill prolongs the widow's right in these cases until the youngest child is 16 years. If the child is not 16 before the widow is 55, the pension continued throughout her life at 10 shillings weekly. Pensions already terminated because the youngest child reached the age of 14 years, six months will be revived.

OLD AGE PENSIONS IN CANADA

Statistics for British Columbia, Manitoba, Saskatchewan, Alberta and the Northwest Territories to the End of the Third Quarter of 1929

THE accompanying tables give particulars of the operation of the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) up to September 30, 1929. Similar tables bringing the statistics up to June 30, 1929, were given in the September issue. The text of this Act was given in the LABOUR GAZETTE, April, 1927, page 375. It makes provision for the establishment of a Dominion-Provincial pension system to be effective in such provinces as have enacted special legislation for this purpose. The Old Age Pensions Act is now in full operation in the provinces of British Columbia, Manitoba, Saskatchewan, Alberta and Ontario. On March 1, 1929, the Act took effect also in the Northwest Territories, payments being made by the Dominion government. The Old Age Pensions Act of Alberta took effect on August 1, and statistics relating to that province are included in the accompanying tables for the first time; the full number of persons however who will ultimately receive pensions in Alberta will not be known until the provincial act has been in operation for a longer period. The Ontario Act took effect on November 1, 1929, and no payments were made under its provisions during the period covered by the present report.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds \$125 a year. The ad-

ministration of old age pensions is entrusted to the authorities appointed by the respective provincial governments. The Department of Labour of Canada pays quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months.

\* The Alberta Act, on September 30, had been in operation only for two months.

### Pension Authorities in Canada and in the Various Provinces and Cities

The Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) is now in full operation in five provinces, in addition to the Northwest Territories. These provinces, in order of their adoption of the Federal Act, are British Columbia, Saskatchewan, Manitoba, Alberta and Ontario.

The Old Age Pensions Act provides that the administration of pensions is to be in the hands of the authorities appointed by the provinces. Section 2 of the Act defines "pension authority" as meaning "the officer or body charged by law with the consideration of applications for pension or with the payment of pensions."

The Pension Authority in the four western provinces is as follows:—

British Columbia: The Workmen's Compensation Board, Vancouver.

Alberta: The Workmen's Compensation Board, Edmonton.

Saskatchewan: The Child Welfare Board, Regina, Saskatchewan.

Manitoba: The Workmen's Compensation Board, Manitoba.

Ontario: Pensions are distributed by local boards appointed by the various municipalities, the central pension authority being the Old Age Pension Board of Ontario.

The administration of pensions in the Northwest Territories is in charge of the Department of Labour, Ottawa.

The officials by whom Old Age Pensions are administered in Canada are as follows:—

#### Dominion

Hon. Peter Heenan, Minister of Labour, Department of Labour, Ottawa.

- H. H. Ward, Deputy Minister of Labour, Department of Labour, Ottawa.  
 G. H. Brown, Assistant Deputy Minister of Labour, Department of Labour, Ottawa.  
 J. D. O'Neill, departmental solicitor, department of Labour, Ottawa.  
 E. A. Thomas, departmental accountant, Department of Labour, Ottawa.  
 F. E. Harrison, auditor, Department of Labour, 306 Royal Trust Building, Vancouver, B.C.  
 W. M. Macintosh, auditor, Department of Labour, 712 Commercial Building, Winnipeg, Man.

### Interprovincial Board

- J. D. O'Neill, chairman, Department of Labour, Ottawa.  
 E. S. H. Winn, K.C., Vancouver, B.C.  
 F. J. Reynolds, Regina, Sask.  
 Major C. K. Newcombe, Winnipeg, Man.  
 Hon. Dr. D. Jamieson, Toronto, Ont.  
 Hon. Alex. Ross, Edmonton, Alta.

### Alberta

- Hon. J. E. Brownlee, Premier and Provincial Secretary, Edmonton.  
 Hon. Alexander Ross, chairman, Workmen's Compensation Board, Edmonton.  
 Walter F. McNeill, commissioner, Workmen's Compensation Board, Edmonton.  
 James A. Kinney, commissioner, Workmen's Compensation Board, Edmonton.  
 Frederick D. Noble, secretary, Workmen's Compensation Board, Edmonton.  
 G. W. Waistell, superintendent of Old Age Pensions, Edmonton.

### Alberta Board of Review

- Mr. Justice J. D. Hyndman, Appellate Division, Supreme Court of Alberta, Edmonton.  
 Elmer E. Roper, secretary, Alberta Federation of Labour, Edmonton.  
 Edward Rinchbeck, Spruce Grove, Alta.

### British Columbia

- Hon. W. A. McKenzie, Minister of Labour, Victoria.  
 E. S. H. Winn, chairman, Workmen's Compensation Board, Vancouver.  
 H. B. Gilmour, commissioner, Workmen's Compensation Board, Vancouver.  
 Parker Williams, commissioner, Workmen's Compensation Board, Vancouver.

### Manitoba

- Hon. W. J. Major, Attorney General, Winnipeg.

- Major C. K. Newcombe, chairman, Workmen's Compensation Board, Winnipeg.  
 George E. Carpenter, director, Workmen's Compensation Board, Winnipeg.  
 Fred. G. Dixon, director, Workmen's Compensation Board, Winnipeg.  
 Nicholas Fletcher, secretary, Workmen's Compensation Board, Winnipeg.  
 P. V. E. Jones, assistant secretary, Workmen's Compensation Board, Winnipeg.

### Saskatchewan

- Hon. Dr. F. Monroe, Minister in charge of Child Welfare Act, Regina.  
 F. J. Reynolds, commissioner, Bureau of Child Welfare, Regina.  
 Edward J. Oliver, superintendent of Old Age Pensions, Regina.  
 Samuel J. Adlam, inspector, Bureau of Child Welfare, Regina.

### Ontario

- Hon. Forbes Godfrey, Minister of Labour, Toronto.  
 Hon. Dr. D. Jamieson, chairman, Old Age Pension Commission, Parliament Buildings, Toronto.  
 J. A. Ellis, commissioner, Old Age Pension Commission, Parliament Buildings, Toronto.

### Local Boards in Ontario—

#### CITIES

Belleville.—Mrs. W. C. Nickel, W. J. Hall, Charles Hanna, Miss Helena Lynch, secretary; Mayor Greenleaf, chairman.

Brantford.—Finance Committee—J. D. Ansell, E. A. Danby, T. E. Brittain, G. F. Sterne, W. J. Hempel, His Worship Mayor Beckett, E. J. Campbell, secretary.

Chatham.—W. M. Foreman, clerk-treasurer; A. J. McGregor, John McCorvie, Mrs. W. A. Hadley, Wm. Stead.

Fort William.—His Worship Mayor Darrell, F. W. Fraser, Mrs. T. E. Dean, Gilbert Hartley, J. R. Pattinson, A. McNaughton.

Galt.—Dr. W. S. McKay, chairman; James M. Knechtel, David Fraser, Mrs. Margaret Secord, Mrs. H. Zinn, Chas. T. Chesney, secretary.

Guelph.—John Armstrong, chairman; Robert G. Johnston, Mrs. J. J. Drew, Wm. Hilborn, Frank Howard, Wm. Stephens, secretary (pro tem).

Hamilton.—Board of Control (Relief Officer acting as secretary).

Kingston.—W. H. Craig, chairman; Samuel S. Corbett, Ambrose Shea, Dr. S. J. Keyes, Thos. W. Milo, W. W. Sands, secretary.

Kitchener.—J. E. Bilger, E. E. Ratz, chairman; M. Phillips; Rev. M. S. Hinsperger, Rev. G. Taylor Munroe, Miss D. M. Jackson, secretary.

London.—Ald. A. M. Towe, Ald. G. F. McKay, Ald. F. H. Curran, Ald. F. B. Kilbourne, S. Baker.

Niagara Falls.—The City Council, H. E. Goddard, secretary.

North Bay.—W. Aubury, C. O. Baker, Wm. J. Dreany, Mrs. Laura B. Kerby, A. T. Smith, H. Freeman, secretary.

Oshawa.—C. J. Wilcox, H. M. Gilchrist, Rev. Father Bench, Mrs. Frank Robson, Mrs. Edith C. Meyers, Miss Dorothy Farncomb.

Ottawa.—Controller Gerald Sims, chairman; Ald. T. E. Dansereau, Ald. Samuel Crooks, Major C. S. Ford, secretary; Mrs. Justina Sears.

Owen Sound.—Mayor D. A. Christie, chairman; C. C. Middlebro, secretary; Ald. A. M. Bunt, Ald. W. P. Clendenning, Ald. J. C. Tennant.

Peterborough.—F. Adams, chairman; S. R. Armstrong, secretary; Ald. W. Stocker, F. Fairen, J. T. Stenton, and A. D. Metherral.

Port Arthur.—The Finance Committee of Council, T. F. Milne, Esq., secretary.

St. Catharines.—Mayor John D. Wright, Ald. Frank C. McCordick, Ald. Walter D. Burns, Ald. Peter Brant, Ald. Frank A. Wilson.

St. Thomas.—Mrs. J. D. Lamont, Mrs. L. D. Marlatt, A. P. Conley, Ald. John Lane, Gladstone Whitworth, secretary.

Sarnia.—Mrs. Mary Norwood, W. R. Dawson, chairman; W. D. McCart, Ed. J. Blake, Omer F. Lewis, secretary.

Sault Ste. Marie.—John C. Shipley, chairman; H. Sargeant. Wm. J. Jeffreys, J. G. Blain, John J. O'Connor, Harold Tolley, secretary.

Stratford.—Mrs. John J. Neil, Thos. Ballantyne, Harry C. Clark, Wm. B. Osborne, Arthur J. Pigeon.

Toronto.—Dr. Gordon P. Jackson, M.B., D.P.H., chairman; Mr. J. O'Connor, vice-chairman; Mrs. W. L. McFarland, Mr. John Dillon, R. C. M. Carrie, Mr. Bert Merson, secretary.

Welland.—J. H. Staley, chairman; J. D. Watt, secretary; James A. Hughes, H. H. Hilder, John Volz, Frank Springer.

Windsor.—Dr. Reni Casgrain, chairman; Mrs. M. E. Fotheringham, secretary; Miss Helen Bartlett, Ald. Chas. D. Fraser, John A. McKeown.

Woodstock.—Mayor John W. Sales, chairman; Ald. Colin E. Sutherland, Ald. Fred Childs, Ald. John Utting, Ald. George A. Cuthbert, Arthur B. Lee, secretary.

East Windsor.—Theodore Pratt, chairman; Thos. Chick, John Hebert, O. W. Hiberdy, Bruce Williams, J. F. Foster, secretary.

#### COUNTIES

Brant.—R. J. McCormick, R.R. No. 4, Paris; Cuthbert M. Burt, St. George; Jeroam Kinsella, Cathcart; Wm. T. Thompson, Paris; Miss Ida Montgomery, Brantford, secretary.

Bruce.—James Byers, Wiarton; Wm. J. McKay, R.R. No. 2, Ripley; John W. Sinclair, R.R. No. 2, Tara; J. C. Tolmie, Southampton; Campbell Grant, Walkerton, secretary.

Carleton.—R. H. Washington, County Court House, Ottawa, secretary.

Board is composed of Wardens Committee: W. Hemphill, Richmond, Chairman.

Dufferin.—R. W. Brett, Shelburne; Robt. Lang, Grand Valley; John Burnside, Grand Valley; Wm. Ferris, Shelburne; W. H. Hunter, Orangeville, secretary.

Elgin.—W. S. Stalker, R.R. No. 1, Rodney; Dugald Blue, Dutton; Wilson H. Mills, Sparta; Dr. C. Sinclair, Aylmer; W. W. Keddie, R.R. No. 1, Belmont.

Essex.—D. M. Eagle, Sandwich, secretary; E. P. Tellier, St. Joachim; R. A. Halford, Maidstone; E. S. Scratch, Cottom; Ed. Crimmins, Amherstburg.

Frontenac.—County Council will act; J. W. Bradshaw, county clerk, secretary, Court House, Kingston; W. R. Aylesworth, Cataraqui, chairman.

Grey.—W. L. Taylor, Singhampton; Jos. H. Fretter, R.R. No. 2, Woodward; Chas. Widmeyer, Neustadt; Hector C. Moody, Dundalk, chairman; Fred H. Rutherford, county clerk, Court House, Owen Sound, secretary.

Haldimand.—W. H. Wingfield, Dunnville, chairman; Archie McDonald, Lowbanks; R. S. Colter, Cayuga; W. J. Saunders, Jarvis; Harrison Arrell, Caledonia, secretary.

Halton.—W. H. Morden, Oakville, chairman; J. W. Breekon, Burlington; G. E. Cleave, R.R. No. 1, Norvel; Donald Campbell, Moffat; J. W. Blain, Milton.

Hastings.—Chas. Thompson, R.R. Madoc, chairman; R. M. Mitchell, R.R. No. 6, Belleville; Henry Jaryett, Fort Stewart; Geo. A. Bailey, Harold; Jas. W. Haggerty, county treasurer, 228 Church Street, Belleville, secretary.

Huron.—W. J. Henderson, Wingham, chairman; Roland Kennedy, Seaforth; Robt. Higgins, Hensall; J. W. Craigie, Goderich; Geo. Holman, county clerk, Goderich, secretary.

Kent.—John Vance, Thamesville; N. A. Roszell, Ridgetown; J. A. McDonald, Wheatley; R. J. Wilson, Charing Cross; W. M. Abraham, county clerk, Chatham, secretary.

Lambton.—W. G. Connolly, Watford; F. C. Eastman, Arkona; Wm. Culbert, Wyoming; Fred Noyle, Mooretown; J. A. Huey, county clerk, Sarnia, secretary.

Lanark.—T. J. Devlin, Perth; Ben Willis, Lanark; Wm. Baird, Carleton Place; Peter McCallum, Almonte; R. N. McCreary, Pakenham.

Lennox and Addington.—County Council.

Leeds and Grenville.—James A. Sanderson, Oxford Station, chairman; James Holmes, Spencerville; Walden Myers, Portland; Walter M. Hanton, Jasper; Wm. Jelly, county clerk, Brockville, secretary.

Lincoln.—F. A. Oakes, Grimsby; R. E. Book, Smithville; S. H. Shields, Beamsville; J. A. Swayze, R.R. No. 2, St. Catharines; Jas. MacPhee, Niagara-on-the-Lake.

Middlesex.—R. S. Douglas, R.R. No. 2, Ilderton, chairman; T. H. Martin, R.R. No. 1, Demfield; J. W. Laidlaw, Wilton Grove; Bernie Galbraith, Appin; Alfred Comfort, R.R. No. 1, Mt. Brydges; John Stuart, county clerk, London, secretary.

Norfolk.—C. D. Renner, R.R. No. 5, Watford; Jonathan Porter, county clerk, Simcoe, secretary; Roy Marshall, Silver Hill; W. D. Robertson, R.R. No. 5, Tillsonburg; J. H. Misner, Port Dover.

Northumberland and Durham.—J. H. Davidson, Cobourg, chairman; O. C. Pomeroy, Castleton; C. H. Curtiss, Warkworth; T. H. Knight, Bowmanville; J. A. Vance, Cobourg, secretary.

Ontario.—Roy Park, R.R. No. 1, Cannington; James Reid, Uptergrove; Gordon McLean, Uxbridge; J. M. Kenny, Whitby; E. L. Chapman, R.R. No. 1, Whitby.

Oxford.—Henry Hanlon, Ingersoll, chairman; Andrew Baxter, Brownsville; Charles Brink, Beachville; James Dance, R.R. No. 2, Paris; R. B. Langdon, R.R. No. 5, Embro; A. E. Roth, clerk-treasurer, Woodstock, secretary.

Peel.—John T. Jamieson, Cooksville, R.R. No. 1; Wm. J. Beatty, Brampton; N. S. Lindsay, R.R. No. 3, Malton; B. C. Thompson, Port Credit; W. J. Wilson, Belfountain; David Wilson, Brampton, secretary.

Perth.—Arthur Mutton, Mitchell, chairman; J. J. Brown, Sebringville, R.R. No. 1, secretary; Dr. P. L. Tye, Milverton; Henry Leinweber, Tavistock; A. M. Cross, R. R. No. 3, Listowel.

Peterborough.—Members of County Council—H. B. Rye, Claraday, chairman; John Clark, Kinmount; Jas. Hawthorne, Warsaw; M. E. Smithson, R.R. No. 8, Peterboro; J. F. Breckenridge, R.R. No. 2, Havelock; M. E. Elliott, Court House, Peterboro, secretary.

Prescott and Russell.—J. A. Brisson, Casselman; Denis Harbie, Hawkesbury, joint secretaries.

Prince Edward.—Peter Collier, Picton, chairman; H. D. Cleminson, Wellington; M. B. Weese, R.R. No. 1, Rednersville; H. Y. Cooper, Bloomfield; Malcolm Parks, Woodrou; E. A. Adams, Picton, secretary.

Renfrew.—T. S. Church, Arnprior, chairman; Geo. D. Biggs, Pembroke, secretary; W. A. Moore, Renfrew; Andrew Moran, Killaloe Station; M. Quilty, R.R. No. 4, Renfrew.

Simcoe.—J. J. McKnight, Tottenham, chairman; Chas. Denney, Egbert; Michael Asselin, Perkinsfield; Jos. Spicher, Staynor; J. T. Simpson, Barrie, secretary.

Stormont, Dundas and Glengarry.—Henry Williams, Cornwall, chairman; W. Hamilton, Chesterville, secretary; J. R. MaLachlan, Lancaster; G. D. Pollock, Berwick; J. A. McCrimmon, Dunvegan.

Victoria.—J. A. McGillivray, R.R. No. 2, Brechin, chairman; Charles Lamb, Lindsay; J. W. Elliott, Dunsford; A. D. McIntyre, Woodville; F. L. Weldon, Court House, Lindsay, secretary.

Waterloo.—Wm. J. Knight, R. R. No. 1, Millbank, chairman; Fred Debus, New Hamburg, secretary; C. T. Groh, R.R. Hespeler; Norman Snider, R.R. No. 2, West Montrose; Henry Griffin, Ayr.

Wellington.—James Beattie, Fergus, secretary; Robert J. Holton, R.R. No. 3, Clifford; George W. Dodge, R.R. No. 4, Kenilworth; William Whitelaw, R.R. No. 7, Guelph; The Warden of the County.

Wentworth.—S. H. McCombe, Stoney Creek, chairman; J. R. Routledge, 495 Wellington St. S., Hamilton, secretary; A. E. Smuck, Dundas; Mark Brooks, R.R. No. 1, Jerseyville.

York.—E. G. Westbury, 324 Silverthorn Avenue, Toronto; J. M. Leslie, 10 Rivercourt Road, Toronto; J. S. Osborne, R.R. No. 1, Newmarket; E. M. Legge, King; H. E. Beckett, Continental Life Bldg.; Toronto, secretary.

Haliburton.—Clayton W. Hodgson, Haliburton; James R. Finley, Tory Hill; Ben J. Sawyer, Maple Lake; H. B. Feir, Haliburton, clerk of the Board.

#### TOWNS

Brockville.—John J. Hall, chairman; Harry R. Phillips, Thomas J. Dunn, Newell L. MacDowell, Geo. K. Dewey, secretary.

Gananoque.—Garfield G. Hood, acting chairman; Jas. A. Thompson, acting secretary; J. C. Linklater, Lieut.-Col. Frank Mooney, Miss Mabel Carpenter.

Ingersoll.—R. McNiven, secretary; R. J. Robertson, chairman; E. C. Corbett, Chas. White, M. J. Comiskey.

Prescott.—Mayor W. J. Taugher; W. P. McCarthy, John L. Reid, G. B. Jenkinson; W. J. Ranson.

St. Marys.—L. Harston, chairman; D. L. O'Brien; R. S. Graham; Dr. W. F. Brown; W. N. Harrison; J. W. White, secretary.

Smith's Falls.—C. B. Houston, chairman; Jno. A. Clark, secretary; Mrs. Chas. O'Reilly, D. F. Jamieson, Harry Sutton.

Sudbury.—Dr. H. H. Arthur, Dr. J. R. Hurtubise; J. S. Gill; John Fawley; His Worship, Mayor C. Bibby; W. J. Ross, secretary.

Timmins.—Mayor G. S. Drew, chairman; A. G. Carson, R. Richardson, P. Dougall, H. Charlebois, G. P. Ramsay, A. Caron, I. E. Dunn, secretary.

Trenton.—The Town Council, P. J. O'Rourke, clerk.

Walkerville.—Dr. C. W. Hoare, chairman; W. M. Grant, vice-chairman; H. L. Merry, secretary; Mrs. J. H. Coburn, Mrs. O. C. Tillman.

## DISTRICTS

Algoma.—Albert Grigg, Jules Moranville, R. E. Armstrong.

Cochrane.—G. A. McDonald, chairman; E. K. Ebbitt, secretary; Richard Carter.

Kenora.—Dr. W. J. Gunne, Dr. D. G. Dingwell, George E. Farlinger.

Manitoulin.—Rev. E. Weeks, Rev. W. T. Swainson, Edward Arthurs.

Muskoka.—Joseph G. Meyers, chairman; Wesley John Smith, Rev. John B. Lindsell, secretary.

Nipissing.—Charles A. Fink, Gordon M. Brady, Arthur Jackman.

Parry Sound.—Fred Walton, chairman; David S. Litster, secretary; L. F. Robertson.

Rainy River.—Norman L. Croome, chairman; F. H. Huffman, secretary; H. V. Maltby.

Sudbury.—Joseph S. Gill, J. C. Gravelle, Thos. J. Godfrey.

Temiskaming.—A. K. Roberts, secretary; R. R. Woods, John Clark, chairman.

## The Older Worker's Place in Industry

This question is discussed by Mr. C. R. Dooley personnel manager of the Standard Oil Company of New York, in the *Management Review*, November, 1929. The older workers, he considers, represent definite assets to the company which employ them: they have experience in their work; they have better judgment than younger men; they are steadier and less temperamental; they have a stronger sense of responsibility towards the employer and their work; their health is often better than that of a younger person. "Then there are certain good personal traits which come with age and maturity. The older worker usually has good self-control; he is more tolerant, more patient, more understanding; he has a better perspective on life and his place in it, and thinks of the group rather than himself."

While these qualifications tend to cause employers to retain older workers in their own line of work, there are, on the other hand, well recognized difficulties in the way of placing them in new employment. Among these difficulties the following are mentioned:—The practice followed by the larger organizations of fixing age limits for employment based on pension requirements; the policy of "promotion from within," which leaves only junior positions available to outsiders; the fact that the older man usually knows only one line of work, this being in

many cases of little use to another company; the fact that the older man has often become set in his habits and slow to accept new ideas or ways; and the fact that it is hard for him to work under a junior, as he would be required to do in most new lines of work.

Mr. Dooley makes the following suggestions to employers who are called on to deal with this problem: They should, as far as possible, have open minds on the question of age; the special qualifications of the older man should be emphasized, and a study should be made of the openings for which older workers are suited. He suggests that an analysis of the work done in a group of companies would show which firms can and will employ older people oftener than other firms. Pension plans in his opinion will have to be modified or adapted in so far as they contribute to this problem (already some companies allow older applicants to waive pension rights or give small pensions for shorter service) and older persons should be helped to face and overcome their handicaps.

The writer states that recently a group of "personnel men," representing some of the most influential companies in New York, recommended that age limits for employment should be abolished and that all applicants should be considered on the basis of their qualifications.

## NATIONAL INSURANCE IN THE UNION OF SOUTH AFRICA

### Report of Commission Recommending Public Insurance Against Unemployment and Sickness

THE Government of the Union of South Africa appointed a commission in 1926 to examine and report upon (a) the payment of pensions by the State to necessitous, aged, and permanently incapacitated persons who are unable to maintain themselves and for whom no provision at present exists; (b) a system of national insurance as a means of making provision for the risks of sickness, accident, premature death, invalidity, old age, unemployment and maternity. The first re-

port of the Commission, recommending the establishment of a system of Old Age Pensions in the Union, was outlined in the *LABOUR GAZETTE*, June, 1928, page 589. In accordance with this report Old Age Pensions were provided during 1928 (*LABOUR GAZETTE*, September, 1928, page 941.)

The Commission has now published its second and third reports, dealing respectively with the subjects of sickness and invalidity insurance and unemployment insurance.

#### Sickness and Invalidity Insurance

The second report deals with that part of the commission's terms of reference which relates to insurance against sickness, accidents, maternity, etc. It explains that the commission owed its origin to the discussion of the subject at the 10th International Labour Conference at Geneva, its instructions being to ascertain whether the principles of the draft conventions and recommendations adopted at that conference could be applied in the Union. A sketch is given of the history of this branch of social insurance, stress being laid on the modern character of the problem of sickness, which became a matter of urgent public concern during the nineteenth century, when industry was being centralized in definite areas. The friendly benefit society movement brought some measure of relief in Great Britain, but was less successful in other countries. The modern system of state insurance began towards the close of the 19th century.

Before the end of the century a great change took place. In 1883 Germany introduced a scheme of insurance against sickness which not only provided that the workers in certain industries should insure, but made it compulsory on both the employer and employee to make contributions. The compulsory system was adopted by Austria-Hungary a few years later, but the other countries continued to support the voluntary system in the hope that it would in time provide a solution of the problem. In only a few countries has the voluntary movement embraced any large proportion of the workers, and in practically only one has it been able to bring within its scope practically all the employed class and their families. In most of the other countries the benefits which the societies are able to give out of the workers' contributions are inadequate

to meet the needs of the workers when they are sick.

Since the beginning of the twentieth century laws providing for the compulsory insurance of workers against sickness have been passed by more than twenty countries, and at the present time several other countries have appointed Commissions or have taken other steps of a like nature.

The report discusses the problem under its various aspects—medical, racial, and economic. The commission finds that "the voluntary system of insurance against sickness failed to solve the workers' problem because it was confined to the higher grades of the workers and those in fairly good health, and left without protection those in poor health and who were therefore most in need of it. Even in countries where is received State subsidies it could not bring the lower paid grades of workers within its scope, and where no subsidy was given by the State the non-success of the voluntary insurance was a clear proof of the inability of the employed class to provide Sickness Insurance at its own cost."

#### Recommendations

The commission recommends the introduction of a scheme of insurance against sickness applicable to workers in the industrial areas of South Africa, under the following conditions:—

All employees in the urban areas earning less than £400 a year will be included, except that employees earning less than £60 per annum will be excluded when satisfactory provision is made by the employer for adequate hospital and institutional accommodation and medical benefits. All eligible persons must be insured.

The insured persons will be placed in wage groups and within such wage group the contribution and benefits will be uniform. Contributions are made by the employer and worker, the proportion paid by the latter increasing with the amount of wages earned. Thus, for the wage group earning from £60 to £90 per annum, the employer would pay one shilling and the insured worker 4 pence per week; for the group earning from £320 to £400 per annum the contributions are 2 shillings and 3 pence each per week by the employer and employed.

Contributions will not be payable when an insured person is sick. If an insured person becomes unemployed his contribution will not be regarded as falling into arrear up to a maximum of six weeks in one year. When these six free weeks have expired he will go out of compulsory insurance, and when he is re-employed he will re-enter compulsory insurance as a new member. When an insured thus passes out of compulsory insurance he may contribute voluntarily at a defined rate for medical and hospital benefits. There will be no maximum or minimum ages for insurance.

"Sickness" is defined as inability to do ordinary work provided the insured person complies with the doctor's orders and that his sickness is not due to wilful misconduct. Persons receiving workmen's compensation or payment for miners' phthisis are not entitled to sick pay.

The amount of sick pay during the first 26 weeks ranges, according to wage group, from (for the lowest group) 4 shillings for the insured person; 1 shilling for his wife and 6 pence for each dependent child under 16; up to (for the highest wage group) 56 shillings for the insured person, 14 shillings for his wife and 7 shillings for each child under 16. During the second 26 weeks sick pay will be half these amounts. No sick pay will be granted in respect to the first three days of sickness. Sick pay will not be payable until an insured person has been insured for 26 weeks. The other recommendations of the Commission are as follows:—

*Medical Service in Rural Areas.*—It is recommended that steps be taken whereby the Health Department should extend the scope of the service by district surgeons and the provision of an increased number of tours.

*Native Areas.*—The commission considered that a scheme of Health Insurance in native areas is impracticable, but recommends the provision of a partially trained native medical service to provide the necessary medical attention in the native areas of the Union.

*Preventive Measures.*—The commission recommends closer co-ordination of the existing Public Health Services with the administration of any scheme of insurance against sickness and the enlistment of the active co-operation of the medical profession working under such a scheme, with a view to eradicating as far as possible at their source the causes of national ill-health.

*Medical.*—Contracts for the medical service and the supply of drugs, etc., throughout the Union should, if possible, be entered into between the administrators of the scheme of insurance against sickness and organizations representative of the medical and pharmaceutical professions on behalf of all members who elect to serve insured persons.

*Drugs, Restoratives, Medical and Surgical Appliances.*—The opinion is expressed that the habit of taking medicines is as pronounced, if not more so, in South Africa as in other countries and that any scheme which includes drugs and medicines as part of its medical benefit must make provision in its regulations for the control of excessive prescribing and unnecessary consumption of drugs.

*Applicability of Scheme.*—It would be undesirable to make any distinction on the grounds of colour in an insurance scheme.

*Low Wage-earners.*—Employers of persons earning less than £36 per annum in insurance areas, who do not satisfy the administering authority that they are making adequate provision for hospital and medical treatment of such employees, should be required to pay the whole contribution to the Insurance Fund, and in the case of persons in the higher groups the greater part of the contributions.

*Insurance against accident.*—When the Workmen's Compensation Act is amended provision should be made, at any rate in the case of permanent partial, or total incapacitation, that all awards be made in the shape of monthly or other periodical payments. All employers should be required to insure their workmen with companies, mutual associations, or societies carrying on this class of business under State supervision and control; and the control and supervision which we have suggested, and which should be on the lines which have proved satisfactory in Britain, should be entrusted to the Treasury.

*Funeral Benefit.*—Provision should be made in any scheme of compulsory Sickness Insurance for a funeral benefit payable on the death of an insured person or his wife or dependent child under the age of sixteen.

*Supervisors' Benefit.*—The existing provisions under which maintenance allowances are paid in respect of destitute and neglected children by the Union Department of Education should be maintained and extended, more especially in those cases where, with the assistance of these allowances, the mother or other relative is enabled to keep the home together but that at the present time they should not be included in any scheme of National or Social Insurance.

*Maternity.*—Maternity Insurance should be included as part of any compulsory Sickness Insurance scheme that may be introduced.

*Invalidity and Old Age Pensions.*—The present non-contributory scheme of non-contributory Old Age Pensions should be given a trial for a reasonable period until experience has shown the results of the working.

*Social Insurance.*—Expenditure on schemes embraced by the general term "social insur-

ance" in other countries has been productive of direct benefit to the workers as a body, and has increased the efficiency of the individual worker by relieving him of certain anxieties regarding himself and those dependent on him, against which he would not normally be able to provide.

*Cost of Social Services.*—The question of the extent to which the country can advance in the adoption of schemes such as those recommended must be decided by reference to the capacity of the industries to bear the burden of the cost involved.

*Reciprocal Agreements.*—Provision should be made in any bill dealing with social insurance for reciprocal arrangements being entered into with other countries administering similar schemes.

*Cost of Administration.*—The cost of administration of the insurance scheme should be borne by the State.

## Unemployment Insurance

The Commission on Old Age Pensions and National Insurance, in their third report, makes recommendations on the subject of unemployment insurance as follows:—

(a) That in any legislation which may be introduced dealing with any branch of social insurance, a clause should be introduced giving the administrator of the funds, with the consent of the government, power to enter into reciprocal arrangements with other countries.

(b) That (i) a system of voluntary insurance against unemployment is not likely to succeed in South Africa; (ii) if an insurance scheme is to be introduced it must be on a compulsory basis; (iii) an insurance scheme cannot, under present circumstances, be applied in the rural and tribal areas of the Union; (iv) it is, however possible to frame a workable scheme limited to certain areas and to benefits just sufficient to tide the unemployed workers over temporary periods of unemployment due to seasonal and trade cyclical fluctuations.

(c) That a workable scheme could be framed limited to certain areas and to benefits just sufficient to tide the unemployed workers over temporary periods of unemployment due to seasonal and trade cyclical fluctuations, but that it would be impossible to include in such a scheme acute and prolonged unemployment caused by an industrial crisis or any other cause which would bring about such a depression that a considerable proportion of

the workers would be thrown out of employment. In such a condition of affairs it is considered that additional relief should be afforded to the unemployed by the State and local authorities probably on much the same lines as is done at present by the provincial and municipal authorities providing work and sharing the expenditure in fixed proportions.

The Commissioners were impressed by the fact that compulsory schemes of unemployment insurance can as yet scarcely be said to have got beyond the experimental stage. "Although such a scheme was instituted in Great Britain nearly twenty years ago the upheaval in economic conditions caused by the European war and exceptional amount of unemployment which has existed since the war and still exists in Britain make it difficult to form any opinion as to the working of such a scheme in normal times. Very few other countries have followed the lead of Britain in this respect, and the International Labour Office has not yet found it desirable to place the question of unemployment insurance on the agenda for discussion by its annual conference."

On the question of contributions to the unemployment relief fund the commission points out that "it is generally accepted that in any insurance scheme the persons who are to reap the benefit should be called upon to make a substantial contribution towards the cost of it. By some it is held that the State should also share in the cost, as the causes of unemploy-

ment are to some extent national, and it is only fitting therefore that the Central Government should be called upon to bear a portion of the cost. Employers are usually required to contribute a part of the funds in any scheme of compulsory insurance, and this is justified on the grounds that if industry requires a reserve of labour it has some responsibility for maintaining the worker whilst he is unemployed."

The Commissioners present a provisional scheme for national unemployment insurance based on a report drawn up by the actuarial advisers to the Union Government. The persons to be insured under this scheme include all employees except those in agriculture, earning less than £400 a year. All eligible persons must become insured. As in the scheme for sickness insurance persons are divided into wage groups, contributions being made in respect to members of each group as follows:—

Wage Group	Weekly contribution by	
	Employer	Insured
(a) Under £36.....	4d.	.....
(b) £36-£60.....	6d.	2d.
(c) £60-£90.....	7d.	5d.
(d) £90-£400.....	8d.	8d.

The benefits payable under the provisional scheme in respect of the insured, his wife and dependent children under 16, are as follows:—

Wage Group	Amount per Week					
	Insured		Wife		Child	
	s.	d.	s.	d.	s.	d.
(a) Under £36.....	4	0	1	0	0	6
(b) £36-£60.....	8	0	2	0	1	0
(c) £60-£90.....	12	0	3	0	1	6
(d) £90-£400.....	16	0	4	0	2	0

These benefits will be payable during unemployment if the insured person has been insured for 26 weeks, the 26 contributions having been paid within two years; but no benefit will be granted in respect to the first seven days of unemployment. Not more than 36 weeks' benefit will be paid in any one year. The fund will be debited with the expenses of administration.

The commissioners point out that the Union is at present enjoying a period of comparative prosperity, and that "if the scheme is postponed until the problem of unemployment is accentuated by trade depression, it will come then as an additional burden upon industry, at a time when industry is least able to bear it."

## CANADIAN GOVERNMENT ANNUITIES

*Address delivered over the Canadian National Railways Radio System by Mr. E. G. Biackadar, Superintendent of Canadian Government Annuities*

AS many of you listening in will be unfamiliar with just what a Canadian Government Annuity is, let me first explain that an annuity is a fixed yearly income paid to you by the Government of Canada. You may purchase these annuities in the same way as you would deposit your money in a Savings Bank, during the productive years of your life. Payment of the annuity ordinarily commences when your earning powers have departed because of old age, and continues as long as you live, no matter how long that may be. The Government Annuities System is safeguarded by the whole resources of the Dominion, and assures a safe and profitable investment of your earnings while you are young, with the certainty of a definite livable income when your working days are over.

If you are a young man or woman, bear in mind that if you would have an old age free from want or dependance you must save and invest wisely in your youth. The standard of living in Canada compares very favourably with that of any other country in the world. Huge sums of money are spent by Canadians

each year for luxuries, which indicates that it should be quite easy for the average Canadian to lay aside out of his income a sufficient amount to provide a steady and dependable income when his earning days are over.

When you consider the fact that ninety-five per cent of men at 60 years of age are dependent upon their daily earnings or their children for support, you will see the necessity of commencing a systematic saving for the time when you will no longer be able to remain in profitable employment. Most persons make ample provision by means of life insurance to take care of any contingency arising in the event of their death, but the great majority of people do not realize there is also a possibility of their living to a very advanced age, and unless they make ample provisions for old age they might find themselves without means of support at a time of life when they are no longer able to help themselves. By careful investigation it has been learned that when the usual retirement age of 65 is reached, only a very small per-

centage of people have sufficient money laid aside or a sufficient income to keep them in comfort in their old age. The others must either keep right on working hard or depend on someone else to support them. How many middle-aged people do you know who are no better off to-day than they were fifteen or twenty years ago, and whose future means of support is very uncertain? These people are beginning to look into the future with grave concern. In their advancing years they make every effort to save a little so that they may have something when they are old, but as many of them begin too late in life, very few meet with any degree of success.

If you are a young man or woman still earning your own living and do not think of retiring for a good many years, a Deferred Annuity is the form of contract which would best meet your requirements. As an illustration of the cost of such an annuity I may say that a young man aged twenty-five could purchase an annuity of \$1,000 per year to begin when he reaches the age of 65, by making a regular, systematic saving of only \$1.08 per week. As an illustration of the advantages of making provision for old age by the Government System, it may be said that in order to obtain such an income by means of accumulating capital and investing it, it would be necessary for this young man to save \$20,000 before he attained the age of 65 and invest it at 5 per cent, whereas if he were to purchase the above annuity at age 25, the total amount he would be required to save before 65 would be only \$2,228, and he would achieve the same result.

Deferred annuities may be purchased by small monthly or annual payments, which may be conveniently paid in at any Postal Money Order Office in Canada. If you were to purchase an annuity and for any reason you were unable to make your premium payments regularly, you would not forfeit what you had paid in. The arrears could be made up later and if not, when your contract matured, you would receive a proportionate amount of annuity based upon the payments you had made.

There are also plans of annuity designed to meet the requirements of older people who find it necessary to retire now and to receive an income commencing at once. This second class is called Immediate Annuities. All the money you have to pay for such an annuity is paid in one lump sum. Your annuity commences three months from the date the purchase money is received, and from then on you receive an income from the Government of Canada payable in quarterly instalments for life, even if you live to be 100 years of age. Such annuities may be guaranteed for from

ten to twenty years, and in the event of your death shortly after purchasing the annuity, the remaining payments would be continued to your estate.

The Government Annuities System of providing a dependable income when one's earning days are over is of interest to young and old, the poor and the person of moderate means. This is your own system, the expenses of which are met by the Canadian Government, and every resident of Canada should take advantage of it. The earlier in life the purchase of a Deferred Annuity is decided upon the less it will cost. I would, therefore, urge that every young person listening in to-night should obtain a copy of the booklet in which the various plans of annuity and other details of purchase are described.

Your copy may be had by calling at the nearest Post Office or by writing to the Superintendent of Annuities, Department of Labour, Ottawa.

### Agricultural Wages in Great Britain

The fourth annual report of proceedings under the Agricultural Wages (Regulation) Act, 1924, of Great Britain, described the administration of this Act during the 12 month's period ending September 30, 1928. The average minimum wage for adult male workers (other than workers of the special classes) remained constant at 31s. 8d. per week throughout the year. This figure is merely the weighted average of the minimum cash wages of ordinary agricultural labourers in each area, and takes no account of overtime payments or additional earnings at special seasons.

It was found impossible to obtain any exhaustive information as to the extent to which overtime is worked, but some particulars were obtained through the investigations made by the Ministry of Labour inspectors in connection with the observance of the minimum rates. Careful estimates based on these cases, which cover 4,400 ordinary male workers, show the average weekly earnings to be about 33s. 4d., or about 1s. 8d. above the minimum cash wages. This does not, however, include extra earnings at harvest, which vary from county to county. Similar information in regard to 2,200 horsemen and 2,000 stockmen indicates an average inclusive wage for these classes of about 36s. 9d. and 38s. 6d. per week respectively.

The average minimum rate for adult female workers throughout the country is given as 5½d. per hour, the rates ranging from 4½d. to 6d. except in Northumberland, where the minimum rate for casual workers is 3d. per hour. Overtime rates for female workers have been fixed by 26 of the 47 Agricultural Wages Committees.

## PENSION SCHEME OF GOODYEAR TIRE AND RUBBER COMPANY OF CANADA, LIMITED

THE Goodyear Tire and Rubber Company of Canada, Limited, has announced the adoption of a pension plan to assist employees by providing for a substantial annuity for old age.

The plan is administered by a pension board of five officers or employees of the company, and all present employees with twelve months or more continuous service and actively at work on October 1, 1929, became eligible on that date.

Male employees who have reached the age of 65 years and have had at least 15 years continuous service, and female employees who have reached the age of 60 and have had at least 15 years continuous service, may be retired on pension on the anniversary of their membership in the plan, either at their own request or at the option of the pension board. Employees who have had at least 15 years continuous service and who in the judgment of the pension board have become physically or mentally incapable of continuing in active service, may be retired on pension, regardless of their age.

Under the plan, the employees are divided into two classes:—

Class A—those who do not voluntarily deposit a percentage of their earnings in the pension fund; and

Class B—those who deposit approximately 3 per cent of their annual earnings.

In order to encourage employees to become depositors, the company will provide more benefits for a Class B employee than a Class A. For the latter, there is provided a monthly retirement income, the annual total of which is equal to three-quarters of one per cent of the employee's earnings during the first 20 years of continuous service. For Class B, a monthly retirement income is provided whose annual total is equivalent to one per cent of the employee's earnings during the first 20 years of continuous service.

In the Class B group, an additional retirement income is provided by the employee's monthly deposits, the amount of which varies according to the age and earnings of the individual employee. Class B employees are grouped according to their earnings. Those receiving annually \$1,500 and under, deposit \$3 monthly. The amount of monthly deposits increases with salary until those receiving from \$4,500 to \$5,100 contribute \$12 monthly. The operation of the plan is illustrated in

the case of a male employee, age 32, with 6 years of past service as of October 1, 1929, whose earnings in those past six years averaged \$1,200 per annum, and who is earning \$1,500 annually from now on. Assuming that he is a non-depositor in Class A his pension of three-quarters of one per cent of his earnings works out at \$211.50 per year, thus:—

6 years at \$1,200 . . . . .	\$ 7,200 00
14 years at \$1,500 . . . . .	21,000 00
Total earnings over first 20	
years . . . . .	28,200 00
¾ per cent of this . . . . .	211 50

Assuming that the employee is a depositor in Class B, the Company buys for him a retirement income equal to one per cent of his earnings for the first 20 years of continuous service, amounting to \$282, thus:—

Total earnings over first 20	
years, as shown above . . . . .	\$28,200 00
1 per cent of this . . . . .	282 00

However, since this employee is in the category of a depositor, contributing \$3 per month to his own pension, he receives an additional annual income from that source of \$266.76. Thus his total retirement income will be \$282 plus \$266.76 making in all \$548.76 per year.

If an employee leaves for any reason before 20 years of continuous service, every dollar deposited in the plan is credited to him in any one of three options, viz: (1) to continue in the plan by making payments direct to the insurance company; (2) to receive a "paid up" certificate guaranteeing an income for life (commencing at the normal retiring age) based on deposits already made; (3) to receive deposits in one cash payment plus 3 per cent interest.

The above options also apply if an employee leaves after 20 years continuous services, with the addition that in such a case the employee becomes entitled to all the benefits (commencing on the normal retirement date) provided by the company if he agrees to take such in the form of a life annuity.

If the employee dies before the retirement age, his beneficiary will receive in cash every dollar which he has deposited in the plan plus interest at the rate of 3 per cent per annum for the years he was a depositor. If the employee dies after retirement and before having received by way of retirement income an amount equal to the deposits he has made,

plus three per cent interest for the years he was a depositor, then the difference will be paid to his beneficiary.

Under this plan any employee who has completed 15 years of continuous service and becomes totally and permanently disabled will receive a monthly income for life, the amount of this income depending upon the length of service, amount of wages and amount of the deposits of employee.

The employee may at any time before five years prior to his normal retirement age (or at any time prior to retirement on passing

a medical examination), elect to accept a smaller annuity with a continuation to his wife or other dependant after his death.

In conclusion it is specified that the company reserves the right to discharge any employee, with or without cause, or to lay off employees permanently or temporarily on account of lack of work. No liability shall be incurred by the company by reason of any such dismissal, or on account of any of the provisions of this plan, if, in the judgment of the company, such dismissal is in its own interest.

### Insurance in Electrical Trades in New York

The Electrical Contractors Association of New York and Local Union 3 of the International Brotherhood of Electrical Workers, have agreed upon plans for group life insurance, old age pensions and total disability insurance covering all union electrical workers in Greater New York, to be furnished at no cost to the worker. The Electrical Contractors Association represents thirty-nine leading electrical contractors. About 7,600 union electrical workers, employed by approximately 400 contractors in New York City, will benefit.

Under the terms of the agreement a fund, to be administered by a board of trustees, will be raised through assessment of all electrical contractors employing union workers. From this fund, premiums on the group insurance will be paid and the general organization of the project maintained. The plan calls for contributions from each firm to the amount of 20 cents for each hour worked by each employee, beginning November 1. Later payments will be made by employers in accordance with regulations adopted by the board

of trustees from time to time. Provision is made for the shifting of union workers from one employer to another, according to the exigencies of building conditions from time to time, while they still maintain their right to group insurance.

Benefits to the workers will consist of a regular life insurance policy of \$3,000, with a \$40 monthly pension for those of the age of 65 or more, and \$30 month paid to those totally disabled. Immediate old age pensions will be paid to those qualified to receive them when the arrangement goes into effect. The union agrees to make the adoption and enforcement of the plan a condition of employment of its members. Union officials expressed the conviction, however, that all employers would willingly enter into the agreement.

The board of trustees will consist of five members, four to be selected from the Electrical Contractors Association and one from Local Union 3. It is anticipated that the arrangements will be completed and the plan put in force by March 1, 1930.

### Industrial Progress of Canada since 1921

Mr. E. W. Beatty, K.C., president of the Canadian Pacific Railway, summarized the industrial progress made by Canada since 1921 in the course of an address at a recent convention of the Industrial Bankers' Association of America, as follows:—

During the period between 1921 and 1928 the assets of Canadian chartered banks had increased by 21½ per cent from \$2,841,000,000 to \$3,452,000,000. Life insurance increased by 91 per cent from \$2,934,000,000 to \$5,689,000,000. Capital invested in Canadian manufactures grew from \$3,810,000,000 to \$4,337,000,000; and the gross value of manufactured products from \$2,747,000,000 to \$4,337,000,000. Perhaps one of the most significant increases in Canadian development was the growth in the extent of hydro-electric power installation, which

in 1921 was 2,754,000 h.p. and in 1928, 5,349,000. Primary forest production in 1921 was \$158,000,000 and in 1926, the latest available figures, \$312,000,000, an increase of 97 per cent. Mineral production grew from \$171,000,000 to \$274,000,000; and newsprint, perhaps the most rapid and surprising development of them all, from 805,114 tons to 2,381,000 in 1928, a percentage increase of 195. In this short period American investments increased from \$2,400,000,000 to \$3,386,000,000, a percentage increase of over 41.

"It is not necessary for me," said Mr. Beatty, "to emphasize to you the value of our fishing industry and the tremendous importance to the country of our agricultural production, steadily increasing until in 1928 its value was \$1,730,000,000 with an agricultural wealth of over eight billion dollars."

## AMERICAN FEDERATION OF LABOUR

### Synopsis of the Proceedings of the 49th Annual Convention, Toronto, October, 1929

FOR the third time in its history the American Federation of Labour held its annual meeting in Canada—the first occasion being in 1909 when it met in Toronto, the second the meeting in Montreal in 1920, and the third the 49th convention held in the convention hall of the Royal York Hotel, Toronto, from October 7 to 18, 1929. The address of welcome to the 49th annual gathering on behalf of organized labour of the city was delivered by Mr. William Varley, chairman of the local reception committee, while Mr. S. J. McMaster, president of the Toronto District Labour Council, introduced the speakers at the opening session. The welcome of the city of Toronto was extended by Mayor Samuel McBride and Controller Joseph Gibbons, and Hon. Dr. Forbes Godfrey, Ontario Minister of Labour, extended greetings from the province. The Hon. Peter Heenan, Federal Minister of Labour, was introduced, but deferred his address until a later session. President William Green replied to the addresses of welcome, following which the Credential Committee reported on those eligible for seats in the convention. The report, which was adopted, showed 386 delegates present, representing 90 international and national organizations, 3 departments, 27 state branches, 51 central bodies, 27 local trade and federal labour unions, and 5 fraternal delegates, among the latter being two from the British Trades Union Congress and one from the Trades and Labour Congress of Canada.

Following the adoption of the report of the Committee on Rules and Order of Business of the convention the customary committees were appointed on (1) executive council's report; (2) resolutions; (3) laws; (4) organization; (5) labels; (6) adjustment; (7) local and federated bodies; (8) education; (9) State organizations; (10) boycotts; (11) building trades; (12) shorter workday; (13) legislation; and (14) international labour relations.

#### Report of Executive Council

Copies of the report of the executive council consisting of 94 pages were distributed among the delegates, the following being a summary as read by first vice-president Frank Duffy:—

Our report begins with the Secretary's statement which shows an increase in paid-up membership of organizations affiliated to the American Federation of Labour and a balance on hand of \$334,560.57. The Treasurer's re-

port follows indicating how our funds are deposited or invested. The trustees of the A.F. of L. Building report a balance on hand of \$45,631.10. (The average paid-up and reported membership of the federation at the close of the fiscal year, August 31, 1929, was 2,933,545, an increase of 37,482.)

*Industrial Progress.*—Under this caption we summarize the economic trends of the past seven years as reported by the President's Committee on Recent Economic Trends. With recent industrial changes have come the following labour problems:

1. Mass production can continue only if there is mass consumption—that is, incomes must be adequate to buy what is produced. Labour is anxious to avoid depression which brings unemployment and distress.

2. Mechanical power and machine tools displace hand skills, and develop new jobs requiring new skills. These new jobs and skills should be examined to find bases for industrial training and union organization. Proper and adequate vocational education is essential to craftsmanship.

3. Stabilization of wholesale commodity prices reflects a new situation in industry. Better accounting methods have put in the hands of management information which enables them to control development instead of blindly meeting chance forces. One of the results has been to change the methods in wage negotiations. Better accounting methods disclose information on what is taking place and all proposals for change must be accompanied by information of the effect of such change. This trend has been of significance to trade unions and has made changes necessary in methods used in collective bargaining. Unions now use more statistics, industrial facts and related data.

4. Rapidity of change brings constant dislocation of people and machinery. Fundamental technical changes brought reductions in employees without thought for those displaced. Persons who have given a lifetime to learning a highly skilled trade find their investment dissipated. In time some may be absorbed by their expanding industry, others may adapt their experience to service in other fields. Others finding adjustment impossible, fall to lower industrial levels. Rapidity of change makes a serious employment problem.

We point out that while there has been unparalleled prosperity to the nation as a whole there are backward sections and industries. We reprint a table showing the trend of employment and earnings in specific industries.

*Wage Earners' Progress.*—In this section we outline what this period of prosperity has brought to wage workers.

We discuss employment, noting that manufacturing industries have been turning out a larger output with fewer workers. We recommend that a major project of the American Federation of Labour for the coming year be to secure the enactment of legislation providing an adequate federal employment service.

Secondly, we discuss incomes of wage earners, noting a steady increase in money and real wages. We contrast the increase in wage earners' incomes with increases in other groups, noting that the rate of increase was higher for the larger income groups.

We also point out the number of wage earners whose incomes are less than \$1,000 per year, and that increases of union workers are larger than those of non-union workers.

We note the shorter work-day and work-week are bringing to wage earners leisure with opportunity for progress and development.

We point out the increasing problem of providing for old age security and recommend that a Federation old-age bill for states be drafted and commended to state federations of labour as a matter of first order importance and that the Federation attack the problem of old age retirement for employees in private industry.

We submit a table showing the benefit services of national and international unions which total \$32,813,924.54 for 1928.

*Progress in Canada.*—In this section we give statistics showing economic progress in Canadian industries and in the wages and employment of wage earners.

*Organization Work.*—We report here our major organizing undertakings in the South, the oil fields of the Southwest, and the re-organization of the New York needle trades. We discuss organizing methods and need of better human relations in industry.

*Union Progress.*—In this section we summarize reports from central labour unions, district organizers and state federations of labour.

*Relations Between Nationals and Internationals.*—Under this caption we report a conference between the Flint Glass Workers and the Machinists; an agreement for the amalgamation of the Tunnel and Subway Constructors International Union with the Hod Carriers and Building Labourers; a conference between the Cigar Makers and the Tobacco Workers to consider amalgamation and a full report of the dispute between the Teamsters, Chauffeurs, Stablemen and Helpers and the Railway Clerks.

*Sleeping Car Porters.*—We report our decision to charter sleeping car porters as directly affiliated local unions.

The section entitled "Official Changes" relates changes in Council personnel.

*Labour's Significant Days.*—We here emphasize the importance and significance of

Labour's Memorial Sunday, Labour Sunday, and Labour Day.

*National Legislation.*—Under this section we report legislative matters affecting Labour which were considered by Congress. The more important proposals were amendments to the Immigration Law, registration certificates for aliens, conscription of labour in national emergencies, unemployment census, liberalization of the retirement law.

We urge continued action for the ratification of the Child Labour Amendment.

We recommend continuation of our non-partisan political policy as essential to legislation to remedy abuses of the injunction.

*Convict Labour Legislation.*—Under this caption we point out the additional measures necessary to carry out the program embodied in the Hawes-Cooper Act. As prison industries are a state problem we recommend specific amendments to state laws.

We reprint bills introduced in various states to make yellow dog contracts illegal and the enactment of such a law in Wisconsin.

We report progress in workmen's compensation legislation and urge stricter regulation of the granting of licences to private employment agencies.

We report the results of our investigation of discrimination against older workers stating that the practice is widespread.

In accordance with the instructions of the New Orleans Convention we recommend provision to strengthen old-age benefits financially.

Our educational activities we report under the following heads: "American Federationist," "A.F. of L. Weekly News Service," "Survey of Business," "Statistical and Information Service," "Library," "Organizing Literature," "Distribution of Labour Publications," "Legal Information Bureau," "Relations with Public Schools," "Workers' Education."

*International Labour Relations.*—We report the work of the Pan-American Federation of Labour and plans for the Havana Congress and failure to adjust differences with the International Federation of Trade Unions.

In a supplemental report the executive council submitted a copy of a proposed bill to amend the judicial code of the United States and to define and limit the jurisdiction of courts in the matter of injunction in labour disputes.

The various sections of the report of the executive council were assigned to the appropriate committees, together with the resolutions touching on the subjects which they were to consider.

The report of the fraternal delegate to the convention of the Trades and Labour Congress of Canada and the reports of the two fraternal delegates to the British Trades Union Congress were also presented to the convention.

### Organization

The report of the Committee on Organization commended the executive council for the organizing work which had been carried on in the south, the oil fields of the southwest and rehabilitation of conditions for the unions in the garment industry in New York city. The committee concurred in the request of the council that all organizations whether or not directly interested take an active part in the work of organizing the south during the coming year and to co-operate with the A.F. of L. to that end. The committee expressed gratification at the methods used by city, central and state bodies in their organizing campaigns, concurred in the sentiments of the executive in regard to the importance of the organization of the wage-earners and expressed satisfaction at the increase in membership. Appreciation was expressed at the services rendered by the volunteer organizers and approval was given to the organizing plans outlined in the executive council's report, which it was recommended should be sent in a circular letter to all city, central and state bodies. The committee reported against the establishment of an auto-air craft department, but favoured the assignment of an organizer by the federation to assist the Metal Trades Council of Chicago and also approved of the federation urging the formation of unions of laundry workers. The committee supported a resolution in favour of the executive council supporting the campaign of the International Ladies' Garment Workers' Union to organize the workers in the women's wear industry. Approval of the committee was also given to a resolution urging a trade union educational and organization campaign among negro workers; as well as to resolutions in favour of organization work among jewellery workers, and automobile and vehicle workers. The committee non-concurred in a resolution asking the establishment of a food department to unite the various workers in the food and catering industry. The recommendations of the committee were adopted.

### Southern Situation

The Committee on Organization also had referred to it a resolution proposing a conference in the interest of financing an organizing campaign among the textile workers in the Southern States. So important was the subject considered that a special hour was set for the discussion of the question. The resolution recounted the troubles in the textile industry in the South, to which was added the testimony of delegates who had been directly connected with the work of organizing in the district. The convention adopted the

resolution, the conference proposed to be held within 30 days at a place to be designated by the president of the federation. It was also decided to raise immediate funds to meet the present situation, a committee being appointed to call upon the representatives present for this purpose. It was further decided that every affiliated national and international union which has not already assigned organizers to be urged to give its fullest support by the assignment of organizers to the South at the earliest date possible.

### Union Labels

The Committee on Labels supported a resolution which asked that organized labour be urged to insist upon the services of union clerks when making purchases in retail stores and to bear in mind that the demand for union label merchandise should be coupled with the demand for union clerks. The resolution also asked that all delegates use their influence to extend organization among retail store clerks and that the federation send a message to all organizers pointing out the importance of strongly supporting the Retail Clerks' International Protective Association to organize all retail clerks. The committee also emphasized the importance of the union label in improving the conditions of the workers and pointed out the advantage of the members of organized labour in spending union earned money only for union label goods and union service. The report was adopted.

### Legislation

The Committee on Legislation approved of the actions of the executive in regard to certain legislative matters referred to in the report of the council. A number of resolutions were also referred to the committee, those on the following subjects being concurred in:—

- Civil Service retirement legislation;
- Shorter Saturday work day for government employees;
- Pensions for Spanish war veterans;
- Competition of enlisted naval men with civilians.
- Saturday half holiday for canal zone government employees;
- Endorsement of retirement measure for canal zone employees;
- Civil Service Court of Appeals;
- Occupational dermatitis;
- Legislation for District of Columbia to protect union labels;
- Enforcement of provisions of Merchant Marine Act governing vessels sailing under mail contracts;
- Abolition of Sea Service Bureau of United States Shipping Board;

Wage increases for United States civil servants;

Improved government employment standards;

That the Post Office Department of the United States establish a new system of accounting under which the public welfare activities of the postal service shall not be charged against postal revenues;

Higher salaries for canal zone pilots.

On recommendation of the Committee on Legislation resolutions on the following subjects were referred to the executive council.

Reclassification of postal labourers' work;

Preference for war veterans in Federal Government service.

### Old Age Pensions

The Committee on Resolutions endorsed the report of the executive council in regard to several matters submitted for the consideration of the delegates, among which was the question of old age pensions. The executive recommended (1) that laws be enacted requiring a pension commission for every county, pension to be at least \$300 annually and that 65 be set as the age for applicants; (2) that a model compulsory old age pension bill be drafted by the federation and recommended to state federations; (3) that the general problem of old age retirement for employees in private industry be given careful study, and that an effort be made to secure the counsel and co-operation of sympathetic individuals and groups in an effort to work out constructive plans on this subject. This recommendation was adopted.

Two resolutions bearing on the same subject were not considered this matter having been covered by the adoption of the recommendations of the executive council.

### Immigration

The report of the executive council on immigration and the recommendations made were approved by the Committee on Resolutions. In relation to further restriction of immigration it was recommended: (1) that efforts be made to further restrict immigration from the eastern hemisphere at least one-half; (2) that all countries below the Rio Grande and adjacent islands be placed under a 2 per cent quota, based on the census of 1890; and (3) that whatever law is passed it must be accompanied by a provision for the employment of a sufficient number of border patrols to carry out the legislation.

The committee recommended, and the convention approved, that the executive council be authorized to take such further steps as in its judgment may seem proper to secure such

additional restrictions as may serve to further reduce immigration into the United States. The convention, on recommendation of the Committee on Resolutions, reaffirmed the declaration of the federation in favour of the placing of Mexico and Central and South America under the quota provisions of the immigration law. The convention also approved of Philippine Islands immigration restriction.

A resolution presented urged revocation of General Order No. 86 issued by United States Secretary of Labour Davis affecting the immigration law which has to do with border crossing between the United States and Canada. The Committee on Resolutions reported that conferences were held with Mr. Davis and Mr. Heenan, the Canadian Minister of Labour. The Committee was of the opinion that the preambles to the resolution were based upon a misunderstanding of the effect and purpose of General Order No. 86, and expressed the opinion that to revoke the order would seriously weaken the enforcement of the United States immigration law. The committee was convinced that the proper way to secure better enforcement of the immigration law and correct conditions against which complaint was made is to secure proper orders supplementing General Order No. 86. The report of the committee was adopted.

### Education

The Committee on Education pointed out that the federation "now as in the past maintains its advanced educational outlook and continues its interest in education." It repeated the declaration of the federation for the support and protection of the public school of all grades and of adult education, and reasserted the demands of its educational platform. The committee endorsed the observance of labour's significant days and the federation literature and news service, matters in the report of the executive council which had been referred to the committee for consideration. Other subjects from the report on which the committee reported were: A Legal Information Bureau; Permanent Committee on Education; Commission on Workers' Education; illiteracy; American Red Cross; child labour; child health day; Workers' Education Bureau.

A resolution proposing the establishing of a national labour college for workers' education was, on recommendation of the Committee on Education, referred to the executive council.

### Injunctions in Labour Disputes

Dealing with the subject of injunctions and anti-trust laws as submitted in a supplemental report of the executive council the Committee

on Resolutions supported the legislative proposal having for its purpose the amending or repealing of the Sherman, Clayton and like restrictive laws, or such parts thereof, as a further study of this subject will warrant. The committee also supported a bill prepared by the council designed to prevent the misuse of restraining orders and injunctions in labour disputes. The committee recommended that the executive council be authorized to make such changes or alterations in, or additions to, the measure as in the judgment of the council future developments and requirements may demand. The convention adopted all of the recommendations of the committee.

A resolution proposing legislation requiring firms seeking injunctions in labour disputes to apply to courts within the territory where the dispute exists was referred to the executive council.

#### **Protest Against National Catholic Unions**

A resolution was presented which protested against the activities of National Catholic Unions in the province of Quebec. The preamble to the resolution declared that the policies, principles and interest of the Catholic unions are to prevent the organization of wage-earners in unions affiliated with the American Federation of Labour. The Committee on Resolutions recommended that the matter be referred to the executive council with instructions to consult with the officers of the International Unions affected and to take such action as, in the judgment of the council, may serve to bring about a condition under which the workers in the province of Quebec may be given the right to freely join trade unions connected with and having the aid and support of the American Federation of Labour. This recommendation was unanimously adopted.

#### **Committee on Law**

The Committee on Law approved of a recommendation of the executive council that the constitution be amended so as to substitute for the "Committee on Boycotts" the "Committee on Industrial Relations", with a view to extending the work and service of this committee. For a resolution seeking to make compulsory the affiliation of local unions with central and state bodies the committee suggested that the president of the federation make a special effort to bring about a more thorough affiliation of local unions with such bodies and that he direct a letter to executives of all national and international organizations urging that they advise their local unions to affiliate. The committee, in lieu

of a resolution proposing amendment to the federation constitution governing the issuance of charters to directly affiliated local unions, submitted the following substitute for section 2, Article XIV:—

The executive council is authorized and empowered to charter local unions, trade unions and federal labour unions, to determine their respective jurisdictions not in conflict with national and international unions, to determine the minimum number of members required, qualifications for membership and to make rules and regulations relating to their conduct, activities and affairs from time to time and as in its judgment is warranted or deemed advisable.

The report of the committee was adopted.

#### **League of Nations**

On the subject of a resolution requesting that the American Federation of Labour affiliate with the International Labour Organization and that the federation use its influence to impress United States representatives to favour both the League of Nations and the International Labour Organization, the Committee on Resolutions recommended that in view of the fact that the United States was not a member of the League of Nations no action should be taken to affiliate with the International Labour Organization. For the same reason the committee recommended against a proposal that the United States government should have unofficial observers stationed in the International Labour Office in Geneva.

The report of the committee was adopted.

#### **Local and Federated Bodies**

The Committee on Local and Federated Bodies commended the president of the federation in urging local branches of all affiliated organizations to affiliate with their central labour bodies, and in this connection the committee directed attention to the constitution which calls on all national and international unions to instruct their local branches to join the federated bodies.

#### **State Organizations**

The Committee on State Organizations expressed gratification at the progress which had been made in the United States through the efforts of state organizations in the way of legislation to safeguard the interests of the workers and social legislation tending to elevate the standard of the people in the several states. Special mention was made of the strengthening of compensation laws, passage of safety codes, regulation of private employment agencies, and the passage by the State

of Wisconsin of a statute outlawing the "yellow dog" contract. The committee asked that the various international unions lend their encouragement with a view to having all local branches affiliate and support state federations of labour.

### Jurisdictional Disputes

To the Committee on Adjustment was referred a resolution wherein the Building Trades Department protested the jurisdiction encroachment of theatrical stage employees. The committee recommended that a conference of those interested be called in Washington on March 4, 1930, for the purpose of endeavouring to reach an adjustment.

A number of references in the report of the executive council had to do with jurisdictional disputes, the report on which was made by the Committee on Executive Council Report. In the long standing disputes between (1) Flint Glass Workers and Machinists and (2) Teamsters and Railway Clerks it was decided to call conferences of representatives of the unions interested for the purpose of endeavouring to reach settlements. Gratification was expressed with the settlement of the dispute between the Hod Carriers and Building Labourers and the Tunnel and Subway Constructors, and the matter of the amalgamation of the unions of the Cigarmakers and Tobacco Workers was left in the hands of the president of the federation. The question of the transfer of the unions of sleeping car porters now under charters from the federation to the Hotel and Restaurant Employees' International Alliance was referred to the executive council.

On the recommendation of the Committee on Executive Council Report the convention decided that central and state bodies be advised of the refusal of the A.F. of L. to issue separate charters to welders.

In the dispute between the American Flint Glass Workers' Union and the Glass Bottle Blowers' Association it was decided that a meeting of representatives of the two unions be held for the purpose of arriving at a settlement.

### Shorter Work Day

On the recommendation of the Committee on Shorter Work Day a resolution asking assistance for the Bookkeepers and Stenographers' Union of New York city in securing a five-day week was referred to the executive council.

Approval was given to a resolution requesting the 44-hour work week in the industrial establishments of the United States Government. The committee approved of the refer-

ences in the executive councils' report in regard to leisure time and the five-day week and expressed the hope that the movement for vacations with pay will make steady progress.

### Boycotts

The Committee on Boycotts supported a resolution of the Metal Polishers' Union that an investigation be made by the A.F. of L. of its dispute with a Chicago firm.

The United Hatters' Union protested the attitude of a hat manufacturing firm in the United States and asked that the federation assist in bringing about a satisfactory adjustment. The complaints of the Iron and Steel Workers, the Tobacco Workers, the Cigarmakers and the Bridge and Structural Iron Workers against certain firms in the United States were referred to the executive council with the recommendation that efforts be made to settle the difficulties.

### International Labour Relations

The Committee on International Labour Relations, in reporting on the reference in the report of the executive council in regard to relations with the International Federation of Trade Unions, recommended that the executive council continue its efforts to establish plans which will result in perfect understanding and collaboration, and, if proper arrangements can be made, that the A.F. of L. will ultimately be in a position to send and receive delegates to and from continental labour conventions.

The committee recommended the reference to the executive council of a resolution favouring co-operation of Pan-American Federation of Labour with the International Federation of Trade Unions. Another resolution referred to the executive council was one favouring an exchange of fraternal delegates with the German trade union movement. In endorsing the report of the executive council in regard to the Pan-American Federation of Labour the committee recommended that the executive council be instructed to continue active membership and participation in the federation and that delegates be sent to the sixth congress to be held in Cuba, January 6, 1930.

### Other Resolutions Adopted

The convention on the recommendation of the Committee on Resolutions adopted resolutions on the following subjects:—

In support of radio broadcasting station WCFL, Chicago.

Protesting repeal of anti-trust provisions of the United States radio law.

In favour of wage standards for material sorters, trimmers and handlers in New York city.

In favour of an effective fire prevention movement.

In favour of conference in the interest of the people of Porto Rico.

In favour of investigation of conditions of people of Virgin Islands.

Urging the employment of union accountants.

In favour of the employment of American citizens in Government construction work in canal zone.

Urging support of labour papers.

Proposing government control of Boulder Canyon dam.

Urging patronage of Pequot products.

In favour of the New York Conservation Commission patronizing union badge manufacturers.

Supporting referendum in New York for increased pay for fire fighters.

In favour of independence of Philippine Islands.

In favour of pardons for Thomas J. Mooney and Warren K. Billings.

Endorsing the investigation being made by the Foreign Relations Committee to establish the truth of charges made in regard to conditions in Cuba.

Urging campaign to secure representation of organized labour on Text Books Commission.

Urging conservation of natural resources and extension of opportunities for outdoor recreation.

Favouring Sunday closing law for barber shops in the District of Columbia.

Urging that overtime work be abolished.

In favour of Government work being performed in Government shops.

In favour of the British Government, the mandatory power in Palestine, protecting the population of Palestine.

The closing resolution of the Committee on Resolutions expressed the thanks of the delegates to all who had contributed to the entertainment and comfort of the delegates and visitors who had attended the convention.

### Referred to Executive Council

Resolutions on the following subjects were referred to the executive council for consideration:—

Abolition of capital punishment.

Preference in employment to United States citizens on all public works in U.S.A.

Protest against the activities of Civil Service League of Seattle, Wash.

Opposing treaty relations with foreign countries which would affect the right of the United States to enact legislation governing operation of all merchant vessels sailing out of American ports.

Support for Theatrical Agents and Managers' Union of New York city.

A protective tariff on logs, lumber and shingles.

### Tribute to Deceased Members

At one of the sessions the delegates stood in silence for a few moments as a tribute to the memory of 45 prominent trade unionists who had passed away since the convention held in 1928.

### The Federation Criticised

At the afternoon session of the fourth day Delegate D. J. Tobin drew the attention of the delegates to an editorial criticism of the American Federation of Labour which had appeared in newspapers operated by a publishing syndicate. The article in question accused the federation of "failing miserably in its stewardship. Every year its weakness is more apparent." The matter was discussed at this and a subsequent session, all of the speakers declaring the criticism to be most unfair. President Green in the course of his remarks said "Give us credit for what we do. We ask for nothing more. Criticize us where we deserve criticism and direct it in the right way, but we resent falsehood and indictment when they are not based upon fact, and as red-blooded men we will make answer to these falsehoods and these untruths". The editor having offered the columns of the papers concerned in which to make reply to the criticism, it was decided to accept the invitation.

### Fraternal Messages

At the afternoon session of the third day the greetings of the fraternal delegates were delivered. The message from the British Trades Union Congress was delivered by Mr. J. T. Brownlie, president of the Amalgamated Engineering Union, of London, and Mr. James Bell, secretary of the United Textile Workers Factory Association, of Oldham. The greetings from the Trades and Labour Congress of Canada were extended by Mr. James Whitebone, of St. John, N.B. Others who addressed the convention at one time or another were Miss Anna Fitzgerald, of the Women's International Union Label League and Trade Union Auxiliary; Mr. A. F. Whitney, president of the Brotherhood of Railroad

Trainmen; Mr. Spencer Miller, Jr., secretary of the Workers' Education Bureau of America; Miss Agnes Nestor, of the National Women's Trade Union League; Miss Peggy Everett, of the Industrial Department of the Young Women's Christian Association; Mr. C. L. Bodenheimer, national commander of the American Legion.

### Presentations

Following the usual custom of the convention President Green presented to each of the fraternal delegates from the British Trades Union Congress and the Trades and Labour Congress of Canada a gold watch and chain suitably engraved. Each fraternal delegate was also presented with a gold wrist watch for his wife. At the closing session of the convention the local reception committee presented President Green with an ebony gavel and Secretary Morrison with an onyx ink stand.

### Sir Henry Thornton

At the morning session of the third day's proceedings Sir Henry Thornton, president of the Canadian National Railways, delivered an address in which he outlined something of the union-management co-operative movement on the Canadian National Railways, commonly known as the B. & O. plan. (The full text of Sir Henry Thornton's address is given elsewhere in this issue). Mr. Otto S. Beyer, consulting engineer, Railway Employees' Department, A.F. of L., who had served the organized labour movement in the promotion of the co-operative plan, also contributed an address on the subject, which was supplemented by Delegate G. M. Bugniazet, secretary of the Brotherhood of Electrical Workers; Delegate A. L. Wharton, president of the International Association of Machinists, the members of whose organizations are working under the union-management co-operative plan. Following the addresses the convention decided that that of Sir Henry Thornton and those which followed should be printed and distributed.

### Labour Heads Speak

At the morning session of the fourth day the Hon. Peter Heenan, Federal Minister of Labour of Canada and the Hon. James J. Davis, Secretary of Labour of the United States, attended the convention and addressed the delegates.

The Hon. Mr. Heenan after extending a welcome to the Dominion both to the delegates and to the Hon. Mr. Davis, referred to the recognition which organized labour is

receiving throughout the world. Mr. Heenan made reference to some of the social legislation which had been adopted, such as workmen's compensation, mothers' allowances, minimum wages for females and old age pensions, and gave figures showing the huge sums expended on account of such legislation.

Dealing more particularly with old age pensions, Mr. Heenan said:—

"Two years ago we placed on the statute books of Canada what, to my mind, is one of the finest pieces of legislation on the statute books of any country in the world—a provision for old age pensions. For the information of you American brothers, let me say that the care of the aged and all this kind of legislation is a matter for provincial or, as you would call it, state legislation, but the Federal Parliament, realizing that it would be too great a burden for any one Province, and realizing the fact that if one Province put it into effect without the others doing likewise, there would naturally be a rush of old people into the Provinces that were paying old age pensions, passed a law which provided that any Province that would accept this plan would receive from the Federal Government fifty per cent of the cost. It was prophesied at that time by many who were, in my opinion, opposed to old age pensions of any kind, that there would not be one Province that would accept it. I am glad to report that, notwithstanding that prophecy and notwithstanding the fact that it has only been on the Dominion statute books for two years, a majority of the Provinces in Canada are paying old age pensions to-day. Five Provinces have accepted and signed agreements with the Dominion, three others have signified a willingness to discuss it, and I am satisfied that once they get to discussing it they will see that the old pioneers who did the work of this country will not be thrown on the scrap heap in their declining years."

Mr. Heenan in dealing with the policy of the Dominion Government in regard to wages on public contracts said:—

"We have in Canada a fair wage, or a prevailing wage clause in all public contracts. That is due to organized labour. As an administrator of that particular clause I am given an opportunity of viewing the conditions of labour throughout Canada. A clause goes into every public contract which calls for the prevailing rate of wages in that district. That gives one a bird's-eye view of the conditions of labour throughout the Dominion."

The Hon. Mr. Davis referred to the friendship between the members of the federation on both sides of the boundary line, which he

declared "does a great deal to maintain the happy relations that exist between our two countries." Mr. Davis predicted that modern mechanical developments would inevitably result in increased hours of leisure for the bulk of the people, and expressed the thought that the schools, churches and colleges should even now be preparing to train the people for the proper use of their greater leisure time. Mr. Davis said he had no fear of the labour-saving machine so long as employers maintain even the present scale of wages and keep the people equipped with purchasing power. Referring to the unemployment problem, he said that a movement had been launched in the United States for the stabilization of industry, and he felt that the problem would be rightly solved. Mr. Davis also made reference to the immigration question, the shorter work day, the passing of the arbitrarily dropping of men as unfit for further service at a certain age, and the question of jurisdictional disputes. Mr. Davis stated that he had "just come from seeing the two chief representatives of our great peoples discussing means for putting into practice the goodwill which the people of the world now at last bear toward each other. Here on this continent they have the best example of what peace means in the relations of Canada and the United States. The same methods will be found for extending such relations everywhere."

#### Address of Premier Ramsay MacDonald

At the afternoon session of the seventh day the Right Hon. James Ramsay MacDonald, premier of Great Britain, and his daughter Ishbel, were welcomed to the convention by President William Green. Mr. MacDonald's address to the delegates was as follows:—

"Mr. President and Friends: It was with the greatest pleasure that about a couple of days ago I found that certain engagements that had been made for me for this morning had to be modified and that in consequence of that modification half an hour was made available for me to greet this Federation and old personal friends sitting in front of me. More than that, when I heard that you had given up the business of this afternoon in order to accommodate me nothing on this earth would have prevented me from coming personally and thanking you for that great act of courtesy. I have been introduced to you in the name of the office which I hold—Prime Minister of Great Britain. That is perfectly true, but at the same time I want you to feel that whether Prime Minister or not I am still the old workman as I was born. The workman is distinguished neither by the clothes he wears nor by the softness nor the hardness of his hands. The workman is distinguished by his mentality and his point of view upon life.

"In Great Britain I am a party man. I am not ashamed of it. I glory in it. If the men and women of Great Britain who share my views elect us to the House of Commons in such numbers that we are called upon to form a Government, that is after my own heart. But here to-day, my friends, I do not represent a party, I do not represent one point of view. I represent the whole nation. I have come upon a mission across the Atlantic, not as a party leader but as he who, at the moment, is not only the head of the party in the House of Commons, but is charged to represent to the people on this side of the Atlantic the opinion, the personality, and the unity of the House of Commons.

"On our side organized industrial labour is working out a great public philosophy. It is working it out, not by revolutionary means, which are bound to be temporary, but by evolutionary means, which have a chance of being permanent. Outward changes in events created by revolution may give men and classes and sections new power, but no sooner are they enthroned in office than they have to turn back and as responsible rulers face precisely the problems that we are facing in Great Britain to-day without any preliminary revolution. The revolution we believe in is the revolution of the ballot box, and if you cannot create great mental changes on account of appeals to reason and appeals to moral sense, you can make no permanent changes in the social construction of nations.

"I have come over as a missionary of peace, and where should I come to receive inspiration for that mission more than to the ranks of labour? Labour—you supply the army, you supply the munitions, you supply the national credit, you are used to incurring the debts, and you have to pay them in fullness of time. All classes in a war share in its sacrifices. Every mother from the highest in the land to the most poverty-stricken has to face the anxieties, the dangers, the pains and ultimately the sacrifices being taken, but in the mass labour bears the burdens, labour bears the pains, labour bears the sacrifices. And if there should be another war the circumstances of it are such that the pains and sacrifices of labour will be infinitely greater than they have been in past wars.

"In days gone by the fighting took place in the front lines. The men who were killed were the men who were within the range of the guns, but in the next war, should there be a next war, death will be dealt out not only on the battle field, destruction will rise from the bottom of the sea, destruction will descend from the heavens themselves, destruction will meet your wives, your children, your home. The civilian population left miles and miles and miles away back from the front—destruction will meet those silently and they will be touched by the mysterious breath of poison and in a mysterious way they will drop down in the middle of your streets and die.

"Ah, my labour friends, I never have been and I never shall be one of those who believes

that class this and class that alone are there to help us. My appeal has always been a national appeal, whether fighting my party battles at home or trying to lead the whole world on the smoother and better roads of reason and moral righteousness—always has been, always will be, but nevertheless in these secret corners of my heart are the well springs that give enthusiasm and power to go on and fight. It is the worker's fireside, it is the worker's life, it is the worker's wife and the worker's child that hold a sacred place. When I think of war, when I think of national enmity, when I think of strife, those are the people that come first and bear me companionship in my thoughts.

"And so I come to you as an old friend, I come to you as one who would have been down there in body as well as with you up here in mind. I come to you as the leader of the Labour Party in the House of Commons, called upon for the moment to fulfil a somewhat broader mission and to give voice to a somewhat more widely humanitarian appeal. And as the missionary of peace, as one who has gone to the neighbouring country in order to create mutual understanding instead of misunderstanding, in order to try to close all chapters of historical suspicion, it is a pleasure, it is of the nature of a fulfilment that, visiting Toronto when you were visiting it, I should come and shake hands with you, meet you and receive from you the support of the labour movement in the United States, the labour movement in Canada, get their support to broaden the area of peace, to lay new foundations for the new world of mutual understanding and to tell you that in the experiences I have had, the good experiences I have had, this is one of the best which I shall take away with me with greatest pleasure and greatest appreciation."

At the solicitation of President Green Miss MacDonald briefly addressed the convention.

## LABOUR PARTNERSHIP IN INDUSTRIAL MANAGEMENT

*Address of Sir Henry Thornton, President of the Canadian National Railways, to American Federation of Labour, Toronto, 1929*

MR. PRESIDENT, Ladies and Gentlemen: After hearing the complimentary remarks of your chairman I find myself almost inarticulate with embarrassment. I wish that the half of what he has been kind enough to say were true.

I am not going to take any chances with this address this morning and I propose to read it to you rather than to trust to the vagaries of tongue and memory. Let me say, however, in the first place, that I think this is

### Officers Elected

The officers elected for the year 1929-30 were as follows:—

President, Wm. Green, Washington, D.C.;  
First vice-president, Frank Duffy, Indianapolis, Ind.;

Second vice-president, Thos. A. Rickett, New York, N.Y.;

Third vice-president, Matthew Woll, Chicago, Ill.;

Fourth vice-president, James Wilson, Cincinnati, Ohio;

Fifth vice-president, James P. Noonan, Washington, D.C.;

Sixth vice-president, John Coefield, Chicago, Ill.;

Seventh vice-president, A. O. Wharton, Washington, D.C.;

Eighth vice-president, Joseph N. Weber, New York, N.Y.;

Treasurer, Martin F. Ryan, Kansas City, Mo.;

Secretary, Frank Morrison, Washington, D.C.;

Fraternal delegates to the British Trades Union Congress, John J. Manning, Washington, D.C. and Thomas Maloy, Chicago, Ill.;

Fraternal delegate to the Trades and Labour Congress of Canada, Adolph Kummer, Cincinnati, Ohio.

Boston, Mass., was chosen as the convention city for 1930.

### Labour Men in Pulpits

The convention adjourned on Friday, October 11, to the Monday following. On Sunday 48 pulpits in Toronto and the neighbouring city of Hamilton were opened to convention delegates, some of whom spoke at both morning and evening services. The president of the federation, Mr. Green, occupied the pulpit of the Yorkminster Baptist Church, while Mr. Frank Morrison, the secretary, spoke in the Bond Street United Church.

the largest grievance committee that I ever have had the pleasure of meeting. Personally, I always welcome grievance committees, because a man with a grievance can usually be made a friend, but he who has no grievance leaves you nothing whatever to work upon.

In what I hope to say to you this morning I would like you to understand that it is the presentation of an idea—an idea which I hope both capital and labour will be able to take and turn into something which will be ex-

pressive of improved mutual relations and work to the welfare of both sides of the equation. I am particularly complimented that I have this opportunity of appearing before so large and so influential and so important a gathering.

In the course of my somewhat checkered career I have dealt with labour in the United States, in England and in Canada. I am happy to number amongst my friends many of those who have won leadership in the ranks of labour, and I can say with truth that thus far I have never had either a labour leader or a labour organization break his or their word or let me down.

You who are here gathered represent a great and important factor in economic and social life. Your deliberations will affect substantially every conceivable form of industrial activity, and your conclusions rank in importance with those of legislative bodies. In recent decades educational opportunities and the acceptance of such opportunities by those who stand in the ranks of labour, coupled with constructive leadership, have attached a dignity and wisdom to the deliberations of labour which justifies attention and consideration by all classes of society. Such being the case, it must be obvious that your discussions should reach beyond those domestic matters which relate to the details of your various occupational pursuits and, if you are to fulfil your responsibilities, deal with matters and policies of national and international importance.

