COMPLETE
ENCYCLOPÆDIA OF MUSIC,

Elementary, Technical, Historical, Biographical,
Vocal, and Instrumental.

BY

JOHN W. MOORE.

TO WHICH IS ADDED AN

APPENDIX,

INTRODUCING MUSICAL EVENTS TO 1876.

BOSTON:

OLIVER DITSON & CO., 451 WASHINGTON STREET.

NEW YORK:
C. H. DITSON & CO.

CHICAGO:
LYON & HEALY.

PHILADELPHIA:
J. E. DITSON & CO.

DISTRICT OF VERMONT, to wit. Be it remembered, that on the 21st day of December, Anno Domini 1852, JOHN W. MOORE, of the said district, hath deposited in this office the title of a book, the title of which is in the words following, to wit: "Complete Encyclopædia of Music, Elementary, Technical, Historical, Biographical, Vocal, and Instrumental." By JOHN W. MOORE. The right whereof he claims as author. In conformity with an Act of Congress, entitled "An Act to Amend the several Acts respecting Copyrights."

EDWARD H. PRENTISS, Clerk of the District.

District Clerk's Office, }
Vermont District, to wit. }

I hereby certify the above to be a true copy of record.

EDWARD H. PRENTISS, Clerk.

PREFACE.

THE value of undertakings in the way of reference, and for the rapid acquirement of leading particulars concerning men more or less eminent for genius, skill, and science, being now universally acknowledged, little apology will be deemed necessary for extending the benefit to a department so interesting as that of Music. The utility of individual effort for the purpose of collecting and preserving whatever remains of the history of music cannot be questioned; for

“ Tradition is a meteor, which, if it once falls, can never be rekindled.”

Mankind are generally interested in the feelings and pursuits of man in different ages; hence arises a fondness for even those details which singly may be unworthy of regard, but which, in the aggregate, form the most valuable sources from which to learn the exact condition of a people. The author's motive in undertaking the drudgery of preparing the work now offered to the public was, that such a publication seemed to him very much needed by all persons in any way concerned in the practice of music, either vocally or upon instruments, as well as by all students of music and those who may be engaged in teaching. However prevalent the acquirement of the French, Italian, and German languages, among musical professors, artists, and amateurs, it is by no means universal; consequently a faithful conveyance of the most interesting information from foreign sources of the best authority, it is believed, will be welcome to many of those, to say nothing of readers and inquirers in general. The material from which this first volume has been compiled was gathered by much labor and expense: the labor has been almost incredible: such a vast amount of matter could not be collected in a day or a year: the gathering of it together has consumed the patient industry of many years. Much of the information was difficult to obtain and slow to collect, and, when obtained, had to be, at great expense, translated and rewritten. The reader will notice that a very large amount of information, not to be found in foreign compilations, in other languages, is here collected and methodized, not only from the formal works of Dr. Burney and Sir John Hawkins, but from all the lighter and more fugitive notices of French, German, English, and American musical progress which have been scattered abroad for many years past. Productions which are the result of labor more than of genius generally lie under two great disadvantages: the pleasure of composing is incomparably less, and the composition itself is held in far less estimation; and it is more than probable that, if the author of this volume had not possessed an earnest desire to become familiar with some of the hidden treasures of an art

always most dear to him, he would have shrunk from the task of collecting and arranging such a vast amount of historical and other matter as will here be found, and which will render these pages valuable hereafter as a book of reference.

In preparing the COMPLETE ENCYCLOPÆDIA OF MUSIC, I have endeavored, by examples selected from the best foreign authorities and the introduction of musical characters, to render the instructions familiar and easy to be comprehended; and I only regret that, in many instances, they could not be made more extensive, particularly the instructions for musical instruments. Limited as they are, however, it is confidently believed that no other work ever published can be found containing so much that is desirable to be known by every student of music. I have compressed the language generally; and yet I have retained all the important intelligence. Whatever regards melody and harmony, either vocal or instrumental; the invention, formation, powers, and characters of musical instruments; the nature of composition and performance in general; or of the music of particular ages and countries, Elementary, Technical, Historical, Biographical, Vocal, and Instrumental,—I have endeavored to define and elucidate: and should this volume of a work, executed on so comprehensive a plan, be found not wholly without omissions or entirely free from defects, the candid reader will, I trust, make due allowances for the difficulties inseparable from such an undertaking; and I am confident that the various and important subjects treated of will be an excuse for any small inaccuracies which may be noticed by those who are conversant with the subject. The elementary portions of the Encyclopædia will be found very fully explained and exemplified; the various musical terms are defined in such a manner as to appear plain to all. It has been so long the custom to use Italian and French words, indeed, whole phrases of the former, and Latin and German words, when describing or indicating the style, time, and occasional characteristics of a piece of music, that it would be a vain undertaking at this day to attempt any innovation on a system which has received the sanction of conventionalism, not only in this country, but all over the civilized world. I have in this work, however, as will be noticed, endeavored to make their order as lucid as possible and their meanings perfectly intelligible. It would require a tedious circumlocution of translation, were it attempted, to displace these old terms for vernacular ones. I have retained them in their original; for, their signification being once understood, their brevity will always be found to be convenient. In my collection of words and terms, as well as the various instruction in the different departments, without confining myself to the theory and practice of any time, I have endeavored to include whatever might be necessary to the reading of the treatises of the old masters, and even to the understanding of the systems and practice of the ancient as well as the later and more modern schools of music. There will be found here collected and alphabetically arranged a large amount of historical matter, besides a summary of the general history of music from the earliest ages, never before published in this country. I have, at great expense, caused to be translated important portions of many foreign musical publications, and have also succeeded in enriching the work by the introduction of a large number of ORIGINAL MEMOIRS of eminent living musicians. The treatises upon Harmony, Thorough Bass, and Wind and Stringed Instruments are full and comprehensive; and I have given scales for many, and descriptions of every known musical instrument, with concise directions for the practice of such as are in common use. I have personally devoted more than *seventeen years* to the one object of making this work complete, during which time every attainable authority has been consulted. I have availed myself of extracts from the works of Gerber, Choron, Fayolle, Orloff, Burney, Hawkins, Hogarth, Calcott, Gardiner, Busby, Hamilton, Schilling, Fétis, and other distinguished authors. I had, in addition, much assistance from the

late Professor Henry E. Moore, and have been materially aided by John S. Dwight, Esq., editor of Dwight's Musical Journal, and by Richard Storrs Willis, Esq., editor of the New York Musical Times, from whose valuable journals I have gained much information not elsewhere to be found. I am therefore confident that this Encyclopædia will be found to be as perfect and reliable as the materials I have been so many years gathering and my own patient industry can make it.

The COMPLETE ENCYCLOPÆDIA OF MUSIC, now offered to the public, enters an unoccupied field, no such work having been compiled before either in this country or in England, and nothing like it existing in the English language excepting a small Lexicon published by the author of this work in 1845. In all the foreign musical works which have come to my knowledge there is a neglect and almost supercilious disregard of modern musical pretensions, which have led me to believe that a correct and modest record of them (in this, and another similar volume which is to follow at a future day) may assist to preserve much historical and biographical information which but for this effort might be forever lost.

The better music is known and understood, the more it will be valued and esteemed; and a love of the higher schools of musical composition is one of the surest tests of a refined and elegant state of society. The reading and study of music and the use of musical instruments have become so general among all classes of people in this country that books treating of the subject begin to have a ready sale. Musical progress in the United States, since 1850, has been very extraordinary, and has more than kept pace with the other arts and sciences. Music propagates itself with great rapidity: from the pleasure it gives, and from the facilities afforded in our day for acquiring a knowledge of it in a country so prosperous as ours, a country the great mass of whose people can afford to hear the performances of the greatest musical artists of the age and can afford the best musical education for their families, the rapid extension of the art may be anticipated. The great European vocalists and artists who have followed each other to this country in quick succession have produced a remarkable effect in raising the standard of musical taste and spreading the science and practice of music over the land. Critics talk of the want of a national music in America: a national music is the spontaneous growth of ages of insulated life and feeling. It is impossible that American music can do more than reproduce the music of other ages and nations. We are too open to the world, too receptive of all influences from abroad, too much a nation made up of others to possess a music of our own. We are for a long time yet to remain in the position of learners; let us not, then, fear the charge of imitation; it is too stale a charge to be pungent. We must imitate while we continue in a state of pupilage.

Man, distinguished from the inferior parts of creation by the divine gift of reason, exhibits no greater evidence of that faculty than by the seeds of science which the Creator has implanted in his nature and the power which he possesses to cultivate and bring them to perfection; but of all the various arts and sciences which he is qualified to prosecute, no one appears more congenial to, no one more intimately interwoven with, the constitution of his frame than that of music. Vocal music, indeed, seems to have been coeval with human nature itself. The invention of musical instruments must, consequently, have taken place at a very early period of the world; though the different epochs of their introduction and improvement, as well as the gradation by which the harmonic laws arrived at their first systematic order and regulation, cannot perhaps be accurately ascertained by modern inquiry. It is more than probable that he who first tuned his voice to song little thought of the marvels of music or dreamed to what perfection the rules of sound would one day be brought. He used the power which God had given him, no

stopped to inquire into the nature or construction of the tones which he almost involuntarily produced, and which lightened his labor while they made glad his heart. Music is the finest expression of life, from its lowest actual up to its highest ideal phases. It is the most central, universal mode of utterance which art can attain; it is vague, because the thoughts and feelings it aims to express partake of the infinite. It represents nothing with the graphic outline of the pencil, because it strives to paint what no outlines can take in: it is the heart's prayer, which cannot embody itself so fully as in the language of tones and harmonies: it seems like the soul's effort to speak its mother tongue in a strange land, a yearning for a completer fulfilment of its destiny, an attempt to paint on the blank canvas of the present, with color-like melodies and tint-like harmonies, its ideal, Claude-like reminiscences of the scenery of its native clime. Never do such visions of perfect life come to us as when listening to the highest musical compositions. These point to a real spiritual fountain of which they are the streams.

In December, 1852, I addressed a circular letter to a large number of American as well as foreign musicians, requesting answers to certain questions therein propounded. I took that method of reaching such as I could not personally visit, because I was desirous of extending my work so as to cover the whole ground, not only in relation to deceased merit, but to enrich it by obtaining *original notices* of all the most eminent living professors. But modesty on the part of those addressed, and other obstacles incident to the nature of the autobiographic portion of the publication, rendered this part of my plan both critical and difficult. Some consented at once to answer the few questions I had taken the liberty of asking; and the information thus obtained can scarcely fail of being of historical importance as well as grateful to the intelligent part of the public. But of the many addressed, comparatively few have as yet given me the information in regard to themselves desired, and this will consequently be considered a sufficient apology to any and all who may look in vain for some notice of themselves or their works in these pages; though, under the head of Psalmody, mention is made of nearly all American musicians with whose history I have been made familiar. In another volume, wherein I propose to take up many subjects but slightly treated of in this, (owing to the want of space,) an effort will be made to collect sketches of such musicians as I have been unable to obtain as yet.

Those who examine this volume will find it presents a view of the whole subject of music, Elementary, Technical, Historical, Biographical, Vocal, and Instrumental, each article being arranged under appropriate heads in alphabetical order. It will be found as complete as any work of its size could be made. The elements of music, I believe, are sufficiently explained and exemplified. I have given definitions and explanations of more than *five thousand technical terms*, in connection with much historical and valuable information. I have given a complete and full, though not elaborate, history of the science of music from the earliest time to the present; a very full and comprehensive musical biography, embracing a succinct memoir of more than *four thousand* distinguished musical celebrities and composers, bringing many of the notices down to 1854. I have endeavored to present all the necessary information which may be required by those who wish to arrive at eminence as vocalists or musicians; and I have given a description of, or directions how to use, all the known musical instruments, with more than *two hundred* short yet important essays upon various subjects connected with the art and science of music, among which will be found treatises upon harmony, thorough bass, modulation, counterpoint, composition, writing for an orchestra, writing for wind and stringed instruments, and almost every subject to which the attention of the musical student should be directed.

In all ages, ancient and modern, music has had its inspired votaries. But it is only

within the last few centuries, as we all know, that it has attained to any thing like perfection as a science and an art. How the plant, which for so many ages looked so dry, and dead, and unpromising, at length bloomed out in such fragrant and brilliant completeness, is alike known to all. It is a privilege of priceless value that we live in an age through which are transmitted the inspirations of Palestrina, Bach, Handel, Haydn, Mozart, Beethoven, Weber, Schubert, Mendelssohn, Rossini, Meyerbeer, Auber, and the long line of masters. It is a great thing to live after these men—men whose lives were all one burning feeling, one overmastering idea, one deep yearning after a perfect expression of the beautiful, one long series of grand, unclassified psychological facts. In their still world of dreams, what miracles did the power of art work out from their intense conceptions—what skilful choice and marshalling of means for producing their intended effects! and what patient and intense labor at composition!

The lives of these men are like insulated points in history, only to be well comprehended by those who are somewhat similarly organized. But their influence is wider than we can imagine. A great musical composer is a central power, who radiates a finer sense of beauty, by little and little, into the outmost and least-delicately organized souls. He is but a poet, whose language is more interior and universal than those who sing in articulate words. Where we stop short on the threshold of the holy of holies and are unable to penetrate by reason of the imperfection of human speech, the high priest of harmony enters and utters to the world's ear the deep, soul-entrancing oracles of God. The curse of Babel falls not on him. He speaks and writes in the native tongue of the angels, and the music is caught up and repeated with joy and acclamation in the isles beyond the sea. His style becomes the style of his age. We sing variations—imitations of his themes. These in turn are caught up and repeated, and in other forms of melody and combinations of harmony they again burst forth upon the ear. And thus they go circling through lands, flashing from soul to soul: the air is pervaded by a musical spirit, the ear is more delicately tuned, the soul more enlarged and spiritualized; and beauty, which is God's primal benediction to his children, is celebrated with pious joy and reverence.

Nature, through all her depths, is full of music—varied in its tones and rich in its melody. There is a music in the stillness of the twilight hour; in the voices of the balmy breeze, as it sighs amid the stirring leaves of the starlit grove or sleeps upon the calm bosom of the reposing waters; in the bubbling of the inland fountain and the thunderings of the foaming cataract; in the ripples of the mountain rill and the majestic voice of the storm-stirred sea. There is music in the glad symphonies of the joyous songsters of the grove beneath and the mutterings of the pealing thunders above; in heaven, on earth; in the outspread skies and the invisible air; in the solitary dell and on the mountain's cloud-veiled top, where human footsteps have never left an echo; in the deepest cells of the passion-stirred heart and the inanimate depths of the material world; in the dim rays of earth and the beams of those celestial lights which gem the high firmament and light the angels to their evening orisons; in the tones of woman's voice on earth and the devotions of the pure spirits of a better land; in all, through all, and over all, and forever vibrating the rich music of universal harmony and the deep tones of undying melody. Thousands of invisible harps are pouring their united melody through the depths of air and earth; millions of archangels touch their heaven-strung lyres and send celestial harmony through the vast halls of the temple of the living God up to the throne of the dread eternal One. It is the air of earth; it is the atmosphere of heaven. The unbounded universe is one sleepless lyre, whose chords of love, and hope, and purity, and peace are fanned into a dreamy and mystic melody by the breath of the invisible God.

PREFACE.

If this volume of the Complete Encyclopædia of Music shall conduce to the diffusion of musical knowledge; if it shall serve to make known the history of the stars which have appeared and lighted the musieal hemisphere; if it shall animate any to copy the virtues and reject the vices of those who have gone before us, — I shall receive the most gratifying reward for the days and years of laborious toil which I have devoted to this one undertaking.

JOHN W. MOORE.

BELLOWS FALLS, *Vermont*, 1854

COMPLETE ENCYCLOPÆDIA OF MUSIC.

A.

A is the nominal of the sixth note in the natural diatonic scale, or gamut — the sixth diatonic step of the first or lowest octave of the modern scale — to which Guido (ARETINUS, or ARETINA, called *Guido* and *Guidone*) originally applied the monosyllable LA. A is the sixth; a indicates the same step in the second octave. As the Italic capital A is used in the first instance, and the small Italic a in the next, the former is called the *large* or *great* octave, the latter the *small* octave. The mark which represents the same note in the third octave is ā, with one line above it, and ā̄ with two lines above it, representing the same note in the fourth octave. These last, being designated by lines, are named the *one-lined octave* and the *two-lined octave*, and so on, because the number of lines denotes the number of octaves above the *small* or second octave. A is also the name of one of the two natural modes, and is the *open note* of the second string of the violin, and the note by which the other strings of that instrument are tuned and regulated. A is likewise the name of that note in our system which answers to the lowest sound used by the ancient Greeks; that is, the *proslambanomenos* of the Hyperdorian, or deepest Greek mode, which note we now place on the first space in the bass clef. A (the Italian A, sounded broad, as in *father*) is naturally the first letter, because it represents the first vocal sound naturally formed by the human organs; being the sound uttered with the mere opening of the mouth, without constraint, and without any effort to alter the natural position or configuration of the lips. A is placed by modern musicians on the first space of the bass staff, or on the first space with the F clef, thus: —

A was long the lowest sound known. The letter A has for ages been used as the name of a tone — it was so used by Aristoxenus, 340 years before Christ. It is the name of the first string of the violoncello, by which its other strings are tuned; and the various instruments of an orchestra, or band, are generally tuned from this letter. The lowest string of the double bass viol

is generally tuned to A; and the tuning fork and pitch pipe are generally keyed on A. This letter is called by all nations, in solmization, LA, thus: —

A not only represents the first natural vocal sound, the sound first made by infants, but it is the first letter of the alphabet in most of the known languages of the earth; in the Ethiopic, however, it is the *thirteenth*, and in the Russian, the *tenth*. A, or the *sixth* note in our system, it will be observed, corresponds with the *proslambanomenos*, or lowest sound, of the Greek scale. The more ancient Greek scales formed their septenaries from the letter A; and the letters below A in the bass were made double, and those above the staff with the G clef were termed *in alt*; but the septenaries being reckoned from A, the limits of the bass, tenor, and treble were not accurately defined. This letter has in the English language, regularly, only two sounds peculiar to itself, a short and a long one; all other sounds of the letter being irregular and various, according to its combination with other letters. A, as the mark of a vocal sound, is the most simple, and that which the dumb are most easily taught to utter. To pronounce it clearly, we need only to open the mouth wider than for any other sound, and then emit the air from our lungs. In music, A has several distinct and different meanings: if any numerical figure is added to the letter A, when prefixed to a vocal composition, it denotes the number of voices for which the piece is intended; as, A 2, for two voices; A 3, for three voices, &c. It occurs in both vocal and instrumental music, technically, in a great many different connections; as, a *tempo*, in time; a *due*, for two voices; a *piacere*, at pleasure, &c. From the earliest ages, the tones of music were designated by the letters of the alphabet, and the lowest or first tone of the ancient Greek scale was called A; and this tone continued to be the lowest or most grave tone known till about the year 900, when Guido Aretinus added another note below, which he called *hypo-proslambanomenos*, thus extending the scale down to G in our present gamut. From this time, or from the time in which Guide

flourished as a popular musician and teacher, or about the eleventh century, A, of course, ceased to be the lowest tone. Since the time of Guido, greater changes have taken place in the arrangement of the tones, and C is now the lowest note, thus establishing our present system of naming the seven principal tones, and making A the sixth degree of the diatonic scale. The Greeks used all the letters of the alphabet, making in all 1620 different musical characters, (an endless task, almost, to learn them;) but we use only seven, the seven first letters of the alphabet, making A the sixth letter, and submediant in the natural scale, thus:—

A. An Italian preposition, signifying *in, for, at, with, &c.*

A ABOVE G GAMUT. That A, or that note, which is one tone higher than G gamut.

A ABOVE THE BASS CLEF NOTE. That A, or that note, which is a third higher than the bass clef note.

A ABOVE THE TREBLE CLEF NOTE. That A, or that note, which is one note higher than the treble clef note.

AANES. One of the barbarous terms applied by the modern Greeks to the modes and tones.

AARON, Abbot of St. Martin, at Cologue, was born in Scotland. He wrote a work on the utility and manner of singing church music; and he introduced the Gregorian night chant from Italy into Germany. He died in 1052.

AARON, PIETRO, a Florentine of the order of Jerusalem, and canon of Rimini, was a voluminous writer on music. The most considerable of his writings is "*Il Toscanello della Musica,*" 1523, 1529, 1539—a rare and important work. He gave in it a decalogue, or ten precepts for counterpoint, in honor, it is said, of the ten commandments of God; and six precepts of less importance, in honor of the six commandments of the church. His works became particularly useful, from being for the most part written in Italian; whereas those of almost all the preceding musical writers were in the Latin language. Pietro Aaron gives a list of such extraordinary performers as were able to sing from notes, "*cantare a libro,*" by which we may suppose that the art was then in its infancy.

ABACO, EVARISTO FELICE DALL'. A violinist and composer, born at Verona. In the year 1726, he was musician to the court of Maximilian Emanuel.

ABACO, BARON, born at Verona, was an amateur performer on the violoncello and composer for that instrument. One of his pieces is dated 1748.

ABACUS, (L.) or KEY-BOARD. An instrument of ancient invention, for dividing the intervals of the octave.

ABACUS ET PALMULÆ. (L.) The name given to the machinery by which the strings of the ancient polyplectrum were struck.

ABACUS HARMONICUS. (L.) The structure and disposition of the keys of a musical instrument.

A BALLATA. (I. *A, prep., according to, and ballata, the ballad.*) To be performed in the bal-

lad style. A song, duet, &c., is said to be composed a *ballata* when its general construction resembles that of a ballad. The term also applies to a chorus that is repeated at the end of each verse of a song: thus the chorus "Rule, Britannia, rule the waves," which concludes each verse of an English national song, "When Britain first at Heaven's command," is a chorus a *ballata*. The ballad has less musical pretension than the air, and the words of a ballad claim our attention quite as much as the tune. With ordinary listeners, this species of song is more generally felt and understood than any other. Songs have at all times afforded amusement and consolation to mankind. Every passion of the human breast has been vented in song. Before music is cultivated as an art, every country has its national songs, which enter largely into all their amusements, and are sung with feeling by exiles and wanderers from their native land. Every profession and trade has its song; the shepherd, the reaper, the miller, the weaver, the smith; also the nurse and lover. For simplicity and expression, perhaps there are no ballads more genuine than those of the Scotch.

A BATTUTA. (L.) In exact beat—like the pendulum of a clock, in true time. BY BEATING. An expression generally employed after a break in the time of any piece, by a recitative, or *cantabile ad libitum*; to apprise the performer that the measure is to be resumed, and the time beaten, as before.

ABBANDONE, ABBANDONO, CON. (L.) With self-abandonment; despondingly.

ABBASSAMENTO. (L. n. *A falling or depression*.) To pass under. It is used in music written for the harpsichord piano, and organ, and shows that, when playing very rapid passages sometimes one hand passes over or under the other.

ABBASSAMENTO DI MANO. (L. *Falling of the hand*.) The downward movement of the hand in beating the time of any piece of music.

ABBASSAMENTO DI VOCE. (L. *Falling of the voice*.) The fall or change of the voice from tenor to bass.

ABBATINI, ANTONIO MARIA, was born at Tiferno, in the year 1605. He was chapel master of the churches of St. John of Lateran, and of Santa Maria Maggiore at Rome. He wrote many motets, the scientific construction of which procured him a well-merited reputation. He was the master of the celebrated Abbé Steghani, of the Venetian school.

ABBREVIATION. A stroke which, placed over or under a note, divides it into quavers; if there be only one; if two, into semiquavers; if three, into demisemiquavers. Persons who are accustomed to reading music which has been written or copied with the pen, will perhaps have considered abbreviations, as they frequently occur in such music, as a kind of SHORT HAND, as it is the art of reducing something to a smaller compass, and occurs alike in music and in speech. The marks of abbreviation are generally written with strokes, thus: \equiv , which are representatives of ties, and signify that as many notes are to be played as tied notes as are contained in the written note.

ABEILLE, LOUIS, was born in the year 1765, it is believed, at Bayreuth. In 1802 he was appointed musician to the Duke of Wurtemberg, at Stuttgart. He composed many esteemed works, both vocal and instrumental, between the years 1788 and 1810.

ABBREVIATIONS are letters used for words; a, A., Alto; Ped., B. C., Basso Continuo; Leg., Legato; V., Violin; M. F., Mezzo Forte, &c.; but we shall notice each abbreviation under its proper head. There are certain abbreviations which, although of modern introduction, are not in general use. This mark, —, set against a note, divides it into quavers; this, ==, divides it into semiquavers; and this, ≡, into demisemiquavers. This mark, —, by itself, implies that the quavers preceding it in the same bar are to be repeated; this, ==, that the semiquavers preceding it are to be repeated; and this, ≡, that the demisemiquavers preceding it are to be repeated. The Italian word *segue*, set against any of these abbreviations, signifies a repetition of the same notes, or passage. Abbreviations were invented to save time and space; many of them are indeterminate and uncertain, on which account manuscripts of others cannot always be read with ease, except by practised musicians. The immortal Handel was the first who used a short hand in musical notation. It may easily be conceived as the result of his rapid imagination, which could not stop to write out its fluent fancies by the ordinary method.

EXAMPLES OF ABBREVIATIONS.

These abbreviations form a musical brachygraphy, or short hand, highly useful both to the composer and copyist, and are now so generally adopted, wherever admissible, as to have become a necessary object of attention to the pupil. When the same note or similar passages are to be repeated, much time is saved to the composer or copyist by the use of abbreviations. A single stroke, over or under a semibreve, or through the stem of a minim or crotchet, divides them into quavers; a double stroke, into semiquavers; and a triple stroke into demisemiquavers. See examples, here and above.

These passages, in Italian music, had formerly the word *erome*, (quavers,) or *semi-erome*, (semiquavers,) annexed to them. At present we often use the term *segue* to signify that we must perform the following notes in the manner in which

the first are marked. Another kind of abbreviation is very frequently used in modern music, viz. grouping the stems of minims like those of quavers, thus:—

ANOTHER STYLE OF WRITING.

Most of these abbreviations are exclusively confined to orchestral and band music; but every performer and student of music should be made acquainted with them, for they are frequently made use of at the present time, as well in piano-forte music as in the accompaniments to vocal music.

ABELLE, a French composer. In the year 1710, he published, at Paris, "*Recueil d'Airs sérieux et à boire*," (Collection of Serious and Drinking Airs.)

ABELARD, PETER, famous for his learning and for his love of Heloise, was distinguished for his musical talent. He died 1142, aged 63.

ABEL, LEOPOLD AUGUSTUS, a violin pupil of Beuda, was born at Coethen in 1720. He was musician to several German princes.

ABEL, CHARLES FREDERIC, youngest brother of Leopold Augustus Abel, was born at Coethen, and was a celebrated composer as well as performer of music. During nearly ten years, he was in the band of the electoral King of Poland, at Dresden, at the time that the celebrated Hasse was chapel master. Either from the calamities of war having reduced their court to a close economy, or, as some say, by reason of a dispute with Hasse, Abel quitted Dresden about the year 1760, with only three dollars in his pocket, and proceeded to the next little German capital, where his talents procured him a temporary supply of money. The following year he made his way to England, where he soon obtained notice and reward. He was first patronized by the Duke of York, and, on the formation of Queen Charlotte's band, was appointed chamber musician to her majesty, with a salary of £200 per annum. In 1763, in conjunction with John Christian Bach, he established a weekly concert, by subscription, which was well supported. Abel performed on several instruments; but that to which he chiefly attached himself was the viol da gamba, now hardly ever used. He remained in London till 1783, when the desire of seeing his brother and revisiting his native country led him again into Germany. It was during this journey, that notwithstanding his advanced age, he gave, at Berlin and Ludwigslust, the most striking proofs of his talent. King Frederic William, then prince royal of Prussia, on hearing his performance on the viol da gamba, presented him with a valuable

snuff box and a hundred pieces of gold. A few years after this, the derangement of his affairs obliged him to remain for some time at Paris, whence he subsequently returned to London. Abel was a man who well knew the world, and kept on tolerable terms with society, though a natural irascibility and disposition to say strong things sometimes rendered him overbearing and insolent in company. His greatest failing was a love of the bottle, in which he indulged to a degree that probably shortened his life. He died in London in 1787, after remaining three days in a lethargic state, without experiencing any pain. Dr. Burney gives the following character of his compositions and performance: "His compositions were easy and elegantly simple, for he used to say, 'I do not choose to be always struggling with difficulties and playing with all my might. I make my pieces difficult whenever I please, according to my disposition and that of my audience.' Yet in nothing was he so superior to himself, and to other musicians, as in writing and playing adagios, in which the most pleasing, yet learned modulation, the richest harmony, and the most elegant and polished melody, were all expressed with such feeling, taste, and science, that no musical production or performance with which I was then acquainted seemed to approach nearer perfection. The knowledge Abel had acquired in Germany of every part of musical science rendered him the umpire of all musical controversies, and caused him to be consulted on many difficult points. His concertos and other pieces were very popular, and were frequently played on public occasions. The taste and science of Abel were rather greater than his invention, so that some of his latter productions, compared with those of younger composers, appeared somewhat languid and monotonous; yet he preserved a high reputation in the profession till his death." Abel's published works consist chiefly of overtures, concertos, quartets, and trios. His adagios in score, and for the piano-forte, have been long published separately in London; and a new edition of them has been lately edited by Mr. Cramer, who was his pupil in counterpoint, previously to studying under Clementi.

In 1787, the admirers of the then modern school lost the great abilities of Abel, who was the only skilful performer on the viol da gamba. This instrument, the then wiry tone of which even the always pleasing and frequently learned modulations of Abel could scarcely render attractive, was practised with considerable success by one M. Lidl, who obtained upon it a facile execution, and just rendered bearable its nasal and ungrateful powers. It is perfectly unaccountable, but not the less true, that Abel's ear, finely tuned as it was known to have been, was partial to the crude, grating tones of this instrument. The late Dr. Walcott says, that at the table of a certain nobleman, Abel and himself were a part of a numerous company, in which, the various qualities of musical instruments coming under discussion, each guest was requested by the nobleman to name his favorite. One said he preferred the variety and spirit of the violin; another was partial to the generous manliness of the violoncello; a third advocated the majesty of the organ; a fourth was most sensible to the mellow murmurings of the hautboy; and a fifth to the thrilling sweetness of the flute; when Abel, finding that no one men-

tioned the viol da gamba, disdainfully rose from his seat, and, *sans ceremonie*, quitted the room.

ABELL, JOHN. An English musician, belonging to the Chapel Royal of Charles II. He was a good vocalist, celebrated for a fine counter-tenor voice, and for his skill on the lute. He preserved the natural tone of his voice to extreme old age. In 1701, he published a collection of songs in several languages, which he dedicated to the king. He continued in the chapel till the revolution, when he was discharged as being a Papist. Upon this he went abroad, and at Warsaw met with a very extraordinary adventure. He was sent for to court; but evading to go by some slight excuse, was commanded to attend. At the palace, he was seated in a chair, in the middle of a spacious hall, and suddenly drawn up to a great height, when the king and his attendants appeared in a gallery opposite to him. At the same instant, a number of wild bears were turned in, when the king bade him choose, whether he would sing or be let down among the bears. Abel chose to sing, and declared afterwards that he never sang so well in his life. He afterwards sang in Holland, and other places in Germany, where he acquired considerable wealth, but squandered away his money, and was afterwards obliged to travel about the country on foot, with his lute slung on his back. In 1701 he published, in London, a collection of songs in several languages. There are two songs by this composer, in the fourth volume of "Pills to purge Melancholy."

ABEL, THOMAS, taught music and grammar to Queen Catharine, wife of Henry VIII. Having written a treatise "*De non dissolvendo Henrici et Catharine Matrimonio,*" he was hanged and quartered, July 30, 1550.

ABEL, AMOR HENRY, chamber musician at Hanover, was born in Westphalia, and published a work in 1674, at Frankfurt on the Maine, entitled "*Erstlinge musicalische Blumen,*" (Early Spring Flowers.)

ABEL, J. E., was born in 1795, at Ludwigslust, the residence of the Grand Duke of Mecklenburg-Schwerin, where his father, a nephew of C. F. Abel, resided upwards of fifty years, being a member of the household band of that prince. J. E. Abel was, from his earliest infancy, together with an elder brother, destined for the profession of music, and enjoyed, to that effect, the most zealous instruction from his father, who was a good violinist. Abel began his studies on the piano and violin when he was but five years old. During a period of four years, six hours daily were devoted to the practice of both instruments; and his father used to excite the youthful ambition of his sons by frequently holding out to them the view of their granduncle's fame. At the expiration of the above period, J. E. Abel, being then nine years old, played with his brother, before a party of able judges, who were so surprised at the attainments of the children, that several of them voluntarily offered their professional assistance towards the further education of the young performers. After receiving the promised instructions from these professors (some of whom were eminent) during the space of about two years, the sons commenced a musical excursion with their father, who intended that they should perform in public, in different parts of the north

of Germany. This plan, however, from various invidious and other motives, did not succeed in a pecuniary point of view; which so disappointed the father, that he decided to change the profession of his sons, destining J. E. Abel for the church, and his brother for mercantile life. In the course of his studies for divinity, J. E. Abel always found time, however, to persevere in his musical pursuits: he now changed the violin for the violoncello, and took lessons of Xavier Himmer, first violoncellist of the grand duke's household band, and a very superior performer. When seventeen years of age, J. E. Abel was offered the situation of instructor in the fine arts to the children of a German count, for which occupation he was thought more particularly qualified, as he painted well in *minia ure*. Here he remained during three years, when he was suddenly seized with a most painful disease, (the *tic douloureux*), that defied the power of medicine during two years, and at length made him resolve to migrate to a warmer climate, which he had a good opportunity of doing, as his brother had previously quitted his commercial pursuits, and established himself in the musical profession at Savannah, Ga., in the United States. In the year 1819, having received a pressing invitation from his brother, he embarked at Hamburg for America, and had the happiness to find his disease give way on the very first touch of the American soil. After a few months' residence, however, at Savannah, the climate brought on so complete a constitutional decay, that he was again obliged to quit America, and embarked for Liverpool, where he arrived in a state of great weakness, in September, 1820. He next proceeded to London, where, by a singular coincidence, he was introduced to J. B. Cramer, while this great master was just correcting the proofs of a publication in grateful memory of C. F. Abel, and as a vindication of his early studies in counterpoint under that master. That, under such circumstances, the nephew of an honored master should come more strongly recommended to such a pupil, and that he consequently met the kindest reception from Mr. Cramer, will appear natural to every one who knows the character for generosity borne by the great pianist. In short, the instructive guidance and continued friendly patronage of J. B. Cramer and Graef (another celebrated pupil of C. J. Abel) afforded J. E. Abel the first inducement to, and sure foundation of, his professional life in London, as teacher of the piano and violoncello. J. E. Abel has published a few compositions for the piano.

ABELTSHAUSER. A composer of twelve quatuors for flutes, &c., published at Mentz 1822. He has also written quatuors for four horns.

A BENEPLACITO. (I.) At your own pleasure; just as you please. This mark leaves a great deal to the judgment of the musician, who takes the music of the composer into his own hands.

ABLITA. (I.) Skill; force of understanding.

ABINGDON, LORD, was an excellent performer on the flute, and composed for that instrument. He is said to have expended much money in fruitless attempts to support Bach and Abel's concerts. After the loss of £1600, his lordship declined to volunteer any further pecuniary guaranty, and the profession determined to try their fortune in carrying them on. From 1785 to 1793,

the performances continued to flourish; but the opposition established by Salomon, and the increasing taste for vocal music, put an end to the efforts of the professors in that year. This musician was piqued at being left out of the professional concerts, and hearing that Haydn had been engaged by Lord Abingdon, and that he was disappointed by the termination of his lordship's management, Salomon brought Haydn to London. It is to this circumstance that the world probably owes those symphonies which are among the finest monuments of instrumental art. Haydn was engaged not only to compose, but to direct the performance of his productions; and thus he was roused by every motive, and excited by the highest instances of talent that could be engaged in his service.

ABOS, SYR. Chapel-master at the conservatory of *La Pieta*, at Naples, about the year 1760. He composed the Opera of *Tito Manlio*, the favorite airs of which were published in London, by Walsh, about the year 1755. He was a pupil of Alessandro Searlatti.

ABRAHAM, teacher of the clarinet at Paris, composed a great many airs for his instrument, about the year 1788. He also published a method for the bassoon. He died in 1805.

ABRAMS, MISS. A celebrated English singer and composer of songs. The air of "Crazy Jane" is the most popular of her compositions. Her sister, THEODOSIA ABRAMS, possessed a remarkably fine mezzo-soprano voice.

ABRIDGMENT. Diminution, contraction, reduction; collecting in a small compass the chief parts of an overture or oratorio. To abridge will require a thorough knowledge of the subject, with tact to seize upon the prominent points, and reproduce them clearly and succinctly.

ABSATZ. (G.) A section or musical sentence.

ABT, FRANZ. One of the most popular of the living song writers in Germany.

ABWECHSELND. (G.) Alternating; as, *mit abwechselnden Manuskripten*, alternately from the great to the choir organ.

ACADEMIA MUSICALE. (I.) Musical academy. A term long since applied by the Italians to certain musical meetings, held under a directing leader, for the purpose of amusement and practical improvement. The earliest *Accademia Musicale* of which we have any account was instituted at Vincenza about the year 1500, and called the *Accademia degli Filarmonici*, (Academy of the Philharmonies, or lovers of harmony.)

ACADEMIE ROYALE. (F.) An academy of music instituted in the year 1669, at Paris by the Sieur Perrin, under a patent granted by Louis XIV., for the public performance of musical dramas, but which patent Louis soon after revoked, ordering another to be made out in favor of Lulli, who was judged more capable of conducting the design.

ACADEMY. A society of persons united for the purpose of improvement in the art of music, or any art or science. Musical academies were frequent in most parts of Europe, but particularly in France and Italy, long since; and associating under the name of Musical Conventions, and

Teachers' Classes, Institutes, Normal Schools, &c., are now becoming numerous in this country.

ACADEMY, MUSICAL. The first institution of a musical academy in England took place in the year 1710, at the Crown and Anchor Tavern. It consisted both of professors and non-professors, assisted by the gentlemen of the Chapel Royal, and the children of the several choirs, and was conducted on an extensive scale, and in the most respectable style. Since that time, several others have taken place on various plans; among which, one of the most successful, at least for a time, was that established by Giardini, about the year 1750.

ACADEMY, ROYAL. The Royal Academy of Music was formed in England, for the performance of operas composed by Mr. Handel, and conducted by him at the theatre in the Haymarket. This institution attracted extraordinary attention, and continued to flourish for a considerable time, with great reputation. The subscription amounted to £50,000; and the king, George I., subscribing £1000, allowed the society to assume the title of Royal Academy. It consisted of a governor, deputy governor, and twenty directors. A contest, however, betwixt Handel and Senesino, in which the directors took the part of the latter, occasioned the dissolution of the Academy, after it had existed for more than nine years. Dr. Busby says it was formed by subscription in the year 1720, for patronizing, supporting, and performing Italian operas, pasticcios, and intermezzi.

ACADEMY OF ANCIENT MUSIC. This institution was established in London, in 1710, by the most eminent masters of the time, with a view to the study and practice of vocal and instrumental music, and continued to flourish for many years. The institution had the advantage of an excellent library, consisting of the most celebrated foreign and domestic compositions, and was aided by the amateurs of the Chapel Royal and the choir of St. Paul's Church, and the boys belonging to each. In 1731, a charge of plagiarism was brought against Bononcini, a member of the Academy, for claiming a madrigal of Lotti as his own, and threatened the existence of the institution. Dr. Greene, leader of the choir at St. Paul's Church, who had introduced the madrigal into the Academy, took part with Bononcini, and both withdrew from the institution. About three years afterwards, Mr. Gates, leader of the choir at the Chapel Royal, retired in disgust; and from this time the Academy became a seminary for the instruction of youth in the science of music.

A CAPELLA. (I.) In church or chapel style.

A CAPRICCIO. (I.) Just as you please; *ad libitum*, at will, agreeable to our fancy.

ACATHIST JS. (Gr.) A solemn hymn, anciently sung in the Greek church, on the Saturday of the fifth week of Lent, in honor of the Virgin, for having thrice delivered Constantino-ple from the invasions of barbarians.

ACCAREZZEVOLE. (I.) Fawningly.

ACCAREZZEVOLEMENTO. (I.) Persuasively.

ACCEL. (I.) Accelerando.

ACCELERANDO. (I.) The term for accelerating the time in the middle of a piece of music; increasing faster and yet more fast to the close.

ACCELERATO. (I.) With increased quickness.

ACCELDO. An abbreviation of Accelerando — meaning that one must accelerate the time of a piece of music at a particular place to produce effect.

ACCENT. A term applicable to every modulation of the voice, both in speaking and singing a swelling of sounds for the purpose of variety or expression. There are a great variety of accents, but we speak particularly of the musical accent. It is to the study of this *anima vocis*, as Diomedes so justly calls it, that the composer and performer should unceasingly apply himself; since without accent there can be no music, because without accent there can be no expression. Much controversy has arisen concerning both the origin and the use of the accent. The Jews, in all probability, made use of it to distinguish the sense, as well as to regulate the musical cadence or melody; they undoubtedly sang instead of reading the Scriptures in their synagogues. The Chinese and Siamese are noted for the musical accent with which they speak; they pay great attention to accent — the Chinese from necessity, since *Ya* in their language means *God, a wall, excellent, stupidity, and a goose*; so that it depends entirely upon the accent what they say. The names which the Greeks gave their accents prove that their effect was musical, consisting in a variation of the tone of voice in respect to acuteness and gravity. The ancients instituted academies for the management of the voice; and some of them, when declaiming in public, it is said, were accustomed to have a musician stationed behind them, in order to regulate the tones of the voice by a pipe or flute. Many passages might be cited from Cicero, Quinctilian, Boethius, and Plutarch, in order to prove that not only musicians, but others, had a *notation*, by which the inflections of the voice peculiar to their several professions of singing, &c., were ascertained. Mr. Steele ascertained that very minute intervals could be accurately marked for the purpose of ascertaining the most effective inflections of the voice. He was also able to imitate, upon a violoncello, the exact tone of the voice in declamation, as it naturally passes from grave to acute, and from acute to grave, and to express it in writing. With a finger on the fourth string of a violoncello, and a corresponding motion of the bow, he imitated the precise tones of speech, by rapidly sliding the finger up and down the string, so as to produce a continued transition of the sound from acute to grave, or the contrary. This kind of musical tone is very different from any succession of notes in the diatonic, chromatic, or even enharmonic scales; for these all consist of *intervals*, or sudden starts from tone to tone. But the music of declamation is a continual and insensible gliding upwards or downwards, without any sudden transitions of tone. It is, however, perfectly susceptible of notation, and on principles altogether analogous to our common method of writing music, as was shown by Mr. Steele, who, to denote this kind of melody, inscribed on the staff of five lines, instead of crotchets and quavers, a set of right lines obliquely ascending or de-

ascending through a space, corresponding to the musical interval, through which the voice naturally glides in speaking. These sliding notes or marks of declamation, when taken out of the staff, are the exact representations of the ancient accents. Mr. Steele made considerable progress in analyzing and recording the melody of speech, and could repeat a sentence as correctly as if it had been set to music. There is a musical accentuation observable in all pleasing declamation. When we utter the interjection Oh! under the strong impression of wonder or surprise, we use a circumflex musical slide, first ascending and then descending through no less an interval than a whole octave, thus: —

When the musical accent denotes sorrow, the tone of the voice continues all the while at the same pitch; for it is the natural character of grief to be monotonous. An accented syllable may be long or short. When the stress is laid upon the vowel, as in clo-ry, Fa-ther, Ho-ly, &c., the syllable is long; when upon the consonant, as in ha-bit, bat-tle, bor-row, &c., the syllable is short. In music, generally speaking, the notes or parts of a bar on which the emphasis naturally falls are said to be accented. In common time, whether vocal or instrumental, the first and third parts of a bar are accented; and in triple time, the first and last note, as will be shown hereafter. Accent is the arithmetical order by which the contents of a bar are divided and arranged. Although the principles of the accent belong chiefly to the composer, yet the performer ought not to be unacquainted with them. To accent is to utter a note or syllable with a particular stress or modulation of voice; it is a swelling of sounds, for the purpose of variety or expression. The accented and unaccented parts of a bar in the several measures may be seen in the following examples. In the sign of

the first note is accented, the second unaccented, the third accented, and the fourth unaccented, thus: —

In the sign of 2 or 2/4, the first note is accented, and the second unaccented, thus: —

In the signs of 3/4, 3/4, 3/8, the first note is accented, the second unaccented, and the third accented.

In the signs of 6/8, 6/8, the first and third notes are

accented, the second unaccented, the fourth and sixth accented, and the fifth unaccented.

In the signs of 12/4, 12/8, the accents lie in the order of 1 and 6. In the signs of 9/4, 9/8, the accents lie in the order of 3 and 3.

The terms *accented* and *unaccented* strictly require no difference in the strength of tone. In vocal music, if any difference be allowed, it must arise from the pronouciation of accented and unaccented syllables. Accent is a certain modulation or warbling of the sounds to express passion; either naturally by the voice, or artificially by instruments. Every bar or measure is divided into the accented and unaccented parts; the former being the emphatical, on which the spirit of the music depends. The notes or parts of a bar on which the euphasis naturally falls are said to be accented. The tonic accents are intended to give the proper tone to syllables, and are divided into grammatical and musical. Upon *accent* the spirit of music depends. The harmony should be always full, and void of discords, in the accented parts of the measure. In the unaccented parts this is not so necessary, discords here passing without any great offence to the ear. In music, as in speech, we may designate several distinct kinds of accent. The *grammatical* or *measure* accent, the *rhythmical* accent, and the *descriptive*, or accent of feeling, are perhaps the most important of all the various kinds. Accent is a peculiar tone, or natural expression, given to certain parts of each measure in every species of time; and without accent there is no more melody in song than in the humming of a bee; and without the regular management of long and short syllables there can be no versification. There are as many different accents, or modes of enforcing or enfeebling the meaning of words, in music as in speech. There is a *yes* that says *no*, and a *no* that says *yes*. The voice of a feeling singer can modulate all these shades, and affect the hearer on the side of intellect as well as sense. Accent, in its primitive sense, is an affection of the voice, which gives each syllable of a word its due pitch, in respect to height or lowness. By accent we learn the manner in which sounds are uttered, without reference to their loudness or softness. The same note may be struck on a drum with a glove, or with a stick, but the accent will be entirely different. The natural accent of all instruments is different, but may be varied by certain methods of playing. This is particularly the case with the violin, upon which, by means of the bow, every variety of accent may be produced. As no characters have been adopted that will sufficiently express these varieties, it is evident that accent must depend principally upon the taste and fancy of the performer. Accent is a modulation of the voice to express a passion. Every bar or measure is divided into *accented* and *unaccented* parts. The accented parts are the principal, being those intended chiefly to move and affect; it is on these the spirit of the music depends. The beginning and middle, or the beginning of the first half of the bar, and the beginning of the latter half thereof, in common time, and the beginning or first of the three notes in

triple time, are always the accented parts of the measure. In common time, the first and third crotchet of the bar are on the *accented* parts of the measure. In triple time, where the notes always go by three and three, that which is the middle of every three is always *unaccented*; the first and last accented; but the accent in the first is so much stronger, that in many cases the last is accented as if it had no accent. The harmony is always to be full where the accent falls.

EXAMPLES.

1	2		1	2		1	2	3		1	2	3		1	2	3	4					
GLO-ry.		Ho-ly.		MEL-o-dy.		HAR-mo-ny.		IN-stru-MEN-tal		1	2	3	4	5	6		1	2	3	4	5	6
Jc-bi-LA-te.		MU-ni-ci-PAL-i-ty.		Im-pos-si-BIL-i-ty.																		

Every species of measure may be subdivided by accent according to the degree of rapidity in which it is performed; and the weak part of any measure may be made emphatic at the pleasure of the composer. To this last species of effect may be referred all *syncopated* or *driving* notes. In psalm singing, the accent of the music should conform to the words, because words are often used entirely different from those adapted to the music. If the words require it, the accent may fall on the unaccented part of the measure. It is better, however, where it can be done, to alter the rhythm of the music so as to make it conform to the words. There is no way of giving expression to words but with accent, and without accent we cannot make music. All monotonous sounds are very disagreeable to the ear, and it is certain that the different degrees of loud and soft give the greatest pleasure to the ear.

ACCENTED. Uttered with accent. Those *notes* or those *parts* of a bar are said to be *accented* on which the emphasis or expression naturally falls. In common time, of four crotchets in a bar, the accentuation will fall on the first and third crotchets of the bar; in triple time, on the first note of the bar.

ACCENTER, or **ACCENTOR,** in the old music, denoted the vocal or instrumental performer who took the leading part in a duet, trio, quartet, &c.; one of the three singers in parts, or the person who sang the predominant part in a trio; the director, or leader, with whom the accentuation of the performance in general chiefly rested.

ACCENTS. This *plural*, in the old music, signifies *verse*, or *song*, and is derived from the Latin words *canere* (to sing) and *cantus*, (song); whence the derivation of *accentus*, the former denoting accent, the latter a musical concert, or the melody of birds.

ACCENTUATION. The act of accenting; the giving to the several notes of a composition their due emphasis, or expression; the art of placing accents, or of pronouncing them with the voice. In vocal music, it is best, and it is a general rule, to observe that the accent conform to the words; for without accent there can be no such thing as music.

ACCENT OF NOTES. The bars of music are not only useful for dividing the movement into equal measures, but also for showing the notes upon which the accent is to be laid. The measures of common time are divided into four parts; of these, the first and third are accented;

the second and fourth unaccented. We shall term the accented *strong* parts, and the unaccented *weak* parts, of the measure, thus:—

The measures of triple time consist of three parts; the first *strong*, the two others *weak*; although the last part is rather *strong* in comparison of the middle part.

In slow common time, the accents are more frequent; but they are found in the same proportion on the first, third, fifth, and seventh quavers, which are the *strong* parts, while the second, fourth, sixth, and eighth are the *weak* parts. In three crotchet time, when divided into quavers, the first, third, and fifth quavers are *strong*; the second, fourth, and sixth *weak*. In six quaver time, the first and fourth quavers are *strong*, and the others *weak*. From the nature of accent arises the necessity of beginning some movements with only part of a measure, as with a single weak part, thus:—

From the same reason arises the necessity of commencing a melody with a half measure, as,—

The following melody, barred in two different ways, produces two opposite effects, the accent falling upon different notes.

When the composer intends that the *weak* parts of the measure should be made of more importance than the *strong* parts, such deviation from the regular accent should be termed *emphasis*. In passages like the following, the quavers are often grouped together according to the emphasis, and not, as is general, according to the accent.

In the first two measures of this example, the quavers are grouped according to the *accent*; in the third, according to the *emphasis*, contrary to accent; and in the fourth, the accent again resumes its importance. The Germans divide accent into two principal species—grammatical and rhetorical; and the first of these we term here *accent*, and the last *emphasis*. The Italian

words *Rinforzando*, *Sforzato*, or their contractions, *Rinf.*, *Rf.*, *Sforz.*, *Sf.*, are often used to mark the *emphasis*, and sometimes are placed over accented notes. As every species of measure may be subdivided by accents, according to the degree of quickness in which it is performed, so also the weak parts of every measure may be occasionally made emphatic at the pleasure of the composer. To this species of effect may be referred the *syncopated* or *driving* notes, which begin on the weak and end on the strong part of the measure. See the following examples:—

In this example, the emphasis is on the syncopated minims, which begin on the second and end on the third part of the measure.

In this example, the emphasis is on the syncopated crotchets, which begin on the second and sixth, or the weak, and end on the third and seventh, or the strong parts of the measure.

ACCENT OF FEELING. This accent breathes through the whole subject an animating spirit. It is the most spontaneous, quick, and deeply wrought product of every good performer. It gives the execution designed both by the author of the words and the writer of the music. When one hears it, he can revel in the full luxury of music; and to thus enjoy song, one can have no hired minstrel, no crowded benches, no glare of lamps, no bustle. He must have a still, calm eye, in some quiet bower, away from the hum of cities; with one who needs not ask or be told what string to strike—one who will cling to the merit, not the less precious that we seldom hear it, the pathetic simplicity which nature prompts—whose heart is in the strain breathed forth—carolling in its own created atmosphere of harmony. Such is a banquet at which there would be no chance "that the appetite should sicken, and so die." To such a feast one would be even selfish enough to wish no fellow-guests. One would have no voice to break the spell—to startle the spirit from its trance of enchantment—to mar with the sounds of earth the tones which bless us with dreams of heaven.

ACCESSORY PARTS. Accompaniments.

ACCESSORY SOUNDS. Little sounds which aid in producing effect in a secondary manner.

ACCESSORY TONES. Harmonics. Tones faintly heard in higher octaves, as the principal tone dies away.

ACCIACCARE. (I.) A broken and unexpected way of striking a chord.

ACCIACCATURA, or ACCIACCATURE. (I.) (Old term, nearly equivalent to *Appoggiatura*.) Clementi says that, in the old music, this character, half beat, is sometimes found placed on the semitone above, and taken as a flat. Acciaccatura is particularly used to indicate the manner in which certain passages are intended to be performed on the harpsichord, and signifies that sweeping of the chords, and dropping of sprin-

kled notes, which are particularly proper in accompaniments, and which constitute one of the greatest beauties of that instrument. Germiniani asserts, in his "Treatise on Good Taste," published in 1749, that the Acciaccatura had been then in use above a hundred years. It is said by some to be a useless ornament; still it is much used by the most skilful performers, and is a grace peculiar to the piano-forte and organ. It is always expressed by a small note before the principal note, and is generally a semitone below the principal note, as follows:—

There is another species of Acciaccatura, which is expressed by the sign \wedge , and is termed by some the *Double Acciaccatura*.

ACCIAJU'OLI, FILIPPO. A dramatic poet and composer, born at Rome, in 1637. He wrote the words and composed the music to several operas. He is the first composer whose name we observe to a comic opera, such as was his "*Girello*," performed with success in 1675. His grand operas were "*La Damira Placato*," played in 1680, and "*Ulisse*."

ACCIDENS. A French term, applied to flats, sharps, and naturals, which are found before or after particular notes in the course of a piece.

ACCIDENTAL. An epithet applied to such accessory sharps, flats, or naturals as do not appertain to the original key of any piece; something non-essential, as songs are *accidental* to a play.

ACCIDENTALS. Sharps, flats, and naturals are called accidentals because they are used to change the sound of letters, as the chord, of which these letters are a part, may require; and because they affect the sound of the letters upon which they are set *no farther* than the compass of the bar in which they are enclosed. If there be occasion for them in a succeeding bar, they must be again renewed; but if one measure ends and the next begins with the same note, the accidental character which alters the first note is understood to affect the second. Those flats, and sharps, and naturals which are seen at the commencement of a movement are not accidentals, but are called the *Signature*, and denote the key in which the piece is to be performed. A sharp, flat, or natural, frequently implies some change of key, or different modulation from that in which the piece commenced, and some consider these signs as equally affecting the key, whether found at the commencement or in the progress of the tune. But we generally designate the flats, sharps, &c., at the beginning, as the signature, and such as come afterwards in the music as accidentals.

EXAMPLES OF THE USE OF THE ACCIDENTAL.

In turns, sometimes the first of the four notes composing it, and at other times the third, are required to be semitones; in which case they must be expressed by an *accidental* either above or below the sign of the turn, thus: $\overset{\sim}{\text{f}}$, $\underset{\sim}{\text{g}}$, $\overset{\sim}{\text{b}}$.

The German theorists place the accidental *above* when the first note is required to be a semitone, and when the third note is a semitone they place the accidental *below*, as in the above example.

ACCIDENTAL CHORDS. Chords which must contain one, and often do contain several notes, not belonging to their own proper harmony--which may be occasioned either by means of anticipation or suspension.

ACCIDENTAL HARMONIES. Koch terms the three harmonies of the key *essential*, and the three relatives *accidental*. Koch, in his *Lexicon*, has placed his accidental harmonies in this point of view. He considers them as connecting chords, and seems to agree with Kirnberger, who asserts that, by a species of transition, the harmony of the triad is thus united to another of its inversions.

ACCIDENTAL NOTES. Notes which do not belong to the harmony.

ACCOLADE. That brace which binds or includes all the parts of a score. The brace at the beginning of a tune, which shows how many parts move together.

ACCOMPANIMENT. The instrumental part of a composition, which moves with the voice, to which it is to be kept subordinate; it also denotes the parts which, in a concerted piece, move with a particular instrument, whose powers it is the object of the composition to exhibit. The accompaniment is considered as a vocal or instrumental accessory, which may consist of an unlimited number of parts, to supply the necessary chorus, and to heighten the general effect. Accompaniments must be executed with much skill and delicacy, and in such a manner as to fulfil not only the object of the composer, but to admit of the leader giving the full effect to the composition, which will otherwise make but a feeble impression, though in the most skilful hands. Accompaniments are in no degree susceptible of embellishment; a circumstance which is too often overlooked. It is extremely difficult, without a previous knowledge of the composition in the person accompanying, to treat an accompaniment in a way which is at once judicious and pleasing. It is generally believed that the accompaniments of the ancients consisted in nothing more than playing in octave, or in antiphony to the voice; though the Abbé Fraguire has endeavored to prove, from a passage in Plato, that they had ac-

tual symphony, or music in parts. The accompaniment truly does denote something attending, or added as a circumstance to another; either by way of ornament, or for the sake of symmetry, or the like. Organists sometimes apply the word to several pipes which they occasionally touch, to accompany the treble, as the drone, flute, &c. The accompaniment is always a part or parts written for instruments which accompany, to make the music more full. The accompaniment often plays a very different part, or melody, from the song; but authors are not agreed whether it was so or not among the ancients. An efficient accompaniment, well performed, is very pleasing to the ear. All music, says Addison, is to deduce its laws and rules from the general sense and taste of mankind, and not from the principles of the art itself; or, in other words, the taste is not to conform to the art, but the art to the taste. Music is not designed to please only chromatic ears, but all that are capable of distinguishing harsh from agreeable notes. A man of an ordinary ear is a judge whether a passion is expressed in proper sounds, and whether the melody of those sounds be more or less pleasing.

The accompaniment can be executed either by many, by a few, or even by a single instrument. We have, therefore, pieces of music with an accompaniment for several, or only for a single instrument. The principles on which the effect of the accompaniment rests are so little settled, that its composition is perhaps more difficult than even that of the melody, or principal part. Frequently, the same musical thought, according to the character of the accompaniment, produces a good or bad effect, without our being able to give a satisfactory reason for the difference. Formerly, the Italians were the most distinguished for expressive accompaniments, contained in a few notes, but productive of great effect. They never weakened the effect of the principal part by means of the accompaniment. The French are behind some of the other nations in respect to this part of composition, as they frequently estimate the effect by the quantity of notes. The accompaniment requires of the performer the most scrupulous study, and of the composer the greatest care and delicacy. The accompaniment of various solo instruments--for example, the violin, flute, piano, &c.--is extremely difficult, and to give it full effect requires great knowledge and skill. The Italian composers accordingly consider a piano accompaniment for a full orchestra, especially in the recitativo, as a great problem, which they have labored zealously to solve. As the object of every musical accompaniment is to give effect to the principal part, the accompanist should always aim to support, and by no means to overpower and oppress it. Of all composers, Mozart, even in respect to the accompaniments, claims the first place, for the simplicity and beauty with which he amalgamates the leading and accompanying parts, through his unrivalled knowledge and excellent management of the parts for every individual instrument. The modern German composers excel in accompaniment.

ACCOMP. Accompaniment, abbreviated. A separate instrumental part added to any composition by way of embellishing the piece and enriching the effect.

ACCOMPAGNAMENTO. (L.) An accompaniment.

ACCOMPANIMENT AD LIBITUM, or AD LIB. Accompaniment at pleasure. This phrase implies that the movement, or piece, at the head of which it is placed, may be performed with or without the accompaniment. It does not, however, mean that the performance will be as perfect without as with the accompaniment; but that the accompaniment may be omitted without any material detriment to the intended effect.

ACCOMPANIMENT OBLIGATO. This expression carries with it a sense directly opposite to that of Accompaniment ad Libitum; and when written at the beginning of a song, solo, sonata, &c., signifies that the accompaniment is indispensable to the just performance of the piece.

ACCOMPANIMENTS. Those instrumental parts in a composition which do not include the principal or principals, but which are added to relieve them, to supply the necessary chasms, fill up the harmony, decorate and variegate the *motivo*, and heighten the general effect.

ACCOMPANIST. The performer in music who takes the accompanying part. One who accompanies, or plays the accompaniment to any piece of music for the voice. A person who undertakes to play an accompaniment should be a skilful musician, and ought perfectly to understand the music; he must possess a quick ear and good taste, or he will mar the beauties of the music. As he will have the pitch to sustain, he must re-strike firmly any notes where the voice falters. There should never be any attempt at display, except in the symphony.

ACCOMPANY. To perform an accessory and subordinate part, calculated to set off and improve the effect of the principal part.

ACCOPIATE. Parts united, joined, or coupled by a brace.

ACCORDEON. (Spelled also *Accordion*.) The accordion is an instrument entitled to notice. It produces melodious sounds, and is remarkable for its peculiar sweetness and power of tone. Difficult passages can be performed on it with taste and delicacy; while the bold swell of the organ, the enchanting tones of the Æolian harp, and the dulcet strains of the hautboy are happily united. In the performance of quadrilles, waltzes, and other melodies, it is capable of giving to the different compositions grace and expression. It may be played upon (if attention is paid to the directions here given) by the most inexperienced learner, who will insensibly, as it were, be taught, without any knowledge of the science of music, to distinguish the various expressions and passions which music is intended to convey. The accordion being so well known, any detailed account here of its size or shape seems to be unnecessary. The sounds are produced by the action of wind upon metallic springs. Each spring is fixed in a metal frame, and placed in a small groove or channel under the different keys; the wind, passing either into or from the bellows, causes the spring to vibrate immediately when a key is pressed. The touch is particularly light, the articulation distinct, and the performer has the means of increasing or diminishing the tone at pleasure. Accordions, though now much

manufactured in this country, have formerly been chiefly made in France and Germany. Those made in France should be held in the right hand, and those in Germany in the left. They may be played either in a sitting or standing position: the former is better adapted to ladies. It may here be observed, as a general rule, that on every accordion, the first finger of either hand should always be placed upon that end of the instrument which produces the lowest note. While sitting, the end of the accordion may be supported by resting it upon the knee, which should be raised by placing the foot upon an ottoman, carefully remarking that the leather folds of the bellows are quite clear from touching any part of the dress. When the performer is standing, the instrument may be supported by the thumb, either by pressing the inside of it against the under part of the brass rail, which is fixed and runs along at the back of the keys, or by passing the thumb so far into the loop as will enable the fingers to reach the extreme keys with ease and facility. The first, second, third, and fourth fingers should be in readiness to press any of the keys, marked 1, 2, 3, 4, &c.; the other keys are used by extending the little finger, or by removing the hand towards that end of the instrument. The other hand should hold the opposite side of the accordion, the thumb resting on one of the ebony or pearl slips, and the second, third, and fourth fingers on the opposite side, the first finger being left at liberty to open the valve when necessary. The two keys which are affixed at the opposite directions of the instrument, when raised, make an accompaniment, harmonizing with the whole of the keys in front, and may be used or not, at pleasure. Each key produces two chords, if the end keys are raised, and two single notes, if the end keys are closed; one by drawing the bellows outward, the other by pressing the bellows inward; so that, on every accordion, there are twice as many notes as there are keys. Those instruments which have the accompaniment stops fixed in front, at the bottom, require the pressure of the second and third fingers, to keep them open, as long as the duration of the harmonies is necessary. Should it be required to repeat a chord, after the bellows have been quite compressed, or expanded, the first finger must open the valve, that the air may escape during the reaction of the bellows, in order to prevent the production of another sound. The bellows, by being gradually opened, augment or suppress the sound at pleasure: the quicker the motion, the louder the tone, and *vice versa*. Particular care should be taken not to move the bellows without a key or the valve being opened; for should both be shut, and the bellows moved, the instrument, by being nearly air-tight, might be considerably injured. A figurative representation is added to all the following scales, which will enable persons, without much knowledge of music, to play on the accordion. The figures, which are counted upwards from the key producing the lowest note, 1, 2, 3, 4, &c., placed under or over the notes, describe what keys are to be touched; and without any other mark over them, the bellows must always be drawn outwards. When this sign, \wedge , occurs, the bellow should be pressed inwards. The dash lines — — —, after a figure, indicate that the note is to be produced on the key last pressed, by the move-

ment of the bellows only. A*, when used, shows that the valve is to be opened, to allow the bellows to contract, or expand, for the succeeding note, as occasion may require. The length of each note depends on the performer; the slower the bellows are moved, the longer the duration, and the converse. To make a shake, the instrument should be held very firmly in one hand, and after the bellows have been drawn out about four inches, the other hand should move them in and out, with a quick, tremulous motion. The scales are all written in the key of C, as that key is the most easy; and melodies for the accordion, may be all easily transposed into that key. Accordeon music is generally written in the key of C.

All exercises and melodies, figured for the accordeon, with 6 keys, may be played with equal facility on those with 8, 10, or 12 keys, if the key-note, which is the second key on each of the latter instruments, be considered as the first, omitting, in the calculation, the lowest key entirely. The learner should be very particular in learning the scale; for if well acquainted with the manner of producing every note in the scale, any piece of music can be played, as notes in the same situation are always made the same way.

Scale of the French Accordeon with 6 Keys.

Accompanying Chords.
Real pitch an octave lower.

KEY NOTE.
Pressed in. | Drawn out. | Draw. | Pr. D C D E F G A B C D E F G
D C D E F G A B C D E F G

NOTE.—Accordeon music may be fingered differently in different books. The learner will be able to judge, however, when any change of movement in the bellows becomes necessary.

ACCORDANDO. (I.) Tuning. In tune.
ACCORDARE. (I.) To agree in sound; to become in tune; to put in tune.
ACCORDATURA. (I.) The scale or tuning of the open strings of any instrument; the notes

G, D, A, and E form the *accordatura* of the violin.

ACORDER. One that tunes instruments.

ACCORD. To agree in pitch and tone. This is a French word, and is formed, according to some authors, from the Latin *ad cor*; but others, with more probability, derive it from the French *corde*, a string or cord, on account of the agreeable union between the sounds of two strings struck at the same time. Whence also some of the consonants in music came to be called *tetrachords*, *hexachords*, &c., which are chords of a fourth and a sixth. When two or more voices or instruments are perfectly in tune with respect to each other, and their tones blend and intermix, so as to form one consonant and harmonious result, they are said to *accord*. *Accord* is generally used as *concord*, and has the same meaning.

ACCORD. (noun.) Synonymous with *chord*; as, the accord of the sixth, &c.

ACCORIMBANI, AGOSTINO, a Roman composer, produced several operas, and other works, between the years 1780 and 1790.

ACCORIMBONI, BALDASSARO. An Italian church composer of the sixteenth century.

ACCRESSIMENTO. (I.) The increase of a sound in duration. A point of addition, or a dot placed after a note, increases its length one half.

ACCRES. (I.) A term the sense of which is similar to that of the word *augmentation*; as, *punto d'accressimento*, the point of augmentation.

A CEMBALO, or A CEMB. (I.) For the harpsichord. Since the happy invention of the grand piano-forte, the use of this expression, together with the instrument to which it alludes, has much declined.

ACETABULUM. (L.) An ancient instrument of music.

ACHTELNOTE. German term for an eighth or quaver.

ACKERMANN, MADAME. Her maiden name was Bachmann. In the year 1796, she was first female singer at the Konigsberg Theatre, and performed the principal parts in Mozart's operas.

ACOMETE.E. A certain order of ancient monks, whose principal establishments were among the Eastern nations. Their appellation is derived from the Greek word *akoimao*, (not to sleep in bed,) because they performed their religious offices (chiefly consisting of singing) both night and day. For this purpose, they divided themselves into three bodies, who vociferated alternately.

ACOLYTHI, (Gr.) ACOLYTES. Young persons employed in the Roman church to light the tapers, carry the candle-sticks at the celebration of all offices in which music and singing are introduced, to prepare the several articles used in the mass, and occasionally to chant in the choirs.

ACOLYTHIA. (Gr.) The order of service observed in the Greek church. This term is also applied separately to the hymns, psalms &c., of which that service is principally composed

ACOUSTICS. A word first applied by M

Sauveur to the theory of sounds. By the knowledge of acoustics, we are enabled to determine the relation of tones, and the ratios of the harmonic intervals, as produced by the various vibrations of different chords, and other sonorous bodies. Acoustics, indeed, comprehend nothing less than the whole theoretical portion of music, as discovered and laid down by Aristoxenus, Pythagoras, Lasus, Enclid, Ptolemy, and others among the great fathers of musical science. We may call acoustics the science which teaches the physical laws and phenomena of sound and hearing. Several important facts concerning sound must have been known at a very early period. The tuning of the lyre, and various other instruments, which are coeval with remotest antiquity, necessarily implies an acquaintance with the fact that, as we diminish the length of musical strings, or increase their tension, we render their tone more acute. We have, however, no reason to believe that, till 500 years before the Christian era, any attempt had been made to discover the relation which subsists between the lengths of strings producing the various notes of music. About this time, Pythagoras gave a correct determination of the ratios between different sounds. The ancients certainly seem to have understood some principles in acoustics which we have lost; or, at least, they applied them better. They contrived to convey the voice distinctly in their huge theatres, by means of pipes, which created no echo or confusion. Our churches and theatres are yet much too large, though we do not need pipes or speaking tubes. If we rub our moistened finger along the edge of a drinking glass, or draw a bow across the strings of a violin, we can in both cases procure sounds which remain undiminished in intensity as long as the operation by which they are excited is continued. If we strike two bells, one of lead, and the other of brass, the sound of the former is feeble and momentary, compared with that of the latter; so we see, that, though bodies all sound, yet the sounds produced are not all alike. The circumstances which affect the sounds of bodies are, their form, their magnitude, their density, the mode by which they are excited, and the comparative force of the power by which they vibrate. Musical sounds have occupied the attention of philosophers more than any other class of sounds. The superior precision with which the ear can estimate any variation in pitch renders these sounds more easily compared; and the vibrations of sonorous bodies, which produce them, are, on account of their superior simplicity of form, more easily investigated. A musical string is of a uniform thickness, and is stretched between two points, by a force much greater than its weight. The stretching force which is applied is generally conceived as measured by the weight which would occasion an equal tension. The sound which a string gives, thus stretched, or in this mode of vibration, is called its *fundamental* sound. The tone of a string becomes more acute as we increase its tension, or diminish its length, and the weight of a given portion. On this fact depend, for the most part, the various modes of producing the several musical sounds on stringed instruments. Wind instruments constitute one of the genera of those which perform their vibrations longitudinally; and though the air which vibrates in all of

them is the same, yet they admit of such a variety in their form, and derive such different characters from this variety, that they may be regarded as a genus not less extensive and important than the class of bodies which vibrate by tension. Observations have been made to ascertain the rate at which sound travels through the air; and the mean result is, that all sounds travel at about the velocity of 1130 feet in a second of time. A musical sound consists of a series of undulations which arrive at the ear at equal intervals of time, and the pitch of the sound depends on the length of the interval between each impression. Musical sounds can therefore be produced, not only by the isochronous vibrations of sonorous bodies, but also by any other mode in which a rapid succession of equidistant impulses can be communicated to the ear, whether those impulses originate from the same or different sources. The sounds produced by instruments are chiefly musical. Kratzenstein and Kempelen have, however, by making experiments on the effects of pipes of different forms, succeeded in constructing such as will imitate very accurately the different vowel sounds produced by the human voice. The speaking trumpet is an instrument intended for transmitting sound to considerable distances in a particular direction. The form which is usually given to the hearing trumpet corresponds to that of the speaking trumpet in being a cone, truncated near its summit; but differs from it in being sometimes of a curved form. The summit of the cone is placed in the ear, and the wide extremity turned towards the point from which the sound comes. The effect of this instrument is to augment sound considerably. Sound may be conveyed to much greater distances by being confined in pipes. Such pipes are frequently used in coffee-rooms and taverns for conveying orders to the attendants. Captain Parry, during the cold experienced in Winter Harbor, was surprised at the great distance at which the human voice could be heard. "I have," he says, "often heard people distinctly conversing, in a common tone of voice, at the distance of a mile; and today, I heard a man singing to himself, as he walked along the beach, at even a greater distance than this." The strong tendency of sound to ascend has also a great effect. Humboldt has remarked, that the barking of a dog has been heard when the listener was in a balloon, at an elevation of about three miles. It has also been noticed, that from the ridge of the Table Mountain, which is 3400 feet high, and the upper part of which rises perpendicularly at a distance of about a mile from Cape Town, every noise made below, even the word of command on the parade, may be distinctly heard.

ACTOR. Musical actors were primitively no more than singing men. The drama, in its origin, consisted of a simple chorus, who sang hymns and songs. An actor, musically speaking, is a singer whose profession it is to represent human nature by action, speech, and musical intonation.

ACTS. Acts are those parts of an opera or musical entertainment, the separations of which from each other form the first and grand division of the piece; divisions which, in some respects

are to the whole drama what the scenes of an act are to the whole of that act.

ACTIS, ABBE, wrote about the year 1788, in the *Mémoires de l'Acad. Royale des Sciences*, observations on the echo in the cathedral of Girgenti, also on the celebrated Ear of Dionysius.

ACT TUNES. Those pieces performed at theatres between the different acts of any play performed upon the stage.

ACUMEN. (L.) A word used by the ancients in signification of the fullest or keenest sound of the voice.

ACUTE. Sharp; something piercing; a term applied to any sound that is sharp, or high, in respect to some other sound; a tone which is sharp, shrill, and high; in which sense the word stands opposed to *grave*. Sounds considered as acute, and grave, that is, in relation of gravity and acuteness, constitute what we call *tune*—the foundation of all harmony.

ACUTENESS. The opposite of *gravity*. There is no such thing as acuteness and gravity, absolutely so called; they are only relations; so that the same sounds may be either acute or grave, according to that other sound they refer or are compared to. The degrees of gravity and acuteness, in fact, make so many tones or tunes of voice or sound. Acuteness, then, is that quality which constitutes the shrillness of any sound.

AD. (L.) At, to, &c.; as, *ad libitum*.

ADAGIO, or ADA'O, formerly ADASIO. (I.) The word *adagio* signifies the second degree, from slow to quick; and is generally applied to music, not only meant to be performed in a slow time, but also with grace and embellishment. It is, likewise, frequently used substantively; as when we say, "an *adagio* of Pergolesi," "an *adagio* of Beethoven," &c. *Adagio* is applied to express tender and plaintive emotions. The Italian word denotes a degree or distinctness of time, the slowest of any except grave, and should be performed slowly and leisurely. *Ado.* is an abbreviation of this term; a very slow degree of movement, demanding much taste and expression in the performance.

ADAGIO-ADAGIO. (I.) A double retardation of time, nearly as slow as grave, and twice as slow as *adagio*.

ADAGIO ASSAI. (I.) More slow, or very slow.

ADAGIO CANTABILE E SOSTENUTO. (I.) This phrase implies that the air or movement to which it is prefixed is to be performed in a slow time, and with a graceful, ornamental, and sustained expression.

ADAGISSIMO. (I.) Almost as slow as grave.

ADAGIO PATETICO. (I.) Slow and pathetic.

ADAM, ADOLPH CHARLES, son of Louis Adam, born at Paris in 1803, and became pupil at the Conservatoire in 1817, then studied harmony and counterpoint with Reicha, and afterwards formed his style with Boieldien. His first attempts at composition were fantasias and variations for the piano. In this form he was quite prolific, also in airs and concerted pieces for

vaudevilles and operettes, performed at the minor theatres. His first opera, *Pierre et Catharine*, was performed at the Opera Comique in February 1829, and well received, as evincing talent, and perhaps too great facility. *Danilowa*, another opera in three acts, produced at the same theatre in 1830, showed still more power. From this time his productions succeeded one another with great rapidity. Some of these were too ephemeral to warrant a hope that Adam's name would live; but in 1833 his *Proscrit* appeared—a work, says M. Fétis, of more force, dramatic sentiment, and novelty in its ideas, than he had put into any of his earlier efforts. In 1832, he went to London, where he wrote the music of a grand ballet for the Covent Garden Theatre. Adolph Adam still figures among the most active composers for the Opera Comique, and many of his sparkling operas, as "*Richard Cœur de Lion*," "*Le Brasseur de Preston*," "*Le Postillon de Lonjumeau*," &c., enjoy great popularity. He has also composed sacred music, among other pieces one called the "Mass of St. Cecilia." During the past year he composed the "*Cantata*," at the Opera Comique, in honor of the President Louis Napoleon.

ADAM DE FULDA. A monk of Franconia, composer of some church music in the fifteenth century.

ADAM, D. VICENTE, a musician at Madrid, published there, in 1786, "Instructions in Composition."

ADAM, LOUIS, of Paris, was born about 1760, at Miettersholtz, near the Rhine. His first master on the harpsichord was one of his relations, an excellent amateur; he had afterwards lessons on the piano, for some months, from an organist of Strasburg, by the name of Hepp, who died about the year 1800; but Adam was more especially indebted, for the science and talent which placed him in the first rank of professors of the piano, to his unassisted study of the writings of E. Bach, Handel, Scarlatti, Mozart, and Clementi. Adam, when young, taught himself the violin and the harp, as also composition, the knowledge of which he obtained from the writings of Mattheson, Fux, Marpurg, and other Germans. He arrived at Paris at the age of seventeen, meaning to follow music as a profession, and made his *debut* as a composer by two concertante symphonies for the harp and piano, with the violin, which were executed at the Spiritual Concerts, and were the first of the kind that had been heard. After this he applied himself to teaching and composition. In 1797, he was appointed professor of the piano at the Conservatory, where he formed a great number of excellent pupils, among whom the most known are Kalkbrenner, F. Chaulieu, Merland, Henri le Moine, &c. Adam's works are, "A Method of Fingering for the Piano," "A Method for Piano-Playing, adopted by the Conservatory and all other Schools of Music in France," various sonatas, &c.

ADAMI DA BOISENA, ANDREA. One of the chapel-masters to the pope at the beginning of the last century. He published, in 1711, "Instructions for properly directing the Choristers of the Pontifical Chapel, both for the Ordinary and Extraordinary Services," in 4to. He died in 1742.

ADAMI ERNEST, DANIEL, was director of music at Landshut, and published, in 1750, a work entitled "Reflections on the Triple Echo at the Entrance of the Forest of Adenbach, in Bohemia," in 4to. He also wrote "Dissertations on the Sublime Beauties of the Canticles, as sung at Divine Service," in 8vo., Leipsic, 1755.

ADAMI. Composer of a quatuor for the flute, &c., published at Hamburg.

ADAMS, THOMAS, was born in 1783. He began his musical studies under Dr. Busby, at about eleven years of age. In 1802, he was appointed organist of Carlisle Chapel Lambeth, where he officiated till 1814, in which year he was chosen (after a competition against twenty-eight other candidates) organist of St. Paul's, Deptford. In his writings and extempore performances he makes free use both of the strict and florid styles, and is known to have carefully studied the works of Sebastian Bach, Haydn, and Mozart. The following are among the principal compositions of T. Adams: "Six Voluntaries," published in 1812; "Scots wha hae with Wallace bled," with variations for the organ, (Mayhew); "*Adeste fideles*," with variations; "A Rose Tree in full Bearing," with variations; Paesello's "*Quant e piu bella*," with variations, (the last three pieces at Clementi's); "*Deh prendi*," and "My Jo Janet," both with variations, (Harmonic Institution); "Six Fugues for the Organ," (Clementi); "Three Voluntaries for the Organ," (Hodsoll.)

ADAMS, MISS. A professor of the piano-forte at the Royal Academy of Music.

ADAMUS, DORENSIS, abbot of a monastery near Hereford, in England, wrote, in the year 1200, "*Rudimenta Musicae*" (The Rudiments of Music.)

ADASTO. Old form of **ADAGIO**, which see.

ADCOCK, ABRAHAM. An English composer at the beginning of the last century.

ADCOCK, JAMES, master to the choristers of King's College, Cambridge, was born in 1778, at Eton, in Buckinghamshire. In 1786, he was admitted a chorister of his majesty's Chapel of St. George, Windsor, and of the College of Eton, where he received his musical education under Dr. Aylward and Mr. Sexton, organist of St. George, Windsor. In 1797, he was elected one of the lay clerks of St. George's Chapel, and in 1799, was appointed to the same situation at Eton College, both of which places he gave up on being nominated lay clerk of King's, Trinity, and St. John's Colleges, Cambridge. Adcock's principal compositions are glees; viz., "Three Glees, dedicated to Sir Patrick Blake," (Birchall); "Hark how the Bees," glee, four voices, (Preston); "Welcome Mirth," glee, three voices, (Goulding); &c. Adcock also published rudiments of singing, with about thirty *solfeggi*, to assist persons who wish to sing at sight.

ADDED LINES. Short additional lines either above or below the staff, which are used when more than nine degrees are wanted.

ADDED SIXTH. A sixth added to a fundamental chord.

ADDIMARI, LUIGI, a Florentine nobleman, composed a musical drama, entitled "*Roberto*." He died in 1708.

ADDISON, JOHN. The son of an ingenious mechanic, born in England near the close of the last century.

Addison first discovered a propensity to music when at school; where, beginning with the flageolet, and proceeding to the flute, bassoon, and violin, he soon made a conspicuous figure in his village choir. About this time a Miss Willeus, (niece to the celebrated Reinhold,) being left almost destitute by the loss of her parents, and knowing the intimacy that had existed between the families, claimed the protection of Mr. and Mrs. Addison. She possessed a fine voice and considerable taste, which soon captivated J. Addison, and first made him conceive the idea of pursuing music as a profession, particularly as it would afford him the opportunity of cultivating her talent; they were married, and she soon after sang at Vauxhall, with great success.

After this she was engaged to perform at the private theatre in Dublin.

The interval between the closing of Vauxhall and the opening of the Dublin Theatre was filled up by an engagement with Mr. Francis Aikin, at Liverpool: here it was that Addison first stepped into the profession.

Addison next went to Dublin, where he was appointed director and superintendent of the orchestra, which was then composed of amateurs, among whom were the Earl of Westmeath, Colonel Lambert Walpole, Counsellor Curran, &c. Here he had an opportunity of studying counterpoint; and was soon employed to compose the orchestra accompaniments to the musical pieces, which were performed there.

The ensuing summer, he and his wife returned to Liverpool, where they were engaged at both the theatre and the concerts. Being now anxious to try his ability as a composer of an original melody, he caused Mrs. Addison to sing one of his songs at a rehearsal, giving it out as a manuscript by Shield; it pleased so much, that he was requested to let it be performed at the next concert: he consented; but his vanity would not permit him longer to conceal the real composer, which he was flattered by finding did not lessen the success of the ballad.

From Liverpool, Mr. and Mrs. Addison returned to Dublin, on an engagement for two seasons, at a very liberal salary. His attention was now chiefly devoted to Mrs. Addison's improvement, in which he succeeded so well, that she maintained a high rank as a vocal performer, notwithstanding such powerful opponents at the other theatre as Miss Pool, late Mrs. Dickons, and Mrs. Second.

The following summer, his father's affairs called Addison to London, whither he carried his wife, and introduced her to Mr. Harris, of Covent Garden, who heard her, was pleased, and instantly engaged her for as long as she could remain before her Dublin engagement.

They next returned to Dublin; where, besides his theatrical engagement, Addison now became in great request as a singing master, and taught in several noblemen's families. Among his

pupils he had the honor of reckoning Lady Charlotte Packenham, afterwards Duchess of Wellington.

Thinking that still more might be done for Mrs. Addison's improvement, he passed part of the next summer and autumn in Bath, and placed her under the celebrated Ranzini, who was very much pleased with her, and spoke in such handsome terms of her tuition, that Addison declared himself her master, and that he had a double motive for bringing her to him, as he expected to receive much benefit himself, by witnessing his manner of instructing; this was pleasantly received, and an attendance on him for some months gratified all parties.

From Bath they returned to Dublin, where they remained three years at the public theatre, under the management of Mr. Jones, who had become the patentee; the summers were passed in excursions to different parts of the country, in the manner of the London theatrical meteors.

About this time Bellamy, with whom Addison was on the closest terms of friendship, became a joint proprietor of the Manchester Theatre with Mr. Ward; and with him Addison made an engagement for himself and wife, as also for the concerts at the same place, and those at Liverpool. After some months' residence at Manchester, domestic events induced Mr. Addison to give up the musical profession; and he sought a person who was conversant with the cotton trade, collected the property he had, and commenced manufacturer. In this he might have succeeded in other times; but no sooner had he turned the chief of his capital into goods, than the war recommenced, and his stock was deteriorated full twenty per cent. in value. He now consulted his friends, who gave him hopes that affairs would mend; but these were delusive, for they gradually declined; till despairing of a change for the better, he called his creditors together, and found no difficulty in persuading them to take charge of the goods, convert them into cash, pay themselves, and remit the balance, if any, to him in London.

Previously to quitting Manchester, he remained, however, a short time, and composed the music of a pantomime; soon after he went to Chester with Bellamy, and composed an opera, written by a lady of that place.

On his arrival in London, he called on his friend Kelly, who had for some time opened his musical saloon. The want of a scientific person, as well as a man of business, to conduct it, had long been felt, and proposals of a present salary, with a prospect of eventually becoming a partner, were made to Addison, and accepted. He was also engaged for the ensuing season, to play the double bass at the Italian opera, at the Ancient, and at the Vocal Concerts, which situations he held for several years.

In the following year, Kelly was employed to compose the music of the "Sleeping Beauty," written by Mr. Skeffington, for Drury Lane. Before beginning the music, however, Mrs. Crouch was taken so ill that she was obliged to be removed into the country; her illness gaining ground afflicted Kelly so much that he could not fix his mind to composition; still, the poetry having been sent, Addison could not resist the desire of trying his ability, and composed several songs for the piece, which he showed to Mr. Skeffing-

ton; at the same time observing, that should Kelly find himself inclined to compose them himself, he (Addison) would suppress his attempts. Mrs. Crouch continuing to decline, Addison was suffered to proceed; but not without that suspicion which authors and managers naturally feel at employing untried talent. Mr. Skeffington was very anxious to have the words of the "Woodland Maid" adapted to an air of Mozart's; but Addison having pleased himself with his own composition for those words, and finding that he must take much liberty with the production of Mozart, to adapt it to the metre, proposed that Gibbon, who was to sing the song, should hear both melodies, without being told whose they were, and make his selection. The choice fell on Addison's, and its success proved that it was not an unfortunate one. This song had another struggle for existence, and was only suffered to be performed on the first night, upon Addison's consenting to exchange it, should it be ineffective. The "Sleeping Beauty" was performed upwards of thirty nights, with great success.

After this, Addison was engaged to compose a piece for Henry Siddons; but the unfortunate conflagration of Drury Lane Theatre destroyed the manuscript, and his hopes for the present; however, Mr. Arnold, shortly after opening the Lyceum as an English Opera House, agreed with H. Siddons for the piece; which he, having just then taken the Edinburgh Theatre, put together hastily, and handed to Mr. Arnold, who brought it out, having made first such additions and alterations as he thought best adapted to his company. It was the second opera produced on those boards, "Up at Night" being the first. Phillips, the eminent singer, who had made a most successful debut in the first opera, was not less approved in the second; his song of "The Young and Charming Bride" never having been sung without an encore. The whole of the music, indeed, pleased very much; and it has often been regretted that a difference between Mr. Arnold and the author, about some further claim in the event of the opera's exceeding fifteen nights, stopped its career.

Addison has composed other pieces for the same theatre, viz., "My Uncle," "My Aunt," "Two Words, or Silent, not Dumb," "Free and Easy," &c.

For Covent Garden he has composed the music of "Robinet the Bandit," and arranged Beil-dieu's music, as well as composed some pieces in "*Rose d'Amour*."

When Sir George Smart first had the oratorios at Drury Lane, Addison adapted some selections, from Winter's favorite operas, to the sacred drama of "Elijah," written by T. W. Moncrieffe, Esq., which was successfully repeated several times during the season.

These, with several single songs, duets, glees, &c., are the chief items of his composition. It should be remembered, that he was *entirely self-taught* in composition, and is a proof of what assiduity, with a persevering mind, may accomplish.

ADDITION. The extra duration given to notes by affixed dots. A point set before or after a note adds to it half its original length, and a second point bears the same proportion to the first as the first does to the original note. Addition is denoted by a dot on the right side of a

note, (♯) to signify that it is to be sounded or lengthened half as much more as it would have been without such mark.

EXAMPLES.

ADDITIONAL KEYS. Those keys of a piano-forte, which, above or below, lie beyond the former compass of that instrument. These keys are generally extended four notes above F in alt., and three notes below double F, and sometimes to F in altissimo. Additional keys are any keys added to an instrument after it has been finished.

A DEUX TEMPS. An expression applied by the French to time, and signifying two crotchets or beats in a bar.

ADJUNCT NOTES. Notes which do not form any essential part of the harmony.

ADLER, GEORGE CHRISTIAN, was born at Wohlbach, in 1674. He wrote, among many other musical works, "*Programma de liberalium Artium in Ecclesia Utilitate, si rite tractentur,*" in 1702.

ADLER, G. Named in Wessel and Stodart's Catalogue, for 1822, as composer of a quintour for violins, &c.

AD LIBITUM, or AD LIB. (L.) At discretion; at pleasure, especially with regard to time. An expression notifying to the performer, that, at the particular part of the composition where it is written, he is at liberty to introduce the extemporaneous effusions of his own fancy. *Ad libitum* is also used adjectively, as when we speak of an *ad libitum* pause, or an *ad libitum* cadenza.

AD LONGUM. (L.) A term applied by the first religious reformers to certain compositions of the church, which consisted entirely of notes of equal duration, and those, generally, the longest in use.

ADLUNG, JAMES, member of the Academy of Erfurt, was born in 1699, and wrote, among other works, one entitled "*Musical Science,*" a book of great utility to organists. He died at Erfurt, in 1792.

ADOLFATI, a pupil of the celebrated Galuppi, is known as the author of several operas. In 1750, he made an attempt to unite in the same strain two sorts of time, the one composed of two notes, the other of three. The piece was effective and applauded. Adolfati imitated in this Benedetto Marcello.

A DOUBLE. Double A; the A below G gamut, one octave lower than the *proslambanomenos*, or lowest note of the ancient Greeks.

AD OMNEM TONUM. (L.) To every note; an expression applied by the ecclesiastical musicians of the sixteenth century to compositions the parts of which were so contrived, that from whatever tone, or note, the *cantus* started, if the

altus, when it began, took the same note, and the tenor and bass the octave below, noticing the necessary sharps and flats, the harmony was still sound and correct.

ADONIA. Solemn feasts observed by the ancients in honor of Venus, and to perpetuate the memory of her beloved Adonis. They commenced with the lamentations of young women, in imitation of the goddess's grief; the remainder of this religious ceremony consisted of odes and hymns of a laudatory and exhilarating kind, and in which the devotees rejoiced, on the supposition that Adonis was immortalized, or, perhaps, restored to life. Menenius, however, is of opinion that these were distinct rites, and performed alternately every six months; under the idea that the favorites of Venus passed with that goddess one half of the year, and the other half with Proserpine. Bishop Patrick dates the origin of *Adonia* from the slaughter of the first born, in the days of Moses; and the prophet Ezekiel is supposed to allude to them, in chap. viii. verse 14. They were observed, with great solemnity, by most nations, particularly the Greeks, Phœnicians, Lycians, Syrians, and Egyptians.

ADQUISITA. A term in the ancient Greek music, applied to the sound added to the bottom of the scale, in each of the several modes, and denominated *proslambanomenos*.

ADRASTUS, a Peripatetic philosopher, and pupil of Aristotle, left a MS., in three books, on harmony: this work remained unknown till the year 1788, when it was announced to have been found, in good preservation, and well written, among the MSS. in the library of the King of Sicily.

ADRIANO. See WILLAERT.

ADRIANO, an Italian singer, was engaged at the opera, in Loudou, in 1817.

ADRIANUS, EMANUEL, published at Antwerp, in 1592, a work called "*Pratum Musicum.*"

ADRIANUS, FRANCISCUS, published some psalms, for four voices, at Venice, in 1567.

ADRIEN. There are three brothers of this name: the eldest published several collections of airs, at Paris, during the time of the French revolution.

A DUE, or A 2. (L.) For two voices, or two instruments.

A DUE CORDE. (L.) Consisting of two strings.

ÆNATORES. (L.) An appellation applied by the ancients to military musicians in general, but particularly to those who blew trumpets, horns, buccina, and the brazen or corneous instruments.

ÆLIANUS, CLAUDIUS, lived about the year 225, and in his work "*Varie Historie*" wrote much on the subject of music.

ÆMINGA, doctor and professor of law at Griesswald, printed, in 1740, a work on festive vocal music. He died in 1763.

ÆOLIAN. The epithet given by the ancient Greeks to one of their modes.

ÆOLIAN HARP, LYRE, or ANEMOCHORD. A musical instrument, first described by Kircher,* which produces the most delicate and enchanting tones merely by the impulse of the wind. It is composed of a rectangular box, made of very thin deal, of the same width as the window in which it is placed, and about five inches deep and six inches wide. Over the upper surface of this box, which is pierced with sounding holes, like the sounding board of the fiddle, are stretched several catgut or wire strings, with a slight degree of tension. When these strings are in unison, and the instrument exposed in the window to the action of a gentle breeze, they will emit the most agreeable combination of wild and melting sounds, changing from one harmonic of the string to another, according to the varying impulse of wind, and its unequal action on the different parts of the vibrating strings. In the Æolian harp constructed by the Rev. W. Jones, the strings, instead of being on the outside, are fastened to a sounding board within a wooden case, and the wind is conveyed to the strings through a horizontal aperture. The instrument may then be used even in the open air. Dr. Young says, to remove all uncertainty in the order of the notes in the lyre, I took off all the strings but one; and on placing the instrument in a due position, was surprised to hear a great variety of notes, and frequently such as were not produced by any aliquot part of the string; often, too, I heard a chord of two or three notes from this single string. Discords are also often heard from the unison strings of this instrument; the cause of which is evident from the manner in which the notes are generated; for the aliquot parts of a string contain in themselves an infinite variety of discords.

ÆOLIAN HARP, NATURAL ONE. In Kolb's topographical dictionary of the Grand Duchy of Baden, we find the following notice of a natural Æolian harp, in a wild mountain notch of the Black Forest of Preisgau, near the town of Tryberg: Some soldiers stationed on these heights, near the end of the seventeenth century, several times heard wonderful musical tones proceed from the tops of the firs which crowned the cataracts near them. In the notch of the mountain, a projecting rock, breaking off abruptly, gave a singular opposite impulse to the current of air streaming up and down through it, and

* It is now many years ago that Kircher mentioned, as a contrivance of his own, an instrument which a few years afterwards was obtained upon the public as a new invention, and called the Harp of Æolus. We will give a description of it nearly in Kircher's own words: "As the instrument is new, so it is so easy to construct, and very pleasant. It is the admiration of every one. It is made exactly to fit a window, in which it is placed; and the harp, while the window remains shut, is silent; but as soon as it is opened, an harmonious sound, though somewhat melancholy, coming from the passing wind, astonishes the hearers; for they are not able to perceive from whence the sound proceeds, nor yet what kind of instrument it is, for it resembles neither the sound of a stringed nor yet of a pneumatic instrument, but partakes of both. The instruments should be made of pine wood, five palms long, two broad, and one deep; it may contain fifteen or more chords, all equal and composed of the intestines of animals. It should be situated in a close place, yet so that the air may on either side have free access to it, in order to which, it may be observed, that the wind may be collected by various methods: first, by canals, that are made in the form of cones or shells, or else by valves; these valves should be placed on the outside, and parallel boards in the inside of the room; its sound very much resembles that of pipes and flutes playing in unison. Various are the opinions entertained of the invention of the different instruments of music; those of the moderns, like those of the ancients, are tensile and infinite. Modern flutes, as far as can be judged by a comparison of them with the graphical representations of the ancient tubes, have greatly the advantage; and as to pipes of other kinds, such as the hautboy and bassoon, the chalumeau, and others, these, as having the adjunct of a reed, are a new and original species, and may be pronounced an invention unknown to the ancients."

thus formed a natural Æolian harp in the boughs of the firs and shrubs, to the tones of which the dashing of the mountain stream furnished an accompaniment. This natural music is still heard, on a windy night, by the side of the mountain stream. The soldiers, impelled by that religious feeling which at those times was a prominent trait in the common people as well as in their superiors, looked for something supernatural. They found fixed on the highest and most beautiful fir, near a clear fountain, an image of the Virgin Mary, made of soft wood, holding the Holy Infant in her arms. A citizen of Tryberg, Frederic Schwab, had fixed it there in the year 1680, as a token of acknowledgment for his recovery at the fountain. The soldiers, taking the tones for the adoration of the angels paid to the mother of the Savior, made a tin cupola over the image, with the inscription, "St. Mary, patron of soldiers, pray for us." They also added a box for contributions, which was very soon so well filled that they were enabled to erect a wooden chapel.

Persons who live on any of our lines of telegraphic wires, especially at centres where several such wires converge, may often, of a windy night, hear natural Æolian harps.

ÆOLIAN ATTACHMENT. This is the name which the ingenious inventor, Coleman, has affixed to one of those musical desiderata, which have been rather hoped for than expected. All pianists and manufacturers of the instrument have long felt that artistic skill and mechanical ingenuity had vainly essayed to banish that woodiness of sound, and want of sustained vibration, that attended the emission of its tone. The Æolian Attachment not only removes the evils that are inherent in the piano-forte, but imparts to it a distinctive vibratory and sustaining power, combining the rich volume and swell of the organ with the passionate intensity and pathetic tenderness elicited from an Amati, or a Straduarium, by a gifted violinist. By the aid of this invention, the dominant vibration may be sustained during the execution of the most difficult passages, and yet there is the most perfect assimilation of sound; indeed, not only is the necessary balance never destroyed, but the general quality of tone is improved. The power of the lower portion of the piano-forte may be increased to that of the lower double C of an organ pipe of thirty-two feet. But the principal advantage is gained in the middle region of the instrument; and here the most delicate shades of feeling may be expressed: the white and black keys seem instinct with human passion, and all the various emotions which the most accomplished vocalist can feel and achieve are placed beneath the fingers and at the command of the performer. And yet the piano-forte is not bereft of its peculiar nature; all its usual resources remain undisturbed; and so perfect is the application of the invention, that it is adapted to every class of piano-forte, large or small, square or upright, thin and poor, powerful and brilliant. Like the soul of harmony, it lies concealed within, and its voice is alone evoked at the will of the performer. Its only external sign is an extra pedal, and the slightest pressure is ample to draw forth the vocal power. It is the invention of Mr. Coleman, an American gentleman, who has

devoted many years to the labor which he has so triumphantly achieved.

ÆOLODICON. A keyed instrument whose tones are produced by thin pieces of metal so placed as to play freely, being put into motion by means of a current of air. By the pressing down of a key, a kind of wind chest is opened, and while the air, compressed therein by a species of bellows, flows out against the metallic spring or plate, the latter is put into a vibrating motion, and produces a tone which is still further modified by the manner of pressing down the key.

ÆOLOMELODICON, or CHORALEON, as it is frequently called, is a keyed instrument, invented in Warsaw, and is sometimes in the form of an organ, though much smaller.

ÆOLOPANTALON. An instrument combining the piano-forte and the æolomelodicon.

ÆOLUS' HARP was introduced into England about the middle of the last century. It is much like the Æolian harp, consisting of strings extended between the deal boards. Mr. Richardson, in his dissertation on the "Manners and Customs of the East," proves that such an instrument was used at a much earlier date than that claimed by Kircher for the invention.

ÆQUISONANT. A term properly applied to unisons, but which is frequently given to octaves, because they so affect the ear as almost to seem one and the same sound.

ÆQUIVAGANS. This term was used by the Latins to signify that all the parts, in the passage against which it was placed, syncopated, or deviated from the natural order of the measure by one and the same time.

ÆSTHETICS. Whatever belongs to matters of taste in music.

AFFABLE. (I.) In an easy, affable manner.

AFFETTO. (I.) A direction to render notes soft and affecting. With tenderness and pathos.

AFFETTUOSO, or AFFETTO. (I.) This word, at the beginning of a movement, denotes it to be tender and affecting, and to require a soft and delicate style of performance.

AFFETTUOSISSIMO, or AFFETTUOSAMENTE. Tenderly, affectionately.

AFFILARD. A didactic writer on music in Paris, at the beginning of the last century. He published "Easy Rules for Singing at Sight," in which the time of the airs is regulated by a penulum.

AFFINITY. Relation, agreement. Chords have an affinity which admit of an easy and natural transition from one to the other.

AFFLIZIONE. (I.) Music with this mark should be performed in a slow manner, expressive of sadness.

A FLAT. That flat which is the seventh of B flat. The third that introduced in modulating by fourths from the natural diatonic mode.

A FLAT, MAJOR. A most lovely key. The major of A flat is unassuming, delicate, and tender; and its relative, F minor, is penitential and gloomy. The most refined sentiments of our best authors have been expressed in this key.

AFFRETTANDO, AFFRETTATE. (I.) Accelerating, hurrying the time.

AFRANIO. Canon of Ferrara in the beginning of the sixteenth century; he is supposed to have invented the bassoon.

AFTER NOTES. Small notes which occur on the unaccented parts of the measure, taking their time from the preceding note.

AGATHION, a Greek singer, lived about 400 years before Jesus Christ; his style of singing was proverbially excellent.

AGAZZARI, AUGUSTINO. Born of a noble family at Sienna, was chapel-master at Rome; according to Quadro, he was the first who introduced instrumental concertos into the church, about the beginning of the sixteenth century; but by the word *concerti*, used in the title page of his work, is only meant "*Salmi Concertati*," or psalms accompanied with violins. Agazzari wrote, in 1538, a work on ecclesiastical music.

AGAZZI published three duos at Amsterdam, in 1734.

AGELAUS obtained the first prize which was given to the players on stringed instruments at the Pythian games, 559 years before Jesus Christ.

AGITE, F. W. Composer of some music for the horn.

AGIA. One of the barbarous terms used by the modern Greeks in characterizing their modes or arranged tones.

AGILITA. (I.) With skill and quickness.

AGITATO. (I.) This term signifies a rapid and violent, but broken and interrupted, style of performance, calculated to shake and surprise the hearer—a style adopted with propriety only when it is the composer's design to awaken the flurry and perturbation incident to irresolution, and the conflict of opposing passions.

AGITATO ALLEGRO. (I.) A style of performance both perturbed and rapid.

AGITATO UN POCO. (I.) A little agitated.

AGNELLI, LORENZO. A composer of church music.

AGNESI, MARIA TERESA, was born at Milan, about the middle of the last century, and is one of those composers who have contributed much to the lustre of the Lombard school of music. Not content with cultivating the science to the extent usually aimed at by her sex, she aspired to a depth of composition equal to the great masters of our sex; to arrive at which, she entered upon studies proportionably profound and persevering. This talent for application seemed to be a natural inheritance in the family of Agnesi, whose sister, Gaetana, attained as much eminence in the mathematics as she herself did in counterpoint. She first published several cantatas, which were well received, not only as being the productions of a female, but because they

bore the true stamp of genius. Her first opera was "*Sofonisba*," which was well received, and soon followed by two others, "*Ciro*," and "*Nitocris*," both of which met with decided success.

AGNUS DEI. A prayer of the Romish liturgy, generally sung before the communion, and, according to the regulation of Pope Sergius II., in 688, at the close of the mass. Most of the great mass composers, as Mozart, Haydn, Beethoven, Hummel, Cherubini, &c., have employed all their depth and tenderness of melody and harmony in this portion of the mass.

AGOSTINI, LUDOVICO, chapel-master to Duke Alfonso II., was born at Ferrara. He published "*Messe, Vesperi, Motetti, Madrigali, e Sinfonie*," Ancona, 1588. He died in 1590, aged fifty-six.

AGOSTINI, PAOLO, of Vallerano, pupil of Nanini, succeeded to F. Soriano, as chapel-master of St. Peter's at Rome. Padre Martini has inserted an "*Agnus Dei*" of this composer, in eight parts, which is a truly curious production, three different canons being carried on at the same time, in a clear and natural manner, both as to melody and harmony. Agostini died at an advanced age, about the year 1660.

AGOSTINI, PIETRO SIMONE, a knight, was born at Rome, and composed, at Venice, in 1688, "*Il Ratto delle Sabine*," an opera, which was not only represented in his own country, but in several other theatres of Italy.

AGOSTINI, ROSA, was first female singer of the theatre at Florence, in the year 1777, when she particularly distinguished herself with Aprile, in the opera of "*Craxus*," by Borghi.

AGOGE. The name given by the ancient Greeks to one of the subdivisions of their melopœia; a species of melody, or modulation, in which the notes, both ascending and descending, proceeded by contiguous degrees. Of this modulation there are three species. The first is, when the sounds move from grave to acute, called by the Latins *ductus rectus*, and by the Italians *conducimento recto*; the second, when they pass from acute to grave, called by the Latins *ductus revertens*, and by the Italians *conducimento ritornante*; and the third, when they rise by sharps, and fall by flats, called by the Latins *ductus circumcurrens*, and by the Italians *conducimento circumcorrente*.

A GRAND CHŒUR. (F.) An expression applied to anthems, services, &c., composed for the full choir. The full chorus, in the French music, is called the *grand chœur*, in opposition to the *petit chœur*, which is composed of three parts — i. e., two trebles and a tenor.

A GRAND ORCHESTRA. An expression applied by the Italians to a composition, or a movement, written for a full band.

AGRELLI, JOHN. Chapel-master at Nuremberg, where he died in 1767. His compositions were numerous, and highly esteemed in his time.

AGRESTA, AGOSTINO, a composer of eminence, is mentioned in the "Treatise on Music" of Cerreto, published in 1601.

AGRICOLA, FREDERIC HENRY. A chapel-master and composer towards the close

of the seventeenth century. He died in Germany, in 1691.

AGRICOLA, GEORGE LEWIS, born at a village near Sondershausen, in 1643, was chapel-master at Gotha, and died in 1676. He published sonatas, preludes, allemandes, &c., for two violins and two viols da gamba, and several other works.

AGRICOLA, JOHN, of Erfurt, published, in 1601, motets for four, five, six, eight, and more voices; also canticles for the principal festivals.

AGRICOLA, JOHN FREDERIC, composer to the court at Berlin, was a native of Dobitschen, in Altenburg. He studied music at Leipsic, under Sebastian Bach. He died in 1774. Agricola translated from the Italian "The Elements of the Art of Singing," by Tosi. He also composed much music both for the church and stage. Agricola's compositions of all kinds exhibit in their character a happy union of genius and facility. He was one of the best organists of Germany.

AGRICOLA, MARTINUS. A chorister in the Cathedral of Magdeburg. He wrote several tracts on music, the principal of which were republished at Wittenburg, after his death, under the title of "*Duo Libri Musices continentes Compendium Artis et illustria Exempla*." Agricola died in 1556.

AGRICOLA, BENEDETTA EMILIA MOLTENI, wife of J. F. Agricola, was a singer at the opera of Berlin, to which place she came in 1742. She had been a pupil of Porpora, Hasse, and Salimbeni. When fifty years of age, she still sang bravura airs in an astonishing manner.

AGRICOLA, RODOLPH. An excellent painter, orator, poet, and musician. He was one of the builders of the organ at Groningen. He died at an early age at Heidelberg, in 1485. Erasmus places Agricola among the first of mortals.

AGRICOLA, MARTIN, singer at Magdeburg, published several musical works between the years 1512 and 1540. He died in 1556.

AGRIPPA. This king inherited a taste for music, as well as for magnificent buildings. About forty years after Christ, he built a splendid theatre at the city of Berytus, where the most costly musical exhibitions were displayed.

AGRIPPA, H. C., born at Cologne in 1486, was renowned for his great erudition. In his work "*De Incertitudine Scientiarum*," he treats on music.

AGTHE, C. C., organist to the Prince of Anhalt-Bamburg, was born in 1759. He composed several songs and operas. He died in 1797.

AGUJARI, LUCREZIA. A celebrated female singer. She married Colla, an esteemed composer, and sang in London for some years, at the Pantheon, where she was at one time engaged at the enormous salary of £100 per night, for singing only two songs. Agujari was truly a wonderful performer. She had two octaves of fair natural voice, from A on the fifth line in the bass to A on the sixth line in the treble, and beyond that, in *alt*, she had, in early youth, more than another octave. Sacchini said he had heard

her go up to B flat in *altissimo*. She died at Parma in 1783.

AGUILERA, SEBASTIAN DE. Composer and organist at Saragossa in the early part of the seventeenth century.

AGUS. A composer who resided for some years at Paris, and died there about 1798. He was scientific, but had little taste or genius. He published several instrumental works, also solfeggi, which were not much approved.

AILE, JOHN GEORGE, organist at Mulhausen, died in 1707. He left sundry works on the origin of music, and on composition.

AILE, JOHN RODOLPH, father of the preceding, was burgo-master and organist at Mulhausen. He published, at Erfurt, in 1648, a method of singing, under the title of "*Compendium pro Tenellis*," &c., with esteemed historical and critical notes. He died in 1673.

AILSTROM, OL, organist at Stockholm, composed several operas, also sonatas. He was living in 1792.

AINESORGEN, C. G., published in 1776, at Hamburg, six sonatas for the harpsichord.

AIBLINGER. Conductor at the Italian opera at Munich in 1823.

AICH, G., regular canon of the order of Premostrants, published some church music at Augsburg in 1663.

AICHINGER, G., an organist, published, between 1547 and 1590, a great number of works for the organ.

AIGNAN, author of a French translation of Homer's Iliad, has composed several operas. He was living in 1810.

AIGNER, ENGELBERTO. A German composer at Vienna, of high reputation for his knowledge in counterpoint. He published "*Missa quatuor Vocum, tota in Canone*."

AIGUINO, BRESCIANO, published several musical works at Venice, between the years 1562 and 1581.

A IN ALT. The second note in *alt*. The ninth above G, or treble clef note.

A IN ALTISSIMO. The second note in *altissimo*. The octave above A in *alt*.

AIMON, P. L. F., born at Lisle in 1779, led the band of the theatre at Marseilles when in his seventeenth year. He afterwards composed many quatuors and quintets. He was living at Paris in 1810.

AJOLLA, FRANCESCO, a composer, born at Florence, was living in France about the year 1530.

AIR, or ARIA. (I.) A tune; a short song or piece of music adapted to words; the peculiar modulation of notes which gives music its character. Haydn says, "Let your air be good; for it is the life, the spirit, and the essence of a composition." An air, generally speaking, is any melody, the passages of which are so constructed as to lie within the province of vocal expression, or which, when sung or played, forms that connected chain of sounds which we call a *tune*. But the strict import of *air* is confined to vocal music; and the word signifies a composition

written for a single voice, and applied to poetry. Simple airs are easily learned, and may be performed with or without instrumental accompaniments. It is related as a curiosity, that a gentleman of Philadelphia, recently returned from Europe, brought with him a canary bird, the gift of a friend, which distinctly sings two airs — the Hunter's Chorus in *Der Freischutz*, and a waltz of Beethoven's. This wonderful little cantatrice was instructed by a blind flute player; and one of its other accomplishments is said to be beating time with its foot while singing. Instances of birds being taught a few bars of a very simple melody are not uncommon; but cultivation to the point which this canary has reached must be exceedingly rare. The mocking bird would doubtless be a more apt pupil than any other. Its natural ear is certainly quickest, and its vocal power most versatile. The secret of teaching a bird to sing an air consists in playing the first notes over and over again upon some instrument agreeable to the bird, taking care to suit the pitch exactly to the learner's capacity. When these notes are successfully imitated, the lesson proceeds with a few following, and so on to the end. A vast amount of patience is required for this.

The chief excellence of that measured strain of music called *air* resides in the beauty of its melody, the symmetry of which lays hold of our affections in a peculiar way. When addressed to the gentler passions, its tender expressions are more intelligible than words, of which few are necessary to assist its meaning; and the less it is enumbered with them, the more powerful is its charm. Melody demands the expression of its own thoughts, before it attempts to express the idea of the poet — a means exclusively its own, and which acts upon us in a pleasurable way. Its power of calling up ideas of the past, upon which the mind loves to dwell, is often a source of great delight: with music of this kind the singer seldom fails to please; he trusts to the charm of the melody rather than the force of the words, recollecting that we must first please the ear before we can touch the heart. It is an observation of Madame de Stael, that when the powers of melody are but feebly felt, we expect that it should faithfully conform to every variation of the words; but when the whole soul is affected by it, every thing, except the music itself, is unreasonable, and distracts the attention, provided there be no opposition between the words and music. We give ourselves up to that which should always predominate over the rest; for the delightful reverie into which it throws us annihilates all thoughts which may be expressed by words. We give ourselves up to the general affections of the soul. Metastasio reduced his language in versification to so limited a number of words, phrases, and cadences, that they seem always the same; and his poetry often produces the effect of a musical instrument, which conveys no idea, but delights you with its melody.

AIR VARIÉ. (F.) Air with variations. This expression sometimes implies no more than that the melody to which it is prefixed is variegated and embellished, *ad libitum*, by the composer or arranger, or even the performer.

AIS. (G.) A sharp.

AKERROYD, S. An English composer, seven-

teenth century. He published numerous songs in the year 1685.

AL, ALL', ALLA, ALLE, ALLO, AI. Prefixed syllables, and meaning very nearly the same thing — *to the*, or *in the style of*; as, *al fine*, to the end; *alla capella*, in the style of church music.

A-LA-MI-RE. An Italian method to determine the key of A by its dominant and subdominant, A E D. In the Guidonian scale of music, *a-la-mi-re* is the octave above *a-re*, or A in the first space in the bass.

A LA GREC. (I.) An appellation occasionally given to choruses performed at the end of each act of a modern drama, in the manner and style of those introduced in the ancient Greek tragedies.

A LA POLACCA. (I.) In the style of the Polish music. See POLACCA.

ALA, G. B., organist at Milan, is said to have died in 1612; yet his many published songs and madrigals bear a later date.

ALANUS AB INSULIS, a renowned philosopher and theologian, was called, on account of his great learning, the Universal Doctor. He died in 1203. In his work called "*Anti-Claudianus*," he treats on music.

ALARDUS, L., a Protestant theologian in Holstein, died in 1672. He wrote, among other works, one "*De Veterum Musica*."

ALARIUS set to music some songs in a collection published at the Hague in 1735.

ALBANEZE, or D'ALBANESE, a singer and pupil of one of the conservatories at Naples, went to Paris in 1747, when eighteen years old, and was immediately engaged at the king's chapel. He was first singer at the spiritual concerts from 1752 to 1762. He died in 1800. His compositions consist of airs, and some charming duets.

ALBANI, MATTHIAS. A renowned violin maker in the Tyrol. His instruments are still much sought for. He lived in the middle of the seventeenth century, and marked his violins thus: "*Matthias Albanus fecit in Tyrol Bulsani*," 1654.

ALBANO. See SEBASTINI.

ALBARINI published some music at Vienna about the year 1789.

ALBERGANTE, H. S., an Italian priest, died at Como in 1698. He wrote several musical works.

ALBERGATI, P. C., of an illustrious family at Bologna, was an amateur and esteemed composer of music. There are several operas of his, which appeared about the beginning of the last century; among others, "*Gli Amici*," and "*Il Principe Selvaggio*."

ALBERGHI, PAOLO, of Faenza, was a celebrated violin pupil of Tartini.

ALBERGHI, I., an Italian composer and singer, was living in 1760.

ALBERICI, G., vicar general at Rome, died there in 1610. He wrote biographical sketches of celebrated Venetian writers, among whom he has noticed many eminent musicians.

ALBERICI, L. An Italian poet and com-

poser, at the end of the seventeenth and beginning of the eighteenth century. He died in 1704.

ALBERICI, P. G., an Italian poet and composer at the beginning of the eighteenth century, published a musical dialogue for four voices, at Orvietto, in 1703.

ALBERICI, V. See ALBRICI.

ALBERICUS, cardinal and Benedictine monk of the convent of Montecassin, was one of the most learned men of his time. He died at Rome in 1106. He was the author of a dialogue on music.

ALBERS, F. B., a composer at Jena, was living in 1785.

ALBERT. A singer at the opera in London in 1820. His voice was a baritone.

ALBERT, MADAME. Principal singer at the great opera of Paris. She appeared for a few months at the opera in London, in 1821, but was not very successful; was a fine actress, but a moderate singer.

ALBERT, HENRY, a good composer and poet, was born at Lodestein in 1604, and was afterwards organist at Königsberg, where he died, in 1668. He was the author of much church music, still sung in Prussia.

ALBERT, PRINCE. Soon after he married Queen Victoria, he was appointed the director of the Society for the Performance of Ancient Music, and is spoken of as being familiar with the compositions of the classical masters of every school. The society of which he was director consisted of 170 performers.

ALBERTI. A celebrated professor of the violin, engaged by Francis I. of France, in 1530.

ALBERTI, a composer and guitarist at Paris, was living in 1796.

ALBERTI, DOMINICO. A Venetian amateur, pupil of Biffi and of Lotti. He astonished Farinelli, in Spain, by his talent in singing. In 1737, he set to music the "*Endymion*" of Metastasio, and, a short time after, the "*Galatea*" of the same author. He died at Rome very young. He was also the composer of thirty-six sonatas in a new style. Dr. Burney highly valued the vocal compositions of Alberti, which are little known in England, and were, indeed, scarce every where, even at the time the doctor was on the continent.

ALBERTI, GIUSEPPE MATTEO. A composer and violinist at Bologna, at the beginning of the last century. He published twelve symphonies, which, being light and easy, were formerly much played in England. He also published, in 1713, ten concertos, in six parts, for violins.

ALBERTI, J., composer and court musician at Ferrara, lived at the beginning of the last century.

ALBERTI, J. F., organist of the court of Saxony, composed some *chefs-d'œuvres* for the church. He died in 1710.

ALBERTI, P., a composer, lived at the beginning of the last century.

ALBERTINI, F., doctor of the canon law, was born at Florence, and wrote a treatise on music about the year 1510.

ALBERTINI, JOACHIM. Chapel-master to the King of Poland in 1784; he composed some operas, and was living in the year 1790.

ALBERTINI, L., an instrumental composer, flourished towards the end of the seventeenth century. He composed twelve sonatas, and dedicated them to Leopold I.

ALBERTUS MAGNUS, a learned bishop of Ratisbon, died in 1280. He was the writer of many theological works, also of two treatises on music.

ALBERTUS, VENETUS, a Dominican, wrote a treatise on music in the middle of the sixteenth century.

ALBICASTRO, H. A Swiss, whose real name was *Weissenburg*; he served in Spain in the army, and subsequently published many musical works at Amsterdam, with the initials B. B. W. He flourished at the beginning of the last century.

ALBINI, V., an instrumental composer, published some sonatas towards the end of the last century.

ALBINONI, THOMAS, of Venice, was the composer of thirty-three operas for that city, between the years 1694 and 1730; he was likewise an excellent performer on the violin, and published in the beginning of the last century, besides several vocal productions, nine different works for instruments, chiefly light and easy concertos and sonatas for violins. One of these works is a collection of airs, entitled "*Balletti a tre, due Violini e Violoncello col Basso*," which became so familiar in England, that most of the common fiddlers of the time were able to play them.

ALBIOSO, M. A good musician and poet, native of Sicily. He died in 1683, and left a collection of Sicilian canzonets, which were published at Palermo.

ALBIZZI TAGLIAMOCCHI, B., a renowned female singer at Florence, lived in the middle of the seventeenth century.

ALBONESIO, A. T. Born at Pavia in 1469; he was a renowned Orientalist: in one of his works he describes the bassoon of Afranius, and gives a representation of it.

ALBONI, MARIETTA, the great contralto, was born at Cesena, in 1826, of very honorable parents, and received an excellent education. At the age of eleven she took lessons in music of the celebrated Maestro Bagioli. Eight years after she entered the Lyceum of Bologna, when Rossini was its director. Her first *début* was at Milan, in the great theatre of La Scala, where she continued to sing during four seasons. She then sang three engagements at Vienna, and made her mark, like all the first class Italian artists, in St. Petersburg. She left that city in 1845 for Germany, after which time she made no engagements with managers, but sang, as her mood prompted, in the principal cities, sharing in London the triumphs of Grisi, Mario, and Tamburini, until she went to Paris, where the rapture of her admirers had no precedent, both at the Italian and Grand Opera Houses.

A year ago she was exciting great enthusiasm in Belgium. And her last public appearance was

in Paris, on the 13th of May, 1852, at a grand solemnity in the theatre of the Palace of Versailles, at which Louis Napoleon *assisted*. She was the great star of the occasion, and astonished and delighted every body by her singing. The director of the Grand Opera made propositions to her to sing in Halevy's new opera, "*Le Juif Errant*," and offered to produce expressly for her a piece of Balfe's: "*Manon l'Escout*," the "*cheval de bataille*," as it has been called, of Malibran. But she had concluded all the preliminary arrangements for a trip to America.

Here she arrived in June, 1852, and her brilliant career in New York, Philadelphia, Boston, &c., both in concerts and in opera, is too well known to need especial notice. A Parisian critic describes Alboni's voice as "a veritable contralto, of the most sweet and most sonorous. It goes down to F in the bass clef and up to the C in *alt* of the soprano; that is to say, it traverses a compass of two octaves and a half. The first register commences with the F in the bass, and reaches to the same note in the *medium*; here lies the real body of Alboni's voice, and the admirable *timbre* of this register colors and characterizes all the rest. The second register extends from the G of the *medium* to the F above; and the remaining compass of a *fourth* above that, forming the third portion, is but an elegant sumptuousness of nature. One must hear, to conceive with what incredible skill the artist uses this magnificent instrument! It is the pearly, light, and fluid vocalization of Persiani, joined to the brilliancy and pomp of style of Pisanoni. Nothing can give an idea of this voice always united, always equal, which vibrates without effort, and of which each note opens like a rosebud. No cry, no pretended dramatic contortion, to bruise and wound your tympanum under the pretext of moving you to tears! No doubt the admirable voice of Alboni is not without some imperfections; it counts several notes that are feeble and slightly dull, as *sol, la, si, do*, notes which serve as the transition between the chest voice, of an unparalleled beauty, and the register of sounds formed above the larynx, commonly called the *head tones*. When the singer is not careful, this little *heath* enlarges, and these notes appear a little stilled. It is quite evident that the *virtuosa* glides over this little *bridge of sighs* with all sorts of precautions, and that she evinces a satisfaction when she arrives at a real tone of her contralto voice, which she makes leap out and vibrate with so much the more sonorousness. Frequently she contrasts the two registers with an exquisite taste, balancing herself lightly on the mixed note before bounding upon the *terra firma* of her chest voice, which she governs with a supreme authority. We have heard her make a gamut from the C in *alt* down to F in the bass; this gamut flew before the ear with the rapidity of lightning, without your losing a single note, and all this was done with an unconcern entirely hopeless for mediocrity."

Of her personal appearance, her favorite *rôles*, &c., at the time of her arrival in America, a writer in the Tribune thus speaks: "Marietta Alboni is about twenty-six years of age, — has great *embonpoint*, — used to keep her hair clipped short and hanging in her neck, when we heard her two or three years since in Europe — has remarkable self-possession and almost indifference of manner

upon the stage, of which Steffanone constantly reminded us, and achieves her glowing triumphs more by the splendor of her voice, and her exquisite management of it, than by any dramatic genius, in which she is deficient. Her voice is the purest, richest, fullest, and sweetest contralto. The limited *repertoire* for such a voice has induced Alboni, who is singularly restless, with all her languor of temperament, to undertake many parts not strictly within her range; but so remarkable is her voice, so delicious to hear under any circumstances, that we believe she has achieved a success in every part she has undertaken. In Rossini's music, in his brilliant finales and *scenas*, like the *Non piu mesta*, Alboni is wonderful. Her voice pours out of her mouth without the slightest effort, and with irresistible effect, and gushes through the glittering *floriture* of that style with a sparkling facility which is most fascinating. The *Brindisi*, from 'Lucrezia Borgia,' known as the *drinking song*, is another of her exquisite bits of vocalization. She used often to sing it between the acts at the Italian Opera in Paris, and it always excited unmingled enthusiasm."

ALBRECHT, J. L., director of the music in the principal church of Mulhausen, died about the year 1773. He published many didactic works on music.

ALBRECHT, J. M., organist at Frankfurt, was born in 1701. He composed several concertos for the harpsichord.

ALBRECHTSBERGER, JOHN GEORGE, was born at Klosterneuburg, in the year 1736, and at the age of only seven years was engaged as a singing boy in his native town, from whence he removed to the Abbey of Moelk, where he conducted a school. In the mean time he learned the organ and composition of Moun, the court organist, and was soon himself appointed organist at Raab. In 1772, he obtained the situation of court organist, and member of the academy at Vienna, and subsequently was made chapel-master at the Cathedral of St. Stephen's, at Vienna. He died in 1803. Albrechtsberger was one of the most learned of modern contrapuntists. He formed a great number of eminent scholars, among whom Beethoven is particularly distinguished. Haydn had the greatest esteem for Albrechtsberger, and is said sometimes to have consulted him professionally. Of his works, his "Elementary Treatise on Composition," published in 1790, at Leipzig, is the one by which he is most generally known; it is an excellent book, and is for modern composition what the *Gradus* of Fux is for ancient music. The principal part of this work has been translated into French. He also wrote "Methods of Harmony," "Figured Bass," and "Composition," adapted for self-instruction. His remains rest in the same burying-place with those of his friends and associates, Haydn and Mozart. Among his distinguished pupils, in addition to Beethoven, were Eybler, Hummel, Seyfried, Lidesdorf, Schneider, Weigl, and Moscheles; and though Albrechtsberger had no power to form, he had the ability to direct, the minds of these eminent men. He did not make them, but he enabled them to be what they were. The seed fell on good soil, but it was his seed, and he must have felt proud of such a pupil as that colossus of harmony — the wizard and the poet — BERTHOVEN. Clementi made Albrechtsberger

known to England as a composer. There seems to have existed, among some of the German school, a predisposition for complicated harmony; their musical aliment appears to have necessarily generated fugue and canon, or the organ of *philofugativeness* must have been developed in an unusual degree. Albrechtsberger said of himself, "I have no merit in composing good fugues, for I do not recollect ever having an idea that might not be employed in double counterpoint." It is from Albrechtsberger and Sebastian Bach, and like men, that the *materiel* of harmony is acquired: they have furnished our musical store-houses and arsenals; they have equipped our Haydns, Mozarts, and Beethovens for the field; they discovered and laid bare "the chains that tie the hidden soul of harmony."

ALBRICI, V. A Roman composer and organist, whom the Queen Christina of Sweden brought with her out of Italy. He died about the year 1680. Most of his compositions are for the church.

ALBUJIO, composer and singer, was living, about the year 1760, at Bergamo. Some opera airs of his are occasionally met with.

ALCEUS. A lyric poet of Mitylene, native of the Isle of Lesbos, and celebrated by the invention of Alcaic verse. He lived 608 years before Jesus Christ. Athenæus calls him *musicæ scientissimus*.

ALCIBIADES. This general, like most of the Athenians, had been taught, while young, to play on musical instruments, and he excelled many others. Zopyrus, a Thracian, was his instructor.

ALCOCK, JOHN, doctor of music, was a native of London, born in 1715. When only seven years of age, he was entered as chorister of St. Paul's, and at fourteen became an articulated pupil of Mr. Stanley, who, although at that time himself only sixteen, was organist of two London churches. Dr. Alcock died at Litchfield, in 1806, aged ninety-one. His works consist of six suites of lessons for the harpsichord, and twelve songs, published at Plymouth; six concertos, and some psalms, hymns, and canons, published at Reading; twenty-six anthems, and a collection of glees, called the "*Harmonia Festi*;" also many double and single chants, published at Litchfield. At each of the above places he was organist. A glee by Dr. Alcock, entitled "Hail, ever-pleasing Solitude," gained a prize medal at the Catch Club, and is considered to be a beautiful as well as scientific performance.

ALLDAY, P., a composer and excellent violin pupil of Viotti, was born at Perpignan. He left France in the revolution, and went to London, where he published much music for the violin. He subsequently gave lessons at Edinburgh.

ALDERINUS, COSMA, a Swiss composer, published at Berne, in 1553, fifty-seven hymns.

ALDOVANDRINI. This Italian musician composed seven operas for Bologna and Venice, between the years 1696 and 1711. Some of them were comic, especially one entitled "*Amor Torna in 58, al 50*," which was written in the dialect of the Bolognese peasantry.

ALDRICH, REV. DR. HENRY, appointed dean of Christ's Church, Oxford, in 1389, was a singular instance of an unprofessional musician.

At the same time that he was greatly distinguishing himself as a polemical writer, a polite scholar, a theologian, a profound critic, an architect, and a man of sound judgment and exquisite taste in arts, science, and literature in general, he became so profound and skilled in the theory and practice of harmony, that his compositions, particularly for the church, equal in number and excellence those of the greatest masters of his time. Though not more than five or six of his choral productions continue to be performed, except at Oxford, yet he composed nearly forty services and anthems, which are preserved in the third volume of Dr. Tudway's collection, in the British Museum. Besides these, Dr. Aldrich enriched the cathedrals with many admirable compositions, by adapting English words, from the psalms or liturgy, to anthems and motets of Tallis, Bird, Palestrina, Carissimi, Graziani, and Bassani, which were originally set to Latin words, for the Roman Catholic service. Among his compositions of a lighter kind, he amused himself with setting rounds and catches, of which eight or ten are inserted in the two books of the "Catch Club," or "Merry Companion." The smoking catch, "Good! good! indeed," and the round, "Hark the bonny Christchurch Bells," have been always admired; the first for humor and contrivance, and the second for its pleasing melody and general effect. The admirable choral discipline Dr. Aldrich preserved in his college, at Oxford, for upwards of twenty years, is still remembered. Indeed, without neglecting more important concerns, he seems to have interested himself in the cultivation and prosperity of the musical art, with as much zeal and diligence as if his studies and pursuits had been circumscribed to that alone. He bequeathed to his college, at his decease, in 1710, an admirable collection of music. Dr. Burney says that, having, in 1778 and 1779, made a catalogue of these musical works, he can venture to say, that, for masses, motets, madrigals, and anthems of the sixteenth and seventeenth centuries, the collection is the most complete of any that he had an opportunity of consulting.

ALDRIGHETTI, ANTONIO LODOVICO, an Italian nobleman, born at Padua, was professor of law there, and wrote a work on music and poetry. He died in 1660.

ALDROVANDINI. See **ALDOVANDRINI**.

ALEMAN. Amongst the ancient bards of Greece was one Aleman, who was a native of Sardinia, and lived about 670 years before the Christian era. He was a celebrated composer of love songs; was remarkable, also, for a most voracious appetite, being the greatest glutton of his time.

ALEMBERT, JEAN LE ROND D'. Between the years 1690 and 1711, composed, for Bologna and Venice, several operas. He also published some sacred music.

ALEOTTI, RAFAELE ARGENTA, an Augustine monk at Ferrara, published some motets and madrigals in the seventeenth century.

ALEOTTI, VITTORIA. A female composer of madrigals, in the latter part of the sixteenth century.

ALESSANDRI, FELICE. Born at Rome in 1742. He went to England in the year 1768, and composed two comic operas for the English

stage, "*Le Moglie Fedele*," and "*Il re alla Cuccia*," which are not devoid of merit. He was the husband of Signora Guadagni, an excellent Italian singer. On his return to the continent, he composed many other operas, up to the year 1792.

ALESSANDRO, ROMANO, a singer admitted into the pope's chapel in 1560, was likewise so exquisite a performer on the viol, that he obtained the cognomen of *Alessandro della Viola*. He composed motets accompanied by many instruments, which seem to have been the first of the kind. Adami says that Alessandro Romano also invented canzonets for four and five voices.

ALEXANDER, J., violoncellist and composer at Duisburg, has published, chiefly at Amsterdam, several works for that instrument, since the year 1800.

ALEXANDER AB ALEXANDRO, a Neapolitan lawyer, died at Rome, in 1523. He wrote some works on ancient music.

ALEXANDER, SYMPHONIARCHA, a composer in the early part of the seventeenth century, published three books of motets, at Frankfort, in 1606.

ALEXANDER, a native of Asia Minor, was the founder of a sect of persons who thought it a religious duty to keep awake day and night to sing music; believing that constant singing would fit them for heaven. He died 430.

ALEXANDER THE GREAT. Music flourished in the reign of this man, and found in him a skilful judge and generous protector. It was customary for the musicians in his employ to sing hymns to his praise, accompanied with instruments.

ALEXANDRE, C. G. Author of six duets, Paris, 1775.

ALFIERI. A musician and poet. He has surpassed every other poet in portraying the heart of a tyrant. The scenes of his "*Timoleon*" are very fine.

ALGAROTTI, COUNT FRANCESCO, was born at Venice, in 1712. He was much esteemed by Frederic II., King of Prussia. He died at Pisa, in 1764. He wrote an essay on the opera, which was translated into English, and published in 1767.

ALGISI, or ALGHISI, D. P. F. A renowned Italian composer, born at Brescia, about the year 1666. He afterward lived at Venice, and composed two operas there, which were much esteemed, especially "*Il Trionfo de la Continenza*."

ALIX. Bonnet, in his "*Histoire de la Musique*," gives the following extraordinary account of a mathematician, mechanician, and musician, named Alix, who lived at Aix, in Provence, about the middle of the seventeenth century. Alix, after many years' study and labor, succeeded in constructing an automaton figure, having the shape of a human skeleton, which, by means of a concealed mechanism, played, or had the appearance of playing, on the guitar. The artist, after having tuned in perfect unison two guitars, placed one of them in the hands of the skeleton, in the position proper for playing, and on a calm summer's evening, having thrown open the window of his apartment, he fixed the skeleton, with

the guitar in its hands, in a position where it could be seen from the street. He then, taking the other instrument, seated himself in an obscure corner of the room, and commenced playing a piece of music, the passages of which were faithfully repeated or echoed by the guitar held by the skeleton, at the same time that the movement of its wooden fingers, as if really executing the music, completed the illusion. This strange musical feat drew crowds around the house of Alix, and created the greatest astonishment; but, alas for the ill-fated artist! this sentiment was soon changed in the minds of the ignorant multitude into the most superstitious dread. A rumor arose that Alix was a sorcerer, and in league with the devil. He was arrested by order of the parliament of Provence, and sent before their criminal court, *La Chambre de la Tournelle*, to be tried on the capital charge of magic or witchcraft. In vain the ingenious but unfortunate artist sought to convince his judges that the only means used to give apparent vitality to the fingers of the skeleton were wheels, springs, pulleys, and other equally unmagical contrivances, and that the marvellous result produced was nothing more criminal than the solution of a problem in mechanics. His explanations and demonstrations were either not understood, or failed of convincing his stupid and bigoted judges, and he was condemned as a sorcerer and magician. The iniquitous judgment was confirmed by the parliament of Provence, which sentenced him to be burned alive in the principal square of the city, together with the equally innocent automaton figure, the supposed accomplice in his magical practices. This infamous sentence was carried into execution in the year 1664, to the great satisfaction and edification of all the faithful and devout inhabitants of Aix.

ALQUOT TONES. Accessory tones, or harmonics. Tones, faintly heard, which are always produced with the principal tone, at harmonic intervals above it.

ALL' ANTICA. (I.) In the old style. This expression applies to music not absolutely antiquated, but that is composed in the scientific style of the last age; that is, of the *old school*.

ALLA BREVE (I.) is the proper designation of the time of a piece of music, in which the breve is equal to a semibreve in $\frac{2}{3}$ time; and is to be played in a movement of twice the usual rapidity; so that a breve is played as fast as a semibreve, a semibreve as fast as a minim, and so on. It is usual, in this mode of time, to prefix to the piece a designation that resembles a C, with a perpendicular line through it, but which is intended to represent a circle bisected; sometimes, also, a $\frac{2}{3}$, or large $\frac{2}{3}$, or $\frac{2}{3}$. It is, however, distinct from two-minim time, which is also often called *alla breve* time, and may be designated by 2, and by C with a perpendicular line through it; but the value of the note corresponds with the designation. Besides, the expression *alla capella* is sometimes used; by which phrase is meant, that though the notes in their proportional magnitude are the same as in the ancient psalm tune, yet they are not to be given in the choral style, as sung by the congregation, but more lively, as is usual in the chapel style.

ALLA CACCIA. (I.) In the hunting style.

ALLA CAPELLA. (I.) An expression applied by the Italians, generally, to music composed in the church style; but occasionally only as referring to time. See **ALLA BREVE**.

ALLA MADRE. (I.) To THE MOTHER, i. e. to the Virgin Mary. An expression written at the beginning of hymns addressed to the Virgin.

ALLA MARCIA. (I.) In the style of a march.

ALLA MODERNA. (I.) In the modern style. The expression *alla moderna* is applied to any music composed in any style which has been adopted since the time of Handel, Corelli, and Germiniani.

ALLA RUSSE. (I.) In the Russian style. An expression found at the beginning of compositions written in imitation of Russian music.

ALLA SCOZZESE. (I.) In the Scotch style. This expression is applied by the Italians either to a whole movement or to a particular passage. It does not always signify that the style is directly Scotch; but that it is so far of a Caledonian caste or *lingue*, as to remind us of the Scotch music.

ALLA SICILIANA. (I.) This expression implies a certain species of air generally written in 6-8 or 12-8, though sometimes in 6-4. Its principal characteristics are, its being in a somewhat slow time, and chiefly moving by alternate crochets and quavers, if in 6-8 or 12-8; and in minims and crochets, if in 6-4; in either case, uniformly having the longest note at the *thesis*, or points of accentuation.

ALLA TURCA. (I.) This expression signifies that the movement, at the beginning of which it is written, is composed in imitation of the Turkish style.

ALLA VENEZIANA. (I.) In the Venetian style.

ALLA ZOPPA, or AL ZOP. (I.) An expression applied by the Italians to any constrained, syncopated movement, the notes of which proceed in an irregular and awkward style.

ALLAN, MADAME CARADORI. A distinguished Italian soprano. Her chief attributes seem to have been clearness, beauty, polish, invention, and taste. She sang with sweetness, delicacy, and variety, and was one of the stars in our American musical hemisphere in 1840.

ALLATIUS, or ALLACCI, LEO, wrote a treatise on the melodies of the Greeks. He died at Rome in 1669. He was a professor of Greek, and principal inspector of the library of the Vatican. He had a great facility in copying Greek manuscripts, and, it is said, was so much grieved as to have wept on wearing out the only pen which he had used in copying during the space of forty years. Allatius was also the author of a useful catalogue of dramatic pieces up to the year 1667, entitled the "*Drammaturgia*."

ALLEGRALENTE. (I.) Rather quick.

ALLEGRIANTISSIMO, MADDALENA. An eminent Italian singer: she made her first appearance at Venice, in 1771, and after singing at several other Italian theatres, went, in 1774, into Germany, where she continued to perform at Mannheim and Ratisbon, till the year 1789, when she returned to Venice, and after performing there at the theatre of San Samuele, during the carnival, came to England in 1781. Her voice was very sweet and flexible, though not very powerful. In 1783, she returned to Germany, when she was engaged at Dresden, by the Elector of Saxony, at a very large salary. We find her again performing at the oratorios in London, in the year 1799.

ALLEGRETTO. (I.) A term signifying a time quicker than *andante*, but not so quick as *allegro* of which word it is the diminutive.

ALLEGRETTO-SCHERZANDO. (I.) Lively and sportive.

ALLEGRI, GIOVANNI BATTISTA, organist in the Venetian States, published some motets at Venice in the year 1700.

ALLEGRI, GREGORIO, born at Rome, of the family of Correggio, was received in 1629 in the pope's chapel as a singer and composer. He was a pupil of Nanini. His celebrated "*Miserere*" is still sung in the papal chapel during passion

week, and is forbidden to be copied on pain of excommunication. It is well known that Mozart, having heard it performed twice, retained the score so strongly in his memory, that he wrote it down in almost perfect conformity to the original manuscript. The "*Miserere*" of Allegri was printed in London in 1771, under the superintendence of Dr. Burney; and in 1810, M. Choron inserted it in his collection of classical music. Allegri died in 1652, and was buried in the chapel of San Filippo Neri, in the Chiesa Nuova at Rome. This is now the common place of interment for the singers of the pontifical chapel. The following is the striking epitaph inscribed on the walls of the chapel:—

Canores pontifical
Ne quot vivas
Concoria incl-ella junxit,
Mortuus corporis discors resolutio dissolveret.
Hic una couit voluere.

The pontifical singers,
Anxious that those
Whom harmony united in life
Should not be separated in death,
Wished this as their burial-place.

Though his abilities as a singer were not very conspicuous, yet he was reckoned a complete master of harmony, and was in such estimation with the performers of his time, that he was appointed by the pope, A. D. 1629, to a situation in the choir of his chapel. His principal compositions are of a sacred and solemn description; and many parts of the church service in Italy, remarkable for the divine simplicity and purity of the harmony, are at this day the evidences of his successful application to the musical art. To his skill as a composer he added a gentleness of disposition, and a warmth of benevolence, which showed that he was possessed of merit still higher and more enviable. The poor flocked around his abode, and were relieved by his charity, and guided by his exhortations. It was his daily business to visit the prisons of Rome, and to attend to the wants of the unhappy persons who were shut up in those dreary manions. At length, after a life spent in useful employment and active benevolence, he died, in 1652, and was buried in the Chiesa Nuova, before the chapel of San Filippo Neri, near the altar of annunciation. Of all his works, the "*Miserere*" is the most distinguished. It was, for upwards of a hundred and fifty years, annually performed in passion week, at the pope's chapel, on Wednesday and Good Friday; it is in appearance so simple as to make those who have only seen it on paper wonder whence its beauty and effect could arise; but it owes its reputation more to the manner in which it is performed than to the composition; the same music is many times repeated to different words, and the singers have, by tradition, certain customs, expressions, and graces of convention, which produce great effects; such as swelling and diminishing the sounds altogether, accelerating or retarding the measure at some particular words, and singing some entire verses quicker than others. So says Signor Sautarelli, who had often heard the "*Miserere*." Andrea Adami, in a work of his, mentions that "after several vain attempts, by preceding composers, for more than a hundred years, to set the same words to the satisfaction of the heads of the church, Gregorio Allegri succeeded so well as to merit eternal praise; for with few notes, well modulated, and well understood, he composed such a '*Miserere*'

as will be continued to be sung on the same days, every year, for ages yet to come; and one that is conceived in such just proportions as will astonish future times, and ravish, as at present, the soul of every hearer." However, some of the great effects produced by this piece may, perhaps, be justly attributed to the time, place, and solemnity of the ceremonials used during the performance: the pope and conclave are all prostrated on the ground; the candles of the chapel and the torches of the balustrade are extinguished, one by one; and the last verse of this psalm is terminated by two choirs; the *maestro di capella* beating time slower and slower, and the singers diminishing, or rather extinguishing, the harmony, by little and little, to a perfect point. This composition used to be held so sacred, that, it was imagined, excommunication would be the consequence of an attempt to transcribe it. Padre Martini says, that there were never more than three copies made by authority, one of which was for the Emperor Leopold, one for the late King of Portugal, and the other for himself: this latter he permitted Dr. Burney to transcribe at Bologna, and Signor Sautarelli favored him with another copy from the archives of the pope's chapel. Upon collating these two copies, Dr. Burney found them to agree pretty exactly, except in the first verse; he says, "I have seen several spurious copies of this composition in the possession of different persons, in which the melody of the soprano, or upper part, was tolerably correct, but the other parts differed very much, and this inclined me to suppose the upper part to have been written from memory, which, being so often repeated to different words in the performance, would not be very difficult to do, and the other parts to have been made to it by some modern contrapuntist afterwards. The Emperor Leopold I., not only a lover and patron of music, but a good composer himself, ordered his ambassador to Rome to entreat the pope to permit him to have a copy of the celebrated "*Miserere*" of Allegri for the use of the imperial chapel at Vienna, which being granted, a copy was made by the senior *maestro* of the pope's chapel, and sent to the emperor, who had then in his service some of the best singers of the age; but, notwithstanding the abilities of the performers, this composition was so far from answering the expectations of the emperor and his court in the execution, that he concluded the pope's *maestro di capella*, in order to keep it a mystery, had put a trick upon him, and sent him another composition. Upon which, in great wrath, he sent an express to his holiness, with a complaint against the *maestro di capella*, which occasioned his immediate disgrace and dismissal from the service of the papal chapel; and in so great a degree was the pope offended at the supposed imposition of his composer, that, for a long time, he would neither see him nor hear his defence; however, at length the poor man got one of the cardinals to plead his cause, and to acquaint his holiness that the style of singing in his chapel, particularly in performing the "*Miserere*," was such as could not be expressed by notes, nor taught or transmitted to any other place, but by example; for which reason the piece in question, though faithfully transcribed, must fail in its effect when performed elsewhere. His holiness did not understand music, and could hardly com-

prehend how the same notes should sound so differently in different places; however, he ordered his *maestro di capella* to write down his defence, in order to be sent to Vienna, which was done; and the emperor, seeing no other way of gratifying his wishes in respect to this composition, begged of the pope that some of the musicians in the service of his holiness might be sent to Vienna, to instruct those in the service of his chapel how to perform the "*Miserere*" of Allegri.

ALLEGRI DI BRAVURA. (I.) Brilliant and striking compositions, or movements.

ALLEGRIA. (I.) Joy, gladness.

ALLEGRO, or ALL'O. (I.) Gay, quick. A term expressive of the third degree of musical rapidity. Generally applied to lively movements; but sometimes, in conjunction with another word, placed at the beginning of compositions intended to rouse and stimulate the more violent passions; as *allegro agitato*, quick and agitated; *allegro furioso*, with rapidity and vehemence. *Allegro* also denotes one of the six distinctions of time, which succeed each other as follows: grave, adagio, largo, vivace, *allegro*, and presto.

ALLEGRO ASSAL. (I.) More quick, or exceedingly quick.
 ALLEGRO COMMODO. With a convenient degree of quickness.
 ALLEGRO CON BRIO. Quick, with brilliancy.
 ALLEGRO CON FUOCO. Quick and animated.
 ALLEGRO CON MOTO. Quick, with more than the usual degree of movement.
 ALLEGRO CON SPIRITO. Quick, with spirit.
 ALLEGRO MA GRAZIOSO. Lively and graceful.
 ALLEGRO MA NON PRESTO. Quick, but not in the extreme.
 ALLEGRO MA NON TROPPO has a similar meaning: lively, but not too spirited.
 ALLEGRO MOLTO, or DI MOLTO. Very quick.
 ALLEGRO NON MOLTO. Not very quick.
 ALLEGRO VELOCE. With rapidity.
 ALLEGRO VIVACE. With vivacity.
 ALLEGRO VIVO. With unusual briskness.
 ALLEGRISSIMO. The superlative of *allegro*; very quick.

ALLELUIAH. Praise to Jehovah. A word used to denote pious joy and exultation, chiefly in hymns and anthems.

ALLEMANDE. (F.) A slow air, or melody, in common time of four crotchets in a bar. A species of composition supposed, from its name, to be of German origin. We meet with the Allemande in Handel's harpsichord lessons, and other works of about their date; but as a sonata movement, it is now obsolete. The dance known by the same name is, however, still used in Germany and Switzerland, and is written in common time of two crotchets in a bar.

ALLENANDO. (I.) Retarding the time, slower and slower, to the end. See RALLENANDO.

ALLISON, RICHARD, professor of music in London, in the reign of Queen Elizabeth, was one of the ten composers who adapted the Psalms to music; they were first published by Thomas Este, in 1594; some of the tunes are still in use.

ALL' IMPROVISTA. (I.) Extemporaneous. This expression is applied by the Italians to the performance of any extemporary strain; as, "He sang *All' Improvista*;" i. e., he sang without premeditation; he invented as he proceeded.

A L'ITALIENNE. (F.) In the Italian style.

AL LOCO. (I.) A term chiefly used in violin music, to signify that the hand (having been shifted) is to be used as before.

ALL' OTTAVA. (I.) In the octave. Instru-

ments, or voices, are said to play or sing *All' Ottava*, when their parts lie, note for note, an octave above or below some other part.

ALL' ROVERSICO. (I.) By reversing. A term applied to a contrary motion in the parts of any composition.

ALL SEGNO, or AL SEG. (I.) To the mark or sign. This expression is usually accompanied with this character, ♯ , and signifies that the performer is to return to a similar mark in the composition, and end with the first part of the strain, or a similar character in the course of the movement, and play or sing from that place to the word FINE, (end,) or the mark ◡ over a double bar.

ALL' UNISONO. (I.) In unison, or sometimes by extension, in octaves.

ALLWOODE. An English composer for the organ in the seventeenth century.

ALMA REDEMPTORIS. (L.) A hymn to the Virgin.

ALMEIDA, ANTONIO DE, was chapel-master of the cathedral at Oporto in the middle of the seventeenth century, and composed several comic musical works.

ALMEIDA, MANDO DE. A Portuguese couposer of church music, died in 1660.

ALMEIDA, or ALMEYDA, an instrumental couposer, published several sets of quatuors about the year 1800. Some of his waltzes and other piano-forte music are published by Clementi.

ALMELOVEEN, THEODORE JANSSON AB, professor of medicine at Harderwyck, was born in 1657. He wrote a work on musical inventions in 1712.

ALMENRAEDER. Composer of some music for the bassoon.

ALMERIGHI DE RIMENO, J., chamber musician to the landgrave of Hesse-Darmstadt, published six sonatas in 1761, at Nuremberg.

ALMEYDA, C. F. A violinist and composer at Madrid. Pleyel, of Paris, published six quartets of this composer in 1798.

ALOUETTE, N., conductor of the music in the church of Notre Dame, at Paris, is known as a composer by his motets, and a very fine "*Miserere*." Lulli was his master.

ALOVISIO, G. B., published, in 1628 and 1637, some church music at Bologna.

ALOYSIUS, JOHN BATTISTA, resided at Bologna towards the end of the sixteenth and beginning of the seventeenth century. He composed much church music, part of which was published at Venice.

ALOYSIUS, JOHN PETR. See PALESTRINA.

ALPHABET. Applied to the seven letters used in music, thus:—

When either part exceeds these seven, either 83-

ending or descending, the same series is repeated, observing the same order.

ALPINE HORN. An instrument made of the bark of a cherry tree; and, like a speaking trumpet, used to convey sounds to a great distance. When the last rays of the sun gild the summit of the Alps, the shepherd, who inhabits the highest peak of those mountains, takes his horn, and cries with a loud voice, "Praised be the Lord." As soon as the neighboring shepherds hear him, they leave their huts and repeat the words. The sounds are protracted many minutes, while the echoes of the mountains, and grottoes of the rocks, repeat the name of God. Imagination cannot picture any thing more solemn or sublime than this scene. During the silence that succeeds, the shepherds bend their knees and pray in the open air, and then retire to their huts to rest. The sunlight gilding the tops of those stupendous mountains, upon which the blue vault of heaven seems to rest, the magnificent scenery around, and the voices of these shepherds sounding from rock to rock the praise of the Almighty, must fill the mind of every traveller with enthusiasm and awe.

ALSTED, or ALSTEDIUS, JOHN HENRY, a German divine, wrote, among other works, the following, which was translated into English: "*Templum Musicum*, being a compendium of the rudiments both of the mathematical and practical parts of music, on which subject not any book is extant in the English tongue. Faithfully translated out of the Latin, by John Birchensha. London, 1664." This book consists of little more than nearly unintelligible and dry definitions. Alstedius died in 1638.

ALT, secretary to the town of Glogau, a composer and violinist, published some quartets at Berlin about the year 1790.

ALT, PHILIPPE SAMUEL, composer and organist at Weimar, was born in 1689.

ALT. An abridgment of the Italian adjective *alto*, high. A term applied to that portion of the great scale of sounds which lies between F, on the upper line of the treble staff, and G of the octave above. Thus the A on the first added line above is called *A in alt*.

ALTA. (I.) High. This word is frequently to be understood in the comparative degree; as, *S va, alta* signifies an octave higher.

ALTERATA. (I.) One of the terms given by the old theorists to the first deviation from the ecclesiastical modes; which modes, till this innovation, were so rigidly confined to the diatonic scale, as to admit of no semitones; but those from E to F, A to B flat, and B natural to C.

ALTERATIONS IN ANCIENT PSALMODY, illustrated in the history of "Old Hundred." We take the following interesting and able article from the columns of the "New England Puritan."

The melody of "Old Hundred" was printed for the first time, as we conclude after a careful investigation, without any accompanying part whatever, about the year 1550, and set to the French version of the 134th psalm; and it was printed alone, in England, in 1562, to Sternhold and Hopkins's version of the 100th psalm, but

differing from the French copy in several notes, probably through mistake, in part, at least.

It was harmonized or arranged in parts, in France, by Claude Goudimel, and printed in 1555, to the 134th psalm, three parts being added to the original melody; and a few years after, it was done by Claude Le Jeune, and set to the same psalm, but was not printed till 1613, several years after his death.

It was harmonized in England, by William Damon, in 1579, and again by the same author, differently, in 1591; also by Dr. Dowland, in 1594, and set to the 100th psalm; likewise by Richard Allison, in 1599, and by Ravenscroft, still differently from the rest, and published in 1621, to the 134th psalm, Dowland's copy being included in the same volume with the latter. We have it again, in three parts, in John Playford's collection, published in 1671, which was very popular, and continued in use during a much longer period than any other ever made.

Various arrangements of this tune have been made in different ages and countries, times almost without number, in two, three, four, and five parts. Many of the greatest composers have exercised their ingenuity upon it; yet among all the arrangements that have ever been made of this tune, no one can claim, by its superior merit, to be established as the standard for all after ages; and we venture to predict that no such arrangement will ever appear. In the reign of George IV., Gardiner, the author of "Music of Nature," made the trial, under the sanction of the king, to supply the churches with a collection both of poetry and music, as a "standard book of psalmody;" and although the work produced was highly creditable and much admired, the result was no less than a *royal failure*, in respect to the object for which it was designed.

What one age considers perfect, or looks upon with complacency, another may view in a very different light. This fact is exemplified in all our experience, and perhaps in nothing more strikingly than in music and metrical psalmody. Sternhold and Hopkins's version of the Psalms, in England, was satisfactory for a long time; but at length complaints being made and improvements demanded, almost every succeeding impression was altered to the fashion of the day. So it was with that of Marot and Beza in France, which, it is believed, is still used to some extent in that country. They have been altered from time to time, through a great number of editions, so as to correspond with those variations to which all languages are liable.

The melody of "Old Hundred" is common property, and any qualified composer has both a legal and a moral right, as we think, to add to it such harmony as he believes will be an improvement: if he succeeds, it is well; if he fails, he will have his trouble and the expense as his reward; and how many have experienced this result! But what true lover of the art would stay the hand of improvement, or forbid the correction of errors, in a case wherein all have an equal right to try their skill; and who will relinquish the use of this tune, as it is now arranged, because in the course of time it has undergone the said changes? On such a principle, we should have to relinquish a considerable portion of the English language.

Some of the most celebrated musicians have constructed parts upon the simple melody of

"Old Hundred." English publications of different ages present it with different harmony from those that preceded them, and different from others of the same age. One work, published more than two hundred years ago, contains two different arrangements; a later one gives us *five*, and one edition of Tate and Brady's Psalms, which was accompanied with music, presents six variations of the *melody*, as it is repeated to different psalms! Dr. Croft only rearranged "London," and Kirby "Windsor," both of which had already been done by Ravenscroft, and probably by others; and John Milton (father of the poet) altered his own arrangement of "York," and issued both copies at the same time; and *the one now in use is neither of his*. The melody, says Ravenscroft, was originally a *Northern tune*. The melody of "St. David's," which was harmonized by Ravenscroft, was of Welsh origin; those of "Dundee" [Dundy] and "Martyrs" were Scotch.

The feelings of our nature require a constant succession of new tunes, (we do not mean to the exclusion of all former ones,) and neither choir nor congregational singing can long be sustained without them. Dr. Busby says, "In general, without variety, pleasure ceases, and nothing more urgently requires relief than an *old song*."

Metrical psalmody had its rise in Germany, and there is no doubt but German musicians were authors of some of the old melodies; and tradition, in Germany, accords to Luther the authorship of several. Schamelus and Walther assert that one John Gallieulus had a share in them. Many persons have entertained the belief that "Old Hundred" was at least Lutheran, while others have been disposed to grant it still higher antiquity. Its origin is very uncertain, and enveloped in great obscurity, although it is generally ascribed to Luther in the American singing books. But history supports a much stronger claim for a musician by the name of William Franc as its author. Yet it may have been one of those very "secular tunes, such as were easy to learn and play on the viol and other instruments;" or one of the "most favorite songs of the times;"* or one of those "ballad airs as would best suit its metre;" or an "opera song;"† all which were sung to the psalms early in the reformation, not only by Lutherans and Calvinists, but Roman Catholics: the latter, however, soon became alarmed, and pronounced psalm singing heretical, and forbade its practice. But it may have originated in an ancient Roman char., some of which, or adaptations therefrom, were long retained in the Protestant service. One author says it was a "love ditty written long before Luther's time." Ravenscroft, who published it in 1621, was ignorant of its author even at that early day.

Adaptations of the melodies of profane songs to sacred poetry, three hundred years ago, were not uncommon: and Luther himself, it appears, was not very scrupulous about it, for he set the Lord's prayer, or the following words, "Our Father, who art in heaven," to a melody of this kind, one which had been used in singing "histories in rhyme, something like the romances or ballads of the present day;" i. e., near the middle of the eighteenth century. The King of Navarre sang, "Stand up, O Lord," to the air of a fashion-

able dance! and in an ancient religious work occurs a Christmas subject set to the tune of "O caper and frisk it," and another to the tune of "O Mother Rogers." But such examples we highly deprecate, and hope never to see followed in our times. It is probable, nay, almost certain, that some tunes of the above character crept into the number which were afterwards adopted and printed to the Psalms, and which have come down to us; but it should be borne in mind that, whether the association was ever offensive or not, no objection on this score can be made by us at the present time, as relates to these tunes, for we have only known them as used for sacred purposes.

In justice to Luther, the fact should be stated that, before Marot and Beza's Psalms were printed with the melodies, the Lutheran reformers in Germany made great use of psalms, hymns, and spiritual songs. Luther himself published a small psalm book, with a few melodies, in 1524 which was subsequently enlarged; and, before his time, Huss and the Bohemian Brethren had been psalm singers. The latter, also, had a small hymn or spiritual song book, with notes, printed at Ulm in 1538.

The people, high and low, were every where infatuated with the notion of psalm singing, on the appearance of Marot and Beza's version; and, before the melodies were printed, each one sang such tunes as he thought fit — dances, jigs, operas, and merry tunes. (Bayle.) New tunes were, also, set to the psalms, by "excellent composers, that chimed so sweetly that every one desired a new psalter." (Strada.)

It is well settled that some of the old melodies had their origin in Germany, whence they were transferred by the reformers to other parts of Europe, where many were adopted or imitated: thus they may have become an ingredient in Marot and Beza's collection; but whether or not "Old Hundred" was among the number so transferred is unknown. In no German choral book, nearly all of which contain this tune, do we find Luther's name attached to it — a circumstance which would be very strange if the Germans could rightfully claim their countryman as its author; and it was not ascribed to him, we believe, in any English publication until the time of Handel, who expressed an opinion that Luther wrote it; but of that Burney and other writers say they have not been able to find authentic proof. Ravenscroft, who published his work in 1621, calls it a "French tune," which he would not have been likely to do, if there had been any chance of its having been written in *England*. He states that his work consists of "psalms, with such tunes as have been and are usually sung in England, Scotland, Wales, Germany, Italy, France, and the Netherlands."

