

WikiJournal of Science

Open access • Publication charge free • Public peer review

WikiJournals couple the rigour of academic peer review with the extreme reach of Wikipedia (where articles often get >100,000 views per year). This improves the encyclopedia's accuracy, and rewards expert contributors with citable, indexed publications.

 **Wikipedia-integrated**

Published articles have suitable material integrated into Wikipedia for massively increased reach and exposure

 **Public peer-review**

All article peer reviews are published and publicly accessible

 **Open Access**

All published articles are openly accessible under a free Creative Commons license

 **Free to publish**

WJM is a fully non-profit journal run by volunteer editors so has no publication charges of any kind

Research

Original research

on scientific topics with an educational focus can be submitted. Such papers follow the standard format of *Introduction, Method, Results, Discussion*. Supplementary data set publication is encouraged.

Focused reviews

describe a specific topic in detail, summarising and synthesising published works. Sections of these may be integrated in relevant, specialist Wikipedia articles.

Encyclopedic reviews

cover an entire topic and are written in an encyclopaedic tone. Published articles are subsequently copied to Wikipedia. Articles can also be expansions, improvements or re-writes of existing Wikipedia articles.

Figure reviews

are short reviews centred around a key figure. This can be a diagram, schematic, photograph, video or animation. The article gives the relevant background, explains the image and acts as an extended figure legend.

Review articles

Ideal for research professionals aiming to:

Achieve maximum outreach, exposure, and impact

Improve public understanding of science

Be rewarded for expert input to open access projects

Contribute to the world's most read encyclopedia