### Historical Background

To provide the necessary perspective for the subject I wish to discuss with you, let us consider for a moment the historical background in the relations between what was in ancient days the master and the servant, but in more modern times the employer and employee. It is the history of the uplift, and improvement of the masses, the battle against servitude, and the progressive advancement of labour in independence, dignity and wisdom.

In ancient days the world was divided broadly into two classes; those who ruled and those who served, the master and the slave. Mechanical devices, excepting in their simpler form, were unknown, and in its mechanical sense energy was chiefly found in arduous labour. This was of necessity a condition of antiquity. Initiative, knowledge and power were the heritage of but few, and was the right of heredity or the reward of the conqueror. The value of men was estimated by the power of their backs and their ability to resist the ravages of ceaseless toil, inadequate food, and a poor protection from the elements,

and life represented a precarious existence. Ignorance of better conditions induced an amazing satisfaction. The greatest of all pursuits in those ancient days was warfare. Wars were waged at will for the benefit of the few, and the uncomplaining masses regarded their sacrifice upon the altar of Mars as a necessity of life. The chief and almost only source of man power in the physical sense was represented by slaves. It was the day of the master and the slave.

### Craft Guilds

The first dawn of the dignity of industry as distinguished from the glory of military pursuit appeared in the formation of craft guilds, which flourished in many countries and awakened the pride of the master craftsman and the artisan. These guilds grew in power, importance, and contributed much to the advancement of industrial pursuits. In most instances the home of the master craftsman was likewise the factory. There he gathered his apprentices, taught them his trade, and over them exercised a paternal influence. The master craftsman, his family and apprentices, became partly a family and partly an industrial unit. The remains of these old guilds are found to-day notably in England and are represented in modern times by the great city companies such as the Ironmongers, the Fishmongers, the Goldsmiths and Silversmiths Company, and many others. In this enlightened day, the great London city companies cherish the best traditions of the craft, and although they have largely ceased to have any industrial importance they still exercise a benevolent and worthy influence.

### Industrial Revolution

The discovery of steam as a form of energy, and the invention of machines which performed mechanically the work of many hands, completely changed the social and economic structure of the more advanced countries and enormously expanded production. The factory displaced the shop of the master craftsman, and the artisan became an employee of capital. These combinations were a necessary evolution in the progress of industry. It was found that the establishment of factories with steam driven machines involved a greater outlay of capital than was within reach of the former master craftsman; consequently, companies were formed for this purpose and numbers of individuals acquired an interest in these enterprises by financial participation. As a result, the paternal influence of the master craftsman disappeared and those who toiled found themselves working for enterprises whose

chief object was the production of satisfactory financial returns to the shareholder. This applied equally to mines, railways, textile and steel works, and finally to all forms of industrial activities. In the initial stages of this development the employing company in its relations to its hands quite naturally acted as a unit. The employees attempted to act as individuals. Remembering that in those days there still lingered in the minds of those who ruled industrially the flavour of feudal days and the traditions of master and servant, oppression was substituted for the benevolent influence of the master craftsman, and conditions in most industrial centres became intolerable to the worker. As a protective measure, the inevitable result was the combination of workers into craft unions, and they then effected that unity of purpose and action which characterized the employer. Naturally in such an atmosphere conflict was inevitable; a conflict which was stupid on both sides, in that each regarded the other as a natural and inevitable enemy.

### New Co-operative Policy

After some decades of such conditions there arose sane minds on both sides who recognized that industrial warfare was just as costly and quite as unsatisfactory as military warfare, and a more intelligent policy made its appearance which was characterized by a recognition on both sides of the rights of the other, until we have to-day happily a general feeling of consideration between capital and labour and a recognition of each other's rights. Such briefly has been the arduous and slow advancement of the toiler from slave to his present position. Of all of the things which have characterized the advance of civilization, the improvement in the position of the masses has been the most outstanding and the most important. It may have been slow, but it probably moved as rapidly as circumstances would permit. It may have been achieved only by toil and self-sacrifice, but the result has been worth while.

The progress is by no means finished; indeed, nothing in this world is ever finished. There is still another step to be made, and now we stand upon the threshold of a new and better relationship which I describe as "the partners." The future contract between capital and labour and between the employer and the employee, will in the decades to come find its greatest progress and its finest expressions in the era of The Partners.

Industrial pursuits are fundamentally the utilization by efficient method of men and materials. The steel rail, the bridge, the building, the locomotive, the automobile, and

all of those thousand and one things with which we are familiar, represent the application of men and materials; materials in their raw form wrought into some useful device by brain and manual effort, and the inanimate material is of lesser importance than the human contribution which turns those materials to useful purpose. We investigate, analyse and test the materials we purchase, we store, protect, and treat them with something akin to paternal care. Those whose brains and muscles revolve the wheels of industry, converting bricks into buildings, and steel into structures, merit equal care. The skilled mechanic, the trained employee, is commercially worth quite as much as many units of material. When for one cause or another he leaves the service of his employer, there is lost knowledge, experience, and productivity. These are the things which enlightened employers cherish and protect.

It is obvious that capital as applied to production becomes quite useless unless accompanied by labour. Both are equally essential for economical and efficient production. One cannot proceed far without the other. Dissatisfaction on the part of one or the other interferes with the smooth running of the whole. In the true sense of the word, these two great elements must be partners if the interests of each are to be served. No industrial or commercial enterprise, no matter how scientific its formulæ, or how efficient its administration, can be successful unless there is contentment on the part of the workers, and a desire born of pride to give of their best. No general, however great his skill, ever won victories with a discontented army. Labour has won its right to partnership, and sagacious capital will welcome such a partnership. With a recognition of the partnership principle, there automatically must disappear that contention and strife which is just as expensive in the industrial world as it is in the relations between nations. Warfare has been described as the only game in which both sides lose. Therefore why play with loaded dice! In the present day, and in the days to come, those industries will prosper most which accept labour as an equal partner, and labour will best prosper when it recognizes the obligations and the dignity of that partnership.

### Co-operative Management on C.N.R.

As illustrative of the partnership theory, I will ask you to bear with me while I describe briefly something of the co-operative movement on the Canadian National Railways, which we have come to regard as our greatest asset. A few years ago, in 1924, I had been thinking of what had been accomplished through the co-operative movement as it found

expression on the Baltimore and Ohio Railroad, through the wise and far-seeing administration of its President, Daniel Willard. Almost simultaneously with that thought, Mr. Bert Jewell, whom you all know as President of the Railway Employees' Department, suggested to me the inauguration of a similar movement on the Canadian National Railways. The idea was alluring because it seemed sound and was in keeping with the more enlightened and progressive relations between capital and labour. Mr. Jewell was fortunately assisted in his proposal, and in subsequent inauguration, by Captain Beyer, and to both of these gentlemen the Canadian National Railways owes much. Suffice it to say, and to make a long story short, that we commenced the co-operative movement in the shops of the Canadian National Railways. In so far as the company and the men were concerned, the objectives were:

1. Continuity of employment.
2. A more kindly and satisfactory relationship between the railway on the one hand and our shop employees on the other.
3. An improvement in output with reduced unit costs.
4. The introduction in our shop administration of the brains of our men, and the provision of an outlet for their ingenuity.
5. A more accurate conception on each side of the other's point of view.

### Results

After a few years of trial, I assert as far as the railway is concerned, and I think those who represent our men would speak similarly, that all of these objectives have been measurably achieved, and certainly the results have been well worth the effort. Since the inception of the plan 6,358 suggestions have been made looking towards improved shop conditions and output, of which far the greatest proportion originated with the men. Of these suggestions 73 per cent have been accepted, 15 per cent are still under consideration, and only 12 per cent rejected. This I regard as an amazing result, of incalculable benefit to both sides. Most of these proposals, many of which are of major importance, would never have come to light had it not been for the partnership movement.

The present co-operative plan is in effect at all of the shops of the Canadian National Railways, and embraces some 16,000 men. In other words, we have now in our shops 16,000 partners instead of as formerly 16,000 employees. It requires no flight of the imagination to appreciate the benefits which have accrued from this movement.

In the matter of continuity of employment, which is perhaps the largest factor affecting the men, stabilization as represented by percentages has risen from 73.6 per cent in 1924 to 83.4 per cent in 1927. In 1924 the disturbed time factor chargeable to the company was 20.1 per cent, while in 1927 this was reduced to 8.5 per cent. So far as we can estimate, the improvement in continuity of employment has resulted in raising the average earnings of all of our employees in all of our shops by about \$150 per year per employee.

The above figures indicate the material advantage to the employee which, when taken into consideration with other factors, I think stamps the whole movement as an unqualified success.

The partnership shop movement has been so satisfactory that it has now been extended to maintenance of way employees, and, although it has only been in operation in that department a few months, it promises equally advantageous results. Should this extension of the co-operative movement meet with the success I fully anticipate, an effort will be made to introduce the same movement in train and engine and clerical services. In fact, I think I can almost visualize the day when the entire staff of the Canadian National Railways in all departments will be operating under appropriate co-operative partnership plans. This means that so far as details are concerned, the administration of the railway will become practically automatic, responsible officers will be relieved of a mass of details and detailed supervision, and will be enabled to devote themselves to the more important problems of the railway and to the study and development of more efficient methods. Every employee will in a sense become a partner in the enterprise. He will go to his daily work with the pride of a partner, will feel a proprietor's interest in his work, and will find a greater pleasure and satisfaction in his daily pursuits. So far as the company itself is concerned, I think I can say beyond doubt that such an atmosphere and such a condition will reflect itself in a better service to the public and an infinitely better financial performance on the part of the company. But what is also of great importance, that improved financial performance will reflect itself in increase in the revenues to the Government, which in turn ought to find expression in reducing the capital debt of the nation and afford whatever relief to the individual the Government of the Dominion may think wise. In short, such a situation and such an attitude on the part of our employees will bring to them a fine patriotic pride in the knowledge that their efforts are a substantial contribution to the welfare of their own country.

### Constructive Power of Labour

The constructive functions of great labour organizations are not in dealing with such domestic things as hours of work, rates of pay, and conditions of employment. The right to fair treatment and fair dealings in such things has long since been won and is recognized. However essential they may be, they represent day by day activities and may be regarded as details. The great constructive work of labour organizations lies in the conception and development of those larger policies which form a foundation upon which to erect an enduring industrial structure which will best promote in its bigger sense the welfare of man. I believe it is given to labour to make such a momentous contribution to the advancement of civilization, a contribution which will rank equally with the great discoveries of the ages.

The power of labour is recognized. Disciplined, organized, and well lead, it constitutes an irresistible force. But great power carries with it equally great responsibility. To those who are given the ability and opportunity to create, there is also the obligation to build. To neglect that obligation is both cowardly and stupid. He who is profligate or unwise with his power is akin to the spendthrift and the fool, and this applies to labour and capital alike. So far as thought and experience lead me, I believe that labour and capital will together make their greatest contribution to the welfare of mankind in the active and unceasing promotion of the partnership theory in all forms of industrial activity. The moment is ripe for the prosecution of such an idea. Pro-

gressive and sagacious leaders of both sides will, I believe, lend their best efforts to implement such a theory. You have seen what, in a relatively small way, it has accomplished for the Canadian National Railways; and yet I consider that we have but hardly scratched the surface of its possibilities. Carried to its logical conclusion it means to the employee contentment, happiness, continuity of work, and pride in his undertaking. It means tranquility, freedom from anxiety, and improved results to the employer. To the world at large it constitutes an example of what can be accomplished by the development of a sound theory of co-operation consistently pursued. Surely such potentialities justify the effort!

The policy which I have discussed will at best not reach its full fruition in a few years. Such large potentialities involve much preaching, considerable conversion, and a period of trial, but if embarked upon, a progressive improvement will be found, increasing in geometrical proportion; and if it should finally develop that the partnership theory in industry has banished contention and enthroned tranquility and peace, it well may be that the nations of the earth will learn the same lesson, and a greater spirit of consideration and co-operation govern our international relations. Perhaps here lies the true road to the banishment of war and the establishment of perpetual peace. The opportunity it seems to me is here for labour to grasp the torch and to be a light to lighten the world and to lead classes, peoples, and nations to the haven of peace, prosperity, and happiness: Truly a noble mission.

## NOTES ON LABOUR UNION ACTIVITIES

### All-Canadian Congress of Labour

THE third annual convention of the All-Canadian Congress of Labour was held at Winnipeg on November 4, and the following days. The President, Mr. A. R. Mosher, in the course of his opening address, stated that the Congress had three main objectives, namely:—

(1) A national, industrial union covering every industry in Canada, which will be fully organized, and strong enough to take a share in the control as well as in the profits of industry.

(2) To unite all such national industrial unions in the All-Canadian Congress of Labour, and to have the congress in turn, affiliated in a great international federation which will bring together the national congresses of other nations for the promotion of world-wide co-operation between the workers.

(3) A national labour party in Canada, which will provide direct representation for the workers.

A full report of this convention will be given in the next issue of the LABOUR GAZETTE.

### Street and Electric Railway Employees of America

The twenty-first biennial convention of the Amalgamated Association of Street and Electric Railway Employees of America was held at Seattle, Washington, September 9 to 16, over two hundred and fifty delegates and officers being present. In the report of President W. D. Mahon, reference was made to the efforts of the organization to establish a local division in the City of Quebec, where an International Union charter had been applied for. Speaking of wage conditions, the president said: "We have also been handi-

capped by the encroachment of busses and jitneys that have taken from the street railway certain amount of its business." Statistics were quoted to show that during the past two-year period there were 373 renewals of contracts, 63 increases and seven decreases. The president showed from the records of the Association that there were 41 divisions, having provisions in their contracts for a regular rest period of one day, affecting approximately 30,000 members, while 18 divisions had established annual vacation periods with pay for approximately 16,500 members. On the question of old age pensions, the president informed the delegates that during the past two years the organization paid 232 old age pension claims, amounting to \$185,600, and that \$13,223,585 had been expended by the international union and local divisions in sick, death, disability and old age benefits since the organization of the Association. The president recommended that the convention extend a hearty vote of thanks to president Moore and secretary Draper and the Trades and Labour Congress of Canada for their support and assistance, and that the local divisions in Canada be requested to take a greater interest in the work of the Congress and in every way possible promote its work.

The committee on audit, to which the treasurer's report was referred, reported that there was a balance on hand July 31, 1927, of \$1,772,749.79, receipts for the two year period amounting to \$2,547,487.41, and expenditure totalling \$2,189,297.57, leaving a balance as of July 31, 1929, of \$2,130,984.63, a net gain of \$358,189.84.

The committee, to which the general executive board's report was referred, referred to the finding of a special committee of the international union appointed to make a complete and thorough investigation of the situation in the City of Quebec, where it was alleged a considerable number of street railway men were prevented from joining the Amalgamated Association by the National Catholic Union, while others who had joined the international union were dismissed from the company's service. In this connection the committee brought in a recommendation, which was afterwards adopted by the convention, that the delegates of the Amalgamated Association of Street and Electric Railway Employees of America to the convention of the American Federation of Labour be instructed to draw attention to the Catholic union as existing in Quebec City, and to suggest that the American Federation instruct a committee, or the executive council of the Federation, to use its endeavours in "establishing conditions under which wage workers of the entire

Province of Quebec may not be antagonized in organizing in American Federation of Labour unions."

On recommendation of the committee on constitution and laws, the convention approved the changing of the name of the organization to Amalgamated Association of Street and Electric Railway, Bus and Coach Employees of America.

Among the resolutions adopted were the following:—

That Congress be petitioned for remedial legislation to secure for radio station WCFL a proper wave length and adequate power;

That railway and municipal inspection boards see that operators of cars have the best possible vision, brakes and gong;

Endorsing the Union Labour Life Insurance Company;

Protesting against the action of the Sears-Roebuck Company in awarding a three million dollar catalogue printing contract to a non-union shop.

A resolution proposing that employees living in one state and injured in another be brought under the provisions of the compensation law, was referred to the delegates to the American Federation of Labour for presentation to that body.

Officers elected were:—President, William D. Mahon, Detroit, Mich.; secretary general executive board, R. L. Reeves, Detroit, Mich.; treasurer, L. D. Bland, Detroit, Mich. Among the vice-presidents elected was Gerard Gagnon, Montreal, Que., while Magnus Sinclair, Toronto, Ont., and F. A. Hoover, Vancouver, B.C., were elected to the general executive board.

Boston, Mass., was selected as the convention city for 1931.

### **Bakery and Confectionery Workers International Union of America**

The twentieth triennial convention of the Bakery and Confectionery Workers' International Union of America was held at St. Louis, Mo., September 16-22, 1929, 102 delegates representing 81 local unions. In the joint report of the international officers and the general executive board, the activity of the union for the past three years was reviewed. The report showed that the average weekly minimum and lowest contract wage for journeymen bakers for all local unions had increased from \$16.36 in 1911 to \$38.99 in 1929. On the subject of sick and death benefits, mention was made of the action of the 1920 convention increasing the amount of sick benefits from \$7 to \$10 per week. This increase was calculated to involve an increased

monthly cost per member of 15 cents, but according to figures submitted, the cost of meeting the sick and death benefit claims during the influenza epidemic in 1918 rose to 66.8 cents per member per month, while the cost for the past year was 60.3 cents. In order to maintain the future financial stability of the benefit funds, the general executive board recommended that the weekly sick benefits be reduced from \$10 to \$7. The convention, however, decided to submit to a referendum vote the question of either increasing the per capita and monthly dues from \$1.10 to \$1.30, or reducing the sick benefits from \$10 to \$7 per week. The report of the auditing committee showed a balance in funds on June 1, 1926, of \$711,797, receipts for the three-year period, \$1,142,659, disbursements, \$1,085,857, leaving a balance on hand as at May 31, 1929, of \$768,599. The investment in land and headquarters amounted to \$80,711. The membership as at June 1, 1929, was given at 26,989. Resolutions were adopted advocating the seven-hour work day in all automatically equipped shops; favouring closer relationship and co-operation of all organizations engaged in the various branches of food industries; and demanding a full and unrestricted wage length for station W.C.F.L. in Chicago. The next convention will be held on the third Monday in September, 1933, in Chicago, Ill.

#### **Metal Polishers' International Union**

Fifty-one delegates representing forty-seven local unions and the international executive board members met in convention at Cincinnati, Ohio, on September 16-21. In reporting on the centralization of industry, the president-secretary-treasurer quoted figures of the Department of Commerce of the United States to show that in 1919 there were 290,105 manufacturing institutions in that country, but that this number had been reduced to 191,866 in 1927, while production in 1927 exceeded that of 1919 by over three hundred million dollars. Other subjects touched upon by the speaker were: higher wages; unemployment; shorter work day and week; dead line at forty and forty-five; strikes and lock-outs; company unions; the injunction; child labour; yellow dog contract.

According to the financial report the receipts, together with the balance on hand as at June 1, 1927, amounted to \$141,333; disbursements totalled \$133,920, leaving a balance on hand of \$7,413.

Resolutions were adopted: endorsing the five-day week, eight-hour day, and forty hours per week; favouring pensions for war veterans

over forty-five years of age; and endorsing old age pensions in the United States and Canada.

The officers-elect are: president-secretary-treasurer, W. W. Britton, Cincinnati, Ohio; vice-presidents, William Kaufman, John J. Flynn, and Charles Janis; Assistant secretary-treasurer, Miss F. M. Dickman, Cincinnati, Ohio.

#### **Wood, Wire and Metal Lathers' International Union**

The sixteenth convention of the Wood, Wire and Metal Lathers' International Union was held in the Jefferson Hotel, St. Louis, Mo., on September 9-14, 1929, with over one hundred and twenty delegates present, being the largest convention ever held by the organization. President Bell informed the delegates that eighty-nine local unions were working a five-day week. The report of the secretary-treasurer showed a balance on hand August 31, 1929, of \$142,726, and a paid-up membership for the month of August of 12,529.

Several additions and amendments were made to the constitution, while the following resolutions were among those adopted by the convention: favouring the establishment of the five-day (forty-hour) week; and instructing the executive board to prepare and submit to referendum vote details of a benefit fund scheme. A resolution asking that an organizer be appointed for Canada for at least three months of each year, was referred to the incoming general president.

Officers elected were: president, W. J. Sorley, Cleveland, Ohio; vice-presidents, G. T. Moore, Ed. Kelley, W. J. Murphy, R. B. Jefferis, C. J. Haggerty, Jos. H. Duty and E. F. MacKnight; Secretary-treasurer, Terry Ford, Cleveland, Ohio.

Toronto, Ont., was selected as the convention city for 1932.

The Saint John Trades and Labour Council, at a meeting on November 1, discussed the circumstances of a recent fatal accident to a workman on high tension electric service wires in the city, and recommended that in future a coroner's inquest should be held on all fatal industrial accidents, and that the jury in each case should include at least one member of the craft to which the deceased workman belonged.

An age limit of 18 years for persons using paint spraying devices is announced by the Pennsylvania State Department of Labour. The order applies wherever the substances used contain lead, benzol or ground siliceous materials.

## THE LABOUR BANKING MOVEMENT IN THE UNITED STATES

THE results of a study of "The Labour Banking Movement in the United States" are published in a new volume prepared by the Industrial Relations Section of the Department of Economics and Social Institutions of Princeton University. In a chapter on the origin of the movement it is shown that labour banking as it exists on this continent is the product of American conditions, and owes little to European precedents. It is described as labour's answer to the policy of the regular banking institutions in supporting the "open shop" campaign of recent years. In contrast with the people's co-operative banks in Germany and elsewhere, the American labour banks are stated to be almost entirely capitalistic, investments in stock being "primarily for dividend returns and not for eligibility for borrowing privileges at unusually low rates. The plan for co-operative dividends to saving depositors, which has appeared on paper in many labour banks, and in practice in three, is but incidental to the underlying capitalistic form of ownership, control, and charges for service". The American labour banks also differ from the banking department of the Co-operative Wholesale Society of Great Britain in their purpose, the latter serving organized and unorganized workers as individual consumers through affiliated retail co-operatives. Labour banks, on the other hand, are regarded as forming a part of the movement towards "labour capitalism", and as the counterpart of the parallel movement towards employee stock ownership.

The term "labour bank", as used in this study, is applied only to institutions in which a majority of the stock is owned by trade unions or their members.

Labour banking, it is stated, was never the official policy of the American Federation of Labour, and the pioneers of the movement were the two non-affiliated unions, the Brotherhood of Locomotive Engineers and the Amalgamated Clothing Workers, whose heads, Warren S. Stone and Sidney Hillman, are credited with the success of labour banking in recent years. The history of the movement from 1920 shows that there were numerous promotions of new banking enterprises which proved abortive. "When the movement to start labour banks was at its height in 1923 and 1924, scores of requests for help and advice in organizing local enterprises poured in to the Brotherhood of Locomotive Engineers' offices in Cleveland, State Federations, city centrals, and national unions considered proposals to start banks. In most of the cases more cautious judgment, the lack of funds, or the absence of professional promoters pre-

vented the outcome of another labour bank." The first labour bank in the United States was the Mount Vernon Savings Bank, opened in May, 1920, in the Machinists' Building at Washington, D.C. The new bank, it is pointed out, did not become the focus of the enthusiastic publicity which the Cleveland Engineers' bank was given by its founders in the ensuing months. The fact that the Mount Vernon Savings Bank was sponsored by national officers of the International Association of Machinists rather than by the organization itself also lessened the attention it received as a labour institution.

The spread of the movement in the following year was mainly due to the cause already noted. "The open shop drive which was being carried on throughout the country had enlisted the aid of bankers. This liaison of financial institutions, and more especially those with labour funds on deposit, with the enemies of organized labour was felt acutely by trade union executives wherever it took place. The reaction on their part was that labour must remove its funds from open shop banks. The establishment of labour co-operative banks was the next step proposed."

At December 31, 1928, there were 27 labour banks in existence in the United States, with \$7,537,500 in capital and total resources of \$116,307,256 deposits amounting to \$98,784,369.

The banking movement is described as an attempt to remodel the present financial system, indicating the direction in which labour feels that improvements should be made. The unique features of the system are sketched in a special section, some of these features being as follows:—

Labour banks differ from other banks, first of all, in that they are owned or controlled by trade unions or trade union members. There are variations in both the circumstances and degrees of control, but a distinguishing feature of these banks is that such control exists.

Trade union groups have found it necessary to guard the sale of stock in their banks if they are to maintain control.

Strictly speaking, no labour bank in the United States has been strictly co-operative, since, among other things, none has been organized on the leases of "one man one vote"; however, the lien placed on the size of individual holdings "approaches the co-operative ideal of an even distribution of voting power".

More important than the limitation of the number of shares permitted stockholders, is the limitation of dividends. This policy, and the closely allied policies of restricting the market and price for stock and paying divi-

dends to depositors, are the features of labour banking which most nearly approach co-operative banking.

The policy of paying dividends to savings depositors in addition to their regular interest is in accordance with the co-operative doctrine that the customers of any business should share in its profits.

An important special use of funds by labour banks has been that in small loans. While many labour banks do not make small loans more frequently or on any different basis than other banks in the same localities, several have separate departments to take care of this business and have developed it as a special service of the bank.

The theory that labour banks would refuse to loan to firms because of their labour policy has been practically discarded, but in a few cases labour banks have been able to help employers favourable to labour.

Some banks loan to workers on first mortgage, thus making home building and owning possible for their patrons.

Discussing the extent to which labour banking has effected the purposes with which it set out, the report states that "the extent to which labour banking has protected the trade union movement from the assaults of open shop bankers is not easy to determine on account of the threat involved in the mere existence of a labour bank in a community. But the relative size of most labour banks compared to the other banking institutions in the same community limits greatly the effectiveness of this threat. The decreasing number

of labour banks and the few cities in which they have existed makes their influence all the more restricted. The wide publicity given the movement in its early years, however, afforded it power far in excess of its size in suggesting to old-line bankers the possibilities of counter-attack should open tactics be used against organized labour. The open shop movement of the post-war years will probably not be repeated soon. More subtle methods of opposing trade union organization have been evolved. The swing of the American labour movement toward co-operation with employers is too important a step for anti-union interests to revive such animosity as existed in 1921."

The writer concludes with the following note of warning:—

"Like all movements which pioneer new fields of social endeavour, labour banking has passed through a cycle of growth and decline. After ten years of experience, the elements of success and failure can be sifted and weighed. Labour's entrance into finance early caught the imagination of many students of social problems. The accomplishments of the successful labour banks have warranted the keen interest and enthusiasm they have aroused. As a permanent residual, their continued growth will permit further contributions to democratic banking. But it is the labour movement and its leaders who must consider gravely both the debits and the credits of the experiment. Without the most painstaking examination of the experiences of the past, a revival of the movement of the post-war years would be both dangerous and inexcusable."

## ORGANIZATION IN INDUSTRY, COMMERCE AND THE PROFESSIONS IN CANADA

### Eighth Annual Report of Department of Labour

The Department of Labour has just issued the Eighth Report on Organization in Industry, Commerce and the Professions in Canada, being for the year 1929. The contents indicate that for the purpose of dealing collectively with trade questions, and of co-ordinating their activities in connection with other matters, a large number of associations of manufacturers and other persons engaged in industrial and commercial pursuits have been established in Canada. Many of the associations embrace the whole Dominion in their operations and are very important organizations in the trade and commerce of the country; others are provincial in scope and some are local associations, all being more or less important in their respective spheres. The report also contains particulars concerning associations of those engaged in professional and scientific occupations, concerning which information is frequently sought. The

organizations are divided into the following groups:—

1. Manufacturing.
2. Building and Construction.
3. Mining.
4. Transportation and Communication.
5. Printing and Publishing.
6. Laundering, Cleaning, Repairing.
7. Personal Service and Amusement.
8. General Manufacturers and Employers.
9. Financial.
10. Agriculture.
11. Dairying.
12. Horse, Live Stock, Sheep Breeders, etc.
13. Wholesale Merchants.
14. Retail Merchants.
15. Real Estate Dealers.
16. Professional.
17. Technical and Scientific.
18. Insurance.
19. Funeral Service.

In the first eight divisions, the report states, there are 397 main and branch associations, with a combined membership of 53,296, made up of persons or firms who are largely connected with industries in which the employment of labour is essential, and in some of which agreements covering conditions of employment are negotiated between the employers and the corresponding organizations of workpeople. In several of the remaining eleven groups into which the associations are divided the employment of help is necessary, but with the exception of the retail merchants' group, there is no corresponding body

of organized labour with which agreements may be made.

While in the main the associations whose names appear in the report are purely Canadian, a number are identified with organizations whose headquarters are in the United States. The names of associations printed in the report number 727 main organizations and 780 branch associations, making in all 1,507 associations, which is 100 more than the number recorded in 1928. The total combined membership of the organizations whose names appear in the report is 964,006, which in some cases apply to companies, but in the main represent individuals.

### FEDERAL GRANTS FOR TECHNICAL EDUCATION

IT will be recalled that at the 1929 session of parliament the Technical Education Act was extended for a period of five years in order that all provinces which had not been able to earn their entire appropriation during the ten years contemplated by the statute might have a further opportunity of doing so. Ontario was the only province which had earned its appropriation at the end of the ten year period (LABOUR GAZETTE, March, 1929, page 266).

During the present fiscal year the province of Alberta has earned and received the balance of its appropriation, namely, \$21,779.82.

The following table indicates the amounts of money still available for distribution to the provinces under the provisions of the Technical Education Act and Amendments.

Prince Edward Island. . . . .	\$ 115,922 46
Nova Scotia. . . . .	355,669 73
New Brunswick. . . . .	86,377 61
Quebec. . . . .	125,302 35
Manitoba. . . . .	504,749 05
Saskatchewan . . . . .	686,193 29
British Columbia . . . . .	12,797 48
	\$1,887,011 97

### THE MINING INDUSTRY IN QUEBEC IN 1928

#### Annual Report of the Bureau of Mines

THE annual report of the Bureau of Mines of the Department of Highways and Mines of the province of Quebec on mining operations during the calendar year 1928, states that the upward trend of the curve of Quebec mineral production, which has been continuous for several years past, was notably accentuated by the 1928 figures, and that the year ending December 31, 1928, saw unprecedented activity and progress in mining in Canada and particularly in the Quebec mineral industry.

The total value of the production of mines and quarries reached the new record of \$37,325,287, being an increase of \$8,201,177, or 28 per cent, as compared with the peak of 1927 when the value amounted to \$29,124,110. Non-metallic minerals, excluding building materials, accounted for production valued at \$12,058,974 or 32.4 per cent of the total, with asbestos forming by far the largest item in

this group. In fact, asbestos, as in past years, is again the leader in production for 1928. (A noteworthy feature regarding the production of asbestos is the fact that the province of Quebec contributes between 70 and 75 per cent to the tonnage of the world's output of this mineral). Other minerals which contributed to the list of non-metallics are feldspar, graphite, magnesite, mica, phosphate, quartz and soapstone. With the exception of mica and soapstone, which declined appreciably, all these show increases as compared with the previous year 1927.

Metallics indicated a production value of \$8,127,132, or 21.8 per cent of the total. This represents a phenomenal increase of nearly 237 per cent as the total value of metallics in 1927 was \$2,412,268. This increase is almost wholly attributable to the output of the new smelter at Noranda, treating the ores of western Quebec.

Building materials—stone, brick lime, cement and sand—showed a production value of \$17,139,161, or 45.8 per cent of the total. This also was a record figure, being an increase of 11 per cent over 1927.

During the fiscal year 1927-28, a total of 4,090 miners' certificates were issued as against 3,799 in 1926-27. This miner's certificate is the permit which every person must possess, before prospecting in the province and staking mining claims therein. Also during the same fiscal year 13,707 claims have been staked in the province, while 12,686 were registered in the previous year. Mining licences to the number of 2,290 were issued or renewed in 1927-28, the number in 1926-27 being 1,467.

The total revenue for the year 1927-28 derived from miners' certificates, mining licences, mining concessions, tax on profit of mines, transfer of titles, etc. was \$522,692, as compared with \$427,045 in 1926-27.

### Employment and Wages

A chapter of the report deals with employment, wages and accidents in the mines. It is pointed out that the seasonal character of some of the work and the unavoidable part time employment require the bringing of total figures, as compiled, to a common denominator, in order to have a uniform basis of comparison from year to year. For this purpose the Quebec Bureau of Mines has adopted the practice of reducing the total number of workmen employed in the industry, mostly on part time, to a basis of a full year of 300 working days. On this basis, the total of 15,649 men employed during 1928 (which appears in the table accompanying this article) is reduced to 10,369 to conform to the 300-day common denominator. The figures for the preceding year are a maximum total of 15,951 and 9,490 on a 300-day basis. Employees in the sand group, totalling 4,780, formed the greatest maximum payroll of any other group, although when calculated on a 300-day basis this total was reduced to 960. Second, in maximum numbers employed were those engaged in asbestos mining, with a total of 3,066, the number calculated on a 300-day basis being 2,943. The copper and pyrite group was third with respective totals of 1,506 and 1,344 employed.

As regards wages, the total paid out in the two main groups—mines and quarries—amounted to \$12,417,768. This is an increase of 9 per cent over the amount paid the year before. Of this total the miners received \$6,754,177 and the quarrymen \$5,653,591, which

figures compare respectively with \$6,498,259 and \$4,919,754 for 1927. The average wage earned by a 300-day workman during 1928 was \$1,197 as compared with \$1,203 the year previous.

### Accidents

There were 24 fatalities during the year, of which 11 were attributable to mines and 13 to quarries. Non-fatal accidents totalled 416, of which 381 were charged to mines and 35 to quarries. The average fatality in this industry for the year is 2.29 per 1,000 men-year. This index number compares with 2.38, 1.83, 2.42, 2.29, and 2.63 for 1923, 1924, 1925, 1926, and 1927 respectively. In the mines proper the proportion of fatal accidents is 2.07 and in the quarries 2.56, as compared with 4.3 and 0.86 for the year 1927.

The report contains tables showing the causes of accidents, these being designed to help operators, superintendents and foremen in the work of accident prevention. Falls of rock accounted for 40 per cent of the fatal accidents in mines, and explosives were responsible for 72.7 per cent of fatalities in quarries—one premature blast having killed 5 men. Among the causes of non-fatal accidents attention is directed to the large number attributed to cable-derricks and haulings.

The report states that "safety first" propaganda is carried on in some mines and quarries and is doing considerable good, special mention being made of the work of the safety organizations of the Canada Cement Company and the Canadian Johns-Manville Company, Limited.

A special chapter details the progress in the development of the mineral deposits of western Quebec in 1928 by townships. A warning is issued to the public in the matter of speculation in what was termed "mining frauds".

The increasingly important part played by aviation in the field of mineral exploration is outlined. A review of mining legislation and amendments to the Quebec Mining Act during the last session of the Legislature is given.

The accompanying table shows the quantities and value of the minerals produced by classes, together with the number of employees and wages. It should be noted that the term "production" is employed as meaning "quantity sold, shipped or used" and does not necessarily mean "output". Products remaining on hand at the end of the year are not included. The ton used is the "short" ton of 2,000 pounds.

## STATISTICS OF MINING INDUSTRY IN QUEBEC IN 1928

Substances	Number of Workmen	Wages	Quantities	Value in 1928	Value in 1927
		\$		\$	\$
Asbestos.....	3,066	3,617,574	273,033	11,238,361	10,021,013

## NEW BRUNSWICK CHILD WELFARE SURVEY

A REPORT has been published showing the results of the New Brunswick Child Welfare Survey carried on during recent months by the Central Welfare Council of the City of Saint John with the support of the Provincial Department of Public Health and with the active co-operation of the Canadian Council of Child Welfare.

The survey staff found that backward social conditions existed in the province owing partly to the scattered and diversified character of the population, and also to the antiquated laws governing family and community welfare. It appeared that throughout the entire province of New Brunswick, the need of more adequate protection of children exposed to serious physical and moral neglect is widespread and urgent. In nine weeks of field investigation, for the greater part of which only one worker was in the field, 312 cases, involving 1,007 children seriously in need of care and protection, were recorded. At the date of recording the returns there were 885

children in the custody of different children's agencies or institutions in New Brunswick. There were sheltered in six municipal homes or almshouses, at the time of the survey, 85 young children varying in age from a few weeks to sixteen years.

The investigators declare that "the child protection services existing within the 28,000 square miles of the Province of New Brunswick are utterly and pitifully inadequate. The province of New Brunswick," it is stated, "is the only province in Canada without a provincial official, charged with general supervision over child protection services and responsibilities arising out of Provincial legislation."

The following recommendations are made in the report:—

1. There should be appointed in one of the Departments of the Provincial Government, preferably in the Department of the Attorney General or the Minister of Health, a thor-

oughly competent official to be known as the Superintendent of Child Protection.

2. That this official should be definitely entrusted with the responsibility of establishing Children's Aid Societies throughout the province.

3. That in the formation of these societies, an effort should be made to obtain their establishment on a county basis, with a full-time officer serving each county, or such counties as it might be found possible to group under one agent.

4. That in each county Children's Committees should be formed in all the smaller centres to work in co-operation with, and under the direction of, the Children's Aid Society.

5. That shelter facilities should be established in a central location for each society and that supervised private boarding homes should be utilized to supplement this service when and where necessary.

#### Mothers' Allowances

In addition to numerous recommendations relating to almshouses, child welfare in general, adoption, poor relief and other matters, the survey makes the following suggestions in regard to mothers' allowances:—

1. That the establishment and development of child protection and family welfare work, on a provincial scale, are practically essential as a preliminary, and to provide the personnel for any successful inauguration and operation of a system of mothers' allowances for the entire province of New Brunswick.

2. That, therefore, immediate and energetic effort towards the establishment and develop-

ment, under provincial direction, of child care and protection services, being a necessary prelude to any provincial scheme of mothers' allowances which might ultimately be developed, all those interested in the latter should devote their sympathy and support to the creation of this first essential service.

3. That, of equal importance in relation to the subsequent possibility of any mothers' allowances system, is the energetic development of family welfare work in Saint John, Moncton and Fredericton, and in many of the counties in which such work could be satisfactorily related to child protection services on a county basis.

4. That, both the poor relief and settlement legislation of this province would require careful analysis and amendment, preliminary to the inauguration of any system of mothers' allowances.

5. That, were child protection services established on a province-wide basis, and such provision made for local and county administration that family welfare and child protection services could be carried on in co-operation, it would be quite possible by the sympathetic support of the County Councils, and the Commissioners and Overseers of the Poor, to provide for the assistance in their own homes, out of funds levied for "outdoor poor relief" and under supervision, of those mothers deemed capable of caring for their own children, in their own families; and that this adaptation of local poor relief funds to demonstrate the principle of mothers' allowances could be made without change in present legislation.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### International Association of Industrial Accident Boards

The sixteenth annual meeting of the International Association of Industrial Accident Boards and Commissions was held during October at Buffalo, New York, under the general supervision of Miss Frances Perkins, the Industrial Commissioner of New York state. Among the delegates from Canada were Mr. F. W. Armstrong, vice-chairman of the Workmen's Compensation Board of Nova Scotia; and Mr. R. B. Morley, general manager of the Industrial Accident Prevention Associations of Ontario. Mr. Armstrong gave an address on "problems of exclusive state fund jurisdictions." Mr.

Morley presided over the accident prevention session, and outlined the safety work being carried on by industry in Ontario. He stated that Section 114 of the Workmen's Compensation Act authorized the industries to set up accident prevention associations, the Compensation Board to pay the cost of operating such associations. This provision, he pointed out, is not contained in any of the compensation acts in the United States, but Nova Scotia and New Brunswick have similar clauses in their Acts. Under this section nearly 9,000 plants are organized in Ontario for safety work, and the industries are spending over one hundred thousand dollars annually through the accident prevention associations. Mr. Morley pointed out that an increasing

number of plants in Ontario are operating for long periods without lost time accidents, claiming that the interest of the chief executives of some of the largest industries was responsible for this condition. Industrialists were interested, he said, because they realize that accident prevention is fundamentally sound from either the humanitarian or the economic viewpoint.

"Compensation in Ontario," Mr. Morley said, "is most generous, and injured workers are given unlimited medical aid and hospital attendance, are paid two-thirds of their average wages for lost time and are awarded pensions for life for serious accidents. Yet, in spite of this, costs have not been a burden on industry because the Ontario Act has been well administered and accident prevention work encouraged." He went on to deal with the question of the efficient operation of factories and the relationship of safety and efficiency, saying that "accidents are the result of underlying inefficiency." He extended an invitation to the meeting to hold the 1930 convention in Canada.

Dr. Walter O. Stack, president, Industrial Accident Board, Wilmington, Delaware, was elected president for the coming year. Mr. Parke P. Deans, commissioner, Industrial Commission, Richmond, Virginia, as vice-president; and Dr. Ethelbert Stewart, United States Commissioner of Labour Statistics, as secretary-treasurer. The only Canadian elected on the Executive Committee was Mr. Robert Taschereau of the Quebec Workmen's Compensation Board.

### Rural Hospitals in Saskatchewan

A paper on "Rural Hospitals or Maternities in Canada," based on information obtained from the Saskatchewan health authorities, was read by Mrs. J. T. Dillon, of the West Virginia Department of Health, at a maternity convention in the latter State.

"Because it is difficult to persuade doctors to remain in the rural areas of Saskatchewan and because the population of that province is 75 to 80 per cent rural, the idea was conceived that one way to help keep a doctor in a rural district, would be to make available a small hospital where he could attend his maternity and emergency cases especially. Consequently the union hospital act was passed eight years ago by the legislative assembly of Saskatchewan providing for the formation of union hospital districts.

"These union hospital districts may be formed by either of two methods: (1) Two or more contiguous rural municipalities may co-

operate in forming a hospital district. (These divisions are about 18 miles square.) The size of the hospital is estimated at one bed for every 300 of population. Each hospital must provide one-tenth of its accommodation for maternity cases and one-tenth for the tuberculosis. The present cost of building and equipping a frame hospital in Saskatchewan, including suitable nurses' home and small isolation building, runs about \$2,500 per hospital bed. The capital cost, therefore, of a 12-bed hospital would be \$30,000. If 15-year bonds are issued for this amount at 7 per cent, the amount of principal and interest to be raised annually for 15 years would be \$3,300.

There are 16 union hospitals in the province. In 1926, 26.3 per cent of the maternity work in all hospitals was carried on in union hospitals, although they comprised only 13.8 per cent of the total number of hospital beds in the province. Maternity work constitutes 14.9 per cent of the work in union hospitals.

"The Red Cross Outpost Service, or nursing home, was organized about eight years ago by the Canadian Red Cross Society to meet the need for nursing care in new districts opening up to immigration into which families were going in large numbers for new homesteads, and were far removed from railway lines, entirely without nurses, and in some cases without resident physicians. According to this plan the community furnishes the building and the Red Cross equips it. For the first few months the Red Cross carries all financial responsibility, after which, according to an agreement made at beginning of the project, the community refunds to the Red Cross 50 per cent of the net operating cost for the first year, and 75 per cent for the second and third years. Patients pay \$3 per day if able to do so, the Red Cross being responsible for the collection of all accounts and the payment of all bills. Those unable to pay are cared for free of charge. During 1927 the Saskatchewan division of the Red Cross Society operated 12 outposts at a total expenditure of \$47,000 and received reimbursement to the amount of \$29,000. The society figures that a net cost of \$18,000 is not very great for care of 1,366 patients and provision for the safe birth of 354 infants. It is the policy of the Red Cross to make each outpost hospital a community centre for health education, the nurse in charge conducting classes in home hygiene and care of the sick, organizing a child-health conference, and sometimes arranging for a course of lectures by local physicians and dentists, in addition to using her opportunity for individual instruction of the patients.

### Continued Increase in Accidents

In the course of an address at the recent convention of the Association of Governmental Officials in Industry of the United States and Canada, Mr. L. A. De Blois, director of the safety engineering division of the National Bureau of Casualty and Surety Underwriters, advocated uniform State regulations as the "outstanding objective" in work to reduce the number of industrial accidents. He showed that the divergence in the existing regulations is very great. A comparison for example of the regulations adopted by thirteen American States for the protection of workers from contact with toothed gearing showed a complete lack of uniformity in defining the coverage, in the type of protection required, and in the manner of installation of the protection. The remedy for the situation, he suggested, lies in the co-operation of State Labour officials, the safety organizations, the insurance interests, and trade associations concerned with the manufacture of machines and machinery.

"Accidental industrial deaths," he said, "are not decreasing. What we have done may have checked a sharper rise in the curve, but I believe that you will agree with me that a civilized people cannot contemplate with equanimity the killing of 24,000 persons a year. In the last decade accidents in the United States have abruptly terminated 830,000 lives, and of this slaughter industry is responsible for at least one quarter. The time has certainly come for more concerted, positive, and constructive action."

### Progress in Prevention of Industrial Disease

Sir Thomas Legge, formerly Chief Medical Inspector of Factories of Great Britain, speaking at a recent convention of the Industrial Welfare Society at Oxford, said that the amazing progress in fighting industrial disease made during the past 30 years was due, in the first place, to better lighting, and, in the second, to locally applied exhaust ventilation. Lead Poisoning—the main industrial poisoning today—was due to the inhalation of dust and fumes and not to dirty hands. Cases of white lead poisoning in factories had fallen from 358 in 1900 to 12 in 1927. That was not due to Home Office regulations, but to the discovery by the industry itself of a means of preventing poisoning by abolishing the dust.

### Deaths From Lead Poisoning in the United States and Canada

In continuation of an earlier review of the lead poisoning situation in the United States and certain other countries, the United States Bureau of Labour Statistics has published Bulletin No. 488, giving statistical data regarding deaths due to lead poisoning, in the period 1925 to 1927. In a previous Bulletin (No. 426) reviewed in the LABOUR GAZETTE, April, 1927, pages 415-416, the Bureau gave the results of its first survey in this field. The latest bulletin brings the information down to the end of 1927.

It is stated that the new statistics reflect a further decline in lead poisoning as measured by the death rate, the actual number of deaths in the United States having been respectively 142 in 1925, 144 in 1926, and 135 in 1927. These deaths, it is pointed out, are only for the United States registration area, which represents 90 per cent of the total American population. It is very doubtful, the report states, if in the remainder of the population not represented by the registration area the number of deaths attained to measurable proportions. In any event, it is considered exceedingly doubtful if the total number of deaths for the whole country would reach, and it certainly would not exceed, 150 per annum. Of the mortality from lead poisoning in the United States, approximately 50 per cent is among painters. The average age at death for all males was 51.5 years; for painters, 52.9 years; and for all occupations, 51.5 years. In the few cases of women and children the lead poisoning was attributed to non-industrial causes.

Included in the review are statistics for Canada of deaths from lead poisoning for the years 1921 to 1926. The tabulation indicates that in 1926 there were in the Dominion (exclusive of the province of Quebec) 6 deaths from lead poisoning. Of this total, 3 were in Ontario. On a population basis, the ratio per million for Canada, excluding Québec was .9 as compared with 1.2 for England and Wales, and .6 for South Africa. Statistics for other countries are also given but not on a basis comparable with Canada.

The deaths of adult males from lead poisoning in the United States registration area from 1925 to 1927 were distributed among the various lead-using occupations as follows:—

OCCUPATIONAL DISTRIBUTION OF DEATHS  
FROM LEAD POISONING, UNITED STATES  
REGISTRATION AREA, 1925 TO 1927

Occupation	Number of deaths
Painters.....	216
Labourers.....	35
Metal workers.....	13
Lead workers.....	22
Farmers.....	13
Commercial.....	9
Printers.....	12
Paint manufacturing.....	7
Miners.....	6
Electric storage batteries.....	5
Carpenters.....	6
Glass workers.....	3
Plumbers.....	6
Potters.....	1
Miscellaneous.....	26
Unknown and retired.....	18
Total.....	398

### Elevator Regulations in Alberta

Regulations have been issued in Alberta under the provincial Factories Act of 1926, with respect to the construction and use of elevators and hoists in all factories, shops and office buildings in the province. The new rules became effective on their publication in the *Alberta Gazette*, October 31, 1929 (the publication of earlier regulations was noted in the *LABOUR GAZETTE*, June, 1926, page 533). In addition to general rules governing construction, automatic catching devices, and brakes etc., there are special regulations relating to lighting; hatchways, bumpers; pent-houses; guide rails; cables; cable fastenings; standards of cable inspection; slack cable device; hand rope lock; hand power elevators; maintenance of elevators; hand rope control; passenger elevators; freight elevators; passenger elevator gates; and freight elevator landing gates.

### National Safety Council of Australia

The first annual report of the National Safety Council of Australia, covering nine months of actual safety work, shows the great activity of this young body. About 50,000 copies of Safety Codes and other leaflets were distributed and a series of posters issued. The Council further arranged for a series of safety slogans to be printed on the match-box labels of a large match-manufacturing company. This firm distributes throughout Australia more than 10½ million boxes every month. A great number of lectures on accident prevention were given during the year covered by the report; thirty-four of these lectures were broadcast by wireless.

One of the most important activities of the Council was the organization of Junior Safety Councils, for the purpose of developing a safety sense among the children and getting them personally interested in safety. Twenty-five schools were visited and eighteen Junior Councils actually formed.

Since November, 1928, the Council has issued its own official journal, bearing the title *The Safety News*. This periodical is issued monthly and covers all branches of the safety movement; in each number some aspects of safety, on the road, at work and in the home, as well as questions concerning first aid, fire protection, etc., are dealt with in interesting articles.

### Health Hazard of Exposure to Silica Dust in the Granite Industry

A few years ago, the United States Public Health Service began a series of intensive studies on the health of workers in dusty trades. The first study was reported in 1928, and dealt with the health of workers in a cement plant. The report on the second study, dealing with the health of workers exposed to silica dust in the granite-cutting industry (Public Health Bulletin No. 187) has recently been published.

This report brings out clearly the extent of the hazard under such conditions as existed in the plants studied. Of particular importance is the fact that it was possible by differentiating occupations on the basis of the amount of dust exposure, to determine within broad limits how much dust of the composition studied can be tolerated by workers without serious deleterious effects. The conclusion was reached that a maximum of dust exposure falling somewhere between 10 and 20 million particles per cubic foot of air is a desirable limit for dust containing about 35 per cent free silica in the form of quartz. It was also concluded, on the basis of a study made in other plants having local exhaust ventilation systems, that this limit could be reached by the use of economically practicable ventilating devices of this character. The recommendation was made that occupational processes in which little dust is produced be segregated in separate rooms of buildings.

It should be pointed out that the limit established was not found to prevent the occurrence of silicosis. It was found, however, that there seemed to be no particular liability to pulmonary tuberculosis where the concentration of dust was within this limit.

The study was of such a character as to present a rather definite picture of what happens to men working for many years under a dust

hazard of the extent described. The salient points may be summarized as follows:

(a) the long period of service before the liability to tuberculosis becomes manifest (generally 20 years or more).

(b) The sharp correlation between length of exposure to the dust and the prevalence of tuberculosis and also the death rate from this disease.

(c) The close relation between the extent of dust exposure and the health of the men.

(d) The universal occurrence of silicosis among the workers.

(e) The large proportion of workers finally succumbing to tuberculosis.

(f) The almost invariably fatal form of the disease within a short time after the onset.

(g) The different character of silicosis as manifested by X-rays compared with that shown where there is exposure to a dust with a much higher content of free silica.

(h) The location of the tuberculosis lesion, usually basal, where the disease complicates silicosis.

(i) The absence of deaths from silicosis per se, tuberculosis apparently always intervening.

(j) the failure of workers to recover from their condition upon going into non-dusty trades.

(k) The high incidence of sickness of a severe nature from causes other than tuberculosis.

(l) The rising sickness and mortality rates from tuberculosis due to longer use of the hand-pneumatic tool.

(m) The high death rates at the present time from tuberculosis, compared with normal industrial experience.

This investigation resembled in its method the studies which are being conducted in other dusty trades and included a record of the sickness and mortality occurring among granite cutters for a period of more than two years, complete physical examinations with special reference to the development of tuberculosis, X-rays, sputum analyses, and autopsies, together with a careful analysis of the atmospheric dustiness under varying conditions. A study of mortality among such workers based on death certificates was also made.

The bulletin is of particular interest because of the large number of excellent X-rays, micro-photographs of the lungs, detailed histories of individual cases, as well as the extensive clinical discussions and the detailed analyses of statistical findings.

### Ultra-Violet Rays for Underground Workers

The first attempt in the United States to give underground workers the benefit of treatment by ultra-violet rays or artificial sunshine has been made by the Bunker Hill and Sullivan Mining and Concentrating Company, who have constructed a solarium close to the house where the men change their clothes. This house is equipped with six quartz lamps arranged to throw their rays toward a locus established by a travelling platform on which the patients recline. Suitable hoods and screens prevent other dispersion of the rays. The rate of travel is such as to give the whole body one minute's exposure, coloured goggles being worn to protect the eyes. Miners use the solarium three times a week, and 300 men can be served per hour. The minute's exposure is sufficient to cause a pink reaction to the skin. The arrangement is such that no time is lost in handling the men coming off shift. Similar equipment has been installed in many sanatoriums, hospitals, and also in athletic clubs.

### Silicosis among Sandstone Workers

A report on the occurrence of silicosis among sandstone workers in Great Britain, by Dr. Sutherland and Dr. Bryson, members of the medical board appointed under the "Refractories Industries (silicosis) Scheme," has been published. Silicosis was found to arise in the occupations of mason, rock-getter, quarryman, planer, and wallstone dresser. The presence of the disease was certified by radiological examination in these occupations. From the clinical examination of workers and from the similarity of the occupation to one or other of the above, it was concluded that the carver, builder, turner, and driller are exposed to a risk of silicosis. In the case of the remaining occupations no definite evidence was obtained, but this does not imply that they are all free from the risk. In the occupations where silicosis was demonstrated by radiographic examination, the disease appeared to become more common after 40 years of age and after 20 years in the stone industry. The majority of these cases were in the first stage. The later stages were represented by fewer cases, owing, no doubt, to incapacity for work.

With regard to the varieties of stone met with during the investigation, cases of silicosis had undoubtedly been caused in some instances by one particular gritstone. On the other hand, no evidence could be gathered to show that there was any gritstone that could be said to be innocuous to the workman.

### Inflammability of Coal Dusts

The relative inflammability and explosibility of coal dusts is the subject of Paper No. 48, published by the Safety in Mines Research Board of the Mines Department of Great Britain. Experiments are described in which explosions were produced with a number of different coal dusts under standard conditions with a view to determine their relative "inflammability" as measured by the mean speeds of the flames over a given distance, and their relative "explosibility" as measured by the maximum pressure developed. It is shown that the order of inflammability and the order of explosibility as thus determined are approximately the same. These orders are also in close agreement with the order of inflammability as determined for the same coals from the proportions of incombustible dust required to suppress inflammation.

### Miners' Gas Masks

The Bureau of Mines of the United States Department of Commerce has published an illustrated pamphlet showing the use of a "type N" miner's gas mask. "The miners' gas mask was developed at the time of and since the World War, and in comparatively recent years it has had an important place in mine rescue and recovery work during fires and after explosions. The mask as used in mines is

principally a protection against carbon monoxide, the most dangerous poisonous gas from fires, and against other gases, such as sulphur gases, which may arise from fires. As it protects against all classes of poisonous gases in air and against smoke, it is designated according to Bureau of Mines classification as "type N." The gas mask aids the work conducted with the oxygen breathing apparatus, but it can never replace the oxygen breathing apparatus, because the gas mask is only a filter capable of protecting against limited amounts up to 2 or 3 per cent of poisonous gases in air otherwise good to breathe.

Everybody must breathe the oxygen to live. Oxygen constitutes nearly 21 volumes in every 100 volumes of air, or 21 per cent; the remaining 79 per cent of air is mostly nitrogen gas. When fires are burning or after mine explosions, the oxygen content of the air in mines may be reduced from the normal 21 per cent to such small quantities that the air will no longer support a man's life. This lack of oxygen may not occur throughout the mine, but there may be a deficiency of oxygen in sections, especially in return airways and in openings in the neighbourhood of fire or regions traversed by mine explosions. Fires confined in unventilated mine areas always deplete the oxygen to some extent, and as the gas mask does not supply oxygen, it cannot protect against atmospheres too low in oxygen.

### Hart, Shaffner & Marx Essay Contest

In order to arouse an interest in the study of topics relating to commerce and industry, to stimulate those who have a college training to consider the problems of a business career, and to aid in constructive economic thinking, a committee composed of Professor J. Laurence Laughlin, University of Chicago, chairman; Professor J. B. Clark, Columbia University; Professor Edwin F. Gay, Harvard University; Hon. Theodore E. Burton, Washington, and Professor Wesley C. Mitchell, Columbia University, has been enabled, through the generosity of Hart, Shaffner and Marx of Chicago, to offer in 1930, being the 26th year of these contests, prizes for the best studies in the economic field to certain classes of contestants.

Class A includes any residents of the United States or Canada, without restriction; the possession of a degree is not required of any contestant in this class, nor is any age limit set. Class B includes only those who, at the

time the papers are sent in, are undergraduates of any American college. Attention is expressly called to the rule that a competitor is not confined to topics proposed in the announcements of this committee, but any other subject chosen must first be approved by it.

A first prize of one thousand dollars, and a second prize of five hundred dollars are offered to contestants in Class A. A first prize of three hundred dollars, and a second prize of two hundred dollars are offered to contestants in Class B. No prizes will be awarded if, in the judgment of the committee, essays of sufficient merit are not submitted. The committee reserves to itself the right to award the two prizes of \$1,000 and \$500 of Class A to undergraduates in Class B, if the merits of the papers demand it. The winner of a prize shall not receive the amount designated until he has prepared his manuscript for the printer to the satisfaction of the committee.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### 13th Conference

AN account of the 13th International Labour Conference will be published in the next issue of the *LABOUR GAZETTE*. The agenda of this session at which maritime questions were considered, was published in the issue for September, 1929, page 1024, together with the names of the delegates from Canada.

As the result of the 13th Conference, the following subjects are to be placed on the agenda of the next special Maritime session of the Conference, which will be held after the ordinary general session of 1930:—

(1) The regulations of hours of work on board ship.

(2) The protection of seamen in case of sickness, including the treatment of seamen injured on board ship.

(3) The promotion of seamen's welfare in ports.

(4) The establishment of a minimum requirement of professional capacity for captains, chief engineers and navigating and engineer officers in charge of watches.

Resolutions were adopted concerning the composition of non-governmental delegations; conditions of life and labour of Asiatic seamen; conditions of labour of workers employed in air transport; the treatment of seamen employed on foreign vessels in the waters of their own country; hours of work in inland navigation, and the action of Governments with regard to the Maritime Conventions adopted by previous sessions of the Conference.

### Indian Seamen and the Conference

The following are some extracts from an appeal addressed by the Indian Seamen's Union, Calcutta, to the Thirteenth Session of the International Labour Conference, calling its attention to certain long-standing grievances:

(1) *Hours of work.* We are subjected to hours of work on board ship varying from 56 to 84 hours a week, whereas our demand—which has been consistently put forth in the press and on platforms—is for 8 hours a day and 48 hours a week, in accordance with the Convention passed at the Washington Conference.

(2) *Protection in case of sickness.* It is the duty of the Indian Government to take adequate and effective steps for the protection of Indian seamen in case of sickness and for their treatment when injured on board ship. Such sick and injured seamen are invariably landed in the nearest port, and they go without pay for months and months till they reach their home ports. We submit that sick or accident

leave with pay should be given to them, and that a Convention to this effect should be drafted in this Conference. In many cases, Indian seamen injured on board ship are smuggled into other countries by underwriters and interested persons in order to avoid payment of compensation and incidental expenses.

(3) *Welfare in ports.* The Indian seamen, who are mostly illiterate and simple, invariably fall an easy prey to "crimps" and to the allurements in the dock areas of seaport towns. The conditions obtaining in such places not only involve moral dangers to such seamen but are also directly responsible for the alarming prevalence of venereal diseases among maritime workers, and particularly Indian seamen. There are no facilities for innocent pleasures for Indian seamen in any seaport towns, and our appeal is that this Conference should find out ways and means for the prevention and cure of venereal diseases affecting Asiatic seamen in all the principal seaports of the world. The authorities of foreign countries have done practically nothing to protect the interest of Indian seamen in seaports, especially in matters of health and recreation.

### Conference on Coal Mining Industry

The Governing body of the International Labour Office at its 46th Session, held at Geneva, October 4 to 8, 1929, had before it, along with other business, a resolution of the Assembly of the League of Nations by which the Governments, employers and workers of the principal coal-producing countries of Europe were to be invited to attend a preparatory technical conference in order to advise it as to what questions relating to conditions of employment in coal mines might best be included in the agenda of the International Labour Conference of 1930, with a view to arriving at practical international agreement. After a discussion lasting over two days a proposal accepting the suggestion put forward by the Assembly was adopted.

Accordingly the following countries will be invited to take part in a preparatory technical conference in January of next year:—Austria, Belgium, Czechoslovakia, France, Germany, Great Britain, the Netherlands, Poland and Spain. The delegations will include representatives of the governments, the mine-owners, and the miners, and the Conference will consider what practical proposals relating to hours, wages and conditions of work in coal mines can be placed, if the Governing Body so decides, before the fourteenth Session of the International Labour Conference in 1930.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN SEPTEMBER, 1929

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in September was 7,027, their employees numbering 1,089,583 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for Sep-

tember was 1,762, having an aggregate membership of 206,617 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

### (1) Employment Situation at the Beginning of October, 1929, as Reported by Employers

There was a further decline in employment at the beginning of October, according to statements received by the Dominion Bureau of Statistics from 7,027 employers, whose staffs aggregated 1,089,583 persons, as compared with 1,098,653 in the preceding month. Activity on the same date last year had also slackened but the situation then was not so favourable as on the date under review, when the index (based upon the average for the calendar year 1926 as 100) stood at 125.6, compared with 126.8 on September 1, 1929, and with 118.8, 110.3, 106.5, 99.5, 95.0, 100.7, 95.8 and 91.3 on October 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Thus the index on October 1, 1929, was for this time of year the highest on record.

The most pronounced curtailment was in construction, where it was seasonal in character; activity in this group, however, continued much greater than in the same period in any other year since the record was commenced. Transportation released employees, chiefly as a result of the grain congestion, and the personnel of summer hotels was also reduced, as is usual at this season. On the other hand, there was an increase in manufacturing, contrasting with the decline recorded on October 1, 1928, and logging, mining and trade also showed improvement, that in logging being more extensive than in the early autumn of any other year for which statistics are available.

### Employment by Provinces

Ontario firms afforded heightened employment, but elsewhere there were contractions, of which the most marked was in the Prairie provinces.

*Maritime Provinces.*—Further and larger losses were indicated in the Maritime provinces, where 538 employers reduced their payrolls from 85,929 persons on September 1, to 83,364 at the beginning of October. This curtailment involved many more workers than that recorded on the same date of last year, but was somewhat smaller than on October 1, 1927, while the index continued higher than in any month of the years, 1921-1928. Construction, transportation and manufactures reported the bulk of the decline, while the tendency was favourable in logging and trade.

*Quebec.*—There was a very slight decrease in Quebec, compared with that of over one per cent noted on October 1, 1928, when employment was not so brisk. Statistics were compiled from 1,600 firms with 302,678 workers, compared with 302,758 at the beginning of September. Transportation and construction registered most of the reduction, while manufacturing, logging, mining and trade afforded more employment.

*Ontario.*—Improvement was indicated in Ontario, according to 3,165 employers of 454,332 persons, or 6,161 more than in the preceding month. Additions to staffs had also been noted on October 1 of a year ago, but employment then was in smaller volume.

Manufacturing, particularly of food and textile products, logging and trade showed considerable advances, but there were losses in construction and transportation.

*Prairie Provinces.*—As on the same date in 1927 and 1928, there was a falling-off in employment in the Prairie provinces at the beginning of October, chiefly in construction, but also in manufacturing, trade and services. On the other hand, transportation and mining were more active. Returns were received from 995 firms with an aggregate working force of 157,228 employees, compared with 167,224 on September 1. The index was about eight points higher than on October 1 of last year.

**Employment by Cities**

The trend of employment was upward in Montreal, Toronto, and Ottawa, but downward in Quebec, Hamilton, Windsor and the Adjacent Border Cities, Winnipeg and Vancouver.

*Montreal.*—There was an increase in employment in Montreal, where the 848 co-operating firms employed 148,082 persons, or 662 more than on September 1. Manufacturing and trade reported the bulk of the gain, while construction and transportation were slacker. Curtailment had been noted on the corresponding date last year, when the situation generally was not so good.

**EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS**

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

*British Columbia.*—Employment in British Columbia showed further curtailment, mainly in construction, manufacturing, transportation and services, while mining, logging and trade reported heightened activity. Data were tabulated from 729 employers, whose payrolls declined from 94,571 persons on September 1 to 91,981 at the beginning of October. Losses on a rather smaller scale were registered on October 1, 1928, but the index then was several points lower.

Table I gives index numbers by economic areas.

*Quebec.*—Employment in Quebec showed a decrease at the beginning of October, 441 workers being laid off by the 118 employers whose returns were compiled, and who had 13,309 on their paylists on the date under review. Practically all the loss took place in construction, services and transportation, while manufacturing showed improvement. The index was practically the same at the beginning of October, 1928.

*Toronto.*—Further expansion was indicated in Toronto, according to 924 firms employing

131,086 persons, compared with 129,543 in their last report. Manufacturing, (particularly of textiles and electrical appliances) was much busier, as were trade and building construction. The additions to staffs reported on October 1 of a year ago were on a rather larger scale, but conditions then were not so favourable.

*Ottawa.*—Trade and manufacturing were more active, while other groups showed only small changes. The forces of the 142 employers furnishing data aggregated 13,772 workers, or 155 more than on September 1.

Employment was better than on the same date in 1928, when declines had been noted.

*Hamilton.*—Curtailment was registered in manufacturing, while construction was somewhat brisker. Statements were tabulated from 221 firms with 39,232 employees, compared with 39,475 in the preceding month. The index number at the beginning of October of last year was many points lower; the trend of employment then was also downward.

*Windsor and Adjacent Border Cities.*—There was a falling-off in the number em-

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS (AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Relative Weight of Employment by Districts as at Oct. 1, 1929.....	100.0	7.7	27.8	41.7	14.4	8.4

ployed in the Border Cities, mainly in automobile plants and construction. One hundred and thirty-one establishments recorded 17,171 employees, as against 17,719 on September 1. Although contractions had also been reported on October 1, 1928, employment was then in greater volume.

*Winnipeg.*—Employment in Winnipeg showed a recession on October 1, when 137 workers were released from the forces of 323 co-operating firms, reducing them to 34,167. Transportation was more active, but there were de-

creases in manufacturing and building. Moderate improvement had been indicated at the beginning of October a year ago, when the index was practically the same as on the date under review.

*Vancouver.*—For the first time since the beginning of February, there was a loss in employment in Vancouver, according to 279 employers with 29,896 persons on their pay-rolls, compared with 30,620 on September 1. Manufacturing, transportation and services reported decreases. A reduction had also

NOTE. The "relative weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by cities as at Oct. 1, 1929.....	13.6	1.2	12.7	1.3	3.6	1.6	3.1	2.7

been recorded on October 1, 1928, when the index stood at 110.6, as compared with 111.7 at the beginning of October of this year.

Index numbers by cities are given in Table II.

### Manufacturing

There was an increase in manufacturing plants, 4,207 of which reported 575,664 operatives, compared with 573,309 in the preceding month. Vegetable food factories showed im-

portant seasonal improvement and there were also large gains in textile, pulp and paper, tobacco, distilled and malt liquor, electrical appliance, electric current and leather plants. Fish-preserving and sawmilling establishments, on the other hand, recorded seasonal losses and there was a falling-off in activity in rubber, building material and iron and steel works. A small reduction had been reported in this group on October 1, 1928, when employment was not so active.

Note; The "relative weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE CALENDAR YEAR 1926=100)

	All industries	Manufacturing	Logging	Mining	Communication	Transportation	Construction	Services	Trade
Oct. 1. 1921	91.3	88.0	86.8	100.8	90.3	101.2	87.4	87.3	91.7

Relative weight of employment by Industries as at Oct. 1, 1929	100.0	52.8	2.7	5.1	2.8	12.8	14.3	2.2	8.0

*Animal Products—Edible.*—There were continued losses in fish-preserving establishments and in dairies, while meat-packing plants afforded rather more employment. Statistics were received from 217 manufacturers, employing 19,309 persons, as compared with 19,971 in the preceding month. This contraction, which was most pronounced in British Col-

umbia, was on a smaller scale than that registered on the corresponding date last year.

*Leather and Products.*—Tanning, shoe and miscellaneous leather product factories reported additions to staffs, continuing the upward movement indicated in the last few months. The 175 employers making returns reported 17,233 workers, or 220 more than on Septem-

<sup>1</sup>The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

ber 1. A slight decline was noted at the beginning of October a year ago, when the index number was very slightly lower than on the date under review.

*Lumber and Products.*—Further reductions in personnel were indicated in the lumber group, in which employment was at practically the same level as on October 1, 1928. The decreases took place almost entirely in rough and dressed lumber mills, while furniture and some other woodworking factories were somewhat busier. A combined working force of 59,555 persons was reported by the 711 co-operating manufacturers, as compared with 61,798 at the beginning of September. Although the largest contractions were in British Columbia, the tendency was downward in all provinces.

*Musical Instruments.*—Additions to staffs on a smaller scale than on October 1 a year ago, were registered in musical instrument plants, in which conditions were not quite so good as during last autumn. Forty-one establishments reported 3,070 employees, as compared with 3,000 in the preceding month. The bulk of the gain was in Ontario.

*Plant Products—Edible.*—Fruit and vegetable canning, chocolate, cocoa and confectionery factories afforded heightened employment, while there was a falling-off in the sugar and syrup division. The staffs of the 372 reporting firms aggregated 38,874 persons, or 3,416 more than in their last report. Employment was better in all provinces except British Columbia, Ontario showing the most pronounced expansion. This gain involved many more workers than that registered on the corresponding date in 1928, when the index was decidedly lower than on October 1, 1929.

*Pulp and Paper Products.*—There was an increase in the staff reported by 527 employers in this group, who had 68,349 workers on pay-roll, as compared with 67,553 at the beginning of September. Activity advanced in pulp and paper mills and in printing and paper goods plants, and the tendency in all provinces was favourable. A decline had been indicated at the beginning of October a year ago, when the index number was lower, as it was in the autumn of all earlier years since the record was commenced in 1920.

*Rubber Products.*—Employment in rubber goods showed a decrease on October 1, 1929, repeating the movement recorded on the same date in 1928, when the level of employment was slightly lower. Data were compiled from 37 firms with 17,395 employees, as against 17,825 in their last report. A large proportion of this curtailment was shown in Ontario.

*Textile Products.*—Garment and personal furnishing, thread, yarn and cloth, hosiery and knitting, and other branches of the textile industry reported increased activity; 585 manufacturers enlarged their payrolls from 80,821 workers at the beginning of September to 82,435 on the date under review. Ontario recorded the bulk of this expansion, but improvement was also shown in the Maritime Provinces and Quebec. Much smaller gains had been noted at the beginning of October last year and the situation then was not quite so favourable.

*Tobacco, Distilled and Malt Liquors.*—There was a large increase in employment in these industries on the date under review, according to the 145 establishments furnishing statistics, which employed 16,476 workers, or 1,034 more than on September 1. Employment continued in larger volume than in the autumn in other years for which data are available. Firms in Quebec registered the gain, while the tendency was downward in Ontario.

*Clay, Glass and Stone Products.*—Moderate seasonal contractions were indicated in building material plants, in which activity was greater than on October 1, 1928. The forces of the 148 co-operating employers declined by 296 persons to 13,867 at the beginning of October. The largest reductions took place in Quebec and the Prairie Provinces.

*Electric Current.*—There was an increase in electric current plants at the beginning of October, when 95 establishments reported 16,799 workers, compared with 16,576 on September 1. The largest gain was in Quebec. Contractions were indicated on the corresponding date last year when the index number was many points lower.

*Electrical Appliances.*—Further additions to staffs were made in electrical apparatus works, 52 of which had 16,109 employees, or 351 more than in their last report. This improvement involved about the same number of workers as that noted on October 1, 1928, when the index number was considerably lower.

*Iron and Steel Products.*—The heating appliance, ship-building, boiler, engine and tank divisions of the iron and steel group registered increases in employment, while there were reductions in the vehicle, agricultural implement and other branches. Statements were received from 676 manufacturers, whose payrolls aggregated 156,277 persons, as compared with 157,883 in the preceding month. Employment declined in Ontario and the Prairie Provinces, but elsewhere there were gains. Rather less marked curtailment had been in-

dicated at the beginning of October last year, when the general situation was not so good as on the date under review.

*Non-Ferrous Metal Products.*—The aluminum, lead, tin, zinc and copper division of this group reported decreases, while the precious metal group was somewhat busier. A combined working force of 20,139 persons was reported by the 106 co-operating employers, who had 20,222 employees at the beginning of September. Most of the reduction took place in Ontario. The situation was much more favourable than in the autumn of earlier years of the record.

### Logging

Statements were tabulated from 212 logging companies, whose staffs were enlarged by 8,651 workers to 29,849 on the date under review. This advance was on a greater scale than in the early autumn of previous years of the record, in most of which the index was lower. Camps in Quebec and Ontario absorbed most of the extra men.

### Mining

*Coal Mining.*—There was a large increase in coal mines, in which employment was in greater volume than on October 1, 1928, when the improvement reported was much less pronounced. Returns were received from 78 operators employing 28,274 persons, as compared with 27,185 in their last report. Gains were noted in both Eastern and Western coal fields, but those in Alberta were most pronounced.

*Metallic Ores.*—Employment in this group on October 1 showed its seventh consecutive increase since the spring; 71 employers reported 17,320 workers, or 296 more than at the beginning of September. Ontario registered the bulk of the improvement, although the tendency was generally favourable. Similar advances had been noted on the corresponding date last year, when the index number was many points lower.

### Communications

For the first time since February, there was a decline in communications, in which 171 companies and branches furnished data showing that they had 30,790 employees, as compared with 30,966 on September 1. The index continued higher than in the autumn of any other year on record.

### Transportation

*Street and Electric Railways and Cartage.*—A minor decrease was indicated in local transportation, 52 persons being released from the forces of the 134 co-operating firms, who re-

ported 26,847 on their pay-rolls. Conditions in this industry were better than on October 1 in 1928, or in any other year since this series was commenced.

*Steam Railways.*—Statistics were tabulated from 106 employers in the steam railway operation group, whose payrolls declined from 88,486 on September 1 to 86,484 at the beginning of October. This reduction was largely due to the delay in the movement of grain. Improvement had been indicated on the same date last year, when the index was rather higher. There were losses on the date under review in all except the Prairie Provinces, where a small advance was reported.

*Shipping and Stevedoring.*—Curtailment in employment was registered in the water transportation group, in which 75 companies employed 18,292 workers. This was a decline of 1,118 compared with their payrolls in the preceding month; all provinces shared in the loss, which as in the case of steam railway operation, was largely a result of the grain congestion. Reductions had also been noted on October 1 last year, and although they were on a smaller scale, the index then was lower than on the date under review.

### Construction and Maintenance

*Building.*—For the first time since the beginning of March, there was a falling-off in employment in building, 1,772 persons being released from the forces of the 682 co-operating contractors. They had 66,161 employees, a number considerably in excess of that reported at the beginning of October a year ago, when the seasonal curtailment indicated was on a smaller scale. In the Maritime Provinces and Ontario there was further improvement while the trend was unfavourable in Quebec and the Western Provinces.

*Highway.*—Work on highways and streets declined, as is customary at this time of year, but the decreases, like the increases which preceded it, involved a larger number of workers than in the early autumn in previous years of the record. Statements were tabulated from 248 employers, whose staffs, standing at 42,887, were smaller by 8,898 persons than on September 1. There were marked contractions in all provinces, those in the Prairies being most pronounced.

*Railway.*—Continued reductions in employment were reported on railway construction, especially in the Prairie Provinces. The forces of the 44 companies and divisional superintendents furnishing returns declined from 54,249 at the beginning of September to 47,168 on the date under review. This shrink-

age was more extensive than that registered on October 1, 1928, when the level of employment was higher.

### Services

The closing of summer hotels largely accounted for a decrease of 950 persons in the staffs of the 223 firms in this group whose returns were received, and who employed 23,531 on October 1. The declines indicated on the same date last year involved a larger number of workers, and the index then was much lower.

### Trade

Trade, especially retail stores, showed a pronounced increase in personnel; 706 estab-

lishments reported 86,554 employees, compared with 85,804 in the preceding month. The situation was better than in the autumn in any other year of the record, which was instituted in 1920.

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of September, 1929

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades or who are idle because of illness are not considered as unemployed, while unions which are involved in industrial disputes are excluded from our tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Little variation from the August level of unemployment among local trade unions featured the September situation, 3.7 per cent of the membership covered by the returns being idle in the latter month compared with 3.5 per cent at the close of August. Reports for September were tabulated from a total of 1,762 labour organizations with 206,617 members, 7,654 of whom were unemployed on the last day of the month. Conditions were somewhat less favourable during September than in the corresponding month last year, when the percentage of unemployed members stood at 2.2. In Nova Scotia and Quebec unions during September the employment tendency was upward from that of the previous month though the improvement represented was nominal only. Of the losses in employment reflected by the remaining provinces those reported from New Brunswick, Ontario, Saskatchewan, Alberta and British Columbia were less than one per cent, while in Manitoba somewhat larger though moderate declines occurred. All provinces participated in the downward movement that employment manifested in comparison with September last

year, Manitoba unions with an increase in idleness of 3.5 per cent showing the most substantial reduction and the remaining provinces contractions in employment ranging from that of Manitoba to .4 per cent in Quebec.

A tabulation is made separately each month of unemployment among trade union members in the largest city in each province with the exception of Prince Edward Island. The percentage of unemployment in Edmonton at the close of September was 8.8, the largest percentage of idleness to be registered by any of the cities in the comparison and showing also the most important employment contraction over the previous month. This recession was due, to a considerable extent, to inactivity among garment workers in that city. Montreal and Vancouver unions with 7.1 per cent and 6.5 per cent of idleness respectively were next in line, though these percentages were indicative of but slight declines over August conditions. Winnipeg and Halifax unions reported moderate reductions in the employment volume during September over the previous month, while the decline indicated by Toronto unions was practically negligible. On the contrary Saint John and Regina unions registered slight employment advances. The volume of work available to union members in all cities showed a falling off when compared with conditions existing in September a year ago, Edmonton as in the previous comparison, reporting the most outstanding change.

The chart which accompanies this article indicates the unemployment trend by months from January, 1923, to date. The curve during September continued in the upward trend of the previous month, though the extension was slight. The level of the curve at the end of

the month was also somewhat above that of September, 1928, indicating a larger unemployment volume during September than in the same month a year ago.

From unions in the manufacturing industries 495 reports were received during September including a membership of 59,213 persons and of these 2,083 were without work on the last day of the month, a percentage of 3.5 compared with 3.9 per cent in August. This slight improvement reported over August was attributable to a considerable degree to better conditions prevailing for textile and iron and steel workers, though expansion, on a smaller scale, was manifest by glass workers, metal polishers, printing tradesmen, papermakers, hat and cap makers and bakers. Garment workers, on the other hand, reported a moderate drop in the volume of work afforded

coalfields, while British Columbia miners reported a fully engaged situation in both months. In comparison with the returns for September of last year when 3.4 per cent of unemployment was recorded activity for Alberta miners showed a substantial increase during the month under review; in Nova Scotia employment was at a somewhat lower level and in British Columbia no miners were reported idle contrasted with a nominal unemployment percentage in September of last year. A number of unions continued to record some short time.

The volume of unemployment in the building trades during September was slightly in excess of that shown in the preceding month though considerably in advance of that indicated during September last year. At the close of September reports from 205 unions

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

and among wood workers employment was somewhat retarded. In comparing with the returns for September, 1928, when the unemployment percentage in the manufacturing industries, as a whole, stood at 2.8 general labourers showed substantial contractions in employment during the month under review and lesser declines in activity were recorded by pulp and paper makers, printing tradesmen, garment workers, hat and cap makers and metal polishers. Cigar makers, wood, textile, iron and steel, and glass workers, however, reported some slight expansion.

The 42 unions of coal miners from which reports were tabulated at the end of September embracing a membership of 15,502 persons showed 2.8 per cent of idleness contrasted with 5.1 per cent in August. The improvement over August was due to heightened activity in both the Nova Scotia and Alberta

of building tradesmen were tabulated comprising a membership of 30,581 persons, 8.6 per cent of whom were without work at the end of the month contrasted with 7.2 per cent of unemployed members in August and 2.9 per cent in September last year. Bricklayers, masons and plasterers, carpenters and joiners, granite and stone cutters, and plumbers and steamfitters all shared in the downward employment trend manifested when compared with August, which was in part offset by the better situation prevailing for bridge and structural iron workers, electrical workers, painters, decorators and paperhangers, tile layers, lathers and roofers and hod carriers and building labourers. The changes throughout, however, were not particularly noteworthy. Apart from bridge and structural iron workers and electrical workers a lower employment level was maintained by all tradesmen during

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Percentage of Unemployment																															
	Fishing	Lumbering and Logging	Mining	Manufacturing Industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing and lithographing	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

September 1929	1																															

September than in the same month of last year, the reductions shown by bricklayers, masons and plasterers, and carpenters and joiners involving the greatest number of workers. Conditions for bridge and structural iron workers were somewhat better than in September a year ago, while among electrical workers the same percentage of idleness was registered in both months of the comparison.

Among transportation workers at the close of September 2.8 per cent of idleness was reported in contrast with 1.9 per cent in August and 1.6 per cent in September a year ago. The percentage for September was based on the reports received from 759 unions with a

combined membership of 73,701 persons. In the navigation division unemployment was in considerable greater volume than in August, while among steam railway employees, whose membership includes about 79 per cent of the total group membership reporting, and among street and electric railway employees, and teamsters and chauffeurs a nominal unemployment increase was noted. In comparison with the returns for September of last year steam railway employees, street and electric railway employees, and teamsters and chauffeurs all reported slight recessions in the employment volume during the month under review, and navigation workers small gains in activity.

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month.	N. S. and Pr. Edward Island.	New Brunswick.	Quebec.	Ontario.	Manitoba.	Saskatchewan.	Alberta.	British Columbia.	Canada.
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4

From long shore men whose reports are tabulated separately each month 12.4 per cent of idleness was registered at the close of September compared with 13.5 per cent in August and with 15.5 per cent in September, 1928. Reports were received for September from 15 associations of these workers with an aggregate membership of 6,436 persons.

Employment for retail clerks eased off slightly during September from the high level maintained in August as shown by the 8 reporting unions combining a membership of 1,293 persons. Of these 2.5 per cent were without work on the last day of the month compared with .1 per cent in August and with .4 per cent in September of last year.

Civic employees reported an unemployment per centage of .9 in September compared with a fully engaged situation in August and with .4 per cent of idleness in September, 1928. The percentage for the month under review was based on the returns tabulated from 72 unions of these workers with 7,271 members.

In the miscellaneous group of trades the change in employment conditions was very slight during September from the previous month, the tendency, however, being favourable. Returns were received from a total of 119 unions at the close of September with a membership aggregate of 6,100 persons and of these 263, or a percentage of 4.3 were idle compared with 4.6 per cent in August. Hotel and restaurant employees, theatre and stage employees and stationary engineers and firemen all reported slight gains in activity during September, while employment for barbers was somewhat retarded. In comparison with the returns for September of last year when 2.9 per cent of unemployment was recorded hotel and restaurant employees, theatre and stage employees, barbers and stationary engineers and firemen all reported moderate reductions in the employment volume during the month under review.