Most of the old melodies were at first sung alone, by the whole congregation, and subsequently underwent the same dressing up, and have had almost as many new suits as "Old Hundred." They have been harmonized at different times, in from two to six parts.

The practice of choir singing, that is, singing performed by a few select persons, sufficiently skilled in music to sing each by himself the part assigned him, arose soon after the melodies became harmonized. Extemporaneous descant was practised, to some extent, by artists, before the harmonies were printed.

* Varietas.

† Menestria.

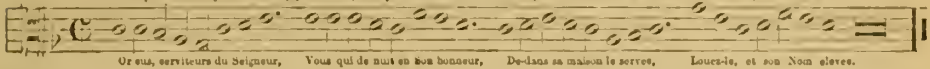

In England, in the reign of Queen Mary, the psalms were sung *sotto voce*; but after the accession of Queen Elizabeth, "like orgies, they were roared aloud in almost every street, as well as church, throughout the kingdom." (Burney.) And at one time, such was the rage, "they were sung by soldiers on march and parade, and at lord mayor's dinners and city feasts." (Hawkins.) The enthusiasm in favor of psalm singing, at the same time, pervaded all France, Holland, and the adjacent countries, both in the church and out of it. Roger Ascham, in a letter dated Augsburg, in 1551, says, "Three or four thousand singing at a time in a church in this city is but a trifle."

We condense these facts from Hawkins, Burney, Choron, and other authentic sources. We have also enjoyed the opportunity of examining and comparing most of the original books of

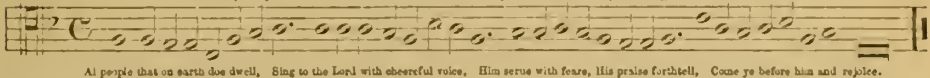

psalmody and music referred to, which are very "rare and curious;" and we have endeavored to embody, in as small a space as possible, all the reasonable hints and suggestions concerning the origin of "Old Hundred," and other old tunes. That "Old Hundred" came from one or the other of these sources, we apprehend there will be little difficulty in believing—precisely which, will probably forever remain a matter of conjecture.

We subjoin a transcript of several early arrangements of this tune; and also of the oldest copy of the simple melody that has been preserved; together with others of nearly the same age: the latter, while they gratify curiosity, show that alterations were made long ago, even in the very outset, *in this part*. And we would here express our disapprobation of altering the melody of any tunes without the strongest reasons.

The simple melody of Old Hundred, as published in France, with Marot & Beza's Psalms, about 1550.

The same, as published with Sternhold & Hopkins's Psalms, in England, in 1562.

The same, published in 1608, in Barker's Bible.

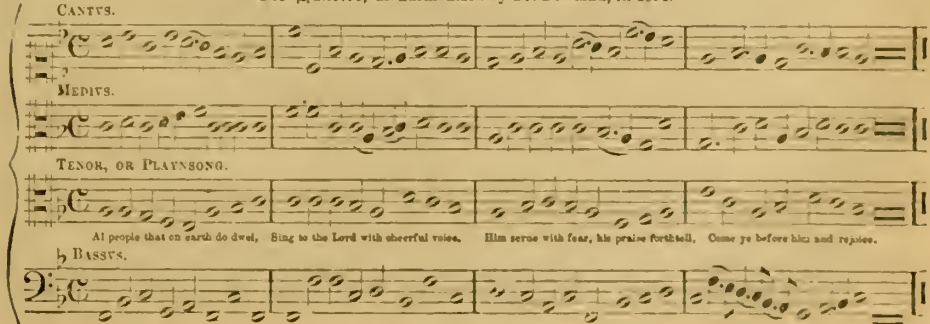

We give the above specimens exactly as we find them; our object would not be attained by modernizing them with bars, new key, &c.; or even correcting the errors.

Old Hundred, as harmonized by Claude Le Jeune, printed in 1613.

Old Hundred, as harmonized by Dr. Dowland, in 1634.

Old Hundred, as harmonized by Ravenscroft, in 1621.

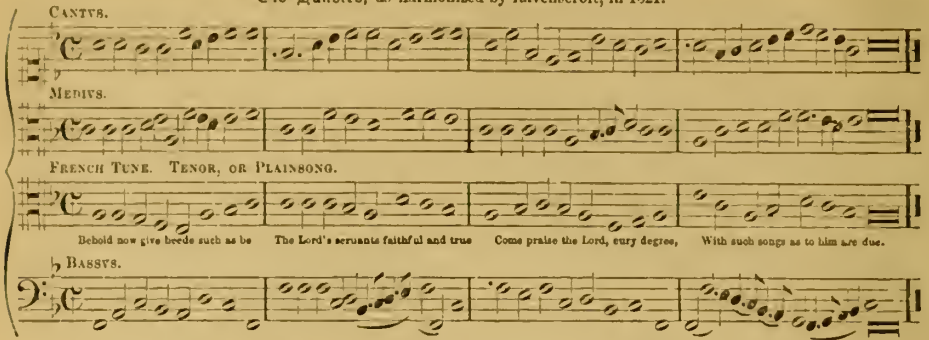

CANTUS.

MEDIUS.

FRENCH TUNE. TENOR, OR PLAINSONG.

BASSYS.

Behold now give heed, such as be The Lord's servants faithful and true Come praise the Lord, every degree, With such songs as to him are due.

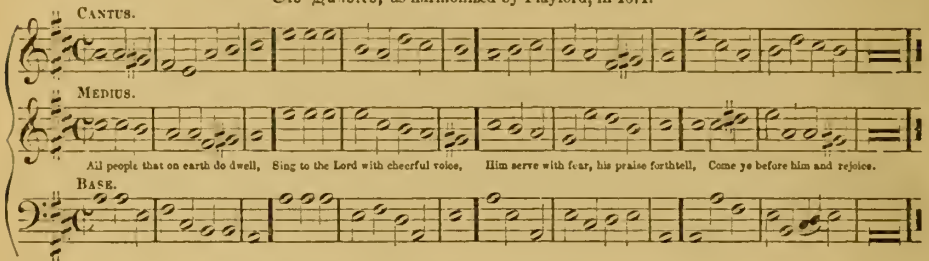

Old Hundred, as harmonized by Playford, in 1671.

CANTUS.

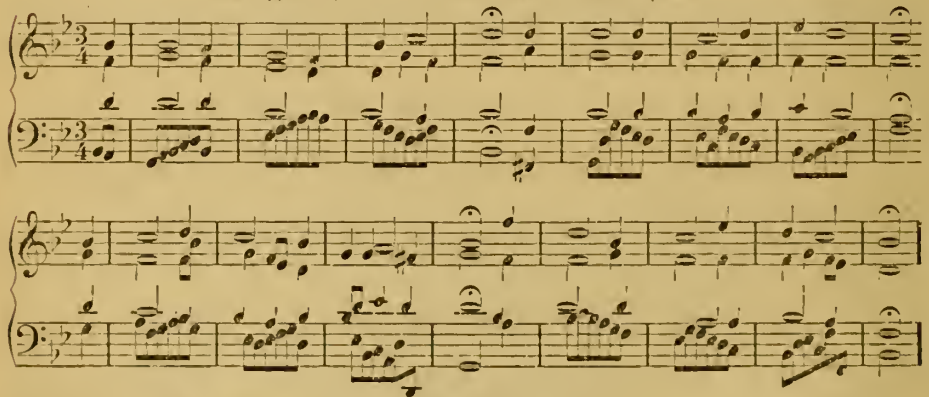

MEDIUS.

BASE.

All people that on earth do dwell, Sing to the Lord with cheerful voice, Him serve with fear, his praise forthtell, Come ye before him and rejoice.

Old Hundred, from John Sebastian Bach's Choral Book, 1739.

Old Hundred, from J. B. Sales's Collection, published in England, in 1837.

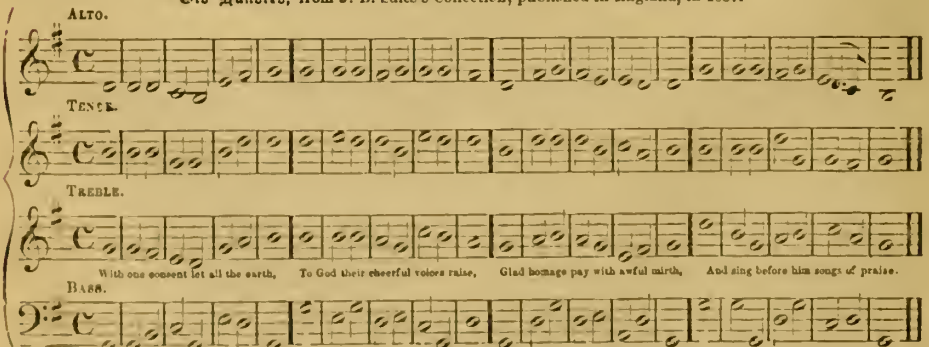

ALTO.

TENOR.

TREBLE.

BASS.

With one consent let all the earth, To God their cheerful voices raise, Glad homage pay with awful mirth, And sing before him songs of praise.

Compare these early arrangements with most of those which appear in the singing books of the present time, and we think there will be no question but some progress has been made in the art of composition since "Old Hundred" was first harmonized; notwithstanding the author of one of the early copies (Dr. Dowland) was a great favorite, and, Anthony Wood says, was styled the "rarest musician that the age did behold." Yet Dr. Burney has since said of this author's compositions, "I have been equally disappointed and astonished at his scanty abilities in counterpoint, and the great reputation he obtained with his contemporaries." We are not told that the copy in the above-mentioned work is therein original; indeed, but a small part of it, if any, appears to be so.

Regarding the old tunes, generally, as used in this country at a former period, we adopt the following language of the venerable and highly respectable editor (the Hon. Nahum Mitchell) of the "Bridgewater Collection"; which work, we will steal this opportunity to say, was the most popular singing book published in its day, and one of the most important in the musical reformation of New England. "When the English books, containing these tunes, were first brought to this country, as Tansur, Williams, Knapp, J. Arnold, &c., who were by no means musicians of the first class, they were evidently set or harmonized, as Tansur professes, in the most simple manner; containing principally the common chords, without any regard to the modern rules of relation and progression."

Music, says Dr. Burney, "is pursuing her slow and steady course towards taste, elegance, simplicity, and invention, under the guidance of judgment and science." Chorou, a French author, says, "Within the space of three centuries, all parts of the musical system, namely, the melody, the principles of musical construction and design, and every kind of composition, have arrived, successively, at a degree of excellence which, it would seem, can hardly be surpassed; but let us not indulge the idea that nothing more is to be done." The Rev. Dr. Hooker, of Vermont, an able advocate for musical education, in a late tract, says, "It is gratifying to observe that both the art and the profession of teaching it are advancing." This is undoubtedly true in regard to music in this country, more than in any other. Who has been acquainted with its state, here, for any length of time, but knows that since the first efforts of such men as Mitchell, Hastings, Mason, and others that might be named, natives of this country, the progress of music has been most rapid and sure? To others, also, who have come among us from abroad, we are indebted for its advancement, in no small degree.

ALTERED TRIADS. The diatonic dissonant triad has, by license, its third sometimes flattened and sometimes sharpened; and thus are formed two altered triads, which are very seldom used. The German authors term these triads *anomalous*.

These altered triads consist of a major and an extreme flat third, and are consequently both chromatic.

ALTERED NOTES. Changed, or varied. Accidentals placed before notes, such as a flat, a natural, or a sharp, alter them by raising or depressing the tone; and such notes are called altered notes.

ALTERNAMENTE, or ALTERNATIVO. (L.) One after another, alternately.

ALTERNATIONS. Changes rung on bells. See PEALS.

ALTENBURG, MICHAEL. A Lutheran clergyman at Erfurt, where he died in 1640. He published some sacred music.

ALTIST, or ALTISTA. The appellation formerly given to the vocal performer who took the *alto primo* part.

ALTISSIMO, or ALTISS. (L.) This word (the superlative of *alto*) is applied to all notes situated above F in alt; i. e., those notes which are more than an octave above F on the fifth line in the G, or treble clef.

ALTITONANS, ALTISONANT, or ALTISONOUS. High sounding. This compound adjective is found appended to the counter tenor parts of anthems, motets, and choral compositions of the sixteenth century, and was used to signify the highest of the parts intended for the natural adult male voice.

ALTMANN published at Breslau, in 1718, a work entitled "*Compendium Musicum*."

ALTNIKOL, an organist in Saxony, pupil and son-in-law of Sebastian Bach, composed, in the middle of the last century, much church music.

ALTO. At the commencement of the present century the alto of the female voice was unknown here; the part, when made use of, being sustained by men. Old singing books will accordingly show you the alto written in *counter tenor* upon the high notes of the staff, an octave above where it now stands for the female voice. It may be added that the contralto part, of which the first effective employment was made by Rossini in duets for two female voices, within this period, is said to have been brought into favor by Grassini, the celebrated friend of the more celebrated Grisi, and by whom the latter was encouraged to follow the path which led to her fame. — *Dwight's Jour. Music.*

ALTO, ALTUS, or ALTO TENORE. *Alto* is the term applied to that part of the great vocal scale which lies between the *mezzo soprano* and the *tenor*, and which is assigned to the highest natural adult male voice. In *scores* it always signifies the counter tenor part. It is now used to indicate the tenor in instrumental music.

ALTO CLEF. When the C clef is placed so that the two strokes enclose the middle line, it is called the counter tenor, or viola clef; and also the *alto* and *contralto*. This borrows the two lower lines of the treble for its upper degrees, and the two upper lines of the bass for its lower degrees. The middle line is the added one between the treble and the bass. This clef is used in "Händel's 400 Songs." The nine degrees of the alto clef are, —

ALTO CONCERTANTE. (I.) The tenor of the little chorus, which sings or plays throughout the performance.

ALTO FLAUTO. (I.) A tenor flute used in bands.

ALTO OCTAVO. (I.) An octave higher.

ALTO PRIMO. (I.) The alto primo is the first, or upper, *alto*. This expression is used in music containing more than one alto, and is set at the beginning of the score, and upon the staff of that part, to distinguish it from the *alto secondo*, or under alto.

ALTO RIPIENO. (I.) The tenor of the great chorus, which sings or plays in the full parts of the concert.

ALTO SECONDO. Second alto. Used in opposition to *alto primo*.

ALTO VIOLA, or ALTO VIOLINO. (I.) Counter tenor viol, or small tenor viol, on which the alto may be played.

ALTRO, ALTRA, ALTRI. (I.) Other or others.

ALUERI. An Italian composer at the commencement of the eighteenth century.

ALVIMARE, P. A. A celebrated French amateur harpist and composer for this instrument at the commencement of the present century. He has composed many very pleasing romances.

ALIPIUS, born at Alexandria, in Egypt, lived about the year 350. His manuscript "*De Musica*" is preserved in the library at Bologna. Without this manuscript we should never have known in what manner the ancients wrote their music. Their musical characters appear to have

been 1620 in number, as may be seen by the tables of Alipius.

ALZAMENTO DI MANO. (I.) The up beat of the hand.

ALZAMENTO DI VOCE. (I.) To raise the voice.

AMABILE, or AMAREVOLE. (I.) In an amiable manner; affectionately.

AMADE, COUNT THIADÉ D'. Composer of a sonata and other music for two piano-fortes. (Wessel and Stoddart's Catalogue, 1822.)

AMEDEI, an Italian composer in the beginning of the eighteenth century, composed, jointly with Orlandi, the opera of "*Arsace*."

AMADIO, CAR., published some Italian dramas about the year 1669.

AMADIO, PIPPO, a violoncellist, lived at the commencement of the last century.

AMADORI, JOSEPHI, pupil of Bernacchi, was a principal composer of the Roman school at the time that Porpora, Leo, and Vinci were at the head of the Neapolitan school. He published at Rome, in 1702, an oratorio called "*The Martyrdom of St. Adrian*."

AMADRI, MICHAEL ANGELO. A composer of motets in the sixteenth century.

AMADUCCI, DONATO. A composer in the seventeenth century.

A MAJOR is that key, in modern music, in which the sixth diatonic tone is assumed as the fundamental tone of the major key. To maintain the natural characteristics of the major, F, G, and C must be made sharp, F \sharp , G \sharp , C \sharp . According to "*Schubart's Characteristics of Music*," this key conveys the expression of innocence, love, content, and cheerfulness.

A MAJOR, relative to F sharp MINOR.

Musical notation for A Major, relative to F sharp minor. The score is in treble and bass clefs, showing a sequence of notes with fingerings and a cadence.

A MINOR, relative to C MAJOR.

Musical notation for A Minor, relative to C major. The score is in treble and bass clefs, showing a sequence of notes with fingerings and a cadence.

AMALARIUS, SYMPHOSIUS. A priest at Metz, and composer of church music about the year 380.

AMANTINI. Knight, and first soprano singer to the Queen of France in 1783.

AMANTIUS lived at the beginning of the seventeenth century; he wrote a treatise on music.

AMAREZZA. (I.) A mark expressive of grief or sorrow.

AMATEUR. A lover, or non-professing practitioner, of music. Any one particularly attached to the science, or who practices music for pleasure.

AMATI. An Italian composer; he was engaged in 1790 at the opera at St. Petersburg.

AMATI. There were four persons of this name, natives of Cremona, and celebrated makers of violins; that is to say, Andrew, Jerome and Anthony, his sons, and Nicholas, the son of the latter. Andrew flourished about the year 1600. Beside

these there were two persons of the name of Stradivarius, of Cremona, admirable artisans; the latter was living at the beginning of this century: his signature was "*Antonius Stradivarius, Cremonensis, fecit, Anno —*." Andrew Guarneri, also of Cremona, signed thus: "*Andreas Guarnerius, fecit Cremona sub titulo Sancte Perese, 1680.*" The violins of Cremona are exceeded only by those of Steiner, a German, whose instruments are remarkable for a full and penetrating tone; his signature is as follows: "*Jacobus Steiner, in Absom prope Enipontem, 1647.*" Enipontem is the Latin name of Innsbruck, in Germany, the chief city of the Tyrol. Matthew Albani, also a Tyrolese, signed thus: "*Matthias Absomus fecit in Tyrol Bulsani, 1651.*"

The first violin ever made was constructed in Italy, about the year 1600; but those which are esteemed by musical men as most valuable, were manufactured by the family of A. and J. Amati, at Cremona, in the year 1650. The violin was first introduced into concerts about two hundred years ago, and when first played upon, it was pronounced a failure, never capable of being used with any success.

Nicholas Amati was the head of this family of Amatis, so celebrated among violinists and instrument makers. It was he who, assisted by his brother, Andre Amati, made for the chapel of Charles IX. those superb instruments, *chef-d'œuvres* of the art, which yet ornament it by their color. Their number was twenty-four, and consisted of six treble violins, six alto violins, six tenor violins, and six violoncellos. The elegant simplicity of the form, united with an exquisite quality of tone, distinguished the works of the two artists. It is only to be regretted that their most common patterns were small or medium, as their violins constructed upon the large model are rare and very choice. Their tone is admirable, and the only fault that can be brought against them would be, that the fourth string has a slight degree of dryness.

Jerome Amati, eldest son of Andre, worked equally upon the two models, of which the largest are likewise the most esteemed. His violins differ a little from those of Nicholas and Andre, and the changes that he introduced in his construction make the tone of the first string often too fine, and always too clear.

Antoine Amati followed the principles adopted by his brother; his instruments have the same quality and the same faults with the preceding.

Nicholas Amati, son of Jerome, who has been often confounded with the old Nicholas, has made some very choice violins, and worthy of being so — particularly of the large patterns, in which he especially excelled. His seconds are sometimes nasal, owing to the thinness of the bottom. The artist Koliker owns the finest Nicholas Amati that is known. The preservation, the form, the material, the color, the tone, all are admirable.

Jacques or Jacobus Steiner, native of Absom, a small village of Tyrol, near Innsbruck, was pupil of Antoine Amati, and worked in the same line with his master. Wishing to have a model of his own, he began to shorten that which is in common use. His numerous counterfeiters, without suspecting it, have all missed this mark, in restoring to their imitations the accustomed width. The brilliancy of the tone of the instruments of Steiner makes amends for what they lack in vol-

ume; likewise his violins are better adapted to the music of a chamber than to that of a concert.

Antoine Stradivarius, of Cremona, was the most perfect of all the manufacturers of Italy. Pupil of nature more than of art, he only left the school of the Amatis to be their equal, and soon to excel them. It was about the year 1700 that he reformed the faults that he had acquired under his masters, and that he discovered the deep combinations that we trace in each of his productions. In working for the ear, Stradivarius has equally labored for the eye; thus the elegant form of his violins, and the superb color with which they are adorned, make them the models of perfection.

Among the distinguished artists who emerged from this school ought to be noticed Joseph and Pierre Guarnerius. The former was pupil of Stradivarius, and the latter of Jerome Amati. Wishing, in their turn, to be original, and not reflecting that the true principles of making violins were established, they made some alterations in the principles they had received, in flattening the tops, increasing the thickness, and diminishing the model. They have given a great celebrity to their works, but it is to be regretted that their fourth string should possess an excessive dryness, and that it should be, so to speak, sacrificed to their others. The violins of Pierre Guarnerius are much superior to those of his brother, with whom he is often confounded, but the works of the latter have a much finer tone. Joseph Guarnerius had for a pupil François Supot, maker to the Duke of Wurtemberg, and came into France in the year 1769.

Nicholas Supot, who has been surnamed the Stradivarius of the age, was son of the preceding. He was born at Stuttgart, the 4th of December, 1758, and received from his father the first elements of the art which he pushed to so high a degree. After having long worked under the best masters of Germany, he set himself to study the models of the celebrated artists of whom we have just spoken. By dint of care, of patience, and of multiplied efforts, he succeeded in discovering a second time the varnish used by the Amatis, the Stradivarii, and the Guarnerii. The violins that he made after the patterns of the great masters have deceived connoisseurs, and especially a renowned manufacturer who had obtained one of his violins, believing it to be a Guarnerius. M. Supot is one of those who have reflected deeply upon the art which he practised with success. He is the author of a little work entitled '*La Chelonomie*,' or the complete Musical Instrument Maker, one vol. 12mo. pp. 300, Paris, 1803, which has been compiled by M. l'Abbe Sibire, so well known for his love for fine instruments.

M. Supot came to France in 1704, and when it was decreed that the Conservatory of Music should give a violin as the grand prize for this instrument, Gaviuies petitioned, and gained his request, that Supot should be charged with its construction. This artist owns a superb bass spoken by Charles IX.

The maker to the court, Mr. Zacharie Fischer, to whom the art is already much indebted for the perfecting of stringed instruments, has, notwithstanding his advanced age, invented a peculiar machine to strengthen, and at the same time to sweeten the tone of the violin. The instruments which he makes after this new process are above

those of the greatest masters. A violin thus perfected may be procured of him for 100 louis. It is possible that what Mr. Fischer has done for the violin will be applied to other stringed instruments. His invention would thus be of so much greater importance." — *Magazine Encyclopedique*.

AMATUS, VINCENTIUS, born in Sicily in 1629, was chapel-master at Palermo. He published some church music for three, four, and five voices. He died in 1670.

AMBITUS. (L.) This word was formerly used to signify the compass of a mode. The *ambitus* of any mode was consequently its extent; that is, the distance, or interval, comprehended between its extremities, or highest and lowest notes.

AMBO, or AMBON. A name given by the priests, in the early ages of Christianity, to the desk in the church at which the canons were sung, and which was similar to what is now called the reading desk. It was in the ambo that that part of the service called the *gradual* was always performed. See *GRADUAL*.

AMBREVILLE, ROSE, wife of Peroni, the violoncellist. She was born in Italy, and in 1773 was first singer at Prague, in the grand opera "*Constanza e Fortezza*," by Fux, which was performed in the public market-place of the above town, by one hundred excellent singers, accompanied by two hundred instruments.

AMBROGETTI. An Italian bass buffo singer at the opera in London. He first appeared in 1817, and quitted England before the season of 1822. He had much fire, whim, and richness in his style, but was sometimes too extravagant and absurd.

AMBROGI. A bass singer at the Italian opera at Berlin, in 1823. He has been also received with great applause at Vienna.

AMBROXX, PETER CHRISTIAN, chamber musician to the Duke of Saxe-Meiningen, was born in 1742. He is said to have been an eminent contrapuntist.

AMBROSCI. A celebrated singer at the German theatres, and a composer of vocal music, up to the year 1860.

AMBROSE, ST., introduced what is called the "*Cantus Ambrosianus*" into his church at Milan, about the end of the fourth century. He is said by St. Augustine to have brought this manner of singing from Greece. Those who have written on the subject agree that St. Ambrose only used the four authentic modes, and that the four plagal were afterwards added by St. Gregory.

AMBROSE. An English composer of ballads. (Clementi's Catalogue.) He is a professor of music, resident at Chelmsford.

AMBROSIANUS CANTUS. (L.) Ambrosian Chant. A kind of chant used about 374, by order of St. Ambrose, Bishop of Milan.

AMBROSINE. A first female singer about the year 1722, at the conservatory of *La Pieta* at Venice.

AME. The sound post of a violin, tenor, &c.

AME. A violinist and composer. He led the band at the Italian Opera at Paris in 1760.

AMEN. So be it; or, taking the word in the sense in which it is frequently used in the Gospels, truly, verily. The word *amen* forms, generally, the conclusion of anthems, hymns, and other compositions; and has so long been one of the principal themes of choral harmony as to have given birth to a distinct appellation for music adapted to its expression; as when, using the word adjectively, we say, such an oratorio, or anthem, concludes with an Amen chorus.

AMENDA, a violinist and composer for that instrument, is the son of a clergyman in Courland. He was at Riga in 1799.

AMENDOLA. An Italian composer of operas towards the end of the last century.

AMERBACH, E. N. Organist at Leipsic in 1571; he composed several works for that instrument.

AMERIGHI, SIGNORA, of Bologna. A singer of extraordinary merit at Naples, at the commencement of the last century.

A MEZZA ARIA. (I.) An expression applied to the *compass* of an air, the notes of which have no great extension, either in height or depth; that is, which lie towards the middle of the compass of that species of voice for which it was composed; as a bass, tenor, or soprano. This phrase is also used to signify a style of composition between air and recitative; a kind of *aria parlante*.

A MEZZA DI VOCE. (I.) An expression implying a soft tone, or gradual diminution of voice.

AMICIS, ANNA DE. An Italian female singer; she performed in the comic operas in London in 1763, and was afterwards selected by J. C. Bach to take the principal parts in serious operas. Her figure and gestures were in the highest degree elegant and graceful; her countenance, though not perfectly beautiful, was extremely high bred and interesting, and her voice and manner of singing exquisitely polished and sweet. She had not a motion that did not charm the eye, nor a tone but what delighted the ear. De Amicis afterwards held the first rank among female singers in the serious operas of Naples and other capital cities of Italy.

AMICO, RAYMUNDUS, a Dominican monk, born in Sicily, published some motets at Messina, in the year 1621.

AMICONI, ANTONIO. A Neapolitan composer for the theatre at the end of the last century.

AMIOT, a Jesuit and missionary to China, translated the works of Ly-koang-ty, which the Chinese consider their best publication on music. He sent this translation, in 1754, to the secretary of the Academy of Inscriptions, who deposited it in the royal library at Paris, where it is still to be found among the manuscripts. Amiot also sent to Paris an original treatise on the music and musical instruments of the Chinese.

AMLING, MATTHEUS, music master at Nuremberg, was born in 1603. Some of his compositions are to be met with.

AMMERBACH, EUSEBIUS, organist and organ builder at Augsburg, lived in the latter part of the sixteenth century.

AMMERBACHER, J. G. Singer at Nordlingen, published in 1717 a short method for singing.

AMMON, ANTON BLASIUS, a native of the Tyrol, died in the year 1590. Many of his sacred musical compositions were afterwards collected and published at Munich.

AMMON, DIETRICH CHRISTIAN, a musician at Hamburg, composed an opera there in 1791.

AMMON, J. Director of the music at Heilbronn. He went to Paris about the year 1790, and has published there many instrumental works.

AMMON, JOHANN CHRISTOPH, a clergyman at Emsheim, in Franconia, published in 1743, in the journals of Ratisbon, a dissertation, in which he endeavors to produce proof that there is really excellent music in the life to come.

AMNER, JOHN, bachelor of music, and organist of the cathedral of Ely, lived in the beginning of the seventeenth century. He published "Sacred Hymns of three, four, five, and six Parts, for Voices and Viols," London, 1615; likewise some anthems, the words of which are to be found in Clifford's collection.

AMODEI, CATALDUS, composer and chapel-master at Naples, died in 1695. He published some cantatas, &c.

AMOEBEUS, a celebrated Greek harper, whenever he appeared on the stage, was paid an Attic talent, or 193*l.* 15*s.*, a day for his performance.

AMON, J. See AMMON, J.

AMOREVOLEMENTE. (I.) With extreme affection.

AMOREVOLI was an admirable tenor singer; he was engaged by the Earl of Middlesex, at the opera in London, in 1741.

A MORISCO. (I.) In the style of a Moorish or morris dance.

AMOROSO, or AMOREVOLE. (I.) Amorously; in a soft, delicate, amatory style.

AMPHIBRACH. This mark of musical rhythm may be represented by the words *delightful, domestic*; in notes, thus:—

AMPHIMACER. A musical foot, composed of one short, one long, and one short note. Same as *Amphibrach*.

AMPHION. The son of Antiope, and renowned for his eloquence and skill in music. The ancients say he was instructed by Mercury, and that the magic of his lyre so charmed the stones, that they arranged themselves in architectural order, and formed the walls of Thebes.

" Amphion too, as story goes, could call
Obedient stones to make the Theban wall.
He led them as he pleased; the rocks obeyed,
And danced in order to the lutes he played."

Amphion was a Theban, who, if he did not perform all the wonderful things attributed to him, certainly softened, by the sound of his lyre, the savage manners of the first inhabitants of

Greece, and engaged them to build towns. He invented the Lydian measure.

AMSELIUS, PANCRATIUS, born at Bostock in 1693, was an eminent singer.

ANACAMPTIC. A name given by the ancient Greeks to sounds produced by reflection; as in echoes. It was also sometimes understood as the opposite of the adjective *Euthian*.

ANACAMPTOS. A Greek term, signifying a course of retrograde or reflected notes. Anacamptic notes were also those which proceeded downwards, or from acute to grave. The word Anacamptos, taken in this sense, was the contrary of *Euthia*.

ANACREON, born at Teos, in Ionia, lived 500 years before Jesus Christ. He is said by Athenæus to have invented the instrument called *Barbiton*. He died (as is well known) by being choked with a grapestone.

ANACREONTIC. This derivative from the name of Anacreon, the bacchautian Greek poet, is sometimes placed at the beginning of convivial songs, glees, and festive odes, (especially when they include the celebration of the grape,) and denotes an hilarity of movement, and a free and easy style of performance.

ANALYZE. To separate a piece of music into its parts or chords, for the purpose of examining each chord or note separately, and ascertaining how they are placed together—a very good exercise for the musical student.

ANANES, or ANENES. One of the barbarous terms by which the Greek church, during the ninth, tenth, and eleventh centuries, characterized the modes or tones, and which terms are still retained by the modern Greeks in their ecclesiastical music.

ANAPEST. A musical foot, containing two short and one long notes. This mark of rhythm, or accent, may be represented by the words *contravene, acquiesce*; in notes, thus:—

ANASTATIUS. A modern Greek composer and violinist, in the service of the sultan at Constantinople, about the year 1786.

ANAXENOR, a famous performer on the lute, lived about forty years before Jesus Christ. Mark Antony gave him guards, and the revenues of four towns.

ANCHERSEN, ANSGARIUS, a physician at Copenhagen, wrote, about the year 1720, a dissertation on the powers of music over the human body.

ANCHE. (F.) Literally, a tube, or pipe; a reed. Any instruments with reeds come under this name, as melodeons, seraphines, clarinets, hautboys, or bassoons; also the reed, or mouth-piece of the oboe, clarinet, &c.

ANCIENT CONCERT. A society, established in London, for the purpose of preserving music which, in the fashionable world, is called ancient. They gave concerts, at which were performed the masterpieces of Pergese, Leo, Durante, Mar-

relo, and Scarlatti; in a word, they performed the music of that constellation of distinguished men, who appeared, almost at the same time, about the year 1730. It is certainly unwise to neglect the productions of genius, to whatever period they may belong. Yet, as music, like every other branch of art and knowledge, is progressive, it cannot surely be expedient constantly to refer to the works of our forefathers, as did this society, for the only models of excellence.

ANCIENT MODES. The modes or scales of the ancient Greeks and Romans.

ANCIENT MUSIC. The epithet *ancient*, when applied to the term *music*, is not, as when conjoined with the word *literature*, to be referred to the productions of the classical Greeks and Romans. The eleventh century of the Christian era arrived before the appearance of Guido's scale; to the age of De Muris (i. e., the fourteenth century) we are indebted for the introduction of the bass, tenor, and treble clefs; and half of the seventeenth century had elapsed before the art was attained of couposing in a plurality of real and distinct simultaneous parts. It is, therefore, chiefly to the composers of the eighteenth century, that the expression *ancient music* properly relates; and, indeed, it seldom alludes to productions of an earlier date. M. Fetis, in 1843, made some discoveries at Brussels, which are interesting in respect to the history of music. The best is a manuscript which was placed in the Royal Library, among the books of plain chant. It contains masses and motets, by celebrated composers of the close of the fourteenth and the beginning of the fifteenth century. The most important pieces in the volume were, "Three masses, for three voices, by Guillaume Dufay; two masses, for four voices, by the same; one mass, '*Omnipotens Pater*,' for three voices, by a hitherto unknown composer, named Jean Plourmel; the mass '*Deus Creator Omnium*,' by an English composer named Riquarett [Richard Cockx]." All these authors wrote from about 1390 to 1420. Then came the motet, "*Orbis Terrarum*," for four voices, by Busnois; a Magnificat, for four voices; and several other pieces by the same author. The volume concludes with a mass by Le Roy. These highly interesting compositions fill up a considerable hiatus in the history of the art. The other discovery, though less important, is worthy of notice; it is a beautiful manuscript, twenty-eight inches high and nineteen broad, on very fine vellum, most admirably written, with arabesques, among which is seen the portrait of the foot of Mary of Burgundy. In this volume was found entire an admirable composition by Josquin de Pres, for six voices, and six or seven other important compositions, written about 1430.

ANCIENT MUSIC SCHOOLS. Among the Jews, there were schools of the prophets, where young men were taught to sing psalms, and to play on musical instruments; and the prophets often prophesied, playing on the harp, and other ancient Jewish instruments. In these schools, persons were only taught the study and practice of music. Thus we see that music schools are of a very ancient date. For music is a language which all nations speak; a language which addresses the heart.

ANCIENT MUSICIANS. Musicians who flourished before the introduction of Christianity, such as the Greeks and Romans, and their contemporaries. The Egyptian flute was only a cow's horn with but three or four holes in it, and their harp or lyre had only three strings; the Grecian lyre only seven strings, and was very small, being held in one hand; the Jewish trumpets, that made the walls of Jericho fall down, were only rams' horns; their flute was the same as the Egyptian. They had no other instrumental music than that by percussion; of which the most boasted was that of the psaltery, a small triangular harp or lyre with wire strings, and struck with an iron needle or stick; their sackbut was something like a bagpipe; the timbrel was a tambourine; and the dulcimer was a horizontal harp, with wire strings, and struck with a stick, like the psaltery. They had no written music; had scarcely a vowel in their language; and yet, according to Josephus, the Jews had two thousand musicians playing at the dedication of the temple of Solomon.

ANCIENT PREFACES. Many of these old musical works, collections, treatises, &c., are curious and instructive. Here are some specimens: — "The whole Booke of Psalmes; with The Hymnes Evangelicall, and Songs Spirituall. — Composed into 4 parts, by several Authors, with such severall Tunes as have bene, and are usually sung in England, Scotland, Wales, Germauy, Italy, France, and the Netherlands. Neuer as yet before in one Volume published. Also: A brief Abstract of the Prayse, Efficacie, and Vertue of the Psalmes. Newly corrected and enlarged by Tho. Rauenscroft, Bachelor of Musicke. Gloria in excelsis Deo. London, Printed by Thomas Harper for the company of Stationers, 1633."

Extracts from the Preface.

"To all that have Skill or Will unto Sacred Musicke, I will Concoord among themselves, with God, and with their own consciences.

"Harmonically Brethreu, I have here undertaken, with no small labour and charge, to bring the Tunes of the Psalmes, Hymnes Evangelical, and Songs Spirituall, (as they are usually sung throughout Great Britaine,) into one entire volume; which are so composed, for the most part, that the musickfull may, with little practice, be enabled to sing them in parts, after a plausible manner.

"But whatsoever the tunes were in David's time, there is no question but they were concordant and harmonious, which could not be, had they not been divided into parts. For if ye look into 1 Chron. chap. 15, 16 verse, ye shall see how the Prophet David, at the dedication of the Arke, as likewise Solomon his Sonne, at the dedication of the temple, 2 Chron. chap. 6, 31 verse, distinguished all their musicke in parts, and appointed such to be Masters and Overseers of it, as were most eminent for their knowledge in that kind, as Chenaniah the chiefe Levite, to have the chiefe place, which was to be master of the song. An office which consisted not only in the direction of the Quire, but likewise in the training up of others to sing, that there might still be a supply of able persons for that service: Asaph the next, and so Heman his Brother, likewise Jeduthun

and Ethau, all of them the most renowned chanters of those times, and such as successively in one another's absence, were to direct the due performance of that charge, so that not only the voice of the Singers, but likewise the sound of the Instruments, agreed so well together, that they seemed to be but one sound and one voice.

"Neither was this method confined only to the Old Testament, but sanctified to the Church of Christ by the prescription of the holy Apostle S. Paul, Cor. 3, verse 16. Let the word of God, &c. Singing, &c. With grace, &c.

"I have therefore endeavoured for the fitting of every heart to that Psalm, which it shall most affect, to place special Tunes, proper to the nature of each Psalm, (not imitating art, so much, as the natural inclination, but joining one with another,) and am bold to admonish the Singers that they observe three rules:

"1. That Psalms of Tribulation be sung with a low voice and long measure.

"2. That Psalms of Thanksgiving be sung with a voice in different, neither too loud nor too soft, and with a measure neither too swift nor too slow.

"3. That Psalms of Rejoicing be sung with a loud voice, a swift and jocund measure.

"In all which the observing of Time, Tune, and Ear, will produce a perfect Harmony.

"Accept kindly, what I have labored earnestly, and use it to thy comfort. Thus I end, humbly wishing to all true Christian Hearts, that sweet consolation, in singing praises unto God, here upon earth, as may bring us hereafter to bear a part with the Quire of Angels in the Heavens.

"Your well according and
"Best wishing Brother,
"THO. RALENSCROFT."

The following is the "Recommendatory Preface" to a work, the title of which is as follows: "The *Grounds and Rules of Music Explained*: Or, *An Introduction to the Art of Singing by Note*. Fitted to the meanest Capacities. By Thomas Walter, M. D. Recommended by several Ministers. Boston: Printed for Samuel Gerrish. 1746."

"An ingenious Hand having prepared Instructions to direct them that would learn to sing PSALMS after a regular Manner; and it being thought proper that we should signify unto the Public some of our Sentiments on this Occasion; We do declare, that we rejoice in good Helps for a beautiful and laudable Performance of that holy Service, wherein we are to glorify God, and edify one another with the *spiritual Songs*, wherewith he has enriched us.

"And we would encourage all, more particularly our *Young People*, to accomplish themselves with Skill to sing the *Songs of the Lord*, according to the *good Rules of Psalmody*: Hoping that the Consequence of it will be, that not only the *Assemblies of Zion* will *decently and in Order* carry on this Exercise of PITY, but also it will be the more introduced into private *Families*, and become a Part of our *Family Sacrifice*.

"At the same Time we would above all exhort, That the *main Concern* of all may be to make it not a mere *Bodily Exercise*, but sing with *Grace in their Hearts*, and with Minds attentive to the *Truths* in the PSALMS which they sing, and affect-

ed with them, so that in their *Hearts they make a Melody to the Lord*.

"PETER TRACHER,	INCREASE MATHER,
JOSEPH SEWELL,	COTTON MATHER,

"Boston, April 18, 1721."

"AMPHION ANOLICUS. A work of many Compositions, for one, two, three and four Voices; with several Accompaniments of Instrumental Musick; and a Thorow-Bass to each Song; figur'd for an Organ, Harpsichord, or Theorboe-Lute. By Dr. JOHN BLOW.

"To Her Royal Highness, the Princess Ann of Denmark:

"MADAME: The excellent Art of Musick was thought by many of the Wisest Ancients, to have derived its Original immediately from Heaven; as one of the First, most beneficial Gifts of the Divine Goodness to Mankind: thereby to draw and allure, the old, rude, and untaught World, into Civil Societies; and so to soften and prepare their Minds for the easier reception of all other Accomplishments of Wisdom and Vertue.

"The most Learned of the Ancient Heathens, the Greeks, were so much of this Opinion, that they carried their Veneration for this Admirable Faculty too far. They believed they could not do it right, but by assigning to it, for its Protection and Improvement, some peculiar tutelary Gods of its own. Nay, when to all the other Ornaments and Perfections of human Life, they seldom appointed more than one single Deity to preside over each of them, to Musick alone they allotted a greater number of Guardian Divinities than to any of the rest; some of the Male, but most of the Female and Fairer Sex.

"They were indeed mistaken, when they bestowed on it these Fabulous Honours; and they made but ill Gods and Goddesses of those Men and Women, who would have done excellently well if they had only passed for Patrons of it, or Inventors in it, as they really were.

"But in all times of the truer Antiquity, even amongst God's own peculiar People, we find this most instructive and delightful Skill did always meet with its due and deserved Honours, short of Idolatry, and within the bounds of Sobriety and Decency.

"Thus we read in the Holy Scriptures, not long after the History of the Creation, the Name of the Man is Solemnly recorded with Renown, among the Founders of Nations, who was the first Inventor of the Harp and the Organ.

"And undoubtedly, there was never any Age of the true Church afterwards, whether Jewish, or Christian, wherein the Sacred delights of Musick were not admitted, to bear an eminent Part in the Worship of the True God.

"In the Jewish Church, it is certain, that ever before the Temple it self was built, while it was yet only in Design, God Inspir'd David, the Man after his own Heart, to Compose before-hand, the Hymns and Divine Anthems that were to be Sung in it.

"And the choice of the Person for that Work

was infinitely for the dignity of the Art: Since no less a Man, than the chief of their Monarchs, and the greatest of their Conquerors, was ordained by God, to be their Poet and Musician on that occasion.

"And it were easy to prove, that the same Celestial Spirit of Musical Concord and Harmony, was all along cherished and entertained in the Christian Church, during the very best Times of its purest Doctrines and Devotions.

"It will be enough, only to mention one undeniable Instance, That, in the Primitive Age, during the cruellest Persecutions, in their most Private and Nightly Assemblies, the Christians of that early Time, as Pliny informed Trajan, remarkably distinguish'd themselves, by their alternate Singing of Psalms and Spiritual Songs.

"Such, Madame, have been always the Employments of the Sublime Art of Musick, to teach and cultivate Humanity; to Civilize Nations; to Adorn Courts; to Inspire Armies; to Inspire Temples and Churches; to sweeten and reform the fierce and barbarous Passions; to excite the Brave and Magnanimous; and, above all, to inflame the Pious and the Devout.

"For these Reasons, it has all along receiv'd the Encouragement and Favour of the Greatest, the Wisest, the most Religious, the most Heroick Persons of all Ages. And it seems but reasonable, that it should be so, that they should principally take upon them the care of this High-born Science of Tuneful Sounds and Numbers, whose Souls are more elevated than others, and seem most to partake of that Natural, and Divine Harmony, it professes to Teach.

"You see, Madame, what undoubted Title Your Royal Highness has to the Patronage of this Art. It is Your own by many rightful claims, not only for Your High Birth and Royal Dignity, but for something, that is even yet more Your own; for that admirable temper of Spirit, that harmonious sweetness of Disposition, that silent Melody, and charming Musick of Your whole Life.

"After I have said this, it cannot be denied, but that, by inscribing these Papers to Your Royal Highness, I have chosen the worthiest and most excellent Patroness for these my Studies, that this Nation, or Age has produc'd. Yet I must still confess, while I applaud myself for the happiness of my Choice, the ambition of it puts me into Confusion; I am ashamed to think, that to such a Patroness I can present so very little, either worthy of the Art I admire, or of the Glorious Princess to whom I dedicate all my Muses.

"But for that part, which concerns Your self, Madame, Your own Goodness and Benignity, has set my Mind at ease, by Your generous Invitation and favourable Promise, of accepting the low Present I now offer, and your Gracious Assurance of a perpetual Protection to its Author.

"And that also, if any thing can, may possibly enable me to supply the other Part better for the future, and lift up my Genius to something more becoming the Majesty of Art it self.

"The two most Noble ends of Musick Vocal and instrumental, being either to raise and nourish the tender, and the Generous Passions of Love, Friendship, and Honour, among Men; or to animate our Affections, and to kindle the ardour

and zeal of our Devotions towards God: I must own, that what I now lay at your Royal Highness's Feet, consists only in some weak Performances of the first kind.

"I will make no Apology for the Subjects of any of them, tho' they are generally conversant about Love-Affairs; since the diversifications and delights of those softer Affections, when conceiv'd in pure Thoughts, and clothed with innocent Expressions, have been always allowed in all Wise and Good-natur'd Polite Nations; and never any where condemn'd by the truly Good and Honourable part of Mankind.

"I dare affirm, that nothing but the unsociable sullenness of a Cynick, would ever exclude secular Musick, so qualified, out of Civil Societies; as nothing but the perverse sowerness of a Fanatick, would ever drive Divine Musick out of the Church.

"But yet, lest a Work of this Nature, tho' perhaps not blameable in it self, either for the Matter, or the manner of it, should however seem to fall below what is due to Your Royal Highness's Greatness of Mind, and consummate Vertue: Give me leave, Madame, to tell You, I am preparing, as fast as I can, to make some amends for this, by a Second Musical Present, upon Arguments incomparably better: I mean my Church-Services, and Divine Compositions.

"To those, in truth, I have ever more especially consecrated the Thoughts of my whole Life. All the rest I consider but as the Blossoms, or rather the Leaves; those I only esteem as the Fruits of all my Labours in this kind. With them I began my first Youthful Raptures in this Art: With them, I hope calmly and comfortably to finish my days. Nor will my mind be ever at rest, till I have offer'd them up to God, for the Publick use of the best Church in the Christian World, under the Propitious Authority of Your Royal Highness's Name.

"May it please Your Royal Highness,

"I am Your most Humble, most Dutiful,

"And most Devoted Servant,

"JOHN BLOW.

"London, A. D. 1700."

ANCIENT SIGNATURES. In the music of Corelli, Geminiini, Handel, &c., the general rules of finding the tonic, either in the major mode by the characteristic notes of the signature, or in the minor mode by the leading note accidentally inserted, are not always sufficient. When, instead of the complete series of sharps or flats of the signature, the last sharp or flat is suppressed, and inserted accidentally when requisite, like the leading note of the minor mode, such deviation from the usual method of notation is termed the *ancient signature*. Thus, in the seventh and twelfth sonatas, or violin solos, of Corelli, op. 5, the signatures appear to be either C major, or A, its relative minor; but the accidental notes, C sharp and B flat, show that the real key is D minor; and that the B flat, which is used in the modern signature, is omitted at the clef. So we see, that, although the term *signature* is defined to be the number of sharps or flats at the clef, yet the word will be also applied to the two natural keys of C major and A minor. Examples of the ancient signature of D minor may also be found in the third and fifth concertos of Geminiini, op. 2, and in the fourth concerto of op. 3.

For instance, the first movement of his third concerto begins thus:—

Here the key is known to be D, by the accidental C sharp, and to be also D *minor* by the natural F, which remains unaltered, as in the signature. The same ancient method of notation is sometimes found in the key of G major, where the sharp of the leading note, F, is inserted accidentally, when requisite; as in the following example from the first chorus of Handel's oratorio of "Saul," "How excellent thy name, O Lord!" One of the intermediate movements commences thus:—

Here the key is known to be G, by the sharp before the F, which is used in the second treble as a third below the A; and the B natural of the clef shows it to be G major.

ANCIENT SHARP SIGNATURES. The ancient signature of one sharp is applicable to the keys of D major and A minor; but the sharp signatures of this ancient method are never found in the minor mode: for, as the second, or supertonic of the key would then require an accidental sharp, the irregularity of the signature would perpetually occur. In the oratorio of Corelli, however, several instances occur of the ancient sharp signature in the major mode, viz.: the sixth and ninth sonatas in two sharps are in the key of A major; and the G sharp is accidentally inserted. The eleventh sonata of the same work bears the signature of three sharps, and is in the key of E major, the D sharp being inserted accidentally. Handel's duet, in the oratorio of "Mithras," "Jays in gentle train appearing," is also in this key, and has this signature. The ancient signature of four sharps is found in Handel's beautiful air, "Rendi il coreno al ciglio," from the opera "Soururus." This is in B major, with the sharp to its leading note, A, occasionally inserted. It was also introduced in 1786, by Dr. Arnold, in the oratorio of "Redemption," to the words, "Lord, remember David."

ANCIENT FLAT SIGNATURES. The objection to the sharp signatures does not apply to the flat, since the second of their minor modes is not affected by the flat. For this reason, and from the variable nature of the sixth, or submediant, in the minor scale, the ancient flat signatures are very frequently found. The signature of one flat belongs to B flat major and G minor. The following example in the opening of Corelli's fifth concerto is in B flat major.

This example affords a very striking instance of the use and effect of harmony in deciding the key and mode, independent of the signature. The eighth concerto of Corelli opens with this signature in G minor, as in the following example:—

This also depends upon harmony for the decision of its key and mode: the melody, as it stands above, might be equally in B flat major, or G minor; but the F sharp, which accompanies the C in the second measure, decides the key. The signature of two flats belongs to E flat major, as

The signature of its relative, minor mode C, is very common.

The signature of three flats is unusual in the major mode of A flat, but extremely frequent in the minor of F. Handel, indeed, has seldom, if ever, used the modern signature in this mode.

In the above example, the E natural is the leading note, and points to the key note, F, of which A flat is the lesser third, and decides the mode.

ANCIENT THEATRES. These buildings were so constructed, originally, that the actor could not be heard at the extremity of the stage. The Greeks, therefore, contrived a plan to supply that defect, and to augment the tone of the voice, and make it more distinct and articulate. For this purpose they invented large copper vessels, which were disposed under the seats of the theatre in such a manner as made all sounds strike upon the ear with more force and distinctness. The orchestra was divided into three parts. The first and most considerable was more particularly called the orchestra, and was appropriated to the pantomimes and dancers. In the second part were placed those who sung in chorus; and in the third were disposed their symphony or band. The passion of the Athenians and all the Greeks for comedy and dramatic representation is inconceivable. Their eyes, ears, imagination, and understanding, all equally shared in the satisfaction. Nothing gave them so sensible a pleasure, however, as the strokes which were aimed at the affairs of the public. Frequently mere accident was the occasion of sudden application, which was very agreeable to the people. Upon the following couplet of Æschylus being spoken upon the stage in praise of Amphiarus, —

"'Tis his desire
Not to appear, but to be great and good," —

the whole audience rose up, and unanimously applied it to another person. A similar circumstance happened to Philopœmen: at the instant he entered the theatre, they were singing, —

"He comes, to whom we owe
Our liberty, the noblest good below;" —

and all the Greeks cast their eyes upon him, and with clapping of hands and acclamations of joy, expressed their veneration for the hero.

ANCILLA. (L.) The sacred shields on which the ancients beat the time of their music at public festivals.

ANCORA. (L.) Again, once more.

ANDANTE. (L.) This word seems to have had, in times past, a signification different from that attached to it by the musicians of the present day, and is frequently to be found at the beginning of old movements of a grand and even cheerful style. But now, it is used to imply a time somewhat slow, and a performance distinct and exact, gentle, tender, and soothing.

- ANDANTE AFFETTOSO.** (L.) Slow and affectionate.
- ANDANTE CON MOTO.** (L.) A little faster than Andante.
- ANDANTE GRAZIOSO.** (L.) Slow, but gracefully.
- ANDANTE LARGO, or LARGO ANDANTE.** (L.) By this expression we understand that the performance of the movement to which it is prefixed is to be slow, distinct, and exact.
- ANDANTE MAESTOSO.** (L.) Slow, with majesty.
- ANDANTE NON TROPPO.** (L.) Slow, but not too much so.
- ANDANTE PASTORALE.** (L.) Slow, and with pastoral simplicity.

ANDANTINO. (L.) Diminutive of Andante. Gentle, tender, and somewhat faster than Andante.

ANDERS, HEINRICH, organist of the old church at Amsterdam, was born in Germany in the year 1690. He published in 1720 two books of sonatas.

ANDERSON, JOHN. A composer of Scotch music, considered by some as unrivalled since the days of Oswald. He died at Inverness in 1808 (Clementi's Cat.)

ANDERSON, LUCY, daughter of Mr. John Phillpot, music seller and professor of music, was

born at Bath in 1797. The only instruction Mrs. Anderson ever received on the piano-forte was from her cousin, Mr. Windsor, of Bath, and that was very irregularly given; but her natural love for the art induced her to persevere with no other assistance than what she derived from hearing the several eminent performers who occasionally appeared at the Bath concerts. At a very early age, Mrs. Anderson (then Miss Phillpot) followed her profession, and played with great success at the Bath concerts. But in consequence of her health suffering from a residence in that town, she was induced to go to London, where the success she met with determined her finally to settle. In July, 1820, she was married to Mr. Anderson, also a professor of music.

ANDERSON, GEORGE FREDERIC, husband of the preceding, and professor of the violin and piano-forte, was born at Carlton Palace in the year 1795. He was a pupil of Wiechsell. Anderson for many years played at the Opera, Ancient, and Philharmonic Concerts, of which last society he was an associate. He was also musician in ordinary to his majesty.

ANDRÉ, JOHN, was born at Offenbach, in 1741. He was first intended for trade by his friends, who had a silk manufactory in that town. André was not regularly taught music, though he had a great taste for it; all the instruction he obtained in that art, till the age of twelve, was from one of his little companions, who went to Frankfort to take lessons on the violin, which he repeated to André. In this way he improved much: he soon afterwards taught himself the harpsichord and the rudiments of composition. Till the age of twenty, André had only composed a few songs; but being at Frankfort about the year 1760, he heard the French and Italian comic operas there, which determined him to attempt composition for the theatre. His first work of this description was the little opera called "The Porter," which was played at Frankfort, and pleased the public by its gayety and simplicity. He next composed Goethe's "Erwin and Elmira," which also succeeded. In a short time these two pieces were performed at Berlin, and were so successful that their author was sent for to compose for the theatre of that metropolis; where also he followed up his studies in composition under the direction of the celebrated Marpurg. André continued at Berlin for several years, and composed many operas; he afterwards returned to Offenbach, where he had previously established a large music warehouse. This was one of the most famous of its kind in Europe. He directed all departments of the work in person, and employed more than fifty workmen. He died in 1799. His compositions consist of more than twenty operas, including music to the tragedies of Macbeth and King Lear; three sonatas for the piano-forte, violin, and violoncello; songs with quartet accompaniment; Burger's "*Leonora*," a romance for the piano-forte, which went through five editions, &c. His style, says M. Fetis, is not remarkable for novelty of ideas or harmony, but his melodies have a natural grace and gayety.

ANDRÉ, JOHN ANTONY, son of the preceding, was born at Offenbach in 1775. At two years of age he is said to have shown a musical tendency. He received his first lessons on the

violin and piano-forte in Berliu, when his father directed the orchestra at the opera there. Marschbaum, the tenor, taught him singing, and at the age of nine he sang difficult airs with taste and accuracy. Returning with his father to Offenbach, he devoted himself with ardor to his instruments, besides lessons in harmony and accompaniment, and in the art of reading a score. A couple of years, under the tuition of Ferd. Franzel, made him a finished violinist.

His first compositions (before he was thirteen) had been symphonies for amateur concerts; but his first avowed work was a sonata for piano and violin, composed on a journey to Mannheim and Strasburg, with his father, in 1788. In 1790, aged only sixteen, he was conductor of an orchestra at Offenbach, where the business of his father had recalled him. He composed much and with great facility. From 1793 to 1795, his time was divided between the music publishing establishment and the practice of his art. At the age of twenty, he went to the University of Jena. In 1793, he made a second musical tour in the Rhine cities. The death of his father threw the music warehouse upon his hands in 1799, which did not prevent, however, a third and larger musical tour through Nuremberg, Augsburg, Munich, Vienna, Prague, Dresden, Jena, Weimar, &c., during which he made the acquaintance of all the great German composers. While at Vienna, he purchased the Mozart manuscripts of the widow; and those priceless treasures are yet in the hands of the André house, which has a branch, conducted by a son, in Philadelphia. In 1800, André visited England.

The list of his compositions, printed since 1788, includes twenty-one symphonies for orchestra, three concertos for violin, seven concertos for wind instruments, several collections of military music, two masses, an opera, ("*Rinaldo and Alcina*," 1799;) seven *opera* of stringed quartets; six of piano-forte sonatas; serenades, dances, fantasias, &c., for orchestra; cantatas, romances, and songs. His music, it is said, lacks invention, but is agreeable and pure in harmony. In 1832, André announced a general treatise on music, in six large octavo volumes. The first volume appeared the same year, and treats of the science of harmony, modulation, the ancient modes, the harmonizing of chorales, &c. Volume two contains single and double counterpoint, fugue, and canon. Volume three is destined to melodies and rhythmic; four, to instrumentation; five, to song writing; and six to style, form, the use of voices and instruments.

ANDRÉ, LEWIS, was, in 1729, chapel-master and composer to the King of Poland.

ANDRÉ, YVES MARIE, a Jesuit, was born at Caen, in Normandy, in 1675. He wrote a treatise on the beauties of music. It is contained in his work called "*Essai sur le Beau*," Paris, 1711, which has gone through many editions.

ANDRÉ, of Modena, a monk, published in 1690 a work on vocal music.

ANDRÉ, LUCREZIA, often called *Carra*. A celebrated Italian singer at the beginning of the last century; she was in the service of the Grand Duke of Tuscany.

ANDREA, HONOFRIO D', a Neapolitan

poet, wrote a discourse on music at Naples, in 1636.

ANDREA, NICOLAUS, pastor in Swedish Lapland, published some church music at Stockholm, at the beginning of the seventeenth century.

ANDREAS ARROENSIS, a composer of the seventeenth century, published the Psalms, set to music, in 1626.

ANDREAS, CRETENSIS, Archbishop of Crete, died in 724. He composed much music for the Greek church.

ANDREAS, SYLVANUS. A renowned contrapuntist about the year 1540.

ANDREINI, ISABELLA, a celebrated singer, poet, and actress, born at Padua, in 1552. She lived a long time in France, and died in 1604.

ANDREONI. An Italian soprano singer. He was engaged in 1741 for the opera in London.

ANDREOZZI, GAETANO, born about the middle of the eighteenth century, was a relation and pupil of Jomelli, and master of the Royal Chapel of Naples. He composed for all the principal theatres of this capital, and also for the greater part of Italy. His principal operas are "*Arbace*," "*Olympiade*," and "*Catone*," Florence, 1787; "*Agésilao*," Venice, 1788. His favorite air, "*Ah! quest' anima non sperti*," is still much celebrated in Italy, and the oratorio "*La Passione di Giesu Cristo*" is justly esteemed. His style was learned, graceful, and dignified. Andreozzi also composed some quartets for the violin, in excellent taste.

ANDREOZZI, ANNA, wife of the preceding, was principal female singer, in 1791, at Florence; and in 1801, at Dresden, where, shortly after, she lost her life by being overturned in her carriage.

ANDREWS. An excellent performer on the teutor, resident at Manchester. He played at the York festival in 1823.

ANDRIGHETTI, A. L., published, in 1620, at Padua, a work on music.

ANDROIDES. In 1738, M. Vaucanson exhibited at the Royal Academy of Sciences, in France, a machine capable of playing several airs on the German flute. By means of springs, valves, and levers, he produced all the motions requisite for an expert player on the flute; and he executed music in such a manner as to have it acknowledged equal in beauty to that derived from the exertions of a well-practised living performer. The same gentleman afterwards exercised his ingenuity in the construction of another musical androïdes, exhibited to the Academy in 1741, and which was not less admired than his flute player. In constructing his pipe and tabor player, M. Vaucanson made some discoveries which he little thought of; and among the rest, that this kind of flute is one of the most fatiguing instruments to the lungs of the performer. In order to produce the highest note of the instrument, the muscles of the chest of a living performer must make an effort equal to fifty-six pounds, for such was the weight with which he found it necessary to load the pair of bellows which supplied the air for this tone in the machine. A

single ounce sufficed for the lowest tone; whence we may deduce the variety of intermediate proportions necessary to be given to the air in giving even the scale of the flageolet. Many musical androïdes have been invented; but among the most celebrated automatical mechanisms was that of M. Maillardet, a native of Switzerland, who constructed an androïdes representing a beautiful female, seated at a piano-forte, on which she performed eighteen tunes. Independent of the execution of the music, which is produced by the actual pressure of her fingers upon the keys, all her motions were elegant and graceful, and so nearly imitating life, that, even on a near approach, the deception could hardly be discovered.

ANDRON, a flute player, born in Sicily, is said to have invented, about the year 130, the art of dancing in correct time to music.

ANDRONICUS. A Neapolitan musician of antiquity. He composed a hymn, which was solemnly chanted by a chorus of young virgins, to appease the wrath of the gods against the Romans. (Vide Sallust.) In the private as well as public sacrifices of the ancient Romans, music was considered an important aid to their ceremonials. The flute was the instrument in use, as also in Greece, to accompany the voices of their priests. The flutes used in the temples were made of boxwood; those for the theatres and public games, of silver. The trumpet and the lituus were also introduced (according to the Grecian custom) during the hecatombs. To show the importance which was attached to the musical characters in ancient Rome, it is related that, early in the history of that city, the musicians formed together a college or society, and were accustomed to partake daily of a dinner at the capital, given them by the state. On account of this dinner being suppressed, they all retired to Tibur; and the only terms on which they would agree to return to Rome were, not only the renewal of their usual daily repast, but to be treated with much more magnificence; as a foretaste of which enjoyments, a banquet was prepared for them at Tibur, where they all became inebriated, and in that state were removed to Rome.

ANDROT, A. A., was born at Paris in 1781; he was admitted, in 1796, a pupil of the Conservatory, and in 1802 gained the prize for composition. He then went to Rome, where he was patronized by Guglielmi, and composed some church music, which was performed in passion week in 1804. Just as he had finished a "*De profundis*," he died, in the twenty-third year of his age.

ANEAU, BARTHELEMY. Author of two books, the one containing church music, and the other the fourth eclogue of Virgil set to music, printed at Lyons in 1539 and 1559.

ANEMOCHORD. Æolian harp.

ANERIO, FELICE, is said by Walther to have been a pupil of Maria Nanino, and by Adami to have succeeded Palestrina as *maestro di capella* of the pontifical chapel. These two circumstances alone imply no common degree of merit; and, according to Adami, many admirable compositions by this author were preserved in the pope's chapel, and in daily use. He seems to have been regarded as a great master of his profession. His madrigals for six voices were printed at

Autwerp, 1599, and canzonets for four voices, at Frankfurt, in 1610; which, for a time, enjoyed a considerable share of public favor.

ANERIO, G. F., a Roman composer and chapel-master at Verona at the beginning of the seventeenth century, published madrigals and other works at Venice and at Rome.

ANFANGS-RITORNEL. (G.) An introductory symphony to an air, &c.

ANFOSSI. An eminent performer on the double bass, re-ident some years since in London. He performed at the York musical festival in 1823.

ANFOSSI, PASQUALE, born about the year 1736. He first applied himself to the practice of the violin, in the conservatories of Naples; but feeling that his imagination was too much restrained by this study, he preferred that of composition, under the auspices of Sacchini and Piccini; the latter of whom, perceiving in him marks of vigor, tact, and most of those qualities which fit a musician for his art, conceived an affection for him, and soon communicated to him some part of the fine talent which he himself possessed. Piccini procured him his first engagement, in 1771, for the theatre *Delle Dame* in Rome. The first attempt of Anfossi was unfortunate; but Piccini made a like engagement for the following year, and notwithstanding a second failure, he concluded a third for the next, and exhorted Anfossi, who had prepared to leave Rome in disgust, to apply with greater ardor, instead of being discouraged by the first obstacles he might encounter in his arduous career. His counsel was prophetic, and so favorable to his pupil, that they soon turned to the disadvantage of the master who gave them. Anfossi hesitated not to follow them. He composed his opera of "*Il Sconosciuto perseguito*," which, when performed in 1773, experienced so brilliant and so continued a success, that Piccini beheld his repose compromised, less by the merit of the work, which could in no case have surpassed his own, than by a spirit of envy and intrigue, which made use of it to inflict disgrace more unjust than painful to him, but which obliged the master to give way to the disciple. Anfossi, freed from the presence of his master, and proud of the unexpected favor of the Romans, (he only was talked of at Rome; his music only was listened to,) redoubled that ardor with which Piccini himself had inspired him. He became more laborious, more active than ever he had been; he composed with the greatest care and the most scrupulous attention; and having completed the opera of "*La Finta Giardiniera*," it was performed in 1774, and he beheld, with less joy than surprise, that the public continued its favor. It was followed by "*Il Geloso in Cemento*," in 1775, which met with the same good fortune. This composer had, however, not yet essayed his talents in the most difficult style. He had not yet written a serious opera; which, if it demands less vivacity than the comic, requires more real genius, and a knowledge of the noblest, most intense, and most expressive emotions of the human heart. He wrote the opera of "*L'Olympiade*;" it was performed in 1776, and he had the grief to behold the fall (as great as it was unseen) of his work. He now experienced, in his turn, the pain his master had undergone; he felt that

disgrace, inflicted by a public who had lavished favors upon him, was the most painful to endure; and like Piccini, being unable to support the blow this event inflicted on his sensibility, he quitted Rome. Anfossi traversed Italy, and stopped at Venice. The Venetians enjoyed the new works composed for them, and this enabled him to forget his disgrace. He was named director of one of the conservatories of that city. With this honorable title he repaired to Paris in 1780, where he gave "*Caius Marius*" at the Academy of Music. The success of this work, although not brilliant, was satisfactory to the author. He then gave "*Il Sconosciuto perseguito*," adapted to French words; but whether the Italian style was not yet perfectly understood at Paris, or whether the translation of the words was prejudicial to its effect, it certainly did not succeed according to its merit. It was uncertain whether this was the cause of Anfossi's leaving France, but he quitted Paris in 1782, and repaired to London, where he remained till 1785; but he arrived at an unfavorable time, for Sacchini had preceded him, and the affairs of the opera were in so embarrassed a state, that his reputation was diminished rather than increased, by his visit to England. He returned to Rome in 1787, where he composed several works, and had the happiness to meet with universal applause. He died in that city about 1795, in the enjoyment of considerable reputation. The compositions of Anfossi do not bear the stamp of genius like those of his two predecessors, Piccini and Sacchini, on whose style his own was formed. He understood the art of developing and refining musical expression, and many of his finales became models of this department of art. His clearness of style may be compared to the same quality in literature, and his fecundity proves that he wrote with facility. His opera of "*L'Avaro*" is considered as his *chef-d'œuvre*; and among his oratorios, "*Betulia Liberata*" is most distinguished.

ANGEBER, W., published some piano-forte lessons at Augsburg about 1799.

ANGELI, LE PERE, lived at the end of the seventeenth century. He published, in 1691, a work on counterpoint.

ANGELINI, ORAZIO, a fine performer on the organ, lived in Italy in 1580.

ANGELO, COUNT, born at Venice, was author of several musical dramas performed at Venice about the year 1654. Among these are "*Cleopatra*," "*Demetrius*," and "*Aureliano*."

ANGELO DA PACCITONO, a Franciscan, published at Venice, in 1547, a work on music.

ANGELO, MICHAEL, of Bologna. Principal soprano at Munich in 1786.

ANGERSTEIN, JOHANN KARL, a priest at Bretkow, published a work on singing, in 1798 at Stendal.

ANGIER, J. H. An English musician of merit, who flourished about 1810.

ANGIOLELLI. A celebrated singing master and singer in Portugal, in 1822.

ANGIOLINI, GASPARO, ballet master &

the Emperor of Russia, wrote, about the year 1789, several works in Italian, on his art.

ANGIOLINI, GIOVANNI FREDERIGO. A good composer, born at Sienna, lived chiefly in Prussia and Russia, and published much music for the harp and piano-forte.

ANGLAISE. (F.) A tune adapted for a country dance, in the English style.

ANGLEBERMEJUS, or ENGLEBERMEJUS, JOANNES PYRRHIUS, a lawyer at Orleans, lived in 1540, and published a work on music and dancing.

ANGLEBERT, J. K. Chamber musician of the King of France, and organist. He published some works for the organ and harpsichord, about the year 1679.

ANGLERIA, CAMILLO, a Franciscan, at Cremona, studied counterpoint under Coreggio. He died in 1630. He is the author of rules for composition, published at Milan in 1622.

ANGLOSINI. A composer of songs published by Clementi.

ANGLO-SAXON MUSIC. Among the Anglo-Saxons, music was much practised; and though their strains would in all probability have sounded harsh to a modern ear, yet over the simple and strong sensations they had a powerful influence. Music had not yet been disjoined from its natural alliance with poetry—a circumstance which gave to both arts a fascination unknown to them separately. The most astonishing effects are ascribed to their music; stories are told of the perfect witchery which their bards exercised over the passions of their audience; of companies being melted into tears by their doleful airs; then exhilarated to laughter, dancing, and shouting, by their sprightly songs; and roused at last to madness and mutual wounds, by the fierce notes that provoked revenge. All this is perfectly intelligible, without supposing their musicians to have possessed any secret in melody that is lost to the present age, when we consider the convivial nature of those assemblies where music was generally introduced. It is not uncommon to see the manliest natures melted into tears by simple melody, or a company to join in dancing and shouting, when the glass has circulated and the fiddle has struck up. Our northern ancestors drank very heartily; and it is much more credible, that the strong potations which they had swallowed, rather than the hand of the harper, introduced riots into their meetings. From an illuminated manuscript of the Anglo-Saxon Bible, it appears that they had a variety of musical instruments, sufficient at least to make a considerable noise in their concerts. In the picture alluded to, there is a harp of eleven strings, a four-stringed instrument like a violin, with a bow, a short trumpet, and a curved horn. In the reign of Edgar, the famous St. Dunstan gave a fine organ to Glastenbury, which is described by William of Glastenbury. But it was to vocal and church music that the greatest attention was paid. Teachers were sent for, at a great cost, from distant countries, and the monks repeatedly travelled to Rome, that they might learn to excel their brethren in an accomplishment on which their promotion often depended. In the reign of Athelstan, the first set of bells was introduced

into England, and presented to the monastery of Croylund by their abbot, Turketul. Single bells, however, must have been known in the seventh century, as they are mentioned by the venerable Bede.

ANGOSCOSAMENTE. With anxiety; apprehensively; sorrowfully.

ANGRI, ELENA, the famous contralto, was born on the Island of Corfu, May 11, 1824, and, judging from the name alone, of Italian parents. The misfortunes of her father forced Elena to cultivate her musical talents, and she went, under the care of an uncle, to Naples and Florence, to enjoy the instructions of the distinguished masters, Taglioni and Doglia. At the age of eighteen, Linari engaged her for the Scala at Milan, whence she went to Vienna, and was appointed first singer to the imperial court. Her next engagement was for St. Petersburg; but an attack of cholera forced her to give this up. In 1849, she appeared in the Royal Italian Opera at Covent Garden, in London, and during the winter of 1849-50 was prima donna at the Italian Opera in Paris. In the autumn of 1850 she returned to London, having accepted an engagement to sing in the national concerts. In January of the last year she accompanied Ernst in a tour through Ireland, Scotland, and England, and aroused every where the highest enthusiasm. She has always been an especial favorite of Rossini, Meyerbeer, and Spontini, the latter of whom wrote an Italian sonnet in praise of her full and sonorous voice—one also of extraordinary compass.

ANGRISANI, CARLO, an Italian singer and composer, published some collections of Notturmi, at Vienna, in 1798. He sang at the opera in London for several seasons, from the year 1817. His voice was remarkable for the roundness, gravity, and volume of its tones.

ANHSANG. (G.) An adjunctive member to a musical sentence; a sort of coda.

ANIMA, ANIMO, ANIMOSO, and ANIMATO. (I.) These words have all a similar meaning. The sound box of an instrument is the *anima*, the soul, the spirit of it. *Animato*, animated, is a term by which the Italians indicate that a movement is to be performed with boldness and spirit.

ANLAGE. (G.) The plan or outline of a composition.

ANLEITUNG. (G.) An introduction. This term often occurs in the titles to German publications.

ANIMUCCIA, GIOVANNI, born at Florence, was an eminent composer of motets and madrigals in four parts, printed at Venice, before the year 1558. He also published a set of masses at Rome, dedicated to the canons of the Vatican. He was chapel-master of St. Peter's, at Rome, and died in 1571. Animuccia is named as one of the companions of San Filippo Neri, who first applied music to the purpose of attracting company to the *Chiesa Nuova*, or New Church, at Rome, on Sunday evenings; whence sacred dramas, or mysteries, or moralities, in music, were afterwards called *oratorios*.

ANJOS, DIONISIO DOS. A good composer and harpist; he likewise performed on the *viol da gamba*. He died at Lisbon in 1709. He wrote some church music and motets.

ANNA, D. G. D', an Italian, printed some trios for two violins and a bass, at Naples, in 1793.

ANNA AMELIA, of Prussia, sister to Frederick the Great, was born in 1723. She was a pupil in composition of Kirnberger, and composed a sacred cantata of extraordinary merit, and several other musical works. She died at Berlin in 1787, and bequeathed her very valuable collection of music to the Gymnasium at Berlin.

ANNELLI. An Italian vocal composer towards the end of the last century.

ANNIBAL, of Padua. A renowned master on the organ at the end of the sixteenth century. He composed motets, madrigals, and other works.

ANNIBALI, DOMINICO. An Italian singer at the court of Saxony. He was engaged by Handel for his operas, in 1736.

ANNUNCIACAM, FR. GABRIEL DE, born at Lisbon in 1679, published there a treatise on singing.

ANOMALIES. Those false scales, or intervals, which necessarily exist in all keyed instruments, from their incapacity of a true and perfect temperament.

ANOMALOUS, or ANOMALOUS TRIADS. *Altered Triads.* See that term.

ANSALDUS, CASTUS INNOCENTIVS, a Dominican, published, in 1747, a large work on the musical instruments of the Jews.

ANSANI, or ANZANI, GIOVANNI, an Italian singer and composer, sang in London about the year 1781. Dr. Burney says his voice was one of the sweetest, yet most powerful tenors he ever heard. He was of an irritable disposition, and his wife, Signora Maccherini, a very indifferent singer, had a still worse temper. It is said that in Italy, when employed in the same theatre, if one happened to be applauded more than the other, they have been known to employ persons to hiss the successful rival.

ANSDELL, W. F., was born in 1793, in the parish of Pancras, and at the age of fourteen commenced his musical studies under the celebrated M. P. King, and some time afterwards became a pupil of Augustus Meeves. Among his published works are "*Le Souvenir*," air with variations, "*Le Bien Venue*," march and rondo, and "*Aure Felici*," as a rondo.

ANSCILLAG. The percussion of a discord.

ANSCHUETZ, J. A., a German composer, published some allemandes and waltzes at Bonn, in 1795.

ANSEAUME, of Paris. Composer for the comic opera, between the years 1750 and 1780.

ANSEMI SECONDINI. A composer at Lodi. He has written some operas since the year 1788.

ANSON, of Manchester. An eminent performer on the trumpet.

ANTAO DE SANTA ELIAS, a Carmelite monk, and chapel-master at Lisbon, died in 1748. He composed a "*Te Deum*" and other sacred music.

ANTEGENIDES, an ancient Greek, improved both the flute and the dress of the performer. He

was the first who appeared in public with delicate Milesian slippers and a saffron-colored robe.

ANTEGNATI, COSTANZO, organist at Brescia, published some works for that instrument, also masses and motets. He died in 1619.

ANTENORI, D. A celebrated violin player at Milan, in 1760.

ANTHEM. A vocal composition set to words generally selected from the Psalms, and adapted to cathedral service. There are five species of anthems: the *verse and chorus anthem*, consisting of verse and chorus, but beginning in chorus; the *verse anthem*, containing verse and chorus, but beginning in verse; the *full anthem*, consisting wholly of chorus; the *solo anthem*, consisting of solos and choruses, but without verse; the *instrumental anthem*, which may be similar to either of the foregoing, but is furnished with accompaniments. Anthem singing is very ancient in the church; some suppose it to have descended from the practice of the earliest Christians, who, according to Pliny, were accustomed to sing their hymns to Christ in parts, or in tunes. Anthems were first introduced in the reformed service of the English church in the beginning of the reign of Queen Elizabeth. Socrates says, "St. Ignatius is the author of anthem singing among the Greeks, and St. Ambrose among the Latins." At the present day we call any sacred tune or piece of music set to words from the Psalms, &c., an anthem.

ANTHEMA. A dance practised much by the Grecians, in which they sang while dancing.

ANTHEM SINGING. As the proper execution of psalmody requires the voices of all in the congregation who can sing, the singing of *anthems* should be confined to the choir. In the ancient Jewish church, persons were expressly appointed by God to conduct his praises, and the assembled congregation occasionally united in the loud chorus. So also in the primitive church, and in the church of England, anthems are performed by a choir, to which the congregation are supposed to listen with devout sentiments. The form of the anthem is naturally derived from the structure of some of the Psalms, in which we frequently find the soliloquy, the dialogue, and the chorus. Thus, "The Lord hear thee in the day of trouble," is the voice of a company encouraging a priest in his intercession. He then expresses his confidence in these words: "Now know I that the Lord helpeth his anointed." Then all join together in supplication: "Save, Lord, and hear us when we call upon thee." The solo, the verse, and the chorus, in church music, express all these turns of the sacred poetry, when properly applied. But as anthems are not often introduced in the service of our churches, and as it is presumed they will only be attempted when there is an able and well-instructed choir, under the direction of an experienced leader, further observations are not required in this place.

ANTHEM-WISE. Alternately, in the manner of an anthem.

ANTICIPATION. The taking, in a preceding chord, one, two, or more of the intended notes of an anticipated combination.

ANTICO. (L.) In the ancient style.

ANTIGENIDAS, of Thebes. One of the most renowned musicians of antiquity; he was appointed flute-master to Alcibiades. Aulus Gellius relates, that Alcibiades, setting up for a fine gentleman, and taking the utmost care of his person, was soon disgusted with his instrument, as Minerva had been before; for happening to see himself in a mirror while he was playing, he was so shocked at the distortion of his countenance, that he broke his flute in a transport of rage, and threw it away, which brought this instrument into great disgrace among the young men of rank at Athens. This disgust did not, however, extend to the sound of the flute itself; for we find by Plutarch, that great performers on it continued long after to be much followed and admired. Antigenidas, notwithstanding the height of his reputation, regarded public favor as a precarious possession, and was never elated by the acclamations of the multitude; and so fully was he persuaded of the coarse taste of the common people, that one day, hearing at a distance a violent burst of applause bestowed upon a flute player, he said, "There must be something very bad in that man's performance, or those people would not be so lavish of their approbation." Antigenidas was the author of several improvements on the flute. He increased the number of holes, which extended the compass of that instrument, rendering its tones more flexible and versatile.

ANTINORI, LUDOVICO, an Italian singer, was engaged by Handel for his operas in London, in 1726.

ANTIPHON. (Gr.) In ancient church music, the short verse sung before the psalm and other portions of the Catholic service.

ANTIPHONARIUM. (L.) A book containing the notation of the antiphony, chants, &c., of the Catholic church.

ANTIPIONE. (Gr.) The response which, in the Catholic church, one side of the choir makes to the other, in the chant. In Greek music, this word signifies the interval of the octave, whose ratio is half.

ANTIIPHONIZING. Singing in octaves.

ANTIIPHONS. Certain ecclesiastical compositions, much used in the early Christian church, and sung alternately, or in dialogue.

ANTIIPHONY. A term used by the ancients, in opposition to *homophony*, which implied a performance wholly in unison. *Antiphony* also signified certain symphonies performed by various voices, or instruments, in octaves and fifteenths to each other, but was more particularly applied to the practice of singing anthems and hymns alternately, or in dialogue. This word was afterwards used by the primitive Christians in the latter sense. St. Ignatius has generally the credit of its revival, and Ambrosius of introducing it into the Latin church. The present signification of the word extends to certain short passages occasionally drawn from Scripture, and allusive to the particular feast or celebration of the passing day.

ANTIQUIS, GIOVANNI DE, chapel-master at a town in Naples, published some madrigals at Venice in 1584.

ANTISTROPHE. (G.) The name given to the second couplet of the *periods* of the Greek odes.

ANTISTHENES, a disciple of Socrates, wrote several works on music, 324 years before Jesus Christ.

ANTOIN, FERDINAND D', published some dramatic music in 1792 and 1794.

ANTOINE, D', captain in the service of the Elector of Cologne, was a scholar of Marburg and Kirnberger. He set to music several operas, and published some symphonies and quartets since the year 1780.

ANTON, CONRAD GOTTLÖB, a learned Orientalist at Wittenburg, published some works on sacred music, and on the ancient metres, since the year 1770.

ANTONELLI TORRES. A Portuguese composer of operas since the year 1733.

ANTONELLIO, or **ANTINELLIO**, ABUNDIO. A Neapolitan composer of motets, &c., about the year 1614.

ANTONEI, PIETRO DEGLI, a chapel-master at Bologna, published several works at the end of the seventeenth century.

ANTONIO. A composer of violin sonatas and motets, about 1729.

ANTONIO. A tenor singer at Rome in 1790.

ANTONIO, DAGL' ORGANI. A celebrated organist at Rome about the year 1460. It is said that foreigners went to Rome from various nations purposely to hear him play.

ANTONIOTTO, or **ANTONIOTTI**, GIORGIO, an Italian musician, resided many years in London. He published, in 1760, a work entitled "*L'Arte Armonica*," or a treatise on the composition of music, originally written in Italian, and translated, under the eye of the author, into English. This, in the opinion of some very good judges, is a work of merit, though it is now seldom referred to. Great expectations were excited on its first publication; so much so, that all the principal musicians of the time subscribed to it.

ANTONIUS, a renowned composer in Sicily, wrote, about the year 1680, a work called "*Cithara Septem Chordarum*," (lyre of seven strings.)

ANTONIUS, J. G., a singer at Bremen, published at Dessau, in 1742, a treatise on music.

ANTONIUS, MARCUS. A Roman composer about the year 1647.

ANZANI. See **ANSANI**.

A PARTE EQUALE. (I.) When, in an Italian opera, two heroes or heroines are introduced on the stage at once, the singers are said to perform a *parte equale*. The same expression is applied to any musical performance in which the voices, or instruments, are all equally conducive to the effect.

APEL, FRIEDRICH AUGUST FERDINAND, doctor of law at Leipsic, was born in 1768. He published several works on music, up to the year 1800. He also composed a "*Te Deum*," published at Offenbach.

APELL, DAVID AARON, councillor of war at Cassel, was born there in 1754. He composed

many musical works for the church, theatre, and chamber, up to the year 1806; among others a "Mass," which he presented to the pope, and a celebrated "*Te Deum*."

APERTO. (I.) Open. When a coda consists wholly of the tonic harmony, the open pedal of the grand piano-forte may be employed with good effect.

A PIACERE. (I.) At pleasure; an expression the signification of which is similar to *ad libitum*.

A PLOMB. A term by which the French express an energetic precision, and certainty of performance. When a singer marks his time with exactitude, firmness, and emphasis, he is said to sing *a plomb*.

APOLLO. One of the heathen gods, and said to be the inventor of music. He raised the walls of the city of Troy by the music of his harp alone:—

"Troy you shall see, and walls divine admire,
Built by the music of Apollo's lyre."

It is said there was a stone, upon which Apollo only laid down his harp, and the stone by the touch became so melodious, that whenever it was struck with another stone, it sounded like a harp. It has been thought that Apollo was the name of the sun, for it may be observed that Apollo's skill in music seems to agree with the nature of the sun, which, being placed in the midst of the planets, makes with them a kind of harmony, and, as it were, a concert; and because the sun is thus placed, the middlemost of the seven planets, the poets assert that the instrument which Apollo plays on is a harp with seven strings.

APOLLINO. The name of an harmonic instrument, or rather *machine*, completed by one Mr. Plimpton, who had labored hard upon it for more than fifteen years. It combined the tones, characteristics, and powers of a great number of instruments, and was exhibited first in 1820, at New York and Boston. It contained twenty-eight different kinds of instruments, which could be played all at once, separately, or any number of them united. It combined, at the same time, the music of a full church organ, a grand orchestra, a martial band, and the Æolian harp; it contained twenty-five flageolets, twenty-five imitations of birds, twenty-five clarinets, four bugles, twenty-five trumpets, eight French horns, twelve bassoons, ten serpents, twenty-eight flutes, twenty-eight fifes, thirty-seven strings on violin and violoncello, thirty-seven strings on harp; bagpipes, bass drum, cyrubs, harmonica, twenty-five music glasses, &c.; the whole included in one machine, and played by *one man* assisted by a small boy. Mr. Plimpton was a self-taught artist, and from his machine would give forth music from the soft breathings of the Æolian harp to the swelling majesty of the organ; from the sweet warbling of the canary bird to the hoarse trumpet's inspiring clangor; from the mellow, liquid notes of the musical glasses to the astounding "thunder drum of heaven." In order to perpetuate the genius of Mr. Plimpton, the inventor of the *Apollino*, it was afterwards called *Plimptonia*, and still again *Plimptonichord*.

APOLLONI, CHEVALIER GIOVANNI, was born at Arezzo. He composed the grand operas of "*Argia*," "*Astige*," and of "*Schiavo Regio*,"

also "*Dori*," which we believe to be either a pastoral or comic opera.

APOLLONI, SALVADORE, born at Venice towards the close of the eighteenth century, was, at an early period of life, nothing more than a barber and bad fiddler. He afterwards became celebrated for the composition of *barcarolles* a sort of local music sung by the boatmen of Venice. Emboldened by the success of these songs, which were not wanting in a peculiar description of grace, Apolloni attempted a higher flight in composition, and wrote three operas, entitled "*Fama dell' Onore*," "*Le Metamorfosi*," and "*Il Pastor fido*," which procured him much applause from his townsmen, who were probably more indulgent to his talent than satisfied with it.

APOEMPIC. A farewell hymn, anciently sung to a stranger about to return to his own country. *Apompic* strains were also addressed to the gods on certain consecrated days, from an idea that each deity, at that period, paid a visit to his own country.

APOTOME. (Gr.) That portion of a tone major which remains after deducting from it an interval less, by a comma, than a semitone major. The ancients called other intervals also by this name. The little interval which Rameau terms "the enharmonic quarter of a tone," they knew by the appellation of *apotome major*. And a certain interval still less than this they denominated *apotome minor*. The curious relations which the magnitude of musical intervals bear to each other have of late years engaged the attention of several ingenious and learned men. They affix certain letters and characters to the most important and useful intervals, in their calculations, in order to exhibit their relations in the form of algebraic equations. Dr. Boyce has described this interval (*apotome*) as equivalent to that by which a sharp elevates any given note; and Dr. Callcott describes it as the *chromatic semitone*, by which, according to his calculation, a sharp elevates, and a flat depresses, any given note in the scale; but other authors have assigned different values to these very common marks in use.

APPASSIONATO, APPASSIONAMENTO. (I.) With intensity of feeling; in an impassioned style.

APPELLES. This man, a tragic actor of Ascalon, was one of the civil counsellors of Caligula, and one of the sweetest singers of the day. Suetonius relates that "as he was standing with Caligula near a statue of Jupiter, the emperor suddenly asked Appelles which of the two was the greater. Appelles hesitated, and Caligula ordered him to be scourged with the utmost violence, praising the sweetness of his voice all the time that he was shrieking in agony."

APPLICATUR. A position or shift on the violin, violoncello, &c.

APPOGGIATURA, or LEANING NOTE. From the Italian *Appoggiare*. A small additional note of embellishment employed in slow movements to connect the greater intervals; but in rapid movements, to give an opportunity for displaying flexibility in voice or finger, and for using intonation and impassioned expression. *Appoggiatura*, or leaning, or *preparative notes* are notes to lean on, in passing intervals, and must be dwelt

upon according to the value or the length of the note. It is a small leading note, or note of embellishment, placed before the principal note, on the accented part of the measure, and borrows half its time, unless it should occur before a pointed note, in which case the appoggiatur., takes the time of the note, and the point takes the time of the appoggiatura. This, however, is not an arbitrary rule, performers being at liberty to vary their length according to their judgment.

Remember, that since the appoggiatura is a small note, reversed and added to other notes for the sake of expression, whatever length is given to the small note must be taken out of the time of the principal note, which is the note immediately after it. There are two sorts of appoggiaturas, the greater and the lesser. The greater appoggiatura is most frequently used in slow movements; and at the end of a strain, when properly performed, sets off the performance to the utmost advantage. (See examples above.) The lesser appoggiatura is chiefly made use of in quick movements; and when it occurs, is always slurred immediately into the note to which it belongs. It is also placed at the beginning of a lesson or piece of music, to take off that harsh and disagreeable effect which it otherwise would have, were it not for the appoggiatura.

The appoggiatura has been termed a *leaning note*, from its frequently bearing the expression of a concluding cadence, or from its deciding the climax of a musical period. It is called *preparative* from its causing a suspension of the resolution of a chord. An appoggiatura is a note of decoration. In slow movements, its chief office is to soften and smooth the effect of certain distances, and, by dwelling upon a note of any chord, to retard the completion of the subsequent harmony. In bold, energetic, and voluble movements, a chain of appoggiatura not only serves to link the greater intervals, but affords the singer, or player, full scope for the display of flexibility in voice or finger, and for the employment of intonation and impassioned expression. The appoggiatura not being always in consonance with the bass and other parts, to avoid a *risible* breach of the laws of harmony it is generally written in a small note.

The appoggiatura may be placed either above or below the principal note, of which it may borrow half the value, and is then accented more strongly than the note which follows it.

The appoggiatura, in an harmonic point of view, forms the highest class of discords; as in the following combination, every note of the scale is struck, of which the upper four resolve themselves as appoggiatura notes into the common chord.

When so employed, the harmony may be said to be suspended; but when substantially or emphatically used, this combination is termed the chord of the thirteenth.

APRILI, GIUSEPPE, born about the year 1764, was a soprano singer. He sang at many of the theatres of Italy and Germany, and finally settled at Naples. Dr. Burney heard him there in 1770, and says that he had a weak and unequal voice, but was perfectly in tune and had an excellent shake. He was a good singing master, and a collection of his *solfeggi* are published in London, which are still much used. He was one of the masters of Cimarosa. Signor Aprili, in his *solfeggi*, has attended to the practical part of singing more than the theoretical. He first gives lessons for the intervals, both quick and slow, and the divisions most frequently met with. His first *solfeggi* are in a *cantabile* style, and well adapted to form the voice. They are intermixed with lessons that are quicker, but they still preserve the same character. They rise by degrees to higher execution, and are throughout elegant and graceful. They are of great compass, and contain much execution, and are of a kind most likely to be beneficial to a singer.

APYCNI. A collective name given by the Greeks to those three sounds in their scale, or system, which, separately, were called *proslambanomenos*, *nete symmenemnon*, and *nete hyperbaleon*. These notes received the common appellation of *apycni*, the sense of which is, *uncovered*, because they did not, on either side, touch, or press upon the compact intervals.

A QUATRE MAINS. (F.) } For four hands.
A QUATRO MANI. (I.) }

AQUAVIVA, ANDREAS MATTHEUS, a Neapolitan duke, died in 1528. He wrote some works on music.

AQUINO. See AIGUINO.

AQUINO, JOSEPH. An excellent comic musical performer at Milan in 1683.

AQUINUS, a Dominican of Suabia, wrote about the year 1494, a treatise on the proportions of numbers and sounds.

ARABIAN MUSIC. Lieutenant Lynch, in his "Expedition to the Dead Sea," gives a graphic description of some Arabian music, which the company enjoyed, and he endured, at one of their evening encampments, on the River Jordan, April 15, 1848. At Acre and at Tiberias, he had engaged some Arab chiefs to accompany the expedition. The name of one of these was Akil Az el Hassee, a border sheikh. Akil had a musical attendant, whom Lieutenant Lynch denominates Akil's bard, who sang Arabic love songs for their entertainment, and accompanied himself

upon the "*Rehabe*, or viol with one string." Lieutenant Lynch approached the sheikh's tent to hear more distinctly, and was politely invited to be seated upon a mat. The music, which was interrupted by his entrance, was continued, by request of his principal. Not a cough or an excuse was uttered. With a semicircular bow he preluded, and then added his voice. The melody was rude and barbarous, in the minor mode. The song was one of love, and though the *tout ensemble* gave evident pleasure to the sons of the desert, yet it presented no congruous expression of the subject to the ears and hearts of our American travellers.

After refreshments, Emir Nassir, another honorable Arab, surprised the listeners by snatching up the instrument and even excelling the professional bard in his performance, both vocal and instrumental. The music, however, was of a similar character with that of the first player, of a wailing, dolorous tone, which seemed more suitable for a funeral than for a lively scene of living love and beauty.

The account is interesting to musicians, strongly contrasting the musical instruments and vocal cultivation of civilized and Christian nations with those savage tribes which roam over Palestine and the adjacent countries.

ARAJA, FRANCISCO, born at Naples in 1700, was chapel-master at St. Petersburg, in the service of the Empress Catharine. He composed several operas, and among others "*Cephale Proeris*," in 1755; this was the first opera in the Russian language: after the representation of it, the empress made him a present of a magnificent sable skin. Arajá amassed a handsome fortune, and retired to Bologna in 1759. His style was rapid, brilliant, and ingenious; his subjects were often beautiful, always varied, and never insignificant; his melody was pure and sweet, and in subordination to the voice. He not only did honor to his art by his talents and learning, but rendered it an object of general attention and interest. The names of some of Arajá's operas are as follows: "*Berenice*," at Florence; "*Amore per regnante*," at Rome; "*Abiatare*," "*Semiramis*," "*Scipione*," "*Arsace*," and "*Seleuco*," at St. Petersburg.

ARANDA, DE SESSA D', a monk, composed some madrigals and other music, which he published at Venice about the year 1571.

ARAUO, or ARAUJO, FRANCISCO DE CORREA D', a Spanish musician, died in 1663. He wrote a work on the organ and other music.

ARBEAU, TOYNOT, of Langres, published in that town, in 1588, a work treating of music and dancing.

ARBITRI. (L.) Certain extemporaneous preludes. See RECHERCHE.

ARBUTHNOT, DR., was a warm partisan of Handel. He wrote several anthems, among which the words of one, "As pants the Hart," are in a collection printed in 1712, without a name, but made by Dr. Croft, who wrote a preface to the book. He wrote also several burlesque poems, and what he calls "Manifestoes," on the subject of theatrical affairs, always espousing the cause of Handel.

ARCADELT, JACQUES, was chapel-master in Lorraine. In 1572 he published at Venice

five books of madrigals. His melodies are, for the age in which he wrote, natural, soft, and agreeable. He seems to have spent the chief part of his life in Italy.

ARCADIANS. A people of Arcadia, who were not distinguished in any of the liberal arts, except poetry and music. During their repasts, they all occasionally joined in singing. Music was a stated branch of their education, and under the special patronage of the magistrates. The Arcadian music and poetry were, probably, like those of all nations in their early stages, artless and uncouth; but they possessed a natural expression and fervid sensibility, that have procured this sequestered nation the first rank in rural song. But music, though it unquestionably softened their domestic manners, did not by any means render the Arcadians effeminate, nor the less formidable to their enemies. On the contrary, the very flute which soothed them in their retirement animated them with rage in the day of battle, and regulated the evolutions of their battalions. To Pan, the god of the shepherds and the patron of rustic festivals, they paid their daily homage, by exercising their skill in the song and the dance, with the music of the pipe.

ARCANZA, MLE., a favorite Portuguese singer in Lisbon in 1822.

ARCATO, or COLL' ARCO. (I.) Signifies that the movement, or the passage, against which it is placed, is to be played with the bow. This word is used in contradistinction to *pizzicato*.

ARCH. A curve formerly placed over a bass note, to signify that it was accompanied with the imperfect fifth.

ARCHANGELUS. A church composer of the sixteenth century. He published many of his works at Venice in 1585.

ARCHENIUS, or ARRCIENIUS, L., printed at Upsal, in 1729, a dissertation on the first inventors of music.

ARCHISTRATUS, an ancient Greek composer at Syraeuse, was the pupil of Terpsion, and wrote two books "*De Tibicinibus*."

ARCHET. (F.) A bow. See ARCO.

ARCH-LUTE, or ARCIELUTO. (I.) A theorbo, or large lute, the bass strings of which are doubled with an octave, and the higher strings with a unison. This instrument was formerly in such repute, in most parts of Europe, that solos were frequently performed upon it in public. It is still used in Italy, where it is called the *arcieluto*.

ARCHILEI, LA VITTORIA, celebrated by the poet Guarini, was the original performer of the part of Euridice, in Jacob Peri's opera. She likewise sang in "*La Desperazione di Fileno*," in which recitando she is said by the composer, Cavaliere, to have drawn tears from every hearer.

ARCHILOCHUS, one of the first poets and musicians of ancient Greece, lived about 720 years before Jesus Christ. He invented several sorts of verse, with their musical accompaniment; also ancient dramatic melody, which was similar to modern recitative. In his youth he

served in the army, and in his first battle he lost his buckler, and saved his life by taking to his heels.

ARCHIMEDES, an ancient Greek philosopher, proposed a theorem to demonstrate the analogy between the proportions of certain solid bodies and those of the musical consonances. He thought the discovery of such importance to mankind, that he caused a diagram thereof to be engraven on his tomb.

ARCHINTA, M., of a noble family at Milan, about the year 1520 composed the words and music of many songs and madrigals.

ARCHYTAS. An ancient Greek composer at Mitylene.

ARCHYTAS, a Pythagorean philosopher of Tarentum, lived about 400 years before Jesus Christ. He is said to have invented some musical instruments. He wrote on the harmony of flutes.

ARCHYTAS'S GENERA. One among the many modes which the Greeks pretended to have of dividing the tetrachord, or minor fourth, in forming their scales of musical intervals.

ARCO, (I.) or ARC. The bow; the utensil with which the violin, viola, viol da gamba, violoncello, and double bass are performed. This word is frequently used in violin music, in opposition to the term *pizzicato*, to denote that the bow is again to be used, instead of applying the fingers to the strings.

ARCOLEO, A., of Caudia. Author of some music in 1690.

ARDALUS, according to Pausanias, was the inventor of the flute, and of flute accompaniment to the voice.

ARDEMANIO, GIULIO CESARE, of Milan, was organist and chapel-master of that town; he died in 1650. He published motets and other music.

ARDESPIN, MELCHIOR D'. A composer at the beginning of the last century.

ARDINA published, about 1784, six symphonies for a full orchestra.

ARDITO, (I.) Bold and energetic.

ARDORE, MARQUIS DE ST. GEORGES, ET PRINCE D', Neapolitan ambassador at Paris from 1767 to 1780, was a very ingenious amateur. He published several cantatas.

ARENA, GIUSEPPE. A Neapolitan dramatic composer, about the year 1741. He set to music the "*Tyrano*" of Goldoni.

ARESTI, FLORIANO, of Venice, was a composer of moderate abilities, about the year 1712. He wrote the operas of "*Cisippo*," and "*Enigma disciolta*," and several others, both tragic and comic.

ARETIN, GUY. A Benedictine monk, who lived in the eleventh century. He rendered himself famous by discovering a new method of learning music, and was said to have been the inventor of the six notes of music, "Ut, Re, Mi, Fa, Sol, La." There can be but little doubt that Guy Aretin and Guido Aretina are one and the same. Guido Aretina, mentioned below,

is the known inventor of the six notes claimed by Guy Aretin.

ARETINA, GUIDO, a native of Arezza, in Tuscany, celebrated for his improvements in music, flourished in the eleventh century. He became a monk of the order of St. Benedict, in Pomposa, near Ravenna, and was afterwards made abbot of the convent of the Holy Cross, at Avellano, in the neighborhood of his native city. His new mode of musical notation was suggested to him during the performance of the hymn to St. John, composed in 770 by Paul, a deacon of the church of Aquilia. The reiteration of the words of this hymn, and the frequent returns of *ut, re, mi, fa, sol, la*, made such an impression upon his mind that it suggested to him the thought of using these six syllables in perfecting an improvement, viz., that of converting the ancient tetrachords into hexachords. This new system, though opposed at its first promulgation, was soon universally introduced, and thus spread the fame of its inventor over all Europe. Aretina was invited to Rome by Benedict VIII., in 1022, and afterwards by Pope John XIX. He was received by this holy father with great kindness; and upon showing him an antiphony, with the syllables marked according to the new notation, the pope was so much delighted with it, that he refused to stir from his seat till he had learned, by means of it, to sing a verse. On his return from Rome, Guido visited the Abbot of Pomposa, in the Duchy of Ferrara, who persuaded him to settle in the monastery of that place. There he composed a tract on music, entitled "*Microlog*," which was finished in the 34th year of his age. He published also another treatise, entitled "*Antiphonarium*;" but it is in a work entitled, "*Argumentum novi Cantus inveniendi*" that he has explained his new system of notation. It was Guido Aretina who improved the ancient method of writing music. Formerly, all the notes were placed upon one line, and distinguished by the letters of the alphabet; but Guido introduced the use of lines and spaces, upon which points were placed instead of the letters of the alphabet. These points were first disposed upon four lines, and afterwards upon five, and from them the term *counterpoint* is derived. The hymn which suggested to Guido his new method of notation was as follows:—

"Ut queant laxis, Resonare fibris,
Mi-ra gestorum, Fa-muli tuorum,
Sol-ve polluti, L-a-bis reatum,
Sancte Joannes."

Guido's method of solmization was preserved in Italy until about the end of the last century, and it is still used by some; but after the rest of the world had adopted a seventh monosyllable, called *si*, the Italians did the same; and hence the modern scales of the two modes, major and minor. This author had either some well-founded tradition, or some fragment of the Greek music, or else, by means of his studies, and of his labor and genius, he formed three hexachords into a system, which includes in substance the true principle of the Greek music, and that of all ages, for there can be but one.

ARETINIAN SYLLABLES. Those syllables mentioned above, invented by Guido Aretina.

ARETINO, GIOVANNI APOLLONI, published some madrigals at Venice, in 1607.

ARETINUS, PAOLO, of the Roman school of musicians, published some sacred music at Venice, in 1567.

AREVALO, FAUSTINO, published some sacred music at Rome, in 1734.

AREZETO, A., leader of the band of the Spanish regiment Guadalaxara, composed some music for wind instruments.

ARGENTI, AUGUSTIN, a nobleman of Ferrara, died in 1576. He wrote a drama, in 1567, called "*Lo Sfortunato*," which was set to music by Alphonso de la Viola.

ARGENTILLY, CARLO D', a chapel-master at St. Peter's at Rome, composed some music, which was much esteemed, about the year 1543.

ARGENTINI, STEFFANO, called also Filippini, chapel-master at St. Stephen's at Venice, published some sacred music there in 1633.

ARGENTINI, CESARE. Chapel-master at Rimini, noticed by Walther, but probably the same person as the preceding.

ARGIVES. This ancient people is said to have excelled in the practice of music; whether vocal or instrumental, or both, history is silent; probably both, as many instruments were used by them.

ARGYROPILUS, a Greek professor at Florence in 1430, died at Rome in 1474. He wrote a volume of songs entitled "*Monodia*."

ARIA. (I.) An air. See that word.

ARIA BUFFA. (I.) A comic air. The appellation given by the Italians to the humorous songs in their comic operas.

ARIA D'ABILITA. (I.) By the expression *aria d'abilita* is to be understood a melody of difficult execution; a song that ranks far above the plain and familiar style, and the just performance of which calls forth all the powers of the singer.

ARIA CONCERTATA. (I.) The *aria concertata* is a grand species of vocal composition for a single voice, the accompaniments of which are constructed in the concert style, enriched and embellished with solo passages for the various instruments concerned.

ARIA DI BRAVURA. (I.) A melody at once florid, rapid, and energetic. Its divisions are volatile, and the passages every where striking, bold, and heroic. The execution of this species of air is generally confined to soprano voices, and it is only to powers of the first order that we can look for its just performance.

ARIA DI CANTABILE. (I.) When this expression is written at the beginning of a melody, or movement, it implies that its style is flowing and *chantante*, and that its performance should be smooth and finished, elegant, graceful, and replete with feeling.

ARIA FUGATA. (I.) Fugued air. An elaborate species of melody, much used formerly, and frequently found in the operas of Handel, Bononcini, and their contemporaries. The *aria fugata* was so called because the accompanying parts were written in fugue. This labored kind of song writing is now judiciously declined, as

undramatic, because deficient in the first of all lyric qualities — passionate expression.

ARIANUS, JOHANN L., wrote an account of lyric poets, at Erfurt, in 1581.

ARIA PARLANTE. By *aria parlante* the Italians mean that species of *cantilena*, the style of which lies between air and measured recitative; a kind of speaking melody, or recitative *a tempo*, like that of "Comfort ye my people," in Handel's "Messiah," and the greater part of Purcell's celebrated song of "Mad Bess."

ARIA TEDESCA. (I.) An air composed in the German style.

ARIBERTI, MARQUIS GIACOMO, of Cremona, composed the opera of "*Argenide*," at Rome, in 1651. He was one of the most celebrated amateurs of his age.

ARIBO. A monk, towards the end of the eleventh century. He wrote a treatise on music.

ARICHONDAS. A musician of ancient Greece. He is said to have invented the trumpet.

ARIE AGGIUNTE. (I.) Supplementary airs. Airs added to an oratorio, opera, or other vocal production, after its first public performance, and which were not originally designed to be included in the piece.

ARIETTA. (I.) A short air or melody. The diminutive of *aria*.

ARIETTA ALLA VENEZIANA. (I.) An expression applied to certain little melodies composed in the style of the Venetian airs, called *barcarolles*. See that word.

ARIETTINA. (I.) A short air, or song.

ARIGONI, FRANCESCO. An illustrious musician of Ferrara, in the seventeenth century.

ARIGONI, GIOV. GIACOMO, also called *l'Affettuoso*, published some madrigals at Venice, about the year 1623.

ARION. A lyric poet and musician of Methymna, in the Island of Lesbos, who flourished about six hundred years before the Christian era. He was immensely rich, and when travelling from Lesbos into Italy, his companions assaulted him, to rob him of his wealth; but he entreated the seamen to suffer him to play on his harp before they cast him into the sea; he played sweetly, and then threw himself into the sea, where a dolphin, drawn thither by the sweetness of his music, received him on his back, and carried him to Cape Tenuarus.

"He on his crouching back sits all at once,
With harp in hand, by which he calms the seas,
And for his passage with a song he pays."

He had previously resided at the court of Periander, King of Corinth, and had amassed his fortune by the profession of music. From Cape Tenuarus, he returned to the court of Periander, who ordered all the sailors who had conspired to throw him overboard to be crucified on their return. He invented the dithyrambic measure, and composed many hymns.

ARIOSE CANTATE. (I.) A kind of speaking airs. The *ariose cantate*, by introducing frequent changes of measure and manner, fir;

served to draw the line between air and recitative.

ARIOSO. (I.) Air-like; melodious. By this word the performer is to understand that the style of the music requires a performance smooth, graceful, and *singing* in its style.

ARIOSTI, ATTILIO. This master, was born about 1660, at Bologna, and intended for the priesthood. But he had, in early youth, such a passion for music, that, defeating all the intentions of his family, he devoted his whole time to the study of it, and, in spite of all remonstrances, determined to make it his profession. He was known in Germany much earlier than in England, having composed "*La Festa d'Imenei*," and "*Atis*," at Brandenburg, in 1700, where he was appointed chapel-master to the electrice. But before he quitted Italy we find his name enrolled among the opera composers at Bologna and Venice; in the first city he set an act of Apostolo Zeno's "*Daphne*," in 1696; and in the second the opera of Frilile, "*La Gloria della Poesia e della Musica*." Here he is called Padre Attilio Ariosti, Servita Bolognese; and it is believed that he had been regularly initiated as a Dominican friar, but that, by a dispensation from the pope, he had been excepted from the rule of his order, and permitted to exercise a secular profession. In 1706, he composed "*Nabucodonosor*," an oratorio, for Vienna; and in the same year, the opera called "*La piu gloriosa Fatica d'Ercole*," for his native city, Bologna. 1708, we find him again at Vienna, when he set to music the opera of "*Amor tra Nemici*." His first arrival in England was in the year 1716, where, it appears by the "*London Courant*," that at the sixth representation of Handel's "*Amadis*," July 12, he performed a new symphony on the *roie d'amour*, an instrument unknown in England till that time. We hear no more of him till the establishment of the Royal Academy of Music in 1721, when he composed the opera of "*Ciro*," or "*Olio ed Amore*," the first act of "*Masio Scovola*," and afterwards "*Caino Marcino Coriolanus*," and "*Vespasiano*." Respecting the opera of "*Masio Scovola*," we should mention that the directors chose to divide the task of setting it to music among their three composers; assigning to Attilio the first act, Bononcini the second, and Handel the third. This opera has been thought to form an epoch in Handel's life; as it has been concluded, though without sufficient proof, that the partition of the same drama among the three composers was a premeditated plan, to try their several abilities and determine preeminence. But it seems to have been thus distributed merely for greater despatch, without meaning it as a final competition. The same expedient has been frequently practised in Italy, for variety as well as expedition, when two or three great masters have been in the city; and nothing was determined in consequence of this concurrence in London. When Ariosti was at Berlin, he gave Handel (then a child) lessons on the harpsichord, holding him, it is said, for hours together on his knees.

ARISI, F., doctor of laws at Cremona, died in 1743. He left a work, dated 1706, containing a list of the celebrated musicians of the seventeenth century.

ARISTEAS, an ancient Grecian, wrote a book relating to performers on the cithara.

ARISTIDES QUINTILIANUS, a Grecian musician, lived about the year 130. Three of his books on music are still extant.

ARISTOCLES. A Greek composer and performer on the flute and cithara at Athens in the time of Xerxes.

ARISTONICUS, a performer on the cithara at Coreyra, was in the service of King Philip of Macedonia.

ARISTOXOUS, a famous flute player, gained six prizes at the Pythian games.

ARISTONYMUS. A renowned performer on the cithara, at Athens.

ARISTOPHANES. There are two ancient Greek authors of this name, the one a writer of comedies, the other a grammarian. It is probably the latter who wrote a treatise on music.

ARISTOTLE, the celebrated philosopher and preceptor of Alexander the Great, wrote a work on music, which is now lost. He also treats on the utility of music, in the eighth book of his "*Politics*." It was in his old age that he applied himself to the practice of the science of music, which he called "*the medicine of heaviness*."

ARISTOXENUS SELINUNTIVS, cited by Eusebius as a musician of ancient Greece, lived in the twenty-eighth Olympiad. He must not be confounded with Aristoxenus of Tarentum, who lived more than three hundred years after him.

ARISTOXENUS, of Tarentum, a philosopher and musician, lived about three hundred and fifty years before Jesus Christ. He is said to have written four hundred and fifty-three volumes; but there are only now extant three volumes of his "*Harmonic Elements*," which is the oldest musical work at present known.

Aristoxenus was born at Tarentum, a city in that part of Italy called Magna Græcia, (now Calabria.) He lived in the time of Alexander the Great, and subsequently, viz., about A. M. 3510. He held it was absurd to aim at an artificial accuracy in gratifying the ear beyond its own power of distinction! That he had anticipated the satisfactory discoveries of modern ages by his doctrine, is sufficiently clear nowadays, although a distinguished ancient, Cicero, (*De Finibus*;) speaking of the elements of Aristoxenus, pronounces them as utterly unintelligible. We should not wonder at this ignorance, when we find people in our own time asserting the existence of quarter tones, &c., in our subdivision of the octave, seeing that it can be plainly proved we cannot, for practical utility, adopt any other system than twelve semitones in the said octave. Hence the best writers use D \sharp and Eb indiscriminately, just as the *doigts* of the respective instruments requires for the sake of facility. Nobody will doubt that Mozart, Weber, Spohr, &c. are musicians; and yet their works, particularly those of the last, abound in conflicting notation.

ARISTOXENUS'S GENERA were amongst the numerous modes in which the Greek writers pretended to divide their tetrachord, or minor fourth. According to Ptolemy, Aristoxenus had six dif-

ferent scales, all formed by supposing the fourth divided into thirty equal parts.

ARKADEL. See ARCADELT.

ARMAND, MESDEMOISELLES. Two distinguished French singers at the grand opera of Paris, at the commencement of the present century.

ARMANDOLINO, GIOVANNI BATTISTA. An excellent singer and performer on the organ in Italy, towards the end of the seventeenth century.

ARMON. Author of a sextuor for the flute, &c., published at Offenbach. (Boosey's Cat. 1822.)

ARMONIA. (L.) Harmony.

ARMONICA. The name given by Dr. Franklin to a musical instrument which he constructed, consisting of hemispherical glasses, which yielded the most agreeable tones by laying the wet finger upon the margin and giving a rotatory motion to the glasses. Might not bells of glass be substituted with advantage in place of the musical metallic bells now in use? The Italian word *armonica* means *harmonious*. This term, when used adjectively, implies a quality, or character, of harmony—as, *sinfonia armonica*, harmonious symphony; *guida armonica*, harmonious guide.

ARMSDORFF, ANDREAS, organist at Erfurt, died in 1699, in his twenty-eighth year; he composed some agreeable music.

ARMSTRONG, SIR RICHARD. A very good musician, and a general in the British army. He retained the power of his voice at the age of sixty, and could then play his own accompaniment on the piano.

ARNALDUS, or ERNALDUS, abbot of Bonneval, was in great repute as composer of canticles, about the year 1141.

ARNAUD, L'ABBÉ, died in Paris in 1784. He published, in 1754, a letter on French music, addressed to M. De Caylus, and several other musical essays, relating to the performances of the day. He was a strong partisan of Gluck.

ARNAUD, PIERRE, published some quartets at Paris, in 1784 and 1787.

ARNAUD, MADAME. A principal singer at the Grand Opera at Paris in 1817.

ARNE, DR. THOMAS AUGUSTINE, was born in 1710, and was the son of Arne, a celebrated upholsterer, in King Street, Covent Garden, at whose house the Indian kings lodged in the reign of Queen Anne, as mentioned in the Spectator, No. 50. Arne had a good education, having been sent to Eton by his father, who intended him for the law. But his love for music operated upon him too powerfully, even while at Eton, for his own peace or that of his companions; for, with a miserable cracked common flute, he used to torment them night and day, when not obliged to attend the school. When he left Eton, such was his passion for music, that he used to avail himself of the privilege of a servant, by borrowing a livery and going into the upper gallery of the opera, which was then appropriated to domestics. At home he contrived to secrete a spinet in his room, upon which, after muffling the strings with a handkerchief, he used to prac-

tise in the night while the rest of the family were asleep; for had his father discovered how he spent his time, he would probably have thrown the instrument out of the window, if not the player. This young votary of Apollo was at length obliged to serve a three years' clerkship to the law, without ever intending to make it his profession; but even during this servitude he dedicated every moment he could obtain, fairly or otherwise, to the studying composition by himself. He contrived, during his clerkship, to acquire some instructions on the violin, of Festing; upon which instrument he made so considerable a progress, that soon after he had quitted his legal master, his father, having accidentally called at a gentleman's house in the neighborhood upon business, found him engaged with company; but sending in his name, he was invited up stairs, where there was a large company and a concert, in which, to his great astonishment, he caught his son in the very act of playing the first fiddle! Finding him more admired for his musical talents than knowledge in the law, he was soon prevailed upon to forgive his unruly passion, and to let him try to turn it to some account. No sooner was the young musician able to practise aloud in his father's house, than he bewitched the whole family. On discovering that his sister was not only fond of music, but had a sweet-toned and touching voice, he gave her such instructions as enabled her to sing for Lampe, in the opera of "Amelia;" and finding her so well received in that performance, he soon prepared a new character for her, by setting Addison's opera of "Rosamond," in which he employed his younger brother likewise, in the character of the page. The opera was performed ten nights successively, and with great applause, the last time for the benefit of Mr. Arne, Jr., the composer. Having succeeded so well in a serious opera, our young musician tried his powers at a burletta, and fixed upon Fielding's "Tom Thumb" for that purpose, which, under the title of the "Tragedy of Tragedies," having met with great success in 1731, he now got it transformed into the "Opera of Operas," and setting it to music, (after the Italian manner,) had it performed, May 31, at the new theatre in the Haymarket; the part of Tom Thumb by Master Arne, his brother. In 1738, Arne established his reputation, as a lyric composer, by the admirable manner in which he set Milton's "Comus." In this masque he introduced the light, airy, original, and pleasing melody, wholly different from that of Purcell or Handel, whom all English composers had hitherto pillaged or imitated. Indeed, the melody of Arne at this time, and of his Vauxhall songs afterwards, forms an era in English music; it was so easy, natural, and agreeable to the whole kingdom, that it had an effect upon the national taste; and till a more modern Italian style was introduced in the *pasticcio* of Messrs. Bickerstaff and Cumberland, it was the standard of all perfection at the theatres and public gardens. It was in 1762 that Arne quitted the former style of melody in which he had so well set "Comus," and furnished Vauxhall and the whole kingdom with such songs as improved and polished our national taste; and when he set the bold translation of Metastasio's opera of "Artaxerxes," he crowded the airs, particularly in the part of Mandane, for Miss Brent, with all the Italian divisions and dif-

facilities which had ever been heard at the opera. This drama, by the novelty of the music to English ears, with the talents of Tenducci, Peretti, and the doctor's scholar, Miss Brent, had very great success, and still continues to be represented whenever singers can be found who are possessed of sufficient abilities for its performance. But in setting "Artaxerxes," though the melody is less original than that of "Comus," Arne had the merit of first adapting many of the best passages of Italy, which all Europe admired, to our own language, and of incorporating them with his own property, and with what was still in favor of former English composers. Dr. Arne sold the copyright of "Artaxerxes" for sixty guineas—a sum which, though at present considered inadequate to the value of a good opera, was in his time reckoned a heavy sum for such a property. The general style of Dr. Arne's melody, if analyzed, would perhaps appear to be neither Italian nor English, but an agreeable mixture of Italian, English, and Scotch. Many of his ballads, indeed, were professed imitations of the Scotch style; but in his other songs he frequently dropped into it, perhaps without design. Arne was never a close imitator of Handel, nor thought, by the votaries of that great musician, to be a sound counterpartist. However, in the science of harmony, though he was chiefly self-taught, yet, being a man of genius, quick parts, and great penetration in his art, he betrayed no ignorance nor want of study in his scores. His oratorios were so unfortunate, that he was a loser whenever they were performed; and yet it would be unjust to say they did not merit a better fate; for, though the choruses were much inferior in force to those of Handel, yet the airs were frequently admirable. But besides the great reputation of Handel, with whom he had to contend, Arne never was able to have his music so well performed; as his competitor had always a more numerous and select band, a better organ, which he played himself, and better singers. None of this ingenious and pleasing composer's capital productions had full and unequivocal success but "Comus" and "Artaxerxes," at the distance of twenty-four years from each other. "Rosamond," his first musical drama, produced in 1773, had a few songs in it that were long in favor, and the "Judgment of Paris" many; but except when his sister, Miss Arne, afterwards Mrs. Cibber, sang in them, he never gained any thing by either. "Thomas and Sally," indeed, as a farce, with very little musical merit, was often acted; and previous to that, "Eliza" was a little while in favor; but the number of his unfortunate pieces for the stage was prodigious; yet none of them were condemned or neglected for want of merit in the *music*, but in the *words*, of which the doctor was too frequently guilty of being the author. Upon the whole, though this composer had formed a new style of his own, there did not appear that fertility of ideas, original grandeur of thought, or those resources upon all occasions which are discoverable in the works of his predecessor, Purcell, both for the church and stage; yet, in secular music, he must be allowed to have surpassed him in ease, grace, and variety, which is no inconsiderable praise, when it is remembered that from the death of Purcell to that of Arne, a period of more than fourscore years, no candidate for musical fame had appeared, who was equally

admired by the nation at large. Dr. Arne died in 1778. Of near one hundred and fifty musical pieces that were brought on the stage at the national theatres within forty years after his death, thirty of them, at least, were set by Arne. A modern critic, of high authority, thus speaks of Arne: "He was a singular instance of that predestinate taste, which is to be accounted for only by peculiar organization, the existence of which, among other less splendid instances, has been since confirmed by Crotch, Himmel, and Mozart. His first stealthy acquisitions in musical science, made chiefly during the night, contrary to the direction of the principal pursuit of his life, and in opposition to the will of his father, are proofs of that irresistible propensity by which genius, perhaps universally, governs its possessors. This was the pure and unbought love of the art, generated by the pleasurable perception of sweet sounds; for although Handel's operas had begun to draw the attention of the public, Arne was too young either to comprehend or to covet the chances of profitable exertion, when he resorted to the means by which he obtained the first rudiments of his future professional skill. Perhaps the highest testimony that Arne's music has obtained from time has been the continued reception of 'Artaxerxes,' against the universal sense and feeling of dramatic effect. Excellent and attractive indeed must the airs be that can atone to English sentiments and habits for the recitative and consequent destruction of all interest in the language, the incidents, and the plot. It is sufficient that scarcely a second attempt of the kind has been since made. There was in Arne's compositions a natural ease and elegance, a flow of melody which stole upon the senses, and a fulness and variety in the harmony, which satisfied, without surprising, the auditor by any new, affected, or extraneous modulation. He had neither the vigor of Purcell, nor the grandeur, simplicity, and magnificence of Handel; he apparently aimed at pleasing, and he has fully succeeded. The fault of 'Artaxerxes,' if we may be allowed to complain of an almost faultless performance, is the level uniformity that pervades the entire piece. It is sweet, elegant, and appropriate; but the songs of most pretension do not strongly affect or carry the hearer away. It was allotted to Arne first to give to English singers passages of execution which equalled, in point of difficulty and compass, those that had only been heard from Italians of the best school. In the present reign of brilliant execution, it is hardly possible to find songs of more crowded notation. 'Fly soft ideas,' and 'The Soldier tired,' are still indeed amongst the standard airs of agility in concerts; and the entire character of Maudue has been, ever since Arne's time, the universal trial of an English singer's abilities. With this composer ended the accession of new principles to the art of dramatic writing. Whatever of novelty has since been appended to our musical drama will not be found to sink beyond the original cast which particular composers have given to their air or accompaniment. Arne's use of instruments was certainly delicate, but he is neither so scientific nor powerful as later composers. We perceive from the score of 'Artaxerxes,' that he employs the hautboys principally, the flutes seldom, and the clarinets in two songs only. In the beautiful air of 'If o'er the

cruel tyrant,' the violins are generally in unison with the voice. We dislike this mode of accompaniment upon principle; it adds nothing to the harmony, and is disagreeable both to the singer and the hearer; for if the precise accord be by any means broken, (and who can insure it in the various necessities of breathing, speaking, &c.?) the effect is interrupted and diminished; delicate and tasteful are, however, the epithets which characterize Arne's instrumentation, as perhaps they best describe the attributes of his style and manner." (Mus. Rev. vol. i. p. 201.)

ARNE, MRS. Wife to the preceding. Her maiden name was Cecilia Young; she was a pupil of Geminiani, and sang in public for the first time at Drury Lane, in 1730. With a good natural voice and fine shake, Mrs. Arne had been so well taught, that her style of singing was infinitely superior to that of any other English woman of her time. She died about the year 1795.

ARNE, MICHAEL. Son of the preceding. So early did the genius of this musician develop itself, that at the early age of ten or eleven years his performance on the harpsichord was such, that he was able to execute all the lessons of Handel and Searlatti with wonderful correctness and rapidity. Even at this early age, so great had been his practice, and such was his perfection on this instrument, that it was thought he could play music at sight as well as any performer then living.

In conjunction with Mr. Battishill, he produced at Drury Lane Theatre, in 1764, the opera of "Alcmena;" but its success was not very flattering. He afterwards produced at the King's Theatre the opera of "Cymon," from which he derived both emolument and fame. Several of the airs have been lasting favorites; and particularly the two, "Yet a while sweet sleep," and "The sweet passion of love," which will be forever remembered.

The attention of Arne was, not long after this time, turned so strongly towards the study of chemistry that he not merely neglected, but, for a while, entirely abandoned, his professional pursuits. Ridiculous as it may seem at the present day, he became a convert to the absurd notions of those persons who believed in the philosopher's stone, and the transmutation of metals. In order that he might discover the former, he was at the expense of building a laboratory at Chelsea; but when he found himself deceived in his expectations, he had the good sense to return to his professional avocations, and he afterwards composed music for Covent Garden, Vauxhall, and Ranelagh.

As a composer, Arne did not possess that happy taste, nor that power of writing beautiful melody, which were so conspicuous in his father; yet there is a certain good sense which pervades all his works; though it must at the same time be observed, that if some of them were less complex, they would perhaps be more pleasing. Upon the whole, however, his merits very justly entitle him to a high and distinguished rank amongst English composers.

ARNE, MISS. See CINBER, MRS.

ARNESTUS. The first Bishop of Prague, in the fourteenth century. He wrote some sacred music about the year 1350.

ARNKLEL, T., a pastor in Schleswig, published, in 1683, a treatise on the use of horns in music.

ARNOLD, GEORGE, organist of the Bishopric of Bamberg, wrote much sacred music about the middle of the seventeenth century.

ARNOLD, FERDINAND, born at Vienna, was a celebrated tenor singer at Riga in 1796.

ARNOLD, IGNATIUS FERDINAND, an LL. D. at Erfurt, born in 1779, wrote several works on music between the years 1799 and 1809.

ARNOLD, JOHANN GOTTFRIED, a good composer and violoncellist, was born in 1773. He lived chiefly at Frankfort on the Maine, where he died in 1806, in his thirty-fourth year. He published six concertos for the violoncello, which are used as exercises by the pupils of the Conservatory at Offenbach and Bonn; he also composed much other music for his instrument, which is chiefly printed.

ARNOLD, DR. SAMUEL, an English musician and composer of considerable eminence, was born in London, about 1739, and received his musical education at the royal chapel, St. James's, under Mr. Gates and Dr. Nares, who discovered in him the most promising talents, which he afterwards cultivated and strengthened by constant study. In 1760, he became composer to Covent Garden Theatre, of which the celebrated Mr. Beard was then one of the managers, and had the advantage of having his compositions introduced to the public through the medium of the vocal abilities of that popular singer and his associates. For them he composed "The Maid of the Mill," which has ever been a favorite with the public. But, in 1767, he tried his skill in a higher species of composition, (the oratorio,) setting to music Dr. Brown's "Curse of Saul," in which it was universally confessed that he was eminently successful. This encouraged him to proceed in the same style; and he produced "Abimelech," "The Resurrection," and "The Prodigal Son," the various merits of which have been justly applauded by the best musical critics. The latter became so much a favorite, that when, in 1773, it was in contemplation to install the late Lord North, as chancellor of the University of Oxford, the stewards appointed to conduct the musical department of the ceremony applied to Mr. Arnold for leave to perform "The Prodigal Son." His ready compliance with this request, which, however, it would have been very imprudent to refuse, procured him the offer of an honorary degree; and his refusal of this did him real honor. He was not insensible of the real value of a degree, but determined to earn it in the usual academical way, and, conformably to the statutes of the university, received it in the school room, where he performed, as an exercise, Hughes's poem on the power of music. On such occasions, it is usual for the musical professor of the university to examine the exercise of the candidate; but Dr. Wm. Hayes, then the professor of Oxford, returned Mr. Arnold his score unopened, saying, "Sir, it is unnecessary to scrutinize the exercise of the author of 'The Prodigal Son.'" About 1771, he purchased Mary-le-bone Gardens, for which he composed some excellent burlettas,

and other pieces, to which he added some ingenious fireworks. This scheme succeeded; but in 1770, the lease of the gardens expired, and they were let for the purpose of building. We find Dr. Arnold afterwards employed by Mr. Colman, then manager of Covent Garden, as musical composer; and when he purchased the Haymarket Theatre, Dr. Arnold was there engaged in the same capacity, and continued in it for life. On the death of Dr. Nares, in 1783, he was appointed his successor, as organist and composer to his majesty's chapel at St. James's; and at the commemoration of Handel, in Westminster Abbey, in 1784, was nominated one of the sub-directors. In 1786, he began to publish a uniform edition of Handel's works, and about the same time brought out four volumes of cathedral music. In 1789, he was appointed director and manager of the performances held in the Academy of Ancient Music, a post of honor in which he acquitted himself with the highest credit. In private life he is allowed to have possessed those virtues which engage and secure social esteem. He died at his house in Duke Street, Westminster, Oct. 22, 1802, in his sixty-third year. Dr. Arnold's published works are, four oratorios, eight odes, three serenades, forty-seven operas, three burlettas, besides overtures, concertos, and many smaller pieces. Perhaps the composition by which he will be longest remembered is the song, "Flow, thou regal purple stream."

ARNOLD, C. Composer of some guitar and other instrumental music. (Wessel & Stoddart's Cat. 1822.)

ARNONE, GUGLIELMO, an organist at Milan, published, in 1593, a "*Magnificat*."

ARNOULD, SOPHIA. A celebrated French actress and singer, between the years 1757 and 1778.

ARNULL. An excellent performer on the horn, some years ago, in London.

ARNULPHUS wrote a treatise on singing, in the fifteenth century.

ARON. See AARON.

ARPA. (I.) A harp. See that word.

ARPA DOPPIA. (I.) Double harp.

ARPEGGIATO, or ARP'CO. (I.) This term implies that the passage, or movement, against which it is placed, is to be performed in the style of harp music.

ARPEGGIATURA. (I.) This term (a derivative from the word *arpa*, a harp) is applied to those passages which, by taking the notes of the harmony in succession, are imitative of harp music. Every sweep, to and fro, through the notes of the chord, may be called an *arpeggiatura*.

ARPEGGIO, or ARPEG. (I.) This term is derived from *arpa*, and signifies reiterated successions of the several notes which compose any chord. The violoncello, viola, violin, and all instruments performed with a bow, are capable of performing an *arpeggio*; but it is to the harpsichord and piano-forte that its execution more particularly appertains.

ARPEGGIO ACCOMPANIMENT. An accompaniment, the passages of which chiefly con-

sist of the notes of the several chords, taken in returning successions.

ARPILCUETA, of Navarre. A Spanish musician in the sixteenth century.

ARQUIER, JOSEPH, a French composer of *petit* opera music, since the year 1789.

ARRANGEMENT. That extension, or selection and disposal, of the movements and parts of a composition which fit and accommodate it to the powers of some instrument, or instruments, for which it was not originally designed by the composer.

ARRHENIUS, LAURENT. See DUNÆUS.

ARRIAGA, JEAN CHRYSOSTOME DE. Born at Bilbao, in 1808; self taught in music, for which he showed rare talent, until the age of thirteen, when he was sent to the Conservatoire at Paris, and studied the violin under M. Baillet, and counterpoint under M. Fetis. He had already, with no knowledge of harmony, written a Spanish opera, in which there were charming and original ideas. His progress was astonishing: in less than three months he had a perfect knowledge of harmony, and by the end of two years he could laugh at any difficulty in counterpoint and fugue. He had two gifts rarely united; viz., ready invention and a scientific turn. He wrote a fugue for eight voices, on the words of the Credo, "*Et vitam venturi*," which Cherubini did not hesitate to pronounce a masterpiece. On the violin his progress was equally remarkable. He was tormented by the continual need of composing. His first work was three quatuors for violin, &c., which appeared in Paris in 1824. These were original, elegant, and purely written. Then came an overture, a symphony, a mass, a "*Salve, Regina*," several cantatas and romances, &c. Exhausted by intense labor, he died, lamented and esteemed, in 1826.

ARRIGHI, PIETRO DOMINICO. An opera composer between 1783 and 1790.

ARRIGHIUS, JOAN BATTISTA. A monk of Florence. He died in 1607. He wrote on the science of music.

ARRIGO TEDESCO. See ISAAC.

ARRIGONI. See ARIGONI.

ARROBAT, COSTE D'. A French opera composer soon after the time of Lulli.

ARS CANENDI. (L.) The art of singing.

ARS COMPONENTI. (L.) The art of composing.

ARSIS and THESIS. (L.) Terms appropriated to prosody and melody. *Arsis* signifies the elevation of the hand, or that part of the bar at which it is raised in beating time. *Thesis*, on the contrary, implies the fall of the hand, or that part of the bar. *Thesis* denotes the emphatic or accented part of the bar, and *arsis* the weak or unaccented part. *Arsis* and *thesis*, therefore, is but another expression for raising and falling, as applied to the action of beating time; and is equivalent to *accented* and *unaccented*, as connected with the phraseology of the melody.

ARTEAGA, STEFFANO, a Spanish Jesuit, died at Paris in 1790. He wrote a work in three

volumes, entitled "*Le Rivoluzioni del Teatro Musicale Italiano, dalla sua origine, sino al presente*," the second edition of which appeared at Venice in 1785. He also wrote on the rhythm of the ancients, and was the most philosophical and profound of all authors upon the melo-drama.

ARTEMANIO, G. C., court organist and chapel-master at Milan, died in 1750. He published several collections of motets and other pieces.

ARTHUR AUX COUTEAUX, music master to the College of St. Quintin, lived about the year 1630. He composed psalms and other sacred music. He was the most eminent composer for the church during the reign of Louis XIII.

ARTICULATION. This word is one of the most important in the musician's vocabulary. It refers equally to vocal and instrumental performance; to words and to notes; and includes that distinctness and accuracy of expression which gives every syllable and sound with truth and perspicuity, and forms the very foundation of pathos and grace.

ARTICULATO. (I.) Articulated; distinctly enounced.

ARTIFICIAL. Not natural: any note or chord is artificial when chromatics are introduced with it.

ARTIFICIAL COMPOUND. The artificial compound, which alone comes under the musician's province, is that mixture of several different sounds, which being produced by art, the ingredient sounds are separable, and distinguishable from one another. In this sense the distinct sounds of several voices or instruments, or several notes of the same instrument, are called simple sounds, in contradistinction to the compound ones, in which, to answer the purposes of music, the simple ones must have such an agreement in all relations, chiefly as to acuteness and gravity, as that the ear may receive the mixture with pleasure.

ARTIFICIAL HARMONY. Those combinations which, though discordant, are allowable, as bearing some relation to the *triad*, or common chord, of the fundamental note.

ARTIFICIAL SCALE. Not natural. See **CHROMATIC SCALE.**

ART OF MUSIC. The Greeks, who were fond of claiming to themselves the invention of every art and science, have not scrupled to assign the origin of music, and to name the inventor. To Mercury they ascribe the honor of inventing the lyre, the first of musical instruments. The shell of a tortoise, they say, (having been exposed on the shore, till the flesh was entirely dried up, and nothing but the sinews remained, stretched over the cavity,) was observed by Mercury, when breathed upon by the wind, to emit musical sounds; and it was this that suggested to him the construction of the lyre, which was first formed of tortoise shell, with cords stretched across it. In music, the fittest subjects for imitation are all those particulars which are eminently characterized by motion and sound. Motion may be either slow or quick, even or uneven, broken or continuous. Sound may be either soft or loud, high or low, i. e., acute or

grave. Wherever, therefore, any of these species of motion, or sound, may be found in an eminent degree, there is room for musical imitation. Thus, in the inanimate world, music may imitate the gliding, murmuring, or roaring of water, as perceived in fountains, cataracts, rivers, seas, &c.; the noise of thunder, and of winds, as well the stormy as the gentle. In the animal world, it may imitate the voices of certain animals, but chiefly those of singing birds; and it may also faintly copy some of their motions. In the human species, it can also imitate some motions and sounds; and of sounds, those most perfectly which are expressive of grief and anguish; for grief naturally expresses itself by sounds which are not unlike to lengthened notes in the chromatic system. Music, as the practice of it is of more easy acquisition than that of either of the other fine arts, as it is more indiscriminately addressed to all, of every age and condition, from youth to age, from the daily laborer to the prince, and as it is in fact more universally practised, may more unhesitatingly be treated of by those but moderately initiated, without fear of the charge of presumption. The right of music to be enumerated among the fine arts has never been disputed, although its relative place in point of dignity has often been matter of controversy. Without touching this question, as being one of very little interest and less importance, we shall be satisfied with vindicating its utility and its just claims to the respectful notice and diligent cultivation of every civilized community. If we needed to appeal to the authority of names in support of this position, we could easily summon a formidable array. One, however, shall suffice; but that one, for strength of intellect and purity of moral character, is equivalent to a host of ordinary names. I allude to Dr. Samuel Johnson. Were not the fact well known and fully acknowledged, that he was the author of the passage I am about to quote, its peculiarity of style would indicate its origin with an almost absolute certainty. In the dedication to Burney's great work on the "General History of Music," we find this striking passage: "The science of musical sounds, though it may have been depreciated, as appealing only to the ear, and affording nothing more than a momentary and fugitive delight, may with justice be considered as the art that unites corporal with intellectual pleasures, by a species of enjoyment which gratifies sense without weakening reason; and which, therefore, the great may cultivate without debasement, and the good enjoy without deprecation. Those who have most diligently contemplated the state of man have found it beset with vexations, which can neither be repelled by splendor, nor eluded by obscurity; to the necessity of combating these intrusions of discontent, the ministers of pleasure were indebted for that kind reception, which they have, perhaps, too indiscriminately obtained. Pleasure and innocence ought never to be separated; yet we seldom find them otherwise than at variance, except when music brings them together." To the truth of the last remark of the great moralist, that pleasure and innocence are generally at variance, except when music brings them together, we may surely demur; and certainly a moderate experience in the ways of the world would excite in the mind of every serious person the earnest wish

that no other associations than such as are characterized by pleasure in combination with innocence were ever occasioned or encouraged by this delightful art. But the assertion that music unites corporal with intellectual pleasure, and gratifies sense without weakening reason, and therefore that the great may cultivate it without debasement, and the good enjoy it without depravation, is as true as it is forcible. An opposite conclusion would be at war with our convictions of the wisdom and benevolence of the Deity, who made the hearing ear and formed the melodious voice, and strung the soul of man with chords ever responsive to the influence of sweet sounds. Music is as truly the voice of nature as speech; that is, it is as natural for man to convey and to receive the movements of sentiment by the influence of sweet sounds as by the use of words. And when I say it is natural, I mean to ascribe this arrangement directly to the wise ordinance of the Great Being who framed us as we are. It was he who, while he gave us the element of air to breathe, gave it also the peculiar qualities by which it conveys the vibrations of sound; and while he made the ear to receive the impulses of the articulate voice, rendered it susceptible to musical intonations; and while he made the wonderful mechanism by which words are uttered, enabled it also to produce effects sweeter than the song of birds. The philosophical theory of musical sounds is very remarkable, and gives the clearest evidence that their employment, for the benefit and pleasure of man, was originally designed by the Almighty. In illustration of this position, I will instance a few of those laws or principles of sound which have been discovered by experiment and proved by demonstration. In music there is no such thing as a simple sound; that is, no tone of a musical character can be produced which is, strictly speaking, one and indivisible. It is capable of separation into distinct constituent parts. As the rays of light are the result of the combination of the seven primary colors, which can be separated by the prismatic glass, so musical sounds are themselves combinations of other sounds. Every tone which proceeds from a stringed instrument, as a violin, a harp, a piano-forte, or from a pipe, as a flute, or an organ, or from a bell, gives out at the same time other sounds which are not the same, but yet unite so as to form one whole in their effect. In a large bell this can easily be perceived when it is tolled slowly; the note sounds, and immediately after we hear others, more particularly the twelfth, fifteenth, and seventeenth. A delicate ear will perceive the same in a piano-forte; for a string sounded in its whole length, the parts of it also sound in certain exact sections or divisions which bear a definite proportion to the whole. Now, in the greater of these divisions, as the twelfth and fifteenth above mentioned, which are most easily perceived, the combination is harmonious; but in the lesser and intermediate parts, the vibrations run into discords, and are not readily distinguishable by the ear. Were they so, there could be no such effect produced as music, because discord would be as frequent and as prominent as concord. This law of sound has been adduced by an eminent ecclesiastical writer to show the wisdom and goodness of God in this correspondence between the physical nature of

man and the constitution of the material world. "There is another providential circumstance," says he, "in the theory of sounds, that if a pipe is blown to give its proper note, a stronger blast will raise it to its octave, eight notes higher. This is done by an instantaneous leap, which, if it were done by procession from the one to the other, as bodies in motion rise or fall, not music, but a noise, would be the consequence, most disagreeable to the ear; to which nothing is more offensive than a sound rising or falling by the way of the whole intermediate space, and not by first intervals; for that is a principle of noises as they differ from notes. We find music as a work of God in the constitution of the air, which is made capable of proportionate vibrations to delight us; and in such degree and manner as to save the ear from offence and interruption. Music may be further traced as the work of God in the nature of man; for God hath undoubtedly made man to sing as well as to speak. The gift of speech we cannot but derive from the Creator; and the gift of singing is from the same Author. The faculty by which the voice forms musical sounds is as wonderful as the flexures of the organs of speech in the articulation of words. The human pipe is of a small diameter, and very short, when compared with the pipes of an organ; yet it will distinctly give the same note with the pipe of an organ eight feet in length. The movable parts which are around the pipe of the human throat have but a very small range. Yet with the contraction and expansion of which the whole is capable, the voice can utter a scale of seventeen degrees, and sometimes more, and divide each whole tone into many parts. But, more than this, man is an instrument of God in his whole frame; besides the powers of the voice in forming, and of the ear in distinguishing, musical sounds, there is a general sense, or sympathetic feeling, in the fibres and membranes of the body, which renders the whole frame susceptible of musical emotion. Every person strongly touched with music must be assured that its effect is not confined to the ear, but is felt all over the frame, and to the inmost affections of the heart; disposing us to joy and thankfulness on the one hand, and to penitence and devotion on the other. It is a very well-known experiment in music, that when one stringed instrument is struck, and another, in tune with it, is held in the hand, it will be felt to tremble in all its solid parts, and one instrument being sounded, another will respond the same note, if in tune with it; thus doth the frame of man feel and answer to instruments of music, as one instrument answers to another. Man, then, is, as it were, a musical instrument of God's own formation; he has music in his voice, his ear, his whole frame." And the thought is beautifully expressed and enlarged by the poet Cowper: "There is in souls a sympathy with sounds, and as the mind is pitched, the ear is pleased with melting airs or martial, brisk, or grave; some chord in unison with what we hear is touched within us, and the heart replies. As music, then, has its origin in the nature of man, and in the constitution of the material world, which has been assigned as the place of his temporary habitation, we may expect to find evidences of its practice wherever the human voice has been heard. We hear of no people, however wild and savage in other re-

spects, who have not music of some kind or other with which we must suppose them to be greatly delighted by their constant use of it upon occasions the most opposite; in the temple and the theatre, at funerals and weddings, to give dignity and solemnity to festivals, and to excite mirth, and cheerfulness, and activity in the dance. Music, indeed, like vegetation, flourishes differently in different climates, and in proportion to the culture and encouragement it receives; yet to love such music as our ears are accustomed to is an instinct so generally subsisting in our nature, that it is not wonderful it should have been held in high estimation at all times." From what has been said concerning the origin of music, it will be seen that we could not for a moment assent to that theory which would consider this noble art as having had its beginnings in the imitation of birds or other animals, or of any of the ordinary sounds of nature. This we should consider as an hypothesis very degrading to him who was made lord of this lower creation. It is reasonable to suppose, indeed, that his natural love of imitation, and the delight he took in listening to the sweet songstress of the forest, prompted him to attempt both with his own voice, and by the help of mechanical appliances, sounds which had so often given him pleasure. And it is possible that the idea of the shepherd's pipe may have been suggested by the whistling of the wind among the dry reeds, and that the lyre, one of the most ancient instruments, may have had its origin in the accident that Hermes, wandering on the shore, struck his foot upon a tortoise shell, the inner parts of which had decayed, except a tendon, which, being more firm, had remained stretched across it, and thus gave the hint for the formation of a stringed instrument. But the first music, we believe, proceeded from the first and most perfect of instruments, the human voice divine; and its earliest effort was not to imitate the vocal powers of the irrational creation, but to emulate the harmony of heaven, when, at the glorious spectacle of the new-created world, the morning stars sang together, and all the sons of God shouted for joy. The great poet of our language has represented, in his immortal work, our first parent as having heard this anthem of the celestial choir, and we see no reason for regarding it merely as poetical fiction. The angel Raphael, in the seventh book of "Paradise Lost," is describing to Adam the work of creation: when the six days' work were ended, the Almighty Creator returned up to the House of Heaven, his high abode. These are the words which the poet gives to the angel when addressing Adam:—

"Up he rode,
Followed with acclamation and the sound
Symphonious of ten thousand harps, that tuned
Angelic harmonies; the earth, the air
Besounded, (thou remember'st, for thou heard'st it)
The heavens and all the constellations rung.
The planets in their station listening stood,
While the bright pomp ascended jubilant.
Open, ye everlasting gates, they sung:
Open, ye heavens, your living doors; let in
The Great Creator, from his work returned.
So sung they; and the empyrean rung
With hallelujahs."

Now, while to the subsidiaries of this gorgeous description we ascribe no higher authority than the imagination of the poet, and therefore read his words only as those of sacred fiction, we need not suppose it improbable, although we

make it not an article of faith, that our first parent learned the use of vocal sounds from angelic choirs; and hence we may say with the poet, but with the sentiment of uttering almost historic truth,—

"From heaven, from heaven, the sacred song begun."

If thus derived from heaven we esteem this noble art to be, should not its highest employment be the service and worship of God? and should not we deem it a wretched and criminal degradation, when its powers and capacities are made to minister, as they too often are, to worldly and sensual purposes?

ART OF READING FROM A SCORE.

The musician who sits down to write a symphony, a concerto, an opera, or any piece for several voices or instruments, can only form an idea of the effects which may be expected to result from his labors by having under his eyes all the parts which concur to form the whole. The process which he employs for this purpose is extremely simple; it consists in writing, on separate staves in each page, whatever is destined to each voice or to each instrument, and then in connecting these different staves by a *brace*, and by bars drawn perpendicularly across the page. This union of the different parts is called a *score*. Scores are necessary to conductors, chorus masters, and directors of concerts, and indispensable to accompanists; for it is only by them that they can gather any idea of the composition as a whole, or of its effects, or of what is assigned to the different voices and instruments. All composers do not lay out their scores in the same manner. There are, however, certain rules of arrangement which have been generally adopted, and which are dictated by reason. Thus the voices are ranged in the order which they occupy in the general system of sounds; the deepest as to pitch being placed lowest in the page, and the others gradually above them. Hence, in a chorus for four voices, the soprano will be placed above the contralto, the latter above the tenor, and this last again above the bass. In a double chorus, the four parts belonging to the first chorus will be arranged as above, and immediately beneath them the four parts belonging to the second chorus. In concerted vocal pieces, as a quintet, sextet, finale, &c., all the voices of the same species are ranged above each other. Thus all the trebles, all the tenors, all the basses, are assembled in adjacent staves. The order generally adopted, in vocal pieces, accompanied by the orchestra, is that in which all the instruments are placed above the voice parts, except the bass, which is placed below them. There is not any positive rule for arranging parts in scores of instrumental compositions. The first arrangement of the following is that of the Italian masters, and of Mozart; the second that of Cherubini, Beethoven, and the modern French and German school; some of Haydn's works observe the third arrangement. The insatiate thirst after novel effect has, of late, caused the introduction of many other instruments, newly invented, and all perhaps good; but they are joined to one or other of the following classes. Thus the *small flutes* are joined to the ordinary or concert flute; the *ophicleides* and trumpets with slides, *valves*,

or keys, fall within the class of brass instruments; the triangles, cymbals, and great drum are ranged by the side of the kettle drums.

1st Arrangement.	2d Arrangement.	3d Arrangement.
First Violin.	Flutes.	Kettle Drums.
Second Violin.	Hautboya.	Trumpets.
Alto.	Clarinets.	Horns.
Flutes.	Horns.	Trombones.

Bassoons.	First Violin.	First Violin.
Trombones.	Second Violin.	Second Violin.
Kettle Drums.	Tenor.	Alto.
Violoncello.	Violoncello.	Violoncello.
Double Bass.	Double Bass.	Double Bass.

ARTEMIRA. This queen was a distinguished musical lady. She took Cairo by a musical stratagem. She went there with a powerful band of music, drums and trumpets; and the people, unarmed, ran in throngs to hear the music, while the queen's troops took possession of the city.

ARTOT, JOSEPH, a celebrated violinist, was born at Brussels on the 4th February, 1815; received his first lessons of his father, who was first hornist at the theatre; at the age of six or seven, played in public a concerto of Viotti; was sent to Paris, and made a page in the royal chapel; took the second prize at the Conservatoire, at the age of 12. He then performed with success in his native city, London, &c., and then for some time was attached to orchestras in the theatres of Paris. But the desire of distinguishing himself led him to renounce these situations for an artistic tour in the south of France, where he had brilliant success. He visited the United States, and gave concerts with Mme. Cinti Damoureau, in 1844, and died soon after his return to Europe. Some interesting particulars of the last days of Artot appeared at that time. "He made, the year previous, a journey into Italy for the benefit of his health, and, finding it somewhat reestablished, was anxious to go to Madrid, hoping there to add a flower to his crown. He was, however, full of sad presentiments, and receiving, on the eve of his departure, the order of Leopold from the King of Belgium, said to his friends, after expressing his pleasure at the unexpected distinction, 'It is a crown upon a coffin.' At Madrid he had a brilliant success; the queen wished to hear him, but at one of his last concerts he was exposed to a current of freezing air, and the cold thus caught brought on a mortal illness. Seeing his end approach, the poor artist wished, at least, to die in France, and was, though with great difficulty, transported thither. There is something in these details which harmonizes with the feminine delicacy and refined sentiment that distinguished the playing of Artot."

ARTS, FINE. Napoleon Bonaparte, when at Milan, in 1797, then pushing his way onward by ceaseless activity, was addressed by the inspectors of the Conservatory of Music at Paris, with a request to use his influence, or his power, to procure for them collections of musical compositions from the Italian towns. In his answer is the following paragraph:—

"Of all the fine arts, music is that which has most influence on the passions, and which the legislator ought the most to encourage. A musical composition of an intellectual character, if the work of a master, never fails to touch the feelings; and it has more influence on the mind

than a good moral book, which convinces our reason, but does not influence our habits."

ARTUFEL, DAMIANUS D', a Spanish Dominican, published at Valladolid, in 1572, a treatise on vocal church music.

ARTUS. Court musician to the Emperor Maximilian, about the year 1512.

ARTUSI, GIOVANNI MARIA, a canon of Bologna, published, in 1598, a work called "The Art of Counterpoint," which reduces the precepts of Zarlino into a compendium. In 1603, he gave a continuation of this work, in which he treats more especially of the imperfections of modern music. In 1600 and 1601, he published some further tracts on music. Artusi wished to prove, by extracts from celebrated authors of antiquity, especially from Plato, that the Greeks understood music in parts; in other words, the rules of counterpoint.

AS. (G.) A flat.

ASAPH. A musician of the tribe of Levi, in the age of David. Twelve psalms bear his name, but it is not generally thought he composed them. Probably he set them to music, or some of his descendants did, and called them by his name. Kings had their particular music and music masters; and Asaph was King David's music master. He taught the sweet singer of Israel.

ASCENDING NOTES, or ASCENDING SCALE. Thus:—

ASCHENBRENNER, CHRISTIAN, was born in 1654. He was a celebrated violinist, and composed six sonatas, which he presented to the emperor at Vienna, and was recompensed with a chain of gold and a medal. He died in 1732.

AS DUR. (G.) A flat major.

ASHE, ANDREW, was born in the town of Lisburne, in the north of Ireland, about the year 1759. His parents sent him to a school near Woolwich, in England, before he was nine years of age. At this early period he showed a great disposition for music, and devoted a certain sum of his weekly allowance to the master of the artillery band, (who occasionally attended the academy,) to receive lessons on the violin. The young votary made such progress, that in a short time his school-fellows preferred dancing to his fiddle to their usual gymnastic exercises between school hours. He continued at this academy until he had attained his twelfth year; at this period, a lawsuit, which had been pending for a number of years, between a neighboring nobleman and his grandfather, terminating to the great disadvantage of the latter, rendered it inconvenient to his parents to continue their son at so distant a seminary, and caused them to resolve on his return to Ireland. Previously to this proposed removal, Count Bentinck, a relation of the Portland family, and a colonel in the British service, happened to be riding by the academy at Woolwich, and perceiving young Ashe in tears, with his letter of recall in his hand, asked him what was the matter; he replied, sobbing

that his family were ruined by a lawsuit, and that he was desired to return home to Ireland, as his friends could not afford to keep him any longer at Woolwich. The humane nobleman, struck with the boy's apparent grief, was induced to make further inquiry about him from the master of the academy; and a correspondence between the count and the child's parents commenced in consequence, which terminated in young Ashe's removal to the house of the count, who shortly after took him to the Island of Minorca, where his regiment then was. There he procured for him instructions on the violin by an eminent Italian master, under whom he improved so much, that he was soon looked upon as a musical prodigy for his age. He next accompanied his protector in a considerable tour through Spain, Portugal, France, and Germany, and finally settled with him on his estates in Holland. Here young Ashe's education was paid particular attention to, the count wishing to prepare him to be a confidential servant on his estates; but the boy was too far advanced in music, and loved it too much, to permit him to pay the attention requisite to complete himself for the intended office of land steward. He had now acquired a pretty general knowledge of various wind instruments, having attended the regular practice of his patron's regimental band, with which, we have heard, he even used to do duty in Minorca. About this time he showed an evident disposition for the flute; but it was then so limited an instrument, that after considerable application he relinquished it, in consequence of its great imperfections. Shortly after this, the Sieur Vanhall (brother to the celebrated composer of that name) arrived at the Hague from London, and brought a flute with six keys. Vanhall announced a concert, in which he was to perform a concerto on this flute with six keys. It being the first of these improved instruments that had reached Holland, a general curiosity was excited to see where these keys could be placed on a flute, and no one was so actively curious in this respect as young Ashe, who lost no time in offering his services on the violin, and promising the count's patronage of the concert, which he accordingly procured for Vanhall. These additional keys on Vanhall's flute were in his hands only ornamental, as he had not acquired the use of them; but when young Ashe tried them, and found that they produced all the half notes as full and round as the tones natural to the instrument in its unkeyed state, he made up his mind to have this flute, *coute qui coute*; which he accomplished at a considerable price, by the count's indulgence. This was about the latter end of 1774, when Ashe had not attained his sixteenth year. From that period he gave up the violin, and dedicated his entire attention to his newly-acquired purchase. After some months' application, the celebrated Wendling, successor to Quautz, the King of Prussia's master, came to the Hague, of whom young Ashe had some lessons; but on his second visit, Wendling told him his new flute was a bad one, that the long keys on the bottom joint spoiled the instrument, and that the small keys were of no use, particularly in quick passages. These observations of the master not corresponding with the high ideas and expectations of the scholar entertained of its excellence, induced him to

discontinue his lessons as soon as a proper respect for such a distinguished master would permit. Our young aspirant had then recourse to his own natural genius, and, after a few years' incessant application, became the admiration of Holland, chiefly from the uncommon fulness of his tone in those more abstruse keys in music, which could not be produced from the flute then in general use, and which perfection was, erroneously in a great measure, ascribed to the performer, without allowing a participation in this honor to be due to the great improvement in the construction of his instrument. All this time Ashe continued under (we may call it) the paternal roof of his benefactor, the count; but, as ingratitude is inherent, in a more or less degree, in some natures, we are sorry to have a particle of it to annex to the subject of our present article; but the truth is, that, flushed with the admiration he experienced, he was anxious to launch into the world from under the roof which had so long sheltered him; and the count, who saw his thoughts by his demeanor, permitted him to go, on a handsome salary, as family musician to the late Lady Torrington, then on the point of removing from Holland to Brussels. He remained in Lord Torrington's family until that nobleman thought proper to reduce his establishment; and was next engaged by the late Lord Dillon, who also resided in Brussels. This nobleman was a great patron of the opera in that city, and wished his musician to have the situation of first flute in the opera orchestra, to which a demur was made by the Brabant nobility and Flemish subscribers in general. Parties ran high; but there being at this period, 1778 and 1779, a great number of English at Brussels, who were a material support to the opera, they demanded a public trial of skill between the resident flute of the opera and young Ashe, which accordingly took place at the first rehearsal of the season; and, although it was admitted that the Sieur Vanhall was by far the most experienced musician and flute player, yet Ashe gained the general approbation and situation by his superiority of *tone*, for which he had to thank the improvement of his additional keys, in all probability, more than any preference of *embouchure*. In this school of musical improvement our young flutist remained for a few years, when an Irish gentleman of the name of Whyte, a great amateur of music, expressed the intention of making a grand continental tour; and as Ashe was by this time a general linguist, in addition to his flute playing, Mr. Whyte proposed to take Ashe with him, which was too congenial with our young traveller's disposition to be declined. After, however, relinquishing all his engagements, letters called Mr. Whyte back to Ireland, and Ashe, having long had a hankering after the land of his birth, from which he had been absent since his infancy, willingly accepted Mr. Whyte's offer of accompanying him to Dublin. Not long after his arrival in Ireland, he was engaged for the Rotunda concerts in Dublin, which were then brilliantly supported. Here Ashe remained a few years, and the great applause his performance always met with was a stimulus to his further improvement. His celebrity having for some time reached England, the late Mr. Salomon (who had, in 1791, brought over the immortal Haydn for his concerts ir

Hanover Square, and was anxious to have a suitable orchestra to execute this incomparable master's symphonies, which were composed expressly for these concerts) suspended the engagement of his principal flute until he had the opportunity of hearing Ashe; which was afforded him the same summer, he being engaged to perform at the Rotunda concerts, with a celebrated violoncello player of the name of Sperat. Salomon was so highly pleased with Ashe's intonation and tone, that he gave him a very liberal engagement for Hanover Square; and accordingly, in 1792, he made his first public appearance in London, at Salomon's second concert, in a manuscript concerto of his own composition, which was replete with such novelty as to excite very considerable admiration. After this favorable *debut*, it is not to be wondered that he became and remained the reigning flute, both as an orchestra and concerto player, at all the established concerts in London. Upon the abdication of Monzani, Ashe was appointed principal flute at the Italian Opera, which situation he held for several years. He next, on the demise of Rauzzini, in 1810, was unanimously elected director of the Bath concerts, which he conducted with great ability for twelve years; but, in consequence of the times being unpropitious for public undertakings, was induced to relinquish their management in the winter of 1821-2; having, as we understand, lost a considerable sum by the last four years of his direction. "In the year 1799," says the editor of the *London Times*, "Ashe married a pupil of Rauzzini, whose vocal excellence (as Mrs. Ashe) is too generally known to make any comment from us necessary. They have had a numerous family, nine or ten of whom are now living: the eldest daughter is a very finished performer on the harp, but is not in the profession, being married to a gentleman of property in the West Indies. We have frequently been delighted with the second Miss Ashe's accomplished style of singing, and very superior performance on the piano-forte, although from appearance she is not yet nineteen. We can only speak of Ashe as an author, from having heard many of his flute concertos performed by himself, which abounded with new passages fancifully dispersed, and the melodies highly pleasing. The reason we have heard assigned for their not being as yet given to the public, is a tenaciousness in the composer to reserve them for his own performance; but we understand he purposes shortly to print them, when, we have no doubt, they will be eagerly sought after by both *dilettanti* and professors. We have dedicated rather more space to this article than we can conveniently afford, having been anxious to lay before our readers a somewhat detailed account of a gentleman so highly esteemed as Mr. Ashe, both in his public and private character. He continues in full possession of his powers, is in robust health, and we have heard him say he has been but a bad customer to both law and physic; never having expended a shilling on the former, and only a single guinea fee to the latter."

ASHE, MRS., wife to the preceding, was a good singer, and for some years sang at the oratorios and other public concerts.

ASHE, MISSES, daughters of the preceding, were excellent performers on the harp and piano;

they also sang pleasingly. They performed before the London public in 1821.

ASHLEY, GENERAL, a celebrated English violinist. His father was the manager of the oratorios at Covent Garden Theatre, which performances he led with great ability for many years. After his death, his sons, General and Charles Ashley, succeeded him as joint managers. General Ashley was educated in music under Giuliani and Barthelemon, and was esteemed an excellent performer on his instrument. He was considered also as the best modern judge of violins and violoncellos; of which, in the latter years of his life, he had a very valuable collection. He died near London in 1818.

ASHLEY, JOHN JAMES. An eminent organist and singing master. He presided for seven years at the oratorios at Covent Garden, where he introduced many of his pupils; among whom were Mrs. Vaughan, Mrs. Salmon, Master Elliott, C. Smith, and other favorite vocal performers. He was in early life a scholar of the celebrated Schreter, and well versed in the science of music, and author of some excellent lessons for the piano-forte, canzonets, &c., &c. He was brother of the preceding, and died a few years since.

ASHLEY, CHARLES, brother to the two preceding, is an eminent violoncellist, still living in London. He is one of the original thirty members of the Philharmonic Society.

ASHLEY, RICHARD, younger brother of the three foregoing, is a celebrated tenor player, residing in London. He was principal tenor at the York musical festival in 1823.

ASHLEY, JOHN, of Bath, received his musical education from his elder brother, Josiah Ashley, an eminent flutist and hautboy player of his day. He has been a performer on the bassoon at the Bath concerts and theatre during nearly half a century, and was also a vocalist at the concerts, Harmonic Society, and Vauxhall of the same city. The sister art of poetry, or, as he has termed it, *rhyming*, was combined with the above professional pursuits, as may be seen by a volume he published, called "Trifles in Rhyme." With regard to music, Ashley never aspired to any thing great in composition; his efforts were confined to ballads and songs, serious and comic; and it is believed that he has written the words to, and composed more of, these trifles, which have been sung by eminent performers, and favorably received by the public, than any English composer of his time. The following is a list of some of Ashley's compositions: ballads, "Honest Ben," "Poor Joe the Marine," "The Sailor's Creed," "The Heart that o'erflows," "Poor Orphan Maid," "Tom and Susan," "Unanimity;" songs, "England's King," "Bundle of Proverbs," "Rhyme without Reason," "Boney at Bayonne," "Origin of Old Bachelors," "Wondrous Song," "Lads of the Ocean," &c., &c.

ASHWELL, T. A church composer in the time of Henry VIII. and Edward VI. Many of his works are still preserved at Oxford.

ASHWORTH, an Englishman, wrote an introduction to the art of singing about the year 1787.

AS MOLL. A flat minor.

ASPERGES ME. (L.) The opening of the mass.

ASPREZZA. (L.) With dryness; coarsely.

ASSAI. (L.) Very; as, *adagio assai*, very slow.

ASSOLUTO. (L.) Solus; alone. One voice, without any accompaniment.

ASIOLI, BONIFAZIO, was born at Correggio about the year 1760. About the year 1796, he went to London, where he remained some time, and then returned to Milan, and was appointed chapel-master and chamber musician to the King of Italy. In 1808, a new conservatory was established at Naples, to the direction of which Asioli was appointed by the king. Among his numerous dramatic and vocal works, the following list is given by Gerber: 1st, "*La Volubile*," opera buffa; 2d, "*Il Ratto di Proserpina*," intermezzo, 1785; 3d, "Six Italian Duets," London, 1796; 4th, "Six Italian Airs, in the Style of Canzonets," London; 5th, "*Variaz, p. il Comb. sull' Aria, L' ame Bettinal a me'l ha fatta*," Vienna; 6th, "*Ottavino a 2 V. 2 Fl. 2 Viole. Fag. e 1c.*," Vienna; 7th, "*Capriccio p. Piano F.*," Op. 1, Zurich, 1803; 8th, "*3 Ariette coll' acc. di Piano F.*," Op. 2, Zurich; 9th, "*Capriccio p. Piano F. a 4 Mani*," Op. 3, Zurich; 10th, "*Capriccio p. Piano F.*," Op. 5, Zurich, 1803; 11th, "*3 Ariette coll' acc. di Piano F.*," Op. 4, Zurich, 1803; 12th, "*3 Duetti p. 2 Soprani coll' acc. di Piano F.*," Op. 6, Zurich; 13th, "*La Campana di Morte, Sonetto, coll' accomp. di Piano F.*," Zurich, 1806. There are several other vocal works of Asioli, some of which are published by Birchall in London, and evince a taste in melody equal to that of any of the modern Italian composers. He never attempted the more severe order of composition; but his works are in music what those of Propertius, Catullus, and Tibullus were in poetry, as compared with Horace and Virgil; as true music *di camera*, they will very long be admired.

ASOLA, or ASULA, GIOVANNI MATTEO. A composer of church music at Verona, between the years 1565 and 1600.

ASOR. An ancient instrument, very much resembling the quadrangular lyre.

ASPELMEYER, or APPELMEYER, FRANZ, musician to the emperor, and ballet composer at Vienna, died in 1786. He composed some instrumental music and two operas.

ASPULL, GEORGE. The *London Musical World*, for 1825, contains the following notice of this extraordinary youth: "In the more select musical circles of London, there has been unobtrusively stealing into notice a child, in whom is developed so early and so extraordinary a talent for music, that the most fastidious predict for him a reputation of the highest order, and speak of him as a genius born to bestow a character for eminence in that art which has hitherto been withheld by foreigners from the natives of this country. His father was formerly, we understand, in business, but, not being successful in the pursuit he at first chose, was compelled to resort to music as a profession, and by diligent and successful practice has acquired some reputation as a performer on the violin. It was not till his son had considerably passed the age of

five years that he gave any indications of that decided bent which his mind has since taken but the marks of genius he then discovered were so evident, that Mr. Aspull determined to undertake himself the care of his education in music, and, foreseeing the advantages to which it might lead, devoted the whole of his time and attention to that object. The fruit of his care and assiduity is apparent in the surprising talent which young Aspull now displays. The instrument on which he performs is the piano-forte, at which he does not usually sit, his stature being so small as to render the position of standing that which gives him the most perfect command of the instrument. His fingers are extremely short, even for his age; with the left hand he cannot reach an octave so as to press down the two notes which form it at one time, and is only enabled to do so with the right hand with much difficulty, and by depressing the wrist. The impediment thus formed to the acquisition of the mere mechanical difficulties of the piano-forte will be perfectly understood by all those who have ever attempted that instrument; but they have not prevented young Aspull from conquering the most complex and rapid passages that have ever appeared in the form of musical composition. With some slight allowance only for those passages requiring greater strength than that to which his little frame is adequate, or combining more distant intervals than his fingers can possibly command, there is no difficulty of execution that can stop him for a moment. The compositions of Kalkbrenner and Moscheles, prepared for displaying in public the manual skill of those celebrated professors, are played evidently without the smallest effort by this extraordinary child. He has also made himself master of a piece of most singular difficulty, by a foreign composer whose name is Czerny, and who wrote it as a trial of skill for all the eminent professors of Europe, and in order to combine all the mechanical niceties of execution of which the instrument is susceptible. This piece, consisting of only one movement, occupies nearly forty pages of printed music, every one of which is crowded with rapid divisions, intricate modulations, and the most chromatic passages that the art of the composer could devise. Some idea may be formed of the complexity of this movement, by the fact that some of our most eminent professors, to whom it has been shown, have shrunk from the attempt to play it. But the mechanical skill of young Aspull is that which has least surprised those who have had the pleasure of hearing him perform. A child, with a certain cleverness and quickness of parts, may be taught, by repeated efforts, to conquer the greatest intricacies, and when conquered, there will remain nearly the same impression from them which results on viewing an exhibition on the tight rope, or the antic tricks of the unfortunate pupils of the posture master. Mr. Aspull's pupil is not of this class; the boy's mind evidently participates in all that his hand executes. A passage which he is compelled to leave imperfect, through a defect of physical power, does not stop or disconcert him, as it would an ordinary pupil, but he passes on to the next, and is as certain to give it with effect as if himself had composed it. Short as the period is which young Aspull has devoted to the

study of music, he has cultivated every style, and all with success; in these are included the concertos of Handel, and the fugues of the Bachs and Scarlatti; than which latter, perhaps, no works could possibly be selected less accessible to a juvenile student. Young Aspull unites with these the talent, which is rare among professors, of extempore playing; at which, if permitted to do so, he will pass hours, and with a fluency that would indicate musical notes to be that vehicle by which he could best express his ideas. We ought not to omit to state of him, that he sings ballads to his own accompaniment on the piano-forte, in a voice thin and weak, owing to his extreme youth, but with peculiar taste and delicate expression. His appearance and behavior do not differ from those of other children of the same age; but his manner, when performing on the piano-forte, is that of a person deeply attentive. The most rapid and involved passages do not produce a change of countenance, nor any sign of effort. Little study is requisite, even for the most elaborate pieces; and those of ordinary difficulty he can execute at once, on being permitted to cast his eye over them before taking his station at the piano-forte. Certainly this child bears about him prognostics of future eminence, which could not have been greater or more conclusive in the person of Mozart himself. In February, 1825, Master Aspull was introduced to his majesty and a party of distinguished personages at Windsor, when he delighted the company for two hours with his performances. He played many of the most difficult compositions on the piano-forte, with a power of execution scarcely exceeded by the most experienced professors, and with a taste and feeling which no practice alone can give. The king, during the whole performance, expressed his most unqualified delight, and bestowed upon this interesting boy that encouragement and commendation, which, to the friends of this phenomenon, are doubly valuable, from his majesty's exalted rank and scientific knowledge; and as the greatest proof of his majesty's opinion of him, he commanded his attendance at the castle the following evening, to have another opportunity of witnessing his powers. The Princess Augusta was equally delighted and astonished by the genius of this child, and condescendingly turned over the leaves of his books during the whole performance. In addition to his display on the piano, Master Aspull sang four songs in a style which called forth the most enthusiastic plaudits." He died 20th August, 1832.

ASSMAYER. Composer of some quintets and other instrumental music for the piano-forte, &c., at Vienna. (Wessel and Stodart's Cat. 1822.)

ASSOUCL, CHARLES COYPEAU D', a French composer for the theatre, died in 1679, at Paris.

ASSUNI or ASUNI, GHILLINI DI. A composer for the flute and guitar. Preston published some of his music about the year 1795. (See also Clementi's Cat. 1823.)

ASTARITA, GENNARO, is celebrated both as a serious and comic composer, but particularly the latter. His natural and agreeable style conciliated the favor of the public, although the opinion of the connoisseurs was not always equal-

ly favorable. His air, "*Come lasciar poss'io,*" was universally sung and applauded. His operas were, "*La Contessa di Bimbiapoli,*" 1772; "*La Visionari,*" 1772; "*Finezza d'Amore,*" 1773; "*Il Marito che non ha Moglie,*" 1774; "*La Critica Teatrale,*" 1775; "*Il Mondo della Luna,*" 1775; "*La Dama immaginaria,*" 1777; "*L'Isola di Benepoli,*" 1777; "*Armida,*" 1777; and "*Circe e Ulisse,*" which, in 1787, was given under this title, in all the theatres of Germany, as a new piece. Neither the nature nor the number of the compositions of this master entitle him to a high rank among classical composers; but he is worthy to be placed at the head of the second class of the musicians of Italy.

ASTER, DAVID. A German organist and voluminous composer at the beginning of the eighteenth century.

ASTIER. A French composer at the beginning of the last century.

ASTON. An English organist and composer in the time of Henry VIII. Some of his music is preserved at Oxford.

ASTORGA, BARON EMANUELE D', a Sicilian, composed an elegant and refined "*Sabat Mater,*" a considerable portion of which is in the first volume of Latrobe's selection; also several cantatas, which were much celebrated. He came to England some time in the beginning of the last century, and passed one or more winters in London. Dr. Burney states the three best of Astorga's cantatas to be "*Quando penso,*" "*Torne Aprile,*" and "*In questo core.*" In these, he says, there are expression, grace, and science, devoid of pedantry.

ASTORGA, J. O., published at London, in 1769, six trios for the flute, and in 1780, some Italian ariettes.

ASTRUA, GIOVANNA, of Turin, was an excellent singer, at first in the service of the Sardinian, and subsequently of the Prussian court. She died in 1758, in her thirty-third year.

ASULA. See **ASOLA.**

A TEMPO, or A TEMP. (I.) In time. Of similar signification with a *battuta*; and, like that expression, seldom used but when the regular measure has been designedly interrupted. When there has been some short relaxation in the time, a *temp*, or a *tempo*, denotes that the performer must return to the original degree of movement.

A TEMPO DI GAVOTTA. (I.) An expression denoting that the movement before which it is placed is to be performed in the time of a gavot. See **GAVOTTA.**

A TEMPO GIUSTO. (I.) In equal and just time. An expression generally applied to the manner of performing a steady, sound movement; a movement less directed to the feelings than to the judgment; more scientific than impassioned.

ATHANASIUS, Bishop of Alexandria, died in the year 372. He wrote some works relating to church music.

ATHENÆUS, a Greek grammarian, was born in the year 160. In the fourth book of his works, he treats of music, musicians, and musical instruments.

ATHERSTANE. A composer of some pianoforte music published in London. (Clementi's Cat. 1823.)

A TRE, or A 3. (I.) For three voices.

ATIS. A good flute player, born at St. Domingo about the year 1715. He resided chiefly in France, and composed much instrumental music.

ATTACCATO SUBITO. (I.) To be commenced immediately.

ATTACCA, ATTACCA SUBITO, (I.) implies that the performer must directly commence the following movement.

ATTENDANT KEYS. According to Boyce and Callcott, attendant keys are the keys on the fifth above and fifth below (or fourth above) any given key, which in modulation are introduced by the addition of a new flat or sharp to the signature. Mr. Maxwell, in his essay on tune, proposes a system of eighteen notes on the octave, which shall make the keys of C major and A minor, with the attendant keys, or six auxiliary scales, perfect, in their harmony, throughout.

ATTERBURY. A celebrated English glee composer in the latter half of the last century. His most popular works were, "Come, let us all a-Maying go," glee, four voices; "With horns and hounds in chorus," catch, three voices; "Take, O, take those lips away," round, three voices; "Sweet enslaver," round, three voices; "Joan said to John," catch, three voices; "Lay that sullen garland by," glee, three voices; "Come, fill the board," glee, four voices; "O, thou sweet bird," glee, four voices; and "Adieu, ye streams," glee, four voices. (Birchall's and Clementi's Cat.) Atterbury died during the performance of one of his benefit concerts.

ATTEY, JOHN. An English composer of some songs, published, early in the seventeenth century, in a collection entitled "Ayres of four and more Parts."

ATTILIO. See **ARIOSTI.**

ATTO. (I.) Act. The word *atto* is found in all Italian operas, in conjunction with one of the words expressive of the ordinal numbers; as, *atto primo*, act the first; *atto secondo*, act the second; *atto terzo*, act the third. See **ACT.**

ATTO DI CADENZA. (I.) An act of cadence. This expression denotes that disposition of the parts which indicates a cadence; as when, at the end of a strain, the bass rises a fourth, or falls a fifth.

ATTORI, ATTRICI. (I.) The principal singers in an opera.

ATTWOOD, THOMAS, was born in the year 1767. When nine years of age, he was admitted a chorister in the chapel royal, and received the rudiments of his musical education under Dr. Nares, (the master of the chapel boys,) and his successor, Dr. Ayrton, remaining under their tuition about five years. When Attwood had attained his sixteenth year, he was so fortunate as to perform at Buckingham House before the Prince of Wales, who most graciously proposed to send him to Italy, to study under the cele-

brated masters of that school, and for this purpose settled a handsome income upon him paid out of his royal highness's private purse, for the whole period of his absence from England. This unlooked-for patronage and bounty was remembered with the deepest sense of gratitude by Attwood, who ascribed to that generous act his subsequent professional successes. In the year 1783, he accordingly went to Naples, where he resided two years, receiving instructions during that time from Filippo Cinque and Latilla. From Naples he went to Vienna, where he was so fortunate as to become the pupil of the celebrated Mozart, under whom he studied till the year 1786, when he returned to England. His royal highness, still most nobly and generously continuing his patronage, nominated Attwood one of the musicians of his chamber band, to which the celebrated Schröder was at that time attached. Soon after the marriage of the Duke of York with the Princess Royal of Prussia, Attwood was applied to by the duke to instruct her royal highness in music. On the arrival of the Princess of Wales in England, he was also selected by his munificent patron to be her royal highness's musical instructor. In 1795, Attwood succeeded Jones as organist of St. Paul's Cathedral; and, in 1796, obtained the situation of composer to his majesty's chapels royal, succeeding the late Dr. Dupuis. Lastly, in 1821, his majesty added to the numerous instances of royal favor already shown him, and which he had continued through so long a period, by appointing Attwood to the situation of organist of the private chapel in the Pavilion at Brighton. All these situations he is said to have had the gratification of obtaining either directly from his majesty, or in consequence of his majesty's generous recommendation. For several years Attwood devoted much of his time to dramatic music, in which he was so eminently successful, that the public experienced a great loss when he thought fit to change the line of his studies. He composed several operas, of which the following were the most popular: "The Prisoner," "The Mariners," "The Adopted Child," "The Smugglers," and "The Castle of Sorento." Among his other works the following are the greatest favorites with the public, viz.: songs, "The Soldier's Dream," "The Adieu," "Sweet Charity," and "The Convent Bells;" glees and trios, "The Curlew," "In peace love tunes," "To all that breathe," "*Quai Silenzio*," and "O, heavenly sympathy." Attwood has further produced several pieces of cathedral music; and of late years has employed a considerable portion of his time in this species of composition. In virtue of his office, as composer to the chapels royal, he wrote the coronation anthem, "I was glad," which was performed at the coronation of George IV. In speaking of this composition, a modern critic observes, "We have frequently heard, from persons of undoubted authority, that Attwood has a profound knowledge of orchestral effects, and we now have a proof of the fact before us. In particular, we admire the use which he has made of the wind instruments. His admirable disposition of them is, indeed, worthy of a pupil of Mozart." He died in 1833.

AUBADE. (F.) A concert given in the morning, in the open air, and under the windows of the

party whom it is intended to celebrate or entertain. See SERENADE.

AUBERLEN, S. G., was living at Tubingen in 1802. He has composed many allemandes, &c.

AUBER, DANIEL FRANCOIS ESPRIT, born at Caen, the 29th of January, 1784, on a journey which his parents made to that city, was the son of a print seller of Paris, who was in easy circumstances. Endowed with a most happy disposition for music, M. Auber first studied this art as an object of pleasure. After having learned to play upon the piano under the direction of Ladurner, he was sent to London to pursue the profession of a merchant; but being soon disgusted with a situation for which he did not feel that he had been born, he returned to Paris. Being well received by the public because of his talents and genius, he began to make himself known by some small compositions, such as romances, some of which met with success. A trio for the piano, violin, and violoncello, which he published about the same time at Paris, proves that he could treat instrumental music with ability. But some other more considerable works soon increased his reputation among artists. He was an intimate friend of Lamare, the celebrated violoncellist, who had a style altogether peculiar in his manner of playing the bass, and which he desired to propagate by a species of music adapted to that purpose; but by a remarkable circumstance, which it would be difficult to explain, he had neither a melodious idea nor trait in his head which he was able to employ in a piece of music. At his request, M. Auber wrote all the bass concertos which have appeared in the name of this virtuoso, and also some others which have remained in manuscript. The public thought that these concertos were the compositions of Lamare; but all artists knew that they were due to the talent of M. Auber. The original character of this music produced a very great sensation in the public, and it could be foreseen that, from that time, the youthful composer to whom it was due would one day enjoy a brilliant reputation. About the same time, M. Auber wrote a concerto for the violin, which was performed at the Conservatory of Music at Paris, by M. Mazas, and which was eminently successful. The desire of laboring for the theatre had already caused him to set again to music the old comic opera entitled "*Julie*," with an accompaniment for two violins, two altos, violoncello, and contrabasso. This work, which contained many charming pieces, was represented at a theatre of amateurs at Paris, and received much applause. A short time afterwards, M. Auber wrote, for the small theatre of M. de Caraman, Prince of Chimay, another opera, with orchestra complete, from which he has since selected many pieces for his other works.

Notwithstanding his success, which until that time had been confined within the circle of a certain number of artists and amateurs, M. Auber was sensible that his musical studies had been incomplete, and that his knowledge failed him in the art of writing; and being desirous of completing his education in this respect, he devoted himself to some arduous labors under the direction of M. Cherubini. These studies being finished, he wrote a mass for four voices, from which he has since taken the prayer in his opera of "*La Muette de Portici*." In 1813, he made his

debut in public by an opera in one act, which he caused to be represented at the theatre Feydeau, under the title of "*Séjour Militaire*." This work did not answer the expectations which the first attempts of M. Auber had excited, and contained nothing of that grace and originality of ideas which had gained applause for his former productions. A repose for many years followed this check, and the composer seemed to have renounced a career in which brilliant success awaited him, when the derangement of his fortune, and the death of his father, obliged M. Auber to seek some resources for his support in the exercise of an art which until then had been to him only a relaxation. In 1819, he caused to be represented, at the Opera Comique, "*Le Testament et les Billets-doux*," an opera in one act. This work was still less fortunate than the first public attempt of the talents of M. Auber had been. The eulogiums which had been lavished upon him were now considered as the opinion of a coterie, and arising from partiality; but the composer soon retrieved himself by "*La Bergère châteline*," an opera in three acts, which was played at the same theatre during the first part of the year 1820. The original ideas, the melody, an elegant instrumentation and dramatic effect, distinguished this work, which obtained complete success, and which may be considered as the first foundation of the brilliant reputation of its author. "*Emma, ou la Promesse imprudente*," an opera in three acts, performed in 1821, completed what a "*Bergère châteline*" had commenced, and from that time M. Auber has known nothing but success.

Auber was first brought into notice in 1823, by his opera "*La Neige*," which became very popular, not only in France, but in Germany, and is frequently performed in the principal German theatres. His "*Fra Diavolo*," and his most celebrated piece, "*La Muette de Portici*," (or *Masaniello*,) are well known all over Europe. In Auber's earlier works there is a palpable imitation of Rossini; but he gradually acquired greater independence of style; and, in his latter compositions, his manner, both in the cast of his melodies and the disposition of his accompaniments, is decidedly his own. His peculiarities, indeed, are so marked, and so constantly perceptible, that they give his music too great a uniformity of character, and lay him open to the charge of mannerism. His music is not marked by depth of thought or strength of feeling. His combinations are ingenious, but not profound; and his melodies, though often sweet, and sometimes tender, are very rarely pathetic. But his music is brilliant, sparkling, exhilarating, and remarkable for the clearness and simplicity of its dramatic effects, even in scenes of the greatest bustle and confusion. These are the beauties which have rendered "*Masaniello*" so generally attractive. Every auditor, learned or unlearned, is animated and delighted by the charming *barcarolle*, the market chorus, the chorus of fishermen, the beautiful finale to the third act, (in the original piece,) the bacchanalian song, and the air sung by *Masaniello*. Beauties of a similar kind, though in an inferior degree, are to be found in "*Fra Diavolo*." Among Auber's minor productions, a comic opera called "*Le Philtre*," written by Scribe, and brought out at the Academie Royale in 1831, is probably the most agreeable.

In May, 1825, M. Auber was made a Knight of the Legion of Honor, and the Academy of Fine Arts of the Institute elected him one of their members in the month of April, 1829. He has since held many posts of distinction, both civil and professional. He continues to produce sparkling works for the Opera Comique, and his overtures, such as those to "Zanetta," "L'Estrope," "Musaniello," "Les Diamans de la Couronne," &c., &c., every where preserve their popularity in miscellaneous concerts. "Marco Spada" is the title of his last opera. M. Auber was recently appointed, by Napoleon III., director of the Imperial music and *maitre de chapelle* at the Tuileries.

AUBERT, musician to the Duke of Bourbon, was engaged at the opera at Paris, as violinist, in 1727. He died in 1758. He composed some sonatas and other music.

AUBERT, son of the preceding, was first violin at the opera at Paris till 1771, when he retired with a pension. Either he or one of his brothers wrote a refutation of the principles of J. J. Rousseau respecting French music.

AUBERT, P. F. OLIVIER, (sometimes written O.) a violoncellist at the Comic Opera at Paris, was born at Amiens, in 1763. He has written an excellent instructive book for the violoncello, also much instrumental music.

AUBERTI, a violoncellist at the Italian Theatre at Paris, published some music for that instrument. He died about the year 1805.

AUBIGNY VON ENGELBRONNER, NINA D', the youngest of two sisters, who were celebrated composers of songs in Germany. She went to the East Indies with an English family.

AUBIN, MADAME ST., at one time a very celebrated singer of the Opera Comique, died in 1850, at Paris, at the advanced age of eighty-seven. She was performing during the worst period of the first revolution, and was in communication with Marat, Robespierre, and Collot-d'Herbois. She exerted her influence with these men to save victims from the scaffold, although there was a certain risk in so doing; and during all her life was remarkable for charity and kindness. She left the stage at the age of forty-two. The Empress Josephine appointed her one of her readers.

AUDACE. (I.) With boldness.

AUDIBILITY OF SOUND. M. Savart, speaking of the inferior limit of the number of vibrations per second which compose a sound just perceptible to the human ear, says he had before proved by experiments, that the limit was much further extended than he had generally supposed. For example, sounds are very distinctly heard which result from more than fifty thousand oscillations in a second. By means of a new apparatus, he can now show that sounds are distinctly perceptible, and even strong, when composed of no more than eight vibrations in a second.

AUDINOT. Author of the *petit opera* "Le Tonnelier," at Paris.

AUDINOT, Mlle. Singer at the Opera at Paris about the year 1782. Gretry composed the

music of some particular parts for her, especially "Colinette à la Cour."

AUENBRUGGER, F., a female composer of vocal and instrumental music, died at Vienna in 1786. Her sister, Mary Anue, also published some music.

AUFHALTUNG. (G.) A suspension.

AUFLÖSUNG. (G.) The resolution of a discord.

AUFFMAN, J. A., a chapel-master, published three concertos for the organ at Augsburg in 1754.

AUFFSCHNAITER, BENEDICT ANTON, chapel-master at Passau, published, between 1695 and 1719, various sacred compositions.

AUGMENTATION. This word is chiefly confined to the language of fuguists. Augmentation is the doubling the value of the notes of the subject of a fugue, or canon; or, to speak in plain terms, giving the intervals of the subject in notes of twice the original length. When whole notes are used for half notes, half notes for quarter notes, or when in any part of a fugue the subject is taken up in notes of double the value of those in which it commenced, the process is called *augmentation*. In fugues by augmentation, text become phrases, phrases become sections, &c.

AUGUSTIN. Court musician to the Emperor Maximilian I., 1512.

AUGUSTINI, PAOLO. See AGOSTINI.

AUGUSTINUS, AURELIUS, lived at the end of the fourth century; he wrote a book on music, which was printed at Basil in 1521.

AULBERUS, or ALBERUS. A Lutheran, professor of music at Tübingen. Many of the canticles now in use in the Lutheran church are of his composition.

AULETTA, P., composed an opera, entitled "Ezio," about the year 1728.

AULETTA. An Italian buffo singer at the Opera at Paris, in the year 1820.

AULETES. One of the names given by the ancient Greeks to flute players.

AULNAYE, M. DE L'. Author of a work entitled "De la Saltation Theatrale," Paris, 1789, in which there are some observations on music.

AULUS GELLIUS lived a short time after the death of Plutarch, and wrote some works on music.

AUMANN, DIETRICH CHRISTIAN, a composer at Hamburg, published several vocal works between 1787 and 1789.

AUMER. A composer of some theatrical music at Vienna. (Boosey's Cat., 1822.)

A UNA CORDA. (I.) On one string.

AURELI, A., of Venice. A voluminous writer of dramatic pieces about the middle of the seventeenth century.

AURELIANUS REOMENSIS. A priest and musician at Rheims about the year 900.

AURENHAMMER, MADAME. An ingenious professor of the harpsichord at Vienna, in

1787. She superintended the publication of some of Mozart's works. See BOSENHOENIG.

AURIEMMA. A Neapolitan composer for the opera about the year 1790.

AURISICCHIO. A Roman composer about the middle of the eighteenth century. He died very young.

AUS. (G.) *From, out of*; it occurs in German titles, &c.

AUSARBEITUNG. (G.) The elaboration or last finish of a musical composition.

AUSDEHNUNG. (G.) Extension, expansion.

AUSDRUCK. (G.) Expression.

AUSWEICHUNG. (G.) Modulation.

AUTENTICO. Authentic; chosen or approved. A term applied by the Italians to certain church modes. See MODE.

AUTHENTIC. This term means having an immediate relation to the key note or tonic; in distinction from *plagal*, having a corresponding relation to the fifth or dominant, in the octave below the key note.

AUTHENTIC MELODIES. Those which have their principal notes between the key note and its octave; in distinction from *plagal melodies*, which have their principal notes in the octave below the fifth of the key.

AUTHENTIC MODES or TONES. In the ancient church music, the four modes, introduced by St. Ambrose, in which the principal notes of the melodies are confined within the octave above the key note; in distinction from the *plagal modes* or *tones*, introduced by Gregory the Great, in which the principal notes of the melodies are confined within the octave below the fifth of the key.

AUTHENTIC or PERFECT CADENCE. The chord or harmony of the dominant, followed by that of the tonic, or the progression of the dominant to the tonic; in distinction from the *plagal cadence*, the chord of the fourth or subdominant, followed by that of the tonic, or the progression of the subdominant to the tonic.

AUTOMATON. D'Alembert gives an account, in the "*Encyclopédie Méthodique*," of a gigantic mechanical flute player. It stood on a pedestal, in which some of the "works" were contained; and not only blew into the flute, but, with its lips, increased or diminished the tones it forced out of the instrument, performing the legato and staccato passages to perfection. The fingering was also quite accurate. This marvelous flutist was exhibited in Paris in 1738, and was made by Jacques de Vaucanson, the prince of automaton contrivers. A full orchestra of clockwork musicians is quite possible. Maelzel, the inventor of the metronome, opened an exhibition in Vienna, in 1809, in which an automaton trumpeter, as large as life, performed with surprising accuracy and power.

AUTOS SACRAMENTALES. (S.) Certain theatrical representations, as we learn from Father Menestrier, which the Spaniards formerly made in their churches expressly for great public and religious festivals, in which great musical skill was displayed.

AUTREAU, J., a painter, died in 1745. He wrote some French songs and an opera.

AUVERGNE, ANTOINE D'. Director of the Grand Opera at Paris in 1792.

AUVRAY, J. B. Composer of some romances and war songs at Paris, in 1797 and 1890.

AVANTANO, P., an amateur of Naples, published in 1736, at Amsterdam, twelve sonatas for the violin and bass.

AVANZOLINI, GIROLAMO, a contrapuntist of the seventeenth century, published at Venice, in 1623, some psalms for eight voices, with the thorough bass.

AVAUX, D', a musical amateur violinist at Paris, published many symphonies and quartets between the years 1787 and 1795. He also wrote, in 1784, a letter on a newly-invented pendulum to measure time and music. We have not seen this work, but probably it takes away the merit of originality from the metronome of Maelzel.

AVELLA, GIOVANNI D', a Franciscan monk, published a book on the rules of music, at Rome, in 1657.

AVE MARIA. (L.) The angel Gabriel's salutation to the Virgin Mary, when he brought the tidings of the incarnation. This expression has long since become a theme for musical composition in the Romish church, and is generally set in chorus.

AVENA. (L.) *An oaten straw*. This reed, as supposed, was the third kind of musical instrument used by the ancients, and succeeded that formed of the horns of quadrupeds. The first was a shell: so simple was the origin of music! To such artless beginnings do we trace its counterpoint, fugue, double fugue, pealing choruses, melting airs, exalting grandeur, thrilling sweetness, and all its magic power over our passions.

AVENARIUS, JOHANN, a German professor of theology, died in 1692. He left a work entitled "*Musica*."

AVENARIUS, PHILIPPE, organist at Altenburg, published some sacred music at Nuremberg in 1572.

AVENTINUS, JOHANNES, a renowned German historian, died at Ratisbon in 1534. He wrote a work entitled "*Musice Rudimenta*."

AVERTEL. A composer of music for wind instruments at Vienna, at the end of the last century.

AVIA, J., a musical amateur, published in 1650, at Constance, a collection of convivial songs.

AVIANUS, JOHANN, of Eisenberg, died there in 1617. He wrote some works on music.

AVICENNA, a celebrated Arabian physician, died in 1036. He wrote a treatise on music in the Persian language.

AVILES, MANUEL LEITAM DE. Chapel-master at Granada in 1625, and composer of several masses.

AVISON, CHARLES, organist at Newcastle

and pupil of Geminiani, was the author of an essay on musical expression, published in the year 1752. He assisted in the publication of Marcello's music to the Psalms, adapted to English words. Of his own compositions there are extant five collections of concertos for violins, and two sets of sonatas for the harpsichord and two violins. (Clementi's Cat.) The music of Avison is light and elegant, but it wants originality. In his essay on musical expression, he was the encomiast of Marcello and Geminiani, frequently to the prejudice of Handel. His work was answered by Dr. Hayes of Oxford, who proved Avison to have been by no means a profound contrapuntist. Soon after Avison republished his book, with a reply to Dr. Hayes, and a letter containing many detached particulars relative to music. This last edition of Avison's work is now very scarce.

A VISTA. (I.) At sight; *a prima vista*, at first sight.

AVOLLO, or AVOLIO, J., appears, by Breitkopf's Catalogue of 1802, to have been a composer of instrumental music at Leipsic. (See also Clementi's Cat.)

AVONTANO, PIETRO, a Neapolitan composer, published, in 1732, twelve sonatas at Amsterdam.

AVOSANI, ORFEO, born near Milan in the early part of the seventeenth century, by no means justified by his talents the title which he chose to bestow on himself of *Husband to Eurydice*. He published some church music.

AXAMENTA. (L.) A denomination given to the verses, or songs, sung by the Salli, in honor of all men. The *axamenta* were never accompanied by instruments.

AXT, F. S., died in Germany in 1745. He wrote a work entitled "*Annus Musicus*."

AYLWARD, THEODORE, was one of the assistant directors at the commemoration of Handel, in 1784, at Westminster Abbey. He composed some church music.

AYRTON, DR. EDMUND, was born in 1734, at Ripon in Yorkshire, of which borough his father was an active and upright magistrate, whose three immediate ancestors held, successively, the consolidated livings of Nidd and Stanley, within the liberty of that town.

He was intended for the church, and received his education at the free grammar school of his native place; where, during five years, he was a contemporary of Beilby Porteus, afterwards Bishop of London. But his father, finding it prudent to indulge his son's natural inclination for the study of music, placed him under the instruction of Dr. Nares, then organist of the cathedral at York, with whom he commenced an acquaintance, which ripened into a friendship that death

alone terminated. At an early age he was elected organist, auditor, and *rector chori* of the collegiate church of Southwell, in Nottinghamshire, where he resided some years, and married a lady of good family, by whom he had fifteen children. He quitted that place in 1764, upon being appointed gentleman of the chapel royal; shortly after which, he was installed a vicar choral of St. Paul's Cathedral, and subsequently became one of the lay clerks of Westminster Abbey. In 1780, he was promoted, by Bishop Lowth, to the office of master of the children of his majesty's chapels, upon the resignation of his valuable friend Dr. Nares. In 1784, the University of Cambridge conferred on him the degree of doctor in music; and, some time after, he was admitted *ad eundem* in the university of Oxford. His exercise was a *grand anthem* for a full orchestra, which merited and gained so much praise, that it was ordered to be performed, with a complete band, in St. Paul's Cathedral, on the 29th of July, 1784, being the day of the general thanksgiving for the peace. This work was afterwards published in score. In the same year he was chosen one of the assistant directors of the far-famed commemoration of Handel, in Westminster Abbey; which situation he filled at all the succeeding performances in that venerable building, till they were discontinued at the troublesome era of the French revolution. In 1805, he relinquished the mastership of the children of the royal chapel, having been allowed for many previous years to execute the duties of all his other appointments by deputy. He died in 1808, and his remains were deposited in the cloisters of Westminster Abbey, near those of his wife and several of his children, whom he survived.

Dr. Ayrtton was an excellent musician, of which his compositions for the church bear indubitable evidence. The performance of these has been confined chiefly to the royal chapel; but the publication of them, which has long been expected, would usefully augment the musical resources of our various choirs, and add no small lustre to the name of their author.

AYTON, FANNY. An English soprano of eminence, educated in Italy. She could utter more than twenty syllables in a second of time, with a neatness and precision not easily surpassed. Her first appearance in England was in 1828, as Ninetta, in "*La Gazza Ladra*," and an engagement of considerable extent was offered her, had she consented to Italianize her name to *Atonini*.

AZAIS published, in 1776, "*A Method for Music, according to a new Plan*," and, in 1780, some sonatas and other instrumental music.

AZIONE SACRA. (I.) A sacred drama.

AZOPARDI, FRANCESCO, chapel-master, published, about the year 1760, a small treatise on composition, which was translated into French.

B.

B is the nominal of the seventh note in the natural diatonic scale of C; to which De Nevers, a French musician in the beginning of the last century, is said to have first applied the syllable *si*; Guido Aretina having only furnished syllables for the six notes, C, D, E, F, G, A. B is the subtonic, or seventh note, thus:—

B is also sometimes used as an abbreviation for *bass*. The Germans call B natural, H; and they call B flat, B, to distinguish it from B natural.

BABBI, C. Chamber musician to the Elector of Saxony, at Dresden, where he published some instrumental music about the year 1780. He was a pupil on the violin of Paul Alberghi.

BABBI, GREGORIO. A celebrated tenor singer at the opera at Lisbon, in 1775.

BABBINI, MATTEO. A celebrated tenor singer of the Bolognese school. He performed at the opera in London, in 1785.

BABELL, WILLIAM. An organist in London. His first essay in composition was to make the favorite airs in the operas of "Pyrrhus and Demetrius," "Hydaspes," and some others, into lessons for the harpsichord. After that he did the same by Handel's opera of "Rinaldo," and succeeded so well in the attempt, as to make from it a book of lessons, which, by the way, few would play but himself, but which has long been deservedly celebrated. He also composed twelve solos for the violin, or hautboy, twelve solos for the German flute and hautboy, and some concertos for small flutes and violins, and some other works enumerated in Walsh's catalogue. Babel died a young man, about the year 1722, having shortened his days by intemperance. It seems the fame of Babel's abilities had reached Hamburg, for Mattheson says he was a pupil of Handel; but in this he is mistaken, for Handel disdained to teach his art to any but princes.

BATICOCCHI published, in 1786, some sonatas in London.

B ABOVE G GAMUT. That B, or that note, which is a third higher than G gamut.
B ABOVE THE BASS CLEF NOTE. That B, or that note, which is a fourth higher than the bass clef note.
B ABOVE THE TREBLE CLEF NOTE. That B, or that note, which is a third higher than the treble clef note.

BACCHIUS, senior, a Greek writer and great musician, lived probably in the second century. He wrote an introduction to music, which was translated into Latin, and published at Amsterdam, in 1652. Fétis says, that of all the Greek writers upon music he was the least pretentiously learned and most practical.

BACCI, PIETRO GIACOMO, was born at

Perugia, a town in the Roman states, towards the middle of the seventeenth century. He composed several operas, the most approved of which was from a sacred subject, and entitled "Abigail."

BACCUSI, HIPPOLITA. An Italian monk, chapel-master at Verona, about 1590. Cerreto assures us that he composed music as early as 1550. He was one of the first who sustained the voices in church music by instruments playing in unison.

BACH, JOHN SEBASTIAN, was born on the 21st of March, 1685, at Eisenach. His father, John Ambrosius, was musician to the court and to the town, and had a twin brother, John Christopher, who was musician to the court and town of Arnstadt, and was so very like him, that even their own wives could not distinguish them, except by their dress. These twins were, perhaps, in this respect the most remarkable ever known. They tenderly loved each other; and their voice, disposition, and style of music were alike. If one was ill, the other was so likewise: they died also within a short time of each other. They were, indeed, a subject of astonishment to all who knew them. In the year 1695, when John Sebastian was not quite ten years of age, his father died; he had lost his mother at an earlier period. Being thus left an orphan, he was obliged to have recourse to an elder brother, John Christopher, who was an organist at Ohrdruff. From him he received the first instructions in playing on the clavichord. But his inclination and talent for music must have been already very great, since the pieces which his brother gave him to learn were so soon in his power that he began with much eagerness to look out for some that were more difficult. The most celebrated composers for the clavichord, in those days, were Froberger, Fischer, John Gaspar Kerl, Pachelbel, Buxtehude, Bruhn, Boehm, &c. He had observed that his brother had a book, in which there were several pieces of the above-mentioned authors, and earnestly begged him to give it to him, but it was constantly denied, till his desire to possess the book was so increased by refusal, that he at length sought for means to get possession of it secretly. As it was kept in a cupboard which had only a little door, and his hands were still small enough to pass through, so that he could roll up the book, which was merely stitched on paper, and draw it out, he did not long hesitate to make use of these favorable circumstances; but for want of a candle he could only copy it in moonlight nights, and it took six whole months before he could finish his laborious task. At length, when he thought himself safely possessed of the treasure, and was intending to make use of it in secret, his brother found it out, and took from him, without pity, the copy which had cost him so much pains; and he did not recover it till his brother's death, which took place soon after. John Sebastian being thus again left destitute, went, in company

with one of his schoolfellows, named Erdmann, afterwards Russian president in Dantzic, to Lüneburg, and engaged there in the choir of St. Michael's school as a treble or soprano singer. His fine treble voice procured him here a decent livelihood; but he soon lost his voice, and did not immediately acquire another good one. His inclination to play on the clavichord and organ was as ardent at this time as in his more early years, and impelled him to try to hear and see every thing, which, according to the ideas then entertained, would contribute to his improvement. With this view, he not only went several times, while he was a scholar, from Lüneburg to Hamburg, to hear the organist John Adam Reinken, who was at that time very famous, but sometimes also to Zell, in order to get acquainted with the prince's band, which consisted chiefly of Frenchmen, and with the French taste, which was then a novelty in those parts. It is not known on what occasion he removed from Lüneburg to Weimar, but it is certain that he became court musician at the latter town in 1703, when he was just eighteen years of age. He exchanged this place, however, in the following year, for that of organist to the new church at Arnstadt, probably to be able to follow his inclination for the organ better than he could do at Weimar, where he was engaged to play the violin. Here he began most zealously to make use of all the works of the organists at that time celebrated, and which he could procure in his situation, by which means he improved both in composition and the art of playing on the organ: further to gratify his desire of learning, he even made a journey on foot to Lubeck, to hear Diederich Buxtehude, organist to St. Mary's Church in that city, with whose compositions he was already acquainted. For almost a quarter of a year he remained a secret hearer of this organist, who was really a man of talent, and much celebrated in his time, and then returned with an increased stock of knowledge to Arnstadt. The effects of his zeal and persevering diligence must already have excited great attention; for he received, in quick succession, several offers of places as organist; among others, that of the church of St. Blasius, at Muhlhausen, which he accepted. But a year after he had entered upon it, making a journey to Weimar, to perform before the reigning duke, his playing on the organ was so highly approved of, that he was offered the situation of court organist, which he accepted. The extended sphere of action in which he here lived impelled him to exert himself to the utmost; and it was probably during this period that he not only made himself so able a performer on the organ, but also laid the foundation of his great compositions for that instrument. He had still further occasion to improve in his art; when his prince, in 1717, appointed him director of the concerts, in which place he had to compose and execute pieces of sacred music. Handel's master, Zachau, organist at Halle, died about this time, and J. S. Bach, whose reputation was already high, was invited to succeed him. He, in fact, went to Halle, to prove his qualifications, by performing a piece as a specimen of his skill. However, for what reason is not known, he did not enter upon the office, but left it to an able scholar of Zachau's, of the name of Kirckhof. John Sebastian Bach was now thirty-two years of age; he

had made such good use of his time, had studied, composed, and played so much, and, by his unremitting zeal and diligence, acquired such a mastery over every part of the art, that he stood like a giant, able to trample all around him into dust. He had long been regarded with admiration and wonder, not only by amateurs, but by judges of the art, when, in the year 1717, Marchand, formerly much celebrated in France as a performer on the clavichord and organ, came to Dresden, where he performed before the king, and gained such approbation, that a large salary was offered him, if he would engage in his majesty's service. Marchand's merit chiefly consisted in a very fine and elegant style of performance; but his ideas were empty and feeble, almost in the manner of Couperin; so far, at least, as may be judged by his compositions. But J. S. Bach had an equally fine and elegant style, and at the same time a copiousness of ideas, which might perhaps have made Marchand's head giddy, if he had heard it. All this was known to Volunier, at that time director of the concerts in Dresden. He knew the absolute command of the young German over his thoughts and his instrument, and wished to produce a contest between him and the French artist, in order to give the prince the pleasure of judging of their respective merits, by comparing them himself. With the king's approbation, therefore, a message was sent to J. S. Bach, at Weimar, to invite him to this musical contest. He accepted the invitation, and immediately set out on his journey. Upon Bach's arrival in Dresden, Volunier first procured him an opportunity secretly to hear Marchand. Bach was not discouraged, but sent a polite note to the French artist, formally inviting him to a musical trial of skill; he offered to play upon the spot whatever Marchand should set before him, but requested the same readiness on his part. As Marchand accepted the challenge, the time and place for the contest was fixed, with the king's consent. A large company of both sexes, and of high rank, assembled in the house of Marshal Count Fleming, which was the place appointed. Bach did not make them wait long for him, but Marchand did not appear. After a long delay, they at last sent to inquire at his lodgings, and the company learned, to their great astonishment, that he had left Dresden in the morning of that day, without taking leave of any body. Bach alone, therefore, had to perform, and excited the admiration of all who heard him; but Volunier's intention, to show a sensible and striking difference between the French and German artist, was frustrated. Bach received on this occasion praise in abundance; but, it is said, he did not receive a present of a hundred louis d'ors, which the king had designed for him. He had not long returned to Weimar, when Prince Leopold, of Anhalt-Cöthen, a great judge and lover of music, invited him to take the office of master to his chapel. He immediately entered on this situation, which he filled nearly six years; but during this time (about 1722) took a journey to Hamburg, in order to perform on the organ there. His performance excited universal admiration. The veteran Reinken, then near a hundred years old, heard him with particular pleasure; and in regard to the chorus, "*An Wasserflüssen Babels,*" which he varied for half an hour in the true organ style, he paid him the compliment of

saying, "I thought that this art was dead, but I see that it still lives in you." Reinken himself had, some years before, composed that chorus in this manner, and had it engraved, as a work on which he set a great value. His praise, therefore, was the more flattering to Bach.

On the death of Kuhnau, in the year 1733, Bach was appointed director of music and chanter to St. Thomas's school, at Leipsic. In this place he remained till his death. Prince Leopold of Anhalt-Cöthen had a great regard for him, and Bach, therefore, left his service with regret. But the death of the prince occurring soon after, he saw that Providence had guided well. Upon this death, which greatly afflicted him, he composed a funeral dirge, with many remarkably fine double choruses, and executed it himself at Cöthen. That in his present situation he received the title of master of the chapel from the Duke of Weissenfels, and in the year 1736, the title of court composer to the King of Poland, Elector of Saxony, is of little consequence; only it is to be observed, that the last title was derived from connections in which Bach was engaged by his office of chanter in St. Thomas's school. His second son, Charles Philip Emmanuel, entered the service of Frederic the Great in 1740. The reputation of the all-surpassing skill of John Sebastian was at this time so extended, that the king often heard it mentioned and praised. This made him curious to hear so great an artist. At first he distantly hinted to the son his wish, that his father would one day come to Potsdam. But by degrees he began to ask him, directly, why his father did not come. The son could not avoid acquainting his father with these expressions of the king; at first, however, he would not pay any attention to them, being in general too much overwhelmed with business. But the king's expressions being repeated in several of his son's letters, he at length, in 1747, prepared to take this journey, accompanied by his eldest son, William Friedemann. At this time the king had every evening a private concert, in which he himself generally performed some concertos on the flute. One evening, just as he was getting his flute ready, and his musicians were assembled, an officer brought him the list of the strangers who had arrived. With his flute in his hand he ran over the list, but immediately turned to the assembled musicians, and said, with a kind of agitation, "Gentlemen, old Bach is come." The flute was now laid aside, and old Bach, who had alighted at his son's lodgings, was immediately summoned to the palace. The king then gave up his concert for that evening, and invited Bach to try his forte-pianos, made by Silbermann, which stood in several rooms of the palace. The musicians went with him from room to room, and Bach was invited every where to play unprepared compositions. After he had gone on for a short time, he asked the king to give him a subject for a fugue, in order to execute it immediately without any preparation. The king admired the learned manner in which his subject was thus executed extempore; and probably to see how far such art could be carried, expressed a wish to hear a fugue with six obligato parts. But, as it is not every subject that is fit for such full harmony, Bach chose one himself, and immediately executed it, to the astonishment of all present, in the same magnificent and learned manner he

had done that of the king. His majesty desired also to hear his performance on the organ. The next day, therefore, Bach was taken to all the organs in Potsdam, as he had before been to Silbermann's forte-pianos. After his return to Leipsic, he composed the subject which he had received from the king, in three and six parts, added several artificial passages to it, in strict canon, and had it engraved under the title of "*Musikalisches Opfer*," (Musical Offering,) and dedicated it to the inventor. This was Bach's last journey. The indefatigable diligence with which, particularly in his younger years, he had frequently passed days and nights in the study of his art, had weakened his sight. This weakness continued to increase in his latter years, till at length it brought on a very painful disorder in the eyes. By the advice of some friends, who placed great confidence in the ability of an oculist who had arrived at Leipsic from England, he ventured to submit to an operation, which twice failed. Not only was his sight now wholly lost, but his constitution, which had been hitherto so vigorous, was quite undermined by the use of, perhaps, noxious medicines. In consequence of the operation he continued to decline for full half a year, till he expired, on the evening of the 30th of July, 1750, in the sixty-sixth year of his age. On the morning of the tenth day before his death, he was suddenly able to see again, and bear the light. But a few hours afterwards he was seized with an apoplectic fit; this was followed by an inflammatory fever, which his enfeebled frame, notwithstanding all possible medical aid, was unable to resist. Such was the life of this remarkable man. We will only add, that he was twice married; and that he had by his first wife seven, and by the second wife thirteen children, namely, eight sons and five daughters. All the sons had admirable talents for music; but they were not fully cultivated, except in some of the elder ones.

Concerning the performance and compositions of Bach, it certainly is true what Marpurgh says, that "he was many musicians in one." "No true idea," says Kollmann, "can be formed of S. Bach's organ playing, except by hearing his works, expressly composed for the organ, performed in the manner in which he played them, viz., those for the *full organ*, on a good, large instrument, and the pedal part on a double bass stop; those for *solo stops*, on as many sets of keys, with different stops, as they contain parts, and the bass part on a suitable double bass stop. And it must be observed, that, though many of Bach's pieces composed for the harpsichord also have a fine effect on a manual organ, particularly most of his forty-eight fugues in the *Well-tempered Clavierchord*, the list of his works will show that they do not come under the denomination of his organ pieces; because they are deficient in his principal requisite for such pieces, namely, a part for obligato pedals; and consequently their effect cannot give an idea of his organ playing, unless an obligato part for the pedals be still selected from their bass part, and performed on a double bass stop." Concerning Bach's abilities as a performer on the harpsichord, Kollmann thus proceeds: "It might perhaps be supposed that one so familiar with the deep and heavy touches of a large organ, and with a true organ style, could not be equally great in the brilliancy, expression, and style calculated for stringed instruments

But the nature of all his compositions for the *Clavier*, (harpichord and clavichord,) as well as the unanimous testimony of all the writers on that subject, convinces us of the contrary; which is also proved by his uncontested victory over the elegant harpichord player Marchand, mentioned before. That he must likewise have been a great performer on the violin, follows, not only from his first appointment, which was as violinist, but also, and particularly, from his *solos* for the violin. Again, his *solos* for the violoncello prove that he also had the greatest practical knowledge on that instrument." The following list of S. Bach's works is given by Kollmann: "1. '*Clavierübung*,' part first, consisting of preludes, allemandes, courantes, sarabands, gigue, minuets, &c. In the Leipzig edition, this work is entitled '*Exercices pour le Clavecin*.' 2. '*Clavierübung*,' part second, (*Exercices pour le Clavecin*;) containing a concerto in the Italian style, and an overture in the French style, for a harpichord with two sets of keys. 3. '*Clavierübung*,' part third, (*Exercices*, &c.,) containing *Vorspiele*, or the giving out of hymns for the organ; and four duets (pieces in two obligato parts only) for the harpichord, which are a complete harmony throughout. 4. '*Six Chorale*,' (hymns,) of divers kinds, for an organ with two sets of keys and pedals. 5. '*Clavierübung*,' part fourth, (*Exercices*, &c.,) containing an air with thirty variations, for a harpichord with two sets of keys, as mentioned before. 6. '*Five Canonical Variations on the Christmas Hymn, Von Himmel hoch*,' ("Behold, I bring you good tidings,") for an organ with two sets of keys and pedals. They are in divers intervals similar to those of the preceding work. 7. '*Musical Offering*,' (as mentioned before,) dedicated to Frederic II., King of Prussia, consisting in a *fugue ricercata* in three parts, also one in six parts, for one performer, divers canons, and a trio for the German flute, (that king's favorite instrument,) with a violin and bass; the whole composed on the subject which his majesty laid before Bach to extemporize upon. 8. '*The Art of the Fugue*,' consisting in twenty-three periodical and canonical fugues, on one subject, the last with two additional subjects, and a hymn for three sets of keys and pedals. 9. '*An Hundred Hymns*,' in four parts, published in two books, by his son Emmanuel Bach; and four more books of hymns, published by Kirnberger. The following have been more recently printed: A. *Works for the Harpichord, without Accompaniments*. 1. Six Preludes, for the use of beginners; 2. Fifteen Inventions, in two parts; 3. Fifteen Inventions, in three parts, also called Symphonies; 4. The "Well-tempered Clavichord," parts one and two — each part consists in twenty-four preludes and fugues, being one in every major and minor key; 5. A Chromatic Fantasia and Fugue — this is the beautiful piece printed, with some additions of Mr. Kollmann, by Preston; 6. A Fantasia — this is like an allegro of a sonata; 7. Six Suites, containing prelude, allemande, courante, sarabanda, gigue, &c., also called English suites; 8. Six lesser Suites, containing allemande, courante, &c., also called French suites. B. *Works for the Harpichord, with Accompaniments*. 1. Six Sonatas for the harpichord, with a violin obligato; 2. Many single Sonatas for the harpichord, with accompaniments for the violin, flute, viola da gamba, &c.; 3. Concertos for the

harpichord, with numerous accompaniments; 4. Two Concertos for two harpichords, with accompaniments for violins, tenor, and violoncello; 5. Two Concertos for three harpichords, with the same accompaniments, which are also concerting among themselves; 6. A Concerto for four harpichords, with the above accompaniments. C. *Works for the Organ*. 1. Grand Preludes and Fugues, for manuals and obligato pedals; 2. *Vorspiele* (Preludes) on various hymns; 3. Six Sonatas or Trios, for two manuals and obligato pedals. D. *Works for Two Instruments*. 1. Six Solos for a violin, without any accompaniments — these are a most unique work; 2. Six Solos for a violoncello, without any accompaniment — these are similar to the preceding ones. E. *Vocal Works*. 1. Five complete annual choruses of church pieces, (like cantatas,) with recitatives, airs, and choruses, for every Sunday and other festival; 2. Five Passions, among which there is one for two choirs; 3. Many Oratorios, Masses, Magnificats, and single Sanctuses, also Pieces for Birthdays, Namedays, and Funeral Pieces; Wedding Masses, Evening Pieces, and several Italian Cantatas; 4. Many Motets, for one and two choirs. — N. B. Of those for two choirs there are at present only eight extant."

BACH, CARL, PHILIPP EMMANUEL, second son of the great Sebastian Bach, and born in 1714, was commonly named Bach of Berlin. He was chapel-master to the Princess Amelia of Prussia. His father was his only master in music; but it appears that he acquired from Hasse's operas his fine vocal taste in composing lessons, so different from the dry and laborious style of his father. He modestly gave as a reason for choosing a style of his own, or at least for differing from that of his instructor, that he was aware, if he had followed his father's method, he never could have equalled him. In the year 1767, he was chosen director of music at Hamburg, in which town he resided many years, and died there in 1783. Emmanuel Bach declares that, of all his works, those for the clavichord or pianoforte are the chief in which he indulged his own feelings and ideas. His principal wish was to play and compose in the most vocal manner possible, notwithstanding the great defect of all keyed instruments, except the organ, in not sustaining their tone. To make a harpichord or pianoforte sing is, indeed, not easily accomplished, as the ear must be tired by too thin a harmony, or stunned by too full and noisy an accompaniment. In his opinion, music ought to touch the heart; and he never found that this could be effected by running, rattling drumming, or arpeggios. If Haydn ever looked up to any great master as a model, it seems to have been Emmanuel Bach. The bold modulations, rests, pauses, free use of semitones, and unexpected flights of Haydn, remind us frequently of Emmanuel Bach's early works, more than of any other composer. But in writing for violins, it must be confessed that Haydn surpassed his model in facility and invention. Emmanuel Bach's compositions consist of symphonies, concertos, sonatas, and much church music. In the whole, there are more than fifty different published works of his composition, some of which were printed after his decease.

BACH, JOHN CHRISTIAN, called Bach of

Milon, and afterwards Bach of London, was a son of Sebastian by his second wife. He was very early in life deprived of the instructions of his father, and was for some time a scholar of his elder brother, Emmanuel, under whom he became a fine performer on keyed instruments. He subsequently went to Italy, where his chief study was the composition of vocal music; here he added new lustre to his name and family, by his several dramatic compositions, and was appointed, by the empress queen, organist of the Duomo of Milan. In 1763 he was engaged by Mattei to compose for the opera in London, and he soon afterwards arrived in that country. His first opera in England, "Orione," was extremely applauded for the richness of its harmony, the ingenious texture of its parts, and, above all, for the new and happy use the composer had made of wind instruments; this being the first time clarines had admission in the opera orchestra. Soon after this, J. C. Bach and Abel, uniting, opened a subscription for a weekly concert; and as their own compositions were new and excellent, and the best performers of all kinds enlisted under their banners, this concert was better patronized and longer supported than perhaps any one that had ever been established in that country, having continued for at least twenty years in uninterrupted prosperity. While C. Bach was in Italy he made little use of his piano-forte, but to compose for or accompany a voice; but when he arrived in England, his style of playing was so much admired, that he recovered many of the losses his hand had sustained by disease, and by being constantly cramped and crippled by a pen; but he never was able to re-instate it in force and readiness sufficient for great difficulties; and, in general, his compositions for the piano-forte are such as ladies can execute with little trouble, and the allegros rather resemble *brevura* songs than instrumental pieces for the display of great execution; on which account they lose much of their effect when played without the accompaniments, which are admirable, and so masterly and interesting to the audience, that want of execution or complication in the harpsichord part is never discovered. There are many admirable airs in the operas he composed for the stage that long remained in favor. The richness of the accompaniments, perhaps, deserve more praise than the originality of the melodies; which, however, are always natural, elegant, and in the best taste of the Italian school, at that time. The Neapolitan school, where he studied, is manifest in his "*Cantilena*," and the science of his father and brother, in his harmony. J. C. Bach had the merit of giving a more dramatic effect to his opera airs by not bringing back after the allegro the slow movement of the commencement, as all the Italian composers before him had done. Bach seems to have been the first composer who observed the law of contrast as a principle. Before his time there frequently was contrast in the works of others, but it seems to have been accidental. Bach, in his symphonies and other instrumental pieces, as well as his songs, seldom failed, after a rapid and noisy passage, to introduce one that was slow and soothing. His symphonies seemed infinitely more original than either his songs or harpsichord pieces, of which the harmony, mixture of wind instruments and

general richness and variety of accompaniment, are certainly the most prominent features. J. C. Bach remained in London almost constantly till his death, which took place in the year 1782.

BACH, JOHANN CHRISTOPH FRIEDRICH, ninth of the eleven sons of Sebastian Bach, was born at Weimar in 1732. He was a pupil in music of his father and elder brothers; and he published some instrumental works not unworthy the name of Bach. He held the situation of master of the concerts at the court of Buckeburg. J. C. F. Bach imitated Emmanuel Bach's manner, but did not equal him. According to the testimony of W. Friedemann, he was, however, the ablest performer of all the brothers, and the one who played most readily his father's compositions for the clavierchord.

BACH, WILHELM FRIEDEMANN, eldest son of Sebastian Bach, was born in 1710. He approached the nearest to his father in the originality of his musical conceptions. All his melodies have a different turn from those of other composers, and yet they are not only extremely natural, but, at the same time, uncommonly ingenious and elegant. When performed with delicacy, as he himself used to play them, they cannot fail to enchant every connoisseur. It is only to be regretted that he tried more to play from his fancy, and to seek after extemporaneous musical delicacies, than to write; the number, therefore, of his compositions is but small. W. F. Bach died at Berlin in 1784.

BACH, CECILIA. Wife to John Christian Bach. Her maiden name was Grassi. She performed the first woman's part for several successive years at the opera in London.

BACH, FRIEDRICH LUDWIG, a music master at Berlin, was living in 1790, and had made many good scholars.

BACH, GEORGE CHRISTOPHER. A singer and composer, who lived, in the year 1689, at Schweinfurt. Among the music of Emmanuel Bach was found some church music by this composer.

BACH, JOHANN BERNHARD, nephew of Sebastian Bach, was organist at Ordruff, where he died in 1742. One of this name was chamber musician and organist at Eisenach. He composed some very fine overtures in the French style.

BACH, JOHANN CHRISTOPH, was probably one of the greatest contrapuntists and most expert organists in Germany towards the close of the seventeenth century. He was court and town organist at Eisenach. In the archives (as they were called) of the Bach family, which Emmanuel Bach possessed in Hamburg, there was, among other pieces, a motet of Johann Christoph's composition, in which he had ventured to make use of the extreme sixth, which, in his days, was considered an extremely bold attempt. He was also an uncommon master of full harmony, as is proved by a piece of church music, composed by him for Michaelmas day, to the words "*Es erhub sich ein Streit*," which has twenty obligato parts, and yet is perfectly pure in respect to the harmony. A second proof of his great skill in the harmony is, that he is stated never to have played on the

organ and clavier with less than five necessary or obligato parts.

BACH, JOHANN ERNST, chapel-master to the Duke of Weimar, at Eisenach, was born there in 1722. He published a collection of tables set to music, and several instrumental works. He died in 1781.

BACH, JOHANN LUDWIG, born in 1677, was chapel-master to the Duke of Saxe-Meiuingen, and died in 1730. He composed some good church music.

BACH, JOHANN MICHAEL, brother of Johann Christoph, was born at Arnstadt in 1660. He composed much sacred music.

BACH, JOHANN MICHAEL, (the younger,) was an advocate in the Duchy of Mecklenburg, in 1792. He published at Cassel, in 1780, a method for composition.

BACH, OSWALD. Author of rules for singing, in 1790.

BACH, WILHELM, son of J. C. F. Bach, born in 1754, was chapel-master to the Queen of Prussia in 1798. He published a celebrated cantata, dedicated to the king, and some instrumental works.

BACHAUMONT, LOUIS PIERRE DE. Author of memoirs on the opera, Paris, 1745.

BACHELOR OF MUSIC. A degree conferred at the universities of Europe, as a title of honor. It is given, as the first degree in music, to such musicians as have at some time composed a piece of music, consisting of as many as six parts, for voices and instruments. One of the qualifications formerly required of a candidate for this academic honor, was, the being able to read and expound certain books in Boethius, a Greek musical author of the sixth century. But this test has long since been dispensed with, and the composition in six parts has taken its place. The exercise must be publicly performed in the music school, or some other place in the university, however, to give claim to the degree.

BACHMANN, CARL LUDWIG, was chamber musician to the King of Prussia, and one of the founders of the amateur concerts at Berlin. He had also a manufactory of violins and tenors; the latter are much esteemed. Bachmann died in the year 1800.

BACHMANN, CHARLOTTE CHRISTINE WILHELMINE. Wife of the preceding, a celebrated singer at Berlin since the year 1779. She has also published several songs.

BACHMANN, GOTTLÖB. Organist at Zeitz in the year 1791. He published much vocal and instrumental music between the years 1793 and 1805.

BACHMANN, J., composer of sonatas, &c., published at Vienna in 1796.

BACHMANN, PATER SIXT, an excellent contrapuntist and organist in Sualia, was born in 1751. He published much music for the organ, &c.

BACKOFEN, a composer, lived at Zurich, in Switzerland, in the year 1745, and published some vocal works.

BACHSCHMIDT. Chapel-master at Eich-

stadt, about the year 1783. He composed some quartets, &c.

BACILLY, B. DE. Author of a work on singing, Paris, 1668.

BACKOFEN, J. G. II., a composer and excellent performer on various instruments, was chamber musician at Gotha. He has composed much instrumental music; the last which we have seen is dated 1803.

BACKOFEN, ERNST. Younger brother of the preceding, a celebrated bassoon player at Nuremberg in 1803. He was a pupil of Schwarz.

BACKOFEN, GOTTFRIED, youngest brother of the two preceding, was first clarinet player at Nuremberg in 1803, and a resident in that town.

BADER. Born 1791, a principal tenor singer at the German Theatre in Berlin. His power, firmness, and tone, together with his delightful performance, gained him much approbation.

BADIA, CARLO AGOSTINO, court musician and composer at Vienna at the beginning of the eighteenth century. Composed several operas and oratorios.

BADINAGE. (F.) Playfulness.

BADONINI. A celebrated Italian singer about the year 1776.

BAEHR, JOSEPH. See **BEER**.

BAER, FERDINAND. See **PAER**.

BAEUMEL, director of the music at Bamberg, died in 1796. He was an excellent performer on the violin.

BAEUMER, FRIEDRICH, chamber musician to the Queen of Prussia in 1794, has published some romances, &c.

BAGATELLA, ANTONIO, wrote at Padua, in 1796, a valuable work on the construction of violins, tenors, violoncellos, and bass viols.

BAGATTI FRANCESCO. A celebrated composer and organist at Milan. He wrote some church music about the year 1650.

BAGGE, BARON C. ERNEST DE, gentleman of the chamber to the King of Prussia, died at Paris in 1791. He was a celebrated amateur player on the violin, but had a most singular method. He published also a concerto for that instrument.

BAGLIONI, FRANCOIS, born at Rome, was an excellent singer since the year 1740. He has five daughters, all of whom distinguished themselves as singers.

BAGLIONI, LOUIS. Son of the preceding and one of the best violinists at Wurtemberg, since the year 1770.

BAGPIPE. This instrument has so long been the favorite with the natives of Scotland, that it may be considered as their national instrument. It is probable that the Norwegians and Danes first introduced it into the Hebrides, which islands they long possessed. Among the many who have the honor of its invention, are reckoned Pan, Mercury, Faunus, Marsyas, and Daphnis the young Sicilian shepherd. The ancient bagpipes of the Greeks, and the *tibia utricularis* of the Romans, is a well-known musical instrument

which has erroneously been supposed peculiar to Scotland and Ireland. The ancients, both Greeks and Romans, however, were acquainted with it; and in many countries it is a favorite and popular instrument at this day. The bagpipe, as constructed at the present period, consists of a large leather bag, inflated by the mouth, or by means of bellows. Connected to it is a flute part, or chanter, as it is called, into which is inserted a reed, and the action of the air from the bag on this reed produces the music. The chanter is perforated with holes like a common flute, for the different notes. The other parts are three drones, also consisting of reeds and tubes, two of which are in unison with D, on the chanter, or the first note of the German flute, and the third, or long drone, is an octave lower. The bagpipe is an extremely defective and imperfect instrument in all its different kinds, of which there are four. First, the Irish, or soft pipe, in which the chanter takes a range of ten or twelve notes with tolerable precision, and which is always played with bellows; the reeds are softer, and the tubes longer; whence the Irish pipe is more suitable for performance in an apartment. An improvement has been attempted, by adapting three or four keys, like flute keys, on one of the drones; by pressing one of them with the arm, a third or fifth to the note of the chanter is produced, which forms an intermediate chord with the drone, and has a pleasing effect. The second kind of this instrument is the Scottish or Highland bagpipe, which is played either with the mouth or with bellows, like the Irish pipe; and, excepting that, as far as we know, keys have never been adapted to it, is almost the same in every respect. The principal difference consists in the reeds being constructed to produce a louder sound, and the drones are shorter. Third, the small or Northumbrian bagpipe, which is the Scottish bagpipe in miniature. Properly speaking, the Scottish bagpipe has but eight or nine good notes; one or two more may be gained by what pipers call *pinching*; that is, half covering the thumb hole, which sometimes is attended with the most disagreeable tones. Nothing is so well adapted for the bagpipe as tunes consisting of few notes, and all set on the same key; for its compass is really very limited, and by no means of that extent of which most performers endeavor to persuade themselves. From the limited compass of the instrument, and its imperfections, we find but little music written for it; to which may be added another reason—that those in general who can play cannot write. The favorite and peculiar music is the Highland pibroch, which we confess has always appeared to us utterly unintelligible. It is supposed to be a battle piece, a march, a lamentation, or the like; and sometimes occupies a complete half hour or more in performance. Of the progressive history and improvement of the bagpipe to its present state, we know but very little. It is supposed that there are allusions to an instrument of similar construction in sacred writ; and there is no doubt that it is the origin of the organ. Perhaps it first consisted of an inflated bag alone, with the pipe and reed; and in such a form it seems to have been used by the Greeks, and also at a later period by less civilized nations. By the Romans it was called *tibia utricularia*, and as certain authors have conceived, *chorus*, or *chorantus*, and it was probably played in the same way as

the modern Highlanders play it. Suetonius speaks of the bagpipe; and it appears that Nero, the Roman emperor, played on it. On one of his coins a bagpipe appears, and we are told of a piece of sculpture, not long ago, in Rome, of this instrument, greatly resembling its present form. The sculpture was supposed to be Grecian. St. Jerome, in his epistle to Dardanus, alludes to the bagpipe in its more simple shape. In France it appears likewise in its simple state, in the *Danse des Aveugles*, in the fifteenth century; and it is among the instruments represented in the dance of death, at Basle, in Switzerland. The bagpipe is said to be of great antiquity in Ireland, and to have been early known in Britain. In the twelfth or thirteenth century, we see it represented without drones, or with only one, having a flag, bearing a coat armorial, such as was recently used in the Highlands of Scotland. King Edward III. had pipers; and Chaucer, speaking of the minstrels, a vagrant tribe, describes the bagpipe under the name of *cornmuse*, which is the appellation at present given to it in France:—

“*Cornmuse and shalnes, many a floyle and lyllynge borne.*”

Among the musicians of Queen Elizabeth's household are named pipers. With regard to the introduction of the bagpipe into Scotland, we are altogether uncertain. Eminent authors have affirmed that it was not known at the battle of Bannockburn, in 1314. But a bagpipe of one drone appears among the sculptures on Melrose Abbey, which, we are told, is a very old edifice. James I. of Scotland, who was murdered in 1436, is said to have been a performer on this instrument. We only know of its being in general use during the last or perhaps the preceding century. At present it enters on the list of military instruments, for every Highland regiment has a piper; and as a national instrument, we have heard of institutions for teaching it in the Isles of Mull and Skye. Neither pupil nor preceptor, however, being able to read, musical notes were represented by pins driven into the ground. To encourage the cultivation of this instrument, annual premiums were distributed by the Highland Society to the most eminent performers. A competition, generally in the end of July, takes place before a committee of that society, at Edinburgh, who decide on the merits of the candidates. The competition lasts several hours; and Highland dances, introduced by way of interlude, are performed with uncommon skill and agility. We doubt if this kind of music can be brought to great perfection, on account of the defects inseparable from the instrument. But the passionate attachment which the Highlanders display for it, and the use of which it has actually been in gaining victories, in the day of battle, render it a fit subject for encouragement.

BALHDT, a celebrated performer on the lant-
boy at Copenhagen.

BALIN, T. G., published at Berlin, in 1790,
six trios for the harpsichord and two violins.

BAIF, JOHN ANTONY DE, private secretary
of Charles IX., died at Paris in 1591. He published several musical works.

BAILDON, a celebrated English glee com-
poser, flourished between the years 1700 and
1780. He is the author of the two glees ‘*Adieu*

to the village delights," and "When gay Bacchus filled my breast;" both of which, in their different styles, must ever delight the amateur of our English part songs.

BAILEY, ANSELM, an English composer, published "A Treatise on Singing and Playing with just Expression and real Elegance," London, 1771.

BAILLEUX, ANTOINE, published at Paris, in 1758, six symphonies for four performers; and about 1767, six symphonies for a full orchestra. He also wrote some *solfeggi* for vocal and instrumental music, a third edition of which appeared in 1792.

BAILLON, P. L. Guitar and singing master, and author of a method for that instrument, published at Paris in 1781.

BAILLOT, PIERRE, a celebrated French violinist, was born near Paris, in the year 1771. He went to Rome for some years, and took lessons of Polani, an excellent professor of the school of Tartini. About the year 1795, he succeeded Rode as professor of the violin to the Conservatory of Paris; since which time he has edited an excellent method for the violin, and one for the violoncello, both of which are now in use at the Conservatory; he has also published some instrumental music. This eminent artist expired at Paris, on the 16th of October, 1842, in the 71st year of his age. His funeral, which took place on the following Saturday, in the cemetery of Montmartre, was attended by all the most eminent musicians in Paris, anxious to mingle their regrets over the grave of a highly-talented brother. Baillet is known throughout Europe by his extraordinary genius and finished style as a performer, and as being master of nearly all the most celebrated violinists of the last quarter of a century.

BAILLOU, LUIGI. Director of the music at the opera in Milan, in 1784. He has published several pieces for the theatre.

BAILLY, M. DE, published "Curious Remarks on the Art of Singing," Paris, 1668.

BAINI, LORENZO, an Italian composer, born at Venice, composed some opera music between the years 1785 and 1790.

BAINVILLE, organist at Angers, published some music for his instrument in the year 1767.

BAJ, T., author of the "*Miserere*," commonly sung on Holy Thursday in the pontifical chapel at Roue, was born near Bologna, and died at Rome in 1718. His "*Miserere*" is a *chef-d'œuvre* for its prosody and just accentuation of the words. It is the only modern production received in the pope's chapel.

BAKER, DR., a composer and eminent performer on the violin and piano-forte, was born at Exeter in the year 1768. From his mother's sister he received his first instructions, by which he was enabled, at the juvenile age of seven, to perform with precision, on the harpsichord, Handel's and Scarlatti's lessons. His first masters were Hugh Bond and the late celebrated Jackson, (at that time organist of the cathedral at Exeter,) and for the violin, Ward; which combined instructions enabled him very soon to lead the concerts in that neighborhood.

About the age of seventeen he left Exeter for London, from whence he was received in the family of the Earl of Uxbridge, to whom he is indebted for the principal part of his musical education. He was under Cramer (the father) for the violin, and Dussek for the piano-forte. It was through this nobleman's interest, exerted in his favor, that he was permitted to perform the "Storm," in Hanover Square rooms, which, by the late Dr. Burney, was considered an inimitable imitation. During his residence as organist at Stamford, he took his degree at Oxford. The principal of Dr. Baker's works are the following, besides numerous manuscript compositions. "Three Sonatas, dedicated to Lady Wright, for the piano-forte and violin." "Three, dedicated to Countess Talbot." "Three Duets for two performers, dedicated to the Duchess of Rutland." "Six Anthems, for four, five, and six voices." "Voluntaries for the Organ." "Glees, for three and four voices, dedicated to the Earl of Uxbridge." "The Storm at Sea, and the whole of the music performed at his concert at the Hanover Square rooms." "Duets for two voices, dedicated to Miss Abrams." "The Overture and Songs of the Caffres, a musical Entertainment performed at Covent Garden Theatre." To the above may be added a great number of songs, (several sung in public by Incedon, &c.,) duets, concertos, solos for the violin, and airs with variations for the piano-forte.

BALARINI. One of the most eminent Italian singers of the seventeenth century.

BALBATRE, CLAUDE, born at Dijon in 1729, went to Paris in 1750. He was an excellent organist of Rameau's school. His organ concertos at the *concert spirituel* were long the delight of Paris. He published some works for the harpsichord, and died in 1799.

BALBI, LORENZO. A violoncellist and composer at the beginning of the eighteenth century.

BALBI, IGNATIUS. An Italian singer. He composed some ariettes in Germany, about the year 1782.

BALBI, LUDOVICO, a celebrated composer at Venice, was a scholar of Costanzo Porta; he published some church music about the year 1578.

BALDACINI, ANTONIO LUIGI, an Italian violinist, published some sonatas about the year 1720.

BALDAN published six symphonies at Venice in 1785.

BALDENEKER, U., court musician and violinist at Mentz, published some trios for the violin at Frankfort, about the year 1784.

BALDI. Singer at Handel's operas in London in 1726.

BALDUCCI. A first female singer at the opera at Venice in 1778.

BALESTRA, R. An Italian composer at the beginning of the seventeenth century.

BALETTI, RICCOB. ELENA, was born at Stuttgart in 1768. She was afterwards first singer at the Opera Buffa at Paris.

BALLABENE, GREGORIO, a vocal com

poser at Rome, was born about 1720. He composed much sacred music.

BALLAD. Formerly a little history, told in lyric verses, and sung to the harp or viol, either by the author himself, or the *jongleur*, whose profession it was to follow the bard, and sing his works. It is about a century since the word *ballad* began to imply a brief, simple tale, conveyed in three or four verses, and set to a short, familiar air. Perhaps no kind of music has so much influence with the multitude as ballad or song singing. Andrew Fletcher once said, "Give me the making of the songs of a nation, and I care not who makes the laws." Foreign travellers have complained of the American people, that they rarely have leisure, and that when they have, they know not how to enjoy it. There is some truth in the remark. We are eminently a working people. Part of this industry results, no doubt, from our condition, and from the powerful incitements to enterprise afforded by a young and prosperous country. Part of it, however, seems to result from impatience of rest. Not a few of the rash adventures and ruinous speculations, by which we have distinguished ourselves in years past, had their origin in a love of excitement, and in our aversion to being without employment. A partial remedy for this evil might be found by diffusing a taste for the elegant and ornamental arts. These arts would furnish that moderate and agreeable excitement which is so desirable in the intervals of labor. Since the days of Martin Luther, music has contributed to the refinement of taste and the strengthening of moral feeling. The greatest composers of Germany have consecrated their genius to the service of religion. Haydn, whose memory is so honored, was deeply religious; his oratorio of the "Creation" was produced, as he himself tells us, at a time when he was much in prayer. In writing musical scores, he was accustomed to place, both at the beginning and close of each one, a Latin motto, expressive of his profound feeling that he was dependent on God in all his efforts, and that to his glory should be consecrated every offspring of his genius. The art of music has special claims upon the American people. All men have been endowed with susceptibility to its influence. The child is no sooner born, than the nurse begins to soothe it to repose by music. Through life, music is employed to animate the depressed, to inspire the timid with courage, to lend new wings to devotion, and to give utterance to joy or sorrow. It is preëminently the language of the heart. The understanding gains knowledge through the eye. The heart is excited to emotion through tones falling on the ear. And so universal is the disposition to resort to music, for the purpose of either expressing or awakening emotion, that the great dramatist, that master in the science of the heart, declares that—

"The man that hath no music in himself,
Nor is not moved with concord of sweet sounds,
Is fit for treason, stratagems, and spoils;
The motions of his spirit are dull as night,
And his affections dark as Erebus:
Let no such man be trusted."

Well may this be said of an art which has power to raise the coarsest veteran to noble sentiments of deeds, and to inspire the rawest and most timorous recruit with a contempt of death.

It is worthy of remark, that as the susceptibility to no other art is so universal, so none seems to have so strong an affinity for virtue, and for the purer and gentler affections. It is certain that from the fabled days of Orpheus and Apollo, music has always been regarded as the handmaid of civilization and moral refinement. Wherever we would awake the better affections, whether in the sanctuary or the closet, in the school for infants or in the house of refuge for juvenile delinquents, we employ its aid. The Germans have a proverb which has come down from Luther, that where music is not, the devil enters. As David took his harp, when he would cause the devil to depart from Saul, so the Germans employ it to expel obduracy from the hearts of the depraved. In their schools for the reformation of youthful offenders, (and the same remark might be applied to those of our own country,) music has been found one of the most effectual means of inducing docility among the stubborn and vicious. "At Berlin," says Professor Stowe, "there is an establishment for the reformation of youthful offenders. Here boys are placed, who have committed offences that bring them under the supervision of the police, to be instructed and rescued from vice, instead of being hardened in iniquity by living in the common prison with old offenders. It is under the care of Dr. Kopf, a most simple-hearted, excellent old gentleman; just such a one as reminded us of the ancient Christians, who lived in the times of the persecution, simplicity, and purity of the Christian church. He has been very successful in reclaiming the young offender; and many a one, who would otherwise have been forever lost, has, by the influence of this institution, been saved to himself, to his country, and to God. As I was passing with Dr. K. from room to room, I heard some beautiful voices singing in an adjoining apartment; and on entering, I found about twenty of the boys sitting at a long table, mending clothes for the establishment, and singing at their work. The doctor enjoyed my surprise, and on going out, remarked, 'I always keep these little rogues singing at their work; for while the children sing, the devil cannot come among them at all; he can only sit out doors there and growl; but if they stop singing, in the devil comes.' The Bible, and the singing of religious hymns, are amongst the most efficient instruments which he employs for softening the hardened heart, and bringing the vicious and stubborn will to docility." It would seem that so long as any remains of humanity linger in the heart, it retains its susceptibility to music. And as a proof that this music is more powerful for good than for evil, is it not worthy of profound consideration that, in all the intimations which the Bible gives us of a future world, music is associated only with the employments and happiness of heaven? We read of no strains of music coming up from the regions of the lost. To associate its melodies and harmonies with the wailings and convulsions of reprobate spirits would be doing violence, as all feel, to our conceptions of its true character. We think that the great Milton offered violence both to nature and revelation in the picture which he draws towards the close of the first book of his "Paradise Lost," where he represents the legions of Satan as moving "in perfect phalanx to the Dorian

mood of flutes and soft recorders," "soft pipes that charmed their painful steps," &c. Music can have connection only with our better nature. Abused it doubtless may be; for which of God's gifts is not abused? but its value, when properly employed as a means of culture, as a source of refined pleasure, and as the proper aid and ally of our efforts and aspirations after good, is clear and unquestionable. "In music," says Hooker, "the very image of vice and virtue is perceived. It is a thing that delighteth all ages, and becometh all states—a thing as seasonable in grief as joy, as decent being added to actions of greatest solemnity as being used when men sequester themselves from actions." Bishop Beveridge says, "That which I have found the best recreation both to my mind and body, whensoever either of them stands in need of it, is music, which exercises both my body and soul, especially when I play myself; for then, methinks, the same motion that my hand makes upon the instrument, the instrument makes upon my heart. It calls in my spirits, composes my thoughts, delights my ear, recreates my mind, and so not only fits me for after business, but fills my heart at the present with pure and useful thoughts; so that, when the music sounds the sweetest in my ears, truth commonly flows the clearest in my mind. And hence it is that I find my soul is become more harmonious by being accustomed so much to harmony, and adverse to all manner of discord, that the least jarring sounds, either in notes or words, seem very harsh and unpleasant to me." All men are more or less susceptible to the influence of music. It is also true that all can acquire the rudiments of the art. It has long been supposed that, in order to learn to sing, a child must be endowed with what is called a musical ear. That this, however, is an error, is evident from experiments which have been made on the most extensive scale in Germany, and which are now repeating in this country. In Germany, almost every child at school is instructed in singing, as well as in reading. The result is, that though in this respect, as in many others, there is a great difference in the natural aptitude of children, still all who can learn to read can also learn to sing. It is found, further, that this knowledge can be acquired without interfering with the other branches of study, and with evident benefit both to the disposition of the scholar and discipline of the school. A gentleman, who in this country has had more than four thousand pupils in music, affirms that his experience gives the same result. The number of schools among us, in which music is made one of the regular branches of elementary instruction, is already great, and is constantly increasing; and we have heard of no case in which, with proper training, every child has not been found capable of learning. Indeed, the fact, that among the ancients, and in the schools of the middle ages, music was regarded as indispensable in a full course of education, might of itself teach us that the prejudice in question is founded in error. Another consideration which gives music special claims on our regard, as a branch of culture, is, that the best specimens of the art are within our reach. It is rare that the pupil can ever look, in this country, on the original works of a master, in painting or sculpture. We have engravings,

casts, and other copies, but they can give us only faint conceptions of the artist's design, and of his execution hardly an idea. In written music, we have a transcript of the conceptions of the composer, almost as complete as in written poetry, or eloquence, and as easy of access. In all these arts, however, much may be done to call forth and improve the taste of our people. By multiplying exhibitions of art; by extending patronage to native talent for painting and sculpture which abounds among us; by promoting efforts for the diffusion of a correct taste in music; and a love for that art, so essential in our devotions, and so useful every where; and finally and especially, by introducing elementary instruction in music into our common schools,—we can do much towards securing a general love for the art. There are said to be, at this time, not far from eighty thousand common schools in this country, in which is to be found the power which, in coming years, will mould the character of this democracy. If vocal music were generally adopted as a branch of instruction in these schools, it might be reasonably expected, that in at least two generations we should be changed into a musical people. The great point to be considered, in reference to the introduction of vocal music into popular elementary instruction, is, that thereby you set in motion a mighty power, which silently, but surely in the end, will humanize, refine, and elevate a whole community. "We have listened," says a recent traveller in Switzerland, "to the peasant children's songs, as they went out to their morning occupations, and seen their hearts enkindled to the highest tones of music and poetry by the setting sun or the familiar objects of nature, each of which was made to echo some truth, or point to some duty, by an appropriate song. We have heard them sing the 'harvest hymn,' as they went forth, before daylight, to gather in the grain. We have seen them assemble in groups at night, chanting a hymn of praise for the glories of the heavens, or joining in some patriotic chorus, or some social melody, instead of the frivolous and corrupting conversation which so often renders such meetings the source of evil. In addition to this, we visited communities where the youth had been trained from childhood to exercises in vocal music, of such a character as to elevate instead of debasing the mind, and have found that it served in the same manner to cheer the social assemblies, in place of the voice of folly or the poisoned cup of intoxication. We have seen the young men of such a community assembled to the number of several hundreds, from a circuit of twenty miles; and, instead of spending a day of festivity in rioting and drunkenness, pass the whole time, with the exception of that employed in a frugal repast and a social meeting, in a concert of social, moral, and religious hymns, and devote the proceeds of the exhibition to some object of benevolence. We could not but look at the contrast presented on similar occasions in our own country with a blush of shame. We have visited a village whose whole moral aspect was changed in a few years by the introduction of music of this character, even among adults, and where the aged were compelled to express their astonishment at seeing the young abandon their corrupting and riotous amusements for this delightful and improving

exercise." Music is one of the fine arts; it therefore deals with abstract beauty, and so lifts man to the source of all beauty—from finite to infinite, and from the world of matter to the world of spirits and to God. Music is the great handmaid to civilization. Whence come those traditions of a revered antiquity—seditions quelled, cures wrought, fleets and armies governed by the force of song? whence that responding of rocks, woods, and trees to the harp of Orpheus? whence a city's walls uprising beneath the wonder-working touches of Apollo's lyre? These, it is true, are fables; yet they shadow forth, beneath the veil of allegory, a profound truth. They beautifully proclaim the mysterious union between music, as an instrument of man's civilization, and the soul of man. Prophets and wise men, large-minded lawgivers of an olden time, understood and acted on this truth. The ancient oracles were uttered in song. The laws of the Twelve Tables were put to music, and got by heart at school. Minstrel and sage are, in some languages, convertible terms. Music is allied to the highest sentiments of man's moral nature—love of God, love of country, love of friends. Woe to the nation in which these sentiments are allowed to go to decay! What tongue can tell the unutterable energies that reside in these three engines—church music, national airs, and finished melodies—as means of informing and enlarging the mighty hearts of a free people?

BALLAD SINGER. One whose employment it is to sing ballads.

BALLAD STYLE. In the air or manner of a ballad.

BALLAD TUNE. The common song or tune of a ballad. Ballad tune generally means a kind of song, adapted to the capacity of the lower class of people. The ballad has not, however, always been confined to the low and inferior order of compositions. In an old English version of the Bible, Solomon's Song is designated as the *Ballad of Ballads*. Some suppose that a knowledge of the ballads in common use is necessary to a minister of state to learn the temper and disposition of the people; and Lord Cecil, prime minister to Queen Elizabeth, is said to have made an ample collection of ballads for this purpose. See Dr. Percy's Collection of old English and Scotch Ballads, and a dissertation prefixed to Dr. Atkin's Collection of Ballad Tunes, or Songs.

BALLARE. (1.) To dance.

BALLATA. (1.) A term applied by the Italians to any song, the melody of which is calculated to regulate the measure of a dance.

BALINO. A celebrated tenor singer at the Chapel Royal at Lisbon. He died in 1760.

BALLAROTTI. A composer of opera music at Venice, at the end of the seventeenth century.

BALLETTI, MADEMOISELLE. First female singer, in 1798, at the Opera Buffa at Paris.

BALLET. A kind of dramatic poem, representing some fabulous action or subject, divided into several acts, in which several persons appear, and recite things under the name of some deity, or other illustrious character. The term is now particularly used for a stage dance. Ballet is likewise the name given, in France, to a whimsical kind of opera, in which dancing is a principal part of the performance. In most of these ballets the several acts seem so many different subjects, connected only by some general relation foreign to the action, which the spectator could not discover, if it was not made known in the prologue. Ballets are accompanied with music, and sometimes consist of a series of airs with different movements.

BALLETTO. (1.) A balletto is a theatrical representation of some tale, or fable, told in dance, or metrical action, accompanied with music; an interlude; a comic dance.

BALLET MASTER. The artist who invents and superintends the rehearsal and performance of the ballet.

BALLA. (1.) Certain analogous dances, which the Italians first introduced about the year 1730, between the acts of their operas, but in the composition of which they were not suffered to intrude so much on the attention of the audience as to rob the poet, composer, and vocal performers of their due rank and importance in the drama.

BALLICOURT. A celebrated flutist and composer for his instrument in London, about the year 1744.

BALLIERE, C. L. D., died at Rouen in 1800. He wrote, among other works, a theory of music, which, although approved by the academy of Rouen, is essentially false.

BALLO. (1.) A sort of ballet; any dancing tune.

BALFE. A good vocalist and fine composer. He sang in New York in 1834. He has acquired such musical reputation as few English singers or composers have ever done. Balfe was born in Ireland, and was first distinguished as a singer. His voice was a baritone of moderate power; but his style was most beautifully finished and full of feeling. He has since merged the singer in the composer. His sparkling and effective operas, the "Enchantress," the "Bohemian Girl," &c., enjoy great popularity. Balfe has presided over the orchestra for some time in one of the great rival opera establishments in London.

BALTAZARINI, a celebrated violinist, was sent, at the head of a band of violin players, from Piedmont, by Marshal Bressac, to Catharine of Medicis, and appointed by that princess her first *valet de chambre*, and superintendent of her music. He was the delight of the court, as well by his skill on the violin as by his invention of *ballets*, or fêtes with dancing and music. It was he who composed, in 1531, the *ballet* for the nuptials of the Duke de Joyeuse with Mademoiselle de Vaudemont, sister of the queen; an entertainment that was represented with extraordinary pomp. Dr. Burney thinks this was the origin of the heroic and historical *ballet* in France.

BALTHAZARINI, BEAUJOYEUX. An Italian musician, who composed several ballads and pieces of music in the reign of Henry III.

BALTZAR, THOMAS, was born at Lubeck, and was esteemed the finest performer on the violin of his time. He went to England in the year 1658, and lived about two years in the house of Sir Anthony Cope, of Hanwell, in Oxfordshire. He was the great competitor of Davis Mell, who, though a clockmaker by trade, was, till Baltzar went there, allowed to be the finest performer on the violin in England; and after his arrival, he divided with him the public applause, it being agreed that Mell excelled in the fineness of his tone and the sweetness of his manner, and Baltzar in the power of execution and command of the instrument. Moreover it is said of the latter, that he first taught the English the practice of shifting, and the use of the upper part of the finger board. Baltzar was given to intemperance, and is said to have shortened his days

by excessive drinking. He was buried in Westminster Abbey, in the year 1663.

BALVANSKY published twelve *Hongroises* at Vienna in 1795.

BALZIANI, LEONARDO. A violin composer at the beginning of the last century.

BAMBERGER, MADAME. A celebrated German singer at Frankfort.

BAMBINI, F., of Bologna, went to France, when ten years of age, with his father, who was manager of a company of Italian comedians. They performed about the year 1760 in Paris. F. Bambini composed several operas, also some instrumental music.

BANCHIERI, ARIANO. A celebrated Italian composer between the years 1598 and 1638.

BANCZAKEWIC, a chapel-master at Warsaw, composed some sacred music, and was a warm promoter of that style of composition.

BAND, or BANDA. A company of practical musicians, associated for the purpose of performing together on their respective instruments. Some bands use brass instruments only, and are called brass bands; others use various instruments, and such as are common in orchestras.

BANDERALI, professor of singing at the Conservatoire at Paris for twenty years previous, died of cholera, in that city, in 1849.

BANDINI, ANGELO MARIA. Among the musical manuscripts purchased by Dr. Burney at Rome, in 1770, was the music book of Salvator Rosa, the celebrated painter, poet, and musician. Number eleven, in the above-mentioned curious manuscript, contains a grumbling, gloomy history of Salvator Rosa, in which the comic exaggeration is not unpleasing; but it is rather a satire on the times in which he lived than a lyric composition. However, it is set by Bandini; but being chiefly narrative, the music is almost wholly recitative. Dr. Burney has published a translation of this cantata. Bandini was a native of Florence.

BANDORE. (I.) A stringed instrument of the lute kind, used many years ago, but now abandoned.

BANESTER, G. An old English composer about the year 1490.

BANISTER, JOHN, succeeded the celebrated Baltzar, as leader of King Charles's new band of twenty-four violins. He was the first English violinist of any note. He died in 1679. He set to music the opera of "*Circe*," written by Davenant, and performed at the theatre and in Dorset Gardens in 1676. He also composed several songs. Banister was the first musician who established lucrative concerts in London. These concerts were advertised in the London Gazette of the times; and in No. 742, December 30, 1672, there is the following advertisement: "There are to give notice, that at Mr. John Banister's house, now called the Music School, over against the George Tavern, in White Friars, this present Monday, will be Musick performed by excellent masters, beginning precisely at four of the clock in the afternoon, and every afternoon for the future, precisely at the same hour."

BANISTER, JOHN, son of the preceding, was an eminent performer on the violin; he was one of King William's band, and played the first violin at Drury Lane, when operas were first performed there. He died about the year 1725. He composed several grounds, with divisions, inserted in the "Division Violin."

BANISTER, CHARLES. A bass singer at the London theatres in the latter part of the last century, and father to John Banister, the celebrated comedian. C. Banister's voice and style were alike powerful by nature and feeling, though rough and unpolished. He gave Carter's very spirited description of a sea fight, "Stand to your guns, my hearts of oak," with a corresponding animation. Shield wrote "The Wolf" for him.

BANISTER, H. J. A composer of vocal music, and teacher, resident in London. Some of his songs were published at the Harmonic Institution.

BANJO. A favorite instrument among the negroes of the south. It is a rude imitation of the guitar united with the tambourine. Its head and neck are formed like the guitar; it has five strings, is played with the fingers and hand, and its body is in the form of a hoop, over which parchment is stretched as over a drum.

SCALE FOR THE BANJO.

Position. — Hold the banjo in the left hand, about two inches from the nut; let the neck rest in the hollow of your hand, which will bring your fingers and thumb directly over the strings, and let the instrument rest against your right side, which will bring it in a proper position to perform with the right hand. You must sit in an upright and graceful position, as it is less tiresome, and will give your right hand a fuller use of the instrument.

On tuning the Banjo in the Key of C. — Tune the middle or third string to C, the fifth or shorter to C an octave above; tune the fourth string to F a fifth below lower C. Tune the second string to E a third above the lower C, and tune the first to G on a third above the second or a fifth above lower C.

SCALE FOR THE BANJO IN THE KEY OF c.

Names of notes, C	F	G	A	B	C	D	E	F	G	A	B	C	D	E	F	G	A	B	C
Figures.	0	1	2	3	0	1	0	1	0	1	0	1	2	3	1	2	3	4	5

The 0 above represents the open strings, the figures 1, 2, 3, and 4, the fingers to place upon them.

On tuning the Banjo in the Key of (D.) = = Tune the middle or third string to D, the fifth to D an octave above, the fourth to G, the second to F, and the first to A, which corresponds to A on the violin.

BANK, J. C. H., a composer and organist at

Magdeburg, published some music for the piano at Leipzig, about the year 1797.

BANKHART, professor of music at Leicester, was an eminent violoncellist. He performed at the York musical festival in 1823.

BANNEUX. A theatrical composer at Paris about the year 1798.

BANNUS, JOHN ALBERTUS. A writer on music in the first half of the seventeenth century. His works were published in Holland; amongst others, a book in the Italian language, called *Alimenta Musicae*.

BANTI, BRIGADA GEORGI, a celebrated female Italian singer, was the daughter of a Venetian gondolier, and in her youth nothing more nor less than a street singer in Georgi, her native town, where a noble amateur, having noticed the brilliancy of her voice, had her instructed in singing at his expense. It is probable she was shortly after advised to try her fortune in a foreign country, for she soon left Venice on her road to Paris; not, however, as it would seem, in prosperous circumstances, since she sang at coffee houses and inns, at Lyons and other towns, for small sums collected from the guests. Monsieur de Visnes, then manager of the opera at Paris, relates, that, in the year 1778, he stopped one evening at a coffee house on the Boulevards, being struck by the sound of a very beautiful voice; it was Banti whom he heard, as she was singing in the coffee room. He put a louis d'or into her hand, desiring her to call on him the next morning. The result was, that Monsieur de Visnes engaged her immediately for the *Opera Buffa*, where she made her *debut*, by an air sung between the second and third acts of "*Iphigénie en Aulide*," and created a universal sensation of delight. After the departure of the celebrated Agujari from London, the managers of the Pantheon engaged Madame Banti for three seasons, upon condition that £100 a year should be deducted from her salary, for the payment of an able master to cultivate her voice. Sacchini was the first appointed to this office; but he found her so idle and obstinate, that he soon quitted her as an incurable patient. She was next assigned to Piozzi, whose patience was likewise soon exhausted by her incorrigible inattention. Her last master in England was Abel; soon after which she left that country, and sang with enthusiastic applause at several of the German courts, and subsequently at almost every principal town in Italy. Her great success certainly exemplifies most strongly the truth of the old adage, that "there are a hundred requisites necessary to constitute a good singer, of which, whoever is gifted with a fine voice, is already in possession of ninety-nine." After several years' absence, Banti returned to England in the spring of 1790, when her performance and singing in Gluck's opera of "*Alecto*" was thought to be most perfect; every look, every action, every note, appearing to be strictly appropriate to the character she had assumed, and to no other. Soon after this, on the occasion of Lord Howe's victory, Banti introduced in one of her cantatas the national air of "God save the King," in a style which perfectly electrified the audience. In the year 1799, she enraptured every hearer by her performance in "*Lies de Castro*," composed

by Francesco Bianchi, and then first produced. The celebrated prayer in it, "*Gran Dio che regoli*," was given in a style of tenderness and appropriate devotion, which perhaps has never been exceeded on the stage. We believe that the year 1802 was the last season of Banti's singing in England. She died at Bologna, in 1805, aged about fifty. It is said, that, on opening her body, the lungs were found to be of an unusually large size.

BANWART, JACOB, a composer of motets, &c., in the latter half of the seventeenth century, was born in Sweden, and became chapel-master at the cathedral in Constance.

BAPTISTA, FR. FRANCISCO. An Augustine monk and music master at Cordova in 1625.

BAPTISTE, JOHN. See BONNOMETTI.

BAPTISTE. A celebrated French violinist at Paris at the commencement of the last century. He went to Rome to learn of Corelli the method of playing his sonatas, which no one at that time in Paris could execute.

BAPTISTE, LUDWIG ALB. FRIEDRICH, a composer of instrumental music, died at Cassel, between the years 1760 and 1770. See BATTISTA.

BAPTISTIN, or JOHN BAPTISTE STRUK, a musician of Florence, died 1740.

BAR, or BARS. A bar is a line drawn through the staff at right angles to the staff itself, for the purpose of dividing the notes into equal measures of time. By the aid of the bar, an orchestra or band, however numerous, is regulated and held together. It is by the aid of the bar, also, that the composer figures to us the correspondence of the parts of his score.

Every musical piece is divided into equal portions of time, called *measures*. These are ascertained by straight lines, called *bars*, drawn down the staff. All the notes, therefore, contained between two bars, constitute one measure.

In common language, the word *bar* is used improperly for *measure*. It is so used in this work, because the use of it has become very common. The word *score* probably originated from the *bar*, which, in its first use, was drawn through all the parts, as it should be still, if a piece of music be in partition or *partitura*. The first introduction of bars took place about the middle of the seventeenth century. Bars always denote strokes drawn perpendicularly across the lines of a piece of music, including between each two a certain quantity or measure of time, which is various as the time is triple or common. In common time, between each two bars is included the measure of four crotchets; in triple time, three crotchets. Their principal use is to regulate the beating or measure of a musical time in a concert. There is also a thick bar used in music at the end of strains and movements, called the *double bar*.

BARANELLI. See GALUPPI.

BARANIUS, HENRIETTA. A female singer at Berlin between the years 1754 and 1797.

BARAVICINI, MADAME. A celebrated female performer on the violin. She was born at Milan in 1778.

BARBA, DANIEL. A composer of instrumental music at Vienna about the year 1799.

BARBANT, CHARLES. About the year 1764, organist at the Bavarian chapel in London. He was the master of Samuel Webbe, the celebrated glee composer, and, in 1766, published a small collection of pieces for the Catholic service, under the following title: "Sacred Hymns, Anthems, and Versicles, for Morning and Evening Service." This work is now extremely scarce.

BARBARINO, BARTOLOMEO, called *Il Pesarino*. A composer, born at Fabriam at the end of the sixteenth century. He published some madrigals at Venice.

BARBARISM. False harmony, or modulation which is very offensive to a musical ear.

BARBAROUS. An epithet that was sometimes applied by the Greeks to the Lydian mode, because the Lydians were an Asiatic people.

BARBELLA, EMANUELE. A modest, ingenious musician, and true follower of Tartini's principles on the violin. He studied composition under the celebrated Leo, and pleasantly remarks of himself, that, "notwithstanding this advantage, Barbella is a mere ass, who knows nothing." He died at Naples in 1773. Some of Barbella's compositions for the violin have been published in England.

BARBER. An English composer of vocal and instrumental music about the year 1790.

BARBICI published some quartets for violins at Paris in 1769.

BARBIER, MADAME WALBONNE. A French female singer about the year 1800.

BARBIER, MRS. An English singer between the years 1711 and 1729. Her timidity, on her *debut*, is favorably alluded to by Addison in No. 231 of the "Spectator."

BARBIERE. A dramatic composer about the year 1790. He wrote an oratorio, "*La Paziienza di Tobia*."

BARBIERI, GIOVANNI ANGELO. An Italian singer and composer about the year 1650.

BARBUD. A celebrated musician at the court of Persia.

BARCA, DON ALESSANDRO, published a new theory of music at Padua in 1786.

BARCAROLLES, BARCORELLES, and **BARCARUOLA.** Certain songs composed by the Venetian gondoliers, and sung by them in their boats. The style of these airs is simple and natural, like the manners of the people who produce them; and they possess a kind of artless beauty, which not only strikes common ears, but delights even the virtuosi. The Venetian gondoliers have the liberty of visiting all the theatres gratis, which gives them an opportunity of cultivating their ear and taste without expense. The gondolier songs are, many of them, so graceful and pleasing, that the musicians of Italy pride themselves on knowing and singing them.

BARD, or BARDD. (W.) An appellation

originally given by the Cambro-Britons to their poets, or minstrels, and by allusion since applied to the poetic authors of all ages, from the rhapsodist of ancient Greece to the rhymist of modern times. The reputation, influence, and power of this order of men were formerly very high; they were courted by the great, and seated at the tables of princes. Their power in stirring the courage and rousing the fury of armies is universally recorded; and generals have often confessed themselves indebted for victory to their heroic strains. The bards were the chosen negotiators with the enemy; the deeds of the day were at night recorded in their songs, and the fame of the fallen heroes perpetuated by their praise. The term *bardus*, according to Festus and Camden, is pure British or Celtic, and denote a *singer*. The term *bard*, however, denotes any professed musician and poet, or minstrel, of ancient times, whose office it was to celebrate in song the mighty deeds of heroes, or to lament, in pathetic strains, their untimely loss, or any great public calamity. Carolan was the last of this order in Ireland, and he died in 1738. To him we are indebted for a large proportion of the popular Irish melodies. (See **CAROLAN TWALOGN**.) Bochart derives the word *bard* from *parat*, to sing. It may be considered the old name for both poet and singer, as it is nearly synonymous with *minstrel*. In fact, there can be little doubt that the bards were ancient poets among the Gauls and Britons, who not only described, but sung, in verse, the brave actions of the great men of their nation, with design to paint and recommend virtue, and even sometimes to put an end to the difference between armies at the point of engagement.

BARDI, GIOVANNI DE, of Florence, Count of Vernio, was *maestro di camera*, towards the close of the sixteenth century, to Pope Clement VIII., by whom he was tenderly beloved. This most accomplished nobleman was particularly attached to the study of antiquity, and to the theory and practice of music, to which he had applied himself for many years so closely, that he became, for the time in which he lived, a correct and good composer. Giovanni Bardi's name is chiefly famous in connection with the origin of the opera, about the year 1600. He was the head of a circle of scholars and *dilettanti*, who were wedded to the ancient Greek drama, and whose attempts to reproduce its *singing speech* resulted in the modern Italian *recitativo*. See **OPERA**.

BARDI, GIROLAMO, son of the preceding, wrote some works on music about the year 1651.

BARETTI, GIUSEPPE, was born at Turin in 1716. He was a language master in London, and wrote several volumes of travels, in which much is related on the subject of Italian music.

BARETTI, A., brother of the preceding, resided at Turin in 1770. He was a good instrumental composer. Some of his duets for violoncellos were published at Paris.

BARGAGLIA, SCIPIONE. A composer of the sixteenth century. In his works on music, the word *concerto* seems (according to Dr. Burney) to be used for the first time.

BARILLE. An Italian buffo singer. He was engaged at the Italian Opera in Paris in 1719.

BARILLI, MADAME. A good Italian singer in Paris at the commencement of the present century.

BARIPICNI. The name given by the ancient Greeks to low sounds in general. See *OXIPICNI*.

BARIPHANUS. See *BARYPHANUS*.

BARITONO VOICE. *Barytone*, or *Baritone*, is applied to a male voice the compass of which partakes of the common bass and tenor, but does not extend so far downwards as the one, nor to an equal height with the other. The compass of a baritone voice usually extends from B flat to F. Phillips and Tamburini are fine examples of this voice.

BARITONO CLEF. The name given to the F clef, when placed on the third line, in order to accommodate the baritone voice. But it is only in some of the old music that the F clef is found in this situation.

BARIZEL. An excellent French performer on the double bass. He played a concerto on his instrument at the Société Philharmonique at Paris in 1823.

BARLY. A celebrated performer on the haut-boy at Madrid about the year 1790.

BARMAN, F., of Munich. A celebrated performer on the clarinet. He was remarkable for his beautiful piano, and for his facility more than for his general tone. He composed eight operas of duos for flutes. Died June 11, 1847, at Munich, aged sixty-four.

BARMANN, JOHANN BAPTIST, a German Benedictine, died in 1783. He published some church music at Augsburg in 1760.

BARNARD, REV. JOHN. A minor canon of St. Paul's Church, London, in the time of Charles I. He published a noble collection of church music by different English masters. This work, unfortunately, was not printed in score, and the consequence of the parts being separated is, that at present it is entirely lost to the world.

BARNETT, JOHN, is the eldest son of Mr. Barnett Barnett, a respectable jeweller and diamond merchant, residing in London; he was born at Bedford in 1802. When only two years of age, he discovered so strong a genius for music, that he could, after once having heard an air, sing it with an exactness truly astonishing; besides which, he could sing a part of a glee, or form exact harmony to any theme that happened to be sung, of course without any knowledge of notes. We cannot here resist the desire of introducing an anecdote respecting him at this time. His mother lulled him to rest with a German national air, (her own native music,) which he soon learned by the frequent hearing of it, and actually sang in the cradle; the same will be found among his piano-forte works, arranged as a fantasia. From the age of eight he became passionately fond of singing and declamation, and composed the melodies of many little songs for himself and his brothers, which he taught them from memory, not yet having a knowledge in music, nor any means of writing down his effusions. At ten years old his voice became peculiarly

powerful, and distinctly different from the generality of juvenile voices, being a contralto, a species of voice never before known in a boy; possessing at the same time the compass and quality of the tenore, contralto, and soprano. At this time he was able to sing the most difficult songs of Braham without the least knowledge of music. In 1813, he was introduced to Mr. S. J. Arnold, (proprietor of the English Opera, and then manager of Drury Lane,) who, upon hearing him, was so much astonished, that he immediately entered into articles of agreement with Mr. Barnett, sen., to take his son under his direction for five years, and provide him with proper instructors in music, &c. He brought him before the public on the 2d of July, 1813, (after giving him but a very few days' time to study his part,) at the English Opera, in the "Shipwreck," which made a considerable impression upon the audience. The ensuing winter, 1813-14, Mr. Arnold brought him out at Drury Lane, where he sang in one piece thirty successive nights or upwards, and was, the same season and three following, engaged as principal singer at the oratorios. Mr. Arnold behaved in the kindest manner towards him; but being much occupied with his management of Drury Lane, and the rebuilding of the English Opera, which had recently been pulled down, he did not attend to his musical studies, but intrusted his tuition to a master, who took advantage of Mr. Arnold's occupations by not instructing young Barnett at all on the piano, and endeavoring to teach him composition from an abstruse work of Gaspar Meek, to understand the elaborate rules of which required a course of study of at least three years. In consequence of this, Barnett gained but little knowledge during the five years, at least from the instructions of his teacher. At this period, however, he exercised his natural talents for composition, and printed several things (which are now to be seen) as by "Master Barnett;" one of which, entitled "The Groves of Pomona," a scena, is peculiarly noticed and highly spoken of in the Musical Quarterly Review, No. 1X. In 1815, Barnett appeared at Covent Garden, at which theatre he was engaged for two years, or a longer period, at the discretion of the proprietors. His voice changing about the close of that season, he received his discharge, as though he had been regularly engaged for one season only; upon which occasion a lawsuit ensued, and Mr. Barnett, sen., recovered damages to a satisfactory amount. Having now been long without instruction in any branch of music whatever, Barnett felt compelled to pursue his studies from the perusal of works only, depending much on his own natural talent for any improvement he might make. Having, however, contracted numerous bad habits in piano-forte playing, he was placed by his father under the celebrated Ferdinand Ries, who improved him considerably on the piano, and also in the German school of composition. The following is a list of Barnett's principal works. All those which are in manuscript are intended for publication. Vocal: "Grand Mass," No. 1, in G. min.; "Grand Mass," No. 2, in C; "Russian Melodies, with Words," one vol.; "Cantata for four voices, with Solos and Choruses, including Storm Chorus;" "Three Glees," one set; "Shadows fly hence," madrigal; "Canon for three Voices, for Miss Paton;" "Three Catches;" "Abraham on the Altar of Isaac,"

scena; "The horn hath called," scena; "Death of Moore," scena; "Groves of Pomona," scena; "The Dart of Isdabel," cantata, one voice; "Comforts lasting," cantata, in ancient style; "Bower of Love," song, in ancient style; "Serenades, 1, 2, and 3, in the Spanish Style;" "Love wakes and weeps," serenade; "Lady, the silver moon," serenade; "Six Italian Songs," set one; "Three Italian Duettos," set one; "Non Temer," duetto sop. and bass; "Ebben Lauretta," duetto, sop. and bass; "Primavera," canzonetta; "Knight of St. Edward," romance; "Alphonso and Leonore," romance; "Land of my birth," romance; "A Farewell, in the Scottish Style;" "Ronald," scena; songs, "A Bard's Song;" "Dear sainted form;" "Spirit of the sunny low;" "Hide, O, hide those ebony tresses;" "Sun's last Rays;" "Twilight's Invitation to Cupid;" "There's a magic in thine eye;" "Smiles and Tears;" "Beam brightly;" "Book of Love;" "When Clara touched the fairy string;" "Poor Rose;" "Tis sweet to hear;" "No dearer moments." Orchestral: "Overture in C;" "Overture in A;" "Mozart's Fantasia, in C min. as a Quintetto;" "Fugue for two Voices, ten. and bass." Piano-forte: "Sonata in E flat;" "Sonata in C min.;" "Sonata in G, with Violin Oblig.;" "Fantasia Ducto, on a Theme of Mozart;" "Fantasia and Fugue on a German Air;" "Fugue Canon;" "Introduction and Rondo on an Air from Beggar's Opera;" "Fantasia on an Air from Rosina;" "Three Waltzes, brilliant." Violin; "Fantasia, in which are introduced two Airs Russes, Piano-forte acc." Flute: "Fantasia on an Air from Mozart;" "Solo, in which is introduced an Air in the Tyrolian Style," &c., &c.

BARNI, CAMILLE, of the Lombard school of musicians, was born at Como in 1762. He commenced his musical career chiefly by arriving at eminence as a violoncellist. He next became second, then first violin at the Grand Opera in Milan; subsequently he settled at Paris, where he has composed many French romances and Italian ariettes; also airs, with variations, for the violin and violoncello.

BARON, ERNST GOTTLIEB, published some works relating to music at Berlin. He died in 1760. He was author of an historical treatise on the lute.

BARONI, ADRIANA, of Mantua, for her beauty surnamed the *fair*, was a fine singer. She lived in the beginning of the seventeenth century.

BARONI, ANTONIO. An Italian composer. Some of his music was published at Vienna in 1799.

BARONI, CATHARINA. A sister of the following, was a poetess and musician.

BARONI LLONORA, a daughter of Adriana Baroni, born at Naples, went in 1638 to Rome, where she was considered the finest singer in Italy.

BAROQUE. (F.) An adjective applied to a composition, the harmony of which is false, and overcharged with modulation, while the intonation is forced and unnatural.

BARRÉ. (F.) In guitar playing, a temporary nut, formed by placing the fore finger of the left hand across the strings.

BARRE, ANTONIO. Publisher at Milan, in 1538, of a large collection of motets by various composers.

BARRE, TRILLE LA. See LABARRE.

BARRED C. C with a bar across it; the second mark of common time.

BARRED SEMICIRCLE. Used to denote a quicker movement than the semicircle without the bar, and is called *alla breve*, because it was formerly written with one breve in a measure.

BARREL ORGAN. Any organ or music box which produces music in consequence of the turning of a barrel or cylinder in which pins are fixed to represent notes upon the staff. A hand organ.

BARRETT, JOHN, a pupil of Blow, was an organist in London at the beginning of the last century. In the "Pills to purge Melancholy" are many songs composed by him, among others the air, "When he holds up his hand," in the "Beggars Opera."

BARRETTI. See BARETTI.

BARRIERE, E. B. J., a French violinist and composer, was born at Valenciennes in 1749.

BARRINGTON, HON. DAINES, wrote in the "Philosophical Transactions," vol. lx., an account of a very remarkable young musician. This was the celebrated Mozart, who had been performing, as a child, in London. D. Barrington published also a volume of "Miscellanies," in which there are some particulars of Dr. Crotch's precocity of musical talent, also of the early genius for music evinced by Samuel Wesley.

BARSAANTI, FRANCESCO. A native of Lucca, born about the year 1690. He studied the civil law in the University of Padua, but, after a short stay there, chose music for his profession. Accordingly he put himself under the tuition of some of the ablest masters in Italy, and having attained to a considerable degree of proficiency in the science of practical composition, took a resolution to settle in England, and arrived there with Geminiani, who was also a Luccese, in the year 1714. He continued many years a performer at the Opera House; at length reflecting that there was a prospect of advantage for one of his profession in Scotland, he went thither, and, with greater truth than the same is asserted of David Rizzio, may be said to have meliorated the music of that country, by collecting and making basses to a great number of the most popular Scotch tunes. About the year 1750, Barsanti returned to England; but being advanced in years, he was glad to be taken into the opera band as a performer on the tenor violin, and in the summer season to that of Vauxhall. At this time he published twelve concertos for violins, and shortly after, "*Sei Antifone*," in which he endeavored to imitate the style of Palestrina and the old composers of motets; but from these publications little profit resulted. Among his earlier compositions were six solos for a flute, with a thorough bass, and afterwards "Six Solos for a German Flute and a Bass." He likewise formed the *first six solos of Geminiani into sonatas for two violins and a bass*.

BARTA, or BARRTA, J., a composer of operas at Vienna, and other music between the years 1780 and 1795

BARTALI, A., chapel-master to the emperor at Vienna, about the year 1780, was reckoned one of the best composers of his time.

BARTELOZZI, B., composed some variations for the guitar in 1802.

BARTH, CHRISTIAN SAMUEL, a celebrated master on the hautboy, died at Copenhagen in 1809.

BARTH, F. P., son of the preceding, performed on the hautboy at the king's chapel at Copenhagen and composed for that instrument.

BARTHEL, JOHANN CHRISTIAN. Court organist at Altenburg since the year 1804.

BARTHELEMON, F. HIPPOLITE, a celebrated violinist and composer, was born at Bourdeaux, in France, in 1741, and lived some time in Paris, in which capital he composed, among other music, an opera called "*Le Fleuve Scamandre*," for the Italian Theatre. In the year 1765, he went to England, and in the following season produced a serious opera for the king's theatre, entitled "*Pelopida*," which was received with so much applause, that Garrick was induced to pay the author a visit for the purpose of asking him if he thought he could set English words to music. On Barthelemon's replying affirmatively, Garrick asked for pen, ink, and paper, and wrote the words of a song to be introduced in the play of "*The Country Girl*." Whilst thus engaged, Barthelemon, looking over Garrick's shoulder, actually wrote down music, in parts, to the song, as fast as the other penned the words. Garrick then turning round, and handing Barthelemon the words, said, "There, sir, is my song;" to which the other answered, "And there, sir, is my music for it." Astonished and delighted at this unexpected exertion of talent, Garrick invited the composer to dine that day with him, in company with Dr. Johnson. The song proved so successful that it was encored every time it was sung; and Garrick, in the fulness of his heart, promised to make Barthelemon's fortune. As a beginning of encouragement, he employed him to set to music the operatic farce of "*A Peep behind the Curtain*." The little burletta of *Orpheus*, in the second act, was so much admired, that this farce was performed a hundred and eight nights in one year. Garrick thus cleared by it several thousand pounds, and rewarded Barthelemon with the sum of *forty guineas* instead of fifty, which he had originally promised him, alleging, as an excuse, that the *dancing eves* had cost him so much money that he really could not afford to pay him any more. Barthelemon has composed the music to several other petit pieces for the theatres; particularly to General Burgoyne's dramatic entertainment, "*The Maid of the Oaks*," which was first acted at Drury Lane, about the year 1774. At length, however, disgusted with the conduct of managers, he declined writing anything more for the stage; and, about the year 1794, was engaged with his family at the Rotunda in Dublin. Mrs. Barthelemon and her daughter were both musical, and had also a taste for composition. The former published a set of hymns and anthems for the Asylum and Magdalen Chapels. We should have observed that, whilst in England, Barthelemon led for

several seasons the opera band. As a violinist, his adagios were much admired: he also particularly excelled as a solo performer of Corelli's music. He died in London, at an advanced age, in the year 1808.

BARTHELEMON, MRS. See **YOUNG**.

BARTHOFFER. A musician at Vienna about the year 1799.

BARTHOLDY. See **MENDELSSOHN**.

BARTHOLINI, RINDIO. A composer at Siena about the year 1600. He published motets, &c., at Venice.

BARTHOLOMEUS, an Englishman, wrote a work in 1365, in which various musical instruments of that time are described. Sir John Hawkins states, that he frequently consulted this work, in writing the history of music during the dark ages.

BARTLEMAN, J., the celebrated bass singer was a pupil of Dr. Cooke, and originally in the choirs of Westminster Abbey and the Chapel Royal. Miss Hawkins, in her anecdotes, states of Bartleman as follows:—

"There was one singular feature in his history, that he lived to occupy the identical house in Berners Street, in which his first patron resided. This patron, Mr. Royer, who had a situation in one of the public offices, perceiving the promise of his voice, presented him to Dr. Cooke for his acceptance as a singer.

"Though delicate in person and constitution, and often ill, Bartleman was lively and spirited to a remarkable degree. It used to puzzle me to find out when or how he learned; and indeed I have heard Dr. Cooke say, 'Those boys of mine learn of one another more than from me.' Of his early superiority he was as little vain as if it had consisted in spinning a top, or trundling a hoop; he never went further in setting himself above another than by humorously caricaturing something ludicrously bad. In short, he was one of the most agreeable lads that ever had 'the run' of a house. An instance of Bartleman's nice feeling I call to mind. My father had made him a present, annexing to the gift the condition that he should copy out some music for him, which he undertook cheerfully; but just afterwards, having reached a point in his musical studies that left him less leisure, he found he had not time to do what he had promised, and having detained the music he had to copy long enough to make the experiment, he returned it, together with his present, with an extremely well penned note, saying, that 'as he could not perform the task, it was not just to accept the reward.' I remember my own astonishment at this promptitude, though, indeed, being out of the choir, we had for some time seen less of him; but it appeared to me as if a boy had on a sudden, without the intervention of—what shall I say?—*ladhood*! started into manhood. I can add, with pride and acknowledgment, that, in the goodness of his nature, he never forgot where he had spent many of his boyish hours, and that whatever time elapsed without our meeting, he was always, on every occasion, prompt to show, and cordial in expressing the continuance of his regard. Success never altered him, applause never elevated him; and he died

I am confident, as he had lived, beloved beyond the usual degree of love bestowed on those whose excellence, to use Wordsworth's beautiful words respecting longevity, 'has no companion.' — So far Miss Hawkins. We have now to remark that Bartleman, as he advanced to manhood, became celebrated for his powers as a bass, or rather *baritono* singer, in which line he first appeared in public, we believe, at the concerts at Freemasons' Hall. He was next engaged at the ancient concerts, and lastly became one of the proprietors and conductors of the vocal concerts at the Hanover Square rooms. He died in 1820.

BARTLETT, JOHN. Author of "A Book of Ayres for the Lute and Viol da Gamba," London, 1606.

BARTOLI, DANIEL, of Bologna, was the author of a work entitled "*Del Suono de Tremore Armonici e dell Udito*," published in 1680. In this truly scientific and ingenious work are to be found several discoveries in harmonics that have been enlarged upon by posterior writers on the subject. It contains four dissertations: the first treats of the similarity between the circular undulations occasioned in still water when a stone is thrown into it, and the propagation and motion of sound. The second, of the motion of sound compared with that of light; of echoes or reflection of sound, and of its augmentation in a whispering room or gallery. Third, of harmonic vibrations and ratios of sound; of sympathetic sounds; of the breaking a glass with the voice. Fourth, of the mixture of sounds; of consonance; harmonics; and the immense increase of sounds in a vessel or enclosed place, by repercussion; with many other curious inquiries, and ends with the anatomy of the ear. He was the author of many other profound and learned works, and died at Rome in 1685.

BARTOLINI PERUGINO, SIMONE. A singer in the pope's chapel at Rome about the year 1543. He was sent with eight other singers, by the pope, to the council of Trent.

BARTOLOZZI. An excellent performer on the tenor, recently living in England.

BARTOLUS, ABRAHAM. A professor at Leipsic, at the beginning of the seventeenth century. He wrote a mathematical work on music.

BARTON, JUSQUIN. A composer of the French school in the sixteenth century.

BARTSCH, C. F. Author of a collection of airs, published at Halle, in 1792.

BARTSCH. A pianist in the orchestra at the theatre of Venice, and composer of some operas, about the year 1796.

BARUTA. A celebrated violinist at Padua about the year 1800.

BARYPHONUS, HENRY, a skillful theorist, flourished about the year 1630, and was author of several treatises, particularly one in Latin, entitled "*Plejades Musicae*," which Walther styles excellent.

BARYPICNI. (Gr.) The ancients gave this name to five of the eight sounds, or princi-

pal chords, of their system, viz., the Hypate-Hypaton, the Hypate-Meson, the Mese, the Parameze, and the Nete-Diazeugmenon.

BARYTONE, or BARTONE. This word means literally *deep-toned*, pertaining to or noting a grave, deep sound, or male voice. The barytone is the lowest but one, of the six registers, into which the scale of the human voice is commonly divided. It is, perhaps, the most common kind of male voice, lying between the bass and the tenor as to compass, and corresponding, at the distance of an octave, with the mezzo soprano, or middle female voice.

BASANIER, MARTIN. Author of a work entitled "*Plusieurs beaux Secrets touchant la Theorie et la Pratique de la Musique*," Paris, 1584.

BASILE, ADRIANA. See BARONI.

BASILICAPETRI, CARLO, Bishop of Novara, died in 1615. He wrote a work entitled "*De Choreis*."

BASILU, D. F. A composer in the latter part of the seventeenth century. He lived at Perouse.

BASILIO, FRANCESCO. An opera composer at Milan about the year 1790.

BASS, BASE, or BASSO. All have the same meaning; the lowest or deepest part. *Bass* is thus written in imitation of the Italian *basso*, which is the English *base*, low, or, substantively, *basis*, foundation; yet with the pronunciation of *base* and plural *bases*. The bass, or lowest part, is, with sound musicians, the most important of all the parts. It is, indeed, the foundation of the harmony — the support of the whole superstructure of the composition. The word *bass* is technically used in various connections; as, Thorough Bass, Fundamental Bass, Ground Bass, Figured Bass, &c., all of which will be noticed. A *Figured Bass* is a bass with figures written over or under each note, to indicate the accompanying harmonies. The term *Figured Bass* is also used as synonymous with *Figurative Bass*, meaning a bass not confined to the plain *canto-fermo* style, but moving with more freedom, and with a melody of its own. For instance, the Bass in Bach's arrangement of "Old Hundred." (See ALTERATIONS.) *Fundamental Bass* is that bass which forms the tone, or natural foundation, of the incumbent harmony, and from which, as a lawful source, that harmony is derived. To explain this by an example: If the harmony consists of the common chord of C, C will be its fundamental bass, because from that note the harmony is deduced; and if, while that harmony is continued, the bass be changed to any other note, it ceases to be fundamental, because it is no longer the note from which that harmony results, and is calculated. *Ground Bass* is used sometimes as synonymous with *Fundamental Bass*, and sometimes as a bass which starts with some subject of its own, and continues to be repeated throughout the movement, while the upper part, or parts, of the composition pursue a separate air, and supply the harmony. This kind of bass was greatly in fashion about half a century since, but has for some time been rejected as an unnatural restraint upon the imagination, and productive of a monotonous melody. *Thorough*

Bass is the art by which harmony is superadded to any proposed bass, and includes the fundamental rules of composition. This branch of the musical science is twofold, theoretical and practical. Theoretical Thorough Bass comprehends the knowledge of the connection and disposition of all the several chords, harmonious and dissonant, and includes all the established laws by which they are formed and regulated. Practical Thorough Bass is conversant with the manner of taking the several chords on an instrument, as prescribed by the figures placed over or under the bass part of a composition, and supposes a familiar acquaintance with the powers of these figures, a facility in taking the chords they indicate, and judgment in the various applications and effects of those chords in accompaniment. *The Bass* is that part of a concert which is the most heard; which consists of the gravest and largest sounds, or which is played on the longest

pipes or strings of a common instrument, or on instruments larger than common for the purpose.

BASS BEAM, or BASS BRIDGE. The name given by instrument makers to the small beam inside the viol, and nearly under the bass string.

BASS HORN. This instrument, formerly much used in bands, has declined much since the introduction of the Ophicleide, which instrument it somewhat resembles. The player of the bass horn should possess a quick and correct ear, and a knowledge of thorough bass, in order to perform upon that instrument acceptably. The instrument has been found rather imperfect, and is not now much used. There is a French horn called bass horn, and the directions for learning that instrument will be found under the term *French Horn*.

B C C# D D# E E# F F# G A# A B B# C C# D# D E# E F# G G# A A# B# C C# D# D# E# E F# G G# A

BASS CLEF NOTE. That note which in the bass staff is placed on the same line with the bass clef, i. e., the fourth line.

BASS GRACE. A small note, like a short *appoggiatura*, and very similar to the *acciaccatura* of the Italians. It is struck only once, and at the same time with the principal note, but is immediately quitted. It is frequently used upon the organ to strengthen the parts, and to supply the want of pedals.

BASS STRING. The lowest note of any stringed instrument.

BASS, THOROUGH, is the art of expressing by *figures* any combination of notes to be struck with the right hand upon the organ or piano-forte, to any given note in the bass. These figures are a sort of shorthand, which describes the accord, and in which is contained the harmony of the full score.

If C is taken as the *tonic* or *key note*, the natural harmony belonging to it consists of the third, fifth, and eighth, making the common chord of C, thus:

Common chords, whether major or minor, require no figures, though formerly they were marked with one or both of the figures 5. A

key is *minor* when the third is at the distance of three semitones from the tonic, and *major* when at four. The order in which the sounds are built upon the bass note is at the taste of the performer, that is, whether the third shall come next to the tonic, be placed in the middle, or be uppermost, thus:

Whenever the bass note steps out of its place into that of the third of the key, this change is called the *first derivative*

of the chord, is marked with the figure 6, and is termed the **CHORD OF THE SIXTH**, as it takes the harmony of the sixth note above it. The *dominant* of the key is always the fifth note above the key note—and when the bass steps into the place of the fifth, or dominant, it is called the *second derivative* of the chord, and takes the figures 6 or simply 4:

The figures denote the intervals above the bass note. Simply a sharp or flat placed under a note, signifies that the third is to be sharp or flat.

An example of a succession of the Chord of the Sixth.

Example of the Chord 4.

A minor.

When a sharp precedes or follows a figure, it signifies that the note which that figure represents, must be sharpened. Another mode of indicating the sharp, sometimes used, is by a stroke or dash drawn through the figure.

Another set of combinations, called Discords, are procured from the Chord of the Dominant Seventh, termed the CHORD OF THE SEVENTH. (See above.)

When the bass steps into the place of the third, as before mentioned, it is termed the *first derivative of the seventh*, and takes the figures 6, being the chord of sixth and fifth. When the bass steps to the fifth, or dominant, it is termed the *second derivative of the seventh*, and takes the figures 4, being the chord of the fourth and third. When the bass steps still a degree farther into the place of the seventh, it is termed the *third derivative of the seventh*, and takes the figures 2, and is called the chord of the fourth and second, or simply the second.

The Seventh and its Derivative.

Thus far the figures show what harmony is built upon the bass; and when the bass ascends from its foundation place into those of the derivatives, the harmony is then said to be *inverted*, as the key-note, which ought to be at the bottom, is then above the bass.

In considering the numerous chords still to be explained, as the figures become so very complex, it is doubtful whether they tend to simplify our notions further than pointing out the root or foundation note of the chord. The discord of the diminished seventh, is produced by raising the bass note of the dominant seventh a *semitone*, which forms a compound of three minor thirds,

and having the same derivatives as the dominant seventh. The effects of this chord in modulation are strikingly powerful; and it readily admits of a transition to any chord in which one of its notes may form a part. There is still a higher class of discords to be mentioned, which are produced by placing the chord of the dominant seventh upon the common chord of the tonic, forming the chord of the eleventh, resolving into the common chord, thus:

These discords are in fact a compound of appoggiatura notes, forming suspended harmonies, which ultimately melt into the common chord.

The following examples, with the chords filled up at length in notes, will be found simple and useful. Persons, who have not the advantage of a master, will find themselves much assisted in their progress, by first writing out the figured basses and the *top notes* of each chord as here given, and then, without looking at examples, supplying the remaining notes according to their own ideas. After which, a comparison of their performance with the corresponding examples in this key, will enable them to correct any errors into which they may have fallen.

In order that the student may more readily learn Thorough Bass, we give some of the most simple studies. The difference between Harmony and Thorough Bass lies in the first being a science, the second an art. Thorough Bass, in this sense, is the art of playing upon the organ, piano-forte, or any keyed instrument, proper harmonies to the notes of a given bass; such harmonies being indicated by figures placed over or under, generally *under*, the bass notes. Thus, the following figured bass —

would be played thus:

There are three Scales; the Major, the Minor, and the Chromatic. The *major* scale is formed by whole tones and semitones. So is formed the *minor*, but in the minor scale, the half tones are placed in different positions from those in the major; and the chromatic scale is formed by semitones only. The major contains five whole, and two half tones, distributed thus:

The real minor scale contains three whole tone intervals, three half tone intervals, and one interval of a tone and a half, (from the 6th to the 7th,) thus:

This is the only minor scale, both ascending and descending, which is justified by the harmony. But in the mere melodic minor scale the sixth and seventh are variable; a law of euphony compels us sometimes to sharpen the sixth and seventh by accidentals, in *ascending*, and again to flatten them in *descending*, thus:

There are four kinds of intervals; major, minor, diminished, and extreme sharp. A minor interval contains one

semitone less than a major. E is the major third of C; E flat the minor third. There is one semitone in a minor second, and two in a major second; three semitones in a minor third, and four in a major; five in a minor fourth, and six in a major, &c.

EXAMPLES.

Major Interval. Minor. Minor Second. Major. Minor Third. Major Third. Minor Fourth. Major Fourth. Major Fifth. Minor Sixth. Major Sixth. Minor Seventh. Major Seventh. Major Eighth, or Octave.

A diminished interval contains one semitone less than the minor interval, thus:

Diminished Third, made by taking away one semitone from Minor Third.

The extreme sharp interval is formed by adding one semitone to the major interval. All minor intervals become diminished intervals, by taking away a semitone from each. All major intervals become extreme sharp intervals by adding one semitone to each.

There are two primitive harmonies; a simple harmony, often denominated a common chord, and a compound harmony, frequently, but improperly, called a discord. A simple harmony is the tonic, or key note, with its third and fifth; the eighth may be added, but this is merely doubling the tonic. No figures are necessary to denote a simple harmony; therefore, whenever you see a bass note without any figure over it, you must play the simple harmony of that note.

When *Tasto Solo*, or T. S. is written over notes having no figures, such notes are to be played as they are written, unaccompanied by any harmonies. All the notes of the scale bear simple harmonies; but as all the harmonies of the scale are derived from the scale itself, it will be found that they vary in their natures. For instance, the tonic bears a major harmony, the second of the scale bears a minor harmony, and the seventh or leading note bears a diminished harmony, although the figures $\frac{5}{3}$ are the same on all three notes.

A major harmony may be known by its third: if the third be major, it is a major harmony. A minor harmony may also be known by its third: if the third be minor, it is a minor harmony. A diminished harmony may be known by its third and fifth: if both be minor, it is then a diminished harmony.

Major. Minor. Minor. Major. Major. Minor. Diminished.

The seventh is the only sound in the major scale which bears a diminished harmony.

REGARDING THE HARMONIES BELONGING TO THE MINOR SCALE.

The tone of the minor scale bears a minor harmony, because its third is minor. The second bears a diminished harmony, because its third and fifth are both minor. The third bears a major harmony, because its third is major. The fourth bears a minor harmony, because its third is minor. The fifth bears a minor harmony, because its third is minor.

Tonic. 2d. 3d. 4th. 5th.

When the fifth of a minor scale is used as a dominant, the third of its harmony must be sharpened by an accidental. All dominants bear major harmonies.—The sixth and seventh of a minor scale, in ascending, bear diminished harmonies, because the third and fifth are both minor. In descending, they bear major harmonies, because the third is major.

Dominant 5th. 6th. 7th. 7th. 6th.

Ascending. Descending.

All the other notes of a minor scale bear the same harmonies in ascending as in descending.

A flat, sharp, or natural, placed over any bass note, indicates that the third of the note is to be played either flat, sharp, or natural, according to the sign.

The student should now endeavor to fill up the subjoined exercise before he proceeds to the next study. Each bass note is to bear its own simple harmony.

REGARDING THE DERIVATIVES OF A SIMPLE HARMONY.

When the third or fifth of a simple harmony is used for a bass instead of the tonic, it becomes a derivative.

There are two derivatives of a simple harmony, viz: $\frac{6}{4}$ and $\frac{6}{8}$.

The first derivative of a simple harmony is formed by making the third of the harmony your bass instead of the tonic, and placing over it the figure 6, thus:

Whenever you see a note with a 6 over it, you must play the harmony of the sixth note above, thus:

The E, the third of C, is omitted in the treble, because in this harmony you must avoid doubling the bass note, which is the major third of the tonic. The major third is of so very powerful a nature, that were you to double it, (particularly in a piano movement,) it would create a harshness: remember that this rule is to be applied to all harmonies.

The major third may be doubled in fortissimo movements, where noise is the principal object: and also, where correct progression cannot be obtained without it.

First Derivative of Simple Harmonies.

The second derivative of a simple harmony is formed by making the fifth of the harmony your bass instead of the tonic, and placing over it the figures 4 and 6, thus:

Whenever you see a note with the $\frac{4}{6}$ over it, you must play

the harmony of the fourth note above, thus :

The bass note is doubled in the treble, because the rule that applied to the major third does not apply to the major fifth; whenever, for the sake of adding fulness to your harmony, you wish to double some of the notes, the best first note to be doubled is the tonic, and the next best is the fifth of the tonic.

Second Derivative of Simple Harmonies.

REGARDING COMPOUND HARMONIES.

A compound harmony is a simple harmony with one or more sounds added to it. The dominant seventh is most frequently used. It is formed by adding a minor seventh to the simple harmony of the dominant or fifth of the tonic; and the full figuring of a dominant seventh is 7 5/♭, but the simple figure 7 is, in most cases, sufficient. A minor seventh is added to the simple harmony of the dominant to create a new and stronger power. You may remain as long as you please upon a simple harmony; but the moment you add a seventh, it becomes necessary that you should almost immediately move from that harmony to another. The first rule by which you must move from a dominant seventh is, that the seventh must descend either a whole or half tone. The second rule is, that the third must ascend a half tone. The fundamental and its fifth move according to circumstances. This is called the resolution of the dominant seventh.

The first resolution of the dominant seventh is into the harmony of its tonic major, thus :

The second resolution of the dominant seventh is into the harmony of its tonic minor, thus :

The third resolution of the dominant seventh is into the harmony of the minor third below the tonic, and is formed exactly the same as the first resolution, with the single exception of the bass rising one whole tone, instead of to the tonic, thus :

The third of the second harmony is doubled by the third and fifth of the first harmony, (the one ascending and the other descending to the same note,) because, had the D, the fifth of G, ascended to E, it would have formed consecutive or following fifths, which, with one exception, is never allowed. The exception to this rule is, that an imperfect fifth may follow a perfect fifth, thus :

There is one other rule, which forbids the use of hidden fifths, which occur in passages similar to the following :

In this instance B is the hidden fifth, which, although not actually sounded, would have nearly the same effect upon a delicate ear, as if it had been sounded.

Consecutive octaves are equally to be avoided; they occur when two notes of the same name move in the same direction, thus :

The difference between octaves and unisons is, that octaves are accompanied by harmonies, unisons never.

The fourth resolution of the dominant seventh is into the harmony of the major third below the tonic: the progression of each note is the same, with

one exception, as in the second resolution; the bass in this resolution ascends a semitone only, thus :

In this resolution we are compelled to double the major third of the second harmony; for did we make D, the fifth of G, ascend to E flat, the fifth of A flat, consecutive major fifths would be the result, which is never allowed.

Exercise of the Dominant Seventh, with its Four Resolutions.

REGARDING THE DERIVATIVES OF THE DOMINANT SEVENTH.

The dominant seventh has three derivatives: the 3, 5, and 6; the 3, 4, and 6; and the 2, 4, and 6. The first derivative is formed, as in the case of simple harmonies, by taking the third for a bass instead of the fundamental, and placing over it the figures 6, thus :

A note bearing 6 means that you must play the harmony of the sixth note above, to which you are to add the fifth.

Exercise of the First Derivative of a Dominant Seventh.

A straight line placed over two or more notes, means that you should hold on the harmony you have taken with the first note, while you play all the notes which fall under the straight line, thus :

The second derivative of the dominant seventh is formed by taking the fifth for a bass, instead of the fundamental, and placing over it the figures $\frac{3}{4}$, thus:

A note bearing $\frac{3}{4}$ means, that you must play the harmony of the fourth note above, to which you are to add the third.

Exercise of the Second Derivative of the Dominant Seventh.

The third derivative of a dominant seventh is formed by taking the seventh for a bass instead of the fundamental, and placing over it the figure 2, thus:

A note bearing a 2, means that you must play the simple harmony of the note above.

Exercise of the Third Derivative of the Dominant Seventh.

All the notes of the scale may bear sevenths; but the dominant or fifth of the scale is the only note which bears a *major third* and a *minor seventh*.

Each seventh (the dominant excepted) is resolved into the harmony of the fourth note above the bass note, thus:

The doubling of the eighth of the bass in the second example is omitted to avoid consecutive octaves.

REGARDING THE DIMINISHED SEVENTH.

The harmony of the diminished seventh may be formed by raising the bass note of any dominant seventh one semitone, thus:

A diminished seventh is to be resolved into the harmony of the semitone above the fundamental, thus:

Exercise of the Diminished Seventh.

A diminished seventh has three derivatives, the same as the dominant seventh, and they are formed by the same rules; but in the derivatives of a diminished seventh there will always be found an accidental sharp, flat, or natural, attached to one part of each derivative, thus:

You will know the first derivative of a diminished seventh by the figures. Whenever you see a note bearing the figures $\frac{b7}{5}$, you will know it to be the first derivative of a diminished seventh, and you must play the harmony of the sixth note above, which note you will sharpen, and to which harmony you will add the fifth note above the bass, thus:

The second derivative of the diminished seventh is indicated by the figures $\frac{2}{3}$ being placed over a bass note. Play the harmony of the fourth note above, which note you will sharpen, to which you must add the third, thus:

Each note of the derivatives is to move in its resolution, exactly in the same manner as when the fundamental was taken for a bass. The bass note bearing a diminished seventh is always the fundamental of that harmony, although some writers assert, that the fundamental is to be found a third below, bearing a minor seventh with a flat ninth added; thus they would say, the diminished seventh on G sharp is the simple harmony of E, with a minor seventh and a flat ninth added. E has no more to do with this harmony than F has to do with the simple harmony of A minor.

The fundamental is always to be found in each separate harmony. For example: This is the harmony of C bearing a minor seventh: if you first take away the C, the harmony immediately becomes that of the diminished harmony of E, E now being the fundamental; take away the E, it becomes the harmony of G minor, G now being the fundamental; take away the G, and the B flat becomes the fundamental.

PASSING NOTES.

Passing notes are those which, by license, you are allowed to sound in passing from one note to another, without in any way altering the harmony from which you move, or the one to which you are moving.

In the following harmonies of C and F, between the G and A, there is a G sharp which may be sounded, forming the passing note:

Passing notes may be carried to almost any extent. In passing from one C to its octave, every semitone between those

two notes might be sounded, without in the least altering the harmony. Example:

The extreme sharp sixth is formed by the system of passing notes: it being really nothing more than the first derivative of the harmony of the seventh of the major scale, (which, you know, bears a diminished harmony,) the third being flattened by license as a passing note, thus:

Some authors consider G as the fundamental of this harmony.

THE DIFFERENT POSITIONS OF HARMONIES.

A harmony can be taken in six different positions—three close positions, and three open positions.

The three close positions are 6 5 4 3 2 1 thus:

The three open positions are 5 4 3 2 1 6 thus:

The derivatives have also six positions.

A sequence is a succession of similar harmonies; as a sequence of thirds, a sequence of sixths, &c. A sequence may be formed of mixed harmonies; the following is a sequence of fifths and fourths:

The next, of fifths and sixths, descending and ascending:

DESCENDING.

ASCENDING.

The next is a sequence of sevenths and sixths by suspension, which might with equal propriety be called a sequence

of appoggiaturas; the seventh, in this case, being nothing more:

A sequence is seldom composed of more than three notes in each harmony.

CADENCES.

A cadence, in harmony, means a termination or close. There are two sorts of cadences—perfect and imperfect. There is but one perfect cadence; all the rest come under the latter denomination.

A perfect cadence is formed by the harmonies of the subdominant and the dominant seventh, followed by that of the tonic, thus:

All other cadences are imperfect. To prevent the harshness between the two first harmonies, it is usual to introduce the harmony of the tonic before taking that of the dominant seventh, thus:

SUSPENSIONS.

A suspension is formed by holding on a part of one harmony, instead of at once moving the whole to the following harmony, thus:

This is the suspension of the third.

Suspensions are generally prepared, which preparation is accomplished by sounding the note in the first harmony, which is employed to suspend the note in the second. A suspended note is prepared by the note above; thus, the third is prepared by the fourth; the fifth by the sixth, and so on.

MODULATIONS.

Modulation is the passing from one key to another. The easiest modulation is from a given note to the harmony of the fourth note above. This is accomplished by merely adding a minor seventh to the first harmony, which immediately changes it to a dominant seventh: its tonic is to be found a fourth above, into which harmony you resolve, according to the rules heretofore given, thus:

An enharmonic change is formed by changing the name and position of a note without (on keyed instruments) changing the sound, thus:

The enharmonic change is of great use in modulation, as it enables the modulator to go, by a very short road, from flat to sharp keys. Suppose we wished to modulate from the key of C through all the major keys, and back again to C by means of the dominant seventh only, this could only be done by the assistance of the enharmonic change, thus:

First system of musical notation, showing a treble and bass staff with chords and notes.

Second system of musical notation, showing a treble and bass staff with chords and notes.

In modulating from one key to another, you must first consider the relationship between the key from which you are going, and the one you wish to arrive at. The easiest modulation is to either of the attendant keys—which are the dominant, the subdominant or fourth of the scale, and the relative minor.

You can modulate from any key to either of its attendant harmonies by merely passing through the dominant (with its minor seventh) of the key to which you wish to modulate. Thus, from C to its attendant harmony, the dominant, which is G, you must pass through the harmony of D, the dominant of G, to which you must add a minor seventh:

Or to its attendant harmony, the subdominant, which is F, you must pass through the harmony of C, the dominant of F, to which you must add a minor seventh:

Or to its relative minor, which is A minor, you must pass through the harmony of E, the dominant of A, to which you must add a minor seventh:

You may modulate to a key bearing no relationship to the key from which you wish to move, by modulating through various keys until you arrive at one bearing some relationship to the key you aim at. For example, C natural bears no relationship to G flat, yet, by adding a minor seventh to the C, and taking advantage of the fourth resolution of the dominant seventh, (which it has now become,) we very soon arrive at a key that does: thus,

relationship to G flat, yet, by adding a minor seventh to the C, and taking advantage of the fourth resolution of the dominant seventh, (which it has now become,) we very soon arrive at a key that does: thus,

having arrived at D flat, we find it to be the dominant of G flat; therefore, by adding a minor seventh, we shall quickly accomplish our aim.

HARMONIES WHICH ARE NOT TO BE CONSIDERED AS INDEPENDENT HARMONIES.

The harmony of the seventh and flat ninth added is nothing more than the diminished seventh on the seventh of the scale, using the dominant as a bass, thus:

The resolution of this harmony is exactly the same as it would be were the G not played; namely, into C.

The harmony of the 2, 4, 5 and 7, is merely the dominant seventh played upon the tonic; and its resolution is the same as if the fundamental had been taken as a bass, thus:

Any harmonies may be played upon the tonic or dominant, and at times upon both combined. This latter observation applies more particularly to movements in the pastoral style.

RHYTHM.

Rhythm, or rhythmus, means proportion. There are two kinds, a simple and a compound rhythmus; into one of these all music can be divided. Music in simple rhythm when it can be divided into proportions of two bars each; the final close coming upon the second bar of the last rhythm. A compound rhythm is formed by commencing a new rhythm upon the last bar of the preceding rhythmus. This very frequently takes place in symphonies and overtures: for example, the following is from Haydn's Surprise Symphony:

Compound Rhythm.

At the end of the third bar, the compound rhythm takes place.

We close this short treatise upon THOROUGH BASS, &c., with a remark on COUNTERPOINT, or the art of adding to a *given subject* one, two, three, or more parts, which, by their combination, shall form an harmonious whole at once systematically correct and agreeable to the ear. Counterpoint presupposes some acquaintance with the principles of harmony, of which, indeed, it is the first and simplest application. If its study be pursued in connection with thorough bass, harmony, and modulation, it cannot fail to lead the pupil by easy and almost imperceptible degrees to a thorough knowledge and facility in the practice of composition. The following system may be adopted. First, —

Select a subject, consisting of a few notes, all of equal length, and each, for greater simplicity, generally occupying one entire bar. This subject begins with the key note; in the course of it, no intermediate cadence or rhythmic point of repose is introduced; and it usually closes with the tonic, preceded by the second note of the scale. Example: —

Such a subject is sometimes called a *plain song*; or, from the Italians, a *canto fermo*. To this subject, which may be taken either as a bass or an upper part, the student is first taught to write a *second part*, formed of notes of equal length to those of the given subject, and consisting only of *concord*s; that is, of unisons, thirds, fifths, sixths, or octaves, intermixed; or of the octaves to these consonant intervals. Example: —

After having sufficiently practised this species, which we will call the *first species* of counterpoint, the student will proceed to write *two* equal notes to each note of the subject. Here the first or *accented* note must always be a concord; but the second note may be either a concord or a *discord of transition*; that is, a *passing note*. In the latter case, the dissonant note must neither be taken nor quitted by a skip; and this may be called the *second species* of simple counterpoint. Example: —

In triple time, three notes are written to each note of the subject. Example: —

The stars in this example point out the passing notes.

The *third species* admits of four, six, or eight equal notes being placed against each note of the subject; but, in other respects, it does not materially differ from the preceding species, as only *concord*s or notes of transition can be used. Example: —

When this species is well understood, the student may proceed to the *fourth species*, in which again only two notes are written against each note of the subject, except in triple time. Its chief peculiarity is, that the last note of each bar is continued by syncopation, so as to form the first note of the following bar. The last note in each bar must always be a concord; but the first note of the bar will, in consequence of this syncopation, be sometimes a *concord* and sometimes a *discord of suspension*; in the latter case, it must be resolved by descending one degree to a concord: thus the ninth resolves into the eighth, the seventh into the sixth, and the fourth into the third; and, when the suspensions are in the bass, the second resolves into the third, and the fourth into the fifth. Example: —

We will now proceed to the fifth and *last species*, which admits of various notes, and which is, in reality, an admixture of all the preceding kinds: this is called *florid counterpoint*. Example: —

FIFTH SPECIES, IN THREE PARTS.

In additional parts use notes similar in length to those of the subject, and thus fill up the harmony with four or five parts. The counterpoints in which the *essential discords* are employed are these: the different chords of the seventh and their inversions, the $\frac{6}{5}$, $\frac{6}{4}$, and $\frac{6}{2}$, the superfluous sixth variously accompanied, the chord of the $\frac{6}{4}$, and the imperfect common chord, altered chords, &c.

BASS VIOLIN. In instrumental music, when the passage ascends above the bass staff, the tenor clef is sometimes introduced, and the notes are thus performed on the violoncello, as a bass violin.

BASS VIOL. Properly, violoncello. (See that instrument.) A stringed instrument, resembling in form the violin, but much larger. It has four strings and eight stops, which are subdivided into semistops, and is performed by a bow. This instrument has long been in use, and is much esteemed. It has a noble effect in concert. See **VIOLONCELLO**.

COMPASS OF THE STRINGS.

BASS VOICE. The gravest or deepest of the male voices.

BASS CHANTANTE. (F.) Singing bass. This expression is applied to any bass, the notes of which flow in a smooth and pleasing manner; forming in themselves, independently of the superior parts, a graceful kind of melody. Not the fundamental bass, but the second, or melodious bass.

BASS CLEF. The character placed at the beginning of a staff, in which the bass or lower notes of a composition are placed, and serving to determine the pitch and names of those notes.

BASS COUNTER, or CONTRA BASS. The under bass. That part which, when there are two basses in a composition, is performed by the double basses, the violoncellos taking the upper bass, or *basso concertante*.

BASSA. (I.) Lower.

BASSANI, GIOVANNI BATTISTA, of Bologna, the violin master of Corelli, was a pupil of Carissimi, and a man of extensive knowledge and abilities in his art, having been not only a successful composer for the church, the theatre, and the chamber, between the years 1680 and 1703, but an excellent performer on the violin. His sonatas for the violin, and accompaniments for that instrument to his masses, motets, psalms, and cantatas, manifest a knowledge of the finger-board and bow, which appears in the works of no other composer anterior to Corelli; and the lovers of the pure harmony and simple melody of that admirable master would still receive great pleasure from the performance of Bassani's sonatas for two violins and a bass.

BASSANI, GERONIMO, born at Venice towards the close of the seventeenth century, was an excellent singing master and composer of tragicomic dramas, among which are especially cited "*Bertoldo*" and "*L'Amor per Forza*."

BASSANI, ORAZIO. A celebrated Italian composer in the sixteenth century. Purcell is said, but we believe without reason, to have imitated some of the compositions of this master.

BASSE. (F.) The bass part, whether vocal or instrumental.

BASSE CHIFFRÉ. (F.) The figured bass.

BASSEGGIO, LORENZO. An Italian composer about the year 1715.

BASSETTO. (I.) The diminutive of *basso*. The name sometimes given to the tenor violin; or to a small bass viol.

BASSET HORN, CORNO DI BASSETTO, (I.) **COR ANGLAIS,** (F.) This instrument

is but seldom used. Its tone is very sweet, and in solo passages, it is capable of producing very striking effects; it resembles a hautboy of a large size, a little bent at the top. Its real compass comprises the notes contained between F bass and B flat in *alt*, except the note F sharp, which is deficient. As the person who plays the hautboy generally takes this instrument, the part for it is usually written a fifth higher than its real pitch, thus:—

Two basset horns are sometimes used instead of two clarinets or two hautboys; but this is only in compositions of a tranquil and religious character.

BASSI. An Italian buffo singer about the year 1797.

BASSIRON, PHILIPP. A composer of church music at Venice in 1513.

BASSISTA. (I.) The singer who takes the lowest part.

BASSO. (I.) The bass. Basso, in choral scores, is generally placed against the staff of the instrumental bass, in preference to that of the vocal bass.

BASSO CONCERTANTE. (I.) The bass of the little chorus. The bass which accompanied the softer parts of a composition, as well as those which employed the whole power of the band. This part is generally taken by the violoncello.

BASSO CONTINUO. (I.) Continued bass. This expression is applied to that *bass part* of a composition which is figured for the organ, harpsichord, or piano-forte, in concert.

BASSO OSTRUTTO. Ground bass, or constrained bass. See **GROUND BASS**.

BASSO PRIMO. The fundamental or first bass.

BASSO RECITANTE. The bass of the little chorus.

BASSO RIPIENO. The bass of the grand chorus; that bass which joins in the full parts of a composition, and, by its depth of tone and energy of stroke, gives a powerful contrast to the lighter and softer passages, or movements.

BASSO RIVOLTATO. A term used by the Italians to signify that bass which, instead of being the fundamental, or lowest note of the chord to which it is applied, consists of the third, or the fifth, of the fundamental note. Such a bass is also called *basso secondo*, to distinguish it from the fundamental bass, which is called *basso primo*.

BASSO SECONDO. A second bass.

BASSOON. The compass of the bassoon extends from double B flat up to B flat in *alt*, three octaves, including all the intermediate semitones except B natural. The notes C sharp and D flat, however, are very bad, and should not be used. When the bassoon ascends very high, the notes are generally written in the tenor clef.

C, OR TENOR CLEF, IN UNISON WITH THE BASS, OR F CLEF.

This instrument serves as the bass to the wind instruments, and frequently doubles the bass of the orchestra; its tone is so assimilated to that of the hautboy, as to render it the natural bass to that instrument. The bassoon is imperfect, and requires the assistance of a good musical ear to blow it in tolerable tune. To make it more portable, it divides into two parts, whence it also bears the denomination *fa-vot*, or *fagotto*, because

when taken to pieces and bound together, it resembles a fagot, or bundle of sticks. Its diameter at bottom is nine inches, and its holes are stopped, like large flutes. A good bassoon is said to be worth four or five hundred pistoles. The bassoon has fourteen holes, as represented by the fourteen lines in the scales, eight of which are stopped by the thumbs and fingers, and six with the keys. The six first holes are stopped with the fingers; the seventh with the F, or great lower key; the eighth with the A b or G# key, which is the small key at the bottom; the ninth with the F# key, or the key governed with the right hand thumb; the tenth is the right hand thumb hole; the eleventh with the long key above the right hand thumb hole, which is governed with the left hand thumb; the twelfth with the small key above the right hand thumb hole, which is the E b or D# key; the thirteenth is the left hand thumb hole; the fourteenth with the upper long, or double B b key, which is the lowest note on the bassoon, to make which, you must stop at once, with your left hand thumb, two keys and one hole, as may be seen by the scale.

The bassoon was probably introduced into England by Handel, as it does not appear to take a part in any composition prior to the publication of "Tamerlane," in 1720. In his oratorios, Handel introduces the bassoon as a mere helper, and it rarely appears as a principal; it joins the hautboy

in reply to the stringed instruments, and these alternate changes from the violins and basses to the wind instruments were the first attempts at orchestral effect. The bassoon was a drudge in the orchestra for more than fifty years, before it was raised from its menial station to become a principal there. It is now made a very eloquent and interesting instrument.

DIATONIC SCALE FOR THE BASSOON.

The holes in the above scale are numbered; and the numbers are the same in the diatonic scale. It will be seen that the manner of sharpening double C and flattening double D is not given, because they cannot be sounded perfectly without an additional key.