Fishermen with 4 unions reporting 820 members registered 1.2 per cent of idleness in September contrasted with 1.6 per cent in August and with .8 per cent in September last year.

Among lumber workers and loggers moderate improvement was shown during September over the previous month, the 5 unions from which reports were received with 1,004 members indicating 4.7 per cent of unemployment compared with 6.9 per cent in August.

The situation was also better than in September of last year when 6.3 per cent of the members reported were unemployed.

Table II shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1928 inclusive and also the percentage of unemployment by provinces for September of each year from 1919 to 1926 inclusive and for each month from January, 1927, to date. Table I summarizes the returns in the various groups of industries for the same months as in table II.

### (3) Employment Office Reports for September, 1929

The volume of business transacted by the offices of the Employment Service of Canada during the month of September, 1929, showed a decline in the average daily placements from that of the preceding period and also from that of last year, registering a loss of nearly 6 per cent in the former and of 44 per

cent in the latter comparison. The decrease from last year was in farming, mainly due to a heavy decline in the harvest requirements in the Prairie Provinces, though all other groups reported declines, except logging and services, the former showing the greater gain. In comparison with the preceding month, logging again showed a noteworthy gain, followed by increases of minor importance in

manufacturing, mining, services and trade. All other groups showed fewer placements, the heaviest loss being in farming. The accompanying chart shows the trend of employment since January, 1927, as represented by the ratio of vacancies notified and of placements effected for each 100 applica-

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o—o—o—o—o—o

cent in the latter comparison. The decrease from last year was in farming, mainly due to a heavy decline in the harvest requirements in the Prairie Provinces, though all other groups reported declines, except logging and services, the former showing the greater gain. In comparison with the preceding month, logging again showed a noteworthy gain, followed by increases of minor importance in

tions for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen that the curve of vacancies and of applications in relation to placements declined sharply throughout the month and at the close of the period was much lower than the level recorded at the close of the corresponding month last year. The ratio of vacancies to

each 100 applications was 84.1 during the first half and 81.9 during the second half of September, 1929, in contrast with the ratios of 101.9 and 102.7 during the corresponding periods of 1928. The ratios of placements to each 100 applications during the periods under review were 80.7 and 74.4 as compared with 90.4 and 91.7 during the corresponding month of 1928.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during September, 1929, was 1,921 as compared with 2,047 during the preceding month and with 3,605 in September a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,314 in comparison with 2,271 in August, 1929, and with 3,523 during September last year.

The average number of placements made daily by the offices of the Service during September, 1929, was 1,794, of which 1,258 were in regular employment and 536 in work of one week's duration or less, as compared with a total daily average of 1,901 during the preceding month. Placements in September a year ago averaged 3,210 daily, consisting of 2,637 placements in regular and 573 in casual employment.

During the month of September, 1929, the offices of the Service referred 44,580 persons to vacancies and effected a total of 43,056 placements. Of these the placements in regular employment were 30,196, of which 24,810 were for men and 5,386 for women, while placements in casual work totalled 12,860. The number of vacancies reported by employers was 33,413 for men and 12,686 for women, a total of 46,099, while applications for work numbered 55,521, of which 40,423 were from men and 15,098 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552

1929 (9 months).....	206,537	101,977	308,514

## NOVA SCOTIA

During the month of September, 1929, positions offered through employment offices in Nova Scotia were nearly 15 per cent higher than in the preceding month and nearly 20 per cent above the corresponding month of last year. Placements also were 5 per cent above August and 16 per cent in excess of September, 1928. Increased placements under construction and maintenance more than equalled the net gain in placements for the province over September of last year. Services also showed improvement, but these increases were in part offset by declines in manufacturing, logging, transportation and trade. The changes in other groups were nominal only. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 50; construction and maintenance, 235; trade, 40; and services, 350, of which 264 were of household workers. Regular employment was found for 253 men and 74 women during the month.

## NEW BRUNSWICK

The demand for workers as indicated by orders received at employment offices in New Brunswick during September was nearly 21 per cent higher than in the preceding month and nearly 10 per cent above the corresponding month of last year. Placements, however, declined nearly 3 per cent from August and also from September, 1928. Manufacturing and transportation were the only groups to show increased placements over September of last year, and these gains were more than offset by declines in other groups, the most noteworthy of which was in lodging. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 66; transportation, 72; construction and maintenance, 99; and services, 521, of which 403 were of household workers. Placements in regular employment numbered 202 of men and 86 of women.

## QUEBEC

During September employment offices in the province of Quebec received orders for nearly 15 per cent more workers than in the preceding month but 5 per cent less than during the corresponding month of last year. Placements were nearly 11 per cent higher than in August, but over 4 per cent below September, 1928. Logging was the only group in which a substantial gain in placements was made over September last year, but services and farming also showed some improvement.

The most substantial decline was under construction and maintenance. There were also fewer placements made under transportation and trade. The changes in other groups were nominal only. Placements by industrial divisions included: manufacturing, 161; logging, 1,436; farming, 89; construction and maintenance, 562, and services, 712, of which 458 were of household workers. During the month 2,351 men and 603 women were placed in regular employment.

#### ONTARIO

Orders listed at employment offices in Ontario during September called for over 19 per cent more workers than in the preceding month, but over 2 per cent less than during the corresponding month last year. There was an increase of nearly 13 per cent in placements when compared with August, but a decline of nearly 8 per cent in comparison with September, 1928. When comparing placements during the month under review with September last year, logging and services showed gains, whereas all other groups showed declines, the most noteworthy of which was in construction and maintenance. Industrial groups in which most of the placements were effected during the month were: manufacturing, 2,362; logging, 2,265; farming, 1,017; mining, 77; transportation, 467; construction and maintenance, 2,779; trade, 727; and services, 4,766, of which 2,883 were of household workers. There were 7,582 men and 1,966 women placed in regular employment during the month.

#### MANITOBA

Opportunities for employment as indicated by orders received at employment offices in Manitoba during September were 45 per cent less than in the preceding month and 62 per cent below September last year. Placements also were 35 per cent below August and 53 per cent below September, 1928. The decline in placements from September last year was mainly due to reductions in farm placements, although there were also declines under manufacturing, construction and maintenance, transportation, and trade. Increased placements were recorded in the logging industry and services. Placements by industrial divisions included: manufacturing, 117; logging, 785; farming, 1,207; transportation, 53; construction and maintenance, 374; trade, 266; and services, 2,265, of which 1,761 were of household workers. There were 2,110 men and 575 women placed in regular employment during the month.

#### SASKATCHEWAN

There was a decrease of 45 per cent in the number of requests for workers registered at employment offices in Saskatchewan during September, when compared with the preceding month, and of 77 per cent in comparison with the corresponding month last year. Placements also were 33 per cent less than in August and 77 per cent less than in September, 1928. As in Manitoba, the reduction in farm placements was responsible for nearly all the decline, when comparing placements during the month under review with September last year. There were, however, reduced placements also under trade, manufacturing, mining, communication and services. Increased placements were reported in logging, transportation and construction and maintenance. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 182; logging, 61; farming, 3,498; transportation, 159; construction and maintenance, 558; trade, 227; and services, 1,450, of which 983 were of household workers. Positions in regular employment were secured for 4,148 men and 838 women.

#### ALBERTA

Employment opportunities as indicated by orders received at employment offices in Alberta during September decreased over 13 per cent when compared with the preceding month and over 48 per cent in comparison with the corresponding month last year. There were declines also in placements of over 21 per cent in comparison with August and over 46 per cent when compared with September, 1928. Large reductions in farm placements accounted for the decrease in comparison with September of last year, although all other divisions, except mining and trade, showed declines, and in these the gains were small. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 267; logging, 48; farming, 3,991; mining, 163; transportation, 88; construction and maintenance, 987; trade, 223; and services, 1,034, of which 745 were of household workers. Placements in regular employment numbered 4,980 men and 407 women.

#### BRITISH COLUMBIA

During the month of September, positions offered through British Columbia offices were 33 per cent less than in the preceding month and 31 per cent less than during the corresponding month last year. There was a decline also of over 30 per cent in placements

when compared with August and of nearly 13 per cent in comparison with September, 1928. All industrial divisions, except services, manufacturing and communication, showed decreased placements when compared with September last year, those in farming and construction and maintenance being the most noteworthy. Services showed the largest increase in placements under this comparison. Placements by industrial division included: manufacturing, 842; logging, 362; farming, 1,749; mining, 91; transportation, 243; construction and maintenance, 768; trade, 205; and services, 1,585, of which 1,020 were of household workers. There were 3,184 men and 815 women placed in regular employment during the month.

### Movement of Labour

During the month of September, 1929, the offices of the Employment Service of Canada effected 30,196 placements in regular employment, of which 20,514 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 3,390 were granted the Employment Service reduced transportation rate, 1,717 going to points within the same province as the despatching office and 1,673 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The number of workers travelling at the reduced rate from Quebec centres during September was 701, of whom 161 received certificates to points within the province and 540 to other provinces. Provincially the transfers included 119 bush workers and 17 saw mill labourers going from Montreal and 25 bushmen from Quebec to points of employment within their respective zones. The movement outside the province was to northern Ontario centres, Hull transferring 100 bushmen and 2 cooks to Sudbury, 142 bush workers to North Bay, 44 bushmen to Cobalt, and 12 bushmen and one domestic within the Pembroke zone, while from Montreal 239 bushmen were conveyed to employment in the Sault Ste. Marie zone.

Of the 788 persons who received certificates for reduced transportation at Ontario offices 781 journeyed to employment in various parts of the province and 7 to other provinces. The provincial movement was largely of bush workers, 693 of whom went to logging camps in the northern parts of the province, who

were recruited mainly by the Fort William, Port Arthur and Toronto offices. From Fort William, in addition, one hotel employee travelled within the same zone, while from Port Arthur 2 carpenters went to Guelph, and 35 carpenters, 5 construction labourers, one teamster, one lineman, and one caulker within the Port Arthur zone. The Toronto office also transferred one drill operator to Kingston, one carpenter and one electrician to Port Arthur, one lumber checker and one farm hand to Timmins, and one blacksmith to Sudbury. Destined also to the Timmins zone were three bricklayers despatched from Kingston, one painter, 2 carpenters and one saw filer from Cobalt, and one carpenter from North Bay. The North Bay office, in addition, was responsible for the transfer of 12 labourers to Sudbury, which zone received 4 labourers and one bricklayer from Pembroke and 6 bricklayers from Ottawa. From Ottawa also one baker proceeded to Windsor. The remaining 4 transfers within the province were of miners who travelled from Sudbury to the Sault Ste. Marie zone. Of the inter-provincial transfers 4 were of farm hands for the Winnipeg zone, 2 of whom travelled from Fort William and 2 from Port Arthur. At the Fort William office one domestic received a certificate for transportation to Calgary. In addition the Kingston office despatched one general maid to Saskatoon and the Toronto office one lineman to St. John.

The movement of labour both within and from the province of Manitoba during September originated at Winnipeg and comprised the transfer of 1,138 workers. Of these, 188 went to provincial employment and 950 to other provinces. Among the former were 80 farm hands, 75 mine workers, 7 brickyard labourers, 6 highway construction workers, 3 cooks, 2 building carpenters, 2 hotel workers and one truck driver going to points within the Winnipeg zone, 4 carpenters, one farm hand, 3 hotel workers, one hospital employee and one housekeeper to Brandon and vicinity and 2 generals to Dauphin. Of the workers transferred outside the province Port Arthur and surrounding territory was the destination of 459 bush workers, 3 lumber workers, 5 railroad construction labourers, one electrician, 2 hotel employees, one nurse maid and one general, while to the Sault Ste. Marie zone were despatched 167 bush workers. The Montreal and Rouyn zones received 55 bushmen and 40 bushmen respectively. In addition, one construction clerk, one highway construction cook, one farm housekeeper and one cookee were conveyed to employment in the Yorkton zone, 45 rock men and 39 railroad sta-

tion men to the Nelson zone and one welder to Calgary. The balance of the interprovincial movement was of harvest labour, 126 farm hands travelling to Saskatchewan centres and one farm hand to Alberta.

The offices in Saskatchewan granted certificates to 345 persons during September, 341 of whom were transferred to points within the province, the remainder representing an interprovincial movement. Provincially a large share of the transfers were of farm workers, 258 of whom journeyed to employment at various rural centres, the majority of these travelling on certificates granted at Moose Jaw and Regina. To the Prince Albert zone 56 bushmen were despatched, 34 from Saskatoon, 20 from Regina and 2 from Moose Jaw. From Regina, in addition, one well digger went to Moose Jaw, 6 railroad construction teamsters, one housekeeper and one cookee to Swift Current, one miller to North Battleford and one miner within the Regina zone, while from Moose Jaw one highway construction cook was conveyed to Swift Current and 8 railroad construction teamsters and one miner within the Moose Jaw zone. To employment within its own zone Saskatoon transferred 5 highway construction teamsters. At the Prince Albert office one cook received a certificate for transportation to Yorkton. The Regina office was responsible for the 4 transfers to other provinces, including one truck driver bound for Dauphin, one cook for Edmonton, one domestic for Hamilton and one miller for Montreal.

The reduced transportation rate certificates granted by Alberta offices during September totalled 256, of which 105 were for provincial points and 151 for centres in other provinces. Of the former 97 were issued at Edmonton to 15 farm hands and one engineer travelling to Calgary, one hotel employee and one farm hand to Drumheller, and to 23 farm hands, one farm cook, 16 highway construction workers, 6 bushmen, 10 saw-mill workers, 16 mine workers, 3 hotel employees, 2 carpenters, one labourer, and one painter going to employment at points within the locality covered by the Edmonton office. In addition, Calgary transferred 3 farm hands and one flunkey to Lethbridge, one farm hand to Edmonton and one farm hand and one farm housekeeper within the Calgary zone, which zone was also the destination of one farm hand journeying from Medicine Hat. Included in the movement outside the province were 22 farm hands and 11 railroad construction labourers going to North Battleford and vicinity, 2 bricklayers to Regina and 115 farm hands to points in the Saskatoon zone. All of these received

their certificates for reduced transportation at Edmonton. The one remaining interprovincial transfer was of a farm hand who was carried at the reduced rate from Calgary to employment in the Saskatoon zone.

Workers who benefited by the Employment Service reduced rate from British Columbia centres during August were 162 in number, 141 of whom went to employment within the province and 21 to points outside. The transfers to provincial centres from Vancouver included 25 cannery workers, 6 railroad construction workers, 3 miners, one highway construction worker, one farm hand, one cook and one painter travelling to Kamloops, 23 railroad station men, one engineer and one fruit picker to Nelson, 10 mine workers and 3 carpenters to Revelstoke, 8 lumber mill workers, one farm domestic, one flunkey, one fruit picker, one miner and one housekeeper to Penticton, one logger, one engineer and one painter to Prince George, 5 apple pickers to Kelowna and 10 bush workers, 6 miners, 6 tunnel construction workers, 4 linemen, 4 highway construction labourers, one farm hand and one blacksmith to centres within the Vancouver zone. For work within their respective zones, Nelson despatched one cook, Prince George 2 loggers and Prince Rupert 3 bush workers, 2 farm hands and one cook. In addition 3 fruit pickers proceeded from Victoria to employment within the Kelowna zone. All the persons travelling outside the province were for the agricultural districts of the Prairie Provinces and included 16 farm hands and 2 farm household workers destined to Alberta points, one farm hand and one farm domestic to Saskatchewan centres and one farm hand to Manitoba.

Of the 3,390 workers who took advantage of the Employment Service reduced transportation rate during September 1,836 were carried by the Canadian National Railways, 1,505 by the Canadian Pacific Railway, 38 by the Temiskaming and Northern Ontario railway and 11 by the Pacific Great Eastern Railway.

In addition to the 2.7 cent rate referred to in the above the special harvest transportation facilities from British Columbia to the Prairie Provinces afforded by the railway companies during the latter part of August and mentioned in the report for that month prevailed until the 10th of September. Under this arrangement the railway companies granted a special harvest rate to all applicants upon presentation of certificates furnished by the Employment Service. Such certificate holders were entitled to a rate of \$11 from Victoria and \$10 from Vancouver or

other British Columbia offices (with the exception of Cranbrook, Revelstoke and Nelson, where the 2.7 cent rate was in force) to Calgary or Edmonton, beyond which points the fare was one-half cent per mile. During the first ten days of September 368 workers travelled at this special harvest rate from British Columbia centres to the Prairie Provinces, 84 farm hands and 50 farm household workers going to points in Alberta. 185 farm hands and 46 farm domestics to Saskatchewan rural districts and one farm worker and 2 farm domestics to employment in Manitoba. Of these 190 were carried by the Canadian

National Railways and 178 by the Canadian Pacific Railway. The number of workers who benefited by this special rate from August 19, when it became effective, until September 10, the concluding date, was 3,408, of whom 625 farm workers and 216 farm domestics went to Alberta centres, 2,225 farm hands and 322 farm household workers to Saskatchewan points and 11 farm hands and 9 farm domestics to Manitoba agricultural localities. Of these the Canadian National Railways transported 1,304 and the Canadian Pacific Railway 2,104.

#### (4) Building Permits Issued in Canada in September, 1929

The value of the building permits issued by 61 cities during September stood at \$17,107,963; this was a decrease of \$4,452,398, or 20.7 per cent, as compared with the total of \$21,560,361 reported in August, and \$3,266,136, or 16.2 per cent, in comparison with the exceptionally high total of \$20,374,149 recorded in September of last year. The September, 1929, total was, however, greater than in same month of any other year of the record except 1928, while the cumulative total for the first nine months of this year exceeds by over \$20,000,000 that for the same months in 1928, the previous high level since 1920.

Some 50 cities furnished detailed statistics, showing that they had issued nearly 1,200 permits for dwellings estimated to cost approximately \$5,200,000 and over 3,000 permits for other buildings valued at almost \$11,400,000. During August, authority was granted for the erection of about 1,400 dwellings and 2,800 other buildings, estimated at approximately \$6,000,000 and \$13,500,000, respectively.

Nova Scotia, Quebec and British Columbia reported increases in the estimated value of building as compared with August, 1929, Nova Scotia showing greatest advance of \$418,277, or 109.5 per cent. Of the declines in the remaining provinces, that of \$1,876,752, or 66.4 per cent in Alberta, was most pronounced.

As compared with September, 1928, there were gains in Nova Scotia, New Brunswick, Saskatchewan and Alberta, of which that of \$727,837 in Nova Scotia was greatest. In Quebec, Ontario, Manitoba and British Columbia reductions were indicated, the last named showing the most extensive loss of \$1,941,730, or 57.1 per cent.

Of the larger cities, Montreal, Toronto and Winnipeg registered lower totals of permits issued than in either the preceding month or the same month of last year; in Vancouver, there was an increase in the former, but a decrease in the latter comparison. Of the other centres, Halifax, Sydney, Saint John, Quebec,

Westmount, Chatham, Guelph, London, Ottawa, St. Catharines, Welland, Windsor, East Windsor, Sandwich, St. Boniface, Moose Jaw, Saskatoon and Kamloops showed gains in both comparisons.

*Cumulative Record for First Nine Months, 1929.*—The following table gives the value of the building authorized by 61 cities during September, and in the first nine months of each year since 1920, as well as index numbers for the latter, based upon the total for the corresponding period of 1920 as 100. The average index numbers of wholesale prices of building materials in the first nine months of the years since 1920 are also given (average 1926=100).

Year	Value of permits issued in September	Value of permits issued in first nine months	Indexes of Value of permits issued, first nine months (1920=100)	Average indexes of wholesale prices of building materials in first nine months (1926 average=100)
	\$	\$		
1929.....	17,107,963	185,714,022	193.2	99.6
1928.....	20,374,149	165,621,634	172.2	97.8
1927.....	14,462,243	141,152,535	146.8	95.8
1926.....	11,047,503	120,163,936	125.0	100.7
1925.....	10,140,853	98,364,181	102.3	104.2
1924.....	15,055,250	96,817,333	100.7	108.3
1923.....	10,768,898	108,319,972	112.7	111.7
1922.....	11,597,034	116,778,540	121.5	108.5
1921.....	10,907,828	88,573,442	92.1	126.8
1920.....	9,842,677	96,146,278	100.0	155.3

The aggregate for the first nine months of this year was 12.1 per cent greater than in 1928, the previous high level of the record, while the average index numbers of wholesale prices of building materials continued lower than in most years of the record.

The accompanying table gives the value of the building permits issued by 61 cities during August and September, 1929, and September, 1928. The 35 cities for which records are available since 1910 are marked with asterisks.

<sup>1</sup> Report not received. <sup>2</sup> Includes Point Grey and South Vancouver, formerly given separately; from January, 1929, when the amalgamation of these cities was effected, the total for the 35 cities includes the "Greater Vancouver" aggregate, instead of that for the area formerly known as Vancouver.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE  
PERIOD JULY TO SEPTEMBER, 1929

EMPLOYMENT conditions as indicated by business transacted by the offices of the Employment Service of Canada during the quarter July to September, 1929, showed a decline from that of the corresponding quarter of last year as there was a decrease of over 31 per cent in both vacancies and placements. Nearly all the net reduction in placements during the quarter under review occurred in farming and was due to the small demand for harvest workers in the prairie provinces. Fewer placements were also made in all other industrial divisions, except logging, services and finance. Of these the increase in logging was the greatest. The adverse conditions, however, in the remaining industrial divisions more than counterbalanced the gains shown in these three groups. Nova Scotia and New Brunswick were the only provinces to show increased vacancies and placements, all other provinces reporting declines in both instances. The accompanying table gives the vacancies and placements of the Employment

Service of Canada by industrial groups in the various provinces during July to September, 1929.

From the chart on page 1264 which accompanies the article on the work of the employment offices for the month of September, it will be noticed that the curve of vacancies in relation to applications declined slightly during the first half of July, but during the latter half of the month and in August showed an upward trend followed by a decline in September. The curve of placements in relation to applications also declined during the first half of July, but rose during the latter half of the month, showed a nominal decline during the first half of August, followed by an upward trend during the latter half of the month, and again by a decline during the month of September. The levels of both curves at the close of the quarter under review were considerably below those attained at the end of September a year ago. During the period July to September, 1929, there was

an average of 84.8 vacancies and 79.0 placements for each 100 applications for employment, as compared with 96.2 vacancies and 89.2 placements for each 100 applications during the corresponding period last year.

The average number of positions offered daily during the present quarter was 1,795; of applicants registered, 2,118; and of placements effected, 1,673, in contrast with a daily average of 2,665 vacancies, 2,771 applications

and 2,472 placements in regular and casual employment during the corresponding quarter of 1928.

During the three months July to September, 1929, the offices reported that they had made

133,026 references of persons to positions, and effected a total of 128,816 placements, of which 92,650 were in regular employment and 36,166 in casual work. Of the placements in regular employment 76,914 were of men and

15,736 of women, while casual work was found for 20,573 men and 15,593 women. Comparison with the corresponding period of 1928 showed that 187,812 placements were then made, of which 149,420 were in regular employment and 38,392 in casual work. Applications for employment during the period under review were received from 120,397 men and 42,624 women, a total of 163,021, in contrast with a registration of 210,536 persons during the

same period in 1928. Employers notified the Service during the quarter July to September, 1929, of 138,205 vacancies, of which 101,899 were for men and 36,306 for women, as compared with 202,529 opportunities for work during the corresponding period a year ago.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of September, 1929.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during September is reproduced below. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the October issue relates to the situation existing in August, 1929. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for August and previous months taken from the October, 1929, issue of the *American Federationist*, the official publication of the organization, are reproduced below.

### Great Britain

During the first three weeks of September the general level of employment remained approximately the same as in August. In the last week of the month there was an increase in unemployment, largely as the result of seasonal influences. There was a further improvement in the coal-mining industry and in boot and shoe manufacture. Employment also improved in the pottery, silk and artificial silk, linen, and carpet industries, and in dock, harbour, river and canal service. There was, however, a further seasonal decline in the building trade, in public works contracting, in

the brick, tile, artificial stone, cement, and clothing industries, and in hotel and boarding-house service. Unemployment also increased in the shipbuilding, tinplate, and jute industries.

Among workpeople, numbering approximately 11,880,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 23rd September, 1929 (including those temporarily stopped as well as those wholly unemployed), was 10.1, the same percentage as at 26th August, 1929, as compared with 11.4 at 24th September, 1928. For males alone the percentage at 23rd September, 1929, was 11.1, and for females 7.4; at 26th August, 1929, the percentages were 11.0 and 7.6. The percentage wholly unemployed at 23rd September, 1929, was 7.9, as compared with 7.7 at 26th August. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at 30th September, 1929, was approximately 1,217,000, of whom 929,000 were men and 219,000 were women, the remainder being boys and girls; at 26th August, 1929, it was 1,190,000, of whom 899,000 were men and 218,000 were women; and at 24th September, 1928, it was 1,343,000, of whom 1,028,000 were men and 236,000 were women.

### United States

Employment in the United States increased 1.1 per cent in August, 1929, as compared with July, and pay-roll totals increased 3.9 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials, on Class I

railroads. This tabulation is made from Interstate Commerce Commission reports for the months of June and July, 1929, and therefore cannot be included in the general statement for the month of August. The number of employees in Class I railroads as at July 15 totalled 1,727,857, representing an increase of 0.5 per cent since June 15. The amount of pay-roll in the entire month of July was \$246,903,206, representing an increase over the previous month of 3.9 per cent.

Employment in manufacturing industries increased 0.4 per cent in August as compared with July, while pay-roll totals increased 4 per cent. August employment stood at a considerably higher level in 1929 than in any year since 1923, a year of great manufacturing activity, with one exception—August, 1926, when employment was practically on a par with 1929. Pay-roll totals in August, 1929, made a greater gain over July than in any year for which the bureau has records.

The Bureau of Labour Statistics' weighted index of employment in manufacturing industries for August, 1929, is 98.6, as compared with 98.2 for July, 1929, and 93.6 for August, 1928; the weighted index of pay-roll totals for August, 1929, is 102.1, as compared with 98.2 for July, 1929, and 94.2 for August, 1928.

The food group of industries as a whole showed slightly decreased employment in August; the textile group reported a slight increase, with woollen goods, women's clothing, and millinery and lace goods outstanding; the iron and steel group fell off in employment, owing to a sizable drop in foundry and machine-shop products which increases in the iron and steel industry and steam fittings and stoves did not overcome; seasonal increases appeared in furniture, boots and shoes, fertilizers, pottery, glass, and wagons. The automobile industry fell off 2.4 per cent in employment but gained 16.2 per cent in pay-roll totals. The prosperous condition of the machine-tool industry was clearly shown by

a drop in employment of only 1.5 per cent, in place of the usual August drop of from 5 to 11 per cent shown in previous years.

The rayon and radio industries, which are not yet included in the bureau's indexes, both added to their employees in August; the rayon increase was 2.3 per cent and the radio increase was 18.6 per cent.

The report for August reflects conditions in 12,543 establishments in 54 of the chief manufacturing industries of the United States. These establishments employed 3,477,550 workers whose combined earnings in one week were \$96,124,530. These employees represent 54 per cent of all employees in the 54 industries covered, and over 41 per cent of the total employees in all manufacturing industries of the United States.

There was a total increase of 9,990 employees in August over July, which resulted in very small changes in each geographic division. The changes were increases in 7 of the 9 divisions, with decreases of 0.2 per cent and 0.3 per cent in the New England and East North Central divisions, respectively.

*Unemployment percentage.*—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 13 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent.

The Montreal City Council is considering the question of compensation for firemen and policemen incapacitated by accident in the course of their duties. It is pointed out that the Workmen's Compensation Act which took effect in the Province of Quebec in 1928 does not apply to policemen and firemen. When accidents to these employees occur, the City Council has power under the City Charter to determine for each case the amount of pension or other compensation to be granted.

The Province of Quebec Safety League has just published an "Industrial Accident Prevention Calendar for 1930," each calendar being in French and English, with an effective picture for each month. The calendars, which are entirely a product of the province, are intended for distribution among the homes of the workers. They may be obtained from the secretary of the League at Montreal, for fourteen cents each.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

**T**HE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing, and other outfit for the military or naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to

the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams).

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

**Contracts Awarded Recently**

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

DEPARTMENT OF PUBLIC WORKS

*Contracts in Group "A" (Construction, etc)*

Construction of an addition to the Public Building at Regina, Sask. Name of contractors, Smith Bros. & Wilson, Ltd., Regina, Sask. Date of contract, October 4, 1929. Amount of contract, \$233,770. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	Per hour	
Bricklayers and masons.....	\$1 45	8
Carpenters and joiners.....	1 00	9
Concrete finishers.....	1 35	8
Concrete layers.....	0 45	9
Concrete mixers.....	0 45	9
Electricians.....	1 05	9
Electricians' helpers.....	.35 to .65	9
Labourers—common.....	0 40	9 to 10
Labourers—building.....	0 45	9
Hollow tile setters.....	1 45	8
Marble setters.....	1 35	8
Marble setters' helpers.....	0 50	8
Ornamental metal workers.....	1 25	8
Painters.....	0 87½	8
Plasterers.....	1 30	8
Plumbers and Steamfitters.....	1 20	8
Plumbers and Steamfitters' helpers.....	0 60	8
Roofers—felt and gravel.....	0 80	9
Sheet metal workers.....	1 00	9
Sheet metal workers' helpers.....	0 70	9
Structural steel workers.....	1 00	8
Teamsters.....	0 45	9 to 10
Teamsters with team and wagon.....	0 90	9 to 10
Terrazo layers.....	1 00	8
Terrazo layers' helpers.....	0 60	8
Metal lathers.....	.08 per yard	8

Installation of a hydrogen pipe line at Montreal Air Harbour, St. Hubert, P.Q. Name of contractors, The General Supply Co. of Canada, Ltd., Ottawa, Ont. Date of

contract, September 23, 1929. Amount of contract, approximately \$21,370.40. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour	
Electric welders.....	\$0 60	8
Steamfitters.....	0 85	8
Trench machine operators.....	6 00 per dy	9 to 10
Gas engine operators.....	6 00 per dy	9 to 10
Foreman of labourers.....	per hour	10
	0 50	
Labourers.....	0 35	10
Carters, horse and cart.....	0 60	10
Teamsters, team and wagon.....	0 75	10

Construction of raised parapet walls at the ends of the Ogden Point Piers, Victoria City, B.C. Name of contractor, Edward Rainaldi, Victoria, B.C. Date of contract, October 2, 1929. Amount of contract, approximately, \$9,573. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages not less than	Hours per day
	per hour	
Foreman.....	\$1 10	8
Labourers.....	0 45	8

Painting of the National Research Building, Ottawa, Ont. Name of contractors, Archibald J. Marshall & James A. Marshall, Ottawa, Ont. Date of contract, October 5, 1929. Amount of contract, \$6,200. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour	
Painters and glaziers.....	\$0 70	8

Grading, gravelling, cement paving, etc., in connection with the Immigration and Customs Building and Diversion Road, Douglas, B.C. Name of contractors, Moncrieff & Vistaunet, Vancouver, B.C. Date of contract, October 7, 1929. Amount of contract, \$7,965. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
Labourers.....	\$0 50 per hr.	8
Asphalt layers.....	4 25 per dy	8

Construction of a slipway at Jericho Air Station, Vancouver, B.C. Name of contractor, John H. Todd, Vancouver, B.C. Date of contract, October 11, 1929. Amount of contract, approximately \$4,277.23. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per day	
Pile driver foreman.....	\$10 00	8
Pile driver engineer.....	9 00	8
Pile driver man.....	8 00	8
Pile driver boomman.....	8 00	8
Bridgeman.....	8 00	8
Derrickman.....	8 00	8
Fireman.....	5 50	8
Labourers.....	4 00	8

Repairs and extension to wharf at Roberts Creek, B.C. Name of contractors, The Vancouver Pile Driving & Contracting Co., Ltd., Vancouver, B.C. Date of contract, September 31, 1929. Amount of contract, approximately \$5,023.81. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per day	
Pile driver foreman.....	\$10 00	8
Pile driver engineer.....	9 00	8
Pile driverman.....	8 00	8
Pile driver boomman.....	8 00	8
Bridgeman.....	8 00	8
Derrickman.....	8 00	8
Fireman.....	5 50	8
Labourers.....	4 00	8

Construction of an addition to the Central Heating Plant, Ottawa, Ont. Name of contractor, Alex. I. Garvock, Ottawa, Ont. Date of contract, October 3, 1929. Amount of contract, approximately \$82,000. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour	
Asphalt layers.....	\$0 55	8
Bricklayers.....	1 25	8
Carpenters and joiners.....	0 90	8
Concrete mixers.....	0 45	8 to 10
Concrete layers.....	0 45	8 to 10
Electricians.....	0 80	8
Painters.....	0 70	8
Plumbers and steamfitters.....	1 00	8
Roofers, felt and tar.....	0 70	8
Sheet metal workers.....	0 95	8
Stationary engineers.....	0 75	8
Steam roller engineer.....	0 75	8
Stone masons.....	1 25	8
Labourers.....	0 45	8 to 10
Powdermen.....	0 50	8 to 10
Rock drillers.....	0 50	8 to 10
Driver, with horse and cart.....	0 75	8 to 10
Driver, with team and wagon.....	1 00	8 to 10
Motor truck driver.....	0 50	8 to 10

Construction and erection of the structural steel work for Airplane Hangar No. 3, Montreal Air Harbour, St. Hubert, P.Q. Name of contractors, Canadian Vickers, Ltd., Montreal, P.Q. Date of contract, September 13, 1929. Amount of contract, \$43,166. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour	
Structural steel foreman.....	\$1 10	9
Structural steel erectors.....	1 00	9
Rivet heaters and rivetters.....	1 00	9
Stickers and heaters.....	1 00	9
Painters.....	0 80	8
Painters' helpers.....	0 45	8
Carters, horse and cart.....	0 50	10
Teamsters, team and wagon.....	0 70	10

Construction of additions and alterations to Post Office for Customs Building, Niagara Falls, Ont. Name of contractors, Gardner Construction Co., Ltd., Welland, Ont. Date of contract, October 3, 1929. Amount of contract, \$37,500. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour	
Concrete workers.....	\$0 40	10
Bricklayers and masons.....	1 25	8
Stonecutters.....	1 25	8
Structural ironworkers.....	1 00	9
Carpenters and joiners.....	0 90	8
Sheet metal workers.....	0 90	8
Lathers (metal).....	0 90	8
Plasterers.....	1 25	8
Painters and glaziers.....	0 75	8
Terrazzo layers (Class A).....	1 05	8
Terrazzo layers (Class B).....	0 90	8
Plumbers and steamfitters.....	0 90	8
Plumbers and steamfitters' helpers.....	0 45	8
Electricians.....	0 85	8
Electricians' helpers.....	0 40	8
Roofers, felt and gravel.....	0 65	8
Labourers.....	0 40	10
Teamsters, horse and cart.....	0 70	10
Teamsters, team and wagon.....	0 90	10
Time and a half for overtime.		

Construction of additions and alterations to Public Building, Yorkton, Sask. Name of contractors, James P. Logan & Sarah M. Black, Yorkton, Sask. Date of contract, September 3, 1929. Amount of contract, \$12,493.50. The General Fair Wages Clause was inserted in the contract.

Construction of an extension to wharf at Mechins (Dalibaire), Matane Co., P.Q. Name of contractors, Ludger Lemieux, Ltee, Ste. Marie Beauce, P.Q. Date of contract, October 2, 1929. Amount of contract, approximately \$44,178.72. The General Fair Wages Clause was inserted in the contract.

Reconstruction of 560 feet of the superstructure of the south breakwater at Whitby, Ont. Name of contractors, The Randolph Macdonald Co., Ltd., Toronto, Ont. Date of contract September 23, 1929. Amount of contract, approximately \$15,056.18. The General Fair Wages Clause was inserted in the contract.

Construction of a breakwater extension at Seal Cove, Charlotte County, N.B. Name of contractor, A. Douglas Dyas, St. Stephen, N.B. Date of contract, September 25, 1929. Amount of contract, approximately, \$15,636. The General Fair Wages Clause was inserted in the contract.

Harbour improvements, consisting of crib-work, raising of harbour walls, repairs to west face wall and dredging harbour, entrance channel and crib seats. Name of contractors, T. A. Brown Co., Ltd., Toronto, Ont. Date of contract, September 30, 1929. Amount of contract, approximately \$10,762.51. The General Fair Wages Clause was inserted in the contract.

Construction of a public building at St. Romuald, P.Q. Name of contractor, Joseph Dorval, Lauzon, P.Q. Date of contract, September 30, 1929. Amount of contract, \$24,275. The General Fair Wages Clause was inserted in the contract.

Reconstruction of wharf at St. Irène, Que. Name of contractors, Arthur E. Farley & Percy B. Grant, Ottawa, Ont. Date of contract, September 30, 1929. Amount of contract, approximately \$30,408.60. The General Fair Wages Clause was inserted in the contract.

Reconstruction of wharf at Ste. Angèle de Laval (Doucet's Landing), County of Nicolet, Que. Name of contractor, J. E. Fleury, Three Rivers, Que. Date of contract, September 30, 1929. Amount of contract, approximately, \$35,940.50. The General Fair Wages Clause was inserted in the contract.

Repairs to east pier at Rondeau, Kent Co., Ont. Name of contractors, The Chatham Dredging & General Contracting Co., Ltd., Chatham, Ont. Date of contract, October 1, 1929. Amount of contract, approximately, \$20,490.77. The General Fair Wages Clause was inserted in the contract.

Construction of a public building at Melville, Sask. Name of contractors, Hipperson Construction Co., Ltd., Regina, Sask. Date of contract, October 1, 1929. Amount of contract, approximately, \$48,278. The General Fair Wages Clause was inserted in the contract.

Construction of a breakwater and pier at Caissie's Cape, Kent Co., N.B. Name of contractor, Ashley A. Colter, Fredericton, N.B. Date of contract, October 2, 1929. Amount of contract, approximately, \$76,952. The General Fair Wages Clause was inserted in the contract.

Reconstruction of wharf at Beaver Harbour, Charlotte Co., N.B. Name of contractor, A. Douglas Dyas, St. Stephen, N.B. Date of contract, October 2, 1929. Amount of contract, approximately, \$14,282.50. The General Fair Wages Clause was inserted in the contract.

Repairs and improvements to landing wharf at Matane, P.Q. Name of contractors, Ludger Lemieux, Ltée., Ste. Marie Beauce, P.Q. Date of contract, October, 2, 1929. Amount of contract, approximately, \$7,616.50. The General Fair Wages Clause was inserted in the contract.

Construction of an extension to the wharf at Douglstown, Gaspé Co., P.Q. Name of contractor, Alfred J. Urquhart, Barachois West, P.Q. Date of contract, October 25, 1929. Amount of contract, approximately, \$7,953.14. The General Fair Wages Clause was inserted in the contract.

Supply and installation of a 36 ton capacity refrigerating plant in the National Research Council Laboratory, Sussex Street, Ottawa, Ont. Name of contractors, Canadian Ice Machine Co., Ltd., Toronto, Ont. Date of contract, September 17, 1929. Amount of contract, \$5,700. The General Fair Wages Clause was inserted in the contract.

Alterations and additions to the mechanical equipment of the Government Central Heating Plant, Ottawa, Ont. Name of contractors, W. G. Edge, Ltd., Ottawa, Ont. Date of contract, October 3, 1929. Amount of contract, \$49,000. The General Fair Wages Clause was inserted in the contract.

Renovations and repairs to the Quarantine Station, Partridge Island, N.B. Name of contractor, James E. Kane, Saint John, N.B. Date of contract, October 25, 1929. Amount of contract, approximately, \$5,833.75. The General Fair Wages Clause was inserted in the contract.

Deepening approach, entrance channel and turning basin at the harbour, Oshawa, Ont. Name of contractors, Canadian Dredging Co., Ltd., Midland, Ont. Date of contract, September 27, 1929. Amount of contract, approximately, \$61,530. The General Fair Wages Clause was inserted in the contract.

Dredging channel to and basin at wharf of Steel Co. of Canada, Ltd., Hamilton, Ont. Name of contractors, J. P. Porter & Sons,

Ltd., Hamilton, Ont. Date of contract, September 21, 1929. Amount of contract, approximately, \$77,980. The General Fair Wages Clause was inserted in the contract.

Draining and improving Sherwood and Bronson outlets at Dundee, Ont. Names of contractors, Oliver F. Cummins and Wm. H. Robinson, Toronto, Ont. Date of contract, September 27, 1929. Amount of contract, approximately, \$6,125. The General Fair Wages Clause was inserted in the contract.

*Contracts in Group "B" (Interior Fittings, etc.)*

Manufacture, delivery and installation of steel cupboard cases in Vault No. 2, Department of Finance, East Block, Ottawa, Ont. Name of contractors, The Office Specialty Mfg. Co., Ltd., Ottawa, Ont. Date of contract, September 25, 1929. Amount of contract, \$5,495. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS

*Contracts in Group "A" (Construction, etc.)*

Construction and erection of the superstructure, with concrete floor, of a steel highway bridge over the waste weir at Hartwell's Locks on the Rideau Canal. Name of contractors, Dominion Bridge Co., Ltd., Montreal. P.Q. Date of contract, October 8, 1929. Amount of contract, \$3,690.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	per hour	
Structural steel erectors.....	\$0 90	8
Carpenters.....	0 90	8
Hoisting engineer.....	0 75	8
Labourers.....	0 45	8 to 10
Teamsters, team and wagon.....	1 00	8 to 10

Construction of the substructure of a Power House in connection with Welland Ship Canal, on the west side of the lower entrance of Twin Locks No. 4. Name of contractors, Aiken, Inness & MacLachlan Limited, Welland, Ont. Date of contract, October 18, 1929. Amount of contract, approximately \$93,185.00. The General Fair Wages Clause was inserted in the contract.

Delivery and erection of three hydraulic Turbine and Auxiliaries for the Power House west of Canal at foot of Twin Locks No. 4, Welland Ship Canal. Name of contractors, S. Morgan Smith-Inglis Co., Ltd., Toronto, Ont.

Date of contract, October 23, 1929. Amount of contract, \$89,880.00. The General Fair Wages Clause was inserted in the contract.

Improvements to Prince Edward Island Ferry Terminals at Cape Tormentine and Port Borden, including construction, placing and filling of timber cribs, formation of rock embankments, rip-rap, construction and placing of mooring posts, etc. Name of contractors, Northern Construction Co., Ltd., and J. W. Stewart. Date of contract, September 25, 1929. Amount of contract, \$734,976.13. The General Fair Wages Clause was inserted in the contract.

Delivery and erection of one 100,000 Imperial gallon steel water tank at Springhill Junction, N.S. Name of contractors, Horton Steel Works, Ltd., of Montreal, P.Q. Date of contract, May 23, 1929. Amount of contract, \$10,000.00. The General Fair Wages Clause was inserted in the contract.

Repairs to one concrete abutment and approximately fifty concrete pedestals, Little Salmon River Viaduct, Mileage 66.8 Grand Falls Subdivision (National Transcontinental Railway), N.B. Name of contractors, Metal-kote Company (Maritime), Ltd. Date of contract, August, 12, 1929. Amount of contract, approximately \$30,431.50. The General Fair Wages Clause was inserted in the contract.

Repairing one concrete abutment and approximately twenty-eight concrete pedestals at bridge, mileage 64.0 Grand Falls Subdivision (National Transcontinental Railway), N.B. Name of contractors, Concrete-Masonry Restoration, Ltd., Toronto, Ont. Date of contract, August 29, 1929. Amount of contract, approximately \$14,462.25. ## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Mining, Non-ferrous Smelting and Quarrying: Non-metallic Mineral Mining and Quarrying

AVONDALE AND WENTWORTH VICINITY, NOVA SCOTIA.—CANADIAN GYPSUM COMPANY LIMITED AND THE NOVA SCOTIA QUARRY WORKERS' UNION OF SWEETS CORNER, HANTS COUNTY, NOVA SCOTIA.

Agreement to be in effect from the date of signing in 1928 to May 1, 1931, and from year to year until either party gives notice 30 days before May 1, of any year.

Only union men to be employed if available. Union men to have preference in all jobs. Horses and carts to be supplied by the union if available. Union members will not be obliged to work with or for union opponents until they have made a settlement with the union.

Hours: 9 per day or night; 8½ on Saturdays for day workers; for night workers, work to stop Saturday at midnight.

Overtime: time and one-half; work on Sundays and three holidays, double time.

One day's pay for turning out at night to load vessels when no vessels are in.

Any dispute which cannot be settled on the job will be taken up by an Adjustment Committee and the management.

If they cannot agree, a board of arbitration will be formed consisting of a representative of each party and a third chosen by them. The decision of this board to be final. No strike or lockout to occur pending this adjustment.

The wage rates will be adjusted on June 28, 1928, December 31, 1928, June 30, 1929, December 31, 1929, June 30, 1930, and December 31, 1930, so as to bear the same proportion to the Government published cost of living for the month prior to each adjustment date as \$2.90 bears to \$21.61, but a minimum wage of \$2.90 per day will be maintained.

Wages per day as from date of signing in 1928:—\$2.90 for breakers, loaders, hand drillers, auger turners, stagemen, sledgemen, dumpmen and shovel men, wharf dumpmen, men loading cars with plaster out of shed or pile by hand, belt men's helpers on top of shed, crusher repair helpers (second grade) night watchmen, steam shovel firemen, steam shovel sidemen, signal men, skip dumpers; \$2.97 for well drillers' helpers, blowers on hand augers, loading workmen in tunnel, crusher dump workmen, railroad men; \$3.06 for stevedores, pumps and donkey runners, steam shovel cranimen; \$3.15 for belt men on top of shed, belt men and secondary crusher man, crusher dump feed men, side man (gas shovel), oilers, blacksmith's helpers; \$3.24 for plug drillers, loaders and blowers, well drillers, sub-bosses, steam locomotive firemen, train brakemen (except main line), wharf foremen, men unloading coal, car builders, carpenters, loading foreman in tunnel, crusher dump foreman, crusher dump car men (on quarry end of crusher), crusher repair helpers (first grade) electrician's helpers (second grade) and operators, machinery repair men, steam drill men. \$3.42 for railroad foreman and main line brakemen; \$3.45 for belt switch operators on wharf loading; \$3.50 for car shop foremen (one car shop foreman paid \$5); \$3.69 for gas locomotive engineers and

track shifters, crushers repair foreman, (one foreman paid \$4.95), main line train conductors; \$3.75 for boss carpenters at Wentworth; \$3.78 for general blacksmith on works and quarry blacksmith, cable and stationary engineers, steam shovel engineers, head machinist, driver of horse hauling cars; \$3.90 for drivers of horses and carts except those under steam shovel; \$3.96 for steam locomotive engineers; \$4 for drivers of horses and carts hauling material from under mechanical shovel; \$4.07 for electricians' helpers (first grade); \$5.40 for dragline operators; \$5.85 for gas shovel operators.

**NEWPORT STATION AND WINDSOR WHARF, NOVA SCOTIA.—THE WINDSOR GYPSUM COMPANY AND THE NOVA SCOTIA QUARRY WORKERS' UNION OF SWEETS CORNER, HANTS COUNTY, NOVA SCOTIA.**

Agreement to be in effect from date of signing in 1928 to May 1, 1931, and from year to year until either party gives notice 30 days before May 1, in any year.

With the exception of the wage scale which is given below, the clauses of this agreement are similar to the agreement with the Canadian Gypsum Company summarized above, and it is provided that if the Windsor Gypsum Company requires the services of any class or classes of labour not specified in this agreement, that such class or classes be paid at the same rate of wages as provided for under the agreement with the Canadian Gypsum Company and the union as renewed in 1925.

The minimum wage to be \$2.90 per day and the same provision for adjustment of wages according to the cost of living is made in this agreement as in the agreement with the Canadian Gypsum Company.

Wages per day: \$2.90 for breakers, loaders, gypsum drillers, stagemen, dumpmen, shovellers and all men loading cars with plaster out of pile by hand; \$2.97 for railroad men; \$3.06 for stevedores and wharf dumpmen; \$3.14 for auger turners when on gypsum; \$3.24 for blowers, car builders and carpenters; \$3.25 for wharf foremen; \$3.42 for railroad foreman; \$3.90 for all drivers of horses and carts.

**NELSON ISLAND, B.C.—VANCOUVER GRANITE COMPANY AND THE QUARRY WORKERS' INTERNATIONAL UNION, LOCAL No. 161.**

Agreement to be in effect from April 1, 1928, to April 1, 1929, and from year to year until either party gives notice 30 days before April 1, of any year.

Only union members or those eligible to become such to be employed.

Hours: 8 per day in all departments except engineers who will be allowed one hour for preparing their plant for operation.

Overtime: time and one-half; work on Sundays, double time.

Wages: quarry blacksmiths \$7 per day, powdermen (none but experienced men to be employed) \$6 per day; men operating steam or pneumatic drills, hammer-men and men gadding out stone and men breaking stone and all derrickmen \$5.50 per day; labourers and lumpers \$4.50 per day; engineers 80 cents per hour.

**Construction: Buildings and Structures**

**SAINT JOHN, N.B.—SAINT JOHN MASTER PLUMBERS AND STEAMFITTERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 574.**

Agreement reached following conciliation by the Fair Wages Officer of the Department of Labour, to be in effect from August 1, 1929, to July 31, 1930, and from year to year until either party gives notice 60 days prior to July 31, of any year.

Hours: 8 per day, a 48-hour week, except in the months of June, July and August, when only 4 hours will be worked on Saturdays, making a 44-hour week.

Overtime: time and one-half; Sundays, double time.

Wages: the minimum rate for competent plumbers and steamfitters is 75 cents per hour, with the exception that all contract work tendered on previous to the signing of the agreement will be completed at the previous wage rate.

For work out of city, fare, board and travelling time to be paid.

No union member to work after regular hours without the consent of the union and of his employer.

Any dispute will be referred to a Joint Conference Board consisting of three employers and three journeymen who shall meet when necessary. If this Board cannot adjust any dispute, the assistance of the Federal Department of Labour will be applied for.

**HULL, QUEBEC.—CERTAIN CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1169.**

This agreement which is in effect from May 1, 1929, to April 30, 1931, is the same as the one in effect at Ottawa, Ontario, which was summarized in the LABOUR GAZETTE for June, page 677, and is corrected in the next paragraph of this article.

*Correction*

**OTTAWA, ONTARIO.—THE OTTAWA BRANCH OF THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 93.**

In this agreement which was summarized in the LABOUR GAZETTE for June, page 677, the fourth paragraph should read as follows:

Overtime: from 5 p.m. to 10 p.m. and work on Saturday afternoons, time and one half; from 10 p.m. to 8 a.m. and work on Sundays and holidays, double time; in case of two or more shifts the regular wage rate shall be paid.

**BROCKVILLE, ONTARIO.—BROCKVILLE MASTER PLUMBERS' ASSOCIATION AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 680.**

Agreement to be in effect from August 1, 1929, to May 15, 1930, and from year to year until either party gives notice of change by January 2, of any year. When such notice is given, the Joint Committee will meet within 30 days to come to a decision.

Only union members to be employed if available, and union members will only work for

members of the Master Plumbers' Association as long as work is available from them.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: from 5 p.m. to midnight and Saturday afternoons, time and one-half; after midnight and work on Sundays and holidays, double time.

Wages per hour for journeymen plumbers and steamfitters, 90 cents.

One apprentice allowed for each steamfitter and plumber employed. An apprentice is to serve four years, after which he is to pass a satisfactory examination before a Joint Examining Board. When he considers himself competent to use tools, an apprentice may try an examination before a Joint Examining Board, and if successful, may work with tools for one year, and will be paid 50 cents per hour for first six months and 65 cents per hour for second six months. After this year he will try the final examination before the Joint Examining Board, and if successful will become a journeyman.

For work out of city, fare and board to be paid and travelling time up to 9 p.m.

No union member to sub-contract or do any work pertaining to the trade after regular working hours.

Any dispute which cannot be settled by representatives of each party is to be referred to a Joint Arbitration Board, consisting of three representatives of each party who shall have power to settle any grievances or appoint an arbitrator if necessary. If a dispute cannot be settled in this way, or if the union violates the agreement, no strike or lockout to occur until an officer of the General Office of the United Association has investigated and rendered a decision.

**KINGSTON, ONTARIO.—THE ASSOCIATION OF BUILDING INDUSTRIES OF KINGSTON AND THE BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION, LOCAL No. 10.**

Agreement to be in effect from April 1, 1929, to March 31, 1930, and thereafter until three months' notice is given by either party.

Only union members to be employed, if available, and union members will work only for contractors who recognize the terms of this agreement.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime, and work on Dominion Day, Christmas and New Year's, time and one-half. No work on Labour Day; double time for work on Saturday afternoons and Sundays.

Wages for journeymen: \$1.10 per hour.

No union member to contract or sub-contract any work.

The Apprentice Act of the Province of Ontario to govern the employment of apprentices.

The work coming under the union's jurisdiction is specified and no labourer is to be allowed to do any part of journeymen's work.

For work out of city, fare and travelling time to be paid.

No strike or lockout to occur until the dispute has been referred to a joint arbitration committee consisting of three members of each party, who may appoint an outside chairman. The decision of this committee to be final.

**HAMILTON, ONTARIO.—CANADIAN CONSTRUCTION ASSOCIATION, HAMILTON BRANCH, AND THE BRICKLAYERS AND MASONS' INTERNATIONAL UNION, LOCAL No. 1, OF HAMILTON.**

Agreement to be in effect from May 4, 1929, to May 3, 1930.

Union members only to be employed and no other agreement is to be made in the district.

Hours: 8 per day, between hours of 8 a.m. and 5 p.m., and 4 hours on Saturday, a 44-hour week. On night shifts, 7 hours to be worked, but 8 hours' pay to be given.

Overtime: to be worked only in case of emergency, and time and one-half to be paid; work on Saturday afternoons, Sundays and holidays, double time.

Wages for journeymen: \$1.25 per hour. All repair work done by owners by the day shall be charged 10 cents per hour extra. (This does not apply to city or government work.)

No cessation of work until a dispute has been referred to a joint arbitration board consisting of three members of each party. If they are unsuccessful in settling the dispute, it will be referred to an independent umpire whose decision will be final.

**EDMONTON, ALBERTA.—MASTER PLASTERERS' ASSOCIATION OF EDMONTON AND THE INTERNATIONAL UNION OF HOD CARRIERS AND BUILDING AND COMMON LABOURERS, LOCAL No. 92.**

Agreement to be in effect from July 1, 1929, to April 30, 1931, and for another year unless notice is given by either party before January 1, 1931.

Only union members to be employed, or men who have been granted one month to qualify as a plasterer's labourer. During this month men will be paid 55 cents per hour.

Hours: 8 per day, 4 on Saturdays, a 44-hour week, except in the case of mixers, who shall be allowed one-half hour extra each day.

Work on Sundays and holidays, double time. No work on Labour day.

Wages for plasterers' labourers: from July 1, 1929, to April 30, 1930, 65 cents per hour; from May 1, 1930, to April 30, 1931, 75 cents per hour.

For work out of town, fare to be paid, and after January 1, 1930, 10 cents per hour extra to cover expenses while working out of town.

**VANCOUVER AND DISTRICT, B.C.—THE CONTRACTING PLASTERERS' ASSOCIATION AND THE OPERATIVE PLASTERERS' INTERNATIONAL ASSOCIATION, LOCAL No. 89.**

Agreement reached following strike reported in the LABOUR GAZETTE for July, page 725, to be in effect from October 10, 1929, to August 15, 1931, and thereafter from year to year until either party gives 90 days' notice of change.

Local union members to be employed and union members will work only for contractors who accept the conditions of the agreement, and the union will not enter into an agreement with any other association or organization.

Hours: 8 per day from Monday to Friday.

Overtime: double time.

Wages per hour for journeymen plasterers: from October 10, to November 14, 1929, \$1.25; from November 15, 1929, to February 14, 1930, \$1.30; from February 15, 1930, to August 14, 1930, \$1.35; from August 15, 1930, to February 14, 1931, \$1.40; from February 15, 1931, to August 14, 1931, \$1.45; from August 15, 1931, \$1.50.

For work outside the area mentioned in this agreement \$1.00 per day extra to be paid.

The employment of apprentices to be governed by the Vancouver Apprenticeship Council.

Any question as to the termination, alteration, or any dispute which may arise will be referred to representatives of both parties, whose decision will be accepted by both parties. If unable to agree, a board of conciliation will be formed, consisting of three representatives of each party whose decision will be binding. If this board cannot come to a decision, the matter to be referred to the President of the Building and Construction Industries Exchange and the President of the Vancouver Trades and Labour Council, who shall each appoint representatives to investigate and render a decision, which will be binding on both parties.

**Transportation and Public Utilities: Local Transportation**

VANCOUVER AND NEW WESTMINSTER, B.C.—

FRASER VALLEY MILK PRODUCERS' ASSOCIATION AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL NO. 464, (MILK DRIVERS AND DAIRY EMPLOYEES).

Agreement to be in effect from July 1, 1927, to July 1, 1928, and from year to year until either party gives notice 30 days before expiration date.

Union members to be employed if available, but if non-union men are employed, they are to join the union after two weeks. No discrimination to be shown employees on account of union activity.

Hours and overtime: the principle of the 6-day week to be observed, but may either be one day off in seven or one week off in seven weeks. All employees other than salesmen to work 8 hours per day with time and one-half for overtime.

Wages: for salesmen, a base rate of \$86 per month for experienced salesmen and \$75 for inexperienced salesmen for first three months. This base rate will be increased or decreased \$4 per month for a period of three months if price of milk is raised or lowered. In addition to this base wage rate a commission on sales will be paid, the rates of commission being specified in the agreement.

Wages per month for other employees: truck drivers (haulers) \$130, truck drivers (special) \$125, relief truck drivers \$130, truck helpers \$120, checkers \$125, stable helpers \$120, all other inside help \$120, inside relief men \$125, relief men outside \$150, new employees \$100, for first three months, \$110 for next three months; after six months the regular rate to be paid.

Seniority to be considered in making promotions, but the decision of the employers to be final, in this respect.

Seven days' notice of resignation or dismissal to be given.

No strike or lockout to occur while this agreement is in force. Any dispute which cannot be settled by representatives of each party will be referred to a board of arbitration consisting of one representative of each party and a third disinterested party selected by them, the decision of this board to be binding.

If both parties are unable to agree on any amendments to this agreement, application will be made under the Industrial Disputes Act for a Board of Arbitration whose majority decision will be binding.

**Transportation and Public Utilities: Street and Electric Railways**

HALIFAX, N.S.—THE NOVA SCOTIA LIGHT AND POWER COMPANY LIMITED AND THEIR EMPLOYEES OF THE STREET CAR OPERATION, STREET CAR MAINTENANCE, ELECTRICAL DISTRIBUTION, POWER HOUSE AND SUBSTATION AND GAS DEPARTMENTS.

*General*

Agreement to be in effect from August 15, 1929, to August 15, 1930, and thereafter from year to year until either party gives notice two months prior to expiration date in any year.

Company officials will meet with a duly authorized committee of employees to discuss any matter of interest to the employees. If such officials fail to satisfy the committee, they may appeal to the Board of Directors or the Manager, or they may call a general meeting of the employees.

In making promotions, or filling new positions ability and seniority to be considered.

The minimum rate of wages for regular employees is 40 cents per hour, except when employees are kept on as watchmen, messengers, or other work lighter than the original duties.

Employees will be furnished with free transportation on the street cars after six months' service.

Modification of this agreement may be made at any time provided the parties are mutually agreeable and the modification is signed by both parties.

*Street Car Operation (Platform Employees)*

Overtime: time and one-half for all time worked in excess of the regular schedule run for regular men and time worked in excess of 9½ hours in any one day for spare men, Sundays and holidays 10 cents per hour extra to be paid.

One day off every eight days in regular rotation.

Wages per hour for motormen and conductors: first year 46 cents; second year 48 cents; third, fourth and fifth year 54 cents; over five years' service 58 cents.

Operators instructing new employees to be paid 10 cents per hour extra. Employees with under three years' service to pay half cost of uniforms. After three years' service, uniforms to be supplied by the company.

In case of a serious accident or a number of accidents in which an employee is considered at fault the case will be referred to a committee consisting of the Superintendent of the Tramways and the Company's claim agent, and two representatives of employees, the report of whose investigation will be submitted to the manager for consideration.

*Street Car Maintenance (Car House and Machine Shop Employees)*

Hours: regular hours for day workers to be 8 per day and 4 on Saturdays, and an 8-hour shift with 20 minutes off for lunch for night workers, but when either day or night workers are regularly required to work longer hours, straight time only to be paid.

Overtime: time and one-half; double time for work on Sundays and holidays except for regular night men. If called for duty after hours and before midnight, at least three hours' pay to be given; if called after midnight, at least four hours' pay at regular rate.

Men engaged in cleaning, sanding and greasing tracks and general attendance work will be paid 42 cents per hour on week days and 50 cents per hour on Sundays and holidays. Regular hours for these men to be 8 per day, 7 days per week.

Wages per hour for car house employees: first-class carpenters 69 cents, second-class carpenters 63 cents, third-class carpenters 57 cents, carpenters' helpers 50 cents, first-class painters 69 cents, second-class painters 63 cents, third-class painters 57 cents, head repairmen 69 cents and 74 cents, armature winders 74 cents, special repairmen and first-class pitmen 65 cents, first-class pitmen 63 cents, second-class pitmen 58 cents, general utility men (experienced) 50 cents, car cleaners 50 cents, general cleaners 48 cents.

Wages per hour for machine shop employees: first-class machinists 74 cents, second-class machinists 68 cents, third-class machinists 60 cents, welders 74 cents, blacksmiths 65 cents, blacksmiths' helpers 53 cents.

*Power Receiving, Operating and Distributing Department (Power House "Line and Meter Employees")*

Hours: a regular day's work to be 8 hours with 4 hours on Saturdays. Regular hours for troublemen to be from 2 p.m. to 11 p.m. with one hour off for lunch, 7 days per week. Regular hours for switchboard operators to be 8 per day, 7 days per week, revolving shift.

Overtime: time and one-half. Any employee, except regular 7-day men, to be paid double time for work on Sundays and holidays, with the exception that any lineman relieving a troubleman or any electrician relieving a switchboard operator will work at straight time.

If called for duty after hours and before midnight, 3 hours' pay to be guaranteed; if called after midnight, 4 hours.

Wages per hour: first-class linemen 74 cents, second-class linemen 68 cents, third-class linemen 60 cents, first-class groundmen 53 cents, second-class groundmen 47 cents, troublemen 74 cents, meter inspector 74 cents, first-class metermen 68 cents, second-class metermen 60 cents, third-class metermen (with over one year's service) 53 cents, lamp repairmen 74 cents, switchboard operators 63 cents, first-class electricians 74 cents, second-class electricians 68 cents, third-class electricians 60 cents.

Employees driving automobiles and horse-drawn vehicles in addition to other duties to be paid one hour's additional work more than other men on same machine or vehicle. This does not apply to troublemen or metermen.

*Steam Department*

Hours: 8 per day, 4 on Saturdays; firemen to work 8 hours per day, 7 days per week, revolving shift.

Overtime: time and one-half. Except for regular 7-day men and men relieving firemen, double time for work on Sundays and holidays. Any helper or ash handler doing firemen's duties to be paid standard wage of firemen, but any employee acting as fireman on Sundays or holidays to be paid straight time only.

An employee called for duty outside regular hours to be guaranteed three hours' pay; if called after midnight four hours' pay.

Wages per hour: masons and boiler repairmen 63 cents, senior steam helpers 61 cents, junior steam helpers 47 cents, ash handlers 50 cents, firemen 61 cents, assistant firemen 54 cents.

*Gas Department Employees*

Hours: revolving shift men to work 8 hours per day, 7 days per week; other employees 8 per day, 4 on Saturdays. Chauffeurs and teamsters to be given one hour additional per day to regular time and will be required to give proper attention to their teams or cars.

Overtime: time and one-half; except 7-day men, all employees to be paid double time for work on Sundays and holidays.

Wages per hour: first-class fitters 74 cents, second-class fitters 65 cents, fitters' helpers 58 cents, meter repairmen 58 cents, meter repairmen's helper 47 cents, blacksmith 63 cents, skilled labour 48 to 53 cents, common labour 42 to 47 cents, leading firemen 65 cents, firemen 57 cents.

**Transportation and Public Utilities: Electricity and Gas**

**HALIFAX, N.S.—THE NOVA SCOTIA LIGHT AND POWER COMPANY LIMITED AND THEIR EMPLOYEES.**

Employees of this company engaged in electrical distribution, power-house and in the gas department are included in the agreement summarized above under the heading of "Street and Electric Railways."

**Transportation and Public Utilities: Telegraphs and Telephones**

**MANITOBA TELEPHONE SYSTEM AND THEIR EMPLOYEES OF THE PLANT DEPARTMENT.**

Memorandum of working conditions and schedule of wages to be in effect from May 1, 1929, from year to year, unless notice in writing in given 30 days before May 1, of any year.

No discrimination to be made against any employee on account of his membership or activities in any organization and a committee of employees will be received at any time by appointment by representatives of the Manitoba Telephone System.

In this memorandum City refers to Greater Winnipeg or Brandon; Exchange means any other exchange with 1,000 subscribers or over.

Hours: on city and exchange work 8 per day and 4 on Saturdays, a 44-hour week; on provincial construction and maintenance a 48-hour week (This does not apply to district men and

troublemen). For shift work, the 44-hour week to prevail. Employees held waiting orders for four hours or less to be paid for four hours; for over four hours waiting time, to be paid for eight hours. When required to report on Sundays or holidays at least 2 hours' time to be paid. If called to work outside regular hours at least 2 hours' time at overtime rate to be paid.

Overtime: on City and Exchange work, time and one-half to midnight; from midnight to 8 a.m., and work on Sundays and holidays, double time.

Employees on monthly salary are only to be paid for overtime on the emergency order of the Superintendent.

After one year's continuous service one week's holiday with pay; after two years' service, two weeks' holiday with pay, after five years' service one week's sick leave with pay allowed each year; after ten years' service, two weeks' sick leave per year.

Travelling time during working hours to be paid for at regular rate with time and one-half for travelling time on Sundays and holidays. Travelling time over normal working hours not to be paid for.

A foreman is an employee who has charge of three or more journeymen, switchmen or journeymen linemen, apprentices or labourers. A sub-foreman is an employee assisting the foreman in the direction of the work.

A journeyman is an employee who has served four years at one or more branches of practical telephone work covered by this memorandum.

Apprentices must be between the ages of 17 and 22. They are to serve four years. Not more than one apprentice allowed for every four journeymen as long as journeymen are available. If any apprentice not considered competent, the annual increase may be deferred two months.

Seniority to be considered in promotions and in lay-offs. Employees on monthly salary to give or be given two weeks' notice of resignation or dismissal.

Any employee, who believes he has been unjustly dealt with, may have his case investigated by a committee of employees who may appeal to the Superintendent, or if his decision is unsatisfactory, to the Commissioner.

Wages per hour for apprentices: inside apprentices 20 cents for first six months, 25 cents for second six months, 35 cents for second year, 45 cents for third year, 60 cents for fourth year; outside apprentices (Winnipeg) 45 cents for first six months, 55 cents for second six months, 60 cents for second year, 70 cents for third year; outside apprentices (Province) 45 cents for first year, 53 cents for second year, 62 cents for third year.

Wages per hour for journeymen: rackmen and installers—over four years 90 cents, under four years 88 cents; combination and pay station repairmen—over four years 94 cents, under four years 92 cents; test clerks and P. B. X. installers—over four years 92 cents, under four years 90 cents; P. B. X. inspectors—over four years 94 cents, under four years, 92 cents; P. A. X. inspectors—over four years 96 cents, under four years, 94 cents; switchmen—over four years 98 cents, under four years 96 cents; shopmen grade "A"—over four years 94 cents; shopmen grade "B"—over four years 91 cents, under four years 87 cents; order gang foremen—97 cents; journeymen cable splicers, City, out-

side—over four years 98 cents, under four years 96 cents; linemen—permanent 92½ cents, temporary 90 cents; foreman—Province, outside—line foremen 85 cents, sub-foremen 80 cents; travelling switchboardmen 82 cents; journeymen, Province—outside-cable splicers 83 cents, linemen 76 cents.

Wages per month: office foremen, City, \$207.50; office foremen, Province, \$178; chief tester, \$202.50; installation foremen \$205; P. B. X. foremen \$200; power plant attendant \$170; power plant inspector \$180; toll wire chief, \$207.50; toll test clerk \$185; Morse equipment man \$190; shop foreman \$195; cable foreman, City, outside, \$200; construction gang foreman, City, outside, \$195; other foremen, City, outside, over four years, \$190; districtmen \$160; district troublemen \$155.

#### WINNIPEG, MANITOBA.—MANITOBA TELEPHONE SYSTEM AND THE INDEPENDENT ORDER OF TELEPHONE OPERATORS.

Memorandum of working conditions and schedule of wages governing the Traffic Department, Winnipeg, and certain Plant Department employees, to be in effect from May 1, 1929, from year to year unless either party gives notice 30 days before May 1, of any year.

No discrimination to be made against any employee on account of union membership or activities; and at all times the Manitoba Telephone System will receive by appointment a committee of employees.

Hours: 8 per day, a 48-hour week, which may be reduced to 7 per day for a period of not over 8 weeks if necessary to reduce staff. Operators to be entitled to one day off in seven. Routine test clerks to work 44 hours per week according to regulations governing City Plant Employees. Day operators are not to be required to report before 7.30 a.m. on week days or before 8 a.m. on Sundays; night operators to be on duty from 11 p.m. to 7.30 a.m. on week days and to 8 a.m. on Sundays, and shall be allowed two hours' rest. Employees working 48 hours per week to be granted one half day off per month with pay in five months, November to March inclusive.

Overtime: time and one-half, including work on legal holidays.

Operators to be given two weeks' holidays each year with pay and they will be entitled to one week's sick leave with pay after one year's service and two weeks' sick leave after two years' service if necessary.

Promotions to be made in accordance with seniority and efficiency.

Any employee who believes herself unjustly dealt with, may have her case investigated by a committee of employees or by a committee of the union, which committee may appeal to the superintendent, or to the commissioner.

Probationers to be paid \$2 per day during school period, if appointed.

Wages per month for operators, city and suburban exchanges.—Information: \$55 for first three months, \$57.50 for second three months, \$60 for second six months, \$62.50 for third six months, \$65 for fourth six months, \$67.50 for fifth six months, \$70 for sixth six months, \$72.50 after three years, \$77.50 after four years.

Wages per month for operators, city and suburban exchange.—Toll: \$55 for first three months, \$57.50 for second three months, \$62.50

for second six months, \$67.50 for third six months, \$70 for fourth six months, \$72.50 for fifth six months, \$75 for sixth six months, \$77.50 after three years, \$82.50 after four years, \$85 after six years, \$87.50 after seven years, \$90 after eight years. Long Distance Rate Clerks same as toll operators.

Wages per month for supervisors and night chief operators.—Information: \$87.50 for first year, \$92.50 for second year, \$97.50 for third year;—Toll: \$92.50 for first year, \$97.50 for second year, \$102.50 for third year.

Wages per month for assistant chief operators.—Information: \$97.50 for first year, \$102.50 for second year, \$107.50 for third year;—Toll: \$102.50 for first year, \$107.50 for second year, \$112.50 for third year.

Wages per month.—Information service clerks: \$75 for first year, \$80 for second year, \$85 for third year, \$90 for fourth year; Summary clerks (new employees): \$80; Complaint clerks: \$75 for first year, \$80 for second year, \$85 for third year, \$90 for fourth year; Routine test clerks: \$70 for first six months, \$75 for second six months, \$80 for third six months, \$85 for fourth six months, \$90 for third year.

#### PROVINCE OF MANITOBA EXCEPT WINNIPEG.—

##### MANITOBA TELEPHONE SYSTEM-PROVINCIAL OPERATORS' SCHEDULE.

Rules and schedule of wages governing operators at Provincial Exchanges in effect from May 1, 1929:—

Hours: for day operators 48 hours per week except in those weeks in which a legal holiday occurs, when hours will be 40 per week; night operators who can sleep most of the night will be on duty 10 hours per night, a 60-hour week; night operators at exchanges where regular relief is provided will be on duty 10 hours per night, but will have two hours' rest, making a 48-hour week.

After one year's service, operators on the permanent staff will receive two weeks' holidays with pay and six days' sick leave with pay each year, if necessary.

In making promotions, merit and ability being equal, seniority will be considered.

Inexperienced operators to be paid \$45 per month for first month while learning.

Wages per month for class "A" exchanges (Brandon): day and night operators \$54 for first three months, \$57 for second three months, \$59.50 for second six months, \$62 for third six months, \$64.50 for fourth six months, \$67 for fifth six months, \$69.50 for sixth six months, \$72 after three years, \$77 after four years, supervisors and night chief operators \$87, assistant chief operators \$92 during first six months, \$97 after six months; automatic test clerks \$84.50.

Wages per month at class "B" exchanges (Portage la Prairie): day and night operators \$52 for first six months, \$54 for second six months, \$56 for second year, \$61 for third year, \$66 after third year; supervisors \$73.50, assistant operators \$83.50.

Wages per month at class "C" exchanges (three or more operators including chief operator): day operators \$50 for first six months, \$52 for second six months, \$54 for second year, \$59 for third year, \$64 after three years; night operators \$46 for first six months, \$48 for second six months, \$50 for second year, \$55 for third year, \$60 after three years; regular relief operators \$50; chief operators, where less than

five operators, including chief operator, but not including relief operator, are employed, \$75; chief operators where five or more operators, including chief operator, but not including relief operators, are employed, \$80; chief operator where seven or more operators, including chief operators, but not including relief operators, \$82.50.

Wages per month at class "D" exchanges (agent chief operators not exceeding 200 subscribers' stations): up to and including 100 subscribers \$110, 101 to 130 subscribers \$125, 131 to 160 subscribers \$150, 161 to 200 subscribers \$175. Agent chief operators in class "D" exchanges to provide their own staff under the jurisdiction of the district traffic officer, who will see that no employee is underpaid, and the chief operator may not retain for herself more than chief operator's wage at class "C" exchange.

#### Service: Public Administration

REGINA, SASKATCHEWAN.—CIVIC WAGE SCHEDULE FOR THE CITY OF REGINA FOR THE YEAR 1929.

##### Water Works

Wages per month: engineers at pumping station \$175, meter repairers \$115 and \$150, turn on men \$115 and \$133.33. Wages per hour: sub-foreman 67 cents, skilled labourers 50 and 55 cents, labourers 40 and 45 cents, team 80 cents, truck driver 52½ cents.

##### Health Department

Wages in street cleaning branch: foreman 47½ cents per hour, labourers 42½ cents per hour, sweepers' operators \$5.50 per day. Wages in scavenging branch: foremen 55 and 47½ cents per hour, teamsters 47½ cents for day work and 50 cents for night work, truck drivers 52½ cents, labourers 42½ cents. Wages of labourer at disposal grounds 42½ cents. Wages per hour at pail washing shed: foreman 52 cents for night work and 49½ cents for day work, labourers 45 cents for night work and 42½ cents for day work. Wages at incinerator: engineer \$145 per month, fireman 55 cents per hour, labourer 42½ cents. Wages per hour at garbage transfer station: foreman labourer 47½ cents, labourer 42½ cents. Wages per hour at stables and garages: night stableman 50 cents per hour, day stableman 47½ cents, carpenter on repair work 73 cents, blacksmith labourer 50 cents.

Hours and overtime: Regular hours 9 per day, 5 on Saturdays, a 50-hour week. Statutory holidays paid for. No higher rate for ordinary overtime.

##### Police Department

Wages per month: constables \$120 to \$155, sergeants \$167 and \$177, detectives \$177, patrol drivers \$150.

Uniforms are provided and an annual vacation of two weeks is allowed.

##### Fire Department

Wages per month: firemen—first year \$110, second year \$125, third year \$132, fourth year \$137; captains \$142 to \$157, electrician \$150, motor mechanic \$170, telephone operators \$100 to \$120.

The Fire Department is operated on the two platoon system.

An annual vacation of 14 days is allowed and pay while on sick leave.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, OCTOBER, 1929

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being slightly higher, while the Dominion Bureau of Statistics index number of wholesale prices declined somewhat.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.63 at the beginning of October, as compared with \$11.64 for September; \$11.28 for October, 1928; \$10.99 for October, 1927; \$10.93 for October, 1926; \$10.89 for October, 1925; \$10.31 for October, 1924; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. Increases occurred in the prices of eggs, milk, butter, bread, prunes, and sugar, while the prices of beef, mutton, fresh and salt pork, bacon, cheese, evaporated apples and potatoes were lower. Including the cost of fuel and rent with that of food the total budget was \$21.96 at the beginning of October, as compared with \$21.90 for September; \$21.52 for October, 1928; \$21.18 for October, 1927; \$21.14 for October, 1926; \$21.11 for October, 1925; \$20.67 for October, 1924; \$21.16 for October, 1923; \$20.87 for October, 1922; \$22.01 for October, 1921; \$26.46 for October, 1920; \$26.92 for July, 1920 (the peak); \$21.48 for October, 1918; and \$14.48 for October, 1914. Fuel was somewhat higher, due mainly to increases in the prices of coal. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again slightly lower at 96.7 for October, as compared with 97.3 for September; 95.4 for October, 1928; 97.2 for October, 1927; and 98.1 for October, 1926. One hundred and twelve prices quotations declined, forty advanced and three hundred and fifty were unchanged.

In the grouping according to chief component materials seven of the eight main groups were lower while one advanced. The Vegetables and Vegetable Products group was again substantially lower, due to decreases in the prices of grains, vegetables, coffee and rubber. The other groups which declined were: the Fibres, Textiles and Textile Products group, due to lower prices for raw cotton, raw jute, hessian, sisal, hemp, raw silk

and raw wool; the Wood, Wood Products and Paper group, due to decreases in the prices of certain lines of lumber; the Iron and its Products group, because of lower quotations for black steel sheets; the Non-Ferrous Metals and their Products group, due to lower prices for copper, lead, tin and zinc; the Non-Metallic Minerals group, due to declines in the prices of gasoline, kerosene and certain building supplies, which more than offset advances in the prices of coal; and the Chemicals and Allied Products group, due mainly to lower prices for copper sulphate.

In the grouping according to purpose consumers' goods were slightly lower, increases in the prices of fish, milk, eggs and coal being more than offset by decreases in the prices of coffee, fresh fruits, fresh meats and gasoline. Producers' goods were also lower, due mainly to lower prices for materials for the textile and clothing industries, for the leather goods industries, for the metal working industries, for the meat packing industries and for milling and other industries. Miscellaneous producers' materials were slightly higher.

In the grouping according to origin raw or partly manufactured goods were lower, due mainly to lower prices for grains, livestock, raw cotton, raw wool and crude rubber. Fully or chiefly manufactured goods also declined, due to lower prices for fuel oil, cured meats, cotton and wool goods and lumber. Domestic farm products, articles of forest origin and articles of mineral origin were lower, while articles of marine origin advanced.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of October, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each

month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of

the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1927, and monthly since January, 1928. As stated in the above mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141·4; 1905, 135·6; 1910, 118·1; 1911, 113·4; 1912, 109·1; 1913, 100·0; 1914, 96·5; 1915, 90·8; 1916, 87·6; 1917, 87·2; 1918, 85·8; 1919, 85·8; 1920, 84·2; 1921, 84·9; 1922, 82·7; 1923, 79·5; 1924, 79·2; 1925, 85·6; 1926, 75·6; 1927, 73·4; 1928, 71·7; 1929, 71·4.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to

(Continued on page 1298)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318) and bringing the figures down to 1929. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1, 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Beef prices continued toward lower levels, sirloin steak being down from an average price of 37.6 cents per pound in September to 36.4 cents in October; round steak from 32.4 cents per pound to 31.6 cents; rib roast from 29.6 cents per pound to 29 cents; and shoulder roast from 23.3 cents per pound to 22.7 cents. Decreases were reported from most localities. Veal was slightly higher at an average price of 24.9 cents per pound. Mutton declined from an average price of 31.6 cents per pound in September to 31 cents in October. Both fresh and salt pork were lower, the former being down from 32.6 cents per pound to 31.4 cents and the latter from 28.6 cents per pound to 27.7 cents. Bacon averaged 40.9 cents per pound in October, as compared with 41.3 cents in September. In fresh fish cod steak and halibut were slightly higher. Lard was slightly higher, averaging 21.7 cents per pound.

Eggs showed a substantial seasonal advance, fresh being 51.3 cents per dozen in October, as compared with 47.4 cents in September and 39.4 cents in August, and cooking averaging 45.1 cents per dozen in October, 41.5 cents in September and 34.8 cents in August. Increases were reported from practically all localities. Milk was slightly higher in the average at 12.4 cents per quart. Higher prices were reported from St. Hyacinthe, St. John's, Thetford Mines, Montreal, Ottawa, Kingston, Belleville, Peterborough, Hamilton, Guelph, Owen Sound, Sault Ste. Marie, Port Arthur, Fort William, Winnipeg, Calgary and Lethbridge. Butter was higher in most localities, dairy being up from an average of 41.8 cents per pound in September to 42.6 cents in October and creamery from 46 cents per pound

\*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 18%; Sundries 20%.

in September to 46.9 cents in October. Cheese was slightly lower at an average of 33 cents per pound.

Higher prices for bread were reported from Quebec, Belleville, Niagara Falls, St. Catharines, and New Westminster. Flour was unchanged at an average price of 5.4 cents per pound. Beans were slightly lower, averaging 11.8 cents per pound. Onions declined from 7 cents per pound in September to 5.7 cents in October. Potatoes were slightly lower at an average price of \$2.21 per bag in October, as compared with \$2.25 in September. Granulated sugar was up from an average of 7.1 cents per pound to 7.2 cents. Anthracite coal was up from \$16.05 per ton in September to \$16.15 in October. Higher prices were reported from Charlottetown, Sherbrooke, Montreal, Orillia, Toronto, Galt, Guelph, Kitchener, Woodstock and Stratford. Bituminous coal was up in the average from \$10.04 per ton to \$10.09. Coke also averaged higher at \$12.84 per ton. No changes were reported in rent.

**Wholesale Prices**

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices continued to decline No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis averaged \$1.414 per bushel as compared with \$1.495 in September. Lower prices were said to be due mainly to an upward revision in the estimate of the Argentine crop, together with increased estimates of the visible world supplies. Coarse grains, for the most part, followed the movement in wheat, western oats being down from 68½ cents per bushel to 68 cents; rye from \$1.08 per bushel to \$1.02; barley from 74.7 cents per bushel to 69.8 cents; and American corn from \$1.17 per bushel to \$1.10. The price of flax advanced from \$2.797 per bushel to \$2.869. Raw sugar at New York was up from \$2.25 per hundred pounds to \$2.31. The price of Santos coffee was down 1 cent per pound at 27½ cents. Livestock prices were, on the whole, lower, good steers at Toronto being down from \$9.35 per hundred pounds to \$9, and at Winnipeg from \$8.26 per hundred pounds to \$8.07. Veal calves at Toronto averaged \$15.26 per hundred pounds, as compared with \$16.06 in September. Hogs at Toronto were down from \$12.16 per hundred pounds to \$11.69 and lambs from \$11.70 per hundred pounds to \$11.03. The prices of beef hides declined from 13-13½ cents per pound to 12-12½ cents and calf skins from 19½-20½ cents per pound to 19-20 cents. Butter prices remained firm between 40 and 44 cents per pound for finest creamery prints. Cheese

at Montreal was 1 cent per pound higher at 22 cents. Fresh eggs at Montreal advanced from 54.4 cents per dozen to 60 cents and at other centres gains of from 1 to 9 cents per dozen were reported. Raw silk fell from \$5.60 per pound in September to \$5.40 in October. Raw wool also declined 1 to 2 cents per pound. Raw cotton at New York fell from an average price of 18.9 cents per pound to 18.5 cents. Lower quotations were reported

on certain lines of lumber. In non-ferrous metals lead prices declined from \$6.675 per hundred pounds to \$6.625; silver from 51.105 cents per ounce to 49.91 cents; zinc from \$6.74 per hundred pounds to \$6.50; and tin from 48.75 cents per pound to 46.5 cents. American anthracite coal at Toronto was 10 cents per ton higher at \$13.47. Copper sulphate was down from \$6.35 per hundred pounds to \$5.75.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

**T**HE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1913=100, was 135.8 for September, a decline of 0.1 per cent from August. A decline of 1.2 per cent in foods was due to a substantial fall in the prices of cereals and a lesser decline in meat and fish. Industrial materials showed only minor changes in the month; small declines in iron and steel and textiles were more than offset by advances in other metals and minerals and miscellaneous products.