First learn the notes on the bass clef, and then those on the C or tenor clef may be attended to. The C clef, occurring frequently in bassoon music, ought to be well understood. When the learner has a sufficient knowledge of the notes,

and can readily call them by their names, it will be advisable to practise the scale. The black dots represent the holes which are to be stopped, and the ciphers those which are to remain open. Great care should be taken to have the reed in good order. An old reed, if sound, is far better than a new one. It should be sufficiently thin to blow easy, and yet so stiff as to sound the notes full and distinct. When you have your reed in good order, be sure and preserve it so, and let no person but yourself ever touch it. The holes are numbered in the direction the wind passes

through the instrument: beginning at the mouth piece, it passes to near the bottom; then, returning, makes its escape at the bell above the mouth piece. To transpose a tune for the bassoon, or any other instrument, observe, first, what key it is in, which may be seen by comparing the key note, and the number of flats or sharps prefixed to the clef; and having raised the key note to G, D, or F, &c., taking care to keep within the compass of your instrument, raise or lower every note exactly in the same proportion. The same fingering, in some instances, on the bassoon, gives different sounds; the alteration being produced entirely by blowing and pinching the reed; but this, practice will soon make easy. The reed requires a gentle pressure of the lips, to be gradually increased as you ascend to the highest notes. A performer who wishes to excel will learn the G clef in addition to the F and C. The bassoon, which belongs to the oboe species, and forms its bass, was invented by Alfranco, a canon of Pavia, A. D. 1539. It was, it is supposed, introduced into England by Handel, about 1720. It consists of a long tube, doubled near the centre, so as to allow the thumbs to play several low notes. It is blown with a reed, through a brass tube. When well played, the tones of the bassoon are sweet and plaintive, and make a good accompaniment; but if not well managed, its tones are coarse and disagreeable. It is one of the most important and effective instruments in the band; and, by the modern additional keys, may be made a very accurate accompaniment to vocal music. In Germany, a large species of this instrument, called the double bassoon, *contra fagotto*, is sometimes used, and gives the octave below; but, in addition to its articulating sounds very slowly, it is very difficult to play, and requires a very robust constitution.

BASSUS. Some derive this barbarous Latin term from the Italian word *basso*; others think with Zarlino, the Italian musical writer, that *basis* is its root, and that it originally implied the fundamental sounds upon which all harmony, and even melody, is constructed.

BASTA, or BASTANTE. (I.) Enough, or stop. An expression by which a performer in a band understands that he is not to proceed any further, unless directed by the leader or conductor.

BASTAMENTO. An eminent Spanish musician in the sixteenth century.

BASTERWITZ. See PASTERWITZ.

BASTIDE. A French author. In his works, called "*Varidés Littéraires, Galantes, &c.*," Paris, 1774, is a letter on the great schools of music.

BASTINI, VINCENZO. A composer of the sixteenth century. He published madrigals, &c., at Venice.

BASTON, JOSQUIN. A good composer of Flanders between the years 1545 and 1559. "He wrote," says Dr. Burney, "in a clear and clean manner."

BATAILLE, GABRIEL. A lute player at Paris between the years 1608 and 1612.

BATEN, FLEUR, a native of Flanders, wrote a work on music about the year 1350.

BATES, JOAH, ESQ., one of the commissioners of the customs, was a good musical theorist, and an excellent performer on the organ. He was a native of Halifax, in Yorkshire, and born about the year 1740. Such were his talents, and so great was his repute as a sound musician, that, at the commemoration of Handel in Westminster Abbey, he was fixed upon as manager to arrange the band, and to superintend and conduct the performance. To this gentleman are also to be ascribed the undeviating correctness and energy which for many years attended the choral performances at the concerts of ancient music, of which he was conductor till the year 1793, when he was succeeded by Mr. Greatorex. It is understood that none of the compositions of Mr. Bates have hitherto been given to the public. He died in 1799.

BATES, MRS., wife of Joah Bates, was a celebrated female singer. She was remarkable for her fine and clear articulation, which has been compared to that of Garrick in acting. She is said, by a professor of great reputation, to have possessed vast natural requisites for a singer, to which was added high cultivation. She studied Handel with that great judge and enthusiastic admirer of his compositions, the late Mr. Bates, her husband, and the Italian school with Sacchini. Her voice was full and rich, her shake brilliant and equal, and her expression, especially of Handel's pathetic airs, matchless. She was not confined to the soprano, for she sang the contralto songs, "He was despised," and "Return, O God of hosts," with such feeling and expression as they had not received since the days of Mrs. Cibber. In the "Rosy Bowers" and "Mad Bess" of Purcell, she was inimitable.

BATES, JR., professor of music at Halifax, in Yorkshire, was an eminent performer on the violin. His brother was also eminent on the double bass.

BATESON, THOMAS. Organist of the cathedral at Chester about the year 1600. He published a set of "English Madrigals, for three, four, and five voices;" he also contributed to Morley's collection of madrigals, called "The Triumphs of Oriana." Bateson is justly placed among the best of our madrigal writers.

BATHE, W., an Irish Jesuit, wrote a work on music in 1596.

BATILLUS. An instrument used by the Armenians in their church service. It was metallic, formed like a staff, furnished with rings, and yielding a harmonical sound.

BATISTIN, or BAPTISTIN, JEAN STUCK, born at Florence, was a composer and first violoncello at the opera at Paris. He died in 1745.

BATON, the younger, wrote in favor of the ancient style of French music, in opposition to J. J. Rousseau, in the year 1754.

BATON. (F.) The rod or stick used by the conductor of an orchestra in beating the time, &c.

BATTEN, ADRIAN. Organist of St. Paul's in the reign of Charles I. and II. He composed some church music of no remarkable character.

BATTERE. (L.) The downward or first beat of any measure.

BATTEUX, CHARLES, died in Paris in 1780. He was an abbot at Rheims, and wrote several works relating to music.

BATTIFERNI, LUIGI. A composer of church music in the first half of the seventeenth century.

BATTINO. An Italian composer of instrumental music in London in the year 1790.

BATTISHILL, JONATHAN, was the son of an attorney, born in London in the year 1738. At the age of about nine years he was placed in the choir of St. Paul's, where he received the usual instructions in singing from Mr. Savage, who was at that time the master of the boys there. At an early age he was regularly articled as apprentice or pupil to this person, and prosecuted his studies with great diligence. This anxious spirit of research, combined with constant practice on the organ, (says the writer of his life in the "Public Characters,") at once stored his mind with those riches of harmonic combination and evolution on which he formed his style, and gave him a command of hand adequate to the execution of whatever his imagination suggested; and at the expiration of his engagement with Mr. Savage, he was considered one of the best extemporary performers on the organ which his country could boast. He had not been long his own master before he was solicited to compose some songs for the theatre of Sadler's Wells; and he produced, for that place, several of the best ballads of the time. He was next engaged to preside at the harpsichord at Covent Garden Theatre; and afterwards was appointed organist, first of the united parishes of St. Clement, Eastcheap, and St. Martin Orgar, and subsequently of Christ Church, Newgate Street. About this time, in conjunction with Michael Arne, he wrote the music of an opera entitled "Alcmena," the subject of which was taken from the Persian history. It was performed at Drury Lane in the year 1764, and excellent as the music was, the managers found it necessary, from the general insipidity of the drama, to lay it aside, after having been repeated five times. This piece was shortly afterwards succeeded by the "Rites of Hecate," a musical drama, in which he afforded further proofs of his very superior talent. Notwithstanding Battishill's numerous engagements with the theatre and his pupils, he by no means neglected the study of sacred music, but produced at different times several anthems and hymns, which, for their various excellences, have been much admired. In the composition of *catches* and *glees*, he has afforded numerous proofs of the diversity of his taste and genius. About the year 1770, he obtained the prize of the gold medal, given by the Noblemen's Catch Club, at the Thatched House, St. James's Street, to the composer of the best cheerful glee; this was obtained by his well-known glee for three voices, "Underneath this myrtle shade." In 1776, he published by subscription two excellent collections of three and four part songs. Soon after his engagement at Covent Garden, Battishill married a Miss Davies, one of the vocal performers of that theatre. She died in the year 1773, and from this period he dissipated much of his time in convivial parties, and

so far gave way to excess, as gradually to undermine his constitution. He died at Islington in 1801, aged sixty-three years; and, according to his last request, was interred near Dr. Boyce, in the vaults of St. Paul's Cathedral. It has been stated that the memory of Battishill was such, that even the longest compositions of Handel, Corelli, or Arne, were always sufficiently present to his recollection, during the time he was playing them, to render the assistance of the text unnecessary. It is said, that if he had once heard music, the impression of it was almost indelibly fixed on his mind; and a very singular instance has been recited in proof of this fact. He was one day dining with Dr. Arnold, when he played, from memory, several passages of the doctor's oratorio of the "Prodigal Son," which he had not heard for thirty years, and which the doctor himself had entirely forgotten.

With respect to the general character of Battishill's compositions, they are marked by a peculiar strength of idea, great force and justness of expression, a masterly disposition, and a happy contrivance in the parts. Four of his anthems, "Call to remembrance," "How long wilt thou forget me, O Lord?" "I will magnify thee, O Lord," and "Deliver us, O Lord our God," are printed in Page's *Harmonia Sacra*. He also left in manuscript at his death six anthems, several psalm tunes, and some glees, rondos, and songs. Some of his choruses in "Alcmena," for science, dignity, and expression, deserve to be classed with the first-rate productions. Most of his songs are likewise extremely energetic and vigorous; this, in particular, is the characteristic of the two bass songs, "Poised in heaven's eternal scale," and "Thus when young Ammon marched along." As proofs of the beauty and originality of his fancy in ballad composition, every one will admit the charming pastoral melody of "Ye shepherds and nymphs of the grove," the mellifluous and affecting air of "When Damon languished at my feet," the expressive passages in "When beauty on the lover's cheek," and, above all, his popular song of "Kate of Aberdeen."

BATTISTA, ALB. L. FR., composed some sonatas at Augsburg. He was an excellent violinist, born in Suabia in 1700.

BATTISTINE, GIACOMO, chapel-master at Novara in 1700, published a collection of sacred music at Bologna.

BATTLE HYMN. During and previous to many of the battles of the ancients, they had hymns and war songs composed and dedicated to certain gods. At the expedition of Cyrus against the Babylonians, before he came within reach of the enemy, he gave the rallying word, which was "Jupiter, protector and conqueror," and then caused the war hymn to be sounded, to which the soldiers answered with a loud voice. This hymn was dedicated to Castor and Pollux, and whenever it was sung, it seemed to inspire the soldiers with both military and religious ardor. So also at the battle with the Persian army; history says, "On the first signal of Cyrus, his troops faced about on every side, keeping a profound silence in expectation of the event. The prince now thought it time to *sing the song of battle*. The whole army answered it with loud

shouts and invocations to the god of war." At the battle of Cunaxa, when the armies were not far distant from each other, "the Greeks began to sing the hymn of battle; and after the death of young Cyrus, on seeing the victors approach, they sang a hymn." During the wars sustained by the ancients in Africa, Agathoiles, desirous of putting his soldiers under the necessity of conquering, by leaving no other refuge than victory, resolved to burn every ship in his fleet. Therefore, "taking a flambeau in his hand, and causing the battle song to be sounded, he hastily led the way on board his own ship, and set fire to it. All the other officers did the like, and were cheerfully followed by the soldiers. The music sounded from every quarter, and the whole army resounded with joyful shouts and acclamations." Of the general treatment of captives by the Babylonians, we know but little. They were a musical people, and had taste enough to appreciate their poetical and musical talents; and they were summoned occasionally to amuse the banquets of their masters, though it was much against their will that they sang the songs of Zion in a strange land. "By the rivers of Babylon, there they sat down and wept when they remembered thee, O Zion." No nation, perhaps, at that early period, were equal to the Babylonians either in vocal or instrumental music.

BATTUTA. (I.) The art of beating time.

BATU. A composer of instrumental music at Paris in 1798.

BAUCK. An organist in Saxony, and composer in 1799.

BAU. (G.) The *structure*, speaking of musical instruments, &c.

BAUD, M., published at Paris, in 1803, observations on strings for musical instruments.

BAUDIOT, CHARLES H. An instrumental composer at Paris in 1802. He was also professor of the violoncello at the Conservatory, and one of the authors of the method for his instrument, approved by that body.

BAUDRON, ANTOINE LAURENT, first violin at the *Théâtre Français*, was born at Amiens in 1743. He composed the music of several operas, among others the new music to the "*Pygmalion*" of J. J. Rousseau.

BAUER, FRANCOIS, a violinist of extraordinary quickness and precision, was born in Bohemia. Mozart heard him at Prague, and is said to have much admired his playing.

BAUER, CATHARINE, an amateur pianist, pupil of Sterkel, published some piano-forte music in the years 1798 and 1799. She was born at Wurtzburg in 1785.

BAUER, G. CHARLES. A composer about the year 1785.

BAUERSACHS, CHRISTIAN FRIEDRICH. A performer on the bass horn and violoncello, also composer for the above instruments. He was born at Anspach, in 1770.

BAUERSCHMIDT, pianist and composer, resided at Petersburg in 1794.

BAUMANN, PAUL CHRISTOPHIE. Director of the music and composer at Stuttgart about the year 1740.

BAUMBACH, FR. A., was director of the orchestra at the theatre of Hamburg, about the year 1783. He published, from that time up to the year 1799, a great variety of vocal and instrumental pieces.

BAUMBERG. A German instrumental composer since the year 1783; some of his works have been published at Amsterdam, others at Berlin.

BAUMGARTNER, JEAN BAPTISTE. A celebrated violoncellist. He wrote "*Instruction de Musique théorique et pratique a l'Usage du Violoncelle*," published at the Hague. He composed also for his instrument, in various parts of Germany and Holland. He died at Eichstadt in 1782.

BAUMGARTEN, C. F. Organist of the Lutheran church in Savoy, and leader of the orchestra at Covent Garden Theatre, towards the close of the last century. Besides his performance on the violin and organ, he deserves notice as an instrumental composer and profound harmonist.

BAUMGARTEN, GOTTHILF VON, an officer in the Prussian service, composed and published several German operas between the years 1775 and 1779.

BAUMGARTEN. An excellent performer on the bassoon. He resided in London about the year 1784.

BAUR, CHARLES ALEXIS, was born at Tours, in France, in 1780. Both his father and mother were professors of the harp and piano in that town, and gave their son instructions on those instruments. At the age of sixteen Baur went to Paris, and became a pupil of the celebrated Naderman. In the year 1820 he went to London, where he established himself as professor of his instrument, and published some pleasing music for the harp, piano, and flute, among which we may name "*Le Caravan*, by Gretry, arranged for the Harp." (Harm. Inst.) "*Duet for the Harp and Flute.*" (Id.)

BAURANS, N. A French composer of *petits operas* in the Italian style, died in 1764.

BAUSTELLER, JOHANN CONRAD. An instrumental composer since the year 1729. He published at Amsterdam six sonatas for the harp-sichord, in the year 1760.

BAVERINI, FRANCESCO, an Italian composer, wrote a sacred opera called "*La Conversione di S. Paolo*," at Rome, in 1440.

BAYART, CONSTANZ A. M. A German composer at Osnabruck about the year 1700. He has published some piano-forte music, and also songs.

BAYER, JOSEPH D., a composer for the piano, published his Op. 1 at Augsburg, in 1801.

BAYER, ANDRE, an organist and composer at Wurtzburg in 1710.

BAYER, MILLE. A female composer at Vienna in 1797.

BAYLY, ANSELM, LL. D., published "The Alliance of Music, Poetry, and Oratory," London, 1789.

BAYON, MLLÉ., published six sonatas at Paris in 1770.

BAZZINO, or BAZZANI, NATALE. A composer of masses, motets, &c., at Venice. He died in 1639.

BAZZINO, or BAZZANI, FRANCESCO, younger brother of the preceding, was a celebrated theorist and composer, born in the Venetian states in 1600. He died in 1660.

B DOUBLE, or DOUBLE B. That B below G gamut; or the twelfth below the bass-clef note.

B DURUM, or HARD B. B NATURAL. So named in opposition to *B Mollé, or soft B.* See *B MOLLIARE.*

B FLAT is the flat seventh of the natural key C, and the first flat introduced, in modulating by fourths, from the natural diatonic mode.

BEALE, JOHN. An English pianist, and pupil of the celebrated Cramer. In 1820 he was elected a member of the Philharmonic, having performed repeatedly at the concerts of that society. About the same period he became associated with Messrs. Attwood, Braham, &c., in the unfortunate speculation of rebuilding the Argyle Rooms, was a performer and director in the concerts undertaken by that musical combination, and contributed as a composer in the formation of their musical catalogue. In 1821, a commemoration of Mozart took place, at Beale's suggestion, on which occasion Cramer united with his pupil in the performance of a duet, (on two pianofortes,) selected from the most classical music of that departed genius. Beale was since recently appointed a professor of his instrument, in the Royal Academy of Music, and to one of his pupils was adjudged the annual prize medal distributed at the first concert of the students. Among various pleasing compositions by Beale for his instrument may be mentioned the two dramatic airs, "Will great lords and ladies," from the "Haunted Tower," and "*Fra tante angoscie,*" by Carafa, both arranged beautifully as rondos for the piano-forte.

BEALE, WILLIAM. An English composer of madrigals, glees, and other vocal music. He was educated as a chorister of Westminster Abbey, and was an excellent part singer. In 1813, he obtained the prize cup given by the Madrigal Society, his composition on that occasion being "Awake, sweet Muse." W. Beale published at Birchall's, in 1820, a collection of glees and madrigals, which did him great credit. "He borrows," says an eminent modern critic, "from the old school, with the lofty and independent air of a man who is conscious he can repay; and as he has given us sufficient proof of his ability to copy other styles, we trust that he will go on to form and improve a style of his own." Certainly we may add, that the peculiar harmony of the old madrigals has never been so well imitated as by Beale, since the publication of Dr. Cooke's "In the merry month of May." Among various songs by Beale, the cantata of "Brutus" is especially worthy the attention of amateurs.

BEALE, professor of music at Manchester, was an excellent violoncellist. He performed at the York meeting in 1823.

BEARD, JOHN. An English singer of celeb-

riety. His name first appears in the *dramatis personæ* of Handel's operas performed at Covent Garden in 1736. Beard had his musical education in the Chapel Royal under Bernard Gates. He first became a great favorite of the town by his style of singing Galliard's hunting song, "With early horn." His voice was a rich tenor. He died in 1791, in the seventy-fifth year of his age. He was highly esteemed in private life.

BEARING NOTES. In the tuning of key instruments, harps, &c., bearing notes signify those notes between which the most erroneous or highly-tempered fifth is situate, on which also the *wolf* is said to be thrown. Many tuners begin at C, and tune upwards, through the progression of fifths, C, G, D, A, E, B, Gb, Db, and Ab, and then stop and begin again at C, the octave above the former note, and tune downwards, through the fifths F, Bb, a \sharp Eb, and thus the resulting fifth Ab, Eb, produces *bearing notes*; owing to each fifth having been made more or less flat than the system of twelve notes will bear, the *least sum* of all their errors or temperaments being the *Diaschisma*. Some tuners are in the habit of throwing their *wolf* into the fifth Ab, Db, and others into that of Db, Gb, which last, as being nearest to the middle of the whole progression of fifths, seems its most appropriate place for general use.

BEAT, or BATTEMENT. (F.) A transient grace or ornament in the performance of a note, denoting that a kind of shake is to be made, by beginning with the *half tone below* the given note, and quickly repeating the given note and that; on the contrary, the shake, marked *tr.*, is effected by beginning on the note *above* the given one, (whether a half or whole tone distant,) and repeating the given note and it alternately. The *turn* differs from both of these in using the notes above and below the given one. When, therefore, a whole tone lies below any note marked for a beat, an accidental sharp is to be supposed on that lower note, except that A is seldom thus sharpened in a beat. The beat is, therefore, the reverse of the shake, (but without the turn,) and is made generally at the distance of a semitone below; and all the notes, excepting C and F, require the note below to be sharpened for the beat. The beat upon B natural, however, is seldom made with A sharp, on account of the great harshness arising from the vicinity of the semitone B C. In some cases of regular accent, it is recommended not to make the beat with the semitone, unless particularly so marked.

BEATINGS. Those regular pulsative heavings, or swellings of sound, produced in an organ, by pipes of the same key, when they are not exactly in unison, i. e., when their vibrations are not perfectly equal in velocity; not simultaneous and coincident; which, as Mr. Emerson observes, occasions a repetition of noises like *vave, ave, ave, ave,* or *ya, ya, ya, ya*; these are called *beats* by Dr. Robert Smith, Mr. Emerson, and we believe every other mathematical writer that notices the phenomena. Earl Stanhope, in a letter in the "Philosophical Magazine," vol. xxviii. page 150, has labored to make a distinction between the meaning of *beats* and *beatings*, in order to identify the former with the pulses or vibrations of the sounds themselves, and to denominate the above

phenomenon by the exclusive use of the term *beatings*.

BEATS. The audible phenomenon attending the sounding of two notes at the same time, which approach within certain limits to the producing of a concord with each other, which the late Dr. Robert Smith, in his "Harmonics," has applied, with the happiest effect, to the practical tuning of instruments, according to any given system or arrangement of the intervals. The phenomenon of beats forms, also, the means by which practical tuners, unacquainted with theory, or the exact comparative magnitudes of intervals, adjust the notes of organs, piano-fortes, harps, &c., by the judgment of their ear, in the daily exercise of the tuning profession.

BEATING TIME. That motion of the hand or foot used by the performers themselves, or some person presiding over the concert, to specify, mark, and regulate the measure of the movements. If the time be common, or equal, the beating is also equal — as, down, left, right, up, or one down and one up; if the time be triple, or unequal, the beating is also unequal — as, down, left, up, &c.

BEATTIE, DR. JAMES, the celebrated author of the poem "The Minstrel," wrote also an essay on poetry and music as they affect the mind. In his essay on the nature and immutability of truth are likewise to be found several ingenious observations on the subject of music. Born in Scotland, 1735, died 1803.

BEAUJOYEUX DE —. See **BALTAZARINI**.

BEAUMESNIL, MILEE, composed the opera "Les Legislatrices," at Paris, in 1786. Died there in 1813.

BEAUMONT, SAUNIER DE, a French author, wrote a letter on ancient and modern music, Paris, 1743.

BECARRE. (F.) The sign \natural , or natural.

BECHE. There were several brothers of this name, musicians to the King of France, about 1750; one of them assisted in editing the solfeggi of Italy.

BECK, C. F. A pianist and composer in Germany, in the latter part of the eighteenth century.

BECK, FRANCOIS. An eminent composer at Bourdeaux. His "*Stabat Mater*" was performed at Paris in 1783, and highly applauded. He died in 1809, at an advanced age. Four operas by Beck, each consisting of six symphonies, were published at Paris about the year 1776.

BECKEN. An ancient musical instrument, much used by the Turks on festive occasions.

BECKER, or BEKER, C. L. Organist at Nordheim, and an instrumental composer since the year 1790.

BECKER, D. Violinist and instrumental composer at Hamburg in 1668.

BECKER, FRED. AUG. Composer of vocal music at Frankfurt in 1775.

BECKER, JEAN, died at Cassel in 1803. He was organist there, and composed much music for the church.

BECKMANN, JEAN FREDERIC GOTT. LIEB, a celebrated popular instrumental and vocal composer in Germany between the years 1768 and 1790, one of the best pianists of the last century. He published sonatas, concertos, &c. He died in 1792, aged fifty-six.

BECKWITH, DR., organist of the cathedral and of St. Peter's at Norwich, was a very able theoretical and practical musician, and a scholar of the Haynes of Oxford. Some very simple instructions by him, for playing thorough bass, are given in the first volume of the "Quarterly Musical Review," p. 380. Dr. Beckwith was the master of Vaughan, the singer. He composed the glee, "Hark o'er the waves," and "The Suppliant's Prayer," a song. "Six Anthems" of his are also published by Clementi.

BE CZWARZOWSKY, A. F. Vocal and instrumental composer in Germany between the years 1794 and 1801.

BEDARD, JEANE BAPTISTE, born in Brittany about 1765, died 1815, composed violin music, two symphonies for orchestra, and in 1800 a method for the violin.

BEDE, surnamed "the venerable," was born in 672, in the diocese of Durham, in England, and was brought up in the monastery of St. Paul, at Yarrow, in which he passed his whole life. He was ordained deacon at the age of nineteen, and priest at thirty. He is believed to have died in his convent, in 735, at the age of sixty-three. An edition of his works was published at Cologne in 1612, (8 vols. folio,) in which we find two treatises upon music, one entitled "*Musica quadrata seu mensurata*," (Music squared or measured,) and the other "*Musica Theoretica*." Burney and Forkel both think that the first of these treatises must have been the work of a later writer. Yet it is not proved that no notions of measured music existed among the northern nations in the eighth century. In his "Ecclesiastical History," Bede mentions a harmony in two consonant parts, of which there were examples in England in his time. His two works on music have been united under the title, "*Venerabilis Bede de Musica Libri Duo*," (Basle, 1565.) The book is exceedingly rare. In the eighth volume of his works is found a little essay entitled, "*Interpretatio vocum rariorum in Psalmis, quibus instrumenta musica vel alie species singulares denotantur*," (Interpretation of the usual names by which musical instruments, &c., are called in the Psalms.)

BEDFORD, ARTHUR, died in England in 1745. He published "The great Abuse of Music," London, 1711; also, "The Temple of Music, or an Essay concerning the Method of Singing the Psalm of David in the Temple before the Babylonish Captivity," 1712.

BEDOS DE SELLES, DOM FRANCOIS, a Benedictine of the congregation of St. Maur, member of the Academy of Sciences at Bourdeaux and correspondent of the Academy at Paris, was born at Caux in 1706, and died in 1779. He published at Paris, in 1776-8, a work in 3 vols. folio, called "*L'art du facteur d'orgues*," (The Organ Builder's Art.) The fourth part contains an abridged history of the organ.

BEDRICK. A harper. He is said to have possessed no less than three villas in Gloucester-

shire. It is therefore evident that at a very early period commenced the custom of extravagant remuneration for musical ability.

BEECKE, IGNAZ VON., captain of dragoons in the regiments of Prince Frederic of Wurtemberg, at Vienna, composed a considerable quantity of vocal and instrumental music between the years 1780 and 1802. His compositions for the piano-forte are much admired at Vienna. He died in 1803.

BEER, JOHANN. See BAHR.

BEER, JOSEPH (sometimes written *Boer* by the Germans) was born in Grünwald, in Bohemia, in 1744. At the age of fourteen he played in a military band in the emperor's service, and afterwards was trumpeter in the French army during the Seven Years' War. Chance led him to Paris, where he became connected with the music of the Duke of Orleans. Here he first devoted himself to the study of the clarinet. He remained here twenty years. In 1788 he visited Holland, Italy, and Russia, where his talent excited great admiration. In 1791 he gave a brilliant concert in Prague, then went to Hungary, and returned to Prague in 1792, at the coronation of the Emperor Francis II., at which time his concerts created great enthusiasm. Called to Berlin soon after, he remained there as concert-master to the Prussian monarch until 1808. Thence he revisited Prague, and returning to Berlin, died in 1811. Before him the art of playing the clarinet was in its infancy; he may almost be said to have created this instrument, since he overcame so many of its imperfections. In his kind he was one of the most remarkable artists that Germany has produced. But few compositions of his are known; one concerto for the clarinet, six clarinet duos, an air with seven variations, &c., are all that Fétis mentions.

BEETHOVEN, LOUIS VAN. The greatest composer of the present century, was born in Bonn, on the Rhine, December 17, 1770. His father was tenor singer in the elector's chapel, a man of irregular habits, besides being a severe taskmaster to the boy, whose early musical education he superintended in person—a stubborn, impetuous, impatient boy, who hated to sit still, and had absolutely to be driven to the piano, and yet who loved music dearly in his own way. These were circumstances to inbitter the sweets of home, and to provoke to surly self-reliance a genius which could not brook artificial methods, and could feel its own appointed way better than rules and teachers could show it. Yet he loved to talk of the good old grandfather, who died when he was but three years old, and he always cherished a warm affection for his mother. Besides music, the rest of his education was common enough—the rudiments of a public school, and “a little Latin.” But the ideal side of his nature found a more genial home in the society of the refined and hospitable family of Von Breuning, his warmest friend through life. The family consisted of the mother, three sons, and a younger daughter, who became Beethoven's pupil. These were his good angels, who could appreciate his mind, and forgive his sins against conventionality. Here he was always welcome and at home; here he grew familiar with intellectual society, and with the works of the German poets.

At the age of 15, he was appointed organist in the chapel of the Elector of Cologne, Max Franz brother of the Emperor Joseph II. This post was obtained for him by Count Waldstein, an amateur of taste, who was the first to recognize his genius, and his friend and patron through life. An anecdote of his skill and playfulness at this time is related:—

“On the last three days of the passion week, the Lamentations of the Prophet Jeremiah were always chanted; these consisted of passages of from four to six lines, and they were sung in no particular time. In the middle of each sentence, agreeably to the old choral style, a *rest* was made upon one note, which rest the player on the piano (for the organ was not used on those three days) had to fill up with a voluntary flourish. Beethoven told Heller, a singer at the chapel, who was boasting of his professional cleverness, that he would engage, that very day, to put him out, at such a place, without his being aware of it, so that he should not be able to proceed. He accepted the wager; and Beethoven, when he came to a passage that suited his purpose, led the singer, by an adroit modulation, out of the prevailing mode into one having no affinity with it, still, however, adhering to the tonic of the former key; so that the singer, unable to find his way in this strange region, was brought to a dead stand. Exasperated by the laughter of those around him, Heller complained to the elector, who (to use Beethoven's expression,) “gave him a most gracious reprimand, and bade him not play any more such clever tricks.”

It was while in this situation, a few years after, that he had an opportunity of showing a cantata of his own composition to Haydn, who, on his way home from England, was invited to a breakfast by the electoral band. The result, as we may suppose, was encouraging to the young artist. He continued to busy himself with the composition of small sonatas, songs, and especially variations for the piano. A feat of his in this kind displayed his extraordinary power before Sterkel, the most accomplished pianist whom Beethoven had ever heard. “The doubt expressed by this finished performer, whether the composer of these variations could play them fluently himself, spurred on Beethoven, not only to play by heart such as were printed, but to follow them up with a number of others extemporized on the spot; and at the same time he imitated the light and pleasing touch of Sterkel, whom he had never heard till then, whereas his own usual way of playing the piano was hard and heavy, owing, as Beethoven declared, not to his want of feeling, but to his practising a great deal upon the organ, of which he was very fond.” But it was natural, that the impetuous, restless young artist should incline more to excess of strength than of delicacy in his playing.

His life in Bonn terminated in 1792, when, by the favor of the elector, and through the instrumentality of his old patron, he was sent to Vienna, to enjoy the instruction of Haydn. He was now twenty-two; and he looked back upon this period as the happiest part of his life. Very little is told of it. Evidently he was not a youth to be easily known. He lived in his art, too absorbed in it to be much given to dazzling exploits before the crowd. The deafness which withdrew him from the world at a later period was already predicted

and prepared in the rapt and inward tone of his whole mind. He was indeed morally "deaf" from the first to what most regard the loudest call; by birth and constitution an awkward stranger in the world of countenance, and ill conformed to its details and its regularities. He had then and always a great dislike to giving lessons. He never would have submitted to it, to help himself; only the necessities of his family and the thought of his dear mother could induce him to it. Madame von Breuning used to compel him against his will to go over to the opposite house, and continue his lessons in the family of the Austrian ambassador. As he knew himself observed, he would sulk along, "*ut inique mentis assellus*," but even on the doorstep would often turn back, and promise to give two hours the next day, for it was impossible to do it now. After one of these occurrences, or any like freak of wayward genius, Mue. von Breuning was accustomed to wink and say, "Our Beethoven has had another '*raptus*'" — a phrase which he was fond of using, as we shall see.

It is to be regretted that more is not preserved of his sayings and doings in the house of Von Breuning, for there, it seems, he was in his element. How intimate his relation was to these good friends, and how nobly he could repent of the violent impulses which were always involving him in misunderstandings with his friends, is shown by a letter which he wrote from Vienna to the daughter, his pupil, in 1793.

"CHARMING ELONORA. My dearest Friend: A year has elapsed since my stay in this capital, and this is the first letter you receive from me; yet rest assured you have ever lived in my recollection. I have often conversed with you and yours, although not with that peace of mind which I could have desired, for the late wretched altercation was hovering before me, showing me my own despicable conduct. But so it was; and what would I not give, could I obliterate from the page of my life this past action, so degrading to my character, and so unlike my usual proceedings. It is true, there were many circumstances widening the breach between us, and I presume that in those whisperings, conveying to us our mutual expressions, lay the chief source of the growing evil. We both imagined that we spoke from conviction, and yet it was but in anger, and we were both of us deceived. Your good and noble mind has, I know, long forgiven me; but they say that self-accusation is the surest sign of contrition, and it is thus that I wanted to stand before you. Now let us draw a veil over the whole affair, taking a warning by it, that should a difference arise between friends, they should not have recourse to a mediator, but explain face to face. You receive herewith a dedication from me to you, and I only wish the work were greater and more worthy of you. Let it be a revival of the many blessed hours which I spent at your houses; perhaps it may tend to recall me to your mind until I return, which, however, will not be so soon. How we will rejoice then, my dear friend! You will find me a more cheerful creature, whose days of trouble have passed away, their furrows smoothed by the lot of better days," &c.

Vienna was too much the seat of the Muses, with its princely amateurs, its congress of great artists, Haydn still living, the spirits of Gluck and of Mozart (only a year since departed) still hovering over the place, ever to let him "return;" and "*Esther days*" he was destined never to know.

He went to Vienna, already a distinguished composer, but comparatively ignorant of the science of counterpoint; for his own instinct revealed to him the laws, so far as they were founded in nature; and he had no hesitation then, or ever after, in setting at nought such as were merely arbitrary. His own sense of beauty he trusted, in spite of science; and the world soon acknowledged in the violation of the law the presence of a higher law. That he learned much from Haydn is evident from the traces of Haydn perceptible in his earlier style, (for instance, in the *first* symphony in C major, and in his first set of three sonatas dedicated to that master.) But his confidence in him as a teacher was soon destroyed. For returning one day from his lesson, with

his roll of music under his arm, he met the learned composer, Schenk. Schenk ran his eye over it, and found it full of mistakes, which had not been noticed, though Beethoven said that the exercise had just come from Haydn's correcting hand. This aroused his suspicion; and taking advantage of Haydn's second visit to England, he withdrew from his instructions entirely, and was never again intimate with him. Schenk from that time became the confidential corrector of his compositions, even after Albrechtsberger gave him lessons in counterpoint.

It was the Augustan age of music in Vienna when Beethoven settled there, perhaps the only place where he could have found patrons worthy of him. His proud disregard of outward rank, which he would never condescend to flatter, and which (unless he found it combined with benevolence) he could hardly treat with conventional courtesy, believing as he did that genius and virtue derive the only true patent of nobility from Heaven; his exposure to calumny through the strangeness of his manners, and to the malignant criticism of those who envied his rising fame, and could not understand his compositions; and his determined principle of never writing a word in his own defence, unless his honor were attacked, — would have found him little favor, had there not been among the wealthy and powerful of Vienna those who had a soul for art, and insight enough to read his Heaven-derived patent of equality with the greatest.

His first welcomer and friend was Von Swieten, once physician to the Empress Maria Theresa — a zealous amateur, whose delight it was, in his old age, to assemble the finest musical talent in his house. Here Beethoven became acquainted with the compositions of Handel, Bach, and all the great masters as far back as Palestrina; and he was always obliged to stay after the rest were gone, and add half a dozen fugues of Bach "by way of a blessing." Frequently the old man would not let him go at all.

The Prince Carl von Lichnowsky, too, the most noble-minded of those Austrian princes, with his consort, became like father and mother to the young artist. Their "kindness pursued" him, and "did not abate even when the adopted son, by his obstinacy, would have forfeited the favor of any other patrons." The princess found every thing he chose to do or let alone "right clever, original," &c. To use his own words: "They would have brought me up there with grandmotherly fondness, which was carried to such a length that very often the princess was on the point of having a glass shade made to put over me, so that no unworthy person might touch or breathe upon me." It was at Prince Lichnowsky's music parties that all Beethoven's compositions were first tried. To the prince's strictures he always listened with respect; and indeed censure from those whom he trusted was dearer to him than praise. Here too was that famous "Rasumowsky Quartet," consisting of the same four superior artists, who for years performed Beethoven's quartets under his own direction; thus forming a tountain head of the genuine Beethoven spirit, and the standard for players all over the world.

Thus far hope and prosperity attended him. By the year 1800 he had composed his two first symphonies, over twenty sonatas, trios, quartets

and his well-known septet, embracing many of his most admired productions. Not only at the shrine of art had he worshipped. Love was the ruling star and chief source of his inspiration through this early period and long after. Though never married, though never blessed with a fair ministering spirit, like Mozart's Constance, though utterly uncommunicative on the whole subject, yet it appears that the secret passion always preyed upon him. But so ideal was it that it doomed itself to disappointment. Its objects, it is said, were generally persons of rank; for with such, necessarily, he chiefly associated. Here was the beginning of sorrows — one of the causes which shut his heart against the world, and made him solitary and reserved, while it infused a depth and strength of passion, an unutterable longing, into his compositions of that time. His "Sonata Pathétique," (Op. 13), his Sonata in A b, (containing the "*Marcia Funebre*," (Op. 26,) and that other, in C♯ minor, (Op. 27,) called the "Moonlight Sonata;" his incomparable song "*Adelaide*," &c., &c., may be regarded as confessions of a platonic love, which shrunk from the cold air, where words pass current. The *Giulietta Guicciardi*, to whom the latter sonata is dedicated, was for a long time the "bright particular star." Nothing is told concerning her; but we have several of his letters to her, written in 1806, which are full of the purest passion, while their abrupt, impatient style seems all along to curse the coarse and unmanageable nature of speech.

In the year 1800 he composed his only oratorio, the "Mount of Olives," which he wrote during a summer residence in a pleasant village adjoining the Imperial Gardens of Schönbrunn. Both this and his only opera, "*Fidelio*," a few years later, were composed in the thickest part of the wood in the park of Schönbrunn, where he used to sit between the two stems of an oak, which shot out from the main trunk a couple of feet above the ground. But before this time, "the evil principle," (as he called it,) in the shape of his brother Carl, had begun to govern him, taking advantage of his ignorance of worldly affairs, and making him suspicious of all the world. His younger brother, John, soon followed and joined the interest of Carl. It was he, who, having by his thrift some years later become an owner of real estate, sent in his card one new year's day, as if to provoke and tantalize his unsuccessful, nobler brother: "John von Beethoven, Landowner." Beethoven returned it, "Ludwig von Beethoven, Brain-owner." Add to these troubles the rapid and alarming increase of his deafness, and we see how wretched was to be the worldly lot of one who was soaring higher and higher into the pure heaven of art. The remarkable "Will," which he addressed to his brothers during a severe sickness in 1802, describes his state: —

"FOR MY BROTHERS, CARL AND . . . BEETHOVEN. — O ye, who consider or declare me to be hostile, obdurate, or misanthropic, what injustice ye do me! Ye know not the secret causes of that which to you wears such an appearance. My heart and my mind were from childhood prone to the tender feelings of affection. Nay, I was always disposed ever to perform great actions. But consider that for the last six years I have been attacked by an incurable complaint, &c. . . . Born with a lively, ardent disposition, susceptible to the diversions of society, I was forced at an early age to renounce them, and to pass my life in seclusion. If I strove at any time to set myself above all this, O, how cruelly was I driven back by the doubly painful experience of my defective hearing! And yet it was not possible for me to say to people, 'Speak louder, howl, for I am deaf!' Ah, how could I proclaim the defect of a sense that I once possessed to the highest perfection — in a perfection in which few of my colleagues possess or ever did possess it! Indeed, I cannot! Forgive me then, if ye see me draw back when I would gladly mingle among you. Doubly mortifying is my misfortune to me, as it must tend to cause me to be misconceived. From recreation in the society of my

fellow-creatures, from the pleasures of conversation, from the effusions of friendship, I am cut off. Almost alone in the world, I dare not venture into society more than absolute necessity requires. I am obliged to live as in exile. If I go into company, a painful anxiety comes over me, since I am apprehensive of being exposed to the danger of betraying my situation. Such has been my state, too, during this half year that I have spent in the country. Enjoined by my intellectual physician to spare my hearing as much as possible, I have been almost encouraged by him in my present natural disposition; though hurried away by my fondness for society, I sometimes suffered myself to be enticed into it. But what a humiliation, when any one standing beside me could hear at a distance a flute that I could not hear, or any one heard the shepherd singing, and I could not distinguish a sound! Such circumstances brought me to the brink of despair, and had well nigh made me put an end to my life; nothing but my art held me hand. Ah, it seemed to me impossible to quit the world before I had produced all that I felt myself called to accomplish. And so I endured this wretched life — so truly wretched, that a somewhat speedy change is capable of transporting me from the best into the worst condition. Patience — so I am told — I must choose for my guide. I have done so. Steadfast, I hope, will be my resolution to persevere, till it shall please the inexorable Fates to cut the thread. Perhaps there may be amendment — perhaps not; I am prepared for the worst — I, who, so early as my twenty-eighth year, was forced to become a philosopher — it is not easy — for the artist, more difficult than for any other. O God, thou lookest down upon my misery; thou knowest that it is accompanied with love of my fellow-creatures, and a disposition to do good! O men, when ye shall read this, think that ye have wronged me, and let the child of affliction take comfort on finding one like himself, who, in spite of all the impediments of nature, yet did all that lay in his power to obtain admittance into the rank of worthy artists and men."

In 1802, Beethoven commenced his "Heroic Symphony," which was not finished till 1804. It was intended in honor of Napoleon, to whom Beethoven, in the simplicity of his enthusiasm for freedom, looked up as the hero of democracy. The score lay before him, neatly printed, and dedicated to the First Consul, when the news was brought to him that Napoleon had caused himself to be proclaimed Emperor of the French. Instantly he tore off the title page, and flung the work upon the floor; and it was long before he could be induced to give his mind to it again. When he did, he changed its title to "Heroic Symphony, to celebrate the Memory of a Great Man" — and the famous funeral march became rather a lamentation over disappointed hopes in a man.

"*Fidelio*" occupied him exclusively in 1804-5, the stormy history of whose first production we may not stop to relate. He found his peace again in a form of art where there were no singers to consult, no opera manager or public to please, only his own artistic ideal, namely, in the symphony. The years 1806-8 witnessed the production of his fourth, fifth, and sixth symphonies — the last two being the one in C minor, and the "*Pastorale*." He directed the orchestra himself. But here again his deafness caused new trouble; for in listening for the coming in of the different parts, he would unconsciously retard the time and mislead the performers, and sometimes get involved in serious alterations with them.

In 1809, he was tempted to leave Vienna by the offer of a good situation from a neighboring monarch. This roused the pride of some of his noble patrons, who subscribed an annuity of four thousand florins for him, on condition that he would not leave Austria. A depreciation of the currency reduced this sum to one fifth, and the death of one subscriber, and the failure of another, reduced it still further; so that he relied mainly on his compositions for support.

It was in 1810 that he met, perhaps, the most appreciating spirit with whom he ever conversed, in the person of the girl Bettine Brentano, of Frankfort, who seems to have passed in and out unannounced among people of genius, by a sort of divine right; and whose letters to Goethe contain some of the best things which have been said concerning Beethoven.

"I could not get any one to introduce me," she says, "but I found him out alone. He has three apartments, in which he alternately secretes himself: one in the country, one in town, and a third on the ramparts. It was there I found him, on the third floor. I entered unannounced; he was seated at the piano; I gave my name; he was most friendly, and asked me if I would hear a song which he had just been composing, and sang with a shrill and piercing voice that made the hearer thrill with wofulness. 'Knowest thou the land?' 'Is it not beautiful?' and he, enthusiastically 'exquisitely beautiful! I will sing it again.' He was pleased with my cheerful praise. 'Most people,' he remarked, 'are *coared* on hearing music, but those have not musician's souls; true musicians are too *poor* to weep.' He then sang another song of yours, which he had just been composing: 'Dry not, dry not, ye tears, &c. He accompanied me home, and it was during our walk that he said all these fine things on the art — talking so loud all the while, and stambling all so often, that it required some courage to listen to him in the street. He, however, spoke so passionately, and all that he uttered *stirred* me so, that I forgot even the street. They were all not a little surprised at home on seeing me enter the room with him, in the midst of a large dinner party. After dinner he sat down to the instrument, and played unasked, wonderfully, and at great length."

We have not room for the many wonderful sayings ascribed to Beethoven in this letter; the reader will find it entire in the "Correspondence of Goethe with a Child," a translation of which was published in Lowell, Massachusetts, some years since.

Schindler (the biographer to whom we are indebted chiefly for our facts) is disturbed by seeing so much *fine talk* put into the mouth of the down-right laconic artist; and Bettine adds, that when she showed Beethoven what she had written, he exclaimed, "And *did* I say all this? Then indeed I had a *raptus*!" But the letters which he wrote to her a short time after, when she had become the wife of Von Arnim, are in quite as high a strain, and quite as fluent. (See Life of Beethoven, by Moscheles, published in London in 1844.)

Thus far, (1813,) Beethoven's troubles were all of that nature that he could escape from them into his inner world of art. They rather favored the creative impulse. Disappointed love, deafness, want of worldly tact, which, if it drew him into many dilemmas, also brought him exemption from many cares, and his proud, independent spirit, — these only made his abstraction from the outward world more complete, and increased his feeling of the greatness of his mission. Abstraction, entire devotion to his art, and *living* in music, is the key to all his peculiarities and eccentricities in his way of living. Inspired with new musical suggestions, he would even forget his food. Thus there is a story of his going into an inn, and throwing himself down upon a seat, buried in thought; after some time he rose and called for the reckoning, quite unconscious that he had ordered nothing. One of his habits was to stand by the hour pouring buckets of cold water upon his hands, while in the frenzy of composition. And this may have had something to do with his frequent change of lodgings; for often he would be paying for three or four dwelling-places at once — since his humor would have it that now he could not compose unless he were on the north side, and now unless he were on the south side of the city. Once a certain baron assigned to him a suit of apartments in his beautiful villa, and supremely happy was he as he surveyed the charming landscape from his window; yet he soon took a dislike to the place, and for no other reason than because "the baron, whenever he met him, was continually making too profound obeisances to him." He was extremely fond of the country and the open air, and would often walk alone, absorbed in his work, till the day was far spent, nay, be gone for days. Ries relates the following anecdote: —

"In a walk, in which we wandered about a

great while before we got home, Beethoven had kept all the way muttering or partly howling to himself, up and down continually, without singing any definite notes. To my inquiry what it was, he answered, 'A theme has just occurred to me for the last allegro of my sonata, (Op. 57.)' When we entered his room, he ran to the piano, without taking off his hat. I seated myself in a corner, and he soon forgot all about me. And now he thundered away at least an hour at the new and beautiful finale of that composition. Finally he stood up, astonished to see me still there, and said, 'I can give you no lesson to-day. I must *work*.'"

Think, too, of his improvisations on the piano, at which he was fond of seating himself in the dusk of the evening. "In the latter part of his life, his playing at such times was more painful than agreeable to those who heard it. The inward mind alone was active; the outward sense no longer coöperated with it. Sometimes he would lay his left hand flat upon the keyboard, and thus drown, in discordant noise, the music to which his right was feelingly giving utterance." In the soft passages he pressed the keys so lightly that they gave no sound. "The most painful thing of all was to hear him improvise on stringed instruments, owing to his incapacity of tuning them. The music which he thus produced was frightful, though in his mind it was pure and harmonious." Let his deafness convince those, who are spiritually deaf to his works, that music is more a thing of the soul than of the sense!

In the last twelve or thirteen years of his life, Beethoven was subjected to calamities, which served not so much to *abstract* him from the world as to *distract* him altogether. He was forced into relations with the practical side of life, and with the selfishness of the world, which he knew how to renounce, but to engage in which, unfitted as he was, could only craze and bewilder him. He got involved in a provoking lawsuit with Maelzel, the inventor of the metronome, who, it seems, had unfairly appropriated the score of one of his symphonies (called the "Battle of Vittoria," not reckoned among his nine great symphonies); this increased his suspicion of men, and made him watch his copyists with the utmost jealousy. Again: in 1815, his brother Carl died, leaving him the guardianship of his son, since the mother was considered an unsafe person to whom to intrust the education of a child. Hence another lawsuit, continued through several years, subjecting him to all manner of mortifications and distractions, and quite breaking the calm heaven of the creative artist. But his sense of responsibility was strong; and he would leave no stone unturned to secure to himself the undisturbed guardianship of the boy, to whose welfare he studiously devoted himself. Meanwhile, too, in preparation for his new duties, he had undertaken housekeeping, of which, with his bachelor inexperience and eccentricities, he of course made a sorry piece of work — petty vexations all the time. Finally, the boy, who had fine talents, and of whom no father could be more fond than he, proved unworthy and ungrateful, and poisoned his last source of worldly hope. His letters to the young man, (see Moscheles,) in 1825, possess a most mournful interest, and exhibit his deep sensibility, his conscientious regard for duty, the

struggle between his tender love and his stern, uncompromising sense of truth, in the noblest and most affecting light. We pity and admire the noble-minded sufferer when we read the short, pithy, burning sentences.

Every thing seemed to conspire to try the endurance of the high-souled Prometheus, chained to the rock of necessity. Deafness now become almost total, decay of general health, anxiety about the means of subsistence, the intrigues of enemies, the death of his old friend Prince Lichnowsky, and, above all, the degeneracy of public taste in Vienna, (the florid, sensuous manner of Rossini having carried all before it like a flood, so that he, Beethoven, was now considered out of date, though several of his noblest compositions had never yet been heard in public,)—all these things served to cloud and depress him. But he trusted in his soul. There was that in him that was greater than fate. Inwardly he felt allied with the good and all-prevailing Power, the soul and essence of all things. He felt that God was near him in his art. He had been true, and bowed to no meanness; he had sacrificed *self*, and wrought for truth and beauty with a single aim. So that even now his creative energies did not fail him. The greatest of his works (as time is slowly and surely discovering) were produced in those dark days. His Mass, (the second, in D,) which he composed for the installation of the Archduke Rudolph as Archbishop of Olmutz, he himself esteemed his greatest. He made a subscription for a certain number of copies of it among the crowned heads of Europe; and it is remarkable that Goethe, to whom he wrote as prime minister to the Duke of Weimar, found it convenient to return no answer to his old friend. The minister of the King of Prussia suggested to Beethoven whether he would rather receive a royal diploma in lieu of the price proposed. "Fifty ducats!" replied Beethoven firmly, to whom all the badges princes could bestow were no temptation. At the same time his brain was teeming with the conception of his gigantic "Choral Symphony," his ninth and last, in which, having exhausted all the usual orchestral effects, and being at a loss how to carry out his thought on so sublime a scale, he at last exclaimed, "I have it! Friends, let us sing the immortal Schiller's 'Hymn to Joy!'" and a choir of voices accordingly are introduced. These works, as well as the sonatas and quartets of that period, which bring the number of his printed works up to about one hundred and forty, are but beginning to be understood, yet are fast outgrowing the prejudice that they are only the wild and *outré* effusions of a mind nearly insane. Indeed, this insanity bids fair to be the wisdom of ages to come.

Some few bright signs there were to cheer him in the surrounding darkness. What must have been his feelings when, after long withdrawal from the public, his place usurped by the modern showy style, he received a letter signed by many of the noblest names, of persons who had a sense for genuine art, calling upon him, for the honor of music and of Germany, to appear once more, and suffer his Mass and "Choral Symphony" to be performed at a benefit concert.

"Let this summons," they write, "to so noble a work not be heard in vain. Delay no further

to transport us back to those long-departed days when the power of Polyhymnia moved with mighty spells alike the hearts of the multitude and of the consecrated priests of art. Need we say with what deep regret your late retired mode of life has filled us? Is any assurance required that all eyes have been turned towards you, and that all have seen with sorrow that lie, whom they acknowledge as the highest of living men in his own domain, should have looked on in silence while our German soil has been invaded by the footsteps of foreign art, the seat of the German muse usurped, and German works have become but the echo of those of strangers, threatening a second childhood of taste to succeed its golden age? &c. . . ."

Beethoven declined reading the paper till he should be alone. "I arrived," says Schindler, "only just as he had finished its perusal. He communicated to me the contents, and after running them over once more, handed the paper quietly to me; then turning towards the window, he remained some time looking up at the sky. I could not help observing that he was much affected, and, after I had read it, I laid it down without speaking, in the hope that he would first begin the conversation. After a long pause, whilst his eyes never ceased following the clouds, he turned round, and said, in a tone which betrayed his emotion, 'It is really gratifying! I am much pleased.'" "To Schindler's entreaties that he would accept the proposal he replied, 'Let us get into the open air.' After a great deal of discussion and management, not without innumerable provocations, intrigues on the part of selfish managers, &c., the concert was arranged. Still it was a glorious day for Beethoven and for art. The theatre was crowded. The master, standing with his back to the proscenium, was not even sensible of the tumultuous applause of the auditory at the close of the symphony, until Mme. Unger, by turning round and making signs, roused his attention, that he might at least see what was going on in the front of the house. This acted, however, like an electric shock on the thousands present, who were struck with a sudden consciousness of his misfortune; and as the floodgates of pleasure, compassion, and sympathy were opened, there followed a volcanic explosion of applause, which seemed as if it would never end."

Beethoven died on the 26th of March, 1827, aged fifty-six, during a tremendous hail storm, after a most painful sickness, brought on by a cold taken while travelling, and aggravated by carelessness on his own part and neglect on the part of those who should have been nearest to him. Several beautiful anecdotes are told of his last sickness. Thus, only a few days before his death, he received from an admirer in England a magnificent present of all Handel's works, whom he had always revered as the greatest of composers. The volumes were laid upon his bed; and he exclaimed, pointing to them. "That is the true thing," (*Das ist das Wahre*), and he spent his brightest hours for the few last days in poring over the notes of those sublime religious strains.

Beethoven was a Catholic by birth. His was a deeply-religious spirit; although religion was with him rather a matter of sentiment and experimental feeling, than of any technical creed

and system. It is said he had written with his own hand two inscriptions, said to be taken from the temple of Isis, which were framed, and lay constantly upon his writing table. They were as follows:—

I. "I am that which is, — I am all that is, all that was, and all that shall be, — no mortal man hath my veil uplifted!"

II. "He is One, self-existent, and to that One all things owe their existence."

Two things he would never talk about — religion and thorough bass. For he regarded them both as things ultimate and settled; the one the foundation of life, the other of music. He regarded a good life as the only confession of faith; and the production of true works of musical art as the only solution of the laws of harmony. His life and his music alike were a yearning and striving towards the spiritual essence, which he felt to be supreme, and the ground of all things. His music was his religion; into that he poured his life. In his music he aspired to the Infinite. In his music he accomplished the great sacrifice of self, and displayed the heroic will by his resolute adherence to the theme, mastering and controlling his thronging inspirations. In his music was he always true, as in his life, compromising nothing for effect, for immediate success or comfort, but spending himself to give worthy utterance to holy and deep sentiments. In his music are the tenderest love, and energetic will, and loftiest aspiration, and purity and faith; as he himself said, "The secret of all true art lies, after all, in the *morak*." To such truth-loving self-renunciation as his, how much was revealed! How much he has bequeathed to the ages in that language which admits of no misconstructions, like words; which sets forth no partial truths, like all thoughts and systems which are only started to be contradicted; that language which comes from the heart of the man, and expresses the sentiment which reconciles all conflicting views, and speaks to the heart again! When will the world appreciate his music?

We add the following from Fétis' *Biographie Universelle*:—

"Never was the interest which so great a man excited manifested so torribly as during his last sickness: anxiety was depicted on every face; a great crowd obstructed the avenues to his house, and the most distinguished personages called at his door to learn the news. The report of the danger which threatened him was rapidly circulated, and soon reached Weimar, where Hummel was, who departed instantly for Vienna, with the intention of becoming reconciled to Beethoven, who had been angry with him some years previous. On entering the chamber, Hummel melted into tears; Beethoven stretched out his hand to him, and these two celebrated men separated only as true friends. After the fatal moment, a general consternation spread through the city. More than thirty thousand persons followed in the funeral procession, and among the eight masters of the chapel who officiated as pall bearers might be seen Eybler, Weigl, Hummel, Gyrowetz, and Seyfried. Thirty-six artists, among whom were the poets Grillparzer and Castelli, carried the torches. The requiem of Mozart, as also a hymn by M. Seyfried, were performed for the obsequies, in the church of the Augustines; and the remains of the great man

were deposited in the cemetery of Wharing, near Vienna, where a monument was shortly afterwards erected over his grave.

"We know of but two pupils who were educated by Beethoven: one is the Archduke Rodolph, who possesses remarkable talent as a pianist, and who has practised with some success as a composer; the other is Ferdinand Ries. Beethoven was little suited to direct a musical education, as he was too much preoccupied and too impatient, and could not follow the progress of a pupil in methodical order.

"Although twenty-four years old when he published his trios for the piano, violin, and violoncello, which he considered his first production. Beethoven has left a considerable number of works of every kind. His activity of composition might indeed be considered astonishing, were it not that, being secluded from society by the afflicting accident which deprived him of his hearing about the year 1796, it was necessary to devote his whole life to composition. The catalogue of his productions comprises thirty-five sonatas for the piano; thirteen pieces of different kinds for the same instrument, such as andantes, fantasias, preludes, rondos, and dances; twenty themes with variations for the piano alone; twenty-two other themes with variations for the piano, with an accompaniment for the violin, violoncello, or flute; a sonata, two themes with variations, and marches for the piano for four hands; ten sonatas for the piano, with an accompaniment for the violin; six duets for a piano and violoncello; six trios for a piano, violin, and violoncello; a trio for a piano, clarinet, and violoncello; a quartet for a piano, violin, viola, and violoncello; a quintet for a piano, hautboy, clarinet, bassoon, and horn; seven concertos for the piano, the first in C, the second in B flat, the third in C minor, the fourth in C minor, (with violin, violoncello concertante, and orchestra,) the fifth in G, the sixth in D, and the last in E flat; a fantasia for the piano, with a chorus and orchestra; five trios for a violin, viola, and violoncello; a serenade for a violin, flute, and alto; seventeen quartets for two violins, viola, and violoncello; three quintets for two violins, two violas, and a violoncello; a septuor for a violin, viola, violoncello, clarinet, bassoon, horn, and contra-basso; a sextuor for two violins, viola, two horns, and a violoncello; two romances for a violin and orchestra, the first in G and the second in F; a concerto for a violin and orchestra; seventy-four pieces for the voice, with a piano accompaniment—among which we may mention the cantata of 'Adelaide,' the 'Invitation to the Waltz,' romances, ballads, convivial songs, canons, and the 'War Cry of Austria,' a national song composed in 1797; twelve songs for one or more voices, with an orchestra, in one scene of which is the air '*Ah! perfido*;' the song entitled '*Germania*;' three series of Scotch airs; a march and chorus of the '*Ruins of Athens*;' the trio, '*Tremate, empi, tremate*,' and an elegiac song; two masses for four voices, chorus, and orchestra, one in C, (op. 86,) the other in D, (op. 123;) the oratorio of '*Christ on the Mount of Olives*;' a dramatic cantata, ('*The glorious moment*;') '*Fidelio*,' an opera; '*Edmont*,' a melodrama; nine symphonies for orchestra, the first in C, (op. 21,) the second in D, (op. 36,) the third in E flat, ('*Heroic*,' op. 55,) the

fourth in B flat, (op. 60,) the fifth in C minor, (op. 67,) the sixth in F, (pastoral, op. 68,) the seventh in A, (op. 92,) the eighth in F, (op. 93,) the ninth in D minor, with a chorus, (op. 125;) 'The Victory of Wellington at the Battle of Vittoria,' a military symphony for a double orchestra; ten overtures for a full orchestra, viz., 'Prometheus,' (op. 43,) 'Coriolanus,' (op. 62,) 'Egmont,' (op. 81,) 'Leonora,' (op. 87,) 'Fidelio,' and the 'Ruins of Athens,' (op. 113,) 'Nahmensfeier,' (a patronal festival, op. 115,) 'King Stephen,' (op. 117,) 'Weilte des Hauses,' (The Dedication of the Temple, op. 124;) a characteristic symphony, (op. 138;) some detached works for an orchestra, consisting of two minuets, Gernau dances, two waltzes, and the ballet of 'Promethens;' a trio for two hautboys and an English horn, (op. 66;) a sextuor for two clarinets, two horns, and two bassoons; a piece in full harmony, a piece for four trombones, and a march for a military band. Some works had been commenced by the illustrious composer, but were not completed before his death; among which we may mention the plan of a tenth symphony, (an allegretto in E flat, published at Vienna, by Artaria, has perhaps been extracted from this work;) an octet for two clarinets, two hautboys, two horns, and two bassoons; a harmony of eight parts in B flat, a part of which has been published by Diabelli, at Vienna. The first two parts of a quintet for two violins, two violas, and a violoncello, were purchased by the same publisher; also a rondo for the piano and orchestra, (Vienna, Diabelli,) besides three quartets for the piano, and some other pieces of less importance. There have been found, also, among the manuscripts of Beethoven a great number of unpublished pieces, the greater part of which were written in his youth, and condemned to oblivion.

"The works of Beethoven may be divided into several classes, each of which indicates a progressive development of his genius. Being from the first an enthusiastic admirer of Mozart, he could not escape the effect of this admiration — an effect which always manifests itself among men the most original, and the best qualified for invention. Thus, notwithstanding the incontestable originality of his ideas, the trios for the piano, violin, and bass, (op. 1;) the sonatas for the piano, (op. 2, 7, and 10;) sonatas for the piano and violin, (op. 12;) the trios for the violin, viola, and bass, (op. 3, 8, and 9;) and the quartets for the violin, (op. 18,) remind us, in form and arrangement, of the style of Mozart, although different shades of a more distinct individuality are observed when we have advanced as far as op. 18. In the symphony in C, (op. 21,) this shade becomes more vivid, and the scherzo is indeed the pure fancy of Beethoven. And the richness of the composer's imagination shows itself still more brilliantly in the quintet in C for violins, violas, and bass, (op. 29,) and in the beautiful sonatas for the piano and violin, (op. 30.) The symphony in D (op. 36) is a composition less remarkable for originality of ideas than for the merit of its arrangement, which is very great; it is in this symphony that we perceive for the first time that remarkable instinct for instrumental combinations which afterwards gives to the symphonies of Beethoven a beauty so varied, so vigorous, and so brilliant.

But it is in the third symphony particularly, (the 'Heroic,' op. 55,) that the genius of the artist displays itself in the absolute character of creation; there every trace of anterior form disappears, the composer is himself, his individuality rises up with majesty, and his work becomes the type of an epoch in the history of the art.

"The second epoch of Beethoven's life, which is so distinctly marked by his 'Heroic Symphony,' comprises a period of about ten years, during which he wrote, besides this work, the symphonies in B flat, C minor, and 'the Pastoral,' the beautiful quartets of op. 59, the opera of 'Fidelio,' the overture of 'Coriolanus,' the beautiful sonatas for the piano in F minor, F sharp, and E minor, the concertos for the piano in C, G, and B flat, a concerto for the violin, a sextuor for two violins, a viola, two horns, and a violoncello, and his first mass. All these are, in general, founded upon a fancy free and full of boldness, but yet confined within bounds fixed by taste, and by a true feeling of analogy in the harmony, and of the necessity of precision in the idea. To the same epoch belongs also the oratorio of 'Christ on the Mount of Olives;' but a kind of restraint which is frequently felt in the vocal compositions of Beethoven, when he wishes to use scientific forms, has thrown over this work a certain hue of coldness which injures its merit, notwithstanding the beautiful ideas which are diffused through it.

"It appears that the residence of Beethoven in the country was more permanent after 1811 than before, and that at this period he devoted himself, in his lonely walks, and in the silence of his closet, to historical and philosophical pursuits, of which, until that time, he had known but the outlines. His readings became frequent, and he was every day more fully convinced of the necessity of confining himself, as an artist, to the design of ideality, independent of all exterior communication. Inensibly, and without his perceiving it, his philosophical studies gave to his ideas a slight tincture of mysticism, which diffused itself through his works, as we may observe by his last quatuors; and without his observing it, his originality, in becoming systematic, lost something of its spontaneity, and the bounds, within which he had until then kept it, were destroyed. The repetition of the same thoughts was even carried to excess; the development of the subject which he had selected sometimes approached rambling; the idea became less clear in proportion as it was more melancholy; the harmony was characterized by more harshness, and seemed from day to day to indicate the weakness of his recollection of sound — finally, Beethoven wished to find new forms, not so much for the effect of a sudden inspiration as to satisfy the conditions of a preconceived plan. The works composed under this direction of the ideas of the artist comprise the third period of his life, and his last style, upon which we have remarked in the symphony in A, the trio for the piano in B flat, (op. 97,) and the last five sonatas for the piano — those fine works in which the beauties more than make amends for the defects. This style arrives at its limit in the grand mass in D, the last overtures, the symphony with a chorus, and especially in the quatuors for the violin, (op. 127, 130, 131, 132, and 135.)

"Thus we see that the compositions of Beet:

hoven are divided into three classes, each indicative of the particular direction of his genius: those of the first class Beethoven did not value; he disliked to hear them spoken of with praise, and really believed that those who praised them did it merely with a design of undervaluing others. Such a disposition of mind is not without example among great artists, when they are advanced in life. And, notwithstanding his opinion in this respect, it is nevertheless true that many compositions belonging to the first period possess some admirable beauties. The compositions of the second period are those in which the great musician has shown the most power of invention, combined with the most extended knowledge of the perfection of the art. This period extends from op. 55 to op. 92. At the commencement of the third period, his ideas suffered the last transformation, which went on developing itself more and more even to his latest work.

“But what distinguishes the compositions of this great man is the spontaneousness of the episodes by which he arrests, in his beautiful works, the interest which he has created, by substituting for it another as lively as it is unexpected. This art is peculiar to him, and it is to this that his great success is to be attributed. Strangers in appearance, at first thought, these episodes immediately arrest the attention by their originality; then, when the effect of surprise begins to subside, the composer knows how to reunite them to the unity of his plan, and makes us perceive that, in the *ensemble* of his composition, variety is dependent upon unity. Beethoven united to this rare quality a deep feeling of the effect of instrumentation, which does not resemble that of any other author. No one possesses as well as he the art of *filling up* (*remplir*) the orchestra, and opposing harmony to harmony. Hence it is that the effect of his great works surpasses in power every thing which had been done before.

“Whatever diversity of opinion there may be as to the works of the different periods of Beethoven's life, there is one point on which the world will be forever agreed, viz., that the author of these works deserves to be reckoned among the number of the greatest artists, and of those who by their genius have contributed most to the development of their art.”

BEFFROI DE REIGNY, L. A., called *Le Cousin Jacques*. A song writer at Paris, and author of some *petits operas*, between the years 1786 and 1805.

BEGEISTERUNG. (G.) Exaltation, excitement, enthusiasm.

BEGLEITUNG. (G.) An accompaniment.

BEGREZ, PIERRE-IGNACE, was born at Namur, in Belgium, in 1787. At the age of six years he was entered as a chorister in the cathedral church of St. Aubain, where the beauty of his voice was much admired. A few years afterwards, he quitted the Netherlands for Paris, where he was received as a violin pupil at the Conservatory of Music. After this time, he was, during several years, employed in the orchestra, at the Italian Opera at Paris, which was under the direction of the celebrated Grasset. He then quitted the violin, his voice having settled into a fine tenor, and devoted himself entirely to the

study of singing, under the first masters then at Paris; so that, in the year 1814, he gained the first prize for singing at the Conservatory. In 1815, he made his *début* at the Grand Opera, and obtained the greatest success in the principal parts of the several operas, “*Armide*,” “*Les Bayaderes*,” and “*Anacreon*.” He still, however, although he received much encouragement, felt that his studies had formed him rather for the Italian than the French school of singing; he consequently decided to take the earliest opportunity of quitting the French opera establishment, and travelling in Italy. At the close of the year 1815, Begrez went to England as first tenor at the King's Theatre, to which establishment he remained attached till the end of the season of 1821; since which time he quitted the stage, and confined himself to concert singing and tuition.

BEGUE, LE, or **LEBEGUE**, a celebrated organist at Paris, died in 1700.

BEHR, SAMUEL RUDOLPH, published some instrumental trios at Leipsic in 1703.

BELL. A well-known pulsative metallic machine, ranked by musicians among the most musical instruments of percussion. The bell, the metal of which is a composition of tin and copper, consists of three distinct parts—the body, or barrel; the clapper; and the ear, or cannon, by which the bell is suspended. When bells were first invented, or who first introduced them into use in the Latin church, is not positively known. But it is certain that they were employed in the Eastern church in the ninth century, when Ursus Patricianus, Duke of Venice, made a present of a set to Michael, the Greek emperor, who built a tower to the church *Sancta Sophia*, to hang them in. Frequent mention is made of bells in ancient history. At the funeral of Alexander, the collars of the mules that drew the chariot were “enriched with precious stones and gold bells; and to the pavilion of entire gold, erected on the chariot, were fastened large bells, whose sound was heard at a great distance.” Cowper, in the person of Alexander Selkirk, finds no stronger mode of expressing the dreary desolation of the island of Juan Fernandez than the following:—

“The sound of the church-going bell
These valleys and rocks never heard,
Never sighed at the sound of a knell,
Nor smiled when the Sabbath appeared.”

All ears delight in the music of a bell. Milton, for instance, numbers it among his pensive pleasures:—

“Or, on a plat of rising ground,
I hear the far-off curfew sound,
Over some wide-watered shore,
Swinging slow with sullen roar.”

The accents of its iron tongue have a strange influence over human sympathies; or, rather, they chime in with every tone of sentiment, and make religion more venerable, grief more tender, and joy more gladsome. Such an effect has been recognized from the earliest times. The Egyptians ushered in the festal days of their deities by the ringing of bells; and bells were rung, too, in some of the religious solemnities of the ancient Greeks. It is supposed that bells were introduced into Christian churches about the year 400, although they were not brought into general use till three or four centuries after

wards. They were given by princes and great men to religious communities; and, in the early ages of the Catholic faith, it was usual to baptize the bells, with great ceremony; the crossing, benediction, and other rites being performed by a bishop. Many marvellous virtues were attributed to them; and among the rest that of dispelling thunder storms, in order to effect which, they were generally rung amid the roar of the tempest. The church bells were also sounded at the moment when the soul of a dying person was passing from his body; a custom for which there were two reasons — one, that all Christians might be reminded to pray for their departing brother; and the other because the knell was believed to chase away the evil spirits, who watched around the sinner's death bed. Bells have the same general shape in all countries; and it is conjectured that their form was imitated from that of a pot or kettle. They have recently been made without any curvature of the sides, but straight up and down, like a tub. The largest bells in the world are in Nankin and in Moscow. In the former city there were four bells of such size, that, though they were never swung in the belfry, but merely struck with a wooden mallet, they caused the tower to fall, and are said to be still lying amid the ruins. In Moscow there is a bell which was presented to the cathedral of that city by the Empress Anne, the height of which is twenty-one feet, its circumference near the bottom more than sixty-seven feet, and its weight at least four hundred and thirty-two thousand pounds. It remains in a deep pit, where it was cast, and has a fissure in its side, through which two persons may pass abreast without stooping. This enormous bell is worth above three hundred thousand dollars, considering it merely as a mass of old bell metal, and without reckoning the gold and silver, a large amount of which is supposed to be mingled with its materials; for tradition affirms that, while the metal was in a state of fusion, many of the Russian nobility and people threw in their plate and coin. The tone of a bell is thought to be greatly improved by a mixture of silver. Bell metal is composed of copper and tin, generally in the proportion of twenty-three pounds of the latter to one hundred of the former; and it is a singular fact, that not only is the compound more sonorous than either of the metals separately, but is also heavier than their aggregate weight. Bells of moderate size are moulded in the manner of large pots. In the manufacture of larger ones, pits are dug in the earth, and they are cast in a sort of plaster moulds. A cracked bell is generally considered irremediably ruined; but attempts have recently been made, and sometimes with success, to restore the proper tone by cutting out the fractured part. While the "Great Tom" of Lincoln was undergoing this operation, a piece was broken off the rim, eight feet in length, and weighing six hundred pounds. It would have been by no means wonderful, if our pious ancestors, when they emigrated to New England, had rejected the use of bells, and refused to be thus summoned to public worship, because the same mode was practised in the churches and high cathedrals of the ancient faith. They do, in fact, in some of the country towns, and probably in Boston, during the first years of its settlement, appear to have substituted the beat of a drum,

instead of the ringing of a bell, on Sabbath and lecture days. This, however, was attributable to the necessity of the case; and bells were imported from England almost as soon as the Pilgrims had exchanged the canopy of forest boughs for a temple built with hands. The earliest use of bells in North America was probably in the French and Catholic city of Quebec. Every little chapel in the wilderness, where the French Jesuits preached to the red men, had its bell. We recollect to have seen, in the museum of Bowdoin College, one which, we believe, had belonged to the chapel of the martyred Father Ralle. After the priest was slain, and his altar desecrated, by the bloody hands of the New England rangers, this bell, if we mistake not, lay hidden many years beneath the forest leaves; until, being accidentally brought to light, it was suspended in the belfry of the college chapel.

BELLA, DOMENICO DALLA. A performer on the violoncello, and composer in Italy, in the beginning of the eighteenth century.

BELLAMY, THOMAS LUDFORD, was born in the parish of St. John, Westminster, in 1770. He was the son of Richard Bellamy, the celebrated bass singer of his day, from whom he received his first musical education. His next instruction was from Dr. Cooke; and afterwards, when his voice changed to a bass, he became a pupil of the celebrated Tasca, with whom he was to have gone abroad in the year succeeding to that in which Tasca died. Thus disappointed Bellamy pursued his studies in London for some time, and was appointed deputy to his father, and others, in the King's Chapel at St. James's, and in St. Paul's and Westminster Abbey. He was also employed, from time to time, at the Ancient Concerts; on one of which occasions, and some time preceding the last commemoration of Handel, in 1791-2, he was particularly noticed by Joah Bates, who kindly volunteered giving him a series of lessons in singing ancient music. In consequence of such instruction, Bellamy's performance at those concerts was soon crowned with the most flattering success. In the year 1794, finding little hopes of promotion but in the event of deaths, Bellamy resolved on accepting an offer made him to go to Ireland, as agent to a nobleman's estates, which he enjoyed but a short time, as certain mortgages were foreclosed, and he was superseded, and left to speculate in a theatrical career, which commenced by his being appointed stage manager to the Dublin Theatre, in the year 1797. Here he was extremely successful, and in the year 1800 purchased into the Manchester, Chester, Shrewsbury, and Litchfield theatres, as joint proprietor; which property he sold in the years 1803-4, and purchased the Belfast, Londonderry, and Newry theatres, becoming sole proprietor. This last speculation proving unfortunate, Bellamy accepted an engagement at Covent Garden Theatre for five years, and was also appointed a member of the Ancient and Vocal Concerts, Oratorios, &c. In 1812 he was engaged at Drury Lane for five years, retaining his concert engagements and the country meetings, in conjunction with Bartleman, who was his friend and contemporary (man and boy) until the day of his death; upon which event Bellamy was appointed principal bass singer of the Ancient Concerts. He also held the appointment of master of the choir

of his Catholic majesty's chapel, under the Spanish embassy, to which he was nominated in the year 1819. Bellamy had not time to write for publication, all his hours unoccupied in public performances having been engaged in tuition, in the conduct of his *music academy*, established upon the *Logierian system*, since the year 1818.

BELLANDA, LUDOVICO. A very celebrated Italian vocal composer about 1590.

BELLAVER, VINCENT. A poet and composer of madrigals at Venice in 1568.

BELLERMAN, CONSTANTIN, born at Erfurt in 1696, published many vocal and instrumental musical works between the years 1726 and 1735.

BELLETTI, GIOVANNI, the barytone, who accompanied Jenny Lind on her visit to the United States, was born in Genoa in the year 1815. He had ever been passionately fond of music; yet, deeply as he loved it, he did not commence his regular studies with the view of adopting it as a profession until he had attained the age of seventeen. At this time he was admitted as a student in the Conservatory of Bologna, under the direction of Signor Donelli. Under the tuition of this master he speedily arrived at a sufficient knowledge of the piano to make his appearance in public. He then placed himself under the tuition of Signor Pilotti, a master of counterpoint in the same institution, and in the space of a single year and a half was enabled to pass his examination, at which he acquired the diploma of a composer and teacher of singing. After this he returned from Bologna to his native city, and became the master and composer attached to the cathedral. He was paid by a purely honorary stipend; but after his voice had been tried in a few masses it attracted notice, and many of his friends, seeing that he had the means of making it more lucrative than he would probably ever make his present position, advised him most strongly to undertake the far more largely paid career of a theatrical vocalist. After long hesitating whether or not to comply with their advice, his indecision was brought to an end by the Chevalier Bystrom, the sculptor to his majesty the King of Sweden, who, after some difficulty, induced him to follow him to Stockholm. Here propositions were made him of an engagement at the Royal Theatre. These he determined upon accepting. He consequently found himself singing at the side of Jenny Lind, who had not at this time commenced the career which has so completely dazzled and bewildered Europe. His *début* was made in the "*Lucia di Lammermoor*." In this opera he obtained a highly-satisfactory success, and in consequence determined upon embracing the career which was offered him by the stage. In this theatre he remained four years. About this period Jenny Lind quitted Stockholm to make her first appearance at Berlin, and shortly after Signor Belletti resolved upon returning to his native country.

Here he was warmly received, and established his success in Europe by making a reputation of the highest order in his own country—a reputation to be justified not alone by the natural gifts of his voice, but by the thorough and admirable application of that musical science to whose acquirement his earliest years had been devoted.

In the midst, however, of his arrangements with the various Italian theatres, he was written to by Mr. Lumley, and offered an engagement in London at her Majesty's Theatre. The prospect of again finding himself singing with Jenny Lind induced him to accept this offer. He remained with Mr. Lumley three years, and made such a decided impression upon the English public that he would in all probability not have separated his future from them, had it not been at the wish of Jenny Lind herself, who urged him to accept the proposition made him by Mr. Barnum, and accompany her to America, where he sang in all her concerts until her marriage.

As an operatic artist, Signor Belletti holds a high rank; but as an accomplished and clever musician, he has a right to take even higher ground. Since his return to Europe, Belletti has sung at the operas of London and Paris with great distinction.

BELLEZZA, CON. (I.) With beauty of expression.

BELLI, GIOVANNI. A celebrated soprano singer, in 1750, at Dresden. He drew tears from most of his audience in the air of "*L'Olimpiade*," beginning, "*Consola il genitore*." He died at Naples in 1760.

BELLINI, VINCENT, a dramatic composer, was born on the 3d of November, 1802, at Catania, a city of Sicily, and entered at a very early age as a pupil at the Conservatory of Music at Naples. After having learned to play on some instruments, and studied the principles of singing, he had for a master in counterpoint Tritto, and after his death Zingarelli. What these masters taught him amounted to but little; for musical studies have been for a long time in a poor condition in Italy, and especially at Naples—in addition to which Zingarelli, although sufficiently well acquainted with the traditions of the ancient school, yet took little interest in the pupils of the Conservatory intrusted to his care, and gave them but few lessons. Bellini ought therefore to be considered rather as a musician of instinct, who has formed himself, than as a pupil of any one great school: his best studies, those of Mercadante for example, consisted in the reading of some works of celebrated masters. After having published at Naples some small compositions for different instruments, such as the flute, clarinet, and piano, Bellini produced there a cantata entitled *Isménè*, fifteen overtures and symphonies, three entire vespers, two "*Dixit Dominus*," three masses, and some other pieces of religious music. His first opera, "*Adelson e Sabrina*," was performed in 1824 in the little theatre of the Royal College of Music; two years after which he furnished, for the Saint Charles Theatre, "*Bianca e Gerlando*." These, his first productions, made known the talent of the youthful composer, and excited high expectations of him for the future. The success of "*Bianca e Gerlando*" procured him an engagement for the theatre Della Scala, at Milan, in 1827—a privilege which a musician rarely attains at his *début*; for the most celebrated masters have frequently written their first works for some small cities, and it is not until after having acquired some renown that they are invited to compose for the tres of the *primo cartello*.

Fortune seemed to favor Bellini also in offering him the best singers of Italy to perform his compositions: thus, for the "*Pirata*," which was represented at Milan in 1827, and which attracted to its author the attention of the musical world, he had the good fortune to find in Rubini that talent which was best adapted to the principal character in his work. Some other circumstances also favored him at his *début* — the unexampled popularity which the productions of Rossini had acquired during a period of nearly fifteen years; the immoderate use which had been made of them by reproducing, in a hundred different ways, the melodies of his works; and finally the fickle taste of the Italians, which, after having raised statues to the genius of an artist, the next day destroys the idols which it worshipped the evening before — all this, I say, favored Bellini; and being a man of genius, he knew how to take advantage of the favorable circumstances which were offered to him. He perceived that the imitation of Rossini's style, into which were thrown those of Paccini, Mercadante, Carafa, and Donizetti, in his first works, was no longer suited to the taste of the people who had already begun to show their satiety of this style, notwithstanding those beauties of the first order which the master had there lavished. Whether it were the result of instinct or reflection, he perceived that, after so many brilliant things, a simple, expressive manner, and one analogous to the dramatic character of the French music, would be that by means of which he could afford the greatest novelty to an Italian audience; and it was under the influence of these ideas that he wrote his "*Pirata*." Its success, which was doubtful at the first representation, was the next time very brilliant, and the piece, to use the popular phrase, was *all the rage*. In 1828 "*La Straniera*" was welcomed with enthusiasm at the great theatre of Milan, on which occasion Madame Marie Salande (who was considered at that time one of the best singers of Italy) and Tamburini sang and contributed much to its success. From this time Bellini attracted the attention of all Italy; and "*I Capuleti ed i Montecchi*," performed at Venice, and "*La Sonnambula*," written at Milan for Mme. Pasta, added to his reputation.

Bellini has, however, been censured for condensing the forms of a great part of the pieces of his compositions into narrow proportions, and writing his instrumentation with negligence. He appeared to be susceptible to this criticism, and, in his opera of "*Norma*," made his style more grand and nervous. This production, written for Milan, had at first rather doubtful success; but it afterwards recovered itself so far as even to excite enthusiasm in Italy, to which, however, the admirable dramatic talent of Madame Malibran contributed not a little. In "*Beatrice di Tenda*," which succeeded "*Norma*," the composer has been less happy; but he had already determined to carry his talent to other climes, and to found in France, upon a solid basis, both his fortune and his fame. Arriving at Paris in 1833, he first studied the taste of the inhabitants of that great city, and then went to London to direct the arrangement in a scene of one of his works; and on his return to Paris in 1834, he wrote "*I Puritani*" for the Italian Theatre of that city. The good fortune with which Bellini had even to this time been blessed still smiled upon him,

on this occasion, in affording him the most satisfactory combination of singers that could be made — Rubini, Tamburini, Lablache and Mlle. Grisi, each in their sphere, possessing talents of the highest order. Nevertheless, if the singers favored the author of the "*Puritani*," he had also the merit of disposing these singers in his work in such a manner as to present them under the most favorable aspect.

Bellini had learned, while he was at Paris, that the French public was not enchanted by two or three small pieces, and that, in order to be successful with them, it was necessary to offer them works composed with more care than the greater part of those which are represented in Italy. Hence it happens that "*The Puritans*" is a more finished composition than his other operas; it contains more variety, a more elegant instrumentation, and more perfectly developed forms. Although there have crept into it many defects in the style of writing and modulations which are badly followed out, yet his progress, so far as art is concerned, is incontestable.

Bellini died in 1835, at the early age of thirty-three. — *Fétis' Biographie Universelle*.

BELLOCHI, SIGNORA GEORGI. An Italian singer. She sang at the opera and various concerts in London in the year 1817, and several subsequent seasons. She had a sound, good style, but her voice was remarkable neither for tone nor compass.

BELLOLI. There were two celebrated horn players of this name (father and son) at Milan at the beginning of this century.

BELLS, MUSICAL. Music bells, or *carillons*, are preserved in several parts of Britain, and in many towns of the continent. They are played by means of keys resembling those of a piano-forte, and when well tuned, and heard at a distance, the music is not disagreeable. It is not evident when they were first introduced, but they may be of considerable antiquity, the number augmenting according as alterations were made in music. Prefixed to a manuscript copy of the Psalms, as old as the fourteenth century, is a painting of King David, playing, with a hammer in each hand, on five bells hung up before him. In the great tower of the cathedral at Antwerp were suspended thirty-three music bells, the largest seven feet wide and eight feet high, the melody of which is highly celebrated. The late Mr. Joseph Strutt observes, that he saw a man in London ring twelve bells at a time; two were placed on his head, he had two in each hand, one was affixed to each knee, and two upon each foot; all of which he managed with great dexterity, and performed a vast variety of tunes.

BELL RINGER. One whose occupation is to ring a bell or bells. A company of Swiss bell ringers visited many of the cities and large towns in the Eastern and Southern States in 1844, and with their unique performances excited considerable attention. Four of these men had begun to practise their difficult art seven years before. At first they used but seven bells, but gradually increased the number to twenty-six. The company consisted of seven, and they used forty-two bells, varying in size from a large cow bell to the smallest dinner bell. The clappers are upon a spring. A piece of leather goes

through the ball of the tongue; the leather strikes the bell, and renders the tone more soft and sweet. The lowest bell is the lowest C of the treble clef, and they run up three octaves and one fourth, with all the semitones. Four of them played the air; the others played a harmony in the lowest octave of the bells, similar to a guitar accompaniment to a song. They trilled notes beautifully. Every piece of music is necessarily arranged for them. Being unable to read music, they learned it altogether by the ear. But nature and art have made them so perfect in this matter, that one of them cannot ring a false note without its being instantly detected by all the others. Their memory, too, is wonderful. Any one of them can tell instantaneously all the notes that are to be played for ten bars ahead. Their bells have to be changed frequently, often with as much rapidity as printers take up their types. Each performer appeared to have his own lot of bells upon the table before him; but the result showed that the use of them was sometimes interchangeable along the whole line of performance. The performance began by each advancing one step to the table, and seizing a bell, which they elevated, with its mouth outward towards the audience, and moved it so as to cause the tongue to strike once, when that was returned to the table, and another seized; and thus the music went on — some of the richest sounds, the most nicely varied, that we ever heard. All the parts of the tune were carried on, each one striking his note or notes at the exact instant; and the time was perfect. There is, to be sure, something perfectly wonderful even in the manual and mechanical dexterity with which they manage to extract such exquisite melody from such apparently unpromising materials, and to make forty-two common-looking bells discourse such eloquent music; but this is not all, or even one half the marvel of their performances. They play all sorts of music, and execute the most difficult passages with a precision and harmony that delighteth even the fastidious and most scientific admirers of the art. There are peals of bells rung in the towers of many churches in Germany, called *carillons*, or chimes, on which, by the contrivance of a rope fastened by the clappers, and collected together at the lower extremities, tunes are played at stated hours in the day.

Let us next consider the duties of the bells as they hang, a musical octave, in their airy home. These duties are threefold — to chime, to ring in peal, and to toll; and they are thus defined in some quaint old verses: —

* To call the fold to church in time,
 We chime.
 When joy and mirth are on the wing,
 We ring.
 When we lament a departed soul,
 We toll."

Uncommon as the practice is — at least in this part of the country — only to chime the bells as the call to church, (this being generally done by half an hour's good round ringing with changes, and closing perhaps by tolling a single bell,) there is, nevertheless, no doubt of its being the proper way. Lest any of our readers, however, should not understand what chiming is, it consists of swinging the bell to and fro by the rope, so that it moves like the pendulum of a clock, and comes in contact with the clapper, which remains nearly stationary inside, owing to its weight and the

loose manner of suspending it. Nor let any one despise this method as a dull substitute for the wilder peal, which seems to cheer the people on their walk to church by its sonorous changes. It is possible that those who object may never have listened to good chimes. If so, let them withhold their judgment, for we can assure them that eight sweet-toned bells, if well chimed, afford as beautiful music as ever charmed a Christian's ear. The effect, too, being more solemnizing than inspiring, is only more becoming the occasion; and this influence, though varying according to circumstances of place, time, health, and state of mind, will seldom fail to induce feelings in harmony with devotional exercises, and to move the sensitive with tenderest impressions.

Ringin a peal has next to be noticed. This is done on all occasions of congratulation or festivity; such as marriages, births, victories, elections, the arrival of distinguished persons, &c. A peal, in technical language, is a performance on the bells of more than 5000 changes; and it occupies the ringers a considerable period of time, generally more than three hours. But a touch or flourish on the bells, which is the ordinary method of notifying any joyful occurrence, is round ringing varied by changes at the option of the ringers, or according to the custom of the belfry. It is usual in the first instance to set the bells: that is, to throw every bell, with its mouth upward, in a stationary position in the frame. And then, every ringer being ready in his place, the treble bell is first dropped, and off they all go in quick succession, closing the round with the stroke of the heavy tenor. This performance, often repeated, is called round ringing, to distinguish it from change ringing; and formerly it was the custom to close every change, as well as every round, with the tenor bell. But this practice is discontinued, as any bell may conclude a change.

A common peal of rejoicing might be arranged thus: First, round ringing for one hundred times; then firing a number of cannons, which means a simultaneous crash from all the bells; then the bells trip off lightly again, 1, 2, 3, 4, 5, 6, 7, 8, from treble to tenor. And again, and yet again they go, quicker, at each rotation, until the sounds flash past the ear just as the spokes of a turning wheel dazzle the eye; and then, on a sudden, they all stop as if the whole peal were demolished. But no; the bells are only set, — mouths up again in their cage, — and first one of them drops for a single stroke, and then another, just to prove that they had not lost their voices.

Let us try a wedding peal, which our fair readers may practise for amusement on the piano-forte, since it is certain that they will not attend to it when it gilds their own nuptial morn. We will first ring twelve rounds in regular order, 1, 2, 3, 4, 5, 6, 7, 8, then twelve changes on the bells in the following rota, 1, 5, 2, 6, 3, 7, 4, 8, then twelve changes thus, 1, 3, 5, 7, 2, 4, 6, 8, then twelve chords thus, $\begin{matrix} 1 & 2 & 3 & 4 \\ 5 & 6 & 7 & 8 \end{matrix}$, and conclude the peal with twelve rounds, as at starting.

Ah! was it not the merry peal thus described which holds that poor lad's attention, who leans against a mile stone at Halloway on a certain cold November morn? His small wallet is over his shoulder, containing all that he has in the world.

He has run away from his employer. He is going he knows not whither; any where to which a chance or a kind word may invite him. But who is there to speak to the lonely runaway? Hark! a voice of Providence through the air seems to greet him. The wind is gently blowing from the south-east, and it wafts the sound of eight bells in full peal into his ears; and, as he listens, his fancy extracts from them a clearer promise than Delphic oracle ever spoke.

1	2	3	4	5	6	7	8
Turn	a	gain,	a	gain,	Whil	ting	lon,
Lord	mayor,	lord	mayor	of	Lon	don	town.

And again in the chords, the notes of which are strung slightly apart, but they soon mingle in the vibrations.

1 5	2 6	3 7	4 8
Turn	again,	Whitting	ton,
Lord	mayor	London	town.

A dumb peal, to commemorate a death, ought always to be conducted in round-ringing order; and it is thus managed. One side of the bulb of the clapper is covered with a thick cloth or felt, and over this a firm piece of leather is tightly strapped. When all the bells are thus prepared, one round is struck with the uncovered side of the clapper, and the usual tone, somewhat deadened, perhaps, is produced. At the next rotation, the padded side of the clapper strikes the bell, and a dull vibration, scarcely perceptible, follows. These alternations produce a very saddening effect.

But the ordinary way of noticing a death or a funeral is by tolling. This is done by a succession of single strokes on one bell. It needs no further explanation. Few who read this will not be able to recall at least one occasion in their past lives when each toll of the bell went like a shock to their own hearts; and they knew that nearer every stroke was the moment coming when the grave would evermore hold the beloved dead.

There are, generally, rules and regulations for good order in the bell chamber; and it is very desirable to make these conducive to the decorous behavior of the ringers in the discharge of their important duties about a church. In All Saints' Church, at Hastings, a maudlin exertion in this direction seems to have been made by the subjoined inscription, which is painted on the wall:—

"This is a belfry that is free
For all those that evil be;
And if you please to chime or ring,
It is a very pleasant thing.

"There is no music, played or sung,
Like unto bells when they're well ring;
Then ring your bells well if you can—
Edence is best for every man.

"But if you ring in spur or hat,
Sixpence you pay—be sure of that;
And if your bell you overthrow,
Pray pay a groat before you go." (Dated 1756.)

BELL OF A HORN. The large, open part of the horn, from which the sound ultimately issues.

BELLOWS. A pneumatic appendage of certain wind instruments.

BELLOWS OF AN ORGAN. The bellows are the pneumatic part of the machine, by which it is supplied with wind, and is wrought by a man called the blower; but in small organs by the foot of the player. This machine is of various constructions, but in general is composed of two

flat boards, sometimes of an oval, sometimes of a triangular form; two or more hoops are placed between them, and bent according to the figure of the boards; a piece of leather, broad in the middle and narrow at both ends, is nailed on the edges of the boards, that the leather may the more easily open and fold again; and there is a valve within, that covers the holes in the under board, to keep in the air.

BELLY OF AN INSTRUMENT. The belly, in a harpsichord, or piano-forte, is that smooth, thin boarding, over which the strings are distended, and which, by its vibration, greatly contributes to the tone. In a double bass, violoncello, tenor violin, and all instruments performed with the bow, as also in the guitar, it is that part of the body which lies immediately under the strings.

BEL METALLO DI VOCE. An expression used by the Italians to signify a clear and brilliant-toned soprano voice.

BELTRAME. An eminent organist and church composer at Verona in 1799.

BEMETZRIEDER, born in Alsace in 1748, went to Paris, and formed an acquaintance with Diderot, to whose daughter he taught music; Bemetzrieder has written several didactic works on music, published at Paris and in London, in which latter capital he resided several years. Some of his music for the piano-forte was published by Preston.

BEMOL. A French term for B flat.

BEN. (I.) Well; as, *ben marcato*, well marked. This expression indicates that the passage must be executed in a clear, distinct, and strongly-accented manner.

BENCINI, P. P. An Italian vocal composer at the beginning of the eighteenth century. He is the author of the oratorio "*L'Innocenza Proletta*," arranged for four voices.

BENDA, FRANZ, or **FRANCIS,** musician to Frederic II. of Prussia, and founder of a German school of violinists, was born in Bohemia, in 1709. He was appointed a singing boy to the Church of St. Nicholas, at Prague, in 1718; and from thence he went to Dresden, where he was engaged at the Chapel Royal. About the same time he applied himself to the study of the violin, and had no other resource to save himself from poverty (having quitted the king's chapel) than to engage with a company of street musicians, among whom there happened to be a blind Jew, named Lobel, an excellent violinist, and who became Benda's master and model. Fatigued with his wandering life, Benda, then eighteen years of age, returned to Prague, and soon afterwards went to Vienna, where he received lessons from one of the first masters of the place. There he remained two years, when he proceeded to Warsaw, and procured the situation of chapel-master. The prince royal of Prussia, afterwards Frederic II., took Benda into his service in 1732, on the recommendation of Quanz. Finally, in 1772, he succeeded Graun, as concert master to the king. He died at Potsdam, in 1786. Dr. Burney says, that Benda's manner of playing was neither that of Tartini, nor Somis, nor Veracini, nor any other great master, but peculiarly his own. He published "*Studies for the Violin*,"

"Progressive Exercises," and other instrumental works; especially "Eight Solos for the Violin," which are extremely admired for their good taste and truly *cantabile* style.

BENDA, GEORGE, brother of the preceding, a native of Altbenadky, in Bohemia, was born in 1722. He was many years in the service of the court of Gotha, and published, in 1757, a very beautiful set of sonatas for the harpsichord, in the style of Emmanuel Bach. He also composed several German comic operas, and two works, which he calls duodramas, "Ariadne in Naxos," and "Medea." The author has manifested great abilities and feeling in the expressive and picturesque symphonic composition with which he has told the story and painted the distress of Ariadne, when abandoned by Theseus in the Island of Naxos. This is done wholly without singing. The narrative part is spoken in blank verse, and the several passions and sentiments are seconded and highly colored in fragments of symphony, like those of accompanied recitative of the most select, impassioned, and exquisite kind. G. Benda was received, in 1742, as first violin at the chapel of the King of Prussia, and subsequently was chapel-master at Gotha. About the year 1760, he obtained permission to visit Italy, and it was after his return that he composed his best vocal music. Dr. Burney says, that the music of G. Benda is new, profound, and worthy of a great master; the only objection that can be made to it is an occasional affectation of too great novelty; but this observation can only apply to his earlier productions, before he went to Italy. In 1778 he settled at Hanburg, and afterwards went to Vienna, and then returned to Gotha, where he was rewarded for his musical talents with a pension, and where he died in 1795, aged seventy-four. He was the most absent man imaginable. It has been said that, on the very verge of death, Benda rose from his bed to finish a tune which a wayward boy, who had run away, had left unfinished. He completed the musical phrase, and instantly died.

BENDA, FRIEDRICH LUDWIG, died in great poverty at Königsberg, in Prussia, in 1792, aged forty-eight. He composed several cantatas and operettas.

BENDA, FRIEDRICH WILHELM HEINRICH, usually called Friedrich Benda, was born in Potsdam, in 1745. He was a good instrumental composer, and also published several oratorios.

BENDA, JOSEPH, musician to the King of Prussia, was brother and pupil to Franz Benda. He died at Berlin, in 1804, aged seventy-five.

BENDA, CARL HERRMANN HEINRICH, was born at Potsdam, in Prussia, in 1748. He was ballet master at the opera at Berlin, and was appointed chamber musician to the King of Prussia, in 1802.

BENDA, MADAME. See HEYNE.

BENDELER, JOHANN PHILIPP, published some works on music, between the years 1688 and 1706. He was born near Erfurt, in 1660.

BENDER. A celebrated performer on the clarinet, in Germany. In beauty and richness of tone, facility, brilliancy of execution, and fine

taste, he is said to rival the first performers on that instrument.

BENDINELLI, AGOSTINO. A composer of church music between the years 1585 and 1604. He was a regular canon of the Lateran, born at Lucca, in 1550.

BENE. (I.) Excellent; good.

BENECKEN, F. B., a clergyman, near Hanover, published some sacred and dramatic music at Hanover since the year 1787.

BENEDICT, JULES, was born December 24, 1804, of an Israelite family. He is a native of Stuttgart, in Germany. While yet a boy he exhibited so decided a passion for music that his parents determined on indulging his inclinations. He was accordingly placed under the tuition of Mummel, at Weimar. Under the care of this master he made an improvement so rapid that in the winter of 1820 he left him to pursue his studies as a pianist and composer at Dresden with Carl Maria von Weber. For more than four years did Benedict remain with this illustrious master, treated more as a beloved son than as a mere student. During this period of his life he accompanied Weber both to Berlin and Vienna to witness the first performance of his *chef d'œuvres*, the "Freyschutz" and the "Euryanthe." In Berlin it was that he became acquainted with Mendelssohn, then a boy, and formed a lasting friendship with the author of "St. Paul" and the "Elijah." At Vienna he was also introduced to the immortal Beethoven, and obtained, through Weber's influence and his own talents, the position of musical director to the Italian Opera. At this time he was scarcely seventeen years of age. Barbaja, who was then its manager, also conducted the theatres of Naples and Milan, and shortly after proposed to Benedict to take the position of *maestro di capella* at Naples, in the theatres San Carlo and Fondo. This was in the spring of 1825. In this position Benedict remained for more than four years. In 1830 he became acquainted with Malibran. This great singer took a warm interest in Benedict's career, and formed a high opinion of his talents. She accordingly urged him to accompany her to England. His departure was, however, deferred, in consequence of his engagement to a young Neapolitan lady, (whom he subsequently married,) until 1835, when he arrived in England. His first concert stamped his reputation. It indeed gave him a European celebrity which he has ever since maintained. At this concert Malibran and Grisi, for the first time, sang together. This was in the celebrated duet from "Andronico." Subsequently he appeared as conductor of the opera buffa at the St. James Theatre, and was afterwards engaged for a number of years as the musical director of the Drury Lane and Covent Garden Theatres. During this time he produced several operas, and it will scarcely be out of place in this brief biography to enumerate his more important works. In 1827 he produced the "Giacinta ed Ernesto" at Naples, in the Fondo. In 1830 the management of the San Carlo produced "I Portoghesi in Goa." The first of these works was an opera buffa, and the second an opera seria, each of them being in two acts. In 1836, "Un anno ed un giorno," a charming little opera buffa in a single act, was given to

the public. After his arrival in London, the first opera which he produced was the "Gypsy's Warning." This was in 1838. It was only in two acts; but such were the sweetness of the melodies and the art displayed in the instrumentation of the opera, that it at once stamped his reputation; and when, in 1844, "The Brides of Venice," a grand opera in four acts, was produced by the management of Drury Lane, he had already been recognized as one of the greatest composers then in the country of his adoption. Since this he has produced but one opera, called "The Crusaders," at the same theatre. The talent displayed in this work confirmed his reputation.

The arrangements and direction of the Musical Festivals in London, Norwich, and Liverpool, have also been intrusted to him, and he is probably the only conductor in England who is as well known and as well appreciated in the provinces as he is in London itself.

In 1847 he was introduced, as we have heard, to Mademoiselle Jenny Lind, who made her first appearance as a singer of sacred music in England at the performance of Mendelssohn's "Elijah," at Exeter Hall, on the 15th December, 1848, under the direction of Mr. Benedict. This performance, which was given by a committee of Mendelssohn's personal admirers, with the view of providing a fund for the purpose of instituting two scholarships in the name of the deceased master, at Leipsic, proved eminently successful, and deserves commemoration as the first introduction of Jenny Lind to the English public. He was the conductor of her concerts in the United States in 1851-2, until the termination of her connection with Mr. Barnum as manager, when he returned to Europe, and passed a sad season in Italy, where he buried his wife and son. M. Benedict now resides again in London, and has been distinguished during the past year as conductor of the Norwich Festival, and of the New Harmonic Society.

BENEDICT, of Appenzel. A composer of church music in the middle of the sixteenth century.

BENEDICTUS. (L.) A movement belonging to a mass, or Catholic morning service.

BENEDICTUS, JOH. BAPTISTA, a mathematician at Venice, died at Turin in 1590. He wrote some works on music.

BENEDIKT, a pianist at Dresden, was a pupil of C. M. Von Weber. He was said to have great firmness of finger.

BENEKEN. See **BENEKEN**.

BENELLI, ALEMANNO. See **MELONI**.

BENELLI, ANTONIO. An Italian tenor singer and composer. He sang, about the year 1798, in England; and in the following year was engaged at Dresden, where he remained in 1810, and published some sonatas.

BENELLI, SIGNOR. An Italian singer, and director of the king's theatre for the season of 1824.

BENE PLACITO. (I.) At pleasure. An expression signifying that the performer is at liberty to exercise his own taste in ornamenting and varying the movement, or the passage, over which is written.

BENET, JOHN. See **BENNET**.

BENETTI. An Italian bass singer, engaged at the king's theatre for the season of 1824.

BENEVENTO, GIUSEPPE J. U. An Italian composer at Venice between the years 1680 and 1727, during which time he brought out eleven operas.

BENEVENTO DI SAN RAFFALE, LE COMTE. An excellent amateur violinist at Turin. He published six duos for the violin, in London and Paris, about the year 1770. He also wrote some letters on music.

BENEVOLI, ORAZIO, chapel-master of St. Peter's, at Rome, was one of the greatest composers of the seventeenth century, and a pupil of Bernardo Nanini. Liberati asserts that Benevoli was superior to his master, and all other composers, in the art of writing fugue and counterpoint for four and six choirs, each of four parts. Dr. Burney cites a mass of this kind, composed by Benevoli, which surpasses, in effect, every thing he had known of the same description. This is probably the mass which Benevoli composed for the cessation of the plague at Rome, for six choirs, of four parts each, the score consisting of twenty-four different parts. It was performed at St. Peter's church, of which he was *maestro di capella*; and the singers, amounting to more than two hundred, were arranged in different circles of the dome, the sixth choir occupying the summit of the cupola.

BENGRAF, JOHANN, published at Vienna, in 1783, some instrumental music.

BENINCORI, ANGELO. An instrumental composer in France and Germany since the year 1802.

BENINI, GIUSEPPE, born at Florence in 1704, was a celebrated performer on the harpsichord, and composer for his instrument. He died at an early age, in France.

BENINI, SIGNORA. A buffo singer at the opera, in London, in 1787.

BENNET, JOHN, one of the best English madrigalists, seems to have had a melody more phrased and chantante than most of his contemporaries. Besides his madrigals for four voices, published in 1599, and of which several are still noticed by the admirers of old music, he contributed largely to the compositions inserted in a work published by Thomas Ravenscroft, in 1614, entitled "A briefe Discourse of the true but neglected Use of characterising the Degrees of Mensurable Musicke," &c.

BENNET, WILLIAM, professor of music, and organist of St. Andrew's Church, Plymouth, was descended from an ancient and highly respectable family. He was born about the year 1767. He was educated in music at Exeter, by Bond and Jackson, both composers and eminent musicians. He afterwards went to London, and finished his studies under the direction of Christian Bach, at whose death he placed himself under the celebrated Schroeter, who, it is well known, by his superior and very elegant performance on the grand piano-forte, brought that instrument

into public notice, and superseded the use of the harpsichord. His pupil Bennet did the same at Plymouth. Being invited to settle there, he was the first person that introduced a grand piano-forte into that town; and by his perseverance and repeated performance on that instrument, at the public and private concerts, he overcame the prejudice of the natives and professors for harpsichords. Soon after his arrival at Plymouth, in the year 1793, Bennet was appointed organist of St. Andrew's church, and was considered one of the best extemporary performers in England on the organ. His musical compositions are extensive and classical. They consist of "Three Sonatas for the Piano-forte, with Accompaniment;" "A Concerto for the Grand Piano-forte, with Accompaniments for a full Orchestra;" "Two Divertimentos;" "Three Sets of six Songs, with a Glee to each Set;" "Three Duets for two performers on the Piano-forte;" "A Coronation March;" "A Coronation Anthem;" The celebrated glee, "When shall we three meet again?" with several other glees, &c., &c. Bennet also published very extensive works: "The Collects of the Church of England, in Score," for the use of cathedrals, or for other public or private performances; and the "New Version of Psalms, in four Parts," with a full accompaniment for the organ or piano-forte. He has likewise composed several overtures and fugues, and voluntaries for the organ.

BENNETT, THOMAS, organist of the cathedral, and of the Episcopal chapel of St. John, Chichester, in the latter half of the last century, received his musical education in the choir of Salisbury, under Joseph Corfe. Bennett's principal works are, "An Introduction to the Art of Singing;" "Sacred Melodies," a selection which is allowed to be made with much judgment and good taste; also "Cathedral Selections," consisting of anthems, commandments, and chants. Each of the above productions has met with much approbation in the musical world.

BENNETT, WILLIAM STERNDALE. One of the most admired of the English composers now living, whose style, however, is so completely imbued with the peculiarities of Mendelssohn, of whom he was a favorite and devoted pupil, that it can scarcely be called original. He was born in 1816. His early orchestral compositions and songs (quite in the manner of German *Lieder*) were hailed as evincing most rare promise. His romantic overtures, called "The Naiads," and

"The Wood Nymph," are still favorites in the concert room, and are remarkable for a certain vein of delicate and fairy-like imagination, and for their great resemblance to the overtures of Mendelssohn, of which, however, they are but pale and feeble copies. We do not hear of any works of magnitude produced by this writer since these early efforts.

BENMARCATO. (I.) Well marked. By this expression the performer understands that the piece before which it is placed is to be executed in a clear, strong, and pointed manner.

BENSER. A pianist and composer at London. He published sonatas, &c., for his instrument since the year 1784. Benser was a German by birth, and the first master of the celebrated J. B. Cramer.

BEQUARRE. (F.) A natural.

BERARD, born in 1710, published "The Art of Singing," Paris, 1755, a work of much merit at the time it was written.

BERARDI, ANGELO, a chapel-master at Spoleto, published at Bologna, in 1687, "*Documenti Armonici*," containing the rules of counterpoint; in 1689, "*Miscellanea Musicale*;" in 1690, "*Arcani Musicali*;" and in 1693, "*Il Perche Musicale*." Berardi's works were a high authority in music at the time he wrote. Many of his precepts are arranged and given by Choirs in his great work on composition.

BERAUDIERE, MARC DE. A French composer of vocal music at the beginning of the seventeenth century.

BERBIGUIER, BENOIT TRANQUILLE. A pupil of Berton at the Conservatory at Paris; he is a good flutist, and has composed many works for his instrument. He is also author of an excellent method for the flute, and some useful exercises for the same instrument. Berbiguier's compositions for the flute are excellent, full of beautiful passages, conducted with fine taste, knowledge, and correct judgment, and always written, both for the performer and the effect, according to the genius of the instrument.

BERCIEM, JAIQUES GIACHETTO, or **JACQUET OF MANTUA**, a native of the Netherlands, lived for a considerable time at Mantua. He published motets and various other vocal music of great merit at Venice, between the years 1539 and 1561. Some of his compositions are preserved in the British Museum.

BERG, a German, published some piano-forte music in London between the years 1770 and 1797.

BERGER, LOUIS. A celebrated pianist and pupil of Clementi, born at Berlin in 1777. He published a valuable work, entitled "*Douze Etudes pour le Piano-forte*," which is reprinted at Clementi's, in London. The exercises are stated, in Clementi's Catalogue, to hold a middle station between facility and extreme difficulty. They are fingered by the author, so as to render them of great advantage to performers who have small hands.

BERGER, JOHANN WILHELM VON, died at Wittenberg, in 1751. He was professor and dean of the university there, and wrote several works relative to music.

BERGOGNONI, BERNARDO. An opera composer at Venice in the beginning of the last century.

BERGOMUS, ALEXANDER. A composer of masses in 1572.

BERGT, CHRISTIAN GOTTLÖB AUGUST, organist of St. Peter's Church at Baugen, was born at Freyberg in 1772. He originally studied theology, but soon gave up that pursuit for music. Since the year 1801, he has published many admired vocal compositions for the church, theatre, and chamber. His grand chorus, "Christ Jesus," is said to be one of the most effective ever performed in England. It was sung at the Manchester Philharmonic Concerts.

BERLIN ACADEMY OF MUSIC. The Berlin Academy of Music was founded in the year 1850, by Dr. A. B. Marx, Dr. T. Kullak, and Herr Julius Stern, of Berlin, and has risen rapidly in the estimation of the European public.

BERLIN, JOHANN DANIEL. Organist in Norway. He published "The Elements of Music," and some other didactic works, at Copenhagen, about the middle of the last century. He died about the year 1775.

BERLIOZ, HECTOR, the composer, was born at Côte St. André, (Isère,) in France, in 1803. The son of a physician of some local repute, he was sent to Paris, after completing his college studies, to attend the courses in law. At that time he knew little of music; the flageolet and the guitar were the only instruments of which he had any notion. Yet, though he was nearly twenty years old, and scarcely able to decipher a few notes, he was passionately fond of the art, and vainly begged his parents to permit him to devote himself to it exclusively. In such a capital the temptation was not to be resisted; so he took the matter into his own hands, quitted the study of the law, and entered the Conservatory. His father, irritated at this defiance of his authority, cut off his supplies, and M. Berlioz had no resource but to become a chorus singer in the Dramatic Gymnasium. He longed to become a composer, and by the shortest route. To learn the piano, to accustom himself to reading music and to the styles of various schools and masters, seemed too long a task for him. Besides, the music in his head bore little resemblance to all this. For him the history of his art began with himself, and with the exception of the "Vestale" of Spontini, which made an early and lasting impression on him, he knew but little of the celebrated master-pieces of music, and had but slight esteem for what he did know. Of course studies were out of the question. He resolved to have no master but his own experience. His first work proved absolutely strange and unintelligible both to hearers and performers. It was a mass for four voices, with chorus and orchestra. But the ridicule it called forth only stimulated him to renewed ardor. An overture to "Waverley," another to a drama called "Les Francs Juges," a "Concert de Sylphes," a "Symphonie Fantastique," an overture to Shakespeare's "Tempest," scenes from Goethe's "Faust," music to some of Moore's "Melodies," &c., marked the development of his tendency. M. Fétis (from whom we glean the above) expresses the pretty general opinion of musicians about these works in the following sentences:—

"His thought, at first uncertain, at length defines itself, so that you may see that the violent passions predominate in it, that the genius of melody is foreign to it, and that the *instinct of instrumental effects* is the most precious gift with which Nature has endowed Berlioz. Prodigal to him on this side, she has not given him the wisdom to keep him from abusing the gift. *Effects, always effects!* that is what Berlioz regards in music, and what constitutes three quarters of his own music. It is but justice to admit that these effects are often happy, and would be still more so if their author economized their use. As to plan, I find not the shadow of it in what Berlioz has published up to this date, (1837.) Very different in that from Beethoven, by whose example

he so often justifies his own vagaries, he seems never to have comprehended the utility of a certain periodical return of ideas; and when he repeats them, it is in a uniform and monotonous manner. His melodies are devoid of metre and of rhythm; and his harmony—a strange assemblage of incongruous sounds—does not always merit the name. Moreover, charm is wanting in all this, because, entirely wedded to his thought, M. Berlioz has not the art of suspending its course by the introduction of unexpected episodes, as men of genius in all times have done, especially Beethoven."

This opinion, however, is far from unanimous. Berlioz had then, and has still more now, a large party of admirers, composed of those who are charmed by what is adventurous, and free, and new; those who gladly hail any revolution in art; there are more poets, painters, &c., than musicians among them. Berlioz competed several times before the French Institute for the prize in musical composition, and obtained the second prize in 1828, and the first in 1830. Then he wrote under the inspiration of the annals of the revolution of July, and while the bullets struck the *Palais des Arts*, where he had shut himself up. The subject of the cantata which he then composed was "Sardanapalus." It was performed on the 30th of October of the same year, at a public meeting of the Academy of Fine Arts. As a pensioner of government, he made the tour to Italy; but in his state of mind, Italy, so far as music was concerned, had little for him. Without even entering Germany, but preferring to follow out his own plan, he returned soon to Paris, where, since 1832, he has repeatedly given concerts, bringing out his own compositions with an orchestra of unusual number and variety of instruments; for therein lies his forte. M. Berlioz has also distinguished himself as a literary writer and critic upon music, in the *Gazette Musicale* of M. Schlesinger, and more recently in the *Journals des Debats*. He always pens a brilliant article, and his opinions of new works, singers, players, and composers, which he seldom withholds, are still widely copied. In 1844, he published a "Musical Tour in Germany and Italy," in two octavo volumes, which is full of pleasant musical criticism and gossip. Berlioz has recently been in high favor with Liszt at Weimar, where all that is new and original in music is most encouraged, and where his opera "*Benevenuto Cellini*" has been produced successfully during the past year. His overture to "Lear," and his dramatic symphony, "Romeo and Juliet," have been the subjects of much discussion of late. The latter was performed, in the summer of 1852, in London, at the concerts of the New Philharmonic Society, the first season of which was signalized by the conductorship of Berlioz, who, among other things, did not fail to bring out that great work of Beethoven, from which, it seems, he would fain date his own artistic career, namely, the ninth or "Choral" Symphony.

BERLS, JOHANN RUDOLPH, was born near Erfurt in 1758. He has composed various symphonies, also some vocal music, since the year 1780.

BERMUDO, JUAN, a Spanish musician,

wrote, in the sixteenth century, a work entitled "*Libro de la Declaracion de Instrumentos.*"

BERNABEL, ERCOLE, the scholar and successor of Benevoli at St. Peter's at Rome, and instructor of the Abbate Steffani, may be ranked among the greatest masters of harmony in the ancient ecclesiastical style of the seventeenth century. This composer, being invited by the Elector of Bavaria to Munich, about the year 1650, entered into the service of that court, where he continued the rest of his life. A specimen of his works may be seen in Stevens's sacred music.

BERNABEL, GIUSEPPE ANT., son of the preceding, after following his father's steps in the study of ecclesiastical harmony, surpassed him considerably in melody and modulation, as he lived long enough to see a great relaxation in the rigor of ancient rules. After succeeding his father as *maestro di capella* to the Elector of Bavaria, by whom he was honored with the title of *conseiller aulique*, and publishing several compositions for the church, replete with musical science of the first class, he lived till the year 1732, extending his existence to the great age of eighty-nine.

BERNACCHI, ANTONIO. An Italian singer, engaged by Handel, in the year 1716, for the opera in London. This performer's voice seems by nature to have been feeble and defective; but he supplied the defects of nature by so much art, that his performance was always much more admired by professors than by the public in general. He staid there at first but one year, after which he went back to Italy, but returned in 1729. After quitting the stage, Bernacchi established a school for singing at Bologna, where he had himself been educated, and where he formed several admirable scholars, who rendered his name and school famous.

BERNARD, ANTON. Chamber musician to the King of Prussia at Berlin, in 1791.

BERNARD, GIFFARD, translated into English, in 1779, Bemetzrieder's "Treatise on Singing." He has also composed some vocal music.

BERNARDI, BARTOLOMEO, chamber musician to the King of Denmark at Copenhagen, in 1720, was a good violinist and composer of vocal and instrumental music.

BERNARDI, FRANZ, a flute player and composer for his instrument in Austria, was born in 1767.

BERNARDI, STEFFANO, was a learned theorist, as well as composer of masses and madrigals of a most elaborate and correct kind. He flourished from 1611 to about 1634, and in 1623 was chapel-master of the Duomo at Verona. He published a didactic work, called "*Porta Musicale*," at Verona, in 1615. This elementary tract has the merit of clearness and brevity.

BERNARDI, FRANCESCO, commonly called *Senesino*, was an excellent soprano singer, born at Sienna about the year 1680. His celebrity appears to have commenced at Dresden, in 1719. Handel, hearing of his talent, then engaged him for his opera in London, at a large salary, and he made his *début* there in 1721. *Senesino's* voice was considered on the continent as a *mezzo*

soprano, though in England it was regarded as a *contralto*. In the year 1726, he was taken ill, and as soon as he was able to travel, went to Italy for the recovery of his health; after remaining there about two or three years, he returned to London. *Senesino's* voice was penetrating, clear, equal, and flexible; his intonation was pure, his shake perfect, and he was peculiarly renowned for his delivery of recitative. In 1739, *Senesino* was residing at Florence. He died about the year 1750.

BERNARDINI, MARCELLO, called also *Marcello di Capua*. A composer of many operas since the year 1784, to several of which he also wrote the words.

BERNASCONI, ANDREA, of Verona. A contemporary of Hasse. He was long in the service of the King of Bavaria, and died at Munich. He composed several serious operas between the years 1741 and 1766.

BERNER, ANDREA, a violinist and composer at Bonn, was born in Bohemia in 1766.

BERNHARD, CHRISTOPH, a composer and tenor singer, was chapel-master to the court of Saxony. He died in 1692. He published some sacred music of great science at Dresden and Hamburg.

BERNHARD, surnamed *L'Allemand*, or *Le Teutonique*, a German organist, so early as the year 1470 invented pedals for the organ at Venice — a discovery which reflects great honor upon the organists of his country, as it implies ideas, harmony, and effects beyond the power of human hands.

BERNIER, NICOLAS, was born in the year 1664 at Mantes, on the Seine. By his merit in his profession, he attained to be conductor of the music at the Chapel of St. Stephen, and afterwards at that of the King of France. The regent Duke of Orleans admired his works, and patronized their author. This musician died at Paris in 1734. His five books of cantatas, and songs for one and two voices, the words of which were written by Rousseau and Fuselier, have procured him great reputation. There are, besides, of his composition, "*Les Nuits de Sceaux*," and many motets, which are still in great esteem. Bernier was a pupil of Caldara, and is regarded by M. De la Borde as one of the greatest contrapuntists and fuguists that ever existed.

BERRETARI, AURELIO, called also *Fiesoli*, published a mass and psalms at Venice in 1656.

BERTALI, ANTONIO, chapel-master at Vienna, was born at Verona in 1605. He composed much vocal and instrumental music.

BERTANI, LELIO, born at Brescia in 1520, was chapel-master there, and afterwards at Vienna. He was a voluminous composer of madrigals.

BERTEZEN, SALVADOR, an Italian composer, published a work entitled "The Principles of Music," at Rome, in 1780.

BERTHAUD, or BERTAUD. A violoncellist and scholar of Duport, at Hamburg, in 1796.

BERTHEAUME, about 1790, first violin at the Comic Opera at Paris, published, since 1780.

eight instrumental works. Bertheaume was conductor at the *Concert Spirituel*, in 1783. Some of his pupils — Grasset, for instance — have arrived at much celebrity on the violin.

BERTHOLDO, SPIRIDIO. A composer of madrigals at Venice in 1561 and 1562.

BERTIN. A composer of operas in France between the years 1706 and 1720.

BERTIN. A composer of instrumental music in London since the year 1793.

BERTINI, SALVATORE, born in the year 1721 at Palermo, received his musical education at the Conservatory of La Pietà, under the celebrated Leo. He was a skilful composer. His first works were for the theatre; he then composed church music, and was successful in both styles, his melodies being sweet and simple in his dramatic pieces, whilst in those for the church they were sublime and pathetic. He died at Palermo in 1794.

BERTINI, BENOIT AUGUSTE. Born at Lyons in 1780. He was a pupil of Clementi on the piano, and published some sonatas in London. Since his return to Paris, in 1806, he has also published some instrumental music.

BERTOLA, GIOV. ANTONIO. A composer of sacred music in Italy at the beginning of the seventeenth century.

BERTOLDI. An Italian composer of madrigals in the seventeenth century.

BERTOLDI, SIGNORA. A good female singer in Handel's operas, in London, in the year 1729.

BERTOLOTTI. A celebrated Italian singer in the latter half of the last century.

BERTON, PIERRE MONTAN, a celebrated French musician, was taught music from four years of age, and at six years old was able to read common vocal compositions at sight; at twelve he sang in the cathedral of Sens, and occasionally played the organ. In the year 1744, he made his *début*, as a singer, at the Opera at Paris, which situation, however, from the failure of some notes in his voice, he did not long hold; but obtained, about two years afterwards, the place of *chef-d'orchestre* at the Grand Opera. Here his talents became so conspicuous, that he obtained successively the offices of chamber musician to the king and director of the Opera. P. M. Berton composed or made considerable alterations in nine or ten operas. It was during his direction that Gluck and Piccini came to Paris, when the great revolution in French music was effected. Gluck had such confidence in the talents of Berton, that he requested him to revise and alter the *dénouement* of his "*Iphigénie en Aulide*," which is still performed as Berton arranged it. Berton did all in his power to appease the parties of the Gluckists and Piccinists, by reconciling the chiefs. He died at Paris in 1780.

BERTON, HENRI MONTAN, son of the preceding, was born at Paris in 1767. He was taught music from six years of age, and entered the Opera band, as a violinist, at thirteen. The taste of young Berton was formed on the models constantly presented to him in the performance of the dramatic compositions of Gluck, Piccini,

and Sacchini. He soon became anxious to compose an opera, although one of his masters in composition had given it as his opinion that he would never succeed as a dramatic composer. Having obtained the words of a comic opera, "*La Dame Invisible*," he composed the music, and expressing great fear that it would not succeed, a female friend showed the manuscript to Sacchini, who not only decided in his favor, but desired to see the author, and from that time had so tender a regard for him, that he called him his son, and was his friend and guide till Sacchini's death, in 1786. H. M. Berton has composed several oratorios for the spiritual concerts, and near thirty operas, the most adured of which at the present time are, "*Montano et Stephanie*," "*Aline*," and "*Françoise de Foix*." He has also published several cantatas, and a great variety of romances. On the establishment of the Conservatory of Music, Berton was named professor of harmony. He has also written several didactic works of great celebrity, of which the following are the titles: "*Arbre Genealogique des Accords*," "*Methodo sur l'Harmonie*," and a "*Dictionnaire sur les Accords*."

BERTON, FRANCOIS, son of the preceding, was born at Paris in 1784. He was a good pianist, and has composed several romances, &c. Died in 1832.

BERTONI, FERDINANDO, chapel-master at the Conservatory of the *Mendicanti*, at Venice, was born in 1727. He was pupil of Padre Martini. In the year 1776, he obtained great renown by his composition of the opera of "*Orfeo*," which was received with enthusiasm at the theatre in Venice. In 1779, Bertoni accompanied Paechierotti to England; however, Sacchini was then in too high favor in London for Bertoni to have much success. Few masters knew better than he the mechanical parts of their business; his melody was flowing and graceful, though not often new; his parts were clear and well arranged, and his counterpoint perfectly correct; still there was sometimes a pacific smoothness in his music that bordered upon languor. Upon the death of Galuppi, in 1785, Bertoni was appointed chapel-master to St. Mark's Church and the state of Venice, the most honorable and lucrative employment to which a musical composer can aspire in Italy. Bertoni was the master of the celebrated singer Tenducci. He composed thirty operas, the words of most of which were written by Metastasio, Apostolo Zeno, and other eminent Italian poets.

BERTRAM, BALTHASAR CHRISTIAN FRIEDRICH, chamber musician to the King of Prussia, and a pupil of Graun, died in 1787.

BERTRAND, ANTONY, born in Auvergne, set to music the songs of Ronsard, the favorite bard of France during the reigns of Henry II., Francis II., Charles IX., and Henry III. He published them in four parts, in 1578, under the title of "*Amours de Ronsard*."

BERTUCH, CARL VOLKMAR, was born at Erfurt about the year 1730. He was organist of St. Peter's Church, at Berlin, and considered to be a fine player of Sebastian Bach's music.

BERTUCH, or BERTOUCII, GEORG VON, was born in 1668. He was a Danish general

officer, and composed several cantatas and other music.

BERWALD, JOHANN FRIEDRICH, was born at Stockholm in 1788. When between four and five years of age, he played at a public concert on a small violin. After that time he visited, with his father, various courts of Europe, whence he received medals and many other marks of royal approbation; at the same time he prosecuted his studies in composition and on the piano-forte. Several of his instrumental works have been published in Germany since the year 1798.

BESARDUS, JEAN BAPTISTE. A performer on the lute, and composer for his instrument, at the commencement of the seventeenth century.

BESNECKER, J. A. A celebrated organist and church composer at Prague in the beginning of the seventeenth century.

BESOZZI, JOSEPH. A musician at Parma in the latter part of the seventeenth century.

BESOZZI, JEROME, born at Parma in 1712, was bassoon player to the court of Sardinia from the year 1730. He went with his brother Alexander to Paris for a short time, where they were heard with the greatest applause. The two brothers subsequently lived together at Turin till their death.

BESOZZI, ANTOINE, brother of the two preceding, was, in 1755, a performer on the hautboy at the chapel at Dresden. He died at Turin in 1781. He performed, at different times, at the principal courts of Europe.

BESOZZI, GAETAN, brother of the three preceding, was born at Parma in 1727, and first entered the service of the court of Naples as performer on the hautboy, and subsequently held the same situation at the court of France. His playing was much admired in London about the year 1793.

BESOZZI, CHARLES, son of Antoine Besozzi, was born at Dresden. He was also a performer on the hautboy.

BESSEL, A. M. S. E. VON, published some instrumental music in Germany, between the years 1790 and 1793.

BESSER, T. G. An organist at Halberstadt, and composer, between the years 1779 and 1784.

BESSON, or BESON, a French composer, published some sonatas at Paris in 1729.

BETHISY, a French composer, published, in 1752, a treatise entitled "An Explanation of the Theory and Practice of Music, according to the new Discoveries." The author has availed himself of Rameau's principles. It is a work of little merit.

BETTS, ARTHUR, was born in Lincolnshire. He received instructions of Hindmarsh and Viotti on the violin, and of Eley, Dussek, and Steibelt, in the theory of music; he also derived great benefit from the friendly lessons of Russell, and from his long practice and experience, may be ranked among the most eminent teachers of the present day. The best compositions of A. Betts are as follows: "Three Sonatas for Piano-forte and Violin;" "A Duet for

two Performers on the Piano-forte;" "Set of Duets for Violin and Violoncello;" "Set of Duets (easy) for Violin and Tenor;" "A Sonata for Piano-forte, (violin obligato,) and Violoncello (ad lib.);" "A Divertimento for Piano-forte and Violin;" "Andante for Violin Obligato, with second Violin, Alto, and Bass." He has also composed some songs, and arranged pieces, amongst which is the much admired "Overture to the Men of Prometheus," by Beethoven, arranged as a quintet for two violins, alto, flute, and violoncello.

BEUF, JEAN LE, published at Paris, in 1739, a treatise on church music.

BEURIUSIUS, FRIEDERICUS. A writer on music in the latter part of the sixteenth century.

BEUTHNER, JOHANN HEINRICH, director of the music at Riga, was born at Hamburg in 1693. He published a cantata at Riga in 1717.

BEUTLER, JOHANN GEORG BERNHARD. Director of the Musical Academy at Berlin, and composer of piano-forte music. He was both an excellent pianist and violinist.

BEVERINI, FRANCESCO, one of the oldest, and probably the first, dramatic composers, lived at Rome about the year 1480.

BEVIN, ELWAY, a musician eminently skilled in the knowledge of practical composition, flourished towards the end of Queen Elizabeth's reign. He was of Welsh extraction, and had been educated under Tallis, upon whose recommendation it was, that, in 1589, he was sworn in gentleman extraordinary of the chapel; from whence he was expelled in 1637, it being discovered that he adhered to the Romish communion. He was also organist of Bristol Cathedral, but forfeited that employment at the same time with his place in the chapel. Child (afterwards Dr.) was his scholar. He has composed sundry services, and a few anthems. Before Bevin's time, the precepts for the composition of canons were known to few. Tallis, Bird, Waterhouse, and Fariner were eminently skilled in this most abstruse part of musical practice. Every canon, as given to the public, was a kind of enigma. Compositions of this description were sometimes exhibited in the form of a cross, sometimes in that of a circle; there is now one extant, resembling a horizontal sundial; and the resolution (as it was called) of a canon, which was the resolving it into its elements, and reducing it into score, was deemed a work of almost as great difficulty as the original composition. But Bevin, with a view to the improvement of students, generously communicated the result of many years' study and experience, in a treatise which is highly commended by all who have taken occasion to speak of it. This book was published in 1631, (4to.,) and dedicated to Goodman, Bishop of Gloucester, with the following title: "A briefe and short Instruction of the Art of Musicke, to teach how to make discant of all proportions that are in use; very necessary for all such as are desirous to attain to knowledge in the Art; and may, by practice, if they sing, soon be able to compose three, four, and five Parts, and also to compose all sort of Canons that are usual by these directions, of two or three Parts in one upon

the plain Song." The rules contained in this book for composition in general are very brief; but for the composition of canons there are in it a variety of examples of almost all the possible forms in which they are capable of being constructed, even to the extent of sixty parts.

BEYER, a German, invented at Paris a new kind of piano-forte, with glass instead of strings. Franklin called it the *glass-chord*. It was publicly exhibited at Paris in 1785, and has since been used in dramatic music on some particular occasions.

BEYER, JOHANN SAMUEL, director of music at Freyberg, published several vocal works between the years 1703 and 1730.

BI. A syllable applied in *solvization*, by the Spaniards, to the note B natural, called by other nations *si*.

BLANCA. (L.) A minim, or half semibreve.

BIANCARDI, VINCENZO. An opera composer at Florence in 1790.

BIANCHETTA. A celebrated female singer in one of the conservatories at Venice, in 1800. Haydn is said to have written his "*Ariadne*" for her.

BIANCHI, PIETRO ANTONIO. A celebrated composer at Venice between the years 1571 and 1609.

BIANCHI, GIULIO CESARE. A composer of motets at Venice in 1620.

BIANCHI, GIOV. ANTONIO, a writer on subjects connected with music, died at Rome in 1758.

BIANCHI, GIOVANNI. An instrumental composer at Milan about the year 1710.

BIANCHI, ANTONIO, a singer and composer, was born at Milan in 1758, and sang at various courts of Europe until the year 1793, when he went to Berlin, and composed several Italian *intermezzi*. He quitted Berlin in the year 1797, and subsequently visited various of the great towns in Germany. His compositions are all vocal, and for the most part dramatic. Among his operas are "*La Reduction de Paris*," performed at Paris; "*Le Mort Maric*," also at Paris; "*Castore e Polluce*," at Florence; "*Caio Mario*," "*Demofonte*," "*Arbace*," "*Piramo e Tisbe*," "*Scipione Africano*," "*Artaserse*," "*Pizarro*," and "*Il Ritratto*," all for Naples.

BIANCHI, FRANCESCO, was born at Cremona. He composed either fifty-seven or fifty-eight entire operas, besides a considerable quantity of church and other music. He wrote a great deal for Paechierotti and Marchesi, and some of his operas remain in public estimation, and were performed, both in Italy and in England, at least as often as those of any other master. He composed his "*Disertor Franchese*" at Venice in 1785, which obtained its celebrity in the following manner: Paechierotti performed the part of the deserter, and in the proper costume of a French soldier. The dress of common life had never before been seen upon the opera stage, and so shocked was the classical taste of the Venetians at this innovation, that they actually refused the piece a fair hearing. It happened, however, that

some royal personage, passing through Venice, expressed a strong desire to see this opera, and in deference to him, the music suffered no interruption; their rapture was equal to their first unwarrantable disgust, and the poor discarded "*Disertor*" became a reigning favorite. Bianchi wrote the first opera, both for Storace and for Billington, "*Castore e Polluce*" for the former, and "*Inez di Castro*" for the latter. His forte lay in fine expression. Though his "*Merope*" (the best of his works) displays how thoroughly he understood the use of instruments, his accompaniments were rather natural and easy than *recherches*. He went hand in hand with the style of his contemporaries, Paesicello, Cimarosa, &c., preferring simplicity to the more complicated effects introduced by the Germans. His "*Semiramide*" is remarkable as having been chosen by Banti for her *début* in England, when it had an extraordinary run. The fame of his success induced the managers to send for him to England, where he remained till the end of his life. Bianchi was previously engaged by the court of Vienna, but his residence in the service of the emperor was prevented by the death of that great personage. It is said that the emperor, having desired his presence at some town in Italy, after conversing with him for near two hours with great familiarity, at length questioned him as to his willingness to settle at Vienna. Bianchi assented, and an engagement was formally made out by the Austrian minister at Venice. He had just read the paper of his appointment, when news of the death of the emperor was brought him, and his good fortune died with the prince. We may relate an anecdote which is, perhaps, the strongest proof of this composer's talents. While Haydn was in England, he assured Bianchi that whenever the accidents of life disturbed his temper, he kept one leaf of Bianchi's works *turned down* for reference; to this he always resorted, and it never failed to restore his serenity.

As a learned contrapuntist, Bianchi ranked high, and a great work of his on the theory of music remained unpublished at his death, in the hands of his widow, Mrs. Lacy. The entire work was intrusted to the care of the editor of the "*Quarterly Musical Review*," with permission to publish extracts. A series of these will be found in the above work, commencing at vol. ii. p. 22.

BIANCHI, J. M. C., was a celebrated performer on the violin. As a musician, both practical and theoretical, he has not often been excelled; and in other respects he was a highly accomplished scholar. His manuscripts consist of Italian operas, English canzonets, violin concertos, &c. This excellent musician died at Neuilly, near Paris, in 1802, aged only twenty-seven years.

BIANCIARDI, FRANCESCO. An Italian composer of madrigals about the year 1590.

BIBER, HENRY JOHN FRANCIS, vice chapel-master to the Bishop of Saltzburg, published in 1681 a set of solos for a violin and bass. He seems to have been amongst the first violin players of his time; and his solos are the most difficult and fanciful, says Dr. Burney, of any music of the same period. One of the pieces is written on three staves, as a score for two violins and bass, but meant to be played in

double stops. Others are played in different tunings of fourths and fifths, as for a treble viol. A second work by this musician, entitled "*Fiducium sacro-profanum*," consists of twelve sonatas, in four and five parts, to be played on three instruments; and a third, "*Harmonica artificiosa-ariosa*," published at Nuremberg, consists of pieces of seven parts, to be played on three instruments.

BIDEAU, DOMINIQUE, published an esteemed method for the violoncello, and some other instrumental works, since the year 1796.

BIEGO, PAOLO. A Venetian dramatic composer between the years 1680 and 1690.

BI-EQUAL THIRD. A name given by Earl Stanhope, in his "Principles of the Science of Tuning," to intervals, two of which, added to a major third, make up an octave; consequently two of them equal a minor sixth.

BIERREY, GOTTLÖB BENEDICTUS, chapel-master and *chef-d'orchestre* at the theatre at Breslau, was born at Dresden in 1772. He composed near twenty operettas, and much other instrumental and vocal music.

BIFERI, NICOLAS, of the Neapolitan school of musicians, was born at Naples in 1739. The characteristics of his style of composition are facility and good taste. After leaving a favorable impression of his talents in Italy, he went to Paris, where he was appointed a chapel-master. He then published a work entitled "*Traité de Musique abrégé*," in which the arts of singing, accompaniment on the piano-forte, composition, and fugue are well taught, in language remarkable for its perspicuity.

BIFFI, GIUSEPPE. A composer at Milan in the sixteenth century. Many madrigals of his composition were published between the years 1582 and 1600.

BIFFI, DON ANTONIO, a Venetian chapel-master to the Conservatory of the Mendicanti, composed some oratorios, &c., in 1704.

BIGAGLIA, DON DIOGENIO, a Venetian Benedictine, composed some cantatas and other music about the year 1720.

BIGATTI, CARLO, one of the best pupils of Padre Mattei, and also of Zingarelli, was born at Milan in 1778. He has published nearly twenty-five works of masses, motets, and airs with variations. He is said to show in his works a profound knowledge of harmony.

BIGGS. A celebrated English composer of songs and canzonets. He was a particular friend of Mrs. Opie, and set much of her poetry to music. Among his publications are a collection of Hindoo airs, and a collection of Welsh airs, the words of both by Mrs. Opie. Biggs ranked very high in England as a teacher.

BIHLER, FRANZ. Chapel-master at Augsburg. He published much vocal and instrumental music between the years 1792 and 1803.

BIHLER, GREGORIUS. A composer at Donawert, in Germany. Some of his music was printed at Ilague in the year 1796.

BILLINGS, WILLIAM. For one hundred and fifty years after the lauding of the Pilgrims

at Plymouth, no native son of New England had attempted musical composition. This distinction was reserved for William Billings, a native of Boston, whose works were so much admired in his day, and so much neglected afterwards. He was born October 7, 1746, and died in Boston, September 26, 1800, aged fifty-four. He was the author of six distinct publications, namely: 1. "The New England Psalm Singer," 108 pages, published October 7, 1770; 2. "The Singing Master's Assistant," 102 pages, published 1778, being an abridgment of the former work; 3. "Music in Miniature," 32 pages, 12mo., published 1779 — this is principally a collection, containing seventy-four tunes, thirty-one new and original, and thirty-two from his former books, and eleven old standard European tunes; 4. "The Psalm Singer's Amusement," 103 pages, published 1781; 5. "The Suffolk Harmony," 55 pages, published 1786; 6. "The Continental Harmony," 199 pages, published 1794. These, with a few separate anthems, viz., "Except the Lord build the house," &c.; "Mourn, mourn, ye Saints," &c.; "The Lord is risen from the dead," &c.; "Jesus Christ is risen from the dead," &c., comprise all his published compositions; and, excepting the eleven European tunes above mentioned, the whole were his own. Billings was of humble origin, and by occupation a tanner. His opportunities for education of any kind were small, and his literary acquirements of course scant. He had little knowledge of counterpoint, having seen probably no work on the science or rules of harmony, except, perhaps, Tausur's Grammar, a very meagre and imperfect treatise; but his love of music and skill in the art of singing were early manifested, and even in youth he became a popular singing master, and began to compose, and commenced his first publication while quite young. The English publications by W. Tausur, A. Williams, J. Arnold, W. Knapp, and J. Stephenson, had found their way across the Atlantic about the time he came on the stage. The lovers of psalmody here, who had from their youth heard nothing but the slow, isochronous notes of the very few old church tunes introduced in their day in the country, very gladly accepted the more lively and spirited airs which these authors offered them. Billings was foremost in adopting the new style, and formed his taste and took his cue in his compositions from such tunes as the third psalm, thirty-fourth psalm, Milford, Christmas Hymn, and many other similar fuguing and lively compositions, then just becoming popular. His works were of course eagerly adopted, and all the old sacred melodies, however before approved and established, were entirely laid aside for many years. Those who succeeded and imitated him carried this style and taste to a still greater extreme. This music, therefore, so much ridiculed by some, and called, in derision, the American or Yankee style, had not its origin, as has been already suggested, on this side the water. England abounded at that time with the same flashy composition. Volumes were there published, and are still extant, in which not a single solid tune can be found, not to e, of any description, which has found its way into any respectable collection of music there or here. Though their harmony may be more correct, the melodies bear no comparison with those of Bil

lings, who therefore, in this respect at least, far exceeded his models. His first publication was exceedingly deficient in all the constituent requisites of good melody, as well as good harmony, and particularly as to accent. It will not bear criticism, and it may amuse the reader to see the remarks of the author himself on his own work. In the preface to his second publication, he said, "Kind reader, no doubt you remember that about ten years ago I published a book, entitled 'The New England Psalm Singer;' and truly a most masterly performance I then thought it to be. How lavish was I of encomiums on this my infant production! Said I, Thou art my Reuben, my first born, the beginning of my strength; but to my great mortification I soon discovered it was Reuben in the sequel, and Reuben all over. I have discovered that many pieces were never worth my printing or your inspection." Of course, in his second work, which at length obtained the name of "Billings's Best," and which professed to be an abridgment of the first, he omitted altogether a great proportion of the tunes, and amended very much those he retained, particularly in the point of accent. This work, as well as his fourth, called the "Psalm Singer's Amusement," became very popular, and no other music for many years was heard throughout New England. Many of the New England soldiers, who, during the revolutionary war, were encamped in the Southern States, had many of his popular tunes by heart, and frequently amused themselves by singing them in camp, to the delight of all who heard them. A gentleman in Philadelphia, distinguished for his great literary attainments, as well as for his musical taste, often spoke of the great pleasure he enjoyed from this source during that period, and said that the name of Billings had been dear to him, and associated with the happiest recollections ever since. Billings possessed something also of the spirit of poetry, as well as of music, and was the author of many of the words, as well as the tunes, he published. The following words set to "Chester" were his own:—

"Let tyrants shake their iron rod,
And Slavery clank her galling chains;
We'll fear them not; we trust in God—
New England's God forever reigns."

He was a zealous patriot also, and much attached to Governor Samuel Adams, of Massachusetts, who was also a great lover and performer of psalmody; and it is within the recollection of many now living, that that venerable statesman uniformly was seated at church in the singing choir. One secret, no doubt, of the vast popularity Billings's works obtained, was the patriotic ardor they breathed. The words above quoted are an example, and "Chester," it is said, was frequently heard from every file in the New England ranks. The spirit of the revolution was also manifest in his "Lamentation over Boston," his "Retrospect," his "Independence," his "Columbia," as well as his "Chester," and many other pieces. Finally, whatever may be said of Billings's music, and however deficient it may now be thought to be in good taste as well as in many other respects, it certainly gave great delight in its day, and many now living, who were accustomed to hear it in their youth, are much inclined to prefer it to the more elaborate and learned music of the present time.

And who can wonder that, after an age of slow, dull, monotonous singing in our churches, confined at the same time to half a dozen threadbare tunes, our congregations should have been electrified and delighted with the chanting, song-like, spirited style which Billings introduced? Besides, the manner of performance should be considered. In the old way, tunes were *set* and *struck up* by the chorister at random; without tuning fork or pitch pipe, and performed by *rote*, and of course often without *tune* or *time*; while the new could be performed only by those who had been instructed in schools and in the art of singing. Billings, therefore, may justly be considered in the light of a reformer, and as having given a new impulse to music generally in our country. Had he lived at the present day, with the superior advantages for obtaining musical skill and science now enjoyed, or had he lived in any other period, there is no reason to doubt he would have been as much distinguished as he was in his own; and though his name and music (as improvement in knowledge and taste in the art advanced) soon declined, and were almost entirely out of date, yet we now begin to see both his name and his melodies making their way again into respectable notice and the best collections. There is fashion even in music. The style and taste of one period have no charms at another. So we look in vain into the music of the earliest antiquity for the wonderful effects ascribed to it. So is it also with the tastes of the different nations at the same period; what prevails in one is without interest in another. The fugues and divisions, once so common and prevalent, and which abounded even to disgust and satiety in former days, particularly in our American composition, and which served finally, no less than their violation of the rules of harmony, to cast them into the shade of neglect and derision, are now much disused and out of fashion. In this respect we have gone to the other extreme. Very few fugues or divisions are admitted, into church music at least, and sparingly into any other. Within the last twenty years much has been done to restore a better taste, and introduce a better kind of music among us. The struggle has been to banish the fuguing and frivolous airs which deluged the country, and in doing it we have returned too far, perhaps, towards the exclusive use of the old tunes with notes of equal length, and to the plain chant. This cannot last, and the want of more exciting and animating melodies in our churches begins to be manifested, and must and will be gratified. Besides, they want a more distinctive character. To the great majority of every audience all tunes seem too much alike. Modern harmony being restricted to a few simple rules, which also restrain the freedom of the melodies themselves, and the time and measure of our sacred music having settled down into a slow and solemn uniformity, it requires some practical acquaintance with music to distinguish one tune from another. A greater variety and more characteristic difference seems to be called for. Billings's melodies were certainly many of them very good, and he generally gave something of an air to the bass and intermediate parts. This led him often into errors in his harmony, such as the unnecessary omission of the third, consecutive eighths and fifths, and permitting the inner and interior

parts to transgress their proper limits. These and other rules of harmony and progression were not, however, much known or promulgated with us in his time. Correct musical grammars were then unknown in New England. But it cannot be denied that he had genius and talent, which would in any age, probably, have distinguished him, and raised him above his contemporaries; and he must be allowed the merit of exciting a musical spirit, which gave to New England an impulse that is felt even to this day.

BILLINGTON, ELIZABETH. This celebrated singer, musician, and piano-forte player, was a daughter of Weichsell, a native, we believe, of Freyberg, in Saxony. She was born in England about the year 1770. Her mother, who was a singer of some eminence, died while her offspring, Mr. C. Weichsell, the celebrated violinist, and Mrs. Billington, were young. These children were trained to music at the earliest possible age, and even performed on the piano-forte and violin for the benefit of Mrs. Weichsell, at the Haymarket Theatre, at six years old. Her first master was Schroeter, an excellent teacher of the piano-forte, and her father superintended her musical education with a degree of severity that could scarcely be justified even by the proficiency of the pupil. Few persons have attained the perfection that Miss Weichsell reached upon this instrument. At fourteen she came before the public as a singer, at Oxford, and at sixteen married Mr. Billington, then a performer on the double bass, who carried her immediately to Dublin, where she commenced her theatrical career in the opera of "Orpheus and Eurydice." Here, perhaps, for the only period of her life, she was doomed to suffer mortification, in the greater applause and respect obtained by Miss Wheeler, a singer much inferior to herself; and such was the effect on the ardent mind of Mrs. Billington, that it had nearly been the occasion of her leaving the stage in disgust. The reputation of Miss Wheeler procured her an engagement at Covent Garden Theatre for three years. Mrs. Billington followed her to London, and no sooner had she arrived, than Mr. Harris, the proprietor, and Mr. Lewis, the manager, waited upon her with a proposal to play three nights. So short a trial she positively refused, expressing her desire to substitute twelve nights, under the apprehension that her too anxious solicitude to please her countrymen might defeat her first efforts. Such, indeed, was her distrust, that she considered this as a final experiment; and she had determined, in the event of any failure, either in the ease of self-possession or of deficiency of powers and attainments, to quit the profession of an actress at once. They proceeded to discuss the terms of her engagement, and she desired a salary of twelve pounds per week; to which the managers objected, as being the *highest sum then given*, and as the remuneration assigned to Miss Wheeler, whose reputation was so high and established. The comparison was unfortunate; it irritated Mrs. Billington, and she instantly declined to enter into any permanent contract. She consented, however, to appear for the twelve nights, and was advertised for the part of Rosetta, in Arne's opera of "Love in a Village." She was announced for the Wednesday night; but the name of Mrs. Billington, late Miss Weichsell, having

caught the attention of the king, his majesty commanded her appearance to take place two days sooner—a circumstance highly flattering, as it was a solitary instance, and contrary to the custom generally observed by the sovereign.

It will readily be conceived, that Mrs. Billington, whose habits of study and practice had been fixed by the severest exercise of parental authority, omitted no preparatory exertion to insure her success with the public under such auspices. Indeed, she labored night and day, and nothing could be more complete than her triumph over the esteem of her audience and the rivalry of her former favored competitor. Miss Wheeler was laid on the shelf, as the theatrical phrase goes, and at the expiration of the twelve nights, the managers again waited on Mrs. Billington, to renew her engagement on a permanent footing. They questioned her cautiously respecting her expectations, and she, rather in jest than in earnest, demanded one thousand pounds and a benefit for the remainder of the season, with which, to her utter astonishment, they immediately complied; and they afterwards voluntarily gave her a second night, in return for the extraordinary emolument they had derived from the exercise of her talents. During this season, although her theatrical duties were unremitting, she never relaxed from the most sedulous general pursuit of the knowledge and practice of her art. She labored incessantly, and received lessons of Mortellari, an Italian master of celebrity, at that time in England. The theatre had no sooner closed than she availed herself of the interval to fly to Paris, where she enjoyed the instructions of the great Sacchini, the composer. Thus she continued from the first to fortify and enrich her natural gifts with the strength and ornaments of high science.

At this time, Madame Mara arrived in England, unequalled in the eminence she had attained. In 1785, the subject of our memoir made her *début* at the Concert of Ancient Music. Mara herself is said not to have beheld her reception quite unmoved, and some disputes even arose respecting place and pre-eminence in the seats of the orchestra—a species of contention very unworthy the transcendent abilities of these gifted individuals. Mrs. Billington's fame continued to spread, while her never-ceasing ardor and assiduity were day by day enlarging her stock of knowledge, acquirement, and facility. She was a constant performer at the concerts of the metropolis, and she sang at the memorable Westminster Abbey performances. She remained at Covent Garden until 1793, when she adopted a resolution to retire from public life, which she vainly imagined she had firmness enough to adhere to. At the instigation of her husband and her brother, she was induced to make a continental tour, with a view solely to amusement; and to this intent she declined all letters of introduction, intending to travel *incognita*. For some time they succeeded, and passed along without notice; but at Naples, the English ambassador, Sir W. Hamilton, penetrated their secret, and persuaded Mrs. Billington and Mr. Weichsell to perform in private before the king and queen, at Caserta, a country residence. The gratification they received induced their majesties to request Mrs. Billington to perform at the great theatre of St. Carlo, then thought to be the finest opera established in the world. She accordingly, in May, 1794, made her

début in "*Inez di Castro*," which was composed expressly for her by the *maestro*, Francesco Bianchi, who wrote an opera worthy the supereminence of this *prima donna*. Her success was complete, for indeed her celebrity made her name known in Italy; and previous to her quitting England, the Venetian ambassador had been in treaty with her to accept an engagement, which, however, she broke.

Her performance at Naples was interrupted by a sudden and affecting event. On the second night, as Mr. Billington was seeking his hat to accompany his wife to the theatre, he fell down in a fit of apoplexy, and died in the arms of Bianchi, at the residence of the Bishop of Winchester. Nor was this the only circumstance that impeded her progress. About this time, an eruption of Mount Vesuvius took place, and the superstitious bigotry of the Neapolitans attributed the visitation to the permission granted to a heretic to perform at St. Carlo. Serious apprehensions were entertained by Mrs. Billington's friends for the consequences of such an impression. Her talents, however, triumphed; she renewed her performance, and no *prima donna* was ever more raptuously received in that country, where the opera is best cultivated and understood. Paesiello, Paer, and Himmel successively wrote for her after Bianchi.

In 1796 she went to Venice, where, after the first performance, she was taken so ill that she could sing no more during the season; and it is among the records honorable to human nature, that the manager generously brought her the whole of her salary, which she compensated by playing the succeeding season without any other reward than the pleasure of reciprocating the liberality of her employer. Conceiving that the air of Venice did not agree with her, she quitted the place. On her journey from Venice to Rome, she was earnestly requested to give a concert at Rome, which she at first declined; but a society of *Cavalieri* undertook the whole of the arrangement, and she and Mr. Weichsell performed to a very crowded audience. Between this period and the year 1798, she visited all the principal theatres in Italy, and in this year married Mr. Felissent, and appeared only twice subsequently at Milan. In 1801, still retaining the name of Billington, she returned to her native country. No sooner was her arrival known, than all the conductors of the public amusements were alike eager to engage her. The managers of Covent Garden and Drury Lane Theatres evinced equal anxiety to secure her talents, and the disposal of her services was at length referred to arbitrators, who awarded that she should appear at the two theatres alternately. Mandane, in Arne's "*Artaxerxes*," was the character selected for her *début*, and the audience were struck with rapture and astonishment at her amazing powers, which were then in their full meridian. On this occasion she introduced a song from Bianchi's "*Inez di Castro*," to the English words "Lost in anxious doubts;" which, being composed expressly for her, exhibited at one view her prodigious qualities, heightened by the delightful execution of her brother's *obbligato* violin accompaniment. Perhaps no other singer could have sung this song; very certain it is, no one has ever attempted it. Engagements now multiplied upon her. She sang at the Italian Opera in 1803, at the king's concert, at the

Hanover Square Vocal Concerts, and at a round of provincial meetings, from this time till 1809, when she finally retired. Two remarkable circumstances attended her during this period of her public life. On her reappearance at the opera, Banti, then in the zenith of her excellence, played the character of Polifonte to Mrs. Billington's Merope, in Nasonini's opera of that name. Never was the house so crowded as on this occasion; the stage was so covered with ladies and gentlemen, that the performers had scarcely room to move. The second occurrence was her performance with Mara on the 3d of June, 1802, the last night of that most distinguished singer's appearing in England. They sang a duet together, composed to display their mutual accomplishments, and the contest excited both to the utmost pitch of scientific expression. At length Mrs. Billington, having gained a competency, and feeling her health very sensibly affected by her efforts in the service of the public, retired in 1809 from all public performances, and was never afterwards induced to appear except on one occasion, when she sang for the benefit of a charity at Whitehall, in the presence of the royal family. Mrs. Billington finally quitted England with her husband in 1817, and died, after an illness of a very few days, at her estate of St. Artien, near Venice.

BILLINGTON, THOMAS, husband of the preceding, and whose sudden death at Naples has been before mentioned, was a musician of talent, and composed some pleasing vocal pieces, among which were Gray's "Elegy," "Maria's Evening Service," "Eloisa to Abelard," Pope's "Elegy," Prior's "Garland," "Children in the Wood," and part of Young's "Night Thoughts," all set for one or more voices.

BILS, FRANZ. An organist in Germany, and voluminous composer, towards the end of the last century.

B IN ALT. (I.) The tenth above the treble clef note; the third note in *alt*. See **TREBLE CLEF NOTE** and **ALT**.

B IN ALTISSIMO. (I.) The octave above B in *alt*; the third note in *altissimo*. See **B IN ALT**, and **ALTISSIMO**.

BINARY. Twofold or double measure. See **TIME**.

BINCHOIS. A celebrated French composer between the years 1400 and 1460. He is cited by Gaffori, as being, together with Dunstable, Caron, Regis, Dufay, and Brasart, one of those musicians, who, at the commencement of the fifteenth century, gave a great impulse to the art of counterpoint, and were, in fact, the precursors of the masters of the Flemish school.

BIND. A ligature, or tie, connecting two or more notes.

BINDER, AUGUST SIEGMUND, organist at Dresden, was born there in 1761. He received his instructions in music of his father, C. S. Binder, and has composed several vocal and instrumental pieces.

BINDERNAGEL, JOSEPH. A German musician, living about the year 1800 in Paris. He published some instrumental music in the years 1799 and 1800.

BINDING NOTES. Notes held together by curves, or ties. See **HOLDING NOTES**.

BINDUNG. (G.) Syncopation.

BINGTON, WALTER, an Englishman, wrote, in the thirteenth century, a work entitled "*De Speculatione Musicae*."

BINI PASQUALINO, of Pesaro, was one of the favorite pupils of Tartini. About the year 1757, he was director of concerts to the Duke of Wurtemberg, at Stuttgart, at the same time that Jomelli was chapel-master to the duke.

BION, a Greek philosopher, wrote a work on music, which is now among the manuscripts in the king's library at Vienna.

BIONI, ANTONIO, a voluminous composer of opera music, and pupil of Giovanni Porta, was born at Venice in 1698. He went to Breslau, in Germany, where, and at Vienna, he composed numerous operas between the years 1724 and 1738.

BIRCH, H. W., was a friend of the celebrated Dr. Croft. On the death of the doctor, in 1727, Mr. Birch erected a monument for his friend at his own expense. This gentleman was remarkable for the singularity of his character. He was a man of abilities in his profession; was one of the counsel for Woolston, in the prosecution against him for his blasphemous publications concerning the miracles of our blessed Savior, and made for him as good a defence as so bad a cause would admit of. He was possessed of a good estate, and was therefore at liberty to gratify his passion for music, which was a very strange one, for he preferred that style which had a tendency to draw tears. Of all compositions he most admired the funeral service by Purcell and Croft, and would leave the circuit and ride many miles to hear it. At the funeral of Queen Caroline, for the greater convenience of hearing this music, he, with another lawyer, who was afterwards a judge, walked among the choirmen of the abbey, each clad in a surplice, with a music paper in one hand and a taper in the other, though neither he nor his friend could sing a note.

BIRCHENSIA, JOHN, an Irishman, published a prospectus, in 1672, of a complete system of music, intended to be published by him under the title of "*Syntagma Musicae*." It is doubtful whether this work ever appeared. He wrote, however, two other small works on music, and translated the "*Elementale Musicum*" of Alstedius.

BIRCKENSTOCK, J. A., chapel-master at Eisenach, was born in 1687. He composed some instrumental music. He died in 1733.

BIRD, WILLIAM, the worthy and admirable scholar of Tallis, is supposed to have been the son of Thomas Bird, one of the gentlemen of Edward VI. chapel, in which he was himself a singing boy. By the great number of his ecclesiastical compositions to Latin words, and the several portions of the Romish ritual which he so frequently set to music, and published late in life, he seems to have been long a zealous adherent to that religion. He must, however, have conformed to the church establishments of Queen Elizabeth's reign, for, in 1563, he was chosen organist of Lincoln Cathedral, where he continued till 1569; when, upon the accidental death of Robert Parsons, who was drowned at Newark-upon-

Trent, he was appointed gentleman of the Chapel Royal; notwithstanding which office, he seems to have composed the chief part of his choral music to Latin words, and to have published it in that language, as late as the middle of the reign of King James I. Bird composed a vast quantity of vocal music, chiefly sacred, between the years 1575 and 1611.

Dr. Tudway's collection, in the British Museum, contains a whole service in D minor, by Bird, with responses, and the anthems, "Sing joyfully unto God," "O Lord, turn thy wrath," (all published in the second and third volumes of Dr. Boyce's Cathedral Music,) "O Lord, make thy servant," "Save me, O God," "Prevent us, O Lord," and "*Civitas sancti tui*." One of his *sacrarum cantionum*, or sacred songs, published in 1589, has been long sung in the cathedrals to the English words "Bow thine ear, O Lord," and is one of the admirable pieces of harmony in the second volume of Boyce's printed collection.

Dr. Aldrich was a great admirer and collector of the works of Bird, and adapted English words to most of his compositions, which were originally set to parts of the Romish service in Latin. He bequeathed to Christ Church, Oxford, beautiful and correct copies of these productions.

His pieces for the organ and virginals are almost innumerable. In a magnificent folio manuscript, curiously bound in red morocco, which is generally known by the name of Queen Elizabeth's virginal book, there are nearly seventy of his compositions.

It has been imagined that the rage for variations, that is, multiplying notes, and disguising the melody of an easy and generally well-known air, by every means that a *note-splitter* sees possible, was the contagion of the present century; but it appears from the *virginal book*, that this species of influenza, or corruption of air, was more excessive in the sixteenth century than at any other period of musical history. None of Bird's pieces for keyed instruments seem to have been printed, except eight movements in a thin folio book of lessons, that were engraved on copper, and published in the reign of King James I., under the following title: "Partheuia, or the Maidenhead of the first Musicke that ever was printed for the Virginals, composed by three famous Masters, William Byrd, Dr. John Bull, and Orlando Gibbons, Gentlemen of his Majesty's most illustrious Chapel." These lessons, though not equally difficult with some of those in the virginal books of Queen Elizabeth and Lady Nevill, are rather more dry and ungraceful.

The canon, "*Non nobis, Domine*," appears in none of his works published by himself, or collected by others, before the year 1652, when Hilton inserted and prefixed the name of Bird to it, in a collection of catches, rounds, and canons; but as no claim was laid to it, by or in favor of any other composer before or since that time, till about the middle of the present century, when it was given to Palestrina by Carlo Ricotti, — who published, in Holland, among his concertos, a fugue in eight parts, on the same subject, — there seems no doubt remaining of Bird having been the author of that pleasing and popular composition.

Bird died in 1623, surviving his master, Tallis, thirty-eight years; and if we suppose him to have been twenty in the year 1563, when he was

chosen organist of Lincoln, he must have been eighty at his decease.

In a collection of music by this writer there are the following reasons why people should learn to sing:—

Reasons set down by th' suetor to persuade everie one to learn to sing:—

1. It is a knowledge easie taught and quicke learned, when there is a good master and an apt scholar.
2. The exercise of singing is delightful to nature, and good to preserve the health of man.
3. It do strengthen all parts of the heart, and doth open the pipes (sic).
4. It is a singular good remedde for a sluttering and stammering in the speech.
5. It is the best means to preserve a perfect pronounciation, and to make a good orator.
6. It is the onlie way when nature hath bestowed the benefit of a good voice; which gift is so rare, as there is not one among a thousand that hath it; and in manie that excellent gift is lost, because they want the art to express nature.
7. There is not any muscke of instrument whatsoever comparable to that which is made by the voices of men, when the voices are good, and the same well sorted and ordered.
8. The better the voice is, the sweeter it is to honor and serve God therewith; and the voice of man is chiefly to be employed to that end—*omnis spiritus laudet Dominum.*

BIRMINGHAM MUSIC HALL. This is the largest in England, being 140 feet long, 65 feet wide, and 65 feet high. It is capable of containing an audience of about 3000 persons. It has rectilineal walls, broken at intervals by pilasters, and is surmounted on all sides by a coving deeply groined, which terminates in the flat ceiling above. Two narrow galleries extend along the sides of the room, and are of greater depth across the end; at the other end is placed the orchestral platform and choral seats, which platform is on the same plane with the lower gallery. The floor of the hall is level.

BIS. (L.) Twice. This term always implies that the bar, or bars, included with it in the same curve, (drawn under or over the notes,) is to be sung or played twice before the performer proceeds to the succeeding bar, or bars.

EXAMPLE.

BISDIAPASON. (L.) A double octave.
BISINIA. (L.) A term formed from the word *bis*, twice, and applied to piano-forte pieces, or movements in which both hands are alternately employed upon the same melody, or succession of intervals.

BISACCIONI, an Italian composer, lived about the middle of the seventeenth century. He composed at Venice, in 1645, the opera "*Ercole Amante*," which was performed at Paris in 1660, on the king's marriage.

BISACCIANTI, SIGNORA. Miss Eliza Ostinelli was born in Boston, Massachusetts, in 1825. Her father, Louis Ostinelli, a talented Italian musician, was for many years a resident of Boston, and leader of the orchestra in the principal theatres. Her mother was a native of New York, and a pianist of rare excellence for that time. Her voice in her girlhood was remarkable for its richness, beauty, and great compass, embracing more than two octaves and a half. With a quick ear and impassioned brilliant style, she sang the English and Italian songs that were in vogue, and which she caught pretty much by ear, to the great admiration of her friends, who anticipated in her a distinguished singer, and were anxious that she should cultivate the rare gift which she possessed without musical knowledge or habit of application. A subscription was

easily raised, and in the latter part of the year 1843, at the age of eighteen, she left America in company with her father, for the direct purpose of cultivating her voice under the best Italian masters. An introduction from the American consul at Leghorn brought her to the notice of Giuditta Pasta, then in Como, the native city of Signor Ostinelli. She continued to receive instruction from Madame Pasta for ten months, and subsequently became a pupil of Vaccai, Nani, and Lamberti, three of the most celebrated masters of Italy. In May, 1847, Miss Ostinelli, who by this time had changed her name for that of Biscaccianti, a distinguished family of Milan, made her first public appearance in the difficult character of Elvira, in Verdi's "*Ernani*," at the Carcano, the same theatre at which Pasta, who, up to this time, had continued to evince the greatest interest in her success, had made, many years before, her *debut*. Her success was complete. She returned to America in the summer of the same year, had an enthusiastic welcome in her native city, and sang, with great success, in opera and concert, in all the principal cities of the Union. A few years since, Mme. Biscaccianti visited Europe a second time, sang several times, if we mistake not, in the opera at London, and then withdrew from the public for a year or more, which period she devoted to the most earnest studies, under the best teachers in London and Paris. On her return to the United States, a marvellous improvement appeared in the finish, style, and sentiment of her singing. She was in every sense an accomplished, refined artist, alike admirable for voice, method, execution, style, and expression. During the past year, Mme. Biscaccianti has been exciting great enthusiasm by her concerts in the principal cities of California. She was the first great singer that visited that golden land.

BISCH, JEAN. Author of "*Elements of Music*," published in 1802. This is probably the same Bisch, a German by birth, who published some military music at Paris, in 1794.

BISCHOFF, JEAN GEORGES, was born at Nuremberg in 1733. He was a skilful performer on several instruments, and composer of some violin music.

BISCROME. (I.) A semiquaver.

BISCIOLA, LELJO, a learned Jesuit, wrote on the subject of music at the beginning of the seventeenth century.

BISGARGUI. See *Viscargui*.

BISIOP, JOHN, a scholar of Rosingrave, was organist of the cathedral at Winchester early in the last century. He published a collection of airs for two flutes, and composed some church music. His "*Hymnus Matutinus*" is even now elegant.

BISIOP, HENRY ROWLEY, was born in London in 1782, and early in life was placed under the musical tuition of the celebrated Francesco Bianchi. In the year 1806, he commenced the course of composition which still distinguishes him, by a part of the music of a ballet produced at the King's Theatre, under the title of "*Tamerval et Bajazet*;" subsequently to which he wrote the ballet called "*Narcisse et les Graces*." After the lapse of two seasons, he came forward at Drury Lane

Theatre with "*Caractacus*," a grand ballet of action, in which his efforts were again successful; but when, about twelve months afterwards, he made his first decided attempt as a dramatic composer, it was thwarted by circumstances of peculiar gloom and misfortune. On the 23d of February, 1809, an opera, called the "*Circasian Bride*," was produced at Drury Lane, with Bi-hop's music. On the following night, Drury Lane Theatre was burned to the ground, and the scores of the new opera were entirely consumed in the flame. This music had been received with enthusiasm by those qualified to criticize it, and there are specimens still occasionally performed, such as the duet of "I'll love thee," which amply commensurate the extent of the loss. But by a calamity even of this extent, Bishop's tide of fortune was not to be turned; the proprietors of Covent Garden Theatre, seeing his merits, and knowing how to employ them, formed an engagement with him for three years, to compose and direct the music of that establishment. He entered on this important office with the season of 1810-11.

The first piece, in consequence of this arrangement, upon which Bishop's talents were employed, was a national drama in three acts, by Norton, selected from Scott's poem of the "*Lady of the Lake*," with some unimportant variations, and produced as the "*Knight of Snowdown*." In the music of this piece Bishop displayed a degree of talent seldom surpassed by British composers. Before the expiration of this engagement, the "*Virgin of the Sun*," the "*Ethiop*," and the "*Renegade*" were produced; and the great musical picture of a storm and earthquake, with which the first of these pieces was enriched, will be long remembered. A five h engagement for five years was now concluded; and when we say that Bi-hop signaled it immediately by the "*Miller and his Men*," no ampler proof can be given of the indications with which it commenced. "*For England, ho!*" a melodramatic trifle of superior pretensions, next enabled him to maintain the impression his prior works had just made; and the annexed record of his compositions will show the magnitude of his labors during these five years.

A new engagement of Bishop at Covent Garden Theatre took place in 1818, and being made, as before, for a term of five years, of course expired with 1823.

In 1819, Bishop became a joint proprietor of the oratorios with Mr. Harris, and they were confined to his exclusive direction; in 1820, a separation of interests occurred, and these splendid performances were conducted by Bishop on his own responsibility, and under his entire control. Arrangements had been made which invested him with the same degree of power for several successive seasons; he profited, however, by a clause in the contract to relinquish them at the end of the first, and withdrew to the continuance of those theatrical avocations they had too sensibly interrupted.

A great public honor was paid to Bishop in the autumn of 1820, when he visited Dublin, and received the freedom of that city by the cordial and unanimous suffrage of those who presented it.

On the institution of the Philharmonic Society, Bishop was appointed one of its directors; he has

also held the same office several times since. He further belongs to the Royal Academy of Music, as a professor of harmony.

Bishop has been concerned in the production of more than seventy theatrical pieces; of this number, more than half are his own unassisted compositions. He also supplied the music of three tragedies, the "*Apostate*," "*Retribution*," and "*Mirandola*;" and a "*Triumphal Ode*," performed at the oratorios; he has published a multiplicity of single songs, duets, glees, &c., of great merit. He arranged the first volume of the "*Melodies of various Nations*;" three volumes of the "*National Melodies*" are also furnished with his symphonies and accompaniments; and he finally stipulated with Mr. Power to superintend his publications of Irish and other classical airs.

The following is a list of Bishop's dramatic production:—

"*Tamrhan et Bajazet*," (composed and selected,) grand heroic ballet, King's Theatre, 1806; "*Narcisse et les Graves*," Amereonte ballet, do., June, 1806; "*Caractacus*," grand ballet of action, Drury Lane, March, 1806; "*Love in a Tub*," ballet, do., November, 1806; "*The Myrterious Bride*," (composed and selected,) romantic drama, do., June, 1808; "*The Circasian Bride*," opera, do., February, 1809; "*Mora's Love*," ballet, King's Theatre, June, 1809; "*The Vintagers*," musical romance, Haymarket, August, 1809; "*The Mania*," opera, Lyceum, March, 1810; "*Knight of Snowdown*," do., Covent Garden, February, 1811; "*Virgin of the Sun*," do. do., January, 1812; "*The Ethiop*," do. do., October, 1812; "*Haroun Al-raschid*," (altered from the "*Ethiop*," do. do., January, 1813; "*The Brazen Bust*," melodrama, do., May, 1813; "*Harry le Roy*," (composed and selected,) burlesque, do., July, 1813; "*The Miller and his Men*," melodrama, do., October, 1813; "*For England, ho!*" (with the exception of three acts,) melodramatic opera, do., December, 1813; "*The Farmer's Wife*," (with Davy, Reeve, &c.,) opera, do., February, 1814; "*The Wandering Boys*," melodrama, do., February, 1814; "*Sadak and Kalasrad*," (first act only,) grand spectacle, do., April, 1814; "*The Grand Alliance*," (composed and selected,) allegorical spectacle, do., June, 1814; "*Doctor Sangrado*," ballet, do., September, 1814; "*The Forest of Bondy*," melodrama, do., September, 1814; "*The Mill of the Mill*," additional music in opera, do., October, 1814; "*John of Paris*," (composed and selected from the French of Boieldieu,) do. do., November, 1814; "*Brother and Sister*," (with Mr. Reeve,) musical entertainment, do., February, 1815; "*The Noble Outlaw*," opera, do., April, 1815; "*Telemachus*," (composed and selected,) opera, Covent Garden, June, 1815; "*Magpie and the Maid*," melodrama, do., September, 1815; "*John du Bart*," do. do., October, 1815; "*Cymon*," (overture and additional music in,) musical entertainment, do., November, 1815; "*Comus*," (additional music in,) do. do., 1815; "*Midsummer Night's Dream*," (composed and selected,) opera, do., January, 1816; "*Guy Rammerey*," (with Whitaker, &c.,) do. do., March, 1816; "*Who wants a Wife?*" melodrama, do., April, 1816; "*Royal Nuptials*," (selected and arranged,) occasional interlude, do., November, 1816; "*The Slave*," opera, do., November, 1816; "*Heir of Versail*," (with Whitaker,) operatic piece, do., February, 1817; "*Hu-*

norous Lieutenant," opera, do., January, 1817; "The Libertine," (adapted from Mozart,) operatic piece, do., 1817; "Duke of Savoy," opera, do., September, 1817; "Father and his Children," melodrama, do., October, 1817; "Zuma," (with Braham,) opera, do., February, 1818; "Illustrious Traveller," melodrama, do., February, 1818; "December and May," operatic piece, do., May, 1818; "Barber of Seville," (overture and additional music, and adapted from Rossini,) do. do., October, 1818; "The Marriage of Figaro," (composed and adapted from Mozart,) do. do., March, 1819; "Fortunatus," melodrama, do., April, 1819; "The Heart of Mid-Lothian," (composed and selected,) opera, do., April, 1819; "A Roland for an Oliver," music arranged for musical entertainment, do., 1819; "Swedish Patriotism," melodrama, do., May, 1819; "The Gnome King," operatic piece, do., October, 1819; "The Comedy of Errors," opera, do., December, 1819; "The Antiquary," (composed and selected,) do. do., January, 1820; "Battle of Bothwell Brig," (composed and selected,) musical entertainment, do., 1820; "Henri Quatre," opera, do., April, 1820; "Twelfth Night," do. do., 1820; "Don John," (part of the music,) do. do., 1821; "Two Gentlemen of Verona," do. do., 1821; "Montrose," (composed and selected,) do. do., February, 1822; "The Law of Java," do. do., May, 1822; "Maid Marian," do. do., December, 1822; "Clari," do. do., May, 1823; "The Beacon of Liberty," musical romance, do., October, 1823; "Cortez," opera, do., November, 1823; "Native Land," do. do., February, 1824.

BISHOP, ANNA, was educated at the Royal Academy of Music, in London. Her first appearance in public was at a concert given by Bochs, July 5, 1839. Griß, Pauline, Viardot Garcia, Persiani, Rubini, Tamburini, and Lablache, all sang at this concert; Thalberg and Dohler presided at the piano, and Bochs at the harp; still, in spite of this brilliant phalanx of artists, who threatened to eclipse altogether the talent of the new *debutante*, she obtained the most triumphant success. Soon after she ventured on an artistic tour through the principal countries of Europe, and visited the most noted towns of Denmark, Sweden, Russia, &c., in all of which places she was successful. Her visit and reception in the large cities of the United States will be remembered by the thousands who heard and admired her.

BISONI A church composer at Lugo, in Italy, in 1788.

BISSET, CATHERINE. Eldest daughter of Robert Bisset, LL. D., author of the "Life of Burke," and the "Reign of George III." At an early age, Miss Bisset gave promise of musical abilities. In consequence of the death of her father, when she was quite a child, she was advised by many friends to study, as a profession, that art which she had previously cultivated as an accomplishment; and notwithstanding the high rank of several of her nearest relatives, at twelve years of age she was giving lessons to assist in supporting her family. Shortly after, she became acquainted with J. B. Cramer, who, with the liberality of mind which so peculiarly characterized him, instructed her without any emolument.

In 1811, Miss Bisset performed, at the New Musical Fund concert, Cramer's difficult concerto in C minor, with the most unbounded applause.

Having established her fame as a public performer, Miss Bisset preferred being heard at the nobility's private concerts until the season of 1823, when she was prevailed on to play at Paris, where she was enthusiastically received, and pronounced, by several of the first professors in that city, to be the only performer of the present day in the true style of her inimitable master.

BISSET, MISS ELIZABETH, pupil of Mr. Dizi, was as celebrated on the harp as her sister on the piano-forte.

BISSON, LOUIS. A French composer in the latter half of the sixteenth century. He altered many four part songs of Nicholas Chemin into duets, without changing the first part.

BITTHERSER, F. R. A monk and composer of music at Wurtzburg in the latter half of the last century.

BITTI, MARTINI. A distinguished violinist and composer of instrumental music at Florence about the year 1714.

BITZENBERG, MADAME. A celebrated pianist, singer, and violinist at Vienna, about the year 1798.

BITMI, GIACOMO FILIPPO, an organist and composer at Milan, died in 1652. He published motets and church music.

BIZARRO. A celebrated composer of madrigals, &c., at Rome, in the first half of the seventeenth century.

BIZZARO. (I.) This term implies that the style of the movement to which it is prefixed is odd, fantastical, and irregular; now quick, now slow; sometimes loud, sometimes soft; just as the carelessness, or whim of the moment, dictates to the composer.

BLACKWELL, ISAAC. An English composer of songs, some of which were printed in a collection entitled "Choice Ayres, Songs, and Dialogues to sing to the Theorbo, Lute, and Bass Viol," fol. 1675. There are some compositions of his for the church in the books of the Chapel Royal, and in those of Westminster Abbey.

BLAMONT, FRANCOIS COLIN DE, was born at Versailles in the year 1690, and for his merit in his profession, was made a chevalier of the order of St. Michael. He was a composer for the opera, and enjoyed the places of superintendent of the king's music, and master of that of his chamber. He wrote the operas "*Didon*," "*Les Fêtes Grecques et Romaines*," "*Il Pastor fido*," &c. He died in the year 1760.

BLANC, DIDIER LE. A French composer of four part songs in 1597.

BLANC, HUBERT LE, published a work on the bass viol at Amsterdam in 1740.

BLANCHARD, E. J. A., a celebrated French musician, died at Versailles in 1770. He was chamber musician to the King of France, who granted him letters of nobility and the order of St. Michael. He composed some sacred music containing beauties of the first order, among which is a magnificent motet, called "*Laudate Dominum*."

BLANCHE. (F.) (Literally, white note.) A minim, or half note.

BLANCHUS, PETRUS ANTONIUS. See **BLANCHI, P. A.**

BLAND, MRS., is the daughter of an Italian Jewess of the name of Romanzini, and was first introduced into public life by a Mr. Cady, hair-dresser to the Royal Circus, who heard and approved of her voice while an infant, and by the consent of her mother she was engaged at a small salary. She soon distinguished herself by her wit and pleasing manner of singing, and rapidly advanced in the good opinion of her audience. Miss Romanzini soon aspired to a regular stage, and was engaged by Mr. Daly, manager of the Dublin Theatre, where she was well received.

When Mrs. Wroughton left the stage, the managers found great difficulty in supplying her place. Among others, Miss Romanzini was engaged for that purpose, and in a short time she proved herself an excellent substitute. The public were greatly pleased with her performance of the page, in "*Richard Cœur de Lion*," which added much to the popularity of the piece, and her fame.

In the summer of 1789 she went to Liverpool, and became a favorite with the inhabitants of that place, both as an actress and as a concert singer. About this period she married Mr. Bland, brother to Mrs. Jordan, by whom she had several children. This lady, both as an actress and as a singer, afforded much pleasure to the public.

BLANGINI, JOSEPH MARIE FELIX, was born at Turin in 1781. At the age of twelve or thirteen he did the duty of organist at the cathedral of that town, and at fourteen led a mass with a full orchestra. He went to Paris in 1799, and devoted himself with the greatest success in giving lessons in singing and composition. He at the same time composed operas and many pleasing romances, and other light vocal pieces. In 1805 he was invited to Munich, and appointed chapel-master to the King of Bavaria; and in 1809 the King of Westphalia conferred on him the situations of chapel-master, chamber musician, and *chef-d'orchestre* to the theatre. Blangini composed one hundred and sixty-four romances; one hundred and seventy nocturnes, for two voices; seventeen sets of canzonets; six motets; four masses; and about twenty operas. Among the more favorite of his operas may be cited "*La fausse Duègne*," "*Nephtali*," "*Zelie et Terzélie*," "*Tues de Castro*," "*Les Fêtes Lacédémoniennes*," and "*Le Sacrifice d'Abraham*."

BLANGINI, M. L. E., sister of the preceding, was a good violinist, and has performed concertos on that instrument at the public concerts at Turin, Milan, Vienna, and Paris. She has also composed some music for the violin.

BLANKENBORG, QUIRINUS VAN, organist at the Hague, published a book on thorough bass in 1739, also some church music.

BLANKENBURG, FRIEDRICH VON, died at Leipsic in 1793. He edited the new edition of Sulzer's "*Theory of the Fine Arts*," and added to the musical articles of that work.

BLASEBLAGE. (G.) The bellows of an organ.

BLASIS, FRANCESCO ANTONIO, composed at Milan the opera of "*Armínio*," in 1790.

BLASIUS, MATHIEU FREDRIC, was *chef-*

d'orchestre at the Opera Comique in Paris. He published, in 1796, a method for the clarinet. He also arranged Haydn's sonatas as quartets, &c., and wrote several operas and instrumental pieces. He died in 1829.

BLAVIT, M. A musician of Besançon, who was engaged in the opera at Paris, and distinguished himself by his taste and the superior merits of his pieces of vocal and instrumental music. He died in 1738, aged sixty-eight.

BLAVIERE, about the year 1772, was a singing master at Antwerp. Dr. Burney speaks highly of his intelligence in musical literature and compositions for the church.

BLAZE, H., published piano-forte music at Paris between the years 1799 and 1805. He died in 1833.

BLAZE, FRANCOIS HENRI JOSEPH CASTIL, son of the preceding, was born December 1, 1784. Destined for the bar, he studied in his youth all that was necessary for the profession of advocate, which did not prevent him from cultivating music, of which the first lessons were given to him by his father. He went to Paris in 1799, to pursue his studies in the law school, which he neglected sometimes for those of the Conservatoire. Having finished the study of solfeggi, he received lessons in harmony from Perne, and prepared himself to complete his musical education, when he found it necessary to renounce his inclination in order to occupy himself exclusively with his business. He became, successively, advocate, sub-prefect in the department of Vaucluse, inspector of the library, &c. He had but little time to give to the culture of an art which he passionately loved. However, he played several instruments, and had composed many romances and other fugitive pieces, which were published, when he suddenly determined to renounce the bar, the administrative career, in fine, every obstacle to his inclination: trusting in the future, he set out for Paris with his wife and children—more careful of his trunks of scores and manuscripts than of his other baggage. Two projects led him to the metropolis of the arts—he wished to have represented there the "*Don Juan*" of Mozart, and some other operas which he had translated and arranged for the French stage, and to publish there a book, in hopes of future renown. This book appeared, under the title of "*The Opera in France*," (Paris, 1820, 2 vols. 8vo.) A man of talent, a writer full of fancy, M. Castil Blaze attacked with energy, in this work, certain prejudiced persons, who, in France, were opposed to dramatic music. He pointed out the defects of the librettos of the operas, the vices of the interior administration of the theatres, the bad distribution of the parts, the false and arbitrary classification of the voices, in fine, all the causes which prevented the good execution of the music. He also made war against the passionate taste of the French for songs, (*chansons*), considering them, with justice, as obstacles to the progress of art. Until the moment when M. Castil Blaze commenced, in the "*Journal des Débats*," the series of piquant articles which were the foundation of his reputation, mere men of letters, ignorant of the first elements of music, had a usual right of putting forth the false opinions, which they took

for doctrines, upon an art of which they did not comprehend even the aim. To this we must attribute the prejudice which existed amongst the great part of the population against harmony, the luxury of instrumentation, and what is called *scientific music*. The author of the Musical Chronicle, in the "Débats," was remarked for the speciality of his knowledge; he silenced the nonsense of the men of letters, and began to initiate the public into the technical language which he used. Whatever progress the art of writing on music in the papers has made in France, we must not forget that M. Castil Blaze was the first who naturalized it in that country.

The treatise upon the "Opera in France" increased to an "Essay upon the Lyric Drama and Rhythmical Verse," which was published in 1826. After having written for more than ten years the Musical Chronicle for the "Journal des Débats," M. Castil Blaze left that paper in 1832, to write for the "Constitutionnel." In 1832, he published two works. One is called "Chapel Music of the Kings of France," (Paris, Paulin, 1 vol. 12mo.), and the other "The Dance and the Ballet, from Bacchus to Mademoiselle Tagliani," (Paris, Paulin, 1 vol. 12mo.)

The translations of the "Nozze di Figaro," of "Don Juan," "Zauberflöte," and the "Matrimonio Segreto," were done by M. Castil Blaze before he went to Paris. The success of the music of Rossini at this period determined him to continue his works of translation, and successively he published "The Barber of Seville," "La Gazza Ladra," "Otello," and "Mozse." He also attempted several *pasticcis*, composed of a union of parts of the scores of Rossini, Mozart, Paer, and several other masters. He even composed some pieces himself, of which the best known are "Les Folies Anjouennes," and "Le Forêt de Sébart." The Theatre Odeon, in Paris, was especially designed, in 1822, for the representation of translated German and Italian operas; every thing played there was successful; but the "Der Freyschutz," by Weber, under the French name of "Robin de Bois," was received with the most enthusiasm.

The translation of "Euryanthe" was also by M. Castil Blaze, but was not so well received. M. Castil Blaze is known as a composer by some pieces of religious music, quartets for the violin, and a collection of twelve romances, amongst which are the "Chant de Thermopyles," and the pretty song of "Roi Reu." (Condensed from Petia.)

BLEIN, M. LE BARON, a general officer in the French engineer corps, was born about 1767. He published in Paris, in 1827, an "Exposé de quelques Principes nouveaux sur l'Acoustique et la Théorie des Vibrations, &c." In 1828 he labored to reform the diatonic gamut, the mode of writing music, &c. Finally, he published, in 1832, "Principles of Melody and Harmony, deduced from the Theory of Vibrations," Paris, 8vo, with plates. His theories have been accused of fundamental errors.

BLESSING, M. An excellent musician, and the inventor of a celebrated instrument, combining the power and variety of a full orchestra, called the *orchestriou*.

BLEWITT JONATHAN, was born in London

in 1782. He was the son of Jonas Blewitt, an organist in London, and author of the first treatise on the organ published in England. Jonathan Blewitt received the groundwork of his musical education under his father, and was afterwards placed under his godfather, Jonathan Battishill. At an early age Blewitt evinced a taste for music, and at eleven years old was appointed deputy organist to his father. He was afterwards engaged to play at All Hallows Barking, Tower Street, for evening lecture, for which a choir was engaged. He then became organist of the chapel at Blackheath, at the time it was attended by her royal highness the Princess of Wales. From thence he removed to Haverhill, Suffolk, at the recommendation of Dr. Arnold, one of his early friends. He next became organist at Brecon, succeeding Mr. Campion, a pupil of his father's, where he remained three years. On the death of his father he returned to London; first, in the expectation of succeeding him in his situation, and secondly, because he had composed an opera written by a lady of distinction, which was to have been brought out at Drury Lane. The theatre, however, being burned down at this period, and circumstances occurring which prevented his election to his father's place, he was disappointed in both expectations, and again returned to the country, where he succeeded in gaining the situation of organist at Sheffield, after a competition in playing with many candidates. In the year 1811, Blewitt visited Ireland, and was patronized by the late Lord Cahir, in whose family he resided for some months; he then became composer and director to the Theatre Royal in Dublin.

After Logier commenced propagating his system of musical instruction in Ireland, Blewitt was the first who joined him; and being an able lecturer, and possessing sound musical knowledge, he soon procured the great majority of musical pupils in the metropolis of Ireland. He was then appointed, by the Duke of Leinster, grand organist to the masonic body of Ireland; he also conducted concerts in Dublin, and officiated in this capacity at the coronation concert during the stay of his majesty in that kingdom. He then became organist of the parish church of St. Andrew's, Dublin. Blewitt was much admired for his extemporaneous performances on the organ, especially in the fugue style. His compositions are numerous; among the principal are, "The Corsair," an opera; "The Magician," an opera; "The Island of Saints," an opera; "Concerto for the Piano-forte;" "Grand Sonata for the Piano-forte;" "La Nymphe Heureuse;" "The Battle of Vittoria;" "Royal Divertimento, dedicated to the King;" "Royal Scotch Divertimento, dedicated to the King on his Visit to Scotland;" "I Pezzi Scelti;" "La Violetta;" "Duets for the Piano-forte;" "The Vocal Assistant;" "Simplification of Modulation and Accompaniment;" "Voluntaries for the Organ," &c. Songs in the Irish style: "Kitty O Lynch;" "Emerald Isle;" "Norah MacFriskay;" "Paddy O'Ram," &c. Songs and duets: "Rosalie," "Rosabel," "I blame thee not," &c.

BLEYER, GEORGE. A lauber musician to the Duke of Schwartzburg in 1660. He composed some vocal and instrumental music, chiefly of a sacred character.

BLIESENER, JOHANN. A pupil of Giordani on the violin. He composed much music for his instrument at Berlin and Vienna, between the years 1789 and 1801.

BLITHEMAN, WILLIAM. Organist of the Chapel Royal to Queen Elizabeth. He was music master to Dr. Bull.

BLOCKLAND. See BROCKLAND.

BLONDEAU, AUG. LOUIS, born at Paris in 1786, was a pupil of Mehul, and gained, in 1808, the grand prize for composition given by the Paris Conservatory. The cantata composed for the prize was "Mary Stuart," the words by Monsieur de Jouy. Blondeau has arranged some of the sonatas of Beethoven as quartets. His cantata of "Mary Stuart" may be found in the "*Journal Hebdomadaire*" of Ledne, thirty-eighth year, Nos. 45-48.

BLODEL. A rhymor or minstrel to Richard I., King of England, about the year 1190. Whilst his master, being a prisoner of the Duke of Austria, was pining in a tower in Germany, Blondel traversed the whole of the Holy Land, and all parts of Germany, in search of the king, whom he at length discovered to be confined in the castle of Lowenstein, by singing, near the walls of the castle, a song which the king and himself had jointly composed. This anecdote furnished the subject of Gretry's beautiful opera, "*Richard Cœur de Lion*."

BLOW, JOHN, doctor of music, born in 1648, at North Collingham, in Nottinghamshire, was one of the first set of children of the Chapel Royal, after the restoration. In 1673, he was sworn one of the gentlemen of the chapel, and in 1674, upon the decease of Humphrey, appointed master of the children. In 1685, he was nominated one of the private musicians to King James II., and in 1687 he was likewise appointed almoner and master of the choristers in the Cathedral Church of St. Paul; but in 1693 he resigned this last place in favor of his pupil Jeremiah Clark. Blow had his degree of doctor in music conferred on him by the special grace of Archbishop Sancroft, without performing an exercise for it in either of the universities. On the decease of Purcell, in 1695, he was elected organist of St. Margaret's, Westminster, and in 1699 appointed composer to the chapel of their majesties King William and Queen Mary, at a salary of forty pounds a year, which afterwards was augmented to seventy-three pounds. A second composer, with the like appointment, was added in 1715, when John Weldon was sworn into that office; at which time it was required that each should produce a new anthem on the first Sunday of his month in waiting. That Blow was a composer of anthems while a singing boy in the Chapel Royal appears from Clifford's collection of the words of the services and anthems used in the collegiate and cathedral churches in 1664; for among the ecclesiastical composers mentioned in this book, amounting to upwards of sixty, are included the names of Pellham, Humphrey, John Blow, and Robert Smith, children of his majesty's chapel. Humphrey was born in 1647, and Blow in 1648, so that, at the restoration, the first was only thirteen, and the second but twelve. Their composing anthems fit for the Chapel Royal, before they had attained the age of sixteen or seven-

teen, would now be regarded as more wonderful proofs of precocity, if Purcell, soon after, at a still more early period of life, had not produced compositions that were superior to these. Dr. Blow died in 1708, at sixty years of age; and though he did not arrive at great longevity, yet, by beginning his course and mounting to the summit of his profession so early, he enjoyed a prosperous and eventful life. His compositions for the church, and his scholars who arrived at eminence, have rendered his name venerable among the musicians of England. "Though there are strokes of the pathetic, and subjects of fuge in Blow's works that are admirable, yet I have examined," says Dr. Burney, "no one of them which appears to be wholly unexceptionable, and free from confusion and crudities in the counterpoint. He has been celebrated by Dr. Boyce for 'his success in cultivating an uncommon talent for modulation;' but how so excellent a judge of correct and pure harmony could tolerate his licenses, is as unaccountable as any thing in Blow's compositions, considering the knowledge and known probity of the late Dr. Boyce. The ballads of Dr. Blow are in general more smooth and natural than his other productions, and, indeed, than any other ballad of his time; there is more melody than in those of Henry Lawes, or any composers of the preceding reign; yet it is not of that graceful kind in which the Italians were now advancing towards perfection with great rapidity. It is either of a Scotch cast, or of a languid kind, that excites no other sensation than fatigue and drowsiness. His pastoral, 'Since the spring comes on,' is, however, as *chuintante* as any mongrel mixture of Scotch, Irish, French, and English, that has been since compiled. The first movement, particularly, seems to have been the model of most of the Vauxhall songs of the last forty years. 'Fill me a bowl' has the same kind of merit. The collecting his secular compositions into a folio volume, in 1700, under the title of '*Amphion Anglicus*,' was doubtless occasioned by the great success of the '*Orpheus Britannicus*,' a similar collection of Purcell's dramatic and miscellaneous songs, published by his widow in 1698. But whether Dr. Blow was stimulated to this publication by emulation, envy, or the solicitation of his scholars and friends, by whom there are no less than fifteen encomiastic copies of verses prefixed to the work, the ungrateful public seems to have always remained insensible to these strains of the modern *Amphion*, which were not only incapable of building cities, but even of supporting his own tettering frame. 'Go, perjured man,' is the best of all his secular productions; but that which was an imitation of a duet by Carissimi, '*Dite, o Cielo*,' is overloaded, in his '*Amphion Anglicus*,' with a labored and unmeaning accompaniment. Pages 11 and 16 of this collection contain two of his best ballads—'Salua has a thousand charms,' and 'Philander, do not think of arms.' In these ballads the union of Scotch melody with the English is first conspicuous. The subject of a song, page 168, 'Oritha's bright eyes,' is likewise broad Scotch." See ANCEST PREFACES.

BLUM, M. H., of the Royal Berlin National Theatre, was an eminent theatrical singer in Germany. Among many other first parts, he has

performed Don Juan, and Caspar in the "*Freywhutz*."

BLUM, CARL. Born in 1788. A dramatic composer, guitarist, singer, and director of the opera at Berlin. He composed several operas, as "*Claudine de Villa Bella*," "*Zoraide, ou la Paix de Granada*," "*Les Pages du Duc Vendôme*," &c. Carl Blum was a great favorite with the German public.

BLUMA, F. XAV., director of the orchestra at Moscow in 1793, published some violin music at Vienna and Leipsic between the above year and 1803.

B MOL, (G.) or **SOFT B.** B flat; so called in contradistinction to B Dur. See B Dur.

BOCCHERINI, LUIGI, was born at Lucca, in 1740. He received his first lessons in music and on the violoncello from the Abbé Vannucci, then music master of the archbishopric. Boccherini, at an early age, showing a great disposition for music, his father, himself an ingenious musician, cultivated his son's talent with care, and at length sent him to Rome, where he soon acquired a high reputation for the originality and variety of his productions. A few years after this he returned to Lucca, where his sonatas were first performed in public. F. Manfredi, a pupil of Nardini, and also a native of Lucca, being there at the time of Boccherini's return from Rome, they executed together his sonatas for the violin and violoncello, (op. 7,) to the great delight of the audience. After this, the two professors became intimate, and quitted Italy together for Spain, where Don Louis, the infant, was collecting professors of the first talent. They were received at Madrid with particular distinction, and Boccherini at length determined to remain in Spain. He was well received by the king, who showed much partiality for him, and loaded him with honor and presents. The only professional obligation imposed on him was to produce, every year, nine pieces of his composition, for the use of the Royal Academy. Boccherini assented to these conditions, and faithfully kept them. He died at Madrid in 1806, aged sixty-six. It is said that Boccherini kept up a regular correspondence with Haydn, the two great musicians endeavoring to enlighten each other respecting their compositions. Carter has said of this composer, that "If God wished to address man, he might be supposed to do so by the music of Haydn; but if he wished to hear music himself, he would prefer that of Boccherini." Puppo, the violinist, well appreciated Boccherini's music, by calling him "the wife of Haydn." Dr. Burney says, "There is, perhaps, no instrumental music more ingenious, elegant, and pleasing than Boccherini's quintets; in which invention, grace, modulation, and good taste conspire to render them, when well executed, a treat for the most refined hearers and critical judges of musical composition." Part of the "*Stabat Mater*" of Boccherini may be seen in the second volume of La Trobe's selection; it is a truly original and highly-finished production.

BOCHSA, ROBERT NICHOLAS CHARLES, was born in 1789, at Montmedy, in the department of the Meuse, in France. His father being first performer on the hautboy at the Grand

Theatre at Lyons, the young musician, while yet an infant, had the means of hearing, and consequently imbibing, some notions of good music. Nor were these opportunities neglected, for, at the age of seven years, he publicly performed a concerto on the piano-forte. Even at this early period his genius for composition also developed itself; for, in his ninth year, he composed a duet and a symphony for the flute. At eleven he played on the flute a concerto of his own composition; and at twelve he composed several overtures for ballets, and soon after a quartet, without knowing a single rule of composition. At sixteen he set to music, at Lyons, the opera of "*Trajan*." At the same period, he applied himself to the study of the harp, and had made himself familiar with that instrument, when he went with his family to Bourdeaux. Here, meeting with the celebrated Beck, he studied composition under him with the greatest enthusiasm, for the space of a year, and set to music the ballet of "*La Dansomanie*," and an oratorio, ("*Le Deluge Universelle*,") in which he introduced a chorus for two orchestras. About this time, Bochsa had so far mastered the difficulties of the harp, the piano-forte, the violin, the tenor, and the flute, as to be able to perform concertos on either of these instruments, besides being able to play in a slight degree on the hautboy, and understanding perfectly the scale and capabilities of nearly all other instruments. On his arrival at Paris, he was received into the Conservatory of Music, and placed as a pupil of Catel, under whom his progress was so great, that, at the close of the first year, he obtained the principal prize in harmony. After this, he studied the higher branches of composition, under the celebrated Mehul, who manifested for his pupil particular kindness and friendship. As Bochsa still continued to apply himself to the harp, he received also some lessons from Nudermann, and afterwards studied more particularly under the celebrated Visconte Marin. But judging, with reason, that no one could rise to eminence by imitating the productions of another, he seems, from his publications, which appeared soon after this time, to have applied himself to a style of composition for the harp, which had hitherto been unknown. It is, doubtless, to this self-confidence that may be attributed the celebrity which he since has acquired. It frequently indeed happens that, through a want of proper confidence, the most original talents remain dormant. To give a detailed account of Bochsa's many improvements in harp composition would require more space than we can devote to a single life. It has been by his eminent talents that the harp, which was before so far confined as to be only adapted for accompanying the voice, is now capable of performing the highest species of musical composition. To conclude, Bochsa has obtained a generally allowed preëminence on the harp, which few individual performers on any other instrument have acquired. His compositions for the harp, which were published at Paris, amount to about one hundred and fifty, consisting of concertos, symphonies, quintets, quartets, trios, duets, sonatas, fantasia, capriccios, &c., besides two methods, and fifty studies, dedicated to G. B. Cramer. In 1813, the Emperor Napoleon appointed Bochsa first harpist of his private concerts. Soon after

this he applied himself with great enthusiasm to dramatic composition, and composed for the royal Comie Opera "*L'Heritier de Paimpal*," an opera in three acts, which experienced great success. In 1814, he was appointed (on the restoration of Louis XVIII.) to compose an opera called "*Les Heritiers Michaux*," which production received the approbation of the king and of the Emperors of Austria and Russia. This opera is said to have been prepared by Bochsá in a few days, and we have heard that the overture was positively composed in two hours. The following is a list of some of the other dramatic productions of this composer, in the order in which they appeared: "*La Lettre de Change*," in one act; "*Le Roi et la Ligue*," in two acts; "*Les Noces de Gamache*," in three acts; and "*Le Roi d'Arragon*," in three acts.

On the 20th of January, 1815, a grand reuicem was performed for the service of Louis XVIII., composed by Bochsá for wind instruments only. About this time he was appointed harpist to the king and the Duc de Berri, by whom, as well as by Monsieur, he was particularly patronized. Bochsá went to Englaud in 1817; where for some time he published yearly noore, on an average, than seventeen or eighteen pieces for the harp. In 1822, he became director of the oratorios, which, under his management, gradually improved both in selection and performance. At the opening of the Royal Academy of Music in 1822, he became a life governor, and was appointed professor of the harp and secretary to the musical department of that institution. For several years past Bochsá has been director of the concerts and operas of Madame Anna Bishop in the United States and in Mexico.

BODE, JOHANN JOACHIM CHRISTOPH. A printer at Hanburg, and composer of some music since the year 1773. He published a German translation of some of the works of Dr. Burney.

BODENBURG, JOACHIM CHRISTOPH, a German, wrote a work on ancient music, especially of the Jews, also a work on the music of the middle ages and modern times. He died in the year 1759, at the age of sixty-eight.

BODINI, SEBASTIEN. Musician to the Margrave of Baden Dourlaek about the year 1756. He published much instrumental music at Augsburg.

BOECK, ANTOINE and IGNACIUS, brothers, were excellent performers on the horn in 1782.

BOECKLIN, FRANCOIS FREDERIC SIGISMUND AUGUSTE, BARON DE, an amateur composer, was born at Strasburg in 1745. He was a favorite pupil of Jomelli; he also took lessons of Richter; he composed symphonies, church music, and also some operas.

BOEHM, THEOBALD, inventor of the "Boehm flute," so called, the most celebrated of German flutists, was born in Bavaria in 1802, and belonged to the music of the king at Munich. He has composed all forms of music for the flute, some with orchestral accompaniment. See FLUTE.

BOEHM, JOHANN, manager of a theatre in Germany, composed the music of some operas about the year 1785.

BOEHM, TWAN, violinist at the Chapel Royal at Berlin, was born at Moscow in 1713. He was pupil of Graun.

BOEHM, GOTTFRIED, published some instrumental music at Nuremberg between the years 1744 and 1750.

BOEHMER published, in 1802, some symphonies for a grand orchestra.

BOEKER, H. The editor, in the year 1791, of a collection of vocal and instrumental music, by celebrated modern composers; this work, we believe, was published at Berlin.

BOELSCHE, J., an organist and composer in Bruuswick, died in 1684.

BOESENHOENIG, JOSEPHIA. A celebrated pianist and composer at Vienna. She was a pupil of Mozart, Kozeluch, and Richter; she published much music for the piano-forte between the years 1791 and 1799.

BOESSET, JEAN BAPTISTE, was the favorite secular composer of the early part of the seventeenth century, also the best lutist and principal composer of songs of his time. Some of his "*Court Ayres*, with their Ditties Englished," were published in London by Pilner, 1629, of which it is now difficult to find the measure or accent.

BOETHIUS, A. M. T. S. A writer of five books on music in the latter part of the fifth century. His works were printed at Basle between the years 1546 and 1570.

BOETTNER, JOHN CHRISTIAN, organist at Hanover, published some music for that instrument in 1787.

BOGEN. (G.) The bow.

BOGENFÜHRUNG. (G.) The management of the bow.

BOHRER, ANTHONY and MAXIMILIAN, two celebrated performers, the one on the violin, the other on the violoncello, are brothers. They performed, in 1823, at Milan. It is said that in their performance of a duet, so great was the similitude of their tones, that the auditor could scarcely determine which of the two was the performer on the violin. Maximilian was well received in England in 1844.

BOIELDIEU, FRANCOIS ADRIEN, a celebrated dramatic composer at Paris, was born at Rouen in 1770. He went to Paris about the year 1795, and first became known by his talents on the piano-forte, and as a composer of romances, some of which had prodigious success, especially the two, "*S'il est vrai que d'être doux*," and "*Le Menestrel*." He soon after began to compose operas: among the more favorite of which may be named "*Le Calife de Bagdad*, 1800," "*Le Petit Chaperon*," and "*La Voiture versée*." Boieldieu was one of the professors of the piano at the Conservatory at Paris since the year 1797; afterwards he resided at Petersburg, having been appointed, in 1803, chapel-master to the Emperor of Russia, after the death of Sarti. He died at his country seat, near Paris, October 9, 1834.

BOISGELOU, PAUL LOUIS ROUALLE DE, was born at Paris in 1734. He was celebrated as an infant musician, by J. J. Rousseau,

in the following passage of his *Émile*: "*J'ai vue chez un magistrat, son fils petit bon homme de huit ans, qu'on mettoit sur la table au dessert comme une statue au milieu des plateaux, jouer à d'un violon, avec une aussi grand que lui, et surprendre par son execution les artistes mêmes.*" He died at Paris in 1806.

BOISMORTIER, a composer of some operas and other music, died at Paris in 1755, aged sixty-four. He was remarkably absent, so much so that he would not undertake to direct the orchestra at the rehearsals of his own music. A motet of this composer, "*Fugit Nox,*" has been much celebrated.

BOISSET, ANTOINE. Chamber musician to the King of France at the beginning of the seventeenth century.

BOLICIO, NICHOLAS. See WOLLICK.

BOLLA, SIGNORA. A female buffo singer at the Opera in London, in the year 1800.

BOLERO. A Spanish dance with castanets.

BOLOGNA, LUIGI. Born at Bologna. A composer of opera music since the year 1786.

BOMBARDO. (L.) A wind instrument, resembling the bassoon; formerly used as a bass to the oboe.

BOMBIX. An inflatable instrument of the ancient Greeks, consisting of a long reed. It contained two parts, the *otmos*, or mouth, and the *enpholme*, or main body.

BON, GIROLAMO, called *Momolo*, was born at Venice, and published at Nuremberg, in 1764, some easy sonatas for the violin and bass.

BONA, VALERIO. A Franciscan monk at Milan in 1596. He published madrigals, motets, and church music, also rules for composition.

BONADIES, PERE JEAN, was a Carmelite, and the master of Franchinus Gassuruis. P. Martini has given a fragment from a "*Kyrie Eleison,*" composed by Bonadies in 1473, when Gaforio was twenty-two years old.

BONANNI, FILIPPO, a Jesuit at Rome, was born in 1638, and published a work on music, called the "*Cabinetto Armonico Pieno d'Istrumenti Sonori.*" In 1776, a new edition of this work appeared at Rome with a French translation, and the following title: "*Descrizione degli Istrumenti Armonici d'ogni genere del Padre Bonanni, seconda Edizione riveduta, corretta ed accresciuta dell' Abbate Giacinto Ceruti, ornata con 140 rami.*"

BONARDI, FRANCESCO. An Italian composer of madrigals at Venice in 1565.

BONAZZI, ANTONIO, an amateur violinist, was born at Cremona. At his death, he left a collection of upwards of a thousand instrumental pieces by different composers, among which were a few of his own compositions. He also left forty-two violins, made by Guarnerius, Amati, Straduaris, and other great makers; several of these instruments were worth one hundred and fifty ducats apiece. Bonazzi died in 1802 at Mantua.

BOND, HUGII. A collector and editor of psalms, hymns, and anthems in London previously to the year 1795.

BOND. An eminent performer on the double bass, resident in London. He was engaged at the York musical festival in 1823.

BONDINERI, MICHELE. A Florentine composer of operas between the years 1785 and 1791.

BONDIOLI, GIACINTO. A composer of sacred music published at Venice between the years 1620 and 1625.

BONEL. An admired tenor singer at the Grand Opera at Paris in the year 1820.

BONELIO, AURELIO, of Bologna, published some vocal music at Venice about the year 1596.

BONESI, B., of Bergamo. A composer of operas, &c., resident at Paris in the year 1806. He studied composition under Fioroni, a pupil of Leo-Bonco, and was master of the celebrated Choron.

BONEVENTI, GIUSEPPE. A favorite composer of operas between the years 1690 and 1727.

BONINI, a monk, published some motets at Venice in the year 1615.

BONINI, SEVERO, born at Florence, published the "*Lamento d'Ariana,*" a cantata, at Venice, in 1613; probably he is the same person as the foregoing.

BONJOUR, L. Organist, in 1786, of the Military School at Paris. He published "*Nouveaux Principes de Musique*" in 1800; also several sonatas, &c., in preceding years.

BONNAY, F. A composer of operas at Paris about the year 1787.

BONNE D'ALPY, Mlle., published some romances at Paris in 1804.

BONNET, JACQUES, author of "*L'Histoire de la Musique et de ses Effets,*" published at Paris in 1715. It is a work of no great merit.

BONNET, J. B., organist at Montauban, and a pupil of Jarnovich, composed much music for the violin. He was born in 1763, and formerly held the situation of *chef-d'orchestre* at the theatres of Brest and Nantes.

BONNEVAL, RENE DU. Author of a defence of the French music against J. J. Rousseau; this work was published at Paris in 1754.

BONNO. See BOXO.

BONNOT. See MANLY.

BONO, JOSEPH, chapel-master and court musician at Vienna in 1710, died there in 1788. He composed several operas and oratorios.

BONOMETTI, GIOVANNI BATTISTA, a composer, born at Bergamo, was in the service of the Archduke Ferdinand of Austria at the beginning of the seventeenth century. He published a large collection of motets, psalms, &c., by eminent masters, also some trios for two violins and bass.

BONONCINI. See BRONONCINI.

BONPORTI, ABATE. A celebrated Italian violin maker towards the end of the seventeenth century.

BONPORTI, FRANCESCO ANTON, an in-

strumental composer, published some music at Strasburg about the year 1741.

BONTEMPI, GIOVANNI ANDRIA ANGELINI, was born in Perugia. He was the author of a history of music, published in 1695, in one small volume folio. He is considered by Dr. Burney an excellent composer for the age in which he lived, and a profound theorist. Bon-tempi has given an exhibition of the ancient diatonic system, as applied to the key of A minor, exactly corresponding with that of Pythagoras.

BONTEMPO, ALESSANDRO. An Italian composer of motets at the beginning of the seventeenth century.

BONTEMPO, J. D., an excellent pianist and composer of instrumental and of church music. He lived some years at Paris, and afterwards at Lisbon, where he formed a Philharmonic society. A requiem composed by Bontempo, at Lisbon, is said to be a work of great merit.

BORCHGREVINCK, MELCHIOR. Court organist at Copenhagen at the end of the sixteenth century. He published, in 1606, a large collection of madrigals by the most celebrated Italian composers.

BORDET, a flutist and composer of music for his instrument, published also a method for music at Paris in 1755.

BORDIER, chapel-master at Paris, published a method for music in 1760. It was reprinted, in 1770, with additions, after his death, and entitled "A Treatise on Composition."

BORDOGNI. A singer of eminence at the Italian Theatre at Paris since the year 1819. He is still distinguished as professor of singing at the Paris Conservatory.

BORDONI, FAUSTINA. See *HASSE*.

BORETTI, GIOVANNI ANDREA. A composer of serious operas at Parma, between the years 1666 and 1672.

BORDER TUNES. The name given to melodies composed, or supposed to have been composed, in the counties bordering on Scotland; as Durham, Westmoreland, and Northumberland.

BORGHESE, A. An Italian composer of an operetta at Paris in 1787.

BORGHI, GIOVANNI BATTISTA. Chapel-master at Loretto in 1770. He composed several operas for the theatres of Venice and Florence. His compositions are much esteemed. Among his operas are "*Ciro*," performed at Venice; "*Piramo e Tisbe*," at Florence; "*Eumene*," and "*Ricimer*."

BORGHI, LUIGI, a pupil of Pugnani, was the leader of the second violins in the orchestra, at the commemoration of Handel at Westminster Abbey. He has published much music for his instrument in London, Berlin, Paris, and Amsterdam. There are also some Italian canzonets by this composer.

BORGO, CESARE, organist at Milan, published many part songs and masses of his composition at Venice and Milan, between the years 1584 and 1614.

BORGONDIO, SIGNORA, an Italian singer, was born at Brescia, in Italy, in the year 1780. She was of a noble family, and dedicated her talents to theatrical pursuits on account of family misfortunes, arising from the consequences of the French revolution. She made her *début* in Italy, at the court of the Duke of Modena. She then passed to Munich in 1816, and was the first singer who performed Rossini's music on the German stage; she appeared in "*Tancredi*," and in the "*Italiana in Algieri*," and was much applauded. She afterwards proceeded to Vienna, where she remained three years, and met with much success. She next went to Moscow and Petersburg, at which latter capital she sang six times before the emperor, and received from him several handsome presents. On quitting Russia, she visited Dresden and Berlin, and finally went to London, where she appeared three times in the season of 1823, in the character of *Tancredi*.

BOROHIME'S HARP. It is well known that the great monarch Brian Borohime was killed at the battle of Clontarf, A. D. 1014. He left his son Donah his harp; but Donah, having murdered his brother Tige, and being deposed by his nephew, retired to Rome, and carried with him the crown, harp, and other regalia of his father. These regalia were kept in the Vatican till Pope Clement sent the harp to Henry VIII, but kept the crown, which was massive gold. Henry gave the harp to the first Earl of Clanricarde, in whose family it remained until the beginning of the eighteenth century, when it came by a lady of the De Burgh family into that of McMahon of Glenagh, in the county of Clare; after whose death it passed into the possession of Counsellor Macnamara of Limerick. In 1782 it was presented to the Right Honorable William Conyngham, who deposited it in Trinity College Museum, where it now is. It is thirty-two inches high, and of good workmanship; the sounding board is of oak; the arms of red sally; the extremity of the uppermost arm in part is capped with silver, well wrought and chiselled. It contains a large crystal set in silver, and under it was another stone, now lost.

BORONI, or BURONI ANTONIO, a pupil of Padre Martini, was born at Rome in 1738. He composed much dramatic and church music between the years 1765 and 1792. Boroni was the principal composer of St. Peter's Church for some years; he also went to Germany, and was chapel-master to the Duke of Wurtemberg. He was the earliest master of the celebrated Clementi, to whom he was related. His principal operas are "*Sofonisba*" and "*La Notte Critica*."

BORROWED HARMONY. Chords of the added ninth have been termed chords of the major and minor *substitution*; since they are considered as derived from the dominant seventh, by substituting the ninth in the place of the eighth. They are chords of borrowed harmony; since the seventh and ninth are supposed to be derived or borrowed from the sub-dominant.

BORSARI, ARCANGELO. A composer of part songs at Venice at the end of the sixteenth and commencement of the seventeenth century.

BORTNIANSKY, DEMETRIO. A composer of church music at Moscow since the year 1783.

BORZIO, CARLO, chapel-master at Lodi, published some church music, also some dramatic pieces, about the year 1616.

BOS, ABBÉ DU. See **DUBOS**.

BOSCH, VAN DER. An organist at Antwerp in 1772. He composed and published at Paris some music for the piano-forte.

BOSCHI, GIROLAMO, a native of Viterbo, was a celebrated bass singer, whom Handel engaged, in 1710, to sing at his operas in London. Boschi's wife had been a great singer, but was much past her prime when she went to England. Handel's genius and fire never shone finer than in the bass songs which he composed for Boschi, whose voice being sufficiently powerful to penetrate through a multiplicity of instrumental parts, Handel set every engine to work in the orchestra to enrich the harmony and enliven the movement.

BOSELLI. A lovely singer, in whose society Haydn spent much of his time. She was attached to the service of his prince, Nicholas Esterhazy, and died in 1790. It is supposed that Haydn would never have left Eisenstadt, if Mlle. Boselli had not died.

BOSELLO, ANNA MORICHELLI. Principal female singer at Milan in 1788, and subsequently at Paris in 1791. She died in 1800, aged forty. She was a great patroness and friend to Catalani in early life.

BOSI, of Ferrara. A composer of operas at Milan in 1783.

BOSIO, ANGIOLINA. Angiolina Bosio de Xindavelonis, one of the best singers that has appeared in opera in the States, was born in Turin, August 20, 1829. Her early love of music, and the decided talent for singing which she evinced even in childhood, induced her parents to send her to Milan, where she studied under Vencesloa Cattaneo. So rapid was her progress that in July, 1844, being then only fifteen years old, she made her *début* at Milan, in Verdi's Opera, "*I Due Foscari*." Her success was decided, and for one so young, was indeed wonderful. Thus encouraged, after fulfilling a brief engagement, she proceeded to Verona, where she confirmed the best hopes of her friends, and created quite an excitement among the *habitués* of the opera. From Verona she went to Copenhagen, where she became so popular that she was offered an engagement for six years, and every means were taken to induce her to accept it. But the daughter of the sunny south languished beneath the cold skies of Denmark, and against her will, but not, as it turned out, against her interests, she declined the offer. Her leave-taking at Copenhagen is described as something remarkable. We next find her at the Circo Theatre, in Madrid, where she created an enthusiasm which amounted to a *furor*. Her fame had now become European, and she was induced, in the season 1848-9, to accept an engagement at the Italian Opera, in Paris, where she became the reigning favorite.

It was fortunate for our opera-loving friends, that the proprietor of the Tacon Theatre, in Havana, being in Paris during this season, lost no time in engaging her. In Havana her triumph was even more decided. Her fame preceding her to this country, on her appearance at Castle

Garden, New York, under Mr. Maretzek's management, she at once became popular. Indeed, few *artistes* have so securely taken hold of the warm affections of the musical public. Bosio is married to Signor de Xindavelonis. During the past year she has sung with great success in the operas of London and Paris.

BOSTON ACADEMY OF MUSIC. A society formed in Boston about twenty years ago, whose object it is to raise music, as a branch of education, to the rank it is entitled to hold; to diffuse a knowledge of its principles among all classes in society; to show its advantages; to remove the prejudices which prevent attention to it; and to correct the abuses to which it is liable. The efforts of the society are not *exclusively* devoted to instruction and improvement in *sacred* music, though this was the first and even principal design. The Academy, under the principal direction of its professors, Lowell Mason and George J. Webb, has done excellent service to the cause of music in Boston and New England. By its orchestral concerts, it first introduced and formed an audience for the symphonies of Beethoven, &c., in Boston. It gave, too, the first example and impulse to the summer "Musical Conventions," or "Teachers' Institutes," for some years past so common in this country.

BOSTON MUSIC HALL. This noble structure was erected in 1852. The main hall is one hundred and thirty feet long, seventy-eight wide, and sixty-five high; the lower floor is level. The orchestra rises from one extremity, at the other is an end gallery, of five rising tiers of seats, above and behind which is a narrower balcony; and from the ends of these, two balconies are carried along the sides of the hall, projecting eight feet six inches from the walls. The front stage of the orchestra rises five feet from the floor, and from this level continues rising rearward in successive platforms to the extremity of the hall in that direction, the upper platform being on a level with the lower balcony. The whole orchestra is thirty feet deep and sixty-three long, and is so connected with the lower balcony that a portion of the latter might, if required, be easily connected with it, and occupied by choral singers. The walls of the hall have a series of piers which support the balconies, and which are formed, above the upper one, into Corinthian pilasters, supporting the cornice of the wall and coving of the ceiling. This coving is circular, and is groined; semicircular lights are placed in the walls under the groins, and ventilators in the ceilings of the same. The hall is lighted at night by a series of gas jets along the top of the cornice, which, being placed under the ventilators, perform the ventilation as well as the illumination of the hall. Corridors are carried, on the level of the floors and balconies, all around the building, communicating with the hall by doors in the side walls at intervals of not more than fifteen feet. Nearly three thousand persons can be comfortably accommodated in this hall — none so placed that they cannot both hear and see the orchestra, or easily leave the hall by some adjacent door leading into the corridors.

BOSTWICK, EMMA GILLINGHAM. Born in Philadelphia, and daughter of George Gillingham, leader of the orchestra of the old Park

Theatre, New York, and also of the orchestras at Philadelphia and Baltimore. In early life Euma gave evidence of extraordinary musical precocity. When a mere infant she could sing various songs; and her earliest recollections are said to have been of those songs, and many simple ballads, which she was accustomed to sing for the gratification of friends of the family, and of strangers that called to hear the wonderful performances of the young musical phenomenon. She always accompanied her voice, even at that early age, on the piano-forte, which she played with remarkable skill, considering her tender years.

At the age of twelve, Miss Gillingham commenced regular studies with John Paddon, organist of Exeter Cathedral, in England. On returning to America, she became a teacher of music at Flatbush Academy, New York. Since that time, she married Charles J. Bostwick, and has been successful in giving concerts in New York, and all parts of the United States.

BOTTARELLI, JOHANN WALPERT, a Florentine poet, published in London, in 1757, "*Del Canzoniere d' Orazio Ode 12 Messe in Musica da' piu renomati Professori Inglesi.*"

BOTTESI. One of the greatest violinists of Tartini's school, about the year 1770.

BOTTI published in 1784, at Paris, six trios for the harpsichord and violin.

BOTTOMLEY, JOSEPH, was born at Halifax, in Yorkshire, in 1786. His predilection for music first appeared at a concert, to which his parents had taken him. At the age of seven he performed a concerto on the violin. His studies on the piano-forte did not commence before he was eight years of age. At twelve, he was removed to Manchester, where he was placed under the tuition of Grimshaw, organist of St. John's, and of Watts, leader of the concerts. Upon the recommendation of Watts, he afterwards received instructions on the violin from Yaniewitz, who was engaged at that time to perform concertos at Manchester. At fifteen, he was apprenticed to Lawton, organist of St. Peter's, Leeds, who had been an apprentice of Dr. Miller, and a pupil of the celebrated Bamgarten. Under this gentleman he obtained considerable theoretical information, both by his private instructions and from his excellent musical library.

After the completion of his term with Lawton, Bottomley went to London, where he devoted a short time to the instructions of the renowned Woell.

At nineteen, having finished his musical education, he announced himself to the public as a professor. Although he was appointed organist of the parish church of Bradford, in the year 1807, yet Halifax, being a very musical town, and affording him much teaching, became his principal place of residence. In 1820, after teaching in some of the most respectable families in the country, giving instruction to several professors, and leading a very considerable number of performances, both sacred and miscellaneous, he was induced, by a liberal salary, to accept the situation of organist of the parish church, Sheffield, at which place he is now stationed. As a stimulus to exertion, it may not be improper to add, that, notwithstanding an inattention to literature in early life, and a continual devotion of

time to teaching and composition, Bottomley found opportunities of cultivating an acquaintance with several languages, the mathematics, and most of the sciences. The following is a list of Bottomley's principal works published: "Six Exercises for Piano-forte," "Twelve Sonatinas," "Two Divertimentos, Flute Accompaniment," "Twelve Waltzes," "Eight Rondos," "Ten Airs, with Variations," one song, one duet, one sonata, "Twenty-eight Songs, set to Dr. Watts's familiar Poems." All the foregoing are for the Piano-forte. "A small Dictionary of Music." His manuscript works, which are numerous, consist of overtures, quintets, one quartet, trios, concertos, fugues, anthems, &c., &c.

BOTTRIGARI, IL CAVALIERE ERCOLE, was born at Bologna in 1531. He was a man of rank, fortune, and erudition, who seems to have spent his whole life, which extended to eighty-eight years, in the study of music and in musical controversy. He died in 1609, and bequeathed his very valuable musical library to his friend Padre Martini.

BOTTRIGARI, ROSA, for whom Rossini wrote many principal parts in the operas, died at Bologna, on the 7th of May, 1847, aged 43.

BOUCHIER, ALEXANDRE JEAN, was born in Paris in 1770. At seventeen years old he went to Spain, where he was appointed violinist of the chamber and chapel of Charles IV. During the time that monarch resided in France, Boucher was also in his suite. He has published some pieces for the violin at Brussels. Boucher was at St. Petersburg in 1823, and performed before the empress mother.

BOURDELOT, L'ABBÉ, an advocate at Paris, published a letter relating to dramatic music about the year 1760.

BOURDELOT, PETER BONNA. Younger brother of the preceding, commenced a history of music conjointly with his brother, which work was completed by Jacques Bonna after their decease. An edition of this book was published at the Hague and at Frankfort in 1743. Some amusing absurdities extracted from it on the subject of "The Effects of Music upon Animals," may be found in the Quarterly Musical Review, vol. v. p. 159.

BOURDON. (F.) A kind of drone bass; a deep, unchangeable sound, accompanying a melody, or series of notes, moving above it. Formerly, this word signified the drone of a bagpipe; it is sometimes applied to the double diapason, or lowest stop, in French and German organs.

BOURRÉE. (F.) A certain dance or movement in common time, of four crotchets in a bar, supposed to have been first invented in France; it somewhat resembles a gavot, and always begins in the last quaver, or the last crotchet, of the measure.

BOURGEOIS. Born in Hainault in 1675. He published many cantatas between the years 1713 and 1750; also two operas, "*Les Amours Deguisés*," and "*Les Plaisirs de la Paix*." Bourgeois died at Paris in 1750.

BOURNONVILLE, JEAN, organist at Amiens.

published several masses between the years 1618 and 1630.

BOURNONVILLE, VALENTIN DE, son of the preceding, published several musical works in 1646.

BOURNONVILLE, grandson to Jean Bournonville, died about 1758. He composed and published many motets. He was a pupil of Bernier, and much celebrated amongst the French musicians of his age.

BOUSSET, JEAN BAPTISTE DE, died at Paris in 1725, aged sixty-three. He was chapel-master at the Louvre, and published some sacred music.

BOUSSET, DROUART DE. Organist to Notre Dame at Paris in 1760. He died suddenly in the church, just after he had finished performing a mass with unusual energy.

BOUSSET, RENÉ DROUARD DE. A native of Paris, who died there in 1760, aged fifty-seven. He was eminent for his taste and genius as a musician.

BOUTADE. (F.) A lesser kind of ballet, formerly practised in France, and which was affected to be executed as an impromptu. Similar performances are now called *capriccios* and *fantasias*.

BOUTELOU. A celebrated counter tenor singer in the chapel of Louis XIV. He was so extravagant that he was frequently in prison, where the king sent him dinners daily of six covers, and frequently paid his debts.

BOUTMI, LEONARD. Composer of some romances at Paris in 1793.

BOUTMY, LAURENT, born at Brussels in 1725, was the author of a treatise on thorough bass, published at the Hague in 1760. He also composed much harpsichord and church music, some of which was printed at the Hague and Amsterdam.

BOUTROY, ZOZIME, the inventor of a machine called the planisphere or harmonic compass, at Paris, in 1785. He afterwards published a symphony for eight instruments, the bass being numbered according to the plan of the above machine; he likewise composed some romances.

BOUVARD. Composer of two operas and other vocal music in Paris at the commencement of the eighteenth century.

BOUVIER, M. J., a composer of instrumental music, and violinist, at Paris in 1785.

BOVICELLI, GIOVANNI BATTISTA, published rules for music at Venice in 1594, also some quadrals and motets.

BOWING. Managing the bow. Bowing constitutes a principal part of the art of the violinist, the violist, &c., since on their skill in this particular greatly depends the quality of their tones, and, in some measure, the facility of their execution.

BOW INSTRUMENTS. All the instruments strung with catgut or goatgut, from which the tones are produced by means of the bow. The most usual are the double bass, (*violono* or *contrabass*;) the small bass, or *violoncello*; the tenor, (*viola di braccio*;) and the violin proper, (*violino*, from *violon*.) In reference to their construction,

the several parts are alike; the difference is in the size.

BOYCE, DR. WILLIAM, born in 1710, was the son of a cabinet maker in London. He was a professor to whom the English choral service is greatly indebted for the well-selected, correct, and splendid collection of cathedral music, which he published in three volumes large folio, upon the plan and on the recommendation of his master and predecessor, Dr. Greene. In 1734, he was a candidate for the place of organist of St. Michael's Church, Cornhill. But though he was unsuccessful in this application, Kelway having been elected, yet he was appointed the same year to the place of organist of Oxford Chapel; and in 1736, upon the death of Weldon, when Kelway, being elected organist of St. Martin's in the Fields, resigned his place at St. Michael's, Cornhill, Boyce was not only elected organist of that church, but organist and composer in the Chapel Royal. The same year, he set "David's Lamentation over Saul and Jonathan," which was performed at the Apollo Society. About the year 1743, he produced the serenetta of "Solomon," which was long and justly admired as a pleasing and elegant composition. His next publication was twelve sonatas or trios for two violins and a bass, which were longer and more generally purchased, performed, and admired than any productions of the kind in England, except those of Corelli. They were not only in constant use as chamber music in private concerts, for which they were originally designed, but in the theatres as act tunes, and at public gardens as favorite pieces, during many years. In 1749, he set the ode written by the Rev. Mr. Mason, for the installation of the Duke of Newcastle as chancellor of the university of Cambridge, at which time he was honored with the degree of doctor in music by that University. Soon after this event, he set for Drury Lane Theatre "The Chaplet," a musical drama in one act, the dialogue of which is carried on in recitative. It had a very favorable reception and long run, and continued many years in use among the stock pieces of that theatre. Not long after the first performance of this drama, his friend Mr. Beard brought on the same stage the secular ode written by Dryden, and originally set by Dr. Boyce for Hickford's room, or the Castle Concert, where it was first performed. This piece, though less successful than "The Chaplet," by the animated performance and friendly zeal of Mr. Beard, was many times exhibited before it was wholly laid aside. These compositions, with occasional single songs for Vauxhall and Ranelagh, disseminated the fame of Dr. Boyce throughout the kingdom as a dramatic and miscellaneous composer, while his choral compositions for the king's chapel, for the feast of the souls of the clergy at St. Paul's, and for the triennial meetings at the three cathedrals of Worcester, Hereford, and Gloucester, at the performances in all which places he constantly presided till the time of his death, established his reputation as an ecclesiastical composer and able master of harmony. Dr. Boyce, with all due reverence for the abilities of Handel, was one of the few English church composers who neither pillaged nor servilely imitated him. There is an original and sterling merit in his productions, founded as much on the study of old English masters as on the best models of other countries,

that gives to all his works a peculiar stamp and character for strength, clearness, and facility, without any mixture of styles, or extraneous and heterogeneous ornaments. Dr. Boyce, dying in 1779, was succeeded in the Chapel Royal by Mr. Dupuis, and as master of his majesty's band, by Mr. Stanley.

BOYER, PASCAL, born in 1743, was chapel-master at Nîmes in his seventeenth year; he afterwards went to Paris, and published a biographical sketch of Pergolesi in the *Mercur de France* of July, 1772. He subsequently published some instrumental music.

BOYVIN, JACQUES, published a treatise on accompaniment, and much organ music, at Paris and Amsterdam, about the beginning of the eighteenth century.

B QUADRUM. (L.) Square B. The name formerly given to B natural, on account of the figure of its signature — ♮. The natural, long after Guido Areteius, was expressed by a Gothic B, ♮, while the Italic B, b, represented the flat. Hence one acquired the Latin name of B *quadratum*, and the other that of B *rotundum*.

BRACES. Those double vertical curves which are placed at the beginning of the staves of any composition. Their use is to bind together the harmonizing parts, and lead the eye with facility from one set of staves to another. In those scores which include a part for a keyed instrument, i. e., the organ, harpsichord, or piano-forte, it is usual to draw a smaller brace within the great one, to include, and to distinguish from the other parts in the score, the two staves designed for either of those instruments. See ACCOLADE.

BRADY, WILLIAM, an Englishman, published some vocal and instrumental music of a light description, at Hamburg and Frankfort on the Oder, at the beginning of the seventeenth century. His instrument was the viola.

BRADELEY, ROBERT. An English composer of songs at the beginning of the eighteenth century.

BRAFTEL, ULRICH, published some motets, &c., at Augsburg, about the year 1545.

BRAHAM, JOHN, whose real name was *Abraham*, was born of Jewish parents about 1774, at London. He was left an orphan when very young; but having a natural inclination for the study of music, he was taken under the protection of Leoni, the singer, and at the age of about ten, made his first appearance on the stage at the Royal Theatre. His vocal powers were at that time so great, that he was able to execute with correctness most of the *bravuras* that had been sung by Madame Mara. The subsequent breaking of his voice, however, deprived him for a while of the means of making a further progress in the public favor. It was about this period that Leoni, from the disarrangement of his domestic concerns, was compelled to leave the country. He went to Jamaica, and left Braham a second time unprovided for. In this emergency his abilities and good conduct procured him a shelter in the friendship of the Goldsmids, a family of high respectability in the city, and under their protection he became a teacher of the piano-forte. His greatest assiduity, however,

was employed in recovering the powers of his voice; and in the numerous musical societies he frequented, he exerted his utmost efforts to regain his former excellence. At one of these meetings he accidentally became acquainted with Mr. Ashe, the celebrated performer on the flute, who, delighted with his vocal abilities, persuaded him to accept an engagement for the subsequent season at Bath. He readily assented, and in the year 1791 made his first appearance as a tenor singer at the Bath concerts, of which Rauzzini was the conductor. No sooner had Braham appeared at these concerts than he became a pupil of Rauzzini, and greatly profited by his able instructions. This liberal master even received him gratuitously into his house, and gave him lessons for three years; and when Braham afterwards sang at his annual concerts, he insisted on his receiving a very ample remuneration. In the spring of the year 1796, Braham was engaged by Storace to sing at Drury Lane Theatre for a limited number of nights; but before the opera of "*Mahmud*" was performed, in which he was to appear, that invaluable composer sunk into the grave. It was, however, brought forward after his death, and Braham's vocal talents received from a London audience those unequivocal marks of applause which they so justly merited. The following season Braham made his first appearance on the boards of the Italian Opera, in "*Zemira and Azor*." Not, however, satisfied with himself, so long as he conceived there was a possibility of further improvement, he determined to seek in Italy the last and highest accomplishment of his talents. For this purpose he embarked for the continent. He went first to Paris, where he continued nearly eight months, during which time he had several concerts, which were crowded at the high price of a louis per ticket. From thence he travelled to Italy. The first engagement Braham accepted in Italy was at Florence, where he was received with the most flattering marks of approbation. From Florence he proceeded to Milan and Genoa, at which places he accepted several successive engagements. At the latter town he continued for some time, and assiduously applied himself to the study of composition under the able *maestro*, Isola, of whose school he has exhibited such successful specimens. When at Genoa, he received offers from the conductors of the theatre at Naples, but the troubled state of the country at that time did not make it desirable to accept them. He therefore directed his route to Leghorn, Venice, Trieste, and finally to Hamburg, every where accompanied with the most gratifying marks of approbation. Having had numerous solicitations to return to his native country, he, at length, waived some suspending engagements at Milan and Vienna, and accepted one from the theatre of Covent Garden. Here he appeared in the winter of 1801, in the opera of "*Chains of the Heart*," the composition of Mazzinghi and Reeve, and has since that period held the very first rank among English stage and concert singers. In energy and pathos of style, Braham was unrivalled; and his powers in this respect were especially conspicuous in accompanied recitative, which generally expresses strong passion; thus, "*Deeper and deeper still*," of Handel, was the *chef-d'œuvre* of Braham's declamatory and pathetic manner, describing as it did Jephthah's

the agony of his rash vow. In the order of musical effects, his singing of this accompanied recitative is ranked, by an ingenious contributor to the Quarterly Musical Review, with the finest efforts of Mrs. Siddons in the drama. Braham has likewise been remarkable, among the natives of England, for his power in sustaining, with the proper manner and pronunciation, the principal male character on the Italian stage; so much so, indeed, that by many his Italian singing was thought far to transcend his English.

He performed at the King's Theatre several seasons, from 1806 to 1816, with those celebrated singers, Mrs. Billington, Madame Grassini, and Madame Fodor. In 1809 he was engaged to sing at the Theatre Royal, Dublin, on such terms as were never given before to any performer, viz., *two thousand guineas for fifteen nights*; and so well was the manager satisfied with the bargain, that it was extended to thirty-six performances on the same terms.

More latterly Braham was engaged at Drury Lane Theatre, where he generally "*ran the round of his characters*" with undiminished power and effect. Foreign singers, who were engaged in England, paid his talents the highest compliment, by saying, "*Non o' è tenore in Italia come Braham.*"

With regard to his merits as a composer, we have only to observe, that if it be allowed that true genius is required to produce chaste, mellifluous melodies, then was Braham highly gifted; for he certainly has written a vast number of songs, duets, &c., &c., which have gained the greatest degree of popularity; as a proof of which most candidates for vocal fame introduce some of them at their *débuts*. "As a national song," says an ingenious modern critic, "Braham's 'Death of Nelson' has pleased and continues to please a vast majority of the inhabitants of the British isles; it has therefore *accomplished its purpose*; for to whom are national songs, which are always appeals to the passions, and seldom free from vainglory, addressed? To the multitude. They are meant to flatter the pride of the people, to cherish their love of country, and to inflame their zeal in its defence. Of such compositions, this most popular singer has produced some that have operated with great force on public feeling, and will hereafter even be considered as features in the musical history of the present eventful age. They will be preserved along with the Tyrtæan strains of Purcell, Arne, and Dibdin."

Our space will not permit us to give a list of the various pieces composed by him, but they may be found to constitute the prominent established favorites in the following operas: "The Cabinet," "The English Fleet," "Thirty Thousand," "Out of Place," "Family Quarrels," "The Paragaph," "Kais," "Americans," "The Devil's Bridge," "False Alarms," "Zuana," "Navensky," &c., &c.

Braham was remarkably quick in "exploring a score;" he entered into the spirit of the composition immediately, and took up the accompaniments for the various instruments with the greatest facility, on the piano-forte.

Braham sang in the United States, in oratorios and concerts, about thirteen years ago, and produced the greatest enthusiasm; as he has done, indeed, several years since then, in England.

Of Braham's visit to this country we find the

following notice in the *Boston Evening Gazette*, for March 19, 1853. On the 11th of January, 1841, John Braham made his first appearance in a Boston theatre at the Tremont, in the character of Henry Bertram, (Guy Mannerling,) without, however, any vocalist to sustain him, the only show of opera being his own unaided efforts.

A few performances at wretched houses closed this unfortunate exhibition, and Braham returned to his appropriate field of action,—the concert room,—where he continued to reap a golden harvest, and by his superb vocalization soon effaced all recollection of his failure in opera. England's greatest tenor was introduced to Boston audiences by the Handel and Haydn Society. The announcement of his *début* was a *chef-d'œuvre* of the enthusiastic secretary who, for so many years, managed the affairs of that association. On the 20th and 22d of November, 1840, two entertainments were promised, so affording Bostonians the only opportunity of listening to the dulcet notes of Europe's most celebrated songster. Crowds rushed to pay their dollar for this only opportunity, and the vast majority were fully satisfied that John Braham's reputation had a solid foundation in the great feats he accomplished. His remarkable power, compass, and good quality of voice fairly astonished, in their remarkable union, all listeners. They could not credit the existence of their own senses, when they witnessed such daring and brilliant performances of the greatest difficulties by a man acknowledged to be very near three score and ten.

Mr. Braham, after his failure at the Tremont, went into the concert-giving business on his own account, besides singing for the Handel and Haydn in oratorios and selections from sacred music. Towards the close of his somewhat protracted concert season he invoked Russell and "the Rainiers" to his aid. His farewell concert took place February 16, 1841, and his last appearance on the 20th of that month for Mr. Hayter's benefit.

In sacred music his most popular and effective performances were, "Sound an Alarm," from Judas Maccabæus; "Comfort ye," and "Every Valley;" "Thy Rebuke," and "Behold and see;" "He that dwelleth," and "Thou shalt dash them;" "Deeper and deeper still," and "Waft her Angels;" "Total Eclipse," and "Why doth the God of Israel sleep," and "The Judgment Hymn." He was also pleasing in the "David" of Neukom, and in the tenor songs from "The Creation."

In "Sound an Alarm," "Thou shalt dash them," the great tests of a tenor in "Samson," and "The Judgment Hymn," he has never been approached here, and the most daring are confounded in their attempt to imitate his surpassing excellence.

In music of a secular character he shone most brilliantly when delivering "Scots wha hae wi' Wallace bled," "All the Blue Bonnets are over the Border," "The Bay of Biscay," "The Death of Nelson," and "The Marseilles Hymn." His fire and outpouring of soul in these moved and swayed his audience to a degree few tenors ever attained with our cold public. "Rocked in the Cradle of the Deep," "The Soldier's Dream," "Robin Adair," "The Last Words of Marnion," "The Evening Gun," and "Kelvin Grove," never

failed to bring out his wondrous union of feeling and expression with just the amount of execution which should meet the demands of the music, and yet not smother and conceal the sentiment. John Braham was a marvel, and those who missed the opportunity to hear that greatest musical wonder of this or any other age must have deeply regretted their inadvertence. He retained his energy and command of the tenor scale longer than any other man has ever done. Donzelli, the celebrated Italian *primo tenore*, who flourished some twenty years since, came the nearest to Braham in this respect, having acquitted himself well in "*Otello*" at Naples when sixty years old; but John Braham made the Birmingham Town Hall ring with his clarion voice at the age of eighty, and filled Exeter Hall with admiring throngs, when some years past that extreme limit of human life.

BRANDENSTEIN, CHARLOTTE DE. A sonata of her composition, in 1780, is inserted in the musical journal of Vogler.

BRANDES, CHARLOTTE GUILHELMINA FRANCOISE, a singer and composer at Hanau, died in 1788. She composed some romances and piano-forte music.

BRATSCHE. (G.) The tenor violin.

BRAULE. (F.) An old dance, said to have been very lively, and performed in a circle, to a rondeau tune.

BRAUN, G. A celebrated performer on the hautboy at Berlin. He published a curious paper on the character and treatment of the hautboy, an extract from which may be seen in the "*Harmonicon*," vol. i. p. 163. Born 1791.

BRAVO, BRAVA, or BRAVI. (I.) An expression of admiration of the music performed, as well done.

BRAVURA. (I.) This word generally signifies a song of considerable spirit and execution; but sometimes is also applied to the *performance* of such a song.

BREIDENSTEIN, JEAN PHILIPPE, organist at Hanau, died in 1785. He published sonatas for the piano-forte, and some songs.

BREINDEL, a pupil of Albrechtsberger, was director of the choir in St. Peter's Church, in Vienna, in 1796. He has composed some church music.

BREITENGASSER, WILHELM, a celebrated composer in Germany in the first half of the sixteenth century. He published at Nuremberg, in 1539, a collection of fifteen masses by celebrated composers.

BREITKOPF, JOHANN GOTTLÖB IMANUEL, a letter-founder, printer, and bookseller at Leipsic, was born there in 1719. In 1755 he invented a new mode of musical typography, which has since been imitated by other nations. Fout, a Swede, procured a patent, and attempted some years since to introduce in London Breitkopf's mode of printing music; but his specimens were so incorrect, in comparison to the music engraved on pewter, that he was soon obliged to relinquish his project. Breitkopf died at Leipsic

in 1794, and left his business to his son Christopher. Besides a general catalogue, with the prices marked, of printed and manuscript music, the Breitkopfs have annually, ever since the year 1762, distributed a theme catalogue, in which the subject of each piece is exhibited in notes, so that a musical collector is enabled to discover whether he is in possession of any of the works specified.

BREITKOPF, BERNARD THEODORE, son of the preceding, composed some vocal and piano-forte music. He was born at Leipsic in 1749, and was in 1780 director of the printing office to the senate at Petersburg.

BREITKOPF, CHRISTOPHER GOTTLÖB, brother to the preceding, was born at Leipsic in 1750. He composed some vocal and piano-forte music.

BREMNER, ROBERT, an English composer, published in London, in 1763, "*The Rudiments of Music, with Psalmody*;" he also published "*Thoughts on the Performance of Concert Music*," "*Instructions for the Guitar*," "*A Collection of Scots Reels*," "*A Selection of Scotch Songs*," &c.

BRESCIANELLO, JOSEPH ANTOINE, chapel-master to the Duke of Wurtemberg, is known by twelve concertos for the violin, published at Amsterdam in the year 1738.

BRESSON, MLLÉ., was born in 1785. She was a pupil on the piano of Adam, during nine years, and has published a method for adapting a score to the piano-forte, also some pleasing romances.

BRETEUIL, LE BARON, a zealous French minister, and a friend of every thing which tended to good, founded, in 1784, the royal school of singing and declamation in Paris, from which the present Conservatory originated.

BRETON, MAHONI LE, violinist at the Italian Theatre at Paris in 1760, published several trios for violins, and duos for the flute.

BREVE. A note of the third degree of length; and formerly of a square figure, as thus, \square ; but now made round, with a line perpendicular to the staff on each of its sides, \circ . The breve, in its simple state, that is, without a dot after it, is equal in duration to one quarter of a large, or to two semibreves, and is then called *imperfect*; but when dotted, it is equal to three eighths of a large, or three semibreves, which being the greatest length it can assume, it is then called *perfect*. The breve was formerly much used for choir service. See Boyce's "*Cathedral Music*."

BREVAL, JEAN BAPTISTE. A celebrated violoncellist at Paris. He published, in 1804, a method for the violoncello; also, previously to that date, much music for the violin, violoncello, and wind instruments.

BREVI, GIOVANNI BATTISTA. A chapel-master at Milan at the close of the seventeenth century. He published vocal music of various descriptions at Modena and Venice.

BREWER, THOMAS. A performer on the viol da gamba, and composer of fantasias and of rounds and catches, in the reign of Charles I. He is the author of the well-known glee, "*Turn*."

Amaryllis," which was originally set by him in two parts, and is said to have been injured by the addition of a third part.

BREWSLER. Author of a treatise on thorough bass, inserted in Clementi's Catalogue, London, 1799.

BRIAN, ALBERT. A church composer in England in the seventeenth century. Dr. Boyce has inserted some of this composer's music in his collection of anthems.

BRICCIO, GIOVANNI. A composer of canons, &c., at Rome. He died in 1643.

BRICCIUS, THEODORUS. A composer of madrigals at Venice in the latter half of the sixteenth century.

BRIEGEL, WOLFGANG CARL, chapel-master at Darnstadt and Gotha, was born in 1626. He composed a great variety of vocal and instrumental music, and died in 1709.

BRIDGE. In a harpsichord, or spinet, the bridge is that flat ruler which is laid over the jacks, to prevent their leaping out of their sockets when the keys are in action. In a double bass, violoncello, tenor, violin, guitar, &c., it is that elevated, perpendicular arch which stands upon the belly, at right angles with the strings, and serves to raise them from the body of the instrument.

BRIJON, E. R., a French musician, published some didactic works on music at Paris and Lyons, between the years 1776 and 1781.

BRILLANTE. (I.) This emphatical expression signifies that the movement to which it is prefixed is to be performed in a gay, showy, and sparkling style.

BRILLIARD. A French composer of violin music about the year 1786.

BRILLON DE JOUY, MADAME. A celebrated amateur performer on the piano-forte, and composer for her instrument. Dr. Burney heard her near Paris, and speaks highly of her talents, in his travels.

BRIND. Organist of St. Paul's Cathedral in London in 1660, and the master of Dr. Greene. He composed two thanksgiving anthems, now hardly known.

BRIOCHI. An Italian composer of instrumental music before the year 1770.

BRIO, or BRIOSO. (I.) With briskness, spirit, animation.

BRISE. (F.) Sprinkled, broken into arpeggio, in treating of chords.

BRITTON, THOMAS, the famous musical small-coal man, was born about the middle of the seventeenth century. He set up in the coal business, but his principal object was music, in the theory of which he was very knowing, and in the practice not inconsiderable. He was so much addicted to it, that he pricked with his own hand very neatly and accurately, and left behind him a collection of music, mostly pricked by himself, which was sold for nearly one hundred pounds. He left an excellent collection also of printed musical books. But what distinguished him most of all was a kind of musical meeting, held

at his own small house, and kept up at his own charges for many years. This society was frequented by gentry, even those of the best quality, with whom he conversed familiarly, and by whom he was much esteemed; for Britton was as respectable for moral endowments as he was curious for intellectual. The circumstances of his death are not less remarkable than those of his life. There was one Honeyman, a blacksmith, who was famous for speaking as if his voice proceeded from some distant part of the house, (a ventriloquist, or speaker from his belly, as these persons are called.) This man was secretly introduced by Robe, a Middlesex justice, who frequently played at Britton's concerts, for the sole purpose of terrifying Britton; and he succeeded in it entirely; for Honeyman, without moving his lips, or seeming to speak, announced, as from afar off, the death of poor Britton within a few hours; with an intimation that the only way to avert his doom was to fall on his knees immediately and say the Lord's Prayer. The poor man did so; but it did not avert his doom; for, taking to his bed, he died in a few days, leaving Justice Robe to enjoy the fruits of his mirth. His death happened in September, 1714.

BRIVIO, CARLO FRANCESCO. An Italian singing master, and composer of vocal music at Milan, in the first half of the last century.

BRIXI, FRANCOIS XAVIER, chapel-master at Prague, was born in 1732. He was a voluminous composer of sacred and other music.

BRIXI, VICTORIN, an organist in Bohemia, was born in 1717. He composed much sacred music, and some sonatas for the piano-forte.

BRIZZI, a Florentine by birth, was considered an excellent tenor singer. He was engaged at Vieua in 1801.

BROADWOOD, JAMES. A celebrated piano-forte maker, in London. His instruments were considered as excelling in workmanship and tone. Mr. Broadwood employed the best set of practical tuners, for attending to the tuning of the instruments of his customers at stated periods. He was the author of a "Practical Method of Tuning," called "Broadwood's Temperament of the Musical Scale." He says, after mentioning that most tuners begin their operations with the note C, "I prefer tuning from A, the second space in the treble clef, as being less remote from the finishing fifths, than any other point of departure: the A being tuned to the forte, tune A below an octave; then E above that octave, a fifth; then B above, a fifth; then B below, an octave; the F \sharp a fifth above; then its octave, F \sharp below; then C \sharp , its fifth above; then G \sharp , its fifth above; and then G \sharp , its octave below. We then take a fresh departure from A, tuning D, its fifth below; then G, its fifth below; then G, its octave above; then C, its fifth below; then C, its octave above; then F, its fifth below; then Bb, its fifth below; then Bb, its octave above; then Eb, its fifth below. The five fifths tuned from notes below are to be tuned flatter than the perfect fifth, and the six fifths tuned from tones above must be made sharper than the perfect fifth. This is similar to the equal temperament."

BROCK, OTTONE VON DEN, a performer

ou the horn, has published much music for his instrument at Paris since the year 1788.

BROCKLESBY, DR. RICHARD, published "Reflections on Ancient and Modern Music, with its Application to the Cure of Diseases," London, 1749.

BRODERIES. (F.) A term applied to those flourishes and embellishments which performers throw *en passant* into any composition.

BRODERIP, of Bristol, was a good composer of Protestant church music towards the end of the last century.

BROGNONICO, ORAZIO. A composer of madrigals in Venice in 1611.

BROKEN CHORDS. Not simultaneous, but taken in a broken, interrupted manner, without exact regularity.

BRONNER, GEORGE. An organist and composer of operas, &c., at Hamburg between the years 1693 and 1715.

BROOKBANK, JOSEPH. Author of "The well-tuned Organ, or a Discussion on the Question whether or no Instrumental and Organical Music be lawful in Holy Public Assemblies," London, 1660.

BROSCI, CARLO. A celebrated singer, born at Andria, in the Neapolitan states, and better known by the name of *Farinelli*, which he received from the patronage of three brothers called Farina. A fall from his horse in his youth rendered castration necessary, and to this accident he was indebted for his celebrity. After enrapturing the crowded audiences of the theatres of Naples, Rome, Venice, and Vienna, Broschi was invited by Lord Essex to London, where for three years he displayed the superiority of his powers, and was magnificently rewarded. In 1737, he left London, and passing through Paris on his way to Madrid, he drew the admiration and the applauses of the French king and of his court. In Spain he was treated with all the distinction which his talents deserved, so that King Philip not only lavished every honor upon him, but regarded him with the confidence and affection of an intimate friend. He held the same distinguished rank of honorable partiality with Philip's successor, Ferdinand, and till his death and that of his queen, Barbara, in 1759, he continued the favorite of the court, and deservedly respected by the public for the generosity of his heart, the benevolence of his conduct, and the condescension and affability of his manners, not only to his inferiors, but even to his personal enemies. On the succession of Charles to the Spanish throne, Farinelli, though honorably received by the monarch, hastened to his native country, where, in the neighborhood of Bologna, he enjoyed the remainder of his life in dignified retirement. Though occasionally haunted by melancholy, yet he continued tranquil; the powers of his voice remained, to the last, strong, clear, and melodious, and for three weeks before his death, like the dying swan, he daily entertained his admiring friends. He died September 16, 1782, in his seventy-eighth year, leaving his musical books and his lands to his sister. His great readiness to relieve distress, and to sweeten the cup of

calamity, whenever he found it possible, prevented the accumulation of riches, and Farinelli, after sharing the favors of monarchs, without feeling his heart biased by flattery, and after remaining unswayed by the vices and extravagances of a theatrical life, lived and died esteemed as a man of worth.

BROSCHI, RICCARDO, chapel-master at Naples, was the brother of the celebrated Farinelli, whom he instructed in the first rudiments of music. Broschi composed the opera called "*L'Isola d'Alcina*," for the Roman theatre, in 1728; it was in this opera that the memorable contention happened between Farinelli and a celebrated performer on the trumpet, over whom that matchless singer obtained a complete victory. In 1730, Broschi accompanied his brother to Venice, where he composed his opera of "*Idaspe*," in which Farinelli, Nicolini, and Cuzzoni performed. His style was grand without bombast, elevated, and noble. It did not possess the majesty of Leo or Jomelli, nor the depth and purity of Feo, but delicacy and expression were principally apparent.

BROSSARD, SEBASTIEN DE, a French musician, born in 1660, was chapel-master and grand chaplain to the cathedral at Meaux. He is the author of a musical dictionary, first published at Amsterdam in the year 1708, and translated into English by Grassineau, in 1740, but not called by him a translation, which it ought to have been. Brossard also composed some vocal and instrumental music, and collected a very complete musical library, which, at his death, in 1730, he left to the royal library of France.

B ROTUNDUM. (L.) B flat. See B QUARDRUM.

BROWN, JOHN. Author of "Letters on the Poetry and Music of the Italian Opera," London, 1789. His lines of criticism seem to be drawn from nature, as exemplified in the passions and sentiments of men. So far as they go they are immutable, and are therefore applicable to all times and to all countries. Brown supposes the lyre to be of the earliest antiquity; for as man, according to his just remark, was in his first state a hunter and a fisher, this oldest instrument partakes most of that state, the two principal pieces being composed of the horns of the animal and the shell of a fish.

BROWNE. An English composer about the year 1500.

BRUCE, in his account of his voyage to Egypt, mentions several musical instruments. He says the Abyssinian flute is about the size and shape of the German flute, with a mouthpiece the size and shape of that of the clarinet; it is played upon lengthwise.

BRUCKHAUSEN. An amateur composer of an operetta at Munster, in 1791.

BRUCKNER, CYRIAQUE, an organist and composer, died in the Palatinate in 1590.

BRUCKNER, ALOYSIUS. A German composer of the seventeenth century.

BRUNINGS, JOHANN DAVID, a pianist and composer at Zurich, published some sonatas for his instrument in 1792-1794.

BRUMEL, ANTONY. A composer of sacred music about the year 1500. He was a contemporary of Josquin des Prez, and pupil of Okeghem. He is considered as the founder of the French school of music.

BRUN, LE. See **LEBRUN.**

BRUNETTE. (F.) A little, tender, delicate and simple air.

BRUNETTI, ANTONIO, chapel-master at Pisa in 1752, was born at Arezzo in 1726. He wrote music for the church. Motets of his, for bass voices with orchestra, are known.

BRUNETTI, GAETANO, son of the preceding, was born at Pisa in 1753. His father taught him the violin; then he went to Florence, and became the pupil of Nardini, whose manner of playing that instrument he imitated with great success. After completing his studies, he travelled through Italy and Germany, and was some time in the service of the elector palatine. Mozart, who heard him at Mannheim in 1778, thought highly of his talent. In 1779 he went to Paris, and there published his first two works, a set of six trios for two violins and bass, and some quatuors, which had little success. Being invited to the place of first violin to the King of Spain, by Boccherini, then director of the royal music, he was happy to place himself under so good a master. This changed his style, for he became as good an imitator of Boccherini as he had been of Nardini. His third work, another set of trios, showed the change; but imitation, however clever, is not genius. Brunetti owed all to Boccherini; but he proved ungrateful, and by intriguing superseded him in the directorship. Then he had to compose, for the service of the court, a great number of symphonies, serenades, and pieces of chamber music. He also wrote quatuors and quintets for the Duke of Alba, in whose house alone they were ever heard. He was fifty-four years old when Napoleon entered Spain; terror brought on a fit of apoplexy, of which he died in 1807. He left, both published and unpublished, a large number of duets, trios, quartets, quintets, sextets, sonatas, concertos, and over thirty symphonies for full orchestra.

BRUNETTI, GIOVANNI GUALBERTO, younger brother of the preceding, born at Pisa about 1760, was the author of several operas; as, "*Lo Sposo di tre*;" "*Le Stravaganze in Campagna*;" "*Bertoldo e Bertoldina*;" "*Le Nozze per invito*;" "*Fatima*;" "*Demofonte*," &c. He succeeded his father as chapel-master at Pisa, and wrote much church music, especially "*Motines de la Trinité*," for four voices.

BRUNI, BARTOLOMEO, born in Piedmont in 1759, chiefly resided in Paris, and was employed as *chef-d'orchestre* of different theatres there. He composed some violin music and sixteen operas between the years 1785 and 1802.

BRUNMAYER, ANDREAS, organist at Saltzburg in 1803, has composed some church and instrumental music.

BRUNMULLER, ELIAS. A composer of instrumental music at Amsterdam at the beginning of the eighteenth century.

BRUSA, FRANCESCO. A composer of

dramatic music at Venice in the first half of the last century.

BRYENNE, MANUEL. The most recent of the Greek writers upon music of whom any works remain. He lived in the reign of the Emperor Michael Paleologus, the elder, about 1320. The treatise which bears his name is entitled "Harmonics," and is a compilation from all the old Greek writers on the subject, including not only Euclid and Ptolemy, but Theon of Smyrna, Aristoxenus, and many others.

BRYNE, ALBERTUS. An English composer in the seventeenth century, and organist of St. Paul's Church. He died about the year 1670. Some of his anthems are to be found in Clifford's collection.

B SHARP. The *sensible* or proper seventh of the major diatonic of C sharp. In keyed instruments it is the same as C natural.

BUCCINA. (L.) A military wind instrument of high antiquity. The tone and form of the buccina are now unknown; but it is generally supposed to have resembled the trumpet; and the definition given by Festus, who calls it a *crooked horn*, seems to sanction that opinion.

BUCH. A German performer on the horn at the Grand Opera at Paris. He published some quartets for his instrument in 1788.

BUCHOLTZ, JOHANN GOTTFRIED, a musician at Hamburg, published some instrumental music there between the years 1782 and 1798. He died in 1800.

BUCOLIC, or BUCOLICAL. Pastoral songs, such as were frequently performed by the ancient shepherds upon pipes.

BUDD. A composer of some harp music in London, about the year 1785.

BUECHNER, JOHANN CHRISTOPH. A singer and church composer at Gotha in 1800.

BUERDE, SAMUEL GOTTLIEB, private secretary to the King of Prussia, was born at Breslau in 1753. He published some collections of sacred music between the years 1787 and 1794.

BUERINGER, JOSEPH. A composer of music for the piano-forte at Vienna in 1799.

BUFFO, BUFFA. A term applied by the Italians to an actor and singer who takes the humorous and ludicrous parts in their comic operas. This epithet is also applied to the pieces themselves; as, *opera buffa*, a comic opera.

BUFFO CARICATO. A humorous and ludicrous character in an Italian opera.

BUGLE, ROYAL KENT. This is by no means a limited instrument, as the bugle was justly considered previous to the invention of keys, for the keys have given it such extent and perfection that its capabilities may now be ranked equal to those of most wind instruments; its effects both as a solo instrument and as an accompaniment to others, have been so often displayed in military and orchestral bands that its powers are now well known. As a chamber instrument it is valuable, for when played sottly and with taste, it forms an excellent accompaniment to the piano-forte. One of the advantages it possesses over most horns is that of a methodical finger-

ing, by which true sounds are produced, without having so much recourse to the imagination, which if in error, false tones must unavoidably be produced. The Kent bugle has six keys, four of which are commanded by the right hand, and two by the left, and are named as follows:—

The bugle should be firmly held by the second finger and thumb of the right hand, the second joint of the former resting on the guard of the A key, and the latter placed underneath, so as to command the D key; this position being formed, the first finger will command the A, the fourth finger the B, and the thumb the D keys. The thumb of the left hand must be placed over the E key, the first finger on the F key, and to support the instrument the fourth finger should be placed underneath, and the second and third by the side of the first. The instrument should be inclined rather downwards, the elbow of the right arm elevated, but the left arm kept near the body, as this position insures the greatest freedom and command of the instrument. To facilitate the acquirement of a good embouchure, the following directions should be observed: Draw the lips tight over the teeth, extending the mouth, and leaving sufficient space between the

teeth for the admission of the tongue; then place the mouthpiece firm in the centre of the mouth, rather more on the upper than the lower lip; the smooth surface of the lips not exposed to the air then becomes the embouchure, which renders the tone more sure, sweet, and brilliant. The sounds which proceed from the bugle are all produced and articulated by the tongue; by the proper method of using this organ, that facility is obtained which so greatly diminishes the practice this instrument requires. To produce any note, the tongue should be drawn suddenly back by a jerk, by which the wind will be forced into the instrument; whilst the tongue is thus in action, *tu, tu* should be pronounced by the breath only without the voice being heard. When sufficient is known to produce the sounds, and to place the lips properly to that part of the mouthpiece they should occupy, it is a rule that should never be disregarded, that in performing the different octaves, the embouchure should not be altered, but the lips should be closed, and the mouthpiece pressed in proportion as the sounds ascend, and in the contrary as they descend. Strict attention to these observations will enable the learner to practise the *natural or harmonic scale*.

The learner should practise the swell on all these notes.

SCALE FOR THE BUGLE.

B C D E F G A B C D E F G A B C

	B	C	D	E	F	G	A	B	C	D	E	F	G	A	B	C
Right Hand: Open Notes		0				0			0				0			
Right Hand: Thumb		X				X			X				X			X
Right Hand: First Finger			1				1			1						1
Right Hand: Second do.				2				2			2					2
Right Hand: Third do.			3						3							3
Right Hand: Fourth do.					4					4						4
Left Hand: Thumb																
Left Hand: First Finger					X											X

The following are the major intervals, which are the distances between the key note and the seven notes of its scale. The notes included in the intervals are called degrees.

No practice can be better or more useful for the student than the scale and the above intervals. Great precaution should be taken to keep the keys of the bugle in order, as any imperfection in their stopping affects all the sounds. One of the principal things to be observed is the proper method of leathering them; for this purpose choice should be made of soft, thick leather, and the soft side should be nearest the instrument. In order to assist the action of the keys, and prevent them from sticking, a little sweet oil should be occasionally applied, and when any

dirt affects the free action of a key, the key should be taken out and the spring cleaned. Sometimes the clapper of a key does not lie level on the ridge; this may be ascertained by pressing the key; the side that is highest will yield to the finger, and may be rectified by twisting the clapper with a pair of pliers till the pressure is equal.

BUISSON, MICHAEL CHARLES DE. A singer and composer of vocal music published at Munich in 1573.

BUINI, GUIB MARS. An opera composer in Italy in the early part of the last century.

BULGARELLI, MARIANNE BENFI, called *La Romanina*. She was much celebrated as a singer in Italy between the years 1700 and 1750.

BULL, DR. JOHN. This celebrated musician was born about 1563, in Somersetshire. His master in music was William Blitheman, organist of the Chapel Royal to Queen Elizabeth, 15

which capacity he was very much celebrated. Bull, on the death of his master in 1591, was appointed his successor in the queen's chapel, and in 1596, at the recommendation of her majesty, he was made professor of music to Gresham College, which situation he resigned in 1607. During more than a year of his professorship, Mr. Thomas Bird, son of the venerable William Bird, exercised the office of a substitute to Dr. Bull, while he travelled on the continent for the recovery of his health. After the decease of Queen Elizabeth, Bull was appointed chamber musician to King James, and on July 16, 1607, when his majesty and Prince Henry dined at Merchant Tailors' Hall, the royal guests were entertained with music, both vocal and instrumental, as well as with several orations. And while his majesty was at table, according to Stowe, "Dr. Bull, who was free of that company, being in a citizen's gowne, cappe, and hood, played most excellent melody upon a small payre of organs, placed there for that purpose only." In 1613, Dr. Bull finally quitted England, and entered into the service of the archduke, in the Netherlands. He afterwards seems to have settled at Lubec, from which place many of his compositions, in the list published by Dr. Ward, are dated, one of them as late as 1622, the supposed year of his decease. Dr. Bull has been censured for quitting his establishment in England; but it is probable that the increase of health and wealth was the cause and consequence. Indeed, he seems to have been praised at home more than rewarded; and it is no uncommon thing for one age to let an artist starve, to whom the next would willingly erect statues. The professorship of Gresham College was not then a sinecure. His attendance on the Chapel Royal, for which he had forty pounds per annum, and on the Prince of Wales, at a similar salary, though honorable, were not very lucrative appointments for the first performer in the world, at a time when scholars were not so profitable as at present, and there was no public performance where this most wonderful musician could display his abilities, and receive applause and reward. A list of more than two hundred of Dr. Bull's compositions, vocal and instrumental, is inserted in his life; all of which, when his biography was written, in 1740, were preserved in the collection of Dr. Pepusch. The chief part of these were pieces for the organ and virginal.

BULL, the violin virtuoso. See **OLE BULL**.

BUNTING. An English musician and editor of two collections of Irish music. (Clementi's Cat.) Bunting has also prefixed to one of his works an historical and critical dissertation on the Egyptian, British, and Irish harp.

BUONONCINI, or **BONONCINI**, **GIOVANNI MARLA**, born at Modena in 1640, one of the first masters of the Lombard school, and father of the celebrated Giovanni and Antonio Buononcini, was a pupil of Carissimi. He published, in 1673, a work entitled "*Il Musico Prattico*," dedicated to the Emperor Leopold. This treatise contains many useful precepts and examples of composition, but is neither so accurate as to be implicitly followed, nor so ample as to supply all the wants of a musical student of the present time. At p. 18 of this work, he speaks of a canon, in his opera of "*Terza*," for fifteen hundred and

ninety-two voices, or six hundred and forty-eight choirs, which, on account of the difficulty of finding such a number of singers assembled together, he has reduced to twenty-two. Giovanni Maria Buononcini published other chamber and church music at Bologna between the years 1686 and 1691; his chamber duets, published in the latter year, are remarkable as learned and labored compositions.

BUONONCINI, **GIOVANNI BATTISTA**, son of the preceding, was also born at Modena, in 1672. After having finished his musical studies, probably under his father, he went to Vienna, and having a very fine hand on the violoncello, was entered in the band of the Emperor Leopold, and retained at a very large salary. At this time, Alessandro Scarlatti had gained great reputation by the operas he had composed, and Buononcini, desirous to emulate him, though but eighteen years of age, composed one, entitled "*Camilla*," which was performed at Vienna, and also at different Italian theatres, with greater applause than had ever been given to any work of the kind. Mr. Haym, convinced of the merit of "*Camilla*," and of the possibility of altering it to the taste of an English audience, then but little sensible of the charms of Italian music, contrived to adapt it to English words; and, notwithstanding the disadvantages arising from this conjunction, it is said to have been received in England with great favor. This was about the year 1707; and so deep was the impression which the music of Buononcini had made upon the minds of the people there, that, till the year 1710, the managers found themselves reduced to a kind of necessity of introducing into every opera they exhibited more than an equal proportion of Buononcini's airs, selected from a variety of works, which by that time he had composed. In the year above mentioned, Handel arrived in England, and gave to the English the opera of "*Rinaldo*," thereby laying the foundation of his musical fame: still, however, Buononcini, who was still at Rome, had many admirers in England, and he was sent for to London, on occasion of the foundation of a Royal Academy of Music. It was hardly possible that men possessed of talents so different as were those of Handel and Buononcini should be equally admired and patronized by the same persons. The style of Buononcini was tender, elegant, and pathetic; Handel possessed all these qualities, and numberless others, and his invention was inexhaustible. For some or other of these considerations, and perhaps for others of a very different kind, two parties were formed of the English nobility, the one professing to patronize Handel, and the other Buononcini. The works of the latter, published in England, consist of cantatas, chamber duets, the operas of "*Astarto*" and "*Griselda*," a funeral anthem for John, Duke of Marlborough, and twelve sonatas for two violins and a bass. Before he quitted England, Buononcini was much disgraced, by its being discovered that a madrigal, which he had given out as his composition, was the work of another person in Italy. Dr. Greene, who had introduced the madrigal in question into the academy, notwithstanding the evidence to the contrary, was one of the last to believe that it was a composition of any other than his friend Buononcini; but finding himself

almost singular in this opinion, he withdrew from the Royal Academy, carrying with him the boys of St. Paul's; and calling in to his assistance Mr. Festing, the first violinist of the king's band, he established a concert at the Devil Tavern, Temple Bar; the joke upon this occasion among the academicians was, that "Dr. Greene was gone to the devil." From a propensity that must seem unaccountable, he affected to be thought a much older man than he was; and in the year 1730, when every circumstance in his person and countenance bespoke the contrary, he scrupled not to assert that he was on the verge of fourscore. About the year 1733, his affairs were come to a crisis in England. There was at that time about the town a man, who, with scarcely any other recommendation than fine clothes and a great stock of impudence, appeared at court, and assumed the title of Count Ughi. It is said that he was a friar; but his pretence was, that he was an Italian nobleman, and a natural son of King James II. Being a man of parts and well accomplished, he, on the footing of relationship, such as it was, gained an easy admission to the Duchess of Buckingham, and became so much her favorite, that those who were not aware of the supposed consanguinity between them, hesitated not to say she meant to make him her husband. This fellow, among various other artifices, pretended to possess the secret of making gold; and Buononcini, who had never in his life known the want of it, was foolish enough to believe him. In short, he was prevailed on to leave the hospitable roof under which he had so long been sheltered, and become a sharer in the fortunes of this egregious impostor. They quitted the kingdom together; but it is possible that this connection lasted not long, and that Buononcini was constrained to recur for a livelihood to the exercise of his profession; for a few years after his leaving England, he was at Paris, and composed for the Royal Chapel there a motet, in which was a solo, with an accompaniment for the violoncello, which he himself performed, in the presence of the King of France. Upon the conclusion of the peace of Aix-la-Chapelle, Buononcini was sent for to Vienna by the Emperor of Germany, and wrote the music for that occasion, being rewarded with a present of eight hundred ducats. This was in the year 1748; and soon after the rejoicings for the peace were over, he, together with Monticelli, a singer who had appeared in the opera at London, set out for Venice, the one having been engaged as a composer, the other as a principal singer there. We here lose sight of Buononcini, who probably died at Venice.

BUONONCINI, MARC ANTONIO, elder brother of G. B. Buononcini, was an eminent composer and violoncellist, also born at Modena; he lived in the strictest friendship with his brother, and they travelled together to various towns in Germany. It does not, however, appear that Antonio accompanied his brother to England, but he probably remained at Modena. M. A. Buononcini composed masses, motets, and several operas, between the years 1679 and 1718. A work on composition, printed at Venice in 1765, is also attributed to him.

BUONPORTI, FRANCESCO ANTONIO, a nobleman of the city of Treut, published, be-

tween the years 1702 and 1714, ten different works, chiefly for violins.

BUONTEMPI. See **BONTEMPI**.

BUONACCORDO. (I.) An instrument resembling a spinet, and of small dimensions, to accommodate the fingers of very young practitioners.

BUONO MANO. (I.) A good hand. An expression implying a free and facile power of execution.

BURCHARD, GEORGE, composed a mass and some symphonies, which were published at Augsburg in 1624.

BURDEN. A regular return of the theme of a song at the end of each verse. The adoption of a *burden of a song*, in lyric poetry, is a very ancient practice, and is still occasionally introduced with a pleasing and interesting effect. The term *burden* is borrowed from the French word *bourdon*, a drone bass; because the one, like the other, is characterized by an unchangeable tone, and bears upon the ear with a similar monotony. See **BOUTON**.

BURLANDO. (I.) Playfully, in a jesting manner.

BURLESCO. (I.) With comic and even farcical humor.

BURLETTA. (I.) A light, comic species of musical drama, which derives its name from the Italian verb *burlare*, to jest, to jeer. The *burletta* was first invented in Italy; from Italy it passed to France, from France to England, and thence to this country.

BURETTE, PIERRE JEAN, was a French physician, and born at Paris in the year 1665. During his infancy he was so feeble and sickly, that he was chiefly allowed to amuse himself by playing on the spinet, which he had been taught to do by his mother; and so early was he a proficient in music, that at the age of eight years he was invited to play in a concert before the king, who expressed himself well satisfied with his performance. Not long after this period he assisted his father, who was at that time a teacher of music, in instructing his pupils; but having a turn for literature as well as for music, he determined, when at the age of eighteen, to adopt one of the learned professions. He consequently became a student in the College of Harcourt, and in 1690 was admitted to the degree of doctor of physic. Besides the Latin and Greek languages, which he had previously acquired, he attained whilst at Harcourt, and afterwards, a knowledge of Hebrew, Syriac, Arabic, Italian, Spanish, German, and English. He afterwards became eminent as a physician, read a course of lectures on the materia medica, and, in 1710, was nominated professor of medicine in the royal college at Paris. His literary attainments were such that he had a considerable share, for more than thirty years, in the publication of the "*Journal des Savans*," and, in 1718, had an appointment in the *Bibliothèque du Roi*. Amongst his other productions, there is, in the memoirs of the French Academy, "A Translation of Plutarch's Treatise on Music," accompanied by notes and remarks. In this work, to which almost all late

writers on the subject have been under great obligations, he has exhibited much genius and learning: "but," observes Dr. Burney, "he does not seem always to have been possessed of an equal share of sagacity, or of courage sufficient to confess himself unable to explain inexplicable passages in his author. He never sees a difficulty; he explains all. Hence, amidst great erudition and knowledge of antiquity, there are a thousand unintelligible explanations in his notes." He died in the year 1747, at the great age of eighty-two.

BURGHERSH, LORD, son of the Earl of Westmoreland, and British ambassador at Florence, is a celebrated musical amateur. He has been president of the Royal Academy of Musicians in London, which establishment owes its origin, in a great degree, to his exertions and influence. Lord Burghersh is said to have studied music in England, in Germany, and in Italy. He has composed an oratorio entitled "*Bajazet*," which is much admired for its smooth and elegant style; he has also published various cantatas, which an eminent modern critic declares to be *really good*, not speaking of them relatively as the works of an amateur, but positively as music. Among Lord Burghersh's principal compositions are the following: "*Bajazet*," above mentioned, "*La Primavera*," "*Il primo Amore*," "*L'Amor timido*," "Cantata, by Leoni," "Cantata by Count Girard," "*La Gelosia*," "*L'Incanto*," "'Tis done, 'tis done," "Day set on Norham's castled steep," "Seven Caizonets, Duets, &c.," "Spirit of bliss," "Fly to the desert," "Bendemeer's Stream," "Why so pale," and "A Song and Catch for four Voices."

BURMANN, GOTTLÖB WILHELM, published some vocal and instrumental music at Berlin, between the years 1792 and 1794. He died at Berlin in 1805.

BURNETTI, DOMENICO, chapel-master at Bologna, published some sacred music there in 1633. He, together with Francesco Bertacchi, founded a musical society at Bologna in 1633, called the *Accademia de Musici Filarchisi*, having for its symbol a pair of kettle drums, with the motto, "*Orbem demulcet attactu*."

BURNEY, JAMES. An eminent music-master and organist at Shrewsbury. He was half brother to the celebrated Dr. Burney, and one of his first instructors in music. He died in 1789, aged eighty.

BURNEY, DR. CHARLES, was born at Shrewsbury in 1726. He received part of his education at the free school founded by Queen Elizabeth in that town, and part at the public school at Chester, in which city he first began his musical studies under Mr. Baker, the organist of the cathedral. About the year 1741, he returned to Shrewsbury, and pursued the study of music under his half brother, Mr. James Burney. In 1744 he met with Dr. Arne, who persuaded his friends to send him to London, and he was then placed under that master for three years. In 1749 he was elected organist of a church in Fenchurch Street, with an annual salary of only thirty pounds, and in the course of the same year was engaged to take the organ part at the new concert established at the King's Arms, Cornhill, instead of that which had been held at the Swan

Tavern, burned down the year before. In the winter of 1749-1750 he composed for Drury Lane three musical dramas, namely, "Alfred," "Robin Hood," and "Queen Mab." Being in an ill state of health, which, in the opinion of the physicians, indicated a consumption, he was prevailed upon to retire into the country. Accordingly he went to Lynn Regis, in Norfolk, where he was chosen organist, with a salary of one hundred pounds a year. He continued there nine years, and at that period formed the design of compiling his "General History of Music." In 1760, his health being re-established, he gladly returned to the metropolis, with a large and young family, and entered upon the pursuits of his profession with an increase of profit and reputation. His eldest daughter, who was then about eight years old, obtained great notice in the musical world by her astonishing performances on the harpsichord. Soon after his arrival in London, he composed several much admired concertos; and in 1766, he brought out at Drury Lane Theatre a translation of Rousseau's " *Devin du Village*," which he had executed during his residence at Lynn. In 1761, he had the honorary degree of doctor of music conferred upon him by the University of Oxford, on which occasion he performed an exercise in the musical school of that university. This exercise, consisting of an anthem of great length, with an overture, airs, recitatives, and choruses, was several times afterwards performed at the Oxford music meeting, under the direction of the famous Emmanuel Bach. In the year following, he travelled through France and Italy, as well with a view to improvement as to collect materials for his intended "History of Music"—an object which he never had out of his mind from the time he first conceived the plan of such a work. In 1771, he published his "Musical Tour, or Present State of Music in France and Italy"—a work which was well received by the public, and deemed so good a model for travellers, that Dr. Johnson professedly adopted it in his account of the Hebrides. Speaking of his own book, "I had," said the doctor, "that clever dog Burney's Musical Tour in my eye." In 1772, he travelled through the Netherlands, Germany, and Holland, and in the course of the next year he published an account of his journey, in two volumes octavo. In the same year he was elected a fellow of the Royal Society. In 1776 appeared the first volume, in quarto, of his "General History of Music." The remaining volumes of this elaborate and intelligent work were published at irregular periods; and the four of which it now consists were not completed till the year 1789. In 1779, at the desire of Sir John Pringle, Dr. Burney drew up, for the Philosophical Transactions, "An Account of little Crotch, the Infant Musician," since professor of music in the University of Oxford. The grand musical festival in 1785, in commemoration of Handel, held in Westminster Abbey, was considered as deserving of a particular memoir; the historian of music was therefore fixed upon as the most proper person to draw it up. Accordingly, in the same year, a splendid volume was published by Dr. Burney, in quarto, for the benefit of the musical fund. In this work the doctor displayed eminent talents as a biographer; and the "Life of Handel" is one of the best memoirs to be found in our language. In 1796, he published the "Life of Metastasio," in three volumes

octavo; but this performance wants that arrangement and judicious selection which characterize his former publications. Besides these productions, Dr. Burney wrote "An Essay towards the History of Comets," "A Plan of a Public Music School," &c., &c. His musical works, in addition to those already mentioned, are, "Sonatas for two Violins and a Bass, two parts," "Six Cornet Pieces, with an introduction and Fuguo for the Organ," "A Cantata and Song," "Six Ducts for two German Flutes," "Six Concertos, for Violin, &c., in eight parts," "Two Sonatas for a Piano-forte, Violin, and Violoncello, two parts," "Six Harpsichord Lessons," &c., &c. Dr. Burney was twice married, and had eight children, of whom several have manifested very superior abilities. His eldest daughter was celebrated for her extraordinary musical powers. Madame d'Arblay, the author of "Evelina," "Cecilia," "Camilla," and "The Wanderer," was the second. His eldest son, James, sailed round the world with Captain Cook, and afterwards commanded the Bristol, of fifty guns, in the East Indies; he published some judicious tracts on the best means of defending the island against an invading enemy, and commenced a history of voyages of discovery. The second son was the very learned Charles Burney, LL. D. His youngest daughter pursued the career of her sister as a novelist. For many years Dr. Burney resided in a house in St. Martin's Street, Leicester Fields, which was formerly occupied by Sir Isaac Newton; but during the last twenty-five years of his life, having been appointed organist of Chelsea College, he inhabited an elegant suite of apartments there, and enjoyed a handsome independence. He died in the year 1814, aged eighty-eight. His remains were deposited in the burying ground belonging to Chelsea College, and the funeral was numerously attended by the governor, deputy governor, and chief officers of the college, and by the family and friends of this accomplished and excellent man. Dr. Burney was intimately acquainted with all the distinguished characters who flourished in his time, as well in other countries as in Great Britain, and in habits of peculiar friendship with Dr. Johnson, of whom he used to relate many interesting anecdotes. Indeed, it is known that soon after the death of that colossus of learning, he had some thoughts of giving a memoir of him to the world; but the subject was so overwhelmed by various publications, that he relinquished his design. In all the relations of private life, his character was exemplary, as a husband, father, and friend. His manners also were peculiarly easy, spirited, and gentlemanly, and he had the graces of the Chesterfield school, without any of its formality.

BURROWES, JOHN FRECKLETON, pupil of William Horsley, Mns. Bac. Oxon., was born in London on the 23d of April, 1787. He first became known to the public by the production of an overture and several vocal pieces, with full orchestral accompaniments, at the Hanover Square concerts, and subsequently by an overture at the "Philharmonic," of which society he was one of the original associates. The knowledge of instrumental effect evinced in these compositions, and the favorable impression they made, render it unaccountable that he should have abandoned this, the higher branch of the art, in which he

had so fair a prospect of success, for the less exalted, though more lucrative, branch of composing for the piano-forte. Such was, however, the fact; and it is for this instrument that Mr. Burrowes has published several sonatas, with accompaniments, besides numerous rondos, divertimentos, and variations upon original as well as popular airs; he has adapted nearly the whole of Mozart's operas for the piano-forte, and made large selections from the works of Handel, Haydn, Rossini, &c., and arranged them both for that and various other instruments. Burrowes is also the author of two elementary works, viz., "The Piano-forte Primer," and the "Thorough Bass Primer," which are strongly recommended by the first masters for their clearness and usefulness; indeed, there are very few students now without them. The success of his publications, and the rapidity with which they succeeded each other, justify us in pronouncing him one of the most prolific as well as most popular writers of the day.

BURTUS, or BURZIO, NICOLAS, professor of the fine arts at Bologna, was the Guidonian adversary of Bartholomew Ramis, and a Pythagorean follower of Boethius; he wrote a Latin work entitled "*Encomium Musicae*," Bologna, 1489; also "*Musices Opusculum*," 1487. Burtius admitted no consonances but octaves, fifths, and fourths; he called the thirds and sixths allowable dissonances, and has given five precepts of counterpoint, which will ever be classical, particularly that of avoiding consecutive fifths and octaves.

BURTON, JOHN, an English pianist, who died in 1785, was a pupil of Keeble. He was an enthusiast in his art; but having in his youth exercised his hands more than his head, he was not a deep contrapuntist; he had, however, in his pieces, and manner of playing them, a style of his own, to which, from his having been one of the first harpsichord players in that country who attempted expression, and light and shade, he excited an interest and attention which would now, perhaps, be much more difficult to obtain.

BURTON, AVERY. An English composer and musician in the time of Henry VIII.

BURY, BERNARD DE, born at Versailles in 1720, was a court musician, and composer of some sacred music.

BURY. A performer on the horn, and composer for his instrument at Paris in 1800.

BUSBY, THOMAS, doctor of music, was born in Westminster in 1755. He was an articulated pupil of Battishill, and, soon after he had served his time, was appointed organist to St. Mary's, Newington, in Surrey. He then began to compose, and his first essay in composition was an oratorio, called "The Prophecy," which was performed with some applause at the Haymarket Theatre in 1799, after having received improvements for many years from its author. The other principal works of Dr. Busby consist of a collection of sacred music, entitled "The Divine Harmonist;" "Melodia Britannica, or the Beauties of British Songs;" the music to Gray's Ode, the "Progress of Poesy," under the title of "British Genius;" the music to Pope's "Ode on St.

Cecilia's Day;" "Comala," a dramatic poem from Ossian; "Johanna," a dramatic romance; "Britannia," an oratorio; and the music to three minor pieces at Covent Garden, namely, "A Tale of Mystery," "The Fair Fugitives," and "Rugantino." Dr. Busby has also published a small musical dictionary and a grammar of music; a "General History of Music," being an abridgment of those of Burney and Hawkins, and in 1814, a "Musical Biography, or Memoirs of the Lives and Writings of the most eminent Musical Composers and Writers who have flourished in the different Countries of Europe during the last three Centuries."

BUSCHMANN. A German musician, and inventor of a new musical instrument called by him the *Terpadion*. He exhibited this instrument in London in the year 1820. The greater part of it resembled the horn finely played; the upper notes had precisely the tone of a flute.

BUSNOY. One of the chief writers of the French school of music in the sixteenth century.

BUSTYN, or BYSTYN, PIERRE. Organist and composer of piano-forte music in Zealand about the year 1720.

BUTLER, CHARLES. Author of a work entitled "The Principles of Music in Singing and Setting, with the twofold Use thereof, ecclesiastical and civil," 1636. This book is a good one for the time in which it was written, and, according to Dr. Burney, contains more knowledge, in a small compass, than any other work of that period in our language. Butler was master of arts of Magdalen College, Oxford.

BUTLER, THOMAS HAMLY, professor of music, is the son of James Butler, who was also respectable for his musical talents. He was born in London about the year 1762, and received his musical education under Dr. Nares, as one of the king's singing boys, in which situation he continued for about ten years. On the expiration of this term, he went to Italy to study composition under Piccini, and remained three years under that master. Whilst in Italy, he was introduced to Sir William Hamilton, the English ambassador at the court of Naples, from whom he

received great attention. On his return to his native country he attracted the notice of Sheridan, and also of the managers of Covent Garden Theatre, the musical department of which house he was engaged to superintend. About this time he brought out his "Book of Sonatas," dedicated to the Duke of Gloucester. On the termination of his theatrical appointment Butler went to Scotland, and afterwards spent most of his life as a teacher of music at Edinburgh, occasionally visiting London, to dispose of his numerous compositions. The beautiful Scotch air of "Lewie Gordon," being sung by the maid of the house, struck Butler's fancy when he first went to Scotland, and in consequence was the first theme he chose for the rondo he composed in that country. Among Butler's other works we may notice his "Musical Games," "A Book of Sonatas, dedicated to the late Princess Charlotte," and many Scotch airs with variations. His music is chiefly published by Clementi. Butler died in Edinburgh in 1823.

BUTTSTEDT, JOHANN HEINRICH, born in 1666, a scholar of Pachelbel, and organist of the principal church of Erfurt, the capital of Thuringia, is numbered among the great organ players and composers for that instrument of his time. He died in 1727.

BUXTEHUDE, DIETRICH, son of Johann Buxtehude, an organist of Lubeck, was one of the great performers on that instrument in Germany. His compositions for the harpsichord were numerous and masterly. In 1696, he published two sets of sonatas. That he was an organist of some merit would appear from the fact that J. Sebastian Bach made a secret visit to Lubeck to hear him and study his manner.

BUZZOLENI, GIOVANNI, of Brescia. A celebrated singer about the year 1700.

BYRD. See **BIRD**.

BYRENIEY, DE —. Organist and composer in Saxony. He died in 1750.

BYSTROEM, THOMAS. A Swedish officer and amateur composer of some sonatas published at Leipsic in 1801.

BYSTYN. See **BUSTYN**.

C.

C is the nominal of one of the two natural modes. That note in the natural major mode to which Guido applied the monosyllable *ut*, but which has long since been relinquished by the Italians for that of *do*, as softer and more vocal. It is the major tonic of a natural signature, thus:—

In modern times, since the temperament of the musical scale has been attended to, it has been usual to consider C as the key note; and its pitch or degree of acuteness has been regulated and preserved by steel instruments, called tuning forks, or C-forks; used by the tuners of finger keyed instruments; but violin performers use the A-fork for tuning their instruments, because they have no string to the note C; and some few persons use the A-fork for piano-fortes. The pitch or degree of tone of the tenor clef C, in our best concerts, is now such as to make or excite in the air two hundred and forty complete vibrations in one second of time, and the C below this half as many, or one hundred and twenty; the C above is four hundred and eighty; and that higher still nine hundred and sixty vibrations in one second of time. The tone C is the one with which the so called natural scale commences—a scale which has neither flats nor sharps. Again, a simple C, or rather a semicircle placed after the clef, intimates that the music is in common time, which is either quick or slow, as it is joined with allegro or adagio; if alone, it is usually adagio.

CABALETTA. (I.) A passage very agreeable, soothing, and comforting, occurring in a larger piece of music.

CACCIA. (I.) A composition written in the hunting style. Hunting music, vocal or instrumental.

CACCINI, GIULIO, called also *Giulio Romano*. He was born at Rome, but resided thirty-seven years at Florence. He was a celebrated scholar, and likewise a dramatic composer. Giulio Romano composed, in conjunction with Jacobo Peri, the opera called "*Euridice*," which was produced on the occasion of the marriage of Henry IV. of France to Mary de Medicis, and acted at Florence in 1600. Dr. Burney considers "*Euridice*" to have been the first opera ever performed in public, though primary attempts at dramatic music were probably made at an earlier period. Giulio Romano died in 1615. His most celebrated work was entitled "*Nuove*

Musiche," published at Venice just before his death.

CACCINI, FRANCESCA, called also *La Cechina*, daughter of Giulio Caccini, was for many years the admiration of Florence, not only for her musical abilities, both in singing and composition, but for her poetry, in the Latin as well as Tuscan languages. She flourished about the year 1640.

CACOPHONY. (Gr.) A combination of discordant sounds. A jarring, disagreeable noise. The effect of the *wolves*, or highly-tempered concords, on keyed instruments, which result or come out from the tuning or adjusting a certain number of other concords, has been thus denominated by Mr. Hawks and some other writers on the subject. *Cacophony* is a bad tone of voice, proceeding from the ill disposition of the organs which produce sound.

CADENCE. (F.) A pause, or suspension, at the end of an air, to afford the performer an opportunity of introducing a graceful extempore close. The word *cadence* is also frequently applied to the embellishment itself; as when we say, He closed his song with a fine, or a good, cadence.

A cadence in harmony consists of two distinct chords, the last of which is generally accented, and is used to terminate the sections and periods of musical rhythm. The term *cadence* was formerly applied to the final melody of a musical close. The Germans adopted the Latin word *clausula* in the same sense. The dominant motion is the foundation of the perfect and imperfect cadences, as the gradual motion is of the false and mixed cadences. When the bases of both chords are the roots of their respective triads, the cadence is termed *radical*; and of these radical cadences, there are four in general use—the perfect, imperfect, false, and mixed; and to these may be added the *plagal*, or church cadence, which is only a variation of the imperfect; and the *authentic*, which is only the ancient term for the perfect.

CADENCE INTERROMPUE. (F.) An interrupted cadence.

CADENZA. (I.) or **CADENZ.** (G.) This word has the same meaning as *cadence*. But the Italians employ it, in composition, in reference to every harmonic progression, where after a dominant is venth a common chord follows of the same key. By the term *cadenza* is meant that extempore flourish upon a voice or instrument which is introduced at the will of the performer, to exhibit a display of taste or talent. When this is made the vehicle of new and appropriate effects, and conducted with skill, it may be tolerated; but when it is reserved for the unpremeditated flights of illiterate musicians, who vain would treat us with their facilities, it too often proves but the mere empty wandering of ignorance and folly. Great science is requisite for the introduction and management of this species of embellishment, as the ear is sensible of any deviation from that course which a correct harmony prescribes. Good taste requires that

the style of the cadenza should be drawn from the *luenz* of the piece it is introduced to adorn. The highest delicacy is required in the execution of these embellishments, which the singer is only enabled to give by the selection of a proper vowel, on which they are performed. No certain rule can be given by which this embellishment can be regulated, except that the cadenza must be suited to the character of the piece, as well as to the harmony of the note on which it is introduced. The cadenza must be sung in one breath, and it is generally ended by a brilliant shake. The first note of a cadenza is sung *forte*, to apprise the accompanying performers of its introduction.

CADENZA SOSPESA. (L.) A suspended or continued pause.

CÆSURA. (L.) The termination of any passage which consists of more than one musical foot. A rest showing the rhythmical end of a portion of melody, or the close of a melodic foot.

CAFFARELLI, GAETANO MAJORANO, a celebrated Italian singer, was the son of a peasant in the kingdom of Naples, and was born in 1703. He was the pupil of Porpora at the same time as Farinelli, whom he equalled in reputation and talent, though not in modesty. It is said that Porpora taught him thus: During five years he made him constantly learn the elements of singing, and a few graces and passages, from one single sheet of music paper. In the sixth year, he proceeded to give him lessons in articulation, pronunciation, and declamation. At the end of that year Caffarelli thought himself very little beyond the elements of his art, and was much surprised when his master said to him, "You may now leave me, young man; you have nothing more to learn from me, and are the first singer in Italy, if not in the world." Caffarelli went to England in the year 1738. It is said that he was never well or in voice all the time that he remained there. In Italy he had long before this gained considerable reputation as a singer; but it was not till after he returned from England that he was classed by his countrymen among their most exquisite singers. Caffarelli amassed much money by his profession, and purchased the Duchy of Santo Dorato, in the kingdom of Naples. He died in 1783, aged eighty, and bequeathed a large fortune, with the dukedom, to his nephew.

CAFFARO, PASQUALE, was born, in 1708, at Lecce, one of the provinces of the kingdom of Naples. He quitted the conservatory after profound study, and his operas were successively represented at several Italian theatres, where he had no cause to complain either of the severity or the coldness of the public. He chiefly excelled in the cantabile; his air "*Belle luci che accendete*" has served as a model in this style to his successors, and is said to have been so popular at the time of its appearance, that the subject was painted on the porcelain of the manufactory of the King of Naples. This air was sung throughout Italy after the lapse of a century. Caffaro also excelled as a composer for the church; his "*Stabat Mater*" for four voices, and in double canon, will bear comparison with the immortal production of Pergolese. Caffaro was

master of the king's chapel at Naples, and also of the conservatory of La Pietà. He died in 1787.

CAFFIAT, or CAFFIAUX, PHIL. JOS., author of an essay on the history of music, Paris, 1755, died in 1777, aged sixty-five.

CAIMO, GIUSEPPE. A voluminous composer of canzonets and madrigals at Milan, between the years 1560 and 1585.

CALAMUS, PASTORALIS. (L.) One of the first instruments used by antiquity. A simple reed, or cane.

CALANDO, or CALAND. (L.) A term signifying that the time of the passage over which it is written is to be gradually diminished in quickness.

CALASCIONE. (I.) A species of guitar.

CALCANDO. (I.) Pressing upon, hurrying the time.

CALDARA, ANTONIO, one of the vice chapel-masters of the Emperor Leopold under Fux, was born at Venice in 1678. He is celebrated for the sublimity of his style, which he manifested in two oratorios of his composition, the one entitled "*Giuseppe*," performed in the year 1722, the other, "*Il Re del Dolore*." He published two sets of sonatas for two violins and a bass, printed at Amsterdam, and "*Cantate da Camera a Voce sola*," printed at Venice. He continued the favorite composer in the imperial service till the year 1736, having been a dramatic composer near fifty years. He died at Vienna in 1763, aged ninety.

CALEGARI, ANTONIO. A dramatic composer and performer on the violoncello, born at Padua. He flourished towards the latter end of the last century, and resided, during many years, at Paris.

CALEGARI, CORNELIA. A female singer and composer of vocal music, principally for the church at Milan. She was born at Bergamo in 1644.

CALKIN, JOSEPH, violin and tenor player, was born in 1781. He first studied music under Thomas Lyon, and subsequently was articled for two years to Spagnoletti. His first engagement in an orchestra was at Drury Lane Theatre in 1798, where he remained ten years; after which he was engaged as a tenor at the opera, ancient and vocal concerts, and the Philharmonic, of which society he was a member and likewise librarian.

In 1813, Calkin married the widow of the late Mr. Budd, bookseller, of Pall Mall, and had the honor of being bookseller to the king; therefore we may justly say that he has had "two strings to his bow." In 1821 he was appointed one of the king's state band, which gave him the title of musician in ordinary to his majesty.

CALKIN, JAMES, younger brother to Joseph, was born in London in 1786. He finished his education at Dr. Burrow's school in Soho Square, and reflects with great pleasure that he sat at the same desk with the celebrated H. R. Bishop. He began to learn the violin at a very early age, being taught at that time by his elder brother, and at the age of thirteen was apprenticed (for seven

years) to Thomas Lyon, of whom he learned the piano-forte, violin, violoncello, and thorough bass.

In 1823, Calkin was elected, unanimously, an associate of the Philharmonic Society; and then an honorary associate of the Concoitore Society. He has composed many divertimenti, &c., for the piano-forte, also several instrumental quartets, one of which was performed at the British concerts in 1826; the latter has been published, and, as a mark of respect for the inimitable manner in which he played it, is inscribed to Mr. Mori.

Calkin has further written a grand sinfonia for a full orchestra, which has been played by the Philharmonic band, but not yet publicly performed.

CALL, LEONARD DE. A voluminous composer of instrumental music, chiefly for the guitar accompanied, and published at Vienna since the commencement of the present century.

CALLCOTT, JOHN WALL, was born at Kensington, Middlesex, in 1766. He gave early indications of that love for knowledge by which he was afterwards so much distinguished.

At the age of seven he was sent to a neighboring school, where he made considerable progress in Latin and Greek. When only twelve years old he was taken from school, and from that period may be said to have educated himself.

In the summer of 1778, he obtained an introduction to the organist of Kensington, and, constantly attending the organ loft, acquired, as a recreation, the first rudiments of music, having previously determined to follow surgery as a profession.

His study of anatomy was, however, but for a short period; for, witnessing a severe operation, his feelings received such a shock that he abandoned from that time all idea of the medical profession.

In 1779, he commenced his practice of music, attempted composition, and wrote various pieces for a private play. He also continued to improve himself in classical learning, and in the French, Italian, Hebrew, and Syriac languages, algebra, and some branches of the mathematics.

In 1782, he was introduced to, and became intimate with, the late Drs. Arnold and Cooke, also with Mr. Sale.

In 1783, he became assistant organist at St. George the Martyr, Hanover Square; and in 1785, Dr. Cooke introduced him to the members of the Academy of Ancient Music. The professional connections he now formed gave him his first bias towards glee writing.

Having assiduously studied harmony and counterpoint, in 1784 he sent his first glee to the Catch Club as a candidate for the prize. It was unsuccessful; but he was not discouraged, and diligently prepared a number of compositions for the following year, when he experienced the gratification of finding himself signally rewarded with three medals.

About this period he actively engaged with Dr. Arnold in the formation of the Glee Club; and in compliance with an invitation to take a bachelor's degree, from Dr. Philip Hayes, professor of music at Oxford, he commenced bachelor in 1785, and set for the occasion Wharton's "Ode to Fancy."

In 1786, two more medals were awarded him

from the Catch Club, and through the recommendation of Dr. Arnold he succeeded to several valuable engagements as a teacher.

In 1787, the Catch Club admitted him as an honorary member, and he sent in nearly one hundred compositions as candidates for the prizes. On that occasion, only two pieces, a canon and a glee, were successful; but in consequence of this extraordinary influx of compositions, it was resolved that the pieces presented should be limited to three of each description. Complying with this new regulation, in 1789 Calcott offered only twelve pieces, but all the four medals were assigned him — a circumstance unparalleled in the history of the Catch Club. This same year he was chosen joint organist with C. Evans, of St. Paul's, Covent Garden.

In 1790, Calcott obtained an introduction to Haydn, then in England, and under that great master for some time studied instrumental music.

From 1789 to 1793, (after which the Catch Club ceased to offer prizes,) he never failed annually to obtain distinction; but the chief part of his time was occupied in teaching.

At this period he began to study the theoretical writers on music. From the perusal of these works he felt emulous to rank among the didactic writers of his country. An intimacy formed about this time with Overend, the organist of Isleworth, greatly increased this desire.

On the death of Overend, Calcott purchased all his manuscripts, as well as those of Dr. Boyce; and it was the study of these which determined him to compile and write a musical dictionary.

In 1797, the plan being completed, he began to collect his materials, and contrived each day, notwithstanding other numerous engagements, to gain a portion of time for reading and making extracts at the British Museum, of which labor many volumes remain.

In 1800, he took his doctor's degree in music at the University of Oxford, and his exercise on the occasion was a Latin anthem.

In 1801, the Kensington volunteer corps was established, and Calcott determined to form a military band from among the inhabitants of the place. Assisted by a subscription, he procured instruments, and not only composed, compiled, and arranged all the music for the performance, but even taught the performers himself. The great fatigue he thus underwent had an injurious effect upon his health, and his friends ventured to remonstrate, but were silenced by that cheerful confidence he always expressed in his own powers.

The compilation for his dictionary still went on; but the labor of classifying his materials interfering too much with other occupations, he resolved to relinquish its further prosecution until a future period — a period which was never to arrive. Thinking, however, that the public had ground to expect something from him on the theory of music, in consequence of his prospectus for the dictionary, he wrote, in 1804 and 1805, his "Musical Grammar." In the same year he succeeded Dr. Crotch as lecturer on music at the Royal Institution; but his health was now too seriously impaired, and the very anxiety he felt to execute with honor the task he had undertaken completely overcame him, and he became at once incapable of all business.

During the indisposition which followed, the public esteem and admiration for Dr. Callcott's talents and character displayed themselves in a remarkable manner.

In his absence, he occasionally employed himself in composition, and, among other things, planned a work on musical biography, but was never able to carry it into execution.

At the end of five years his friends indulged the idea of his complete and permanent restoration to health; but their hopes were eventually disappointed. After a period of two years his indisposition returned, and in the spring of 1821 his constitution was unable to resist any longer the ravages made upon it by repeated attacks, and he was released from a life of affliction on May 15, 1821, in the fifty-fifth year of his age.

Of the character of Dr. Callcott, it is sufficient to observe, that the excellent qualities of his heart were fully equal to his extraordinary talents, and that he possessed the sincere affection of every one who knew him.

His compositions were very numerous, and his printed works are by no means equal in extent to those which still remain in manuscript.

Many of these consist of anthems, services, odes, &c.; but his fame will chiefly rest upon his admirable glees, catches, and canons.

These were given to the world at various times, and in a great variety of publications; but a collection of the most favorite among them has been made, in two folio volumes, by his son-in-law Mr. Horsley, together with a memoir of the author, whence we have extracted the greater part of the above account.

CALLENBERG, GEORGES ALEXANDER HENRY HERRMANN, COUNT OF. A German nobleman, born in 1744. He composed some sonatas, which were published in Berlin in 1781.

CALLENBERG. A celebrated organist at Riga about the year 1739.

CALLIOPE. One of the Muses; the mother of Apollo; and Horace supposes her capable of playing on any musical instrument.

CALMATO. (I.) At rest, calm, quiet.

CALMUS. A performer on the violoncello, and composer for his instrument at Altona in 1797. He died at Dresden in 1809.

CALORE. (I.) With much warmth and animation.

CALORI, SIGNORA. An Italian female singer in London in the year 1758.

CALVI, GIOVANNI BATTISTA. An amateur composer of dramatic music at Milan between the years 1784 and 1788.

CALVIERE, or CALVIAIRE, a celebrated organist and composer at Paris, was born in 1695. His "*Te Deum*" is a very fine composition. He died in 1755.

CALVISIUS, SETHUS, or CALVITZ, the son of a poor peasant, and born in Thuringia in 1556, was a learned theorist and a good practical musician; he published a Latin work on music in 1592, and composed much music for the church. He died in 1617.

CALVOER, GASPARD. A German writer on music, who died in the year 1725.

CAMBERT, organist at Paris, and the first French musician who tried to set an opera, quitted France in disgust on Louis XIV. taking from him the management of the opera and giving it to Lulli. He went to London, and was appointed master of King Charles II.'s band. It has been said that Cambert, who died in London in 1677, broke his heart on account of the bad success of his operas in England.

CAMBIARE. (I.) To change.

CAMBINI, GIUSEPPE. A voluminous composer of vocal and instrumental music published in France and Germany between the years 1780 and 1800. He was a pupil of P. Martini, and a correct theorist.

CAMBIO, PERISSONE. A composer of little national songs, "*Canzone Villanesche, alla Napoletana*," some of which were published at Venice in the middle of the sixteenth century. Dr. Burney says, "In these canzonc there is generally more humor in the words, and more air and vivacity in the melody, than in any other compositions equally ancient. They appear to have been originally sung in the streets in parts, as the words of several imply. In one of them a singing master speaks, who offers to teach the gamut in an hour, and the syllables, ut, re, mi, fa, &c., are ingeniously applied, in most of the parts, to such sounds as require them in solmization."

CAMEFORT. A French composer of songs in the reign of Louis XIV.

CAMERA. (I.) A chamber. A word used in conjunction with some other, to indicate that the composition to which it is prefixed is written for the chamber; or, in other words, that it is chamber music; as *sonata di camera*, a sonata for the chamber.

CAMERLOHER, or CAMMERLOCHER, DON PLACIDO DE, chamber musician at Munich, published some instrumental music at Amsterdam and Nuremberg about the year 1760.

CAMIDGE, DR. An eminent organist and composer, resident at York. He presided at the organ at the grand vocal festival at York, in 1823. His organ introductions to some of Dr. Croft's anthems, performed at the meeting, were so masterly as to attract great and deserved attention.

CAMIDGE, MR. An eminent musician, also residing at York. He was an assistant conductor with Dr. Camidge at the York festival.

CAMINANDO. (I.) Flowing with gentle and easy progression.

CAMPAGNOLI, BARTOLOMEO. Violinist at Dresden in 1783. He was born in Italy in 1751. He has published much instrumental music. He died in 1827.

CAMPBELL, ALEXANDER. Editor of some Scotch songs in 1792, also of some harp music. We believe he was an organist at Edinburgh.

CAMPELLI. An opera composer at Padua in 1707.

CAMPION. A French composer and didactic writer on music in Paris at the commencement of the last century.

CAMPION, DR. THOMAS. An English poet and musician in the seventeenth century. He published also didactic works on music.

CAMPIONI, CARLO ANTONIO. Chapel-master to the Grand Duke of Tuscany. He composed a celebrated "*Te Deum*" in 1767. He also published some violin duets.

CAMPOBASSO, VINCENZO. A dramatic composer at Milan in 1789.

CAMPORESE, MADAME. This celebrated singer was the wife of Signor Giustiniani, a gentleman of family and respectability. She was principal chamber singer at the court of Bonaparte, and never appeared as an actress till she made her *début*, in 1817, at the King's Theatre in the Haymarket, in Cimarosa's "*Penelope*." She was at first extremely embarrassed; but every successive performance dispelled a part of her fears, and in her next character, the Contessa in the "*Nozze di Figaro*," she had so entirely conquered them, that her reputation as an actress was completely established, her deficiency from the first having been only in the usages and manners of the theatre. In Agnese, and Donna Anna in "*Il Don Giovanni*," more especially, she gave proofs of consummate talents. In the season of 1818, the management of the Opera House having passed into other hands, Miss Corri was substituted as prima donna for Madame Camporese, who quitted England, but was re-engaged by Mr. Ayrton for the season of 1821, when she gave peculiar satisfaction in the part Ninetta, in "*La Gazza Ladra*," where the situations, more interesting than the music, called into full exertion her abilities as an actress. In 1822-1823, she appeared in Desdemona, in Rossini's "*Otello*," which was considered as her best character; and at the end of the season, after singing admirably at the oratorios and various public concerts, she retired from the stage and public singing.

CAMPRA, ANDRÉ, born at Aix, in Provence, in 1660, was at first a chorister in the cathedral of that city, having for his instructor in music William Poitevin, preacher to that church. Soon after his leaving the choir, he became distinguished by his motets, which were performed in churches and private concerts. His genius having been too much confined while restrained to the narrow limits of a motet, he set himself to compose for the stage, and made the music to sundry operas. The grace and vivacity of his airs, the sweetness of his melody, and, above all, his strict attention to the sense of the words, render his compositions truly estimable. Campra died at Versailles in 1744.

CANNABICCI, CHRISTIAN, chapel-master to the elector of Bavaria, a native of Manheim, and a pupil of Stamitz for the violin and composition, was, in 1778, concert master and director of the Italian Opera at Munich. He was considered as one of the best solo players in all Germany. Many of his compositions, in symphonies and other instrumental pieces, were published even in Paris and London.

CANARIE, (F.) or **CANARIO, (I.)** is the

name of a piece of music supposed to have come to us from the Canary Islands, whence it derives its name. It is a sort of *gigue*, or jig, from which it is distinguished only by a still swifter time. It is commonly in $\frac{3}{8}$ or $\frac{6}{8}$, but more rarely in $\frac{17}{8}$ measure.

CANDELLE, P. J. A dramatic composer at Paris in the latter half of the last century. He also composed some motets.

CANDELLE SIMONS, ÉMILE. Daughter of the preceding, a French actress, singer, and composer at Paris since the year 1787. She was a good performer on the harp.

CANDIDO, LODOVICO. A violinist and composer for his instrument at Venice in 1712.

CANETTI, FRANCESCO. An Italian dramatic composer between the years 1784 and 1790.

CANGE, CHARLES DU. See **FRESNE.**

CANIS, CORNELIUS, a Belgian, composed several good canons, which were published in the Antwerp and Louvain collection of songs, printed about the year 1544. He died before the year 1556.

CANON. A vocal composition, in two or more parts, so constructed as to form a perpetual fugue. There are various kinds of canons, as the simple, the double, and the triple canon; the augmented, the diminished, the reversed, and the increased canon; the resolved, the unresolved, the finite, and the infinite canon; all of which rank under the general name of *canon*, and are but so many different ways of conducting a continued fugue, consisting of one, two, or three subjects, carried on by a greater or lesser number of harmonic parts. A canon is a composition in which the several voices begin at fixed intervals, one after the other, and in which each successive voice sings the verse or the strain of the preceding one. In Italian, therefore, it is called *fuga di conseguenza*; in Latin, *canon perpetuus*, or continuous fugue; in German, *Kreisfuge*, (circulating fugue.) Sometimes each voice begins with the same, sometimes with different notes. Canons may be finite or infinite. The former end, like any other compositions, with a cadence, while the infinite canon is so contrived that the theme is begun again before the parts which follow are concluded. By this means the performance might be continued to an indefinite length. A canon may consist of two, three, four, or more voices. Generally only one voice of a canon is written, and a sign shows the place where the other voices are to begin. Formerly, at the beginning of canons, it was the custom to place the directions by which they were to be described and sung. These directions were called the *rule* or *canon*, and thence arises the title which such compositions have since retained. Canons differ from ordinary fugues; for in the latter it is sufficient that the subject be occasionally repeated and imitated according to the laws of counterpoint; but in the former it is essential that the subject be strictly repeated by all the succeeding parts; which repetition may be made in the unison or octave, the fourth or the fifth, or any other interval of the scale. There are several other canons, as *canon polymorphus*, *canon*

per tonos, canon per diminutionem, and *canon per augmentationem*, which to fully explain would exceed our limits. Sometimes, also, a musical passage of a composition, in which one voice repeats, for a short time, another, is called, improperly, a canon.

Canon, in ancient music, is a rule or method of determining the interval of notes. Ptolemy, rejecting the Aristoxenian way of measuring the intervals in music by the magnitude of a tone, (which was supposed to be formed by the difference between a diapente and a diatesseron,) thought that musical intervals should be distinguished according to the ratios or proportions which the sounds terminating those intervals bear to one another, when considered according to their degree of acuteness or gravity; which, before Aristoxenus, was the old Pythagorean way. He therefore made the diapason consist in a double ratio; the diapente in a sesquialterate; the diatessaron in a sesquitercian; and the tone itself in a sesquioctave; and all the other intervals according to the proportion of the sounds that terminate them; wherefore, taking the canon (as it is called) for a determinate line of any length, he shows how this canon is to be cut accordingly; and this method answers exactly to experiment, in the different lengths of musical chords. From this canon, Ptolemy and his followers have been called *canonici*; as those of Aristoxenus were called *musici*. This term with the ancient Greeks signified what we now call *monochord*.

CANONE APERTO. (L.) An open canon.

CANONE CHIUSO. (L.) A close or hidden canon.

CANTABILE, or CANTAB. (I.) A term applied to movements intended to be performed in a graceful, elegant, melodious, singing style. The cantabile or singing style has of late obtained great attention in piano-forte composition. And as a substitute for the too often rapid airs with variations which once monopolized the time of the student of that instrument, for the creation of an elegant taste, such works as the "*Lieder ohne Worte*" of Mendelssohn and others must be regarded as of high value. In modern pianos of best quality much regard seems to be had to the production of a tender and expressive singing tone. It was in fact the search for this which gave rise to the invention of striking the strings with hammers instead of quills.

CANTADOURS. Certain itinerant singers of songs and ballads, who, with other musical professors of various descriptions, sprang up in Provence about the middle of the ninth century. It was their practice to perform on public stages in the open air, and to sell their productions, and receive presents in money from their surrounding auditors.

CANTANDO. (I.) In a singing manner.

CANTANTE. (I.) An expression sometimes used to distinguish the voice part of a composition.

CANTARE. (I.) To sing.

CANTATA. (I.) An elegant and passionate species of vocal composition, consisting of an intermixture of air and recitative. The cantata, which was invented by Barbara Strozzi, a Venetian lady, who flourished about the middle of the

seventeenth century, was, at one time, extended to such a length as to form a little opera, but has since been cultivated in Italy, Germany, and England only as chamber music—a sort of song or composition intermixed with recitatives, airs, and variety of motions, ordinarily intended for a single voice, with a thorough bass; sometimes for two, three, or more voices, with one or more violins, or other instruments. The cantata passed from Italy into France, and thence to England; it has something in it extremely fantastical and capricious. The word *cantata* was used in the church as early as in the year 1314, to express what we often mean by *anthem*, with which it is still synonymous in Germany, being chiefly confined to Lutheran church music. The secular cantata is a kind of composition suited to the chamber, wherein less light and shade are requisite than in either ecclesiastical or dramatic music. When Pope Ganganelli and the King of Portugal were reconciled, in 1770, cantatas were sung at Venice and Rome, equal in length to an opera.

CANTATILLA. (I.) The diminutive of *cantata*. A short song in air and recitative. Little used at present.

CANTATRICE. (I.) A female singer.

CANTICA. (L.) Ancient dramatic soliloquies, which are supposed to have been introduced as interludes, or act tunes.

CANTICI. (I.) One of the names given to the *laude*, or songs, sung by the Romish priesthood, in the twelfth and thirteenth centuries, in praise of God, the Virgin Mary, or the saints and martyrs.

CANTICLE. A hymn, or song, anciently sung by the Hebrews in honor of the Divinity, and generally supposed in commemoration of some sacred and important event. The most distinguished production of this kind is the canticle attributed to Solomon, concerning the occasion and intention of which there are various opinions. The Greeks gave the name of canticles to certain vocal soliloquies in their tragedies.

CANTILENA. (I.) A melody. This word was originally used as a diminutive of *canzone*; but now it bears a different sense, and serves to distinguish the treble melody, or upper part of any composition, from the bass and other inferior parts.

CANTILENA SCOTICA. (L.) A Scotch melody.

CANTINO, PAOLO. A composer of madrigals at Venice in 1785.

CANTO, or CANT. (I.) A word chiefly used in choral music, and signifying the melody, or highest vocal part.

CANTO CLEF. The name of the C clef when placed on the first line.

CANTO FERMO. (I.) The name given to the ancient chants of the Romish church; which were adopted as standing melodies. These chants, till counterpoint was discovered, were unaccompanied, or only harmonized with octaves.

CANTO FIGURATO. (I.) This term was applied by the old Christian ecclesiastics to the

canto fermo in its more cultivated state, when harmony began to assume modulation and contrivance.

CANTO PLANO. (I.) An old term applied to ecclesiastical chanting.

CANTORATE. A leading singer.

CANTORE, or CANTOR. (I.) A general name for a singer.

CANTO RECITATIVO. (I.) A speaking song. See **CANTUS**.

CANTUS. (L.) A mode of recital between the characters of air and recitative. Cantus also signifies the treble.

CANTUS AMBROSIANUS, or AMBROSIAN CHANT. A method of singing and chanting, first introduced by St. Ambrose. What this method was, is not at present known; but it is said to have borne some analogy to the modes of the ancient Greeks. It does not appear to have consisted of any particular or determined series of notes. His design, however, it is thought, was only to inculcate a simple melody; founded, indeed, on the rules of art, but so familiar and easy, that the whole congregation might join in the performance. It is to this accommodation that we trace the origin of the practice, in the Romish church, of the people uniting with the choir in chanting divine service.

CANTUS GREGORIANUS, or GREGORIAN CHANT. This chant, which derives its name from St. Gregory, its inventor, added four interposing notes between the four instituted by St. Ambrose, in which the diapente held the uppermost place in the diapason. The chief difference between the tones employed by these improvers of the ancient chant was, that those of St. Ambrose arose from the arithmetical, and those of St. Gregory from the harmonical, division of the diapason.

CANTUS MENSURABILIS. (L.) Measured melody. A term applicable to every kind of music, whether vocal or instrumental, in which the length of the component sounds is regulated and determined by the received rules of time.

CANUN. The canun is the name of an instrument much used by the Turks; it is strung with catgut, and is something in the form of the dulcimer.

CANZONE. (I.) The word *canzone*, in its literal sense, signifies an ode, or song, of considerable length; but it is now applied by Italian musicians to any air in two or three parts, with passages of fugue and imitation.

CANZONET, or CANZONETTA. (I.) *Canzonet* is the diminutive of *canzone*, and, in Italy, signifies a short song in one, two, or three parts; but in England it is more generally applied to the two latter.

CAOINAN. The Irish funeral song.

CAPELLA. (I.) Chapel.

CAPISCOLUS. A dignitary in certain cathedrals, who superintended the choir, or band; and corresponded with him who, in other churches, is called the *chanter*, or *precentor*.

CAPISTRUM. (Gr.) A kind of muzzle used by the ancient trumpeters, so formed as to extend horizontally across the face, and embrace and confine the cheeks, to prevent their bursting with the violence with which they blew the instrument — an accident to which, without such precaution, the performer, from his vehement exertion, was continually liable.

CAPO. (I.) Head or beginning.

CAPOLLINI, MICHEL ANGELO, composed the music to a sacred drama at Mantua in 1627.

CAPORALE. A celebrated violonecellist. He went to London in 1735, and though no profound musician, nor gifted with a very powerful hand, he was heard for some years with great partiality, from the almost single merit of a full, sweet, and vocal tone. He published some solos for his instrument in London.