The *Statist* index number (in continuation Sauerbeck's figures) on the base 1867-1877=100, was 112.6 at the end of September, which is the lowest index number recorded during the past fourteen years. Compared with the end of August, the total index number has fallen 1.1 per cent. Among foodstuffs, there was a marked decline in vegetable foods, chiefly in wheat, flour, oats and maize; animal foods also declined. Industrial materials showed little change from August, with the exception of a considerable decline in textiles, chiefly cotton and wool.

**COST OF LIVING.**—The index number of the Ministry of Labour, on the base July, 1914=100, was 165 at October 1, an advance of one point over the previous month. Food advanced two points owing to a seasonal increase in the price of milk and further increases in the prices of butter and eggs. These advances were partly offset by lower prices for potatoes and bacon. Rents and fuel and light were slightly higher, while clothing was lower than the previous month.

### Belgium

**WHOLESALE PRICES.**—For the month of August, the index number of wholesale prices of the Ministry of Industry, Labour and Social Welfare, was 850, a decline of 0.9 from the July level. Among the groups contributing to this decline, is food, which shows a fall of 5 per cent, and textiles with a smaller decrease. Of the 17 groups included in the compilation, eight declined, four advanced and five were unchanged.

**COST OF LIVING.**—The official index number of the cost of living for a middle class family of moderate income, on the base 1921=100, was 228.98 for September, an advance of 1.8 per cent over the previous month. With the exception of rent, all groups advanced, the most marked advance being in food.

### Denmark

**WHOLESALE PRICES.**—The index number of the Department of Statistics, on the base 1913=100, was 150 for September, showing no change from August. Declines in vegetable foods, fodder, fertilizers and textiles and clothing were offset by advances in animal foods and fuel and lubricating oil.

### Germany

**COST OF LIVING.**—The official index number of the cost of living on the base 1913-1914=100, was 153.6 for September, a decline of 0.3 per cent from the August level. The changes from August were very slight; declines in food and clothing were partly offset by advances in rent, heat and light and sundries.

### Italy

**WHOLESALE PRICES.**—The index number of the Chamber of Commerce, Milan, on the base 1913=100, was 472.31 for September, continuing the steady decline since March and being the lowest monthly index number re-

corded since 1921. The chief decline for the month was in vegetable foods.

**COST OF LIVING.**—The index number of the cost of living, Milan, on the base July, 1914=100, was 536.54 for September, a decline of 1.6 per cent from August, due principally to a decline in the food group.

### New Zealand

**WHOLESALE PRICES.**—The index number of the Census and Statistics Office, on the base 1909-1913=1,000, was 1,563 for August, an increase of 0.4 per cent over July. There were advances in foodstuffs of vegetable origin, wood and wood products and animal products, while declines were noted in textile manufactures, metals and their products and non-metallic minerals and their products.

**COST OF LIVING.**—The official index number on the base July, 1914=1,000, was 1,605 for August, as compared with 1,609 for May. Declines were shown in the groups—groceries, dairy produce, clothing, drapery and footwear and miscellaneous products; on the other hand, meat and rent were higher.

### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base

1926=100, was 97.5 for September, a decline of 0.2 per cent from August. In all groups the changes were very slight; declines were noted in farm products, metals and their products, and increases in foods, hides and leather products, fuel and lighting materials, building materials, chemicals and drugs and miscellaneous products.

The *Annalist* index number, on the base 1913=100, was 145.5 for October, a decline of 1.4 per cent from September. With the exception of fuels which advanced and chemicals which were unchanged, all groups declined.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 163.2 for September, as compared with 162.9 for August. Slight increases were shown in food, housing and fuel and light; on the other hand clothing declined and sundries were unchanged.

The index number of the Massachusetts Special Commission on the Necessaries of Life, on the base 1913=100, was 161.9 for September, as compared with 162.5 for August. Among foods, decreases were noted in meats, fish, flour and onions. The fuel and light group advanced owing to a seasonal increase in the price of anthracite coal.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1929

**T**HE number of fatal industrial accidents (including such fatalities from industrial diseases as are included with fatal accidents by workmen's compensation boards, etc.) which were recorded in the Department as occurring during the third quarter of 1929, was 454, there being 150 in July, 162 in August and 142 in September. The report for the second quarter of 1929 was given in the *LABOUR GAZETTE*, August, page 948. In the third quarter of 1928, 446 fatal accidents were recorded (*LABOUR GAZETTE*, November, 1928, page 1286). The supplementary lists of fatal industrial accidents on pages 1313-1314 contain 3 for 1928 and 36 for the first half of 1929. In this series of reports it is the custom to record industrial accidents under the dates of the occurrence of the accidents and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial workmen's compensation boards, the Board of Railway Commissioners of Canada, and certain other official sources; and from the

correspondents of the *LABOUR GAZETTE*. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the third quarter of 1929 were as follows: Agriculture, 52; logging, 29; fishing and trapping, 17; mining, non-ferrous smelting and quarrying, 52; manufacturing, 59; construction, 96; transportation and public utilities, 91; trade, 16; finance, 1; service, 41.

Of the mining accidents, 25 were in metalliferous mining, 19 were in coal mining, 4 in non-metallic mineral mining and quarrying, and 4 in "structural materials."

Of the accidents in manufacturing, 4 were in "vegetable foods, drink and tobacco," 3 in "animal foods," 2 in "textiles and clothing," 15 in "saw and planing mill products," 5 in "wood products," 2 in "pulp, paper and paper products," 17 in "iron, steel and products," 2 in "non-ferrous metal products," 3 in "non-metallic mineral products," 2 in "chemical and allied products," and 4 in "miscellaneous products."

In construction, there were 37 fatalities in "buildings and structures," 2 in "railway construction," 3 in "shipbuilding," 25 in "highway and bridge," and 29 in "miscellaneous construction."

In transportation and public utilities, there were 39 fatalities in "steam railways," 1 in "street and electric railways," 17 in "water transportation," 8 in "air transportation," 10 in "local transportation," 15 in "electricity and gas," and 1 in "telegraphs and telephones."

In trade, there were 3 fatalities in "wholesale," and 13 in "retail."

In finance, there was 1 fatality.

Of the fatalities in service, 29 were in "public administration," 4 in "recreational" 1 in "laundering, dyeing and cleaning," 1 in "custom and repair," 3 in "personal and domestic," and 2 in "professional establishments."

There was no serious disaster resulting in the loss of a very large number of lives during the period under review.

Three fishermen were drowned from a sail boat during a heavy storm on Lake Winnipeg, Man., on July 27.

Two boiler shop workers were killed at Trail, B.C., on July 31, when an acetylene gas tank exploded in the reduction plant of a mining company.

Two miners at Flin Flon, Manitoba, lost their lives on September 3, by falling down a shaft when a platform gave way.

Two labourers engaged in highway construction were killed at Guilds, Ontario, on July 27, in a collision of two trucks while returning from work.

A truck driver and a foreman employed on transmission line construction lost their lives near Thurso, Que., on August 23, when the truck in which they were riding plunged over an embankment into a river.

A captain and a scowman were drowned near Moncton, N.B., on September 5, when their scow sank.

A pilot and engineer engaged in air transportation lost their lives on September 22, when their plane crashed into Lake Manitoba, Man., in foggy weather.

Two attendants at a garage station at Winnipeg, Man., were burned to death on September 20, when a gasoline pump exploded while it was being installed.

Two firemen were killed at Winnipeg, Man., on August 12, when their fire truck overturned.

A flying officer on a forest patrol plane, and a fire fighter were killed in a plane crash on Lac du Bonnet, Man. on September 10.

It may be mentioned that during this quarter three fatalities occurred in Canadian waters which are not included in this list, owing to the fact that the men killed were employed by another country, being a sailor and a butcher on the British Steamship Athenia, who fell into holds of the ship at Montreal harbour on September 17; also a sailor on the Steamship Lady Astley who fell from a plank and was drowned while painting the ship at Montreal.

*Supplementary Lists of Accidents.*—The supplementary list of fatal accidents occurring in 1928, to be found after the main table of accidents, contains three fatalities, of which 1 was in mining, non-ferrous smelting and quarrying, 1 in manufacturing and 1 in transportation and public utilities.

One accident occurred in June, one in September, and one in December.

Concluding the lists is a supplementary list of fatal industrial accidents occurring during the first half of 1929. This includes 36 fatalities, of which 1 was in agriculture, 1 in fishing and trapping, 6 in mining, non-ferrous smelting and quarrying, 5 in manufacturing, 12 in construction, 6 in transportation and public utilities, 1 in trade, and 4 in service. Two of these accidents occurred in January, 1 in February, 2 in March, 1 in April, 10 in May, and 20 in June.

#### FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THIRD QUARTER OF 1929

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE AND STOCKRAISING—</b>				
Farmer.....	Near Chatsworth, Ont.....	July 1	.....	Thrown from wagon. Died July 19.
Farmer's son.....	Near Charlottetown, P.E.I.	" 4	14	Kicked by horse while unhitching it from wagon.
Farmer.....	Kinley District, Sask.....	" 8	About	
Farmer.....	North York Township, Ont.	" 8	54 63	Struck by lightning. Car on which he was riding from work on his farm backed into ravine.
Garden truck driver...	Pelton Crossing, Ont.....	" 9	31	Collision of train with his truck.
Farmer.....	Near Milverton, Ont.....	" 18	29	Struck by train at crossing on farm.
Farm hand.....	Near Hamilton, Ont.....	" 21	.....	Electrocuted when he touched wire fence across which high tension wire had fallen.
Farmer.....	Ste. Marthe, Que.....	" 21	30	Burned in fire that destroyed house.
Farmer's wife.....	Near Madoc, Ont.....	About July 21	.....	Gored by bull while milking cows.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THIRD QUARTER OF 1929—  
Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE AND STOCKRAISING—Contc.</b>				
Farmer	Near Lindsay, Ont.	About July 22		Struck by lightning.
Farmer	Near Stittsville, Ont.	July 22	68	Struck by broken whippetree.
Farmer	Near Belleville, Ont.	" 24	64	Fell from load of hay, under horses' feet. Died July 25.
Farmer	Wainwright, Alta.	" 27		Collision of train with his grain truck.
Farmer	Glencoe, Ont.	About July 29		Collision of taxi with his wagon.
Farmer	Miscouche, P.E.I.	July 29	64	Fell from load of hay injuring spine.
Farmer	Near Chatham, Ont.	" 31		Explosion of gasoline.
Farm hand	Near Thurso, Que.	" 31	18	Struck by falling hay fork.
Farmer	St. Pie, Que.	About July 31		Gun discharged while preparing to shoot crows.
Farmer	Near Winnipeg, Man.	Aug. 4	50	Gored by bull.
Farmer	Three Rivers, Que.	About Aug. 5	65	Kicked in abdomen by horse.
Farmer	Near Chatham, N.B.	Aug. 6	83	Killed by ram.
Gardener	Near Winnipeg, Man.	" 8	34	Injured when his truck overturned.
Farm hand	Near Breckenridge, Que.	" 9	33	Kicked in stomach by horse. Died Oct. 26.
Farmer's son	Grand Forks, B.C.	" 10	16	Thrown from wagon.
Farm hand	Near Winnipeg, Man.	" 11		Struck by lightning.
Farmer	Rivière des Prairies, Que.	" 16		Fell from load of hay.
Farmer	Near Cornwall, Ont.	About Aug. 18	35	Struck by piece of fly wheel on circular saw when it broke. Died Aug. 27.
Farmer	Niverville, Man.	Aug. 19		Crushed by tractor when it overturned. Died Aug. 20.
Farmer	Near Wingham, Ont.	About Aug. 20	62	Injured thumb—blood poisoning. Died Aug. 27.
Farm hand	Hunter River, P.E.I.	Aug. 23	23	Thrown from box car while in charge of car load of horses.
Farmer's son	Riverhill, Sask.	" 26	16	Struck by lightning.
Farmer	Near Kingston, Ont.	" 27	21	Injured when horses ran away.
Farmer	Near Saskatoon, Sask.	" 27	28	Kicked by horse. Died Aug. 29.
Farmer	Near Gracefield, Que.	" 27	60	Struck by pieces of fly wheel of gasoline engine when it broke.
Farmer	Near New Hamburg, Ont.	" 28	64	Fell from hay mow, fracturing spine. Died Sept. 5.
Farm hand	Meadows, Man.	" 29		Fell from hayrack.
Farm worker	Near Petersburg, Ont.	" 29	15	Neck broken when team ran away.
Farmer	Near Windsor, Ont.	" 29	53	Burned when tractor upset and gas tank exploded.
Farm hand	Rosedale, Alta.	Sept. 2	28	Electrocuted while repairing pump when pipe touched high tension wire.
Dairy woman	Orillia, Ont.	" 2	40	Thrown from milk rig when horse bolted.
Fruit rancher	Near Nelson, B.C.	" 4	84	Accidentally shot while weeding garden.
Farmer's son	Near Guelph, Ont.	" 7	12	Thrown in front of plough when steering gear of tractor broke.
Farmer's son	St. Joseph d'Alma, Que.	" 11	20	Killed by delayed dynamite explosion while blasting stone.
Land clearer	Near Burnaby, B.C.	" 12	50	Kicked on head by horse.
Farm hand	Chisholm, Ont.	" 16	65	Thrown from wagon when horses ran away. Fractured skull. Died Sept. 19.
Farmer	Near Melfort, Sask.	" 20	45	While moving granary it passed over him fracturing skull.
Farmer	Near Collingwood, Ont.	" 20	21	Collision of motor truck with his hay wagon.
Farmer	Near Coronation, Alta.	About Sept. 22		Crushed between tractor and thresher.
Farmer	Near St. Helen's, Ont.	" 24		Fell from apple tree while picking apples.
Farmer	Near Chatham, Ont.	" 25	65	Trampled by horse in stable.
Farm hand	Near Sovereign, Sask.	About Sept. 27	28	Trampled on by horses while fastening line.
Farmer	Fredericton, N.B.	Sept. 28	65	Injured when his team ran away.
<b>LOGGING—</b>				
Logger	Hansard Lake, B.C.	July 6	38	Struck by windmill. Died July 18.
Boomer	Near Port Arthur, Ont.	" 13	22	Fell from boat while booming logs and drowned.
Logger	Halfway Road, B.C.	" 15	27	Log rolled over him.
Logger	Near Nanaimo, B.C.	" 15	57	Struck by falling limb. Died July 16.
Faller	Cumberland, B.C.	" 20	60	Struck by falling tree.
Contractor	Lumberton, B.C.	" 20	20	Struck by falling tree.
Logger	Englewood, B.C.	" 26	48	Speeder collided with locomotive. Died July 29.
Boom man	Chemainus, B.C.	Aug. 3	22	Log rolled over him while loading logs.
Logger	Near North Bay, Ont.	" 7	15	Fell from log boom and drowned.
Logger	Whonnock, B.C.	" 12	28	Struck by log. Fractured skull. Died Sept. 2.
Logger	Wahkana Bay, B.C.	" 13	71	Log rolled on him. Died Aug. 20.
Rigger	Boulder Creek, B.C.	" 14	About 30	Caught by flying cable which broke his neck. Log fell on him.
Rigging slinger	Halfway River, B.C.	" 16	47	Log fell on him.
Hook tender	Hardy Inlet, B.C.	" 17	23	Fell under tractor.
Logger	Near Golden Lake, Ont.	" 17	22	Fell from truck and run over while returning from work. Broken neck.
Hook tender	Ocean Falls, B.C.	" 27	32	Hit by falling limb.

<b>LOGGING—Contc.</b>				
Chokerman.....	Britannia, B.C.....	July 27	41	Struck by falling tree.
Labourer.....	Theodosia Arm, B.C.....	" 29	38	Struck by gravel car.
Logger.....	Grimsthorpe Twp., Ont.....	" 29	40	Struck by falling tree. Fractured skull.
Chokerman.....	Britannia Beach, B.C.....	Sept. 2	41	Struck by log being lifted by donkey engine.
Chokerman.....	Elk Bay, B.C.....	" 4	28	Fractured skull. Died Sept. 5.
Logger.....	Halberg, B.C.....	" 4	About	
Logger.....	Near Three Rivers, Que.....	" 17	About	45 Struck by falling timber.
General hand.....	Near Waying, Ont.....	" 18	35	Struck by falling tree.
Logger.....	Thor Lake, Ont.....	" 20	31	Struck by falling tree. Fractured skull.
Logger.....	Elk Bay, B.C.....	About	44	Struck by falling tree.
Logger.....	Keefers, B.C.....	Sept. 21	.....	Struck by falling tree.
Logger.....	Alert Bay, B.C.....	Sept. 27	42	Drowned from raft.
Logger.....	Alert Bay, B.C.....	" 27	25	Burned when gasoline donkey caught fire.
Logger.....	Turgeon, Que.....	" 30	37	Struck by falling tree. Fractured skull.
<b>FISHING AND TRAPPING—</b>				
Trapper.....	North of Roberval, Que.....	About	.....	
		July 10	19	Perished from hunger after having been lost in woods.
Fisherman.....	Skeena River, B.C.....	July 10	.....	Drowned.
Fisherman.....	Smiths Inlet, B.C.....	" 14	.....	Drowned while taking in net.
Fisherman.....	Near Bucetouche, N.B.....	" 16	22	Drowned while fishing lobster traps.
Fisherman.....			38	
Fisherman.....	Lake Winnipeg, Man.....	" 27	21	Drowned from sailboat during heavy storm.
Fisherman.....			25	
Trapper.....	Kapusking, Ont.....	" 30	39	Drowned when his canoe upset.
Fisherman.....	Off Vancouver Island, B.C.....	About	.....	
		Aug. 3	.....	Fell overboard and drowned.
Fisherman.....	Haysport, B.C.....	" 3	.....	Fell from boat and drowned.
Fisherman on schooner	Canso, N.S.....	" 10	About	Fell from schooner and drowned.
			42	
Fisherman.....	Near Steveston, B.C.....	" 18	30	Fell from fishing boat and drowned.
Fisherman.....	Port Alberni, B.C.....	" 19	35	Fell overboard and drowned.
Fisherman.....	Digby Island, B.C.....	" 20	About	
			52	Drowned from his trolling boat.
Fisherman.....	Ladner, B.C.....	" 27	23	Drowned when his boat was rammed by ferry.
Fisherman.....	Rabbit Point, Man.....	Sept. 19	.....	Drowned when his fishing lorrie upset in rough water.
Farmer working on fishing tug.....	Lake Winnipeg, Man.....	" 22	45	Fell in lake and drowned.
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>				
<i>Metalliferous Mining—</i>				
Locomotive fireman.....	Coniston, Ont.....	July 6	33	Crushed between locomotive and car.
Teamster.....	Cold Lake, Man.....	" 10	27	Drowned while ferrying horses across lake.
Concrete worker.....	Flin Flon, Man.....	" 12	37	Fell 20 feet when scaffolding collapsed. Fractured skull.
Miner.....	Timmins, Ont.....	" 15	.....	Slipped through chute for filling ore cars.
Motorman.....	Britannia Mines, B.C.....	" 16	25	Collision of two ore trains.
Cooke.....	Near Kashabowie, Ont.....	" 25	17	Drowned.
Shift boss.....	Schumacher, Ont.....	" 27	31	Fell into ore chute and suffocated when plank gave way.
Boiler shop worker.....	Trail, B.C.....	" 31	25	Killed when acetylene gas tank exploded in reduction works.
Boiler shop worker.....			22	
Miner.....	Cobalt, Ont.....	" 30	46	Struck by falling rock. Died July 31.
Miner.....	Frood, Ont.....	Aug. 8	35	Premature explosion in mine.
Miner.....	Bidgood Mines, Ont.....	" 9	.....	Injuring during blasting operations.
Miner.....			26	
Miner.....	Flin Flon, Man.....	" 14	23	Fell 270 feet in mine.
Miner.....	Britannia Mines, B.C.....	" 27	37	Crushed by mine train.
Driller.....	South Porcupine, Ont.....	" 28	50	Silicosis. Incapacitated since July 20, 1926.
Labourer.....	Argonaut, Ont.....	" 28	22	Injured by delayed dynamite explosion. Died Aug. 29.
Labourer.....	Anyox, B.C.....	" 31	55	Chain from slag bucket fell on him.
Miner.....	Flin Flon, Man.....	Sept. 3	38	Fell down shaft in mine when platform gave way.
Miner.....			26	
Miner.....	Britannia Mines, B.C.....	" 4	30	Struck by load of steel.
Driller.....	Creighton Mine, Ont.....	" 5	24	Fell into ore pass.
Miner.....	Kirkland Lake, Ont.....	" 17	40	Silicosis. Laid off Feb. 11, 1927.
Driller.....	Stewart, B.C.....	" 21	17	Foot slipped and fell off cliff while repairing water pipe.
Crusher's helper.....	Kirkland Lake, Ont.....	" 21	46	Fell and struck head on shaft bearing while examining chute.

Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—Conc.</b>				
<i>Coal Mining—</i>				
Miner.....	Glance Bay, N.S.....	July 2	38	Crushed by fall of coal. Fractured spine. Died July 22.
Pumpman.....	Cadomin, Alta.....	" 6	62	Slipped off ladder fracturing skull.
Machine runner.....	Glance Bay, N.S.....	" 10	27	Struck by fall of coal.
Miner.....	Dominion, N.S.....	About July 15	.....	Struck by fall of stone. Broken back. Died Sept. 23.
Machine operator.....	Nanaimo, B.C.....	July 31	45	Caught in machinery. Died Aug. 5.
Miner.....	Near Edmonton, Alta.....	Aug. 13	.....	Struck by runaway coal car when cable broke. Died Aug. 18.
Miner.....	Springhill, N.S.....	" 13	46	Crushed under fall of coal.
Miner.....	Hillcrest, Alta.....	" 15	30	Crushed by fall of coal.
Donkey runner.....	Glance Bay, N.S.....	" 21	16	Clothing became caught in cable and he was whirled around drum.
Machine boss.....	Rosedale, Alta.....	" 23	38	Buried under fall of rock.
Miner.....	Glance Bay, N.S.....	" 27	27	Spine fractured in colliery over a year ago.
Miner.....	Glance Bay, N.S.....	Sept. 14	45	Crushed by fall of rock.
Miner.....	Blakeburn, B.C.....	" 16	36	Struck by runaway cars in mine.
Loader.....	Comox Mine, Cumberland, B.C.....	Sept. 23	55	Pinned against mine car while cars were being switched.
Miner.....	Canmore, Alta.....	" 24	38	Run over by truck laden with coal. Died Oct. 5 from cerebral embolism and paralysis.
Chain runner.....	Glance Bay, N.S.....	" 25	27	Struck by steel boom which was dislodged when two coal boxes left rails.
Miner.....	Blakeburn, B.C.....	" 26	40	Struck by falling rock.
Miner.....	Wayne, Alta.....	" 27	32	Injured when he slipped in washroom. Died Oct. 3.
Miner.....	Redcliff, Alta.....	" 30	.....	Injured in explosion at coal plant. Died Oct. 3.
<i>Non-metallic mineral mining and quarrying—</i>				
Driller.....	Calmont, Alta.....	July 9	.....	Block fell on his head.
Oil field worker.....	Muskegon, Ont.....	" 30	28	Burned in gas explosion. Died Aug. 5.
Oil field worker.....	Muskegon, Ont.....	Aug. 5	.....	Burned in gas explosion.
Oil driller.....	Calmont, Alta.....	" 21	22	Struck on head by swinging tool. Died Aug. 22.
<i>Structural materials—</i>				
Farmer working in gravel pit.....	Near Brantford, Ont.....	July 9	18	Crushed by falling load of gravel.
Labourer in sand and gravel pit.....	Stanford, Ont.....	Aug. 2	48	Incapacitated from paralysis and fractured spine since Dec. 29, 1927, when he fell in pit.
Worker in cement quarry.....	Montreal, Que.....	" 30	38	Crushed between shovel and arm of shovel.
Farm hand employed in gravel pit.....	Near Woodstock, Ont.....	Sept. 17	43	Pinned under truck when it upset during cave-in.
<b>MANUFACTURING—</b>				
<i>Vegetable foods, drink and tobacco—</i>				
Superintendent at sugar factory.....	Chatham, Ont.....	July 29	49	Crushed between bucket of cement and wooden pillars. Died Aug. 3.
Labourer with flour millers.....	Portage La Prairie, Man... ..	Aug. 14	25	Struck in face by cable hook while moving car of coal. Died Aug. 16.
Worker in grist mill.	St. Prime, Lac St. Jean, Que.	" 30	.....	Caught in machinery.
Worker in canning factory.....	Harrow, Ont.....	Sept. 10	20	Body mangled when caught in shaft.
<i>Animal foods—</i>				
Superintendent at creamery plant.....	Letellier, Man.....	July 23	54	Killed when boiler exploded.
Butcher with meat packers.....	Montreal, Que.....	Aug. 9	.....	Crushed by vertical drop door.
Boatman with fish packers.....	Kildonan, B.C.....	Sept. 10	.....	Drowned.
<i>Textiles and clothing—</i>				
Foreman in tent and awning factory.....	Burnaby, B.C.....	July 28	53	Burned in fire at plant caused by explosion of oil tank.
<i>Rubber products—</i>				
Rigger.....	Near Toronto, Ont.....	Sept. 26	42	Struck by falling steel jack.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THIRD QUARTER OF 1929—  
Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>MANUFACTURING—Conc.</i>				
<i>Saw and planing mill products—</i>				
Saw operator.....	Stoke Centre, Que.....	July 1	.....	Struck by piece of wood when saw broke.
Engineer.....	North Vancouver, B.C.....	" 14	45	Smothered in saw dust bin.
Planing hand.....	Lindsay, Ont.....	" 17	70	Ran sliver in hand while unloading plank. Died July 23.
Setter.....	Verner, Ont.....	" 25	36	While setting logs on carriage was thrown against circular saw and leg cut off.
Conveyorman.....	Englewood, B.C.....	" 25	58	Strain. Gangrene. Died Aug. 13.
Saw mill worker.....	Burk's Falls, Ont.....	Aug. 7	43	Struck by piece of lumber hurled from saw. Died Aug. 8.
Mill man.....	Carleton Co., N.B.....	" 13	39	Caught in saw.
Saw mill worker.....	Near Midway, B.C.....	" 14	30	Fell against saw which cut his arm off. Died Aug. 15.
Saw mill worker.....	North Vancouver, B.C.....	" 21	36	Struck by flying piece of steel when gear wheel shattered.
Mill worker.....	Saint John, N.B.....	" 22	64	Struck on head by revolving arm of winch used for hauling logs.
Teamster.....	Near Chapleau, Ont.....	" 30	.....	Thrown from wagon when team ran away.
Mechanic.....	Blind River, Ont.....	Sept. 13	50	Sleeve caught in shaft while oiling bearings.
Labourer.....	Sudbury, Ont.....	" 18	.....	Crushed between truck and box car while loading lumber. Died Sept. 21.
Rigger.....	Vancouver, B.C.....	" 20	38	Heavy piece of timber fell on him in yard.
Watchman.....	Montreal, Que.....	" 29	58	Injured when attacked while on duty. Died Oct. 21.
<i>Wood products—</i>				
Machine hand in furniture plant.....	Vancouver, B.C.....	July 5	18	Burned in explosion at plant.
Worker in box factory.....	Burnaby, B.C.....	" 29	15	Fell from plank into river and drowned.
Worker in upholstering plant.....	Kitchener, Ont.....	Aug. 3	61	Struck on head by descending elevator.
Cabinet maker.....	Toronto, Ont.....	" 20	32	Struck in stomach by a piece of wood from circular saw. Died Aug. 22.
Workman with creosote company.....	Transcona, Man.....	Sept. 27	37	Skull crushed by fall when carrying tie.
<i>Pulp, paper and paper products—</i>				
Teamster.....	Ottawa, Ont.....	Sept. 7	66	Collision of street car with his wagon. Died Sept. 18.
Deckerman.....	Iroquois Falls, Ont.....	" 22	25	Fell into deckers and drawn between couch roll and cylinder. Fractured skull.
<i>Iron, steel and products—</i>				
Worker in machinery plant.....	Renfrew, Ont.....	July 10	18	Foot crushed when heavy weight fell on him. Died of tetanus, July 28.
Crane operator.....	Hamilton, Ont.....	" 16	27	Run over by an overhead crane.
Night watchman.....	Hamilton, Ont.....	" 17	50	Fell from unloading machine on April 17, 1927, necessitating amputation of leg.
Worker in car plant.....	Trenton, N.S.....	" 18	17	Crushed between car and partition.
Steel plant worker.....	Hamilton, Ont.....	" 30	50	Struck by hook of electric crane. Died Aug. 1.
Steel plant worker.....	Hamilton, Ont.....	Aug. 1	50	Asphyxiated by gas leaking from exhaust pipe.
Steel worker.....	Toronto, Ont.....	" 6	25	Knocked down by truck injuring head. Infection. Died Aug. 17.
Machine shop worker.....	Montreal, Que.....	" 8	63	Fell from ladder fracturing skull. Died Aug. 12.
Worker in tool factory.....	Galt, Ont.....	" 14	45	Fell and struck head on iron lathe base, fracturing skull.
Steel plant worker.....	Sydney, N.S.....	" 16	.....	Burned by fall of hot flue dust.
Labourer.....	Toronto, Ont.....	" 31	.....	Struck while unloading steel cast from truck. Fractured skull.
Machine operator.....	Toronto, Ont.....	Sept. 5	45	Electrocuted while supervising repairs to moulding machine.
Watchman at smelting plant.....	Hamilton, Ont.....	Sept. 5	48	Electrocuted when he touched live wire which fell during fire at plant.
Labourer.....	Hamilton, Ont.....	" 18	.....	Collapsed while working near blast furnace.
Labourer.....	Sydney, N.S.....	" 21	22	Fell from pipe while cleaning flue. Concussion.
Steel worker.....	Montreal, Que.....	" 26	40	Injured by fall in plant.
Ladleman's helper.....	Sault Ste. Marie, Ont.....	" 26	25	Severely burned when ladle of molten steel tipped and splashed on him. Died Sept. 28.
<i>Non-ferrous metal products—</i>				
Assembler.....	Toronto, Ont.....	July 5	50	Crushed when tank fell on him.
Welder in aluminum mfg. plant.....	Oakville, Ont.....	Sept. 17	21	Burned when acetylene torch exploded. Died Sept. 18.

Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MANUFACTURING—Con.</b>				
<i>Non-metallic mineral products—</i>				
Foreman in cement factory.....	Point Anne, Ont.....	July 30	44	Fell while walking on cement floor. Died Aug. 27.
Power house worker at oil refinery.....	Montreal, Que.....	Aug. 22	30	Electrocuted when he touched high tension wire.
Worker in gypsum plant.....	Caledonia, Ont.....	Sept. 18	32	Crushed by falling slab of rock. Died Sept. 19.
<i>Chemical and allied products—</i>				
Gas worker.....	Vancouver, B.C.....	Aug. 19	.....	Burned when fire broke out in gas plant.
Electrician with fertilizer manufacturers.....	Niagara Falls, Ont.....	" 20	27	Gas explosion while installing pipe at plant.
<i>Miscellaneous products—</i>				
Conveyor operator with manufacturers of alloys and electrodes.....	Welland, Ont.....	July 15	38	Caught in large belt.
Worker in electric plant.....	St. Catharines, Ont.....	" 25	64	Killed when car crashed into transformers which he was preparing to mount.
Millwright helper with auto wheels and rims manufacturers.....	Windsor, Ont.....	Aug. 20	14	Fell 15 feet from ladder. Fractured skull. Died Aug. 22.
Employee of sewing machine factory.....	Thurso, Que.....	" 27	.....	Caught in circular saw.
<b>CONSTRUCTION—</b>				
<i>Buildings and structures—</i>				
Carpenter with roofing contractor.....	Topping, Ont.....	July 1	46	Fell from roof of barn. Died July 2.
Labourer.....	Montreal, Que.....	" 3	22	Fell from scaffold.
Engineer.....	Hamilton, Ont.....	" 3	.....	Fell in front of mixer while moving same. Died July 4.
Labourer.....	Montreal, Que.....	" 6	24	Crushed by elevator.
Labourer.....	Toronto, Ont.....	" 12	26	Injured while working on hoist. Died July 16.
Carpenter.....	Halifax, N.S.....	" 16	29	Thrown from building when beam fell. Died July 19.
Labourer.....	Montreal, Que.....	" 16	40	Wall fell on him fracturing skull.
Carpenter.....	Calgary, Alta.....	" 19	45	Crushed by falling timbers.
Carpenter.....	North Toronto, Ont.....	" 19	About 55	Fell 25 ft. from building. Died Aug. 24.
Labourer.....	Montreal, Que.....	" 19	31	Hoist on which he was working collapsed.
Foreman carpenter.....	Quebec, Que.....	" 20	76	Fell from scaffold.
Night watchman.....	Montreal, Que.....	Aug. 1	60	Smothered when bags of cement fell on him.
Carpenter.....	Montreal, Que.....	" 1	67	Fell from ladder while painting house.
Plasterer.....	Montreal, Que.....	" 9	.....	Fell from third storey window, fracturing skull.
Labourer.....	Montreal, Que.....	" 10	35	Struck in stomach by car lever. Died Aug. 11.
Bricklayer.....	Montreal, Que.....	Aug. 14	20	Fell from building.
Chimney builder.....	Montreal, Que.....	" 15	48	Electrocuted when he touched live wire and fell to pavement.
Labourer.....	Montreal, Que.....	" 15	23	Fell from building.
Coal and wood dealer engaged at excavation work.....	Vancouver, B.C.....	" 17	.....	Premature explosion during blasting operations.
Labourer.....	Buckingham, Que.....	" 19	23	Foundation collapsed during excavation work.
Carpenter.....	Dryden, Ont.....	" 21	57	Fell from barn striking head on stone. Died Aug. 23.
Plasterer.....	Vancouver, B.C.....	" 23	49	Fell from scaffold when it collapsed. Fractured skull.
Carpenter.....	Essondale, B.C.....	" 30	35	Fell from scaffold.
Labourer.....	Toronto, Ont.....	Sept. 3	43	Fell one floor in new building. Died Sept. 10.
Painter.....	Montreal, Que.....	" 4	74	Fell from scaffold fracturing skull.
Roofer.....	Toronto, Ont.....	" 5	54	Fell from roof of house fractured skull. Died Sept. 7.
Sheet metal worker.....	Weston, Ont.....	" 6	.....	Fell from ladder fracturing neck. Died Sept. 25.
Structural steel worker.....	Vancouver, B.C.....	" 11	31	Fell three floors through planking of building. Died Sept. 15.
Labourer.....	Donnacona, Que.....	" 14	48	Electrocuted when he came in contact with live wire.
Contractor.....	Ottawa, Ont.....	" 14	47	Fell from scaffold when support gave way.
Carpenter.....	Bow Island, Alta.....	" 17	68	Fell from roof of building injuring head. Died Sept. 21.
Painter.....	Winnipeg, Man.....	" 17	31	Fell from ladder. Died Sept. 18.

<i>Buildings and Structures</i>				
<i>—Conc.</i>				
Structural steel worker.....	Copper Cliff, Ont.....	Sept. 19	37	Crushed under steel beam when it fell from hoisting crane.
Iron worker.....	Montreal, Que.....	" 21	32	Fell from 40 ft. scaffold when he lost his balance.
Labourer.....	Prescott, Ont.....	" 23	25	Fell into water and drowned.
Mechanic.....	Hamilton, Ont.....	" 26	.....	Fell 50 ft. from temporary elevator shaft.
Labourer.....	Toronto, Ont.....	" 27	44	Fell 34 ft. from scaffold.
<i>Railways—</i>				
Tie placer.....	Sudbury, Ont.....	July 27	28	Run over by car.
Painter.....	Churchill, Man.....	Aug. 11	.....	Struck by train.
<i>Shipbuilding—</i>				
Engineer's assistant..	Midland, Ont.....	July 11	69	Electrocuted while carrying an electric trailer.
Welder.....	Vancouver, B.C.....	Aug. 15	55	Electrocuted when he fell into harbour with electric drill.
Labourer.....	Midland, Ont.....	" 19	49	Injured when he fell 30' from staging. Died Sept. 2.
<i>Highway and Bridge—</i>				
Farmer operating grader.....	Near Radisson, Sask.....	July 3	.....	Thrown from seat of road grader when it struck a stone. Broken neck.
Engineer.....	Great Central, B.C.....	" 17	37	Struck by pile-driver hammer.
Labourer.....	Near Lacelle, Que.....	" 9	17	Fell from stand and rolled under wheels of steam shovel.
Structural iron worker.....	Near Brandon, Man.....	" 20	48	Killed when car in which he was returning from work overturned.
Road grader operator	Kamloops, B.C.....	" 25	26	Injured when road grader passed over him. Died Sept. 12.
Labourer.....	Kenora, Ont.....	" 25	22	Injured while loading rock on wagon. Pneumonia. Died Sept. 4.
Superintendent.....	Restigouche, N.B.....	" 26	39	Injured during blasting operations. Died July 29.
Labourer.....	Guilds, Ont.....	" 27	22	Collision of two trucks while returning from work.
Labourer.....	Near McAdam, N.B.....	Aug. 8	52	Killed in dynamite explosion following delayed action of fuse.
Supervisor.....	Near McAdam, N.B.....	" 8	56	Injured in dynamite explosion following delayed action of fuse.
Bridgeworker.....	Montreal, Que.....	" 13	20	Fell from bridge.
District engineer.....	Mud Lake, Ont.....	" 22	43	Car in which he was driving upset when it struck loose gravel.
Flagman.....	Near Parrsboro, N.S.....	Aug. 22	61	Hurled down a sixty foot embankment in auto collision.
Gravel pit worker...	Upper Clarence, N.S.....	" 27	18	Crushed when gravel caved in.
Labourer.....	Toronto, Ont.....	Sept. 5	23	Fell from derrick into harbour and drowned.
Bridge worker.....	Merriton, Ont.....	" 7	32	Fell 40 ft. from bridge.
Graderman.....	Craigellachie, B.C.....	" 9	.....	Injured knee. Died of septicemia Sept. 20.
Road paving foreman	Near Mount Forest, Ont.....	" 11	32	Pinned beneath truck when it upset.
Truck driver.....	Near Shawville, Que.....	" 13	19	Thrown from truck when it overturned on sharp curve.
Labourer.....	Sandwich, Ont.....	" 18	33	Crushed by skip of concrete mixer.
Painter.....	Vancouver, B.C.....	" 20	40	Fell 40 ft. through bridge deck, fracturing skull. Died Sept. 21.
Bridgeworker.....	Ashcroft, B.C.....	" 26	64	Fell into river from bridge and drowned.
Operator of concrete mixer.....	St. Vincent de Paul, Que....	" 27	29	Smothered under sand slide.
Truck driver.....	Moose Jaw, Sask.....	About Sept. 28	19	Pinned beneath gravel truck when it overturned.
<i>Miscellaneous—</i>				
Labourer working on canal wall.....	Peterboro, Ont.....	July 3	20	Fell into canal and drowned.
Labourer with engineering contractors.....	Near Chippewa, Ont.....	About July 6	50	Scratched arm on wire while building coffer dam. Infection. Died July 17.
Sewer pipelayer.....	Toronto, Ont.....	" 11	.....	Buried by cave-in of sewer ditch. Died July 12.
Worker on power development.....	Tuskat, N.S.....	" 12	26	Injured by delayed blast while blasting rocks. Died Sept. 15.
Labourer.....	Toronto, Ont.....	" 13	33	Buried when sewer caved in.
Labourer on dam construction.....	St. Vincent de Paul, Que....	" 13	46	Struck on head by chain when it broke.
Labourer on power construction.....	Seven Sisters Falls, Man....	" 16	32	Crushed when he fell under cars and was run over.
Labourer on sewer construction.....	Kitchener, Ont.....	" 20	About 46	Crushed when sewer caved in.

<b>CONSTRUCTION—Conc.</b>				
<b>Miscellaneous—Conc.</b>				
Well digger.....	Near Piapot, Sask.....	About July 23	.....	Buried by cave-in.
Well digger.....				
Labourer with power development con- tractors.....	Seven Sisters Falls, Man....	" 27	.....	Struck on head by falling boom.
Groundman on tele- phone line con- struction.....	Near Britannia Beach, B.C.	Aug. 1	26	Drowned while carrying supplies when boat capsized.
Labourer on sewer excavation.....	Toronto, Ont.....	" 5	35	Cave-in of sewer.
Miner engaged in dam construction..	Blairmore, Alta.....	" 9	30	Fell into reservoir and drowned.
Superintendent of dam construction..	Ear Falls, Ont.....	" 15	40	Drowned when his boat upset.
Worker on river de- velopment.....	Liverpool, N.S.....	" 15	21	Crushed when cement conveyor crashed through roof of shed.
Night watchman on scow of harbour construction com- pany.....	Oakville, Ont.....	" 15	45	Fell into harbour and drowned.
Worker on dam con- struction.....	Rivière des Prairies, Que...	" 16	22	Fell into river and drowned.
Worker on dam con- struction.....	Gabelle, Que.....	" 22	30	Fell from scaffold and drowned.
Truck driver.....	Near Thurso, Que.....	" 23	21	Drowned when truck plunged over embankment into river.
Foreman on trans- mission line con- struction.....				
Carpenter engaged in repairing locks.....	Near Kingston, Ont.....	" 27	46	Premature dynamite explosion during blasting operations.
Labourer on water main construction..	North Bay, Ont.....	" 27	46	Crushed when heavy pipe fell on him.
Labourer on water main construction..	Ville La Salle, Que.....	Sept. 10	22	Crushed when heavy pipe fell on him.
Labourer on wharf construction.....	Quebec, Que.....	" 11	.....	Fell into river and drowned while picking up driftwood.
Labourer on sewer construction.....	Hamilton, Ont.....	" 12	.....	Buried when sewer caved in.
Labourer on demol- ition of tank.....	Montreal, Que.....	About Sept. 16	27	Fell into tank fracturing skull.
Labourer on power construction.....	Port Robinson, Ont.....	" 26	.....	Truck collided with truck in which he was riding to work.
Well digger.....	Big Fish Lake, Alta.....	" 30	.....	Overcome by gas fumes while dynamite blasting in 40-foot well.
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<b>Steam railways—</b>				
Brakeman.....	Peterboro, Ont.....	July 2	25	Slipped while making coupling and car ran over him.
Switchman.....	Winnipeg, Man.....	" 4	43	Run over by freight engine.
Brakeman.....	Near Expanse, Sask.....	" 5	52	Fell between cars and was run over.
Engineer on gravel train.....	Mile 58 Flin Flon Rly., Man.	" 13	40	Collision of two trains.
Station agent.....	Near St. Florence, Que.....	" 14	.....	Fell from train.
Switchman.....	Saskatoon, Sask.....	" 17	24	Fell beneath wheels of freight train.
Roadmaster.....	Near Viking, Alta.....	" 21	57	Collision of train with speeder on which he was riding.
Yardman.....	Tadanac, B.C.....	" 21	21	Run over by train.
Labourer.....	Tracy, N.B.....	" 25	32	Collision of train with hand car on which he was riding.
Section foreman....	Near Ninette, Man.....	" 27	49	Motor car derailed.
Switchman.....	Tadanac, B.C.....	" 28	24	Crushed between coal cars while coupling same. Died Aug. 31.
Boilermaker.....	Mimico, Ont.....	" 29	45	Fell from locomotive.
Carpenter in round- house.....	Toronto, Ont.....	" 29	43	Crushed beneath falling steel beam.
Brakeman.....	Near Tweed, Ont.....	" 29	35	Crushed when train was derailed on collision with motor car.
Sectionman.....	Flanders, Ont.....	" 31	34	Fell when getting on car and was run over.
Flagman.....	Quibell, Ont.....	" 31	30	Struck by clan on work train. Skull fractured.
Conductor.....	Moose Jaw, Sask.....	Aug. 4	56	Crushed between rail and platform when he jumped from train.
Sectionman.....	Near Birdsall's, Ont.....	" 6	57	Thrown from gasoline lorry load of logs when log fell under wheels. Died Aug. 19.
Labourer.....	Rush Lake, Sask.....	" 7	25	Fell off car and run over.

Housekeeper.....	Toronto, Ont.....	July 12	67	Fell down cellar stairs fracturing skull.
Guide.....	Clyde River, N.S.....	" 19	62	Drowned when canoe capsized in sudden squall.
Apartment janitor...	Ottawa, Ont.....	Sept. 20	77	Overcome by fumes from hot water furnace.
<i>Professional establishments—</i>				
Workman at hospital	Montreal, Que.....	July 3	43	Crushed by descending elevator counterweight in shaft.
Engineer at convent.	Montreal, Que.....	Aug. 5	27	Electrocuted while making electrical repairs.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING 1928

Trade or Industry	Locality	Date	Age	Cause of Fatality
MINING, NON-FERROUS SMELTING AND QUARRYING— Prospector.....	Chesterfield inlet.....	About Sept. 1	.....	Perished in blizzard.
MANUFACTURING— Saw and planing mill products— Stable man.....	Northumberland Co., N.B..	June 25	49	Kicked by horse, embolism from fracture. Died Dec. 10.
TRANSPORTATION AND PUBLIC UTILITIES— Water transportation— Waterfront worker..	Halifax, N.S.....	About Dec. 15	49	Fell into harbour and drowned.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING FIRST HALF OF 1929

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCK RAISING— Farmer.....	Near Edmonton, Alta.....	June 4	.....	Back broken in runaway.
FISHING AND TRAPPING— Trapper.....	Bathurst Inlet, N.W.T.....	" 21	.....	Frozen when lost in blizzard.
MINING, NON-FERROUS SMELTING AND QUARRYING— Coul mining— Miner.....	Queens Co., N.B.....	Jan. 10	32	Struck by falling rock.
Miner.....	Glace Bay, N.S.....	About April 15	.....	Back broken in mine. Died Sept. 23.
Foreman.....	Michel, B.C.....	May 1	.....	Struck by auto when he jumped from truck.
Miner.....	Cassidy, B.C.....	" 10	69	Struck by cable, fractured leg, pneumonia, died July 5.
Miner.....	Glace Bay, N.S.....	June 14	31	Crushed by fall of stone.
Structural materials— Labourer in quarry..	Northumberland, Co., N.B.	May 30	55	Leg torn off when caught in shaft. Died May 31.
MANUFACTURING— Vegetable foods, drink and tobacco— Bottler in distillery..	New Westminster, B.C.....	June 24	.....	Barrel fell on him.
Saw and planing mill products— Lumber yard worker	Moncton, N.B.....	About June 25	47	Injured while at work. Died Aug. 31.
Lumber grader.....	Blind River, Ont.....	June 26	63	Slipped into slab chute fracturing leg. Died July 5.
Wood products— Labourer in furniture factory.....	Listowel, Ont.....	" 28	.....	Fell from third floor of building.
Chemical and allied products— Skilled worker in acetylene plant....	Vancouver, B.C.....	May 30	61	Explosion of gas tank. Died from cerebral hemorrhage.
CONSTRUCTION— Building and Structures— Bricklayer.....	Toronto, Ont.....	May 7	52	Hand caught under plank, infection. Died July 6.
Helper with marble contractors.....	Toronto, Ont.....	" 25	.....	Twisted leg while unloading car of marble, phlebitis. Died June 29.
Steel fitter.....	Toronto, Ont.....	June 8	42	Struck in hand by pulley wheel of hand crane when it came off. Died July 5.
Carpenter.....	Restigouche Co., N.B.....	" 12	50	Fell 25 feet and fractured skull.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING  
FIRST HALF OF 1929—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>CONSTRUCTION—<i>Conc.</i></b>				
<i>Railway—</i>				
Labourer.....	Paris, Ont.....	May 4	57	Run over by engine while unloading ties.
Labourer laying steel rails.....	North Bay, Ont.....	" 30	.....	Collapsed while at work.
Waterboy.....	Elms, Man.....	June 10	.....	Struck by train, fractured skull. Died June 12
Labourer.....	Flin Flon, Man.....	" 26	25	Injured when he jumped from ballast train.
<i>Highway and bridge—</i>				
Labourer.....	Restigouche, Co., N.B.....	" 24	70	Struck by train.
Driller.....	Victoria Co., N.B.....	" 28	61	Injured during blasting operations. Died July 15.
<i>Miscellaneous—</i>				
Labourer with marine contractors.....	Ojibway, Ont.....	" 22	28	Drowned.
Plumber engaged in cleaning sewer.....	Sydney, N.S.....	" 28	21	Burned by explosion of gas.
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<i>Steam railways—</i>				
Labourer.....	Ashcroft, B.C.....	Feb. 16	30	Bruised leg, and poisoned. Died July 16.
Master.....	Victoria, B.C.....	May 3	65	Fell down stairway, injured skull.
Trackman.....	Truro, N.S.....	June 19	44	Fell from railway car fractured spine. Died July 31.
Carman.....	Winnipeg, Man.....	" 28	52	Strain from heavy lifting. Died June 29.
<i>Water transportation—</i>				
Deck hand.....	Rigaud, Que.....	" 27	19	Fell over deck of vessel striking scow and drowned.
<i>Telegraphs and tele-phones—</i>				
Lineman.....	Glenville, N.S.....	" 26	.....	Crushed under his car when it overturned.
<b>TRADES—</b>				
<i>Wholesale—</i>				
Assembler, with plumbers' supplies Co.....	London, Ont.....	" 7	60	Wire penetrated finger while uncrating boxes, infection. Died June 29.
<b>SERVICE—</b>				
<i>Public Administration—</i>				
Teamster.....	London, Ont.....	Jan. 21	65	While unhitching horses which had broken through ice, was kicked in knee, amputation. Died July 14.
Chief of police.....	Granby, Que.....	Mar. 4	.....	Collision of auto with fire truck on which he was riding.
<i>Custom and repair—</i>				
Mechanic.....	Vancouver, B.C.....	Mar. 8	.....	Burned when his gasoline soaked clothing became ignited. Died Mar. 11.
<i>Professional Establishments—</i>				
Worker with Salvation Army.....	Toronto, Ont.....	May 27	56	Trampled by runaway team. Died May 28.

There were 8,057 accidents reported to the Workmen's Compensation Board of Ontario during the month of October, 44 of these being fatal. This is a decrease of 221 from the number during October a year ago, but an increase of 819 over the month of September this year. The benefits awarded during October amounted to \$735,736.62, of which \$602,814.83 was for compensation and \$132,921.79 for medical aid. This compares with \$707,471.31 benefits awarded during October a year ago.

These figures have, according to R. B. Morley, general manager of the Industrial Accident Prevention Associations, stirred industrial leaders to further efforts to cut the toll of accidents by an extension of the safety work being done. Additional members are being added to the field force of the Associations and an intensification of accident prevention activities in the plants will be carried out under V. L. Mummery, chief inspector.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Evidence of Experts has same value as ordinary evidence

The Supreme Court of Canada recently affirmed the judgment of the Quebec Court of King's Bench, which had reversed a decision of the Superior Court refusing to grant the claim of a workman for compensation for permanent partial incapacity (this action concerned an accident which occurred before the date on which the Quebec Workmen's Compensation Act of 1928 took effect). The Supreme Court's judgment established that the law makes no distinction between the evidence given by experts and that given by ordinary witnesses: the testimony of experts must be weighed by the Courts in the same manner as that of any other witness. A judgment would therefore be wrong if it were based upon the sole fact that the successful party had a greater number of experts testifying on his behalf. The judgment also affirmed that, notwithstanding the enactment of the Workmen's Compensation Act the evidence in actions for accidents to workmen under that Act, remains subject to Article 1203 of the Civil Code. The element of fault alone has been eliminated from the earlier law and the theory of professional risk has been substituted for it. The onus is still upon the claimant to prove that the accident occurred by reason of, or in the course of, the work, and to establish the connection between the accident and his sickness or incapacity.

The workman who claimed compensation in this case met with an accident on January 14, 1927, by slipping and falling off a height into water. In November, 1927, being still unable to work, he sued the employer under the Workmen's Compensation Act then in force. The Superior Court granted him an indemnity for absolute temporary incapacity up to a certain date, but refused to grant his claim for permanent partial incapacity. On appeal, the Court of King's Bench reversed that judgment and recognized the workmen's right to an annuity of which the capital was fixed at a sum of \$2,687. The question at issue was whether or not the condition of the claimant, who was found to be suffering from perigastritis, was the direct result of the accident. Two physicians held in the affirmative and three in the negative. The trial judge (whose decision was later set aside) declared that he was guided by the opinion of the majority of the experts:—

"It cannot be expected," he said, "that I should make a choice between two opinions diametrically opposed one to the other, and

expressed by professional men of well-known experience and competence, and of whom I have no reason to suspect the integrity and sincerity. According to the ordinary rule of appreciation of the evidence, the testimony of the three physicians who categorically declare that the perigastritis which affects the respondent has no relation to the accident must overcome the testimony of the one physician who holds a contrary opinion; and this settles the question of indemnity for permanent partial incapacity."

In setting aside this view of the case the Supreme Court gave the following ruling as to the value in law of "expert" evidence.

"It must be admitted that the Courts are sometimes greatly embarrassed by the lack of unanimity between the professional men who express divergent views in scientific and, as it happens in the present case, in medical matters. But—except perhaps in the case where the question has been referred to them as experts, upon which we have not to express any opinion here—the law makes no distinction between professional men and other witnesses. Their evidence must be appreciated like that of the others, and the Court is bound to examine it and to weigh it as any other evidence given in the case. We, therefore, are of the opinion that the trial judge erred in stating as 'an ordinary rule of appreciation of the evidence' that the theory of the defence should succeed because it was supported by a greater number of physicians. . .

"The judgment of the Superior Court failed to give us the personal appreciation of the presiding judge. It is based exclusively upon the appreciation of the physicians. And, as the opinions of the latter are divergent, and it does not make a choice between them, the judgment brings the matter to a negative result, because it does not pronounce upon the facts. The question thus remained absolutely open when the case was carried to the Court of King's Bench. In turn, however, that Court in order to reverse the judgment of the Superior Court, proceeded not upon any appreciation of the facts, but upon a so-called legal presumption which, by force of the Workmen's Compensation Act, would impose upon the employer the onus of proof. . .

"The appellant was right, according to us, to quarrel with that doctrine. Accidents to workmen, since the passing of special legislation concerning them, have continued to be governed, for purposes of the evidence to be adduced, by art. 1203 of the Civil Code. The element of fault alone has been eliminated and

the theory of the professional risk has been substituted for it. It is no less incumbent upon the victim to demonstrate that the accident happened in the course of his work and to make the proof of the relation existing between that accident and the illness or the incapacity. No doubt such evidence may be made in the ordinary way, including presumptions; but the burden has not been shifted; and with the exception of the element of fault, the proof to be made under the Workmen's Compensation Act is governed by the same rules as in any other case.

"We must therefore lay aside the ground of the judgment of the Court of King's Bench; but upon a careful examination of the evidence we have arrived at the same conclusion as that reached by that Court. . . .

"The three physicians who were called by the company placed too much stress upon the version of the accident and upon the history of the case stated in a report which they had prepared together at the time they made the examination upon the victim, but which, in essential particulars, differs from the proof made under oath at the trial. This, and the fact that, while claiming that the illness of the respondent did not result from his fall, they declared themselves unable to discover another cause, diminishes the weight of their testimony. The affirmation to the contrary seems to us more in accord with the logical succession of the circumstances and of the symptoms which have manifested themselves. These circumstances and these symptoms are sufficiently weighty, precise and concurring to allow us to decide that the respondent has made the proof, which was incumbent upon him, of the relation between his illness and the accident which happened to him; principally when such conclusion is in accord with that of two physicians 'of well-known experience and competence and whose integrity and sincerity (we) have no reason to doubt,' according to the testimonial granted by the trial judge to all the physicians who have been heard in this case.

"The appellant has not contested the degree of permanent incapacity from which the respondent is suffering nor the amount of the indemnity awarded by the Court of King's Bench; it has merely denied the relation of cause and effect between the incapacity and the accident. As we are of the opinion that this relation has been proven, we must therefore, with the restrictions already indicated, confirm with costs the conclusions of the judgment of the Court of King's Bench."

### Compensation barred by Foolhardy Act of Workman

A young man under 20 years of age, who had been employed by a farmer as a labourer, was required to assist in the operation of a portable sawmill jointly owned by the farmer and his brother, wood being sawn for the neighbouring farmers. On a certain day the young man took the place of another man who acted as "tail man," receiving the sawn timber from the mill and handing it to the farmer whose timber was being sawn. During the afternoon the sawdust carrier belt came off its pulley when the pit below became so full of sawdust as to hamper the working of the belt. The employer replaced the belt in the young man's presence by prying it on with a crowbar kept for this purpose. He then handed the crowbar to or towards the young man, addressing to him the words that were claimed to be equivalent to a direction to use the crowbar if the belt should again slip. The employer then started back to his place at the lever, it being necessary to keep the machinery going during the cleaning-out process. He had only gone a few feet when the young man met with an accident. Instead of using the crowbar to keep the belt on the pulley he tried to put or keep it in place by placing his left foot on the revolving mandrel. The mandrel carried his left foot into the friction clutch, a distance of 9½ inches, where it was caught and so badly crushed that amputation was afterwards necessary.

The young man brought action in the Alberta Supreme Court against his employer for damages for personal injuries. One of the questions at issue was whether or not the employer had given the plaintiff any direction or warning to use the crowbar. On this point the judgment said:—

"Even if I am wrong in holding that the defendant sufficiently performed his duty to instruct and warn the plaintiff, having regard to all the circumstances which a jury must take into account, including the plaintiff's inexperience and youth as well as his intelligence, I think the defence of contributory negligence has been made out. Although there was no obligation on the plaintiff to be better informed than he was as to the proper method of performing his work, I think it was his duty to use the safest method he knew to perform his task of putting or keeping the belt on, and it was negligence on his part to adopt a method of lesser safety than the one he was directed to take. . . .

"There may be another ground in law upon which this judgment might be put," the judgment proceeded. "So far as putting or keeping

the belt on is concerned, it may be said that he was employed to put or keep it on by a particular method, namely, by using the crowbar for the purpose, and that he was outside his employment in taking upon himself to use a method of his own. I am only suggesting this as a possibly sound legal proposition. A somewhat similar proposition has been laid down under the English Workmen's Compensation Act (now 1925 (Imp.), c. 84). See *Plumb v. Cobden Flour Mills Co.*, (1914) A.C. 62.

"Notwithstanding whatever sympathy I have for the plaintiff's misfortune, and however much I may regret his failure to succeed before the Workmen's Compensation Board, I must dismiss his action, finding as I do that he is the author of his own misfortune, a fact which in hospital he admitted to at least one witness."

The action was dismissed with costs.

### Statutes Limiting Common Law Rights Must be Unambiguous

Drug store employees in British Columbia having applied to the Male Minimum Board for an investigation under the provisions of the Male Minimum Wage Act, into the conditions of their employment, the Board refused the application on the ground that this employment was not included in the scope of the Act. A public meeting was held in the Parliament Buildings, Victoria, on September 13, when counsel appeared on behalf of employers in pharmacy to protest against the Board's proceeding to set a minimum wage, on the ground that pharmacy did not come within the scope of the Act. The board upheld their contention and decided that it had no jurisdiction. Application was then made in the Supreme Court of British Columbia by counsel for the drug clerks for a Writ of Mandamus to compel the Board to proceed with the investigation. This application was refused by Hon. Mr. Justice Murphy in a written judgment handed down on October 26, the text of this judgment was as follows:—

#### *Reasons for Judgment of the Hon. Mr. Justice Murphy*

"I would refuse the mandamus on the ground that to grant it would be to infringe the principle that statutes which limit common law rights must be expressed in clear unambiguous language. 27 Hals. 150 and authorities there cited.

"Freedom of contract is a right jealously guarded by the common law. The Male

Minimum Wage Act, where applicable, greatly curtails, if indeed it does not destroy this right.

"The applicants herein are licentiates of pharmacy duly authorized to practice pharmacy under the Pharmacy Act. This art is in said Act described as a profession (sec. 8 and sec. 36). It is in addition, in my opinion, unquestionably a 'profession' within the meaning of that word as used in modern English speech. Its practitioners are consequently members of a profession.

"Section 17, the governing section of the Male Minimum Wage Act reads:—

This Act shall apply to all occupations other than those of farm labourers, fruit packers, fruit and vegetable canners and domestic servants.

"The next question therefore is, does the word 'occupation' include 'profession' clearly and without ambiguity as required by the legal principle above cited? I would say it does not. Used loosely as it frequently is, it would, but accuracy in the use of English would, I think, require pharmacy to be described as a profession, not as an occupation. As stated, the Legislature has so described it. If therefore the Legislature intended to interfere with the freedom of contract in the professions it could have put the matter beyond question by using the word.

"Again, if the Male Minimum Wage Act applies to one profession, it must apply to all. 'Wages' under the Male Minimum Wage Act is thus defined:—

Wage or Wages includes any compensation for labour or services measured by time, piece or otherwise.

"Members of professions, especially when young, frequently give their services gratuitously or for nominal remuneration, in order to gain experience. To put a money value on this experience would seem to be an impossible task, yet if the Act applies that is what the Board would be called upon to do under sec. 4 thereof. Further 'Wages' so set up by the Board must by sec. 4 be set for all employees in the occupation dealt with and at a rate applicable to all. Yet I think it obvious that the value of experience may and indeed must vary with the individual concerned. Sec. 6 does indeed give power to the Board to grant exceptions from payment of set wages but only in the case of 'any casual employee, part time employee, apprentice employee, or employee handicapped by reason of advanced age or physical infirmity.' Clearly, I think those words cannot extend to members of a profession *qua* such membership.

"The consequences of action by the Board with regard to professions might prove so serious to the public that if the Legislature intended them it would, I think, have used the apt word 'profession' in defining the scope of the Act. Hospitals, for instance, might well find it impossible to accept medical interns. Youthful medical men would thus be prevented from securing what I think may be said to be experience essential to them. Hospitals would be crippled to some extent by being deprived of the presence at all times of men who if not of mature experience, have at any rate, received a thorough medical education.

"The application is dismissed."

It was understood the Drug Clerks would carry an appeal against the above judgment to the Court of Appeal, which will sit in January next.

Early in November the Male Minimum Wage Board of British Columbia commenced an investigation into the conditions of the employment of steam engineers, taxi drivers, warehouse men and others throughout the province, with a view to the establishment of minimum rates of wages for these various occupations. The provisions of the Male Minimum Wage Act, which was re-enacted by the provincial legislature at its last session, were outlined in the LABOUR GAZETTE, June, 1929, page 607.

VOLUME 29]

DECEMBER, 1929

[NUMBER 12

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

THE customary seasonal contraction in industrial employment in Canada was noted at the beginning of November, when the 7,043 firms furnishing employment returns to the Dominion Bureau of Statistics reported 1,082,576 employees, as compared with 1,090,846 on October 1. Each of these firms employed a minimum of 15 workers. Reflecting the reduction, the index (based on the average for the calendar year 1926, as 100), declined from 125.6 in the preceding month to 124.6 on the date under review, as compared with 118.9, 108.8, 104.0, 98.3, 94.1, 100.0, 97.0 and 91.3, on November 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Despite this usual autumnal recession, the volume of employment continued to be decidedly greater, not only than in any November, but also than in any other month of the years 1921-1928. At the beginning of November the percentage of unemployment registered by local trade unions stood at 6.0, contrasted with unemployment percentages of 3.7 at the beginning of October and 3.1 at the beginning of November, 1928. The November percentage was based on the reports tabulated by the Department of Labour from a total of 1,750 local unions with a combined membership of 212,328 persons. Reports received from the offices of the Employment Service of Canada during October, 1929, indicated a marked decline in the average daily placements effected, when the figures were compared with those recorded during the corresponding period a year ago. This decline was almost entirely due to a large decrease in farm placements.

The average cost of a weekly family budget of twenty-nine staple foods was \$11.75 at the beginning of November as compared with \$11.68 for October; \$11.28 for November, 1928; \$11.07 for November, 1927; \$11.01 for November, 1926; \$11.23 for November, 1925; \$10.46 for November, 1924; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for November, 1918; and \$7.96 for November,

1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 95.8 for November, as compared with 96.7 for October; 96.9 for November, 1927; and 97.6 for November, 1925.

The loss in working time caused by industrial disputes in Canada during November was more than twice the loss in the preceding month, though the number of individual disputes showed a decrease. The time loss in November this year was about one-half that in November, 1928. Eight disputes were in existence during the month, involving 823 workers, and resulting in the loss of 12,871 working days. Corresponding figures for October, 1929, were: 11 disputes, 771 workers, and 6,219 working days, and for November, 1928, 16 disputes, 1,840 workers, and 20,893 working days.

### Industrial Disputes Investigation Act

During November the Department received a report from the Board of Conciliation and Investigation appointed in connection with the dispute between the Hydro Electric System of the Corporation of Winnipeg and certain of its employees, the chief question at issue being the employees' right of association. In connection with the application from the employees of the Ottawa Electric Railway Company, reported in the last issue, the matter in dispute was adjusted during the month through the mediation of the Minister of Labour. A new application, also involving employees of the Winnipeg Hydro Electric System, was received during the month. Full particulars concerning proceedings under the Act during November are given on page 1333.

### Arbitration under Railway Labour Act of United States

The third report of the Board of Mediation which was established in the United States under the provision of the Railway Labour Act of 1926, was published in November. (The provisions of this Act, with extracts from a statement by President Coolidge of its general purposes,

was given in the *LABOUR GAZETTE*, April, 1926, page 792.) The report claims that, mainly as a result of the Railway Labour Act, "never in the history of our country has railway transportation been more harmoniously performed and conducted than now, and never before so efficiently in the interest of everybody."

The Railway Labour Act provides for arbitrations and for party arbitrators, so called, appointed by each side in the several disputes. These arbitrators may be, and generally have been, selected from persons in some way associated with one or the other side participating in an arbitration proceeding. One or two other arbitrators, known as neutral arbitrators, must also be selected either by the party arbitrators already named, or, in the event of such arbitrators failing to make an appointment, by the Board of Mediation. The conclusions and awards of these arbitration boards, it is stated, have been most generally accepted with approval throughout the country. The Railway Labour Act also provides for the appointment of emergency boards by the President to investigate situations which might lead to a sudden and harmful interruption of interstate commerce. There have been three such boards.

Of the 428 cases involving rates of pay, rules, and working conditions submitted to the Board, 335 had been disposed of by June 30, 1929; 129 of these were acted upon during the fiscal year covered by this report. Of these 129 cases, 46 were settled through mediation, 10 were submitted to arbitration, 37 were withdrawn through mediation, 6 were withdrawn without mediation proceedings, and 30 were closed by action of the Board. During the fiscal year ended June 30, 1929, the Board received 37 applications for its services in the adjustment of grievances which had not been decided by the appropriate adjustment board by which they had been considered. This made a total of 69 such cases received by the board since its creation.

Members of the Board of Mediation, five in number, are appointed by the President by and with the advice and consent of the Senate. The terms of office (except in case of vacancy occurring) are for five years. The board annually designates one of its members to act as chairman for the ensuing year.

### **Compulsory arbitration fails in Norway**

relating to the labour disputes.

The Norwegian parliament recently rejected a government bill to prolong for a further period of two years the provisional legislation compulsory arbitration of labour disputes. The circumstances under

which this law was enacted were outlined in the *LABOUR GAZETTE*, July, 1927.

The system of compulsory arbitration has been in force in Norway under various provisional Acts. The first was adopted in 1916, and the last in 1927. The system was tested last year by an official trade union revolt against an award of the court of arbitration providing for a reduction in the wages of building workers. This dispute, which was ultimately settled by a compromise, was generally regarded as definitely discrediting the compulsory arbitration system. It was alleged that the government had abused the Act by applying it to an industrial dispute of small importance, involving little danger to the community. In these circumstances, it had been anticipated that the provisional Act of 1927 would be allowed to expire without renewal, and both the Confederation of Trade Unions and the Employers' Federation protested against the introduction of the Government's prolonging bill.

### **Booklet on Old Age Pensions in Canada**

The Department of Labour is publishing this month a booklet containing full information concerning old age pensions in Canada, and also giving some account of pension systems in other countries. The provisions of the Dominion Old Age Pensions and of the corresponding Acts of the five provinces now paying old age pensions are given in detail, the methods employed by various provinces for distributing pensions being described, with an account of the discussions in Parliament and of the other proceedings which culminated in the enactment of this social legislation. The booklet also contains a list of the officials in charge of the actual distribution of the pensions.

### **New Brunswick Old Age Pension Commission**

The government of New Brunswick appointed a Royal Commission during November to inquire into the question whether the province should enact legislation to provide old age pensions in the province, in accordance with the provisions of the Old Age Pensions Act of the Dominion. The chairman of the Commission is Mr. Justice W. C. H. Grimmer, of the Chancery Division of the New Brunswick Supreme Court, the other commissioners being Mrs. H. F. McLeod, Fredericton; Mrs. J. B. Chouinard, St. Quentin; Mr. Oscar J. Dick, Saint John; and Mr. George A. Stone, Moncton. Mr. R. A. Cross, of St. George, will be the secretary of the Commission.

SIGNING OF AGREEMENT, JULY 22, 1929, BETWEEN THE DOMINION AND PROVINCIAL GOVERNMENTS FOR OLD AGE PENSIONS IN ALBERTA

Left to right, *Seated*—Hon. Peter Heenan, Dominion Minister of Labour; Geo. Latham; Hon. J. E. Brownlee, Premier of Alberta; Hon. Chas. Stewart, Dominion Minister of the Interior; Hon. R. G. Reid, Provincial Treasurer of Alberta; I. Lacombe, M.P. *Standing*—A. Farmilo; C. Lawson; Elmer Roper; Fred Harrison; E. E. Owen; Hon. P. E. Lessard; Carl E. Berg; Audrey Fullerton; Ald. Jas. East; Col. C. N. Schnarr; Jack Oliver; Dan Powers.

The Province of Nova Scotia appointed last year a similar commission which presented an interim report early in 1929. This report, which was outlined in the *LABOUR GAZETTE*, May, 1929, estimated the number of persons in the province who would be eligible for pensions, the cost of pensions, and other matters, pointing out the greater difficulties which confront the older provinces in the provision of pensions for old age, as compared with the western provinces. The Nova Scotia Commission had not made its final report at the time of writing.

### The pension question in the older provinces of Canada

Mr. E. S. H. Winn, K.C., chairman of the Old Age Pensions Department of British Columbia, gave a full account of the old age pensions system of Canada in the course of an address delivered at San Francisco under the auspices of the American Association for Labour Legislation. He referred to the difficulty in the eastern provinces caused by the higher proportion of aged persons in their population. These provinces, like the eastern States in the United States, contain a higher percentage of aged people than those in the west. Coming from east to west in Canada the percentage of people over 70 by provinces, as shown by the census of 1921, was as follows:—

Prince Edward Island, 6.02; Nova Scotia, 4.73; New Brunswick, 3.85; Quebec, 2.71; Ontario, 3.49; Manitoba, 1.69; Saskatchewan, 1.16; Alberta, 1.17; British Columbia, 1.84.

It will be seen that the five most easterly provinces have an average of 4.18 per cent of their population over 70 years of age, while the average for the four westerly provinces is only 1.46 per cent. The problem consequently, of financing old age pensions is relatively an easier one at present in the west.

### Value of veteran employees in industry

Some of the special qualifications possessed by older employees in industry were stated in the last issue (page 1216). The value of veteran workers is now recognized by some of the larger manufacturing concerns. The Franklin Automobile Company, of Syracuse, N.Y. for example, has adopted, as a definite policy, the principle of preference to experience rather than youth. Mr. H. H. Franklin, the president of the company, described the new policy in a statement issued during November. "In the Franklin plant, where

the great part of the work is on a precision rather than a production basis, it is recognized that a man reaches his most effective period only after years of experience. After he is 50, the age at which most factories bar a worker, jobs of various kinds can be found for a faithful employee that continues his productivity and does not place him in the discard. Under the new Franklin employment program, older employees will be placed in positions where experience counts more than actual speed. Younger men will be brought in to fill the vacancies created by their advancements. Where an employee of the Franklin company, not of pensionable age, reaches a point where his productivity is affected, he is not tossed aside or discharged. Such a worker, where speed is an element, is replaced by a younger man, while the older man is given a type of work where precision, but not speed is required. In this way, the older worker continues as an efficient producer under revised conditions which better fit him. The veteran worker who has made a material contribution to the success of the Franklin Company because of his loyalty and efficient work over a long period of years, derives still further benefits from the Franklin pension plan. A permanent pension fund has been provided which assures the worker of a steady income for life after he reaches the pensionable age and desires to cease all active operations in the factory. However, it is not mandatory that the Franklin employee retire from active work, even though he may be entitled to do so under pension provisions. The pensions are secured by a form of insurance which provides payment, no matter what changes occur in the status or control of the Franklin company."

The Hon. W. G. Conley, governor of the State of West Virginia, in an address on November 15, referred to the unemployment problem resulting from the common practice of discharging the older workers in industry. "From the standpoint of the State," he said, "the creation of an arbitrary artificial low-age barrier affords a serious social problem and one that is totally unnecessary. The employer who ignores economic and social dangers by creating an arbitrary low-age barrier to employment invites trouble. It is far better that men and women earn a livelihood than become a charge on the community. The creation of such a social burden is unnecessary, uneconomic and unwise."

**Provincial  
sickness  
insurance  
proposed in  
Alberta**

The Alberta Association of Municipal Districts at its twenty-first annual convention, held at Edmonton on November 21, adopted a resolution asking the provincial government to make adequate provision for the care of indigent and indigent sick persons, and to assume a larger proportion of the cost. It was declared that this burden was increasing for both the municipalities and the province, and that a more equitable distribution of the cost could be made under some plan of health insurance covering the entire province. An additional resolution, drafted by a committee of the Association after conference with the Hon. George Hoadley, Minister of Health for the province, called for amendments to the Municipal and the Hospitals Act which would enable municipal districts, by payment of an agreed annual fee, to have a hospital district take care of its indigent sick.

**Workmen's  
Compensation  
inquiry in  
Manitoba**

The appointment of a special committee in Manitoba to inquire into the subject of Workmen's Compensation in the province was noted in the LABOUR

GAZETTE, August, 1929, page 846. In the course of its sessions at Winnipeg during November, this committee, which is composed of fifteen members, of whom five represent respectively the legislature, the employers and the workers, considered proposals from representatives of both sides for the improvement of the present Act. The proposals submitted by the labour organizations were as follows:—

1. Increase in allowance to widows of workmen killed in industry from \$30 to \$40 per month.
2. Extension of the waiting period to seven days with compensation running from date of disability.
3. Extension of the act to include diseases caused by liquids or dust, and those caused by electric or oxyacetylene welding.
4. Amendment of the definition of the word "accident" in the act to include hernia.
5. A board of three full time members.
6. Deletion of the section which bars payment of claims filed by dependent widows, or other dependents, residing in Poland.
7. That allowances of \$20 per month now paid to widows of workmen killed in industry on schedules that existed before 1920, be increased to \$40 per month.

8. Increase in compensation from the 66½ per cent of wages of the injured workman to 75 per cent.

9. That the maximum basis of wage payments be increased from \$2,000 to \$2,500.

10. Constant campaign of education among employers and employees to be carried on jointly by the Compensation Board and the Bureau of Labour.

11. Inclusion in schedules of the act of groundmen employed at aviation fields and of mechanics who have to accompany aeroplanes in flight.

The Employers' Association of Manitoba submitted a brief containing the following proposals:—

1. Introduction of a fixed limit of \$6,000 to maximum compensation instead of an unlimited amount as now in force under the Act.
2. Contribution by employees to medical aid of one to four cents a day as now in effect in Alberta and British Columbia.
3. That workmen should be compelled to use safety appliances provided them and employers be compelled to display warning notices within their plants to this effect.
4. That there should be a time limit in which to report accidents and file claims.
5. Revision of the schedule of doctors' fees.
6. That a government contribution to administration expenses be considered.

**Workmen's  
Compensation in  
Saskatchewan**

By an order published in the *Saskatchewan Gazette*, November 30, Mr. Netson R. Craig, K.C., of Moose Jaw, was appointed chairman of the Board which will have charge of the administration of the Workmen's Compensation Act passed by the Legislature of the Province at its last session. The other two members of the Board have not yet been appointed. The general provisions of the new Act will become effective after the few months that will be required to put into operation the insurance principles it contains. The Act of 1929 is similar in its provisions to the Compensation Acts in effect in Ontario, Manitoba and the other Canadian provinces having provincial funds for insuring employers against the risk of accidents to their workmen.

**Conferences  
on winter  
unemployment  
in the west**

Representatives of the cities of Regina, Saskatoon and Moose Jaw conferred with the provincial government in November on the subject of winter unemployment in Saskatchewan, the government being

asked to instruct the Employment Offices to make a survey of the unemployment situation in the province. It was suggested also that the government should devise some scheme of relief work for persons who failed to qualify for municipal relief by having complied with the requirement of previous residence for six months. Further, it was recommended that the federal government should be asked to assume responsibility for the relief of unemployed immigrants of less than three years standing.

Later in the same month delegations representing various western cities waited on the Prime Minister in the course of his recent tour in the western provinces, asking that the federal government should give as much assistance as possible towards the relief of unemployment. They suggested that public works should be continued as far as possible during the winter months, and that the railway companies should be urged to continue the employment of their workmen. The delegates asked also that the federal government should give full consideration to the question of establishing an unemployment insurance scheme for the Dominion. In reply, Mr. King promised to bring the proposals of the delegates before the federal government. He pointed out, however, that the subject of unemployment insurance was within the scope of provincial rather than federal jurisdiction.

#### **Unemployment insurance changes in Great Britain**

A new Unemployment Insurance Bill was introduced in the British House of Commons by the Minister of Labour in November, its main provisions being as follows:

(1) It lowers the minimum age for entry into insurance to 15 years as from the date of the raising of the school-leaving age from fourteen to fifteen on April 1, 1931; (2) It increases the rates of benefit payable to young persons under twenty-one; (3) It increases the rates of benefit payable to adult dependants, and brings new categories of such dependants within the scope of the Act; (4) It amends the present statutory conditions for receipt of benefit in so far as they affect the disqualification of claimants who are "not genuinely seeking work"; (5) It amends the existing over-centralized machinery for the determination of claims; (6) It extends the "transitional period" during which benefit is payable to claimants who would otherwise be ineligible by reason of their having paid insufficient contributions; (7) It transfers the cost of the benefit payable to such claimants from the Unemployment Fund to the Exchequer.

#### **Plan to stabilize industry in United States**

In order to prevent or check business depression and unemployment in the United States, President Hoover held conferences during November with industrial, financial, and labour leaders, and at the end of these conferences he made an announcement of policy which included the following lines of action:—(1) an aggressive but prudent pushing of a constructive program of building operations, the large corporations and state and local governmental bodies co-operating with the federal government to this end; (2) a reduction of taxes; (3) an agreement between the employers and the workers by which the former promise not to seek to reduce, and the latter not to seek to increase wages. Finally, in less definite form, there is an understanding with farm leaders to lower interest rates for the farmers, and an extension of federal aid to road work in country districts.

#### **Department of Labour's report on co-operative associations in Canada**

The Department of Labour has just distributed the Second Report on Co-operative Associations in Canada, a volume which indicates the extent of the co-operative movement in

the Dominion. The report contains the names of 936 societies, with a combined membership of 512,835. Given first place in the report is the Co-operative Union of Canada, whose aim is to federate co-operative societies for mutual advantage and to propagate a knowledge of co-operative principles. The remaining associations are grouped provincially according to the phase of co-operative endeavour with which they are identified, as follows: (1) Productive, with 70 associations with a combined membership of 51,097; (2) Marketing, 257 associations and 313,049 members; (3) Productive and marketing, 11 associations and 3,337 members; (4) Distributive, 291 associations and 19,278 members; (5) Marketing and Distributive, 16 associations and 58,261 members; (6) Credit and Savings, 5 associations and 41,072 members; Miscellaneous, 286 associations and 26,741 members.

In the productive group the largest association is the Saskatchewan Co-operative Creameries, which has a membership of 40,000. First in the marketing group is the Canadian Co-operative Wheat Producers, with a membership of 140,000 comprised in Manitoba, Saskatchewan, Alberta and Ontario

Wheat Pools, and is the largest wheat marketing organization in the world. The Central Alberta Dairy Producers' Association is the largest in the productive and marketing group, and in the distributive group the British Canadian Co-operative Society, a Nova Scotia body with 3,387 members, stands first. Of the associations in the marketing and distributive section the United Farmers' Co-operative Company, an Ontario organization, has the largest following, reporting 20,000 members. In the Credit and Savings group the Co-operative People's Banks of the Province of Quebec show a membership of 41,000 comprised in 183 local co-operative banks. The bulk of the associations included in the miscellaneous group are operating in the Province of Saskatchewan where there are 185 societies which cannot be definitely classified, the remaining 101 associations being divided between six other provinces.

In a summary of business transacted figures are given for 418 associations which reported, showing (1) paid-up capital; (2) assets; (3) sales for the past year; (4) general liabilities; (5) profit or surplus; (6) loss; (7) reserve; and (8) unapportioned profits.

#### Consumers' co-operation in Canadian cities

The *Canadian Co-operator*, November, 1929, comments on the backwardness of consumers' co-operation in the larger cities of Canada, and gives examples of failures in the past, due to the neglect of certain economic principles. "The rational way of organizing a co-operative society in a large city," it is stated, "is to concentrate on the development of one district. Workingmen usually reside in close proximity to their work. An intensive membership should be organized close to an industrial plant. Members who live beyond an economical delivery radius should be expected to deal on a cash and carry basis, infrequent delivery service, or pay for delivery. Such remote trade support should not be relied upon as a factor in the achievement of success. So economically organized, and the purchase dividend proving substantial, there would, in course of time, be a demand for additional stores on the boundaries of the district served. On being satisfied that the trade which could be depended on in the district would justify opening one, a branch store could be established, and so on indefinitely until a chain of branch stores had been opened throughout the industrial areas around the city. Then the number of members of so many branches, and the share and loan

capital developed, would justify the establishment of a department store in the centre of the city for the distribution of commodities in household or personal demand, other than food produce. That, indeed, is substantially the way the Movement has developed in many of the industrial districts of Britain. It would be well, too, with the view of increasing the rate of purchase dividends—the great trade magnet—for co-operators in large cities to tackle such lines of distribution as bread, milk and fuel, which, owing to the comparatively few firms engaged therein, are virtually on a monopoly basis, there being little or no competition as to price."

#### New publication by Fisheries Department of Canada

The Fisheries Branch of the Department of Marine and Fisheries, Ottawa, published last month the first issue of the *Fisheries News Bulletin*, containing current information regarding the industry in Canada. The *Bulletin* will be published monthly, both in English and French. It will give publicity to interesting facts as to the fisheries resources and the progress of the fishing industry, and to the efforts by which it is sought to solve fisheries problems. Popular knowledge of the fisheries will thus be widened and popular interest in them stimulated. The *Fisheries News Bulletin* should also be of interest and value to fisheries officers throughout the country, and persons engaged in the industry, by enabling them to be more fully informed as to fisheries resources and operations in parts of the Dominion remote from their own and as to the work of the Fisheries Branch, which covers a wider field than is perhaps generally realized.