CAPOTASTO, or CAPO D'ASTRO. The principal touch, as the bridge of any instrument is the place where the strings touch, or bear.

CAPPUS, JEAN BAPTISTE. A French composer of vocal and instrumental music between the years 1730 and 1733.

CAPRANICA, MATTEO. An Italian dramatic composer at Rome in 1746.

CAPRICCIO, (I.) or CAPRICE. A loose, irregular species of composition, in which the composer, without any other restraint than the boundary of his imagination, continually digresses from his subject, and runs wild amid the fervor of his fancy.

CAPRICCIETTO. (I.) A short capriccio.

CAPRICCIOSO. An Italian adjective, signifying that the movement at the beginning of which it is written is to be played in a fantastic, free style.

CAPRICORNUS, or BOKSHORN, SAMUEL. Chapel-master at Stuttgart. Much of his vocal and instrumental music was published between the years 1655 and 1708, though some of it probably is posthumous, as he is supposed to have died at Stuttgart in 1669.

CAPRIOLI, GIOVANNI PAOLO, published some sonatas at Venice in 1628.

CAPRON. A French composer. He made his *début* at the spiritual concerts about the year 1768, and soon after published some sonatas and questions for the violin.

CAPUTI, ANTONIO. An Italian dramatic composer about the year 1754.

CAPUZZI, or CAPUCCI, ANTONIO. There were two brothers of this name, violinists at Venice, composers of dramatic and instrumental music since the year 1735.

CARADORI, ALLAN, MADAME, was born in the Casa Palatina at Milan, in 1800. Her father was the Baron De Muncz, a native of Alsace, who formerly held the rank of colonel in the French service.

The musical education of Mlle. De Muncz was completed entirely under the guidance of her mother, without the aid of masters or any other auxiliary. The death of the Baron De Muncz, and the consequent failure of pecuniary resources

n his family, at length obliged his daughter to employ her musical powers professionally; and for this purpose she went to England, and under the name of Caradori, derived from a branch of her mother's family, made her *début* at the King's Theatre on the 12th January, 1822. The first character in which she appeared was the Page, in "*Figaro*;" and it is not a little remarkable that circumstances required her to learn that part, and to make her first appearance on any stage within the short period of three days.

This attempt was completely successful, and she was since equally fortunate in the operas of "*Il Barone de Dolsheim*," "*Elisa e Claudio*," "*Corradino*," and "*La Clemenza di Tito*," in the latter of which she sustained the part of *prima donna*. As a concert singer, Mme. Caradori rapidly rose into public estimation by her performances at the Philharmonic Society and other musical establishments in different parts of Great Britain, especially at Brighton, Oxford, Bath, Bristol, Gloucester, &c., &c. As a composer, she is best known as the authoress of the pleasing romances, "*La Plus Jolie*," "*Le Sourire*," and "*La Fileuse*."

The principal advantages possessed by Madame Caradori are, a voice of great sweetness, flexibility, and justness of intonation; an extensive knowledge of the different branches of the art which she possesses; and a facility of reading music, by which she is enabled at once to sing and accompany (*a prima vista*) any vocal piece which is presented to her. To these may be added, an intimate knowledge of four languages, of which the English is one, an agreeable person, a graceful deportment, and high moral character.

In August, 1823, Madame Caradori was married to Mr. Allan, the secretary of the King's Theatre. She gave concerts in this country about twenty years since, and her exquisite rendering of "I know that my Redeemer liveth," in an oratorio performance of the Boston Handel and Haydn Society, is still remembered with delight.

CARAFÀ, MICHEL, born at Naples in 1785, commenced the study of music in the Convent of *Monte Oliveto*, at the age of eight years. His first master was a Mantuan musician named Fazzi, a skilful organist. Francesco Ruggi, a pupil of Fenaroli, gave him lessons in harmony and accompaniment, and later he passed under the direction of Fenaroli himself. Whilst visiting Paris, he received lessons in counterpoint and fugue from Cherubini. Though he had written in his youth, for amateurs, an opera called "*Il Fantasma*," and had composed, about 1802, two cantatas, "*Il Natale di Giove*" and "*Achille e Deidamia*," in which were the germs of talent, he had not thought of cultivating music except as a relaxation from other work; he entered the career of arms; he became an officer in a regiment of hussars of the guard of Murat, afterwards enquery to the king in the expedition against Sicily, and chevalier of the order of the Two Sicilies. It was not until the spring of 1814 that Carafà thought of turning to account his talent, and that he produced his first opera, called "*Il Vascello l'Occidente*," at the theatre *Del Fondo*. This work, which was quite successful, was followed by "*La Gelosia Corretta*," in 1815; "*Gabriele di Vergi*," in 1816; the "*Ifigenia in Tauride*," San Carlos at Naples, in 1817; "*Adele di Lusignano*" at Milan; in the autumn of the same year, "*Berenice in Syria*," at San Carlos. In 1821, he made his *début* upon the

French stage, by the opera "*Jeanne d'Arc*." This opera had not the success which it merited; for there were many beautiful things in it. After he had brought out this opera, Carafà went to Rome, where he wrote "*La Capriciosa ed il Soldato*," which had great success; he there composed the "*Solitaire*." Of all Carafà's operas, the most popular is the "*Solitaire*." There is some carelessness in the score, but there are in it dramatic situations well conceived and well rendered. After the representation of this piece, which took place in Paris in August, 1822, Carafà returned to Rome, where he wrote "*Eufemie di Messina*;" this work was a complete success. In 1823, he produced "*Abufar*," at Vienna. On his return to Paris he produced the "*Valet de Chambre*" and "*L'Auberger supposé*." In the autumn of 1825, he wrote "*Il Sonnambulo*," at Milan; and at Venice, the "*Paria*," in February, 1826.

In 1827, he returned to Paris. The 17th of May of that year, he produced an opera in one act, called "*Sangarido*;" this had no success. This was followed by "*La Violette*," opera in three acts, of which M. Lelorne composed some pieces; "*Masaniello*," in three acts, a work full of beauties, and which should be considered the masterpiece of Carafà. Since then he has written "*La Fiancée de Lammermoor*," and "*La Prison d'Edinbourg*," 1831-1833.

M. Carafà is often censured for filling his works with reminiscences and imitations. It must be owned he did not always choose his ideas as well as he was able: he wrote quickly and carelessly, as was the custom of Italian composers; but if he had been more careful of his scores, judging from the beautiful things found there, his reputation would be more brilliant.

CARAFFE, the younger. Chamber musician to the King of France; he published several symphonies about the year 1752.

CARAPPELLA, TOMMASO, was born at Naples about 1700, and delighted that city by his compositions, which, although in the ancient style, termed by the Italians *madrigalesco*, united energy with taste and sentiment. His master is unknown, but his compositions obtained the approbation of the learned, both in the theory and practice of music. The sound doctrines and pure principles which had presided at the foundation of the Neapolitan school, and under whose auspices its numerous great works had been produced, revived under the pen of Carapella; or rather he was one of its most religious defenders, and endeavored to prevent the diffusion of bad taste or false doctrines, and the destruction of the sacred and venerable vestiges of ancient simplicity. Hymns and cantatas being greatly in favor with the nation at the time he finished his studies, he composed chiefly in this style. One of his religious hymns is still sung at Naples, on the *fête* of Santa Francesco Romana. Carapella afterwards set to music, with great success, the opera entitled "*Massimi*." After having successively and equally succeeded in both the sacred and profane styles, and taken rank among the best masters of his school and of Italy, he published a collection of his hymns and cantatas for two voices, distinguished for their perfection in melody—a work which recommends him to the esteem of posterity, although not his only claim to honorable recollection.

CARATTERE. (I.) Character; as, *con molto carattere*, with much character and emphasis.

CARAVACCIO, GIOVANNI, a composer of church music at Venice in 1620.

CARAVAGGIO, GIOVANNI GIACOMO GASTOLDI DE. A poet and composer of vocal music at Venice in 1590.

CARAVOGLIA, BARBARA. Principal female singer at Naples in 1788.

CARBONEL, JOSEPH NOEL. A very celebrated French performer on the tambourine; he published a method for his instrument in 1766. He died in 1801.

CARBONEL, JOSEPH FRANCOIS NARCISSÉ, probably the son of the preceding, was born at Vienna in 1773. He has composed much vocal and instrumental music, published at Paris.

CARBONELLI, STEFFANO, a celebrated violinist and pupil of Corelli, went to England from Rome about the year 1720. He was received into the family of the Duke of Rutland, a great patron of music. During his residence with this nobleman, he published and dedicated to him twelve solos for a violin and bass, of his composition, which he frequently played in public with great applause. About the year 1725, he quitted the Opera House, and went to Drury Lane Theatre, where he led the band, and frequently played select pieces between the acts. After continuing a few years at Drury Lane, Carbonelli quitted his station there, and attached himself to Handel, at the time when he began to perform oratorios. For a series of years, he played at the rehearsal and performance at St. Paul's for the benefit of the sons of the clergy. At first, in England, Carbonelli professed himself to be of the Romish persuasion; but afterwards he became a Protestant, and married the daughter of Mr. Warren, parish clerk of St. James's, Westminster. In the latter part of his life, he in some measure declined the profession of music, and betook himself to that of a merchant, and an importer of wines from France and Germany. By the interest of a powerful friend, he obtained the place of one of the purveyors of wine to the king, and died in that employment in the year 1772. At the time of Carbonelli's resigning his profession of violinist for that of wine merchant, the following lines were written, which have been admirably set to music, as a duet, by Dr. Cooke:—

"Let Rubinelli charm the ear,
And sing, as erst, with voice divine;
To Carbonelli I adhere;
Instead of music, give me wine.

But yet, perhaps, with wine combined,
So if music may our joys improve;
Let both together then be join'd,
And taste we like the gods above."

CARBOR, ROBERTUS. One of the oldest known composers of sacred music in Scotland; a mass of his composition in the twelfth century is extant.

CARCANI, JOSEPH, chapel-master at Venice, was a celebrated dramatic composer about the year 1742.

CARDON. A harpist at Paris, and composer for his instrument; his method for the harp was published at Paris in 1785. He died in Russia about the year 1805.

CARDUCCI, GIOVANNI GIACOMO. A

vocal composer at Venice in the latter half of the sixteenth century.

CARESANI, CRISTOFORO, organist at the Chapel Royal of Naples about the year 1680, is considered one of the best composers of his time. His duos, which appeared in 1681, are especially held in estimation. Choron, at the end of his "*Principes de Composition*," has given exercises on all the intervals by Caresani, which are in the highest degree useful.

CARESTINI, GIOVANNI, a celebrated Italian singer, was born at Mount Filantrana, in the March of Ancona, and at twelve years old went to Milan, where he was patronized by the Cusani family, whence he was frequently called *Cusani*. His voice was at first a powerful and clear soprano, which afterwards changed to the fullest, finest, and deepest countertenor that has perhaps ever been heard. His first appearance on the stage seems to have been at Rome, in 1721, in the female character of Costanza, in Buononcini's opera of "*Griselda*." In 1723, he was at Prague during the great musical congress there, on occasion of the coronation of the Emperor Charles VI., as King of Bohemia. In 1724 he was at Mantua; and in 1726 at Venice, where he performed with Farinelli and the famous tenor Paita. In 1728 he was at Rome, and again in 1730, where he performed in Vinci's celebrated operas of "*Alessandro nell Indie*," and "*Artaserse*," both written by Metastasio. He was now engaged by Handel to supply the place of Senesino, who, together with his whole troop, except Strada, had deserted from his service, and enlisted under the banners of Porpora and the nobility at Lincoln's Inn Fields. Carestini's person was tall, beautiful, and majestic. He was also a very animated and intelligent actor. He manifested great agility in the execution of difficult divisions from the chest in a most articulate and admirable manner. It was the opinion of Hasse, as well as of many other eminent professors, that whoever had not heard Carestini was unacquainted with the most powerful style of singing. He continued in the highest reputation for twenty years after quitting England, and sang at Berlin in 1750, 1754, and 1755, and at Petersburg till the year 1758, when he returned to Italy, and soon after died.

CAREW, MISS. This eminent English vocalist was born in London, of a good family, originally Irish. Her musical education was directed to the stage, and she appeared at Covent Garden in 1815. She attracted a good share of public regard, and appeared subsequently at the Haymarket, the English Opera, and at Drury Lane. She was also engaged in the Philharmonic and various public and private concerts of London; at Bath, Oxford, York, Manchester, Norwich and other places. Miss Carew's voice was not extremely powerful, but her intonation was perfect, and the sweetness and ductility of her notes, joined to excellent taste and science, justly entitled her to a high rank amongst recent British female singers.

CAREY, HENRY, was a man of facetious temper. He was a musician by profession, and one of the lower order of poets. His first preceptor in music was Linnert, a German; he received some further instructions from Rosein-grave; and, lastly, was a disciple of Geminiani;

but with all the advantages he might be supposed to have derived from these instructors, the extent of his abilities seems to have been the composition of a good ballad air, or at most a cantata. About the year 1744, in a fit of desperation, he laid violent hands upon himself at his house in Warner Street, Cold Bath Fields, putting a period to a life which he had led without reproach. In all the poems and songs written by Carey on wine, love, and subjects of that kind, he manifested an inviolable regard for decency and good manners. He composed the air of "Sally in our Alley," and is thought by some to have been the author of "God save the King."

CARICATO. (L.) With exaggerated expression.

CARILLONS. (F.) The name of small instruments furnished with bells, properly tuned, that are acted on by finger keys, like those of the piano-forte, and used for accompanying certain songs, where the ringing of church bells is to be imitated, and where dampers are not used for preventing the continuance of the sound. In Holland and some parts of the Netherlands the steeples of the churches are furnished with a large series of bells, tuned accurately to the tones and half tones of the scale, and with strong wires that are connected at one end with hammers that strike the bells, and at the other with keys, and pedals for the lower notes of the scale, on which persons called *carillonneurs* perform music in parts, by striking the keys rather forcibly with their hands and feet. It is *hard work* to play the carillons; the carillonneur performs with a kind of keys communicating with the bells, as those of the organ do with the pipes. The keys are projecting sticks, wide enough asunder to be struck with violence and velocity by the two hands, edgewise. The performer wears a thick leather covering for the little finger of each hand, to protect the hand from the violence of the stroke given. The first and second trebles are played with the hands, and the bass with the feet on the pedal keys. The keys to the carillons at Amsterdam have three octaves, with all the semitones complete, in the manual, and to the octaves in the pedals. The brass cylinder to the chimes at Amsterdam, (which are played by clockwork,) on which the tunes are set, weighs 4474 pounds, and has 7200 iron studs fixed in it, which in rotation of the cylinder gives motion to the clappers of the bells.

CARISSIMI, GIACOMO. Chapel-master of the German college at Rome, and of the pontifical chapel, from about the year 1640. His productions are very numerous, though it does not appear that he composed for the theatre. His sacred and secular cantatas and motets have always had admission into every collection of good music. He did not invent the cantata, but has the merit of transferring this invention from the chamber to the church, also of improving recitative in general. There is something interesting, says Dr. Burney, in the most trivial compositions of this admirable master, and in his works may certainly be traced more traits of fine melody than in those of any composer of the seventeenth century. It is manifest that Purcell partly formed his style on the productions of Carissimi. He is said to have acquired a considerable fortune by the exercise of his profession, and to have

lived to the age of ninety. Being praised for the grace and ease of his melodies, he is said to have replied, "*Ah! questo facile, quanto e difficile!*" "Ah! with what difficulty is this ease acquired!" There are some curious specimens of this composer's works in Dr. Burney's History, vol. iv. p. 143.

CARLETON, RICHIARD. An English clergyman and composer of madrigals in 1601.

CAROL. An old name for a song sung to dancing. This word, derived from the old Italian word *carola*, has, in England, long lost its original acceptation. We never meet with it at present, except in the works of old English poets, or at the head of the ballads of the Christmas minstrels.

CAROLA. (L.) This old Italian word was formerly synonymous with *ballata*, and signified a song of a plain, simple, popular melody, to be sung to a dance.

CAROLAN, TWALOGH, a celebrated poet and musical composer, justly styled the *Irish Handel*, was born in the year 1670, in the village of Nabber, in the county of Westmeath, on the lands of Carolan's Town, which formerly belonged to his ancestors. The cabin in which he was born has become a prey to all-devouring time; yet the spot where it stood will perhaps be visited at a future day, by the lovers of national music and song, with as much true devotion as the birth-place of Shakespeare, or the cottage of Burns. At the age of ten years he was receiving instructions upon the harp; and though fond of the instrument, he was too negligent to strike it with a master's hand. He used it only to assist him in composition; his fingers wandered through the strings in quest of melody, while his mind was only intent on the musical expression of the then vibrating chord. He lived at Moss-hill for some years. But extravagant habits soon reduced his resources; and finding himself unable to support his family in a way suited to his inclination, he resolved to become an itinerant harper and bard, in which character he continued during the remainder of his life. He was every where a favorite and every where well received. He was very fond of ardent spirits, and imagined that whiskey assisted him in his musical compositions, and never composed without a bottle of whiskey by his side. The fame of Carolan as a musician having reached the ears of an eminent Italian music-master in Dublin, he determined to put his abilities to a severe trial, the result of which convinced him how well-founded had been whatever was said in his favor. The method he made use of was this: he selected an excellent piece of music in the Italian style; but here and there either altered or mutilated it in such a way, that none but a real judge could detect the alterations. Carolan bestowed the deepest attention on the performer while he was playing it, not knowing it was intended as a trial of his skill, and that the critical moment was at hand which was to determine his reputation as a musician forever. He declared it to be an excellent piece of music, but to the astonishment of all present, he said, very humorously, "Here and there it limps and stumbles." He was then requested to rectify the errors, which he accordingly did; and in this state the piece was sent from Connaught to Dublin. The Italian no sooner saw it than he pronounced Carolan to be a true musical genius. Carolan, while on a visit to Mrs. M'Dermott's, of Alder-

ford, in the county of Roscommon, was taken suddenly ill and died there in the month of March, 1738, in the sixty-eighth year of his age, and was interred in the parish church of Kilronan, in the diocese of Ardagh. But no memorial exists of the spot in which his remains were laid. A collection of his music was published, by his son, in 1747, and it was republished by John Lee, in Dublin, in 1780. Carolan, as a musician, stood in the first class; and he added considerable to the ancient stock of Irish music.

CAROLI, ANGELO. An Italian composer of church music in the middle of the eighteenth century.

CAROLU'S, JOANNES. A Spanish writer on the guitar in 1635.

CARON. An old French composer, who flourished before the period of the renovation of the arts.

CAROSO, MARCO FABRIZIO. Author of a collection of dances at Venice in 1581; the music of them is regularly barred, which is not the case with any other music of the sixteenth century that Dr. Burney ever saw.

CARPANI, or CARPINI, GAETANO. A church composer of the year 1750; he was considered the most profound contrapuntist of his day in Rome. The celebrated Clementi took lessons of him for some time.

CARPENTIER. Author of a method for the guitar, Paris, 1770.

CARPIANI, LUCAS. Chapel-master at Bologna, and dramatic composer, in 1673.

CARPINI. See **CARPANI.**

CARRE, LOUIS. A French writer on music at the commencement of the last century.

CARRE, REMI. A French monk and writer on singing in the year 1744.

CARTELLIERI, A. A composer of vocal and instrumental music, published at Berlin and Vienna between the years 1792 and 1806.

CARTER, THOMAS, a singer, pianist, and composer of vocal music, was born in Ireland, in 1768, but left that country very young, and was patronized by the Earl of Inchiquin. He finished his musical education in Italy; and while at Naples was much noticed by Sir William and Lady Hamilton. He composed the beautiful ballad of "O Nanny, wilt thou gang with me?" also the celebrated description of a sea fight, "Stand to your guns, my hearts of oak." He was likewise known as composer of a capriccio, beginning with the words, "Fairest Dorinda," in which he united all the elegances of musical science with the most humorous comic expression. Carter passed some time in India, where he conducted the musical department of the theatre in Bengal; but the climate so greatly affected his health that he was under the necessity of returning to England; and it is supposed that in India he imbibed a liver complaint, which, at length, in the year 1804, terminated his existence. Mr. Carter did not always meet with that encouragement to which his musical talents might have entitled him; and, as economy was not among the virtues which he cultivated in early life, he was often

reduced to those straits and difficulties from which genius and talent can plead no exemption. In one of those scenes of embarrassment, his means and resources having been exhausted, he ransacked the various species of composition he had by him, but finding that none, nor all of them would produce a single guinea at the music shops, he hit upon the following expedient for the immediate supply of his most pressing necessities. Being well acquainted with the character of Handel's manuscript, he procured an old skin of parchment, which he prepared for the purpose to which he meant to turn it, and imitating as closely as he could the handwriting as well as the style and manner of that great master, he produced, in a short time, a piece, which so well deceived a music seller, that he did not hesitate to give twenty guineas for it; and the piece passed this day, amongst many, for a genuine production of Handel. Carter died in 1804.

CARTIER, JEAN BAPTISTE. A good French violinist at Paris since the year 1791. He was a pupil of Viotti, and published much music for his instrument between the years 1792 and 1801; he has also edited the sonatas of Corelli, Porpora, and Nardini.

CARULLI, FERDINANDO. A Neapolitan guitarist, and composer for his instrument. He was born in 1770. He has published at Paris an excellent method for his instrument.

CARUSO, LUIGI, born at Naples in 1754, was son of a chapel-master of some estimation, and brother of Emanuele Caruso, who also distinguished himself as a musician. He quitted Naples at the conclusion of his studies, which were pursued under his father. His first opera was "*Il Medico magnifico*," given at Florence in 1771. Encouraged by its favorable reception, Caruso couposed at Rome, in 1781, "*Il Finato per la Musica*," which succeeded completely, and supported several representations. It was followed by "*La Tempesta*," "*Colombo*," and "*Il Maledico confuso*," which were equally fortunate. He returned to Naples, where he gave "*Gli Amanti dispettosi*," founded on "*Le Dèpit Amoureux*" of Moliere. Caruso resided some time in Germany, where he distinguished himself in vocal composition, and from thence proceeded to Sicily, where he was named chapel-master at Palermo. The style of this composer was formed upon that of the best masters.

CASALI, GIOVANNI BATTISTA. Chapel-master at Rome in 1760. He had the honor of being master to Gretry. He composed a great number of masses, some oratorios, and also a few works for the theatres. The second mass in the first volume of Novello's collection is by Casali.

CASALI, LUDOVICO. A writer on music at Modena in 1620.

CASATI, FRANCESCO. An organist and composer of motets in Venice at the beginning of the seventeenth century.

CASATI, GASPARO. A Venetian vocal composer in the middle of the seventeenth century.

CASATI, THEODORO. An organist and vocal composer at Milan in the middle of the seventeenth century.

CAS E, JOHN. An English physician, born at Wodstock. He wrote a work called "The Praise of Music," an edition of which was published at Oxford in 1786; also, two years afterwards, a Latin work on music. He died in 1600.

CASELLA. —, remarkable as the first madrigal composer mentioned in the history of music, lived at Florence about the year 1280, and was an intimate friend of Dante.

CASELLA, AUGUSTUS CESAR, was born at Lisbon on the 15th of October, 1820, of Genoese parents. His father was a celebrated professor of the violoncello, and at that period held the office of leader at the theatre of San Carlo, in the above-mentioned city. At the age of four years Casella evinced a great taste for music. When his father was practising upon his instrument, he would draw near to him, and a desire to become a great performer was perceptible in the child, even at that tender age. He was always singing, scribbling musical characters, and laying his hands on every instrument that came within his reach. Finally his ruling passion was yielded to. His father left Lisbon, and returned to his own country, where he commenced superintending the studies of his son. The violin was the first instrument put into the hands of the youth; but the experiment was fruitless. The learner showed no inclination for the study. The violoncello, his father's instrument, was then tried; to that, and to that only, he applied himself with the greatest eagerness. He studied under the tuition of his father, and with so much assiduity that at the age of fourteen he gave his first concert at the theatre of Carlo Felice, in Genoa. This concert met with a highly-favorable result, and produced a great effect. But many allowances are made to one at the age of the young *débutant*. His father, who was a finished master of his art, was well aware that much more study was necessary to make a great *artiste* of his son. Consequently he placed him at the Conservatory of Music, in Genoa, where he remained for some time, and until his father received the appointment of first violoncellist to his Sardinian majesty, and was obliged to leave Genoa in order to proceed to the capital. Here it was, it may be said, Casella began his musical career, by occupying a distinguished place in the orchestra of the Royal Theatre, where he remained for six years, endeavoring to perfect himself in his art. But never did a manager have so insubordinate a musician as Casella. He could not adapt himself to the materialism of the orchestra, and although his father had contracted for him for eight years, he managed so that at the close of the sixth Casella was permitted to resign his post. From that time he changed completely. He applied himself to the study of the solo violoncello and to composition, and in the year 1841 he gave his farewell concert in the presence of Prince Carignano, at which he received great applause. On that occasion he produced, for the first time, his elegy on the loss of his mother. This pathetic piece met with so much favor that he was not allowed to withdraw before having repeated it, at the request of his royal highness.

He next went to Genoa, in the year 1842, at the time the royal court was indulging in great festivities on account of the marriage of the

hereditary Prince Victor Emanuel Carella, and was employed to play at a concert before the court, at which were present Charles Albert, King of Sardinia, all his family, Prince Carignano, the King of Naples, the Viceroy of Milan, &c. He produced such an effect that he was rewarded for his performance with the title of solo violoncellist at the royal court. He also received at Genoa the degree of professor of the Conservatorio.

Thence he proceeded to France, where he gave several concerts, which created a great sensation. Mery, the French poet, said "Casella sings with the violoncello as Rubini does with the voice. His elegy causes tears to flow," &c.

He was created honorary member of several Philharmonic Societies; he also obtained the degree of professor of the Conservatory of Turin; and relying upon the success which he had already met with, on the fondness of the American people for music, and on their capacity to appreciate it, he did not hesitate to set foot on the new world. He was well received in this country.

CASENTINI, MARSILIO. A composer of madrigals and other vocal music, published at Venice in 1607 and 1615.

CASINI, D. GIOVAN MARIA, a Florentine priest and composer, was chapel-master and organist to the Grand Duchess of Tuscany in the year 1700, and published some vocal and instrumental music between the years 1706 and 1714.

CASSIODORUS, MAGNUS AURELIUS. A Roman consul, who wrote on the subject of music. He died in 575.

CASTAGNEDA Y PARES, D. ISIDORE. Author of a theoretic treatise on the first elements of music, published at Cadiz in 1785.

CASTANETS, or CASTAGNETS. Instruments used in dancing. They consist of two hollowed chestnut shells. The dancer, holding a castanet in each hand, rattles them to the motion of his feet. The castanets, in conjunction with the guitar, were formerly the favorite accompaniments of the Moorish and Spanish dances.

CASTELBIANCO, QUIRINO DI. A performer on the harpsichord, and composer for his instrument, living in Italy in the year 1700.

CASTELLAN, SIGNORA, a native of Lyons, France, developed in her infancy great musical talent, and at eight years of age was placed under Cinti Damoreau, the celebrated singer. She studied till she was sixteen, when she appeared in opera. She has a compass of three octaves. She sang in Boston, Mass., in the winter of 1843-4, and has since held a distinguished rank in the operas of London and Paris.

CASTELLI, PAOLO. A dramatic composer and poet at the court of Vienna in 1683.

CASTELLO, DARIO. A composer of instrumental music published at Venice in the years 1627 and 1629.

CASTELLO, GIOVANNI. An Italian performer on the harpsichord, and composer of some music for his instrument, published at Vienna in 1722.

CASTOLDI, or GASTOLDI, GIOVANNI GIACOMO, born at Carraggio, was the author of thirty musical works, the titles and dates of

which may be seen in Walther's "*Musikalisches ezikon.*" His ballads, printed at Antwerp in 1596, under the title of "*Balletti a 5 e 6 Versi per Cantare, Sonare, e Ballare; con una Mascherata di Cacciatori a 6, e un Concerto di Pastori a 8,*" put the derivation of our word *ballad* out of all doubt, which originally meant a song, sung and danced to at the same time. "The tunes of Gastoldi," observes Dr. Burney, "are all very lively, and more graceful than any I have seen before the cultivation of melody for the stage."

CASTRO, JOHANNES A. A voluminous composer of vocal music, published in the Netherlands between the years 1596 and 1600.

CASTROVILLARI. A monk and Italian dramatic composer in the middle of the seventeenth century.

CASTRUCCI, PIETRO, born at Rome, about 1690, was an excellent performer on the violin. He succeeded Corbett as first violin at the Opera House in London, about the year 1718, and led the opera band for many years; but growing old, Handel had a mind to place a young man named John Clegg, scholar of Dubourg, at the head of the orchestra. Castrucci, being in very necessitous circumstances, and not in the least conscious of any failure in his hand, was unwilling to quit his post; upon which Handel, in order to convince him of his inability to fill it, composed a concerto, in which the second concertino was so contrived as to require an equal degree of execution with the first: this he gave to Clegg, who in the performance of it gave such proofs of his superiority as reduced Castrucci to the necessity of yielding the palm to his rival. Oppressed with years, he immediately sunk into oblivion, and at the age of eighty, upon the merit of his past services, became a supplicant to the public for a benefit, at which he performed a solo, and soon after died. He published two sets of solos for a violin, with a thorough bass, and twelve concertos for violins, which, though hardly known, have great merit. It is Castrucci who is represented in one of Hogarth's prints as the enraged musician, the painter having sufficient *polissonerie*, previous to making the drawing, to have the musician's house beset by all the noisy street instruments he could collect together, whose clamorous performance brought him to the window in all the agonies of auricular torture.

CASULANA, MADDELANA. A female composer of some madrigals published at Venice and Brescia between the years 1568 and 1583.

CATACOUSTICS. (From the Greek.) That branch of the science of acoustics which considers the doctrine of echoes, or reflected sounds.

CATALANI, ANGELICA. This celebrated singer and actress was a native of Sinigaglia, in the neighborhood of Rome, where she was born in the year 1783. Her father was a merchant, and lived in high respectability, but, from the incursions of the French, lost all his property. Very early in life Catalani was noticed by Cardinal Onorati, who, being delighted with the power and sweetness of her voice, recommended her to the convent at Gubbio, with such injunctions on its masters, with respect to the care and attention of their fair pupil's talents, as soon rendered her the accomplished subject of general

conversation. During her residence in this house of learning and religious repose, the fame of her extraordinary voice brought persons from distant parts of Italy to hear her sing. As a striking instance of the delight which the tones of her voice produced on her auditors at this period, it may be mentioned that she was publicly applauded in the chapel of the convent, when she sang with the nuns; which the cardinal could by no other means prevent than by forbidding her performance in the church. At the age of fifteen she left the above convent, when the unexpected revolution in her father's affairs first induced her to become a public performer; for which purpose she went to Venice, where she made her first appearance on the boards of a theatre at the early age of fifteen. She next proceeded to Milan, where she made her *début* in an opera, in which the celebrated Marchesi performed.

The great success which accompanied her first exertions, together with the valuable instructions she received in music from Marchesi, soon gave Catalani a very high degree of professional eminence.

After having delighted the inhabitants of Venice, Verona, and Mantua for three years in her professional capacity, she was called to Lisbon, where she continued three years, enjoying every kind of attention her heart could possibly pant for. In this city Monsieur de Valebrequet, then a very young officer in the 8th regiment of French hussars, fell in love with her during her performance; and it is said, that a *presentiment*, on first seeing each other, produced the following remark: "If ever I marry, that gentleman (meaning the above) will be my husband;" and the same sentiment was expressed by Monsieur de Valebrequet. In a short time they were married, and, it is said they passed many years together in an uninterrupted state of domestic happiness. They have three children, two of whom were born in England. Madame Catalani (for so we shall continue to call her) stood so high in the estimation of the court of Portugal, that when she signified her intention of leaving Lisbon, the consort of the prince regent wrote a letter to her mother, the Queen of Spain, recommending Catalani to her majesty in terms of the strongest respect and admiration. On her arrival at the court of Spain, her majesty received her with the most familiar kindness, and was profuse in her royal presents and favors. The king also gave many proofs of his respect for her moral demeanor and extraordinary talents; one of which was the free use of the Opera House, by his command, for the performance of a concert. Her reputation had at this time advanced so rapidly in Spain, that the grantees of the court fixed the prices of the first seats in the opera at six ounces of gold, which is equal to twenty-one guineas. Even at this high price the theatre was crowded; and the receipts, independent of presents, amounted to two thousand five hundred guineas. From Spain Madame Catalani went to Paris, where her reception was the most flattering, and where she gave four concerts, the price of admission to which was increased from the usual sum of six francs (ten shillings) to one pound five shillings, and each of these entertainments produced to her twenty-four thousand francs.

The celebrity this beautiful and accomplished artist had acquired in Italy and Lisbon soon

reached England, and as soon created a wish on the part of British amateurs to attach such an acquisition to the Italian opera of that country.

All the English who were in Portugal at the time, and who witnessed the prodigious powers and great success of Madame Catalani, recommended her going to England, and accepting whatever salary might be offered her; but only for a single season, as they were convinced that in the second year she might make her own terms, both at the King's Theatre and at the London concerts. In compliance with this advice, she engaged herself for one year at the King's Theatre, at a salary of two thousand guineas; and on the 13th of December, 1806, made her first appearance in London, in the character of Semiramide in the serious opera of that name, composed expressly for her by Portogallo. The prognostics of her friends in Lisbon were now soon to be completely verified; for in the second season of Madame Catalani's residence in England, she cleared more than ten thousand guineas, as will appear by the following calculation: She received five thousand guineas from the King's Theatre, and two benefits assured to her at one thousand guineas each; one thousand one hundred and fifty guineas from Harrison's and the king's concerts; one thousand guineas from the oratorios at Covent Garden; and more than one thousand from different subscription concerts; thus forming a total receipt of upwards of ten thousand guineas *in less than six months!*

In 1807 she performed the part previously enacted by Mrs. Billington, in the opera of "*Il Fanatico per la Musica*;" and in 1808 appeared in various new characters, evincing her admirable powers as well in the comic as tragic scene. In 1809 her talents were withdrawn from the King's Theatre, in consequence of a misunderstanding with the managers. The same season she gave six concerts at the Hanover Square rooms, and performed at the oratorios. In 1810, she reappeared at the King's Theatre, and had two benefits, in which she personated *La Vestale* in Pucitta's opera of that name, and *La Buena Figliuola* in Piccini's opera so called. She also performed at the oratorios, and succeeded Mrs. Billington at the Ancient Concerts. In 1811, she performed the "*Elfrida*" of Paesiello, for her benefit. In 1812, she appeared in the following, among other operas: "*Enrico IV.*," of Martini; "*La Clemenza di Tito*," of Mozart; "*Camilla*," of Paer; and "*Le Nozze di Figaro*," of Mozart. In 1813, the Opera House opened with "*Il Furbo entra il Furbo*," a burletta by Fioravanti, in which Madame Catalani performed. At her benefit she appeared in an unsuccessful opera, by Ferrari, "*L'Eroina de Raab*." She also returned to the Ancient Concerts, from which, for one season, she had seceded. In 1815, Madame Catalani quitted England, and proceeded to Paris, where the King of France granted her the patent of the Theatre Royal Italien, and condescended to annex, by way of encouragement, an annual allowance of about seven thousand pounds sterling. She continued for four years proprietor and sole manager of that theatre, then the most elegant in Paris. She gave alternate engagements to the celebrated composers Paer and Spontini, for conducting the musical department, and also engaged, during the time mentioned, almost all the first singers, both male and female, of Italy. Nevertheless, as,

when Madame Catalani did not herself sing, the receipts were trifling, the establishment became a burden to her, and she resolved on leaving Paris, and exerting her talents in all the capitals of Europe. The trumpet of fame successively announced the glorious fruits of this determination.

From Paris she went direct to Berlin, where success the most flattering, and honors the most distinguished, awaited her. She excited no less admiration by her beneficence than by her extraordinary talents; and his Prussian majesty bestowed upon her the most honorable reward, in deigning to write her a most gracious letter, transmitting to her, at the same time, the grand medal of the academy, (similar to that which the great Frederic sent to Voltaire.) The king's letter was published in all the journals of the time. Madame Catalani likewise received from the court of Prussia the most distinguished testimonies of kindness.

Laden with honors and presents, she went from Berlin to Hanover. His royal highness the Duke of Cambridge, whose enlightened taste for the arts, and particularly for music, is generally known, received her with all that austerity which distinguishes him; and all the ladies of the court hastened to make her sensible of their goodness. She gave a concert for the benefit of the poor, and was, the same evening, crowned at the theatre.

Madame Catalani afterwards went to Stuttgart. The charms of her voice made such an impression on the late king, who, as we know, was passionately fond of music, that some minutes before his death, which happened a few days after his hearing her, he pronounced her name.

From Stuttgart she went to Munich. At this first visit to that capital, in consequence of a trifling misunderstanding, she did not sing; but returning some time after, when she paid her duty to the queen, her majesty embraced her, and lavished her goodness upon her, as if to indemnify her for the slight mistake that had occurred. The king was not less obliging in his conduct to Madame Catalani, and was so good as to recommend her to the friendship of his daughter the Empress of Austria.

Furnished with this powerful recommendation, she proceeded to Vienna, where she met with prodigious success. To give an idea of it, it will be sufficient to cite the following facts: At each of her concerts, the great room of the Redoubt was filled to excess, though the price of admission was very high; the room contains three thousand persons. She also obtained the favor of the whole imperial court, and the emperor made her a present of a superb ornamental set of opal, enriched with diamonds. The poor shared her success, and blessed the benevolence of her heart. The magistracy of the city testified at once their own admiration and the public gratitude, by causing to be struck, expressly for her, a medal which bears the most honorable inscription.

For a long time, pressing invitations called for Madame Catalani in Russia, where the brilliancy of her reputation had excited an impatient desire to hear her. On leaving Austria, she made the journey to St. Petersburg, where she commenced with a concert, the tickets for which were fixed at twenty-five rubles. Such was the impression she made, that the room could not contain the

crowds of persons who came to the succeeding concerts, and every evening several hundred were disappointed of places. At length she chose for the scene of her concluding concert the public exchange; and more than four thousand persons were present. Always the patroness of the poor, Madame Catalani determined that the large receipts of this evening should be devoted to the wants of two hundred unfortunate families in St. Petersburg. When, after this, she took leave of the empresses, their majesties condescended to embrace her, giving her assurances of the interest with which the preëminence of her talents and the excellence of her conduct had inspired them. The reigning empress made her presents of a pair of gold ear rings and a diamond necklace. The Emperor Alexander was not less generous. In the presence of his whole court, he graciously kissed her hands, thanking her for the good act she had done, and presenting her with a magnificent girdle of brilliants. Madame Catalani remained four months in Russia; and in that space of time the concerts which she gave, as well in the capital as at Riga, at Moscow, and at Wilna, produced her, all expenses paid, more than fifteen thousand guineas, exclusive of presents of great value. The liberality with which the Russian nobility encourage the fine arts is well known, and the following is a new testimonial. When Madame Catalani went from Moscow to Warsaw, she found, on her arrival at this latter city, a letter from the principal Muscovite nobles, in which they offered to secure to her two hundred and forty thousand rubles, (about ten thousand guineas,) if, during the winter, she would come and give ten concerts in their ancient capital. Fearing that her health would not bear the severity of the climate, she was compelled to decline this offer, advantageous as it was, and for which she conveyed an answer in terms at once of gratitude and regret. Besides the capitals we have named above, Madame Catalani sang in fifty or sixty populous towns of Germany and Italy; and every where the most august personages, as well as the public at large, showed her, by brilliant favors, that their esteem for her personal conduct and beneficent disposition equalled their admiration for the wonders of her talent. It may be said, that her success, and the distinctions with which she was honored at all courts, have hitherto been, and will probably remain, without a parallel. In the summer of 1821, Madame Catalani returned to London, and immediately announced a concert at the Argyll rooms, which was brilliantly attended. She sang, on that occasion, an air by the Marquis Saupier, "*Lella superba Roma*;" "An Air by Rode, with Variations, originally written for the Violin;" a recitative and air of Pucitta, "*Mio bene*;" and Mozart's bass song in Figaro, "*Non piu andrai*." In point of energy, force, and brilliant execution, it seemed hardly possible that Catalani could exceed the degree of perfection she had arrived at before quitting England; competent critics gave it, however, as their opinion, that her powers were certainly improved. The Quarterly Musical reviewer, who was present at her first concert in 1821, speaks of her in these words: "Madame Catalani's style is still purely dramatic. By this epithet, we mean to convey the vivid conception that exalts passion to the utmost pitch of expressiveness; the brilliancy of coloring that in-

vests every object upon which the imagination falls with the richest clothing, that gives the broadest lights and the deepest shadows. Hence there is a particular point in the perspective from which alone she can be viewed to advantage. Distance is indispensable, for her efforts are calculated to operate through amplitude of space, and upon the largest assemblies. Approach her, and she is absolutely terrific; the spectator trembles for the lovely frame that he perceives to be so tremendously agitated. They who have never witnessed the enthusiasm which illuminates that finest of all created countenances have never seen, no, not in Mrs. Siddons herself, the *perfection of majesty*, nor in Miss O'Neill, the *softest triumphs of the tender affections*. Madame Catalani's person is a little increased, and her features are now stamped with the complete and perfect dignity of consummate beauty in its richest maturity. Her thoughts literally coruscate through the bright radiance of her eyes and the ever-changing varieties of her countenance. Hers is the noblest order of form, and every vein and every fibre seem instinct with feeling the moment she begins to sing. Never do we recollect to have observed such powerful, such instantaneous illuminations of her figure and her features as Catalani displays. Thus the whole person is aiding (how strongly!) the effects of the most extraordinary voice, the most extraordinary energy, and the most extraordinary facility the world of art has ever known; and the combined results are irresistible. The mind is now allured, and now impelled, now awed by dignity surpassing all that can be conceived, now transported by smiles of tenderness more exquisite than poetry has ever fancied."

In the season of 1822, Madame Catalani gave five concerts at the Argyll rooms, with her usual success. She sang four airs in various styles at each concert, and is said to have given the opening of the Messiah, "Comfort ye my people," in the traditional style of Handel, with her own magnificence and force, and with nearly as much purity as Mr. Vaughan himself. Since these concerts, she was heard at the two celebrated provincial music meetings of York and Birmingham, which took place in the autumn of 1823. At the former meeting she sang the "*Gratias agimus*," from a mass by Guglielmi; "Holy, holy," by Handel; "*Scena deve e il elemento*," by Facci; Rode's violin air with variations, "*Al dolce incanto*;" "Comfort ye," "Every valley;" "I know that my Redeemer liveth," and "Angels ever bright and fair," by Handel; "Luther's Hymn;" "*Domine, labia mea*;" grand aria, "*La tu vedrai*," Clementi; "Robin Adair, with Variations;" "*Non piu andrai*," Mozart; "Sing ye unto the Lord," Handel. At Birmingham she sang "*Mio ben*," Pucitta; "Rode's Air;" grand scena, "*La di Marte*," Morlacchi; "*Se mai turbo*," Ciacchetti, &c. An invitation having been made to Madame Catalani to perform for a few nights in London, in the opera season of 1824, and it being the ardent wish of the public that she should acquiesce, (her legitimate throne being most decidedly the boards of a theatre, and not the orchestra of a concert room, where the half of her unrivalled talents is alone within the sphere of observation,) she accordingly reappeared on the boards of the King's Theatre, after an absence of ten years, and we have

only space here to add, with powers unimpaired. Madame Catalani for twenty-two years held a high rank among musicians. She died at her villa, near Sinigaglia, Roman States, at the age of fifty-nine. She left a fortune stated at three hundred and thirty-two thousand pounds. She was distinguished by piety of life, and modesty and purity of manners. Generous and benevolent, she gave away much in charity, and it is estimated that the product of her concerts for the benefit of the poor amounted to more than two millions of francs. She founded on her domain a school of music, where she taught singing gratuitously to a certain number of poor young girls.

CATALISANO, GENARO. Writer of a work on the principles of music, published at Rome in 1751.

CATEL, CHARLES SIMON, a French musician, born at Aigle (Pays de Vaud) in 1773, went while very young to Paris, where he was befriended by Sacchini, and studied under Gobert and Gossec. In the third year of the republic, when the Conservatory was instituted, he was made professor of harmony. In 1810, Catel was chosen as a fourth inspector, of over-see, of the Conservatory, in addition to Gossec, Mehul, and Cherubini, who had held that office from its commencement. This post he resigned in 1814, on account of the removal of his friend, M. Sarrette, from the administration; and from that time he declined all offices, only excepting his nomination as member of the Institute in 1815. In 1824 he was made a chevalier of the legion of honor. He has composed a great number of musical works, but none has done him so much credit as his "Treatise on Harmony," printed in 1802, and adopted by the Conservatory. This work is now very generally received throughout Europe. It contains a theory which may be considered as a simplification of Rameau's system; but which is, in fact, the development of a more ancient and fertile observation. It consists in regarding only as chords, properly so called, those which need no preparation. M. Catel calls them natural chords; their employment gives natural harmony; artificial harmony is deduced from these by the retardation of one or other of several parts, which are prolonged in the following chords. This theory is extremely simple and luminous. He died at Paris in 1830.

CATCH. A humorous vocal composition, of English invention, consisting of three or more harmonic parts, in which the melodies are so opposed and interrupted by the contrivance of the composer, that in the performance the singers catch up each other's sentences, and give to the words a sense different from that of the original reading. From this characteristic such a piece derives the name of *catch*.

Chairs to mend, old chairs to mend, rush or cane bottom, old chairs to mend, New
 mackerel, new mackerel. new mackerel, new mackerel.
 Old rags, any old rags - take money for your old rags! any bare skins or rabbit skins!

CATCH CLUB. A musical society, the members of which met together for the purpose of singing catches and pieces. There are many of these social institutions in the large cities of England. The most respectable catch club was that held at the Thatched House Tavern, St. James Street, which was established so early as the year 1702.

CATENA DI TRILLI. (I.) A chain or succession of short shakes.

CATGIT. A small string for fiddles and other musical instruments, made from the intestines of sheep and lambs, dried and twisted, either singly or together. Great quantities are imported into England and this country from France and Italy.

CATHEDRAL DUTY. An expression applied to the office or performance of the organist of a cathedral. To execute with precision and effect the organ service of a cathedral, the officiate must be intimately acquainted with the works of the great church masters; be well versed in thorough bass, counterpoint, and all the various evolutions of ancient harmony; and to a natural aptitude for this species of performance, add the advantage of sedulous application and long experience.

CATTANEO, FRANCIS MARIA, born at Lodi in 1739, was chapel-master and instrumental composer at Dresden in the year 1756.

CAUCIELLO, PROSPERO. A composer of instrumental music published at Lyons in 1780; he belonged to the Chapel Royal at Naples.

CAULERY, JEAN. Chapel-master to the Queen of France. He published a collection of sacred songs at Antwerp in the year 1556.

CAURROY, FRANCOIS EUSTACHE DU, successively chapel-master to Charles IX., Henry III., and Henry IV., of France, and also canon of the Holy Chapel in Paris, and prior of St. Aoult, was born in the year 1549. Although considered one of the greatest musicians of his day, he does not appear to have been much known out of his own country. There are extant, of his composition, "A Mass for the Dead," which was formerly sung once every year in the cathedral church of Notre Dame at Paris; and a posthumous work, published in 1610, entitled "*Mélanges de la Musique de Eustache de Caurroy.*" He died in the year preceding the date of the last publication.

CAVACCIO, GIOVANNI. A singer and composer, born at Bergamo in 1556. He spent some years of his youth in Bavaria. He composed much vocal music, published after his return to Italy between the years 1581 and 1615. He died at his native town in 1626.

CAVALIERE, EMILIO DEL. Born about 1550; a celebrated Roman nobleman and amateur composer. He set to music the first known oratorio which was performed at Rome, in the year 1600; it is called "*La Rappresentazione di Anima e di Corpo,*" and was represented in action on a stage in the church of La Vallicella, with scenes, decorations, and chorus, à l'antique, and analogous dances. Emilio del Cavaliere, as well as the rest of the early composers of dramatic music, imagined that he had recovered, in his recitative, that style of music which the ancient Greeks and Romans used in their theatres. And a singer of such music is required by Cavaliere to have a fine voice, per

fect, y in tune, and free from all defects in his delivery, together with a pathetic expression, the power of swelling and diminishing the tones, and an equal respect for the composer and poet, in rendering them closely, and attending well to the articulation and expression of the words. It is recommended to place the instruments of accompaniment behind the scenes, which in the first oratorio were the following:—

Una lira doppia. A double lyre, perhaps a viola gamba.

Un clavicembalo. A harpsichord.

Un chitarone. A large or double guitar.

*Dui flauti, o vero dui
Tibri all' antica.* } Two common flutes.

No violin is mentioned here; but what excites the most surprise at present, in these instructions for the performance of an oratorio on a stage in a church, are the directions for the dances. There are, however, examples of religious dances in the sacred writings, as well as in the history of almost every ancient people, in which their religious ceremonies are mentioned. Most of these dances are performed to the music of choruses, which are singing at the same time, in the manner of those in the old French operas. On many occasions it is recommended for the actors to have instruments in their hands, as the playing or appearing to play upon them would assist illusion more than a visible orchestra.

CAVALIERI, GIROLAMO. An Italian priest and composer of some vocal music published at Milan and Louvain between the years 1600 and 1616.

CAVALLI, FRANCISCO. Chapel-master at Venice, and composer of thirty-five operas, between the years 1637 and 1667; several of these were frequently revived long after his decease. Dr. Burney says that the "grave recitative began first to be interrupted with that ornamented sort of stanza called *aria*, in the opera of '*Giasone*,' set by Cavalli in 1649." Born in Venice in 1610, and died there in 1674.

CAVALLO, TIBERIO. An author of a paper on musical instruments, in the "London Philosophical Transactions" for the year 1788.

CAVALLO, FORTUNATUS, born in the bishopric of Augsburg in 1738, made his first studies in the seminary of that city; learned composition of the cathedral chapel-master Jnlini; afterwards studied under Riepel at Ratisbon, where, in 1770, he became chapel-master at the cathedral. He died at this post in 1801. Cavallo composed more than twenty solemn masses, concertos for the clavichord, symphonies, cantatas, &c.; but, with the exception of two masses and some offertories, all his compositions fell a prey to the flames when a part of Ratisbon was burned, in 1809. He was a skilful organist, and played well on the violin.

CAVATINA. (I.) A short air without a return, or second part, and which is sometimes relieved with recitative.

CAZZATI, MAURITIO. A voluminous composer, born at Mantua. In the year 1678 he published his sixty-fifth musical work; his compositions chiefly consist of motets and masses

C CLEF. The clef, so called because it gives to the notes placed on the same line with itself the letter C for their local name.

The staves, as here placed, embrace all the notes within the ordinary compass of all the varieties of voice. The best soprano voices rise a few notes above the treble staff—to B or C natural; which notes, occurring only occasionally, are provided for, without inconvenience, by means of leger lines above the staff. Scarcely a note is found in the best basses below the staff, though, as an exception, some descend to D D, three notes below the staff. The extent of the interval between the notes in the bass and those in the treble is not often understood by beginners. From this diagram they will see that a single line inserted between the two staves makes the progression perfect, note by note. The single line referred to is that upon which the note C (*ut*) is placed. Treble voices, generally, can descend to this C, and bass voices reach it, though they seldom rise much above it; so that it may be considered as a sort of standard, being a note within the compass of all voices. But the generality of male voices can neither rise high into the treble staff, nor descend low into the bass. It follows, therefore, that neither the treble nor the bass staff is appropriate for representing the compass of these voices. In providing for these, which are called the mean voices, the C line before referred to, as being the middle of the vocal system, is adopted as a starting point from which to reckon upwards and downwards. The higher male voices, usually called countertones, (sometimes *contr' alti*, sometimes *alti*,) range about as high into the treble staff as they descend into the bass. For such voices, therefore, it is obviously convenient that—since fashion has limited the staff to five lines—the C line should be the middle line. Accordingly a staff is adopted for the alto or countertenor part, upon the middle line on which C is written, or—which is the same thing—the C clef is placed. Again: for that class of voices which are of a somewhat deeper pitch, a staff is more convenient with the C line placed higher up. Hence we have the tenor staff, with the second line (from the top) marked C, and three lines beneath it out of the bass staff. In like manner, for baritone voices, (of a still lower register,) the C line is the top line of the staff, and four lines are taken from the bass. The student will find his advantage from familiarizing himself with this diagram, until he has got the habit of assigning a staff, as soon as he looks at its clef, to its proper place in the system. Now, it must be obvious to all, by this time, that the tenor and countertenor parts cannot be written on the treble staff. When the "mean parts" are placed on a staff with the treble clef, that clef then loses its original effect, and represents notes an octave below its usual signification.

CEBELL. The name of a species of air frequently found in the compositions of the foremost masters of the violin, who lived in the time of

Charles II. By the examples still remaining of this kind of air, it appears to have been in duple time of four bars or measures, repeated in division at the pleasure of the performer. The most characteristic feature in this air is the alternate series of grave and acute notes which form its several strains.

CECCHI, DOMENICO, called also *Cortona*. An Italian singer at the commencement of the eighteenth century.

CECCHIELLI, DOMENICO. Chapel-master at Rome in 1649.

CECCHINI, ANGELO. An Italian musician and dramatic composer at Rome in 1641.

C DUR. (G.) The key of C major.

CELESTINO, ELIZIO, chapel-master to the Duke of Mecklenburg-Schwerin, was born at Rome in 1739. He was a celebrated violinist, and resided for some time in London; some of his compositions for his instrument were published in London previously to the year 1797.

CELLA, LUDWIG. A pianist and composer for his instrument at Erlangen in 1797.

CELONIAT, IGNAZIO. An Italian dramatic composer in the year 1768.

CEMBALO, or CEMB. The Italian name for a harpsichord.

CENCI, LUDOVICO. An Italian madrigal composer in 1650.

CEPHALICAS. The name of one of the musical characters of notation used in the middle ages.

CERCIA, DOMENICO. A Neapolitan dramatic composer in the present century.

CERO, LUIGI. An Italian composer, born at Genoa. His compositions are dated since the year 1783.

CERONE, D. PEDRO, born at Bergamo, was a singer at Naples, and author of a didactic work on singing in 1609. He published also a very ample musical treatise, written in the Spanish language, and entitled "*El Melopeo*," Naples, 1613. This is a scarce and curious book, consisting of nearly twelve hundred folio pages, among which, though many are bestowed upon obsolete science, there is a complete body of the speculative and practical musical knowledge of the times.

CERVALET. A short kind of bassoon, formerly much in use, which was blown through a reed resembling that of a hautboy. The instrument itself is not more than five inches in length, yet is capable of producing a sound equally deep with one of forty inches.

CERVETTO, JAMES, the elder. A violinist, born in Italy in 1682. He went to London in 1738, where he continued till 1783, and died at the great age of one hundred and one. He first brought the violoncello into favor in England, though his tone, in comparison to more modern performers, was raw and uninteresting.

CERVETTO, JAMES, the younger, son of the preceding, was born about the year 1740; he inherited a good fortune from his father. When quite a child, and hardly acquainted with the gamut, he had a better tone on the violoncello,

and played what he was able to execute in a manner much more *chantante*, than his father; and when arrived at manhood, his tone and expression were equal to those of the best tenor voices. It was at the professional concerts in London that he established his reputation, till at length he was considered matchless on his instrument. He composed and published some instrumental music.

CES. (G.) C flat.

CESTI, PADRE MARC ANTOINE. An Italian composer. He was admitted as a tenor singer in the Pope's Chapel in 1660, but he had set an opera for Venice eleven years before this; it was called "*Orontea*," and was in such favor as to be produced in different towns of Italy during thirty-four years. The most celebrated, however, of all Cesti's operas was "*La Dori*;" this first appeared at Venice in 1663, and was frequently performed in other principal cities of Italy. Cesti was also one of the first writers of cantatas.

CHIA. An instrument kindred to the kin, but having the chromatic scale, used in China.

CHABANON, MICHEL PAUL GUI DE, member of the French Academy, died at Paris in 1792. He was the author of several works on music; he also composed some music for the piano-forte. Chabanon wrote in favor of the music of his own country, and says, among other things, the French manner of singing is more placid and more mitigated than the Italian. We believe there are few judges of vocal music who will accede to this opinion.

CHABANON DE MAUGRIS, brother of the preceding, was a poet and dramatic composer. The piano-forte music which has been attributed by Forkel to his brother, is probably of his composition. He died in 1780.

CHABRAN. See CHIABRAND.

CHACONNE. (F.) CIACONNE. (I.) An air borrowed from the Arabians, the characteristic of which is a ground bass, consisting of four or eight measures of triple time of three crotchets, with its repetition to continually varied melodies. The *chaconne* somewhat resembles the saraband, but is rather more grave, has the first and last crotchet of every bar strongly accented, and was formerly used as an accompaniment to a certain dance, slow and graceful in its movement.

CHAGNIOT. An excellent artist in the manufacture of violins, at Paris. He is said to have greatly improved the instrument, and has changed its shape a little, making it rather resemble the guitar. If he has not obtained the liquid tone of those of Italy, at least he has already produced a tone both as powerful and of as fine quality, which successfully rivalled one made by Stradivarius, at a public competition.

CHALAMEAU, or CHALMEY. A wind instrument, so called from the Latin word *calamus*, a reed, through which it is blown. The chalameau has been long since improved by the French into the hautboy, and now forms, under that name, one of the most attractive and useful instruments in the orchestra.

CHALIL. An old Hebrew instrument. A

pipe perforated and furnished with holes like the fife or flute of the present day.

CHALLONER, NEVILLE BUTLER, born in London in 1784, began the violin at a very early age under the tuition of Claude Joseph Du-roeeck, a native of Brussels, and performed a concerto on that instrument at nine years of age. At thirteen he was articled to General Ashley, and previously to receiving any instruction, was found competent to assist in the orchestra of the oratorios at Covent Garden Theatre, and at the public performances at Ranelagh. In 1799, being then fifteen, he was engaged to lead the band at the Richmond Theatre; the following year he held the same situation at the Birmingham Theatre. In 1803 and 1804 he studied the harp and piano-forte, and led the band at Sadler's Wells. In 1805 he entered the Royal Society of Musicians, and the next year published "Four Preceptors," for the piano-forte, violin, harp, &c. In 1807, he was appointed first tenor at the Harmonic City concerts, at which were the first performances of Mozart's "*Don Giovanni*," &c., in England. In 1809 he was engaged as harpist at the Opera House. In 1813 Challoner was engaged as principal second tenor at the Philharmonic concerts, being also an associate of that society. His Piano Preceptor sold to the extent of nearly nine thousand, and his Violin and Harp Preceptors to the number of between three thousand and four thousand each. He taught upwards of six hundred private pupils.

CHALON, F. An arranger of opera music for the flute and clarinet, at Paris, in the present century.

CHALONS, CHARLES. A composer of some instrumental music published at Amsterdam in 1762.

CHAMPEIN, STANISLAS, was born at Marseilles in 1753. When only thirteen years of age, he composed a mass and other sacred music. He went to Paris in 1776, after which time he was principally known as a dramatic composer. His operas have been very numerous, amounting nearly, if not quite, to the number of fifty, between the years 1780 and 1800. There were at the *Théâtre Feytaud*, at Paris, two rival schools, the first composed of the works of Monsigny, Gretry, Dalayrac, and Champein; the second, of those of Cherubini, Mehul, Kreutzer, Berton, Boieldieu, and their pupils.

CHANGES. Those alternations or variegated peals rung on bells.

CHANSON. (F.) A song.

CHANSONNETTE. (F.) A little song. The diminutive of *chanson*.

CHANSONS DE GESTE. (F.) A name given to the historical and heroic romances sung from town to town by the itinerant minstrels of the thirteenth century.

CHANTANT. (F.) A term applied to instrumental music composed in a smooth, melodious, and singing style.

CHANT. A species of cathedral melody, of a style between the characters of air and recitative, to which the psalms of the day are repeated. The first chant was that established by St. Ambrose, Bishop of Milan; the second was the Gregorian Chant, commonly called the Roman Chant, and which is still retained, under the appellation of *plain song*, or *canto fermo*. Chants are now

used for the vocal music of churches, to some extent, throughout this country.

The use of chanting ascends to the most remote antiquity. The Greeks were aware of four different kinds, which formed, said they, the most perfect music, and might be called the oracles of the soul.

The Dorian Chant, imagined by Lamias, who lived before Homer, and with which the harp was sometimes associated, was adapted to grave and warlike measures.

The Phrygian Chant had the power of exciting the hearers to fury.

The Sub-Phrygian Chant appeased the furor excited by the former.

The Lydian Chant was sorrowful, and occasioned languor and melancholy.

Amongst the moderns, the *Gregorian Chant* was established by St. Gregory the Great, who lived in the reign of the Emperor Maurice. Charlemagne incorporated it with the Roman Liturgy in 789.

CHANTER. A male singer. Sometimes used to denote preeminence; as the *chanter* signifies the leader of the choir.

CHANTERELLE. The highest or most acute of the four strings of a violin, tuned to E above the treble clef note.

CHANTEUR. (F.) A male singer.

CHANTEUSE, (F.) or **CHANTRESS.** A female singer.

CHANTING. In all cathedrals, and in many churches, chapels, and other places of worship, the psalms in prose are sung, or rather recited, to certain plain and simple melodies called chants. The effect of this peculiar mode of delivering them, when well executed, is very striking and sublime, and must be familiar to all who habitually attend places of worship.

A chant is an extremely short and simple kind of melody, divided into two parts by double bars.

In our prayer books and psalters each verse of the psalm is divided into two parts, or members, by means of a colon; as, —

"O, be joyful in the Lord, all ye lands: serve the Lord with gladness, and come before his presence with a song."

The first half, or member, of each verse must be sung to the incipient note of the chant, all but the two, three, or four last syllables, which must be applied to the last three notes of the first part of the chant. Similarly, the second half of each verse of the psalm must be recited to the incipient or reciting note of the second half of the chant, except the last four, five, or six syllables of the sentence, according as the accents may allow of their being given to the concluding notes of the chants.

For example, the words and chant given here will be sung as follows: —

Reclting Note. Reclting Note. TALLIS.

O, be joyful in the Lord, all ye lands: (Serve the Lord with gladness, and come before his presence with a song.

All other verses of this psalm are to be sung to repetitions of this same melody.

To such a melody as this, any of the psalms in prose may be sung or recited.

A chant of this sort is called a *single chant*.

There is another kind which is called a *double chant*. In these the melody is divided into four parts, or members, by double bars, and these take in two verses of each psalm, in exactly the same manner as just explained. Where the number of verses in any psalm is great, the double chant is less monotonous than the single chant, and therefore preferable, though either may be employed.

DOUBLE CHANT. Lord Mornington.

The heavens declare the glory of God: And the firmament showeth his handy work.

One day telleth an - other: And one night oerl - teth an - other.

In applying the words of the psalms, the chief rule to be observed is, that every accented note must be sung to an accented syllable. For this reason we are frequently obliged to sing two, or even three syllables to one accented note, or occasionally even to an unaccented note: In such cases these notes become partial or temporary reciting notes.

Every word of two or more syllables has one accented syllable, which must fall to an accented note in the chant. With regard to monosyllables the case is different: they may be accented or not, according as we choose to consider them. And here lies the chief difficulty of arranging the words to the notes. Perhaps no two persons would be found to agree in this respect; and all that we can recommend is, that, to avoid confusion, as few syllables as possible should be employed for the few last bars of each member of the chant.

The last syllable of a sentence, or member, though not naturally accented, may, for convenience, be placed under the last note of either member of the chant; and in many cases a single syllable may occupy a whole bar, or even extend to the half or the whole of the next bar.

To assist the student in applying the words to the notes, we have marked the places of the single bars and double bars of the chants by the characters *a* and *b*.

Where a syllable is to be halting into the first half of the next bar, or to occupy the whole of that bar, we have made use of the character *o*.

Thus the position of the verse ending with *doth* | — *ac* | *knowledge* | *thee*, will be adapted to the chant thus:—

do - th ac - knowledge thee.

the reciting note being continued so as to occupy the accented half of the succeeding bar.

In present collections all the chants are harmonized for one, two, three, or four classes of voices, with an accompaniment for the piano-forte, organ, or seraphine.

Enough of earth I lo, round the sapphire throne,
Rance seraphs, front to front, with rustling wing,
In number numberless, in glory one:
From lip to lip their lauds alternate ring:
Hark! how with angel touch they sweep the string,
And yeuns chant as on creation morn,
Holy, thrice holy Lord, of kings the King!
Crowned be that head, once wreathed with pointed thorn!—
Strange, that a seraph's song should wake a mortal's scorn!"

The chant may be denominated the simplest form of musical expression. It has neither the complex involutions of the anthem, nor the ever-changing harmonies of the chorale. Its present character, which has not substantially varied from its original construction, is manifested either in a rapid and uniform intonation, resembling "the musical pronouncing," spoken of by St. Augustine, as in use in the churches of Alexandria; or in the distinct articulation of a part of a sentence upon one note, terminating with a few varied and deliberate chords.

The antiquity of the chant is universally admitted, although the author and time of its invention have been controverted. About the middle of the fourth century, St. Ambrose introduced chanting into the services at Milan, whence the practice extended itself throughout the western branch of the Christian church. He derived it, as St. Augustine informs us, from the Greek luthers—a testimony confirmed by Eusebius.

It is probable that the style thus traced to the first ages of the church was in effect but an adaptation of the mode of chanting the Hebrew ritual in the Temple service; embracing such improvements as the progress of knowledge and acquaintance with the music of pagan countries might suggest. Thus Calvin admits his conviction, "that, from the beginning, the Christians borrowed the Jewish use in singing of psalms, and that in his admonitions to the Ephesians and Colossians, the apostle evidently recommends this duty, which was so much practised by the Jews." The latter, as we have already observed, confined their music almost exclusively to the temple; and many parts of the Old Testament lead to the conclusion that they were not unacquainted with responsive singing. The fact that women assisted in musical divisions, as well as the structure of many psalms and prophetic hymns, favors this opinion. Thus Psalm civ. is plainly formed on the model; in which, as Bishop Lenthall observes, "the parts are easily distinguished, inasmuch as while one semichorus always speaks of God in the third person, the other addresses him in the second." Psalm cxxxvi. presents another specimen, the burden or closing couplet of which is expressly quoted by Ezra as an anthem. And they sang together by course in praising and giving thanks unto the Lord; because he is good, for his mercy endureth forever towards Israel."

It is difficult to conceive stronger authority for the admission of any of the circumstantial of Christian faith than can be produced in support of the neglected chant. We can trace the chant back to within a few centuries of the flood, through all the gradations of religious worship under the present and former dispensation, whether Christian or Jewish, church, temple, or tabernacle; we ask, therefore, some slight caution before an unqualified condemnation.

"For," as Hooker observes, "whosoever were the author, whatsoever the time, whosoever the example of beginning this custom in the church of Christ; sith we are wont to suspect things only before trial, and afterwards either to approve them as good, or if we find them evil accordingly to judge of them; their counsel must needs seem unaccountable, who advise men now to suspect that wherewith the world hath lived by their own consent, and which, by years' acquaintance and upwards, enough to take away suspicion and jealousy. Men know by this time, if ever they will know, whether it be good or evil which hath been so long retained."

The progress of chanting is so nearly connected with the general history of church music, that few observations need be added to bring it down to our own time. Before the invention of counterpoint, and the consequent introduction of more varied and intricate harmonies, ecclesiastical music consisted almost exclusively of the chant. The newly-imported melody of St. Ambrose was a chant; the Canto Firmo of Gregory was a chant; and it was not till the adoption of elaborate harmonies, that it yielded precedence to the fuller chorale or bold anthem. Indeed, as we have already seen, it was long after the invention of counterpoint that music ventured to step beyond the grave and solemn descent which custom had familiarized and antiquity rendered venerable. So long, however, as it was left mainly to the management of the priests and immediate officers of the church, it retained its hold upon the ecclesiastical services.

By a comparison of the specimens of the alternate chant, which abound in our Liturgy, with the choral practices of the Jews and early Christians, the mind is struck with numerous coincidences existing between them, all demonstrative of the high regard paid to antiquity and the care with which its monuments have been preserved. The cathedral chanting of the church of England possesses a almost every characteristic of the Jewish music, and varies only in its crushing the meagre simplicity of a paucient mode from the

abounding stores of modern harmonies. It may not be uninteresting to enumerate a few instances of general resemblance.

1. In the temple service there were two precentors, one for each kind of singers, who were appointed to commence and direct the others.

2. They seem to have had not only singing men, but singing boys. 3. "The singers were generally Levites, and stood in the desks while they sang; and the singing boys," as Bedford supposes, "stood directly under them."

4. The singers and boys were divided into two bands, standing opposite each other. Their places were determined by lots "ward against ward, as well the small as the great, the teacher as the scholar."

5. They answered one another; "and therefore," as Bedford says, "it is very probable that one side sang one verse of a psalm, and the other side sung the other."

6. It may be added, that the singers divided each psalm into three parts, making long pauses, during which the trumpets sounded, and the people worshipped; to which the symphonies and other instrumental movements in our anthems may bear some analogy.

CHANTERRES. (F.) Certain Provencal singers of songs and ballads.

CHANTOR or CHANTOR. A person who sings in the choir of a cathedral. St. Gregory first instituted the office of chantors, erecting them into a body, called *Schola Cantorum*, though Ambrosius seems to attribute the rise to Pope Hilary, who lived a hundred years before Gregory. But the word is obsolete in this sense, and instead thereof we use the word *chorister* or *leaver*.

CHANTRES. Certain religious institutions of the Romish church, endowed for the particular purpose of singing masses for the souls of the founders. These superstitious establishments, together with those of free chapels, were granted to Henry VIII. by the Parliament, in 1545, and were dissolved by a statute of Edward VI.

CHANTS ROYALS. Certain lyrics written on lofty subjects, and much used in the early times of French poetry.

CHANTRY PRIESTS. Those dispensary priests, whose particular office it was to sing the mass in the chantries.

CHANT EX ISON. (F.) The name formerly given to a species of chant, or psalmody, consisting only of two sounds. Many religious orders adopted this chant, and some had no other.

CHANT SUR LE LIVRE. An expression by which the French mean something more than *singing at sight*. It implies the composing a part upon seeing only the chant, or *canto fermo*, on which it is to be founded.

CHAOS. A rude and shapeless mass of matter, and confused assemblage of inactive elements, which, as the poets suppose, preëxisted the formation of the world, and from which the universe was formed by the hand and power of a superior being. Chaos was deemed by some as one of the oldest of the gods, and invoked as one of the infernal deities. A good representation of Chaos may be found in the orchestral introduction to Haydn's "Creation."

CHARACTER. A general name for any musical sign. The note, the brace, the bar, and the marks of time, as well as those which denote the sharp, the flat, the natural, the shake, the turn, the beat, the crescendo, and the diminuendo, &c., &c., are all characters. The ancient Greeks used letters instead of notes for their characters of pitch; and the Latins, after them, adopted the same method.

CHARACTERS. The defect of Guido's notation was first remedied by John de Muris, an advocate of the parliament of Paris, in the fourteenth century, by the invention of certain characters, or notes, by which the different times might be commodiously expressed.

These characters consisted of the *Maxima*, or *Large*,

equal in duration to four breves;

The *Long*, equal to four semibreves;

The *Breve*, equal to four minims;

The *Semibreve*, equal to two minims;

The *Minim*, equal to two semi-minims, or crotchets;

The *Crotchet*, equal to two crotchets, or quavers;

The *Quarter*;

and, in process of time,

The *Semiquaver* and *Demisemiquaver*, diminishing in value by the same proportion.

In England and Germany the notes are named after the seven letters, A, B, C, D, E, F, G. The only difference is that the Germans apply the letter B to B flat only, and call our B natural, H.

In Italy and France the notes are named *la, si, do, re, mi fa, sol*, corresponding to our A, B, C, D, E, F, G.

These notes may be natural, sharp, or flat, and occasion ally even double sharp, or double flat. Thus we have C natural, C sharp, C flat, and, at times, C double sharp, and C double flat. In France and Italy these notes would respectively be called *do naturel, do dièze, do bemol, do double dièze, do double bemol*, &c. The Germans add to the letter

which is used to denominate the note in its natural state, is, when it is to be made sharp, and es, when flat; thus.

- C sharp is called *cis*.
- C flat " *es*.
- C double sharp " *cisis*.
- C double flat " *cesces*.

The Staff, on which the notes are written; with Leger-lines, drawn above or below the staff, to supply additional places for the notes.

Each note has its corresponding rest; as,

Minia. Crotchet. Quaver. Semiquaver. Demisemiquaver.

Rests may be dotted or doubly dotted, like the notes which they represent.

Notes are sometimes divided into 3, 5, 7, 9, &c. equal parts, instead of 2, 4, or 8, as is usual; in this case, the number of parts is expressed by a figure, and a curved line is drawn over it, thus: 3 5 7 9 &c.

Marks of Transposition or Alteration of the pitch of the Natural Notes.

- ♯ The sharp.
- ♭ The flat.
- ♮ The natural.
- × Double sharp.
- ♯♯ Double flat.
- ♯♯♯ Single sharp after a double sharp.
- ♯♯♯♯ Single flat after a double flat.

Table of Characters denoting the different species of Time.

	Bar lines, dividing a movement into small equal portions of duration.
C or C	Indicates two minims or four crotchets in each bar.
2/4	two crotchets in each bar.
3/4	three minims " "
3/8	three crotchets " "
3/16	three quavers " "
6/8	six crotchets " "
6/16	six quavers " "
12/8	twelve quavers " "
12/16	twelve semiquavers " "
9/8	nine crotchets " "
9/16	nine quavers " "
9/32	nine semiquavers " "

Other Characters affecting the duration of the Notes.

- A bind or tie, which connects two or more notes of the same name into one longer note.
- A pause, which lengthens at will the duration of a note or rest.

Characters indicating the various degrees of Loud and Soft.

- m* signifies mezzo, a medium or middle sound.
- p* " piano, a soft sound.
- f* " forte, a loud or strong sound.
- pp* " pianissimo, softer than piano, yet a good audible sound.
- ff* " fortissimo, stronger than forte, but not so loud as to degenerate into a scream.
- ∧ indicates a crescendo, or gradual increase of tone.
- ∨ indicates a decrescendo, or gradual decrease.
- ∧∨ indicates first a crescendo, and then a decrescendo.
- ∨∧ indicates first a decrescendo, and then a crescendo.

Marks of Accent and Expression.

- > ∨ ∙ indicate a stress or marked accent on any single note or chord. The abbreviations *sf*, *sfz*, *sfz*, *sfz*, or even *f* over a single note, are also used for the same purpose.
- Dashes, indicate notes struck very short, or staccato; that is, not held their full value.
- Dots, notes struck short, but not in so marked a way as the preceding.
- Curves and dots. Notes still less staccato.
- Slur, or legato mark.

Graces. or ♯ indicates the appoggiatura, whether superior or inferior. Turn. ♯ Inverted turn.

Turn with the note above made flat. Turn with the note below made sharp.

tr, or tr— A shake. >>> or ~ ~ ~ Vibration or close shake. Indicates that the chord before which it is placed must be sprinkled or arpeggio-ed.

Characters used to separate a Movement into its component parts or strains, Marks of Repetition, &c.

- || Double bar. Double bar, with a repetition of the preceding strain. Double bar, with a repetition of the following strain.
- ||| Double bar, with a repetition of the strain on each side. Indicates the strain which is to conclude the piece.

Marks of Punctuation, or Rhythm.

- △ Indicates a phrase, or incomplete musical idea.
 - Indicates a section, or complete but not independent idea.
 - Indicates a period, or complete and independent musical sentence.
- The ordinary marks of punctuation, ; : . are employed by some composers for a similar purpose.

Miscellaneous Characters.

- { A brace, used to connect two or more staves together in piano-forte, harp and organ music, or in scores.
- ♩ 120 &c., mark the application of Maelzel's Metronome.
- ⌘ Ped. Are met with in piano-forte music, to indicate the use of the pedals.
- ∞ The direct; it is placed upon the same line or space as the note which begins the next staff.
- ∞ Are often met with in the latter music, the former to indicate a down, and the violin an up, bow.

CHARACTER OF KEYS. Most of those writers who have brought forward irregular systems of temperament, or such wherein an invariable law is not observed in the temperament of the different concords, as far as the scale or the number of notes in an octave will admit, have insisted much on the advantages of what they call the peculiar character of certain keys, arising from the varied and very considerable degrees of imperfection in the principal concords of such keys. From all we have read or heard, we are disposed entirely to disregard the character of keys derived from their imperfections, and to contend that nothing seems wanting to heighten the pleasure of hearing modulation, skillfully conducted, on regular tempered scales, and where the different keys are exactly alike tempered, as on D. Loeschman's instruments with twenty-four strings or pipes in each octave, or by able singers or violin players, who use no tempered harmonies whatever; this opinion will be confirmed by such as hear organs, where every harmony is given absolutely perfect, and yet nothing seems wanting in the effect of its modulations, or of the pieces performed in different keys. See EUTRANTON ORGAN.

CHATZOZERAI. The straight trumpet, and in this differing from the shophar. These instruments were made of pure beaten silver, by order of Moses, who had been directed by God how to make them.

CHANDOSCHKIN. A Russian violinist and composer for his instrument; some of his works were published at Petersburg in 1795 and 1796.

CHAPELLE, PIERRE DAVID AUGUSTIN. A French violinist and dramatic composer, between the years 1785 and 1795. He was born at Rouen in 1756.

CHAPPLE, SAMUEL, was born at Crediton, in Devonshire, in 1775. At the age of fifteen months he was attacked with the natural small pox, which deprived him of sight. As soon as he could reach the distances on a violin, he began to take lessons on that instrument. At about fifteen years of age he commenced the piano-forte, under Eames of Crediton, who learned of Thomas, a pupil of Stanley; all these three organists were blind. Chapple had also with him two young men as pupils, who were blind. He was appointed organist of Ashburton in the year 1795. His publications consist of "Sonatas for the Piano-Forte with Violin, Songs, Anthems, &c."

CHARDE, JOANNES. Professor of music at Oxford in 1518.

CHARDINI, or CHARDIN, was born at Rouen, and entered as tenor singer at the Grand Opera at Paris, about the year 1780. Chardini composed also an oratorio, called "*Le Retour de Tobie*," and several operas. He died young, in 1790.

CHARLES V. was entertained at his meals with music; and even in the sixteenth century, music was considered the best regale that could be given to any distinguished individual. After his abdication he often retired to an apartment near the high altar, where he sung and beat the time during the performance of mass. If any of his singers sung out of time or tune, he could be overheard calling them names, as "red-headed blockhead," &c. A composer of Seville presented him a book of motets and masses, and upon one of them being performed as a specimen, he called to his confessor, and said, "See what a thief, what a plagiarist, is this scoundrel! Why, this passage is taken from one composer, and that from another," naming the composers as he went on. The astonishment of the singers, who had not before observed the plagiarism of the pretended composer, may be imagined. He selected about fifteen friars, who were good singers, for his choir, and if one ever sang wrong, he would cry out and mark him. He would allow no singers but those of some religious order in his choir. One day, a layman with a contralto voice sang a part well, but all the thanks he got for his pains was an order from Charles to leave, or to hold his tongue.

CHARPENTIER, MARC ANTOINE, was superintendent of the music of the Duke of Orleans, and his instructor in the art of musical composition. He has left several operas, one of which, viz., his "*Médée*," was in its time highly celebrated. He composed another, called "*Philomèle*," which was thrice represented in the Palais Royal. The Duke of Orleans, who had composed part of it, would not suffer it to be published. Charpentier died at Paris in 1704.

CHARPENTIER, J. J. BEAUVARLET, was born at Abbeville in 1730. He was an organist at Paris, and published much sacred music up to the time of the French revolution. He died in 1774.

CHARPENTIER, J. M. BEAUVARLET, son of the preceding, was born at Lyons in 1766. In the year 1789, he was organist of St. Paul's Church at Paris. He published some masses arranged for the piano-forte, also a work entitled "*Théorie d'Orgue*," between the years 1793 and 1800.

CHARTRAIN. A French violinist and composer for his instrument at Paris, about the year 1780.

CHASSIRON, PIERRE MATTHIEU MARTIN DE. Author of a work on dramatic music published at Paris in 1751.

CHASSE. (F.) The name applied to any instrumental composition written in imitation of hunting music.

CHASTELLUX, LE MARQUIS. A French writer on the subject of music. He died at Paris in 1788. He wrote "*Essai sur l'Union de la Poésie et de la Musique*," Paris, 1765.

CHAUVET, F., a blind organist at Paris, composed some songs, &c., about the year 1798.

CHAUVET, LE JEUNE, C. R., probably the son of the preceding, published some piano-forte music at Paris in 1803.

CHECCI, RENE, published some flute music at Augsburg in 1798.

CHE. An Italian preposition, signifying *than*; as, *Poco piu CHE allegretto*. A little quicker than allegretto.

CHIELYS. An ancient stringed instrument, resembling the harp. By some authors it has been described as originally formed of a shell found in the Nile at low water; and its invention is ascribed to Mercury.

CHIELLERI, FORTUNATO, was born at Parma in 1668. He was a celebrated dramatic composer; his first opera met with much success at Piacenza, in 1707. After this he travelled for three years in Spain, and, on his return to Italy, composed many operas; he was then invited by the Bishop of Wurtzburg to go into Germany, where he remained till the year 1726, which he spent in England, publishing there a set of cantatas, and being received a member of the Royal Academy of Music. His next journey was to Sweden, where he remained four or five years, afterwards retiring to Cassel, where he died in the year 1757.

CHEXARD, N. A celebrated singer at the *Théâtre Feydeau* at Paris. He was also a violoncello pupil of Dupont, and an excellent performer on that instrument.

CHENIE, MARIE PIERRE, was born at Paris in 1773; he was professor of the double bass at the Grand Opera, and has composed several masses, also several romances.

CHERON. A French composer for the flute about the year 1720; he also composed some motets.

CHERUBINI, MARIA LUIGI ZENOBIO SALVATOR, was born at Florence, September 8, 1760, and commenced the study of composition in 1769. His first masters were Bartoluccio and Alessandro Felice, father and son. At the age of thirteen he wrote a mass, which gave promise of the fine musical endowments he subsequently realized. From that time till 1778, he produced a great number and variety of pieces for the theatre and the church, which continually met with high approval, and extended his reputation. Meanwhile the young artist, thirsting for knowledge, and ambitious of higher

attempts than he had yet found opportunity for, grew weary of the limits of his native town, and during four years studied under Sarti, at Bologna. It was to this course of study that he owed his scientific acquirement and surpassing knowledge of counterpoint, and the simple purity of style, which form the distinctive seal of his admirable talent. Cherubini was not rich, and found but one way of paying for the excellent lessons he received: this was, to make his master profit by the science he imparted. Sarti was at that period so much in request throughout Italy, that he found it impracticable to supply the numerous and valuable demands made upon his talent; he was therefore fortunate in meeting with a disciple of Cherubini's genius, who, careless of all but the perfection of his art, was willing to devote his own budding excellence to the glory of his master. Some of Sarti's most celebrated operas, produced during the sojourn of Cherubini in Bologna, were afterwards acknowledged by the master to have been almost entirely the progeny of the pupil. Two of these are recorded: "*Achille in Sciro*," and "*Giulio Sabino*;" the latter of which Cherubini afterwards recomposed in London. In 1784, Cherubini was engaged by the manager of the Italian Opera in London, where he produced two very successful works, "*La Finta Principessa*," and "*Giulio Sabino*." From London he went to Paris, with the intention to fix himself. In 1788, he made a short tour in his native country, which he never revisited. During this visit, he produced an opera on the subject of "*Iphigenia in Aulida*," at the theatre of Turin. His first opera given to France was produced at the Grand Opera, and met but a cool reception, in consequence of the expectations raised by an announced posthumous work of Vogel on the same subject, "*Demophon*," which, however, proved a failure, and Cherubini's opera was admitted, though then too late, to have merited the preference: the overture of Vogel alone survives. During the following years, Cherubini contented himself with composing a vast number of *morceaux*, which were introduced into the operas given by an excellent Italian company in Paris, whose rehearsals he superintended, and whose performances he directed, with indefatigable care and success. An opera entitled "*Koucourgi*," which was on the point of being represented at the Feydeau Theatre, (Opera Comique), was interrupted by the troubles which succeeded the memorable 10th of August. He produced at the same theatre, in 1791, his "*Lodoiska*," the success of which was eclipsed by Kreutzer's more popular opera of the same name, performed at the theatre of the Italian Comedy. In 1794, he brought out "*Elisa*," of which the beautiful introduction is well remembered; in 1797, his "*Médée*," the style of which is noble and severe; in this opera, Madame Scio attained a just celebrity, and we find it abounding in beauties of the very highest order. In 1798, he produced "*L'Hotellerie Portugese*," of which the overture, (a *chef d'œuvre*), and an exquisite trio, retain their popularity undiminished. It was in 1800 that "*Les Deux Journées*," appeared, with a success perfectly colossal; this charming opera is too well known to every amateur to need the indexing of a single *morceau*. In 1801 he was deputized by the *Académie des Beaux Arts* to present to Haydn the medal which they had ordered to be struck in his honor, immedi-

ately after the first performance of the "*Seasons*." In 1803 "*Anacreon*" was produced at the Grand Opera, and is replete with well-known delicious pieces; and at the same theatre, in 1804, the celebrated ballet "*Achille à Scyros*." Cherubini's success in Paris now resounded in Germany, whither he was invited in 1805, and where he produced his opera of "*Paniska*," at the Imperial Theatre at Vienna; several pieces from the "*Koucourgi*," which had not hitherto been heard, being successfully readapted in this opera. During this sojourn, all his most favorite works became popularized in Germany. In 1809 his opera of "*Pygmalion*" was produced at the *Théâtre des Tuileries*; in 1810 "*Le Crescendo*" at the *Théâtre Feydeau*; this was a one-act operetta, of which one air and a duet are alone remembered. In 1813 his opera "*Les Absences*" was triumphantly given at *L'Académie*; but its promising career was interrupted by the news of the fatal disasters at Moscow. Up to this moment, despite his immense reputation, Cherubini had enjoyed no public distinction; he was not in esteem with Napoleon, who could not pardon the countryman of Cimara (with whose music the emperor was delighted even to intoxication) for what seemed to him the heresy of writing in the German school; the honors and emoluments lavished upon Paisiello and Paer were an indirect reproach on Cherubini, who disdained to make his talent subservient to any master. With the exception of "*Les deux Journées*," the works of Cherubini were far more popularly known throughout Germany than in France; and though the imperial domination was inflexible, yet no steps were taken to remunerate Cherubini for the frequent execution of his works in Vienna and Berlin. Cherubini had no other resource but the emoluments of his office of inspector of the *Conservatoire*, which he held from its establishment in 1795; but his glory consoled him for the rigors of his fortune, until the Bourbon restoration opened a richer prospect before him. In 1815 he revisited London by the invitation of the Philharmonic Society, and produced a symphony and other successful pieces at their concerts of that season. Named superintendent of music to the king, a station last enjoyed by Martini, he ardently gave himself up to the perfection of a style of composition to which he had long been affectionately devoted, and in which he had already signalized himself by the publication of his beautiful mass for three voices, his "*Grand Requiem*," his "*Messe du sacre*;" and a crowd of works of the same character, too numerous to mention here, now followed in rapid succession. The Institute now opened its doors; the Legion of Honor enrolled him among its members; he was invested with the order of St. Michael; in fine, justice was at length accorded to him. In 1821 he cooperated with Boieldieu, Berton, and Kreutzer in the production of a "*Pièce de Circonstance*," on occasion of the birth of the Duke de Bourdeaux, one of his choruses in which, "*Dors noble enfant*," will never be forgotten. In 1822 he was appointed director of the *Conservatoire*, a function which he continued to discharge till the 3d of February 1842. The revolution of July deprived Cherubini of his office of director of the King's Chapel, and did a fatal injury to the art, by destroying one of the finest schools that had ever existed for the com-

position and execution of sacred music. Cherubini now recommenced his dramatic career, in 1832, in an opera called "*La Marquise de Brinvilliers*." The introduction is remarkable for a vigor and sprightliness perfectly juvenile. In 1833 he produced his "*Ali Baba*," in four acts, in which he incorporated a few of the pieces from the unacted "*Koncourgi*" which had not found a place in "*Faniska*;" there is an admirable *trio de dormeurs* in this opera, and several other charming *morceaux*, the merits of which were neutralized by the ineffectiveness of the *libretto*. At the age of seventy-three, Cherubini had put forth all the nerve of his youth, the polish of his prime, and the maturity of his age, gathered into one bouquet; and it was but too truly said of the French at the time, and has been but too justly repeated, "*Ingrat Public*." Germany, however, retributed Cherubini for the coldness of France; "*Ali Baba*" had a vast success, and is yet a stock piece in all the principal operatic theatres on the other side of the Rhine. In 1835, some impediment having arisen to the execution of Cherubini's Grand Requiem at the funeral of Boieldieu, in consequence of the ecclesiastical authorities having forbidden the employment of female voices in the service of the church, Cherubini undertook to compose a Requiem for male voices only, which he published in 1836, being then at the advanced age of seventy-six. This was his last composition, and though perhaps, as a whole, inferior to his first Requiem, it contains several very remarkable portions; it has been frequently repeated, and received its final glory from being chosen to form the musical rite of its distinguished author. In this brief notice it has been impossible to detail more than the titles of his most celebrated works; it would occupy far more space, and require far more consideration, to attempt to do justice to this extraordinary man by any analysis of his merits as a dramatic and sacred composer; be it sufficient to awaken the gratitude of musicians and of the public for the incessant and lasting service he rendered by his lessons as a professor of composition, from 1795 to 1822, and as director of the *Conservatoire* from that time till nearly the day of his death. Amongst his numerous pupils, the names of Boieldieu, Auber, Carafa, Halévy, Leborne, Batton, Zimmermann, and Kuhn may be cited as forming the most triumphant eulogy of his talent as a great master of his art. Finally, a month previous to his demise, the King invested him with the grand cross of the Legion of Honor, it being the only time that badge of distinction had ever been worn by a musician. He died March 15, 1842. Cherubini's character as a man has been differently, and more than once unjustly, appreciated; extremely nervous, abrupt, irritable, and of an absolute independence, his first interviews were almost always unfavorable; but he readily gave way to the excellence of his nature, which forced him to burst through the less flattering appearances which circumstances compelled him to assume; thus, notwithstanding the inequality of his humor, (which some have said to be always equal, because always choleric,) he was adored by those who surrounded him; the veneration of his pupils almost amounted to fanaticism. MM. Halévy and Batton attended his last moments with a prodigal tenderness, even more than filial; and Boieldieu never spoke to

him but in terms of affectionate adoration. Cherubini returned with no less warmth and constancy the love of his scholars; above all, he was attached to M. Halévy, whom he considered as a son. The sensations one experienced on approaching Cherubini were difficult to describe, and even to comprehend; the veneration inspired by his great age and eminent talents was at once neutralized by his peculiar demeanor, and the apparent egotism of his opinions; but at every instant, as one grew familiar with his singular characteristics, one beheld more and more the great and good man; his countenance uncurtained itself, his fine spiritual smile shone forth, and the perfect contour of his head became a model of aged beauty; his conversation grew sweet as rich, his native good nature stole upon you little by little, he became companionable in spite of himself, his heart claimed relationship with yours, you quitted him enchanted, and wondering at the sudden and different emotions you had experienced, you felt that your awe had softened into admiration, that your almost aversion had melted into love. Though the style of Cherubini belongs more to the German than the Italian school, still he cannot properly be placed amongst the artists of the former; yet his manner is less Italian than that of Mozart; it is purer than that of Beethoven; it is, in fact, the chaste ancient style of Italy, refreshed and decorated with the harmony of modern times. One cannot help thinking, that, if Palestrina had survived to these days, he would have been another Cherubini; here are the same purity, the same sobriety of proceeding, the same results, obtained by the same (so to speak) mysterious means; for, to the eye, their music presents combinations of which it is impossible to divine the effect, until the execution of it reveals the same to the ear. Cherubini is not to be ranked with those musicians whose labors have effected revolutions in the art by an entire transformation of style. Contemporary of Haydn, of Mozart, of Beethoven, and of Rossini, Cherubini seems to have been placed by nature amongst those great geniuses as a moderator whose wisdom and firmness was destined to counteract the ideality of the satellites of those luminous planets; as Reason, by the side of Imagination, corrects her in her eccentric orbit, and focuses her scattered rays. The works of this master will always serve as models, because, written on a system of exactitude almost mathematical, and consequently exempt from the changeable affectations of time and fashion, they will survive many a composition of more startling pretensions, and which may have reached a wider renown on its first appearance. If we compare the early works of Mozart with those of Cherubini, which were written at the same epoch, there being but four years' difference between the period of their respective births, we cannot but remark in the compositions of the former certain passages in accordance with the prevalent taste of the day, while in the latter we find nothing to indicate the era in which they were written. Cherubini very rarely attained to much popularity; his works are generally of too grand and mental a conception to meet with simultaneous appreciation, and it will be for posterity to enjoy and reward what the living world have yet scarcely learned to comprehend.

[The above is abridged from an article written

a week after Cherubini's death by the composer, Adolphe Adam.]

CHERUBICAL HYMN. A hymn of great note in the early Christian church. It was likewise called *trisagium*, or thrice holy; because its form was in these words: "Holy, holy, holy, Lord God of hosts," &c.

CHERUBINO, NICOLO. An Italian composer of sacred music in the seventeenth century.

CHEST OF VIOLS. A *chest of viols* is an old expression, applied to a concert or *set* of viols, consisting of six, which were generally two basses, two tenors, and two trebles, each with six strings. The particular use of a chest of viols was to play fantasias in six parts. They were, however, variously employed; and together with a harpsichord, or organ, formed an ordinary band.

CHEVALET. (F.) The bridge of a violin, tenor, or violoncello, &c.

CHEVALIER. A composer of small dramatic pieces, and actor at the French Theatre in Hamburg, in 1796, 1797, and 1798.

CHEVALIER, MADAME. Niece to the foregoing, and actress at the French Theatre in Hamburg, in 1796, 1797, and 1798. She was a beautiful woman, an excellent actress, and a very pleasing singer. From Hamburg she went to St. Petersburg, where she was patronized by the Emperor Paul, and realized a considerable fortune. On the death of Paul, she was sent out of Russia by the government.

CHEVILLE. (F.) The peg of a violin, tenor, &c.

CHEVRIER, FRANCOIS ANTOINE. A writer on dramatic music at Paris in 1755. He died in Holland in 1760.

CHIARINI, P. A performer on the harpsichord, and composer of Italian operas, between the years 1739 and 1744.

CHILAVACCI, VINCENZO. A composer, born at Rome in 1760. Several of his vocal works were published at Vienna about the year 1799. In 1801, he produced an opera at Warsaw, where he first introduced the *opera buffa*. He died in 1815.

CHLAVE. (I.) A clef, or key. See CLEF.

CHIESA. (I.) A church, a word frequently used in conjunction with some other, to signify that the music to which it is prefixed is in the church style; as, *sonata di chiesa*, a church sonnet.

CHIFFRES. (F.) Ciphers, figures, in speaking of thorough bass.

CHILCOTT, THOMAS, organist of the abbey church at Bath, was composer of some concertos for the harpsichord. He was the first master of the celebrated Thomas Linley.

CHILD, DR. WILLIAM, was a native of Bristol, and a pupil of Elway Bevin. In 1631, being then of Christ Church College, Oxford, he took his degree of bachelor of music, and in 1636 was appointed one of the organists of St. George's Chapel, at Windsor, and soon after one of the organists of the Royal Chapel at Whitehall. After the restoration he was made chanter of the King's Chapel, and one of the chamber musicians to Charles II. In 1663 the University of Oxford conferred on him the degree of doctor in music. Dr. Child, after having been organist of Windsor Chapel sixty-five years, died in that town in 1697,

at ninety years of age. His works are, "Psalms for three Voices, &c., with a continued Bass, either for the Organ or Theorbo, composed after the Italian way," London, 1639; "Catches, Rounds, and Canons," published in Hilton's "Catch that catch can," 1652; "Divine Anthems;" and compositions to several pieces of poetry, some of which were written by Dr. Thomas Pierce of Oxford. Some of his secular compositions likewise appeared in a book entitled "Court Ayres," printed in 1655. But his principal productions are his services and full anthems, printed in Dr. Boyce's collection. His style was so remarkably easy and natural, compared with that to which choirmen had been accustomed, that it was frequently treated by them with derision. Indeed, his modulation was so nearly modern as not to produce that solemn, and, seemingly, new effect on our ears, which we now experience from the productions of the sixteenth century.

CHILMEAD, EDMUND, a deeply-read mathematician, and well skilled both in the theory and practice of music, was the author of a tract, "*De Musicâ Antiquâ Græcâ*," printed at the end of the Oxford edition of "*Aratus*," in 1672. He was born at Stow in the Wold, in Gloucestershire, and became one of the clerks of Magdalen College, Oxford. About the year 1632, he was one of the petty canons or chaplains of Christ Church; but being ejected by the Parliament visitors, in 1648, he went to London, and took lodgings in the house of Thomas Est, the musician, in Aldersgate Street. In a large room of this house he held a weekly music meeting, from the profits of which his chief subsistence was derived. He was an excellent Greek scholar, and was employed to draw up a catalogue of the Greek manuscripts in the Bodleian library. Wood mentions a treatise of his, "*De Sonis*," which does not appear to have been published. The rest of his works seem chiefly to have been translations. He died in the year 1654, in the forty-third year of his age. His tract "*De Musicâ Antiquâ Græcâ*" contains a designation of the ancient genera, agreeable to the sentiments of Boethius, with a general enumeration of the modes, after which follow three odes of Dionysius, with the Greek musical characters adapted to the notes of Guido's scale.

CHILSTON. An old English musician in the commencement of the fifteenth century. He wrote some curious directions for the practice of extemporary descant.

CHIMES. A kind of periodical music, produced at equal intervals of time, by means of a particular apparatus added to a clock; of the parts of which apparatus, the principal are the bells, the chime barrel, and hammer. In order to calculate numbers for chimes, and adapt the chime barrel, it must be observed that the barrel must turn round in the same time that the tune it is to play requires in singing. As for the chime barrel, it may be made of certain bars that run athwart it, with a convenient number of holes punched in them, to put in the pins that are to draw each hammer; and these pins, in order to play the time of the tune rightly, must stand upright, or hang down from the bar some more, some less. To place the pins rightly, you may proceed by the way of changes on bells, viz., 1, 2, 3, 4; or rather make use of the musical

notes. Observe what is the compass of your tune, and divide the barrel accordingly from end to end. Thus, in the following example, the tune is eight notes in compass, and therefore the barrel is divided into eight parts; these divisions are struck round the barrel, opposite to which are the hammer tails; but when two notes of the same sound come together in the same tune, there must be two hammers to that bell to strike it. Then you are to divide it round about into as many divisions as there are musical bars, semibreves, minims, &c., in your tune. Thus the hundredth Psalm, Old Hundred, has twenty notes; the first note is a semibreve, and therefore on the chime barrel must be corresponding divisions. This may be better understood by conceiving the surface of a barrel to be represented in the second table below, as if the cylindrical superficies of the barrel was stretched out at length, or extended on a plane; and then such a table, so dotted or divided, if it was to be wrapped round the barrel, would show the places where all the pins are to stand in the barrel; for the dots running about the table are the places of the pins that play the tunes.

The Notes of Old Hundred.

A Table for dividing the Chime Barrel of Old Hundred

If you would have your chimes complete, you ought to have a set of bells to the gamut notes, so that, each bell having the tune sound of *sol, la, mi, fa*, you may play any tune, with its flats and sharps, nay, even the bass and treble, with one barrel; and by setting the names of your bells at the head of any tune, you may transfer that tune to your chime barrel, without any skill in music; but observe that each line in the music is three notes distant, that is, there is a note between each line as well as upon it.

CHINELLI, GIOVANNI BAPTISTA. An Italian composer of vocal and instrumental music about the year 1630.

CHINESE MUSIC. The Chinese have had a system of music from the most remote period, and in its scale it seems to have more resemblance to the Grecian than any other to which it could be compared. From the time of Yao and Chun, which their chronology would carry back two and twenty centuries before Christ, they have had what they call eight species of sounds: 1st. The sound of dried skins, such as drums; 2d. The sound emanating from stone, called *king*; 3d. That of metal, as bells; 4th. That of baked earth, called *hiven*; 5th. That from silk, called *kin* and *che*; 6th. That from wood, called *ya* and *tihon*; 7th. That from bamboo, such as flutes, called *koan*; 8th. That from the gourd, called *cheng*. Their scale consists of fourteen notes, of which the seven middle notes correspond to our gamut from F upwards. They seem unacquainted with harmony. It is supposed that the

Chinese were the earliest inventors of the musical scale and notation, having possessed them long before Pythagoras. Be this as it may, whatever expansions the Chinese mind ever had are now lifeless, and have long been so. Certain arts have been reserved for modern times, and for Europe and America; among them harmony, or the combination of musical sounds, which, as a science, was clearly unknown to the ancients: the Chinese at this day have no combinations of sounds, using only the links of melody. The Chinese claim that under their eight qualities of sound all can be classed. This division of metal, stone, silk, bamboo, gourd, earthenware, skins, and wood, they say, is not fictitious, but to be found in nature. They believe that, although all the different tones are to be found in each of the substances, each, however, contains a note belonging to it more than to all the others, and that nature, in combining the particles which produce it, made provision for universal concord. The Chinese say that *Hoang-ty*, who lived twenty-two centuries before the Christian era, employed *Lyng-lun*, a principal personage of his court, to undertake the regulating of the Chinese music. This worthy, in his travels, accidentally cut a beautiful bamboo in such a manner as to form a tube in the parts divided by the large knots; he cut out the marrow, blew in it, and a sound issued which exactly corresponded with the pitch of his voice, when he spoke unaffected by any passion. At another place he found a spring bubbling from the earth, which, to his great astonishment, produced a sound in unison with the one he had drawn from his tube. A bird accompanied by its mate, which he noticed perched on a tree, produced a sound, again, in unison with that of the tube and the stream: he then made a number of sounds, which formed among themselves six semitones; the female added to these six other semitones, and while the two alternately sang, *Lyng-lun* cut twelve tubes of different sizes, in unison with the twelve semitones furnished by the voices of the birds, and, delighted with his discovery, he carried his tubes to the emperor, who commanded that forthwith these twelve sounds, found in so marvellous a manner, should form the gamut of the Chinese music. Amiot, in his "*Mémoires concernant l'Histoire des Chinois*," (tom. vi. Paris, 1780,) which contains the first satisfactory account of the Chinese music, mentions sixty-nine theoretic works upon the subject, which the Chinese possess.

CHINESE FLUTE. This is made of bamboo, bound with silk between the apertures; to preserve the wood from cracking, which helps, doubtless, to sweeten the sound.

CHIRON. An ancient teacher of music. One of the best antique paintings, dug from Hierulacum, represents Chiron teaching Achilles to play on the lyre.

CHIROPLOAST. A guide for the hand in piano-forte playing.

CHITARA. (I.) A cithara, or guitar.

CHIUDENDO. (I.) Closing, ending. A word generally used in conjunction with some other; as, *chiudendo col. ritornello*, ending with the symphony; *chiudendo col. aria*, ending with the air.

CHLADNI, ERNST FLORENS FRIEDRICH, LL. D., was born at Wittenburg in 1756. His father was first professor of law in that town. Dr. Chladni published, in 1787, a work entitled "Discoveries concerning the Theory of Sounds," and in 1802, "A Treatise on Acoustics," which was reprinted at Paris in 1809. This latter work contains many very valuable and novel experiments on the nature of the vibrations of sonorous bodies; prefixed to it is a biographical memoir of the author from his own pen, a translated abridgment of which we copy from the third volume of the Musical Review: "My father (first professor of law at Wittenburg, in Saxony) had given me a good education in my paternal mansion, and at length in the provincial school of Grimmé. My education left me very little liberty, so that, if others consider their youth as the most happy part of their lives, I cannot say as much of mine. This continual restraint, which would not have been necessary, because I was not disposed to abuse liberty, produced quite a contrary effect, by impressing me with an almost irresistible inclination to choose for myself my occupations, to travel, to strive against adverse circumstances, &c. Being returned to Wittenburg and to Leipsic, and after having fulfilled what was required, I obtained at Leipsic the employment of a professor of law; but after the death of my father I quitted jurisprudence, because it was not conformable to my inclinations, and I applied myself principally to the study of nature, which had always been my secondary occupation, and yet the most cherished. As a lover of music, of which I had begun to learn the first elements a little late, in my nineteenth year, I observed that the theory of sound had been more neglected than many other branches of physics, which inspired me with the wish to supply the want, and of being useful to this part of natural philosophy by some discoveries. In making (in the year 1785) a great many very imperfect experiments, I had observed that a plate of glass or metal gave different sounds when it was confined and struck at different places; but I found no part of the discovery on the nature of the manner of these vibrations. The journals had given in those times notices of a musical instrument, made in Italy by the Abbé Mazzochi, and consisting of bells, to which he applied one or more violin bows, which caused me to conceive the idea of making use of a violin bow in order to examine the vibrations of different sonorous bodies. When I applied the bow to a round plate of brass, fixed in the middle, it gave different sounds; which, compared with each other, were equal to the squares of 1, 2, 3, 4, 5, &c., &c.; but the nature of the movement to which the sounds corresponded, and the means of producing each of these movements at pleasure, were hitherto unknown to me. The experiments on electric figures, formed by a plate of re-in covered with sand, discovered and published by Litchenburg, (in the Memoirs of the Royal Society of Göttingen,) made me presume that the different vibratory motions of a sonorous plate ought to offer different appearances, if a little sand or other similar matter was strewed on their surface; and employing these means, the first figure which presented itself to my eyes on the surface of a round plate, of which I have been speaking, resembled a star with ten or twelve rays, and a very acute sound was heard in the series

mentioned above, such as agreed with the square of the number of the diametrical lines. Only guess my astonishment in seeing this phenomenon, which no other person had ever seen before. After having reflected on the nature of these movements, I did not find it difficult to vary and multiply the experiments, whose results followed with rapid succession. My first memoir, which contains researches on the vibrations of a round plate, of a square plate, of a bell, of a ring, &c., appeared at Leipsic in 1787. The results of the researches which I have since made on longitudinal vibrations, and on other objects of acoustics, are to be found in certain German journals, and in the memoirs of different societies. Finally, after having made yet more experiments, I have united as much as possible the results in my 'Treatise on Acoustics,' which appeared in German at Leipsic, in which I have abridged, changed, and added a great deal, as appeared to me most convenient. The invention of the *euphon*, and of the *claircylindre*, and their execution, in very unfavorable circumstances, cost me much more time, more labor, and more expense, than my researches on the nature of sound, of which these two instruments are the practical applications. Those who have labored in a similar sphere, as, for example, those who have tried to perfect the harmonica, know full well the unforeseen difficulties which are met with in similar efforts. Too often, when we would apply to practice the ideas which appear conformable to theory, nature, consulted by experiments and trials, disavows our conjectures, and opposes to us insurmountable obstacles, which we could not foresee. Thus, after having labored in vain during a long space of time, we must sometimes destroy all we have done, and begin again. The *euphon*, invented in 1789, and finished in 1790, consists, externally, in small cylinders of glass, which are rubbed longitudinally with the fingers moistened with water. These cylinders, of the thickness of a pen, are all equal in length, and the difference of the sounds is produced by interior mechanism. The sound more resembles that of the harmonica than that of any other instrument. The *claircylindre*, begun about the year 1800, and since brought to perfection, contains a finger board, and behind this finger board a cylinder of glass, which is turned by means of a pedal and a leaden wheel. This cylinder is not itself the sonorous body, as the bells of the harmonica, but it produces the sound by its friction on the interior mechanism. The principal quality of this instrument is the power of *prolonging* the sounds at pleasure, with all the shades of *crescendo* and *diminuendo*, according as we augment or diminish the pressure of the keys. This instrument never gets out of tune. The reports of the Institute of France and the Conservatory of Music have judged very favorably of this instrument, which, if well made, will always be conformable to the theory. The best manner of producing the sounds will be to use a violin bow. Chladni died in 1827.

CHOICE NOTES are essential notes placed on different degrees in the same measure, either or all of which may be sung, thus: —

CHOIR. At this day, by a *choir*, we comprehend four choruses; Trebles, Altos, Tenors, and Basses. When a sufficient number of persons to constitute a chorus on all of the parts unite, or are united together in song, they constitute a choir. By a choir, or chorus, is ordinarily meant a company of singers. The original word means to collect or bind; a choir accordingly signifies a company collected or bound together in their singing. The term *choir* also designates the place, or gallery, in a church, where the music is performed. The choir, in nunneries, is a large hall adjoining to the body of the church, separated by a grate, where the nuns sing the office. The *choir of a cathedral* is that part of the cathedral in which divine service is performed. The choir is separated from the chancel where the communion is celebrated, and also from the nave of the church, which latter division took place in the time of Constantine. In the twelfth century, they began to enclose it with walls; but on account of the beauty of the architecture, the ancient balustrades were soon restored.

CHOIRMAN. A term inelegantly applied to any vocal officiate of a choir.

CHOIR ORGAN. The smaller or softer-toned organ, used to accompany the principal singers in solos, duets, &c.

CHOPIN, FREDERIC, the most original, imaginative, and delicately spiritual of recent pianists, and composers for the piano, has been so fully and intelligently commemorated in a memoir from the pen of his surviving brother artist, Franz Liszt, that we borrow the following notices from him, and for the rest, refer the reader to a translation of the memoir in "Dwight's Journal of Music," (vol. i. nos. 3-11.)

"Chopin was born at Zelazowa-Wola, in Warsaw, in the year 1810. His own recollection of his boyhood related chiefly to a gift from the Catalani, a gold watch with the inscription—'1820. *Madame Catalani to Frederic Chopin, aged ten years.*'

"The years of his childhood offer nothing especially remarkable. He was frailly built by nature, and the anxious attention of his friends was directed above all to his health. He grew up among patterns of domestic virtues and religious observances, and had the example of simplicity, activity, piety, and refined culture before his eyes. In his ninth year he received instruction in music, and soon after he was placed under the charge of a passionate worshipper of Sebastian Bach, by the name of Zivna, who for many years conducted the musical studies of the boy in the good old thorough manner. His parents, (his mother was a Pole, his father a Frenchman.) lived in limited circumstances, and indeed never thought of building hopes upon a brilliant virtuosity in their son, but kept him to the earnest and conscientious study of music, so that he might become a competent and skilful teacher.

"Through the magnanimous patronage of Prince Anton Radziwill, the same who has shown his artistic capacity by his compositions to Goethe's 'Faust,' Chopin was admitted rather early to one of the high schools of Warsaw. But the prince did not stop there; he provided for the complete education of the boy, in whom he had discerned a remarkable talent, and obviated, through the mediation of a friend of the family, Anton Korzuchowski, all the necessities involved

in the education of an artist. At the school Chopin made the acquaintance of the sons of Prince Borsy Czertwytynski. Their mother, who loved and practised music with a true feeling for the art, conceived a great sympathy for the young artist, and in her saloons he had first an opportunity to know the select and brilliant circles of the higher society, in which Warsaw was at that time so rich. Soft, full of feeling, fine in every sense, the features of his face had in his sixteenth year an ideal beauty, of which it might have been said, that it belonged to no determined age or sex.

"Into this first period of his youth falls his attachment to a young maiden, who all her life has thought of him with loving devotion. The storm which tore him far away from his home severed this first love, and robbed the exile of a fond and faithful wife, as well as of his fatherland. Never in his after years was there for him the bliss of such a tie as he dreamed of then. His beloved kept his memory sacred, and clung with filial affection to his parents; nor would Chopin's father permit that the portrait of his Frederic, which she had drawn in their days of hope, should ever be replaced by another, however more artistically perfect.

"When he had finished his schooling, and had learned, through the study of harmony with Joseph Elsner, the difficult art of being severe with himself, his parents wished him to travel, in order to hear great performances of important musical works. With this view, Chopin visited some cities in Germany, in which, however, he never staid more than a short time. In the year 1830 he had just left Warsaw again with a similar purpose, when the revolution of the twenty-ninth of November broke out.

"He saw himself compelled to remain in Vienna, where he performed in some concerts, without, however, making the impression which he had a right to expect. He left Vienna with the intention of going to London: still he desired to stop some time in Paris; he had his passport *viséd* to England 'via Paris,' and this word contained his whole future. Long years after, when he had become naturalized and settled down in France, he used often to say, laughingly, 'I am only here on my passage through.'

"Shortly after his arrival in Paris he gave several concerts, and was heard by the higher society and by the young artists equally with admiration. I still remember very well his first appearance in the saloon of M. Pleyel, where the ever-reiterated applause could not satisfy our surprise and enthusiasm at a talent which revealed a new phase in the poesy of musical art, and developed such felicitous innovations in form.

"Chopin did not allow himself to be dazzled nor intoxicated by his triumphs; he bore them off without pride, but at the same time without false modesty. All his countrymen who were then in Paris prepared the most hearty and appreciating reception for him; and from that time forward he was constantly welcome in the house of Prince Czartoryski, the Countess Plater, Lady Von Komar and her daughter, the Countess Delphine Potocka. This latter lady was in beauty, intellect, and grace one of the most admired queens of society; to her he has dedicated his second Concerto, with the beautiful Adagio. At a later time he associated especially with his

countrymen, and this too had some influence on his musical occupations. He continued in fact by this means in a sort of musical correspondence with his fatherland; they brought him new songs and poems to Paris, and furnished with his melodies these flew home again, and quickly became generally known and loved, without any body knowing the composer's name. As the number of these melodies had increased considerably, he thought at last of collecting and publishing them. But he was not destined to realize this thought, and so his songs have remained lost and scattered flowers, whose fragrance only here and there salutes a wanderer, whom chance has led into the distant regions where they still grow. We have heard some songs in Poland which are ascribed to him, and which are worthy of him too; but who can venture to undertake an accurate separation of the productions of his muse from those of the spirit of the people?

"But evidently Chopin is a tone poet, who, by his compositions, has lent an individual expression to the poetic sense, the poetic way of feeling, of a people in a given period. His music does not fit either of the two great frames, which are distinguished by the names of German and Italian music. But that national coloring was with him by no means a thing purposely sought for: he did not make it *a priori* his ideal; perhaps he would himself have wondered, had you called him a national composer. As with the genuine national poets, so in his music the peculiar national spirit pervaded the creation without forethought and without the consciousness of the creator. And this spirit resides not merely in the form and rhythm of the Polonaises, Mazourkas, &c.; but one and the same feeling runs in a thousand ways through all his works, Concertos, Scherzos, Preludes, Etudes, and especially Nocturns. Thoroughly subjective, Chopin has breathed into all his tone creations one and the same life, his own inmost and most individual life, so that in all a unity of character prevails, an exclusive mode of feeling, out of which their beauties, and indeed their weaknesses and defects too, flow.

"He could not go outside of himself, and the greatest beauties and the greatest merit passed for nothing with him, if they contradicted one side or another of his æsthetic comprehension. As great an admiration as he cherished for Beethoven, yet certain portions of his works appeared to him too rough-hewn; their build was for him too athletic; the passion in them seemed to him too sickly, the rage too impetuous and thundering; to him the lion's marrow in this giant's limbs was too coarse a stuff, and the seraphic, Raphael-like profiles, which emerge amid the violent creations of this spirit, became frequently almost painful through the cutting contrast.

"In some of the melodies of Franz Schubert he recognized the full charm; but unwillingly he listened to those whose outlines (to his ear at least) were too sharp, in which the feeling lies, as it were, bare and naked, and where you (so to speak) hear the limbs crack under the rack of pain. Every thing immoderate and rude repulsed him; every thing that approached the style of the new French melodrama was martyrdom to him. If he was partial to the romantic, yet he hated all insane excess, all startling and shudder-exciting effects.

"All the free and sparkling flow of the Italian music, as unsought as it is unlearned, pleased him quite as little as that which in the German bears the stamp of a power of which he recognized the strength, but not the elevation. Among the composers of the former period he valued and played Hummel most, and Mozart was to him the ideal type of musical poetry, since he more seldom than all others condescended to overstep the bounds which separate the excellent from the common. And yet his abhorrence of the commonplace and his pure nature found even in "Don Juan," that immortal masterpiece, passages whose presence he lamented; his reverence for Mozart was not thereby lessened, but, as it were, saddened; he could go so far as to forget what he did not like, but to become reconciled to it was to him impossible.

"How much Chopin regarded art as his most sacred calling, how proud he was that Heaven had appointed him to this vocation, and with what a religious piety he looked upon himself as a priest of the same, was proved in his dying hour by a provision of his last will. He who, among the first artists of his time, had given the fewest concerts, nevertheless ordered on his death bed that he should be buried in the dress he used to wear in his public concerts. As he associated his love for art and his faith in it with the thought of immortality, so he again testified, by a dumb symbol, when he laid himself down in the tomb, to the conviction that had elevated and made beautiful his life."

Chopin was an invalid through all the best period of his artistic life. His frail *physique*, his melancholy, refined, and spiritual tone of character, unfitted him to be a popular composer or performer in the concert room; he shrank from large assemblies, and exerted the magic influence of his genius only in select and sympathetic private circles. In the year 1836 commenced his intimacy with the celebrated novelist Mme. Dudevant, *alias* "George Sand." We copy again from Liszt:—

"Chopin seemed at first to have a certain shrinking from this lady, who was so prominent above all others, and like a Delphic priestess uttered so much which others might not utter. He avoided, he postponed meeting her. George Sand knew not, suspected not this sylph-like tear; she approached him, and her look soon dissipated the prejudice which he till then had obstinately cherished against literary women.

"In the autumn of the year 1837 he became subject to attacks of a malady, which from that time left him scarcely more than half his vital energy. Alarming symptoms showed themselves, and compelled him to travel to the south, to escape the severe winter air. Madame Sand, who was always so watchful and sympathizing for the afflictions of her friends, would not allow him to travel alone, since his situation demanded so much care and nursing, and she resolved to accompany him. They selected the Isle of Majorca for their place of abode, because there the sea air, together with the mild climate, is very beneficial to weak lungs. Although he had so serious an attack, at his departure, that his friends hardly expected to see him again, yet he survived there a long and painful sickness, and his health became so far restored that it continued better for several years. . . . There, in solitude

washed on all sides by the blue waves of the Mediterranean, overshadowed by citron trees, he inhaled the air for which natures, that here below have no home, feel an eternal homesickness — the air of that dreamed-of land, so easily discovered in spite of all reality and of all hinderance if *two* seek it — the air of that home of the ideal, whither one would fain take with him all that is fair and dear to him.

“During the whole time of his sickness Madame Sand never for a moment left the bedside of the man who loved her until death, and with a fervor that did not lose its strength when its joy was departed.

“In fact Madame Sand had become a super-earthly being for Chopin, who had chased away the shadows of death from his bed. She cherished him with that all-anticipating, fond care, which is oftentimes more healing than the remedies prescribed by the physician's art. All the while she knew nothing of fatigue, of exhaustion, of ennui; neither her powers nor her spirit surrendered before the task. At length the malady abated, and ‘the presentiment of death, which gnawed at Chopin's heart, and undermined all tranquil satisfaction, gradually moved farther off; the cheerful, amiable spirit of his friend put to flight the gloomy thoughts, the dark foreboding, and rekindled his spiritual life.’ Joy stepped into the place of cloudy anxieties.

“The recollection of the days which he had spent upon the Isle of Majorca remained in Chopin's heart like the memory of an ecstatic bliss, such as fate vouchsafes but once to its most favored one. In later years he always spoke of this period with deep emotion and thankfulness, as of a benefaction equivalent to the happiness of a lifetime, and without any hope that it could ever be possible to find a like blessedness on earth: ‘The world had no joys more after this.’

“After 1840 his health declined by steady intermissions. The weeks which he spent every summer on the Nohant estate he counted, for several years, as his best moments. There he worked with satisfaction, and every year brought several compositions back with him; but the winter always increased his sufferings. It became difficult, and soon impossible, for him to move about. In the winter of 1846-7 he could scarcely walk any more, and he could not go up stairs without painful strictures in the chest; from this time forward he respite his life only by the greatest forethought and carefulness.

“In the opening of the spring of 1847 he grew worse from day to day, and he became so sick that they despaired of his recovery. He spoke during this sickness frequently and almost with exclusive partiality of the Sand, without bitterness and without reproach. Tears came into his eyes at the mention of her name, and the recollection of past days was to him a painful consolation.

“In spite of the diversions by which his friends sought to turn him from the subject, he always came back to it, as if he wanted to destroy life by the recollection of the feeling which had made life beautiful, and to stifle himself in this deadly aroma. In vain they tried to remove his thoughts from this object; he kept continually speaking of it, and when he spoke of it no longer, did he not continue to *think* of it: It was as if he would have sucked in this poison, that he might not have to breathe it too long.

“The winter of 1847-8 was only a painful alternation of reliefs and relapses. In spite of that, he resolved in the spring to execute his old purpose of going to London. When the February revolution broke out, he was still confined to his bed; it seemed as if a dark destiny drove him to a livelier sympathy in the events of the day and he spoke more about them than was otherwise his habit.

“In April he felt himself better, and now seriously thought of visiting that island, to which he had set out to go when youth and life still offered him the brightest prospects. He travelled to England, where his works had already found an intelligent public, that knew them and admired them. He left France in that state of mind which the English call *low spirits*. The momentary sympathy which he had bestowed with a certain degree of exertion upon political events had quickly passed away. He had become more silent than ever. His affection towards the few persons whom he continued to see, took the color of that soul-pervading excitement which precedes the last farewell greeting. His indifference for all outward things still grew upon him. Art alone retained its unlimited power over him. In the shorter and shorter moments in which he was permitted to occupy himself with it, music claimed his whole being as earnestly as in the time when he was full of life and hope. Before he left Paris he gave yet one concert in the hall of M. Pleyel, a friend to whom he always stood in the most intimate relation, and who now too pays a worthy tribute to his memory and his friendship by the erection of a monument over his grave. In this concert his select and long-tried public in Paris heard him for the last time.

“In London he was received with extraordinary cordiality, and this reception drove away his melancholy, and scattered his gloomy and desponding humor. He fancied himself entirely master of it, when he flung all, even his former habits of life, into the strenuous oblivion. He neglected the prescriptions of his physician, and the carefulness which his sickly condition required. He played twice in public, and innumerable times in private circles. He went much into company, staid longer than usual, defied all exhaustion, and let no consideration bind him to a regard for his health.

“At the Duchess of Sutherland's he was presented to the queen, and the selectest circles of society were emulous of his possession. He made a journey, too, to Edinburgh; but the air there was particularly injurious to him. After his return from Scotland he felt very feeble; the physicians urged him to leave England as soon as possible, but he delayed his departure a long time. Who can define the feeling which suffered him to linger? He played once more in a concert for the Poles; it was the last love token that he sent to his fatherland, the last look, the last longing sigh! All his friends crowded round him, and he received the most enthusiastic applause. He bade them all farewell, without their dreaming that it would be the last. What may the thought have been that moved his heart when he crossed the Channel to return to Paris? to that Paris, now so different to him from that which he had found, without seeking it, in the year 1831.

“This time a bitter and unexpected blow awaited

him on his arrival. Dr. Molin, whose advice and skilful attendance had saved his life, to whom alone, as he was convinced, he owed the prolongation of his days, lay on his death bed. He felt this loss severely; it had a dispiriting influence on him. He cherished the firm belief that no one could supply that man's place to him, and had confidence in no physician more. He kept continually changing his physicians; none would suit him, and he placed no further hope in their art. A sort of superstitious despondency got possession of him.

"After the winter of 1848 he had ceased to be in a condition to work continuously. Here and there he took in hand some leaves containing hastily-sketched thoughts, but the strength failed him to arrange them into an orderly whole.

"In his latter days he designed to write a Piano-Forte School, in which he wished to embody his thoughts about the theory and practice of his art, the fruit of his long labor, of his happy innovations and his artistic experience.

"But Chopin's powers sufficed no longer for such purposes. He traced in thought, to be sure, the outline of his plan, and spoke of it repeatedly; but the execution was to him impossible. He only wrote out a few pages of it; the fire has consumed them with the other papers.

"At length his illness increased so visibly that further hope was out of the question. Soon he could no more leave his bed, and he could hardly speak. His sister, at his sad news, hastened from Warsaw, and never left his sick bed. He saw the anxiety, the forebodings, the mourning around him, without betraying any signs of the impression it all made upon him. He spoke of his eud with entire Christian peace and composure, and yet he hoped for a coming morrow. The singular passion which he always had for changing his habitation came once more to light; he had hired other quarters, ordered them to be fitted up, and busied himself with arrangements, often relating to the smallest particulars. As these directions were not taken back, they were all strictly executed, and some articles of furniture were carried to the new dwelling on the very day of his death.

"From week to week, soon day by day, the shadow of death stepped closer and closer to him. The sickness reached its goal, the suffering became more and more painful, the decisive moment drew near. In the intermissions of the more and more frequent crises, Chopin preserved to the last his presence of mind and force of will. The wishes he expressed in these painless moments showed with what solemn tranquillity he looked death in the face. He wished to be buried next to Bellini, with whom he had lived in very friendly relations during his abode in Paris. Bellini's grave is in the churchyard of *Père la Chaise*, next to that of Cherubini; the desire to become acquainted with this great master, in the admiration of whom he had been educated, was one of the motives which induced him to touch at Paris on his route from Vienna to London in 1831. His earthly resting-place is now between Bellini and Cherubini, those two so different spirits, whom Chopin, however, approached in equal degrees, since he had as high an esteem for the science of the one, as he had attraction towards the other. He shared the melodic feeling with the composer of '*Norma*,' and at

the same time aspired after the inward substance and the harmonic depth of the old master.

"To his very end he maintained the reserve that was peculiar to him in his relations with his friends; he desired to see no one for the last time; but his thanks to the friends who visited him he embroidered round with the pure gold of a touching acknowledgment. The first days of October left no further room for doubt or hope. The fatal moment was to be feared each day, each hour; his sister and Gutmann never left him for a minute. The Countess Delphine Potocka hastened back to Paris, when she heard of his dangerous condition. All who came to the dying man found it impossible to tear themselves away from the sight of this beautiful, great soul in its departure from this life.

"On Saturday, the 15th of October, a crisis, still more painful than any that had preceded, lasted several hours. He bore it with patience and strength of spirit. The Countess Delphine was there; her soul was penetrated, her tears flowed. He opened his eyes, and saw her standing at the foot of his bed, the tall, slender figure, clad in white, the image of an angel beautiful as ever painter's fancy had created. Surely she seemed to him a heavenly apparition; he revived an instant, and breathed out a prayer to her to sing. All believed that he was talking wild; but he repeated his request with a tone of earnestness which no one could resist. They pushed the piano in the hall close to the door of his chamber, and the countess sang with sobbing voice; tears ran down her cheeks, and never had her fine talent and her wonderful singing a more touching expression. Chopin listened, and seemed to forget his sufferings; she sang the hymn to the Holy Virgin, which, it is said, saved Stradella his life. 'How beautiful! O my God, how beautiful!' said he—'once more, once more!' The countess pressed down the overflowing fountain of her feeling, seated herself again at the piano, and sang a psalm of Marcello. But within the chamber a piercing pain suddenly seized the sick man; all the bystanders were terrified, and involuntarily sank in silence on their knees; only the voice of the countess floated like a heavenly melody above the sighs of the others. The night came on; a twilight spread its shadow over the mournful scene; Chopin's sister knelt against his bed, and wept and prayed.

"In the night he grew worse; yet on Monday morning he became somewhat better, and asked for the holy sacrament. In the absence of the Reverend —, with whom he had been on very friendly terms in their common exile, he sent for the Reverend Alexander Jelowicki, one of the most distinguished men of the Polish emigration. He saw him twice, and received from him the holy supper with devotion, in the presence of his friends. Thereupon he let these approach singly to his bedside, gave them a last farewell, and invoked God's blessing on them and on what they loved and hoped. The remainder of the day passed off amid increasing pains; he spoke no word more. Only towards eleven o'clock in the evening did he feel himself slightly relieved. The clergyman had not left him, and Chopin expressed a desire, so soon as he found his speech again, to pray with him. He pronounced the prayer of the dying, in Latin, with a clear, intelligible voice, leaning his head steadily on Gut-

mann's shoulder. A cataleptic sleep lasted till the 17th of October, 1849. About two o'clock began the death struggle; a cold sweat ran from his brow. After a brief slumber, he asked, with scarcely audible sound, 'Who is with me?' He inclined his head to press his lips once more gratefully upon the hand of Gutmann, who held him in his arm, and in this moment he breathed forth his soul. He died as he had lived, in love."

As to the form and quality of Chopin's compositions, we glean from the same source the following appreciative sentences:—

"By confining himself exclusively to the piano-forte, Chopin has proved himself, in our opinion, to possess one of the most essential properties of a writer or a composer; namely, a correct appreciation of the *form* in which his mission was to be achieved, and his designs executed.

"How admirable this well-considered feeling of the beautiful for its own sake! On the one hand, he restrains his talent from the common tendency to distribute every shred of melody over a hundred music desks; and on the other, he enriches the auxiliary sources of the art, in teaching us how to concentrate them upon a given space.

"Far from seeking his renown in the noise of the orchestra, Chopin contented himself with seeing his thoughts fully quickened into life upon the key board of the piano. He always reached his end, which was no other than to secure to the musical essence of his idea the full expression of its power; but he despised the mere *effect* of masses and the coarse pencil of the scene painter.

"It is impossible to subject Chopin's labors to an intelligent analysis without finding in them beauties of the first magnitude, an expression perfectly new, and a harmonic texture as original as it is complete. With him the boldness always justifies itself; the richness, even to exuberance, does not exclude clearness; the strangeness does not degenerate into *baroque* affectation. The embellishment begets no blur; the luxury of ornaments does not smother the beauty of the main lines. His best works are rich in combinations which may be said to make epochs in the treatment of musical style. Audacious, shining, seductive, they clothe their profundity with so much grace, their art with so much charm, that one has difficulty to disentangle himself from their transporting, magic clasp, so as to judge them in cold blood from the standpoint of their theoretic worth. This worth has been already *felt*; but it will be more and more appreciated when the time shall come for an exact examination of the services that have been rendered to the art of music in the period in which Chopin lived.

"To him we owe that expansion of the chord, both when struck full, and when broken into *arpeggio* and through several octaves; those chromatic and enharmonic windings, of which his *Etudes* contain such astonishing examples; those minute groups of interpolated notes, which fall down like a colored dew upon the melodic figure, and for which, until he came, only the *fioriture* of the older Italian song school had been taken for a model. While he enlarged the boundaries within which it had hitherto kept, he lent to this kind of ornament that unexpectedness and that multifariousness, which lay beyond the compass of the human voice, heretofore always slavishly

copied in the (so called) *embellishments* for the piano, that had become so stereotyped and monotonous. He invented those wonderful harmonic progressions which lent a serious character even to those pages which with their light material could scarcely lay claim to such meaning. But what of the *material*? (the subject matter.) The idea which he charms out of it, the inspiration which he breathes into it, exalts, ennobles, magnifies it. What melancholy there is, what subtlety, what fine perception, and above all, what art, in those masterpieces of Lalontaine, whose matter is so commonplace, and whose title so modest! *Etudes* and *Preludes* are titles quite as modest; nevertheless, the musical pieces of Chopin which bear them remain forever perfect types of a species which he has created, and which, like all his works, sprang from the character of Lis's poetic genius.

"Almost the earliest of his works, they bear the stamp of a young creative power, which in some of his following productions, that are more labored, more filed, more learnedly written, gradually disappears, to become lost entirely in his latest; for these are the offspring of a morbid sentimentality, which might be called the painful fruit of an exhausted vital energy.

"Had we here to talk the language of the school about the development of piano-forte music, we should proceed to analyze the contents of those noble pages which present so rich a harvest of observations. We should in the first line examine those *Nocturnos*, *Ballads*, *Inromptus*, *Scherzos*, which are all full of unexpected and unheard-of subtleties of harmony. We should then seek these same refinements in his *Polonaises*, *Mazourkas*, *Waltzes*, and *Boleros*. But such a work would only be of interest to those initiated into counterpoint and thorough bass.

"Through the feeling that flows forth in all of them, these works have spread and become much loved in large circles; and this feeling is in the highest degree romantic, individual, peculiar, and yet related not only to that people which has to thank him for one more celebrity, but also to all hearts that were ever touched by the misery of exile and by the sentiment of love.

"Meanwhile Chopin was not always contented with those frames within which he sketched his happily-chosen figures; he would also bring his thoughts into the limits of the classic form. He has written fine *Concertos*, and fine *Sonatas*; but it is not difficult to discern in these productions rather the will, the purpose, than the inspiration. This last with him was capricious, arbitrary, fantastical, bound to no reflection; he had to give it free play, and he did violence to his genius, as we think, as often as he thought to chain it to traditional rule. Chopin could not imprison the wavering, never sharply defined outlines, which lend his thoughts their highest charm, within the stiff, angular framework of a precise pattern.

"Nevertheless, these efforts are decidedly distinguished by a rare nobility of style, and contain passages of high interest and movements of surprising grandeur of thought. We may mention, for example, the *adagio* of the second concerto, to which he was particularly partial, and which he was very fond of playing. The embellishments in this belong to the finest manner of the composer, and the leading thought is kept up with a wonderful breadth. The entire movement is

ideally perfect, and the expression of the feeling now bright and gleaming, now touching and penetrating.

"How can we omit to mention the 'Funeral March' in his first sonata, which, for the first time arranged for orchestra, was played at his own burial? No other tones could have expressed, in a language which so goes through the soul, the anguish and the tears which must have accompanied that man to his last resting-place, who had so sublimely conceived the manner in which a great loss should be wept. One of his young countrymen said once to me, 'Only a Pole could have written this.' And in fact, all that there is solemn and heart-rending in the funeral procession of a whole nation, weeping its own death, resounds in this funeral strain.

"His *Polonaises* belong among the finest products of his inspirations. They have nothing in common with the painted primness of ball room, virtuosos, and saloon *polonaises*. Their powerful rhythm electrifies the slack nerves of our *blasé* indifference. The noblest traditions of the Polish national character are preserved in them.

"In listening to many of Chopin's *polonaises*, you fancy that you hear the firm and heavy tread of men, advancing with the consciousness of courage against every turn of fate. In some of the others this broad manner disappears. Especially in the *polonaise-fantasia*, which belongs to the last period of his works, you perceive no more those bold and brilliant portraits; no more the lively step of that cavalry so used to victory; an elegiac mood predominates, which at the most is interrupted only by a melancholy smile.

"The celebrated *mazourkas* of Chopin wear an entirely different character from the *Polonaises*. Upon a wholly different ground play tender, pale, and opaline *nuances*, instead of the juicy and strong coloring. The feminine and even effeminate element is no longer placed in a certain mysterious twilight, but advances into the foreground with such decided significance, that the other elements vanish before it, or are banished into its train. Woman here appears the queen of life. Man, to be sure, is still spirited and proud, but lost in the dizziness of pleasure. In spite of this, there is a sad vein running through it. The national songs, in their melody and in their words, strike both these tones, and both bring out the singularly effective contrast, which results in real life from that necessity of cheering sorrow, which finds a magical narcotic in the grace and stolen charm of the *mazourka*. The words sung in Poland to these melodies give them, moreover, the right to cling closer to the life of memory than any other dance music.

"Chopin has happily appropriated to himself the popular melodies, and transferred into them the whole merit of his labor and his style. In polishing these diamonds to a thousand facets, he discovered all their hidden fire, and, even gathering up their dust, he set them in a pearly ornament. Could there be a better frame in which to enclose his personal recollections, poetry of all sorts, attractive scenes, episodes, and romances? These now owe to him a circulation far outreaching their own native soil, and they belong at present to the ideal types which art surrounds with the glory of its sanction.

"Chopin has set free from its bondage the secret essence of poetry, which is only indicated in the

original themes of the Polish *mazourkas*. While he has adhered to their rhythm, he has ennobled their melody, enlarged their outline, and magically introduced into many passages a harmonic *chiaroscuro*, which gives back that world of excitements and emotions wherewith hearts are moved in the dance of the *mazourka*. Coquetry, vanity, fantastical humors, inclination, sadness, passion, the outgush of feelings, all are in it. To comprehend how admirably this frame suits these soul pictures, which Chopin executes within it as with a pencil dipped in the colors of the rainbow, one must have seen the *mazourka* danced in Poland; there only can one learn the whole that lies in this national dance.

"Indeed, one must perhaps have been in Chopin's fatherland fully to understand and appreciate the character not only of his *mazourkas*, but also of many of his other compositions. They almost all breathe that aroma of love and longing which surround his preludes, his nocturnos, his impromptus, like an atmosphere, in which all the phases of passion move by in succession. In all these compositions, as in every ballad, every waltz, every Étude of Chopin, lies the memory of a fleeting moment of life full of poetry, which he often so idealizes, and spins his web out of such fine, ethereal threads, that they seem no longer to belong to our nature, but to the fairy world, and sound like the chattering, confidential whisper of a Peri, a Titania, an Ariel, or of those elemental spirits which likewise are subject to the bitterest illusions and to unendurable ennui.

"Amongst the great number of his *mazourkas*, too, there reigns a striking diversity of subjects, and of the impressions they call forth. In many you hear the clink of spurs, but in the most, above all, the scarcely distinguishable rustling of crape and gauze in the light breeze of the dance, amid the flutter of fans and the jingling of gold and diamonds. Some seem to describe the lively enjoyment of a ball, which, on the eve of a storming of the castle, is, as it were, undermined with heaviness; you hear the sighs throughout the dance rhythm, and the dying away of the farwell whose tears it veils. Through others glimmers the anguish, the secret sorrow, which one has carried with him to the festival, whose stir cannot drown the voice of the heart. There it is a murmuring whirlwind, a delirium, through which a breathless and spasmodic melody is hurrying to and fro, like the impetuous beating of a heart that breaks and perishes in love and passion. There again resound from afar bold *fanfara*, like distant reminiscences of glory and of victory. Some there are whose rhythm is as vague and evanescent as the feeling with which two lovers contemplate the rising of a star in the firmament."

CHOR. (G.) Choir, horns; as, *aria und chor*, air and chorus.

CHORALMASSIG. (G.) In the style of a chorale, or psalm tune.

CHORAL, or CHORISTIC. An adjective, derived from the word *chorus*, and not only applied to vocal music consisting of a combination of different melodies, and intended to be performed by a plurality of singers to each *part*, as when we speak of a *choral anthem*, a *choral service*, &c., but which is also used in a collective sense, to distinguish the performers of choruses

when assembled for performance, who are thus called a *choral band*.

CHORAL, (as a substantive.) A plain and simple sacred tune, like "Old Hundred," Luther's "Judgment Hymn," &c. What we call a *psalm tune* the Germans call a *choral*.

CHORD. The word *chord*, before the introduction of simultaneous sounds, was solely applicable to a distended sonorous string; but when *counterpoint* was discovered, and various combinations formed and established, a general term became necessary to express those combinations; and that which before applied only to a single string, was now borrowed, and its sense extended to a union of the sounds of several strings, pipes, or voices. In practical music, there are various species of chords. The *fundamental chord*, which consists of the three fundamental consonances; *i. e.* the third, the fifth, and the eighth of the fundamental bass, or their inversions. The *accidental chord*, which is produced either by anticipation or retardation; by *anticipation*, when, in a preceding chord, one or more notes are taken of a succeeding chord to which they do not belong; by *retardation*, when one or more notes of a preceding chord are by *suspension* carried into the composition of the succeeding chord. The *anomalous* or *equivocal chord*, in which some interval, or intervals, are greater or less than those of the fundamental chord. The *transient chord*, in which, in order to smooth the transition from one chord to another, some intermediate notes are introduced, which do not form any component parts of the fundamental harmony, nor can justly be called either anticipations or suspensions. For examples of chords, see **SCALES**.

CHORDS. Strings by the vibration of which the sensation of sound is excited.

CHORION. A Greek composition, consisting of a hymn sung in honor of Cybele, the mother of the gods; said to have been invented by Olympus of Phrygia.

CHORISTER. The general name for a vocal officiate in a choir; formerly much used.

CHORON, ALEXANDRE ETIENNE, was born 21st October, 1772, at Caen, where his father was overseer of farms. His studies, which he terminated at the age of fifteen years, at the College of Juilly, were brilliant and solid; but he considered them only as preliminaries of a more extended instruction, of which he felt the want, and which, during all his life, was the object of his labors. Few persons knew as well as he the Latin tongue; he spoke and wrote it with ease. His memory was wonderful, and he often recited long passages from Virgil, Horace, Martial, or Catullus, whose works he had not read for a long time. The pleasure of reciting became such a habit, that he rarely conversed with his friends without introducing some Latin verse, some phrase of Cicero, and even some Bible passage, or from the fathers of the church, his favorite reading. Greek literature was not less familiar to him; and such was his inclination for it, that in the latter part of his life, he delivered himself up to the reading of philosophers, historians, and Greek poets, with all the ardor of youth. While young he devoted himself to the study of Hebrew, and

his progress was so rapid, that in the absence of the professor, he took his place sometimes in the College of France.

From his infancy, Choron had a passionate love for music; but destined by his father to a profession entirely opposite to the culture of arts, he was not permitted to devote his time to this most enticing study. The masters whom he eagerly demanded were refused him; and it was several years after he had left college before he could, with no other help than the books of Rameau, D'Alembert, J. J. Rousseau, and of the Abbé Roussier, acquire any notions of theoretical music, as then understood in France. As to the exercises relative to the practice of the art, he could do nothing, having no masters. Perhaps they would have been only a moderate help, for he had nearly reached his twentieth year, and musical studies commenced at that age seldom lead to skill in reading or execution. Choron felt the insufficiency of his first musical education, and although nature had endowed him with an exquisite sense of the beauties of music, he could never seize at the first glance the character of a composition.

The calculations with which the theoretical books of the school of Rameau are filled led Choron to study mathematics: at first he considered them as only accessory to musical science, but he soon liked them for themselves, and devoted much time to them. His progress was rapid, and was remarked at the school of the *Ponts des Chaussées*. Monge judged him capable of receiving his advice, adopted him as a pupil, and made him fulfil, in this quality, the duties of tutor of descriptive geometry in the normal school, in 1795; a short time after, he was chosen chief in the polytechnic school, which had just been instituted. As he progressed in the science of mathematics, he felt there was much less relation between them and music than was generally believed. He perceived the entirely metaphysical action of the latter upon the human organization, and was persuaded it could be studied only in itself. Convinced of this truth, he began to devote himself exclusively to the study of the practical art, and Bionesi, author of a "Treatise on Measure," which was not without merit, taught him the principles of this art. Choron was then twenty-five; Grétry, who had become a friend of his, advised him to take some lessons in harmony of the Abbé Roze, who then passed for a learned musician, although his science was but small.

Bionesi taught him the Italian literature of music; he began to read the works of P. Martini, Eximeno, Sabbatini, and then those of ancient authors, such as Gaffori, Aaron, Zarlino, Berardi. The necessity of knowing all the schools, to compare the systems, led him to learn the German language, in order to read the writings of Kirnberger, Marpurg, Koch, and Albrechtsberger. Of all these authors, the last and Marpurg were those whose method and ideas he liked the best. After some years employed in these serious studies, he gained more knowledge of the theory and practice of music than any Freuchman at that period possessed. He associated himself with M. Focchi, composer and professor of singing; and the fruit of their union was the publication of a book, entitled "Principles of Accompaniment of the Italian Schools," Paris, 1804, in folio. This title was not justified by the

nature of the work, which was a sort of eclectic combination, in which very different doctrines were reconciled with more address than reason. The object which the authors proposed was not perceived.

At the time this work appeared, Choron was known through a publication of a different character. His thoughts upon the necessity of perfecting the instruction in primary schools had caused him to discover more simple and rational means of teaching the art of reading and writing. He published the result of his researches in 1800, under the title of "Method of Primary Instruction in the Art of Reading and Writing."

Desirous of increasing the taste for good music, and of diffusing the taste for instruction in the history and theory of this art, Choron associated himself, in 1805, in a musical commercial house in Paris, and carried into it all his fortune, to employ it in the publication of ancient classical works, forgetting there were then in France no readers of those productions. He bought, at a great expense, the cantatas of Porpora, *solleggios* for several voices, of Caresana, those of Sabbatini, pieces which were executed in the Sistine Chapel during holy week, a mass in double canon, and the *Stabat* of Pierluigi, of Palestrina, of Jossquin Després, the *Requiem* and the *Miserere* of Jomelli, the *Miserere* for two choirs of Leo, and many other compositions of the same sort.

At the same time he was occupied with the publication of a voluminous compilation under the title of "Principles of Composition of the Italian Schools." The exercises of counterpoint and fugue composed by Sala, and engraved upon copper plates at the expense of the King of Naples, formed the foundation of this collection.

After immense labor and enormous expense, this work appeared in 1808, in three great volumes in folio, of more than eighteen hundred pages, which, since then, have been divided into six volumes under new titles. Their publication annihilated Choron's fortune. But, endowed with rare activity, his mind was occupied with many works at once, and the "Principles of Composition" yet being unpublished, from reading the "Historical Dictionary of Musicians," written in German, by E. L. Gerber, he conceived the idea of publishing a work of the same kind in French. Unfortunately, the plan was made hastily, and the book of Gerber, which served as its base, was badly translated by a German who knew but little of French, and did not understand music. Choron, whose health was disordered, took M. Fayolle for a partner in this work, and it was the latter who did most of the labor; as Choron could give but little care to it, only a few articles were furnished by him. The most considerable piece which he put in the book was the historical introduction, a valuable summary, which had already appeared in the "Principles of Composition." The "Dictionary of Musicians" was published in the years 1810 and 1811. At the same time he wrote many remarkable reports upon matters of art and literature. That which he wrote upon the "Principles of Versification," by Scoppa, may be considered as a masterpiece.

Until then his life had been one of study; but in 1812 he became devoted to institutions of public utility. Occupied in this year in the compiling of the Bulletin of the Society for the Encouragement of National Industry, he was charged

by M. Bigot de Préameneu with a plan of reorganizing the masterships and the choirs of the cathedrals, as well as the direction of the music at *fêtes* and religious ceremonies. Some writing upon the objects of his new duties made him known, to his advantage, in relation to his ideas concerning the instruction of music; but he did wrong to call in question the utility of the Conservatoire, whose direction did not conform with his views. He conceived unjust prejudices against an establishment which for many years had produced fine talents of all kinds.

The restoration was at first fatal to the existence of the Conservatoire of music. Born of the revolution, this establishment had in the eyes of the partisans of the ancient monarchy an original stain, so that it was maintained with reluctance in 1814, and closed in the following year. This blow, given to the school towards which Choron had shown himself such a warm antagonist, seemed to be a triumph for him; but he had too much justice in his mind, and too much love for the art, to think of triumphing. Choron was director of the Opera in January, 1816. He was scarcely installed, than he acquired the conviction of the necessity of establishing, between the Conservatoire of music and the theatre which was trusted to him, intimate relations; he proposed a reorganization of this same establishment, under the name of the Royal School of Singing and Declamation. He was charged with the digesting of the scheme; and was often reproached afterwards for the mean combinations of the plan.

The administration of the Opera under the direction of Choron was not exempt from blame; but whatever may be said, it cannot be denied that it was the least expensive and the most productive. Struck by the difficulty that young composers met with in making themselves known, Choron desired to open an entrance to their career, and decided that a certain quantity of pieces in an act should be intrusted to them, that they might write the music. His benevolence for the artists made him forget that the Opera was organized for great things, and that it was not a theatre of experiment. Choron had too many enemies to be able to remain long at the head of the administration of the Opera. In the first month of the year 1817, he received his dismissal without any compensation: no one recollected that a man who had made so great sacrifices for music merited some reward from the government. Happily, he had energy in his soul, and ideas in his head; he lost no time in complaining of the ingratitude with which his services were paid, but employed himself for a long time upon works on music. He then undertook the editing of a sort of encyclopædia of musical sciences, by the title of "Introduction to the general and analytical Study of Music." Brilliant with new ideas, and strong in the fruitful principles of truth, this work was destined to place Choron in the rank of the most distinguished men, among men of letters and historians of music. No doubt, had he finished it, he would have introduced many new ideas in the theory of this art, and would have drawn upon himself the attention of musicians of all countries; but such was the activity of his mind, that he could not occupy himself a long time with the same object. At the end of a few months he was fatigued with his labor — lost his faith in his first conceptions.

Many times after he had read me passages from it, I have said, "How beautiful and new! Publish it, and your name will live in the history of art." He promised to work again. Eight days after, a new idea seized him, and he would be entirely indifferent for this work.

Next to the inconstancy of his views, the greatest obstacle that Choron met with, in the accomplishment of his projects upon musical books, consisted in the facility with which he surrendered himself to the objections made to him. Once, as an absurd observation was made to him against the fundamental principle of a "Treatise on Harmony and Accompaniment," which he had just finished, he stopped the printing of it, paid the printer, and condemned the book to forgetfulness.

In the first month which followed his expulsion from the opera, Choron conceived the project of a mode of instruction of music by a simultaneous method, which he called *concertante*. The idea had scarcely struck him than he rushed to M. de Pradel, superintendent general of the royal household, who had taken him under his protection, and obtained a slight sum in aid of the school he was about to establish. He began the work with his usual ardor. He multiplied his endeavors to bring his method to the perfection of which he believed it susceptible. He at length conquered all the difficulties, and published in 1818 his "Concertante Method of Music in four Parts." It was harshly criticized on account of some want of correctness in harmony; but it was no less one of those happy ideas that one would have put in practice for the simultaneous instruction of music. The new career in which Choron was placed gave him an occasion to employ those facilities no one knew he possessed. It was not only by an uncommon activity that he distinguished himself as chief of a musical institution, but his ardent soul communicated to his pupils a love for the art, and a sentiment which does not exist to so great a degree in pupils of any other school.

At first unperceived, the school of Choron excited attention, by exercises in which slight defects of exactness and completeness were redeemed by a deep sentiment of the character of music. There, for the first time, was heard in Paris the sublime compositions of Bach, Handel, Palestrina, and other great masters of the German and Italian schools.

If Choron had been able to realize his projects, if he had found all the protection that was due to him, we should congratulate ourselves upon the course he took after his administration of the Opera. But after the annihilation of the fruit of his efforts, we can but regret that he abandoned his labors as a literary musician for those of a professor. He composed a multitude of hymns and anthems for two, three, and four voices; he wrote chorals in church music for three voices; a method of church music; a collection of choral chants used in the churches of Germany, arranged for four parts, with organ; a complete selection of church music for one or more voices; and many other things of the same kind. As to the other works, which he announced by different prospectuses, the greater part were only projected, for he had not time to write them. It is in this category that are ranged "The Abridged Exposition of the Principles of Music;" "The Encyclopædic Manual of Music," which made a part of

the collection of the manual of M. Rovet; the translation of the "Treatise on Modern Composition," of Preindl, a work of which Choron had too favorable an opinion; the "Repertory of Contrapuntists;" last, "The Introduction to the general and analytical Study of Music," of which he unfortunately has finished but a part.

The chronological list of works composed or published by Choron are, 1. Collection of romances, songs, and poetry, set to music, Paris, Le Duc, 1806, 8vo. Among these romances are "The Sentinel," whose success has been great. 2. "Musical Bulletin of Augustus Le Duc, and Company," Paris, 1807 and 1808, 8vo., twenty-four numbers, of four pages each. 3. French and Italian notices upon Leo, Jomelli, Pierluigi, Palestrina, and Josquin Despres. These notices are put at the commencement of each number of the "General Collection of the Classical Works of Music," Paris, Le Duc. 4. "Principles of Accompaniment of the Italian School," by Choron and Fioechi, Paris, Imbault, 1804, one vol. in fol. 5. "Principles of Composition of the Italian Schools," Paris, Auguste Le Duc, 1803, three vols., fol. This work was divided into six volumes, with new titles, in 1816. The first volume contains a preface of 17 pages; the first book, which treats of harmony and accompaniment, in 102 pages, and a selection of *Partimenti* for the accompaniment, taken from the works of Durante, Cotinacci, Fearoli, and Sala, in 142 pages. The second volume contains a treatise on simple counterpoint, in 42 pages; the models of Sala for this counterpoint; the trios of Caresana, in 34 pages; a new French translation of the double and conditional counterpoint of Marpurg, in 52 pages; the models of Sala for double counterpoint, in 71 pages. The third volume contains the treatise on imitation and figure, translated from Marpurg, in 73 pages; and the models of Sala to the fugue in four parts, in 181 pages. The fourth volume contains the second collection of fugues by Sala, in 138 pages; the treatise of canons, translated by Marpurg, in 60 pages; and the models of the canons of Sala, in 68 pages. At the commencement of the fifth volume is a treatise upon the style of each kind of music, under the title of Musical Rhetoric, in 39 pages, followed by models of the *osservato* style of church music, extracts from the *esemplare* of P. Martini, and models of the concert style in Jomelli; these models are contained in 202 pages. The sixth volume contains models of madrigals without accompaniment, taken from works of Martini and Paolucci; models of duets, trios, and cantatas, taken from the works of Marcello, Lotti, Alexander Scarlatti, and Pergolese; models of vocal music of different kinds, as well as some models of instrumental style. The work finishes with elementary notions of acoustics, by an historical sketch of the progress of composition, and by the table of subjects. 6. "Historical Dictionary of Musicians," by Choron and Fayolle, Paris, Vallade, 1810 and 1811, two vols. in 8vo. This work reappeared with a new title in 1817, Paris, Chimot. Choron did not expect to take Fayolle as a partner when he undertook this work. He announced it in 1809, in a prospectus under the title of "Historical Dictionary of Music." 7. "Considerations upon the necessity of re-establishing the Chants of the Church of Rome in all the Churches of the French Empire"

Paris, Coureier, 1811, in Svo., of 15 pages. 8. "Elementary Method of Music and Church Music, for the use of Seminaries and Masterships of Cathedrals." Paris, Coureier, 1811. 9. "Report made to the Class of Fine Arts of the Imperial Institute of France upon the work of M. Scoppa, entitled, 'True Principles of Versification,'" Paris, Baudouin, 1812, one vol. in 4to. In this work, Choron has particularly examined the musical rhythm. 10. "Report made to the Class of Fine Arts of the Imperial Institute of France upon a Manuscript which contains the Collection of the Treatises of Music, by J. Le Teiturier," Paris, 1813, 8 pages in Svo. 11. "General Treatise on the Voice and Orchestral Instruments, and principally Wind Instruments, as used by Composers, by J. L. Francœur; new edition, reviewed and augmented by Modern Instruments, by M. Choron," Paris, 1813; "Encyclopedical Library of Music, containing Notes, Researches, and Dissertations upon Theoretical and Practical Music," Paris, 1814. 13. "Elementary Method of Composition, by J. G. Albrechtsberger, translated from the German by A. Choron," Paris, 1814. 14. "Method of Accompaniment according to the Principles of the Schools of Germany, translated from the German of Albrechtsberger," Paris, 1815. These two works have been reunited by Choron, with some additions, from the edition of the complete works of theory by Albrechtsberger. This complete translation has appeared under this title: "Methods of Harmony and Composition, by the Aid of which one can teach himself, to accompany a figured bass, and to compose all Kinds of Music, by J. G. Albrechtsberger," Paris, 1830, two vols. 15. "The Practical Musician, or Gradual Lessons which lead the Pupils into the Study of Harmony, Accompaniment, and the Art of Counterpoint, teaching them the Manner of composing all Kinds of Music, by Fr. Azopardi, Master of the Chapel of Malta, translated from the Italian by the late M. De Framery, new edition, revised, corrected, and put into a better order, by A. Choron," Paris, 1816. 17. "Choral Book of Paris containing the Chant of the Diocese of Paris, written in Counterpoint, in four Parts," 1817. This work is only a little book, which contains the annual masses and great solemnities. 18. "Concertante Method of Music in many Parts, of a Gradual Difficulty," Paris, 1817. 19. "Method of Church Music, otherwise called Ecclesiastical or Gregorian Chant, containing Lessons and Exercises necessary to attain to a perfect Knowledge of this Chant," Paris, 1818, 28 pages. 20. "Exposition of the Concertante Method of Music," Paris, 1818, a half folio in two columns. 21. "Salvation of the Holy Sacrament, containing Stanzas and Anthems in Honor of the Holy Sacrament and Holy Virgin, put to Music to three equal Voices, by Choron," Paris, 1818, one vol. in Svo. 22. "Concertante Method of Church Music and Ecclesiastical Counterpoint," Paris, 1819. 23. "Harmonic Solfeggio, offering a Methodical Series of Exercises in Harmony for four Voices, for a Master and his Pupils," one vol. The prospectus of this work has only appeared. 24. "Abridged Instruction upon the Organization and Direction of a School of Music, Solfeggio, and Singing," Paris, 1819. 25. "Elementary Exposition of the Principles of Music, serving as a Complement to

the Concertante Method," Paris, 1819. The prospectus of this work alone has appeared. 26. "Elementary Solfeggios, containing the First Lessons of Musical Reading, for the Use of Beginners," Paris, 1820. 27. "Elementary Concert Method of Music, in three Parts," Paris, 1820. 28. "Method of Singing used by the Pupils of the Royal Singing School," Paris, 1821. The first part only of this work has appeared. 29. "Choral Chants in four Parts, used in the Churches of Germany," Paris, 1822. 30. "Book of Chorals for three Voices, used in the Colleges of St. Louis." Choron has published some little works, very short, and a few occasional writings, of which but few copies were published, which are now quite rare.

CHORUS, or CHO. An old Scotch name for a kind of double trumpet; so called on account of the great power of its tone.

CHORUS. This word, as used by the ancient Greeks, implied indifferently a band of singers, a company of dancers, or an assembly composed of both, or of an indiscriminate mixture of persons; and had, in its general sense, rather a plural than a specific meaning; but the dramatic *chorus*, and the chorus employed in public festivals, always consisted both of singers and dancers, and formed a numerous body of performers.

The present signification of the word *chorus* is wholly confined to music, and in its general sense alludes either to a composition of two, three, four, or more parts, each of which is intended to be sung by a plurality of voices, or to the vocal performers who sing those parts, and form what is called the *chorus*, or choral part of the band.

CHORUSES form a separate mass. By uniting them to the complete orchestra, we have three masses to treat at once. When a chorus is not in unison, it should always form correct harmony in two, three, or four parts, independent of the orchestra. It must be treated exactly in the same manner as either of the other masses. The entire orchestra is often too powerful as an accompaniment for the chorus; in this case it must be accompanied by only one of the two masses, generally that of the stringed instruments, which are always to be preferred in compositions of a soft and tranquil character. When a composer wishes to accompany a voice by wind instruments, he must treat them as solo instruments; that is, employ only one of each sort, except in the terminations, where a. the mass may become necessary.

CHROMA. (Gr.) A term signifying a refined style of singing; also the former appellation of the character now called a *quaver*. See *QUAVER*.

CHROMATIC. A term applied by the ancient Greeks to that of their three genera or modes, which consisted of semitones and minor thirds. Modern musicians use the term *chromatic* to distinguish those passages of melody formed by successive semitonic intervals; or any series of dissonant and extraneous chords.