The Ottawa Public School Board will ask the Ontario Legislature, at its next session, to amend the Ontario Public Schools Act so as to enable group insurance being made available for school caretakers and other permanent employees of the Board after one year's service.

The Women's Federated Labour Union, at a meeting at Halifax, Nova Scotia, in November, appointed a committee to make a survey of wages and working conditions of women workers. The information thus obtained will be used later in urging the provincial government to give effect to the Minimum Wage for Women Act, which was enacted by the Legislature in 1920, but has not yet been proclaimed as being in force.

## THE EMPLOYMENT SITUATION IN CANADA

### Statement by the Hon. Peter Heenan, Minister of Labour

THE Executive of the Employment Service Council of Canada on December 16 presented to the Hon. Peter Heenan, Minister of Labour, certain recommendations adopted at the last annual meeting of that body. Amongst the subjects referred to was the question of the recent communications addressed to the Government, which have requested the Federal Government to call a national conference to deal with unemployment similar to that recently called by President Hoover of the United States.

The Minister stated that in his opinion there is not the same necessity for calling a national conference with respect to unemployment as there was in the United States. In that country the crash in the stock market destroyed confidence and threatened to result in slackened activity in industry generally; confidence had to be maintained or restored; with so many of the American railroads in private hands and all those interests wondering what was going to happen next, and most of them already curtailing their expenditures, undoubtedly the holding of such a conference had good effect in the United States.

"In Canada it is different," the Minister continued. "The graphic picture of comparable employment statistics in manufacturing industries in the United States and Canada confirms this opinion. Both the United States and Canadian governments collect from employers of labour in manufacturing industries returns showing the volume of employment afforded each month in these industries. The base figure of 100 in both cases is the average for the year 1926. The latest returns to hand from the United States show that the index number of employment for the month of September, 1929, is 99.3 points, while the comparable index number for Canada is 119.8 points, in other words 20.5 points higher in Canada than in the United States. Moreover, the index of employment in all industries in Canada, as at November 1, 1929, stands at 124.6, which represents the highest peak of employment reached at this period of the year since these statistics have been gathered. The crash in stocks did not affect this country to the same extent as the United States. Investors have not lost confidence. Heads of

banks and other institutions have not hesitated to make public views of a most reassuring character. Our railroads are practically all controlled by the Government and the Canadian Pacific Railway. Such unemployment as has already developed in Canada, apart from the normal seasonal slackening is wholly traceable to one uncontrollable cause. What has happened in Canada this year is that crop conditions have hastened winter unemployment rather than that conditions are abnormally depressed.

"However, government action to stimulate employment has already been taken. The Hon. Charles Dunning, then Minister of Railways and Canals, representing the Government, discussed the situation quietly with officials of the two railways, and reassuring statements were subsequently made by the heads of these concerns. The Canadian National Railway is providing for an expenditure of twenty million dollars for equipment this year, as well as proceeding with other improvements. The Federal Government is prosecuting work on some millions of dollars of contracts already in hand and is letting other contracts amounting to several more millions of dollars.

"If this example is followed by the Provincial and municipal authorities and private corporations, there will be no reason for undue alarm and the winter unemployment period will be tided over without the necessity of calling a conference at this time and on such short notice.

"The calling of a conference might react unfavourably on existing economic conditions, at least psychologically. It will be recalled that at the United States conference a suggestion was made that the workers should agree not to seek higher wages. Personally I do not think that present circumstances warrant action in asking the workers of this country to agree not to seek whatever wages and conditions they may consider they are entitled to or to interfere in any way with their normal method of procedure as to how they should handle their affairs. The workers and employers of Canada have shown in the past that they know how to handle their economic affairs, having regard to the best interests of the country as a whole."

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation throughout Canada is reported by superintendents of the Employment Service of Canada at the end of November to be as follows:—

In the Province of Nova Scotia the agricultural industry was seasonally dull. Fishermen reported fairly good catches. Logging was very quiet with a number of experienced woodsmen idle. Mines were working on steady time. Contracts in building and construction in Halifax were nearing completion, and as a result the number of unemployed was gradually increasing. Sydney also reported inactivity in that line, while at New Glasgow, conditions were more favourable and carpenters busily engaged. In manufacturing, biscuit and confectionery workers were not so well employed and sawmills and wood working factories were only fair, while steel industries were busy. Transportation, both by rail and water, was fairly heavy. Trade showed improvement. With a heavy demand for women domestic workers, insufficient applicants were registering to meet all requirements, especially in Halifax, but in all localities many placements were made.

New Brunswick offices reported few demands for farm workers, but the fishing industry was fairly active. Logging was for the most part quiet, the majority of calls for workers being from northern New Brunswick. Manufacturing lines were about normal, a few minor fluctuations being reported. Building construction showed favourable progress. Most of the outside contracts were completed, and the work in hand confined almost entirely to inside finishing. Trade, both wholesale and retail, was seasonally good and transportation brisk. There was the usual demand for women domestics.

Curtaiment in farm placements was again reported by employment offices in the Province of Quebec. Decreased activity also occurred in logging, as camps were full and additions to staff were made for replacement purposes only. Practically all lines of manufacturing were busy, particularly favourable conditions being reported by Quebec and Sherbrooke, with normal conditions prevailing at Hull and Three Rivers. Factory hands, especially in the silk and textile group, were well occupied in Montreal, but considerable unemployment existed amongst garment workers. Boot and shoe workers also were somewhat less busy than usual. Cold weather caused the usual slackening in the building

trades. Montreal reported a decline in transportation, but Three Rivers made special mention of transportation activities still carried on at full capacity. Although trade showed a downward trend, a revival of business during the holiday season was anticipated. Service was quiet and few placements were effected. Contrary to past experience, a surplus of women applicants for domestic work was reported.

From Ontario, it was reported that the call for farm hands was very light, with a number of experienced applicants available. Logging was more active this season than last, particularly in the Sault Ste. Marie district, and pulp cutters were in demand in several localities. Fort William, Sudbury and Timmins also reported increased activity in this group. Mining was fairly active, but no demand existed for additional help. The condition of the manufacturing industries throughout the provinces varied from place to place. Guelph and Kitchener reported factories running steadily with some additions to staffs; improvement was also noted at Belleville, Brantford, Peterboro and St. Catharines, while Hamilton, Oshawa and St. Thomas reported a decline in factory employment, and a reduction of the working force in many plants. Building and construction showed general curtailment as contracts neared completion, though some centres reported continued demand for skilled tradesmen. Unskilled workers were, however, gradually becoming more numerous and consequently more difficult to place. Orders for houseworkers had for the most part declined, but vacancies for good house generals were available.

In Manitoba, the demand for farm workers was small, positions for married couples being particularly difficult to find. There were also very few calls for bushmen, and a number of applicants unplaced. Considerable winter construction work was being carried on in Winnipeg with prospects very favourable for building operations in 1930. Mining was quiet. Wholesale trade reported a fair volume of business and retail trade showed improvement. The demand for women domestic workers was light, with many inexperienced workers applying, for whom no openings were available.

The demand for farm workers in Saskatchewan continued to show a decline, and applicants exceeded vacancies throughout the province. Practically no orders were received from the logging camps, with no immediate prospects of improvement. Construction work in

general was quiet, the majority of orders being of a casual nature, and many men were on hand to fill all such, promptly. There was little activity in the women's division. A few domestics were placed, but generally speaking, calls for help were few, while many women

were available. Applicants at the employment offices throughout Saskatchewan were on the increase and the outlook for the present rather dull.

There was little improvement in farming in the Province of Alberta, as the calls for

workers were few. With many applicants, wages were a secondary consideration, board and lodging for the winter months being of the first importance. This, however, did not improve the situation. Building construction was fairly brisk. Outside work on account of winter conditions showed slackening, but interior finishing still furnished employment for a number of skilled workers. In Edmonton, tenders were called for sewer construction—this work to be commenced immediately as a relief measure. Railway work was somewhat quiet. Cold weather improved the local demand in coal mines, but eastern shipments showed a falling off in comparison with those of last season. Logging was quiet, but prospects were better for the future, and it was expected that there would be a good demand for men as soon as weather conditions allowed easier access to camps. In Edmonton, retail stores reported improved business, which seemed likely to continue until after the holiday season. There was a slight increase in the demand for town domestics, but few orders were received from the farming districts for women workers.

In British Columbia, only a few orders were listed for farming, and in the majority of cases these offered low wages or board alone. There was little activity shown in logging. A few pole makers were sent out, but many camps had closed down, and about New Westminster, the lack of employment in this line, was largely responsible for unfavourable local conditions. Some metal mines were continuing development work by contract for winter months, though little additional activity was looked for until spring. Quietness prevailed in the coal division. Building construction showed some activity in Nelson, New Westminster and Prince Rupert, but in other parts of the province there was little doing. Railroad gangs were also being laid off. Manufacturing was quiet, and although many local industries were operating, production was curtailed to such an extent that staffs had been reduced from twenty-five to fifty per cent. Work was fairly active in the ship yards, longshoring however, was quiet. Trade also was only fair, though improvement was hoped for at holiday time. There was still a surplus of women applicants for casual and daily work, but positions were available for experienced household workers. While unemployment was undoubtedly on the increase throughout the province, yet it was hoped the situation would become less acute with improved weather conditions.

#### EMPLOYERS' REPORTS

Employment at the beginning of November showed the customary seasonal contraction, but activity continued at a higher level than on the corresponding date in any other year since 1920. The Dominion Bureau of Statistics tabulated statements from 7,043 employers, whose payrolls were reduced from 1,082,576 persons on October 1, to 1,090,846 at the beginning of November. Reflecting this decrease, the index number (with the average for the calendar year, 1926, as the base equal to 100), declined from 125.6 in the preceding month to 124.6 on the date under review, as compared with 118.9, 108.8, 104.0, 98.3, 94.1, 100.0, 97.0 and 91.3 on November 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Heightened employment was registered in the Maritime Provinces and Quebec, but the trend was downward in Ontario, the Prairie Provinces and British Columbia. In the Maritime Provinces, there was an increase on November 1, contrasting with the losses generally recorded at the beginning of November; most of the advance took place in logging and shipping, while there were seasonal decreases in manufacturing, notably in sawmills. In Quebec, building construction, trade and transportation showed improvement, and there were very marked seasonal advances in logging, but highway and railway construction, manufacturing, communications and services registered curtailment. In Ontario, employment again declined; the most extensive recessions were mainly of a seasonal nature in construction, canning, saw-milling and iron and steel plants, while logging, mining and trade were decidedly busier. In the Prairie Provinces, coal mining, logging and trade were much more active; on the other hand, manufacturing, construction, transportation and services showed contractions. In British Columbia, the greatest losses were in manufactures and construction, but logging and transportation were also slacker. Mining and retail trade, on the other hand, were more active.

Additions to staffs were registered in Montreal, Quebec, and Winnipeg; in Toronto, Ottawa, Windsor and the Adjacent Border Cities, and Vancouver there were reductions, while practically no general change was noted in Hamilton. In Montreal, manufactures, transportation, construction, and trade reported increased activity, but losses were recorded in communications and services. In Quebec city, services and manufacturing showed curtailment, while construction and trade reported heightened activity. In Toronto, most of the decline was in manu-

facturing, construction and transportation, while trade was considerably busier. In Ottawa, almost all the curtailment took place in manufacturing, trade showing greater activity. In Hamilton, advances in manufactures were offset by losses in quarrying and other groups. In Windsor and the Adjacent Border Cities, seasonal dullness in automobile plants and construction caused the decrease. In Winnipeg, trade reported considerable gains, but manufacturing and transportation released help. In Vancouver, construction and manufactures showed most of the reduction, while trade and services were more active.

Further shrinkage of a seasonal character was noted in manufactures, chiefly in the lumber, iron and steel and food-canning industries, although there were also losses in electric current, leather and building material works. On the other hand, electrical apparatus, non-ferrous metal and some other factories registered considerable advances. There were also large increases in logging, mining, and trade, but construction and maintenance, communications, transportation and services showed decided losses.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of November, 1929.

**TRADE UNION REPORTS** The situation among local trade unions was somewhat less favourable during October than in the preceding month, 1,750 labour organizations from which returns were tabulated with a combined membership of 212,328 persons showing 6 per cent of inactivity, contrasted with 3.7 per cent in September. The October percentage was also in advance of that indicated during the corresponding month of last year when 3.1 per cent of idleness was recorded. These reductions were mainly attributable to curtailment of employment among steam railway workers due to the smaller grain movement. The decline from September was caused, in large measure, by seasonal inactivity among garment workers.

In another section of this issue will be found a report in detail of unemployment conditions affecting local trade unions at the close of October.

**EMPLOYMENT OFFICE REPORTS** During the month of October, 1929, the offices of the Employment Service of Canada referred 37,652 workers to positions and effected a total of 36,066 placements. Of these the placements in regular employment were 23,199 of which 18,539 were of men and 4,660 of women. Placements in casual work numbered 12,867.

Employers notified the Service of 38,523 vacancies, of which 27,027 were for men and 11,496 for women. Applications for work were received at the offices from 36,442 men and 15,236 women, a total of 51,678. A marked decline is shown when the figures are compared both with those of the preceding month and with those of the corresponding month a year ago, the reports for September, 1929, showing 46,099 vacancies offered, 55,521 applications made and 43,056 placements effected, while in October, 1928, there were recorded 61,926 vacancies, 70,803 applications for work and 57,740 placements in regular and casual employment. A report in detail of the work of the offices for the month of October, 1929, may be found elsewhere in this issue.

**BUILDING PERMITS AND CONTRACTS AWARDED** According to a report prepared by the Dominion Bureau of Statistics the value of permits issued in 61 cities during October, 1929, was \$18,063,577, as compared with \$17,114,963 in the preceding month and with \$21,558,085 for October, 1928.

The *MacLean Building Review* states that the November total was the largest on record for this month in any year with the exception of November, 1925. It exceeded that of the same month a year ago by 56.2 per cent. The total value, for eleven months of 1929, of all types of building, stands 20 per cent over 1928. The *Review* estimates the total value of construction contracts awarded in Canada in November, 1929, at \$45,375,500. Of the November total, \$14,816,100 was for business buildings; \$13,504,700 was for engineering purposes; \$10,309,800 was for residential buildings; and \$6,744,900 was for industrial purposes. The apportionment of the contracts awarded during November, by provinces, was as follows: Quebec, \$18,856,000; Ontario, \$18,420,600; British Columbia, \$3,183,500; Saskatchewan, \$1,784,500; Alberta, \$1,191,200; Manitoba, \$880,500; Nova Scotia, \$874,400; New Brunswick, \$168,300; Prince Edward Island, \$16,500.

### Production and Trade

**INDUSTRIAL PRODUCTION** Figures showing the volume of production in certain industries during the recent months and also in the corresponding months in the previous year are given in the table on page 1328.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that despite the extensive liquidation of speculative stocks traded on the

Canadian exchanges, industrial production was in good volume during October, the index maintained by the Bureau being 197.5 compared with 174.5 in September and 187.2 in October last year. The construction industry obtained an unusual amount of new business for the season and permits indicated that building in the principal cities was active during the late fall. Mineral production showed considerable improvement over recent months. Silver exports and receipts at the Royal Mint were less than in September, but the other principal metals showed marked gains. Newsprint production was greater than in any preceding month. The output of motor cars showed a gain over September, a strong demand for trucks being in evidence. A feature of the month was the importation of 11,812,485 pounds of raw cotton, indicating that preparations are now being made for a more active season in the cotton textile industry. Imports of raw cotton had been at a moderate level from June to September. The imports of crude petroleum were resumed in large volume during October, the total being 122,600,000 gallons, the largest importation in the history of the industry. Owing to the quiet period in the production of motor cars, the rubber industry has shown a moderate recession in the activity measured by the imports of raw material. The official index for manufacturing production was 186.0 during October compared with 166.2 in the preceding month, indicating that industrial conditions continued strong at the beginning of the fourth quarter.

The output of newsprint in Canada during October was greater than in any preceding month. Production at 251,914 tons showed an increase of 10.5 per cent over the preceding month and 16 per cent over October, 1928. Operation in October was 88.8 per cent of rated capacity and shipments were even greater than the output. Canadian mills produced 295,942 tons more in the first 10 months of the present year than in the same period of 1928, representing an increase of 15 per cent.

EXTERNAL TRADE  
A summary of Canadian trade prepared by the Department of National Revenue shows that in October, 1929, the merchandise entered for consumption amounted to \$116,261,197 as compared with \$99,379,848 in the preceding month, and with \$112,340,617 in October, 1928. The chief imports in October, 1929, were:—Iron and its products, \$23,805,777; Non-metallic minerals and products, \$20,432,169;

Fibres, textiles and textile products, \$16,410,244.

The domestic merchandise exported during October, 1929, amounted to \$119,265,558, as compared with \$87,751,034 in September, 1929, and with \$141,816,210 in October, 1928. The chief exports in October were: Agricultural and vegetable products mainly foods, \$38,332,029; Wood, wood products and paper, \$27,682,110; Animals and animal products, \$15,087,906.

### Strikes and Lockouts

The time loss due to industrial disputes in November, 1929, was more than twice that occurring in October, although fewer strikes occurred, the extension of the pulp wood camp workers' dispute in Northern Ontario involving several hundred men for the greater part of the month. As compared with November, 1928, the figures for November, 1929, show that only one-half the number of strikes occurred, involving approximately one-half as many workers and causing approximately one-half the time loss occurring in the same month in 1928. There were in existence during the month eight disputes, involving 823 work-people and resulting in a time loss of 12,871 working days, as compared with eleven disputes in October, involving 771 workers and resulting in a time loss of 6,219 working days. In November, 1928, there were on record sixteen disputes, involving 1,840 workers and resulting in a time loss of 20,893 working days. At the end of the month there were on record six disputes involving approximately 770 workers. These figures do not include those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was slightly higher at \$11.75 for November, as compared with \$11.68 for October; \$11.28 for November, 1928; \$11.07 for November, 1927; \$11.01 for November, 1926; \$11.23 for November, 1925; \$10.46 for November, 1924; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for November, 1918; and \$7.96 for November, 1914. The increase was due mainly to seasonal advances in the prices of eggs, milk, butter and cheese, while the most important declines occurred in the prices of beef, mutton, pork, bacon, lard,

bread, flour and beans. Including the cost of fuel and rent with that of foods the total budget averaged \$22.03 at the beginning of November, as compared with \$21.96 for October; \$21.52 for November, 1928; \$21.27 for November, 1927; \$21.24 for November, 1926; \$21.51 for November, 1925; \$20.81 for November, 1924; \$21.19 for November, 1923; \$20.89 for November, 1922; \$21.60 for November, 1921; \$26.13 for November, 1920; \$26.92 for July, 1920 (the peak); \$21.61 for November, 1918; and \$14.36 for November, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly lower at 95.8 for November, as compared with 96.7 for October; 96.9 for November, 1927; and 97.6 for November, 1926. In the classification according to chief component materials five of the eight main groups were lower, two were higher and one was un-

changed. The groups which declined were: the Vegetable and Vegetable Products groups, due mainly to declines in the prices of grains, rubber, vegetable oils, coffee and turpentine; the Animals and their Products group, due to lower prices for live stock and meats, which more than offset increases in the prices of eggs and fish; the Textiles and Textile Products group, due to lower prices for raw textile materials and for cotton fabrics; the Non-Ferrous Metals and their Products group, due to lower prices for lead, silver, tin, zinc and solder, which more than offset slight increases in the prices of copper; and the chemicals and Allied Products group. The Wood, Wood Products and Paper group was slightly higher, due to advances in the prices of white pine lumber. The Non-Metallic Minerals and their Products group also advanced, due mainly to higher prices for coal and lime. The Iron and its Products group was unchanged.

### Stable Money Association

The Stable Money Association, recently formed with headquarters in New York City, is an educational and research organization, whose objects is to promote the stabilization of the purchasing power of money. This Association is calling the attention of the world to the grave financial, economic, and social disturbances caused by instability in the purchasing power of money. The Association maintains that wide fluctuations in the purchasing power of money are preventable although it does not advocate any particular method or plan.

Leaders in the fields of banking, industry, commerce, law, labour, agriculture, and economics in America, including Owen D. Young, Pierre S. du Pont, Elihu Root, Matthew Well, John L. Lewis, Frank O. Lowden, Louis J. Taber, Dr. John R. Commons, Dr. Lionel D. Edie, Dr. Wesley Clair Mitchell, Otto H. Kahn, and Charles Evans Hughes, are officers of the Association. Frederick A. Delano, Deputy Chairman of the Federal Reserve Bank of Richmond, is President. The honorary vice-presidents of the Stable Money Association are as follows:—Messrs. Edward W. Beatty, Chairman of the Canadian Pacific Railway and Director of the Bank of Montreal; Dr. Eduard Benes, Minister of Foreign Affairs, Czechoslovakia; Alexander de Popovics, governor of the National Bank of Hungary; Sir Herbert Holt, president of the Royal Bank of Canada; Max

Lazard, president of the French Association for the Prevention of Unemployment; Emile Moreau, governor of the Bank of France; Alberto Pirelli, past president of the International Chamber of Commerce, and managing partner of Pirelli & Co., Milan, Italy; Oscar Rydbeck, director of Skandinaviska Kreditaktiebolaget, Stockholm, and president of the Stockholm Chamber of Commerce; Sir Josiah Stamp, director of the Bank of England and president of the Executive of the London Midland and Scottish Railway Co.; Sir Henry Strakosch, chairman and managing director of the Union Corporation, Ltd., London, director of the Anglo-International Bank, Ltd., and member of the Financial Committee of the League of Nations; C. E. ter Meulen, senior partner of Hope & Co., Amsterdam; Dr. Gerard Vissering, president of the Netherlands Bank, Amsterdam; K. A. Wallenberg, chairman of the Stockholms Enskilda Bank, Stockholm.

The law providing for social insurance adopted by the French Parliament in March, 1928, was expected to be made fully effective at the end of December, 1929. Its provisions were outlined in the *LABOUR GAZETTE*, June, 1928, page 590. The new Act provides benefits for sickness, maternity, old age, and also makes provision for family allowances, temporary pensions for orphans, and an unemployment "guarantee".

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF NOVEMBER, 1929

**D**URING the month of November an application for the establishment of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was received in the Department of Labour from linemen, cablemen, station operators, assistant operators, lamp trimmers, maintenance men, electricians, electricians' helpers and assistants, steam engineers, chauffeurs, steam main service men, and other mechanics, employed by the Hydro-Electric System of the city of Winnipeg, and being members of the Hydro and Mechanical Workers' Unit and Pointe du Bois Unit of the Federation of Civic Employees of Winnipeg. The dispute relates to the employees' request for increased wages and directly affects 225 men.

An application for a Board was reported in the November issue of the *LABOUR GAZETTE* as having been received from motormen, conductors, shopmen, barnmen and trackmen in

the employ of the Ottawa Electric Railway Company, and being members of Division No. 279, Amalgamated Association of Street and Electric Railway Employees of America. The dispute grew out of the dismissal from the service of the company of nine conductors and motormen who had reached the age of sixty-five years. The Honourable Mr. Heenan, Minister of Labour, held interviews with both parties to the controversy and a conference was arranged between representatives of the employing company and a committee of the employees' union, at which, as a basis of settlement, the company offered to make provision for the immediate employment of the nine dismissed employees at such work in the car barns as their physical condition would permit. This proposal was submitted to a representative meeting of the union members, and a resolution was passed accepting it as an adjustment of the dispute.

### Report of Board in Dispute Between City of Winnipeg and Its Linemen and Cable Splicers

The Minister of Labour received on November 30 a report from the Board of Conciliation and Investigation established in August of this year to deal with a dispute between the Hydro Electric System of the Corporation of the City of Winnipeg and certain of its employees, being linemen and cable splicers.

The Board, which rendered a unanimous decision, was composed of Honourable Mr. Chief Justice D. A. Macdonald, of the Court of King's Bench of Manitoba, chairman, appointed on the joint recommendation of the other Board members; Mr. R. F. McWilliams, K.C., Winnipeg, appointed by the Minister in the absence of a recommendation from the Corporation of Winnipeg, and Mr. Ralph Maybank, Winnipeg, nominated by the employees.

The grievance of the employees and for which they were seeking redress related to that part of the agreement governing their employment in the service of the city which prohibits them from remaining members of or becoming associated with any labour union.

In the statement of the nature and cause of the dispute as set forth in the application the employees referred to a resolution passed by the city authorities under date of June 9, 1919, during the period of the Winnipeg strike, requiring every individual seeking employment from the city to sign an agreement embodying,

among other things, prohibition from becoming associated with a labour union. The employees stated that the ostensible purpose of the resolution was to prevent any further or future participation by civic employees in a sympathetic strike.

The employees asked to be released of that undertaking and, if allowed freedom of association, offered to pledge themselves not to join in any sympathetic strike, the union also to undertake that the members would not be called out on a sympathetic strike.

The Board in its report states that undoubtedly these men were forced to sign the agreement under duress and that they are quite within their rights in requesting its abolition or modification; also that the dispute is one coming within the meaning of the Conciliation Act. After citing, among other points, (1) the Treaty of Versailles, to which Canada is a signatory and which expressly includes among its objects recognition of the principle of freedom of association, and (2) the Industrial Conditions Act of Manitoba of 1919, embodying the same principle, the Board recommends that the city authorities should take steps to modify the restrictions upon the liberty of the employees contained in the existing agreement along the lines contained in the offer of the

employees The text of the Board's conclusions follows:—

"Ten years have passed since the strike of 1919. World conditions and the mental attitude and other phases of life have changed. The peace of the world is the moving spirit, and to accomplish this end individual friendship and good-will must be promoted and are necessary in all walks of life, and particularly between capital and labour. The maintaining of such an attitude as is evidenced by the City of Winnipeg with these employees is not in harmony with the spirit of the times, and a solution of the grievance which the employees complain of should be found. In our opinion, the offer of the employees places the City of Winnipeg in a better position with respect to these employees than the existing agreement. The suggested settlement is evidence of their good faith in the motives by which they are prompted.

"Their affiliation with the Union of Electrical Workers assures the men of benefits beyond their reach as a small aggregation of workers. These benefits, in addition to the right of collective bargaining, may be briefly summarized as of a social character, together with mutual aid in sickness, distress and death.

"These are the main objects of the applicants in seeking a removal of the restrictions

which prevent their association with an organization that would afford them the protection so much needed by all industrial workers, and particularly by those engaged in the hazardous occupation of the applicants.

"The punishment for the offence of 1919 should not be perpetual. Even a conviction in our criminal courts for the greater portion of our grievous offences against society seldom extend to a term of ten years.

"The Board has given full and serious consideration to all the facts and circumstances surrounding this agreement, and has heard a great number of witnesses on behalf of both the applicants and the City of Winnipeg.

"As a result of such consideration, we would respectfully recommend that steps should be taken to modify the restrictions upon the liberty of the employees contained in the existing agreement along the lines contained in the offer of the applicants as above set forth. Whether such modification should relate only to these applicants, and others be left to be dealt with as their cases arise, or whether a general modification, applicable to all classes of employees, should be effected at the present time, is a matter to be decided by the City Council, and does not come within the scope of the matters referred to this Board."

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of Recent Decisions

**T**WO new decisions were recently given by the Canadian Railway Board of Adjustment No. 1. This Board was established by a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods; the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; The Brotherhood of Railway Trainmen; the Order of Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. Earlier decisions were outlined in the *LABOUR GAZETTE*, November, 1929, and in previous issues. The third report of the proceedings of the Board, covering the decisions rendered from October 1, 1923, to September 30, 1927, was issued as a supplement to the issue of November, 1927.

#### Case No. 350.—Canadian Pacific Railway (western lines) and Order of Railroad Telegraphers.

A temporary agent having been removed from service the company appointed a spare telegrapher to replace him. The man who was appointed was junior in service to another employee, a relieving agent, who became available for the position about two weeks after the appointment of the junior employee, and who should, in the employees' opinion, have been sent to the job on the date on which he became available. The employees considered that seniority should have governed the appointment, and that the senior spare man should be paid for the time he was held out of work, in accordance with paragraph 5 of Article 2 of the Schedule, which provides that "senior spare men will be kept working in preference to junior spare men." The company on the other side contended that it was never intended that a spare man should be entitled to "bump" another spare man who had been temporarily ap-

pointed to a position. The Board decided that the senior spare man in this case should be paid for the time he had lost through not being appointed to the position in question.

**Case No. 351.—Esquimalt and Nanaimo Railway Company and Order of Railroad Telegraphers.**

The superintendent of the E. and N. Railway, on August 16, 1928, issued the following bulletin to all telegraphers; "Effective January 1, 1929, a deduction of five dollars per month will be made from the schedule rating of all telegraphers occupying company's dwellings." It appeared that the agreement between the company and its telegraphers, in effect for many years, provided that deductions might be made for rental of station dwellings, but that it was not until January 1,

1929, that any deductions had been made from telegraphers' salaries for such rentals. It had, moreover, been the practice to bulletin vacant positions as with or without dwellings. The employees claimed that the effect of the bulletin was to reduce the salaries of the men affected by five dollars a month, reducing in proportion the basis of their payments for overtime. The Board considered that the telegraphers in bidding for positions advertised as "with dwelling," were justified in believing they were not to have the rentals deducted from their salaries; and the Board's decision was, therefore, that no deductions for rentals should have been made from telegraphers occupying positions which were bulletined as "with dwellings," who accepted positions so advertised.

## STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1929

THE number of strikes and lockouts in existence in Canada during November was eight, as compared with eleven in the preceding month. The extension of the strike of pulpwood camp workers in Northern Ontario, however, involving several hundred workers, caused a substantial increase in the time loss for the month as compared with October. Compared with November, 1928, the figures for November, 1929, show that only one-half the number of strikes occurred, involving approximately one-half as many workers and causing approximately one-half the time loss.

Date	Number of disputes	Number of employees involved	Time loss in working days
*November, 1929.....	8	823	12,871
*October, 1929.....	11	771	6,219
November, 1928.....	16	1,840	20,893

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Six disputes involving 767 workpeople were carried over from October and two disputes commenced during November. Of these eight disputes, two terminated during the month, both in favour of the employer. At the end of November, therefore, there were six disputes recorded as strikes or lockouts, as follows: moulders, Montreal, P.Q.; pulpwood camp workers, Northern Ontario; copper-smiths, Toronto, Ont.; silversmiths, Toronto, Ont.; stage hands, Ottawa, Ont.; and musicians, Ottawa, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to two such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926; and photo engravers, Toronto, Ont., commencing January 17, 1929.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

**PULPWOOD CUTTERS AND CAMP WORKERS, NORTHERN ONTARIO.**—The strike of employees which commenced on October 14, in the district east of Port Arthur during November spread westward to the Pigeon River district and also north, increasing the number involved to over six hundred. The strikers demanded an increase in wages from \$4 per cord to \$5, with increases for monthly paid

employees. It is reported that one employer agreed to increase the wages, but refused to take back some of the strikers, his offer, therefore, not being accepted. At the end of the month the strike was still in progress in all the camps involved.

**COMPOSITORS, NELSON, B.C.**—This dispute, involving compositors in a newspaper office owing to the alleged violation of the agreement in respect to the employment of apprentices, is recorded as having lapsed during November, employment conditions being no longer affected.

**MOULDERS, MONTREAL, P.Q.**—In this dispute, commencing May 2, 1929, for an increase in wages, the number of strikers during November decreased from sixteen to thirteen, two of the others having secured work elsewhere.

**STAGE HANDS AND MUSICIANS, OTTAWA, ONT.**—Musicians in a theatre ceased work on

November 11, 1929, in sympathy with a strike of stage hands on October 28. All employees in the theatre had been asked to accept a reduction in wages of twenty per cent, the stage hands ceasing work and being replaced. The musicians, therefore, in accordance with their agreement with the stage hands' union, gave two weeks notice to the management cancelling their contract. The musicians in turn were replaced. The employees' organizations, however, have not called off the strikes.

**COAL MINERS, SPRINGHILL, N.S.**—A number of boys ceased work on November 22, 1929, protesting against the suspension, pending investigation, of an employee because of a broken safety lamp. About fifty miners also were unable to continue their work for the day. Work was resumed the following day. As a result of the investigation, the suspension of the employee involved was confirmed.

#### STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1929

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
-----------------------------------	------------------------------	---------------------------	---------

##### (a) Strikes and Lockouts in Progress prior to November, 1929.

<b>LOGGING—</b> Pulpwood cutters and camp workers, Northern Ontario...	640	10,000	Commenced Oct. 14, 1929; for increase in wages. Underminated.
<b>MANUFACTURING—</b> <i>Printing and Publishing—</i> Compositors, Nelson, B.C.....	2	10	Commenced July 18, 1929; alleged violation of agreement <i>re</i> employment of excess apprentices. Lapsed during November, 1929.
<i>Iron, Steel and Products—</i> Moulders, Montreal, P.Q.....	16	350	Commenced May 2, 1929; for increase in wages. Underminated.
<i>Other Metal Products—</i> Coppersmiths, Toronto, Ont...	13	200	Commenced Oct. 1, 1929; for increase in wages. Underminated.
Silversmiths, Toronto, Ont....	90	2,150	Commenced Oct. 25, 1929; for increase in wages. Underminated.
<b>SERVICE—</b> <i>Recreational—</i> Stage hands, Ottawa, Ont.....	6	75	Commenced Oct. 28, 1929; against reduction in wages. Underminated.

##### (b) Strikes and Lockouts Commencing during November, 1929.

<b>MINING—</b> <i>Non-Ferrous Smelting and Quarrying—</i> Coal miners, Springhill, N.S...	50	50	Commenced Nov. 22, 1929; against suspension of a miner. Terminated November 23, 1929; in favour of employer.
<b>SERVICE—</b> <i>Recreational—</i> Musicians, Ottawa, Ont.....	6	36	Commenced Nov. 11, 1929; in sympathy with strike of stage hands. Underminated.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1929, in the review of Strikes and Lockouts in Canada and Other Countries, 1928. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

### Great Britain and Northern Ireland

The number of disputes beginning in October was 55, and 15 were still in progress from the previous month, making a total of 70 disputes in progress during the month, involving 21,700 workpeople and resulting in a time loss of 190,000 working days for the month. Of the 55 disputes beginning in the month, 8 arose out of proposed reductions in wages, 20 on other wage questions, 3 on questions of working hours, 10 on questions respecting the employment of particular classes or persons, 6 on other questions as to working arrangements, 8 on questions of trade union principle. Settlements were reached in 46 disputes, of which 11 were in favour of workpeople, 16 in favour of employers, 19 ended in compromises and in 5 other cases, work was resumed pending negotiations.

The strike of shipyard joiners, which with other crafts indirectly affected, had involved about 3,000 shipyard workers since April, was terminated on November 20. A national lock-out had been threatened by employers, but through conciliation by the Ministry of Labour, a compromise settlement was reached.

Two strikes involving together about 3,800 coal miners in South Wales occurred during October against the employment of non-union workers. Most of the non-unionists joined the union and the disputes were terminated.

A one-day strike of 2,000 London omnibus workers occurred on November 11, over a dispute concerning union membership; work was resumed the next day pending consideration by the union executive.

### Australia

The dispute involving about 12,000 coal miners in New South Wales, which began on March 31, was still in progress at the beginning of December. An agreement reached between the owners and union representatives on November 29, was later reported to have been rejected by a meeting of miners at Sydney; the terms of this proposed agreement called for a reduction in wages.

### United States

The number of disputes which began during September was 64, and 74 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 16,415, and the time loss 413,928 working days.

About 4,000 embroidery workers, hemstitchers, pleaters and tuckers in New York City were on strike from September 4 to 6, and were successful in their demand for an impartial chairman similar to the one appointed in the cloak and suit industry which followed the strike in that branch of the industry, as reported in the *LABOUR GAZETTE* for August. The appointment of the chairman was for the adjustment of all disputes and the abolishment of sweatshop conditions in the trade. The five day week of 40 hours and other demands were also secured by the strikers.

### Alberta Federation of Labour

The fourteenth convention of the Alberta Federation of Labour will be held in Edmonton, commencing Monday, January 13, 1930, the headquarters being the Macdonald Hotel. The convention call states:—"The need of a large and representative attendance at this convention is very great. Matters of the utmost importance to the trade unionists of the whole province will be discussed. Amendments to the Workmen's Compensation Act and other legislative changes can only be secured by the united and vigorous action of the movement, and this convention which is being held in the capital of the province, almost simultaneously with the opening of the legislature, should be an effective demonstration of the trade union forces of the province."

## COMBINES INVESTIGATION ACT

### Investigation into Alleged Combine in Plumbing and Heating Industry in Ontario

**A**N investigation into the Canadian Plumbing and Heating Guild, the Dominion Chamber of Credits, Limited, and the Amalgamated Builders' Council, together constituting an alleged combine of persons engaged in the plumbing and heating industry in Ontario, was conducted under the Combines Investigation Act during the months of August, September, October and November, 1929.

The events leading to the appointment of a Commissioner to investigate this alleged combine were reported in the August issue of the *LABOUR GAZETTE*.\* The Canadian Plumbing and Heating Guild was an organization for the stated purpose of regulating trade practices in the plumbing and heating industry in Ontario, and was incorporated without share capital under the Ontario Companies Act on June 30, 1927. Louis Michael Singer, K.C., of Toronto, Ontario, the Commissioner of the Canadian Plumbing and Heating Guild, on September 8, 1927, secured the incorporation of the Dominion Chamber of Credits, Limited, as a limited liability company with an Ontario charter. The Dominion Chamber of Credits, Limited, was nominally a credit bureau for the distribution of credit information and the collection of debts for its subscribers. The subscribers of the Chamber of Credits included operators conducting businesses in the installation of plumbing and heating equipment, as well as manufacturers and jobbers of plumbing and heating supplies. The Amalgamated Builders' Council, the third branch of the alleged combine, was formed on April 30, 1928, and was registered on June 8, 1928, as a trade union under the Trade Unions' Act, R.S.C. 1927, c. 202, an Act passed by the Dominion Parliament in 1872. Members of the Canadian Plumbing and Heating Guild became members of the Amalgamated Builders' Council. The Amalgamated Builders' Council, or A.B.C., was formed and registered for the subsequently revealed purpose of seeking for this body of employing contractors the immunity from criminal prosecution for conspiracy in restraint of trade which is accorded to trade unions registered under the Trade Unions' Act.

Mr. Gordon Waldron, K.C., on July 19, 1929, was appointed a Commissioner under the Combines Investigation Act to investigate the alleged combine, following a preliminary

inquiry which had been conducted by the Registrar of the Combines Investigation Act. Mr. F. W. Griffiths, K.C., was appointed counsel to conduct the investigation before the Commissioner.

Reference was made in the August article to the Commissioner's committal of Mr. L. M. Singer for contempt of court, and to subsequent applications to the Courts for his release. On August 17, Mr. Justice Logie granted this release, on bail of \$75,000, pending the hearing of an appeal from Mr. Justice Jeffrey's order of August 1st. The Court of Appeal met on September 16, before the Toronto sessions of the Waldron Commission opened, granted bail, and adjourned the case for two weeks to give Mr. Singer an opportunity to purge his contempt at the Toronto hearings of the Commission, which began on September 23. Mr. Singer's examination was not completed at the expiration of the two weeks, and the hearing before the Court of Appeal was adjourned from time to time. Finally, on November 12, the appeal was dismissed with costs, the order of dismissal not to issue until November 18, 1929. On the following day, November 13, Sir Richard Meredith, Chief Justice of the Common Pleas Division, allowed the same appeal and ordered the discharge of Mr. Singer from custody. The periods during which Mr. Singer was actually confined in the Toronto gaol were July 22-23 and August 1-17.

The investigation itself, as already noted, opened with the attempted examination of Mr. Singer on July 22. The first hearings, which by the Minister's authorization were held in public, were commenced on August 12, in the County Court House at Sandwich, Ontario. Sixty witnesses, from Windsor and the other Border Cities, were heard at this point, the hearings continuing for fourteen days, concluding on August 31. During this period inquiry was made into the operations of the Border Cities zone of the Canadian Plumbing and Heating Guild, the Dominion Chamber of Credits, and the two local sections of the Amalgamated Builders' Council, one representing the plumbing and heating contractors, the other the sheet metal contractors. Eight counsel, besides the counsel for the Government, took part in the Windsor proceedings.

\**LABOUR GAZETTE*, August, 1929, p. 868.

Public hearings were resumed on September 9, in London, Ontario, where evidence was given by twenty-seven witnesses, including operators, jobbers and manufacturers, most of them represented by counsel. The London hearings occupied nine days and were concluded on September 20.

The Toronto sittings, which opened at Osgoode Hall on September 23 and ended on November 15, occupied twenty-eight days. During this period, seventy-six witnesses were examined and statements on behalf of witnesses were made by fourteen counsel. An adjournment from October 28 to November 8 was arranged to permit of inquiry into the operations of the Canadian Plumbing and Heating Guild and the Amalgamated Builders' Council in Fort William and Port Arthur. Mr. F. W. Griffiths, K.C., acting for the Commissioner, took evidence in private at these points, examining twenty-five witnesses. In all, one hundred and eighty-eight witnesses were examined or made statements during the investigation, twenty-five counsel appeared for witnesses, and 7,300 pages of evidence were taken.

On October 31, Commissioner Waldron made an interim report dealing exclusively with certain alleged frauds discovered in the City of London during the course of the investigation. The Commissioner expressed the opinion that they were in violation of Section 444 of the Criminal Code as well as of the Combines

Investigation Act. Section 444 of the Code provides that—

Everyone is guilty of an indictable offence and liable to seven years' imprisonment who conspires with any person, by deceit or falsehood or other fraudulent means, to defraud the public or any person, ascertained or unascertained, or to effect the public market price of stocks, shares, merchandise, or anything else publicly sold, whether such deceit or falsehood or other fraudulent means would or would not amount to a false pretence as hereinbefore defined.

The Minister of Labour, in accordance with Section 31 of the Combines Investigation Act, remitted the interim report to the Attorney General of Ontario on November 8. Question was raised by the Honourable G. H. Ferguson, as Acting Attorney General, as to the propriety of the Provincial Government proceeding with any prosecution under the Combines Investigation Act pending the decision of the Privy Council as to the Act's validity. It was pointed out in reply that no question had been raised concerning the validity of Section 444 of the Criminal Code: whereupon the Prime Minister gave assurances of further consideration. No decision had been announced by the Attorney General up to December 10.

The interim report has not been made public, and presumably will not be published until after the receipt of the Commissioner's final report. A summary of both reports will appear in a later number of the *LABOUR GAZETTE*, following their publication.

---

### Rationalization in British Industry

The *Monthly Circular* published by the Labour Research Department (Great Britain) outlined in recent issues the progress already made in giving effect to the new policy of rationalizing industry in the United Kingdom. In addition to the application of the principle in such large industries as coal, cotton and steel, rationalization has been extended recently to a number of minor industries. For example, a group of second-grade china manufacturers have entered into a merger under the title "English China Corporation, Limited." It is proposed under the scheme to erect a large new factory on modern lines, and the combine is to control its own raw material with a view to the cheapening of production. A similar process is going on in cast iron goods and among the manufacturers of patent fuel or coal briquettes. It is stated that very little

has been effected so far in amalgamating iron and steel companies, although some of the large firms are carrying out pooling schemes. "Right from the commencement of the European steel cartel," it is pointed out, "the British industry has persistently refused to join, and though the reason was never definitely stated it has come to be accepted that the question of quotas was the stumbling block. Under the cartel each country is allotted a certain quota of production; the continental countries have proposed that the British quota should be based on the actual recent production, while the British demanded a quota more in line with their productive capacity, which was some 30 per cent more. On this difference the negotiations have always broken down."

## REPORT OF BUREAU OF LABOUR OF MANITOBA FOR 1927-28

THE Bureau of Labour of the Province of Manitoba has issued its thirteenth report, being for the twelve months' period ending April 30, 1928, in the form of a series of charts. These charts show the progress of the Bureau since its establishment in 1915. (The Bureau of Labour is now in charge of the administration of the following provincial acts:—

The Bureau of Labour Act, the Manitoba Factories Act, the Bake Shops Act, the Shops Regulation Act, the Minimum Wage Act, the Elevator and Hoist Act, the Steam Boiler Act, the Building Trades Protection Act, the Public Buildings' Act, the Fair Wage Act, the Electricians' License Act, the Public Amusements Act—(The licensing of Cinema Projectors); the One Day's Rest in Seven Act.

The tables in the report give particulars of the inspections carried out and orders made under these Acts. Thus, under the Factories Act inspections numbered 16,809 and orders 6,998 in 1928. The orders were for improvement in safety conditions, health and sanitation and child labour. Under the Bake Shops Act there were 54 safety orders, while 37 such orders were made under the Shops Regulation Act, in addition to eleven orders for improved sanitary conditions, and nineteen for infringements of provisions concerning child labour. It is stated that the position of children in industry was under close supervision during the year, twenty-two cases of unlawful employment of children being found, three of these in the woodworking industry and the remainder in stores. The resulting orders were complied with in every case.

### Minimum Wages for Women

The Minimum Wage Board is composed of the following members:—

Mr. Geo. N. Jackson, chairman; Mrs. Edna M. Nash and Mr. L. J. Rumford, representing the employers; Mrs. Jessie MacLennan and Mr. James Winning, representing the employees. Eleven prosecutions were made during the year, these being in connection with laundry, hotel, and office workers. Fines were imposed in five cases, and stay of proceedings entered in the other six, all claims for wages having been adjusted satisfactorily. In all, sixty claims for wages were adjusted and collected involving the sum of \$932.96, without resort to prosecution.

In Winnipeg and district 1,794 inspections were made and of the resulting orders, 241 concerned working conditions, 298 concerned hours of work, and 416 concerned wages. Outside of Winnipeg the corresponding numbers of orders were 9, 21, and 30 respectively. Overtime permits were issued to the number of 189, and twelve for legal holidays. The largest number of these permits were in laundries and in ladies' wear and ladies' hat establishments.

### Industrial Accidents and Accident Prevention

The following table shows the number of accidents reported to the Bureau for the fiscal year ending April 30, 1928.

Group	Fatal	Miscellaneous	Total
Industrial.....	6	5,832	5,838
Building Trades.....	7	564	571
Elevator.....	1	15	16

The report gives particulars of each of these fatalities. The Bureau also investigated other fatalities in occupations not coming under its authority, namely, in agriculture, in a hotel (male worker), on railway construction, on public work. In all, the Bureau made special investigations of 1,073 accidents during the fiscal year.

On the subject of accident prevention the report points out that "there are two parties who principally have the power, if properly directed, to prevent industrial accidents, i.e., the employer and the employee. Both have responsibilities, and neither can avoid them.—" It is the duty of the employer to provide safe equipment and maintain same in a safe condition. The worker also has a responsibility and must do his part wholeheartedly in order to achieve the desired results. Experience has shewn that many industrial accidents are due to the human element and might be prevented by exercising thought and care.

"According to the Manitoba Workman's Compensation Board report for 1927, we find 10,982 accidents reported at a cost of approximately one million dollars, and forty-six of these were fatal. There is no doubt that some of these accidents should have been prevented. While the workers need compensation in the event of accidents, there is also a pressing need for accident prevention,

because an ounce of prevention is worth a ton of cure. The enactment of Workmen's Compensation legislation has undoubtedly stimulated many owners of industries to introduce safety appliances in their factories. From the standpoint of the employee, it is exceedingly important that accidents should not happen. Industry free from accidents is more to be desired than workmen's compensation. Much work has been done by the Bureau in connection with accident prevention by effecting improvements in working conditions, and wherever possible, every effort has been made to impress upon the worker the necessity of realizing that many accidents might be prevented if due care was taken. There is still much work which might be done to advantage, such as the establishment of a bulletin service for the purpose of keeping before the employer and the worker the necessity of adopting safer working methods and the avoidance of unnecessary risks, and, therefore, it is hoped that in the near future, adequate means may be found for the further development of this humane work of accident prevention."

### First Aid

An extensive program of First Aid instruction was carried out during the year among the industrial and mercantile workers in the province, and in spite of the large classes the standing of those examined by the St. John Ambulance Association was much higher than usual. On this subject the report states as follows:—

"We are convinced that 'First Aid' is next in importance to the prevention of accidents; in fact, in some ways it is of even greater importance, because with all our efforts, we can never hope to entirely eliminate accidents, but with efficient first aid promptly at hand the fatal tendencies of accidents can very frequently be arrested. As an illustration of this, a workman in one of our shops fell on a circular saw which was running. His thigh and buttock were cut so deeply that the artery was severed. Had this man remained unattended for three minutes he would have died. However, a competent first aid man was near and due to his promptness and skill, this man's life was saved, and he is alive to-day and working in the same shop.

"Attention might well be drawn to the work which is being done by the Winnipeg Central Division of the St. John Ambulance Brigade. The membership consists of men who have been instructed by the Bureau of Labour and who have successfully passed the

examination. Formed in May, 1927, it has proved of great benefit to those men who wished to maintain and enlarge the scope of their skill and knowledge in first aid to the injured. Meetings are held twice monthly when instruction is given and opportunity is afforded for practising the methods taught for the alleviation of pain and suffering. Six teams drawn from the membership competed in a very successful contest for a trophy donated by Mr. J. S. Taylor. One cannot estimate too highly the benefit accruing to industry and the community generally from the organized body of skilled 'First Aiders' who are always ready to take care of any emergency of sickness or accident, because their continuous training keeps them efficient. This organization is self-supporting and all of the work is done voluntarily and gratis."

Among the special efforts of the year on behalf of safety the report mentions a special investigation by the Elevator and Hoist Board into the recurrence of accidents caused by an inadequate locking system, and it is hoped that a uniform system of interlocks will soon be obtained.

*Steam Boiler Act.*—Special efforts were made during the year to cover the entire province in the inspection of boilers, and strict supervision was carried out of all steam plants, which should be in charge of duly licensed engineers.

*Building Trade Protection.*—During the summer of 1927, a special inspector experienced in building construction, who devoted his entire time to inspection work under this Act, was appointed. Through the employment of this man, many improvements in scaffolding, etc., became effective, and he helped to create considerable interest in accident prevention throughout the building trades.

*One Day Rest in Seven Act.*—This act, passed at the legislative session of 1928 (LABOUR GAZETTE, May, 1928, page 463), was handed over to the Bureau for administration, and preparations were made for its enforcement. Regulations are being prepared also in connection with the recent amendment to the Factories Act in regard to dry cleaning and dyeing establishments where gasoline is used.

*Unemployment Relief.*—The report contains an appendix describing the work of the Commission on Seasonal Unemployment, which reported to the Legislature in 1928 (LABOUR GAZETTE, May, 1928, page 495). The extent

to which the provincial government assisted the municipalities in dealing with the unemployment situation during the past eight years is outlined, the cost to the province, during the undermentioned winters, being as follows:—

Winter 1920-1921.. .. .	\$ 78,952 28
Winter 1921-1922.. .. .	151,718 85
Winter 1922-1923.. .. .	63,542 80
Winter 1923-1924.. .. .	55,104 39
Winter 1924-1925.. .. .	\$61,064 79
Less refund.. .. .	2,455 47
	<hr/>
Winter 1925-1926.. .. .	58,609 32
Winter 1926-1927.. .. .	16,567 57
Winter 1927-1928.. .. .	9,640 41
	<hr/>

## MINING IN ALBERTA IN 1928

### Annual Report of the Mines Branch of the Province

THE annual report of the chief inspector of mines of Alberta reviews the activities of the mining industry in the province during the calendar year 1928. The report chiefly consists of tables, giving statistics of coal production and numbers of workmen employed in each mine; the number of accidents, fatal, serious and slight; the number and nature of the prosecutions under the Mines Act, the certificates issued, etc.

*Production in 1928.*—The total production of coal in 1928, amounting to 7,334,179 tons, was the largest output in the history of the province, exceeding last year's record by 397,399 tons. Of the total production for the year, 1,409,475 tons were sold for consumption in Alberta; 2,422,729 tons, in other provinces in Canada; 52,265 tons for consumption in the United States; 3,054,239 tons were sold to railway companies; 22,882 tons were used making briquettes; 240,431 tons were used under colliery boilers; 7,106 tons were used by colliery railroads; 58,039 tons were put to stock; and 119,998 tons were put on the waste heap. In addition to the coal mined, 53,768 tons of shale were mined from which 21,375,961 bricks were made; during the year there were also 140 tons of bituminous sands produced.

There were in operation during the year 1 shale mine and 2 open pits producing shale for brick making. The number of coal mines in operation was 284, of which number 14 were opened, 9 re-opened and 42 abandoned during the year. In addition to the mines abandoned, there were 34 closed temporarily, leaving 247 mines in operation at December 31, 1928.

The production of domestic coal amounted to 3,378,200 tons; sub-bituminous 740,498 tons; and bituminous coal 2,984,419 tons. No anthracite coal has been produced in Alberta since 1923. In the year 1928, 44,265 tons of

coal were shipped from Alberta to Ontario as compared with 22,680 tons in 1927.

*Per Capita Production.*—The number of tons mined per man underground since the year 1919 was as follows:

1919.. .. .	958
1920.. .. .	1,055
1921.. .. .	824
1922.. .. .	971
1923.. .. .	893
1924.. .. .	982
1925.. .. .	834
1926.. .. .	991
1927.. .. .	970
1928.. .. .	1,107

In calculating the total *per capita* production of men employed underground, the tonnage mined from stripping pits was deducted, and only the tonnage produced from mines was used.

*Number of employees.*—There were 11,473 persons employed during the month of December, 1928, which was a decrease of 156 from the number employed during the month of December, 1927. The total number of miners employed below ground as at December 31, 1928, was 8,727; while the total employed above ground was 2,746. Of these totals, domestic fields provided employment for 5,304 men under ground employees and 1,353 above ground; sub-bituminous coal mines for 615 below ground and 426 above ground; and bituminous mines for 2,808 below ground and 967 above ground.

*Prosecutions.*—There were 55 prosecutions instituted for contraventions of the provisions of The Mines Act, 49 of which were successful, 4 being unsuccessful and 2 withdrawn, the one as the defendant had left the district, and the other because defendant had been convicted on another charge the same day.

**Accidents.**—During the year there were 28 fatal accidents, besides 71 accidents classed as "serious" and 122 as "slight." The number of tons of coal mined per fatal accident was 261,935; per serious accident, 103,298 tons; per slight accident, 60,166 tons. The largest group of accidents was that of those due to haulage, with falls of rock accounting for the next largest group.

**Safety Measures.**—The report outlines the measures taken in the prevention of accidents, summarizing these as follows:

In addition to the regular inspections of mines, all serious and fatal accidents were investigated, and all inquests were attended by representatives of the Bureau.

In all dry and dusty bituminous mines, rock dusting with crushed limestone was continuously carried on.

Samples of mine air were taken at intervals in different mines by the inspectors, in addition to tests made by Burrell Gas detectors. These samples were forwarded to the Department of Mines, Ottawa, for analysis.

Samples of coal dust were collected and forwarded to the Scientific and Industrial Research Council of Alberta for analysis for combustible contents, also for screen tests for fineness. Samples of rock dust also were collected, and tested for silica content.

Examinations for certificates of competency as coal miners were conducted throughout the province, there having been 2,466 certificates issued during the year, making a total of 9,946.

## MOTHERS' ALLOWANCES IN CANADA

### Provisions of Acts in Force in Five Provinces

**T**HE Manitoba Child Welfare Commission, whose report was outlined in the *LABOUR GAZETTE*, April, 1929 (page 383), has published an appendix to that report containing, in tabular form, a comparative analysis of the provisions of the Mothers' Allowance Acts as in force on September 1, 1928, in the provinces of Canada having such legislation in effect, namely, Alberta, British Columbia, Manitoba, Ontario and Saskatchewan. The information was certified as correct for each province by the officials severally responsible. It is pointed out that in Manitoba since 1924, mothers' allowances have been granted under the provisions contained in Part III of the Child Welfare Act, which authorizes payment to the mother or other guardian under conditions approved by the Child Welfare Board. In this way Manitoba makes practically the same provisions for "bereaved and dependent children" as the other provinces make under Mothers' Allowance legislation.

The information given in the Commission's new table is reproduced below.

#### Dates of Provincial Acts

Alberta, 1919; British Columbia, 1920; Manitoba, 1916; Ontario, 1920; Saskatchewan, 1917.

#### Conditions of Allowances

##### (1) Widowhood—

This condition qualifies in the five provinces.

##### (2) Incapacitation of Husband—

**Alberta.**—The Act provides for the wife of a man unable to support his family by reason of disability resulting from sickness or accident, likely to continue for at least one year, but this clause has not been proclaimed.

**British Columbia.**—The wife of a man domiciled in the province at the time of the appearance of his disability, which disability must mean total disablement, and be likely to continue for at least one year.

**Manitoba.**—The wife of a man totally and permanently disabled to the point where it is impossible to work for compensation and where such disability appears to be irremediable, subject to review of his condition every three months (definition of incapacitation fixed by regulation).

**Ontario.**—The wife of a man who is totally and permanently disabled.

**Saskatchewan.**—The wife of a man permanently incapacitated by an incurable disease.

##### (3) Tuberculosis of Husband—

**Alberta.**—Included in "incapacitation" and therefore, as this section of the Act has not been proclaimed, this group has not been admitted to allowance, at present.

**British Columbia.**—Included in "Incapacitation."

*Manitoba.*—Incapacitation from tuberculosis included in "incapacitation." The wife of a man actually confined in a sanatorium. (This is not provided by statute or regulation but is the policy, though not absolutely adhered to.)

*Ontario.*—The allowance is granted on condition that the man is a patient actually in care in a tuberculosis sanatorium.

*Saskatchewan.*—The allowance is paid to the wife of a man actually a patient in a tuberculosis sanatorium.

(4) Insanity of Husband—

*Alberta.*—The wife of a man committed to, and actually an inmate of a hospital under the Mental Diseases Act.

*British Columbia.*—The wife of a man who actually became an inmate of a hospital for the insane while he was domiciled in the province.

*Manitoba.*—The wife of a man confined in a hospital for mental diseases.

*Ontario.*—The wife of a man confined in a hospital for the insane in Canada.

*Saskatchewan.*—The wife of a man confined in a hospital for the insane or feeble-minded in Canada.

(5) Incarceration of Husband—

*Alberta.*—Not admitted to allowance.

*British Columbia.*—The wife of a man who became an inmate of a penitentiary (i.e., was sentenced for a minimum of 2 years) while he was domiciled in the province.

*Manitoba.*—Not admitted to allowance.

*Ontario.*—Not admitted to allowance. However, Ontario has unique provision for the extramural employment and payment of prisoners.

*Saskatchewan.*—The wife of a man who is an inmate of a gaol or penitentiary (in practice, the allowance is paid only in respect to men sentenced for 6 months or longer).

(6) Desertion by Husband—

*Alberta.*—Not admitted to allowance.

*British Columbia.*—The wife of a man, deserted for at least 2 years by a husband domiciled in the province at the time of desertion but who does not reside or own property therein. (N.B. in practice, property in British Columbia owned by a deserting husband may be realized for the benefit of his dependents.)

*Manitoba.*—Not admitted to allowance.

*Ontario.*—The wife of a man who has not been seen or heard of for 5 years (in practice,

this period may be reduced to 3 years by special Order in Council for each case).

*Saskatchewan.*—Not admitted to allowance.

(7) Unmarried mothers—

*Alberta.*—Not admitted to allowance.

*British Columbia.*—By statute, under the general clauses, the allowance may be granted to an unmarried mother deemed a fit and proper person to have the care of her child or children.

*Manitoba.*—Not admitted to allowance. (Though the common law wife may not generally be deemed as falling within this group, her children are born out of legal wedlock and therefore fall within this classification.) In practice, the allowance has been paid to common law wives, otherwise suitable to have the care of their children.

*Ontario.*—Are not admitted to allowance. (In practice, where the woman is proved to be a common law wife, the allowance may be paid, by Order in Council for each case.)

*Saskatchewan.*—Not admitted to allowance.

(8) Divorced Wives—

*Alberta.*—Not admitted, unless also widowed.

*British Columbia.*—Admitted under two clauses: (a) if divorce granted on grounds of desertion and adultery; (b) under the general clause empowering the Board to grant allowance to "any other person whose case is a proper one for assistance."

*Manitoba.*—Not admitted.

*Ontario.*—Not admitted.

*Saskatchewan.*—Not admitted.

(9) Indian Children on Reserves—

*Alberta.*—Considered wards of the Federal Government.

*British Columbia.*—No provision.

*Manitoba.*—No provision.

*Ontario.*—By a special arrangement Ontario admits such children, and the Federal Department of Indian Affairs meets 50 per cent of the cost.

*Saskatchewan.*—If husband is a treaty Indian, the wife is not considered as entitled, but as being the responsibility of the Federal Government.

### Character of Mothers

In all the provinces a mother benefiting under the Act must be a fit and proper person to exercise custody and control over her children.

### Number of Dependent Children

The number of children whom a mother must have in order to qualify for an allowance in each province is as follows:—

*Alberta.*—Two children or more. (Unless special circumstances exist.) This restriction is imposed by regulation.

*British Columbia.*—One child or more.

*Manitoba.*—Though the statute states one child or more, by Order in Council the allowance is generally applicable only where there are 2 children or more.

*Ontario.*—Two children or more.

*Saskatchewan.*—One child or more.

### Age of Children

*Alberta.*—Boys under 15 years. Girls under 16 years. (Compulsory school age extends to 15 years.)

*British Columbia.*—Children under 16 years. (Compulsory school age extends to 15 years.)

*Manitoba.*—Children under 14 years (14 years is interpreted as the child's age until its 15th birthday. Compulsory school age extends to 14 years, unless the child is not at work, when he must remain at school until 16 years; 14 years is interpreted in practice to extend to the end of the school year in which the child attains his 14th birthday).

*Ontario.*—Children under 16 years (compulsory school age extends to 16 years, unless a child of 14-16 has attained a university matriculation standing).

*Saskatchewan.*—Children under 16 years (compulsory school age extends to 15 years).

### Special Exemptions

*Alberta.*—An allowance is not paid to a physically fit mother with only one child, unless there are very exceptional circumstances so warranting. This restriction is imposed by regulation.

*Manitoba.*—An allowance is paid to a mother with only one child under 14 years only if the mother or child is incapacitated.

*Ontario.*—An allowance is paid to a mother with only one child under 16 years only if she has another child over 16 years, or the husband be totally and permanently incapacitated and actually in the home.

*Saskatchewan.*—Whether the mother or child is incapacitated, the mother with one child under 16 years is given a small allowance if she has no means of support except her own efforts.

### Foster Mothers

*Alberta.*—Foster mothers are admitted to allowance only if they are also widows.

*British Columbia.*—Only a grandmother, aunt or elder sister who assumes the care, custody and maintenance of the child is so admitted.

*Manitoba.*—Any person accepting the care, custody, and maintenance of the children, and deemed suitable, is admitted (in practice, even institutions have been paid for care, for varying periods of time, under Part III of the Child Welfare Act).

*Ontario.*—The grandmother, aunt or elder sister of such children, or any woman with such children actually in charge, who, upon detailed investigation, is accepted as eligible under the Act.

*Saskatchewan.*—The grandmother, unmarried or widowed aunt, or elder sister of such children, or any woman with such children who are orphans actually in care, who, upon detailed investigation is accepted as eligible under the Act.

### Special Groups of Children Admitted

*Manitoba.*—Children whose both parents are dead, or whose only surviving parent (if the mother) is in a hospital for mental diseases or totally and permanently incapacitated, are admitted.

### Citizenship

*Alberta.*—No requirements.

*British Columbia.*—Mother must be a British subject.

*Manitoba.*—Mother must be the wife of a British subject by birth or naturalization, but notwithstanding, any child actually born in Canada may benefit regardless of parental citizenship.

*Ontario.*—Mother must be a British subject, or the wife of a British subject by birth or naturalization.

*Saskatchewan.*—No requirements.

### Residence

*Alberta.*—Mother must have been resident of province at time of enactment of legislation, or the wife of a man resident in the province at the time of death, or admission to hospital, under the Mental Diseases' Act.

*British Columbia.*—Mother must have been resident of the province, at least 18 months prior to making application, but also hus-

band must have been domiciled in province at time of incapacitation, admission to institution or desertion.

*Manitoba.*—Mother must have been resident of province at least two years prior to death, incapacitation or admission of husband to an institution, but by order in council any children otherwise eligible who have at any time lived in Manitoba for two years may be admitted if they have returned to live near relatives or friends who can assist them.

*Ontario.*—Mother must have been resident of province at time of death, incapacitation, desertion or admission of husband to an institution, and for a two-year period.

*Saskatchewan.*—Mother must have been resident of Canada at least two years prior to making application and resident in the province one year immediately prior thereto, and also at the time of death, incapacitation or admission of husband to an institution, and also the husband must have been actually resident in the province at death, incapacitation or admission to an institution.

**Assets**

**(a) Property Assets—**

*Alberta.*—No property limitations, but the income from any property is deducted from the allowance.

*British Columbia.*—A mother is allowed equity in real estate of assessed value of \$1,500 or less, and if used as a home.

*Manitoba.*—Where equity in property exceeds \$2,000 in value the mother is not allowed to retain any cash assets in excess of \$200 allowed for general use. (See cash assets below.) There is no definite upward limit on the property equity which a mother may hold and be eligible. A lien in favour of the province is registered against all clear title property, but only to prevent sale, transfer, or loan. The lien is never exercised.

*Ontario.*—Allowed equity in real estate as follows:—

Rural.. . . . .	\$1,500
Town of 5,000.. . . .	2,000
Cities up to 50,000.. . . .	2,500
Cities 50-100,000.. . . .	3,000
Cities 100-200,000.. . . .	3,500
Cities over 200,000.. . . .	4,000

(On all property over \$1,000 in value, one-twelfth of 5 per cent of the equity allowed is deducted from the monthly allowance in lieu of rent.)

*Saskatchewan.*—There is no legislation governing equity in property or cash, as the allowance is really interpreted as a relief only to mothers actually in necessitous circumstances, and each case is therefore dealt with as such. In fact, the Act reads "if the woman is in poverty and unable to support her children." If she has cash assets she must wait till these are depleted.

**(b) Cash Assets—**

*Alberta.*—Amount to be retained by the mother depends upon local municipality inspectors, and varies from \$200 to \$500.

*British Columbia.*—Allowed personal property or cash of \$500 or less, together with household furniture and wearing apparel.

*Manitoba.*—Allowed to retain cash assets up to \$200 and sufficient to meet outstanding obligations. All cash assets over the above must be deposited with the Child Welfare Board, and the interest therefrom applied to the allowance. The amount of any deposit over \$1,000 is expended as payment of the allowance by the Board until the sum is exhausted when the regular allowance begins. The deposit up to \$1,000 is returned on cessation of the allowance.

*Ontario.*—Liquid assets up to \$500.

*Saskatchewan.*—There is no legislation governing equity in property or cash, as the allowance is really interpreted as a relief only to mothers actually in necessitous circumstances, and each case is therefore dealt with as such. The Act reads "if the woman is in poverty and unable to support her children." If she has cash assets she must wait till these are depleted.

**(c) Adequacy of Means—**

In all provinces a mother in order to receive an allowance must be without adequate means of support.

**Earnings of Mother and Child**

*Alberta.*—Mother and children are expected, in practice, to add to income, provided children's welfare is not prejudicially affected thereby. The mother is allowed to retain 50 per cent of her earnings. The board of working children and 50 per cent of the balance of their earnings are deducted.

*British Columbia.*—Mother and children are expected in practice to add to income provided children's welfare not prejudicially affected thereby; deductions in allowance are made accordingly on the merits of each case, where children over 16 are living with the

applicant and earning more than sufficient to maintain themselves.

**Manitoba.**—Where there are two children in a family, and one attends school, the mother is expected to earn \$5 per month, and this amount is accordingly deducted from her allowance automatically, unless there are conditions of illness, etc. If she earns more than \$5 but not more than \$10 she is allowed in effect to keep her "second \$5" in that only the first \$5 is deducted from her allowance. If she earns more than \$10, she is allowed to benefit to the extent of this sum of \$5 and of only 25 per cent of each succeeding dollar over \$10. Thus if she earned \$11, \$5 plus 75 per cent of the \$1 would be deducted, that is \$5.75, from her allowance. This same scale of deduction is applied to three children families where two children are at school. In families of only two children, however, where both children are at school, the mother is expected to earn \$10 per month and this amount is accordingly deducted from her allowance. If she earns up to \$15 she is allowed to retain, as it were, her earnings over \$5 to the extent of the next \$10 earned, but only 25 per cent of each succeeding dollar. Where a mother takes roomers, 75 per cent of the rental of a furnished room, or 100 per cent of the rental of an unfurnished room is deducted.

**Earnings of Children.**—The cost of living of an earning child is estimated at \$28 per month, \$11 for food, \$10 for clothing, and \$7 for sundries. An earning child over and above this must pay into the home 100 per cent of his or her earnings until 18 years of age, 80 per cent until 20 years of age, and 70 per cent until 21 years of age and over, and deduction on the basis of such real or potential contributions, including the \$11 deduction for food, for an earning child, are accordingly made in the amount of the allowances. Special consideration may be allowed where relatives or friends are paying for education of a child over fifteen years of age, provided that such child is expected to contribute to the home after this additional education is received. Where the unemployment of mother or child is due to ill health, no deduction is made for potential earnings.

**Ontario.**—Mothers and children are encouraged in practice to add to income, provided children's welfare not prejudicially affected thereby. Though the allowance paid is a flat rate, deductions are made on the merits of each case. Earning children are expected to pay at least one-half of their earnings into the home.

**Saskatchewan.**—As the maximum allowance paid is \$30 per month, it is obvious that mothers and children must add to income by their own earnings.

**Amount of Allowance**

**Alberta.**—The maximum allowance is as follows:—\$37.50 to mother; \$10 to 1st child (if over 10 years of age, otherwise \$7.50); \$7.50 to second child; \$5 to each additional child. Rent is computed at \$12 in this budget. The budget would be varied up or down accordingly. The maximum allowance to a typical family is as follows:—

Mother.. . . . .	\$37.50
1 child 12-15 years.. . . .	10.00
1 child 7-11 years.. . . .	7.50
1 child 1- 6 years.. . . .	5.00
	\$60.00

This is the maximum allowance under any circumstances to a family of that size (unless rent greater than \$12 is approved).

**British Columbia.**—The maximum allowance is as follows:—

\$42.50 to mother and 1st child, and \$7.50 each additional child.

This is the maximum allowance under any circumstances to a family of that size.

**Manitoba.**—The maximum allowance under the Budget System used, is as follows:—

City residents only. (For families living in rural districts no schedule is used. The amount of allowance is fixed by the Director, in his own discretion, with the report of the local committee, and the city schedule and its comparison with local conditions, before him.)

**Food and clothing—**

- \$12 for mother
- 11 for child 12-15 years.
- 9 for child 7-11 years.
- 7 for child 1- 6 years.

**Rent—**

- \$18 mother and 2 children.
- 20 mother and 3-4 children.
- 25 mother and 5 children.

**Operating costs—**

- \$6 mother and 2-5 children.
- 7 mother and 6 or more children.
- (includes ordinary heat for cooking only.)

In October a flat allowance of one month's clothing (in this case \$12.25) for winter, is made. From October to April (spread over 7 months) a special winter fuel allowance for 6 months is made varying in amount from

\$12 to \$18 per month with the size and nature of accommodation. Therefore the maximum allowance to a typical family of mother and child 12-15 years; 7-11 years; and 1-6 years, would be as follows:—

Food and clothing.. . . .	\$39.00
Rent .. . . .	20.00
Operating costs.. . . .	6.00
Clothing allowance.. . . .	12.00
Fuel allowance.. . . .	96.00

Though the maximum fuel allowance would really be \$18 or \$108 for 6 months, i.e. \$9 per month for 12 months, the lower figure was taken, as \$16 is really paid to most families of this size. Extra fuel and clothing \$108 a year or \$9 per month. The maximum allowance to a family of this size with no other source of income is \$74. However, due to the policy of automatic deduction for potential as well as real earnings, a family of this size might receive either \$74 per month, if the mother or one child were considered to be in ill-health, or \$69 per month if the deduction were made. (Of 25 three-children families, with two children at school and one at home, at the close of the fiscal year in ten cases no deduction was made; in nine cases where the mother earned, \$5 only was deducted. In only 6 cases was the deduction made on the basis of potential earnings.) Thus, in Manitoba, at the present time a typical family of this size and type might be receiving, if of class "A"—i.e. no deduction being made because of ill-health or other similar cause, \$74.

If of Class "B" deduction made for potential earnings or real earnings, \$69.

*Ontario.*—The maximum allowance is as follows:—For any mother with 2 children: \$40 in a city; \$35 in a town (5,000 or more); \$30 in rural area; plus \$5 for each additional child. Maximum in all cases \$80. Therefore the maximum allowance to a typical family of a mother and 3 children is:—\$45 in a city; \$40 in town; \$35 in rural area.

*Saskatchewan.*—The maximum allowance for any family \$30 per month. (In special, necessitous circumstances, for a large family, the Minister may authorize a greater amount, but should the family require this further help and be living in an organized unit, the municipality is asked to supplement the allowance as no portion of allowance expenditure is charged to the municipalities.)

#### Health, Medical Services, etc.

*Alberta.*—No provision is made in the allowance for these services. Hospital services are provided only under the free hospital legislation of province.

*British Columbia.*—No provision is made in allowance for these services. Hospital services are provided only under the free hospital legislation of province.

*Manitoba.*—No provision is made for medical services, but medical, dental and optical supplies are given. Hospital services are provided only under the free hospital legislation of province.

*Ontario.*—Medical services are provided for by full time district officers of health, where families live in those districts; otherwise no provision is made. Hospital services are provided only under the free hospital legislation of the province.

*Saskatchewan.*—No provision is made in the allowance for these services. Hospital services are provided only under the free hospital legislation of province.

#### Agency Administering

*Alberta.*—The Superintendent of Dependent and Delinquent Children.

*British Columbia.*—The Workmen's Compensation Board sitting with an extra woman member as Mothers' Pension Board, with administration through an independent Mothers' Pension secretary and staff.

*Manitoba.*—Director of Child Welfare and Child Welfare Board (voluntary).

*Ontario.*—Mothers' Allowance Commission appointed by the government, with *per diem* allowance and with paid administrative staff.

*Saskatchewan.*—Commissioner of Bureau of Child Protection.

#### Supervision

*Alberta.*—By inspectors of Department of Dependent and Delinquent Children.

*British Columbia.*—By special staff of Mothers' Pensions Visitors.

*Manitoba.*—(a) By staff and local Child Welfare Committee and (b) by "friendly visitors" (voluntary).

*Ontario.*—(a) By special staff of Mothers' Allowances visitors. (b) No supervision by voluntary workers is made except on the request of the paid investigator for the individual case and then in close co-operation and under immediate supervision and advice of paid investigator.

*Saskatchewan.*—By staff of bureau of Child Protection.

**Inter-Provincial Reciprocal Arrangements**

*Alberta.*—None.

*British Columbia.*—None.

*Manitoba.*—None.

*Ontario.*—With Saskatchewan only.

*Saskatchewan.*—With Ontario only.

**Source of Revenue**

*Alberta.*—One-half provincial revenue. One-half municipality revenue.

*British Columbia.*—Provincial Treasury entirely.

*Manitoba.*—Paid out of Consolidated Revenue of province, and province re-im-bursed by 50 per cent assessment from municipalities.

*Ontario.*—Paid out of Provincial Treasury, and province re-im-bursed by levy of 50 per cent on municipality. Province pays entirely in unorganized territory.

*Saskatchewan.*—Provincial Treasury entirely.

**CALGARY FIRE DEPARTMENT PENSION FUND**

THE following pension scheme took effect in Calgary on December 15 for the benefit of the members of the Fire Department of the City. It forms part of a larger scheme in which it is hoped that all the civic employees will be included later. The City Council has authority under the City Charter to pass a bylaw to provide for the granting pensions, gratuities and retiring allowances to its employees.

The services of Professor M. A. MacKenzie, of Toronto, were recently called into consultation by the City authorities in regard to a pension scheme applicable to all employees, and it is understood that a comprehensive scheme is now available for the consideration of the council elected for 1930. Owing however to the large expenditure planned for next year the Council were unable to recommend the adoption of the general scheme at the present time.

The Fire Department Pension Fund Bylaw provides as follows:—

1. There is hereby constituted and shall be constituted hereafter, a Fund to be known as "The Fire Department Pension Fund" which shall be created and maintained by the contributions and payments to be made as provided hereinafter.

2. The Fund and the benefits and obligations derived thereunder, shall be applicable to all active members of the Fire Department including the Chief of the Fire Department and the Assistant Chief.

3. The City shall pay into the fund monthly, a twelfth part of \$2,815 which sum is the annual interest upon the accrued liability actuarially calculated as existing at the date hereof.

4. Contributions to the fund shall be compulsory upon all members of the active Fire Department and in so far as the said members are concerned, shall upon the commencement of this scheme or upon entry into the Force (as the case may be), be made as follows:

(a) Present and New Members of the Department who have not passed 27 years of age, shall, during the continuance of their service, pay 3 per cent of their salaries.

(b) Members of the Department who have passed the age of 27 years but have not passed the age of 33, shall, during the continuance of their service, pay 3½ per cent of their salaries.

(c) Members who have passed the age of 33 but have not passed the age of 38, shall, during the continuance of their service, pay 4 per cent of their salaries.

(d) Members who have passed the age of 38 but have not passed the age of 42, shall, during the continuance of their service, pay 4½ per cent of their salaries.

(e) Members who have passed the age of 42 but have not passed the age of 45, shall, during the continuance of their service, pay 5 per cent of their salaries.

(f) Members who have passed the age of 45, shall, during the continuance of their service, pay 5 per cent of their salaries.

5. Members contributions shall be paid in by the City Treasurer, who shall on each pay day, deduct from the salary or wages of each member of the Department covered by the scheme, the percentage referred to in the past preceding paragraph.

6. The City shall, in addition to the sum mentioned in paragraph three hereof, pay monthly into the fund a sum equivalent—

(1) to 3 per cent of the salaries of present and new members of the Department included in the class contained in subsection (a) of paragraph 4 hereof.

(2) 3 per cent of the salaries of present employees included in the class contained in subsection (b) and 3½ per cent of the salaries of new employees included in the class contained in subsection (b) of paragraph 4 hereof.

(3) 3 per cent of the salaries of present employees included in the class contained in subsection (c) and 4 per cent of the salaries of new employees included in the class contained in subsection (c) of paragraph 4 hereof.

(4) 3 per cent of the salaries of present employees included in the class contained in subsection (d) and 4½ per cent of the salaries of new employees included in the class contained in subsection (d) of paragraph 4 hereof.

(5) 3 per cent of the salaries of present employees included in the class contained in subsection (e) and 5 per cent of the salaries of new employees included in the

class contained in subsection (e) of paragraph 4 hereof.

(6) 3 per cent of the salaries of present employees included in the class contained in subsection (f) of paragraph 4 hereof.

7. To the Fund there shall also be added:

(a) All gifts made to the Department or any member of the Force for services rendered in the course of Departmental duties.

(b) All legacies, bequests or gifts made by any person or corporation for the benefit of the Fire Department or its pension fund.

(c) Any sums raised by means of concerts, athletic events and dances by the Firemen for the Fund.

(d) All sums existing at the date hereof and standing to the credit of the Firemen's Benefit Fund.

8. The Fund shall be administered by a Committee consisting of the Mayor, for the time being, of the City of Calgary, who shall be Chairman and shall also have a vote; Two representatives of the Fire Department, who shall be annually selected by the members of the Department; The City Comptroller, for the time being; The City Solicitor for the time being, or in lieu of the two latter or either of them, such other permanent city official or officials as the Council of the City of Calgary may designate.

9. The Committee who, subject to the provisions of Section 11, shall not be entitled to any remuneration, shall have the power to make all reasonable regulations covering the procedure and the transaction of its business.

10. The City Treasurer shall have the custody of the Fund and shall act as treasurer to the pension Committee.

11. The Committee shall have a right to appoint a Secretary either from its own number or otherwise, as the Committee may determine and to fix the Secretary's remuneration.

12. The Secretary who shall make and keep complete statistical records, shall hold office at the pleasure of the Committee.

13. The Medical Board referred to herein-after shall consist of the Medical Officer of Health, for the time being, a member of the Alberta College of Physicians and Surgeons, to be selected by the members of the Department annually or otherwise, as the said members shall determine, and the President of the Calgary Medical Association, for the time being, who shall be the Chairman of the Medical Board.

14. The costs of administration and operation including the allowance to the Secretary, the fees of the Medical Board and all other legitimate clerical and professional expenses, shall be borne by the City until such time as an actuarial survey shall declare the fund able to bear this expenditure.

15. The fund and the administration thereof, shall be applicable as far as possible, to all future and present members of the Force.

16. The maximum age for new entrants to the Fire Department shall be 27. If the City desires for any reason to engage any man over the age of 27, the City if it desires such officer to be pensionable, shall cause to be contributed to the fund either wholly or partially

by itself or wholly or partially by the entrant such sum as may be necessary to take care of the total accrued liability in respect of such proposed beneficiary. In no event, however, shall any new entrant be admitted to the Fire Department over the age of 45.

17. The minimum age for the retirement from the Department shall be 65, at which age any member may claim his pension, or be pensioned by the Committee.

18. Notwithstanding the provisions of the last preceding section, any member may apply to the Medical Board for an examination and if the Medical Board shall report to the Committee that any member by reason of disease, sickness or general physical unfitness, is unable to carry on his work, he shall unless the City shall procure him other employment in the Department or with his consent, in some other Department of the City, the performance of which suits his physical condition, be entitled after a service of not less than ten (10) full years, to receive his benefits under this scheme.

19. Upon retirement after at least ten (10) years of service, a member shall receive a monthly pension equivalent to one-seventieth of the average monthly pay of the last five (5) years of service, multiplied by the number of years of service. Provided, however, that the member shall have reached the age limit of 65 or have been retired by the Committee upon the recommendation of the Medical Board. And provided further, that no pension shall be in excess of one-half such average salary nor greater than \$150 per month.

20. In calculating the pension in accordance with the provisions of the last preceding paragraph, the years of service without contribution, that is to say, the years of service of existing members of the Department before the adoption of this pension scheme, shall count as half-years.

21. Any years of service actually spent by any present member of the Department after resignation from the Force, with the armies of the Allies during the Great War, shall count as years of service in the Force in accordance with the provisions of Section 20. In case any present member of the Force has, prior to the date hereof, rejoined the Force after resignation, then the years of service prior to resignation shall also count as years of service with the Department in accordance with the provisions of Section 20 hereof.

22. If any member of the Fire Department included in the operation of this scheme shall, prior to the date hereof, have served in any other Department of the City of Calgary in respect of which a pension scheme shall after the date hereof be inaugurated or has been at the date hereof already inaugurated then the years of service in such other Department shall count as years of service with the Department in accordance with the provisions of Section 20 hereof.

23. If any member of the Fire Department included in the operation of this scheme shall, after the date hereof, resign from the Fire Department and accept employment by the City of Calgary in any other Department, such member shall continue his contributions and retain his rights in the Firemen's Pension Fund in all respects as if he had continued to be a

member of the Fire Department; also the City shall continue its contribution on his behalf.

24. Pensions shall be paid for three years, in any event, and for so much longer as the pensioner may live.

25. Pensions shall be paid on the regular pay days of the active force, the first payment to be made on the first pay day after resignation and the last payment on the first pay day after the death of the pensioner.