Chromatic, in the ancient music, is the second of the genera, or kinds, in which the consonant intervals were subdivided into their consecutive parts. The chromatic abounds in semitones; it had its name either by reason that the Greeks marked it with the character of color, or because the chromatic kind is a medium between the

other two, enharmonic and diatonic, as color is between white and black; or because the chromatic kind varies and embellishes the diatonic kind by its semitones, which have the same effect in music with variety of colors in painting. Boethius, and after him Zarlino, attribute the invention of the chromatic genus to Timotheus, a Milesian, in the time of Alexander the Great. The Spartans banished it their city by reason of its softness. Mr. Malcolm observes, that we are at a loss what use the ancients could make of these divisions and subdivisions. All acknowledged the diatonic to be the true melody; the others seem only humorous irregularities, calculated to please the fancy by their novelty and oddness; and were besides so very difficult, that

few, if any, are said to have ever practised them accurately among the ancient musicians.

CHROMATIC SCALE. This scale divides every whole tone of the diatonic scale, and consists of twelve semitones in an octave. No music is so far chromatic that it does not depend on the diatonic scale; and no passage can be called chromatic unless there is a regular progression by semitones. From the nature of chromatic intervals, which are not so agreeable to the ear, nor so easy for the voice, as the diatonic, we believe they should seldom be introduced, but reserved for more powerful effects than can be produced by diatonic progressions; and when they are used, they should be introduced so that the music may be both wild and agreeable.

CHROMATIC SCALE, WITH THE NUMERALS, LETTERS, AND SYLLABLES.

ASCENDING SCALE

Numbers.....	1	♯1	2	♯2	3	4	♯4	5	♯5	6	♯6	7	8

The student will notice, that in the application of syllables to altered notes, the vowel sound is changed by sharps to *ee*, and by flats to *ea*. When we speak of altered notes by numerals, we should say *sharp one, sharp two, flat six, flat seven*, &c.; and when we speak of them by letter, say *F sharp, C sharp, B flat, E flat*, &c. Either a flat, or a sharp, affects all the notes on the same degree throughout the measure in which it occurs, thus:

When the last note in a measure is altered, and the first note in the next measure is on the same degree, the influence of the flat or sharp is continued, thus:

A natural is used to contradict the influence of either the flat or the sharp.

A note *sharped* naturally leads to the next sound or degree above; and a note *flatted* leads to the next degree below. The *sharp*, the *flat*, and the *natural*, when introduced into any given melody or harmony, are termed *chromatics*. Naturals is sometimes used for diatonic, and also sometimes for physical, in which sense it is that performed by natural organs, that is, vocal music, in contradistinction to artificial or instrumental. Bishop Wilkins observes, that there appears a world of difference between natural and artificial sounds or things; the first ever appear adorned with all imaginable elegance and beauty, the latter, though the most curious in their kind, are infinitely rude and unbecom; the finest needle appears, when viewed with microscopes, a rough bar of iron; and the most accurate engraving, or embossment, as if done with a mallet or trowel.

CHRONOMETER. (From the Greek.) The name given to any machine constructed for the purpose of measuring the time.

The first modern chronometer was invented by Loulie, a French musician, who flourished about the latter end of the seventeenth century; and who, in his "*Elements, ou Principes de Musique mis dans un nouvel Ordre*," gives a full description of the instrument.

CHRISTMAS CAROLS. The custom of celebrating the festivities of the season by the singing of carols appears to have mingled with the Christmas observances from the earliest period. We have specimens of the carols themselves of a remote date; one in the British Museum is dated as far back as the thirteenth century. There are evidences of the universality of the practice in the fifteenth century; and the great popularity of these songs is proved by the fact of a collection thereof having been printed in the early part of the following century, by Wynkyn de Worde. It is to the Puritans that we appear to have been indebted for the introduction of the religious carol. Those enemies of all mirth, — even in its most innocent or valuable forms, — finding the practice of carol singing too general and rooted to be dealt with by interdiction, appear to have endeavored to effect their objects by directing it into a channel of their own; and — probably retaining the ancient airs — to have adapted them to strange religious ballads. The entire version of the Psalms of David, made by Sternhold and Hopkins, was published about the middle of the sixteenth century; and some time before the middle of the seventeenth, a duodecimo volume appeared, under the title of "*Psalms or Songs of Zion, turned into the Language, and set to the Tunes of a strange Land*, by W. S., William Slatyer, intended for Christmas Carols, and fitted to divers of the most noted and common but solemn Tunes, every where familiarly used and knowne."

CHRYSOGONUS. A celebrated singer in Greece, who lived about thirty years after Christ.

CHURCH MUSIC was introduced into public worship at a very early period. What the

music of the first Christians was can only be matter of conjecture; but it may be supposed to have been similar to that which had formerly been used in the different countries where they dwelt. In Judea, the chant was used; and in other parts of the Roman empire, the new Christians would have recourse to the pagan hymns of the Greeks and Romans. The ecclesiastical chants of the primitive Christians are supposed to be as old as the time of King David, for in his time music had a regular establishment in the worship of the sanctuary. The Hebrew psalmody, from the time of David, appears to have been transmitted from father to son till the middle of the first century of the church.

Till the time of Palestrina, about the year 1570, sacred music was nothing but a tissue of sweet sounds, almost destitute of perceptible melody. Music, like the other arts of civilization, suffered by the Goths and Huns, who overran Rome and Western Europe. It was not until the eleventh century that Guido, a Benedictine monk, in Italy, laid the foundation of solfège, and Franco, a German, in the latter end of the same century, laid the foundation of figured music. In the four following centuries, harmony, counterpoint, and fugue were gradually developed. Thorough bass was discovered by Viadama, an Italian, two hundred years ago. All the inventions in music, and the improvements, have been by Italians and Germans. Lulli first introduced overtures. And even this imperfect music, in which one part only executed the melody, was performed in Italy with but a small number of instruments. Paul Veronese, the great painter, who lived in the middle of the sixteenth century, has preserved to us the form of those which were used in his time in his famous picture, the "*Cena di San Giorgio*," namely, a double bass, a violoncello, a violin, a flute, and the sackbut. But it was not till the time of the immortal author of "*The Creation*," who only died at Vienna so recently as 1809, that music attained its modern perfection. No man before him conceived the idea of an orchestra composed of eighteen kinds of instruments.

When we look at church music, as we now enjoy it in the United States, and compare it with its infancy, we cannot but wonder at the progress it has made. One of the most essential preparations for eternity is delight in praising God: to be able to do this acceptably, in sacred song, is a higher acquirement than even devotedness in prayer. Although the spirit be not master of that which it creates through music, yet it is blessed in this creation, which, like every creature of art, is mightier than the artist.

CIACONNE. (F.) An obsolete kind of air, derived from an old Italian dance, one feature of which is its obligatory ground bass.

C IN ALT. (I.) The eleventh above the G, or treble clef note; the fourth note in alt.

C IN ALTISSIMO. (I.) The octave above C in alt; the fourth note in altissimo.

CIS. (G.) C sharp, as *cis dur*, C sharp major; *cis moll*, C sharp minor.

CIAMPI, FRANCESCO. A Neapolitan composer and violinist. He published several operas at Venice between the years 1729 and 1762; he was likewise the author of some admirable productions for the church. Dr. Burney was in

possession of a Miserere and a mass by this master, possessing great merit.

CIANCHETTINI, PIO, son of F. Cianchettini, of Rome, and of Veronica Dussek, was born in London in 1799. When only five years old, he performed in public a sonata of his own composition, in the Opera concert room in London; after which he travelled with his father through Germany, Holland, and France, in each of which countries he exhibited his talent with great applause, and was even called the British Mozart. On his return to London, he continued his studies, and at eight years old spoke perfectly well the French, English, Italian, and German languages. Immediately after this age, he commenced the composition of various instrumental pieces; amongst the rest a grand concerto, which he executed himself at a concert in London, in 1809, receiving the greatest applause. Cianchettini attended Madame Catalani, when first in England, in several of her musical tours, acting as her composer and conductor of her concerts, and was reengaged in the same capacity by Madame Catalani on her return to England in 1822. In the Italian songs composed for Catalani by Cianchettini, he has been very happy in adapting his music so as to display the most brilliant powers of that singer. In the other songs which he has written, he has shown great taste in selecting the most classical words in British poetry; thus attempting to embody with music the finest effusions of a Milton and a Pope. His cantata for two voices, the words of which are taken from the *Paradise Lost*, was his first specimen in this style of composition, and abounds in sweet and tender, and at the same time scientific passages. His music to Pope's "*Ode on Solitude*" is also fraught with grace and feeling. The following are among the principal works of Pio Cianchettini: "*A Cantata for two Voices, with Choruses, Words from the Paradise Lost*;" "*Take, O, take those lips away*," song; "*Fantasia on Di tanti palpiti*, for Piano-forte;" "*Introduction and an Italian Air, with Variations for Piano-forte and Flute or Violin*;" "*Pope's Ode on Solitude*;" "*Sixty Italian Catches for two, three, and four Voices, by Padre Martini, with an Accompaniment for Piano-forte*;" "*Scena ed Aria, Ah quando cessera*;" "*Duetto, Ecco di Pafò il Tempio*;" "*Benedictus, three Voices*." Cianchettini died in England in 1851.

CIBBER, MRS., sister to Dr. Arne. She was celebrated as a singer till the year 1736, when she first appeared as a tragic actress. Her singing was much esteemed by Handel, who adapted one of the airs in the "*Messiah*" principally for her voice.

CIBULKA, or ZIBULKA, M. A. A good vocal composer, and performer on the harmonica, born in Bohemia about the year 1770. He published much vocal and instrumental music between the years 1791 and 1810.

CIECO, FRANCESCO. A celebrated Florentine organist. He was the son of Jacobo a painter, of great probity and simplicity of manners. During childhood he was deprived of his sight by the small-pox. Being arrived at adolescence, and beginning to be sensible of the misery of blindness, in order to diminish the horror of perpetual night, he began, in a childish manner

to sing; but advancing towards maturity, and becoming more and more captivated with music, he began seriously to study it as an art, first by learning to sing, and afterwards by applying himself to the practice of instruments, particularly the organ, which he soon played without ever having seen the keys, in so masterly and sweet a manner as to astonish every hearer. Indeed, his superiority was acknowledged so unanimously, that, by the common consent of all the musicians of his time, he was publicly honored at Venice with the laurel crown, in the manner of a poet laureate, for his admirable performance on that instrument before the King of Cyprus and the Duke of Venice. He died in 1390.

CIFOLELLI. An Italian dramatic composer in France about the year 1770.

CIFRA, ANTONIO, a pupil of Palestrina, was chapel master at Rome. He published some motets and psalms at Venice in 1629, which are better than his secular music; in reference to some of which, Dr. Burney says, "We cannot help respecting these old masters for their science in ecclesiastical composition, in which they have left such admirable examples of pure harmony and ingenious contrivance; yet whenever, like Mr. Vellum, in Addison's comedy of the 'Drummer,' they choose to be jocular, or to attempt grace and gayety, they become grotesque and ridiculous."

CIMA, GIOVANNI PAOLO. An eminent organist and composer at Milan from 1591 to 1610. He acquired great reputation among the learned musicians of his time for his construction of perpetual fugue or canon.

CIMA, GIOVANNI BATTISTA. A good organist and composer at Milan about the year 1626.

CIMA, ANDREA, a brother of G. P. Cima, was chapel master and organist at Milan and Bergamo. He published concertos for two, three, and four voices, at Milan in 1614, and at Venice in 1627.

CIMADOR, GIAMBATTISTA, born at Venice in the year 1761, was a musician of no great scientific acquirement, though his works are full of fire and imagination. Before he quitted Italy, he composed an opera called "*Pigmalione*," which was well received by the public as a spirited and original work; the composer himself was, however, so discontented with it, that he threw the score in the fire, proposing never to write original music again; he kept his word, we believe, as we are not aware that he subsequently did more than arrange the music of other composers. His most important work, in this latter way, was an arrangement of twelve symphonies of Mozart, as sextets, with a seventh part *ad lib.*; this was done while Cimador was in England, where he remained many years, being, during part of the time, engaged in the music trade. It is stated by Gerber, that Cimador was a pupil of Haydn in composition.

CIMAROSA, DOMINICO, was born at Naples in 1751. He received his first instructions in music from Aprile, and subsequently studied on the principles of the great Durante, at the conservatory of Loreto, where he took advantage of

the valuable lessons of Fenaroli, a pupil of Durante. He became early in life celebrated as a dramatic composer, and in 1787 received an invitation from the Empress Catharine of Russia to accept the office of dramatic composer to the court of St. Petersburg. He did not, however, long remain in that capital, for we find him in 1791 again in Italy, whence he was invited to Vienna by the Emperor Leopold, being offered the appointment of conductor of the Italian Opera in that city, in the room of Salieri. In the following year he accordingly proceeded to Vienna, and soon composed for the theatre there one of his best operas, "*Il Matrimonio Segreto*." He next revised his opera of "*Il Pittore Parigino*," and produced it on the same stage. Shortly after this, the Emperor Leopold died, when his successor, the Emperor Francis, presented Cimarosa with a splendid gold snuffbox, as an acknowledgment of the sense he entertained of his talents; at the same time stating, that he had yielded to the wishes of the inhabitants of Vienna, by restoring their favorite Salieri to his office of opera conductor. Up to this period Cimarosa had made himself known by the composition of the following operas: "*L'Italiana in Londra*," 1779; "*Il Convitto*," "*I due Baroni*," "*Gli Inimici Generosi*," and "*Il Pittore Parigino*," 1782; "*Artaserse*," of Metastasio, and "*Il Falegname*," 1785; "*I due Supposti Conti*," 1786; "*Volodimiro*," "*La Ballerina Amante*," and "*Le Trame Deluse*," 1787; "*L'Impresario in Angustie*," "*Il Credulo*," "*Il Marito Disperato*," and "*Il Fanatico Burlato*," 1788; "*Il Convitato di Pietra*," 1789; "*Giannina e Bernadotte*," "*La Villanella riconosciuta*," and "*Le Astuzie Femenili*," 1790; and "*Il Matrimonio Segreto*," 1792. Cimarosa now resumed his function of chapel master at Naples, where his talents and industry had acquired him numerous friends and admirers. He, however, continued his labors in that city only a very few years longer, producing there, amongst other minor works, the following: "*Il Matrimonio per Susurro*," "*La Penelope*," "*L'Olimpiade*," and "*Il Sacrificio d'Abraham*," in 1793; "*Gli Amanti Comici*," and "*Gli Oraci*," in 1797. When the French revolutionary armies extended their successes to Naples, and occupied that city, during which time it was said that Cimarosa evinced a decided partiality for their cause, he lost the favor of the court, and at length very narrowly escaped the forfeiture of his life. He died at Venice in 1801, from the effects, according to some of his biographers, of the cruel treatment he experienced in the prisons of Naples. This fact, however, appears to rest on no good authority, as, after his arrival at Venice, in 1800, he not only completed the composition, and brought out his opera, of "*L'Imprudente Fortunato*," but commenced writing another opera, entitled "*Artemisia*," only the first act of which he had completed before his death. Several composers afterwards attempted to finish it, and the piece in this state was announced for performance at Venice; but the public caused the curtain to be lowered in the middle of the second act. All the operas of Cimarosa are distinguished by their contrivance, originality of ideas, richness of accompaniment, and the skill displayed in scenic effect. These merits are peculiarly conspicuous in his comic operas. We cannot help feeling, as we listen attentively to each passage, that the score must have been dictated by the inspiration

of the moment. The enthusiasm excited in Italy by the "*Matrimonio Segreto*" can hardly be conceived. In a word, it at once fixed the wavering taste of the Italians. Cimarosa himself presided at the piano during the first seven representations of the opera at Naples—a circumstance very unusual there. At Vienna, the emperor, after hearing the first representation of it, invited both the vocal and instrumental performers to a banquet, after partaking of which, they proceeded the same evening to the theatre, for its second performance.

Several traits have been cited of the modesty of this great master. A painter, desirous of paying him a compliment, said that he considered him superior to Mozart. "Sir," replied Cimarosa with warmth, "*what would you think of the man who should say that you are superior to Raphael?*" Amateurs have differed much in opinion as to the comparative pleasure derivable from the dramatic works of Mozart and Cimarosa. Napoleon once asked Grétry (who knew little about Mozart's music) what was the exact difference between these two great composers. "Sire," replied Grétry, "Cimarosa places the pedestal in the orchestra, and the statue on the stage; whereas Mozart fixes the pedestal on the stage, and the statue in the orchestra;" meaning by this to express, that the renown of Cimarosa depended on the vocal, of Mozart on the instrumental parts. Some of Cimarosa's serious operas, especially his "*Orzi e Curiazi*," are as great in their style as his *buffa* compositions.

CINQUE-PACE. The name of a dance, the measures of which are regulated by the number five.

CINTI. See DAMOREAU.

CIPRIANO DI RORE, one of the most renowned composers of the sixteenth century, was born at Mechlin, in Flanders, 1516. In the title page of a book published at Venice in 1549, he is called the scholar of Adrian Willaert. In the preface of the "*Canti Carnascialeschi*," published at Florence in 1559, he is called *Cantore*, as if he had been merely a singer in the service of the house of Medici. However, he seems to have spent the greatest part of his life in Italy as a composer; in which character he is mentioned with great respect by Zarlino, Vincenzo Galilei, Pietro Pontio, and almost every Italian musical writer of his time; and, after having been successively *maestro di capella* to the Duke of Ferrara, the republic of Venice, where he was the immediate predecessor of Zarlino, and the Duke of Parma, he died at the court of that prince, in 1565, aged forty-nine. His motets and madrigals were first published at Venice in 1544, and after his decease were republished with his masses. His "*Cantiones Sacras*," or motets, were likewise printed at Louvain in 1573.

CIPRIANO, CORNIER. A violinist, resident in Poland; he was a scholar of Nazari of Venice, and was born in that town. He composed much music for his instrument, and died at Warsaw in 1789.

CIRILLO, FRANCESCO. A Neapolitan dramatic composer about the year 1650.

CIRRI, GIAMBATTISTA. An Italian violoncellist and instrumental composer between the years 1763 and 1795. Some of his music has

been published in London, and other pieces at Berlin and in Italy.

CISTELLA. (L.) An instrument formed of, or contained in, a little chest.

CITHARA. (L.) An instrument of antiquity, the precise construction of which is now unknown, but which is supposed not to have been unlike the lyre. At first it had only three strings; but the number was, at different times, increased to eight, nine, and lastly to twenty-four.

CITHARA BIJUGA. (L.) A kind of cithara, so called from its having two necks, which determine the lengths of the two sets of strings.

CITHARA HISPANICA. (L.) Spanish guitar.

CITHARISTICA. (L.) An adjective applied to music composed for, or intended to be accompanied by, the harp or guitar.

CITHARODIA. An expression used by the ancients, to signify the art of singing to the lyre. To be able to sing to that instrument was to be master of the citharodia.

CITOLE. The word *citole* is derived from *cistella*, a little chest, and was the name formerly given to an instrument of the most simple construction, being little more than a small chest with strings on the lid or top.

CITTERN. The old English name of the guitar.

CLAGGET. An English composer, and inventor of several improvements in musical instruments, which he commenced exhibiting to the public in what he called a musical museum, about the year 1789. His compositions are chiefly instrumental.

CLAIR, J. M. LE. A French violinist, and composer for his instrument. He was chamber musician to Louis XV. He was assassinated in the streets of Paris in 1764.

CLANGOR. A loud, shrill sound, peculiar to the trumpet.

CLAPPER. A certain longitudinal piece of metal, freely suspended by one of its ends from the central and upper part of the interior of a bell, and which, actuated by the oscillating motion of the machine, strikes the *barrel* with its lower end, and produces those vibrations which cause the sound.

CLARICHORD, or CLAVICHORD. A keyed instrument, now out of use, somewhat in the form of a spinet, and the strings of which are supported by five bridges. One distinction in the clarichord is, that the strings are covered with pieces of cloth, which render the sound sweeter, and, at the same time, so deaden it, as to prevent its being heard at any considerable distance. On this account, it was formerly much used by the nuns, who could pursue its practice without disturbing the silence of the dormitory. It is sometimes called the dumb spinet.

CLARINET. A wind instrument of the reed kind, the scale of which, though it includes every semitone within its extremes, is virtually defective. Its lowest note is E below the F clef, from which it is capable, in the hands of good solo performers, of ascending more than three octaves. Its powers through this compass are not perfectly equal; the player, therefore, has not a free choice in his keys, being generally confined to those of C and F, which, indeed, are the only keys in which the clarinet is heard to advantage. The music for this instrument is, therefore, usually written in those keys. There are, however, B flat clarinets, A clarinets, D clarinets, B clarinets, and G clarinets; though the three latter

are scarcely ever used, at least in this country. Within a few years, this instrument has been much improved. It approaches in tone the female voice nearer than any other instrument, and, as a principal in the orchestra, it now sustains a distinguished part. This instrument, which is of German origin, was introduced into Great Britain about the year 1779; and for the first twenty years its use was confined to the military; for at the grand performance at Westminster Abbey, 1791, forty oboes and bassoons were admitted into that stupendous orchestra of a thousand performers, but the clarinet had not gained sufficient reputation to obtain a place. Soon after this period, from its warlike tone, it was adopted by all the military bands upon the continent; and the French found it of such singular efficacy in leading on the troops to battle, that all their regiments were headed by vast groups of these performers.

At the federation in Paris, July 14, 1802, eighteen thousand troops passed in review before the Consul Bonaparte, to which were attached more than twenty bands of fifty performers each, forming an aggregate of more than one thousand musicians. The ordinary practice of military men is not less than six hours per day, and that for twenty years is but just adequate to conquer all the difficulties of this instrument. Probably the greatest good effected by the thirty years' war was the improvement of the wind instruments. It was the incessant practice of fifty thousand performers spread over the continent, that drew forth the genius and powers of those instruments, by which Haydn and Mozart perfected the musical science. In quality of tone the clarinet is warm and powerful, partaking somewhat of the oboe and trumpet combined; and the lustre of its tones adds great refulgence to the orchestra. The tone of the clarinet is peculiarly graceful in the open air.

The clarinet is divided into four parts—the mouthpiece, (on which a flat reed is tied,) the upper joint, the middle piece, and the bell, or bottom piece. It has thirteen holes, five of which are stopped by keys. It is to those keys that the instrument is indebted for its chief use, for before they were contrived, the clarinet could not be used in concert, as it is at present. When played by itself, the fulness and sweetness of tone is very pleasing; but when joined with other instruments, or in concert with other instruments, its charming effect is too obvious to be particularly described. To make it familiar, and render playing on it easy, the following plain and concise instructions are intended:—

The clarinet must be held near the centre of the body, the bell part inclining downwards, with the left hand uppermost, and the right lowest. The thumb of the left hand is for the key nearest the mouth, and the first open hole that is underneath; the first finger for the second or upper key, and the second open hole; the second finger for the third open hole; the third finger for the fourth open hole; and the little finger of the left hand for the two long or lowest keys. The first finger of the right hand is for the fifth open hole; the second finger for the sixth open hole; the third finger for the seventh open hole; and the little finger of the right hand for the eighth or lowest open hole, and the short key at the bottom; so that the thumb and first and little finger of the left hand manage six holes, and the little finger of the right hand two.

Blow moderately strong the *chalmreau* or lowest notes; but for the clarinet notes, the reed must be pinched with the lips a little, and blown a little stronger; yet be careful that the teeth do not touch the reed.

In the following scale, the black notes represent the holes which are to be stopped, and the ciphers those which are to remain open.

A COMPLETE SCALE OF NOTES FOR THE CLARINET.

A different way of playing these notes.

Left Hand

Right Hand

Ex. 1 Ex. 2. Ex. 3. Ex. 4.

The compass of the clarinet extends from *e* to *four times marked c*, (see Ex. 1,) including all the intermediate semitones; but in orchestral music, the passages seldom run above *thrice marked c*, (Ex. 2,) and the notes between *e* and *once marked bb* (Ex. 3) are very soft; they are often used in arpeggios. Those included between

once marked *bb* and thrice marked *e* ♯ (Ex. 4) are more sonorous and brilliant, &c., &c.

Above this compass, they cannot be subdued without great difficulty. There are three kinds of clarinets used in the orchestra, the *A*, the *Bb*, and the *C*. Those in *C* execute the notes as they are written; those in *Bb* play them a major second lower, and those in *A* a minor third lower than they are written. These different kinds of instruments are used because some keys, even among those in common use, would be imperfect or impracticable on the *C* clarinet; such keys, for example, as have more than two sharps or flats for their signature.

The *C* clarinet is used for the keys of *C*, *G*, and *F* major, and their relative minors, *A*, *E*, and *D*; the *Bb* clarinet for the keys of *Bb*, *Eb*, *Ab* major, and their relative minors, *G*, *C*, *F*; the *A* clarinet for the keys of *A*, *D*, and *E* major, and their relative minors *F*♯, *B*♯, and *C*♯; the *Bb* clarinet diminishes the number of flats in the signature; that of *A* the number of sharps. The composer chooses one of these three clarinets, according to the key in which the piece is written; and, in selecting one, his aim is to have only a single flat or sharp after the clef, or at most two.

CLARINO. A kind of trumpet, consisting of a tube narrower than that of the common trumpet, and the tone of which is exceedingly shrill. The clarino was long a favorite instrument with the Portuguese, who had it from the Moors. *Clarino* is now the name given by the Germans to the common trumpet.

CLARION. An octave trumpet. It is said that the clarion now used among the Moors served anciently for a treble to several trumpets, which sounded tenor and bass.

CLARI, CARLO MARIA, of Pisa, a scholar of Colonna, and chapel-master of the cathedral of Pistoja. His excellent chamber duets and trios were not published till the year 1720; they had, however, been dispersed in manuscript long before that period, and though the duets of Steffani were more early known, it does not appear that they had been his model; for he was a composer of great eminence so early as the year 1695, when he set an opera for the theatre of Bologna, entitled "*Il Sario Delirante*," which was extremely admired. His style of *duetti* and *terzetti* certainly resembles that of Steffani; but we find no similarity of passage, and sometimes he is even superior to the abate, in grandeur of subject and elegance of phrase, in his melodies. Handel is supposed to have availed himself of Clari's subjects, and sometimes of more, in the choruses of *Theodora*.

CLARK, RICHARD, born at Datchet, near New Windsor, in 1783, was educated under Dr. Aylward and Mr. Sexton, in the choir of St. George's Free Chapel of Windsor, and under Stephen Heather, at Eton College. On the death of his grandfather, Mr. Sale, in 1802, Clark was elected his successor, as lay clerk of St. George's Chapel, and gentleman extraordinary at Eton College. In 1805 he was appointed a deputy at Westminster Abbey for J. B. Sale, and on the death of Page was appointed deputy at his majesty's Chapels Royal, for Bartleman, and secretary

to the Glee Club. In 1811 he quitted his place at Windsor. In 1814 he published, principally for the use of the above-named club, a volume containing the poetry of glees, madrigals, rounds, and catches, with a preface, in which is given an account of the national anthem of "God save the King," the music of which is there attributed by Clark to H. Carey; also a notice of the origin of the Glee Club, with some account of the word *madrigal*, and its introduction into England about 1583; together with a list of the prizes given at different periods by the Nobleman's Catch Club, and the Glee Club, up to the year 1812; some remarks on the custom of applauding the grace, "*Non nobis, Domine*;" also his regret at not being able to discover the author of those beautiful words beginning,

"When winds breathe soft along the silent deep,
The waters curl, the peaceful billows sleep."

The account of "God save the King" in this volume being contradicted, Clark set himself about finding the real author and composer; and after more than eight years' research, (in which time he appears to have been indefatigable,) by a strong chain of circumstantial evidence he labored to prove that the national anthem was written by Ben Jonson, the music by Dr. Bull, and that it was first sung at Merchant Tailors' Hall on July 7, 1607, by the gentlemen and children of his majesty's Chapel Royal, when King James I. was present, at a dinner given by that company on his escape from the powder plot. This curious account was published in 1821, with forty-three plates, among which are portraits of Jonson, Bull, King James, &c.; the work appears by the list of subscribers to have been very highly patronized. There are, indeed, some curious facts in it which had previously not appeared in print. After this work was published, Clark produced three tunes from very rare collections, which he had spoken of, but from their scarcity could not meet with in time to print for his subscribers; these went further to prove that the same air of "God save the King" existed in the reign of King Charles, and was composed by Bull.

On the death of Corfe, Clark was appointed one of the gentlemen of his majesty's Chapels Royal, and continued a deputy for J. S. Smith; he was also appointed a deputy at St. Paul's for Sale. Clark's compositions consist of several "Chants, Commandments, Anthems, and Glees;" one of these was a candidate for the prize given by the gentlemen of the Glee Club. None of them have been printed.

CLARKE, CHARLES E. J., organist of the cathedral at Worcester, was a chorister in the same cathedral. He was appointed organist to the cathedral at Durham before he had attained his sixteenth year, and two years afterwards, in 1814, a vacancy occurring in the situation of organist to the cathedral at Worcester, his native city, he was elected.

CLARKE, DR. JEREMIAH, was educated in the Royal Chapel, under Dr. Blow, who entertained so great a friendship for him that he resigned in his favor the place of master of the children and almoner of St. Paul's; Clarke was appointed his successor in 1693, and shortly after he became organist of that cathedral. In July 1700, he and his fellow-pupil were named gentle

men extraordinary of the Royal Chapel; and in 1704 they were jointly admitted to the place of organist. Clarke had the misfortune to entertain a hopeless passion for a very beautiful lady, in a station of life far above him; his despair of success threw him into a deep melancholy, and on the 5th of November, 1707, he shot himself.

The compositions of Clarke are few; his anthems were remarkably pathetic, at the same time that they preserve the dignity and majesty of the church style; the most celebrated of them are, "I will love thee," printed in the second book of the *Harmonica Sacra*; "Bow down thine ear;" and "Praise the Lord, O Jerusalem." The only works of Clarke published by himself are lessons for the harpsichord, and sundry songs, which are to be found in the collections of that day, particularly in "The Pills to purge Melancholy;" but they are there printed without the basses. He also composed, for D'Urfey's comedy of "The Fond Husband, or the Plotting Sisters," that sweet ballad air, "The bonny gray-eyed morn," which Gay has introduced into the "Beggar's Opera," and is sung to the words, "'Tis woman that seduces all mankind."

CLARKE, DR. JOHN, now CLARKE WHITFIELD, was born at Gloucester in 1770. He commenced his musical education at Oxford, in 1783, under Dr. Philip Hayes, professor of music, went to Ludlow in 1789, under the patronage of the Earl of Powis, and was elected organist of St. Lawrence's church in that town. In 1793 he took his degree of Mus. Bac. at Oxford, and in 1795 went to Ireland, being appointed organist of the metropolitan cathedral at Armagh. In the same year he was created Mus. Doc. by Trinity College, Dublin, and elected master of the choristers of Christ Church and St. Patrick's Cathedral in that city. He returned to England in 1798, owing to the Irish rebellion; and was next elected organist and master of the boys of Trinity and St. John's Colleges, Cambridge, which appointment he held for more than twenty years. In 1799 he was admitted Mus. Doc. in the university of Cambridge, and in that of Oxford in 1810. In 1814 he took the surname of Whitfield, by sign manual, on the death of his maternal uncle, Henry Fotherley Whitfield, Esq. In 1820 Dr. Clarke was elected organist and master of the choristers of Hereford Cathedral; and in November, 1821, professor of music at Cambridge. His vocal compositions are numerous. The principal are, four volumes of cathedral music in score, several sets of glees, two volumes of vocal pieces, with original poetry, by Sir Walter Scott, Lord Byron, Mrs. Joanna Baillie, Mr. Hogg, &c.; various songs and glees, from "The Lay of the last Minstrel," "Marnion," "Rokeby," "Lord of the Isles," "The Pirate," &c., many of which were popular, as, "Fitz-Eustace," "Lochinvar," "The last Words of Maruion," "The Coronach," "The Cypress Wreath," "Is it the roar of Teviot's tide?" "Ave Maria," "Sweet Teviot," &c., with numerous single miscellaneous songs, duets, and glees; an oratorio in two acts; the first act consisting of the crucifixion, the second of the resurrection. The crucifixion was inimitably performed in the cathedral at Hereford, at the triennial music meeting, 1822, by a select and numerous band, led by Mr. F. Cramer, and received with universal approbation. This oratorio excited additional

interest from the publicity of the circumstance of its having been composed during the agonized feelings of the author for the loss of his eldest son, an amiable young man, midshipman in his majesty's ship York, who perished with the whole crew, December 24, 1808. Dr. Clarke further edited several works, principally consisting of fifteen volumes of Handel's oratorios and coronation anthems, with a compressed accompaniment for the organ or piano-forte; the beauties of Purcell, in two volumes; two volumes of anthems, by celebrated composers; Arne's "Artaxerxes;" Matthew Lock's music in "Macbeth;" with numerous single songs, duets, glees, &c., &c.

CLASING, JOHANN HEINRICH, music teacher, classical composer, and pianist, was born at Hamburg in 1779. Thoroughly grounded in good music himself, he zealously labored, and with some success, to elevate the musical character of his native city. As a teacher, he was distinguished for thoroughness, and formed many excellent pupils. Both in and about Hamburg he took an active part in the bringing out of great church compositions. He edited many of Handel's works, with a new instrumentation. His piano-forte arrangements of some of Handel's oratorios, especially the "Messiah," are considered among the Germans as the very best extant. As a composer, for the church especially, Clasing was distinguished; but his creations, flowing from a true religious spirit, were poorly appreciated by his contemporaries. As a pianist, his feeling and expressive delivery gave him a high rank. He is described as an extremely modest, unselfish, amiable, and upright man; and yet, though every Hauburger prized his merits, and loved to talk of him as "our Clasing," he remained all his life a poor private teacher, harassed for the means of living, and dragged out his last years in poverty and sickness. He died on the 8th of February, 1829. His principal works are, 1. "Pater Noster," in German, for four voices, without accompaniment; 2. "Belsazar," an oratorio; 3. "Jephtah's Daughter," an oratorio for three voices, chorus, and orchestra; 4. "Micheli et son Fils," an opera, as sequel to Cherubini's "Deux Journées;" 5. "Which is the right one?" a comic opera, &c.; also a trio for piano, violin, and violoncello; a sonata for piano and violin; fantasias rondos, &c.

CLAUDE, or CLAUDIN, LE JEUNE, whom the French rank among their first composers of the sixteenth century, was a native of Valenciennes, born about 1550. He was not only in the service of Henry IV., but in great favor at the court of his predecessor, Henry III., particularly in the year 1581, at the wedding of the Duke de Joyeuse, when his music is said by several writers of the times to have produced an extraordinary effect. Thomas d'Embry, who was his intimate friend, and had the story from Claudin himself, relates what happened on this occasion in a less suspicious manner than the rest. "This great musician," says he, "at first caused a spirited air to be sung, which so animated a gentleman who was there, that he clapped his hand on his sword, and swore it was impossible for him to refrain from fighting with the first person he met; upon which Claudin caused another air to be performed of a more soothing kind, which soon restored him to his natural

temperament. Such power," continues he, "have the key, movement, measure, and inflections of the voice over the affections." His works consisted chiefly of miscellaneous songs and psalms. His songs are chiefly French, and in many parts like the madrigals of Italy.

CLAUDIANUS, MAMERTUS, a priest, who lived at Bienné about the year 462. Among his learned writings are many hymns and psalms, which he taught himself to the singers of his church. He is chiefly noted for having first composed and introduced the little litanies still sung in the Catholic church three days before Pentecost. He is also thought to have been the composer of the passion hymn, "*Pange lingua gloriosi prelium.*"

CLAUDIO DA CORREGGIO. See **MERULO.**

CLAUSE. Phrase.

CLAUSULA. (L.) In German, *clausel.* A close, or cadence. **CLAUSULA AFFINALIS.** (L.) A Latin name given by the old composers to a cadence in a key related to the predominant key of the piece; as where a piece of music in D minor ends with a cadence in F major.

CLAUSULA DISSECTA. Old Latin name for half cadence. **CLAUSULA PEREGRINA.** (L.) This term meant a cadence in a key whose key note was not in the scale of the principal key. More lately, a cadence in any key.

CLAUSULA PRIMARIA, or PRINCIPALIS. (L.) The principal or customary cadence in the key of the piece, called also *clausula finalis* or *final close.*

CLAUSULA SECUNDARIA, or DOMINANS. (L.) The secondary or dominant close; i. e. the cadence in the fifth.

CLAUSULA TERTIARIA, or MEDIANS. (L.) The cadence of a piece in a minor key, when it took place in the key of the third.

CLAVECIN, (F.) CLAVICHORD. CLAVIER. (G.) An old keyed, stringed instrument, now universally superseded by the more brilliant toned piano-forte. Its compass, in its prime, was five octaves, from FF to *f* thrice marked. Yet more modern ones are found with five and a half and six octaves. It dates far back into the middle age; but it is not true that Guido of Arezzo was its inventor, though he is commonly supposed to have been the inventor of the *spinnet*, an instrument which differs from the clavichord, inasmuch as its strings are snapped by goose-quills. The clavier or clavichord is unquestionably of later origin. It came into use in the seventeenth century, and throughout the whole of the eighteenth, and even in the beginning of the nineteenth century, it was the favorite instrument of the dilettanti, as the piano-forte is now. The common English term for the above is *harpsichord.*

CLAVICEMBALO. (I.) } Old names for the harpsichord.
CLAVICYMBALUM. (L.) }
CLAVICYMBEL. (G.) }

CLAYTON, THOMAS. One of the royal band in the reign of William and Mary. Having been in Italy, he persuaded himself that he could reform the bad musical taste of the English by his own compositions in the Italian style, and he accordingly, in the year 1705, arranged an opera called "*Arsinoe*," in which Dr. Burney says, "not only the common rules of musical composition were violated in every song, but also the prosody and accents of our language."

CLAVIS. (L.) Literally, a *key.* Used in music in several senses: 1. As synonymous with **CLEF**, (which see:); 2. A note or tone; as, *claves signate*, (which see:); 3. The lever to the bellows of an organ; 4. The finger keys to a piano-forte or organ; 5. The keys which open and shut the holes in a wind instrument, as the flute or clarinet.

CLAVES SIGNATE. (L.) *Keys with signs.*

An appellation given to the colored lines used by Guido in his tablature, before the invention of clefs, to determine the situations and powers of the notes.

CLAVICITHIERUM. An ancient oblong keyed instrument. See **CLARICHORD**; also **SPINET.**

CLAVIER. (F. G.) The key board of a piano or organ.

CLEEMANN, F., a native of Mecklenburg, published some German songs in 1797, and in 1800 a work entitled "*The Musician's Manual.*"

CLEFS. Literally *keys.* Certain characters placed at the beginning of the several staves in a composition, to determine the local names of the notes, and the sounds in the great scale which they are intended to represent. The three clefs now in use—viz., the F, or bass clef; the C, or tenor clef; and the G, or treble clef—by the several situations given them on the staff may operate as so many more different clefs, and furnish us with the means of expressing all the notes within the usual compass of execution, in both vocal and instrumental music, without a confused addition of leger lines, either above or beneath the staff.

CLEGG, JOHN. An English violinist. He travelled with Lord Ferrers to Italy, and much improved his taste during his stay in that country. Clegg, by the account of contemporary professors, seems to have been superior to all performers on the violin in tone and execution, till about the year 1742, when he had so deranged his faculties by intense study and practice, that he was confined in the hospital of Bethlehem, where, during intervals of sanity, he was allowed the use of his instrument; and it was long a fashionable, though inhuman amusement, to visit him there, among other lunatics, in hopes of being entertained by his fiddle or his folly.

CLEMENS, (called by his contemporaries *Non Papa*.) **JACOB.** An excellent Flemish composer, principal chapel-master to the Emperor Charles V. Seven books of his motets, in four parts, were published after his decease, at Louvain, in 1567, as was his "*Missa Defunctorum*," in 1580. His style is clear, his harmony pure, and every subject of fugue or imitation simple and natural.

CLEMENT, FRANZ J., born at Vienna in 1782, displayed a great genius for music at a very early age. When seven years old he went to London, and performed publicly on the violin with the first masters of the day, in some instances taking the first violin part. In 1802 he became *chef-d'orchestre* at one of the theatres at Vienna, where he remained till 1811. He afterwards gave concerts in Russia, Hungary, Bohemia, &c., and was recalled to Vienna in 1818. In 1821 he accompanied Mme. Catalani as director of her concerts in Munich, Frankfort, &c., giving rare proof of skill as an orchestra conductor. His musical memory was prodigious, and his ear so fine, that he perceived the least mistake in a player or singer. As a violinist, they say that he was born to be another Paganini, but his indolence prevented. He composed and published about 25 concertinos for the violin, a trio, a quatuor, 12 études, 3 overtures, 6 concertos, many variations, rondos, &c., a little opera, and the music to a melodrama; all these works are remarkable for richness and abundance of ideas.

CLEMENTI, MUZIO, the celebrated pianist and composer, was born at Rome, in the year 1752. His father was a worker in silver of great merit, and principally engaged in the execution of embossed vases and figures employed in the Catholic worship. At a very early period of his youth, he evinced a strong disposition for music, and as this was an art which greatly delighted his father, he anxiously bestowed the best instructions in his power on his son. Buroni, who was his relation, and who afterwards obtained the honorable station of principal composer of St. Peter's, was his first master. At six years of age he began solfaing, and at seven he was placed under an organist of the name of Cordicelli, for instruction in thorough bass; at the age of nine he passed his examination, and was admitted an organist in Rome. This examination consists in giving a figured bass from the works of Corelli, and making the scholar execute an accompaniment, after which he is obliged to transpose the same into various keys. This Clementi effected with such facility, that he received the highest applause from his examiners. He next went under the celebrated Santarelli, the great master of singing. Between his eleventh and twelfth years he studied under Carpini, the deepest contrapuntist of his day in Rome. A few months after he was placed under this master, he was induced by some of his friends, and without consulting his preceptor, to write a mass for four voices, for which he received so much commendation, that Carpini expressed a desire to hear it. It was accordingly repeated in church in the presence of his master, who, being little accustomed to bestow praise on any one, said to his pupil, after his dry manner, "Why did not you tell me you were about to write a mass? This is very well, to be sure; but if you had consulted me, it might have been much better." Under Carpini he was practised in writing fugues and canons on the *canto fermo*, and his master was frequently heard to say, that had Clementi remained under his instruction a year longer, he might have passed his examination in counterpoint. During these studies he never neglected his harpsichord, on which he had made so great a proficiency between thirteen and fourteen, that Mr. Peter Beckford, nephew of the alderman of that name, who was then on his travels in Italy, was extremely desirous of taking him over to England. The declining riches of the Roman church, at this period, not giving much encouragement to the trade of his father, he agreed to confide the rising talents of his son to the care of Mr. Beckford, and soon after this Clementi set off for England. The country seat of Mr. Beckford was in Dorsetshire, and here, by the aid of a good library and the conversation of the family, Clementi quickly obtained a competent knowledge of the English and several other languages. With regard to his own art, his early studies were principally employed on the works of Corelli, Alessandro Scarlatti, Handel's harpsichord and organ music, and on the sonatas of Paradies. His efforts to acquire preëminence on the harpsichord were in the mean time as indetigable as they were successful; and at the age of eighteen he had not only surpassed all his contemporaries in the powers of execution and expression, but had written his Op. 2, which gave a new era to that species of composition.

Three years afterwards this celebrated work was submitted to the public. The simplicity, brilliancy, and originality which it displayed captivated the whole circle of professors and amateurs. It is superfluous to add, what all the great musicians of the age have uniformly allowed, that this admirable work is the basis on which the whole fabric of modern sonatas for the pianoforte has been erected. The celebrated John Christian Bach spoke of it in the highest terms; but, although one of the most able players of his time, he would not attempt its performance; and when Schroeter arrived in England, and was asked if he could play the works of Clementi, he replied, that "they could only be performed by the author himself, or the devil." Yet, such is the progress which executive ability has made, that what was once an obstacle to the most accomplished talent is now within the power of thousands. A well-known popular air with variations, his Ops. 3 and 4, and a duet for two performers on one instrument, were the next productions of his youthful pen. Soon after he had quitted Dorsetshire to reside in London, he was engaged to preside at the harpsichord, in the orchestra of the Opera House, and had an opportunity, which he never neglected, of improving his taste by the performances of the first singers of that age. The advantage which he derived from this species of study was quickly shown by the rapid progress he made, beyond his contemporaries, in the dignity of his style of execution, and in his powers of expression. This, also, he carried into his compositions; and Dussek, Steibelt, Woelfl, Beethoven, and other eminent performers on the continent, who had had no opportunity of receiving personal instructions from Clementi, declared that they had formed themselves entirely on his works. His ability in extemporaneous playing had, perhaps, no parallel. The richness of harmonic combination, the brilliancy of fancy, the power of effect, and the noble style of execution, which he displayed, made him stand alone in an age which produced such a host of executive talent. His reputation, without the protection of any patron, rose with such rapidity, that, in a very short time, he received the same remuneration for his instructions as J. C. Bach; and the fame of his works and of his executive talents having spread over the continent, he determined, in the year 1780, and at the instigation of the celebrated Pacchierotti, to visit Paris. In that city he was received with enthusiasm, and had the honor to play before the queen, who bestowed on him the most unqualified applause. The warmth of French praise, contrasted with the gentle and cool approbation given by the English, quite astonished the young musician, who used jocosely to remark, that "he could scarcely believe himself to be the same man." Whilst he remained in that capital, he composed his Ops. 5 and 6, and published a new edition of his Op. 1, with an additional fugue. Having enjoyed the unabated applause of the Parisians until the summer of 1781, he determined on paying a visit to Vienna. In his way there he stopped at Strasburg, where he was introduced to the then Prince de Deux Ponts, since King of Bavaria, who treated him with the greatest distinction; and also at Munich, where he was received with equal honor by the elector. At Vienna he became acquainted with Haydn, Mozart, and all the

celebrated musicians resident in that capital. The Emperor Joseph II., who was a great lover of music, invited him to his palace; where, in the latter end of the year 1781, he had the honor of playing alternately with Mozart before the emperor, and the Grand Duke Paul of Russia and his duchess. At Vienna, he composed three sonatas, (Op. 7,) published by Artaria; three sonatas, (Op. 8,) published at Lyons; and six sonatas, (Ops. 9 and 10,) also published by Artaria. On his return to England, he deemed it necessary to publish his celebrated "*Toccata*," with a sonata, (Op. 11,) — a surreptitious copy, full of errors, having been printed without his knowledge in France. In the autumn of 1783, John Baptist Cramer, then about fourteen or fifteen years of age, became his pupil. He had previously received some lessons from Schroeter, and was studying counterpoint under Abel. Clementi, at this time, resided in Titchfield Street, and Cramer used to attend him almost every morning, until the following year, when Clementi returned to France. Previous to his undertaking this second journey, he was engaged at the nobility's concerts, and had published his Op. 12; upon one of the sonatas of which work both Dr. Crotch and Samuel Wesley afterwards gave public lectures in London. In the year 1784, he again went back to England, and soon afterwards published his Ops. 13, 14, and 15. From this period to the year 1802, he remained in England, pursuing his professional labors with increasing reputation; and wishing to secure himself sufficient time for the prosecution of his studies, he raised his terms for teaching to one guinea per hour. His fame, however, was so great, that this augmentation of price rather increased than diminished the candidates for his instruction. The great number of excellent pupils, of both sexes, whom he formed during this period, proved his superior skill in the art of tuition; the invariable success which attended his public performances attested his preëminent talents as a player; and his compositions, from Op. 15 to Op. 40, are a lasting proof of his application and genius. Before the publication of this last work, he had produced one, the advantages of which have been and are still felt and acknowledged by almost all professors; we mean his excellent and luminous "*Introduction to the Art of Playing on the Piano-forte*." About the year 1800, having lost a large sum of money by the failure of the well-known firm of Longman and Broderip, 26 Cheapside, he was induced, by the persuasions of some eminent mercantile gentlemen, to embark in that concern. A new firm was accordingly formed, and from that period he declined taking any more pupils. The hours which he did not thenceforward employ in his professional studies he dedicated to the mechanical and philosophical improvement of piano-fortes; and the originality and justness of his conceptions were crowned with complete success. The extraordinary and admirable talents of John Field are still fresh in the memory of most lovers of classical music. These talents Clementi had cultivated with unceasing delight. With this favorite pupil, in the autumn of 1802, he paid his third visit to Paris, where he was received with unabated esteem and admiration. This pupil delighted every one who heard him; and what is still more worthy of remark, he played some of the great

fugues of Sebastian Bach with such precision and inimitable taste as to call forth from a Parisian audience the most enthusiastic applause. From Paris he proceeded to Vienna, where he intended to place Field under the instruction of Albrechtsberger, to which his pupil seemed to assent with pleasure; but when the time arrived for Clementi to set off for Russia, poor Field, with tears trembling in his eyes, expressed so much regret at parting from his master, and so strong a desire to accompany him, that Clementi could not resist his inclinations; they therefore proceeded directly to St. Petersburg. In this city Clementi was received with the greatest distinction; he played extemporaneously in the society of the principal professors with his accustomed excellence, and to the admiration of his audience; and having introduced Field to his friends, soon afterwards left Russia, in company with a young professor of the name of Zeuner. Zeuner was the principal piano-forte player and teacher in Petersburg; and having received some instructions from Clementi during his residence there, he became so attached to his master, that he left all his scholars for the sake of accompanying him to Berlin. In the latter city Clementi played, both extemporaneously and from his works, before all the most eminent musicians, with his wonted vigor and effect; and, after remaining there two months, took Zeuner with him to Dresden, the place of his birth, where he left him well prepared to acquire the reputation which he afterwards obtained. In Dresden, an unassuming, but very able and excellent young musician, of the name of Klengel, introduced himself to the acquaintance of Clementi, and, after obtaining some instructions, became exceedingly desirous of accompanying his master in his travels. Clementi was so much pleased with his character and talents, which have since become well known to the public, that he consented; and after a few weeks' residence at Dresden, he took him on to Vienna, where, during some months, his pupil worked very hard under his instruction. It was at this time that he became acquainted with and cherished, by counsel and the frequent exhibition of his own powers on the piano-forte, the rising talents of Kalkbrenner, who has since raised himself to such distinguished eminence. During the summer following, Clementi took his pupil Klengel a tour through Switzerland, and returned immediately afterwards to Berlin, where he married his first wife. In the autumn he took his bride through Italy, as far as Rome and Naples; and on his return to Berlin, having had the misfortune to lose her in childbed, he immediately left the scene of his sorrows, and once more visited Petersburg. In this journey he took with him another promising young pupil, of the name of Berger, who had previously received his instructions, and who is now the principal professor of the piano-forte at Berlin. At Petersburg he found Field in the full enjoyment of the highest reputation — in short, the musical idol of the Russian nation. Here he remained but a short time; and finding relief from the contemplation of his severe loss in the bustle of travelling, he again went back to Vienna. The following summer, having heard of the death of his brother, he proceeded once more to Rome, to settle the affairs of his family. He then made short residences at Milan and various other

places on the continent, where he was detained, in spite of his inclinations, by the disastrous continuation of the war; and seizing a hazardous opportunity of conveyance, in the summer of 1810, he once more arrived in England, and the year following married. Although, during this period of nearly eight years, he published only a single sonata. (Op. 41,) his mind and his pen were still occupied in the composition of symphonies, and in preparing materials for his "*Gradus ad Parnassum*." His first publication, after his return, was the appendix to his "Introduction to the Art of Playing on the Piano-forte" — a work which has been of infinite use both to the profession and to the public. He next adapted the twelve grand symphonies of Haydn for the piano-forte, with accompaniments for the flute, violin, and violoncello. This work was a great desideratum, since that which had already been published by Salomon was awkwardly and imperfectly done. Before he went abroad, he had adapted Haydn's "Creation" for the piano-forte and voices; and he now published the oratorio of the "Seasons," which he had done in the same manner. He afterwards adapted Mozart's overture to "Don Giovanni," besides various selections from the vocal compositions of the same author. The Philharmonic Society having been now established, he gave two grand symphonies, which were received there, and at various other concerts, with enthusiastic applause. He produced several other symphonies at the Philharmonic Concerts, in March, 1824. Clementi enjoyed the highest consideration in England. Having become rich, in the last years of his life he abandoned the direction of his mercantile house to his associate, M. Collard, and retiring to a pretty country seat, lived in repose, and seldom visited London. Once when he did come, Cramer, Moscheles, and others gave a banquet to the patriarch of the piano, at the close of which he improvised to the astonishment and delight of all present. This was his "swan song." He died on the 10th of March, 1832, at the age of eighty years.

CLEMENTI & CO. Manufacturers of wind instruments, London. Their instruments were considered as the best in their day. Their flutes were very popular in the day of Nicholson, after whose plan, and under whose immediate direction, they made great numbers.

CLERAMBAULT, LOUIS NICOLAS, a French vocal composer, and a great favorite of Louis XIV. He died at Paris in 1749.

CLEREAU, PIERRE, a French composer of vocal music, published at Paris, in the middle of the sixteenth century, "*Chansons Spirituelles à quatre Voix*," and a work entitled "*Tricinia*."

CLERICO, FRANCESCO. Ballet master and dramatic composer at Venice in 1789.

CLIFFORD, REV. JAMES, a minor canon of St. Paul's, died about the year 1700. He edited, in 1664, a useful little book, containing a collection of the words of the services and anthems used in the collegiate and cathedral churches.

CLIFTON, JOHN C., was born in London, in 1781. He was intended for mercantile life by his father, who at length, however, on the persuasion of his son, placed him under the musical tuition of R. Bellamy who was related to the

Clifton family. Bellamy was at that time almoner and master of the choristers of St. Paul's cathedral. Under his able instructious Clifton remained nearly five years; at the expiration of which time his father sent him to a classical school, and again wished to turn his mind to commercial pursuits, at the same time not purposing to neglect his musical education; which soon after recommenced under the celebrated Charles Wesley, of whom Clifton became a favorite pupil. Again, however, his father took him suddenly from his musical pursuits, and placed him in a counting house, to the duties of which he could not at all get reconciled. When about eighteen years of age, he became acquainted with Cinador, Spagnoletti, and other musicians, who changed and improved his taste to such a degree that he determined immediately to follow music as a profession; but when on the point of doing so, he was given a situation in the government stationery office, where he did not continue more than two years, again finding calculation and account books to interfere too much with his favorite pursuit. The first opening of Clifton's professional life was at Bath, where he was engaged to conduct the musical department of the Harmonic Society, for which he set to music a Latin grace, "*Seu edamus*," written by Dr. Morgan, and which continued to be sung for many years before supper. While at Bath he composed several glees and songs, among the latter his admired song, "If music be the food of love." In 1802 he visited Ireland, with the best introductions. During the time of his residence there, he met with great encouragement in composition, and published many of his works in Dublin; he also wrote a biographical sketch of his friend Sir John Stevenson, for one of the literary reviews. In 1815 Clifton produced a musical piece called "Edwin," at Crow Street Theatre, the music of which was well received. He resided in Ireland, chiefly in Dublin, for nearly fourteen years, and conducted during that time several concerts. The last, which he conducted conjointly with Sir John Stevenson, did credit to their feelings, as well as to all the professors, who volunteered their services, it being for the benefit of the poor of Ireland, who were then in a state of famine. The concert was on a very grand scale, and to make it more attractive, Clifton collected from the military bands all who were able to sing, and rehearsed them in the choruses of Haydn, Mozart, and Beethoven. He likewise added some hundreds of the charity children, and taught them Handel's hallelujah chorus, which produced a sublime effect. The orchestra was composed of more than four hundred performers. For his exertions on this occasion, Clifton received the public thanks of the committee, and was offered a professor's degree, which his modesty declined. In 1816 he finished a "Theory of Harmony simplified," and invented a machine called the E. domusicon, which, being fastened to the piano-forte, over the action, produced the notes and chords as they were struck, and gave you the different intervals so distinctly, that the eye and the ear were engaged at the same time, which rendered vocal distances easily attainable for sight singing. He next publicly lectured on his new plan and invention, which gave much satisfaction. Being advised to publish it, he went to London and prepared his book for the press; but finding the

expenses enormous, and the difficulty attending the prosecution of his new design to be very great, he abandoned the idea altogether. In 1818, Clifton adopted the principles of Logier's system, and settled in London, where he held a highly respectable rank in his profession, as a teacher of singing, and of the theory and practice of harmony.

CLONAS. A celebrated fluto player, who flourished soon after Terpander, and who was the composer of several pieces of music for his instrument.

CLOSE. The end or conclusion: as, the *closing movement*, the last movement; the *closing bar*, the last bar. When the *close* has for its bass the key note of the composition, it is called a *perfect close*; when its bass is any other than the key note, it is termed an *imperfect close*. *Close* therefore is synonymous with *cadence*. It is commonly indicated thus:

Frequently *two* double bars are used alone, and sometimes *one* with the half bar, for a close; but the regular character should be used in all cases.

COBB, RICILARD. Organist to Charles I. of England. Several of his compositions may be found in "The Triumphs of Oriana."

COBBOLD, WILLIAM. An English composer of madrigals and psalms at the close of the sixteenth century. Some of his compositions are to be found in Thomas Este's collection of psalms, published in 1591, and in a work entitled "The Triumphs of Oriana," published in 1601.

COCCHI, GIOACCHINO. A Neapolitan dramatic composer; he was engaged in 1757 to write for the Opera in London. When he first went to England, he carried there the new passages that were in favor at Rome and Naples, to which, however, he added so little from his own stock of ideas, that, by frequent repetition, the public was soon tired of them; and his publications in England are now as much forgotten as if he had lived in the fifteenth century. In 1762 his engagement as opera composer in London ceased. About 1772 he retired to Venice, where he had been *maestro* of a *conservatorio* before going to England. The exact year of his death is unknown.

COCCLA, CARLO, a celebrated dramatic composer, was born at Naples about the year 1789. He studied counterpoint under Fenaroli, and theatrical composition under Paesello. In the year 1820 he went to Lisbon, where he was engaged for two years as composer to the theatre, and produced during that time four operas. From Lisbon he went to England, where he arrived in August, 1823, and was engaged for the season of 1824 at the Opera in London, as composer and conductor. His most admired operas are, "*La Festa della Musica*," "*La Clotilde*," "*La Sotraggia*," and "*Fajel*." For some time after 1836, he was Director of the Musical Academy at Turin.

COCHIEREAU. A celebrated French singer at Paris towards the close of the seventeenth century; he likewise composed some ariettes.

CODA. An Italian word, applied to a small number of bars at the end of a composition, which form the final close after the other strains of the movement have been duly repeated.

COGAN, DR. PHILIP. An English composer, chiefly of instrumental music, since the year 1788.

COGGINS, JOSEPH, an English professor of the piano-forte, was for many years a pupil and assistant of Dr. Callcott. He published, in 1815, an excellent work, called "The Musician's Assistant, containing all that is truly useful to the Theory and Practice of the Piano-forte." He also published a divertimento from a theme of Steibelt's, and other piano-forte music.

COICK, or LE COQ, GIAN. Author of several songs in the collections of his time, particularly of one in five parts, printed at Antwerp by Susato, 1545, in the sixth book of "*Chansons à cinq et six Parties*." In this song the two upper parts are in canon, in which the second part inverts the melody of the first, while the other three move in fugue. "*Tout à rebours va mon affaire*" is the motto of this canon. This composition is curious and valuable, merely from the difficulty of its construction.

COIGNET. A merchant at Lyons. He was a collaborator with J. J. Rousseau in the opera of "*Pygmalion*."

COL, or CON; also *Coll* and *Colla*. An Italian preposition, signifying *with*; as, *col arco*, with the bow; *con spirito*, with spirit, &c.

COLASSE, PASCAL, chapel-master to Louis XIV., was born at Paris in 1636. He was a pupil of Lulli, and took him for his model in all his compositions, as the following lines testify:—

"Colasse de Lullil craignit de s'émuler,
Et le pillé, dit-on, cherchant à l'imiter."

But it is said that, whether he imitated Lulli or not, his opera of "Thetis and Pelcus" will always be esteemed an excellent production. There are, besides, of his composition, motets and songs. Colasse destroyed both his fortune and health in an infatuated pursuit of the philosopher's stone, and died at Versailles in the year 1709.

COLBRAN, ISABELLA ANGELA. See ROSSINI.

COLEMAN, OBED M. Born at Barnstable, Mass., Jan. 23, 1817. In earliest infancy he exhibited much musical talent, but not until sixteen years of age, and during severe illness, did he exhibit extraordinary powers of invention. About this time, at New Bedford, Mass., he invented an astonishing piece of mechanism, known by exhibition as the Automaton Lady Minstrel and Singing Bird—the figure of a lady and bird, the former performing several popular airs upon the accordeon, while the latter, perched upon her shoulder, "warbled woodnotes wild." Having disposed of this ingenious contrivance for eight hundred dollars, he removed to Saratoga, N. Y., in 1742, where he effected some valuable improve-

ments upon the accordion, on which instrument he was an excellent performer. Here he commenced the construction of his Æolian Attachment to the piano-forte, which secured to him a high rank among inventors, and to his family a fortune. His patent sold in this country for one hundred and ten thousand dollars. He died at Saratoga Springs, April 5, 1845.

COLEMAN, DR. CHARLES, was a gentleman of the private music of King Charles I. After the rebellion he taught music in London. Coleman, Henry Lawes, Captain Cook, and George Hudson, composed the music to an entertainment written by Sir William D'Avenant, intended as an imitation of the Italian opera, and performed during the usurpation, at Rutland House, in Charter House Yard.

COLETTI, A. B. A Venetian dramatic composer at the beginning of the eighteenth century.

COLIZZI, JEAN. An Italian instrumental composer in the latter half of the last century. Some of his music was published in London.

COLLA, GIUSEPPE. Husband of Agujari, the singer, and composer of most of the music which she sang in public during her stay in England. Dr. Burney says that Colla's music, though often good, was by no means either very original or varied.

COLLA PARTE (I.) implies that the accompanist must follow the principal part in regard to time.

COLLA PIU GRAN FORZA E PRESTENZA. As loud and as quick as possible.

COLLEGE YOUTHS. A society of London bell ringers. The College Youths form the chief society of the kind, and were formerly so respectable as to have for one of their members Sir Matthew Hale, chief justice of the Court of King's Bench. See RINGERS.

COLOMBE, or COLOMBA. An instrumental composer at Paris in 1783.

COLOMBINI. An author of some madrigals published at Venice in 1633.

COLONNA, FABIO, a Roman nobleman and celebrated mathematician, published, in 1618, a speculative work, now become very scarce, on the division of the scale, which at no time could be of much use to practical musicians, but at present, when so many better treatises on harmonies are extant, would not be read, if it could be found. Colonna died in 1647.

COLONNA, GIOVANNI PAOLO, was born at Brescia in 1630. He was chapel-master at Bologna. He composed but few operas; but he published, about the latter end of the last century, many excellent works for the church, of which P. Martini has given a list to the amount of twelve, in the second volume of his History of Music. It was the opinion of Dr. Boyce that Colonna was Handel's model for choruses accompanied with many instrumental parts different from the vocal. His Psalms in eight parts, published at Bologna in 1694, have been very justly admired for their masterly composition.

COLORS OF THE GENERA. Colors were used by the ancient Greeks to distinguish the

different species of their genera; hence, substituting the name of the sign for that of the thing signified, they indifferently used the expressive species of the genera, and color of the genera.

COLTELLINI, CELESTE. A celebrated Italian female singer since the year 1780.

COMA, ANNIBALE. A composer of madrigals, published at Venice at the latter end of the sixteenth century.

COMANEDO, FLAMINIO. A composer of canzonets, published in Venice and Milan at the beginning of the seventeenth century.

COMBINED ORCHESTRAL MASSES are employed in overtures, symphonies, in the ritornellos to airs, and concerted vocal pieces, in choruses, in airs for dancing, in pantomimic music in triumphal marches, and, in fact, wherever we desire to produce great effects and develop powerful imagery. But in all cases, these combinations must not be of too long duration, as otherwise the music degenerates into mere noise. That these combined masses may produce an agreeable effect, they must be introduced after intervals of repose; eight, sixteen, or twenty-four bars in succession are always sufficient. Still, however, in terminating a composition, a few more bars may be allowed; because, if the hearer's attention is exhausted or withdrawn, at least the close of the piece will, by this means, dissipate the *ennui* which would otherwise result.

COME 'L PRIMO TEMPO. (I.) In the same movement as at first.

COME SOPRA. (I.) *As above, or as before.* An allusion to the manner of performing some former passage, the style of which performance has been already denoted.

COME STA. (I.) *As it stands.* An expression implying, that the performer is not to embellish the passage over which it is written with any addition of his own, but to sing or play it exactly as it is given by the composer.

COME TEMPO DEL TEMA. (I.) Same movement as the theme.

COMES. (L.) A *companion, or follower.* The appellation formerly given to the voices, or instruments, which followed the *dux*, or leading performer. Thus, in fugues, the technical term for the principal theme is *dux*, and for the following, *comes*.

COMI, GAUDENZIO. An Italian musician in the service of the Prince of Conti, at Paris, in 1790. He has published some symphonies and other instrumental music since the year 1786.

COMIC SONG. A *song* consisting of the combination of a lively air with humorous words.

COMIN, GIACOMO, music master to Queen Margaret of France, and composer of some Italian part songs, lived in 1589.

COMMAS. The smallest of all the sensible intervals of tone. The *comma* is the difference between a tone major and minor. It is seldom in use, except in the theory of music, to show the justness of the concords; for in the practice, the division is drowned and lost. *Lai relet di* divides his tone into nine parts, or commas; so that

according to him, a comma is the ninth part of a tone.

In perfect intonation, i. e., where the scale is mathematically perfect, and not *tempered*, the interval from 1 to 2 is a major tone; and from 2 to 3 a minor tone. The first contains nine, the second eight commas. See TEMPERAMENT.

COMMODO, COMMODAMENTE. (1.) Quietly, with composure.

COMMON CHORD. The combination of the third, fifth, and eighth of any note.

COMMON TIME. A measure which has an even number of parts in a bar.

EXAMPLE.

COMPANY OF MUSICIANS. A chartered association of musical composers and performers. King Charles I., soon after his accession, showed a disposition to encourage the liberal arts, particularly music, as appears by his charter granted to Nicholas Lanier and others, in which Lanier was appointed "master of the king's music," with a salary of two hundred pounds a year. The same monarch also, in the eleventh year of his reign, granted a charter to divers persons, the most eminent musicians, incorporating them by the style "Marshals, Wardens, and Commonality of the Art and Science of Music."

COMPASS. A word used to express the range of notes or sounds, comprehended by any voice or instrument.

COMPASS OF VOICES IN CHORUSES. The species of voices used in choruses are the *soprano* or *treble*, the *contralto*, the *tenor*, and the *bass*. The treble or soprano voice is about the same as the tenor in extent, but is an octave higher in its pitch. Soprano parts are often written in the C clef on the bottom line of the staff. The contralto has about the same extent as the bass, but an octave higher; the tenor the same extent as the soprano, but an octave lower; the bass the same extent as the contralto, but an octave lower.

EXAMPLES.

In writing for the chorus, it is necessary to employ the medium notes of each species as much as possible. They are as follows:—

When voices are compelled to sing above their medium notes, they soon become fatigued, and finish by screaming. Notes below the medium of the voice are deficient in power; they render the harmony feeble and indistinct: hence they

must be employed but seldom, and never in all the parts at one time.

COMPIACEVOLE. (1.) Pleasing, attractive.

COMPLEMENT. A term applied to that quantity which is wanting to any interval, to fill up the octave. When we take any note together with its *fourth*, the *fifth* above the upper of the two notes is the quantity wanting, or the *complement*.

COMPOSER. An inventor of new music according to the rules of science: or, a *practical* musical author; so called in contradistinction to a *theoretical* musical author, who speculates in acoustics, and writes on the laws of harmony and melody, but does not concern himself with their practical application in composition.

COMPOSITION. The production of new music according to the established rules of harmony and modulation. The art of disposing musical sounds into airs, songs, &c., either in one or more parts, to be sung by a voice, or played on instruments. Under composition are comprehended the rules, 1. Of melody, or the art of making a single part; that is, contriving and disposing the simple sounds, so that their succession and progression may be agreeable to the ear. 2. Of harmony, or the art of disposing and concerting several single parts together, so that they may make one agreeable whole. It may be proper to observe here, that melody being chiefly the business of the imagination, the rules of its composition serve only to prescribe certain limits to it, beyond which the imagination, in searching out the variety and beauty of airs, ought not to go; but harmony being the work of the judgment, its rules are more certain and extensive, and more difficult in practice.

A superficial observer might imagine that all the possible combinations of the twelve sounds comprising the musical scale, would in time be exhausted, and thus end composition. The twelve sounds of the scale admit, of course, by mere combination, of 144 different successions. Each of these combinations can be varied again by accent, rhythm, or measure, by length, rapidity, force, legato, and staccato, so as to admit of constructing many millions of tones. Then there lie slumbering and unwrought, in the musical quarry, many forms of exquisite melody, to say nothing of harmony. So there is no end to composition, and no excuse for wearisome monotony. There is ample provision made in the great scale of nature for the composer of music.

The nature of musical composition is undergoing a continual change; and so innumerable are the combinations which may be wrought, that its style is without limits, and its effects unbounded. In the early composers, we find little more than simple mutations of harmony, and scarcely an attempt to rise into the more graceful region of melody. As to design or imitation of natural effects, no such traces appear. The old writers imagined that they could unravel the musical mysteries, by making sounds follow each other agreeably to certain laws, thereby uniting the principles of harmony and melody at once. Every device was tried: such as placing what was uppermost in the composition occasionally at the bottom, called inversion; which, with contrary

motion, imitation, augmentation, answers, and the like, was thought to achieve all the varieties attainable in the system of sounds. But "the moulds of the contrapuntist are broken," and musicians are taught this great truth, that the art knows no bounds but what nature prescribes. Composition has advanced by slow degrees, and every age has had its favorite authors and favorite style. At each revolution it was imagined that the limits of the art had been reached, and that nothing remained beyond. Music exists upon emotions, which are more lively as they are more varied. They are also quickly effaced, and therefore in this art the necessity of novelty is felt more than in any other. Hence the interest that is taken in revolutions, and the enthusiasm which they excite. Hence, too, the regrets of those who are wedded to music of olden date, and their exclamations, that music is gone! music is totally ruined! which signifies nothing more than that the style of music has been changed.

COMPOSIZIONE DA TAVOLINO. (I.) Songs for the table, or convivial melodies.

COMPOUND SOUND. A *compound sound* consists of the sounds of several distinct voices or instruments, all united in the same individual time and measure of duration, that is, all striking the ear together, whatever may be their other differences. But in this sense there is a twofold compound — natural and artificial.

COMPOUND HARMONY. *Compound harmony* is that which to the simple *harmony* of an octave adds that of another octave.

COMPOUND TIME. Measures which contain two or three principal accents; as, $\frac{6}{8}$, $\frac{12}{8}$, $\frac{9}{8}$, &c.

EXAMPLE.

COMPUTATRICES. (L.) *Female computers.* One of the names given to the *præcæ* — women whom the ancients hired to sing and weep over the dead at their funerals. They were called *computatrices* because it was a part of their office to enumerate, or compute, the virtues and merits of the deceased. See **PRÆCÆ**.

C MOLL. (G.) C minor.

CON. (I.) With *as*, *con espressione*, with expression.
CON AFFETTO. (I.) An expression implying a smooth, tender, and affecting style of performance.
CON ABBANDONO ED ESPRESSIONE. With self-abandon and expression.

CON BRIO. (I.) With briskness and spirit.
CON BRIO ED ANIMATO. Animated and brilliant.
CON DOLORE. (I.) *Sae Doloroso.*
CON FURIA. (I.) With vehemence; with fury.
CON PRECISIONE. (I.) With precision.
CON GRAVITÀ. (I.) With gravity.
CON GRAZIA. (I.) With grace.
CON GUSTO, or GUSTOSO. (I.) With taste.
CON IMPETO. (I.) With impetuosity.
CON MOVIMENTO. (I.) With agitation; with commotion.
CON SPIRITO. (I.) With spirit.
CON TENEREZZA. (I.) With tenderness.
CON TIMIDEZZA. (I.) With timidity.
CON VARIAZIONE. (I.) With variations.
CON VIVEZZA. (I.) With animation, vivaciously.
CON ZELO. (I.) With zeal.
CON SVA AD LIBITUM. With octaves at pleasure.

CONCENTO. (I.) A word formerly used by the Italians to signify the harmony resulting from the consonance of voices and instruments in concert.

CONCERT. A musical performance, in which any number of practical musicians, either vocal or instrumental, or both, unite in the exercise of their respective talents. The concerts of the ancient Greeks were executed only in the unison or octave.

CONCERTANTE. (I.) A concerto for two or more instruments, with accompaniments for a band.

CONCERTINA. This is a new instrument, introduced in New York, March 9, 1852, by Mr. Sedgwick, an Englishman.

It was patented in 1829 by Professor Wheatstone, whose name has been since celebrated as one of the inventors of the present English system of the electric telegraph. Although the tones are produced on the same principle as that of the common accordeon, it has no nearer resemblance to that instrument than an ordinary whistle has to the German flute.

The internal construction is quite different. It is capable of the most complex harmonies, and the most difficult violin or flute music can be performed on it. Its compass is three octaves and a half.

The instrument possesses not only a complete chromatic scale, but also an *enharmonic* scale; it having two separate tones (for instance for the notes G \sharp and Ab or D \sharp and Eb. From this fact, as well as the flexibility of the bellows, the chords are in better tune than is generally the case with instruments of a fixed sound. The keys of the concertina are alternate, right and left, thus: A, C, E, &c., being on the *right* side of the instrument, B, D, F, and so on, would be on the *left*.

CONCERTINO. (I.) The principal instrument in a concert, or concertante; as, *oboe concertino*, the principal hautboy.

CONCERTO. (I.) A composition expressly written for the display of some particular instrument, with accompaniments for a band.

CONCERTO GROSSO. (I.) *Great concert.* An expression applied to the great, or grand chorus of the concert; or to those parts of the concert in which the *ripienos* and every auxiliary instrument are brought into action, in order to contrast and aggrandize the effect. For this great improvement in instrumental music we are, it is said, indebted to Giuseppe Torelli, who introduced its practice towards the latter end of the seventeenth century.

CONCERTO SPIRITUALE. (I.) A miscellaneous concert, consisting of the performance of pieces wholly selected from sacred compositions.

CONCIATINI, GIOVANNI CARLO, an eminent singer of the Bolognese school, was born in 1745. He was first singer at the opera at Berlin till 1796, when he retired with a handsome pension from the Prussian court.

CONCINNOUS. The signification of this term is generally confined to performance in concert. It applies to that vice, discriminating execution, in which the band not only gives with

mechanical exactness every passage of the composition, but enters into the design, or sentiment, of the composer, and, preserving a perfect concord and unison of effect, moves as if one soul inspired the whole orchestra.

CONCITATO. (I.) Agitated. See AGITATO.

CON COMMODO. (I.) With an easy quickness.

CONCORD. A union of two or more sounds, which, by their harmony, produce an agreeable effect upon the ear. Unisonance being the relation of equality between the *pitch* of two or more sounds, theorists consider unisons as concords in the first degree. But an interval, being a difference of *pitch*, or a relation of inequality between two sounds, will form a *concord*, or *discord*, according to the circumstances of that particular relation. Of *concords*, there are two kinds, the one called perfect, the other imperfect: perfect *concords* consist of the fifth and eighth; imperfect *concords* of the third and sixth. The imperfect *concords* have also another distinction — that of the greater and lesser third and sixth. The *concords* are again divided into consonant and dissonant. The consonant *concords* are the perfect *concord* and its derivatives; every other is a dissonant *concord*. We apply the word *concord* also to the state of an instrument in respect of its tuning, as also to the agreement of two or more voices; as when we say, "That instrument is not in concord," or "not in tune;" "Those voices do not concord," or "do not harmonize and agree."

CONCORDANT. An epithet applied to all consonant or harmonious combinations.

CONDOCIMENTO. (I.) A term answering to the *agoge* of the Greeks, the *ductus* of the Romans, and signifying a melody, or succession of sounds, moving by conjoint degrees.

CONDUCTOR. A term applied to the person who arranges, orders, and directs the necessary preparations for a concert, and also superintends and conducts the performance. The duties of this office are well set forth in the following article from the "London Musical World."

"A conductor's business at what is commonly called a 'Piano-forte Concert,' i. e., where there are merely two or three principal performers, and where the piano affords the only accompaniment to the vocal music, are light indeed, compared with those which involve the training and practising large numbers of vocalists or instrumentalists, for concerts with a 'full band,' an efficient chorus, or, as in oratorios and operas, with both combined. The duties of a conductor become onerous in proportion to the number of those engaged in a performance, and the difficulty of the works to be executed; and those frequenters of our 'grand' concerts, who imagine that the conductor's business is confined solely to his use of the *bâton*, or to his performances at the piano, either as accompanist or soloist, are egregiously mistaken. The office of a conductor is, indeed, any thing but a sinecure. Those only have ever entirely succeeded, who have possessed qualifications rarely found united in one man: —

"1. It is absolutely necessary that the conductor should be a composer, in the full acceptation of the term; one who can, if necessary, produce

large and good works for band and chorus; who can arrange quickly songs, duets, &c., for full orchestra, from a piano-forte accompaniment, and *vice versa*; and who can judiciously add extra parts either for wind or string instruments, to give additional effect to meagrely-constructed scores.

"2. He must possess a knowledge of the world as well as of music. He must unite great firmness and determination of purpose, without compromising the character of the man of good sense and the gentleman. He must have 'no mean and narrow prejudices,' or spiteful revenge, in his disposition. He must give equal attention to the half-slumbering juvenile at the triangles, to the solemn double bass, and to the careful and watchful principal violin.

"3. He must possess a thorough knowledge of every piece performed, not only in a practical, but in a theoretical point of view. Without this, he cannot pretend to correct an error, either in any separate part, or in his own full score; and without this capability, he should never, in my humble opinion, presume to wield the *bâton*.

"4. He must possess the quick susceptibility of faculty, rendered in the highest degree acute by culture, necessary to enable him to detect the most trifling error at rehearsal; and, in pointing out the error, he must do so without wounding the feelings of the performer. This latter point is one of the most difficult a conductor has to encounter. Should he be abrupt in his detection and exposure of an erring executant, he is certain to give offence; and should he be silent, and allow the error to pass uncorrected, the chances are that he will be denounced, by some *charitable* members of the orchestra, as incapable of fulfilling satisfactorily the manifold duties of his office.

"5. A conductor must be endowed with the most delicate perception of the measure of time and the play of rhythms, that he may indicate the *tempos* with accurate division and decision. He must neither beat time like a machine, nor must he be so extravagant or violent in his manner as to divert the attention of the audience from the music to the eccentric gyrations of his spasmodic *bâton*. Like the talented conductor Costa, he may make the motions of the *bâton* and his hands indicative of both force and expression. To invoke a *fortissimo*, and a decisive entrance of the brass instruments in orchestral music, I have seen the grand *maestro* significantly raise both his hands, in addition to an imperial wave of the *bâton* over his head, effecting at once the purpose desired; and how expressive the movements he employs to obtain a *crescendo tutti*, and the intimation of the left hand when he would have the delicacy of a piano. But, alas! to many persons — those who have no real music in their souls, stocks and stones — all that belongs to feelings, in matters of art, is stuff and affectation; beauty, they think, is an affair of line and rule; and taste a question of law and precedent, or an easy rule-of-three sum.

"6. A good conductor must, at all times, be prepared to accompany on the piano-forte all kinds of pieces — songs, duets, violin solos, &c., in all sorts of keys, or rather a 'bunch of keys' — at a moment's notice. He must gratify the soaring taste of the high tenor, by transposing his song a note or two higher; the contralto he must conciliate by playing her solemn ballad in a lower key; and he must accomplish the whole

task without touching a single wrong note; or woe betide him from the critics, great and small, professional, newspaper, amateur, lady, &c. And besides all this, he must have magnanimity enough to suppress all display on the instrument, making his performance wholly subsidiary to the vocalist, whom he must, nevertheless, support at all points, covering any failure with a shower of notes, while the artist revives again.

"But all this, and more, are required of those who aspire to the office of musical conductor; and though few can lay claim to the numerous qualifications which I have but imperfectly enumerated, still, it is to him alone who possesses the majority of these, to whom may, with safety, be intrusted the highly-important office of musical conductor."

CONDUCTUS. (L.) A species of air much used in the time of Franco. Its particular style is not at present known; but this circumstance was particular to it — that though, in every other kind of descant, some known melody was chosen which governed the air originating from it, in the *conductus* the descant and the harmony were both of them new, and produced together.

CONFORTI, GIOVANNI BATTISTA, a pupil of Claudio da Correggio, published a book of madrigals at Venice in 1567.

CONFORTO, NICOLO. Composer of the opera "*Antigone*," which was successfully produced in London in 1757.

CONGREGATIONAL SINGING. The advocates of this kind of singing have English authority for attempting to introduce it into the churches in this country. In 1644 psalm singing in congregational form was established by the Assembly of Divines at Westminster. They decided that it was "the duty of Christians to praise God publicly by singing of psalms together in the congregation; the whole congregation may join, and all who can read shall have a psalm book. But for the present, where many in the congregation cannot read, the minister may read the psalm, line by line, before the singing thereof." Here we have not only old but good authority for congregational singing, and for lining or *deaconing* the hymn.

CONJUNCT. (From the Greek.) A term applied by the ancient Greeks to those tetrachords which were so disposed with respect to each other, that the last or highest note of the lower tetrachord was also the first or lowest note of the tetrachord next above it.

CONNOISSEUR. (F.) A person who possesses a knowledge of the principles of composition, or performance, and is a competent judge of musical effect.

CONRAD, J. G., published some preludes for the organ at Leipsic in 1798.

CONRADI, JOHANN GEORG, chapel-master at Dettingen, was one of the first opera composers for the Hamburg Theatre in the years 1691 — 1693.

CONSECUTIVE. This term is applicable to any two chords, one of which immediately succeeds the other. Thus, when any two combined sounds, which are fifths to each other, are followed

by two other combined sounds, also fifths to each other, such chords are called *consecutive fifths*.

CONSERVATORIO. (I.) The name given in Italy to the public music schools in that country.

CONSERVATORY OF PARIS. Founded by Sarete, 1795, and the expense paid from the public treasury, by decree of the convention. In 1800, Napoleon fully developed the institution; and Sarete continued director until 1814, when he was dismissed, and Cherubini appointed in his place. At this institution vocal and instrumental music, in all their branches are, taught by the most distinguished practical performers. The length of study in every department is *three years*.

CONSERVATORY AT LEIPSIC. This institution was founded in 1843, under the patronage of the King of Saxony, and with the valuable coöperation of the chapel-master, Dr. Felix Mendelssohn Bartholdy. Its reputation spread so rapidly, both in and around Germany, that at the close of the first half year, it numbered forty-four pupils, thirty-three male and eleven female. At the commencement of the second term, the number had increased to sixty. These pupils are, attracted thither not only from all parts of Germany, but from Belgium, Holland, Denmark, Norway, Russia, England, and America.

CONSONANCE. *Consonance*, if we are to deduce the definition of the word from its etymology, is the effect of two or more sounds heard at the same time; but its general signification is confined to concording intervals. When the interval of a *consonance* is invariable, it is called perfect; and when it may be either major or minor, it is termed imperfect.

CONSONANT. This word is applied to those intervals which produce consonant concords; i. e., concords composed of consonances only.

CONSTANTINI, FABIO. A Roman composer of sacred vocal music about the year 1630. He also published a collection of the vocal works of the most esteemed masters of the preceding ages.

CONTI, ANGIOLA, called *La Taaccarina*. A much esteemed Italian prima donna about the year 1760.

CONTI, GIACOMO. *Chef-d'orchestre* of the Italian Opera at Vienna in 1790. He composed much instrumental music.

CONTI, GIOVACCHINO, called *Gizzielo*, from his master Gizzi, was a celebrated Italian singer about the year 1750. He was engaged by Handel for the opera in London. Conti excelled in the pathetic. At the time he was in England he was a young singer, and so modest and diffident, that when he first heard Farinelli at a private rehearsal, he burst into tears and fainted away from despondency. Gizzielo narrowly escaped with his life during the earthquake which happened at Lisbon in 1755, and he was impressed with such religious awe on witnessing that tremendous calamity, that he retreated to a monastery, where he ended his days.

CONTI, IGNAZIO. An Italian composer of dramatic music in the service of the Emperor of Germany at Vienna; his compositions bear date from the year 1728 to 1735.

CONTI, LAURA. A female Italian singer, educated at the conservatory of *L' Ospidaleto* at Venice. Dr. Burney was delighted with her taste and expression; he heard her at Venice in 1770. She was a pupil of Durante.

CONTI, NICOLO. A composer of Italian songs about the year 1750.

CONTI, FRANCESCO, a celebrated theorist, born at Florence, was, upon the decease of Ziani, in 1703, appointed vice chapel-master to the Emperor of Germany, at Vienna. He composed an opera entitled "*Archelaus Rè di Cappadocia*," the words whereof were written by Abbate Pariani; as also the opera of "*Clotilda*," performed at London in the year 1709. He was also the composer of various other dramatic pieces; among which may be remarked the comic opera of "*Don Quixote*," said to be one of the first examples of good comic dramatic music. The following anecdote of Conti is preserved. In the year 1730, this musician, having been insulted at Vienna by a secular priest, took satisfaction on the spot, by beating the holy father. The transaction having been public, a criminal process was issued against Conti; he was convicted, and an ecclesiastical sentence passed upon him, that he should be exposed for an hour, each of three successive days, at the great door of the cathedral church of St. Etienne. The emperor commuted the sentence to one instead of three humiliating exhibitions, to which he had been condemned; but not having conducted himself with sufficient humility on the first occasion, he was ordered to suffer the remaining portion of his original sentence, by being exposed on the other two days, dressed in a loose robe or shirt, and bearing in his hand a lighted torch; to this was superadded a fine of one thousand francs, to be given to the priest who had been struck. All the expenses of the proceedings were ordered to be defrayed by him; that he should be imprisoned four years; and after that, banished forever from the Austrian dominions.

CONTINI, GIOVANNI. Chapel-master at Brescia, and composer of madrigals and sacred music, published at Venice between the years 1560 and 1570.

CONTINUATO. (I.) *Held on.* A term implying that any sound is to be continued, or sustained, with an unvaried force or strength. Also, it sometimes means that a movement is to be performed throughout in equal time.

CONTRA-BASS. (I.) The lower bass.

CONTRA-BASSO. (I.) The instrument called a *double bass*.

CONTRALTO. (I.) Countertenor. A voice between the tenor and treble. See **COUNTERTENOR.**

CONTRARY MOTION. When one *part* ascends, and another descends, simultaneously, they are said to be in *contrary motion*.

CONTRAST. Contrast, in music, is that opposition and relief produced by the difference of style in the several movements of a composition; or the *chiara oscura* of the several passages in the same movement; the alternate *crescendos* and *diminuendos*, *pianos* and *fortes*, employed by the composer, to awaken the attention and interest the feelings of his audience.

CONTRAPUNCKT. (G.) Counterpoint.

CONTRAPUNTO. (I.) Counterpoint. See that word.

CONTRAPUNTIST. A musician skilled in counterpoint. See **COUNTERPOINT.**

CONTRE-BASSE. (F.) A double bass. See **DOUBLE BASS.**

CONTRE-DANSE. (F.) A dance so called, because the parties stand in pairs opposite to each other. See **COUNTRY DANCE.**

CONTRIVANCE. This word is applied to that branch of the science of composition which regards the disposition of the several *parts* with respect to each other. When the parts of a composition *sing*, or move smoothly, and at the same time harmonize well, reply to each other, take up the points adroitly, and mingle and modulate with sweetness, freedom, and facility, they are said to exhibit a great deal of contrivance.

CONVERSI, or CONVERSO, GIROLAMO, born at Correggio, composed two books of madrigals, published at Venice in 1575 and 1584. His madrigal, "When all alone, my pretty love," will ever be a favorite with the amateurs of this style of music.

COOK, HENRY, was educated at the chapel royal, during the reign of King Charles I.; but at the commencement of the rebellion he quitted it, and entered the army. About the year 1642 he had interest enough to obtain a captain's commission; and from that time he was always distinguished by the name of Captain Cook. The loyalty and skill of this musical soldier recommended him to the notice, and secured him the patronage, of Charles II., by whom he was not long afterwards appointed master of the children of the royal chapel. A hymn in four parts, composed by Cook, was performed instead of the Litany, in the Chapel of St. George, at Windsor, by order of the sovereign and the knights of the Garter, on the 17th of April, 1661. None of his church music has hitherto been printed; and, if we may judge from his few secular compositions that are to be found dispersed in the collections of the times, he seems to have by no means possessed the requisite qualifications for the high office to which he was appointed. In the second part of Playford's "*Musical Companion*," published in 1667, there are two or three of his songs, which are in almost every respect dry and uninteresting. He was the musical instructor of Humphrey, Blow, and Wise; and, as Anthony Wood informs us, died of grief in the year 1672, in consequence of the talents and musical reputation of his pupil Humphrey having become far superior to his own.

COOKE, DR. BENJAMIN, a celebrated English musician, was the son of Benjamin Cooke, a music seller in New Street, Covent Garden. About the year 1780, he was organist and master of the boys of Westminster Abbey. Dr. Cooke composed many beautiful vocal pieces; among which may be named the duets of "Thyrsis when he left me," and "Let Rubinelli charm the ear;" also the glees, "Hark! the lark," "How sleep the brave," "In paper case," and "In the merry month of May;" the latter of which is an admirable imitation of the ancient madrigal style.

Dr. Cooke had the character of a most amiable and agreeable man. Miss Hawkins, in her anecdotes, says, "No one was ever less vain of superior excellence in an art, or, rather, less sensible of it, than Dr. Cooke; he certainly supposed that every body could do what he did, 'if they would but try;' and he would lend his abilities to assist, in the least ostentatious manner. When seated at the organ of Westminster Abbey, where no one ever excelled him in accompanying an anthem, he would press every hand that could be useful into his service; and, even at the risk of addressing himself to persons ignorant of the first principles of music, would say to any lad, who had strolled into the church, and found his way up to the organ, 'Young gentleman, can't you lend us a hand here?' To his boys he would say, 'Come, come, don't stand idle; put in one hand here under my arm.'" Dr. Cooke died in the year 1793.

COOKE, ROBERT, organist and master of the choristers of Westminster Abbey, died in the year 1814. He was a composer of some excellent vocal music. The most admired of his works is, "An Ode to Friendship," which was sung on the first night of the British Concerts. Among his other works are, "In the rose's fragrant shade," glee, four voices; "Love and Folly were at play," glee, four voices; "Mark where the silver queen," glee, four voices; "Queen of the sea," "Round thy pillow," three voices; "Soft spirit," three voices; &c., &c.

COOKE, NATHANIEL, was born at Bosham, near Chichester in 1773. He received the principal part of his musical education in London, from his uncle Matthew Cooke, organist of St. George's, Bloomsbury. N. Cooke published many small pieces for the piano-forte, some of which are particularly pleasing. He further published "A Collection of Psalms and Hymns for the Use of the Brighton Church Choir," which includes a well-constructed canon, "I have set God always before me," and a "*Te Deum laudamus*," that was much admired at Brighton, having been sung in the church nearly every Sunday for fifteen years. At the election of an organist for the parish church at Brighton, though several candidates were put in nomination, all the persons present, amounting to four hundred, with one exception only, held up their hands in Cooke's favor.

COOKE, THOMAS, was born in Dublin, about 1785. Having evinced an early genius for music, he studied under his father, and at seven years of age played a concerto on the violin in public, with an effect and precision hardly ever equalled by so young a performer. A talent for composition soon appeared, when he had the advantage of further instruction in theory from the celebrated Giordani, at that time resident in Dublin. No living musician had a greater knowledge than T. Cooke of the various musical instruments in use, on nine of which he performed *solos* for his benefit, in one night, at Drury Lane Theatre, and for all of which he wrote with much facility. At a very early age, T. Cooke succeeded to the directorship and leading of the music at the Theatre Royal, Dublin. While in this situation he composed several musical pieces, which were eminently successful; but the ambition of ardent genius is seldom at rest so long as there is any

thing to attain; and to the surprise of all his friends, he suddenly announced himself in Dublin, to perform the arduous singing character of the *Seraskier*, in the "Siege of Belgrade." The play-going part of the town knew not what to think, not having the least idea of his possessing any vocal powers beyond those necessary to join in a glee; but it proved that he well knew his ground, for, to the astonishment of a most brilliant house, (it being his own benefit,) he acquitted himself in such a manner as at once to place him on the line of first-rate singers. After this successful *début*, he, at the request of the proprietors, played some nights more in Dublin, and soon afterwards, having occasion to visit London, he accepted a proposal from the proprietors of the English Opera, at which theatre he filled the situation of first singer some seasons, during which time he composed many successful operas. This led to offers from Drury Lane, where he closed an engagement for a series of years as principal singer, and at which theatre he was engaged as musical director, leader, and composer. Cooke was a member of the Philharmonic Society, of the Royal Academy of Music, of the Nobleman's Catch Club, and of the Glee Club; director, leader, and composer of the music to the Theatre Royal, Drury Lane; and principal tenor singer to the Bavarian legation, at their chapel in Warwick Street, &c., &c. His principal compositions are the operas "Frederic the Great," "The King's Proxy;" overture to "Maid and Wife;" glees, songs, &c., and the "Scale, with fifty-seven Variations, for young Performers on the Piano-forte." Cooke married Miss Howells, singer at Covent Garden, and had several children, who became distinguished in music. In London he went by the name of "Tom Cooke."

COOMBE, WILLIAM FRANCIS, was born at Plymouth, in Devonshire, in 1786. He began his musical studies under his father, a professor of singing at Plymouth, in which town he sang at the early age of nine years, on occasion of some oratorios being given, at which the principal London performers were present. He next studied music under Churchill, and a short time with Jackson, of Exeter. At the age of fourteen he was appointed organist of Chard, in Somersetshire, afterwards at Totness, in Devonshire, which situation he held for nine years, subsequently removing to Chelmsford, in Essex, where he held the organist's place eleven years. Having been much engaged in teaching, he had but little time for composition. He has, however, published a few sonatas, &c., chiefly for the use of his pupils.

COOMBS, JAMES MORRIS, born at Salisbury in 1769, was admitted a chorister in the cathedral, and received his musical education from Dr. Stephens and Mr. Parry. At an unusually early period of life he composed and published a "*Te Deum*," which was much admired for its originality, and is still occasionally performed in various cathedral churches. In 1789 he was appointed organist of Chippenham. He afterwards published several single songs, glees, a set of canzonets, &c., many of which were very popular. In 1819 he edited a selection of *psalm tunes*, which is very highly approved of, and has an extensive circulation. His last attempt in composition was an "*Agnus Dei*," deemed particularly beautiful. He died in the year 1820, aged fifty-one.

COOPERARIO, or **COOPER**, **JOHN**, a celebrated performer on the *viol da gamba*, and composer for that instrument and the lute, was one of the musical preceptors to the children of King James I. Some of his vocal compositions are to be found in Sir William Leighton's collection, and there are several others extant in manuscript. In conjunction with Lanier and another person, he composed the songs in a mask written by Dr. Campion, on the marriage of the Earl of Somerset with Lady Frances Howard, (the divorced Countess of Essex,) which was represented in the banqueting house at Whitehall, on St. Stephen's night, 1614. One of the songs in this mask, beginning with the words "Come ashore," is inserted in Smith's "*Musica Antiqua*," as a specimen of the music of this composer. Cooperario was the author also of "Funeral Tears for the Death of the Right Honorable the Earl of Devonshire; figured in seven Songes, whereof six are soe set that the Wordes may be expressed by a Treble Voyce alone, to the Lute and Base Viol, or else that the meane Part may be added, if any shall effect more Fulnesse of Parts. The seventh is made in forme of a Dialogue, and cannot be sung without two Voyces," printed in 1606; and "Songs of Mourning and Bewailing the untimely Death of Prince Henry," printed in 1613. It has been supposed by some persons that Cooperario was by birth an Italian. This, however, is an error, arising from the circumstance of his having Italianized his plain and genuine name of John Cooper into Giovanni Cooperario.

COPPOLA, **GIUSEPPE**, a Neapolitan composer, published an oratorio entitled "*L'Apparizione di St. Michele*," in 1788.

COPYIST. One whose profession it is to copy music, either for private or public performance. The chief part of this art consists in giving the heads of the notes a full rotundity of form, and a decided and unequivocal situation on the lines, and in the spaces they are meant by the composer to occupy; to make the ties of the semiquavers and notes of less value strong and clear, as well as to place them at equal distances; and where two or more staves move together, to set the parts so correctly under each other that the eye may catch at a glance what the hands are to perform at the same moment.

COR. (F.) A horn. See **CORNO**.

CORANTE. (I.) A slow dance in $\frac{3}{2}$ or $\frac{3}{4}$ time.

CORANTO. (I.) A certain air, consisting of three crotchets in a bar. See **COURANT**.

CORBELIN, a harpist at Paris, published a method for his instrument in 1783, and other musical works up to the year 1802.

CORBETT, **WILLIAM**, was a celebrated performer on the violin, and leader of the first opera orchestra at the Haymarket, at the time when "*Arsinoe*" was performed there. Of this person there are some particulars worth noting. He was a good composer and a great collector of music and musical instruments. When the Italian Opera, properly so called, was established in London, (that is to say, in the year 1710, when "*Rinaldo*" was performed at the Haymarket,) a set of instrumental performers were introduced,

and Corbett, though in the service of the king, was permitted to go abroad. Accordingly he went to Italy, and resided at Rome many years, during which time he made a valuable collection of music and musical instruments. Those who were acquainted with his circumstances, at a loss to account for his being able to lay out such sums as he was observed to do in the purchase of books and instruments, confidently asserted that, besides his salary, he had an allowance from government, and that his business at Rome was to watch the motions of the Pretender. In his younger days, and before he left England, he had published two or three sets of sonatas for violins and flutes, twelve concertos for all instruments, and sundry sets of tunes made for plays; but upon his return, about the year 1740, he brought with him a great quantity of music of his composing during his residence abroad, from the publication of which he hoped to derive considerable advantage; he was, however, disappointed in his expectations. Corbett died at an advanced age, about the year 1748.

CORDA; plural **CORDE**. (L.) A string; as, *sopra una corda*, on one string.

CORDANS, **DON BARTOLOMEO**. A Venetian dramatic composer between the years 1707 and 1731.

CORDATURA. (L.) The collective appellation given to the open scale of any stringed instrument; thus the open strings, G, D, A, E, form the *cordatura* of the violin; F, A, D, G, B, E, form the *cordatura* of the guitar.

COR DE SIGNAL. (F.) A bugle.

CORDICELLI, **S. GIOVANNI**. A Roman organist and composer of motets about the year 1750. He taught Clementi thorough bass.

CORELLI, **ARCANGELO**, founder of the Roman school (what may now be termed the ancient school) of violinists, was born at Fusignano, near Imola, in the territory of Bologna, in 1653. He is said, by Adami, to have received his first instructions in counterpoint from Matteo Sironelli, of the papal chapel; his violin master was Giovanni Battista Bassani, of Bologna. It has been said, without authority, that Corelli went to Paris in the year 1672, but was soon driven thence by the jealousy and violence of Lulli. That he visited Germany, after he had finished his studies, we are assured by Gaspard Printz, who informs us that he was in the service of the Duke of Bavaria in 1680. Soon after this period he returned to Italy, and settled at Rome, where, about 1683, he published his first twelve sonatas. In 1685, the second set appeared, under the title of "*Balletti da Camera*." In 1690, Corelli published the third opus of his sonatas; and in 1694 the fourth, which, consisting, like the second, of movements fit for dancing, he called also "*Balletti da Camera*." About this time the opera was in a very flourishing state at Rome, and Corelli led the band as principal violin. His solos, the work by which he acquired the greatest reputation during his lifetime, did not appear till the year 1700, when they were published at Rome under the following title: "*Sonate à Violino, e Violone, o Cembalo, Opera Quinta, Parte Prima; Parte Seconda, Preludii, Allemande, Correnti, Gigghi, Sarabande, Gavotte, e Follia*." This work was dedicated to Sophia Charlotte, Electress of Brandenburg. Corelli's great patron at Rome was Cardi-

nal Ottoboni, the great encourager of learning and the polite arts; to whom, in 1694, he dedicated his "*Opera Quinta*," and in whose palace he constantly resided, "*col spetiosa carattere d'attuale scrittore*" of his eminence, as he expresses himself in the dedication. Crescimbeni, speaking of the splendid and majestic *ademie*, or concert, held at Cardinal Ottoboni's every Monday evening, says, that the performance was regulated by Arcangelo Corelli, "that most celebrated professor of the violin." The following anecdotes of this eminent musician were communicated by Geminiani, one of his most illustrious pupils, and who was himself an eye and ear witness of what he thus related. At the time when Corelli enjoyed the highest reputation, his fame, having reached the court of Naples, excited a curiosity in the king to hear his performance; he was consequently invited, by order of his majesty, to that capital. Corelli, with great reluctance, was at length prevailed upon to accept the invitation; but, lest he should not be well accompanied, he took with him his own second violin and violoncello. At Naples he found Alessandro Scarlatti and several other masters. He was entreated to play some of his concertos before the king; this he for some time declined, on account of his whole band not being with him, and there was no time, he said, for a rehearsal. Although, however, he consented, and in great fear performed the first of his concertos, his astonishment was very great to find that the Neapolitan musicians executed his productions almost as accurately at sight as his own band after repeated rehearsals, when they had almost got them by heart. "*Si suona* (says he to Matteo, his second violin) *à Napoli.*" After this, being again admitted into his majesty's presence, and desired to perform one of his sonatas, the king found an *adagio* so long and dry, that, being tired, he quitted the room, to the great mortification of Corelli. Afterwards he was desired to lead in the performance of a mask, composed by Scarlatti, which was to be represented before the king. This he undertook; but from Scarlatti's little knowledge of the violin, Corelli's part was somewhat awkward and difficult; in one place it went up to F, and when they came up to that passage, Corelli failed, and could not execute it; but he was astonished beyond measure to hear Petrillo, the Neapolitan leader, and the other violins, perform with ease that which had baffled his utmost skill. A song succeeded this, in C minor, which Corelli led off in C major. "*Ricominciamo*," (let us begin again,) said Scarlatti, good naturedly. Still Corelli persisted in the major key, till Scarlatti was obliged to call out to him, and set him right. So mortified was poor Corelli at this disgrace, and the deplorable figure he imagined he had made at Naples, that he stole back to Rome in silence. Soon after this a haughty player, whose name Geminiani could not recollect, acquired such applause at Rome, that Corelli, disgusted, would never again play in public. All these mortifications, joined to the success of Valentini, whose concertos and performances, though infinitely inferior to those of Corelli, were become fashionable, threw him into such a state of melancholy and chagrin, as was thought to have hastened his death. This account of Corelli's journey to Naples is not a mere personal anecdote; it throws light upon the comparative state

of music at Naples and at Rome in Corelli's time, and exhibits a curious contrast between the fiery genius of the Neapolitans, and the meek, timid, and gentle character of Corelli, so analogous to the style of his music. In 1712 his concertos were beautifully engraved at Amsterdam, by Estienne Roger and Michael Charles le Cene, and dedicated to John William, prince palatine of the Rhine; but, alas! the author survived the publication of this admirable work but six weeks; the dedication bearing date the 3d of December, 1712, and he dying on the 18th of January, 1713. He was buried in the Church of Santa Maria Della Rotonda, the ancient Pantheon, in the first chapel on the left hand of the entrance of that beautiful temple, where a monument, decorated with a marble bust, is erected to his memory, near that of the greatest of painters, Raphael, by Philip William, count palatine of the Rhine, under the direction of Cardinal Ottoboni. During many years after Corelli's decease, a solemn service, consisting of selections from his own works, was performed in the Pantheon, by a numerous band, on the anniversary of his funeral. This solemnity continued as long as any of his immediate scholars survived to conduct the performance. Of the private life and moral character of this celebrated musician no new information can now be obtained; but if we may judge of his equanimity and natural disposition by the mildness, sweetness, and even tenor of his musical ideas, his temper and talents must equally have endeared him to all his acquaintance. The account that is given of his having amassed six thousand pounds, exclusive of a valuable collection of pictures, and of his having bequeathed the whole of his property to his patron, Cardinal Ottoboni, savors more of vanity than true generosity; and the cardinal magnanimously evinced his opinion of this bequest, by reserving only the pictures, and distributing the remainder of Corelli's effects among his indigent relations, to whom they naturally appertained. In regard to the peculiar merits of Corelli's productions, it may be briefly said, that his *solos*, as a classical book for forming the hand of a young practitioner on the violin, have ever been regarded as truly valuable by the most eminent masters of that instrument; and it is said that his "*Opera Quinta*," on which all good schools for the violin have since been founded, cost him three years to revise and correct. Tartini formed all his scholars on these solos; and Giardini observed, that of any two pupils of equal age and abilities, if the one were to begin his studies by Corelli, and the other by Geminiani, or any other eminent master whatever, he was certain that the first would become the best performer. The concertos of Corelli have withstood all the attacks of time and fashion with more firmness than any of his other works. The harmony is so pure, the parts are so clearly, judiciously, and ingeniously disposed, and the effect of the whole, from a large band, so majestic, solemn, and sublime, that they preclude all criticism, and make us forget that there is any other music of the same kind existing. Geminiani's character of Corelli, upon the whole, seems very just: "His merit was not depth of learning, like that of his contemporary, Alessandro Scarlatti, nor great fancy, or a rich invention in melody or harmony, but a nice ear, and most delicate taste, which led him to select the

most pleasing melodies and harmonies, and to construct the part so as to produce the most delightful effect upon the ear." At the time of Corelli's greatest reputation, Geminiani asked Scarlatti what he thought of him, who answered, that "he found nothing greatly to admire in his composition, but was extremely struck with the manner in which he played his concertos, and his nice management of his band, the uncommon accuracy of whose performance gave the concertos an amazing effect, even to the eye as well as to the ear." For, continued Geminiani, "Corelli regarded it as an essential to a band, that their bows should all move exactly together, all up or all down, so that at his rehearsal, which constantly preceded every public performance of his concertos, he would immediately stop the band if he saw an irregular bow." There was little or no melody in instrumental music before Corelli's time; and though he has more grace and elegance in his *cantilena* than his predecessors, and though slow and solemn movements abound in his works, yet it must be confessed they are destitute of true, pathetic, and impassioned melody. However, when we recollect that some of his productions are upwards of a hundred and fifty years old, we shall, in spite of this deficiency, admire and wonder at their grace and elegance, which can only be accounted for on the principle of their ease and simplicity, which have conferred longevity on the works of Corelli. His productions continued longer in un fading favor in England, where they still retain a considerable portion of esteem, than even in his own country, or indeed in any other part of Europe. They have, however, been compelled to submit to the superior genius and talents of Haydn, Mozart, Beethoven, and Cherubini, who, in the ideas of the generality of musical readers, will probably, and perhaps justly, be considered to have left at an immeasurable distance the comparatively humble efforts of their laborious predecessors.

CORFE, JOSEPH, born at Salisbury in 1740, was one of the choristers of the cathedral of that city, and received his musical education from Dr. Stephens, the organist. Early in life Corfe was honored with the patronage of James Harris, Esq., grandfather to the Earl of Malmesbury, by whose friendship he was recommended to the notice of Bishop Lowth, which procured for him, in 1782, the appointment of one of the gentlemen of his majesty's Chapel Royal. In 1792 he was elected, by the dean and chapter of Salisbury, organist of that cathedral and master of the choristers; which situation he resigned, in 1804, to his son Arthur. Few men stood higher, both in public and private estimation, than Corfe. His compositions are chiefly for the church, and his morning and evening service, with many excellent anthems, are in constant use at Salisbury and other cathedrals. He died in 1820. The following is a list of his publications: "A Morning and Evening Service, a Sanctus, with eight Anthems, dedicated to the Dean and Chapter of Salisbury," 1 vol.; "A Treatise on Singing;" "A Treatise on Thorough Bass;" "The Beauties of Handel, dedicated to his late Majesty," 3 vols.; "Sacred Music, adapted to some of the choicest Compositions of Jomelli, Pergolesi, &c., &c., by the late James Harris, Esq., dedicated to the Earl of Malmesbury;" "The Beauties of Purcell, dedicated to Miss S. Beckford," 2 vols.; "Three

Sets of GleeS, from Scotch and other Melodies;" "The Second Volume of Kent's Anthems."

CORFE, ARTHUR THOMAS, son of the preceding, was born at Salisbury in 1773. He was placed as chorister at Westminster Abbey in 1783, and received his musical education from Dr. Cooke; he afterwards studied the piano-forte under Clementi. In 1804 he was elected organist and master of the choristers of the cathedral of Salisbury. Mr. A. T. Corfe's compositions are a "Te Deum," "Jubilato," "Sanctus," and "Commandments;" an anthem, "Lord thou art become gracious," for a counter tenor; the Ordination Hymn, from Handel's Works; and also several piano-forte pieces.

CORKINE, WILLIAM. An English composer of "Airs to sing to the Lute and Bass Viol," published at London, in two volumes, in 1610 and 1612.

CORNAMUSA. The old name of the bagpipe. See CORNMUSE.

CORNE DE CHASSE (F.) French horn. See HORN, FRENCH.

CORNET A PISTONS. (F.) A species of trumpet with valves.

CORNET. A wind instrument now but little known, having more than a century since given place to the hautboy. There were three kinds of cornets — the treble, the tenor, and the bass. The treble and tenor cornets were simple, curvilinear tubes, about three feet in length, gradually increasing in diameter from the mouthpiece towards the lower end. The bass cornet was a serpentine tube four or five feet long, and increasing in diameter in the same manner. Though the tone of this instrument was naturally powerful and vehement, yet in skillful hands it was capable of becoming both soft and sweet. The name *cornet* has more recently been given to a species of trumpet, much used in the brass bands of our day.

CORNETTINO. (I.) A small or little cornet the diminutive of *cornet*. The word *cornettino* is also the appellation for an octave trumpet.

CORNISHE, WILLIAM. Composer for the Chapel Royal in the time of Henry VII.

CORNMUSE. The name of a horn, or Cornish pipe, formerly much in use, and blown like the bagpipe.

CORNO. (I.) A French horn; plural *corni*.

CORNO DI BASSETTO. (I.) A basset horn.

CORNO INGLESE. (I.) English horn. A reed instrument related to the hautboy, but of a deeper pitch.

CORO. (I.) A chorus or piece for many voices.

COROMEION. (From the Greek.) A brazen bell, much used by the ancients.

CORONATA. The Italian name for pause.

CORRADINI, NICOLO. Organist and composer at Cremona. His "*Canzoni Francesi*" were published at Venice in 1624.

CORREGIO, CLAUDIO, published some madrigals at Venice in 1566.

CORRI, DOMINICO, an Italian composer, resident in London, was a pupil of Porpora at Naples, from the year 1763 till Porpora's death, in 1767. Corri went to London in 1774, and the same year produced an opera entitled "*Alessandro nell' Indie*;" but his name was not sufficiently blazoned to give his opera much *éclat*, or indeed to excite the attention it deserved. In 1788 Corri published three volumes of English songs, with original accompaniments—a work which was moderately successful. About the year 1797, he entered into partnership with Dussek in a music warehouse, where he published a great deal of his own and other music; but the works by which he is chiefly known in England are his opera of "The Travellers," and a treatise on singing, in two volumes, called "The Singer's Preceptor." He was father of Antonio Corri, of New York, Haydn Corri, of Dublin, M. Corri, of Manchester, and also to Mrs. Moralt, late Mrs. Dussek.

CORRI, MONTAGUE, second son of Domenico Corri, was born in Edinburgh about the year 1785. At an early age he was taught fencing by Mr. T. Angelo, and became unusually expert at it when only ten years old. As all his family were musical, it was intended he should be brought up to the same profession; but his inclinations leading him to prefer painting, for which he also showed a talent, some family differences took place, which occasioned his suddenly leaving home and entering the sea service; he soon, however, became tired of this life, and returned to his family, where, on approaching the age of nineteen, he began to reflect that he must depend entirely on himself for support, and flew with avidity to music as his last resource. M. Corri may be said to have been almost *self-taught* in music, never having received more instruction than six lessons from his father, twelve from his mother, and a few occasionally from Winter and Steibelt on composition; whatever further knowledge he derived was from reading over the scores of the most celebrated composers. His career in instrumental practice was soon stopped, first by an accidental wound in his head, and soon after by the complete dislocation of one of the fingers of his right hand, which prevented him from playing on the piano-forte. Composition and the arrangement of instrumental music, both for theatres and military bands, then became his only means of support, and in this branch of business his expedition was wonderful. He was first employed at the Surrey Theatre as composer and compiler of the music. As an instance of his quickness and cleverness in theatrical business, we will relate the following two anecdotes: he once received the words of two songs in the morning, both of which were sung the same evening in a theatre. At another time Mr. Liston had advertised "The Forty Thieves" for his benefit at Covent Garden; but on the Saturday previous to his benefit, which was to happen on the following Tuesday, it was found that the orchestra parts were not to be had, they having never been reset since the fire of Drury Lane Theatre: thus circumstanced, M. Corri was named as the person most likely to replace them. On Sunday he was sent for, and after reflecting a little on the difficulty of the undertaking, ultimately agreed to do

it. He commenced on Monday morning, without giving himself time to make the score, to write the whole of the parts for the different instruments from a piano-forte copy, and contrived to be prepared for a half band rehearsal on Tuesday morning. During the rehearsal, he quitted the house for rest and refreshment for an hour, and immediately after proceeded with his work, which he entirely completed, without an error, by eight o'clock that evening. Corri's next engagements were at Astley's and the Cobourg Theatre till the year 1816, when he was appointed chorus master at the English Opera House. About 1817 he was engaged by his uncle to manage his Pantheon at Edinburgh. On his return, he arranged some music for regimental bands, at Newcastle-upon-Tyne; and then took his passage from Shields to London, on board a Dutch trader, which was wrecked. After many hardships, Corri and the rest of the crew were taken up from the long boat by a collier, and he arrived in Gravesend, having lost every thing he possessed, except the clothes on his back and a few pounds in a pocket book which he had tied round his neck. After this period, he resided alternately at Manchester and Liverpool, occasionally employed at the theatres, and giving instructions in fencing.

CORRI, NATALE, brother of Dominico Corri, was a singing master of reputation at Edinburgh, where, for many years, he gave public concerts and other musical entertainments. N. Corri has published several books of Scotch songs, also some Italian chamber music.

CORRI-PALTONI, MME. FANNY, daughter of Natale Corri, was born at Edinburgh in 1801. Her earliest instructor in singing was her father; but she was early placed under the tuition of Braham. She subsequently made a long tour in company with Madame Catalani, during which she must have heard most of the principal singers in Europe. At the age of seventeen she was introduced to the English public at the King's Theatre, where she undertook several arduous characters as *prima donna*. The editor of the Musical Review, in speaking of Miss Corri's singing, observes, that "no auditor would listen for five minutes to her singing without pronouncing, This is the manner of Catalani." In 1821 she went to Germany, where she had small success; and from there to Italy, where she married a singer by the name of Paltoni. In 1825 she had acquired considerable reputation at Bologna. Two years afterwards she was called as *prima donna* to Madrid; then, in 1828, she sang at Milan with Lablache. In 1830 she returned to Germany, and was afterwards in Russia.

CORRI, MISS ROSALIE. Younger sister of the preceding. She sang at the oratorios in London in 1820 and 1821, had a good voice, and much of the delightful execution of her sister.

CORTECCIA, FRANCESCO, an eminent Italian organist and composer, was chapel-master during thirty years, to the Grand Duke Cosme II. He published at Venice, 1566, madrigals, motets, and some sacred music. He died in 1581. A copy of Cortecchia's madrigals is preserved in the Christ Church collection, at Oxford.

CORTONA, ANTONIO. A Venetian dramatic composer about the middle of the last century.

CORYMBÆUS. The name given by the au-

cient Greeks to the conductor, chief, or leader of their choros, whose office it was to beat the time, and to direct and regulate every thing concerning the performance.

COSIMI, NICOLÒ. A Roman composer and violinist. He was in England in 1702, when he published twelve solos for the violin, which have considerable merit for his time. There is a mezzotinto print of this musician, engraved by J. Smith from a picture of Sir Godfrey Kneller.

COSTELEY, WILLIAM, of Scotch origin, was organist and *valet de chambre* to Charles IX. He wrote on music in 1570.

COSYN, an English musician, published, in 1585, sixty psalms, in six parts, in plain counterpoint.

COSYN, BENJAMIN, a celebrated composer of "Lessons for the Harpsichord," and probably an excellent performer on that instrument, flourished in the first half of the seventeenth century. There are many of his lessons extant, somewhat in the same style with those of Dr. Bull, and in no respect inferior to them.

COTILLON, or COTILL. A lively, animated dance, generally written in six quavers in a bar.

COUCHED HARP. The original name of the spinet. See that word.

COULE. (F.) A group of two notes connected by a slur.

COUNTER. See ALTO.

COUNTER BASS is a second bass, where there are more than one in the same performance.

COUNTER FUGUE. A fugue in which the subjects move in contrary directions.

COUNTER TENOR. One of the middle parts, so called because it is, as it were, opposed to the tenor.

COUNTER TENOR CLEF. The name given to the C clef, when placed on the third line, in order to accommodate the counter tenor voice.

COUNTER TENOR VOICE. *High tenor.* A term applied to the highest natural male voice. See VOICE.

COUNTERPOINT. The combination, and modulation of sounds either consonant, or allowably discordant. This branch of musical practice derives its name from the *points* formerly employed in composition, instead of notes, and may be understood, *point against point, or note against note.* This was the primitive state of counterpoint, which has since been called plain or simple counterpoint, in contradistinction to the modern figured or florid counterpoint, in which, for the purpose of beautifying the melody, and enriching the general effect, many notes in succession are frequently set in one part, against a single note in another. Soon after the laws of counterpoint began to be understood, music for the human voice was divided into four parts, the lowest of which was called tenor, the next counter tenor, the third mectosus, and the highest triplum and treble. About 1450, the parts were increased to six, and were called bass, baritone, tenor, contralto, mezzo soprano, and soprano. By the study of counterpoint the composer at the same time reaps the advantage of learning to combine various parts with facility, and of being able to supervise their harmonic connection; he likewise imperceptibly acquires the faculty of so arran-

ging the melody, which expresses his ideas, as to make it capable of a variety of variations; he reaps the advantage of being able to take in a one view all the various harmonic combinations which may accompany his subject, and can then choose those which best answer his purpose. In short, by the study of counterpoint, he acquires an expertness and dexterity in the use of harmony, without which he is unable to produce the ideas of sound conceived in his fancy, and without which he cannot arrange and complete them to advantage in their harmonic extent.

There are very few important inventions which are involved in greater obscurity than that of the discovery of counterpoint, or written harmony. The honor of this invention has been given to Guido Aretinus; but it was probably known long before his time, and it was one of those discoveries which, no doubt, many men made; one which must have been naturally attained after making some progress in music; but Guido probably made great improvements in counterpoint.

COUNTRY DANCE. A lively pointed air, calculated for dancing. When the country dance was first introduced is not known; but it is certainly of French origin, though now transplanted into almost every country in Europe. No rules have ever been laid down for the composition of a country dance, nor is it, indeed, confined to any particular measure; so that any common song, or tune, if sufficiently cheerful, may, by adoption, become a country dance. See CONTRE DANSE.

COUPERIN, ARMAND LOUIS, son of Nicholas Couperin, chamber musician to the Count of Toulouse, was organist to the king, and to several churches in Paris. He composed some instrumental and church music, and was much celebrated for his skill on the organ and harpsichord. He died in 1789. Dr Burney heard him perform on the organ at Paris in 1770, and considered him as a great player.

COUPERIN, FRANÇOIS, organist and chamber musician to Louis XIV. and XV., was a fine performer on the harpsichord, and composed for that instrument an *allemande* entitled "*Les Idées heureuses,*" which may be seen in the first volume of Sir John Hawkins's History, p. 48. Couperin died in 1733.

COUPERIN, GERVAIX FRANÇOIS, son of the preceding, succeeded his father as organist of several churches in Paris; he also composed some instrumental and church music.

COURANT. (F.) A melody, or air, of three crotchets in a bar, moving by quavers, and consisting of two strains, each beginning with the latter three quavers of the bar.

COURTAUT. (F.) An ancient instrument, similar to the bassoon, but much shorter, and therefore called by this name, from the French word *courte*, short. The courtaut had two rows of projecting apertures, called *tampions* or *tetines*. These *tetines* were not movable, but fixtures, disposed on different sides of the instrument for the accommodation of left-handed as well as right-handed performers; and when the *tetines* on one side were used, those on the other side were stopped.

COUSSER, JOHANN SIGISMUND, born about the year 1657, was the son of an eminent musician of Presburg, in Hungary. Being initiated by his father into the rudiments of music,

and also into the practice of composition, he travelled for improvement into France, and at Paris became a favorite of Lulli, and was by him assisted in the prosecution of his studies. After a stay of six years at Paris, Cousser visited Germany, and introduced there the Italian method of singing, to which the Germans had hitherto been strangers. About the year 1700, he visited Italy, making two journeys thither in the course of five years. Upon his last return to Germany, not receiving that encouragement which he thought due to his merit, he quitted that country, and went to England, and, settling in London, became a private teacher of music. In the year 1710, he went to Ireland, and obtained an employment in the cathedral church of Dublin. Cousser composed several operas and other vocal music. He died at Dublin in the year 1727.

CRAMER, WILLIAM, born at Manheim about the year 1730, was an excellent violinist, celebrated for his fire, tone, and certainty of touch. He is said by the German writers, to have united in his playing the brilliancy of Lulli with the expression and energy of Benda; he was considered as the first violinist of his time in Germany, and was employed at the chapel of the elector palatine, at Manheim, from 1750 to 1770. In the latter year he went to England, and was nominated chamber musician to the king, and likewise appointed leader of the orchestra at the Opera, and a few years afterwards leader at the Ancient Concerts. It was Cramer who, in 1787, led the orchestra of eight hundred musicians, at the commemoration of Handel. He died in 1805. W. Cramer composed and published much music for the violin.

CRAMER, JOHN BAPTIST, son of the preceding, though born in Germany, went to England with his father at a very early age. With a strong natural genius for music, it could not be long before young Cramer's progress in the art gave to his friends the promise of future excellence. Surrounded also, as he was, by the most eminent musical circle then resident in England, he had every opportunity of forming his taste on the best models. Still, it is said that the violin, to the performance of which instrument the father wished to direct his son's talent and taste, was never sufficiently admired by young Cramer to draw forth the latent powers of his genius, and it was not till he was discovered, when about six years old, to take every opportunity of practising privately on an old piano-forte, that his friends perceived the true bias of his mind; shortly after which, his father apprenticed him for three years to a German professor of that instrument, by the name of Benser; his next master being Schroeter, and his third, though only for the short term of one year, the celebrated Clementi. Cramer, on the completion of his tuition, had arrived at the age of thirteen, when, after another year's assiduous practice from the works of the best masters, his fame as a performer began to spread through the metropolis, and he was invited to play in public at several of the first concerts, where he astonished the most judicious audiences by his precocious brilliancy of touch and rapidity of execution. At the same time he studied the theory of music under C. F. Abel. The father and son may be considered as having been at this period two of the first instrumental performers in Europe; their as-

sistance was anxiously sought for in every orchestra of importance throughout the kingdom; and it was not long after this time, that W. Cramer, who had for several years been *chef-d'orchestre* at the Opera, was appointed to lead at one of the commemorations of Handel in Westminster Abbey; a professional honor of the very highest degree to which a violinist could aspire, and to which no one could have done greater justice. It should be recollected that the vocal and instrumental band on that occasion consisted of above eight hundred performers; and it is well known that London could then boast of many excellent violinists, all of whom readily ceded their claims to Cramer, Sen. We believe that the son was in that year on the continent; at all events the character of his instrument was such as to render his professional assistance useless on the occasion. He was about seventeen years of age when he went to various parts of the continent, exerting his talents in several of the capital towns, in such a manner as to attract the attention of all amateurs of the piano-forte. His return to England took place about the year 1791, previously to which period he had become known as a composer by several operas of sonatas, published at Paris. A few years afterwards he again went abroad, and proceeded as far as Vienna and Italy. At Vienna he renewed his friendship with Haydn, who, when in England, had evinced great partiality for him. On his again revisiting England he married. J. B. Cramer's eminence as a teacher as well as performer has long been established in London, and his "Instructions" and "Studies" for his instrument are considered as among the best in Europe; the former work has gone through several editions. The "Studies" are works displaying a great versatility of taste, and fully answer the purposes for which they were written. Various passages in them, as indeed in many of the other works of this master, remind one forcibly of the harmony of Sebastian Bach; this is, indeed, the less remarkable, as the works of that great master and his family are said to have received the strictest attention from Cramer, in the earlier portion of his professional career. Well indeed would it be for various professors of the present day, had they laid the foundation of their musical attainments on so firm a basis! The neglect of good models is probably the source of all musical defects. "How many a musical genius," says Forkel, "has been cramped by the deficiencies of the music master, who, that he may maintain his own credit, cries up and recommends studies to his pupils, compositions within the reach of his own limited talents, whilst the sublime effusions of a Bach are deemed as obsolete and whimsical, lest, if produced, it should be discovered that the master can neither play nor even comprehend their beauties!" Thus many a pupil is obliged to spend his time, labor, and money in useless jingling, and in a half a dozen years is, perhaps, not a step farther advanced in real musical knowledge than he was at the beginning. With better instruction he would not have wanted half the time, trouble, and money to be put into a way in which he might have safely and progressively advanced to perfection in his art. "It is certain," continues Forkel, "that if music is to remain an art, and not to be degraded into a mere idle amusement, more use must be made of classical works than has been done for some time

past. Bach, as the first classic in music that ever lived, or perhaps ever will live, can incontestably perform the most important services in this respect." A person who has for some time studied his music must (as is proved by the writings of J. B. Cramer) readily distinguish mere jingle from real harmony, and will show himself a good and well-informed artist in whatever style he may subsequently adopt. We conclude by a few remarks on the style of composition and performance of this eminent master. "If music be a language," says an eminent contemporary writer, — "if it be, moreover, the language of the passions, as authors have described it, — we must not, therefore, imagine that sounds convey only sentiment, raise only refined emotions, or excite only impassionate feelings. Music has a phraseology as varied, and perhaps even more diversified than words can assume; and while we perceive that the great body of compositions passes across the mind without producing any pleasurable ideas, or conveying to any other sense than our hearing any peculiar excitement, there are, among the few, men who seldom write a passage that is not remarkable for some particular beauty. It is therefore sufficiently perceptible, that natural aptitude and cultivation arrive together, at last, to a perfection analogous in the assimilation of its objects to that which marks what is called fine taste in conversation and manners. Language defines the thought precisely. Music, on the contrary, addresses a whole class of perceptions. A certain series of notes will excite our sensibility to a general but undefined feeling of grandeur, or pathos, or elegance, without, perhaps, producing one single perfect image — emotions merely; yet it is obvious that these emotions attend as certainly on passages of a given kind as definite ideas are conveyed by a particular set of words. It happens, then, that there is the same choice in musical as in conversational phraseology; and we apprehend that elevation and polish are attained by the same means in the one case as in the other — by a naturally delicate apprehension, by memory, by a power of assimilating what is great or elegant, by a diligent study of the best models. At this perfection J. B. Cramer seems to have arrived. Seldom, indeed, is it, that we meet with a weak, insipid, or coarse passage in his writings. If he employs those which are common or familiar, he interweaves them so judiciously with more graceful notes, he varies his expression so continually, dwells for so short a time upon any single expedient of the art, opposes the members of his musical sentences, and even whole sentences with such judgment, throws in such strong and vivid lights of fancy, modulates with such skill, and lays his foundation of harmony in a manner so masterly, that they who do and they who do not understand the contrivance and elaboration of all this complex, yet apparently natural order, feel alike the sweetness and effect, are alike agitated by the varying sensations. With the exception of Clementi, we know of no composer who has so universally succeeded. And yet, if we were desired to point out the reason of the universal pleasure his compositions bestow, we should say, after all the attributes we have already allowed to belong to this author, that the grand source of delight has not yet been mentioned. This grand delight is *melody*. This is the never-ceasing charm." No words can possi-

bly give a more just idea than the above of the causes of the pleasurable sensations derivable from melodious music; also of the peculiarities of merit in the compositions of J. B. Cramer. With respect to the talent of this master as a pianist, we need only say that, by the willing acquiescence of the capital, every professor yielded to him the palm, not indeed in velocity of finger, but in brilliancy of touch and genuine taste. The following eulogium of his performance by a contemporary writer is by no means overcharged. "As a performer on the piano-forte, Cramer is unrivalled, and we may perhaps venture to assert, every professor unreluctantly yields to him the palm. His brilliancy of execution is astonishing; but this quality, which is, in fact, purely mechanical, amounts to little or nothing in the general estimate of such merits as his; taste, expression, feeling, the power that he possesses of almost making the instrument speak a language, are the attributes by which he is so eminently distinguished. The mere velocity of manual motion, those legerdemain tricks which we are now and then condemned to witness, may entrap the unvary; the physical operation of sounds, whose rapidity of succession is incalculable, may be necessary to stimulate the indurated tympana of some few dull ears; but those who love to have their sympathies awakened by the 'eloquent music which this instrument may be made to discourse,' who derive any pleasure from the most social and innocent of the fine arts, and who would gain the practical advantages of an instructive lesson by listening to a delightful performance, — such persons should seize every opportunity that is afforded them of hearing Cramer." We will conclude by a few remarks on a passage in the preface to one of his elementary works. He says that "experience proves that introducing popular airs, arranged as lessons for the practice of learners, greatly promotes their application and improvement; besides, when desired to play, they have the satisfaction to observe that they afford more entertainment to their hearers, by pieces of this kind, than by playing long and uninteresting compositions; therefore the author has selected for his lessons many favorite airs, which he has arranged in a familiar style; and in order to preserve the necessary progressive gradation, has composed the remainder of the lessons." We are ourselves convinced that the foregoing idea of Cramer is founded on enlightened experience; as, without cavilling about terms, we know at present several instances of unusually rapid advances in piano-forte playing made by children who are studying on the plan recommended above, and who have thus gained that confidence in their own playing which is absolutely requisite to accustom a child to perform well before strangers; and which confidence they have acquired by feeling and knowing that, whilst they amuse themselves, they give pleasure to their hearers. The following is a list of Cramer's published works: Op. 1. "Three Sonatas." 2. "Three Sonatas," (easy.) 3. "Three Sonatas, with Accompaniments," (easy.) 4. "Three Grand Sonatas," Paris. 5. "Three Sonatas," (easy.) Paris. 6. "Four Grand Sonatas," Paris. 7. "Three Grand Sonatas," dedicated to Muzio Clementi. 8. "Two Sonatas." 9. "Three Sonatas, with Accompaniments." 10. "Concerto, with Orchestral Accompaniments." 11. "Three

Sonatas." 12. "Three Sonatas, with popular Airs." 13. "Three Sonatinas." 14. "Three Sonatas," (easy.) 15. "Three Sonatas," (easy.) 16. "Concerto, with Orchestral Accompaniments." 17. "Marches and Waltzes." 18. "Three Sonatas, with Accompaniments." 19. "Three Sonatas," (easy.) 20. "Sonata," dedicated to Clementi. 21. "Two Sonatas," (easy.) 22. "Three Sonatas," dedicated to J. Haydn, Vienna. 23. "Three Sonatas," (easy.) 24. "Duet for two Grand Piano-fortes." 25. "Three Grand Sonatas." 26. "Concerto, with Orchestral Accompaniments." 27. "Two Grand Sonatas," London and Paris. 28. "Quartet for Piano-forte, Violin, Tenor, and Violoncello," London and Vienna. 29. "Three Grand Sonatas," dedicated to J. L. Dussek, London, Paris, and Vienna. 30. "First Volume of Studio peril, Piano-forte." 31. "Three Sonatas," (easy.) 32. "Notturmo," (easy.) 33. "Three Sonatas." 34. "Grand Duet for two Performers on the Piano-forte." 35. "Three Sonatas, with popular Airs." 36. "Grand Sonata," dedicated to J. Woelfl. 37. "Concerto, with Accompaniments." 38. "Three Sonatas." 39. "Three Sonatas, with popular Airs." 40. "Second Volume of Studio peril, Piano-forte." 41. "Three Sonatas, with popular Airs." 42. "Grand Sonata," dedicated to G. Onslow, Esq. 43. "Three Sonatas, with popular Airs." 44. "Three Sonatas." 45. "Duet for Piano-forte and Harp." 46. "A Sonata." 47. "Three Sonatas." 48. "Grand Concerto in C minor," London and Paris. 49. "Three Sonatas." 50. "Duet for two Performers on the Piano-forte." 51. "Concerto in E flat, major," London, Paris, and Offenbach. 52. "Duet for Piano-forte and Harp." 53. "Grand Souata (*L'Ultima*)," London and Paris. 54. "Notturmo." 55. "*Dulce et Utile*," London and Paris. 56. "Concerto in E sharp, major." 57. "Sonata, No. 1, '*Les Suivantes*,'" London and Leipsic. 58. "Sonata, No. 2, '*Les Suivantes*,'" London and Leipsic. 59. "Souata, No. 3, '*Les Suivantes*,'" London and Leipsic. 60. "Grand Bravura, with Variations," London, Paris, and Bonn. 61. "Grand Quintetto for Piano-forte, Violin, Tenor, Violoncello, and Contra Basso," London and Bonn. 62. "*Sonata de Retour à Londres*," dedicated to F. Ries, London, Paris, and Leipsic. 63. "Sonata," dedicated to J. N. Hummel, London, Paris, and Leipsic. 64. "*Aria à l'Inglese*," dedicated to T. Broadwood, Esq., London and Leipsic. Without *opus* numbers: "*Sketch à la Haydn*," dedicated to his friend, D. Dragonetti; "Rondo," dedicated to his daughter; both composed for the Harmonicon. "Round, from the Opera of 'Cortez,' arranged as a Fantasia." "Capriccio, with Airs from Mozart." "Fantasia, with Variations on a Russian Air." "*Che farò senza*, Air adapted from Gluck." "*Vedrai Carino*, with Variations from Mozart." "*Ah! Perdona*, with Variations from Mozart." "*Deh Prendi*, with Variations from Mozart." "Impromptu on a Subject by Handel." "Grand Sonata, with a Violin Obligato," London and Munich. "Periodical Sonatas, Letters A, B, C, D." "Twelve detached Movements, consisting of Rondos, Variations, Adagio, and a Toccata," (published in an oblong form,) London and Vienna. "Four Rondos, from Subjects of H. R. Bishop's Operas." "Two Serenatas for Piano-forte, Harp, Flute, and Horns." "Twenty-five Divertimentos for the

Piano-forte, including 'Days of Yore,' *La Réunion*, '*Le Retour du Printemps*,' '*La Streenna*, 'Harvest Home,' 'Banks of the Danube,' '*La Ricordanza*, 'Of noble race was Shenkin,' 'Hannoverian Air, with Variations,' 'Rousseau's Dream, with Variations,' 'Crazy Jane, with Variations.'"

CRAMER, FRANÇOIS, second son of William Cramer, was born at Schwetzingen, near Mannheim, in 1772. He was early instructed by an able master in the art of playing the violin. At the age of seven, he left his native country to join his father and brother, who were settled in England. On his arrival in London, it was his father's anxious wish, by giving him good masters, to follow up what he had already so well begun; but the change of climate operating on his naturally delicate constitution, it was advised that he should entirely discontinue the study of the violin, which was strictly adhered to by his father. A lapse of seven years having made great improvement in the health of the young artist, at the age of fifteen it was thought necessary that some plan should be adopted for his future prospects in life. His brother John then recommended him to take up the violin again; which advice he followed, and had the painful task of being obliged to recommence, even by practising the gamut and scales of different descriptions. Having, however, had an early impression of these difficulties, he soon found the means of overcoming them, and in a few months was able to take a part in some easy duets, for two violins, and to accompany his brother in some familiar sonatas for the piano-forte. Soon after this, he found himself equal to attempt some of Corelli's music, and studied with much avidity the solos of that great master; after which he made himself well acquainted with the solos of Geminiani and Tartini, and the *capriccios* of Benda and old Stamitz. In the improvement of a young artist, more, however, is required than to make himself acquainted with the secrets of his instrument: reading music is of the first importance. At the age of seventeen, therefore, his father placed him (gratuitously) in the opera band, of which he, the father, was the leader, that he might profit by the various styles and character of the music generally heard in that theatre. In the course of a few years he rose in the ranks of the orchestra, and was appointed principal second violin under his father, not only at the opera, but at all the principal concerts, namely, the King's Concert of Ancient Music, the Ladies' Concerts, and the great musical festivals given in the country. In the autumn of the year 1799, he lost his father, and in the ensuing season was appointed leader of the Ancient Concerts, by the unanimous consent of the noble directors. He was likewise engaged to lead the Vocal Concerts, Philharmonic, &c., and had the honor of leading, by express command, the band on the occasion of the coronation of George III.

CRANFORD, WILLIAM. One of the choir of St. Paul's Church, in London, in 1650. He composed several rounds and catches, to be found in Hilton's and Playford's collections; and likewise the well-known catch, to which Purcell afterwards adapted the words, "Let's live good honest lives."

CRANTIUS. See KRANZ.

CRANZ. See KRANZ.

CRECQUILLON, THOMAS. An eminent Belgiau composer and chapel-master to Charles V. His compositions are dated between the years 1549 and 1576.

CREED. An English clergyman, who died in 1770. A paper of his was read to the Royal Society, in 1747, entitled "A Demonstration of the Possibility of making a Machine that shall write extempore Voluntaries, or other Pieces of Music." This paper is printed in the Philosophical Transactions for 1747, No. 183, and in Martin's Abridgment, vol. x. p. 266. See HOULFIELD.

CREDO. (L.) *I believe.* One of the principal movements of the mass.

CREIGHTON, ROBERT, D. D., was the son of Dr. Robert Creighton, of Trinity College, Cambridge, who was afterwards Bishop of Bath and Wells, and attended Charles II. during his exile. In his youth he had been taught the rudiments of music, and entering into orders, he sedulously applied himself to the study of church music, in which he attained to such a degree of proficiency, as entitled him to a rank among the ablest masters of his time. He died at Wells, in the year 1736, having attained the age of ninety-seven. Dr. Boyce has given to the world an anthem for four voices, "I will arise and go to my father," composed by Dr. Creighton, which no one can peruse without regretting that it is so short.

CREMBALA. An ancient instrument, which resembled the castanets, and was the common accompaniment to female singers and dancers.

CREMONA. The appellation by which those violins are distinguished, which, from their super-excellence of tone, have really, or are supposed to have been made at Cremona, in Italy.

CREMONESI, AMBROSIO. A composer of some concerted madrigals, published at Venice in 1636.

CRESCENDO, or CRES. (L.) By the term *crescendo* the Italians signify, that the notes of the passage over which it is placed are to be gradually swelled. This operation is not of modern invention, though now generally adopted. The ancient Romans, as we learn from a passage in Cicero, were aware of its beauty, and practised it continually.

EXAMPLE.

The swell is in one sense applicable to all music. There is something of it upon every note played, and upon every syllable sung; but in its more general and appropriate acceptation, it is numbered among the most refined and delicate beauties of music; and in this sense it is never used, unless the sentence or word be very emphatic, and the sound intended to express such sentiment in a manner at once striking and affecting.

CRESCENT. A Turkish instrument with bells or jingles, peculiar to their military music.

CRESCENTINI, LE CIEVALIER GIROLAMO, was born in 1769 at Urbania, near Urbino, in Italy. This celebrated soprano singer, of the Bolognese school, performed at the principal theatres and courts of Europe. In 1804 he was at Vienna; where, at a representation of "Romeo and Juliet," in which he personated Romeo, after the beautiful air, "*Ombra adorata*," which he sings in the garden, two doves were made to descend from the clouds, bearing him a crown of laurels, while, from every side, flowers and garlands were thrown on the stage. Having consented, in 1809, to perform the same opera at the Court Theatre in Paris, he so delighted the Emperor Napoleon, that, at the third representation of the piece, the emperor sent him the decoration of the order of the Crown of Iron. Crescentini has composed much vocal music, which has invariably met with success. His singing exercises — a truly valuable work — are published by Boosey & Co., of London. In the year 1806, Crescentini was in the service of the Emperor Napoleon, as principal singer at his private concerts.

CRESCIMBENI, GIOVANNI MARIA, an Italian priest, died at Rome in 1728. He was author of the following works: First, "*Istoria della volgar Poesia*," Roma, 1698. Second, "*Commentarii intorno alla sua Istoria della volgar Poesia*," Roma, 1702–1711. In these works the eleventh chapter treats "*De Drammi Musicali, e della loro Origine e Stato*;" the twelfth chapter "*Delle Feste Musicali, e delle Cantate e Serenate*;" and the fifteenth chapter "*Degli Oratorj e delle Cantate Spirituali*."

CRESPER, WILLIAM. A celebrated vocal composer in the middle of the sixteenth century. His name appears in many of the best collections of motets and songs which were published about that time.

CRIS OF LONDON. Certain musical phrases, or successions of sounds, in which the London hawkers have long been habituated to announce their several articles, and their qualities. Formerly, it was the practice of composers to harmonize the *cries of London*, faithfully retaining every note of the original melodies, however rude and barbarous. Thus dignified, they seemed to claim a place in this Encyclopædia. In the collection entitled "Pammelia" is a round to the cry of "New Oysters!" and another to that of "Have you any wood to cleave?" The great Orlando Gibbons gave, in four parts, the cries of his time, among which is one of "A play to be acted by the scholars of our town." Morley, in the reign of James I., set those of the Milliner's Girls, in the New Exchange in the Strand. Among others, equally unknown to the present times, were "Italian Falling Bands," "French Garters," "Roman Gloves," "Rabatos," (a kind of ruffs,) "Sisters," (i. e., nuns,) "Thread," "Slick Stones," "Poking Sticks," (taper, and used to open and separate the plaits of the great ruffs then in fashion.) In a play called "Tarquin and Lucrece," the following cries occur: "A Market Stone," "Bread and Meat for the poor Prisoners," "Rock Samphire," "A Hassock for your Pew, or a Pesocke to thrust your Feet in," "Lanterns and Candlelight;" with many others.

CRISPI, ABBÉ PIETRO, was born at Rome, about the year 1737. He published several sonatas and concertos for the harpsichord, in the style of Alberti. His compositions contain great elegance of melody, which, though sometimes simple to excess, is not easily imitated; specimens of them are inserted in Dr. Crotch's collections. Crispi died at Rome in 1797.

CRIVELLI, DOMENICO, was born at Brescia in 1794. At nine years of age, he, with his father, an eminent tenor singer, went to Naples, the latter being engaged there in the service of the Royal Chapel of Caserta, as well as in that of the Theatre Royal of San Carlo. On his arrival at Naples, Domenico Crivelli immediately commenced his studies in the art of singing, under the tuition of the celebrated Millico, and, on completing his eleventh year, entered as a pupil of the Conservatory of St. Onofrio. During the succeeding three years, his services were employed as a soprano voice in that establishment; and so successful was he in his public performances as to be decuded by the governors, at the end of that period, a proper object of their munificence, by dispensing for the future with the annual fees demanded from each collegian attached to the institution. On the change of his voice, Crivelli applied himself more seriously to the study of composition than he had done before, having been recommended to cultivate this portion of his musical studies with attention and assiduity; and in this branch of the science, he had the good fortune to be placed under the direction of Fenaroli, pupil of the great Durante. After five years of close application and deep study, and after having undergone the fifth public examination, he was named *maestro* of the same Conservatory; and during the last two years of his residence in that capacity, the instruction of the *solfeggio* of the younger pupils of the establishment was wholly confided to his care. During this period, he composed several pieces of sacred music; and it was by these essays he first submitted his abilities as a composer to the criticism of the public. These efforts experienced the most flattering encouragement; and, stimulated by the encomiums bestowed upon him on those occasions, as well as by taste and inclination, to render himself a proficient in "ideal composition," he took leave of his college, in 1812, to visit Rome, in order to place himself under the instruction of the celebrated Zingarelli, at that time master and composer to the Pontifical Chapel. The following year he returned to Naples, and then commenced his profession at large, particularly devoting his talents to the service of the "ecclesiastical function;" and though these productions were honored by the general approbation of his former masters, yet, being fortunately favored by the cordial friendship of the Chevalier Paesicello, he never allowed any of his compositions to make their appearance till he had first consulted the eminent talents and opinion of his celebrated friend. Indeed, so sincere and affectionate was the attachment of the chevalier, that, a little before his death, he undertook to direct the performance of a new mass composed by his young friend, and dedicated to a *fiute* of the patron saint of Caravaccio College at Largo Mercatello; there by giving unequivocal proof of the high regard and estimation in which he held the talents of Crivelli. The result,

however, justified the opinion thus entertained, the performance being received with marks of the strongest approbation by professional artists as well as the public. Encouraged by the success of his classical effort in sacred music, the young composer began to try his talents in theatrical composition, being now and then called upon to compose many "*peggi sciolti*" for the stage. In 1816 he completed his first theatrical piece, an "opera seria," for the Theatre Royal of San Carlo; but that theatre being unfortunately burned at that time, put an end to the prospect of its being soon exhibited there—a circumstance which led to some flattering offers from the theatre at Palermo. His father, however, who at that time had left Paris for London, under an engagement at the King's Theatre, prevailed upon him to relinquish the proposition from Palermo, advising him rather to choose England for his professional career, where he found the fine arts, and music in particular, so generally cultivated and protected as to furnish hopes of greater advantage than in any town on the continent. Embracing immediately his father's suggestions, Crivelli quitted Naples for England, passing through Paris on his way. He remained in that capital about six weeks, during which time an overture of his composition was performed at a public concert, given for the benefit of the poor; a composition which he had the high gratification to hear not only applauded by the Parisian public, but complimented by the Chevalier Paer in person. Crivelli soon after quitted Paris for London, where he arrived in 1817; and his reception there proved so flattering to the hopes which had been excited by his father, that he immediately commenced his career as "professor of singing." In this avocation, he soon discovered the necessity of new modelling the materials of elementary instruction; and, with this view of the defects of the prevailing system, composed and arranged, for the use of his numerous pupils, a progressive series of scales, exercises, and *solfeggi*. The only pieces Crivelli had thus far published in England were three canons and a canzonetta. The managers of the Italian Opera often employed his pen to change, correct, transpose, and otherwise adapt to the peculiar tones of the voice of eminent performers, musical pieces on many different occasions, and some of his original pieces were received on that stage with general applause. He wrote there, also, an opera buffa, entitled "*La Fiera di Salerno, ossia la Finta Capricciosa*." On the formation of the Royal Academy of Music in London, which fixes a new epoch in the annals of British music, Crivelli was appointed, by the unanimous vote of the committee, "*maestro di canto*" to the boys on that establishment; and in acquitting himself of this arduous task, he applied the rules and methods of the Conservatorio at Naples, which had been confirmed, by long experience, as the best, and founded on the closest observation of practical efficiency.

CROCE, GIOVANNI. Vice chapel-master of St. Mark's, at Venice, in 1605. He composed some church music; among which his "Penitential Psalms" were reprinted in London with English words. The madrigal, No. 26, in "The Triumphs of Oriana," is by this composer. Pencham says, that "for a full, lofty, and sprightly vein, Croce was second to none." He died in 1609.

CROCHE. (F.) A quaver. See **QUAVER**.

CROENER. There were four brothers of this name belonging to the chapel of the Elector of Bavaria, about the year 1740. They published together some violin trios, at Amsterdam, in 1788.

CROFT, WILLIAM, educated in the Chapel Royal under Dr. Blow, was born in 1677, at Nether Easington, Warwickshire. His first preferment, after quitting the chapel, on the loss of his treble voice, was to the situation of organist of St. Anne's, Westminster, where an organ was newly erected. In 1700 he was admitted a gentleman extraordinary of the Chapel Royal; and, in 1707, upon the decease of Jeremiah Clarke, he was appointed joint organist with his master, Dr. Blow; upon whose demise, in 1708, he not only obtained the whole place of organist, but was appointed master of the children, and composer of the Chapel Royal, as well as to the place of organist of Westminster Abbey. All these appointments, at so early a period of life, he being then but thirty-one years of age, occasioned no diminution of diligence in the performance of his duty, or of zeal in the study and cultivation of his art; and, indeed, he seems to have gone through life in one even tenor of professional activity and propriety of conduct. We hear of no illiberal traits of envy, malevolence, or insolence. He neither headed nor abetted fiddling factions; but insensibly preserving the dignity of his station, without oppressing or mortifying his inferiors by reminding them of it, the universal respect he obtained from his talents and enuience in the profession seems to have been blended with personal affection. In the year 1711, he resigned his place of organist of St. Anne's Church in favor of John Isham, and in the following year published anonymously, under the title of "Divine Harmony," a similar book to that of Clifford, mentioned above, containing the words only of select anthems used in the Chapel Royal, Westminster Abbey, St. Paul's, &c., with a preface, containing a short account of English church music, and an euconium on Tallis and Bird. In 1715 he was honored with the degree of doctor of music, in the University of Oxford. His exercise for this degree, which was performed in the theatre, July 13, by the gentlemen of the chapel, and other assistants from London, consisted of two odes, one in English and one in Latin, written by Dr. Joseph Trapp. The music to both these odes was afterwards neatly engraved on copper, and published in score. During the successful war of Queen Anne, the frequent victories obtained by the Duke of Marlborough occasioned Dr. Croft, as composer to her majesty, to be frequently called upon to furnish hymns or anthems of thanksgiving. Several of these, and other occasional compositions for the church, are printed in his works, and still performed in the English cathedrals. In 1724 Dr. Croft published, by subscription, a splendid edition of his choral music, in two vols. folio, under the title of "*Musica Sacra, or Select Anthems in Score, for two, three, four, five, six, seven, and eight Voices; to which is added the Burial Service, as it is occasionally performed in Westminster Abbey.*" The neatness and accuracy with which the work was published, being the first of the kind that was stamped on pewter plates, and in score, rendered it more acceptable and useful to the purchasers;

as, whatever choral compositions appeared anterior to this publication had been printed with types, on single parts, and extremely incorrect. Dr. Croft's music never reaches the sublime, though he is sometimes grand, and often pathetic. His allegros are always more feeble than his slow movements. But more melody is necessary to support cheerfulness with decorum and dignity, than Croft, or indeed the whole nation, could furnish during the first twenty years of the last century. This pleasing composer and amiable man died in 1727, in the fiftieth year of his age, of an illness occasioned by his attendance on his duty at the coronation of King George II.

CROIX, ANTON L.A. See **LACROIX**.

CROME. (I. Pl.) Demi-crotchets, or quavers. This word is scarcely ever used at present. When written under crotchets, or minims, it directs the divisions of those notes into demi-crotchets, or quavers.

CROOKS. Certain movable, curved tubes, which are occasionally applied to trumpets and horns, for the purpose of tuning them to different keys.

CROSDILL. A celebrated English violoncellist, born in London in 1755. He was chamber musician to the Queen Charlotte in 1782. About the year 1794, Crosdill retired from the duties of his profession, having married a woman of considerable fortune. He was principal violoncellist at the Ancient Concerts, on their first institution.

CROTALUM. (From the Greek.) Synonymous with cymbalum. The name of an ancient instrument.

CROUCH, DR. WILLIAM, was born at Norwich in 1775, and exhibited a most extraordinary instance of precocity of musical genius; a very interesting account of which was given by Dr. Burney in the *Philosophical Transactions*, vol. lxxix. part i. for the year 1779, to which, from its great length, we must refer our readers. The following comments, by the Hon. Daines Barrington, are nearly of equal interest, and more concise. "I first heard little Crouch on the 10th of December, 1778, when he was nearly three years and a half old, and find that I made the following memorandum on returning home: Plays 'God save the King' and '*Minuet de la Cour*' almost throughout with chords; reaches a sixth with his little fingers; cries *no* when I purposely introduced a wrong note; delights in chords and running notes for the bass; plays for ten minutes extemporary passages, which have a tolerable connection with each other; seldom looks at the harpsichord, and yet generally hits the right intervals, though often distant from each other. His organ rather of a hard touch; many of his passages hazarded and singular, some of which he executes by his knuckles, tumbling his hands over the keys."

At the same time Daines Barrington received the following account from the mother, of the first appearance of a musical disposition in her child:—

"His father is an ingenious carpenter of Norwich, and had made an organ, on which he was capable of playing two or three easy tunes, and

which had not been used for some time. When little Crotch was two years and three weeks old, he heard 'God save the King' played on this instrument, after which he was excessively fractious, whilst they were putting him to bed: his mother then conceived that he wanted to get at the organ, and, placing him so as to command the keys, she immediately struck them, although she did not then distinguish that he played any particular tune. The next morning, however, there was no doubt but that he successfully attempted 'God save the King.' After this the child's musical fame spread quickly through the city of Norwich.

"The accuracy of this child's ear is such, that he not only pronounces immediately what note is struck, but in what key the music is composed. I was witness of an extraordinary instance of his being able to name the note touched, at Dr. Burney's, who has a piano-forte, with several keys, both in the bass and treble, beyond the scale in the common instruments of the same sort.

"Upon any of these, very high or very low notes being struck, he distinguished them as readily as the intermediate notes of the instrument. Now, it is well known that the harpsichord tuners do not so easily manage the extremes, as their ears are not used to such tones, and more particularly the lowest notes.

"A still more convincing proof, perhaps, of the same kind has been mentioned to me by Master Wesley, who takes little Crotch much under his protection. The child has lately taught himself to play on the violin, which he holds as a violoncello, and touches only with two of his fingers. Master Wesley has sometimes mistimed the instrument, on purpose to excite his anger, which he never fails to express; adding, at the same time, whether it should be higher or lower. He likewise judges most accurately of what are called *extremes* on the violin; which seems to be still more astonishing, as the child has scarcely heard any other instrument than the organ, which is defective in the quarter tones. In other words, it seems to prove that Crotch's ear is so very exquisite as to distinguish quarter tones; whilst the notes of the organ are only subdivided into half tones, all of which are, to a certain degree, imperfect; and the ability of the tuner is shown by distributing this defect as equally as possible amongst them all. Surely, therefore, this great refinement may be pronounced to have been almost innate in the child; for though, perhaps, he might have heard a Norwich fiddler, yet it is highly improbable that such performers should have stopped with this great precision.

"Dr. Burney indeed mentions, that Crotch was present at a concert in London where Pacchierotti sang; and where, undoubtedly, there might be some able musicians.

"I once happened to be present when he was playing a well-known air called the '*Minuet de la Cour*,' in the greater third and key of A, which he afterwards repeated in that of B. Observing this readiness in the child to transpose, I desired him to try it in C, which he not only complied with, but proceeded regularly through the whole octave; whilst he sometimes looked back with great archness upon me, inquiring whether I knew in what key he was playing; and having

answered him once or twice wrong on purpose, he triumphed much in setting me right. I must acknowledge, also, that at last he really puzzled me, for he concluded in the key of F sharp, which is never used by English composers, and which I was not able to name on his word of command, not having attended to the last note of his bass.

"I need scarcely say, that I left the room after this in great astonishment; and it then occurred to me that it might be right to make an experiment, whether he would be equally ready to transpose in the minor third, in which, probably, the child had never heard any composition whatsoever, it being so seldom used at that time.

"I accordingly communicated what I had been witness of to Master Wesley, desiring that he would write down a simple melody of a few bars in the minor third; which he immediately complied with, and went with me to little Crotch, in order to assist in the experiment.

"I was in great hopes that the child would catch this little air, after Master Wesley had repeated it five or six times; but in this I was disappointed, for little Crotch happened not to be in a humor for music, though we endeavored much to coax him to the organ. Having observed, however, that he would sometimes play from pique, when entreaties had no effect, I desired Master Wesley to give the treble only, and told Crotch that he could not add the bass to it: on this, the urchin sat down by Master Wesley, accompanying with the proper bass this same tune, transposed in the minor third through the whole octave.

"When he had finished, Master Wesley had a curiosity to try him in transposing through the octave in the major third, which Crotch instantly did, and in a manner too peculiar not to be fully stated.

"The tune fixed upon, in trying this experiment a second time, was, as before, the '*Minuet de la Cour*;' but Crotch, conceiving at once what Master Wesley wished to be a witness of, only played three or four bars of the first part, and then instantly changed the key throughout the octave.

"The child both looks and is very intelligent in other matters which do not relate to music, and draws in a bold, masterly way with chalk on the floor.

"One of his most favorite objects to represent is a violin, which he forms instantaneously with a few strokes. I need scarcely mention the difficulty of reversing the two sides and S's, which must be very obvious to penmen as well as painters. The boy likewise succeeds very well in the hasty outline of a ship."

From the foregoing extract it will clearly appear that young Crotch was a most extraordinary instance of precocity of musical genius: he seems, indeed, "by the help of nature alone, to have instantly, as it were, understood those distinctions, which are accessible to common ears and common talents only by a long course of study." His extraordinary natural powers were, however, in the opinion of many, checked by the severity of his subsequent musical studies; his talent being chiefly trained under some celebrated masters of the old school of English music at the universities, to the minute perfection of strict counterpoint. At the age of twenty-two he was

appointed professor of music in the University of Oxford, which conferred on him the degree of doctor in music; since which period he has held the highest rank in England as a profound theorist. He was afterwards professor in the Royal Academy of Music. His best work is the oratorio of "Palestine." He has published motets, glees, an ode for five voices, songs, three volumes of "Specimens of the various Kinds of Music of all Nations," much piano music, &c. For several years he read public lectures upon music in London and at Oxford, the substance of which he published in 1831. Besides his "Palestine," the least feeble of his compositions are Three Concertos for the Organ; a Sonata for the Piano, in E flat; ten Anthems for four voices; a Fugue for the Organ on a subject by Muffat, &c. Crotch has arranged for the piano a great part of Handel's oratorios and operas; the symphonies, overtures, and quatuors of Haydn, Mozart, and Beethoven; concertos of Corelli, Geminiani, &c. He has also published several treatises on harmony and composition.

CROTCHET. The third principal note used in music. It is equal in duration to half a minim, or a fourth of the semibreve, thus:—

In the above example, all the notes are crotchets, the stem of which may turn either up or down, according to its situation upon the staff.

CROUCH, F. NICHOLLS, a popular English composer, author of the song "Kathleen Mavourneen," was engaged as violoncellist in the King's Theatre, London, in 1817. He came to America, and was engaged in the same capacity in one of the Italian Opera troupes, about the year 1818. He has since been established as a successful teacher in Portland, Me., where he is at the head of several musical societies, and active in the getting up of classical performances, such as oratorios, madrigals, and chamber music.

CROUCH, MRS., a celebrated actress and singer at Drury Lane Theatre, was born in 1763, and first appeared on the stage in 1780. She had a remarkably sweet voice, and a *naïve*, affecting style of singing; this, added to extraordinary personal charms, made her a great favorite of the public for many years. She died at Brighton in 1805.

CROWLE. An old English instrument, called by the French *chrotta*. Some writers say that it was a kind of flute: according to others it resembled the ancient crotalum.

CRUCIATI, MAURIZIO, an Italian composer of sacred music at Bologna, about the year 1660. One of his works is entitled "*Sisera*," an oratorio, published at Bologna in 1667.

CRUCIFIXUS. (L.) A part of the *Credo* in the mass.

CRUGER, JOHANN, chapel-master of the Church of St. Nicholas, at Berlin, was born in 1602. He was the author of "*Synopsis Musica*," and several other musical works, published in Germany between the years 1622 and 1651. His collection of Lutheran hymns, entitled "*Praxis*

Pietatis," went through thirty editions, up to the year 1701.