26. Pensions shall be unassignable and unattachable, in accordance with the provisions of the Charter of the City of Calgary. Provided, however, that from any pension or moneys to be paid or payable under this scheme, either to a member or his estate, the City shall have the right to deduct all moneys that may be owing to it by the member or his estate on any account whatsoever.

27. Upon the resignation or dismissal from the Force, a member shall be entitled to receive the following sums:

(a) If he has served for less than ten (10) pensionable years, he shall receive the whole of his contributions, together with interest compounded annually at the rate of  $4\frac{1}{2}$  per cent.

(b) If he has served for more than ten (10) pensionable years, he shall in addition to the sum referred to in subsection (a), be entitled to receive also the City's contribution on his behalf made pursuant to Section 6 hereof, also compounded annually at the rate of  $4\frac{1}{2}$  per cent. Provided always, however, that if any member is dismissed because of any conviction for an offence against the criminal code, or if the facts leading to such dismissal, lead to such conviction, or if any member is dismissed for any other reason which in the opinion of the City Commissioners implies personal disgrace to the member so dismissed, then such member shall not be entitled to receive from the Fund any sum in excess of the sums actually contributed by him together with interest at the rate of  $4\frac{1}{2}$  per cent compounded annually. Provided, however, that any member so dismissed, may have a right to appeal to the Council of the City of Calgary, whose decision in the matter shall be final.

(c) For the purposes of subsections (a) and (b) of this Section 27, pensionable years shall be years served in the Department subsequently to the date of the passing hereof and years served in the Department prior to the date of the passing hereof but calculated in accordance with the provisions of Sections 20, 21 and 22 hereof.

28. If any member of the active Fire Department dies in service, there shall be paid to his estate by way of death benefit, the sum of \$2,500.

29. When any member or his widow or other dependent as defined by the Workmen's Compensation Act, becomes entitled to benefit under the Workmen's Compensation Act, the only payment to be made from the Firemen's Pension Fund shall be such sum as may be necessary to bring the total from both sources up to the benefit provided for by the regulations governing this fund. Provided, however, that the

payments from the Firemen's Pension Fund shall never be less than the contributions actually made by the member to the Fund, together with interest at the rate of  $4\frac{1}{2}$  per cent compounded annually.

30. The Fund shall be in the custody of the City Treasurer and shall be considered and set apart as a separate trust fund. He shall invest the sum in securities approved by statute for the investment of the Sinking Fund securities of the City of Calgary.

31. The Committee through the City Treasurer, may, when any person becomes entitled to a pension under this scheme, purchase from the Dominion Government an annuity in the amount and on the terms set out herein.

32. The City will guarantee interest on the moneys so invested, at the rate of  $4\frac{1}{2}$  per cent. Any surplus interest over and above the rate of  $4\frac{1}{2}$  per cent earned by the securities, shall be held in the Fund in trust by the City to take care of any deficit that may arise from failure to receive interest at the rate of  $4\frac{1}{2}$  per cent.

33. An actuarial valuation by a competent actuary, shall be made every five years and the charge upon the City for the interest on accrued liability and monthly contributions, shall be adjusted according to the result of each such valuation.

Amendments to the Mothers' Allowance Act of Alberta are to be considered by the provincial legislature at its next session. At a recent conference on the subject at Edmonton, Mayor Bury called attention to the tendency of mothers in the province to drift into the cities, which thus become liable for expenditures that should rightfully be met by the rural districts. It was suggested that in cases where the mother has no residence qualification, but is otherwise entitled to an allowance, the allowance be given and the entire cost borne by the provincial government. The mayor believed that the latter suggestion could be put into effect without an amendment to the existing act, and that it never was the intention of the government to deprive a mother of an allowance even if she had not the necessary residence qualifications.

In November 27 the trustees of the Unemployment Insurance Fund of the men's clothing trades in New York City ordered the distribution of \$100,000 to some 4,000 members of Amalgamated Clothing Workers' Union who in the last year have not enjoyed the minimum terms of employment. Last year the fund under the supervision of the union and the New York Clothing Manufacturers' Exchange distributed \$50,000. In Chicago where the system has been in effect since 1923, \$5,750,000 has been collected, and \$4,750,000 paid out.

## INDUSTRIAL AND TRADE UNION PENSION SYSTEMS IN THE UNITED STATES

**T**HE American Association for Old Age Security recently published a report of the proceedings of the Second National Conference on Old Age Security held at New York last April under the auspices of the Association. One of the speakers, Mr. Murray W. Lattimer, of the Industrial Relations Councilors, New York, contributed a study of industrial and trade union pensions in the United States.

Dealing first with pensions provided by industrial and commercial concerns, Mr. Lattimer stated that there are in existence to-day some 550 business, industrial and commercial pension plans in organizations employing 4,000,000 and 4,500,000 persons. These plans are of two main types—the non-contributory in which the employer bears all the cost and the contributory in which the cost is divided between both employers and employees. Although contributory plans have increased in the last few years the number of employees covered by them is probably not more than four per cent of that under non-contributory plans.

Under about 300 formal non-contributory plans the company promises some pension, computed by a fixed method, to those employees who fulfil the specified requirements.

### Non-Contributory Pensions

Typical provisions of non-contributory plans are as follows:—

1. For superannuation pensions, the employee must have served 20 to 25 years continuously with the company and be 65 years of age. The limits on service are 10 years as a minimum, to about 40 years as a maximum. A break of service by a lay-off or leave of absence of less than a year's duration is usually allowed. Voluntary quitting, however, always breaks the continuity.

2. For a disability pension (about three-quarters of the plans have such a provision) 15 or 20 years of service and no age requirement are stipulated.

3. One, 1.5 or 2 per cent of the average annual salary for the last 10 years of service, multiplied by the number of years of service is the amount of the pension.

4. A large majority of schemes have either a maximum pension, or what has the same effect, a small flat pension.

5. With very few exceptions, the employee acquires no right whatever to any pension or credit therefor until he fulfils all the require-

ments for a pension and is actually placed on the pension roll by the board of directors.

6. In all cases, the company reserves the option to terminate the plan at any time after six months' or one year's notice. In about forty per cent of the plans, however, the pension once granted is guaranteed by the employing company for the life of the pensioner, and termination of the plan is subject to this guarantee. In other cases, it may be subject to forfeit if some company rule is violated or the pensioner is convicted of a crime.

7. Very few of the plans hold pensioners subject to recall to active duty, except in cases of those disability pensioners who recover completely.

8. Provision for dependants of pensioners is ordinarily made by group insurance and not through the pension plan, although, in a few cases the pension (or half of it) may be continued to the widow until her re-marriage, or to the minor children up to their majority.

### Contributory Pensions

The contributory plans differ mainly in the phases connected with the contributors.

1. The employee is assessed from 25 per cent to 75 per cent of the cost. Sometimes the company makes no promise as to what proportion it will bear, merely specifying that it will contribute such sums, from time to time, as it sees fit.

2. In case of death or withdrawal, the employee's contribution is returned to himself or his heirs with interest.

3. However, instead of the pension being based on final salary the more usual procedure is to relate it to the salary over the whole period of service.

Mr. Lattimer estimated that there are now 80,000 to 100,000 pensioners under formal plans drawing between \$50,000,000 and \$60,000,000 in pensions annually. The average annual pension in 1927 of the 46,000 pensioners of whom record exists is a little over \$590.

### Trade Union Pension Schemes

The chief provisions of the trade union schemes are stated to be as follows:—

1. A retirement age of 60 or 65 years.

2. Twenty to 25 years of continuous membership in good standing is necessary to qualify for both superannuation pension and disability pension, except in the schemes of the three railroad brotherhoods which specify

only one year. This one year membership will ultimately be confined to disability pensioners, since the brotherhoods have set maximum age limits of 40 and 45 years for those joining the funds with 65 as the age of retirement.

3. A pension of \$25 to \$40 per month. The Granite Cutters, however, pay only \$10 per month for 6 months of the year, and the Printing Pressmen \$4 per week.

4. In eight schemes, protection for dependants takes the form of a death benefit, one union continues to pension dependant widows. The three railroad brotherhoods have special widows' pension departments in which members may purchase annuities to be paid to their widows.

5. In eight cases the pension is payable only to members who are unable to obtain sustaining employment which is variously defined. In the other four, payment is made on condition of retirement from the trade.

At the present time, the nine internationals and six locals having pension schemes are paying nearly \$4,000,000 annually to about 11,500 pensioners.

Mr. Lattimer criticizes non-contributory industrial pension systems on the ground of their insecurity, stating that "in every instance the whole scheme may be abolished overnight." It can probably be anticipated, he thinks, that an effort will be made to reduce the burdens in the companies by

assessing part of the cost on the employees. A large number of new plans have been established in the past three years on the contributory principle. Most of them, however, have been in small companies. We have found only seven companies, one an insurance company, two public utilities, two oil, one coal mining, and one food products company, having over 5,000 employees, which have adopted the contributory principle.

The speaker declared that trade union pension funds are generally in a precarious condition, since all the money which they pay out must be assessed against themselves. "The total funds in hand are but little more than enough to pay present pensioners for two years. The number of pensioners is growing rapidly. Already most of the unions have been compelled to raise dues, some of them several times. We have made calculations showing the percentage of his own pension paid by each member of the fund or union for various ages. If a person becomes a member at thirty, and is in good standing continuously, he will pay from five to thirty-five per cent; at forty, from three to thirty per cent; and at forty-five, from 2.25 to twenty-seven per cent. In several of the funds it appears certain that if more than one-tenth of the present membership survive to claim a pension, there cannot possibly be funds to pay them under the present financial arrangements."

## NUMBER OF WORKERS UNDER UNEMPLOYMENT INSURANCE IN GREAT BRITAIN

THE following information is taken from an article appearing in the *Ministry of Labour Gazette*, November, 1929:—

The number of persons who are insured against unemployment under the British Unemployment Insurance Acts is estimated once a year on the basis mainly of information derived from the exchange of unemployment books in July.

The Unemployment Insurance Acts provide, subject to certain exceptions, for the compulsory insurance against unemployment of substantially all employed persons. The principal classes of persons who are excepted from such compulsory insurance are juveniles under 16 years of age, and (since January 2, 1928) persons aged 65 and over, persons employed otherwise than by way of manual labour at a rate of remuneration exceeding in value £250 per annum, persons employed in

agriculture and private domestic service, and outworkers. Persons employed by local public authorities, railways and certain other public utility undertakings, members of the police forces, and persons with rights under a statutory superannuation scheme may, in certain circumstances, also be excepted.

The total number of insured workers aged 16 to 64, inclusive, in Great Britain at the beginning of July, 1929, is estimated at 11,834,000 (including 134,000 insured under the Special Schemes for banking and insurance industries), as compared with 11,629,000 at July, 1928, and 11,534,000 at July, 1927.

For Great Britain and Northern Ireland the estimated number insured at July, 1929, is 12,094,000, as compared with 11,881,500 at July, 1928, and 11,784,000 at July, 1927. It will be seen that there has been a substantially larger increase in the insured population in

the year ended June, 1928, than in the previous year. In the six years July, 1923, to June, 1929, there has been an estimated increase in the numbers insured against unemployment of 8.4 per cent, or an average of 1.4 per cent per annum. The rate of increase, however, has not been constant throughout this period, but has been influenced by two main factors, viz., the state of employment and the extent to which unemployed insured persons have maintained contact with the Employment Exchanges, and have, therefore, had their unemployment books renewed annually.

The available statistics tend to show that the heavier increase in the past year is due in some degree to the effect of the removal of restrictions on the granting of unemployment benefit which came into operation in April, 1928, and to the system under which, as from July, 1928, unemployed insured persons may avoid the accumulation of arrears of Health Insurance contributions by registering at Employment Exchanges as applicants for work. It is known that up to October, 1928, these two exchanges were responsible for the addition of about 65,000 persons to the numbers

on the registers of the exchanges, and it is clear that a large proportion of this addition consists of individuals who otherwise might have dropped out of the statistics of the numbers insured.

A comparison between the estimated number of insured persons at two or more dates, in any individual industry, shows the net result of the influence of a number of factors. On the one hand, there is in every industry a constant wastage due to deaths, emigration, retirement from employment, the passing of individuals out of the scope of unemployment insurance through entry into business on their own account, through enlistment in the forces, through rises in salary for non-manual workers above the £250 limit, or through reaching the age limit of 65, together with the transfer of individuals to some other industry. On the other hand, unless the industry is declining very rapidly, there is a constant flow into it, consisting mainly of juveniles under 18, to replace such wastage or as result of expansion in business or both. Some industries are also being recruited partly from other industries.

### Sickness and Accident Insurance in Canada in 1928

The report of the Superintendent of Insurance for the Dominion of Canada for the calendar year 1928, includes full particulars concerning accident and sickness insurance. Accident insurance, by definition in the Insurance Act, covers (a) personal accident; (b) property damage; (c) employers' liability and workmen's compensation; (d) all other liability.

#### Accident Insurance

The business of accident insurance was transacted by fifty-eight companies, viz: twenty Canadian, twenty-seven British and twelve foreign.

(1) *Personal Accident*.—Of the fifty-eight accident companies, fifty-seven transacted personal accident insurance, viz: nineteen Canadian, twenty-seven British and eleven foreign companies. The total premiums written for this class of business were \$3,239,726, and the losses incurred amounted to \$1,355,340, with unsettled claims outstanding to the amount of \$518,977.

(2) *Employers' Liability and Workmen's Compensation*.—Of the fifty-eight accident companies, fifty-four transacted employers' liability and workmen's compensation insurance, viz: seventeen Canadian, twenty-five British and twelve foreign. The total premiums for this class of business were \$4,626,602. The claims incurred amounted to

\$3,522,173, and there were outstanding at the close of the year unsettled claims amounting to \$1,800,893.

(3) *All Other Accident*.—Of the fifty-eight accident companies, fifty-eight transacted "all other accident" insurance, viz: twenty Canadian, twenty-seven British and eleven foreign. The total premiums for this class of business were \$1,283,999, the losses incurred were \$470,087, while outstanding claims at the end of the year were \$304,677.

*Combined Accident and Sickness*.—Twenty-three companies transacted this class of business, viz: ten Canadian, five British, and eight foreign. The premiums written amounted to \$1,875,084 and the claims incurred to \$1,115,624. There were outstanding at the close of the year unsettled claims amounting to \$267,346. The total premiums for fifteen years for which separate figures are available are \$17,147,926, and total claims \$8,013,056.

#### Sickness Insurance

The business of sickness insurance was carried on by fifty-four companies, viz: twenty Canadian, twenty-four British and eleven foreign companies. Premiums written amounted to \$1,815,446; claims incurred to \$1,093,728; outstanding claims at the end of the year to \$367,942. The total premiums received for the period of thirty-three years are \$30,524,196 and the total claims \$20,384,202.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Licensing of Moving Picture Projectionists in British Columbia

New regulations, under the Moving Pictures Act of the Province, governing the licensing and operation of moving picture theatres, film exchanges and Kinematographs, were published in the *British Columbia Gazette*, November 14. These regulations lay down principles as to proper construction of theatres and projected rooms, and contain rules regarding the inspection and approval of films; the license fees for film exchanges and theatres are also stated. Details are given regarding examinations for projectionists' licences, the certificates being classified in three grades according to the nature of the equipment operated. In addition to competency in electrical, mechanical and optical work candidates for certificates are required to have a specific working knowledge of safety appliances connected with projection-machine apparatus, auxiliary safety appliances, their use and care, and of projection room, its construction, equipment, ventilation, and general lay-out of room.

No moving picture may be operated in the province unless it is in charge of a licensed projectionist.

### Training Foremen in Accident Prevention

The Province of Quebec Safety League has published Safety Leaflet No. 21, on "Foreman training and Accident Prevention", showing the purposes that are served by the "foreman conferences" recently inaugurated. "Realizing the importance of our foreman and the lack of opportunity that a man coming up through the ranks has to secure the type of training which would develop in him the qualities essential to a good executive, we are taking what we believe to be the best means of meeting this need through the inauguration of foreman conferences under the guidance and direction of the superintendent of industrial relations. The plan calls for a series of weekly meetings held in company time which foremen and assistants are required to attend. The time of the meeting is arranged so as to offer the least interference with our service. Each meeting lasts one hour and fifteen minutes. The case method of instruction is used in conducting the meetings. It utilizes definite illustrations taken from experiences on the job as a means of developing the subject up for discussion. It also provides the maximum opportunity for participation on the part of those attending. One valuable result obtained through the foreman confer-

ences is the training and experience given in analysis; participation in the discussion of the various topics forces the men to study their jobs from all angles. It breaks them of the bad habit of 'jumping at conclusions' without having all the facts in the case on which to base their conclusions."

Another advantage of foreman conferences is stated to be as follows: "The foremen became aware of the necessity of learning something of first aid and came to realize the danger of infections as well as the necessity of reporting promptly all injuries, no matter how trivial, so they could be cared for properly. Then too, the foremen were able to get definite information about the workings of the Compensation Act, its provisions and requirements. The various elements that enter into the cost of an accident were studied and the foremen were brought face to face with what it really means to the injured party as well as to the company.

"One important fact that was emphasized continuously was that no man could be considered an efficient workman who could not work safely. It has been generally observed that the man who really knows how to do a job does not make false moves, does not place himself in an awkward position. He knows how to handle his tools and the material he works with, and realizes there is one best way to do every job. Consequently he is able to carry on his work without danger to himself or fellow workers."

The standard accident prevention program that is usually set up includes a council made up of sub-department heads and a central committee composed of foremen and workmen selected as representatives from the sub-departments. The chairman is appointed by the general superintendent of the department. The central committee meets each month and studies the accident report sent out by the claim department. The causes of the accidents are listed and recommendations are made as to ways and means of preventing their happening again. Inspections of the various sub-departments are made and a report of what is found is sent to the council. The council is required to pass on all recommendations sent by the central committee and to make final disposition of them. It must study the recommendations from the standpoint of efficiency in operation and the cost of putting them into effect.

"The foreman conference," it is declared, "is one of the best methods that we have

discovered for getting the accident prevention work started on a sound basis. It not only gives the foremen an opportunity to become acquainted with the problem, but trains them to study and analyze it without fear or prejudice. It has concentrated their attention on the great importance of the three factors in good foremanship—selection, training and supervision. The intelligent application of these are basic in accident prevention, as well as in any other phase of operation."

### Insurance for Employees of the Hupp Motor Car Corporation

The Hupp Motor Car Corporation, which has factories at Windsor, Ontario, has effected through the Aetna Life Insurance Company of Hartford, Connecticut, a combined plan of group life and sickness and accident insurance for the benefit of 7,000 employees in its divisions, subsidiaries and affiliated companies. The amount of Group Life Insurance involved is \$15,000,000, and group "Sickness and Accident Insurance" will have an annual premium approximating \$75,000. The cost of the plan is shared by the corporation and the employees.

The Hupp Motor Car Corporation first adopted Group Life Insurance on December 12, 1924. The original policy provided life insurance only, and the plan limited a very large percentage of the employees to a \$1,000 policy. This group insurance program has now been modernized by raising the minimum limits of life insurance to at least \$2,000 for male employees, and by the addition of a very practical plan of sickness and accident benefits:—

	Life Insurance	Weekly Benefits
Foremen.. . . .	\$4,000	\$24 00
Male employees.. . . .	2,000	12 00
Female employees.. . . .	1,000	12 00

Sickness and accident insurance has been offered to the plant employees only. However, the life insurance obtainable by the office and salaried group has been substantially increased under the newly adopted policy. The weekly benefits for temporary disability begin on the first day in case of accidents, and on the fourth day in the event of sickness. These benefits continue for a period not exceeding twelve weeks for any one disability.

### Winter First Aid Classes

The *Industrial Safety News*, published by the Nova Scotia Accident Prevention Association, recommends employers of labour to organize First Aid classes at this time of the year. "This is the season, when the holidaying spirit of the summer is replaced by the desire to find some profitable and pleasant way to spend the long evenings of autumn and winter. A course in First Aid, as given through the St. John Ambulance Association, provides a splendid opportunity for pleasant and profitable evenings. The value of the knowledge so gained can not be measured in terms of dollars and cents. 'First Aid to the Injured' is defined in the St. John Ambulance Association text book as being 'a special branch of practical medicine and surgery, by a knowledge of which trained persons are enabled to afford skilled assistance in cases of accident or sudden illness.' The instruction begins and ends with 'First Aid' and the subject is taught simply, but thoroughly and exhaustively in a course of six weekly lessons. The benefits of such training may be summarized as follows:—Suffering is alleviated—The workman who has met with a slight injury is enabled to return to work almost immediately in comfort and with a sense of security—Minor accidents are prevented from developing into serious injuries as a result of septic infection or blood poisoning—The loss of a limb or even of life has ensued from an apparently trivial, but neglected injury—The recovery of the workman and his return to work after a severe accident may be materially expedited."

The Public Accounts of the Province of Saskatchewan for the fiscal year ended April 30, 1929, contain a list of the names of, and the amounts paid to all the pensioners who received old age pensions during that period under the provisions of the Old Age Pension Acts of the Dominion and the Province. The actual amount of pension payments was \$451,385.35, of which \$191,041.97 was reimbursed by the Government of the Dominion, \$345.60 by the Province of British Columbia, and \$2,973.50 by the Province of Manitoba. In addition the provincial government contributed, in respect of pensions paid to pensioners in other provinces who had formerly resided in Saskatchewan, the following amounts: to British Columbia, \$7,958.91; to Manitoba, \$2,649.18. Including the cost of administration, which amounted to \$26,350.51, the net expenditure by the province for Old Age Pensions during the period covered, was \$293,980.88.

## MARINE HOSPITAL SERVICE IN CANADA

**A**N address delivered by Dr. J. A. Amyot, Deputy Minister of National Health, at the third conference of the Canadian Medical Association, held at Ottawa in November, contained the following account of the marine hospital service in Canada.

Prior to Confederation the medical treatment and care of sailors was unorganized and was, therefore, somewhat haphazard in nature. We find in the year 1822 that the Provincial Legislature of New Brunswick voted the sum of £500 for the establishment of a marine hospital and pest-house, and the City of Saint John provided land for the erection of the marine hospital. This institution was in existence until the year 1893, when it became a home for incurables.

At the time of the passing of the British North America Act, it was decided that, inasmuch as the Dominion was granted the privilege of collecting taxes, quarantine and the establishment and maintenance of marine hospitals, should become a function of the Dominion Government. In 1867, therefore, sick mariners came under the care of the Dominion; and, in order to provide funds, a duty was levied on ships entering Canada, and Part V of the Canada Shipping Act, which relates to Sick and Distressed Mariners, was passed. If we refer to that section of the Act which deals with duty on ships we find the following provisions:—

There shall be levied and collected on every ship arriving in any port in the provinces of Quebec, Nova Scotia, New Brunswick, Prince Edward Island or British Columbia hereinafter called "the provinces," a duty of two cents for every ton which such ship measures, registered tonnage, but in no case shall the duty payable by any ship be less than two dollars in any year.

No ship otherwise liable to pay the duty shall be exempt from the payment of the said duty by reason of her voyage being one not requiring entry or clearance at the Custom House. If the ship does not require entry, the duty shall be paid immediately on her arrival.

No ship engaged in the coasting trade of Canada and arriving at any port in any of the said provinces from any other port in the same province, or arriving at any port in the province of Quebec from any port in the province of Ontario, shall be subject to the payment of the said duty. . . .

No ship arriving at any port in Canada from any place out of Canada, and afterwards continuing her voyage to another port in Canada, shall be exempt from the payment of the said duty at the last mentioned port, unless she has paid it at the first mentioned or some other port on the same voyage.

Such duty shall be payable on each ship each time she arrives in any such port, but in no case shall it be oftener than three times during

each calendar year, and shall be paid by the master or person in command of such ship, or by some person on his behalf, to the collector or other chief officer of the Customs at the port at which such ship is entered, and at the time of making such entry. Such entry shall contain on its face the tonnage of such ship.

Except as in this Part mentioned, no entry shall be validly made, or have any legal effect whatsoever, unless the duty is so paid.

No collector or other chief officer of the Customs shall grant a clearance to any ship on which such duty or any part thereof is due and unpaid.

Although the above provisions did not originally apply to fishing vessels, at a later date an arrangement was made by which the captain of a fishing vessel had the privilege of paying the duty and enjoying all the benefits of the Act.

The master or person in command of any ship paying such duty may send to any hospital for sick mariners, at any hour of the day, and, in the case of accident or emergency, at any hour of the night, any sick mariner belonging to the ship. Such sick mariner so sent with a written recommendation from such master or person in command of such ship, endorsed as approved by the collector of customs of the port, or other officer appointed for the purpose by the Minister, shall be gratuitously received into such hospital, and receive therein such medical and surgical attendance and such other treatment as the case requires. . . .

No sick mariner shall be entitled to the benefits conferred by this section for a period longer than one year without written authority from the Minister, and no sick mariner shall be entitled to treatment or care hereunder when suffering from permanent insanity.

The funds collected for the treatment of sick mariners are paid into the consolidated revenue of the country, and when Parliament meets a sum sufficient for the treatment of sick mariners is voted by the Government. This money is turned over to the Department of Pensions and National Health to be used for the treatment and care of sick and distressed mariners.

From the year 1867 until 1921, the dues were 1½ cents per ton. It was found necessary in the latter year to increase the dues to 2 cents per ton as the expenditure was greater than the revenue. In spite of the increase in the rate, we have again reached a point where the expenditure is greater than the revenue.

Each sailor who is a member of the crew of a ship which has paid dues is entitled to treatment when ill, irrespective of the nature or severity of the illness. Treatment is provided in government hospitals, general hospitals, infectious disease hospitals, sanatoria, nursing homes and private homes if hospital accommodation is not available.

The Department of Pensions and National Health has two marine hospitals for the

treatment of sailors—one of which is situated at Sydney, Nova Scotia, and the other at Lunenburg, Nova Scotia. In addition, sailors are placed in some of the Departmental hospitals, which are set aside for the treatment of soldiers, when conditions permit.

Contracts have been entered into by the Department of Pensions and National Health with various hospitals, which number 58, whereby a sailor is given complete hospitalization for a definite *per diem* rate. In the case of general hospitals, this is at the rate of \$3 per day. Infectious disease hospitals vary from \$3.50 to \$5 per day. In sanatoria the rate is \$3.50 per day. In hospitals at which there is no attending physician, the rate is \$2.50 per day. Outdoor treatment is provided at the same rate as indoor treatment; for example, if a sailor has a headache and goes to the outdoor where he receives a pill, the charge is the same as if he occupied a bed in a ward for twenty-four hours.

General Hospitals, sanatoria and infectious disease hospitals agree to furnish the sailor with ordinary public ward quarters, hospital bedding, linen and clothing, full medical and surgical care, necessary operations, including use of operating room, anaesthetic, X-ray, dressings, hospital appliances, etc., satisfactory diet and medicines, including serums and vaccines. Hospitals in which there is no medical attendant supply all but the services of the physician.

In outlying districts where hospitals are not available, a room is found for the sick sailor,

generally at the rate of \$1 per day, and board, nursing, medical or surgical treatment provided. It has been found necessary in some districts to appoint physicians on a salary basis, and in some others, on a fee basis. There are 57 physicians on salary and 48 physicians on a fee basis. The salary is based upon the amount of work performed. The fees of physicians who are on a fee basis are as follows:—

First visit aboard ship, at home or hospital, etc. . . . .	\$2.50
Subsequent visits aboard ship, at home or hospital, etc. . . . .	1.50
First attendance at office. . . . .	2.00
Subsequent attendance at office. . . . .	1.00

An additional 50 cents per visit or attendance may be allowed if it was during night hours (8 p.m. to 6 a.m.).

30 cents per mile, one way, may be allowed for the distance travelled outside the Town or City limits during day hours (6 a.m. to 8 p.m.) and 50 cents per mile, one way, during night hours (8 p.m. to 6 a.m.).

The total number of sick, distressed, and injured mariners treated during the year 1927-28 was 5,217, and the number of days of hospital treatment was 45,207. A tabulated statement of diseases and injuries treated during the year 1927-28 will be found in the Annual Report of the Department of Health for that year. From year to year we find that the number of cases being treated is increasing, and the demand for hospital medical services is becoming more and more imperative.

### Recent Immigration into Canada

Returns from the Department of Immigration and Colonization give particulars of immigration into Canada during the six months' period ending September 30, 1929. The total number of immigrants during this period was 120,338 compared with 123,713 during the corresponding period last year.

Of the immigrants arriving in Canada during the six months of 1929, 51,781 were from ports in Great Britain, 47,848 were from other ocean ports, and 20,709 were from the United States. Of the immigrants from the British Isles, 25,897 were from England, 8,266 from Ireland, 14,896 from Scotland, and 2,722 from Wales. The largest group from the European continent was that of the Germans, who numbered 10,205, followed by the Ruthenians, (Czechoslovakia) with 8,401; Poles, with 4,794; Magyars, with 3,926; Finnish, with

3,207; Swedish, with 2,387; and Danish with 2,128.

Canadians returning from the United States during the same period numbered 17,676.

The 120,338 immigrants entering Canada this year included 56,122 adult males, 34,641 adult females, and 29,575 children under 18. By occupational groups, 35,736 of the male immigrants were in the farming class; 6,610 were classed as labourers; 7,494 were mechanics; 3,635 were in the trading class, and 525 were in the mining class. The female immigrants included 12,825 domestic servants. The destination of the immigrants was as follows: to Nova Scotia, 1,434; New Brunswick, 1,855; Prince Edward Island, 93; Quebec, 16,726; Ontario, 43,272; Manitoba, 31,402; Saskatchewan, 7,936; Alberta, 11,221; British Columbia, 6,327; Yukon Territory, 70; Northwest Territories, 2.

## ALL-CANADIAN CONGRESS OF LABOUR

### Proceedings of Third Annual Convention, Winnipeg, November, 1929

**T**HE third annual convention of the All-Canadian Congress of Labour was held at Winnipeg during the four days commencing November 4, the president Mr. A. R. Mosher, being in the chair. The credentials of 84 delegates, coming from all parts of Canada, were found in order.

An address of welcome on behalf of Winnipeg was given by Alderman S. J. Farmer, M.L.A. Mr. Farmer expressed the regret of the Mayor at his unavoidable absence. He asked the convention to give its attention to the problem of unemployment. Labour, he declared, must find an answer to the organization of capital. "One of the most distressing things in Canada to-day, and one that we, who represent the political wing of labour, find a great detriment to us, is the multiplicity of divisions in the ranks of organized labour," said Mr. Farmer. "It must not last, if labour is to get far in its efforts to better conditions for the workers. Some way must be found by which labour can once more organize its forces and present a united front. I hope you will give the subject your most serious consideration and endeavour to find a way out."

The Hon. Peter Heenan, Minister of Labour, addressed the convention, giving an account of the work of the Department of Labour, with special reference to the administration of the Industrial Disputes Investigation Act and of the Old Age Pensions Act of 1927.

An address was also given by His Honour Judge Stubbs, who spoke of the work of the League of Nations, pointing out that its purposes would only be realized when it was sustained by the organized opinion of the people in each country.

#### President Mosher

President Mosher in his opening address described the objects and organization of the Congress. "As you are all aware", he said, "the All-Canadian Congress of Labour was established in Montreal in March, 1927. It was not the fruit of creative but rather of reconstructive effort, since there had been former organizations which had endeavoured, with varying degrees of success, to unite the national unions for the carrying out of common purposes. It was felt, however, two years ago, that the time had come when a new body was required to provide for the co-operation of the national unions, which had been increasing steadily in membership and influence.

These unions were beginning to feel the need for an inclusive federation, through which they might work together to stimulate organization, to recommend legislation, and to promote the political representation of the workers. It was also recognized that one of the chief requirements of labour was a program of education, based on clearly defined principles and efficiently carried out, by which the workers and the people of Canada generally might gain a better conception of the Canadian labour movement and the purposes which it was endeavouring to accomplish. Even without an effective federal body, the various national unions were promoting the labour movement in this country, but it was obvious that their efforts should be co-ordinated and means be afforded for the expression of the ideas and ideals of the growing national organizations. . . .

"What we want", Mr. Mosher said, "is a national, industrial union covering each industry in Canada, which will be fully organized and which will be strong enough to take a share in the control as well as in the profits of the industry. In the second place, we want to unite all such national, industrial unions in the All-Canadian Congress of Labour and to have our Congress, in turn, affiliated in a great international federation which will bring together the national congresses of other nations for the promotion of world-wide co-operation between the workers. In the third place, we want a national labour party in Canada, which will provide direct representation for the workers and which will ultimately give us a true democratic government. . . .

"Our goal is human welfare in the widest sense, and we must be prepared to advocate the changes in our economic and political system which will bring it about. The defects of the present social order are everywhere becoming more apparent, and, we must recognize, with the British Labour Party, that the only solution of our problems lies in a complete reconstruction of the industrial system along the lines of democratic control of production and distribution".

#### Resolutions

The discussions during the convention were mostly on questions that were dealt with in the annual report of the Executive Board, the substance of which is outlined below. The Board's report was adopted, with one amendment.

Among the resolutions adopted by the Congress were the following:—

“That this convention go on record as favouring closer co-operation between the various Canadian unions, and that all Canadian unionists should protest against working with unorganized workers, wherever a Canadian union is functioning on their behalf.”

In connection with this resolution, organization of the building trades workers in a national industrial union was also recommended.

“That this convention condemn any policy of co-operation with employers which will lead to a weakening of the militant spirit in the labour movement and ultimately to the establishment of company unionism.

“That the Congress encourage the political representation of labour in every way possible.

“That the Congress continue its efforts with the federal and provincial governments to secure the abolition of all closed or company-owned towns and villages in Canada.

“That the Congress continue its efforts to secure legislation establishing national unemployment insurance.

“That the Congress request the Dominion government to introduce legislation at the next session of Parliament to amend the criminal code of Canada, to legalize peaceful picketing.

“That the Executive Board of the Congress take up with the federal government the question of having the provisions of the provincial mothers' allowance acts applied to residents within the national parks and forest reserves of Canada.

“That this convention demand the abolition of all money grants for cadet and all other military purposes on the part of the Dominion, provincial, and municipal governments, and the abolition of all militarist teachings from the school curriculum, and that the cadet system be entirely separated from the schools.

“That as a vacancy now exists on the Board of Directors of the Canadian National Railways, due to the death of one of its members, this convention request the federal government to fill this vacancy by the appointment of a representative nominated by this Congress.

“That the law in the province of New Brunswick should be amended to do away with that ancient and antique relic of barbarism by which a man can be placed in gaol for debt, and a new law passed similar to the law of the province of Quebec under which a debtor goes before a judge and makes a statement of his affairs and the judge, after

hearing the evidence as to the debtor's earning power and his debts, makes an order for the payment of so much a week, fortnight, or month, to an officer of the court, to be distributed pro-rata among the creditors.

“That the affiliation of the One Big Union be resumed on payment in full by the One Big Union of affiliation fee for the period October 1, 1928 to June 20, 1929, upon the last reported membership, and that the O.B.U. be excused from payment of affiliation fee for the period June 21, 1929 to November 30, 1929, the resumption of the affiliation to be regarded as effective from the time when payment is made.”

A resolution “that the provincial governments be requested to standardize medical fees and bear the cost of all maternity cases,” and one “that serious consideration be given to the appointment of an organizer in Western Canada by the Executive Board of the Congress” were referred to the Executive Board for study and report. A resolution “That the Executive Board take such immediate action as it may consider most effective to protect Canadian unionists from discrimination by the Employment Service of Canada” was referred to the Board for continued action.

The accounts presented by the Secretary Treasurer were found to be in order, and showed a total of \$23,570.74 to have been received from affiliation fees, etc., with total disbursements of \$22,427.58 and a surplus for the year of \$1,143.16, or a total surplus of assets over liabilities since the establishment of the Congress of \$2,426.74.

### Election of Officers

In the election of officers and other members of the Executive Board, President A. R. Mosher, was again given an acclamation. The other officers elected were: Vice-Presidents, F. Wheatley (Mine Workers' Union of Canada) and Z. David (Canadian Association of Railway Enginemen); Secretary-Treasurer, W. T. Burford (Electrical Communication Workers of Canada). G. W. McCollum (Canadian Electrical Trades Union), T. McGregor (Canadian Brotherhood of Railway Employees), and T. S. Vickers (Amalgamated Carpenters of Canada) were elected members of the Executive Board.

### Report of the Executive Board

The report of the Executive Board constituted a manifesto of the policy of the All-Canadian Congress. It dealt at considerable length with the existing conditions of labour in Canada, and outlined a policy of action

that, in the opinion of the Congress, would strengthen the labour movement in this country. The report opened with a sketch of the present position of labour in various countries, the survey tending to show that the Canadian movement is comparatively in a backward condition. It was declared that unemployment is much more rife than the published statistics on this subject would indicate; that any increase in wages lags far behind the increased value of the workers' production; that employers are now seeking closer control of labour by such means as company unions, company towns, and other forms of allegedly "co-operative" enterprise; and that social legislation, at the best, is meagre and spasmodic.

It was stated that with the single exception of the United States, all countries "have labour movements which are of such size and solidarity that they challenge the dominant power." The failure of the United States labour to express itself unitedly on matters of major political concern is attributed to the prevalence of narrow craft unionism in that country, and to the philosophy by which it is accompanied.

◀ "Against the United States labour philosophy, whose imposition upon them has been facilitated by geographical propinquity, the workers of Canada are in revolt. The All-Canadian Congress of Labour exists as the result of an agreement among autonomous national unions that (a) the Canadian labour movement must be freed from the reactionary influence of United States-controlled unions; (b) Canadian workers require a new organization through which they may collectively promote their general welfare and raise their economic and social standards; (c) while the workers, under the present system, cannot obtain the full value of their labour, it is nevertheless necessary to strive at all times to procure higher real wages and better conditions of labour; and (d) it is necessary to promote among the workers a thorough understanding of working class economics."

*Activities during the past year.*—The report states that "in the comparatively short time that has elapsed since the establishment of the Congress, much has been learnt concerning the varied needs of different groups of organized workers, and the Board has kept constantly in mind the necessity of adapting means to ends in the peculiarities of local and organizational situations. The Board has taken full advantage of the co-operation offered by the officers of the national and local affiliated and chartered unions, and of the labour councils. It wishes to express its hearty

appreciation of the readiness and generosity with which that co-operation has been forthcoming. The help of the labour councils has been particularly valuable, for their knowledge of local conditions has contributed more than any other factor to the building up around the local centres of substantial groups of unions, as well as to the strengthening of the branches of national unions within their spheres of influence. The councils and their local affiliates very clearly recognize the importance of the work they are doing, both for their own direct interest and for the advancement of the movement as a whole, and the Board believes that upon the continuance of this local organizing effort much of the progress of the Congress during the next few years will depend."

*Affiliated National Unions.*—The national unions affiliated with the Congress are as follows:—

Amalgamated Building Workers of Canada,  
Amalgamated Carpenters of Canada,  
Canadian Association of Railway Engineers,  
Canadian Broker and Leased Wire Telegraphers' Association,  
Canadian Brotherhood of Railway Employees,  
Canadian Electrical Trades Union,  
Electrical Communication Workers of Canada,  
Mine Workers' Union of Canada,  
National Union of Painters, Decorators & Paperhangers of Canada,  
Vancouver & District Waterfront Workers' Association.

On account of delinquency in the payment of affiliation fee, the following national unions were expelled from the Congress:

Auto Workers' Industrial Union of Canada,  
Lumber Workers' Industrial Union of Canada, and One Big Union.

In each case, prior to expulsion, a request was received for remission of part of the affiliation fee, but the Board declined to make a concession that would establish what it considered a most undesirable precedent. The Auto Workers' Industrial Union of Canada has since disbanded.

*Local Unions.*—The chartered local unions of the Congress are as follows:—

Boilermakers and Iron Shipbuilders' Union of Canada (Vancouver),

Bridge, Structural, Ornamental, Reinforced Iron Workers, Pile Drivers and Riggers' Union of Canada, No. 1 (Vancouver),  
 Canadian Brotherhood of Stationary Engineers (Medicine Hat),  
 Canadian Cement Finishers' Union, Local No. 1 (Vancouver),  
 Canadian Longshoremen's Association, No. 2 (Prince Rupert),  
 Canadian Stewards' Association, No. 1 (Halifax),  
 Edmonton Civic Employees' Union (Edmonton),  
 General Workers' Union of Canada, No. 1 (Calgary),  
 General Workers' Union of Canada, No. 6 (Vancouver),  
 General Workers' Union of Canada, No. 7 (Port Hawkesbury),  
 General Workers' Union of Canada, No. 8 (Port Hawkesbury),  
 Grain Workers' Industrial Union of Canada, No. 1 (Port Arthur),  
 Musicians' Union of Canada, No. 1 (Fort William),  
 Musicians' Union of Canada, No. 2 (Vancouver),  
 National Lathers' Union of Canada (Vancouver),  
 National Machinists and Allied Shop-Workers' Union of Canada, No. 1 (Vancouver),  
 National Union of Plasterers, No. 1 (Toronto),  
 National Union of Theatrical Employees, No. 1 (Montreal),  
 National Union of Theatrical Employees, No. 2 (Montreal),  
 National Union of Wood, Wire and Metal Lathers of Toronto, No. 2 (Toronto),  
 Operating Engineers and Firemen's Union of Canada (Calgary),  
 Ottawa Railway Employees' Union (Ottawa),  
 Silk Winders' Union of Canada, No. 1 (Toronto).

"It will be noted that since the last convention the names of several of the local unions then reported have been removed from the list. A few of these became defunct through loss of membership on account of adverse employment conditions, and others proved to have been premature through commendable attempts to set up a union where there was little prospect of success; while some of the local unions that no longer exist as separate entities owe this circumstance to their absorption by one or other of the affiliated national unions. The Board views this

latter tendency with the utmost satisfaction, believing that the interests of the workers of Canada will be better served by a comparatively small number of national unions than by a multiplicity of narrow craft organizations. Nevertheless it is felt that such casualties as have occasionally occurred among the newly organized local unions indicate a need for the more cautious recognition of such bodies. To avoid encouragement of ill-considered applications for local union charters the Board recommends a modification of the present requirements, as specified in Appendix A of this report."

*Labour Councils.*—The labour councils chartered by the Congress are as follows:—

Calgary Labour Council,  
 Edmonton Labour Council,  
 Montreal Labour Council,  
 Prince Rupert Labour Council,  
 Quebec Labour Council,  
 Toronto Labour Council,  
 Vancouver Labour Council,  
 Winnipeg Labour Council.

*Industrial Union of Building Trades.*—  
 "With the acceptance by the second convention of industrial unionism as the basic organizational principle of the Congress, and the knowledge that the majority of the affiliated unions had advocated the broadening of the union structure at every opportunity, the Board felt that a lead should be given to the application of this principle where conditions seemed propitious. It therefore acted upon a resolution introduced at the second convention by the Canadian Electrical Trades Union, calling for the formation of an industrial union of building workers, the building trades appearing to be most in need of consolidation upon an industrial basis.

"A conference was called by the Board and duly took place at Montreal on the 17th of March, 1929, being attended by delegates from all the affiliated national unions in the building industry. The delegates unanimously decided to establish an industrial union under the name of the 'Amalgamated Building Workers of Canada,' and this union was brought into existence forthwith, a constitution being adopted that would readily permit the admission of any body of workers in the industry. For such a union to function with efficiency, a widely representative executive and a central office are essential, and, as much greater delay than was anticipated has occurred in the merging of the larger eligible unions into the Amalgamated Building Workers of Canada, its various units have been temporarily granted individual charters in the Con-

gress. They thus constitute a nucleus to which it is hoped substantial additions will be made before long, to enable the election of the national executive of the new industrial union to be proceeded with.

*Projected Organizing Activity.*—"Preparations were made for an extensive organizing campaign amongst the workers of the auto-car industry, following the expulsion of the Auto Workers' Industrial Union of Canada and its dissolution through incompetent leadership, but adverse conditions in the industry, due to the depression in the prairie provinces and a reduced demand for its product, necessitated postponement of action.

*Legislative Representations.*—"As instructed by the Congress at the last convention, the Executive Board has made representations to the Dominion government on the following among other matters:—

- The enactment of unemployment, sickness, and invalidity insurance legislation,
- The provision of more adequate statistics on unemployment,
- The abolition of company towns,
- Military training in the schools,
- The improvement of benefits under the Old Age Pensions Act,
- Resumption of relations with Russia,
- Transient labour from the United States,
- Immigration policy.

*Other Representations.*—"In addition to the action taken on instructions of the last convention, the Executive Board has made representations to various ministers of the federal government. Among the more important matters were—

- The representation of Canadian workers on the Canadian National Railways' directorate,
- The importation by the Employment Service of Canada of aliens to fill positions for which competent Canadian workers were available,
- The appointment of officials of foreign labour organizations to government advisory bodies and on official delegations,
- The protection of waterfront workers from accidents,
- The policy of the Employment Service of Canada respecting the selection of workers for positions on the basis of union affiliation.

"The Board appeared before the Royal Commission on Radio Broadcasting and set forth its views on the operation of broadcasting stations. It is gratifying to note that the recommendations of the Commission embody the principle of government ownership, control, and operation, along the lines recommended by the Board."

The Board also assisted the affiliated national unions in matters affecting their interests, and has endeavoured to advance the interests of the membership as a whole.

*Publications.*—"The publications of the Congress have been uniformly successful in the widespread support they have received from the workers, and have paid their way. The official organ, *The Canadian Unionist*, has appeared monthly and has been accorded much recognition by public persons and by the general press as an authoritative source of labour information. *The Canadian Unionist* has served as a valuable medium for the discussion of all problems of interest to the workers, and has provided guidance to the members of affiliated and chartered unions as to the policy of the Congress on many matters.

"The Executive Board has continued to co-operate with the labour councils in the production of local publications, to the satisfaction of all concerned. In addition, occasional leaflets have been published to assist in the organizing work that has been carried out in various localities.

*Recommendations for Future Action.*—"For the continuance of the work of the Congress during the coming year, the Executive Board urges that the local branches of affiliated national unions, the chartered local unions, and the labour councils to continue and extend their organizing activities."

"In addition to the organization on the industrial field, the local bodies should endeavour to stimulate interest among their members, and among the workers generally, in working-class political questions. The Board recommends that active support be given to such local labour candidates for office, in municipal, provincial, and federal elections, as are in sympathy with the principles of the national labour movement. Where no candidate is in the field, members of affiliated unions and other interested groups of workers, should form a local political organization in order to place one even though there may appear to be little hope of getting him elected. The fear of making an insignificant showing on the first attempt should not deter action: it should be regarded as creditable if the candidate goes on the hustings and yet saves his deposit.

*General—Social Legislation.*—"In legislative matters, the All-Canadian Congress of Labour does not aim to offer the government of the day an agenda for each parliamentary session. While it is competent to deal, at its conventions, with all questions of social legislation, it makes no conscious effort whatever to fill up the legislative calendar, its general policy

being to demand the acceptance by the public and by governments of broad principles of social reform, together with proper measures for the protection of the workers' economic activities.

*Old Age Pensions.*—"The acceptance of the Old Age Pensions Act by five of the nine provinces is regarded by the Board as indicating an awakening of the public conscience to the duty of alleviating one form of distress among the workers. Inadequate though the present pension is in amount, and restricted though it is in application, it is of inestimable importance as a unit in that structure of social insurance which is being erected by the Dominion and provincial governments—tardily, haphazardly, and perhaps reluctantly—and which the Board believes must eventually grow from its beginnings in workman's compensation, minimum wages, and mothers' pensions into a comprehensive and complete system comprising unemployment, sickness, invalidity, and state life insurance, and family allowance, with a national minimum wage law for all workers.

*Unemployment, Sickness, and Invalidity Insurance.*—"While it is of the utmost importance that the organized workers exercise all possible pressure to bring the Old Age Pensions Act into effect in those provinces which have not yet passed enabling legislation, and to secure its improvement in those which have, the Board regards as equally urgent the making of a concerted demand for unemployment, sickness, and invalidity insurance. The desirability of uniform action throughout the country, in enacting legislation of this kind, is much more apparent than in the case of Old Age Pensions, as separate action by the provinces would tend to lessen the mobility of labour, and such piecemeal legislation might be regarded as imposing an industrial handicap on some sections of the country. As it is too much to expect simultaneous and uniform action by all the provinces, there is clearly need for an amendment of the British North America Act to permit of action by the Dominion government.

"As regards the manner of apportioning the cost of unemployment, sickness, and invalidity insurance, it is the opinion of the Board that, as unemployment is a purely industrial incident, the workers who are laid off constituting a reservoir of labour upon which industry can draw when the need arises, the maintenance of unemployment insurance should be a direct charge upon industry alone. While regarding the problem of sickness and inval-

idity as inseparable from that of unemployment, and while believing that no measure of unemployment insurance could be effective without making provision against these important causes of unemployment, it is recognized that a distinction might reasonably be made in apportioning the cost with respect to these ancillary forms of insurance, and that a contribution from the public funds as well as from industry might be appropriate.

*Family Allowances.*—"The Executive Board recommends that the unions embraced in the Congress be urged to give earnest consideration and close study to the question of family allowances, provided by the state to wage-earners with two or more children. As a step towards the more equitable distribution of the national income the state grant towards the support of families is regarded as being of primary importance. It involves a recognition, at least partial in extent, of the principle that each member of the community shall receive according to his needs. In a country where there is an inclination to increase the population to the limit of absorption, it is obviously desirable that the conditions for the upbringing of families shall not involve hardship on either the children or their parents, and yet Canada has been slow to approach a problem which has been tackled by countries in far less need of larger population. In New South Wales and New Zealand family allowances are already provided by the state on a general scale. In France, Belgium, Holland, Germany, and Poland, family allowances are paid by certain municipalities, government services, and industrial corporations, and affect several million workers. In most other countries, including Canada, some relief is afforded the worker with a family to support by modification of income taxation, but this, as a rule, helps very few workers.

"From the worker's point of view the main consideration is that he and his dependants shall not endure penury by incurring the natural responsibility of a family, as unfortunately often happens through the disparity between living costs and income. Family allowance must therefore be regarded as a promising palliative of the faults of our present economic system. In other directions, too, adoption of the policy of state grants to workers having families to support would be of benefit. At present every increase secured by a body of workers enables the man without dependants to gratify his taste for some additional luxury, and, small though this may be, it broadens the gap between the standards

of living attainable by himself and his married fellow-worker respectively.

"The Board believes that family allowances would tend to increase the consumption of staple commodities and to improve the employment situation. They would alleviate the burden of keeping children at school for an educational period which social agencies insist shall be progressively increased, and, incidentally, by making it possible for children to remain at school, would remove such juvenile competition from the labour market. Proposals that children shall remain at school up to and beyond the age of sixteen years have already been endorsed by the All-Canadian Congress of Labour, and it can be shown that, were such a plan adopted, it would redound to the welfare and happiness of every section of the community. Only by family allowances can this benefit be secured.

*British North America Act.*—"The amendment of the British North America Act to enable the Dominion parliament to pass social legislation, such as unemployment insurance, is a reform which all labour organizations should endeavour to secure. It must be borne in mind, however, that no constitutional change will automatically change the laws of the country, and the workers should not overlook the fact that a government will exercise only such of its powers as it sees fit, no matter how greatly they may be enlarged. It is therefore of much greater importance to build up a working-class political mentality which will in turn build a labour political party in national, provincial, and municipal legislative bodies. Lobbying is not likely to be much more effective under a revised constitution than it is now. With the emergence of Canadian workers from foreign domination in their economic organizations it is to be hoped and expected that they will cast off an equally foreign attitude towards active participation in politics.

*Industrial Disputes Act.*—"Perhaps the worst effect of the alien influence in the labour movement has been the weakening of the workers' morale in their struggle against exploitation. While the Congress is strongly in favour of the avoidance of strikes, by methods of negotiation and arbitration, and is prepared to consider any proposals that may be made by employing groups for the peaceful settlement of industrial disputes, the Executive Board notes a disquieting tendency among labour organizations generally to regard compromise as an ideal to be aimed at.

"It has been impressed upon the Board that the existence of the governmental conciliation

machinery has militated, on occasion, against the exercise of the workers' economic power. The resolve to improve working conditions is sometimes permitted to degenerate into a resolve to debate those conditions before a board of conciliation: even the appointment of a conciliation board is viewed as a concession. When the original determination thus becomes deflected, and when delay in getting the machinery in motion leads to a loss of the workers' initiative, apathy is the inevitable result.

"It is recognized by the Board that the Industrial Dispute Investigation Act serves a useful purpose, and the Board does not offer any criticism of its administration, but it is felt that the organized workers in their unions and labour councils should seriously consider the effect of the act not only in specific applications but also in relation to the labour movement as a whole. In particular should consideration be given to the facts that in respect to some workers the provisions of the act are obligatory, though optional in respect to others, and that its incidence is dependent upon the vagaries of provincial enabling legislation. In a broader sense it is desirable that most earnest attention be paid to the possible weakening effect of the official conciliation process upon the moral and numerical strength of union membership.

*Trade Unions Act.*—"Recent registrations of employers' organizations under the Trade Unions Act have called attention to the fact that extremely few unions have taken advantage of such safeguard as is afforded thereby. While the Board does not recommend that its affiliates should make it a policy to register under the act, it does nevertheless believe that there is inherent in the act an acknowledgment of the workers' right to organize for economic protection, and that the act should not therefore be allowed to become a dead letter through desuetude or abuse.

"It may be pointed out that the abuse of the purpose of the act, by registration of employers' associations as labour unions, has been connived at by those foreign labour bodies functioning in this country which seek to secure benefits for their restricted membership by depriving other workers of the right to earn a living may be a process of unconscionable extortion practised upon the community at large. The Board is confident that the Congress will most emphatically condemn such discreditable tactics, though aware that they are only an added indication of the character of those alien unions whose name is already a by-word and a reproach.

*Protection of the Right to Organize.*—"The peculiar condition of organized labour in Canada, a condition without parallel in any other country in the world, renders it necessary that special provision be made to ensure the right of all workers to protect and advance their interests through the organization of their choice. It has been plainly shown that there is a tendency for employers to accord recognition to alien craft unions as representing the workers, regardless of the attitude of the majority of the workers concerned towards those unions. The alien unions, knowing the falsity of their position, are often content to make working agreements unduly favourable to the employers, so long as they can thereby compel the workers to pay dues. Such collusion invariably reacts to the detriment of the workers and ties them to an organization for which they have no respect or sympathy but which they must nevertheless support in order to escape victimization.

"For the safeguarding of the workers' right to organize, the Board recommends that legislation be sought embodying the following provisions:—

That the union representing the majority of the employees of any employer shall be recognized as the representative union.

That all negotiations between any employer and the employees in any class, craft, or category respecting wages, conditions of labour or terms of employment, shall be conducted between the employer and the representative union, and no person except the accredited officers of such representative union shall have the right to negotiate for such union or to enter into any agreement on behalf of the employees in such class, craft, or category.

That all employees who are members of any union which is not the representative union shall be entitled to and shall (except as to the right to negotiate for, and, in dealings with the employer, the right to represent the employees of such class, craft, or category) receive the same wages, and shall be entitled to and shall receive the same benefits and privileges, and shall in all respects enjoy the same terms and conditions of employment as employees of the same class, craft, or category who are members of the representative union or as employees who are represented thereby.

*Immigration and Colonization.*—"The Executive Board of the All-Canadian Congress of Labour does not believe that the question of immigration is one that can be approached

solely from a consideration of national factors. Canadian standards of living are affected by production of commodities in other countries, which, in the world market (including our own), compete with the products of Canadian labour. Consequently the economic and cultural standards of Canadian workers are adversely affected by this competition, when occurring in countries having inferior living standards, as effectually as if the workers of those countries were actually employed in Canada. The Board therefore believes that a policy of absolute restriction of immigration will not solve our unemployment problem any more than will the setting up of tariff barriers.

"The Board recommended last year that the whole problem be given scientific study by an impartial commission appointed by the federal government. The Board reaffirms its previous conviction in that regard, and recommends that such commission be composed of representatives of the government, industry, and labour, and that the commission's report should form the basis of administrative policy.

"Pending the report of such commission, the Board recommends that the government take steps to cause a suspension of efforts by private agencies, such as transportation companies and the Salvation Army, to stimulate immigration by offering inducements to intending immigrants; also that provision be made by the government for every intending immigrant to be fully informed of the employment situation in Canada in general and as affecting himself in particular.

"The Board further recommends that any system of assisted immigration be considered only if based upon a colonizing plan looking to the establishment of industries giving diversified employment to members of co-operative settlements. In this connection the Board is of the opinion that organized labour should endorse the constructive proposal of Mr. George Lansbury, whereby the British government would take over suitable areas of land and there set up agricultural and industrial communities so balanced in the nature of their products as to be to a large extent self-sufficing and not to disturb the existing balance of Canadian production."

The foregoing report was adopted as a whole on the 7th of November, 1929, with the proviso that the section entitled "Protection of the Right to Organize" be referred to the incoming Executive Board of the Congress with instructions to consult affiliates in any industry before supporting any demand for legislation as suggested in that section.

## NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

### Technical School Graduates Secure Positions

Twenty students of the Central Technical School, Toronto, have been placed in situations during the past month, according to the report of Mr. Gordon N. Kennedy, vocational co-ordinating officer. The twenty former students now hold such positions as draftsmen, apprentice printers, dressmakers, radio workers, artists, dietitians, mechanics, and laboratory assistants. Nearly 200 students of the graduating class of last June are now employed in local positions or following further courses.

The LABOUR GAZETTE, September, 1929 (page 963), contained a note on the successful placing in local industry of former students of the Technical and Commercial School, London, Ontario, more than 400 students having secured positions during the past year.

### Agriculture Course at Fredericton, New Brunswick

The seventh annual short course of the New Brunswick Agricultural School opened on November 18 with an enrolment of twenty-two young men, divided between the English and French-speaking sections of the province, with the former predominating. The school is

under the direction of Mr. O. C. Hicks, superintendent of the Soils and Crops division of the provincial Department of Agriculture. The curriculum includes animal husbandry, veterinary science, horticulture, aviculture, use of incubators, care of gasoline motors and other subjects. Among the lecturers for the course is Mr. G. L. Miller, chief forester for New Brunswick, who will present papers on forestry work and also give practical demonstrations.

### Agricultural Course, Lambton County, Ontario

Lambton County Branch of the Ontario Department of Agriculture will hold an annual one-month course in agriculture and home economics at Wilkesport, opening on January 6. Lectures and discussions will take place each day. Practical work in agriculture will be a feature, including live-stock judging, poultry culling, milk and cream testing, judging of seed grain and corn, and identification of weed seeds. Attention will also be given to taking drainage levels, pruning trees and preparing practical farm buildings. In the women's class, sewing and millinery will be taught.

## HISTORY OF ASSOCIATION OF GOVERNMENTAL OFFICIALS IN INDUSTRY

AT the sixteenth convention of the Association of Governmental Officials in Industry, held in Toronto in June, 1929, the following address giving a history of the association was delivered by Miss Louise Schultz, the secretary-treasurer:—

The first printed record in the office of the Association of Governmental Officials in Industry of the United States and Canada regarding the activities of the association, known for years as the Association of Governmental Labour Officials, is a bulletin published by the United States Department of Labour, primarily to give an account of the fifth annual convention of the association held in Des Moines, Iowa, in 1918. This bulletin contains as an appendix a brief account of an informal meeting, by courtesy called the fourth convention of the Association of Governmental Labour Officials of the United States and Canada, held in Asheville, N.C., in September, 1917, to which nine States and one Province sent representatives, as follows: Arkansas, Connecticut, Iowa, Kansas, Massachusetts, Michigan, New Hampshire, North Carolina, Pennsylvania, and Quebec. This convention was the by-product of a conference of labour commissioners and other members of labour departments called by Sec-

retary of Labour Wilson, July, 1917, to confer on the problem of child labour in the United States. \* \* \*

There are several items in the report of the fifth annual convention in which I believe the members and friends of the organization here to-day will be interested. The first pages of the report contain a history of the association prepared by Linna E. Bresette, who acted as secretary-treasurer of the association for five years. In this report she states that she finds from reference to old files (which by the way are not now in our possession) that the Association of Governmental Labour Officials of the United States and Canada resulted from an amalgamation of two organizations, one called "Chiefs of the Bureaus of Labour Statistics," organized in 1883, and the other the "Association of Factory Inspectors," organized in 1887.

In 1883, 46 years ago, the labour commissioners of six States, Massachusetts, New Jersey, Pennsylvania, Ohio, Illinois, and Missouri, met and organized the "Association of Chiefs of the Bureaus of Labour Statistics." The purpose of that organization, to quote at random from the opening address at the first convention, was "To secure information in all departments of labour in its relations to the commercial, social, industrial, educational, and sanitary conditions of the labouring classes.

\* \* \* The best methods of obtaining and systematizing are to be devised, discussed, and formulated. \* \* \* It is not the duty of the labour commissioner to attempt an adjustment of the relation of the labouring and manufacturing classes with the capital of the country. It is his office to furnish such reliable statistics and data to the law-making power as will furnish the basis of an intelligent comprehension of the complex features of this great problem. \* \* \* The establishment of a safe and proper equilibrium between the great forces of this country—labour and capital—is of vital import, and is worthy the best efforts of the statesmen, to the end that such laws shall be enacted as shall relieve labour of unjust burdens and encourage capital in the development of other avenues for the profitable employment of labour." The Commissioner of Labour of the Federal department at Washington held the position of president of the association for 20 years.

The first meeting of factory inspectors occurred in Philadelphia in June, 1887—42 years ago—through the efforts of the chief inspector of Ohio, who corresponded with other chief inspectors in the country and brought about this meeting at Philadelphia, which was attended by factory inspectors from three States, Massachusetts, New Jersey, and Ohio, and a representative of the State Board of Education of Connecticut. In the opening address delivered at the first meeting of factory inspectors a statement was made to the effect that "the purpose of this organization is to take counsel one of another as to the best means of accomplishing the object for which the office of factory inspector was created." Mr. Dorn, of Ohio, in his opening address, mentioned the fact that the office of factory inspector is of comparatively recent origin, and that because of the limited knowledge of its designs people must be made acquainted with the importance of the necessity of thorough inspection before factory inspectors can expect to succeed in their undertaking. Mr. Dorn made the following observation, which again I quote somewhat at random: "Make our workshops and factories comfortable and healthy and secure those employed therein against the accidents that are now a daily occurrence, and one great source of discontent and consequent strikes will be removed. The greater the interest the employee takes in his work, the greater the profit of the employer. The fact has been established that the workman cares for his employer just in proportion as the employer cares for his workman. Good and humane treatment on the part of capital should receive a proper and profitable reward from labour. It is a paying investment. On us devolves the important duty of ascertaining whether children under a certain age are employed in workshops and factories. Our business requires of us the careful examination of all kinds of structures and all kinds of machinery and mechanical appliances. Opposition to inspection is fast disappearing. We are welcomed or not, just in proportion to the manufacturers' knowledge of our purposes and the results effected by our examinations. It would perhaps be well if we could have more uniformity both as to the laws and the manner or carrying them out in the different States. We are here for the purpose of comparing notes, and of each one availing himself of the

experience and suggestions of others. \* \* \* We are endeavouring to restore the child to the schoolroom. \* \* \* We are endeavouring to protect the working people of the country in life, health, and limb, that they may be able to rear their children in such manner that they shall become intelligent and healthy men and women, the possessors of sound minds, of good morals, and of unbroken constitution."

It is of interest to note that the aims and purposes which were enunciated at the first convention of the two organizations, later amalgamated into the one to which we now belong, have been reiterated at every succeeding convention. The two organizations maintained their separate entity for a number of years, until at a meeting of factory inspectors at Toronto, Canada, in 1908, a committee was appointed with a view to bringing about amalgamation of the two organizations. How history repeats itself! Difficulty had been met in securing appropriations to defray the expenses of delegates attending the conventions. The solution seemed to be amalgamation, which would mean one convention to attend, rather than two. Through the ingenuity of a few members of each organization, both held their meetings in Rochester in 1909. Some sort of arrangement was effected, and the two organizations met as one at the county courthouse at Hendersonville, N.C., in 1910. At that time a resolution was adopted at the meeting of factory inspectors in which the statement was made that since the purposes, aims and objects, and scope of work of the factory inspectors and commissioners of labour statistics were identical, a committee should be appointed to confer with a like committee of commissioners looking to the merging of the two associations under an appropriate name and workable constitution. The factory inspectors, however, were not ready to amalgamate, as they feared that their identity might be lost if the two associations were merged.

Finally, in 1914, this opposition was overcome. The two associations were merged under the name "Association of Governmental Labour Officials of the United States and Canada" at Nashville, Tenn., June, 1914, at which time a constitution was adopted. The constitution stated that the purpose of the new association should be the promotion of the welfare of industrial workers, the securing of uniform labour legislation, better laws for factory inspection, laws creating State employment bureaus, laws promoting industrial hygiene and accident prevention, and to aid in every way possible to secure better provision for the industrial development and protection of the workers of the various States and Provinces. Membership in the organization was restricted to employees in Federal, State, provincial, county, or municipal departments having to do with the enforcement and supervision of labour laws. Other than the fact of amalgamation and statements of officers elected and place of meeting each year given in the printed proceedings there is no printed record of what occurred at the first, second, and third conventions of the Association of Governmental Labour Officials of the United States and Canada.

At the convention held in Des Moines, Iowa, in 1918, the Federal Government at Washington was represented by Mr. Ethelbert Stewart, who was delegated to attend by the Secretary of

Labour. Miss Bressette's observation in this connection is as follows: "His presence at once added zest to the meeting and restored the spirit of co-operation between the Federal department and the departments of the various States." As a result of the attendance of Mr. Stewart at the convention at Des Moines in 1918 a very great benefit accrued to the Association of Governmental Labour Officials of the United States and Canada in that the United States Department of Labour undertook to print the proceedings of the conventions. Mr. Stewart's observation, as stated in his letter of transmittal to the head of the Department of Labour at Washington, is worthy of mention at this time. \* \* \*

In preparation for this paper, I have read over the reports of the proceedings of the various conventions beginning with the fourth and extending through the fifteenth. I have been interested to note that Quebec was apparently the first Province to affiliate itself with the association. Since that time Alberta, British Columbia, Manitoba, and Saskatchewan have sent representatives to the various conventions, though not so continuously as has Ontario. The Federal Department of Labour of Canada affiliated with the organization in 1923, through the attendance of the secretary at the Richmond convention. It has maintained membership ever since and has sent representatives from the employment service and the labour intelligence branch to conventions. The Children's Bureau, the Women's Bureau, and the Employment Service of the United States Department of Labour affiliated with the organization as they were established. The Bureau of Mines was made an honorary member in 1927. Although none of these bureaus pay dues to the association, the expense of printing the proceedings, borne by the Department of Labour, far exceeds any liability any of these bureaus might otherwise have in the matter of dues. Furthermore, they are prohibited by law from paying dues. The records have not always been clear each year as to what States paid dues, but the following States and Provinces, which have sent representatives at some time to the conventions, are not represented this year: Alaska, Arizona, California, Connecticut, Delaware, Indiana, Kansas, Michigan, North Carolina, North Dakota, Oklahoma, Oregon, Rhode Island, South Carolina, South Dakota, Texas, Utah, Virginia, Washington, Wyoming, and Quebec. \* \* \* There are representatives in attendance from 13 States and 4 Provinces, and from various bureaus of 2 Federal departments—the Bureau of Labour Statistics, the Women's Bureau, and the Children's Bureau, of the United States Department of Labour, and the intelligence bureau and the employment bureau of the Canadian Department of Labour. Altogether 22 bureaus are represented this year.

It is interesting to note that the year of largest attendance was 1924, when the convention was held at Chicago; at that meeting representatives of 34 departments registered. The Association of Public Employment Services met at the same time and place, and thus helped to augment the attendance of both conventions. In 1925, at Salt Lake City, representatives of 24 departments registered for the convention of the Association of Governmental Labour Officials: that year the International Association of Industrial Accident Boards and Commissions met immediately after our con-

vention. Twenty-four departments participated in the convention at Harrisburg in 1922, 23 at Richmond in 1923, and 19 at Columbus, Ohio, in 1926. \* \* \*

At the New Orleans convention, in 1928, the name of the association was changed by constitutional amendment from Association of Governmental Labour Officials to Association of Governmental Officials in Industry. The change was made for the purpose of removing a misunderstanding that then existed regarding the nature of the association and for the purpose of assisting in securing the co-operation and support of such organizations as chambers of commerce and other employers' associations. It was also felt that this change in name more aptly defined the status of the personnel of the members of the organizations.

In looking over the proceedings of the last 13 conventions, I have noticed with interest the subjects which have been given consideration, i.e., industrial hygiene, industrial fatigue, factory inspection, accidents and accident prevention, occupational diseases, industrial rehabilitation, mine safety work, migratory children, minimum-wage legislation, conciliation in labour disputes, and how to make statistics uniform. Our organization has had participation in the formulation of a number of safety codes, notably those concerning which we had reports at the business session Wednesday morning. It has had the privilege of participating in the work of the National Association of Legal Aid Organizations in its attempts to work out a satisfactory and uniform law for the collection of wage claims. The organization had a representative at the industrial accident prevention conference, called by Secretary of Labour Davis, in Washington in July, 1926. We admitted to membership, by changing the constitution in 1925, the Washington representative of the International Labour Office.

The address of Miss Schultz concluded with a number of questions and suggestions for consideration of future meetings of the associations.

On November 15, the British House of Commons approved the principle of annual vacations for all working men on full pay by agreeing to a second reading of a private bill introduced by the labour member Ernest Winterton. In explaining the proposals he pointed out that they would give at least eight consecutive vacation days and that the employers who evaded these obligations would be subjected to strong penalties. In referring to the alleged high cost of the plan he maintained that the health and efficiency of the workers would be benefited to such an extent that increased production would be certain to follow.

Speaking for the government, J. J. Lawson, parliamentary secretary of the Ministry of Labour, accepted the principle of the bill, but could not promise facilities for its further passage through the house. Despite approval of the House of Commons it is likely therefore to remain only a pious resolution.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Thirteenth Session of the International Labour Conference

THE Thirteenth Session of the International Labour Conference (League of Nations), constituted under the provisions of the Treaties of Peace, was held at Geneva, Switzerland, from October 10 to 26, 1929, and dealt exclusively with maritime matters. Two Maritime Conferences had been held previously, the first in 1920 and the second in 1926.

The objects for which the International Labour Organization was formed are set out in Part XIII of the Treaties of Peace and are, briefly, to promote the improvement of industrial conditions by legislative action and international agreement.

Twelve previous sessions of the International Labour Conference have been held as follows: Washington, D.C., 1919 (LABOUR GAZETTE, December, 1919); Genoa, Italy, 1920; (LABOUR GAZETTE, October, 1920); Geneva, 1921 (LABOUR GAZETTE, January, 1922); Geneva, 1922 (LABOUR GAZETTE, December, 1922); Geneva, 1923 (LABOUR GAZETTE, December, 1923); Geneva, 1924 (LABOUR GAZETTE, August 1924); Geneva, 1925 (LABOUR GAZETTE, July, 1925); Geneva, 1926 (8th and 9th Sessions) (LABOUR GAZETTE, July, 1926); Geneva, 1927 (LABOUR GAZETTE, July, 1927); Geneva, 1928 (LABOUR GAZETTE, July, 1928); and Geneva, 1929 (LABOUR GAZETTE, July, 1929).

It will be observed that this is only the second time that two sessions of the Conference have been held in the same year, the other occasion having been in 1926, when the Eighth Session was followed immediately by the Ninth. The Treaty of Peace requires that "the meetings of the general conference of representatives of the members shall be held from time to time as occasion may require, and at least once in every year."

Each member state is entitled, under the terms of the Treaties of Peace, to send four delegates to the International Labour conference, two of whom must be Government delegates and the two others are to be delegates representing, respectively, the employers and the workpeople of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in the respective countries. Each delegate may be accompanied by advisers not exceeding two in number for each item of the agenda.

The decisions of the Conference may take the form of either a Recommendation or a Draft Convention. A two-thirds majority of the votes cast by the delegates is required for the adoption of any Recommendation or Draft Convention by the Conference. The Recommendations and Draft Conventions are afterwards transmitted through the Secretariat of the League of Nations' to the different countries represented on the International Labour Organization for acceptance or otherwise. Each country is obliged under the Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the Conference, to bring the respective Recommendations or Draft Conventions "before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action."

#### Agenda of the Conference

The agenda of the Thirteenth Session of the Conference comprised the following items, dealing exclusively with maritime questions:—

I. Regulation of hours or work on board ship.

II. Protection of seamen in case of sickness (including the treatment of seamen injured on board ship), i.e.:—

- (a) The individual liability of the ship-owner towards sick or injured seamen;
- (b) Sickness insurance for seamen.

III. Promotion of seamen's welfare in ports.

IV. Establishment by each maritime country of a minimum requirement of professional capacity in the case of captains, navigating and engineer officers in charge of watches on board merchant ships.

In accordance with the double-discussion procedure laid down in the Standing Orders of the Conference, the above four items were before the Session for first discussion only, which would not lead to the immediate adoption of Draft Conventions or Recommendations but would settle the points on which Governments should be consulted with a view to a second and final discussion at a later session.

CANADIAN DELEGATION IN ATTENDANCE AT THE TWELFTH SESSION, INTERNATIONAL LABOUR CONFERENCE, GENEVA, MAY 30 - JUNE 21, 1929  
 Left to right—Mr. Geo. E. Carpenter, Adviser to Employers' Delegate; Mr. W. C. Coulter, Employers' Delegate; Mr. Gerard Tremblay, Adviser to Government Delegates; Dr. W. A. Riddell, Government Delegate; Mr. Ernest Finch, Adviser to Government Delegates; Mrs. Mary Ellen Smith, Government Delegate; Mr. George Gilbert, Adviser to Government Delegates; Mr. F. M. Draper, Workpeople's Delegate; Mr. James Simpson, Adviser to Workpeople's Delegate.

### Countries Represented

Of the fifty-five countries which are members of the International Labour Organization, thirty-three sent delegates to the Thirteenth Session. In view of the importance of the agenda, it is not surprising that all maritime countries were represented at the Conference, with the exception of Norway which was prevented by special difficulties from sending a delegation. A list of the countries represented follows:—

Australia	India
Belgium	Irish Free State
Brazil	Italy
British Empire	Japan
Bulgaria	Latvia
Canada	Netherlands
Chile	Persia
China	Poland
Colombia	Portugal
Cuba	Roumania
Czechoslovakia	Siam
Denmark	Spain
Estonia	Sweden
Finland	Uruguay
France	Venezuela
Germany	Yugoslavia
Greece	

### Canadian Delegation

The Canadian delegation in attendance at the Conference was as follows:—

*Government Delegate.*—Dr. W. A. Riddell, Geneva, Switzerland.

*Technical Adviser to Government Delegate.*—Mr. James E. Tighe, Saint John, N.B.

*Employers' Delegate.*—Mr. A. L. MacCallum, Manager and Secretary of the Shipping Federation of Canada, Montreal, P.Q.

*Workers' Delegate.*—Mr. R. J. Tallon, Vice-President, Trade & Labour Congress of Canada, Mimico, Ont.

*Technical Adviser to Workers' Delegate.*—Mr. W. A. MacDonald, Secretary-Treasurer, National Association of Marine Engineers of Canada, Halifax, N.S.

### Officers of the Conference

The following were elected as officers of the Conference:—

*President.*—H. E. Eduard Aunos Perez, Spanish Minister of Labour.

*Vice-Presidents.*—Mr. Niilo A. Mannio, Government Delegate, Finland; Mr. Paul de Rousiers, Employers' Delegate, France; and Mr. Benjamin Tillett, Workers' Delegate, British Empire.

*Secretary-General.*—Mr. Albert Thomas, Director of the International Labour Office.

*Deputy Secretary-General.*—Mr. Harold B. Butler, Deputy-Director of the International Labour Office.

### Committees Appointed

The following committees were appointed by the Conference, viz: a Selection Committee, composed of twenty-four members, which met from day to day during the session of the Conference and served for general purposes; and committees on each of the four items of the Agenda.

### Opening Addresses

Mr. Arthur Fontaine, Chairman of the Governing Body of the International Labour Office, in opening the Conference, pointed out the essentially international character of the shipping industry and the consequent necessity of international safeguards in relation to the conditions of work of seamen.

Mr. Eduard Aunos Perez, Spanish Minister of Labour, in accepting the Presidency of the Conference, endorsed the view expressed by Mr. Arthur Fontaine that the necessity of uniform international standards was the more evident as regards problems of maritime labour by reason of the fact that life at sea was essentially international. It was true that many national legislations had dealt with the protection of seamen, but it was also certain that the effects of international competition, particularly in commerce and shipping, urgently required the conclusion of international Conventions relative to the working conditions of seamen.

### Protest of Employers' Delegates

The Shipowners' Group, in view of the fact that British shipowners had decided not to be represented at the Conference on the ground that the British seamen's representatives were not properly chosen, requested the Conference to adopt a resolution declaring that the nomination of non-Government delegates and advisers to attend maritime conferences ought to be made in agreement with the organizations, if such organizations exist, which are most representative of ship-owners and seamen respectively, and that the Governing Body should be instructed to take steps to secure this result so as to avoid in the future a recurrence of the present situation. A lengthy discussion occurred on this resolution, which was rejected by 64 votes to 24. In the course of the discussion it was stated that the owners of over 50 per cent of the tonnage of

countries which are members of the International Labour Organization were not represented at this Conference.

In the ensuing discussion it was pointed out by one of the Workers' representatives that under the Peace Treaty member states undertook to nominate non-government delegates and advisers "chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in their respective countries." The same course had been followed in the present case by the British Government as had been adopted in the case of previous Conferences. What the employers were seeking was to amend the Peace Treaty by substituting shipowners and seamen for employers and workpeople. It was also brought out that the five technical advisers appointed by the General Council of the British Trades Union Congress to accompany the Workers' delegate, represented unions in daily contact with the interests of seafarers, and that the National Union of Seamen had been given the opportunity of appointing three further advisers but had not accepted the offer.

On the rejection of the Employers' resolution on October 12, the Employers' delegates withdrew from the sittings of the Conference. At a special plenary sitting of the Conference on October 17, a compromise resolution was adopted in the terms following, which was followed by the return of the Employers' delegates to the Conference:—

"In view of the difficulties which have arisen at the special sessions of the Conference devoted to Maritime questions, including the composition of non-Governmental delegates, the Conference invites the Governing Body to seek all appropriate means to avoid in the future a repetition of such difficulties."

### Decisions of the Conference

The main decisions of the Conference are summarized below.

By 76 votes to 17, it decided to place on the agenda of the next special Maritime Session of the Conference, which will be held after the ordinary General Session of 1930, the question of the *regulation of hours of work on board ship*. It adopted, by 71 votes to 20, a series of "Conclusions" prefaced by a declaration that it is desirable to consult governments on the question of an international regulation of hours on board ship by means of a Draft Convention, based on the principle of the eight-hour day or the forty-eight hour week. The "Conclusions" defined the principal points on which the Governments should be con-

sulted in a questionnaire to be prepared and distributed by the International Labour Office.

By 72 votes to 17, it decided to place on the agenda of the next Maritime Session the question of the *protection of seamen in case of sickness*, including the treatment of seamen injured on board ship. It adopted, by 65 votes to 16, a series of "Conclusions" concerning the individual liability of the shipowner towards the seamen, and, by 68 votes to 14, a series of "Conclusions" concerning sickness insurance for seamen. Both sets of "Conclusions" were prefaced by the opinion that the question could be made the subject of a Draft Convention.

By 89 votes to 0, it decided to place on the agenda of the next Maritime Session the question of the *promotion of seamen's welfare in ports*. It adopted unanimously a series of "Conclusions" on this subject, which, it was considered, could be made the subject of a Draft Convention or a Recommendation. It also adopted a resolution relating to the exemption of seafarers from ordinary passport requirements.

By 73 votes to 2, it decided to place on the agenda of the next Maritime Session the question of the *establishment of a minimum requirement of professional capacity* for captains, chief engineers and navigating and engineer officers in charge of watches. It adopted, by 65 votes to 0, a series of "Conclusions" on the subject, with a view to the possibility of a Draft Convention concerning it.

Resolutions were adopted concerning the composition of non-Governmental delegations (54 to 19), conditions of life and labour of Asiatic seamen (48 to 18), conditions of labour of workers employed in air transport (53 to 7), the treatment of seamen employed on foreign vessels in the waters of their own country (59 to 0), hours of work in inland navigation (39 to 17), and the action of Governments with regard to the Maritime Conventions adopted by previous Sessions of the Conference (55 to 7). Two other resolutions, relating to the right of association and to manning scales, obtained a majority but not a quorum.

### Texts of Conference Decisions

Following are the texts of the decisions of the Conference, comprising a series of "Conclusions" and the Questionnaires which have been prepared for submission to the various member states of the International Labour Organization on the different items chosen for the agenda of the Fifteenth (Maritime) Session of the International Labour Conference, to be held in 1930; also the texts of certain Resolutions adopted by the Conference:—

## I. REGULATION OF HOURS OF WORK ON BOARD SHIP

## Conclusions of Conference

The Conference,

Having examined the Report submitted by the International Labour Office on the regulation of hours of work on board ship,

Decides that it is desirable to consult Governments on the question of the international regulation of this matter by means of a Draft Convention;

Considers that it is also desirable to ask Governments whether such regulation should be based on the principle of the eight-hour day or the forty-eight-hour week, with such methods of application and such exceptions as the special conditions of the shipping industry require;

Further considers that it is desirable to consult Governments as to the definitions of the following expressions:

- normal hours of work;
- hours of actual work;
- hours on duty;
- overtime;
- compensation for overtime;
- work required for safety; and

Accordingly invites the International Labour Office to ascertain the views of the Governments on the following main points:

## I. Scope of the Draft Convention:

(1) As regards vessels: possible exceptions: sailing ships, Government vessels not engaged in trade, vessels engaged in urgent work of public utility, vessels below a certain tonnage; other possible exceptions.

(2) As regards trades: international and national; distant, medium, near; if this classification not considered possible, please indicate the method of international classification which you consider most practical; possible exceptions.

(3) As regards persons employed on board: possible exceptions; e.g. masters, non-watch-keeping officers in charge of a department, pilots, crews remunerated exclusively by a share in the profits or consisting entirely of members of the owner's or skipper's family, persons belonging to a special occupation not directly related to maritime work and who are not employed by the master or shipowner.

(4) Modifications which might be required in order to meet the special conditions pro-

vided for in Article 405, paragraph (3), of the Treaty of Peace.

II. Methods of regulating working hours it might be possible to adopt for different categories of the crew: (a) in port, (b) on sailing days, (c) on passage, (d) on arrival days.

(1) Engine-room Staff.

(a) Normal working hours; possibility of adopting both in port and at sea, and for all trades, the principle of an eight-hour day.

(b) Rules for ensuring a weekly rest, or for compensating it if not granted.

(c) Compensation and limitation of overtime.

(2) Deck Staff.

(a) Normal working hours; possibility of adopting the principle of an eight-hour day for work in port, and for work at sea various limits suited either to the different kinds of trades (distant, medium, near) or to the category of tonnage of the ship.

(b) Rules for ensuring a weekly rest, or for compensating it if not granted.

(c) Compensation and limitation of overtime.

(3) Catering Department.

Possibility of adopting rules differing for catering staff in attendance on passengers and staff in attendance on members of the crew.

(a) Catering staff in attendance on passengers.

Possibility either of limiting normal working hours, or, failing this, of fixing a minimum rest period.

Granting a weekly rest, or compensating it if not granted.

Limitation and compensation of overtime.

(b) Catering staff in attendance on the crew.

Possibility of limiting normal working hours. Weekly rest, or compensating it if not granted. Compensation and limitation of overtime.

III. Possibility of providing that overtime for certain classes of work necessary for safety shall not be subject either to limitation or compensation. Definition of work of this nature.

## QUESTIONNAIRE RE REGULATION OF HOURS OF WORK ON BOARD SHIP

1. Do you consider that hours of work on board ship should be regulated internationally by means of a Draft Convention?

2. Do you consider that, subject to such methods of application and such exceptions as the special conditions of the shipping industry require, this regulation should be based on the principle of the eight-hour day or the forty-eight-hour week contained in the Treaty of Peace?

3. Do you consider that for the purposes of the regulation in question the following expressions should be defined:

- (a) normal hours of work;
- (b) hours of actual work;
- (c) hours on duty;

(d) overtime;

(e) compensation for overtime?

If so, what definitions do you propose?

## SCOPE

As regards vessels.

4. Do you consider that all or any of the following classes of vessels should be excluded from the scope of the Draft Convention:

- (a) sailing ships,
- (b) Government vessels not engaged in trade,
- (c) vessels engaged in urgent work of public utility (please specify the vessels you propose to exclude under this heading),
- (d) vessels below a certain tonnage? (What tonnage limit do you propose?)

Are there any other classes of vessels you consider should be excluded?

*As regards trades.*

5. (1) Do you consider it desirable to establish, for the purposes of the Draft Convention, an internationally applicable classification of the various kinds of trades?

(2) If so, should the following be distinguished:

- (a) "national" trades and "international" trades;
- (b) "distant," "medium" and "near" trades within each of the two preceding groups?

On what criteria should these distinctions be based?

(3) If you consider the international classification indicated above impossible, what method of international classification do you consider the most practical?

6. Do you consider that certain kinds of trades should be excluded from the scope of the Draft Convention, and on what conditions, if any?

*As regards persons employed on board.*

7. Do you consider that certain categories of persons should be excluded from the scope of the Draft Convention, e.g.:

- (a) masters;
- (b) non-watch-keeping officers in charge of a department;
- (c) pilots;
- (d) crews remunerated exclusively by a share in the profits or consisting entirely of members of the owner's or skipper's family;
- (e) persons belonging to a special occupation not directly related to maritime work and who are not employed by the master or shipowner (please specify the persons you would exclude under this heading?)

*Methods of regulating hours of work for the different categories of the crew.*

8. Do you consider that for the purpose of regulating hours of work the Draft Convention should distinguish between:

- (a) engine-room staff, deck staff, catering department;
- (b) time in port, sailing days, time on passage, arrival days?

*Engine-room staff.*

9. Do you consider that the Draft Convention should limit to eight hours per day the normal hours of work of the engine-room staff both in port and at sea and in all kinds of trades included in the scope of the draft?

(2) If not, what general maximum or different maxima do you propose?

(3) Should rules be laid down for ensuring a weekly rest, or for compensating it if it is not granted? What rules do you propose?

(4) Should provision be made for compensating and limiting overtime? What rules do you propose?

*Deck staff.*

10. (1) Do you consider that the Draft Convention should fix the normal hours of work of the deck staff as follows:

- (a) In port, eight hours per day (if not, what maximum do you propose?);
- (b) On passage and on arrival and sailing days, different maxima according to the different kinds of trades (distant, medium, near) or to the tonnage category of the vessel? (What maxima do you propose?)

(2) Should rules be laid down for ensuring a weekly rest, or for compensating it if it is not granted? What rules do you propose?

(3) Should provision be made for compensating and limiting overtime? What rules do you propose?

*Catering department.*

11. Do you consider that the Draft Convention should lay down different rules for catering staff in attendance on passengers and staff in attendance on the crew?

12. (1) Do you consider that the Draft Convention should fix a maximum or maxima for the normal hours of work of catering staff in attendance on passengers?

If so, what maximum do you propose, (a) in port, (b) on passage, (c) on sailing days, (d) on arrival days?

If not, should a minimum rest period be fixed, and if so, what minimum?

(2) Should provision be made for granting a weekly rest, or for compensating it if it is not granted? What rules do you propose?

(3) Should provision be made for compensating and limiting overtime? What rules do you propose?

13. (1) Do you consider that the Draft Convention should fix a maximum or maxima for the normal hours of work of catering staff in attendance on the crew?

If so, what maximum do you propose, (a) in port, (b) on passage, (c) on sailing days, (d) on arrival days?

(2) Should provision be made for granting a weekly rest, or for compensating it if it is not granted? What rules do you propose?

(3) Should provision be made for compensating and limiting overtime? What rules do you propose?

**WORK IN THE INTERESTS OF SAFETY**

14. Do you consider that the Draft Convention should provide that overtime for the purpose of work required in the interests of safety is not to be subject either to compensation or to limitation? (Please indicate as precisely as possible the classes of work you would include under this heading.)

**MODIFICATIONS TO MEET SPECIAL CONDITIONS**  
(Article 405 of the Treaty of Peace)

15. Has your Government any special observations or suggestions to make on the basis of Article 405, paragraph 3, of the Peace Treaty, which provides for the possibility of special rules to meet climatic conditions or particular conditions in certain countries?

## II. PROTECTION OF SEAMEN IN CASE OF SICKNESS, INCLUDING THE TREATMENT OF SEAMEN INJURED ON BOARD SHIP

### Conclusions of Conference

#### THE LIABILITY OF THE SHIPOWNER TOWARDS SICK OR INJURED SEAMEN

The Conference,

Having examined the report submitted by the International Labour Office on the protection of seamen in case of sickness and injury, and in particular that part of the report which relates to "the individual liability of the shipowner towards sick or injured seamen",

Considers that the question of "the individual liability of the shipowner towards sick or injured seamen" could be made to subject of a Draft Convention;

Invites the International Labour Office to consult the Governments on the following principal points:

#### I. Scope

1. Scope as regards ships.
  - (a) Application of the shipowner's liability to all ships ordinarily engaged in maritime navigation, with the exception of ships of war;
  - (b) Possible exceptions, in particular in the case of:
    - (i) vessels of public authorities not engaged in trade;
    - (ii) coastwise fishing boats;
    - (iii) boats of small tonnage.
2. Scope as regards seamen.
  - (a) Application to every person employed on board;
  - (b) Possible exceptions, in particular in the case of:
    - (i) Pilots;
    - (ii) persons employed in ports in repairing, loading and unloading ships;
    - (iii) members of the shipowner's family who work exclusively on his behalf and who live in his house.

#### II. Risks Covered

1. Nature of the risks covered.
  - (a) sickness;
  - (b) injury;
  - (c) death.
2. Determination of the period of protection.
  - (a) beginning of the period of protection: beginning of the engagement;
  - (b) end of the period of protection: expiry of the engagement.
3. Relationship between the service and the risks covered.
 

Possible exception where the injury occurs otherwise than in the service of the ship.
4. Risks covered and the notion of fault.
  - (a) possible exception in case of injury intentionally caused by the seaman;
  - (b) possible exception in case of sickness due to the wilful misconduct of the seaman or to his own act.

#### III. Benefits, and Liabilities of the Shipowner

1. Assistance to sick or injured seamen.
  - (a) Nature of assistance:
    - (i) medical aid, supply of proper and sufficient medicines and appliances necessitated by the sickness or injury;
    - (ii) maintenance: board and lodging.

(b) Duration of assistance: Two cases are to be considered:

(i) the seaman is not compulsorily insured against sickness or accident, or is not protected by workmen's compensation legislation: right to assistance at the expense of the shipowner: until cure, healing of the injury, certification that the sickness is incurable; or until repatriation of the seaman, or until the end of the voyage of the ship, or until the expiry of a period prescribed by law:

(ii) the seaman is compulsorily insured against sickness or accident or is protected by workmen's compensation legislation: right to assistance at the expense of the shipowner: until the time when the seaman is entitled to the medical benefits provided by sickness insurance, accident insurance, or workmen's compensation.

(c) Arrangements for assistance: Responsibility of the shipowner or his representative for the arrangements for assistance until the time when this responsibility can be transferred to the consular authority or to another competent authority appointed by national law.

(d) Defrayment of the expenses of assistance:
 

- (i) Expenses paid directly by the shipowner who himself pays the cost of medical treatment, drugs, hospital treatment, board and lodging; or repayment by the shipowner or his representative of the actual cost of assistance; or payment of the cost of assistance in accordance with a tariff prescribed by law or regulations.

(ii) Obligation for the shipowner or his representative to deposit an advance or security with the authority which assumes responsibility for the organization of assistance, especially in the case where the sick or injured seaman is left behind abroad.

#### 2. Wages of the sick or injured seamen.

Two cases are to be considered:

(i) The seaman is not compulsorily insured against sickness or accident, or is not protected by workmen's compensation: right to wages at the expense of the shipowner: until termination of service; or until cure, healing of the injury, certification that the sickness is incurable; or until repatriation of the seaman, or until the end of the voyage of the ship, or until the expiry of a period prescribed by law, e.g. four months.

(ii) The seaman is compulsorily insured against sickness or accident, or protected by workmen's compensation legislation: right to wages at the expense of the shipowner: until the time when the cash benefits provided by sickness insurance, accident insurance or workmen's compensation become payable.

#### 3. Repatriation of the sick or injured seaman.

(a) Right to repatriation.

(b) Place of repatriation:

Port of engagement of the seaman, or  
Port of departure of the ship, or  
Port in the country of the seaman.

(c) Items included in repatriation expenses: expenses of transport, and of board and lodging of the seaman during the voyage.

#### 4. Burial expenses.

Liability for the shipowner to meet the expenses of burial:

- (a) in case of death on board;
- (b) in case of death on shore, if at the time of his death the seaman was entitled to claim assistance at the shipowner's expense.

#### 5. Protection of the property of the sick, injured or deceased seaman.

Liability for the shipowner or his representative, in case of the death of a seaman on board, or in case the seaman is left behind:

- (a) to draw up an inventory of the seaman's effects and an account of the wages due to him;

(b) to deliver to the seaman, or in the event of his death to his heirs, his effects and wages, including the proceeds of the sale of objects which could not be kept on board, through the agency of the maritime or consular authority or some other competent authority.

#### IV. Settlement of Disputes

Provision of means for the settlement of disputes which shall be readily accessible, quick acting and inexpensive.

Compulsion to essay conciliation in case of dispute between shipowner and seaman:

- (a) on the initiative of a competent authority;
- (b) at the request of either party.

Necessity for provisional executive decisions in case of disputes arising outside the country whose flag the vessel flies.

### QUESTIONNAIRE RE PROTECTION OF SEAMEN IN CASE OF SICKNESS, INCLUDING THE TREATMENT OF SEAMEN INJURED ON BOARD SHIP

#### FIRST PART.—THE INDIVIDUAL LIABILITY OF THE SHIPOWNER TOWARDS THE SICK OR INJURED SEAMEN

##### *Possibility of international regulation*

1. Do you consider that the International Labour Conference should adopt a Draft Convention to regulate internationally the individual liability of the shipowner towards sick or injured seamen?

#### I. SCOPE

##### *As regards ships.*

2. Do you consider that the shipowner's liability should apply to all ships ordinarily engaged in maritime navigation, with the exception of ships of war?

3. Do you consider it necessary to provide for exceptions, in particular in the case of:—

- (a) vessels of public authorities not engaged in trade;
- (b) coastwise fishing boats;
- (c) boats of small tonnage, and, if so, what tonnage limit do you propose?

##### *As regards seamen.*

4. Do you consider that the shipowner's liability should apply to every person employed on board?

5. Do you consider it necessary to provide for exceptions, in particular in the case of:—

- (a) pilots;
- (b) persons employed in ports in repairing, loading and unloading ships;
- (c) members of the shipowner's family who work exclusively on his behalf, and who live in his house?

#### II. RISKS COVERED

##### *Nature of the risks covered.*

6. Do you consider that the shipowner's liability should cover the risks of sickness, injury and death?

##### *Definition of the period of protection.*

7. Do you consider that the period of protection should:—

- (a) commence with the engagement;
- (b) terminate with the engagement?

##### *Relation between the service and the risks covered.*

8. Do you consider it necessary to provide for an exception in the case of injury occurring otherwise than in the service of the ship?

##### *Risks covered and the notion of fault.*

9. Do you consider it necessary to provide for exceptions:—

- (a) in case of injury wilfully caused by the seaman;
- (b) in case of sickness due to the wilful misconduct of the seaman, or to his own act?

#### III. BENEFITS AND SHIPOWNER'S LIABILITY

##### *Assistance to the sick or injured seaman.*

##### *Nature of assistance.*

10. Do you consider that the assistance to be provided for the sick or injured seaman should comprise:—

- (a) medical treatment and the supply of proper and sufficient medicines and appliances necessitated by the sickness or injury;
- (b) maintenance—board and lodging?

##### *Duration of assistance.*

11. Do you consider that the seaman who is not compulsorily insured against sickness and accident, or is not covered by workmen's compensation legislation, should be entitled to assistance:—

- (a) until cure, healing of the injury, or certification that the sickness is incurable; or
- (b) until repatriation; or
- (c) until the end of the ship's voyage; or
- (d) until the expiry of a period prescribed by law, and, if so, what length would you propose for the prescribed period?

12. Do you consider that the seaman who is compulsorily insured against sickness and accident, or is covered by workmen's compensation legislation, should be entitled to assistance until the time when he is entitled to the medical benefits provided by sickness insurance, accident insurance, or workmen's compensation legislation?

*Arrangements for assistance.*

13. Do you consider that the responsibility of the shipowner or his representative for the arrangements for assistance should only cease when such responsibility can be transferred to the consular authority or another competent authority appointed by national laws or regulations?

*Defrayment of the expenses of assistance.*

14. Do you consider that the shipowner should be liable:—

- (a) to meet directly the expenses of assistance by paying himself the cost of medical treatment, drugs, hospital treatment, board and lodging; or
- (b) to repay the actual cost of assistance; or
- (c) to defray the cost of assistance in accordance with a tariff prescribed by law or regulations?

15. Do you consider that the shipowner or his representative should be liable to deposit an advance or security with the authority which assumes responsibility for the arrangements for assistance, especially in the case where the sick or injured seaman is left behind abroad?

*Wages of the sick or injured seaman.*

16. Do you consider that the seaman who is not compulsorily insured against sickness and accident, or is not covered by workmen's compensation legislation, should be entitled to wages:—

- (a) until termination of service; or
- (b) until cure, healing of the injury, or certification that the sickness is incurable; or
- (c) until repatriation; or
- (d) until the end of the ship's voyage; or
- (e) until the expiry of a period prescribed by law—e.g. four months—and, if so, what length do you propose for the prescribed period?

17. Do you consider that the seaman who is compulsorily insured against sickness and accident, or is covered by workmen's compensation legislation, should be entitled to wages until the time when the cash benefits provided by sickness insurance, accident insurance, or workmen's compensation legislation, become payable?

*Repatriation of the sick or injured seaman.*

18. Do you consider it necessary to provide in the Draft Convention that the sick or injured seaman shall be entitled to repatriation at the expense of the shipowner?

19. Do you consider that the expenses of repatriation should comprise the expenses of transport, and of the board and lodging of the seaman during the voyage?

20. Do you consider that the place to which the sick or injured seaman is to be repatriated should be:—

- (a) the port at which he was engaged, or
- (b) the port of departure of the ship, or
- (c) a port in his own country?

*Burial expenses.*

21. Do you consider that the shipowner should be liable to meet the expenses of burial:—

- (a) in case of death on board;

- (b) in case of death on shore if, at the time of his death, the seaman was entitled to assistance at the shipowner's expense?

*Protection of the property of seamen deceased or left behind on account of sickness or injury.*

22. Do you consider that the shipowner or his representative should be liable, in case of the death of the seaman on board or in case the sick or injured seaman is left behind:—

- (a) to draw up an inventory of the seaman's effects and an account of the wages due to him;
- (b) to deliver to the seaman, or, in the event of his death, to his legal representatives, his effects and wages (including the proceeds of the sale of objects which could not be kept on board) either directly or through the agency of the consular authority, maritime authority, or some other competent authority?

## IV. SETTLEMENT OF DISPUTES

23. Do you consider it necessary to frame provisions for settling disputes by means which shall be readily accessible, rapid and inexpensive?

24. In particular, do you consider it possible to:—

- (a) make it obligatory to essay conciliation in case of dispute between shipowner and seaman; on the initiative of a competent authority; or at the request of either party;
- (b) make it necessary to decide, such decisions having interim effect, disputes occurring outside the country of the vessel's flag?

## SECOND PART.—SICKNESS INSURANCE FOR SEAMEN

*Possibility of International Regulation.*

1. Do you consider that the International Labour Conference should adopt a Draft Convention to regulate internationally sickness insurance for seamen?

## I. SCOPE

*As regards ships.*

2. Do you consider that compulsory sickness insurance should apply to all ships engaged in maritime navigation, including sea fishing vessels, but excluding ships of war?

3. Do you consider it necessary to provide for exceptions, in particular for vessels of public authorities not engaged in trade?

*As regards seamen.*

4. Do you consider that compulsory sickness insurance should apply to every person employed on board?

5. Do you consider it necessary to provide for exceptions, in particular for:

- (a) foreign seamen;
- (b) seamen not resident in the country of the vessel's flag;
- (c) masters and officers in receipt of remuneration which is high in relation to the general level of remuneration;
- (d) members of the employer's family;
- (e) pilots;
- (f) workers below or above specified age limits?

## II. PERIOD OF PROTECTION

6. Do you consider that the period of protection should extend:

- (a) from the beginning of the engagement until termination of service;
- (b) and, further, until the expiry of a specified period from the termination of service?

## III. BENEFITS

### *Sickness benefit*

#### *Conditions for benefit.*

7. Do you consider that sickness benefit should be paid to a seaman who is incapable of work by reason of sickness, is not entitled to his wages, and is present in the country in which the insurance institution is established?

#### *Benefits for dependents of seaman who is abroad.*

8. Do you consider it necessary to provide for the payment of benefit to the dependents of a seaman during the period between the expiry of his right to wages and his return to the country in which the insurance institution is established?

#### *Qualifying and waiting periods.*

9. Do you consider it necessary to provide for allowing the payment of benefit to be made conditional on completion of a qualifying period and the expiry of a waiting period of a few days?

#### *Sickness due to the seaman's wilful misconduct.*

1. Do you consider it necessary to provide for an exception in case of sickness due to the seaman's wilful misconduct?

#### *Duration of benefit.*

11. Do you consider it necessary to fix in the Draft Convention the period during which benefit is to be payable in case of incapacity for work? If so, what period do you propose?

#### *Rate of benefit.*

12. Do you consider that the rate of benefit should be:

- (a) a flat rate; or
- (b) a rate varying with the service category or wages of the seaman?

#### *Family allowance.*

13. Do you consider it necessary to make special provision on behalf of seamen having family responsibilities?

### *Medical benefit*

#### *Content of medical benefit.*

14. Do you consider that a sick seaman should be entitled to medical benefit comprising:

- (a) medical treatment and the supply of proper and sufficient medicines and appliances;

(b) and, where necessary, hospital treatment or the expenses thereof?

#### *Condition for medical benefit.*

15. Do you consider that the grant of medical benefit should be conditional on the presence of the sick person in the country in which the insurance institution is established?

#### *Duration of medical benefit.*

16. Do you consider that medical benefit should be granted:

- (a) as long as the sick person needs it; or
- (b) during a certain period from the beginning of the sickness; if so, what period do you propose?

#### *Family medical benefit*

17. Do you consider it desirable to provide for the grant of medical benefit to members of the seaman's family living in his household and dependent on him?

#### *Maternity benefit*

18. Do you consider it desirable to provide that benefit is to be granted:

- (a) in case of the confinement of a woman employed at sea;
- (b) in case of the confinement of the wife of an insured seaman?

#### *Funeral benefit*

19. Do you consider it desirable to provide for the payment of a benefit on the death of an insured seaman?

## IV. FINANCIAL RESOURCES

20. Do you consider that the Draft Convention should affirm the principle of the joint contribution of the employer and of the insured person?

21. Do you consider that the Draft Convention should make provision for a financial contribution by the public authorities?

## V. INSURANCE INSTITUTIONS

22. Do you consider that the Draft Convention should affirm the principle of self-government of the insurance institutions, under the supervision of the public authorities?

23. Do you consider that the Draft Convention should provide for the participation of insured persons and employers in the management of the insurance institutions?

## VI. SETTLEMENT OF DISPUTES

24. Do you consider that the Draft Convention should provide for a right of appeal to be granted to the insured person in case of dispute concerning his right to benefit?

25. Do you consider it desirable to entrust the settlement of disputes concerning benefits to special tribunals?

### III. PROMOTION OF SEAMEN'S WELFARE IN PORTS

#### Conclusions of Conference

The Conference, having examined the report submitted by the International Labour Office on the welfare of seamen in ports, considers that the question of the welfare of seamen in port could be made the subject of a Draft Convention or Recommendation, and invites the International Labour Office to consult the Governments on the following principal points—

#### A.

I. Institution in all important ports, where no such arrangements already exist, of an authority or other officially recognized organization comprising representatives of shipowners, seamen, and the recognized institutions concerned, for the following purposes:—

(1) to promote and co-ordinate the necessary practical measures for the welfare of both national and foreign seamen, more particularly those indicated under (B), (C), (D) and (E);

(2) to collect, in co-operation with the other public authorities concerned, all information as to the conditions prevailing in port and adjacent areas as may be necessary to enable the practical measures indicated above to be effectively carried out.

II. The desirability of the International Labour Office entering into contact with the Governments or the national committees to be set up for this purpose in order to promote collaboration between all the national organizations concerned.

#### B.

I. Adoption of legislative measures or regulations embodying among others the following measures, account being taken of national and local conditions:—

1. Regulation of the sale of alcohol, including such measures as the reduction of the number of taverns in or near dock areas, the fixing of a closing time for such taverns, or such other measures as may be practicable for protecting seamen against the dangers of alcoholism.

2. Application of the existing provisions restricting the sale and use of narcotics.

Necessity of instructing seamen in the dangers arising from the use of narcotics.

3. Prohibition of the employment of attendants of both sexes in public houses under a certain age.

4. Institution of official supervision of taverns, lodging-houses and hotels.

5. Supervision of persons visiting ships in order to prevent persons desiring to go on board with the intention of introducing alcoholic drinks or narcotics or for other undesirable purposes from having access thereto.

6. Sufficient lighting for docks and the fencing of dock areas, wherever such a measure is possible, by fixed or movable barriers.

7. Supervision of boatmen plying between the ships and the shore.

8. Removal from the port area of loafers and persons of no definite occupation.

II. Adoption of measures for enforcing the regulations, for example:—

1. Organization of special police forces for the port and its surroundings.

2. Improved co-operation between the consuls and the local authorities.

3. Greater practical facilities for seamen to communicate with their consul.

#### C.

Adoption of measures to protect the health of seamen, in particular:—

1. The prohibition of soliciting and enticing seamen in the harbour area.

2. Propaganda amongst seamen by national organizations, working if possible in contact with the voluntary organizations referred to in Article 25 of the Covenant and the technical bodies with which they co-operate, concerning the dangers of tuberculous, tropical, venereal and other diseases; the necessity for infected persons to receive attention; and the available facilities for such attention.

3. The necessity for the organization of prophylaxis and of free and accessible treatment for venereal diseases as provided for by the Brussels Agreement, and the necessity of extending this Agreement to as many countries as possible.

4. The admission without difficulty of seamen of all nationalities and all religious beliefs to public hospitals and dispensaries in ports.

5. The extension as far as possible to foreign seamen of the provisions made in the national sphere for protection against tuberculosis.

#### D.

Adoption of measures relating more particularly to accommodation for seamen:—

1. Provision of a sufficient number of hostels for seamen of all nationalities satisfying all the necessary conditions at a reasonable price, and the institution of the official supervision mentioned in B. I (4).

2. Institution and development in all ports of a certain size of: meeting and recreation rooms (canteens and rooms for games); libraries; sports organizations; opportunities for excursions.

3. Extension of facilities in connection with the majority of hostels, homes and other institutions for seamen, or through other organizations, for enabling seamen to deposit their wages and to transmit them to their families from foreign ports.

4. Steps to favour the general adoption of the system under which, as soon as a seaman is enrolled, he may allocate, if he so desires, part of his wages for regular remittance to his family.

#### E.

The possibility of propaganda being undertaken by official or voluntary bodies with a view to ensuring the success of the proposed measures.

#### F.

1. Indication of sources from which funds necessary for giving effect to the measures contemplated in the foregoing parts of the Conclusions may be drawn.

2. Possibility of some contribution from the funds of social insurance institutions.

## QUESTIONNAIRE ON PROMOTION OF SEAMEN'S WELFARE IN PORTS

*A. Preliminary Question.*

1. Do you consider that the international Labour Conference should adopt a Recommendation on the subject of the promotion of seamen's welfare in ports?

*B. Organization*

2. Is it desirable to provide for the institution, in all important ports where no such arrangements exist, of an authority or other officially recognized organization comprising representatives of shipowners, seamen and the recognized institutions concerned, for the following purposes:

- (a) to promote and co-ordinate the necessary practical measures for the welfare of both national and foreign seamen, more particularly those indicated under C. D. E, and F;
- (b) to collect, in co-operation with the other public authorities concerned, all information as to the conditions prevailing in the port and adjacent areas as may be necessary to enable these practical measures to be effectively carried out?

3. Do you consider it desirable that the International Labour Office should enter into contact with the Governments or the national committees to be set up for this purpose, in order to promote collaboration between all the national organizations concerned?

*C. Regulations*

4. Is it desirable to provide for the adoption of legislative measures or regulations embodying among others the following measures, account being taken of national and local conditions:

- (a) Protection of seamen from the dangers of alcoholism by all means considered practicable, including—
  - (i) the regulation of the sale of alcohol;
  - (ii) the reduction of the number of taverns in or near dock areas;
  - (iii) the fixing of a closing time for such taverns;
- (b) (i) Application of the existing provisions restricting the sale and use of narcotics;
- (ii) Necessity of instructing seamen in the dangers arising from the use of narcotics;
- (c) Prohibition of the employment of attendants of both sexes in public houses under a certain age; (what age do you propose?);
- (d) Institution of official supervision of taverns, lodging-houses and hotels;
- (e) Supervision of persons visiting ships, in order to prevent persons desiring to go on board with the intention of introducing alcoholic drinks or narcotics or for other undesirable purposes from having access thereto;
- (f) (i) Sufficient lighting for docks;
- (ii) Fencing of the edges of docks wherever such a measure is possible, by fixed or moveable barriers;
- (g) Supervision of boatmen plying between the ships and the shore;
- (h) Removal from the port area of loafers and persons of no definite occupation?

5. Is it desirable to consider the adoption of provisions for ensuring the enforcement of the regulations, e.g.:

- (a) Organization of special police forces for the port and its surroundings;

- (b) Improved co-operation between the consuls and the local authorities;
- (c) Greater practical facilities for seamen to communicate with their consul?

*D. Hygiene*

6. Should provision be made for measures to protect the health of seamen, and in particular for the following:

- (a) Prohibition of soliciting and enticing seamen in the harbour area;
- (b) Propaganda amongst seamen by the national organizations, working if possible in contact with the voluntary organizations referred to in Article 25 of the Covenant and the technical bodies with which they co-operate, concerning the dangers of tuberculosis, tropical, venereal and other diseases, the necessity for infected persons to undergo treatment, and the available facilities for such treatment;
- (c) Organization of prophylaxis and of free and accessible treatment for venereal diseases as provided for by the Brussels Agreement, and the extension of this Agreement to as many countries as possible;
- (d) Admission without difficulty of seamen of all nationalities and all religious beliefs to public hospitals and dispensaries in ports;
- (e) Extension as far as possible to foreign seamen of the provisions made in the national sphere for protection against tuberculosis?

*E. Practical Measures*

7. Should measures be considered relating more particularly to accommodation for seamen, e.g.:

- (a) Provision of a sufficient number of hostels for seamen of all nationalities satisfying all the necessary conditions at a reasonable price and subject to the official supervision mentioned in Part C (4)?
- (b) Institution and development in all ports of a certain size of
  - (i) meeting and recreation rooms (canteens and rooms for games),
  - (ii) libraries,
  - (iii) sports organizations,
  - (iv) opportunities for excursions;
- (c) Extension of facilities, in connection with the majority of hostels, homes and other institutions for seamen or through other organizations, for enabling seamen to deposit their wages and to transmit them to their families from foreign ports;
- (d) Institution or more general adoption of a system under which as soon as a seaman is enrolled he may allocate, if he so desires, part of his wages for regular remittance to his family? (What system do you propose?)

*F. Propaganda*

8. Do you consider that it should be made possible for official or voluntary bodies to undertake propaganda with a view to ensuring the success of the proposed measures?

*G. Financial Organization*

9. From what sources do you consider that the funds necessary for giving effect to the measures contemplated in the foregoing questions might be drawn?

10. Could provision be made for some contribution from the funds of social insurance institutions?

*H. Possibility of a Draft Convention on certain Points*

11. Do you consider that some, and if so which, of the points mentioned above might form the subject of a Draft Convention?

**IV. THE MINIMUM REQUIREMENT OF PROFESSIONAL CAPACITY IN THE CASE OF CAPTAINS, NAVIGATING AND ENGINEER OFFICERS IN CHARGE OF WATCHES ON BOARD MERCHANT SHIPS**

**Conclusions of Conference**

The Conference, after examining the Report presented by the International Labour Office on the question of the minimum requirement of professional capacity in the case of captains, navigating and engineer officers in charge of watches on board merchant ships, invites the International Labour Office to consult the Governments on the following points:

1. The possibility of adopting a Draft Convention specifying that possession of a certificate of professional capacity is to be required by national legislation for employment as:

- (a) Master or skipper;
- (b) Navigating officer in charge of a watch;
- (c) Engineer officer in charge of a watch;
- (d) Chief engineer.

2. The determination of the scope of this Draft Convention on the basis of general definitions, which might be as follows:

Master or skipper: any person having command or charge of a vessel:

Navigating officer in charge of a watch: any person, not being a pilot, who is navigating a ship:

Engineer officer in charge of a watch: any person who is running a ship's engines.

3. Possibility of providing for minor exceptions, on such grounds as, for example, type of vessel and tonnage.

4. Possibly, general conditions for granting certificates which should be specified by national laws or regulations:

- (a) a minimum age;
- (b) a certain standard of professional experience;
- (c) the necessity of passing one or more examinations organized and supervised by the public authorities.

5. The provision of sanctions against:

- (a) a shipowner engaging a master or officer who is not duly certificated, as required by the Draft Convention;
- (b) a master or officer making use of forged documents to obtain employment as such.

The determination of the character of such sanctions (penal or disciplinary).

6. Supervision of the enforcement of the stipulations of the Draft Convention; the right of the authorities responsible for the application of laws or regulations relating to the safety of navigation to detain any vessel not carrying the duly certificated officers required. Geneva, 21 October, 1929.

**QUESTIONNAIRE ON THE MINIMUM REQUIREMENT OF PROFESSIONAL CAPACITY IN THE CASE OF CAPTAINS, NAVIGATING AND ENGINEER OFFICERS IN CHARGE OF WATCHES ON BOARD MERCHANT SHIPS**

Do you consider that the International Labour Conference should adopt a Draft Convention specifying that national laws or regulations are to require certificates of professional capacity for employment as:

- (a) master or skipper;
- (b) navigating officer in charge of a watch;
- (c) chief engineer;
- (d) engineer officer in charge of a watch?

2. Do you consider that the scope of the Draft Convention should be determined on the basis of general definitions, which might be as follows:—

*Master or skipper*—Any person having command or charge of a vessel;

*Navigating officer in charge of a watch*—Any person, not being a pilot, who is navigating a ship;

*Chief engineer*—Any person permanently responsible for the engine-room staff;

*Engineer officer in charge of a watch*—Any person who is running a ship's engines?

3. Do you consider that it should be left open to national laws or regulations to provide for minor exceptions on such grounds as, for example, type of vessel and tonnage? If so, what proposals do you make?

4. Do you consider it desirable, while leaving it to national laws or regulations to settle in

detail the conditions for granting certificates, to indicate in the international regulations that these conditions as a whole are to be directed towards securing the following guarantees:

- (a) a minimum age;
- (b) a certain standard of professional experience (length of service at sea, a qualifying period in the engine-room or in workshops, etc.);
- (c) the passing of one or more examinations organized and supervised by the public authorities?

5. Do you consider it desirable to indicate that national laws or regulations are to provide for sanctions against:

- (a) a shipowner engaging a master or officer who is not duly certificated as required by the Draft Convention;
- (b) a master or officer making use of forged documents to obtain employment as such?

What do you consider should be the character of such sanctions (penal or disciplinary)?

6. Is it desirable to provide for special measures for supervising the enforcement of the rules of the Draft Convention?

In particular, is it desirable to empower the authorities responsible for ensuring compliance with the laws or regulations relating to the safety of navigation to detain any vessel not carrying the duly certificated officers required?

## RESOLUTIONS ADOPTED BY THE CONFERENCE

The texts of the Resolutions adopted by the Conference are as follows:—

*Resolution Concerning the Composition of Non-Government Delegations*

“In view of the difficulties which have arisen at the special Sessions of the Conference devoted to maritime questions, including the composition of non-Governmental delegations, the Conference invites the Governing Body to seek all appropriate means of avoiding in the future a repetition of such difficulties.”

*Resolution concerning the conditions of life and labour of seamen in Asiatic countries.*

“Whereas equality of treatment of seamen without distinction of race or nationality is an essential factor in the improvement of conditions of life and labour throughout the world;

Whereas marked inequalities at present exist in the treatment of the seamen of certain nationalities, especially those from Asiatic countries, as compared with other seamen performing the same work, in particular in such matters as wages, hours, the system of recruitment, unemployment, housing, health, the protection afforded by the laws of the country of the shipowner in respect of insurance, workmen's compensation, freedom of association, etc.; and

Whereas the Twelfth Session of the International Labour Conference adopted a resolution recalling the necessity of equal treatment of national workers and coloured foreign workers and requesting the Governing Body of the International Labour Office to consider the desirability of placing this question, if possible, on the Agenda of the 1931 Session;

The Conference requests the Governing Body (1) to call the special attention of the International Labour Office, in carrying out the enquiry known as the “Asiatic enquiry”, to the present conditions of life and labour of Asiatic seamen, as mentioned above, and in particular when they are employed outside their country or on board foreign vessels, and

(2) to consider whether this question could be placed on the Agenda of an early Session of the Conference.”

*Resolution concerning conditions of labour in air transport.*

“The Conference, bearing in mind the decisions taken on behalf of the seafaring community and the measures framed at previous Sessions concerning workers employed in the various branches of sea, inland waterway and railway transport; but

Having regard to the importance and the expansion of air transport, which is developing into a new industry employing numerous categories of workers;

Having regard to the fact that in some countries workers in air transport are grouped in the same organizations as sea transport workers and that the aspirations of pilots and mechanics in aviation for the improvement of their condition are thus identified with those of seamen and engineers employed on board ship; and

Having regard to the risks to which crews in air transport are exposed and the desirability of regulating internationally the working conditions and the protection of an occupation which has to be carried on in different countries;

Invites the Governing Body of the International Labour Office to consider the desirability of

(a) Undertaking a study not only of the safety but also of the living, training and working conditions of workers in air transport with a view to including these questions in the Agenda of a Session of the International Labour Conference; and

(b) Appointing a Committee of experts to study questions affecting workers in air transport.”

*Resolution concerning the equitable treatment of seamen*

“The Conference,

Considering the necessity of providing adequate protection in the modern order of society for the workers of all countries, and in particular for seamen.

Bearing in mind the report on special countries adopted at the Washington Session.

Requests the Governing Body to consider all appropriate measures with a view to drawing the attention of States Members to the necessity of securing equitable treatment for seamen employed on board vessels sailing in the territorial waters or on the inland waterways of the country of which such seamen are nationals, in accordance with the social legislation of that country.”

*Resolution concerning the limitation of hours of work in inland navigation*

“Whereas it is of the utmost importance that workers employed on inland navigable rivers and waterways should have the benefit of a limitation of the hours of work no less than seamen employed in maritime navigation, and whereas the Recommendation concerning the limitation of hours of work in inland navigation which was adopted at Genoa in 1920 has failed to achieve adequate results;

The Conference requests the Governing Body of the International Labour Office to consider the possibility of placing the question of the limitation of the hours of work of inland watermen on the Agenda of an early Session of the Conference with a view to the adoption of a Draft Convention on the subject.”

*Resolution concerning the application of Draft Conventions and Recommendations adopted by previous Maritime Sessions of the Conference.*

“The Conference,

Having noted the resolution adopted at its Twelfth Session on the motion of Mr. Matsuo, Japanese Workers' Delegate, concerning the application of Article 405, paragraph 5, of the Treaty of Peace of Versailles,

And taking into account the steps already taken by the Governing Body of the International Labour Office to give effect to this resolution,

Requests the Governing Body of the International Labour Office to continue and to expedite the study already undertaken and to give its particular attention to the action taken by States Members of the International Labour Organization upon the Draft Conventions and Recommendations adopted by the previous Maritime Sessions of the Conference, including the maritime Conventions adopted at the 1921 Session, and to submit a report on the subject to an early Session of the Conference.”

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN OCTOBER, 1929

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in October was 7,043, their employees numbering 1,082,576 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for Oc-

tober was 1,750, having an aggregate membership of 212,328 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

### (1) Employment Situation at the Beginning of November, 1929, as Reported by Employers

There was the customary contraction in industrial activity at the beginning of November, when the 7,043 firms furnishing employment returns to the Dominion Bureau of Statistics reported 1,082,576 employees, compared with 1,090,846 on October 1. Reflecting the reduction, the index number declined from 125.6 in the preceding month to 124.6 on the date under review, as compared with 118.9, 108.8, 104.0, 98.3, 94.1, 100.0, 97.0 and 91.3 on November 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Despite this usual autumnal recession, employment continues in decidedly greater volume, not only than in any other November, but also than in any month in the years 1921-1928; the accompanying chart illustrates the favourable industrial situation generally prevailing as compared with the last seven years.

Pronounced seasonal curtailment again took place in construction and manufacturing, while logging, mining and trade reported considerable improvement, also, largely seasonal in character.

#### Employment by Economic Areas

Heightened employment was registered in the Maritime Provinces and Quebec, but the tendency was downward in Ontario, the Prairie Provinces and British Columbia.

*Maritime Provinces.*—There was an increase in employment in the Maritime Provinces on November 1, 1929, contrasting with the losses generally recorded on that date in other years

for which statistics are available. Most of the advance took place in logging, which was unusually active, and in shipping, while there were seasonal decreases in manufacturing, notably in sawmills. Returns were received from 533 employers, with 84,127 workers on their payrolls, or 743 more than at the beginning of October. Considerable losses had been indicated on November 1, 1928, when the index, as on the same date in earlier years of the record, was lower.

*Quebec.*—As on November 1 last year, there was an upward trend in Quebec, where the 1,624 co-operating firms enlarged their staffs by 6,439 employees, bringing them to 309,432. Building construction, trade and transportation reported improvement, and there were very marked seasonal advances in logging, while highway and railway construction, manufacturing, communications and services registered curtailment. Employment was in much greater volume than on the corresponding date in 1928, or in any other year since the record was instituted in 1920.

*Ontario.*—Employment declined in Ontario, where the situation was, however, more favourable than in the autumn of earlier years of the record, in most of which reductions were noted at the beginning of November. The most extensive recessions on the date under review were mainly of a seasonal nature, in construction, canning, saw-milling and iron and steel plants, while logging, mining and trade were decidedly busier. A combined

working force of 447,437 persons was registered by the 3,168 employers whose data were tabulated and who had 453,963 on their payrolls in the preceding month.

*Prairie Provinces.*—As is very often the case at the time of year, there was a decrease in the Prairie Provinces on November 1, 1929, but employment continued better than in the autumn in any other year since the record was commenced in 1920. Returns were compiled from 1,004 firms having 153,182 employees, as against 158,636 at the beginning of October. Coal mining, logging and trade afforded considerably more employment; on the other hand, manufacturing, construction, transportation and services showed contractions.

**Employment by Cities**

Additions to staffs were registered in Quebec city, Montreal, and Winnipeg; practically no change was shown in Hamilton, while in Toronto, Ottawa, Windsor and the adjacent Border Cities and Vancouver there were reductions.

*Montreal.*—The trend of employment in Montreal was upward, 1,332 persons having been added to the staffs of the 859 co-operating firms, who employed 149,577. Manufacturers, transportation, construction and trade reported increased activity, while there were losses in the service and communication groups. Rather less pronounced improvement had been indicated on November

**EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS**

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

*British Columbia.*—Further declines in personnel were recorded by the 713 employers furnishing returns in British Columbia; their staffs aggregated 88,398 workers, compared with 91,870 in the preceding month. The greatest losses were in manufactures and construction, but logging and transportation were also slacker; on the other hand, mining and retail trade were more active. Employment was in greater volume than on November 1 last year, when the movement was also unfavourable.

Table I gives index numbers by economic areas.

1, 1928, when the index was several points lower.

*Quebec City.*—Employment showed an increase in Quebec, according to 120 employers of 13,472 persons, compared with 13,323 on October 1. Services and manufacturing showed curtailment, while construction and trade reported heightened activity. The situation was more favourable than on the same date last year, when reductions had been noted.

*Toronto.*—There was a falling-off in the number of workers on the payrolls of 927

firms in Toronto, who had 130,415 in their employ, or 917 less than in the preceding month. Most of the decline took place in manufacturing, construction and transportation, while trade was considerably busier. A gain had been registered at the beginning of November a year ago, but the index then was lower.

*Ottawa.*—Almost all the curtailment in Ottawa was in manufacturing, particularly of

lumber products, but trade showed heightened activity. The 142 employers furnishing data reported 13,316 workers, as against 13,639 on October 1. Employment was in greater volume than on the same date in 1928, when contractions had also been indicated.

*Hamilton.*—Practically no general change occurred in Hamilton, where the 220 co-operating firms employed 39,224 persons. Advances in manufactures were offset by

NOTE.—The "relative weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS (AVERAGE CALENDAR YEAR 1926=100)

Relative Weight of Employment by Districts as at Nov. 1, 1929.....	100.0	7.8	28.6	41.3	14.1	8.2

losses in quarrying and other groups. The movement in November 1 last year had been upward, but the index then was lower by many points.

*Windsor and the Adjacent Border Cities.*—Employment in the Border Cities showed a further decrease; 134 employers reported 16,753 persons on their payrolls, compared with 17,162 at the beginning of October. Seasonal dullness in automobile plants and construction caused the decrease, which was

on a smaller scale than that indicated on the same date a year ago. Employment then, however, was much brisker than during this autumn.

*Winnipeg.*—Improvement was noted in Winnipeg, according to 328 firms employing 34,582 workers at the beginning of November, as compared with 34,391 in their last report. Trade reported considerable advances, while manufacturing and transportation released help. Very little change had been recorded

NOTE. The "relative weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Nov. 1.....	121.8	133.6	125.0	125.0	130.4	134.9	115.8	111.6
Relative weight of employment by cities as at Nov. 1, 1929..	13.8	1.2	12.0	1.2	3.6	1.5	3.2	2.8

on November, 1, 1928, when employment was at approximately the same level.

*Vancouver.*—There was a slightly downward movement in employment in Vancouver, where 272 employers had 29,825 persons on their staffs, or 90 less than in the preceding month. Manufactures and construction showed most of the reduction, while trade and services were more active. The situation was better than at the beginning of November last year, when much larger losses had been reported.

**NOTE:** The "relative weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

**TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE CALENDAR YEAR 1926=100)**

	All industries	Manufacturing	Logging	Mining	Communication	Transportation	Construction	Services	Trade

Relative weight of employment by Industries as at Nov. 1, 1929.....	100.0	51.8	4.2	5.3	2.8	12.1	13.6	2.0	8.2

Index numbers by cities are given in Table II.

**Manufacturing**

Further shrinkage of a seasonal character was noted in manufactures, chiefly in the lumber, iron and steel and food-canning industries, although there were also losses in electric current, leather and building material works. On the other hand, electrical apparatus, non-ferrous metal and some other factories registered considerable advances. The 4,199 co-operating manufacturers reported

560,954 operatives, as against 575,406 at the beginning of October. This decline involved more workers than that shown on November 1 last year, but the index was then lower.

*Animal Products—Edible.*—Dairies and fish canneries reported seasonal curtailment, whilst meat-packing plants afforded more employment. Statistics were received from 202 manufacturers, employing 18,813 persons, as com-

pared with 19,201 in the preceding month. This contraction, which took place chiefly in Quebec and British Columbia, was smaller than that registered on the corresponding date last year, when the index number was approximately the same.

*Leather and Products.*—Following four months of uninterrupted expansion, there was a falling-off in employment in this group on

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	Relative weight <sup>1</sup>	Nov. 1, 1929	Oct. 1, 1929	Nov. 1, 1928	Nov. 1, 1927	Nov. 1, 1926	Nov. 1, 1925	Nov. 1, 1924

<sup>1</sup> The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

November 1, chiefly in boot and shoe factories in Quebec. The 178 firms furnishing data reported 16,935 workers, as against 17,266 on October 1. Activity was rather greater on the same date in 1928, the changes then recorded having been slight.

*Lumber and Products.*—Further contractions, involving a larger number of employees than in autumn last year, were indicated in the lumber group, in which employment was in rather less volume than in November, 1928, although it was brisker than in any other November of the record. The losses on the date under review took place almost entirely in rough and dressed lumber mills, while furniture, vehicle and some other divisions were busier. A combined working force of 54,242 persons was reported by the 706 co-operating manufacturers, as compared with 59,412 at the beginning of October. There were important contractions in all provinces.

*Plant Products—Edible.*—Fruit and vegetable canneries made large seasonal reductions in their payrolls, while sugar and syrup factories showed an advance. The forces of the 372 reporting firms aggregated 35,338 persons, or 3,586 less than in their last return. Employment improved in Quebec, while in Ontario and British Columbia there were pronounced seasonal losses. This decrease involved many more workers than that registered on the corresponding date in 1928, but the index number was then much lower than on the date under review.

*Pulp and Paper Products.*—There was a small increase in the number reported by employers in this group, 533 of whom had 68,447 workers on their payroll, as compared with 68,351 at the beginning of October. Decreases in pulp and paper plants were offset by gains in printing and publishing houses. The tendency was favourable in Ontario and the Maritime Provinces, while in Quebec and British Columbia there were declines. Although considerable advances had been noted at the beginning of November a year ago, the index then was lower, as it was in the autumn of earlier years of the record.

*Rubber Products.*—Employment in rubber goods showed a slight recession on November 1; data were compiled from 37 firms with 17,304 employees, as against 17,426 in their last report. This decrease took place chiefly in Ontario. Employment was at a lower level than on November 1, 1928, when large gains had been indicated, but was better than in any other November on record.

*Textile Products.*—Thread, cotton, woollen, hosiery and knitting factories reported in-

creased activity, but the production of garments, personal furnishings and headwear showed a falling off; 587 manufacturers enlarged their payrolls from 82,800 on October 1, to 82,885 on the date under review. There were moderate increases in Ontario and the Maritime Provinces. A much larger gain had been noted at the beginning of November last year, when the situation was practically the same as on the date under review.

*Tobacco, Distilled and Malt Liquors.*—There was a slight increase in employment in these industries, as a whole, 94 persons being added to the staffs of the 148 establishments furnishing statistics, which employed 16,632. Quebec registered most of the gain, which took place mainly in tobacco factories. A downward movement had been noted on the corresponding date last year, and the index then was lower by some 10 points.

*Chemicals and Allied Products.*—Improvement was recorded in this group, according to statements furnished by 116 plants employing 8,118 persons, or 109 more than in their last report. Conditions were more favourable than in the autumn of 1928.

*Clay, Glass and Stone Products.*—Seasonal curtailment was indicated in building material plants, chiefly in Ontario, but employment generally was at a much higher level than on November 1, 1928. The forces of the 144 employers from whom information was received, declined by 356 persons to 13,472 at the beginning of November.

*Electric Current.*—Employment in the production of electric current showed a contraction, 795 workers being released from the forces of the 94 co-operating manufacturers, who employed 15,916 persons. Although only slight changes had been indicated in this industry on November 1 last year, the index then was several points lower.

*Electrical Appliances.*—Further additions to staffs were made in electrical apparatus works, 49 of which had 16,636 employees, or 610 more than in their last report. This advance was much more pronounced than that noted on the same date last year, when the index number was decidedly lower.

*Iron and Steel Products.*—The crude, rolled and forged, vehicle, agricultural implement, shipbuilding and some other divisions of the iron and steel group registered reduced employment, while there were large increases in the iron and steel fabrication group. Statements were received from 683 manufacturers whose payrolls aggregated 150,916 persons, as compared with 156,014 in the preceding month. Employment declined in all provinces except

British Columbia, the losses in Ontario being most noteworthy. Less extensive curtailment had been indicated at the beginning of November last year, but the situation then was not so favourable as on the date under review.

**Non-ferrous Metal Products.**—Data tabulated from 105 firms in the non-ferrous metal group showed that they employed 20,579 workers, or 416 more than on October 1. Smelters and refineries recorded most improvement, although all branches were busier. Employment was more active than on the same date of 1928, or of any other year of the record.

**Mineral Products.**—For the first time this year, there was a slight decline in employment in the 86 mineral product factories reporting, which released 73 persons, bringing their staffs to 14,407 at the beginning of November. Practically all the reduction occurred in Quebec. The index was considerably higher than on November 1, 1928, when a larger loss had been indicated.

### Logging

Statistics were tabulated from 226 firms employing 45,224 men, or 14,911 more than in the preceding month. This advance was the largest on record and brought employment to its highest level in the autumns since 1920. All provinces, except British Columbia, shared in the upward movement which, however, was most marked in Quebec and Ontario.

### Mining

Coal and metallic ore mining afforded considerably more employment, while quarries and other non-metallic mineral mines were seasonally slacker. Statements were compiled from 224 operators, with 56,893 employees, or 674 more than in their last report. Of the total employees recorded on the date under review, 29,619 belonged in the coal mining, 17,620 in the metallic ore and 9,654 in the non-metallic mineral group. Additions to staffs had also been indicated on November 1, 1928, but the index then was lower.

### Communications

Telephones and telegraphs showed the reductions in personnel usual at the time of the year, according to 170 companies and branches with 30,109 workers in their employ, a loss of 587 since October 1. Conditions continued better than on November 1 of other years of the record.

### Transportation

**Street Railways and Cartage.**—There was a decrease in employment in local transportation, according to 140 firms whose staffs declined from 27,226 employees on October 1 to 27,022 at the beginning of November. Improvement was reported in Quebec, but there were losses in Ontario and the Prairie Provinces. Activity was greater than on the corresponding date in 1928, although the movement then was favourable.

**Steam Railways.**—Statistics were tabulated from 104 employers in the railway operation group, in which their payrolls decreased by 1,003 persons to 85,427 on November 1. This decline, which was largely a result of the delay in the movement of grain, was shared in by all provinces except Quebec. Employment was not so active as in the autumn of 1928, although it was brisker than in other years of the record.

**Shipping and Stevedoring.**—Additions to staffs were noted in water transportation, 75 companies employing 18,897 workers, as compared with 18,289 in the preceding month. The Maritime Provinces and Quebec reported increased activity. Smaller gains were recorded on November 1 last year, and employment then was at a lower level.

### Construction and Maintenance

**Building.**—There was a considerable increase in building, 1,268 persons being added to the forces of the 683 co-operating contractors, who had 67,324 employees, a number considerably greater than that reported at the beginning of any other November in the last nine years. The largest advances took place in Quebec, while the trend was unfavourable in Ontario and the Prairie Provinces.

**Highways.**—Work on highways and streets again declined seasonally, but the reduction involved a smaller number of workers than in the autumn of 1928, when employment was in less volume. Statements were tabulated from 250 employers, whose staffs, standing at 38,362, were smaller by 4,499 persons than on October 1. All provinces shared in the downward movement, which was most pronounced in Quebec.

**Railways.**—Further curtailment of railway construction work was reported, especially in Ontario and the Prairie Provinces. The forces of the 43 companies and divisional superintendents furnishing returns declined from 47,104 persons on October 1, to 41,797 at the

beginning of November. This shrinkage was decidedly greater than that registered on the corresponding date in 1928, when the level of employment was considerably higher.

### Services

There were continued decreases in the personnel of hotels and restaurants, as the tourist and vacation season closed; 219 firms in the service division employed 21,804 persons, against 23,365 at the beginning of October. The index was considerably higher than on November 1 in other years of the record.

### Trade

The trend of employment in trade continued upward, 1,822 workers being added to the forces of the 710 retail and wholesale

establishments furnishing returns, whose staffs aggregated 88,763. The advance took place in the former division. The number of persons reported was higher on November 1, 1929, than in any other month since this series was instituted in 1920, and further pronounced gains may be expected during the next few weeks, in preparation for the Christmas and holiday trade. The advances recorded on the corresponding date last year also gave employment to a large number of workers.

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of October, 1929

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed while unions which are involved in industrial disputes are excluded from our tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Industrial depression usually apparent with the approach of the winter season, was in evidence to a considerable extent among local trade unions during October, the percentage of unemployed members rising from 3.7 at the close of September to 6.0 per cent in October. The unemployment volume was also in advance of that recorded at the close of October last year when 3.1 per cent of the members were idle. Returns for October were furnished by 1,750 unions with an aggregate membership of 212,328 members, 12,716 of whom were without employment on the last day of the month. In the curtailment of activity reflected during October over the previous months all provinces shared in varying measures, though the unemployment area centered chiefly in the province of Quebec, where the manufacturing industries, particularly, showed an adverse situation. Steam railway operation in several provinces recorded declines of a noteworthy character and in the building trades employ-

ment eased off to some extent. When a comparison is made with the returns for October, 1928, Manitoba and Alberta unions reported the most pronounced employment recessions during the month under review, while reductions, on a somewhat smaller scale, were shown by Ontario, Quebec and Saskatchewan unions. From the remaining provinces the increases in idleness reported were slight.

Each month a separate tabulation is made of trade union unemployment in the largest city in each province with the exception of Prince Edward Island. Compared with the returns for September, Edmonton unions alone reflected a higher employment level during October, but the improvement recorded was nominal only, while of the remaining cities Regina, with an increase in idleness of about 5 per cent, reported the most important employment decline. Of the cities taken for comparison Montreal registered the largest unemployment percentage for the month under review, namely 9.5, which was, however, but 2.4 per cent in excess of that recorded in the same city for September. Edmonton, Montreal and Winnipeg unions showed a substantial drop in the volume of work afforded during October when compared with the same month a year ago and in Halifax, Toronto and Regina employment was also at a lower level. In Vancouver the same percentage of idleness was recorded in both months of the comparison. In Saint John, however, the employment tendency was upward, though the change recorded was quite slight.

The curve of unemployment as indicated in the accompanying chart showed a decided upward trend at the close of October from the previous month. The level attained by the curve at the end of October was also considerably higher than in the same month last year, showing that the situation for organized workers during October was less favourable than in the corresponding month a year ago.

A considerable slowing up of industrial activity was shown in the manufacturing industries during October due chiefly to seasonal influences. Reports were tabulated at the end of the month from a total of 489 unions covering 59,780 members and of these 4,691 or 7.8 per cent were without work compared with

workers. On the other hand, cigar makers reported adequate work for all their members contrasted with a large unemployment percentage in October a year ago and fair sized advances in employment were reflected by pulp and paper makers and wood workers during the month reviewed.

Little change in the employment situation as affecting coal miners was shown during October when compared with both the returns for the previous month and October last year, the 44 unions from which reports were tabulated with 18,221 members indicating 1.9 per cent of inactivity compared with 2.8 per cent in September and with .9 per cent in October, 1928. The improvement recorded

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

3.5 per cent in September. Unemployment for iron and steel workers, especially railway carmen and garment workers during October, accounted, to a large extent, for the unfavourable conditions reported in comparison with September. Further, though more moderate contractions in employment were registered by leather workers and general labourers, and declines of minor importance occurred among hat and cap workers, textile workers and metal polishers. On the other hand, conditions for paper makers, printing tradesmen and bakers were nominally improved. In comparison with the returns for October last year when 4.5 per cent of idleness was recorded in the manufacturing industries, the bulk of the increase in unemployment reported during the month under review was, as in the previous comparison, apparent among garment and iron and steel workers, with contributing declines, on a somewhat smaller scale, among leather

over September was entirely due to the greater activity prevailing among Alberta miners during October, while in Nova Scotia nominal declines in employment occurred. British Columbia miners reported no members idle in either month. The percentage of unemployment for Nova Scotia miners during October showed a slight gain over the same month of last year and in Alberta the situation was practically unchanged. In British Columbia coal miners were reported as fully engaged in October, compared with a fractional unemployment percentage in the same month of last year.

A moderate drop in the volume of work afforded was indicated by building tradesmen during October when compared with September, but conditions were much quieter than in October a year ago. Returns were furnished for October this year by an aggregate of 217 unions with 32,426 members and of

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

these 3,368 or a percentage of 10.4 were idle at the end of the month compared with 8.6 per cent in September and with 5.1 per cent in October, 1928. Bricklayers, masons and plasterers, painters, decorators and paper-hangers and hod carriers and building labourers recorded increases in unemployment involving the greatest number of workers when compared with September. Among bridge and structural iron workers the largest percentage contraction in employment was registered, but these tradesmen form but a small share of the total membership in the building trades and hence do not materially affect the situation for the group as a whole. Among plumbers and steamfitters, granite and stone cutters, and electrical workers also, employment subsided slightly. On the other hand, carpenters and joiners showed slight improvement in conditions and among tile layers, lathers and roofers also, some expansion was noted. Employment for all tradesmen, with the exception of tile layers, lathers and roofers was on a lower level during October than in the same month of last year, bricklayers, masons and plasterers, carpenters and joiners and painters, decorators and paperhangers recording extensive losses and the remaining tradesmen contractions on a smaller scale.

From unions of transportation workers 752 reports were tabulated during October, showing a membership of 73,074 persons and of these 5.1 per cent were unemployed at the close of the month contrasted with 2.8 per cent in September and 2.3 per cent in October last year. The unfavourable situation indicated during October both over the previous month and October last year was almost entirely attributable to slacker conditions among steam railway employees, whose membership forms over 81 per cent of the total group membership reported. All groups in the steam railway division contributed a share to the total increase in idleness reported in both comparisons, though unemployment in the maintenance of way and general railway employees' groups predominated. Navigation workers were slightly less active than in September, though the level of employment was considerably in advance of that indicated during October a year ago. Among street and electric railway employees and teamsters and chauffeurs nominal contractions in employment only were shown in both comparisons.

Reports from longshore workers, which are tabulated separately each month, indicated at the close of October 15.2 per cent of unemployed members as compared with 12.4 per cent in September and 16.2 per cent in Octo-

ber, 1928. The percentage for October was based on the returns received from 11 organizations with a total of 7,073 members.

Retail clerks reported a very good situation in October, the 8 unions from which reports were received with 1,453 members showing .1 per cent of idleness compared with 2.5 per cent in September and .7 per cent in October last year.

Among civic employees little change was shown from September conditions, the 65 unions from which reports were tabulated at the end of October with 7,141 members indicating 1.1 per cent of inactivity compared with .9 per cent in September. Unemploy-

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

ment showed a moderate increase over October last year when the percentage of idleness stood at .2.

From unions in the miscellaneous group of trades 121 returns were tabulated at the end of October covering a membership of 5,871 persons, 262 of whom, or a percentage of 4.5 were idle on the last day of the month contrasted with 4.3 per cent in September. Hotel and restaurant and theatre and stage employees reported a somewhat higher level of employment than in September, but the reductions in activity shown among stationary engineers and firemen were sufficient to sway the percentage for the group as a whole in an unfavourable direction. Among barbers the same situation prevailed in both months. In making a comparison with the returns for October last year when 5.1 per cent of idleness was recorded hotel and restaurant employees were much busier during the month under review. Conditions for barbers showed slight improvement, while theatre and stage employees and stationary engineers and firemen reported curtailment of operations.

### (3) Employment Office Reports for October, 1929

The volume of business transacted by the offices of the Employment Service of Canada during the month of October, 1929, showed decreases in the average daily placements of 26 per cent and 38 per cent, respectively, when a comparison was made with the records of September, 1929, and with those of October, 1928. This large reduction, in each instance, was due to decreased farm placements. In the former comparison, logging showed a noticeable gain, followed by minor increases in transportation and services, all other groups recording decreased placements. Logging and services were the only industrial divisions in which gains were shown over October, 1928, the largest decline in the remaining groups, outside of farming, being shown in construction and maintenance.

The accompanying chart shows the trend of employment since January, 1927, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and of placements in relation to applications showed a marked decline throughout the month, and at the close of the period the levels attained were over 6 points below those recorded at the close of the corresponding month last year.

Slightly less activity was indicated by fishermen during October than in the previous month, though the employment level was somewhat above that shown in October of last year. Returns for October were received from 3 unions of these workers with 763 members, 2.9 per cent of whom were idle on the last day of the month contrasted with 1.2 per cent in September and 4.0 per cent in October last year.

From lumber workers and loggers 4 reports were tabulated at the end of October combining a membership of 1,189 persons and of these 22, or 1.9 per cent were unemployed compared with 4.7 per cent in September and 12.6 per cent in October a year ago.

Table II shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1928 inclusive and also the percentage of unemployment by provinces for October of each year from 1919 to 1926 inclusive and for each month from 1927 to date. Table I summarizes the returns in the various groups of industries for the same months as in table II.

The ratio of vacancies to each 100 applications was 76.5 during the first half and 72.5 during the second half of October, 1929, in contrast with the ratios of 92.6 and 79.3 during the corresponding periods of 1928. The ratios of placements to each 100 applications during the periods under review were 71.0 and 68.6 as compared with 85.6 and 75.1 during the corresponding month of 1928.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during October, 1929, was 1,427 as compared with 1,921 during the preceding month and with 2,294 in October a year ago.

The average number of applications for employment received daily by the offices during the month under review was 1,914 in comparison with 2,314 in September, 1929, and with 2,623 during October last year.

The average number of placements made daily by the offices of the Service during October, 1929, was 1,336, of which 859 were in regular employment and 477 in work of one week's duration or less, as compared with the total daily average of 1,794 during the preceding month. Placements in October a year ago averaged 2,139 daily, consisting of 1,604 placements in regular and 535 in casual employment.

During the month of October, 1929, the offices of the Service referred 37,652 persons to employment and effected a total of 36,066 placements. Of these, the placements in regular employment were 23,199 of which 18,539 were of men and 4,660 of women, while placements in casual work totalled 12,867. The number of vacancies reported by employers was 27,027 for men and 11,496 for women, a total of 38,523, while applications for work numbered 51,678, of which 36,442 were from men and 15,236 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Nova Scotia were ten per cent higher than in the preceding month and 23 per cent above the corresponding month last year. Placements also showed a gain of nearly 25 per cent over September and of nearly 35 per cent when compared with October, 1928. Increased placements under construction and maintenance were mainly responsible for the gain over October last year, although more placements were also made in services and farming. There were small reductions in placements under trade, manufacturing, logging and transportation. The changes in other groups were nominal only. Industrial divisions in which most of the placements were effected during

NOVA SCOTIA

During the month of October, 1929, positions offered through employment offices in

the month were: manufacturing, 44; farming, 51; construction and maintenance, 292; trade, 51, and services, 429, of which 328 were of household workers. During the month 320 men and 74 women were placed in regular employment.

NEW BRUNSWICK

There was a decline of nearly 26 per cent in the number of positions offered through employment offices in New Brunswick during October when compared with the preceding month, and of nearly 16 per cent in comparison with the corresponding month last year. Placements were over four per cent less than in September and nearly 8 per cent below October, 1928. Logging was the only group to

show any gain of importance in placements over October last year, although there was an increase also under transportation. Construction and maintenance and services were the only groups to show any decrease of importance. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 34; logging, 105; construction and maintenance, 51, and service, 531, of which 386 were of household workers. Placements in regular employment numbered 184 of men and 61 of women.

#### QUEBEC

Orders listed at employment offices in the province of Quebec during October called for over 2 per cent less workers than in the preceding month and 25 per cent less than during the corresponding month last year. There was a gain, however, in placements over September of nearly 6 per cent, but a decline of over 18 per cent in comparison with October, 1928. Logging was the only group to show any gain of importance in placements over October last year, although mining showed a small increase. The most noteworthy decline in placements occurred in the construction and maintenance group, and was responsible for the reduction for the province as a whole. There were fewer placements also under manufacturing, transportation, services and trade. Placements by industrial divisions included: manufacturing, 132; logging, 1,553; farming, 42; transportation, 42; construction and maintenance, 643; trade, 41; and services, 697, of which 465 were of household workers. During the month 2,548 men and 565 women were placed in regular employment.

#### ONTARIO

Opportunities for employment as indicated by orders received at employment offices in Ontario during October were over 12 per cent better than in the preceding month, and nearly 4 per cent in excess of the corresponding month last year. Placements also were nearly 11 per cent higher than in September, but declined nearly 3 per cent when compared with October, 1928. There were substantial gains in bush placements when compared with October last year, and services and trade also showed improvement. These gains, however, were more than offset by declines under manufacturing, farming, communication, transportation and construction and maintenance. The decrease under construction and maintenance was the most noteworthy. Industrial groups in which most of the placements were effected during the month were: manufactur-

ing, 2,145; logging, 3,628; farming, 943; mining, 65; transportation, 550; construction and maintenance, 2,670; trade, 766; and services, 5,240, of which 3,140 were of household workers. Placements in regular employment numbered 8,633 of men, and 1,996 of women.

#### MANITOBA

The number of positions offered through employment offices in Manitoba during October was nearly 14 per cent less than in the preceding month and nearly 30 per cent below the corresponding month last year. Placements, however, were over 13 per cent higher than in September and over 5 per cent above October, 1928. The demand in placements over October of last year was entirely attributable to increased placements of bush workers, as all other groups, except fishing, showed declines. Of these declines, farming and services were the most noteworthy. Placements by industrial divisions included: manufacturing, 108; logging, 2,223; farming, 416; construction and maintenance, 268; trade, 171; and services, 2,518, of which 2,021 were of household workers. There were 2,847 men and 697 women placed in regular employment during the month.

#### SASKATCHEWAN

Employment opportunities as indicated by orders received at employment offices in Saskatchewan during October were 50 per cent less favourable than in the preceding month and 82 per cent below the corresponding month last year. Placements also were 55 per cent less than in September and 86 per cent lower than in October, 1928. The large decline in placements in comparison with October last year was entirely due to reductions in farm placements, where over 15,000 less placements were made during the month under review than during the corresponding month a year ago. There were declines in placements also under construction and maintenance, services, logging and trade. Transportation was the only group to show any gain. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 140; logging, 100; farming, 510; transportation, 222; construction and maintenance, 329; trade, 167; and services, 1,277, of which 727 were of household workers. Regular employment was procured for 883 men and 464 women during the month.

#### ALBERTA

Alberta orders during October called for 53 per cent less workers than in the preceding

month and 57 per cent less than during the corresponding month last year. Placements also were 49 per cent lower than in September and 46 per cent below October, 1928. Logging, farming and construction and maintenance showed the largest declines in placements, when compared with October last year, although there were reductions also under manufacturing, trade, and mining. Services showed the only gain of importance, the changes in other divisions being small. Placements by industrial divisions included: manufacturing, 155; logging, 66; farming, 1,230; mining, 164; transportation, 118; construction and maintenance, 453; trade, 202; and services, 1,097, of which 748 were of household workers. There were 1,993 men and 418 women placed in regular employment during the month.

#### BRITISH COLUMBIA

There was a decline of over 29 per cent in the number of positions offered through employment offices in British Columbia during October when compared with the preceding month, and of over 21 per cent in comparison with the corresponding month of last year. Placements were 48 per cent less than in September, and nearly 23 per cent fewer than in October, 1928. The only group to show increased placements over October last year was services and this gain was more than offset by the declines in other divisions, of which logging was the most substantial. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 470; logging, 365; farming, 230; mining, 60; transportation, 229; construction and maintenance, 449; trade, 168; and services, 1,122, of which 615 were of household workers. Regular employment was found for 1,131 men and 385 women during the month.

#### Movement of Labour

During the month of October, 1929, the offices of the Employment Service of Canada made 23,199 placements in regular employment, 13,844 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 4,318 were granted the Employment Service reduced transportation rate, 1,968 going to points within the same province as the despatching office, and 2,350 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire

to travel to distant employment for which no workers are available locally.

Transfers at the special rate effected by Quebec offices during October numbered 430, of which 48 were provincial and 382 interprovincial. Provincially the Quebec office granted certificates to 5 bushmen and 1 cook travelling to Amos and to 4 bushmen and 1 cook going to employment within the Quebec zone. In addition, Montreal despatched 37 bushmen to centres within the same zone. For points outside the province Hull transferred 163 bushmen to Pembroke and vicinity, 91 bushmen and 1 waitress to Sudbury, and 75 bushmen to Cobalt. The balance of the interprovincial movement was to the Sault Ste. Marie zone, which received 52 bushmen from Montreal.

Offices in Ontario transferred 1,538 workers at the special reduced rate during October, 1,509 to centres within the province and 29 to outside points. The bulk of the provincial movement was of bush workers for logging sections within the province, particularly around Timmins, which region was the destination of about 800 of these workers. The Port Arthur and Sudbury zones received around 300 and 200 bush workers respectively, and several other zones bushmen in lesser numbers. In all, 1,424 bush workers travelled at the reduced rate, a number of offices combining to effect these transfers. In addition, the Ottawa office transferred 2 blacksmiths and 3 sawmill workers to Pembroke, 1 cookee to Sudbury, 4 carpenters to Timmins, and 1 lineman to Toronto; Pembroke 2 plasterers and 1 labourer to Timmins, and 2 sawmill workers and 1 labourer to Sudbury; North Bay 1 farm hand to Cobalt and 1 handyman to Sudbury; Toronto 8 power construction workers and 1 electric welder to Port Arthur; Windsor 2 granite finishers to Guelph and 20 bricklayers to Sudbury; and Fort William 2 machinists to Hamilton and 1 cook within its own zone. To points within their respective zones Port Arthur sent 6 construction labourers, 3 carpenters, 2 muckers and 1 cook; Sudbury 11 rock men, 2 miners and 1 cook; and Timmins 2 miners and 1 hoist man. The Timmins zone was also the destination of 1 blacksmith travelling from Cobalt, and Sudbury of 2 bricklayers despatched from Hamilton. Of the persons travelling outside the province, 23 were bushmen for the Hull zone who received their certificates for reduced transportation at Pembroke. The Cobalt office was instrumental in the transfer of 2 machine helpers to Amos, and of 1 bookkeeper to Winnipeg, to which zone also 1 miner was transferred from Sudbury. The remaining 2 interprovincial certificates were

issued at North Bay to carpenters conveyed at the special rate to Rouyn.

Certificates for reduced transportation granted by Manitoba offices during October totalled 1,994, and of these 118 were issued to provincial points, and 1,876 to centres in other provinces. Workers travelling on provincial certificates from Winnipeg included 3 farm domestics and 1 hotel employee going to Brandon, 7 hotel employees to Dauphin, and 50 farm hands, 25 carpenters, 5 railroad construction workers, 3 bushmen, 3 fishermen, 2 miners, 2 teamsters, 1 cook, 1 rock man, and 1 cookee within the Winnipeg zone. From Dauphin 9 bushmen were transferred to Winnipeg, and 2 bushmen and 2 cooks within its own zone. The Dauphin zone also received 1 farm hand from Brandon. A large share of the inter-provincial movement originated in Winnipeg and was to Ontario points, Port Arthur and vicinity being the destination of 1,453 bush workers, 3 farm hands, 3 handymen, 2 hotel employees, 1 saw filer and 1 blacksmith; Timmins of 300 bushmen, 10 farm hands and 1 town general; Sault Ste. Marie of 23 bushmen; and Sudbury of 5 station men and 1 construction foreman. From Winnipeg also Nelson received 39 station men and 1 cook; Regina 10 farm hands, 1 farm housekeeper, and 1 hotel employee; Estevan 6 building construction labourers and 2 farm hands; Saskatoon 3 farm hands; Swift Current 2 farm hands; Prince Albert 1 first aid man; Moose Jaw 1 cook; and Weyburn and Yorkton each 1 farm hand. The remaining 4 transfers outside the province were of bushmen for the Port Arthur zone, all of whom travelled from Dauphin.

Workers who took advantage of the Employment Service reduced transportation rate in Saskatchewan during October were 124 in number, 75 of whom went to provincial employment and 49 to other provinces. Within the province, the Saskatoon office granted certificates to 29 bushmen, 1 cook, 1 farm hand, 1 fisherman and 1 dishwasher going to Prince Albert, 2 farm hands each to the Yorkton and Weyburn zones, and to 4 farm hands and 2 housekeepers travelling within the Saskatoon zone. From Moose Jaw 1 teamster was carried at the special rate to North Battleford, 1 farm hand to Saskatoon, and 2 carpenters, 3 farm hands and 2 farm housekeepers within the Moose Jaw zone, while from Regina 4 bushmen went to Prince Albert, 1 lineman to Swift Current, 1 farm hand to Saskatoon, 1 hotel employee and 1 lineman to Moose Jaw, and 1 farm hand, 1 farm housekeeper and 1 blacksmith to employment in the Regina zone. The balance of the provincial movement was from Prince

Albert, which office despatched 11 bushmen and 1 cook within its own zone. Of the transfers outside the province 45 were of bushmen for the Port Arthur zone, 25 of whom secured their certificates for transportation at Regina, and 20 at Moose Jaw. In addition, the Moose Jaw office was responsible for the transfer of 2 bushmen to Winnipeg, and Regina of 1 bushman to Dauphin and 1 labourer to Three Rivers.

From the offices in Alberta 119 persons secured certificates for reduced transportation during October, 109 of whom went to centres within the province and 10 to other provinces. A large part of the provincial movement was from Edmonton, which office effected transfers of 1 carpenter and 1 machinist to Calgary, 1 cook to Lethbridge, and 46 bush workers, 20 mine workers, 14 farm hands, 1 farm housekeeper, 5 sawmill workers, 3 labourers, 2 teamsters, 2 lathers, 1 carpenter, 1 engineer, 1 blacksmith and 1 hotel worker to employment at various points within the Edmonton zone. In addition, Calgary despatched 3 farm hands to Lethbridge, 1 farm hand each to the Drumheller and Edmonton zones, 1 farm housekeeper to Medicine Hat, and 3 farm hands within the Calgary zone. All the workers going outside the province travelled on certificates issued at Edmonton, and included 4 farm hands and 2 bricklayers proceeding to employment in the Saskatoon zone, 2 railroad construction labourers to North Battleford, and 1 farm hand each to the Swift Current and Regina zones.

In British Columbia during October 113 certificates for reduced transportation were granted, 109 of which were provincial and the balance interprovincial. Of the former 98 were issued at Vancouver, to 34 station men, 1 carpenter, 1 engineer, 1 cyanide worker, and 1 form setter travelling to Nelson, 8 mine workers, 3 carpenters, 2 edgermen, 1 painter, 1 waitress and 1 farm hand to Penticton, 7 mine workers and 1 engineer to Revelstoke, 3 farm hands, 2 sawmill workers and 2 cooks to Kamloops, 1 farm hand to Prince George, and to 18 bush workers, 8 tunnel construction workers, 1 miner and 1 powderman going to employment within the Vancouver zone. The Prince Rupert office transferred 1 tie maker to Prince George, and 2 bush workers and 1 mine worker within its own zone, while from Nelson 2 miners and 1 blacksmith were conveyed to Cranbrook, and 2 cooks to employment in the Nelson zone. The remaining provincial transfers were of 2 tie makers who proceeded from Prince George to situations in the same zone. The movement outside the province included from Vancouver 1 tile setter going to Regina, and 1 miner to Ed-

monton, and from New Westminster 1 farm hand each to the Lethbridge and Medicine Hat zones.

Of the 4,318 persons who profited by the Employment Service reduced transportation

rate during October 3,014 were carried by the Canadian National Railways, 1,175 by the Canadian Pacific Railway, 117 by the Temiskaming and Northern Ontario Railway, and 12 by the Pacific Great Eastern Railway.

#### (4) Building Permits Issued in Canada during October, 1929

The estimated value of the building authorized by 61 cities during October was \$18,063,577; this was an increase of \$948,614, or nearly 5.5 per cent, as compared with the September total of \$17,114,963, but a decrease of \$3,494,508, or 16.2 per cent, as compared with the aggregate of \$21,558,083 for October, 1928. The value in the month under review was greater than in October of most years for which statistics of these centres are available, while the cumulative total for the elapsed 10 months of 1929 exceeds by nearly 9 per cent that for the same months in 1928, the previous high level of this record, which was commenced in 1920.

Some 50 cities furnished detailed statistics, showing that they had issued over 1,200 permits for dwellings estimated to cost approximately \$6,000,000, and about 3,300 permits for other buildings valued at over \$16,000,000. During September, authority was granted for the erection of about 1,200 dwellings and 3,000 other buildings estimated to cost approximately \$5,200,000 and \$11,400,000, respectively.

New Brunswick, Quebec, Ontario, Saskatchewan and Alberta registered increases in the value of authorized building as compared with September, 1929, that of \$953,381, or 21.0 per cent, in Quebec being most noteworthy. The greatest decrease in this comparison was that of \$683,875, or 85.4 per cent in Nova Scotia.

In the comparison with October, 1928, there were gains in New Brunswick, Alberta and British Columbia; Alberta showed the largest increase, of \$639,301, or 108.5 per cent. The other provinces recorded declines, that of \$3,012,171, or 28.1 per cent in Ontario being most pronounced.

Montreal showed improvement over both September, 1929, and October, 1928; in Winnipeg there was an increase over the preceding month, but a reduction as compared with the same month in 1928, while in Toronto and Vancouver the total was lower than in either comparison. Of the other centres, Moncton, Saint John, Shawinigan Falls, Three Rivers,

Belleville, Galt, Guelph, Kingston, Kitchener, Oshawa, Ottawa, Sault Ste. Marie, York Townships, Sandwich, Walkerville, Edmonton, Lethbridge, Medicine Hat and Victoria registered increases as compared with September, 1929, and October, 1928.

*Cumulative Record for First Ten Months of 1929.*—The following table gives the value of the building authorized by 61 cities during October and in the first ten months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first ten months of the years since 1920 are also given (average 1926=100).

Year	Value of permits issued in October	Value of permits issued in first ten months	Indexes of Value of permits issued, first ten months (1920=100)	Average indexes of wholesale prices of building materials in first ten months (average 1926=100)
1929.....	\$ 18,063,577	\$ 203,784,599	191.3	99.6
1928.....	21,558,085	187,179,719	175.7	97.9
1927.....	18,848,019	160,000,554	150.2	96.8
1926.....	14,738,402	134,902,338	126.6	100.4
1925.....	11,312,644	109,676,825	102.9	104.0
1924.....	13,089,588	109,906,921	103.2	107.7
1923.....	9,999,187	118,319,159	111.0	111.7
1922.....	10,737,525	127,515,975	119.7	108.6
1921.....	10,491,228	99,064,670	93.7	125.2
1920.....	10,401,041	106,547,319	100.0	154.4

The aggregate for the first ten months of this year was 8.9 per cent greater than in 1928, the previous high level of the record, while the average index number of wholesale prices of building materials continued lower than in most years since 1920.

The accompanying table gives the value of the building permits issued by 61 cities during September and October, 1929, and October, 1928. The 35 cities for which records are available since 1910 are marked with asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS  
ISSUED BY 61 CITIES

<sup>1</sup> Report not received. <sup>2</sup> Includes Prince Rupert not shown in September report. <sup>3</sup> Includes Point Grey and South Vancouver, formerly given separately; from January, 1929, when the amalgamation of these cities was effected, the total for the 35 cities includes the "Greater Vancouver" aggregate, instead of that for the area formerly known as Vancouver.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during October is reproduced below. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review*, published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the November issue relates to the situation existing in September, 1929. The employment situation in the United States is further

indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for September and previous months taken from the November, 1929, issue of the *American Federationist*, the official publication of the organization, are reproduced below.

Great Britain

There was a decline in employment during October, the industries chiefly concerned being those which are most subject to seasonal variations. These included building, public works contracting, brick, pipe and tile making, artificial stone and cement, hat and cap manufacture, road transport, shipping service, en-

entertainments and sports, and hotel and boarding-house service. There was also some increase in unemployment in the rubber industry, in iron and steel manufacture, and in the wool textile and jute industries. In coal-mining, there was a decrease in the numbers wholly unemployed, but this was more than counterbalanced by an increase in the numbers temporarily stopped.

There was, however, an improvement in the pottery, glass, tinplate, motor vehicle, and tailoring industries, in textile, bleaching, dyeing and finishing, and in dock, harbour, and river service.

Among workpeople, numbering approximately 12,100,000 insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at October 21, 1929 (including those temporarily stopped as well as those wholly unemployed) was 10·4, as compared with 10·0 at September 23, 1929, and with 11·7 at October 22, 1928. For males alone the percentage at October 21, 1929, was 11·5, and for female, 7·5; at September 23, 1929, the percentages were 11·0 and 7·3. The percentage wholly unemployed at October 21, 1929, was 8·2, as compared with 7·8 at September 23. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at October 23, 1929, was approximately 1,270,000, of whom 978,000 were men and 225,000 were women, the remainder being boys and girls; at September 30, 1929, it was 1,217,000, of whom 929,000 were men and 219,000 were women; and at October 29, 1928, it was 1,421,000, of whom 1,118,000 were men and 227,000 were women.

### United States

Employment in the United States increased 0·8 per cent in September, 1929, as compared with August, and pay-roll totals increased 1·2 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of July and August, 1929, and therefore cannot be included in the general statement for the month of September. The

number of employees in Class I railroads as at August 15 totalled 1,742,584, representing an increase of 0·9 per cent since July 15. The amount of pay-roll in the entire month of August was \$251,946,549, representing an increase over the previous month of 2·0 per cent.

Employment in manufacturing industries increased 0·7 per cent in September as compared with August, while pay-roll totals increased 0·5 per cent. Manufacturing employment in September stood at the highest level yet reached in any month of 1929, or in any month since March, 1927. The natural increase in September pay-roll totals in manufacturing industries was, as usual, somewhat lessened by Labour Day closing, which affected all reports covering the first half of the month.

The Bureau of Labour Statistics' weighted index of employment in manufacturing industries for September, 1929, is 99·3, as compared with 98·6 for August, 1929, and 95·0 for September, 1928; the weighted index of pay-roll totals for September, 1929, is 102·6, as compared with 102·1 in August, 1929, and 95·4 in September, 1928. The monthly average, 1926, equals 100.

The food group of industries as a whole showed substantial increase in September, with the confectionery industry outstanding; the textile group showed a highly satisfactory increase, with cotton goods, knit goods, and women's clothing especially marked; the iron and steel group showed a small increase, every separate industry showing an increase except the iron and steel industry itself, which fell off 1·3 per cent in employment; every separate industry in the leather, paper, chemical, and tobacco groups reported increased employment. The lumber, stone-clay-glass, metal, other than iron and steel, vehicle, and miscellaneous groups, each, as a whole, registered slightly decreased employment.

The automobile industry reported 7,000 fewer employees, a decrease of 1·6 per cent, with a decrease of 6·1 per cent in employees' earnings, and the automobile-tire and the agricultural-implement industries also reported marked decreases in both items.

Employment in rayon plants fell off slightly, while radio plants reported a curtailment of 4·2 per cent.

This report represents 12,603 establishments (exclusive of rayon and radio establishments; see note 3, p. 124) in 54 of the chief manufacturing industries of the United States. These establishments had in September 3,546,658 employees whose earnings in one week were \$97,535,056.

*Unemployment percentage.*—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist*, the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per

cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current

rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed thereby by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military or naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades

and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams).

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

#### Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

DEPARTMENT OF MARINE AND FISHERIES  
*Contracts in Group "A" (Construction, etc.)*

Construction of a combined lighthouse and dwelling at Carter Island, Lockeport Harbour,

Shelburne Co., N.S. Name of contractor, Stewart C. MacMillan, Contractor & Builder, Isaac's Harbour, N.S. Date of contract, November 7, 1929. Amount of contract, \$5,540. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours	
		Per day	Day Week
Concrete foreman.....	\$ 5 00	9	54
Concrete workers.....	0 30	9	54
Carpenters.....	0 50	9	54
Blacksmiths.....	0 60	9	54
Painters and glaziers.....	0 50	9	54
Labourers.....	0 30	9	54
Plumbers and tinsmiths.....	0 70	9	54
Structural iron workers.....	0 65	9	54
Bricklayers and masons.....	1 00	8	44

Construction of a pile and concrete wharf at Sorel, P.Q. Name of contractors, Messrs. Cummins & Robinson, 70 Lombard St., Toronto, Ont. Date of contract, October 17, 1929. Amount of contract, \$119,910. The General Fair Wages Clause was inserted in the contract.

Dredging the area in front of the Marine Depot at Dartmouth, N.S. Name of contractors, The Halifax Dredging Co., Ltd., Halifax, N.S. Date of contract, November 18, 1929. Amount of contract, approximately \$1,600. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF NATIONAL DEFENCE

*Contracts in Group "A" (Construction, etc.)*

Construction of a rifle range at Valcartier Camp, Quebec, P.Q. Name of contractor, Mr. Horace Dussault, Montreal, P.Q. Date of contract, November 15, 1929. Amount of contract, \$9,500. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours	
		Per hour	Per day
Labourers.....	\$ 0 35		9-10
Concrete mixers and workers.....	0 40		9
Carpenters.....	0 55		9

Repairs to the fortification walls, Sections A & B, Quebec, P.Q. Name of contractor, Mr. Oscar Dumaine, Quebec, P.Q. Date of contract, November 15, 1929. Amount of con-

tract, \$3,114. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Per hour	Hours
			per day
Masons.....	\$ 1 00		9
Labourers.....	0 35		9-10
Carpenters.....	0 55		9

Repairs to the fortification walls, Sections C & D, Quebec, P.Q. Name of contractor, Mr. Emile Cote, Quebec, P.Q. Date of contract, November 15. Amount of contract, \$9,730. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Per hour	Hours
			per day
Masons.....	\$ 1 00		9
Labourers.....	0 35		9-10
Carpenters.....	0 35		9

DEPARTMENT OF PUBLIC WORKS

*Contracts in Group "A" (Construction, etc.)*

Construction of the superstructure of the Prescott Terminals, Prescott, Ont. Name of contractors, The Atlas Construction Co., Ltd., Montreal, P.Q. Date of contract, November 6, 1929. Amount of contract, approximately \$3,093,000. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours	
		Per hour	Per day week
Electricians.....	\$ 0 80		8 44
Millwrights.....	0 85		8 44
Carpenters.....	0 85		8 44
Plumbers.....	0 90		8 44
Steamfitters.....	0 90		8 44
Bricklayers.....	1 10		8 44
Structural steel workers.....	1 00		8 44
Sheet Metal workers.....	0 90		8 44
Operating engineers.....	0 75		8 44
Concrete finishers.....	0 75		8 44
Painters and glaziers.....	0 70		8 44
Plasterers.....	1 10		8 44
Labourers.....	0 40		9-10

Construction of an extension to the breakwater at Brooklyn, Queens Co., N.S. Name of contractors, Stephen Bros., Ltd., Halifax, N.S. Date of contract, Nov. 6, 1929. Amount of contract, approximately, \$100,000. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than		Hours	
	Per hour	Per day	Per week	Per day
Foreman timberman.....	\$0 65	9	54	
Timberman.....				
Carpenters.....	0 60	9	54	
Concrete foreman.....	0 65	9	54	
Blacksmiths.....	0 60	9	54	
Labourers.....	0 30	9	54	
Teamsters, team and wagon.....	7 00	9	54	
Carters, horse and cart.....	5 00	9	54	
Piledriver foreman.....	0 55	9	54	
Piledriver crew.....	0 35	9	54	
Timbermen, skilled.....	0 45	9	54	
Timbermen, ordinary.....	0 40	9	54	

Any unavoidable overtime work in connection with the above to be paid for in conformity with the custom of the locality.

Construction of repairs to wharf at Comox, B.C. Name of contractor, Wm. Greenlees, Vancouver, B.C. Date of contract, October 28, 1929. Amount of contract, approximately \$5,758.68. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than		Hours	
	Per day	Per day	Per day	Per day
Piledriver foreman.....	\$10 00	8		
Piledriver engineer.....	9 00	8		
Piledriver man.....	8 00	8		
Piledriver boomman.....	8 00	8		
Bridgeman.....	8 00	8		
Derrickman.....	8 00	8		
Fireman.....	5 50	8		
Carpenters.....	7 00	8		
Labourers.....	4 00	8		

Construction of repairs to wharf at Royston, Comox-Alberni District, B.C. Name of contractor, Mr. Wm. Greenlees, Vancouver, B.C. Date of contract, October 28, 1929. Amount of contract, approximately, \$4,868.19. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than		Hours per day	
	Per day	Per day	Per day	Per day
Piledriver foreman.....	\$10 00	8		
Piledriver engineer.....	9 00	8		
Piledriver man.....	8 00	8		
Piledriver boomman.....	8 00	8		
Bridgeman.....	8 00	8		
Derrickman.....	8 00	8		
Fireman.....	5 50	8		
Carpenters.....	7 00	8		
Labourers.....	4 00	8		

Construction of repairs to wharf at Union Bay, Comox-Alberni District, B.C. Name of contractors, James McDonald Construction Co., Ltd., Victoria, B.C. Date of contract, November 9, 1929. Amount of contract, ap-

proximately \$4,343.37. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than		Hours per day	
	Per day	Per day	Per day	Per day
Piledriver foreman.....	\$10 00	8		
Piledriver engineer.....	9 00	8		
Piledriver man.....	8 00	8		
Piledriver boomman.....	8 00	8		
Bridgeman.....	8 00	8		
Derrickman.....	8 00	8		
Fireman.....	5 50	8		
Carpenters.....	7 00	8		
Labourers.....	4 00	8		

Repairs to wharf at William Head Quarantine Station, B.C. Name of contractors, James McDonald Construction Co., Ltd., Victoria, B.C. Date of contract, November 9, 1929. Amount of contract, approximately \$5,590. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than		Hours per day	
	Per day	Per day	Per day	Per day
Piledriver foreman.....	\$10 00	8		
Piledriver engineers.....	9 00	8		
Piledriver boommen.....	8 00	8		
Derrickmen.....	8 00	8		
Bridgemen.....	8 00	8		
Carpenters.....	8 00	8		
Fireman.....	5 50	8		
Labourers.....	3 60	8		

Alterations and addition to the Armoury at Haileybury, Ont. Name of contractors, Hill, Clark, Francis, Ltd., New Liskeard, Ont. Date of contract, October 3, 1929. Amount of contract, approximately, \$37,250. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than		Hours per day	
	Per hour	Per hour	Per day	Per day
Labourers, common.....	\$0 40	9		
Labourers, building.....	0 50	9		
Concrete layers, mixers and finishers.....	0 50	9		
Bricklayers.....	1 25	9		
Structural steel workers.....	0 75	9		
Foreman roofer (felt and gravel)...	0 75	9		
Sheet metal workers.....	0 75	9		
Carpenters and joiners.....	0 75	9		
Lathers—metal.....	0 75	9		
Stonemasons.....	1 25	9		
Plasterers.....	1 25	9		
Painters and glaziers.....	0 75	9		
Plumbers and steamfitters.....	0 75	9		
Electricians.....	0 75	9		
Driver, team and wagon.....	8 00	9		
Driver, horse and cart.....	5 50	9		

Wharf repairs at Les Eboulements, Charlevoix Co., Que. Names of contractors, Alfred Cauchon, Albert Charest, George Lajoie and Edouard Rochette, all of La Malbaie, P.Q. Date of contract, October 14, 1929. Amount of contract, approximately \$12,486.87. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours per day
	Per hour	
Foreman.....	\$0 50	10
Carpenters.....	0 40	10
Blacksmiths.....	0 40	10
Blacksmiths' helpers.....	0 30	10
Labourers.....	0 30	10
Carters (1 horse and cart).....	0 40	10
Teamsters (2 horses and wagon)...	0 50	10

Construction of new Federal building at Vegreville, Alta. Name of contractor, Charles Gordon, Vegreville, Alta. Date of contract, November 19, 1929. Amount of contract, \$28,570 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours per day
	Per hour	
Bricklayers.....	\$1 45	8
Stonemasons.....	1 45	8
Hollow tile setters.....	1 45	8
Plasterers.....	1 45	8
Marble setters.....	1 45	8
Plumbers and steamfitters.....	1 15	8
Sheet metal workers.....	1 10	8
Carpenters and joiners.....	1 00	8
Concrete finishers.....	1 00	8
Electricians.....	1 00	8
Metal lathers.....	1 00	8
Structural steel workers.....	1 00	8

Dredging at Port Lewis (Lake St. Francis), Que. Name of contractors, Les Chantiers Manseau, Ltd., of Sorel, P.Q. Date of contract, October 28, 1929. Amount of contract, approximately \$13,481.87. The General Fair Wages Clause was inserted in the contract.

Construction and delivery of a single screw seagoing steel tug. Name of contractors, Collingwood Shipyards Ltd., Collingwood, Ont. Date of contract, October 4, 1929. Amount of contract, \$213,000. The General Fair Wages Clause was inserted in the contract.

The supply and installation of two water-tube boilers at the Government Central Heating Plant, Ottawa, Ont. Name of contractors, Canadian Vickers, Ltd., Montreal, P.Q. Date of contract, October 31, 1929. Amount of contract, \$17,950. The General Fair Wages Clause was inserted in the contract.

Renovation and repairs to the Quarantine Station, Grosse Isle, P.Q. Name of contractors, Henry Lemelin and Omer Brousseau, both of St. Romuald, P.Q. Date of contract, November 4, 1929. Amount of contract, approximately \$9,981. The General Fair Wages Clause was inserted in the contract.

Construction of new walks, grading, driveway, etc. to the public building at Waterloo, P.Q. Name of contractor, Herve Boyer, Waterloo, Que. Date of contract, October 26, 1929. Amount of contract, \$2,200. The General Fair Wages Clause was included in the contract.

Construction of a public building for Telegraph Service at Peace River, Alta. Name of contractor, Carl Peterson, Peace River, Alta. Date of contract, October 29, 1929. Amount of contract, \$3,800. The General Fair Wages Clause was inserted in the contract.

*Contract in Group "B" (Interior Fittings, etc.)*

New interior fittings for the Post Office at Springhill, N.S. Name of contractors, Wood Specialties, Ltd., Alexandria, Ont. Date of contract, October 30, 1929. Amount of contract, \$1,900. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS

*Contracts in Group "A" (Construction, etc.)*

Construction of a station building at St. Leonard, N.B. Name of contractor, C. W. Bowlin, Woodstock, N.B. Date of contract, November 4, 1929. Amount of contract, \$15,000. The General Fair Wages Clause was inserted in the contract.

POST OFFICE DEPARTMENT

Following is a statement of payments made in November, 1929, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount of Orders
	\$ cts.
Making metal dating stamps and type also other hand stamps and brass crown seals . . . . .	2,485 11
Making and repairing rubber stamps, daters, etc. . . . .	242 66
Making up and supplying letter carriers' uniforms, etc. . . . .	24,561 10
Stamping pads, ink, etc. . . . .	514 51
Bag fittings . . . . .	28,882 10
Scales . . . . .	448 45
Letter boxes . . . . .	654 14
Mail bagging . . . . .	25,031 31

An article appearing in the October issue of the *Public Service Monthly*, published under the authority of the Saskatchewan Government, indicates the growing importance of commercial fishing in the Province. In 1923, the value of the "take" was \$286,643 while in 1928 production aggregated 69,931 hundred-weight, value at \$563,075, this being an increase of approximately \$60,000 over the 1927 catch. Commercial fishing in Saskatchewan in the summer season is relatively unimportant in comparison with the winter activities, the trend of which has been upward dur-

ing the past two or three seasons while summer fishing has tended to decline. During the 1928 season, 29 sail and row boats and nine gasoline launches were engaged in the industry in the province, while 1,084 men secured at least a portion of their livelihood as fishermen on Saskatchewan's northern lakes. Fishery experts predict that as result of increased interest, assured markets and an increasing demand, the number of fishermen in the north-land of the province during the coming winter season will be double that of last year.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given with other information of general interest.

### Manufacturing: Printing and Publishing

EDMONTON, ALBERTA.—TWO DAILY NEWSPAPERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 255.

Agreement to be in effect from May 28, 1929, to May 27, 1932. If at the termination of the agreement the two parties fail to agree on any change desired by either of them, provision is made for reference to an arbitration committee.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE, August, 1925, page 828, with the following exceptions:—

Wages per hour for journeymen pressmen: from May 28, 1929, to May 27, 1931, \$1.05 for day work and \$1.11½ for night work; from May 28, 1931, to May 27, 1932, \$1.06½ for day work and \$1.13½ for night work. Foreman at least \$5 per week over journeymen's scale.

Work on New Year's Day, Good Friday, Victoria Day and Thanksgiving Day and any specially proclaimed national holiday to be paid for at overtime rate.

Christmas Day, Dominion Day and Labour Day to be paid for at straight time without working, or if working on these days, overtime rate to be paid in addition.

VICTORIA, B.C.—CERTAIN EMPLOYERS AND THE INTERNATIONAL BROTHERHOOD OF BOOKBINDERS, LOCAL No. 147.

Agreement to be in effect from November 1, 1928, to September 30, 1930, and may be extended from year to year provided mutually satisfactory arrangements can be made whereby wages and hours may be adjusted and settled by local conciliation.

Only union members to be employed if available and union members will not work in shops where non-union men are continually employed.

Hours: 44 per week ending at noon on Saturday.

Overtime: time and one half for first six hours; thereafter and work on Sundays, Labour

Day and Christmas Day, double time; all other holidays time and one half.

Wages per week for journeymen bookbinders: from November 1, 1928, to February 28, 1929, \$43.50; from March 1, 1929, to September 30, 1930, \$45.

Wages for apprentice bookbinders: first half of third year one third of journeymen's scale, second half of third year one half of journeymen's scale, fourth year two thirds of journeymen's scale.

Men apprentices to serve four years. One apprentice allowed for first four journeymen, two for eight journeymen and one apprentice for each additional five journeymen.

Wages per week for journeywomen: from November 1, 1928, to February 28, 1929, \$21.75; from March 1, 1929, to September 30, 1930, \$22.50.

Wages per week for junior women: first six months \$11, second six months, \$12, third six months, \$13, fourth six months, \$14, fifth six months, \$16, sixth six months, \$18.50.

Women apprentices to serve three years. One apprentice allowed to each shop and one apprentice for three journeywomen, two apprentices for five journeywomen, three apprentices for nine journeywomen and an additional apprentice for each five journeywomen thereafter.

Conciliation and arbitration to govern the adjustment of any dispute.

Provided an arbitration agreement is arrived at, the individual employer agrees to become a party to one arbitration proceeding representing the employing commercial printers of Victoria, the findings of such arbitration to be binding.

### Manufacturing: Iron, Steel and Products

SAINT JOHN, N.B.—A CERTAIN BRASS AND IRON FOUNDRY AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL No. 482.

Agreement reached following conciliation by the Fair Wages Officer of the Department of Labour.

Agreement to be in effect from October 28, 1929, to October 28, 1930, and from year to year unless thirty days notice is given by either party.

Hours: 9 per day, 5 on Saturdays, a 50-hour week. If a night shift is used, a week's work will consist of ten hours per night for five nights.

Overtime: from 5 p.m. to midnight, time and one third; after midnight, time and one half. Work on Sundays and holidays, time and one half.

Should it be found necessary to reduce the staff, the employer will consider reducing the hours before reducing the number of employees on the regular staff.

Wages per hour: tool makers 70 cents, machinists and brass finishers 65 cents, tool machinist 60 cents, machine operators and brass machinists 55 cents, monitor operators 50 cents, machine hands and brass machine operators 45 cents, skilled labour 35 cents, unskilled labour 30 cents, assemblers 30 to 60 cents.

Apprentices (except those employed at the time of signing the agreement) to be between ages of 16 and 21 years, and will serve five

years, and every effort be made to instruct them in every branch of the trade.

Wages per hour for apprentices: first year 16 to 20 cents, second year 25 cents, third year 30 cents, fourth year 35 cents, fifth year 40 cents.

A shop committee consisting of a chairman and a member of each department will act for a period of three months, the membership of this committee and the continuance of it after the three month period to be subject to the approval of the employer.

If any employee considers that he is unjustly dealt with, the matter may be taken up by the shop committee and the management, and if necessary will be referred to arbitration.

### Construction: Buildings and Structures

TORONTO, ONTARIO.—THE CARPENTER AND GENERAL CONTRACTORS' SECTION AND THE GENERAL CONTRACTORS ASSOCIATION OF THE TORONTO BUILDERS EXCHANGE of the first part, AND THE TORONTO DISTRICT MANAGING COMMITTEE OF THE AMALGAMATED CARPENTERS OF CANADA of the second part.

The terms of this agreement, which was signed on November 16, 1929, are printed in full as follows:—

Clause 1.—*This Agreement* shall take effect on the 1st day of January, 1930, between the two bodies aforementioned, and shall remain in effect until the 31st day of December, 1931, and any change of this agreement requested by either party, must be made three months prior to December 31, 1931, and notification of the same shall be given in writing.

Clause 2.—The party of the second part, as a whole, shall not order any strike against members of the first part, either individually or collectively, nor shall any members of the party of the second part leave their work before the matter in dispute is brought before the Arbitration Board, hereinafter described for settlement, such Board to be called within forty-eight hours, and report their decision as early as possible. A joint Arbitration Board of three members from each party shall be appointed forthwith to carry out the terms set in this clause.

Clause 3.—Under this Agreement, eight hours shall constitute a full working day, for the first five days of the week, and four hours on Saturday, the hours to be from eight a.m. to five p.m. and Saturday from eight to twelve noon. Where it is agreeable to both parties of this Agreement to take one-half hour for lunch, then the quitting time shall be 4.30 p.m. In the event of any building exceeding eight stories in height, the eighth floor shall be known as the starting point, at the starting time, and the employees shall proceed to their work from this point on the employers time.

Clause 4.—All work done after twelve noon on Saturdays, also Sundays, New Year's Day, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, and Christmas Day, shall be paid at the rate of double time. Work may be done in case of an emergency for the first three hours after the ordinary quitting time of the regular working days of the week, and shall be paid for at the rate of time and one-half, all other overtime to be paid for at double rate.

Clause 5.—When work is carried on in two or more shifts, the second and third shifts shall be paid eight hours time for seven hours work. The men shall not work on any more than one shift in twenty-four hours, unless paid for such time, as rates in clause 4 of this Agreement specify: first shift to work regular hours; if other hours, they shall be paid at the same rate as second and third shifts. Saturdays, 4 hours pay for three and one-half hours work.

Clause 6.—The rate of wages for Carpenters in this district as agreed between the parties hereto, shall be as follows:—

January 1, to June 30, 1930, shall be \$1.05 per hour.

July 1, to December 31, 1930, shall be \$1.10 per hour.

January 1, to December 31, 1931, shall be \$1.15 per hour.

Clause 7.—When men are moved from one job to another during working hours, car fare shall be paid by the employer, and also time in transit. Carpenters shall be paid every week. In case of discharge, the men shall immediately be paid their wages in full. In case of quitting, those doing so shall be paid on the regular pay-day. When a man is to be laid off, or when a man decides to quit, one hour's notice shall be given in either case, on condition that the employee works for the hour specified.

Clause 8.—The jurisdiction to which these rules apply, shall be a radius of eight miles from Bloor and Yonge Sts., Toronto. The contractors agree to pay the rate of wages, and observe the working conditions as set forth in this Agreement within the said eight mile radius; also pay transportation charges both ways outside of this radius.

Clause 9.—It is also agreed that a room shall be provided with sufficient space and heat for Carpenters to eat their meals, and be used for the storage of their tools; a lock and key to be provided.

Clause 10.—This Agreement is made on the condition that all carpenters shall work harmoniously together.

Clause 11.—The rates for pay for apprentices shall be as follows:—

For the first year, twenty-five cents (25c.) per hour.

For the second year, thirty-five cents (35c.) per hour.

For the third year, forty-five cents (45c.) per hour.

For the fourth year, sixty cents (60c.) per hour.

TORONTO, ONTARIO.—CERTAIN CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS, LOCAL No. 151.

Agreement signed following strike reported in the LABOUR GAZETTE for June and July, to be in effect from May 1, 1929, to May 1, 1931. If any change desired by either party, notice to be given 60 days before expiration.

Only members of local unions of the International Brotherhood are to be employed.

Hours: 8 per day, 4 on Saturdays. If the five day week is generally adopted by the Toronto Building Trades Council, negotiations will take place to meet the new condition.

Overtime: time and one-half for first four hours, thereafter and all work on Saturday afternoons, Sundays and holidays, double time. No work on Labour Day; overtime will be dispensed with as far as possible.

Wages per hour for journeymen: from May 1, 1929, to May 1, 1930, 90 cents; from May 1, 1930, to May 1, 1931, \$1.

One apprentice allowed to every contractor employing two journeymen, two apprentices if ten journeymen employed and thereafter one additional apprentice for every five additional journeymen employed.

Any shop grievance will if possible be adjusted between the business agent and the employer, but no strike to occur until the executive of the local union investigates the dispute. The representatives of the local unions shall have the right to remove workers from their job whenever the local union considers it necessary. A shop steward to be appointed on any job when more than four journeymen employed.

Every contractor will satisfy the union that his employees are properly protected under the Workmen's Compensation Act of Ontario.

**TORONTO, ONTARIO.—MASTER PAINTERS' ASSOCIATION AND THE NATIONAL UNION OF PAINTERS, DECORATORS AND PAPERHANGERS OF CANADA, JUBILEE LOCAL NO. 1.**

Agreement to be in effect from May 1, 1929, to April 30, 1930. Negotiations towards any new agreement will commence not later than December 31, 1929.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half to midnight and for work on Saturday afternoons to 5 p.m.; overtime after midnight on other days and after 5 p.m. on Saturdays, and all work on Sundays and holidays, double time. No work on Labour Day. When two or three shifts are worked, regular wage to be paid.

Wages per hour for journeymen painters, decorators and paperhangers: 80 cents.

For work out of city, fare, board and travelling time to be paid. On country work, overtime may be worked at regular wage. Men may work the same number of hours as the workmen in the same trade are working in that locality.

### Construction: Shipbuilding

**ST. JOHN, N.B.—ST. JOHN DRY DOCK AND SHIPBUILDING COMPANY LIMITED AND THE MACHINISTS AND APPRENTICES EMPLOYED BY THEM.**

Agreement to be in effect from March 21, 1929, to March 1, 1930 and from year to year unless thirty days' notice of change is given by either party.

Hours: 9 per day, 4½ on Saturdays, for day work; if night shift employed, 10 hours per night, five nights per week.

Overtime: overtime to midnight, time and one-half; after midnight and all work on Sundays and holidays, double time.

Wages for machinists; 65 cents per hour.

If any apprentices are employed, not more than two additional each year to be employed, unless otherwise mutually agreed on. Appren-

tices are to serve four years and will be instructed in all branches of the trade.

Wages per hour for apprentices: 15 cents during first year, 20 cents during second year, 25 cents during third year and 30 cents during fourth year.

If any employee considers himself unjustly dealt with, the matter may be taken up by the shop committee and the management and if necessary, will be referred to arbitration. No stoppage of work until every effort has been made to reach an agreement. No discrimination to be shown members of the shop committee.

### Construction: Miscellaneous

**VANCOUVER AND VICTORIA, B.C.—TRADE RULES OF THE PILE DRIVERS, BRIDGE, DOCK AND WHARF BUILDERS UNIONS, LOCAL NO. 2404 VANCOUVER AND LOCAL NO. 2415 VICTORIA (UNITED BROTHERHOOD OF CARPENTERS AND JOINERS).**

These rules which were revised on January 1, 1929, are similar to the rules previously in force and summarized in the LABOUR GAZETTE for September, 1928, and July, 1925, with the following exceptions:—

Wages for boomman \$1.06¼ per hour, \$8.50 per day.

Travelling time must be paid on all jobs lasting two weeks or less, but any man who is sent to a job and leaves within two weeks must forfeit his transportation.

### Transportation and Public Utilities: Water Transportation

**CHARLOTTETOWN, P.E.I.—SCHEDULE OF WAGES AND WORKING CONDITIONS ADOPTED BY THE LABOURERS' PROTECTIVE UNION LOCAL NO. 9658.**

This schedule was adopted by the union to be in effect from April 1, 1929, to March 31, 1930.

Wages per hour: general wharf and warehouse work—day work 40 cents, night work 50 cents; work at steamboats with general cargo—day work 60 cents, night work 70 cents; work at sailing vessels with general cargo, brick, or lumber 50 cents; shovelling coal, stone, salt or brick in bulk on board sailing vessels—25 cents per ton for vessels under 300 tons and 30 cents for vessels over 300 tons (three men to hatch all tonnage); trimming coal, stone, corn or salt from sailing vessels and labour connected therewith, 75 cents per hour (four men to a gang); for all steamers discharging coal 55 cents per ton, trimming coal from steamers 75 cents per hour; for discharging molasses 50 cents per puncheon, for bunkering steamboats 25 to 50 cents per ton or by the hour, for trimming coal at milk factory, cold storage plant and electric light plant 25 cents per ton, for bagging coal at any coal agent 70 cents per hour, for trimming coal from cars 75 cents per hour, working at steamboat or sailing vessels loaded with fertilizer 65 cents per hour for day work and 70 cents per hour for night work. For putting coal into cellars 15 cents per load.

time and one-half for work on Sundays and holidays and for work during meal hours.

Men ordered to steamer loading or discharging cargo to receive one hour's pay and to be paid for waiting time.

### Transportation and Public Utilities: Street and Electric Railways

PORT ARTHUR AND FORT WILLIAM, ONTARIO.—

CITIES OF PORT ARTHUR AND FORT WILLIAM AND AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES, LOCAL NO. 906, AND ALL OTHER EMPLOYEES OF THE STREET RAILWAY DEPARTMENT.

Agreement to be in effect from May 1, 1928, to May 1, 1930.

This agreement was signed following the report of the Board under the Industrial Disputes Investigation Act, which report was printed in the LABOUR GAZETTE, October, 1928, and was adopted by both parties with certain changes as reported in the issue for November, 1928. The working conditions covered in the agreement show only minor change from the previous agreement which was summarized in the LABOUR GAZETTE, October, 1927. The new wage scale is as follows:—

Wages per hour in transportation department: on two-man cars—first six months 45 cents, second six months 50 cents, thereafter 54½ cents; on one-man cars—first six months 52½ cents, second six months, 57½ cents, thereafter 62 cents. Regular spare operators working less than six hours in any one day will be paid six hours per day, six days per week at their respective rates, unless off sick or unless one has missed his call.

Wages per hour in car house department: carpenter 65 cents, machinist and blacksmith 65 cents, painter 61 cents, first class pitman 60 cents, second class pitman 55 cents, labourers and car cleaners 50 cents.

Wages per hour in track department: track bonder 51 cents, regular trackmen 49 cents.

### SASKATOON, SASK.—BY-LAW TO REGULATE WAGES AND WORKING CONDITIONS OF THE MUNICIPAL STREET RAILWAY.

A summary of this by-law is given below under the heading: "Service—Public Administration".

### LETHBRIDGE, ALBERTA.—CITY OF LETHBRIDGE AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES.

Agreement to be in effect from March 1, 1929, to February 28, 1930. If either party desires a change at the expiration of the agreement, thirty days' notice to be given. If unable to reach a new agreement, a board of arbitration under the Industrial Disputes Investigation Act will be applied for.

No discrimination to be shown employees on account of union membership. A check-off for monthly union dues will be maintained.

Hours: 9 per day for both transportation and barn departments.

Overtime and all work on Sundays, holidays and rest day, time and one half. Sub-station operator on Sundays to be paid straight time.

Wages for motormen: first six months 55 cents, second six months 58 cents, thereafter 61

cents; motormen training students 3 cents per hour extra, spare men 55 cents.

Wages per hour: barnmen—first six months 55 cents, next six months 58 cents, thereafter 59 cents, mechanic 70 cents, track greaser 55 cents, trackman experienced 55 cents, other labourers 50 cents.

The terms of the group sickness and accident insurance policy to be continued.

Seniority to be considered in making promotions, in choice of runs and also if necessary to reduce staff.

The length of training period to be left to the discretion of the Superintendent, but no wages will be paid for this period.

The superintendent will at all times receive a grievance committee. Failing a settlement, the matter may be referred to the City Manager.

### EDMONTON, ALBERTA.—CORPORATION OF THE CITY OF EDMONTON AND EDMONTON CIVIC EMPLOYEES' FEDERATION—SPECIAL CONDITIONS CONCERNING THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES, LOCAL NO. 569.

The conditions of this agreement are similar to those summarized in the LABOUR GAZETTE for November, 1925, with the exception of the hours of motormen and conductors and the wages schedule which is as follows:

#### Motormen and Conductors and Motormen-Conductors

Hours: 8 per day. Time and one half for legal holidays.

Wages per hour: first six months 58 cents, second six months 60 cents, second year 65 cents, third year 68 cents, thereafter 71 cents.

#### Barn Men

Wages per hour: car cleaners (after six months) 55 cents, car repairers 57 to 70 cents, controller men 75 cents, foreman carpenter \$1, fireman for boilers 60 cents, linemen's helper 62 cents. Wages per month: general foreman \$195, assistant general foreman \$180, barn foreman (nights) \$160, fare box inspector \$155, storekeeper and record clerk \$155.

Wages per hour for trade mechanics: car wirers 73 cents, painters 80 cents, painters' helpers 65 cents, blacksmiths' helpers 57 cents and 64 cents, labourers and sand men 55 cents, electric welders 70 and 80 cents, armature winders 89 cents, blacksmiths 80 cents, babbitt men 68 cents. Equipment of car men \$125 per month.

Wages for trackmen, etc: track labourers 55 cents per hour, trackmen in charge of gang 60 cents per hour; track greasers \$110 per month, flagmen \$100. Time and one half for legal holidays.

Wages for power house and pumping station: shift engineer \$192 per month, assistant chief engineers \$155, water tender and head fireman with certificate \$145, water tender and head firemen \$140, relief man \$140, fireman 60 and 65 cents per hour, head ash handler 59 cents, other ash handlers 55 and 57 cents, elevator attendants 65 and 63 cents, crane engineers' helpers 62 cents, general helpers 55 and 56 cents, experienced helpers if qualified after three years 60 cents, boiler cleaners 60 and 66 cents, tube blower 61 cents, combustion men 57 cents. Wages at pumping station: chief filter operators \$145 per month, general help on filters 56 and 60 cents per hour.

### Service: Public Administration

SASKATOON, SASK.—BY-LAWS TO REGULATE THE WAGES AND WORKING CONDITIONS OF CERTAIN CLASSES OF EMPLOYEES OF THE CITY OF SASKATOON.

#### *Linemen of the Electrical Department*

By-laws to be in effect from January 1, 1929, to January 1, 1930.

Hours:  $8\frac{1}{2}$  per day for first five days and  $4\frac{1}{2}$  hours on Saturdays.

Overtime to 10 p.m. on other days and to 5.30 p.m. on Saturdays, time and one half; overtime between 10 p.m. and 8 a.m. on other days and after 5.30 p.m. on Saturdays, and all work on Sundays and holidays, double time. Any lineman called out at 3 a.m. or earlier will be paid double time until relieved. Any lineman called out after 5.30 p.m. to be paid at least three hours' time.

Wages per hour: line foreman \$1.15; journeymen linemen—first class \$1.02 $\frac{1}{2}$ , second class 88 $\frac{1}{2}$  cents.

Wages per hour for apprentices: first three months 57 cents; first six months thereafter 59 $\frac{1}{2}$  cents, second six months thereafter 62 $\frac{1}{2}$  cents, third six months thereafter 65 cents, fourth six months thereafter 67 $\frac{1}{2}$  cents, last nine months 70 cents.

Any lineman will be considered a journeyman who has at least three years' experience in one or all branches of the trade, that is to say, lineman, cable splicer or troubleman, provided such workman proves qualified by examination and test.

Not more than one apprentice to every four journeymen and no apprentice will be allowed to work on high voltage wires or primaries except during the last six months of apprenticeship.

Two journeymen will be assigned to all work done on high voltage wires. All linemen employed on poles with high tension wires must wear rubber gloves and protectors which will be supplied by the city.

Journeymen linemen will have supervision of the setting and framing of poles and all work carried out thereon; also the laying and pulling of cables.

In filling any vacancy, seniority to be considered.

After one year's service, two weeks holiday with pay will be given each year, and if necessary, two weeks' sick leave per year. This period of sick leave may be extended by special sanction of the city council.

#### *Employees of the Pumping Plant and Electrical Department (except linemen)*

By-law to be in effect from January 1, 1929, to January 1, 1930.

This by-law is the same as the one previously in force and summarized in the LABOUR GAZETTE for October, 1927, with the exception of the wage scale which is as follows:—

Wages per hour for outside electrical workers: wiremen (electricians) 85 cents, street light patrolman 75 cents, relief light patrolman 70 cents, meter installers 75 cents, tungsten patrolman 65 cents, groundmen—first season 57 cents, thereafter 60 cents.

Wages for power house workers: assistant chief engineer \$195 per month, shift engineer

\$185, senior assistant shift engineer \$180, assistant shift engineer \$175, draughtsman \$180, turbine and boiler room attendants \$145, firemen \$155, storekeeper \$135, coal foreman \$165, meter repairer \$165, station electrician 95 cents per hour, skilled mechanics 85 cents, skilled mechanic's helpers 65 cents, blacksmith 75 cents, foreman boiler cleaner 75 cents, boiler cleaners, ash men and coal handlers 57 cents for first six months, 60 cents for second six months and 62 cents thereafter. Assistant chief engineers will be paid \$132.50 per month as a minimum, with a maximum of \$175 when qualified to take charge of switchboard.

Wages for pumping station and filtration plant workers: shift engineers \$180 per month, assistant engineer \$150, cleaner and relief man \$135, casual helper 57 cents per hour.

#### *Fire Department*

By-law to be in effect from January 1, 1929, to January 1, 1930.

This by-law is the same as the one previously in force and summarized in the LABOUR GAZETTE for October, 1927, with the exception of the wage scale, which is as follows:—

Wages per month: fire alarm and police telegraph supervisor \$190.75, senior captain \$182.50, captains \$162.50, motor mechanic \$162.50, lieutenants \$157.50, firemen—first year \$132.50, second year \$142.50, after two years \$152.50; firemen appointed on or after January 1, 1929: first year \$122.50, second year \$132.50, third year \$142.50, after three years \$152.50.

#### *Municipal Street Railway*

By-law to be in effect from June 24, 1929, to January 1, 1930.

This by-law is the same as the one previously in force and summarized in the LABOUR GAZETTE for October, 1927, with the following exceptions:

Wages per hour for employees of Mechanical Department: linemen 92 cents, arc welders 83 cents, electrician and armature winder 82 $\frac{1}{2}$  cents, lineman's assistant 80 $\frac{1}{2}$  cents, charge hand 80 cents, carpenter and painter 80 cents, machinist 75 $\frac{1}{2}$  cents, blacksmith 72 cents, junior mechanic 69 $\frac{1}{2}$  cents, painter's assistant 68 $\frac{1}{2}$  cents, car and track repairers (pitmen)—first year 59 cents, second year 61 cents, after three years 62 $\frac{1}{2}$  cents, general worker 56 cents, car cleaners and helpers 53 $\frac{1}{2}$  cents, senior track repairer 67 $\frac{1}{2}$  cents, track foreman 65 cents, leading hand—first year 50 cents, second year 52 cents, greaser 49 $\frac{1}{2}$  cents, flagman \$4.16 per day, sub-foreman 55 cents per hour, casual track labourer 45 cents, permanent track labourer 47 $\frac{1}{2}$  cents, night foreman \$160 per month.

Any vacancy occurring on day shift to be filled from the night shift, seniority and efficiency to govern.

#### PRINCE ALBERT, SASK.—SCHEDULE OF WAGES AND WORKING CONDITIONS FOR CERTAIN CLASSES OF CIVIC EMPLOYEES.

Schedule in effect for the year 1929:—  
*Power House*

Hours: 48 per week, with two weeks' vacation with pay each year.

Wages: shift engineers \$150 per month, firemen \$125 per month, power plant maintenance man \$120, coal and ash handlers 45 cents per hour.

*Meter and Line Department*

Hours: 8 per day, a 44-hour week, with two weeks' vacation with pay each year.

Wages: meterman \$120 to \$132 per month, lineman 65 to 75 cents per hour, helpers and apprentices 35 cents, line foreman 75 cents.

*Fire Department*

The Department is not operated under the two platoon system. Wages per month for firemen from \$85 for beginners to a maximum of \$115.

*Works Department*

Hours: 9 per day.

Wages for labourers: 40 cents per hour for regular labourers and 35 cents for temporary labourers.

LETHBRIDGE, ALBERTA.—CITY OF LETHBRIDGE AND THE CIVIC EMPLOYEES' FEDERAL LABOUR UNION, LOCAL NO. 70.

*General*

Agreement to be in effect from March 1, 1929, to February 28, 1930. The parties are to meet about January 30, 1930, to discuss new agreement and future wage adjustments are to be based on the cost of living as published in the LABOUR GAZETTE for the previous October.

No discrimination on account of union membership and the check-off to remain in force. Preference of employment to be given to citizens of Lethbridge.

Hours: except where otherwise specified, hours to be 8 per day.

Overtime: time and one-half for overtime, including work on legal holidays, to all men paid on hourly basis. No overtime to be paid to employees paid on monthly basis. Except where otherwise specified, double time for work on Sundays. If asked to report for work and then not required, men on hourly rate will be paid one hour's pay.

Wages: minimum wage to be 50 cents per hour and this will also be the minimum on all city contract work.

The group sickness and accident insurance policy to be continued.

The City Manager will at all times receive a grievance committee. If any dispute cannot be settled in this way, it will be referred to a conciliation board.

Seniority to be considered in making promotions.

*Water Works*

Wages for water works employees: foreman 63 cents to 65 cents per hour, pipe layers, hydrant men, caulkers, etc. 60 cents, diggers (permanent) 55 cents, diggers (temporary) 50 cents, meter reader and inspector, \$140 per month.

*Streets Department*

Wages for employees of Streets Department: street cleaners (old men) \$75 per month, special rate 59 cents per hour, general rate 55 cents per hour, temporary labourers 50 cents.

*Stables Department*

Wages for teamsters: 55 cents per hour.

The regular 8-hour day to be worked, but if required to care for team one-half hour additional night and morning to be allowed.

*Engine Drivers*

When employees are on any make of engine or on mechanical work other than driving motor cars or trucks, tractor engineers' wages to be paid, that is 63 cents per hour.

*Fire Fighters*

The wage schedule for fire fighters is not included.

Ten days vacation with pay each year after one year's service, which may be increased to fourteen days at discretion of the chief. Full pay for sickness and accident leave according to insurance agreement, and this time may be extended at the discretion of the City Manager.

New employees taken on must be between the ages of 21 and 35.

*Power House*

Machinist and boilerwasher to be paid overtime rates for all overtime including legal holidays; double time for Sundays. Engineers will be granted 12 days' holidays with pay and firemen 14 days.

*Coal Mine*

Wages: drivers wages \$5.38 per day for inside work, \$4.90 per day for outside work, tippemen 60 cents per hour. Contract rates for other classes of work are specified.

EDMONTON, ALBERTA.—THE CORPORATION OF THE CITY OF EDMONTON AND THE EDMONTON CIVIC EMPLOYEES' FEDERATION.

Agreement to be in effect for the year 1929, and from year to year thereafter until a new agreement is negotiated.

This agreement is similar to the one summarized in the LABOUR GAZETTE, November, 1925 (Electrical Workers' Agreement in issue for October, 1927), with the following changes:

*Civic Employees Federal Union No. 30*

Wages per hour: common labourers and teamsters 55 cents, sewer and water house service construction men 55 cents, experienced labourers 57 cents, truck drivers 58 cents, heavy truck drivers 65 cents, gasoline engine operators, hydrant and valve repairers 62 cents, water service and meter installers, pipe layers, fitters and caulkers 66 cents, meter mechanic 71 cents, sewer and waterworks construction foreman and inspectors 76 cents, steam boiler operators 82 cents.

*International Brotherhood of Steam Shovel and Dredgemen, Local No. 55*

Wages per hour: 92 cents.

*Policemen's Association Local No. 74*

Wages per month: night inspector \$180, inspectors \$170, sergeants (detectives) \$170, sergeants \$160, constables \$125 to \$145, detectives \$160, acting detectives \$145, accountant and finger print expert \$175, matron \$97.50, janitor \$120, woman police officer \$100.

*City Fire Fighters' Union, Local No. 209*

Wages per month: captains \$165, lieutenants \$160, mechanic \$175, assistant electrician \$155, assistant motor mechanic \$155, firemen and drivers \$125 for first year to \$145 for third

year, operators \$120 for first year to \$127.50 for third year, fire marshal \$165, superintendent of fire and police telegraph alarm system \$200.

*Amalgamated Street and Electric Railway Employees, Local No. 569*

This agreement is noted above under the heading: "Transportation and Public Utilities—Street and Electric Railways."

*International Association of Machinists, Local No. 817*

Wages per hour: machinists employed at power plant 90 cents, machinists' helpers 70 cents, machinists at Street Railway barns 90 cents, boiler room mechanics 78 cents, machinist helper at Street Railway 68 cents.

*International Association of Steam and Operating Engineers, Local No. 857*

The only wage rates mentioned under this agreement are shift engineers \$180 per month, assistant shift engineers \$145.

*United Brotherhood of Carpenters and Joiners*

Wages per hour at Street Railway barns from May 1, 1929, 95 cents, foreman 5 cents per hour extra.

*United Brotherhood of Painters, Decorators and Paperhangers, Local No. 1016*

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half to midnight; after midnight and all work on Sundays and holidays, double time.

Wages per hour for journeymen painters: 95 cents; foreman 5 cents per hour extra.

One apprentice allowed for every five journeymen, and they must be bonded to serve three years.

Wages per hour for apprentices: first year 20 cents, second year 40 cents, third year 60 cents.

*Canadian Electrical Trade Union, Edmonton Branch*

This agreement is the same as the one previously in force and summarized in the LABOUR GAZETTE, October, 1927, with the following changes:

Wages per month for telephone employees: journeymen on switch work \$146 to \$187, service men and rack men \$146 to \$170, inspectors \$145 to \$176, inspectors on P.B.X. work to serve a probation period at \$176 for first six months, \$182 thereafter, senior shop mechanic \$182; other shop mechanics 51 to 73 cents per hour, installer and linemen 70 to 87 cents per hour, installation sub-foreman 90 cents, cable splicers' helpers 63 cents; branch office sub-foreman \$190 for first six months, \$200 thereafter; P.B.X. and exchange construction sub-foreman \$200 wire chief \$220.

Wages for light and power electrical workers: line construction and maintenance—foreman lineman \$1.02 per hour, line inspector and repairmen \$1.02, journeymen linemen 95 cents, apprentices 57 to 80 cents, groundman 60 cents. Meter section: foreman meter section \$195 per month, meter repairman and meter installer 90 cents per hour. Street light section: foreman \$195, journeymen repair and patrolmen \$170, wiring inspector \$195, power house electrician 95 cents per hour; power house operators \$155 and \$160 per month; street railway linemen 89 cents per hour.

Wages for apprentices: switchmen, inspectors, servicemen and rackmen from \$60 per month for first six months to \$125 for sixth month; shop repairmen from 30 cents per hour for first six months to 60 cents during sixth six months; installers, linemen and cable splicers from 30 cents per hour for first six months to 75 cents during sixth six months; cable splicers 85 cents per hour during fourth year.

## AGREEMENTS AND CHANGES IN WAGES AND WORKING CONDITIONS ON STEAM RAILWAYS IN CANADA

IN the issue of the LABOUR GAZETTE for May, page 541, reference was made to changes in working conditions for certain classes of railway employees, the agreements in force being amended accordingly, affecting locomotive engineers on the Canadian Pacific Railway and shop mechanics and maintenance of way employees on all the principal railways. Further changes have been agreed to or proposed as follows:

**LOCOMOTIVE ENGINEERS AND FIREMEN.**—As in the case of the disputes between the Canadian Pacific Railway and its locomotive engineers and firemen mentioned above, disputes between the Canadian National Railways and its locomotive engineers, firemen, etc., as to amendments to the tripartite agreement between the railway and the two unions were referred to two Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act. Following the reports of

these boards (LABOUR GAZETTE, August, 1929, pages 858-862, and September, 1929, page 980), the Canadian National Railways entered into separate agreements with its locomotive engineers making changes in rules and working conditions, as approved by the Board dealing with its case, similar to those previously made on the Canadian Pacific Railway, effective on eastern lines from September 1, 1929, with similar changes on western lines effective November 1, 1929.

The Canadian National Railways and its locomotive engineers also referred to a Board of Conciliation another dispute involving seniority rights of the engineers on the various railway lines amalgamated into the new system, an agreement reached at Montreal, May 1, 1926, not being satisfactory. An agreement between the parties was reached and was approved by the Board (LABOUR GAZETTE, September, 1929, pp. 979-980).

CONDUCTORS, TRAINMEN, ETC.—A dispute between the Canadian Pacific Railway and its conductors on eastern lines was referred to a Board under the Industrial Disputes Investigation Act, the Order of Railway Conductors desiring a separate agreement with the railway instead of the tri-partite agreement to which the Brotherhood of Railway Trainmen was also a party and desired also changes in wages, while the trainmen's organization objected to the proposed abrogation of the tri-partite agreement (LABOUR GAZETTE, August, 1929, p. 856). The Board upheld the right of the conductors to a separate agreement and subsequently such an agreement was reached and this provided for increases in wage rates of passenger conductors from \$6.70 per day (150 miles) to \$7.08, and in the minimum per month under specified conditions from \$201 to \$212.40, effective July 16, 1929.

Following a reference to a Board under the Industrial Disputes Act, the rates of pay for conductors, trainmen, etc., on the western lines on both the Canadian Pacific Railway and the Canadian National Railways were increased by amendments to the existing agreements, effective from October 1, 1929 (LABOUR GAZETTE, October, 1929, p. 1082-1086.) The increases were: passenger conductors from 4.47c. per mile to 4.72c. (150 miles per day), from \$208 per month to \$219.65; freight conductors from 6.16c. per mile to 6.25c. (100 miles per day); passenger baggagemen from 3.24c. per mile to 3.29c. (150 miles per day); passenger trainmen from 3.13c. per mile to 3.18c. (150 miles per day); freight brakemen from 4.84c. per mile to 4.91c. (100 miles per day); yard foremen from \$6.64 per day to \$6.74; yardmen from \$6.16 per day to \$6.25; switchtenders from \$4.72 per day to \$4.79; and corresponding changes for other classes of service and on special parts of the railway lines.

Trainmen, brakemen and yardmen on eastern lines of the Canadian Pacific Railway secured an agreement effective November 1, 1929, providing for brakemen and yardmen increases similar to those for western lines as follows: baggagemen from \$4.86 per day (150 miles) to \$4.94 and per month from \$145.80 to \$148.20; trainmen from \$4.70 per day (150 miles) to \$4.77 and per month from \$141 to \$143.10; through freight brakemen from 4.84c. per mile to 4.91c. way freight brakemen from 5.24c. per mile to 5.31c.; yard foremen from \$6.64 per day to \$6.74; yardmen from \$6.16 per day to \$6.25; switch tenders from \$4.72 per day to \$4.79.

Freight conductors on eastern lines of the Canadian Pacific Railway secured an increase

in wages effective Nov. 1, 1929, similar to that on western lines (5 cents per 100 miles) by an amendment to the conductors agreement of July 16, 1929 mentioned above.

MAINTENANCE OF WAY EMPLOYEES.—Following the amendments to the agreement between the Railway Association of Canada, representing the principal railways, and the Brotherhood of Maintenance of Way Employees making certain slight rules and working conditions from February 1, 1929, further amendments were made effective from June 1, 1929, providing for increases in wages as follows: section foremen, classified yards, from \$4.70-\$5 to \$4.85-\$5.15; other section foremen from \$4.55 to \$4.70; extra gang foremen from \$5.10-\$5.60 to \$5.25-\$5.75; sectionmen in classified yards from 41c. per hour to 41c. for first year, 42c. for second year, 45c. after second year; other sectionmen from 38c.-41c. to 38c.-43c.; foremen, bridge and building, and mason foremen, etc., from \$5.60 per day to \$5.75; painter foremen from \$5.25 to \$5.50; pile driver and hoist engineers from \$5 per day to \$5.15; carpenters from 58c.-62c. per hour to 61c.-65c.; bridgemen or rough carpenters from 48c.-58c. per hour to 48c.-61c.; painters from 58c. per hour to 58c.-61c.; plumbers, blacksmiths, etc., from 72c. per hour to 77c.; masons, bricklayers and plasterers from a minimum of 62c. per hour to 65c.; mechanics' helpers from 46c. per hour to 48c.; with similar increases to other classes. Signed maintainers, mechanics and helpers, since 1924 under separate agreements with the several railways instead of being under the maintenance of wage agreement with the railway association, secured similar increases, effective June 16, 1929 on the Canadian National Railways and on the Canadian Pacific Railway, eastern lines, and effective July 16, 1929, on the Canadian Pacific Railway, western lines. The signal maintainers and mechanics' rates rose from 65-72 cents per hour to 68-75 cents and helpers' rates from 45-46 cents per hour to 46-50 cents.

Stationary firemen, oilers and shop labourers received increases effective July 1, 1929 of one cent per hour for employees with one year's service and 2 cents per hour for employees with two year's service.

CLERKS, FREIGHT HANDLERS, ETC.—These classes on the Canadian National, the Canadian Pacific Railways and the Dominion Atlantic Railway had entered into negotiations for increases in wages and the last two cases have been referred to Boards under the Industrial Disputes Act.

## COMPARATIVE PURCHASING POWER OF HOURLY WAGES IN TERMS OF FOOD, ETC., IN VARIOUS COUNTRIES

THE International Labour Office has maintained since 1924 a record of comparative real wages in various countries, originally compiled and published by the British Ministry of Labour in 1923. Summaries of these figures have been given from time to time in the *LABOUR GAZETTE*, December, 1928, page 1397, and in various preceding issues. During the current year the scope of the statistics has been considerably increased by including figures for a larger number of cities in each country, and by increasing the number of commodities for which prices are secured as well as the number of occupations and industries for which wages are secured. From these data an index number of real wages, showing the comparative purchasing power of hourly wages in terms of food, fuel and light and soap have been calculated for each country, taking Great Britain as the standard and therefore represented by 100.

An international budget of foods, fuel and light and soap was constructed, showing the average quantities of each article ordinarily consumed by the workers and their families in the various countries so far as information was available. The cost of this budget in each country was then calculated, using the average prices in the cities covered. The average hourly wage in each country was calculated from the figures for cities and occupations included, and the purchasing power of wages in each country was determined by dividing the cost of the budget into the average hourly wage. The index number of real wages for each country was determined by taking the figure representing the purchasing power of hourly wages in it and dividing it by the similar figure for Great Britain.

In the figures issued from 1924 to 1928 an allowance was made for rent as well as for food, but this feature of the compilation has been dropped for the present. Also the index numbers were calculated according to six cost of living budgets, designed to represent conditions in various countries or groups of countries. This feature also has been dropped as it appeared that the differences in the results obtained from the various budgets were not great.

The international budget now used includes twenty-seven foods and fuel (coal or its equivalent), electricity, gas, paraffin oil and soap, there being a calculation for all these items and one for the food separately. The wage data secured include building trades, metal trades, furniture making, printing trades, electrical work, transportation, bakers and civic labourers. The International Labour Office secured the data for prices and wages for July, 1929, and published the results of the collection and compilation in the *International*

*Labour Review* for October, including for each country a table of hourly wages in each city, for each occupation, and a table of the average retail prices of the various commodities, tables of the items in the international budget of foods, etc., its cost in each country, and a table of the index numbers of real wages calculated from such figures. For some countries, it is stated, the figures for July, 1929, were not received in time to be included in the tables and among these was Canada. The accompanying table gives the index numbers of real wages for each country as published with the addition of figures for Canada which have been calculated from the data furnished to the International Labour Office by the Department.

It is pointed out by the International Labour Office that the figures issued are subject to important reservations in that they are based on only certain items in the cost of living and on the wages for relatively few classes of labour in the large cities in each country. It is the intention, however, to increase the scope of the figures in both respects with the object of determining as accurately as possible the comparative levels of cost of living and wages, and consequently the relative purchasing power of wages, that is real wages, in each country. The International Labour Office states:—

"During recent months, however, the urgency of effecting some improvements in the statistics has become greater. The data are being used to an increasing extent by business undertakings in different countries, and the Office is frequently asked to supply additional information.. Perhaps the most noteworthy recent example is the use of these figures and the desire for more complete information of a similar character by the Ford Motor Company, Ltd., which is interested in international real wage comparisons as a basis for the establishment of wage scales to be applied in its factories in different European countries."

INDEX NUMBERS OF COMPARATIVE REAL WAGES IN THE LARGE TOWNS OF DIFFERENT COUNTRIES, GENERALLY IN JUNE-JULY, 1929. (Great Britain=100)

## PRICES, RETAIL AND WHOLESALE, IN CANADA, NOVEMBER, 1929

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices in Canada during November was slight, the weekly family budget in terms of retail prices being somewhat higher, while the Dominion Bureau of Statistics index number of wholesale prices was again slightly lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was \$11.75 at the beginning of November, as compared with \$11.68 for October; \$11.28 for November, 1928; \$11.07 for November, 1927; \$11.01 for November, 1926; \$11.23 for November, 1925; \$10.46 for November, 1924; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for November, 1918; and \$7.96 for November, 1914. The most important increases occurred in the prices of eggs, milk, butter, cheese, evaporated apples and prunes, while the prices of beef, mutton, pork, bacon, lard, bread, flour and beans were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$22.03 at the beginning of November, as compared with \$21.96 for October; \$21.52 for November, 1928; \$21.27 for November, 1927; \$21.24 for November, 1926; \$21.51 for November, 1925; \$20.81 for November, 1924; \$21.19 for November, 1923; \$20.89 for November, 1922; \$21.60 for November, 1921; \$26.13 for November, 1920; \$26.92 for July, 1920 (the peak); \$21.61 for November, 1918; and \$14.36 for November, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again slightly lower at 95.8 for November, as compared with 96.7 for October; 94.9 for November, 1928; 96.9 for November, 1927; and 97.6 for November, 1926. One hundred and eleven prices quotations were lower, forty-four were higher and three hundred and forty-seven were unchanged.

In the grouping according to chief component materials five of the eight main groups were lower, two were higher and one was unchanged. The groups which declined were: the Vegetables and Vegetable Products group, due mainly to lower prices for grains, rubber, vegetable oils, coffee and turpentine; the Animals and their Products group, due mainly to lower prices for live stock and meats,

which more than offset increases in the prices of eggs and fish; the Textile and Textile Products group, due to a decline in the price of raw textile materials and for cotton fabrics; the Non-Ferrous Metals and their Products group, due to lower prices for lead, silver, tin, zinc and solder; and the Chemicals and Allied Products group, due to lower prices for certain dyes, paints and fertilizers. The Wood, Wood Products and Paper group advanced, due to higher prices for certain lines of lumber. The Non-Metallic Minerals and their Products group was also higher, because of higher prices for coal, fuel oil and lime. The Iron and Its Products group was unchanged.

In the grouping according to purpose consumers' goods were slightly lower, foods, with the exception of fish, eggs, milk and its products, and sugar and its products being cheaper. Certain textile fabrics and coal were also lower. Producers' goods were substantially lower, due to declines in the prices of certain building and construction materials and in materials for the textile and clothing industries, for the fur and leather goods industries, for the metal working industries, for the meat packing industries, for milling and other industries, as well as for miscellaneous producers' materials.

In the grouping according to origin both raw and partly manufactured goods declined, the former due mainly to lower prices for grains, live stock, hides, raw wool, raw cotton and raw rubber, which more than offset increases in the prices of eggs, milk and coal, and the latter due to lower prices for flour and other milled products, bakery products, leather products, wool fabrics, cured meats and chemicals, which more than offset increases in the prices of butter, fuel oil and cured fish. Domestic farm products and articles of mineral origin were somewhat lower, while articles of marine origin and articles of forest origin advanced.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of November, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quota-

(Continued from page 1422)

tions in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes

twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but

more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1927, and monthly since January, 1928. As stated in the above mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 85.6; 1926, 75.6; 1927, 73.4; 1928, 71.7; 1929, 71.4.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318) and bringing the figures down to 1929. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted

according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

Beef prices continued toward lower levels, sirloin steak averaging 35.9 cents per pound in November, as compared with 36.4 cents in October; round steak 30.8 cents per pound in November and 31.6 cents in October; rib roast 28.4 cents per pound in November and 29 cents in October; and shoulder roast 22.4 cents per pound in November and 22.7 cents in October. Lower prices were reported from most localities. Mutton was down in the average from 31 cents per pound in October to 30.4 cents in November. Both fresh and salt pork were lower, the former averaging 30 cents per pound, as compared with 31.4 cents in October and the latter 27.5 cents per pound, as compared with 27.7 cents in October. Bacon was somewhat lower at 40.1 cents per pound. In fresh fish cod steak, halibut and white fish were slightly higher. Lard was down from an average of 21.7 cents per pound in October to 21.5 cents in November.

Eggs showed a substantial seasonal advance in practically all localities, fresh averaging 58.5 cents per dozen in November, as compared with 51.3 cents in October and 47.4 cents in September, and cooking averaging 48.6 cents per dozen in November, 45.1 cents in October and 41.5 cents in September. Milk was again higher, averaging 12.6 cents per quart. Increases were reported from Sherbrooke, Hull, Toronto, Hamilton, Brantford, Strat-

\*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18%; Clothing 18%; Sundries 20%.

ford, St. Thomas, Sudbury, Cobalt and Prince Albert. Butter was generally higher, dairy being up from 42.6 cents per pound in October to 43.6 cents in November and creamery from 46.9 cents per pound in October to 47.4 cents in November. Cheese was slightly higher, averaging 33.1 cents per pound.

Bread was slightly lower in the average at 7.9 cents per pound. Lower prices were reported from Chatham, Sarnia, Regina, Medicine Hat, Edmonton and Lethbridge. Soda biscuits were somewhat higher at an average price of 18.4 cents per pound. Flour was down from 5.4 cents per pound in October to 5.3 cents in November. Canned tomatoes advanced from 15.7 cents per tin to 15.9 cents. Canned peas and corn were also slightly higher. Beans were down from an average of 11.8 cents per pound in October to 11.3 cents in November. Decreases were reported from most localities. Onions also were lower at an average price of 5.2 cents per pound. Potatoes were practically unchanged at \$2.21 per ninety-pound bag. In Ontario prices averaged somewhat lower but in the western provinces the tendency was upward. Prunes were slightly higher, averaging 15.3 cents per pound. Anthracite coal averaged \$16.17 per ton as compared with \$16.15 in October. Coke showed little change at an average price of \$12.86 per ton. A slight decrease in price was reported from Thetford Mines.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

The movement of grain prices during the first half of November was toward substantially lower levels. During the latter half of the month, however, prices rose sharply and by the end had recovered most of the loss. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged \$1.332 per bushel, as compared with \$1.414 in October and \$1.60 in July, the peak. The decline at the beginning of the month was said to be due to the large shipments from the Argentine and to the large stocks in storage in Britain. Toward the end of the month, however, decreased estimates of the Argentine crop caused prices to advance considerably. Coarse grains were all lower, western oats being down from 68 cents per bushel in October to 65.6 cents in November; rye from \$1.02 per bushel to 94 cents; western barley from 69.8 cents per bushel to 64.9 cents; and flax from \$2.87 per bushel to \$2.72. Flour declined during the first part of the

month but advanced later, the price in November averaging the same as for October, namely \$8.60 per barrel. Rolled oats declined from \$4.40 per ninety pound bag to \$3.90. Raw sugar at New York was down from \$2.31 per hundred pounds to \$1.94, while refined sugar was unchanged at \$5.27 per hundred pounds. Ceylon rubber was substantially lower, averaging 16.73 cents per pound, as compared with 19.71 cents in October. The trend of Canadian cattle prices has been downward since June and quotations are now at the lowest point reached since the fall of 1927. This is said to be due largely to poor pasture conditions. Good steers at Toronto averaged \$8.89 per hundred pounds, as com-

pared with \$9 in October. At Winnipeg the price was down from \$8.07 per hundred pounds to \$7.97. Hogs at Toronto declined from \$12.39 per hundred pounds to \$11.52, while lambs were higher at \$11.60 per hundred pounds, as compared with \$11.03 in October. Beef hides declined from 12-12½ cents per pound to 10-10½ cents. Raw cotton at New York declined from 18.46 cents per pound to 17.53 cents in November. Raw silk also was lower, the price at New York being down from \$5.40 per pound to \$5.15. The price of tin was lower at 43¼ cents per pound in November, as compared with 46½ cents in October.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 136.1 for October, an advance of 0.2 per cent over September. An advance of 1.6 per cent in the food group was due to substantial increases in meat and fish and "other foods," partly offset by a decline in cereals. The only marked change in industrial materials was a decline in both cotton and other textiles.

The *Economist* index number, on the base 1927=100, was 90.2 at the end of October, a decline of 1.7 per cent from the previous month. The general decline extended to all groups, the greatest fall being in the textile group. Out of the 39 articles included in the compilation, 31 showed decreases during October.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-1877=100, was 111.1 at the end of October, which is 1.3 per cent lower than the previous month. With the exception of the animal foods group, which was slightly higher due to increases in the prices of beef and pork, all groups were lower. The most notable reduction was in groceries, owing chiefly to a substantial decline in the price of coffee. Minerals were lower due chiefly to lower prices for tin. In the textile group, with the exception of wool, all textiles declined.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 167 at November 1, as compared with 165 on October 1. The increase was chiefly caused by an advance of three points in the food group. A seasonal advance in the price of eggs was the principal reason for this change.

### Austria

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base, prices in gold, first half of 1914=100, was 127 for October, as compared with 128 for September and 132 for August. Both food and industrial materials showed declines from the September level.

COST OF LIVING.—The official index number, on the base prices in gold, July, 1914=100, was 113 for October, showing no change from August and September. The only change noted was an advance in heat and light.

### Germany

COST OF LIVING.—The official index number of the cost of living, on the base 1913=100, was 153.5 for October, a decline of 0.1 per cent from September. Slight reductions in food and clothing were almost offset by advances in rent, heat and light and sundries. The changes in each group was less than one per cent.

### British India

WHOLESALE PRICES.—The index number of the Government of Bombay, on the base July, 1914=100, was 146 for August, an advance of one point over July. The only appreciable change was an advance of five points in raw cotton. Food was unchanged.

**COST OF LIVING.**—The official index number of the working class cost of living in Bombay, on the base July, 1914=100, was 149 for September which is the same as the figure for the previous month. The only change recorded in any of the main groups was a decline of one point in clothing.

#### South Africa

**COST OF LIVING.**—The official number of retail prices of food, fuel, light, rent and sundries, on the base 1910=1000, was 1425 for September, as compared with 1427 for August. This decline was due to a reduction in food prices.

#### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 96·3 for October, a decrease of 1·2 per cent from September. Both farm products and foods showed considerable declines, and small decreases were noted in hides and leather products, textile products, metals and their products and miscellaneous products. On the other hand, fuel and lighting was slightly higher, owing to increased prices for anthracite and bituminous coal; building materials and chemicals and drugs were also higher than the previous month, while house-furnishing goods were unchanged.

Bradstreet's index number (which is the sum total of the prices per pound of 96 articles of common consumption) was \$12·2367 at December 1, a decrease of 1·3 per cent

from the previous month, and the lowest monthly figure recorded since July 1, 1924. Declines were noted in provisions, fruits, hides and leather, textiles, metals, oils, naval stores, chemicals and drugs and miscellaneous products; on the other hand, breadstuffs and live stock advanced while coal and coke and building materials were unchanged.

Dun's index number, which is the estimated cost *per capita* of a year's supply of commodities in wholesale markets, was \$191·179 on November 1, a decrease of 0·5 per cent from October 1. With the exception of breadstuffs which increased considerably in price and of metals which showed a slight advance, all groups were lower than for the previous month.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 163·4 for October, as compared with 163·2 for September. Slight declines in food and housing were offset by advances in clothing, fuel and light and sundries.

The index number of the Massachusetts Special Commission on the Necessaries of Life, on the base 1913=100, was 161·7 for October, as compared with 161·9 for September. Slight advances in clothing, fuel and light and sundries were offset by a decline in food. The index number of the price of meat continued to decline, while butter, eggs and vegetables were higher. It is noted that the price of potatoes was nearly twice as much as in the same month last year.

## CENSUS OF INDUSTRY IN CANADA

### Manufactured Mineral and Chemical Products and Mining 1927-28

**T**HE Dominion Bureau of Statistics, under Statistics Act of 1918, takes annually by mail an industrial census of fisheries, mines, forestry and general manufactures in Canada. Summary statistics of the various manufacturing industries for the years 1926 and 1927 were given in the *LABOUR GAZETTE*, October, 1929, page 1182. The Bureau has recently compiled figures for manufactured mineral and chemical products and for the mining industry

for the year 1928. The accompanying tables give these figures by groups and sub-groups, together with the figures for the same industries for the year 1927. Tables for the mining industry giving figures back to 1925 were published in the *LABOUR GAZETTE*, November 1928, pages 1305-1309. In the year 1927 a new high record for mineral production in Canada was set, and the figures for 1928 show still further increases in all the various groups.

## COAL STATISTICS OF CANADA FOR 1928

ACCORDING to a bulletin entitled "Coal Statistics for Canada", compiled by the Dominion Bureau of Statistics, the Dominion's coal output during the calendar year 1928, of 17,564,293 tons established a new high record, exceeding that of 1927 by nearly 1 per cent. The principal increase in output was in Alberta where a 6 per cent advance in production was recorded. Greater tonnages were also produced in New Brunswick, Saskatchewan and British Columbia, while Nova Scotia's output was 4.7 per cent lower than in the preceding year.

The report states that tonnages lost in 1928 through temporary stoppages in work due to lack of orders, absenteeism, mine disability, car shortages, or other miscellaneous causes were estimated at 4,915,000 tons. It is also estimated that labour disputes at the coal mines in 1928 which involved 5,578 men with a consequent loss in working time of 86,921 days were the cause of a further loss of 272,453 tons.

Canadian coal shipped from the mine for domestic and industrial consumption averaged \$3.71 per ton, f.o.b. mine, in 1928, as compared with \$3.65 per ton in 1927. Lignite coal shipments averaged \$2.99 per ton; Saskatchewan producers receiving \$1.84 per ton, while Alberta mine operators obtained an average of \$3.15 per ton for this grade. Bituminous coal shipments brought \$3.96 per ton at the mine on the average; in the several provinces the average per ton receipts were as follows: Nova Scotia, \$4.04; New Brunswick, \$4.17; Alberta, \$3.52; and British Columbia, \$4.29. Shipments of sub-bituminous coal from Alberta mines averaged \$3.08 per ton.

Imports of anthracite and bituminous coal from Great Britain during 1928 totalled 670,612 tons as against 928,544 tons imported in the previous year. It is pointed out that a study of the anthracite importations reveals that the average quantity imported in each of the past five years amounts to about four million tons, and also that the records for the past two years show a very appreciable increase in tonnage imported from Great Britain. In 1927, imports of anthracite from the United States totalled 3,265,411 tons; from Great Britain, 788,235 tons; and from other countries, 9,973 tons, making a total of 4,063,619 tons. During 1928, anthracite imports included 3,203,231 tons from the United States, 526,467 tons from Great Britain, and 7,635 tons from Belgium, British South Africa, the Netherlands and Russia. Imports from Russia amounted to 6,204 tons, shipments of anthracite being received from this country in December, 1928, for the first time.

Steady employment throughout the year was afforded 14,429 employees in the coal mines in eastern Canada; and in the western Canada mines less than the usual summer seasonal decline in employment was observed. In 1928, the average number of employees in this industry was 30,256 as compared with 29,772 in the previous year. Salaries and wages advanced to a total of \$43,320,811 as compared with \$38,955,967 in 1927. Wage-earners as distinct from salaried employees, working in the coal mines of Canada in 1928 totalled 28,754; of these 6,522 worked on the surface and 22,232 underground. Surface men worked on an average 277 days and underground men, 241 days. Total man-day's work done during the year was 7,167,010; this number divided into the total wages paid showed an average daily earning power per man of \$5.57. In 1927, the computed average was \$5.03 and in 1926 the average was \$4.97.

Capital actually employed by the companies operating in the coal mining industry in Canada during 1928 was \$146,835,825.

In addition to the consumption of 34.4 million tons of coal, Canadian domestic and industrial concerns used large quantities of coke, manufactured and natural gas, fuel oil and electricity. Coke manufactured in 1928 amounted to 2,314,127 tons; sales totalled 951,401 tons; exports were 25,058 tons, while the imports of coke were recorded at 1,060,029 tons. The coal equivalent of the coke imported was 1,630,812 tons. Coke made available for consumption during the year amounted to 3,349,098 tons.

Manufactured gas is largely used for household purposes and in 1928 the sales of gas in Canada totalled 15,607,000 thousand cubic feet.

Natural gas consumed for domestic purposes amounted to 14,372,000 thousand cubic feet; industrial users utilized 7,576,000 thousand cubic feet. The domestic consumption was sufficient to displace approximately 575,000 tons of coal.

Fuel oil consumption in Canada for industrial and domestic purposes has increased very materially. In 1928, the total quantity of fuel oil made available for consumption in Canada was 429,410,281 imperial gallons. A survey of the Canadian acute fuel area, Ontario and Quebec, in 1926 showed a total distribution of over 28,000,000 imperial gallons of fuel oil indicating a possible displacement of 200,000 tons of coal.

The bulletin contains tabular summaries of coal statistics for each province as well as a chapter on the world production of coal.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

**Employee must Exercise Reasonable Care in Dangerous Work**

A farm labourer in the course of his employment and at the farmer's request, was splitting firewood in a shed. The accumulation of refuse on the floor did not leave sufficient clearance in the height of the cross beams in the roof and he was unable to swing his axe freely. The axe caught one of these beams, striking the workman's left wrist and severing the tendons, nerves and arteries of the outer half of the wrist. The employee, in addition to severe pain at the time, suffered a permanent disability in the left hand as a result of the accident. He brought action against his "master" in the Yale County Court for damages for injuries received in the course of his employment. The evidence showed that the plaintiff had worked for the farmer for four months that winter, and that he was familiar with the shed, having often cut firewood there without injury. The Court found that the shed was a safe working place for any man using reasonable care. "If there did not appear sufficient clearance in any particular spot chosen by the wood chopper in which to put down his chopping block, his clear common-sense duty was to move it and place it in such a position as to ensure his own safety.

"If the premises," the judgment continued, "could by any possible reasoning be considered dangerous or unsafe premises to work in (with which I do not agree) then I think the maxim *volenti non fit injuria* clearly applies. Plaintiff clearly knew all about the premises. I am quite aware of the fact that many decisions of the Courts in England and Canada hold that *volens* (willing) means more than *sciens* (knowing)—that knowledge of the danger is not sufficient—there must be established an agreement or consent express, or generally implied, to assume the risk on the part of the party who seeks redress for injuries received. I consider that this is a very clear case where the plaintiff, who has repeatedly used these premises for this purpose throughout a course of years should be held to be *volens*, to have impliedly consented to assume any risk in the use of these premises for this purpose.

"It seems to me that if I were to give effect to the plaintiff's contention I would be laying an altogether unheard of burden upon farmers, who might be in like stead with the defendant."

The action was dismissed, costs being allowed to the defendant should he so desire.

**Regulation of the Fish Canneries *ultra vires* of Dominion**

The Judicial Committee of the Privy Council recently sustained the judgment of the Supreme Court of Canada (LABOUR GAZETTE, November, 1928, page 1312) in the matter of the interpretation of section 7A and 18 of the Fisheries Act, 1914, and of the question whether or not the Dominion has power, under section 91 (12) of the British North America Act, to make regulations governing fish canneries.

The judgment of the Judicial Committee was delivered by Lord Tomlin. It was to the effect that section 7A of the Fisheries Act, which provides that "No one shall operate a fish cannery for commercial purposes without first obtaining an annual licence therefor from the Minister;" and section 18 of the Act, which provides that "No one shall operate a salmon cannery or salmon curing establishment in British Columbia for commercial purposes except under a licence from the Minister," are *ultra vires*, inasmuch as they confer powers upon the Minister in relation to matters which *prima facie* fall under the subject "Property and Civil Rights in the Province," and are not covered directly or incidentally by any of the subjects enumerated in section 91 of the British North America Act. Trade processes by which fish when caught are converted into a commodity suitable for the market are not within the scope of the subject expressed by the words "Sea Coast and Inland Fisheries" in section 91 of the British North America Act; and, in the absence of evidence establishing a necessary connection between effective fishery legislation and the imposition of licences on fish canneries and fish curing establishments, it cannot be said that such a licensing system is necessarily incidental to such legislation.

The judgment, further, confirmed the opinion of the Supreme Court of Canada in declaring that sections 14, 15 and 24 of the Special Fishery Regulations for the Province of British Columbia (made by the Governor in Council under the authority of section 45 of the Fisheries Act, 1914) respecting licences to fish (the validity of which was not attacked) do not give the Minister any discretion in granting or refusing a licence where it is applied for by a qualified person who submits a proper application and pays the prescribed fee.

### Unincorporated Union may not be sued, but its members liable

The Court of Appeal at Montreal rendered judgment on November 29 against nine members of the Amalgamated Clothing Workers of America, who were found jointly liable for damage caused during the strike in the clothing industry in 1926 to the Society Brand Clothes, Limited, Samuel Hart and Company, Limited, and the International Tailoring Company, Limited. The circumstances of the strike of 1926 were outlined in the *LABOUR GAZETTE*, August, 1926, and in following issues. The decision from which appeal was taken was outlined in the issue for March, 1929, page 359. The Superior Court had dismissed a petition for interlocutory injunction asked by the three companies against the union and those conducting the strike. The Court of Appeal reversed that ruling in so far as it affected the individuals against whom it was sought.

The Court of Appeal upheld the workers' right to strike but condemned the picketing methods used. It also denied the right of the companies to sue the Amalgamated Clothing Workers of America, as such, because it is not a juridical entity, but it upheld damage actions against several union organizers and workers who participated in the strike.

Three separate actions instituted by the companies were joined for proof and hearing. The following account of the case is based upon the notes of Mr. Justice W. L. Bond, who delivered judgment for the court.

In August, 1926, the Society Brand Clothes, Limited, Samuel Hart and Company, Limited, and the International Tailoring Company, Limited, applied for and obtained an interim injunction against the respondents and subsequently instituted proceeding against them to recover damages. On October 4, 1926, an interlocutory injunction was granted, but on March 4, 1929, this injunction was quashed and the action of the present appellants dismissed. The present appeal was taken from that judgment.

It was alleged originally that the Amalgamated Clothing Workers of America organized a strike among the appellants' employees, with the result that a number of employees left their work and failed to return on account of intimidation by the union. It

was also alleged that by means of organizing picketing, watching and besetting the appellants' places of business, and the homes of employees, the union intimidated employees and prevented them from working and also prevented new employees from reaching the factories. For this action the Society Brand asked \$15,000 damages, Samuel Hart and Company \$10,000, and the International Tailoring Company \$3,000 damages.

In defence, the union maintained its right to picket the factories of the appellants and countered with the allegation that if their was any intimidation it was on the side of the employers. At trial the union raised the additional plea that the Amalgamated Clothing Workers of America and its various branches named in the writ, were neither registered nor incorporated and were therefore incapable of being sued. The trial Judge found that the employers had established their case, but he dismissed the action on the ground that the union and its branches were beings unknown to law. The actions against the individual respondents were dismissed because the proof was inconclusive.

In appeal, the companies contended that the union, not having pleaded this defence either by preliminary plea or by plea to the merits, should not have been allowed to invoke it at trial.

Mr. Justice Bond, in his notes of judgment, considered the status of the Amalgamated Clothing Workers of America at great length. He held, in the first place, that the original defendants had the right to invoke this plea at any time during the process of the action, and he then considered the law relating to suits against associations of persons which are not legal entities, that is, which have no juridical personality and are therefore incapable of being sued as an organized body.

"The Amalgamated Clothing Workers of America, as such," he decided, "is not recognized as a corporation, or person, under any provision of the law of this province. I should further say that it is not authorized to appear under any provisions of Article 79 of the Code of Civil Procedure, as it is not authorized so to do by the Domestic Law of its domicile, and, finally, that in any event if it is subject to being sued, it can only be sued by means of an action directed against its president or treasurer as such. I would therefore concur, in so far as concerns this association, with the learned trial judge, and I would dismiss the appeal as against the association, without costs, there being no per-

son in whose favour costs could be awarded. *A fortiori* the appeal as against the local branches or subsidiaries must share the same fate."

Turning now to the action in so far as it relates to the individuals named in the original suit, His Lordship analyzed the means of defence raised: (1) that the appellants' employees had a right to strike; (2) that the strike was carried on in a peaceable and lawful manner. They also raised the contention that inasmuch as any actions which might be considered unlawful could be punished under the Criminal Code, the civil remedy was ousted.

The last point His Lordship disposed of by adopting the conclusions of Chief Justice Greenshields in the Rother case (34 K.B., p. 77), that the civil law will give a man a remedy to prevent destruction of his property, even though the Criminal Code covers specific acts leading to that damage.

As to the first right invoked, namely, the right to strike, that question His Lordship thought no longer open to debate, and he again adopted the conclusions of Chief Justice Greenshields who, in the Rother case, declared: "So far as the right to strike is concerned, I dispose of it for the purposes of this case by the mere statement that a man may work when and for whom he chooses, and for what wage and under what conditions as to him seem best, and, having the right to choose the work, he has an equal right to refuse or refrain from labouring, unless his refusal to work would detrimentally affect someone who is entitled by law to the whole or part of the product of his labour."

"But the right to strike thus conceded," Mr. Justice Bond continued, "does not confer upon them the right to prevent others from working who desire to do so. In the case now under consideration, in the exercise of their undoubted right to strike, the strikers exceeded all lawful limits, and by means of assaults, illegal picketing, and intimidation, during a period extending from approximately July 26 until the middle of September, prevented other employees from continuing in their lawful employment. As to picketing, this has long been recognized as being unlawful when it amounts to something more than 'peaceful picketing,' namely, intimidation by show of force, harassing and besetting those desirous of working, and watching their private residences.

"Ample evidence is to be found in the record to establish that picketing, in the present instance, far transcended the limits of

'peaceful picketing.' The strikers assembled continuously in the neighbourhood of the appellants' premises, in mobs of 200 or more. They likewise assembled in 'gangs' of 30, 40 and 50, and sometimes more. Intimidation was resorted to by threatening gestures in the large assemblages, in the vicinity of the working premises. . . . By no stretch of language can such a course of conduct be described as 'peaceful picketing' or the lawful exercise of the right to strike."

His Lordship here considered the degree of responsibility attributable to the individual respondents and found the following jointly liable: S. D. Genis, H. Schneid, J. Holtzman, Lionel Morris, Dominick Cecolicchio, David Sternschein, Victor Tatone alias Caruso, William Kromp and Charles O'Ransky. The case against Emile Deroeck and Albert alias Baptiste Fournier was dismissed.

The Society Brand Clothes, Limited were awarded \$6,286.02 damages against the men named, jointly and severally. Samuel Hart and Company, Limited, were awarded \$3,993.53 against Genis, Schneid and Holtzman, and the International Tailoring Company \$2,019.36 against the same three men. The judgment of the Superior Court quashing the interlocutory injunction was reversed and the interlocutory injunction restored as against the respondents named.

Justices Rivard and Hall dissented only to the extent that they would include the Amalgamated Clothing Workers of America in the condemnation.

#### **No Damages for Injuries Due to Employee's Negligence**

The assistant elevator operator at an hotel at Toronto was severely injured when, believing the elevator to be there, he opened the sliding door and fell to the bottom of the shaft. He brought action against the proprietors for personal injuries, alleging liability on their part (1) because of an improper and dangerous system of operation; (2) because of the defective condition of the elevator; and (3) because of the negligence of a fellow employee. The action was tried by Mr. Justice Raney without a jury.

There were two stacks of elevators at the hotel, three on each side of a corridor. No operator was assigned to No. 3 elevator, at which the accident occurred, as it was used by the starter or assistant starter only if no other elevator was at the ground floor. The evidence established that a practice had existed during the entire time of the

plaintiff's employment on the elevators—a period of 5 or 6 years—of giving each operator a relief for 15 minutes every two hours. When an operator went off duty, if he closed his door tight, it could not be readily opened from the outside, and the practice of the operators was to use a wooden wedge, placed on the floor next the door-jam, to keep the door from shutting tight, so that, when the operator returned at the end of his relief he could insert his fingers between the door and the jam and draw the door back. Then the operator picked up the wedge and put it on the edge in the elevator. This practice was described by one of the defendants' engineers as being unsafe, and he and other officials who were called as witnesses disclaimed any knowledge of it. The practice, however, having gone on so long, the defendants were affected with notice of it, and for the purposes of this case it was taken that the use of the wedges was with the knowledge of the defendants. On the other hand, the practice was well known to the plaintiff; and, whatever the incidental risks were, he assumed them, and it was held that he could not support a claim against the defendants on the basis that the practice was attended with danger to the operators of the elevators.

As to the allegation that the elevator was out of repair to the knowledge of the defendants at the time of the accident, Judge Raney found that there was no substantial disrepair such as might contribute to the accident.

On the third point raised by the plaintiff, as to the alleged negligence of a fellow employee, the judge commented as follows:—“Since the Workmen's Compensation Act was passed in 1914, a defence that an accident was due to the negligence of a fellow-servant is not a bar to recovery by the plaintiff (R.S.O.

1927, sec. 120); so that, if the action was due to the negligence of Johnson, the plaintiff will be entitled to succeed.” The evidence, in the judge's opinion, indicated that the real cause of the accident was the plaintiff's failure to remember instructions he had given Johnson, and to ascertain before opening the door that the elevator was there, “This,” the judgment stated, “he might have ascertained by looking through the glass in the door or by looking at the automatic indicator over the door.”

The plaintiff's action was dismissed, the judge remarking that it was unfortunate that he was not within the protection of the Workmen's Compensation Act.

#### **Bone-Setter Not Recognized by Compensation Board**

Mr. Robert Taschereau, chairman of the Workmen's Compensation Board of Quebec, in dealing with a case at Three Rivers in which the services of a bone setter had been engaged by the employer, strongly condemned the practice of employing non-professional men for the treatment of injured workmen. The workman in this case had sustained a broken leg in the course of his employment. The employer alleged that he had engaged a bone-setter instead of a professional medical man in deference to the expressed wish of the workman. The chairman stated that the duty rested on employers of labour of securing professional aid for their injured workmen and that they should not concern themselves with the workmen's personal prejudices.