CRUPEZIA. (Gr.) The wooden clog used by the ancient musicians in beating time.

CRUSELL, BERNHARD. A German performer on the clarinet, and composer for his instrument, towards the close of the last century. Among his more favorite works are, "Concertante for Clarinet, Horn, and Bassoon, with Accompaniment of Grand Orchestra," Op. 3. "Symph. Concertante for Flute, Clarinet, and Bass principal, with two Violins, Alto, and Bass, two Hautboys, two Horns," Op. 22.

CRUTH, or CROWTH. An old Welsh instrument, somewhat resembling the violin. It has six strings, supported by a bridge standing in an oblique direction with respect to the strings, and is played on with a bow. Of the strings, which are six in number, the first four are conducted from the *tailpiece* down the fingerboard; but the fifth and sixth, which are about an inch longer, branch from them laterally, and range about the distance of an inch from the neck.

CUDMORE, RICHARD, was born in the year 1787, at Chichester, in Sussex. His first master was James Forgett, a native and organist of that city. Cudmore performed a solo on the violin in public when only nine years of age; at ten, he was taught by Reinagle, in Oxford; at eleven, he played a concerto at Chichester (composed by himself) in public, and was then introduced to the celebrated Salomon, under whose instructions he remained about two years. When twelve years of age, Cudmore led the band at the theatre in Chichester; also played a concerto for the celebrated comic actor Suett, at his benefit; in the same year he performed among the *primo* violins at the Italian Opera, in London. Cudmore next resided, during nine years, in Chichester; in the course of which time he played at Oxford two concertos on the violin, when Morelli and Mrs. Mountain were engaged. He removed subsequently to London, became a pupil of Woelfl on the piano-forte, played a concerto at Salomon's concert on the piano-forte, also one at Madame Catalani's concert. He likewise performed in public a concerto of his own composition on the piano-forte, and also one of his own on the violin. He then became a member of the Philharmonic Concerts. We cannot adduce a more genuine instance of Cudmore's musical ability than the following anecdote. On one occasion a performance took place at Rowland Hill's chapel in London, for which Salomon had rehearsed with Dr. Crotch and Jacobs; Salomon, being, however, suddenly subpoenaed on a trial, sent to Cudmore to become his substitute at the chapel, when he performed the music *ad sight*, before two or three thousand persons. As another instance of Cudmore's skill in playing *à l'ore courert*, he is remembered to have performed at sight, in a party given by Mr. C. Nicholson, a difficult manuscript concerto which was brought there by a professional man. Cudmore once executed *three solos* the same evening, at a public concert at Manchester. At Liverpool he performed a concerto on the violin by Rode, one on the piano by Kalkbrenner, and one by Cervetto on the violoncello.

CULANT, LE MARQUIS DE, a French musician,

teur musician, wrote a tract, entitled "*Nouveaux Principes de Musique*," Paris, 1785.

CUM CANTU, or CUM DESCANTU. (L.) With melody. An old phrase of the Romish church, applied to those festivals the celebration of which chiefly consisted of singing.

CUM SANCTO SPIRITU. (L.) A part of the *Gloria*. See *Mass*.

CUMMINS, CHARLES, violinist, pianist, and composer, was born at York in 1785. His father was the Roscius of that theatrical circuit for nearly forty-four years, and commenced his prosperous career under the management of the eccentric Tate Wilkinson. He closed a valuable life in the actual performance of his public duty, dying on the stage at Lee's while representing the part of Dumont, in the tragedy of "*Jane Shore*," on the 20th of June, 1818.

Charles Cummins, in the course of a liberal education, received lessons in the theory of music from Dr. Miller, of Doncaster, and, preferring the science for his profession, became successively leader of the theatrical bands at Lancaster and Exeter, till engaged at Bath, at the express instance of his friend Mr. Loder, as director of the choruses in that and the Bristol theatre. He was since established at Bristol and Clifton as a teacher of the piano-forte, singing, and thorough-bass. He was the composer of much local and incidental music, a small part only of which has been published.

His attainments in languages, and facility in literary composition, rendered Cummins a powerful auxiliary to the orchestra, in the writing and arrangement of English words for several pieces of celebrity, for the use of Signor Rauzzini's concerts and the Bath Philharmonic Society, (of the latter of which he was a director,) particularly the "*Storm Chorus*" of Haydn, two of Mozart's motets, (Nos. 1 and 2,) sundry extracts from his "*Requiem*," and Cherubini's "*Monody on the Death of Haydn*," besides the adaptation of many songs from foreign operas for the English stage.

He was a frequent writer in publications embracing musical criticism, and distinguished himself, during the existence of a Bath gallery of paintings, as a connoisseur possessing no mean powers of pictorial discrimination. He is the author of a pamphlet in controversy with Mr. Loder, the propagator of a new system of musical tuition; which was, by virtue of Cummins's dissertation upon its merits, utterly excluded from Bath and the west of England generally. He received notices of his literary efforts in the cause of music from the most eminent individuals in the profession, and was awarded a splendid token of the collective opinion of a large majority of the unprecedented concourse of talent at the grand musical festival held in the cathedral of York in the autumn of 1823.

Cummins was a member and secretary of a literary and philosophical society in Bristol, named *The Inquirers*, to which he delivered occasional lectures on music. Cummins enjoyed the reputation of being, in conversation, a wit, whose flashes excite warmth in his hearers without scorching or implacably degrading their personal object; and he was a not less forcible than lively extemporaneous orator. Cummins commenced the season of 1823-4 as leader and musical conductor of the Bristol Theatre Royal.

CUPIS, J. B. le jeune. A violinist at Paris, and pupil of Bertaud. He composed a concerto, well known in France by the name of "*Le Saut de Cupis*." He flourished towards the middle of the last century.

CURSCHEMAN, CHARLES FRIEDERICH, was born in Berlin, June 21, 1805. He was distinguished in his boyhood for possessing an unusually beautiful soprano voice, upon which a degree of culture was bestowed very unusual amongst boys. He frequently undertook to sing the solo part at public school feasts and other musical performances, astounding his audience with *Arie di Bravura*, such as that in Graun's "*Der Tod Jesu*." His father, who was a merchant in Berlin, had, however, no intention of bringing up his son to the profession of music, and the principal pursuit of the young Curschman for several years was the study of jurisprudence; but his love for music became so paramount as to decide him to dedicate his whole life to its study. In pursuit of this resolution, he repaired to Cassel, where he studied the theory of music and composition during four years, under Spohr and Hauptmann. It was during these days of study at Cassel that Curschman composed several works; and of these a short opera, named "*Abdul and Erinich*, or, the *Two Dead Men*," and a sacred piece, were performed in public, and received great applause. In 1829 Curschman returned to Berlin, in which city he constantly resided, with the exception of occasional short tours through Germany, France, and Italy. He became favorably known to the public as the composer of several elegant songs, the popularity of which was much increased by his tasteful manner of singing them. He seems to have been extremely fastidious in the selection of what compositions he would give to the public; and his printed works, during several years, were confined to about nine books of songs. The consequence is, that they are almost all excellent in their way, and are vivid musical illustrations of his judiciously-chosen poetry. Death put an early period to his promising career, in the year 1841. Several compositions of Curschman have become favorites with the English public, who were first attracted to his music by the two charming trios, "*Ti Prego, o Madre Pia*," and "*L'Addio*," first introduced by Miss Masson, who had them from the composer, and for whom they were first printed. Several of his songs have recently become favorites in this country.

CURTZ, BERNARDONE. A buffo singer at Vienna in 1751. For an anecdote respecting him, see the biography of HAYDN.

CURVE. Applied to the slur and a part of the hold.

CUTLER, WILLIAM HENRY, Mus. Bac. Oxon., was born in the year 1792, of respectable parents, in the city of London. Shortly after the birth of this their second child, the father obtained a spinet at a sort of lottery sweepstake, and after the business of the day was over, would frequently strum to his two little boys on this instrument. He had then, however, very little knowledge of music, but possessing industry and perseverance, overcame every difficulty in the science, so as to enable him to superintend his second son through all his subsequent exertions in practice.

A friend relates that one time when he entered the father's parlor, he saw him with this little boy on his lap, teaching him his notes; at another time, the same friend has seen father and son on the carpet playing with pieces of card, on which the notes of music, and their names and lines, &c., appeared, corresponding with papers pasted on the keys of the spinet. At that time the child could not have been much above two years of age, certainly not three years old. His father, conceiving that the boy had a taste for music, next engaged a master to teach him the violin, when he improved so rapidly as to play a concerto of Jarnowich before he was five years old. He performed on the little Amati violin, which was once Dr. Crotch's. Still, however, the spinet appeared to be the child's favorite, and J. H. Little was for some time his instructor on that instrument, which was at length changed for a piano-forte, G. E. Griffin being engaged as the boy's master. About the year 1799, the child had lessons in singing and thorough bass from Dr. Arnold, who expressed his approbation of his talent by repeated gifts of small silver twopenny and threepenny pieces. Shortly after this, he played a concerto of Viotti on the piano-forte, at the Haymarket Theatre, for the Choral Fund Concert, and received universal applause: he played concertos, &c., several times since for the same fund. He sang also at the oratorios under Dr. Arnold. In 1801, when Dr. Busby took his degree of doctor of music, young Cutler went to Cambridge to sing the principal airs in that exercise; and under this gentleman he would have been placed, but his father objected to his being other than a concert singer, while the doctor wished him to be brought out in theatrical performances. In 1803 he was placed in the choir of St. Paul's. He sang also at Harrison's Concerts, the Concerts of Ancient Music, the Glee Club, (generally,) Wykhams, &c., &c., and private concerts. Previously to this, he had also appeared before the public as a composer, his first publication being a march for the full band of the sixth regiment of Royal London Volunteers, in the rifle company of which regiment his father was an officer. Soon after this, he sang in the solemn services, dirge, &c., of three of the greatest men of the day, being summoned to attend the funerals of Lord Nelson and Messrs. Pitt and Fox. After leaving the choir of St. Paul's, he was placed under the instruction of the late W. Russell, Mus. Bae. Oxon., for the theory of music, and was, in 1818, elected organist of St. Helen's, Bishopsgate; he also taught in several private families. In the year 1812 he took his bachelor's degree at Oxford, highly complimented by letter from the professor of that university. In 1818, when Logier went to England from Dublin, W. H. Cutler, influenced by Kalkbrenner's advertisement, applied to Logier, and paid one hundred guineas to learn his system. He then opened an academy on the Logierian plan; but, after between two and three years' trial, finding it not advantageous to keep up the requisite establishment, he relinquished that house, though continuing to teach the theory of music according to Logier's system. In 1821 Cutler was engaged to sing at the oratorios at Drury Lane, under the direction of Sir George Smart; but want of nerve prevented his giving full power to his voice, and determined him to rein-

quish altogether singing in public. In 1823, a part of the exercise for his bachelor's degree was performed at the oratorios under the direction of Boehsa. He resigned the situation of organist of St. Helen's, and was appointed organist of Quebec Chapel, Portman Square, for which chapel he wrote a "*Te Deum*," and "*Jubilate*," and a "Four Part Anthem for Christmas Day." We should not omit mentioning that, among other advantages, in the course of Cutler's musical education, he was fortunate enough occasionally to be favored with the counsel of Clementi, both on his compositions and performances on the piano-forte.

CUVELLIER, J. G. A French dramatic composer, born in 1770. He composed several operettas and songs.

CUZZONI. See SANDONI.

CYMBAL, or CYMBALUM. An instrument of antiquity, similar to the tympanum of the drum. The cymbals were round, and made of brass, like our kettle drums, but are generally thought to have been smaller. The Jews had their cymbals, or instruments which translators render by that name. Ovid gives cymbals the epithet *genialia*, because they were used at weddings. Cymbals, tambourines, triangles, and drums are instruments principally used for keeping time. Precise rules for performance are somewhat difficult to be given, as almost every performer has a favorite method peculiar to himself. We will therefore only observe, that the indiscriminate use which is too often made of these instruments, without the least regard to the character of the music, is to be entirely condemned. They should be intrusted only to persons of good taste, whose judgment will direct them when to give the forte and piano, and when to be silent, and in other respects so to vary as to favor the general design of the music.

The cymbal is an instrument whose origin is very ancient, and on account of the extreme simplicity of its construction, it was probably in use some time before the tambourine. The ancient cymbals were made of sonorous brass, or copper, and were of a diversity of forms. The differences consisted in the size, the depth or shallowness of the bowl, the presence or absence of the rim, and the form of the handle by which the player held the instrument. These various forms were a mere matter of fancy. The kinds which differed the most materially from those now in use were those in which the rim was absent, and the convexity of the bowl terminated in an elevation which furnished the player with a handle. Others were furnished with handles on the sides, and others with handles in the same position as ours, with the addition of cords or ribbons to join them. Cymbals were much employed in the sacred mysteries of the heathen, and particularly in the services of Cybele and Bacchus.

CYPRIANUS. A composer of madrigals in the sixteenth century. He and Orlando were the first two who hazarded what are now called chromatic passages.

CZARTII, GEORGE, born in Bohemia in 1708, was an eminent violinist, attached to the court of Berlin, and subsequently of Mannheim, where he died in 1774. He published six solos for the violin and flute.

CZERNY, GASPARD, born in Bohemia, was an excellent performer on the English horn. He resided in his youth in Prague, and afterwards at Petersburg, and Frieburg, at the Brisgau, at which latter place he engaged himself, in 1786, in the service of the Princess of Baden. He has published at Vienna some music for military bands.

CZERNY, CARL, the highly-gifted author and composer, was born at Vienna, on the 21st of February, 1791. His parents came from Bohemia, and his father, who had formerly been in the imperial military service of Austria, settled in Vienna, in 1785, as a teacher of the piano-forte. Like many others who have highly distinguished themselves, Czerny displayed in his earliest infancy a great natural disposition for music; and as his father at that time very diligently practised the works of Bach, Mozart, Clementi, &c., and was frequently visited by the piano-forte players, then resident at Vienna, as Kozeluch, Gelinek, Wanhall, and others, the youth had constantly the advantage of hearing good music, and hence his sensibility for the art was speedily manifested. This circumstance, doubtless, induced his father, who possessed no independent fortune, to devote his earnest attention to educate him for the profession; so that, even in his eighth year, young Carl performed the compositions of Mozart, Clementi, Kozeluch, Gelinek, &c., with much facility. About this period the early works of Beethoven appeared, and Czerny became so enamoured with them as to prefer them to all others. He therefore studied them with peculiar assiduity, and when about ten years old (in 1801) had the pleasure of being introduced to their renowned author, who was then in the prime of life and had created the greatest sensation as a piano-forte player by the production of effects and difficulties which were previously unknown. He played to Beethoven some of the great masters' newest compositions, and made such a favorable impression on him that Beethoven at once voluntarily offered to take him as a pupil. The intimacy thus formed gradually ripened into the most perfect friendship, which was maintained unbroken throughout the too short life of this the greatest musical genius of this century. Among the many proofs of high regard which Beethoven entertained of Czerny, it may be mentioned, as a fact not generally known, that he selected him as the musical instructor for his adopted nephew, (Carl Beethoven,) who, afterwards, alas! most deeply imbibed his uncle's days, notwithstanding the unbounded kindness which was ever extended towards him. But to return to the subject of this memoir. Under Beethoven's guidance Czerny studied, first the Clavier School, and the works of Emanuel Bach, and then all the compositions which Beethoven himself had written and published in the course of the year. He had also to arrange many of Beethoven's works, as well as to correct the proofs of such of them

as were being prepared for publication, all of which afforded him much practice, and imparted an accurate knowledge of the spirit of these fine compositions. As the elder Czerny could with difficulty support himself by teaching, Carl, though only in his fourteenth year, (in 1805,) also commenced giving lessons; and soon obtaining some talented pupils, he became so celebrated as a teacher, that, in a short time, every hour in the day was occupied. In the year 1810, Clementi resided in Vienna, and Czerny became acquainted with him at a noble house where he gave instruction, at which Czerny was nearly always present. This was particularly advantageous to him, as he thereby acquired a knowledge of Clementi's classical method, and formed his own upon it. He soon became one of the most favorite and highly-esteemed teachers in Vienna, and gave daily from ten to twelve hours' instruction, chiefly in the noblest and best families. To this occupation he devoted himself for thirty years—from 1805 to 1835; and among his numerous pupils who have become known to the public are Mademoiselle Belleville, Liszt, Döhler, and others. Among amateurs, too, of high rank, he has had many pupils who might well have passed for professors. The disposition which Czerny manifested for composition during his youth was fully equal to that which he showed for piano-forte playing; and he almost daily noted down ideas, themes, &c., for all kinds of musical pieces. His father caused him to study diligently the works of Kimberger, Albrechtsberger, and others, so that he soon acquired all the requisite theoretical knowledge; and Beethoven thoroughly exercised him in scoring and the art of instrumentation. But as lesson-giving occupied his whole time, Czerny, for a long while, had no thought of publishing any work. At length, however, in the twenty-seventh year of his age, his Op. 1 appeared, (Vars. Concertantes for Piano-forte and Violin,) which met with such an unusually favorable reception that he was afterwards completely overwhelmed with orders, both from the music publishers of Germany and those of other countries. Hence he was obliged to devote his leisure hours in the evening to composition; and feeling at all times in a suitable frame of mind for it, he has produced, up to 1848, about eight hundred original compositions, exclusive of many great compositions in manuscript, and independent of numerous arrangements of Masses, Symphonies, Overtures, Operas, &c., &c. In addition to these, he has also published "Ten Letters addressed to a young Lady, on the Art of playing the Piano-forte;" "Letters on Thorough Bass, with an Appendix on the higher Branches of musical Execution and Expression;" "Thirty-two new Exercises on Harmony and Thorough Bass;" "School of Practical Composition, or Complete Treatise on the Composition of all Kinds of Music, both instrumental and vocal."

D.

D. The nominal of the second note in the natural diatonic scale of C, to which Guido Aretinus applied the monosyllable RE. It is the super-tertionic, or second note, thus:—

The key of D is ample, grand, and noble, having more fire than C: it is completely united to the loftiest purposes. D in music marks in thorough basses what the Italians call *discanto*, and intimates that the treble ought to play alone, as T does the tenor, and B the bass.

DA. (I.) For, by, of, from; as, *da camera*, for the chamber.

DA CAMERA. (I.) An expression applied to music for the chamber.

DA CAPELLA. (I.) For the chapel, or in church style.

DA CAPO, (I.,) or D. C. An expression written at the end of a movement, to acquaint the performer that he is to return to and end with the first strain. This term is composed of two Italian words, signifying from the head or beginning. When written *Da capo al segno*, it means, Repeat from the sign.

DA CAPO SENZA REPETIZIONE, E POI LA CODA. Begin again, but without any repetition of the strain, and then proceed to the coda.

DACTYL. A species of rhythm which may be represented by the word *laborer*; one long and two short notes.

DACIER, ANNE, died at Paris in 1721. Among her numerous writings we may distinguish a dissertation on the flutes of the ancients, inserted in her edition of "Terence."

DAGINCOURT. A composer for the harpsichord at Paris. He died at Rouen in 1755.

DAHMEN, J. A. An excellent violinist and composer for his instrument. He was born in Holland, and lived many years in England. He flourished in the latter part of the last century.

DAL. (I.) From; as, *dal segno*, from the sign; a mark of repetition.

DAL TEATRO. (I.) In the style of theatrical music.

DALAYRAC, NICHOLAS. A French composer of some note. He was born in Languedoc, of a noble family, went to Paris young, and became early a composer. "*Nina*," 1786; "*Adolphe et Clara*," 1799; "*Maison à vendre*," 1800; "*Pizarros et Diego*," 1803; and "*Camille*," 1791, are some of his operas. He died in 1809.

DALBERG, JOHANN FRIEDRICH HUGO, FREYHERR BARON VON. A celebrated German amateur composer and pianist, born about the year 1752. Von Dalberg's compositions consist both of vocal and instrumental pieces, and were published about 1801.

D'ALBANESE. See ALBANESE.

DALEMBERT, JEAN LE ROND, member of the Academies of Sciences of Paris and Berlin, and perpetual secretary to the French Academy, was born at Paris in 1717. In 1722 Rameau published his treatise on harmony, which at first produced little effect, from its being too profound for common readers. In 1752 Dalembert undertook to render the system of Rameau more familiar, and wrote a tract for that purpose, by which means he only gave the appearance of order and clearness to a system essentially erroneous, and which is, in great part, rejected by the modern musical theorists of France. Dalembert also wrote some tracts on music in the periodical publications of his time.

DALLOGGIO, DOMENICO, a composer and violinist, was born at Padua. In 1735 he went with his younger brother to St. Petersburg, where he remained for twenty-nine years in the service of that court. He died suddenly, in 1764, being then on his return to his native country. His compositions were chiefly instrumental, and for the violin. Some of them were published at Vienna.

D'ALPY, MILE., an eminent performer on the piano-forte, was a pupil of Cramer.

DALVIMARE. See ALVIMARE.

DAMBRIUS. A French composer about the year 1685.

DAMEN. See DAHMEN.

DAMIANI, F. An Italian composer and singer, who was in London about the year 1800, where he published "God save the King" in Italian, with variations; also "Four easy Songs for the Harp or Piano," and "Notturmi, for two and three Voices."

DAMON, WILLIAM, is chiefly known on account of the harmonies which he published to a collection of psalm tunes. He was organist of the Chapel Royal during the reign of Queen Elizabeth, and was a man of considerable eminence in his profession.

DAMON, the Athenian, was the music master of Pericles and Socrates. The philosopher calls him his friend, in a dialogue of Plato, where Nicias, one of the interlocutors, informs the company that Socrates had recommended, as a music master to his son, Damon, the disciple of Agathocles, who not only excelled in his own profession, but possessed every quality that could be wished in a man to whom the care of youth was to be confided. Damon had chiefly cultivated that part of music which concerns time or cadence.

for which he is highly commended by Plato, who seems to have regarded rhythm as the most essential part of music, and that upon which the morals of a people depended, more than upon melody, or, as the ancients called it, harmony. He is also mentioned by Aristides Quintilianus, as having excelled in characterizing his melodies by a judicious choice of such sounds and intervals as were best adapted to the effects he intended to produce. Damon, according to Plutarch, was a profound politician, and, under the mask of a musician, he tried to conceal from the multitude his talent. He was, however, involved with his patron, Pericles, in the political disputes of his time, and banished as a favorer of tyranny. The period when he flourished may be gathered from his connections.

DAMOREAU, MME. LAURE CINTHIE MONTALANT. A famous French soprano, known at first as Mlle. Cinti. She was born at Paris in 1801, was educated at the Conservatoire, and in 1823 attracted the notice of Rossini, who wrote parts for her in "Moses," and "The Siege of Corinth." From this time her reputation and success were very great, and her talent is considered by some critics to be of the highest order, and compared to that of Sontag and Malibran. She married in Brussels, in 1827, Damoreau, an actor, but the marriage was not a happy one. In 1844 she visited the United States.

DAMPERS. Certain movable parts in the internal construction of the piano-forte, which are covered with cloth or soft leather, and, by means of a pedal, are brought into contact with the wires in order to deaden the vibration.

DANA, GIUSEPPE. An Italian composer at Naples. In 1791 he brought out there two ballets of his composition, viz.: 1st, "*La finta Pazzia per Amore.*" 2d, "*Finta campestre.*"

DANBY, JOHN. A celebrated English composer of glee, in the latter part of the last century. He died whilst a concert was performing for his benefit. The following catalogue comprises his principal works: "*La Guida alla Musica Vocale*;" "When Sappho tuned," glee, three voices; "When generous wine expands," three voices; "When floods retire to the sea," three voices; "The fairest flowers the vale prefer," three voices; "Sweet thrush," four voices; "Shepherds, I have lost my love," three voices; "Go to my Anna's breast," four voices; "Fair Flora decks," three voices; "Come, ye party jangling swains," four voices; and "Awake, Eolian lyre," four voices. John Danby gained numerous prize medals for his compositions, from the Glee Club and other societies, and for a series of years he shared with the celebrated Samuel Webbe the meed of public approbation in his peculiar school of music.

DANCE, WILLIAM, was born in 1755. He studied the piano-forte under Dr Aylward, organist of St. George's Chapel, Windsor, and the violin, first under C. F. Baumgarten, and subsequently under the celebrated Giardini. Dance lived to be one of the oldest professors in London, having performed in the orchestra of some theatre since the year 1767. He belonged, for four years, to Drury Lane Theatre, in the time of Garrick, and afterwards, for a period of eighteen years, (name-

ly, from 1775 to 1793,) to the King's Theatre. He led the band at the Haymarket Theatre for seven summers, from 1784 to 1790, inclusive. He assisted at all the performances for the commemoration of Handel at Westminster Abbey, and led the band there, in the year 1790, for three performances, during the indisposition of the elder Mr. Cramer. Dance taught the piano-forte in London for forty-eight years. He was one of the founders of the Philharmonic Society, and one of its directors and treasurer. He has published various piano-forte works of merit, consisting of sonatas, fantasias, variations, preludes, &c. His variations on "God save the King" have been extremely admired, and the sale was such as to require four sets of plates.

DANCES. Certain tunes composed for or used in dancing; as the waltz, the minuet, the saraband, the cotillon, the reel, the hornpipe, the polka, &c., which see in their proper places.

DANCERIES. The general name formerly given to publications consisting of collections of galliards, allemaudes, ballad tunes, and other lively melodies.

DANCING OF THE EARLY CHRISTIANS. That the early Christians danced in their religious service there can be no doubt, for in the eighth sermon of St. Augustine, we find the following reproof: "It is better to dig or to plough on the Lord's day than to dance. Instead of singing psalms to the lyre or psaltery, as virgins and matrons were wont to do, they now waste their time in dancing, and even employ masters in the art." The original of the word *choir* signifies a dance or company of dancers. Odo, Bishop of Paris, forbade dancing in his diocese in the twelfth century.

DANDRIEU, JEAN FRANCOIS, was born in the year 1684. He was a celebrated composer for, and a masterly performer on, the organ and harpsichord. Both in style and execution he is said to have greatly resembled the famous Couperin. Dandrieu died at Paris, in 1740, leaving, of his works, three volumes of pieces for the harpsichord, and one volume for the organ, with "*Un Suite de Noëls*," or carols and songs celebrating the nativity of Christ, all of which have been greatly esteemed.

DANN. A composer of some sonatas published at Heilbronn in 1797.

DANNELEY, JOHN FELTHAM, was born at Oakingham, in Berkshire, in 1786. His grandfather was a solicitor of great repute and considerable property at Windsor, whose early death and unforeseen misfortunes plunged his family in difficulties; when his son, G. Danneley, accepting a situation obtained for him in the choir at Windsor, devoted himself to music as a profession, and by him, his second son, the subject of this memoir, was initiated into musical science. At the age of fifteen, he was placed, as a pupil for the piano-forte, under C. Knyvett, and under Samuel Webbe for thorough bass. At the age of seventeen, he left his musical studies to reside entirely with a wealthy maternal uncle, who promised and intended to provide amply for him; but indulging in procrastination, (which so often frustrates the best intentions,) was, by rapid illness and consequent death, deprived of the power of

making a will. By this event young Danneley was again cast upon the world; when, resuming his professional pursuits with increased assiduity, he placed himself under the tuition of that very eminent performer, the late Woelfl, from whom he learned to comprehend and admire the expression given to piano-forte playing by the varied and sensitive touch adopted by the best German masters, and so well described in Forkel's life of Bach. He also took lessons from another excellent master, C. Neate, and then went to reside with his mother at Odiham, in Hampshire. At this period of his life he contracted a great love for foreign music, from frequently joining in concerts with French and Italian officers, placed as prisoners of war in the vicinity of Odiham, and in their society he acquired a knowledge of the French and Italian languages. In his twenty-sixth year, an eligible circle of tuition was offered to his acceptance at Ipswich; and after a few years' residence, he was elected organist of the church of St. Mary of the Tower in that town. At the commencement of the peace Danneley went to Paris, where he attended the meetings of *L'Ecole des Fils d'Apollon*, and studied assiduously under Antoine Reicha, the first theorist of the day, author of some admirable quintets, and of the "*Cours complet de Composition Musicale*"—a work celebrated all over Europe. At this time he also took lessons of Pradler, the Cramer of Paris, and Mirecki, *le jeune Polonois*, of whose splendid edition of Marcello's psalms, Danneley was one of the original promoters. He also enjoyed the advantage of frequent conversations with the celebrated Cherubini, and Monsigny, the author of an original and elegant, though perhaps somewhat fanciful, theory of music. In superior Parisian society, as well as in professional circles, Danneley's astonishing facility, as a sight player, was generally admired. In 1822 Danneley prepared to visit Vienna and Munich; but these arrangements were changed for an attainment much more the object of his wishes, namely, the hand of an amiable and accomplished young lady, to whom he had long been attached. The following are among the specimens which Danneley has occasionally selected for publication from his numerous manuscript compositions: "Queen of every moving measure;" "*Col Arso d'un Ciglio*;" "Military Divertimento;" "Waves of Orivell;" duet, "Rondo in C;" "Violets," a song; and "*Palinodia à Nice*," a set of twelve Italian duets, dedicated to his royal highness the Duke of Sussex. Danneley published in 1826 a portable encyclopædia of music, in one volume, consisting of all the most useful information that could be compiled, abridged, and selected from the best theoretical works of the continent—a task for which he was well qualified by his knowledge of the French, Italian, and German languages.

DANYEL, JOHN. A bachelor of music, at Christ Church, Oxford, in the year 1604. He published "Songs for the Lute, Viol, and Voice," London, 1606.

DANZI, FRANZ. Chapel-master to the King of Bavaria at Munich, and an excellent violoncellist. He was born at Manheim, of Italian parents, in 1763. His father was an excellent performer on the violoncello, and taught him music at a very early age; he also studied, subsequently, under

the celebrated Abbé Vogler, at that time chapel-master to the elector. In 1779 he produced his first opera, "*Azakia*," for the theatre at Munich, to the cathedral of which town he was appointed chapel-master. Since that period he has published several other operas, and a great variety of instrumental music, much of which has been printed at Paris. His quatuors for two viols, tenor, and violoncello, Op. 44, published at Leipsic, are particularly admired. Danzi was appointed, in 1807, chapel-master to the King of Wurtemberg, at Stuttgart, from whence he still continued to publish instrumental music.

D'APEL. See **APEL.**

DAPHNIS. A musician of whom it is recorded that he was taught to sing and play upon the pipe by Pan.

DAQUIN, LOUIS CLAUDE, organist to the King of France, was born at Paris in 1694. He became celebrated as an organist at the early age of twelve years. When Handel went to France, he was so astonished on hearing the performance of Daquin, that, although extremely pressed to play himself before him, he could never be prevailed upon to do so. Daquin is said to have preserved the brilliancy of his touch to the advanced age of seventy-eight. During his last illness, which was only of eight days' continuance, he recollected that the *fête* of St. Paul was approaching, and said, "*Je veux me faire porter à l'église par quatre hommes, et mourir à son orgue.*" He died the 15th of June, 1772, and his funeral was attended by a prodigious concourse of amateur and professional musicians. The regular canons of St. Anthony, to whom he had been organist for sixty-six years, sang his funeral service. Daquin composed some sacred and other music for his instrument.

DAQUONEUS, JOANNES. A composer of madrigals, one set of which was published at Venice in 1557, and another at Antwerp in 1594.

DARBES, JOHANN. A Danish violinist of some merit, who is also known as the composer of a "Stabat Mater;" he lived near Copenhagen, in 1784, having been pensioned by the court.

DARCIS, M., a pupil of Gretry, composed the opera "*La Fausse Peur*," in 1774. "*Le Bat Musqué*" is also attributed to him.

DARD. Author of some instrumental music, also of a work entitled "*Principes de Musique*," published at Paris about the year 1796.

DAREIS, J. B. Author of some romances published at Paris in 1800.

DARONDEAU, BONONI, born at Munich in 1740, was a professor of singing at Paris, and composed seven collections of romances, and the music of the opera "*Le Soldat par Amour.*"

DARONDEAU, HENRY, son of the preceding, was born at Strasburg in 1779. He was a pupil of Bertou, and has composed several collections of romances, and some piano-forte music.

DASERUS, or DASSER, LUDOVICUS Chapel-master to the Duke of Wurtemberg in the latter half of the sixteenth century. He composed much sacred music.

DASH. The line drawn through a figure is

thorough bass, in order to raise the interval designated by that figure half a tone higher.

DATIS. The song of mirth. So called by the ancient Greeks.

DAUBE, JOHANN FRIEDRICH, born in 1730, was secretary to the Imperial Society of Arts and Sciences at Vienna. He wrote several books on music, and composed some sonatas for the lute. He died at Vienna in 1797.

DAUBERVAL. A pupil of Noverre, and a celebrated ballet master. He was born at Versailles, and died in 1806.

DAUER. (G.) The duration or length of notes.

DAUPHIN. A composer of songs at Paris in the beginning of the last century.

DAUPRAT. Professor of the horn at the Paris Conservatory.

DAUSSOIGNE. Professor of accompaniment at the Paris Conservatory.

DAUTRIVE, RICHARD. A French violinist and composer for his instrument in the year 1799.

DAUVERGNE, ANTOINE, born at Clermont in 1713, was superintendent of the king's music, and director of the opera. He composed many dramatic pieces, and some music for the violin. He died at Lyons in 1797.

DAUVILLIERS, JACQ. MARIN, born at Chartres in 1754, was a composer of light vocal music.

DAVELLA, GIOVANNI, published at Rome, in 1657, "*Regola di Musica*"—a work of no great merit, according to Dr. Burney.

DAVID, "the sweet singer of Israel," was selected by Saul to comfort him. "David took a *kinnor*, and played with his hands; so Saul was refreshed, and was well, and the evil spirit departed from him." David was an excellent musician, and had plenty of singing men and singing women in his court. David composed a variety of psalms, and caused his skillful players to set them to music, as appears by their inscriptions to Jeduthun, Asaph, &c., the sons of Korah. As the Levites were eased of a great part of their charge by the tabernacle and ark being fixed in a place, David caused great numbers of them to devote themselves to music, and distributed four thousand sacred singers into twenty-four classes, who should serve at the temple in their turns. The four sons of Asaph, six of Jeduthun, and fourteen of Heman, constituted the chief of these twenty-four classes; and Asaph, Jeduthun, and Heman were the chief musicians. Their *neqinnoth*, or stringed instruments, were the psaltery and harp, to which may, perhaps, be added the *heminneth*, the *shushanim*, and the *alamoth*, the dulcimer, and sackbut; and the *nehiloth*, or wind instruments, were the organ, cornet, flute, pipe, and trumpet. They had also timbrels, cymbals, and bells. But as to many of their instruments, our best information affords us no certain knowledge of their particular forms.

DAVID, FELICIEN. Born in 1810, at Cadect, near Aix, in France. He exhibited musical

indications at an early age, and he was educated in a college of the Jesuits. In 1830 he produced some compositions full of original inspiration, but not until 1838 and 1839 did he compose any thing calculated to make him known. His great work is "The Desert," which has been very widely celebrated.

DAVID, GIACOMO. A celebrated tenor singer, born at Bergamo about the year 1750. He sang at most of the large towns of Italy, also in London and Paris, till about the year 1796, when he returned to Italy, and became chamber musician to the Grand Duke of Parma.

DAVID, L. A harpist and singing master at Geneva in the year 1800. He has published some romances with accompaniments for his instrument.

DAVID, the younger. A very eminent Italian tenor singer; his voice is of extraordinary compass. He has been engaged for some time at Vienna, where he is enthusiastically admired.

DAVIES, MISS CECILIA, known in Italy by the name of *L'Inglesina*, first appeared at the opera in London in 1773. She was considered as being second only to Billington among English female vocalists. She had performed for some time in Italy before her appearance on the London boards, and even the Italians confessed that her powers were excelled on the continent by Gabrielli alone. After singing a few years in England, she returned to the continent with her sister, who was a celebrated player on the harmonica. The once celebrated Cecilia Davies was living in London, in July, 1832, and was then nearly ninety-one years of age. It was said that she retained all her faculties, was very communicative, and recollected the former events of her life perfectly, which she related with great distinctness and vivacity.

DAVION, J., published a collection of romances at Paris, about the year 1801.

DAVY, RICHARD. An old English composer of songs. He lived about the year 1500.

DAVY, JOHN, was born in the parish of Upton-Heliou, about eight miles from Exeter. When he was about three years of age, he came into the room where his uncle, who lived in the same parish, was playing a psalm tune on the violoncello; but the moment he heard the instrument he ran away crying, and was so much terrified that it was thought he would have gone into fits. For several weeks his uncle repeatedly tried to reconcile him to the instrument; and at last, after much enticement and coaxing, he effected it by taking the child's fingers, and making him strike the strings. The sound thus produced very much startled him at first; but in a few days he became so passionately fond of the amusement that he took every opportunity of scraping a better acquaintance with the monster which had before so much terrified him. With a little attention, he was soon able to produce such notes from the violoncello as greatly delighted him. About this time there happened to be a company of soldiers quartered at Crediton, a town about a mile from Heliou. His uncle frequently took him there, and one day attending the roll call, he appeared much pleased with

the fifes. Not contented, however, with hearing, he borrowed one of them, and soon made out several tunes, which he played very decently.

At the age of four or five years, his ear was so correct that he could play an easy tune after once hearing it. Before he was quite six years old, a neighboring blacksmith, into whose house he used frequently to run, lost between twenty and thirty *horseshoes*. Diligent search was made for them many days, but to no purpose. Not long afterwards the smith heard some unsical sounds, which seemed to come from the upper part of his house; and having listened a sufficient time to be convinced that his ear did not deceive him, he went up stairs, where he discovered little Davy, with his property, between the ceiling and the slated roof. The boy had selected eight horseshoes out of the whole number to form an octave, had suspended each of them by a single cord clear from the wall, and, with a small iron rod, was amusing himself by imitating the Credito chimes, which he did with great exactness.

This story being made public, and his genius for music daily increasing, a neighboring clergyman, of considerable rank in the church, showed him a harpsichord. This he soon became familiar with, and, by his intuitive genius, was in a short time able to play any easy lesson which was put before him. He applied himself likewise to the violin, and found but few difficulties to surmount in his progress on that instrument.

When eleven years old he was introduced to the Rev. Mr. Eastcott by this gentleman, who was now become his patron. Mr. Eastcott was so much struck with his performance on the piano-forte, and his general turn for music, that he earnestly recommended to his friends to place him with some musician of eminence, under whom he might have free access to a good instrument, and acquire a requisite knowledge of the rules of composition. They applied to Mr. Jackson, the organist of Exeter Cathedral, and, when he was about twelve years of age, he was articled as a pupil and apprentice of this excellent man.

His progress in the study of composition, and particularly in that of church music, was extremely great. He also became an admirable performer, not only on the organ, but on the violin and violoncello. The first of his compositions that appear to have attained any high degree of celebrity, were some *vocal quartets*, which were considered by the best judges to afford the strongest indication of musical genius and knowledge.

Davy resided at Exeter for some time after the completion of his studies. One of his earliest employments, upon his arrival in London, appears to have been as a performer in the orchestra at Covent Garden; at this time he also employed himself in teaching, and soon had a considerable number of pupils. He composed some dramatic pieces for the theatre at Sadler's Wells, and wrote the music to Mr. Holman's opera of "What a Blunder!" which was performed at the little theatre in the Haymarket in the year 1800. In the following year he was engaged with Moorehead in the music of "Perouse," and with Mountain in that of "The Brazen Mask," for Covent Garden. He died in February, 1824.

DE'AMICIS, ANNA. See AMICIS.

DEBAIN, ALEXANDRE. Born in 1809. He became a cabinet maker. At the end of his apprenticeship in 1825, he devoted himself to piano-forte making. The mechanism of this instrument he improved, and conformed to his own better taste. He was successively employed, as head workman and superintendent, in the principal music establishments in Paris till 1830. At this period he journeyed abroad, repaired and improved a great variety of organs, and by observation and comparison increased his own stock of information. In 1834 Debain returned to Paris, and founded his present establishment for the manufacture of piano-fortes and expressive organs. This he now directs and controls with great skill, industry, and success, employing one hundred and fifty workmen. In his pianos he has made many improvements. His wood is seasoned from eight to ten years. His workmen are all masters of their particular parts of the instrument. Still Debain owes his widest celebrity to his "organs expressifs." His almost countless experiments upon the metal and tone of his reeds, his bellows, and his cases, their size and "sonority," have all taxed the brain, time, and money of this painstaking, persevering, and worthy man. His countrymen appreciate his worth: of these organs alone he annually sends out from his establishment six hundred. This instrument of four sets of reeds, with twelve registers, Debain most appropriately names the "harmonium." It is equally suited for the parlor, concert room, and small church. Debain invented a mechanical organist in 1846, four years after he completed the harmonium. By three years more of close study and uncounted trials, he succeeded in producing the mechanical pianist. This truly ingenious piece of mechanism he names "antiphonal;" it is now applied to the harmonium and piano-forte; in the harmonium it is only placed on the key board. The mechanical piano has a double action. The music for both instruments is written in iron points, on small pieces of boards. This piano took one of the premiums at the "World's Fair." It was completed and patented in 1839. Debain's harmonium of eight half stops, and twelve registers, is three feet nine inches long, two feet six and a half inches high, one foot eleven inches wide, and weighs "one hundred kilos."

DEBAIGNE, AHBÉ, was music master to Louis XI. Bonchet relates that the prince once said, jocosely, that he should like as well to hear a concert of pigs as of musicians. The abbe, on this, collected a number of pigs, of different ages, in a sort of tent, before which he placed a machine, with keys similar to a harpsichord; on touching these keys, they moved some sharp-pointed instruments, which pricked the animals, and caused them to make a prodigious noise, to the great entertainment of his majesty, who lavished his favors on the ingenious inventor of this novel species of harmony.

DE BEGNIS, GIUSEPPE, was born at Lugo, a town in the pontifical states, in the year 1795. He commenced his vocal studies at little more than seven years of age, under Padre Bongiovanni, and sang soprano in the chapel at Lugo from that time till he was near fifteen, when his voice broke. He always evinced much genius as a comic actor, and was desirous, at the time his

voice failed, (which he feared would not return,) to follow that profession, for which purpose he studied under the direction of Mandini, a celebrated Italian actor. His father, however, refusing to consent to his becoming a comedian, he took further lessons in singing from the composer Saraceni, brother to Madame Morandi. In the carnival of the year 1813, he made his first *début* as *prima buffo* singer at Modena, in an opera called "*Marco Antonio*," the music by Pavesi, and was received with such applause as at once to decide the line of his future professional pursuits. From thence he went to Forlì and to Rimini, and terminated the first year of his theatrical career again at Modena. In the following carnival he performed at Sienna, at the opening of a new and superb theatre, called *Teatro degli Accademici Rozzi*. He first appeared there in the comic part of Pazzo, in the "*Agnese*" of Paer, and was received with enthusiasm both as an actor and singer. He afterwards played Selime, the Turk, in the "*Turco in Italia*" of Rossini. He next proceeded to Ferrara, Badia, and Trieste, at which latter town he appeared in the following operas: "*Avvertimento alle Mogli*" of Caruso; "*La Matilde*" of Coccia; "*Teresa e Claudio*" of Farinelli; "*Don Papirio*" of Guglielmi; and "*Don Timonella di Piacenza*" of Celli. In the carnival of 1815, he was at Cesena, where he particularly attracted the town by his performance in the opera "*Bello piace a tutti*;" he sang in it an *aria buffa*, in the style of the old ronds, and in which he imitated with his falsetto the celebrated singer Pacchierotti. The music of the above opera is by Fioravanti. He next appeared in the "*Due Prigionieri*" of Pucitta, and finally in "*La Guerra aperta*" of Guglielmi. He passed the spring in Mantua, and performed the part of Mustapha, in "*L'Italiana in Algeri*" of Rossini, and in "*La Guerra aperta*." At Udine, during the summer, he performed in "*L'Italiana*," and in "*L'Inganno felice*," of Rossini. He passed the autumn at Rome, where he played in "*Agnese*," the part of Francesco, in the "*Ginevra degli Almievi*," the Solitario, in the "*Lagrima d'una Vedova*" of Generali, Selime, in the "*Turco in Italia*" of Rossini, and in "*Il Quid pro Quo*" of Romani. In the carnival of 1816, he was at Milan, where he had an illness of three months' continuance, and was not able to sing during the whole period of his engagement. On his recovery, he proceeded to Parma, where his success was the most brilliant of any he had experienced in the course of his musical career, especially in the part of Mustafà, in the "*Italiano*," and in the "*Marcoltaudo*" of Pajni. He passed the summer at Modena, and appeared in "*Marc Antonio*," and in "*La Capricciosa pendita*" of Fioravanti. In the autumn he went to Bologna, where he undertook the part of Selime, the Turk, in the "*Turco in Italia*;" his voice was at that time still more flexible, and its compass greater than it was since, and he got through the part with considerable success. A singular circumstance, and highly honorable to his comic talent, now took place at Bologna. Before the arrival of De Begnis, Paer's opera of "*Agnese*" had been twice attempted in that town, and completely failed in both instances. The manager, however, having heard of De Begnis' success in the character of Pazzo, both at Rome and Ferrara, wished again to try the piece, and it was accordingly chosen

for the benefit of Mlle. Ronzi. The whole town were against the attempt, and the opera was declared to be miserably *ennuyant*. The trial, however, was made, and its success was, in this instance, as complete as were its former failures; the principal reason for which change was generally attributed to the talent of De Begnis, whose success was such in Pazzo, that the piece was afterwards played many times, and is still considered there as one of their best stock operas. De Begnis also played at Bologna, with much success, the comic part of the *Ancien Militaire*, who detests noise, in the opera "*Il Matrimonio per Susurro*," by Salieri. It was at this town that De Begnis was married to Mlle. Ronzi; he was also nominated Philharmonic Academician to the Musical Institute at Bologna. Soon after their marriage, he was obliged to separate for some time from Madame De Begnis, who had previously to her marriage made an engagement for Genoa, and De Begnis for Rome; on his second visit to which city he performed the feigned prince, called Dandini, in the opera of "*La Cenerentola*"—a part expressly written for him by Rossini. The newly-married couple again met at Florence in the spring of 1817, and passed the summer at Vicenza and the autumn at Verona, where De Begnis was elected an honorary member of the Musical Academy of the *Antifoni*. The success of De Begnis and his wife were here such, especially in Figaro and Rosina, in the "*Barbieri di Siviglia*" of Rossini, that this celebrated composer invited them to perform at the opening of the new theatre of Pesaro, which was under his direction. The opening piece selected by Rossini was "*La Gazza Ladra*," in which they played the Podesta and Ninette. This was succeeded by the "*Barbiere di Siviglia*." From thence they proceeded to Lucca, where they passed the autumn of 1818, and, in the carnival of 1819, made their *débuts* at Paris. Here their success was complete; their first appearance was in the "*Enorusciti*" of Paer, in which they played Isabelle and Uberto. They afterwards performed together in the "*Barbiere*," in the "*Molinara*" of Paesiello, and in the "*Pietra di Paragone*" of Rossini. De Begnis played also in the "*Pastorella nobile*," with several other operas that we have not space to enumerate. After remaining three seasons at Paris, they made their first appearance at the King's Theatre in London, in the opera of "*Il Turco in Italia*;" since which period De Begnis was considered as the most natural and purest *buffo* singer in England. He has performed at all the principal concerts and public musical meetings in England, and has had the direction of the operas at Bath, which proved highly successful. Signor De Begnis died of cholera in New York in August, 1849, aged fifty-four.

DE BEGNIS, MADAME RONZI. Wife of the preceding. Many particulars respecting this lady being included in the foregoing article, it is only requisite to mention that, after her marriage at Bologna, Madame De Begnis went to Genoa, and performed, at the great theatre there, *Elizabetha Regina d'Angleterra*, in Rossini's opera of that name, and was received in it with the greatest enthusiasm. She afterwards sang in "*La Rosa bianca e la Rosa rossa*" of Mayer. On her return to Florence, she sang at the oratorios there in Lent. She afterwards accompanied De Begnis

to the different towns mentioned in the preceding article, at all of which she received high honors as an artist, especially as a serious singer; her comic powers, known to have been very great, having been considered on the continent us altogether secondary to her performances as *prima donna seria*. Madame De Begnis was remarkable for her articulate execution; her voice was extremely pleasing. She was engaged, for the season of 1824, at the King's Theatre.

DEBLOIS, CHARLES GUI XAVIER, called also *Vangronnenrade*, was born at Laneville in 1737. He was a pupil of Giardini, and for twenty-eight years one of the first violins at the Italian Opera at Paris. He composed a comic opera, called "*Les Rubans*," also some romances, and four symphonies.

DECACHORDON. A musical instrument with ten strings, called by the Hebrews *kasur*, being almost the same as our harp, of a triangular figure, with a hollow belly, and sounding from the lower part.

DECANI. (L.) Priests. A term applied to those vocal performers in a cathedral who are in priests' orders, to distinguish them from the lay choristers.

DECHAMPS, L., published "*Nouvelles Romances*," Op. 1 and 2, at Paris, in 1800.

DECHE composed a comic opera, called "*Adèle*," at Paris, in 1791.

DECISO. (I.) With decision; boldly.

D DUR. (G.) D major.

DEDEKIND, CONSTANTIN CHRISTIAN, chamber musician to the Elector of Saxony, published a very large collection of songs, in four volumes, quarto, at Dresden, in 1657.

DEEP. A word applied to those notes which, in comparison with some others, are low, or grave; as when we use the expressions *deep voice*, *deep pitch*, *deep tone*, &c.

DEERING, RICHARD, the descendant of an ancient Kentish family, was educated in Italy; and when his education was completed, he returned to England, with the character of an excellent musician. He resided in England for some time, but, upon a very pressing invitation, went to Brussels, and became organist to the monastery of English nuns there. From the marriage of Charles I. until the time when that monarch left England, he was organist to the queen. In 1610 he was admitted to the degree of bachelor of music at Oxford, and died in the communion of the church of Rome, about the year 1657. He has left of his composition "*Cantiones Sacre quinque Vocum, cum Basso continuo ad Organum*," printed at Antwerp in 1597, and others entitled "*Cantica Sacra*," published at the same place about nineteen years afterwards.

DEFESCHI, WILHELM, was, in the year 1725, organist of the great church at Antwerp. He published much instrumental and vocal music, chiefly at Amsterdam; his oratorio named "*Judith*" was, however, published in London in the year 1730.

DEGEN, HENRY CHRISTOPHER, chapel-master to the Prince of Schwartzburg in 1757,

composed much music for the violin and harpsichord, on both of which instruments he excelled.

DEGREE, ACADEMIC, in music. A titular honor conferred by a university or a qualified professor of music. See *DOCTOR IN MUSIC*.

DEGREE, THEORETICAL. The difference of position, or elevation, between any two notes. There are conjunct and disjunct degrees. When two notes are so situated as to form the interval of a *second*, the degree is said to be *conjunct*; and when they form a *third*, or any greater interval, the degree is called *disjunct*.

DEGREES. Each line and space of the staff is called a degree. There are nine degrees, counted upwards, thus:—

When more than nine degrees are wanted, they are obtained by adding short parallel lines either above or below the staff, thus:—

These short lines are called added lines or ledger lines. In naming the degrees out of the compass of the staff, the pupil should be careful to give them their true position; as, first, second, third, &c., above the staff, and the first, second, third, &c., below the staff, thus:—

The same care should be had in naming the added lines and spaces. The letters are applied to the degrees above and below the staff, in the same order as they stand upon the staff, thus:—

By the same principle, other lines may be added, either above or below the staff, and the letters and degrees continued to any degree of pitch.

A melody proceeds by degrees when it moves to the next line or space, either ascending or descending, thus:—

DEHEC, NASSOVIUS, principal violinist at the Church of Santa Maria, at Bergauo, published "Six Trios for the Violin," at Nuremberg, in 1760.

DEL. (L.) Of or by; as, *del Corelli*, of or by Corelli.

DELABORDE, JEAN BENJAMIN, born at Paris in 1734, was of a wealthy family, and received a polished education. Among other masters, he was instructed on the violin by the celebrated Dauvergne, and in the theory of music and composition by Rameau. Destined by his friends for a government financial situation, he became at first principal *valet de chambre* to Louis XV., of whom he was a great favorite. He soon after this cultivated his talent for music with greater ardor and application, and, in 1758, produced at the theatre of the court the comic opera "*Gilles Garçon Peintre*," which was very successful. At the death of Louis XV., in 1774, Delaborde quitted the court, and became one of the farmers general of finance. In 1780 he published "*Essai sur la Musique ancienne et moderne*," four volumes in quarto, with plates — a work of little authority. After this, he produced several other books on music, expensively edited, but which are now considered of little or no value. Delaborde was afterwards guillotined in the revolution, for being a partisan of the court.

DELAFOND, JOHN FRANCIS. A singing master and teacher of several musical instruments, also of the Latin and French languages. He published, in 1725, at London, an octavo volume, entitled "A new System of Music, both theoretical and practical, and yet not mathematical" — a work of little merit.

DELANGÉ, E. F., a composer at Liege, published there, in 1768, his opera 6th, consisting of eight overtures.

DELAUNAY published at Paris, in 1799, "*Seize petits Airs pour le Clavécin*."

DELAVAL, MADAME. A French harpist, and composer of a cantata entitled "*Les Adieux de l'infortuné Louis XVI. à son Peuple*." She has also published much harp music, and some French songs.

DELCAMBRE, THOMAS. A professor of the bassoon at the Paris Conservatory, and composer for his instrument.

DELFANTE, ANTONIO. A dramatic composer at Rome. He produced, in 1791, the opera buffa, entitled "*Il Ripiego deluso*."

DELICATAMENTE, or DELICATO. (L.) Delicately.

DELICATEZZA. (L.) Delicacy; as, *con delicatezza*, with a soft and tender nicety of expression.

DELICATISSIMO. (L.) With extreme delicacy.

DELILLE, OCTAVIA, born in Paris, in 1830, was left an orphan in her second year, and was adopted by an officer of the Bank of France, whose name she bore until her public appearance, and by whom she was raised with the tenderest care. Her unconquerable love for singing,

and the early development of marked musical genius, led to her being placed as pupil in the *Conservatoire*. She studied faithfully, with a settled purpose, and year after year carried off the first prizes for the various branches of singing. Her first successes were obtained at the Concerts of the Court and the Grand Society Concerts of the Royal Conservatoire. Her delightful singing, and the strange fascination of her manner, attracted the notice of the director of the Opera Comique, and he induced her to attempt the operatic stage. She consequently appeared in an opera written for her, and her success was so decided that she sang in the same opera sixty successive nights, to crowded houses. Shortly after she appeared in the well-known opera "*La Dame Blanche*," which was repeated, with a success beyond record, for one hundred nights. She appeared with equal success at the Royal Theatre of Brussels, not only in *opera comique*, but *opera seria*, and subsequently in the first theatres in Italy, Rome, Milan, Naples, Venice, &c. After a not very protracted tour, she returned to Paris, and performed the usual rôle of characters with increasing success. At this period (1850) she had scarcely reached the age of twenty-one; but by prudence, and the increasing use of her fine talent, she had acquired an independent fortune. She came to America in November, 1851, and appeared in New York in December.

DELLAIN. Author of a work entitled "*Nouveau Manuel Musical*," Paris, 1781. He composed the music of "*La Fête du Moulin*," performed in 1758, at the Italian theatre.

DELLAMARIA, DOMENICO, born at Marseilles of an Italian family, devoted himself to the study of music from a very early age. At eighteen years old, he had already composed a grand opera, which was represented at Marseilles. He subsequently went to Italy, where he studied, during nearly ten years, under various masters, the last of whom was Paesello. Whilst he remained in Italy he composed six comic operas, three of which were performed with much success, especially his "*Il Maestro di Capella*." Dellamaria returned to France in 1796, and first produced the opera "*Le Prisonnier*," which much increased his reputation. To this brilliant *début* succeeded "*L'Oncle Valet*," "*Le vieux Château*," "*L'Opéra comique*," and some other works, all given within the space of two years, and attesting the fecundity and superiority of his talent. Dellamaria died suddenly, in his thirty-sixth year, at Paris, in 1800.

DELLEPLANQUE, a harpist at Paris, composed and published much music for his instrument, between the years 1775 and 1800.

DELLER, FLORIAN. A dramatic composer at Ludwigsburg. He died in 1774.

DELVER, FRIEDRICH, a pianist at Hamburg, has published some romances and piano-forte music since the year 1796.

DEMACHII, JOSEPH. A violinist of the King of Sardinia's chapel at Alexandria, about the year 1760. He published seventeen operas of instrumental music at Paris and Lyons.

DEMANCHER. (F.) To change the position

of the hand; to shift on the violin and similar instruments.

DEMANTIUS, CHRISTOPHER. A celebrated composer, born at Reichenberg in 1567. His works are chiefly vocal, both sacred and profane. Many of them were published at Nuremberg, between the years 1595 and 1620.

DEMAR, SEBASTIAN, born in Franconia in 1766, was a pupil of Haydn. He has published much instrumental music, chiefly at Paris, between the years 1795 and 1808. He has for some years past been leader of the town band at Orleans, and several of his pupils for the piano and horn have become excellent performers.

DEMAR, JOSEPH, brother to the preceding, resides at Wurtzburg, and has composed a method and various music for the violin.

DEMI-CADENCE. A term used in church music. When the last or final sound of a verse in a chant is on the key note, it is called a full or complete cadence; but if it fall on any other than the key note, as the fifth or third, it takes the name of an imperfect or demi-cadence. The termination, in this case, is postponed to the succeeding verse. Almost all our double chants afford examples of a demi-cadence.

DEMI-DITONE. A minor third.

DEMISEMQUAVER. A note of the ninth degree of length, reckoning from the *large*, or of the sixth degree of length, reckoning from the *semibreve*, or longest note now in common use, of which it is a thirty-second part. It is the shortest principal note commonly used in music, a black note, with a line and three blocks or hooks, thus:—

DEMI-TONE. An interval of half a tone. See SEMITONE.

DEMMLER, JEAN MICHEL. A German organist, and composer of much vocal and instrumental music. He died in 1785.

DEMNICHI. Author of a collection of romances, published at Paris in 1796.

DEMOIVER. A flutist and composer for his instrument. Some of his music was published in London towards the end of the last century.

D MOLL. (G.) D minor.

DEMONTI, II. A professor of music at Glasgow. Some of his sonatas for the piano-forte are published.

DÉ MURIS, JOHN. It is singular that this person, who wrote several books and did so much to improve music, both in its language and science, should have lost his nationality. His books are in the libraries of Italy, France, and England, and he is claimed as a native of each of these countries, without there being sufficient proof in existence to give him to either. One of his books was dated 1404, which indicates when, though not where, he lived. He was the first who used the minim as it, or the half note, is now used. At first he wrote it black, but afterwards white, as at present. He wrote the signs of the modes for different kinds of time.

Most of the rules he gave for counterpoint he had from Franco; but he wrote them in such a manner as to make them more easily understood than they had been before.

DENEUFVILLE, JEAN JACQUES, was the son of a French merchant. He studied music, and afterwards became organist and composer at Nuremberg, in Germany, where he composed some sacred music, at the beginning of the last century. He died in 1712, in his twenty-eighth year.

DENNINGER, J. N., chapel-master at Ochringen, published some instrumental music at Mannheim, about the year 1788.

DENNIS, JOHN. Author of an "Essay on the Italian Opera," London, 1706. Dennis died in 1737.

DENTICE, LUIGI. A Neapolitan nobleman, and amateur of the fine arts. He wrote a work entitled "*Due Dialoghi della Musica*," Naples, 1552. These dialogues give some idea of a concert at Naples at that period. One of the interlocutors describes a performance at which he had been present, at the palace of Donna Giovanna d'Arragona. He says the performers were most perfect musicians, and sung in a wonderful manner. It appears that the vocal performers were accompanied by a band, and each sang to his own instrument. "There are few musicians," says the author, "who sing to their instruments, that have entirely satisfied me, as they have almost all some defect of intonation, utterance, accompaniment, execution of divisions, or manner of diminishing or swelling the voice occasionally, in which particulars both art and nature must conspire to render a performer perfect."

DEPLORATION. A dirge, or any other mournful strain.

DE PROFUNDIS. (L.) One of the seven penitential psalms.

DERIVATIVE. An epithet applied by theorists to those chords which are *derived* from fundamental chords, and to those accented or harmonic notes of a bass which are not fundamental.

DERIVIS, an eminent French bass singer at the Grand Opera at Paris, was a pupil of the Conservatory. Born in 1731.

DEROSIERS, NICOLAS. A guitarist and composer of instrumental music, published in Holland at the latter end of the seventeenth century.

DES. (G.) D flat.

DESAIDES, or DEZEDE. An Italian dramatic composer, born at Turin in 1745. He resided chiefly at Paris, and composed a great number of operettas for the French stage, between the years 1778 and 1787. The piece most prized of his composition is "*Blaise et Babet*." He died in 1792.

DESARGUS, XAVIER. A professor of the harp at Paris, and author of a method for his instrument, published there in 1809.

DESAUGIERS, MARC ANTOINE, was born in Provence in 1712, and made his *début* as a composer at the Academy of Music in Paris, in 1774, by the opera of "*Erizène*." After five or two operas of inferior merit, he produced

"*Les Jumeaux de Bergame*" — a piece which obtained the most complete success. Desaugiers lived on terms of intimacy with Gluck and Sacchini, and composed a mass on the occasion of the death of the latter which has been greatly admired. He died at Paris in 1793.

DESBOURDES. Member of the Conservatory at Paris, and author of the minor opera "*La Nonne de Lindenberg*," performed at Paris in 1798.

DESCARTES, RENÉ, the celebrated French philosopher, wrote, in 1618, at the age of twenty-two, a work entitled "*Compendium Musicae*," which was never published during his lifetime, but was translated into various languages and printed after his decease.

DESCANT, or DISCANT. A term used by old musical authors to signify the art of composing in parts. Descant is of three kinds; plain, figurative, and double. *Plain descant* consists of a due series of concords, and is the same with simple counterpoint. *Figurative descant* is less restrained, and includes the relief of discords; and *double descant* infers that contrivance of the parts which admits of the treble or any high part being converted into the bass, and *vice versa*. Descant also implies a melodious display of successive notes extemporaneously sung or played to a given bass. Hubald, Odo, Guido, and other Latin writers used descant to express concord and harmony of sounds. In more modern times, however, *descant* is used to signify the highest kind of female voice, or highest part in a score — the same as *soprano*.

DESCENDANT. (F.) In descending.

DESCENDING. Passing from any note to another less acute.

DESCENT. A falling or sinking of a voice or instrument from any note to another less acute.

DES DUR. (G.) D flat major.

DESHAYES. A Parisian composer of dramatic and sacred music, also of some instrumental music, between the years 1780 and 1793.

DESMARETS, HENRY. A French composer of dramatic and other vocal music. He died at Luneville in 1741.

DESMASURES. A celebrated organist at Rouen about the year 1780. He lost three fingers of his left hand by the bursting of a gun, and afterwards used some fingers of wood, made at Paris, and with which he is said to have played nearly as well as previous to his accident.

DES MOLL. (G.) D flat minor.

DESORMERY, LEOPOLD BASTIEN, born at Bayon in 1740, was a French dramatic composer for the court, of some eminence. He also composed some sacred music.

DESORMERY. Son of the preceding. An eminent pianist at Paris. He also composed some instrumental music.

DESPERAMONS. A French singer and composer of romances at Paris. He was born at Toulouse in 1783. At eight years of age, he commenced his studies in music, and at fourteen went to Paris, where he was admitted as a violin pupil of the Conservatory. He subsequently

quitted his violin studies, and devoted himself to singing, first under Persuis, and afterwards under Garat. Desperamons was one of the professors of singing at the Conservatory.

DESPRES. See JOSQUIN.

DESPRÉAUX, L. FELIX. A composer of piano-forte music at Paris. Born in 1746. Died in 1813.

DESSUS. (F.) One of the appellations formerly given to the treble, or upper part of a vocal score.

DESTOUCHES, ANDRÉ CARDINAL, born at Paris in 1672, was superintendent of the king's music, and inspector general of the opera, between the years 1713 and 1731. He made his *début* in composition, in 1697, by the opera of "*Issé*," which pleased the king so much that he gave him a purse of two hundred louis, adding that "*Destouches était le seul qui ne lui eût point fait regretter Lulli*." He died in 1749.

DESTRA. (L.) The right hand.

DESTRUCTION OF MUSIC BOOKS, &c. In 1646, after the Litany had been denounced by the House of Lords as a superstitious ritual, and after the Westminster Divines had ordered that nothing but psalm-singing should be allowed in worship, all the choral books then to be found in England were collected from the churches, libraries, and private houses, and destroyed. All the organs were also taken down, and most of them, with the music books used for them, were burned. The consequence was, that when the government got back into the hands of the king, there were no singing books, organs, organists, or singers to be found.

DEUTEROS. *Second*. The numerical term by which the ancient Greeks distinguished the Æolian mode.

DEVIIENNE, FRANÇOIS. A celebrated French flutist, and professor of his instrument, at the Conservatory at Paris. He wrote a method for the flute, published at Paris in 1795, and composed several comic dramatic pieces, among which are "*Les Visitandines*," "*Les Comédiens ambulans*," and "*Le Valet de deux Maîtres*." Many overtures and symphonies for a full orchestra, also concertos, quartets, trios, duos, and solos for wind instruments were published by Devienne. At length the intensity and variety of his professional studies affected his mental faculties, and he died insane at the Lunatic Asylum at Charenton, in 1803, at the early age of forty-three.

DEVOZIONE. (L.) Devotion; as, *con devozione*, devoutly.

DEVRIENT, E. P. A bass singer, born at Berlin in 1601. He performed, in 1823, at Dresden, and was highly spoken of for the beauty and freshness of his tone.

DEXTRE. (L. Pl.) The ancient Roman flute players, who, in general, possessed the art of playing on two flutes at once, fingering one with the right hand and the other with the left, gave to those which they fingered with the right the name of *dextra*. The *dextra*, for the accommodation of the right hand fingers, were perforated in a different manner from the *sinistra*, which were played with those of the left.

DEZEDE. See DESAIDES.

D FLAT. The flat seventh of E flat. The fourth flat introduced, in modulating by fourths from the natural diatonic mode.

D'HAUDIMONT, L'ABBÉ. A pupil of Rameau, and chapel-master at one of the churches in Paris. He composed some sacred music about the middle of the last century.

D'HERBAIN, LE CHEVALIER, a captain in the French infantry, composed in Italy the operas of "Eneas" and "Lavinia," also several others at Paris, about the middle of the last century.

DIA. A Greek preposition, signifying through or throughout; as, *diapason*, through all, or throughout, the octave, or the scale.

DIABELLI. Composer of much instrumental music at Vienna, in all forms. Born in 1781.

DIAGRAM. (From the Greek.) The name given by the ancients to their table, or model, representing all the sounds of their system.

DIALOGUE. A vocal or instrumental composition of two parts, in which the performers, through the greater portion of the piece, sing or play alternately, yet occasionally unite. Opera scenes, especially those of the Italian drama, are frequently conducted upon this plan, and in situations of either humor or passion, are found capable of the most striking effects. The instrumental dialogue not only affords considerable scope for the display of the composer's ingenuity and science, but from the attention and exactitude which it demands in performance, is particularly calculated for the improvement of young practitioners.

DIAPASON, or DIAP. By this term the ancient Greeks expressed the interval of the octave; and certain musical instrument makers have a kind of rule or scale, called the *diapason*, by which they determine the measures of the pipes, or other parts of their instruments. There is a *diapason* for trumpets and serpents; bell founders have also a *diapason*, for the regulation of the size, thickness, weight, &c., of their bells. *Diapason* is likewise the appellation given to certain stops in an organ, so called because they extend through the whole scale of the instrument. It is derived from the Greek *dia* (through) and *pason*, (all.)

DIAPASON DIAPENTE. (From the Greek.) The interval compounded of an octave and a fifth conjoined. *A twelfth.*

DIAPASON DIATESSARON. (From the Greek.) The interval compounded of an octave and a fourth conjoined. *An eleventh.*

DIAPENTE. The name by which the ancient Greeks distinguished the interval of the fifth.

DIAPENTISSARE. A term derived from the word *diapente*, and applied by Muris, and other ancient theorists, to a certain method of descent by fifths.

DIAPHONIA. (Gr.) The name applied by Guido and others to the precepts that formerly taught the use of the organ, and its application to vocal melody. In explanation of these precepts, Guido says, "Suppose the singer to utter any given sound, as for instance, A; if the

organ proceed to the acutes, the A may be doubled, as A, D, a; in which case it will sound from A to D, a diatesseron, from D to a, a diapente, and from A to a, a diapason.

DIAPHONOI. (Gr.) Discords; sounds which, struck together, never unite. A term used in opposition to *symphony*.

DIAPHORICA. (From the Greek.) A name given by the ancient Greeks to every dissonant interval. Guido Aretinus makes it synonymous with *descant*.

DIASCHISMA. (From the Greek.) An interval in the ancient music, forming the half of a minor semitone.

DIASTALTIC. Dilating. A term applied by the ancient Greeks to the major third, major sixth, and major seventh, because they are extended or *dilated* intervals. This epithet was also applied to that subdivision of the Melopria which constituted the noble, bold, and exhilarating.

DIASTEM. A word used in the ancient music, and properly signifying an interval, or space. The Greek writers, however, frequently understand by a *diastem* any simple, incomposite degree, whether a *diesis*, *hemitone*, *sequitone*, or *ditone*, and employ it in opposition to the compound interval, which they call *system*.

D IN ALT. The fifth note in alt. The twelfth above the G, or treble clef note.

D IN ALTISSIMO. (I.) The fifth note in altissimo. The twelfth above G in alt.

DIATESSERON. A term applied by the ancient Greeks to that interval which we call a *fourth*; consisting of a greater tone, a lesser tone, and one greater semitone.

DIATESSERONARE. (From *diatesseron*.) An expression implying the singing in *fourths*.

DIATONIC. A term applied by the ancient Greeks to that of their three *genera*, which consisted, like the modern system of intervals, of major tones and semitones. The diatonic *genus* has long since been considered as more natural than either the *chromatic* or *enharmonic*. Aristoxenus asserts it to have been the first, and in favor of us that the other two were formed from the division of its intervals. The natural scale of music, which, proceeding by degrees, includes both tones and semitones, is called *diatonic*, a word compounded of *dia*, through, and *tonic*, a tone, because the greater number of intervals, five out of seven, in the scale, are tones. A considerable difficulty arises from the distribution of intervals upon keyed instruments, and the student does not readily perceive how an interval is to be found between two keys, as B and C, or E and F, which are close together. The method of stopping the violin, or the frets on a guitar or lute, shows the nature of intervals much more clearly. For instance, the third string of the violin is tuned to the *one marked D*; but when shortened by one ninth of the space between the nut and the bridge, will sound E, a tone higher; one sixteenth of the remaining length being further taken, the sound F, a semitone higher, is heard. A just idea of intervals is hereby obtained; and, as the latter is nearly half the magnitude of the former, the interval from D to E is called a tone,

and from E to F a semitone, being real spaces taken upon the length of the string.

DIATONIC SCALE. This scale consists of a series of natural progressive sounds, lying at the foundation of all melody. There are eight sounds in this scale, designated by numerals, thus: —

There are seven intervals in this scale, five of which are called *tones*, and the other two *semitones*. The semitones occur between the *third and fourth*, and the *seventh and eighth*, thus: —

Many, who have not attentively considered the subject, suppose that the regular gradation of *tones* and *semitones* is a mystery — a certain something which cannot be defined. True, great mathematical research and many experiments were necessary, in order to bring out the theory and reduce it to practice; but the principle is natural to man; so much so, that any one, even a little child, unless there is some radical defect in the hearing or vocal organs, may sing the scale correctly, without the least tuition.

The sounds of the natural scale are applied to the staff with the F clef:

Number 1 is placed on the fourth degree, C, and the others follow in regular order, thus: —

The scale is applied to the staff with the G clef:

Number 1 is placed on the first leger line below the staff, C, and the others follow in order, thus: —

The student will notice the different positions of the scale with the two clefs. This arrangement is necessary, inasmuch as it preserves a regularity of sounds in passing from one scale to the other, thus: —

Sounds may be carried to the highest and lowest possible degree of pitch; but vocal sounds are usually confined between the space below the staff with the F clef and the space above with the G clef. The following table exhibits the extension of the scale, from the lowest note in the *bass* to the highest note in the *soprano*. —

The human voice is divided into four parts or general classes — the bass, the tenor, the alto, and the soprano. The lowest male voices generally sing bass, the highest male voices the tenor, the lowest female voices the alto, and the highest female voices the soprano. Boys, before their voices change, generally sing the alto. Besides the four general divisions, there are three other classes — the baritone, a voice between the bass and tenor; the falsetto, the upper, unnatural tones of a man's voice; and the mezzo soprano, a medium species of female voice. The following example exhibits the usual compass of the voice in the several parts: —

It is important that the difference of pitch between male and female voices be fully understood by the pupil. When the G clef is used for the tenor, it denotes that each sound of the scale is an octave lower than when used for the alto and soprano.

The following diagram will illustrate the F and G clefs as variously used, and the relative situation of each: —

From the above, it will be seen that C on the first line above the bass staff, and C on the first line below the treble staff, are both in unison with C on the third space with the G clef, when it is used for the tenor.

The diatonic scale, it will be remembered, is a gradual succession of sounds by tones and semitones, which may proceed either from acute to grave, or from grave to acute; five whole tones and two semitones making a complete natural octave. In our ordinary music there are but two scales, or keys—the major and the minor; but on a more thorough examination of the principles of music, we find there may be as many diatonic scales as the distribution of the two semitones in an octave can be varied, which, including their original situation, is twelve times.

DIATONUM INTENSUM, or SHARP DIATONIC. The name given by musical theorists to those famous proportions of the intervals proposed by Ptolemy, in his system of that name—a system which, long after the time of this ancient speculative musician, was received in our counterpoint, and is pronounced by Dr. Wallis, Dr. Smith, and other most learned writers on harmonics, to be the best division of the scale.

DLAZEUXIS. (Gr.) Division, separation. The name given by the ancients to the tone which separated two disjunct tetrachords. The *diazouxis* was placed between the *mesis* and *paramesis*; i. e., between the highest note of the second tetrachord, and the lowest of the third, or between the note *synnemenon* and *paramesis hyperboleon*.

DIBDIN, CHARLES, was born in Southampton, where his father was a silversmith, about the year 1745. He was educated for the church on the foundation of Winchester School; but music soon took such complete possession of his mind, that he would attend, as a boy, to little else. At twelve years of age he had a very sweet voice, and sang at the cathedral at Winchester; also at a subscription concert in that town, where he was patronized by the principal inhabitants. Shortly after this, he stood for the situation of organist at a village in Hampshire, but was rejected on account of his youth. Dibdin's elder brother was captain of a West Indiaman, and being in London about this time, pressing invited his younger brother to make a trial of his talents in that metropolis. He accordingly went to London, and was introduced to several of the most eminent music sellers, for whom he composed some ballads; the profits of which were, however, very trifling, as the most he received for the copyright of six songs was three guineas. The rest of his time he filled up in tuning piano-fortes. This occupation being little to his taste, he soon became acquainted with the principal musical and theatrical characters of the day, and in the summer of 1762, when only fifteen years of age, appeared as a performer at the Richmond theatre. The following year he performed at Birmingham, and, in 1764, made his *début* on the London boards, in the character of Ralph, in the "Maid of the Mill," and received a great share of the public approbation. Still, however, he was not in his element; he disliked the profession of an actor, and his chief delight was in composition. Accordingly, soon after this time, he wrote the

principal part of the music for "Lionel and Clarissa," and a year or two afterwards, the entire music of "The Padlock." The success of these pieces fully established his fame as a dramatic composer.

Among Dibdin's more celebrated works for the stage may be enumerated "The Deserter," produced in 1772; "The Waterman," (words and music,) in 1774, and "The Quaker," in 1775. In the intervals of these performances, it must be confessed that his prolific pen gave birth to a great deal of trash. The whole number of his theatrical compositions amounted to nearly a hundred. After quarrelling with the proprietors of all the principal theatres, and more especially with Garrick, having also failed in more than one theatrical speculation as a manager, Dibdin at length resolved on attempting to entertain the public by his single performance of his own songs, accompanying them himself on the piano-forte. In this he was eminently successful for some years, both in London and in provincial towns; and he might doubtless have amassed a handsome fortune by this singular exertion of his talent, had he not been unusually improvident in his pecuniary concerns. The number of new songs which he wrote (both words and music) for these entertainments is astonishing; they amounted, it is said, to upwards of twelve hundred, among which his sea songs are certainly the most clever. "Poor Jack," "Tom Bowling," and various other ballads of that class, will ever remain dear to the ear of the sailor. Dibdin died in 1814, in very obscure circumstances, having suffered, for some years previously to his decease, from an illness which rendered him almost helpless.

DIBDIN, MISS, an excellent performer on the harp, was originally a pupil of Challoner, and since of Bochsá. She was, in 1824, an assistant professor of her instrument at the Royal Academy of Music. Miss Dibdin began her musical studies under Challoner in 1808, and in 1815 she performed Steibelt's grand duetto on the harp with Haydon, at the oratorios at Covent Garden, where she was advertised as "a pupil of Mr. Challoner." She afterwards performed in public with Bochsá, and with the greatest *éclat*.

DICHORD. (From the Greek.) The name given to the two-stringed lyre, said to have been invented by the Egyptian Mercury. Apollodorus accounts for its invention in the following manner: "Mercury," says he, "walking on the banks of the River Nile, happened to strike his foot against the shell of a tortoise, the flesh of which had been dried away by the heat of the sun, and nothing left of its contents but the nerves and cartilages; he was so pleased with the sound it produced, that he thence conceived the idea of a lyre, which he afterwards constructed in the form of a tortoise, and strung it with the dried sinews of animals."

DICKONS, MRS. This lady, so justly celebrated as a singer, was also an instance of premature musical genius, having been, at the age of six years, capable of performing Handel's overtures and fugues on the piano-forte, with an astonishing degree of taste and precision.

Mr. Poole (her father) took advantage of this extraordinary talent, and placed her under the tuition of the celebrated Rauzzini, of Bath, thus infusing into her young mind the true Italian

taste. In due time she was engaged at the Ancient and Vocal Concerts, and also at Covent Garden Theatre, where she made her *début* in the character of Ophelia, in which she evinced the most delicate feeling and pathos; she also performed, with unrivalled success, the first range of operatic characters in England, Scotland, and Ireland, and was received by the Irish with enthusiasm. The excellence of Mrs. Dickons in sacred music is also well known. In that style she sang with such a degree of sublimity, that religion seemed to breathe through every note. She was also engaged at the Italian Opera, and performed (among other principal characters) the Countess, in Mozart's "*Le Nozze di Figaro*," with eminent success, to Madame Catalani's *Sennama*. At the conclusion of her engagement at Drury Lane Theatre, in 1816, she was engaged as *prima donna* at Madame Catalani's theatre at Paris. From thence she went to Italy, where (at Venice in particular) she received the high and distinguished honor of being proclaimed, by general vote, *socia onoraria dell' Istituto Filarmonico*.

She was engaged to sing at several places with the celebrated Velluti; but the death of a particular friend demanded her speedy return to England before she could fulfil those engagements, and Mr. Harris availed himself of that opportunity to bring her forward once more in his theatre, where she had so early begun her theatrical career. She early retired from public life, esteemed and beloved by all who had the pleasure of knowing her, and although in full possession of her vocal powers, declined many tempting and lucrative offers to return to the stage. She had most flattering and advantageous applications to sing in Italy, where her fame was well known and her talent duly appreciated.

DIDYMUS was an eminent musician of Alexandria, and, according to Suidas, contemporary with the Emperor Nero, by whom he was much honored and esteemed. He wrote upon grammar and medicine, as well as music; but his works are all lost, and the whole that we know at present of his harmonical doctrines is from Ptolemy, who preserved and disputed them. However, this author confesses him to have been well versed in the canon and harmonic divisions; and, if we may judge from the testimony even of his antagonist, he must have been not only an able theorist in music, but a man of considerable erudition.

As this writer preceded Ptolemy, and was the first who introduced the minor tone into the scale, and consequently the practical major third, which harmonized the whole system, and developed the road to counterpoint, (an honor that most critics have bestowed on Ptolemy,) he seems to have a better title to the invention of modern harmony, or music in parts, than has been allowed him.

DIES IRÆ. (L.) A principal movement in a requiem.

DIESIS. The name given to the smallest interval used in the music of the ancient Greeks. In harmonic calculations, those are called *dieses* which are greater than commas, and less than semitones. *Diesis*, in modern music, is the name given to the elevation of a note above its natural pitch. This raising of the sound is, however, only a kind of insensible gliding through the interval of a semitone, and does not produce any

change in the denomination of the note upon which it operates. With some authors, *diesis* is only another name for the quarter of a tone. With others, again, it is indiscriminately applied to a variety of the lesser intervals.

DIETER, or DIETTER, CHRISTIAN LUDWIG, was born in 1757, in Wurtemberg. He composed much instrumental music, particularly for the bassoon, also some dramatic pieces, between the years 1781 and 1803.

DIETTENHOFER. See DITTENHOFFER.

DIETZ, JOSEPH, a German composer, published, in 1768, at Nuremberg, some music for the violin; also, subsequently, some instrumental trios at Amsterdam and Paris.

DIEZE. (F.) A sharp. See SHARP.

DIEZELIUS, VALENTIN, published a large collection of Italian madrigals at Nuremberg, in the year 1600.

DIEZEUGMENON. An appellation given by the ancient Greeks to their third tetrachord, when disjoined from the second.

DIGITAL EXERCISES are exercises to render the fingers independent of each other. As the third finger in each hand is (as it can be anatomically demonstrated) weaker than any other, it will be advisable for all who practise the piano-forte, &c., to cultivate its *volution* and improve its strength by exercises like the following. Such exercises may at first produce weariness, and perhaps some degree of pain; but this will gradually wear off, and the student will be amply repaid for his labor.

DIGNUM, CHARLES, was born at Rotherhithe, where his father was a respectable, but not affluent tradesman. Being of the Roman Catholic church, he officiated, when a boy, at the Sardinian ambassador's chapel, and also sang in the choir. His voice was at that time particularly admired by the frequenters of the chapel, for its melody and power; so much so that S. Webb, a gentleman well known to the musical world, remarked his talents, and gave him instruction. Dignum, however, entertained no idea of making music his pursuit; he wished rather to dedicate himself to the service of religion, and importuned his father to send him to the college at Douay to complete his education, and fit him for taking holy orders. This plan was, however, relinquished, and young Dignum was placed on trial under the care of a carver and gilder named Egglesoe, who was at the head of that branch in the house of Messrs. Seddons. Though this situation was by no means suited to his genius, he remained nine months in it, and was on the point of becoming a regular apprentice, when a quarrel between his father and Egglesoe dissolved the connection. Thus it often happens that the most trivial circumstance changes the history of a man's life. Had Dignum pursued the occupation of Egglesoe, he

might have lived in obscurity, and died unknown beyond the circle of his own family; chance, however, operated in his favor, and whilst he was dubious what occupation to follow, he was introduced to the acquaintance of the celebrated Mr. Linley. That great master of vocal and instrumental music readily perceived the talents of young Dignum, and gave him the most flattering hopes that he would one day become an acquisition to the stage. Thus encouraged, and conscious of his own natural powers, Dignum articulated himself to Linley for seven years. During the first two years of this period, the master bestowed the most indefatigable attentions on his pupil, and would not permit him to sing in public till his judgment was sufficiently correct. Dignum made his *début* at Drury Lane Theatre in 1784, in the character of Young Meadows, in the comic opera of "Love in a Village." His figure was indeed rather unfavorable for the part he represented; but his voice was so clear and full toned, and his manner of singing so judicious, that he was received with the warmest applause. He then appeared in Cymon, and again experienced the most flattering approbation. On the removal of Bannister, Sen., to the Royalty Theatre, Dignum succeeded to a cast of parts more suited to his person and voice, which was a fine tenor; amongst other characters, those of Hawthorn and of Giles particularly suited him, and he was superior in them to every other actor since the days of Beard, who was their original representative. Dignum retired from the stage in easy circumstances, and took residence in London, greatly esteemed, by a numerous circle of acquaintance, for his private worth and amiable disposition. He composed several pleasing ballads, and also published, by subscription, a collection of popular vocal music.

DI GRADO. (I.) An expression implying that the passage to which it refers moves by conjoint intervals.

DILETTANTE. (I.) A lover of music.

DILUENDO. (I.) A gradual dying away of the tone till it arrives at extinction.

DIMINISHED. An interval is said to be *diminished*, when by the application of a sharp or natural to the lower tone, or of a flat or natural to the upper tone, it becomes contracted within its natural space, or compass. Hence, by raising the lower note of a minor seventh a minor semitone higher, we produce a *diminished* seventh.

DIMINUENDO, or DIM. (I.) A term implying that the loudness of the passage over which it is placed is to be gradually lessened. The opposite of *crescendo*.

DIMINUTION. *Diminution* implies the imitation of, or reply to, any given subject, in notes of half the length, or value, of those of the subject itself. Thus a theme expressed in minims and crotchets, and taken up in crotchets and quavers, is said to be answered in *diminution*.

DI MOLTO. (I.) An augmentative expression; as, *allegro di molto*, very quick; *largo di molto*, very slow.

DIRECT. A certain character placed at the end of a staff to apprise the performer of the situation of the first note in the succeeding staff. For this purpose, it is always situated on that

line or space in its own staff which answers to the line or space occupied by the note which it is designed to announce, thus:—

DIRECTIVE TERMS. The terms *andante*, *moderato*, *piano*, &c., are called *directive terms*, because from them we discover the character and movement of a piece of music. Many performers neglect these terms, and decide the velocity of a movement from the signs of the measure C, 3, &c., which are inserted at the beginning of the staff, whereas these signs signify no more than the measure, or contents of the bars. Whenever any directive words appear, an invariable adherence to them is indispensably necessary. At the same time the subject ought to be consulted, especially when no directive words are found. Then, and then only, may the performer suppose that he has a tolerable idea of the design of the piece. In much of the more modern music, the vagueness of these directions about time is corrected by the *metronomic* marks.

DIRECTOR. A person who undertakes that department of a concert which is unconnected with the science, but which includes the mechanical office of fixing the salaries of the several performers, appointing the days of performance, and choosing the pieces, &c.

DIRGE. A solemn and mournful composition, performed at funeral processions. The *dirge* was in very general use with the ancient Greeks and Romans, and was numerously filled, both by voices and instruments.

DIRUTA, GIROLAMO, was a Franciscan friar, and the author of a work in dialogue, entitled "*Il Transilvano*," printed at Venice in the year 1625. The design of this work is to teach the proper method of playing on the organ and harpsichord.

DIS. (G.) D sharp.

DISALLOWANCE. A term applied to any anomalous formation, or succession of chords. Two succeeding eighths, or two consecutive perfect fifths, in the same direction, constitute a *disallowance*.

DISCORD. A discord is a dissonant or inharmonious combination of sounds, so called in opposition to the *concord*, the effect of which the discord is calculated to sweeten and relieve. Among various other discords, are those formed by the union of the fifth with the sixth, the fourth with the fifth, the seventh with the eighth, and the third with the ninth and seventh — all which require to be introduced by certain preparatives, and to be succeeded or resolved by concords to which they have some relation. Discords are sometimes introduced intentionally into music; not for themselves simply, but to set off the concords by their contrast and opposition. A well-cultivated ear will quickly distinguish a discord.

No one will deny the necessity of discord in the composition of music in parts; it seems to be as much the essence of music as shade is of paint.

ing; not only as it improves and meliorates concord by opposition and comparison, but, still further, as it becomes a necessary stimulus to the attention, which would languish over a succession of pure concords. It occasions a momentary distress to the ear, which remains unsatisfied, and even uneasy, till it hears something better; for no musical phrase can end upon a discord; the ear must be satisfied at last. Now, as discord is allowable, and even necessarily opposed to concord, why may not *noise*, or a seeming jargon, be opposed to fixed sounds and harmonical proportions? Some of the discords in modern music, unknown till this century, are what the ear can but just bear, but have a very good effect as to contrast. The severe laws of preparing and resolving discord may be too much adhered to for great effects; we are convinced that, provided the ear have annals made at length, there are few dissonances too strong for it. If, for instance, the five sounds, C, D, E, F, G, are all struck at the same instant, provided the D and the F are taken off, and the three others remain, the ear will not suffer much by the first shock; or, still further, if, instead of the five sounds above mentioned, the following are struck, C, D \neq , E, F \neq , G, and the D \neq , F \neq are not held on so long as the rest, all will end to the satisfaction of the offended ear.

DISCORDS OF SYNCOPATION only differ from those of suspension by constituting part of the radical harmony, and by not being merely appoggiaturas. The diatonic sequence of sevenths is one of the principal passages in which these discords are used.

DISCORDANT. An epithet applied to all dissonant and inharmonious sounds, whether successive or simultaneous.

DIS-DIAPASON, or BIS-DIAPASON. (From the Greek.) A double octave, or fifteenth. To this interval the ancient Greeks bounded each of their modes, and gave it the name of the *perfect system*.

DISEURS. (F. Pl.) A name formerly given by the French to certain narrators or romancers, who, in a kind of chant, recited their metrical histories.

DISJUNCT. A term applied by the ancient Greeks to those tetrachords which were so disposed with respect to each other that the gravest note of any tetrachord was one note higher than the acutest note of the tetrachord immediately beneath it.

DISSONANCE. That effect which results from the union of two sounds not in concordance with each other. The ancients considered thirds and sixths as *dissonances*; and, in fact, every chord, except the perfect concord, is a dissonant chord. The old theories include an infinity of dissonances, but the present received system reduces them to a comparatively small number. One rule, admitted both by the ancients and the moderns, is, that of two notes dissonant between themselves, the dissonance appertains to that of the two which is not included in the fundamental concord.

DISSONANT. Those sounds or intervals are said to be dissonant which do not form a concordance between themselves.

DISSOLUTION. A term used in the Greek music when a sound in the enharmonic genus is lowered three dieses; for thereby that genus is dissolved, and the music, or that interval at least, is chromatic.

DISTANCE. An expression applied to the interval between any two disjunctive notes; as, G in alto is said to be at the *distance* of a seventh from A above the treble clef note.

DISTANT SOUNDS. Dr. Arnott relates that, as a ship was sailing parallel to the coast of Brazil, but far out of sight of land, the persons on board distinctly heard sounds as of church bells, ringing as if for some day of rejoicing and festival. This was strange noise upon the wide and solitary ocean. The bells could be heard distinctly, but only from one part of the vessel; all the crew and passengers heard the same ding-dong, but none could solve the mystery. Many months afterwards it was ascertained, that on the day of this phenomenon, the bells of the Brazilian city of St. Salvador had been ringing in honor of some saint's day or other festival. The sound, blown from the land by a gentle wind, had come across a wide tract of sea to this ship, which was then sailing opposite St. Salvador. The fact of its being heard at only one particular spot on the deck was accounted for by the accidental position of a sail, which concentrated the sounds, and made them audible. Hence we draw the philosophical inference, that an instrument might be constructed, that should bear the same relation to sound that the telescope does to sight.

DITHYRAMBICS. Songs sung in honor of Bacchus. From these compositions, consisting of verse and melody, were derived the first dramatic representations at Athens, and which were afterwards sung as choruses to the first tragedies.

DITONE. An interval comprehending two whole tones, or a major third. The proportion of the sounds that form the *ditone* is 4:5, and that of the minor third is 5:6. F. Parran makes the ditone the fourth kind of simple concord, as comprehending two tones, according to Aristotle, a greater and a less. Others make it the first discord, dividing the ditone into eighteen equal parts, or commas; the nine on the acute side making the greater tone, as asserted by Salmon De Caux.

DITTENHOFER, JOSEPH, was born at Vienna about the year 1743. He received his instruction on the harpsichord in that city from Steffani, and his knowledge of counterpoint from Wagenseil, both of whom were reputed to be the first and most skilful organists in Vienna. After having passed fifteen or sixteen years on his travels through Germany and France, he at length fixed his residence in London, where he taught the harpsichord and piano-forte, and published a didactic work on composition, also several fugues and voluntaries for the organ. Dittenhofen possessed a perfect knowledge of his instrument, and although he had not that brilliant and rapid performance which is remarkable in some of the modern professors, yet his education was so regular that he was a complete master of harmony and modulation. One of the most celebrated English pupils of Dittenhofen was Monro, of Newcastle-upon-Tyne.

DITERS VON DITERSDORF, CARL. This admirable composer was by birth a German, and born in the year 1739. He first made himself known as a performer on the violin in the Imperial Chapel of Vienna, and afterwards resided at Frankfort. So highly was he esteemed by the Emperor of Germany, that, as a reward for his merit and talents, he was elevated, in the year 1770, to the rank of nobility, by the title of Dittersdorf, and at the same time nominated ranger of the forests in the emperor's Silesian dominions. Shortly after this period, he was appointed by the Bishop of Breslau director of his chapel, and from that time he appears to have resided alternately in Silesia and at Vienna. In 1792, says Dr. Burney, he lived in a splendid manner on his own property, in Austria. His light comic operas for a long time enjoyed great popularity in Germany and France; but his style grew old and ordinary as the works of Mozart were better understood. His compositions were extremely numerous, especially his operas, of which the most celebrated was "*Der Doktor und der Apotheker*," produced at Vienna in 1786. Between this date and 1798 he produced upwards of thirty operas or operettas. He also wrote several oratorios, as "*Isaac*," "*Esther*," "*Job*," &c.; some masses and motets; fifteen symphonies for grand orchestra, entitled "*The Metamorphoses of Ovid*," published at Vienna in 1785; some forty manuscript symphonies; concertos, sonatas, quartets, duos, songs, romances, &c., &c., in great number. Some called him the Gretry of Germany. As his popularity waned he grew miserable and poor, but found a kind home in the Baron Stillfried's chateau in Bohemia, where he died in October, 1799, two days after he had finished dictating to his son the history of his life, which was published at Leipsic in 1801, (294 p., 8vo.) — a work full of *naïve* originality.

DITTY. A short, simple, melancholy air. *Ditty*, which is derived from the Latin word *dictum*, and was originally spelled *dittie*, implied, in its primitive sense, a saying, or sentence, and had no allusion to a poem or song, to which it was afterwards appropriated.

DIVERBIA. (L.) The name given to the dramatic dialogues of the ancients. The *dierbia* are supposed not to have been set to such refined and elaborate melodies as those which accompanied the sentimental and passionate cantata or soliloquies.

DIVERTIMENTO. (I.) A short, light, pleasing composition, vocal or instrumental, written in a familiar style, and calculated to engage the general ear.

DIVERTISSEMENT. (F.) The name given to certain airs and dances, formerly introduced between the acts of the French operas.

DIVISION. This word bears two constructions. With theoretical musicians, it implies the division of the intervals of the octave; but taken in a practical sense, signifies a course of notes, so running into each other as to form one connected series or chain of sounds; and which, in vocal music, is always applied to a single syllable. The singing or playing a passage of this kind is called *running a division*.

DIVISION OF TIME. We regulate the

length of sounds by a division of the time occupied in the performance of any given melody, or harmony, into regular portions, called measures. During the performance of any piece of music, time passes away; and in order to preserve regularity and prevent confusion, all music must be divided into equal portions. The following line represents the time of any given melody:—

Now suppose this line, or time, to be divided into equal portions, each division would constitute a measure, thus:—

To keep the time equal, we make use of a motion of the hand or foot, thus: knowing the true time of a crotchet, we shall suppose the measure or bar actually subdivided into four crotchets for the first species of common time, then the half measure will be two crotchets; therefore, the hand or foot being up, if we put it down with the very beginning of the first note or crotchet, and then raise it with the third, and then down to begin the next measure, this is called *beating time*. By practice we get a habit of making this motion very equal, and consequently of dividing the measure or bar into equal parts, up and down; as also of taking all the notes in the just proportion, so as to begin and end them precisely with the beating. In the measure of two crotchets, we beat down the first, the second up. Some call half of the measure in common time a *time*; and so they call this the measure or mode of *two times*, or the *dupla* measure.

Time is to music what rhythm is to poetry, and cannot be too rigidly observed. The following are the usual divisions of time:—

I. $\frac{3}{4}$ Extreme value. Equivalent value in subdivisive notation. 1 2 3 4

II. $\frac{3}{2}$ Extreme value. Equivalent value, &c. 1 2 3

III. $\frac{3}{4}$ Extreme value. Equivalent value, &c. 1 2 3

IV. $\frac{3}{8}$ Extreme value. Equivalent value, &c. 1 2 3

No I. is simple common time, and is chiefly used for brilliant or grand movements. No II. is half as long again in the bar or measure as common time, and is now rarely used, though once

so much in vogue, particularly in serious vocal music. No III., it will be seen, is a fractional portion of common time, as its name, $\frac{5}{4}$, or triple time, imports; as is also $\frac{3}{8}$.

V. $\frac{2}{4}$ Extreme value. Equivalent value, &c.

VI. $\frac{6}{8}$ Extreme value. Equivalent value, &c.

VII. $\frac{9}{8}$ Extreme value. Equivalent value in Triplets.

VIII. $\frac{12}{8}$ Extreme value. Equivalent value in Triplets.

No. V., $\frac{3}{4}$, or half common time, is generally chosen for rondos and light pieces, but can also serve to express the grave and sentimental. No. VI., $\frac{6}{8}$, or compound common time, is capable of all kinds of expression, from the most hilarious merriment to the deepest pathos; $\frac{3}{4}$ and $\frac{3}{8}$ are often misused for this measure. Nos. VII. and VIII., $\frac{9}{8}$ and $\frac{12}{8}$ are only $\frac{3}{4}$ and common time in triplets, as will be seen from their symbol notes, which are respectively of the same extreme value.

Some writers have made use of apparently un-rhythmical divisions of time, such as five crotchets in the bar in place of four, and frequently with most excellent effect. The following specimen from Reeve is a felicitous instance:—

1 2 3 4 5

Come, stain your cheek with nut or berry, &c.

And others have indulged in an alternation or mixture of different measures, such as $\frac{3}{4}$ intermingled with simple common time. In Boieldieu's "*Dan e Blanche*," there is a happy instance of this license in the notation of a melody that could not be otherwise so well expressed by the ordinary equal-barred subdivision or measure.

Sometimes three notes are played in the time of two, (and are then called a triplet,) or six in the time of four. In such cases either the figure 3 or 6 is placed with a curved line over or under the notes, thus:—

When one part moves in triplets, and the other does not, but is dotted, the dotted note takes the whole triplet before the short note is played:—

EXAMPLE.

DIVINE MUSIC is that respecting the order and harmony which obtains among the celestial minds. Mundane music is that which respects the relations and order of every thing else in the universe. Though Plato by divine music understands that which exists in the divine mind, viz., those archetypal ideas of order and symmetry according to which God formed all things, and as this order exists in mundane creatures, he calls it mundane music. This last species the ancients again subdivided into the following: celestial music, or the music of the spheres, comprehending the order and proportions in the magnitudes, distances, and motions of the heavenly bodies, and the harmony of the sounds resulting from these motions; elementary music, or the harmony of the elements of things; human music, which consists chiefly in the harmony of the faculties of the human soul and its various passions, and is also considered in the proportion, temperament, and mutual dependence of the parts of the body; and also music, properly so called, which has for its object motion, considered as under certain regulations, by which it affects the senses agreeably. Aristides, Quintilianus, Bacchius, and some other ancient writers, define music the knowledge of singing, and of things belonging thereto; which they explain by the motions of the voice and body, as if the singing consisted only in the different tones of the voice.

DIVOTO. (I.) A term signifying that the piece before which it is written is to be performed in a grave, solemn style, proper to inspire devotion.

DIXON, WILLIAM, published some books of psalms and hymns in London, about the year 1790.

DIZI, F. A celebrated harpist, resident in London, and celebrated for the superior beauty of the tone produced by his touch. He composed and arranged much very pleasing music for his instrument. At the Covent Garden oratorios, in the season of 1821, Bishop (the conductor) employed no less than twelve harps, with Dizi at their head, whilst Sir George Stuart, at Drury Lane, engaged thirteen, headed by Boehsa. Dizi invented an improvement in the mechanism of the harp, and calls his invention "the perpendicular harp." The principle is, that the tension

of the strings acts upon a centre, parallel to the centre of the column, as well as to that of the sonorous body. He has arranged his mechanism between plates of iron and brass, which are at such a distance as to allow the strings to vibrate freely. These plates are held together by the pins which serve to turn the string. The strength of these metal plates is much more than equal to the pressure upon them, and they are, therefore, not liable to the common disturbances and evils arising from loss of shape. The column which assists in supporting the mechanism takes the pressure exactly in the centre, and therefore has no tendency to incline to either side. The strings are stated to possess a freer power of vibration, and consequently the tone is prolonged. They are, moreover, so placed that, when at their utmost tension, they still preserve a straight line, and make no angle. Dizi has substituted a damper pedal for the swell, by which means the *sons étouffés* may be produced without the common action of the hand. There are several simplifications in the mechanism, and the instrument, being alike on both sides, is more uniform in its appearance; but the principal excellence we conceive to be, that the string is not drawn out of its vertical perpendicular. Dizi's compositions for the harp are distinguished for their elegance. Among his principal publications we may enumerate "Twelve Exercises or Fantaisies composed expressly for the Patent Harp, with double Movement," Chappell; "A Second Series of Twelve Fantaisies for Patent Harp," Harp. Inst.; "Six French Romances arranged, Book I.," "Six French Romances arranged, Book II.," &c., &c.

DO. A monosyllable long since substituted by the Italians for that of *ut*, which Guido applied to the first note of the natural major diatonic scale. Guido's monosyllable was rejected as too hard and rough.

DOCTOR IN MUSIC. A musician, upon whom some university has conferred the degree of doctor in the faculty of music. At what time this degree was first instituted in England, authors do not agree. Anthony Wood says it took place as early as the reign of Henry II.; but Spelman thinks it had no existence till the reign of King John. No name being to be found of the first professor in music to whom this title was granted, we are in want of the very circumstance which would decide the question; and must, therefore, be satisfied with the conjecture, that its commencement must have been pretty early, since we know it to have been conferred upon Hambois, who flourished towards the beginning of the fifteenth century. It, however, clearly appears, by the qualifications formerly required of a candidate either for a doctor's or bachelor's degree in music, that at the time of the institution of these degrees, music was regarded as a science merely speculative; and that little, if any, stress was laid on skill in composition. The being able to read and expound Boethius was conceived to be a higher criterion of scientific acquisition than any specimen of inventive harmony and melody; and an acquaintance with the ratio of musical intervals, and the philosophy of sound, superseded the operations of creative genius and practical theory. The present statutes, however, are formed on a broader principle, and, looking to talent and active science for the necessary

qualifications, require of the candidate an exercise in eight vocal parts, with instrumental accompaniments, which he is to submit to the inspection of the musical professor, and, if by him approved, to have performed in the music school, or some other public place.

DODEKACHORDON. A term applied by theoretical musicians to the twelve modes of Aristoxenus.

DOEHLER, THEODORE, a distinguished pianist of the new school, contemporary with Herz, Thalberg, &c., was born in 1814, at Naples, where his father was teacher of languages. He showed great taste for music while a boy; but there were no fit masters for him until the arrival of Jules Benedict at Naples, under whom he mastered the mechanism of the piano. His father being called to Lucca to superintend the education of the princes, young Doehler accompanied him, and, a few months afterwards, followed the duke to Vienna, where he was admitted to the school of Carl Czerny, and made such remarkable progress that, at the age of seventeen, he was appointed pianist to the Duke of Lucca. From that time he accompanied his sovereign in his travels through Germany and Italy, and every where made a sensation by his talent. His compositions for the piano are principally brilliant and difficult fantasias upon themes from operas, as "*Zampa*," "*La Straniera*," "*Norma*," "*Robert le Diable*," &c., suited to the display of rapid and dazzling execution.

DOIGTER. (F.) The fingering.

DOLANTE, CON DOLORE, or CON DUOLO. (I.) Sorrowfully, pathetically.

DOLCE, or DOL. (I.) This term expresses the quality of tone in which the passage over which it is written should be performed, which should be, as the term implies, soft, smooth, and delicate. Upon the violin this is produced by drawing a light and swift bow over the strings near to the finger board; and, for the greatest degree of softness, the bow must still recede farther from the bridge. By this means a tone may be acquired resembling that of the musical glasses, or the lower tones of the flute. Before this can be obtained in vocal tones the organs must be brought into the most pliant state, and used with the greatest delicacy. When this term is applied to instrumental music, it is generally to those *morceaux* of melody that are so peculiarly adapted to the voice, and the performer cannot express them better than by taking the vocal tones as his model.

DOLCE E PIACEVOLMENTE ESPRESSIVO. (I.) Soft, and with pleasing expression.

DOLCE MANIERA. (I.) A sweet, delicate manner. An expression applied to a performer who is master of a soft, pathetic, and finished style of execution. Of such a performer, we say he has a *dolce maniera*.

DOLCEMENTE. An Italian adverb, implying a soft, sweet, and graceful style of performance.

DOLCEZZA, or CON DOLCEZZA. (I.) With sweetness and softness.

DOLCISSIMO. (L.) With extreme sweetness.

DOLES, JOHANN FRIEDRICH, a singer and chapel-master at Leipsic, was born in the year 1715. He composed much vocal music, principally for the church. He died in 1797.

DOLES, DR. JOHANN FRIEDRICH, son to the preceding, was born in 1746, and considered as one of the best German musical amateurs. He published some instrumental music at Leipsic, about the year 1733.

DOLOROSO. (L.) A term indicative of a soft and pathetic style of execution.

DOMESTICI. (L. pl.) The name given to those two of the four singers in the Patriarchal Church of Constantinople who act as assistants to the two principals.

DOMINANT. The dominant of any mode is that sound which makes a fifth of the final, or tonic.

DOMINICK, M. A professor of the horn at the Conservatory at Paris. He published a method and some music for his instrument, also several romances.

DONA NOBIS PACEM. (L.) *Give us peace.* The concluding movement of the mass, or Catholic morning service.

DONATI, BALDASSAR. Chapel-master of St. Mark's church, at Venice. He composed many madrigals and canzonets (*Canzone Villanesche*) between the years 1555 and 1568. See **CAMBIO.**

DONATI, IGNAZIO. An Italian composer and chapel-master at Milau. He published some sacred music at Venice, between the years 1619 and 1633.

DONI, ANTONIO FRANCESCO, published at Venice, in 1544, a work entitled "*Dialoghi della Musica.*" Dr. Burney places this among the more rare musical publications, never having seen but one copy of it, which was in the possession of P. Martini. Doni died, according to Walther, in 1574, in the fifty-fifth year of his age.

DONI, GIOVANNI BATTISTA, a native of the city of Florence, was born in the year 1594. He was the descendant of a noble family, and though not by profession a musician, has been justly celebrated for his skill in this science. Early in life, he was appointed professor of eloquence, and member of the Florentine Academy, and that of Della Crusca. He was much favored by Cardinal Barbarini, afterwards Pope Urban VIII., and at his recommendation was appointed secretary to the college of cardinals. Being a man of extensive learning, and finding the attention required in this employment too great an interruption to his studies, he quitted it, and retired to Florence, where he ended his days, at the age of about fifty. From an account which he has given us of himself and of his studies, it appears that, in the early part of his life, he was taught to play on the flageolet and the lute. He says that he also attained some proficiency on the harpsichord; and that, afterwards, notwithstanding the little time he had to spare from his more serious vocations, he applied himself with uncommon assiduity to the science of harmony. In 1635 he published at Rome a dis-

course entitled "*Compendio del Trattato dei Generi e Modi della Musica, con un Discorso sopra la Perfezione de' Concerti.*" This book is of a miscellaneous nature, but its avowed design is to show that the music of the ancients was preferable to that of the moderns. It contains a tract, entitled "*Discorso sopra la Perfezione della Melodia,*" at the beginning of which the author treats of the madrigal style of composition, and of the particulars which distinguish the *cantus figuratus* from the *cantus ecclesiasticus*. The invention of the latter, he says, followed naturally from the use of the organ. Five years afterwards, Doni published his "*Annotazioni sopra il Compendio de' Generi, e de' Modi della Musica,*" and some other tracts. In one of them he describes an instrument of his own invention, called, after his patron, a *Lyra Barbarini*, resembling, in shape, the Spanish guitar, but having three niches, each of which was double, like the theorbo, or arch lute. The use of this instrument was to enable the performer to play either in the Dorian, the Phrygian, or the hypo-Lydian modes of the ancients. All these tracts contain curious particulars relative to the music and musicians of the author's time. Doni published, in 1647, a treatise in three books — "*De Præstantia Musicae veteris.*"

DONIZETTI, GAETANO, one of the most admired of the Italian dramatic composers since Rossini, was born at Bergamo in 1799. After learning the rudiments of music at the Lyceum of that city, he took lessons of the celebrated *maestro di capella* Simon Mayr, and then became a pupil of Pilotti and Maltei at Bologna. Having completed his studies, he wrote overtures, violin quartets, cantatas, masses, and other pieces of church music. He somehow became engaged in military service, and it was long before he could obtain the liberty to devote himself to the object of his highest ambition, namely, dramatic composition. Once free, he gave in rapid succession to Venice the operas "*Enrico, conte di Borgogna,*" "*La Follia,*" "*Le Nozze in Villa,*" "*Il Falegname de Liconia,*" to Rome "*Zoraida di Granata,*" to Naples "*La Zingara,*" "*La Lettera Anonima,*" and other works to other cities. In 1822 his "*Chiara e Serafina*" was performed at La Scala in Naples. These works showed the usual faults of a great facility of production, and bore the marks of imitation of Rossini. A multitude of other feeble works continued to flow from his facile pen; yet the composer's manner wore, at times, a character more grand and elevated. Thus, in the serious style, his "*Anna Bolena*" and "*Elizabeth at Kenilworth,*" (represented at Naples in 1828,) and above all, his "*L'Esule di Roma,*" (1829,) contain real beauties. In the buffo kind, his "*Elisir d' Amore,*" &c., were full of vivacity and grace. The interval between this and his "*Marino Faliero*" (Paris, 1835) was filled with some fourteen operas, all of which have sunk into obscurity. The careless haste of his compositions was due very much to the miserable pay which composers received. For several years Donizetti, under engagement with Barbaja, the *impresario* at Naples, had to write every year two serious and two buffo operas, and received for his labor hardly enough to meet the first necessities of life. He has frequently been known to instrument the entire score of an opera in *thirty hours*. Donizetti was made professor of counterpoint in the Royal Academy of Music a.

Naples, being, perhaps, the only young Italian composer qualified for its functions. He was, moreover, well acquainted with the art of singing, a great reader of music, and a remarkably good accompanist at the piano. The excitement of incessant and rapid composition finally affected his brain, and in the years 1844-7 he was in an insane hospital near Paris; since which he was placed with an experienced physician, his nephew, in Italy. He died about 1850. Of the sixty or seventy operas which he composed, some eight or ten have enjoyed a greater popularity in the opera-loving cities of Europe and America, for years before and since his death, than almost any other works. His "*Lucrezia Borgia*" and "*Lucia di Lammermoor*" are in many respects great works, and universally admired. The "*Elisir*" still holds its place upon the stage as one of the most charming of light comic operas; while the "*Fille du Regiment*," "*Linda di Chamounix*," "*Maria di Rohan*," "*Roberto Devereux*," and several others of his operas, besides the above named, are all associated with the triumphs of all the great singers of the middle of the nineteenth century. Donizetti's best works sparkle with piquant or gracefully florid melodies, such as suit and please the different kinds of voices, and with musical ideas worked up into quartets, trios, &c., with the greatest effect. Whatever else he may be, he is essentially dramatic in the plot and construction of his operas, and understands well the art of stimulating the enthusiasm of the general audience.

DONZELLI. An Italian singer, born at Bologna in 1790, and distinguished in all the cities of Europe. He had a beautiful voice, of such compass that he never used the falsetto; his action was polished, his recitative particularly impressive, his elocution generally good, and his whole performance full of life and expression.

DOPPEL. (G.) Double; as, *Doppel-griff*, double stop on the violin.

DOPPIO. (I.) Double; as, *doppio movimento*, double time, that is, as fast again.

DORATUS, NICHOLAS. Composer of madrigals, published at Venice in the middle of the sixteenth century.

DORIAN. The epithet applied by the ancient Greeks to one of their modes.

DORIC MODE. The first of the authentic modes of the ancients. Its character is severe, tempered with gravity and joy, and is proper for religious occasions, as also to be used in war.

DORION is mentioned by Plutarch as a flute player who had made several changes in the music of his time, and who was head of a sect of performers that militated against another party of practical musicians, of which Antigenides was the chief — a proof that these two masters were contemporaries and rivals. Dorion, though much celebrated as a great musician and poet by Athenæus, is better known to posterity as a voluptuary. Both his music and poetry are lost; however, many of his pleasantries are preserved. Being at Milo, a city of Egypt, and not able to procure a lodging, he inquired of a priest, who was sacrificing in a chapel, to what divinity it was dedicated: who answered, "To Jupiter and

to Neptune." "How should I be able," says Dorion, "to get a lodging, where the gods are forced to lie double?" Supping one night with Nicæreon, in the Island of Cyprus, and admiring a rich gold cup that was placed on the sideboard, "The goldsmith will make you just such another," says the prince, "whenever you please." "He will obey your orders much better than mine, sir," says Dorion; "so let me have that, and do you bespeak another." The remark of Athenæus upon this reply is, that Dorion acted against the proverb which says, that

"To flute players nature gave brains, there's no doubt;
But alas! 'tis in vain, for they soon blow them out."

Upon hearing the description of a tempest, by the Nautilus of Timotheus, Dorion said, "He has seen a better in a boiling caldron." Having lost a large shoe, at a banquet, which he wore on account of his foot being violently swelled by the gout, "The only harm I wish the thief," said he, "is, that my shoe may fit him." His wit and talents made amends for his gluttony, and he was a welcome guest wherever he went. Philip of Macedon, in order to enliven his parties of pleasure, used frequently to invite him with Aristonicus, the citharist.

DORNAUS, PHILIP, a German professor of the horn, published some music for his instrument at Offenbach in 1802.

DORNAUS, L. Younger brother to the preceding, also a professor of the horn, and composer of music for his instrument.

DORNEL, ANTOINE, organist of St. Genevieve Church, at Paris, died in 1755. He published some vocal and instrumental music.

DOT. A point placed after a note, by which the duration of that note is increased one half. This expression of continuity was formerly called a *point of perfection*, because a note, when dotted, attained its then greatest possible length, or was perfected. A dotted note is also termed a *note of prolation*.

DOTTED NOTES, RESTS, &c. The dot placed after any note renders it one half longer than it would be if simply written. Thus, inasmuch as a semibreve is as long as two minims, it follows that the duration of a dotted semibreve should be equal to that of three minims, of a dotted minim equal to that of three crotchets, and so on, as expressed in the following table:—

Dotted Semibreve	Dotted Minim	Dotted Crotchet
		
Dotted Quaver	Dotted Semiquaver	Dotted Demisemiquaver
		

By which it will be seen that the use of the

dot is only a conventional method of expressing the notation of the second staff.

EXAMPLE OF DOTTED NOTES OF EVERY VALUE.

A double dot placed after a note imparts to it the additional value of three fourths of its simple duration. Thus, a semibreve being equal to two minims, or four crotchets, a double-dotted semibreve is as long as three minims and a half, or seven crotchets, and so forth, as will be seen in the annexed table:—

Double-dotted Semibreve	Double-dotted Minim	Double-dotted Crotchet	Double-dotted Quaver	Double-dotted Semiquaver
is as long as	is as long as	is as long as	is as long as	is as long as

A dot affixed to a rest increases its value in like manner as it affects a note. Thus a dotted semibreve rest is as long as a semibreve rest and a minim rest, a dotted minim rest is equal to a minim rest and a crotchet rest, and so on.

And in like manner the double dot may be placed after a rest, lengthening the duration of its pause as the double dot after a note protracts that of its sound.

The double dot is rarely affixed to semibreves or minims.

When dots are placed at the sides of double

bars, it indicates that the portions or parts on the sides of the dots should be repeated:—

Dots attached to the single bars are also used, more particularly in manuscript music, thus:—

This repetition is sometimes expressed by the word *bis* (which is literally *twice*) written under a curved line:— *bis*

DOTTED TOUCH. This is a touch, upon keyed instruments, which rigidly marks the distinction between the dotted or doubly-dotted note and that which follows it, thus:—

DOTZAUER, JUSTUS JOHANN FRIEDRICH, a composer and violinist at Dresden, was born near Hildburghausen, in Saxony, in 1783. He was appointed chamber musician to the King of Saxony in the year 1811, and has published much instrumental music, chiefly at Leipzig. The quartets of Dotzauer are much admired.

DOUBLE. A word which, in the old music, carries the same sense as that which we now give to the term *variation*. In the harpsichord lessons of Handel, and other masters of his time, we find, (instead of *variation 1st, variation 2d, &c.*) *double 1, double 2, &c., &c.*

DOUBLE BAR. A double bar consists of two parallel straight lines, somewhat broader than the common bar, drawn near each other, and passing perpendicularly through the staff. The double bar serves to divide the different strains of a movement. If two or more dots are placed on one of its sides, they imply that that strain of the movement on the same side with the dots is to be performed twice; and if dots are placed on each side of the double bar, it is to be understood that the mark of repetition extends to the strains on each side of the double bar.

DOUBLE BASS, CONTRA BASSO, or VIOLONO. A large, deep-toned bass instrument, extending, in general, to double C downwards, and reaching, in ascent, to the treble clef note, or even higher. The scale of the double bass is equally perfect with that of the violoncello.

The double bass is the deepest and most powerful toned instrument used in concert music. It is so indispensable to enrich and sustain the masses of harmony, that it may be fairly con-

sidered as the pillar and metronome of the orchestra.

Music for this instrument is written on the bass clef, like the violoncello; but the actual pitch of the notes is an octave lower than on that instrument.

The double bass is mounted with three thick catgut strings, which are tuned by fourths, in the following manner:—

1st string. 2d string. 3d string.

G D A
O O O

O indicates the open string.

The following scale exhibits all the natural notes which are capable of being played in the first or original position of the hand, as also the fingers employed to stop them. Notes above the original position are obtained by advancing the hand upon the finger board:—

3d string. 2d string. 1st string. Notes above.

A B C D E F G A B C D E F G
O 1 4 O 1 4 O 1 4 1 4 1 4 1
Fingers closed. Closed. Wide apart. 4 1 4 1 4

GENERAL SCALE, INCLUDING THE CHROMATIC NOTES.

3d string. 2d string. 1st string.

A A# Bb B C C# Db D D# Eb E F F# Gb G G# Ab A A# Bb B

O 1 1 1 4 4 4 O 1 1 1 4 4 4 0 1 1 1 4 4 4

In the above scales the notes marked 4 are stopped by pressing the top joints of all the four fingers firmly upon the strings. The double bass generally plays out of the same book or part as the violoncello. This may always be done when the violoncello part is simple, and does not contain rapid passages; but, when it contains difficult passages or scales in unusual keys, the double bass can no longer keep pace with the violoncello, and it becomes necessary to simplify the passages so as to suit it. In all such cases, authors, for their own interest, should not neglect to write a distinct part for the double bass as simple as possible.

The contra basso, which used to be played with but three strings, is now found in the orchestra with a fourth; and, all unwieldy as it is, has been, in late years, in the hands of a Bottesini, made to perform with astonishing success the part of a solo instrument.

DOUBLE COUNTERPOINT. When, in composition in two parts, the parts are so composed that the upper part may be inverted an octave lower, so as to become the under part, whilst the other retains its place unaltered, that is named a double counterpoint in the octave. There may be, moreover, a third or fourth accompanying part; but the intervals in the two inverted parts must appear in the following way:—

1	2	3	4	5	6	7	8
8	7	6	5	4	3	2	1

Hence it is obvious that the unison answers to the octave, the second to the seventh, &c.

DOUBLE CROCIE. (F.) A semiquaver. See SEMIQUAVER.

DOUBLE DEMISEMIQUAVER. A note equal in duration to one half of a demisemiquaver. See DEMISEMIQUAVER.

DOUBLE ENDING. This consists of dots at the end of a strain, with a double bar and two or more notes, a figure 1 placed over the first part, and a figure 2 over the second part. It signifies that certain measures are to be repeated,

and the note or measure under figure 1 to be sung the first time, and the note or notes under figure 2 the second time, omitting the part under figure 1. Should they be connected by a tie, both parts are to be sung the second time, thus:—

DOUBLE FLAT. After all the seven notes of music have been made flat, the same series of letters begins again with B, and that, being the first, takes the name of double B flat, thus:—

The Germans have sometimes employed a large B, as the character of the double flat. As the characters double sharp and double flat seldom occur, the mode of restoring the single sharp or flat, after the use of the double character, varies with different authors. Some use a single sharp or flat, some employ a natural, or else unite the single sharp or flat with the natural, thus: ♯♯, ♯b; and others again leave the passage to the ear and judgment of the performer.

DOUBLE NOTE. This is the ancient breve, and was written thus formerly, but as now used is written thus:

DOUBLE SHARP. The double sharp is sometimes marked with a single cross, thus: which, according to Vaneo, originally represented the two commas of the quarter tone, or enharmonic diesis, and which properly represents the distance between the F double sharp and the G natural. After all the notes of music have been made sharp, the same series of letters begins again, and F, being the first, takes the name of double F sharp, thus:—

The double sharp raises a note before which it is placed two half tones.

DOUBLE TIME has two parts, or motions, in each and every measure, and may be marked or beat by letting the hand fall and rise alternately, thus :—

DOUBLE TONGUING. A term used by flutists, or flute performers, to signify that action of the tongue against the roof of the mouth, by which the most brilliant and spirited articulation is produced, of which the flute is capable.

DOUBLETTE. (F.) An organ stop called by us fifteenth.

DOURLIN, VICTOR, a pupil of Gossec, obtained, in 1806, the grand prize for composition decreed by the National Institute. He subsequently went to Italy, and on his return to Paris produced several operas, among which are "*Philoboles*," "*Linnée*," "*La Dupe de son Art*," and "*Les Oies du Frère Philippe*."

DOWLAND, JOHN, a celebrated performer on the lute, was born in the year 1562, and at the age of twenty-six was admitted to the degree of bachelor of music, at Oxford. He seems to have been a great favorite with the public. Anthony Wood says of him, that "he was the rarest musician that the age did behold." And Shakspeare has thus immortalized him in one of his sonnets :—

"If music and sweet poetry agree,
 As they needs must, (the sister and the brother,)
 Then must the love be great 'twixt thee and me,
 Because thou lovest the one, and I the other.
 Dowland to thee is dear, whose heavenly touch
 Upon the lute doth ravish human sense;
 Spenser to me, whose deep conceit is such,
 As, passing all conceit, needs no defence;
 Thou lovest to hear the sweet, melodious sound
 That Phoebus' lute (the queen of music) makes,
 And I, in deep delight am chiefly drownd
 When as himself to singing he betakes;
 One God is good to both, as poets feign;
 One knight loves both, and both in these remain!"

In the year 1584, Dowland travelled through the principal parts of France. From thence he passed into Germany, where he was received in the most flattering manner by the Duke of Brunswick, and the learned Prince Maurice, the Landgrave of Hesse Cassel. After a residence of some months in Germany, he crossed the Alps into Italy, and successively visited Venice, Padua, Genoa, Ferrara, and Florence. He published, in 1595, "The first Booke of Songes or Ayres of four Parts, with Tablature for the Lute;" and in the second book, printed in 1600, he styles himself lutenist to the King of Denmark. A third book of the same work was afterwards given to the public. Some time after this, he printed his "*Lachrimæ, or Seaven Teares*, figured in seaven passionate Pauans, with divers other Pauans, Galiards, and Almands, set forth for the Lute, Viols, or Violins, in five Parts." The pavan, or pavan, was a peculiar species of Spanish dance. This work seems to have attained considerable celebrity. It is alluded to in a comedy of Thomas Middleton, entitled, "No Wit like a Woman's," in which the servant tells his master bad news, and is thus answered: "No, thou plaist

Dowland's *Lachrimæ* to thy master." Dowland translated and published, in 1609, the "*Micrologus*" of Ornithoparcus, containing the substance of a course of lectures on music, delivered by that author, about the year 1535, in the universities of Tubingen, Heidelberg, and Mentz; and in 1612, he published "*A Pilgrim's Solace*, wherein is contained Musical Harmony of three, four, and five Parts, to be sung and plaid with Lute and Viols." In the preface to this work he styles himself lutenist to Lord Walden. One of Dowland's madrigals for four voices, "Go, crystal tears," is inserted in Smith's "*Musica Antiqua*;" and another, "Awake, sweet love," which is full of elegance, taste, and feeling, in Dr. Crotch's selections. He died in Denmark, as it is supposed, in the year 1615.

DOWLAND, ROBERT, son to the preceding, published a work entitled "*A Muscial Banquet*," London, 1610.

DRACO. Instructor of Plato in music.

DRAGG, or STRASCINO. (I.) A grace consisting of descending notes.

DRAGHI, ANTONIO, a dramatic composer, born at Ferrara in 1642, began to write at a very early age, and after producing masses and motets at the age of twenty-one, composed his first opera, in 1663. Few musicians have been so prolific. After spending twenty-five years in the service of the court at Vienna, he returned to Ferrara, where he died in 1707. Fétis gives a list of eighty-three operas by Antonio Draghi.

DRAGHI, BERNADINO. A composer of canzonets (*Canzone Villanesche*) published at Venice in 1581.

DRAGHI, GIOVANNI BATTISTA, an Italian by birth, and is supposed to have been one of those musicians who visited England with Mary d'Este, the Princess of Modena, and consort of King James II. He was a fine performer on the harpsichord, &c., and published, in England, many lessons for that instrument. He joined with Locke in composing the music to Shadwell's English opera of "*Psyche*," and on his decease, in 1677, succeeded him in the place of organist to the queen.

Although Draghi was an Italian, and many of his compositions are entirely in the Italian style, yet, during his long residence in England, he seems, in a remarkable degree, to have assimilated his music to that of the old English masters. This is particularly apparent in his anthem, "This is the day that the Lord hath made," and in many of the ballad airs and dance tunes composed by him.

During the reigns of Charles II. and James, Draghi was the favorite court musician, and he is supposed to have been the musical preceptor to Queen Anne. Towards the latter end of his life, he composed the music to a whimsical opera, written by D'Urfey, entitled "*The Wonders in the Sun, or the Kingdom of Birds*," performed at the Queen's Theatre in the Haymarket, in 1708. Some of the music of this opera is extremely good; but the piece proved unsuccessful, surviving only six nights, and scarcely paying half the expense which had attended the getting of it up.

In the printed collections of songs published

towards the close of the seventeenth century, we meet with many that have the name of Signor Baptist to them. This uniformly means Baptist Draghi, and not Baptist Lulli, as some persons have supposed.

DRAGONETTI, DOMENICO, the celebrated performer on the double bass, was born in Venice, in 1771. His father, Pietro Dragonetti, was also a performer on that instrument, but by ear only; he excelled in accompanying a band at balls, and was likewise a professor of a sort of guitar with steel strings—an instrument which was at that time commonly in use for the purpose of teaching the chords in music. At nine years of age, Domenico, feeling an irresistible impulse towards music, applied himself to study, unknown to his parents, on the guitar of his father, and in a short time made incredible progress; so much so, indeed, that a certain Doretto, an excellent violinist and composer of ball music, having requested Peter to accompany him on the guitar in some of his compositions, and the son, Domenico, perceiving that his father did not perfectly well succeed, asked for the guitar, to accompany himself the composer. Peter, unconscious of the ability of his son, refused to satisfy him; Doretto, however, observing the boy's assurance, persuaded the father to cede the instrument to him. How great was the surprise which Domenico occasioned to both parties, when, taking the guitar in hand, he began to accompany the notes of Doretto with chords so exact and so masterly as to resemble much more those of an expert professor than of a mere lad! Domenico having at that time an acquaintance named Giacomo Sciarandori, a shoemaker by trade, but who was a passable violinist, and knew a little of music, begged this man to be his instructor in the rudiments of violin playing. He very willingly undertook the office, and with this frail assistance alone, aided by his natural genius and perseverance, Domenico soon picked up, unknown to his father, a knowledge of the use and management of his double bass. Soon after this, another musical performance took place between his father and Doretto, when Peter played the double bass. The son then again proposed (as he had done before with the guitar) himself to accompany Doretto with the double bass; when, on his request being granted, his extraordinary advancement on the instrument was so highly appreciated by Doretto, that he earnestly begged the father to allow his son to play in public with him at some of the most brilliant musical parties of Venice. He was at this time about twelve years of age, and, on the father's consenting to his public performance, his fame soon spread through that city as a most extraordinary instance of precocity of musical talent. He was now placed under the tuition of Berini, the best master for the double bass in Venice, and received from him eleven lessons, that number being found sufficient, as Berini could teach him nothing further. Young Dragonetti, now abandoning himself entirely to his genius, determined to carry the culture of his instrument to the highest possible point of perfection, and with this object in view, associated himself with his friend Mestrino, who, being likewise endowed with extraordinary talents for the violin, was engrossed by a similar desire of fame. The two

students commenced, therefore, at the house of Dragonetti, the most scientific and accurate exercises on the violin and double bass, employing many hours of the day in various practical experiments on music not adapted to their instruments. To these exercises of execution they added the composition of Capricci and other short pieces, which pursuits lasted for several years, whilst the two friends were engaged, almost every evening, at the most brilliant musical circles in Venice, and on their return from these assemblies, would frequently amuse crowds in the streets by serenading with the violin and guitar. When Dragonetti was only thirteen years of age, he held, with great applause, the situation of first double bass at the Opera Buffa, at Venice; and when in his fourteenth year, he obtained the same rank in the orchestra of the Grand Opera Seria, at the theatre of St. Benetto, where he remained always employed during his stay in Italy. When about eighteen, being at Treviso, he was invited by the distinguished family of the Signori Tommasini to join in their quartets. At this mansion he met a nobleman named Morosini, procurator of St. Marco, who, astonished at the performance of Dragonetti, complimented him by observing, that he was only sure of his not being a performer at the chapel of St. Marco, because they had no double bass there equal to him. On his return to Venice, the office of principal double bass at the above chapel was offered to him and accepted. This was thought a peculiar honor, since the post was certainly already well filled by Berini, and it had been a previous rule in the chapel that the first places should be given by seniority. Dragonetti, however, did not willingly accept of this office, being hurt at the idea of superseding his old master Berini, whom he much loved and respected; so much so, that he was just on the point of refusing the proffered honor when Berini appeared in his chamber, and, embracing him, entreated that he would accept the situation, as he (Berini) had been complimented with increased salary, and was perfectly contented to resign in favor of so eminent a successor. About a year after this time, Dragonetti was offered a very lucrative appointment in the service of the Emperor of Russia, on which occasion he applied to the procurators of St. Marco for permission to resign; so far, however, were they from acceding to his request, that they augmented his salary, and relieved him from the embarrassment of refusal, by taking that duty on themselves. He was now invited to perform at the magnificent musical meetings which were given in Venice on the occasion of the grand festival for the new doge. He was likewise employed, with the pay of a concerto performer, to take the solo and other violoncello parts in quartets with his double bass. At one of these meetings, which was most numerously attended, he was unexpectedly called upon for a *concerto a solo* on his instrument, from which he tried to excuse himself, having with him no music of that description. This apology was, however, not accepted, and he was at length obliged to play a very difficult concerto, written for the bassoon. After this time, he set himself to work to compose concertos, sonatas, and solos for the double bass, in which he introduced passages to prove the superiority of his power over the instrument, and many of which were attended with difficul

ties which he alone was competent to overcome. Nor was the execution of these compositions long delayed; for shortly after this time, the republic of Venice received fourteen sovereign princes within their city, when they elected Dragonetti one of the directors of their great musical festivals on that occasion, at which meetings he formed the delight of his distinguished audience by the performance of his own music for the double bass. He was sometimes called on to perform seven or eight pieces on the same evening, and almost always those of his own composition. One of his concertos so delighted the Queen of Naples, that he was commanded to repeat it in every evening's performance, which were fourteen in number. He afterwards presented a copy of the concerto to the queen, which was most graciously received. Dragonetti next went to Vicenza, where he played at the grand opera. It was at this town that he was so fortunate as to get possession of the celebrated double bass, manufactured by Gasparo di Salò, master of the famous Amati. This instrument had formerly belonged to the convent of St. Pietro. Delighted with so precious an acquisition, Dragonetti hastened to get the instrument repaired with the utmost skill, on the completion of which he made a trial of it in the hall of his residence at Vicenza. How great was his surprise, when, after a few sounds, he observed the servants running from a distant kitchen in alarm, many of the brass vessels on the shelves having vibrated so powerfully to the tones of the double bass as to ring and shake as if they were all ready to fall. On quitting Vicenza, Dragonetti proceeded to Padua to pay his accustomed friendly visit to the inmates of the celebrated Convent of St. Giustina. He took his newly-acquired instrument with him, and, in describing its excellences to Signor Turvini Bertoni, the celebrated chapel-master and organist of the convent, ventured to express an opinion that the lower strings of it might be made to produce a more powerful effect than could be derived from the bass of the magnificent organ of the convent. Turvini treated this proposition with ridicule, which so piqued Dragonetti, that he resolved to have his little revenge, and accordingly furnished himself in private with some immensely thick bass strings, which at night he attached to his instrument. The weather was perfectly calm, and, when sleep reigned through the whole convent, he quietly carried his double bass into one of the spacious corridors, and there produced, from the thick strings, sounds so strange and characteristic, as precisely to counterfeit the rising of a horrid tempest. The imitation was so complete, that nothing was talked of the next morning in the convent but the storm of the preceding night. Great indeed was the surprise of the fraternity, when they discovered, from the neighbors, the weather had been unusually serene. On the following night, Dragonetti, having remained unsuspected, was desirous again to conjure up the spirits of the air; but, unluckily, he so alarmed one of the monks, that, rushing precipitately from his cell, he tumbled over the double bass, and the necromancer was thus discovered. After this anecdote, it may be well supposed that the organist allowed the double bass to be more powerful than his own instrument. Dragonetti had now attained the age of twenty-four, and his fame as a performer being decidedly unrivalled

in his own country, he was applied to by the celebrated singer Banti to make an engagement for London. In this request she was seconded by Bertoni, chapel-master of St. Marco, and Pacchierotti the singer, both at that time in England, and who, on their return to Italy, prevailed on Dragonetti to accept the proposals made to him. He accordingly took leave of the directors of the chapel of St. Marco, who kindly granted him a year's leave of absence, with a continuation of his salary for that period. Dragonetti remained in London the rest of his life, occupying without a rival the place of first double bass in the Royal Theatre and the concerts of the Philharmonic Society. He died in 1846.

DRAMA BURLESCA. (I.) A burletta. See that word.

DRAMATIC. An epithet applied to music written for the stage, and which is also appropriate to all imitative compositions calculated to excite interest and passion. The first musical drama performed in England wholly after the Italian manner was "Arsinoë, Queen of Cyprus," translated from the Italian of Stanzani of Bologna, and performed in 1775. The singers were all English.

DREIBERG, FREDERIC DE, chamberlain to the King of Prussia, and born at Charlottenburg in 1785, was distinguished by his learned investigations into the Greek music, about which he wrote several elaborate treatises. He also composed some operas, having been a pupil of Spontini.

DRESE, ADAM. A good composer of church music in the seventeenth century. He was chapel-master at Arnstadt.

DRESE, JOHANN SAMUEL. A relation of the preceding, and chapel-master to the Duke of Weimar. He died in 1716. His compositions consist of harpsichord music, also some church and dramatic pieces.

DRESSLER, JOHANN FRIEDRICH. A German instrumental composer towards the end of the last century. He published some concertos and quartets for wind instruments. He was the first person who introduced the trombone into English orchestras.

DREYER, JOHANN CONRAD, a celebrated singer and director of the music at Lunenburg was born at Brunswick in 1672, and died in 1713.

DREYER, JOHANN MELCHIOR. A celebrated church composer. His compositions bear date from the year 1790. Dreyer was organist at Elwangen, a town of Suabia.

DREYKLANG. (G.) A chord of three sounds, a triad.

DREYSTIMMIG. (G.) In three parts.

DRINKING SONG. A vivacious melody set to words in praise of the bottle.

DRITTA. (I.) The right hand.

DRIVING NOTES. Long notes placed between shorter ones in the same bar, and accented contrary to the usual rhythmic flow.

DRONE. The greatest of the three pipes, or conduits, of the bagpipe. The office of the drone is to emit one continued deep note, as an accom-

panying bass to the air, or tune, played on the smaller pipes. See BAGPIPE.

DRONE BASS. The monotonous bass produced by the great tube of the bagpipe.

DROUET, LOUIS, a celebrated flutist, was born in Holland about the year 1792, and went to London in 1817, where his talents as a performer deservedly received the most brilliant applause. He performed at most of the principal concerts in London; he also established a flute manufactory in Conduit Street, where he resided only one year, leaving England for the continent in 1819. Drouet had an amazing facility in performing rapid passages, but it is said he was deficient in taste in adagio movements. He has composed much music for his instrument.

DRUM. A martial, pulsatile instrument, of a cylindrical form, perfectly hollow, and covered at each end with vellum, or parchment, so held at the rim that it can be stretched or relaxed at pleasure, by means of small cords, or braces, acted upon by sliding knots of leather. This is the common drum, which, from its being suspended at the side of the drummer when it is beating, has also the name of the *side* drum. This instrument is said to be of Oriental invention, and is thought by Le Clerc to have been first brought into Europe by the Arabians.

DRUMMER. He whose office it is to beat the drum.
DRUM MAJOR. The chief drummer of a regiment.
DRUMS, KETTLE. Kettle drums are two large basins of copper, with spherical bottoms, and covered at the top with vellum or goat skin, which is held round the rim by a circle of iron, and tightened, or relaxed by screws fixed at the sides for that purpose. Kettle drums are always so tuned that the sound of one is the key note of the piece accompanied, and that of the other a fourth below.
DRUM, SIDE. The common drum. So called, because, in beating, it is suspended at the side of the drummer.
DRUM-SLAVE. The name formerly given to a drummer.

DRUZECHY, or DRUSCHETZKY, GEORG. A musician at Presburg in 1787. He composed some dramatic pieces, also some solos for the violin.

DUBOURG, MATTHEW, a violinist, and pupil of Geminiani, was born in 1703. He led the violins for Handel when in Dublin. One night, Dubourg having a solo part in a song, and a close to make *ad libitum*, he wandered about a great while, and seemed a little bewildered and uncertain of his original key; but at length coming to the shake, which was to terminate this long close, Handel, to the great delight of the audience, and augmentation of applause, cried out, loud enough to be heard in the most remote parts of the theatre, "You are welcome home, Mr. Dubourg." It was in 1728 that Dubourg was appointed composer and master of his majesty's band of music in Ireland. He resided there many years, and, in 1761, received a visit from his master, Geminiani, who died in his house, at the great age of ninety-six. It has been erroneously stated that Dubourg was no composer; he was, indeed, no publisher, but the odes which he set for Ireland, and innumerable solos and concertos composed by him for his own public performances, were left in the possession of one of his pupils, and some of them are excellent. Dubourg died in London in 1767.

DUBUISON. A celebrated French composer of songs in the reign of Louis XIV. He died in 712.

DUE. (I.) In two parts, generally preceded by *a*; as, *a due*, for two.

DUET. A composition expressly written for two voices, or instruments, with or without a bass and accompaniments. In good duets, the execution is pretty equally distributed between the two parts, and the melodies so connected, intermingled, and dependent on each other, as to lose every effect when separated, but which are perfectly related and concinnous when heard together. Yet, however combined by the disposition of the harmony, the parts are not necessarily similar in their motion; indeed, it is when the composer is sufficiently master of his art to be able to variegate the parts, by giving them contrary directions, that the happiest effects of which this species of composition is capable are most decidedly produced.

DUETTINO, or DUETTO. (I.) A short duet.

DUFAY. See **FAY.**

DUFRESNE. A French violinist at the *Théâtre Français* in 1752. He published, in 1780, six solos for the flute.

DUGAZON, GUSTAVE, son of Madame Dugazon, the celebrated French actress, was a pupil of Berton, at the Conservatory. He has published some romances and piano-forte music.

DUGUET, ABBÉ, a chapel-master of Notre Dame, at Paris, about the year 1780, was an esteemed composer of church music.

DULCIANA. A stop in the choir organ, of a soft and sweet quality of tone.

DULCIMER. A triangular instrument, consisting of a little chest slung with about fifty wires cast over a bridge fixed at each end; the shortest, or most acute, of which is eighteen inches long, and the longest, or most grave, thirty-six. It is performed upon by striking the wires with little iron rods. This name is also given by the translators of holy writ to an instrument used by the Hebrews, concerning the form, size, and tone of which there have been various conjectures, but of which nothing certain is known. Padre Martini imagines the term dulcimer to have signified a concert of instruments or voices, rather than any single instrument; and the sackbut he thinks was a wind instrument, formed of the root of a tree, and played upon by stops, like a flute. An ancient sackbut was, however, found in the ruins of Pompeii; from which it appears that this instrument, so often mentioned in the sacred writings, resembled the modern trombone; the latter, in fact, was formed by the Italians upon the one they discovered in the ashes of Vesuvius, where it had been buried nearly two thousand years.

DULCINO. The name formerly given to a certain small bassoon, which was used as a tenor to the hautboy.

DULON, FRIEDRICH LUDWIG. A celebrated German flutist, and composer of instrumental music, published at Leipsic since the commencement of the present century. He was appointed, in 1796, chamber musician to the Emperor of Russia, from which court he retired with a pension, to reside on his property at Stendal, in Brandenburg.

DUMANOIR, a fine performer on the violin, was, in 1659, by letters patent, appointed king of the violins, with power to license performers on that instrument in all the provinces in France.

DUMAS, LEWIS. The inventor of an instrument to teach children music mechanically, and also one to teach reading and writing. He died in 1744, aged sixty-eight.

DUMB SPINET. See **CLARICHORD**.

DUMENIL. A principal counter tenor singer at the opera at Paris towards the end of the seventeenth century. He had been a cook, and was utterly ignorant of music when he first appeared on the stage.

DUMONCHAU, CHARLES, was born at Strasburg in 1775. He was a professor of music at Lyons, and composed some minor dramatic pieces; also much instrumental music, some of which has been published at Offenbach.

DUMONT, HENRI, chapel-master to Louis XIV., is celebrated by the French writers as a masterly performer on the organ. He was born in the diocese of Liege in 1610, and was the first French musician that introduced thorough bass into his compositions. There are extant some of his motets, which are in great estimation; as also five grand masses, called royal masses, which were performed in some of the convents in Paris, and in many provincial churches of France, as late as 1824. Dumont died at Paris in the year 1684.

DUMP. A melancholy tune; or, as by some conjectured, an old Italian dance.

DUNI, EGIDIUS, was born in 1709, at Matera, in the kingdom of Naples. He was, like all other great melodists, a musician while yet a child; his taste for the art was as intense as it was precocious. He was always to be found at the village church, and uniformly attentive to the chanting of the priests and the sounds of the organ. This decided taste for music induced his parents to send him to the Conservatory of Naples, for they were not rich, and the musical profession was then in such consideration that they were anxious their son should enter it. The young Duni, therefore, accompanied by his father, went to Naples, and was received into the Conservatory directed by Durante. This great master showed much attachment to his pupils; he served as a model of talent as well as an example of virtue to them, and he was no less their father by his kindness than their master by his learning and instruction. The docility of Duni pleased him; he carefully cultivated his opening talents for his art, gave him the best studies, and when they were completed, concluded an engagement for him at Rome, to which city Duni repaired. He was there commissioned to compose the opera of "*Nerone*," which had the greatest success. Duni, after having been advantageously and honorably appreciated in several of the great Italian theatres, was next called to Paris. He appeared for the first time in a country of which he knew neither the taste nor the music; but he was formed to succeed, as much by the sweetness and modesty of his character as by his talents. He composed several comic operas for his *début*, conceiving that he ought especially to devote himself to that style in France; for he judged,

not without reason, that the French would be better pleased with Italian music when applied to the comic than to the great opera. He succeeded. We cannot give a better eulogy than the opinion of the authors of the "*Dictionnaire Historique des Musiciens*" on the style of this composer. "Varied and natural music, delicious and flowing melody, these are the qualities which always maintain for Duni an honorable place among those who have obliged the French to appreciate new pleasures in their lyric theatres. When reproached with not being sufficiently powerful, he replied, 'I desire to be sung for a length of time.' Nevertheless, he composed airs suited to the situation of the scene when required. It may also be remarked, that it is astonishing for an Italian to have so well understood and observed the prosody of the French language." We shall add to this judicious and honorable analysis of Duni's talent, that no one better understood the art of giving, by means of sound, the truest and most animated pictures of rural life, and the most delightful and varied scenes of village manners. He is the Teniers and Claude Lorraine of music; he has the coloring of the one and the design of the other; and the spirit of his subjects, the grace of his airs and accompaniments, sufficiently testify that nature had bestowed on him the gift of a richly-stored palette, from which he chose the most lively as well as the most agreeable colors. The first of Duni's operas was "*Le Peintre amoureux*," in which he has expressed the most striking and comic situations. "*Mazet*" is one of the prettiest compositions of its kind, and not less true than original. "*La Clochette*" surpasses the former in ease and truth of local coloring. "*Les Moissonneurs*" enriches the French comic opera, and insures the reputation of its author. "*Les Sabots*," "*Les Chasseurs*," and "*La Sabotière*" leave nothing to be desired in point of musical expression. The latter opera is still performed in the French theatres. Duni died in 1775, in the sixty-sixth year of his age.

DUNSTABLE, JOHN, called by the Germans *St. Dunstan*, had for a long time the reputation of being the inventor of counterpoint; but books were written long before his time on that subject. His works upon music are almost all lost. He died in 1458.

DUNKEL, FRANZ, chamber musician to the court of Saxony, was born at Dresden in 1759. He composed much sacred music between the years 1788 and 1797.

DUO or **DUETTO**. (I.) A combination for two voices or instruments. See **DUET**.

DUPHLY, a French composer for the harpsichord, was born at Rouen; his compositions bear date from the year 1750.

DUPIERGE, FELIX TIBURCE AUGUSTE, born near Paris, in 1784, published some instrumental music in that city.

DUPONT, J. B., a violinist at Paris, published, about the year 1773, "*Principes de Musique*," and "*Principes de Violon*." He has also published some concertos for the violin.

DUPORT, JEAN PIERRE. A pupil of the celebrated Berthaud. He resided at Paris till the year 1772, when he went to Berlin, where the King of Prussia named him violoncellist to the

court, and subsequently director of the court music. He has published much music for his instrument, both at Berlin and at Paris.

DUPORT, JEAN LOUIS. Younger brother to the preceding, and his pupil on the violoncello. He is considered to have excelled his brother on that instrument. He performed at the *concert spirituel* at Paris in 1780, and was again heard in public in 1806, when, although nearly sixty years of age, he is said to have lost none of the ease, brilliancy, and energy which characterized his style of playing in the prime of life. He then executed every possible violin passage on his violoncello. He has composed much music for his instrument, published chiefly at Paris.

DUPREZ, GILBERT, one of the greatest of recent tenor singers, was born at Paris in 1805. He was educated in the school of Choron, who took great interest in him. His first public effort was in the representations of Racine's "*Athalie*," in 1820, at the *Théâtre Français*, where they introduced choruses and solos into this drama. Duprez sang the soprano in a trio composed for him and two other pupils of Choron, and his expressive accent excited the warmest applause. When his voice changed, and obliged him to suspend his singing exercises, he took to harmony and counterpoint, and his attempts at composition proved that he might have succeeded as a composer, had he continued to cultivate the gift. Meanwhile a tenor voice had replaced his boyish soprano; dull and feeble at first, it inspired little hope; but the musical feeling of Duprez was so fine, so active, and so strong, that he triumphed over the defects of his organ. In December, 1825, he made his *début* in the Odeon Theatre, in the part of Count Almaviva, in a French version of Rossini's "*Barber*." He lacked assurance and stage experience, and his voice was weak; yet all foresaw that he would be a distinguished singer. He remained at the Odeon until the end of that theatre, in 1828. Then he went to Italy, and obtained engagements, which kept him obscure for a time, but were of service to him in developing his talent and his voice, which acquired more power and volume. Returning to Paris in 1830, he played several rôles at the *Opera Comique*, especially in "*La Dame Blanche*," where the connoisseurs applauded and remarked his progress; but not obtaining an engagement, he went back to Italy. Since then he has sung in all the great cities, especially Naples, with more and more brilliant success. He is counted in the first rank of tenors, after Rubini and Mario, and greatly distinguished himself in the opera at Paris, in 1852, in Rossini's "*William Tell*," by the splendid manner in which he took the high C as a chest tone, (*l'Ut de poitrine*.)

DUPREZ, CAROLINE, daughter of the preceding, was born at Florence in 1832, during the period of her father's second visit to Italy, where he married a vocalist of that country. From her earliest infancy she was fond of music, and when Duprez, after his career in Italy, returned to Paris, in 1835, to make his *début* at the *Académie Royale*, as Arnoldo in "*Guillaume Tell*," he took especial pains with the musical education of his child. She was always anxious to be present at the Grand Opera, and in vain were her desires checked by her parents. While Duprez took charge of her tuition in singing, she studied har-

mony and accompaniment under M. A. Carpentier, and the piano under Mlle. Marten. It was principally for his daughter that Duprez wrote his work, "*The Art of Singing*." At the age of fourteen years Mlle. Caroline was enabled to conquer every vocal difficulty, and since that time she has been singing with remarkable success, and on the 9th of January, 1851, she made a successful *début* at the *Théâtre des Italiens*, in Paris.

DUPUIS, THOMAS SAUNDERS, Mus. Doc., was born in England in the year 1733, but his parents were natives of France. His father held some situation at court, and this, probably, is the reason why his son was placed in the Chapel Royal. The first rudiments of his musical education were received from Mr. Gates. He afterwards became a pupil of Travers, at that time organist of the King's Chapel, and for whom, in the early part of his life, he officiated as deputy. On the death of Dr. Boyce, in the year 1779, Dupuis was appointed organist and composer to the Chapel Royal. As a composer, Dr. Dupuis is known by several publications, and many of his writings are still in manuscript in the Royal Chapel. The former consist principally of two or three sets of "*Sonatas for the Piano-forte*;" "*Two grand Concertos*" for that instrument; "*Organ Pieces*," intended principally for the use of young persons; two sets of "*Chants*," performed at the Chapel Royal; and several "*Antheus*." Two of the latter, "*The Lord, even the most mighty God*," and "*I cried unto the Lord*," are inserted in Page's *Harmonia Sacra*. As a performer on the organ, Dr. Dupuis was excelled by very few Englishmen of his time. He died in 1796, and was succeeded as organist of the Chapel Royal by Dr. Arnold, and as composer to his majesty by Attwood, then the organist of St. Paul's.

DUPUY. A German violinist and composer for his instrument in the year 1790. He resided for some years at Copenhagen, which place he quitted in 1809. He has composed some much esteemed duets for two violins.

DUR. (G.) Major, in relation to keys and modes; as, *C dur*, *C major*.

DURAND, A. F., a violinist and composer for his instrument, was born at Warsaw in 1770. His compositions are published at Leipsic, Bonn, and Dresden, and bear date from the year 1796.

DURANOWSKY, A. A violinist and pupil of Viotti. He has published, in Paris, some duos for the violin.

DURANTE, FRANCESCO, born at Grumo, a village near Naples, in 1693, was educated in the Conservatory of San Onofrio, and received lessons of the celebrated Alessandro Scarlatti. He quitted the Conservatory at an early age, and went to Rome, where he was attracted by the reputation of B. Pasquini and Pittoni. He studied five years under these masters, learning from one the art of singing and counterpoint, and from the other all the resources of counterpoint. He then returned to Naples, and devoted himself to composition; but he wrote principally for the church, to which his genius seems peculiarly to have directed him. This style became exclusively his own, and he did not hesitate to improve on the manner of Palestrina himself, which, notwithstanding the genius of that composer, partook of the infancy of the art; he embellished it without

loading it with ornament; he added to its noble and antique simplicity that elevation which belongs to a species of melody consecrated to the celebration of the Creator. But Durante principally excelled in tuition. To his instruction and principles the Neapolitan school owes its greatest masters of the eighteenth century. He became a professor of the Conservatory of San Onofrio about the year 1715, and was at the head of that of *Gli Poveri di G. C.* when Cardinal Spinelli, Archbishop of Naples, abolished it. Durante died at Naples in 1755, aged sixty-two. He was not only a great composer, but a good citizen. He had several wives, who all died before him. One of them put his patience more to the proof than Xanthippe did that of Socrates. She sold, for the purpose of gaining, all her husband's scores, which would have been forever lost, both to the art and to himself, if, aided by his wonderful memory, he had not remembered and written them anew. With respect to Durante's style of composition, his subjects are simple, and at the first glance appear commonplace; but they are so well concealed, and conducted with so much art and genius as to produce prodigious effects. He had the means of employing all the imaginable forms; and thus keeping alive the interest of the auditor, he increased the desire of hearing him, which is the more remarkable, as his manner was severe and serious, and he generally sacrificed but little to grace.

The greatest singers and best masters prefer the ducts of Durante to those of any other composer in his style. He formed them upon the airs of the cantatas of his master, Alessandro Scarlatti. They are more in dialogue or duct than fugue, but contain more beautiful and impassioned pieces of melody than ever the creative genius of old Scarlatti invented; and these are marked in so learned a way, that it appears refinement can go no farther in this style of composition.

DURATE. (1.) A term properly applicable to whatever offends the ear by its effect. The *B* natural, on account of its hardness, was formerly called *B durate*. Also there are rough or hard intervals in melody, to which the term *durate* is applied; such are those produced by the regular series of three whole tones, whether ascending or descending, as also all false relations.

DURIEU, M., published at Paris, in 1793, "*Nouvelle Méthode de Musique Vocale*," also a "*Méthode de Violon*."

DURON, SEBASTIAN. An eminent Spanish composer of church music in the sixteenth century.

DUSCHECK, FRANZ, a professor of the piano-forte, and composer for his instrument, at Vienna, died in 1799. He was the son of a day laborer. Many of his compositions for his instrument are highly esteemed.

DUSSEK, JOHN JOSEPH, organist at Czeslau, in Bohemia, was born there in the year 1740. His father, grandfather, and great-grandfather were all celebrated organists. His brother, Francis Joseph, was also an able musician and composer.

DUSSEK, JOHN LOUIS, son of John Dussek, was born at Czeslau, in Bohemia, in the year 1761. He learned the elements of music of

his father, and at ten years of age was sent by some noble friends of his family to one of the first colleges of the University of Prague, where he remained seven years. Besides the study of ancient and modern literature, he cultivated the science and practice of music, profiting much by the instructions of a Benedictine monk in counterpoint. Having attained the age of nineteen he left his native country for Brussels, where a nobleman of the stadtholder's court presented him to the Princess of Orange. After this honor, the young artist made his *début* in public, as pianist, at the Hague, and was patronized there by the stadtholder and all his family. On quitting Holland, he resolved to travel in the north of Europe, and from thence to visit Paris and London. At Hamburg he had the good fortune to receive professional advice from the celebrated Emmanuel Bach. He then proceeded towards St. Petersburg; but being introduced on his journey to Prince Charles Radziwill, he was induced, by an advantageous offer from that nobleman, to remain with him in Lithuania for two years: at the expiration of which time, instead of proceeding northwards, he returned to Berlin, and in the year 1786 arrived at Paris. There he remained only till the breaking out of the French revolution, when he went to London, and, by the year 1790, was well established there as a teacher of the piano. In 1796, he opened a music warehouse in the Haymarket in conjunction with N. Corri, and they were appointed music sellers to their majesties and the royal family. This establishment, however, did not succeed, and Dussek revisited the continent in the year 1799, with the intention of again seeing his father: we know not, however, if he reached Bohemia; but, in the following year, we find him residing at Hamburg, where he occasionally, but very rarely, performed in public. After remaining there during upwards of two years, he proceeded again, we believe, to Paris, and in the latter part of his life, was attached to the household of the Prince of Benevento. He died about the year 1810.

The following is a list of Dussek's principal works:—

Piano-forte and harp music: Op. 1. "Three Sonatas, with Accompaniment, Violin and Violoncello." 2. "Three Sonatas, with Accompaniment, Violin and Violoncello." 3. "Three Sonatas, with Accompaniment, Violin and Violoncello." 4. "Three Sonatas, with Accompaniment, Violin and Violoncello." 5. "Grand Sonata." 6. "*Petits Pièces*." 8. "Three Sonatas." 9. "Three Sonatas, Violin Accompaniment." 10. "Three Sonatas, Violin Accompaniment." 11. "*Duo à deux Clavéins*." 12. "Three Sonatas, Violin." 13. "Three Sonatas, Violin." 14. "Three Sonatas, with Air Russe." 15. "Ploughboy." 16. "Three Sonatas, Violin Obligato." 17. "Three Sonatas." 18. "Three Concertos." 19. "Six Sonatinas." 20. "Three Sonatinas." 21. "The Rosary." 22. "Concerto." 24. "Sonata." 25. "A Concerto, with favorite Airs." 26. "Duet, Harps." 27. "A Concerto." 28. "Six Sonatas," (easy.) 29. "A Concerto." 30. "A Concerto." 31. "Three Sonatas, with Airs, Violin, or Flute and Violoncello." 32. "*Grand à Duo quatre Mains*." 33. "Overture for two Performers on one Piano-forte." 34. "Two Sonatas for Harp, Accompaniment, Violin

and Violoncello." 35 "Three Sonatas, with Airs, Violin, or Flute and Violin." 36. "Duet for Harp and Piano-forte." 37. "Sonata, arranged by Cramer." 38. "Sonata." 39. "Three Sonatas." 40. "A Military Concerto." 43. "Sonata, arranged by Cramer." 44. "Farewell." 45. "Sonata, for Clementi and Co.'s Piano-forte, with extra keys, up to F, and also arranged for the Piano-forte up to C." 46. "Three Sonatas." 47. "Sonata." 48. "Duet to the Sisters." 49. "A Concerto." 50. "Duet, arranged by Cramer." 51. "Three Sonatas," (easy.) 53. "A Quartet." 61. "Elegy on the Death of Prince Ferdinand of Prussia." 67. Three Sonatas, progressive, *à quatre Mains*." 68. "Notturmo Concerto, progressive, Piano-forte, Violin, and Cornet." 71. "Airs with Variations." 72. "Two Sonatas, for Violin and Violoncello," (easy.)

DUSSEK MORALT, MRS., wife of the preceding, and daughter of Dominico Corri, was born at Edinburgh in 1775. Her extraordinary musical genius showed itself at the early age of four years, when she played in public on the piano-forte. In 1788, the family left Scotland, and went to settle in England, when Miss Corri sang at the king's, and all the nobility's and public concerts in London, being then only fourteen years old. Her principal singing-master was her father, but she sang a great deal with Marchesi, Viganoni, and Cimador, at that time. In 1792, she married J. L. Dussek, and soon after was celebrated not only as a singer, but also as a player on the harp and piano-forte, performing with her husband at all the oratorios, and at Salomon's concerts. She then sang at Cambridge, Oxford, Liverpool, Manchester, Dublin, and Edinburgh with universal applause, and afterwards performed one season at the Opera House; but finding it attended with so much fatigue and cabal, quitted the stage, and became a teacher and composer of music, especially for the harp. In 1812, Mrs. Dussek married her second husband, John Alvis Moralt; after which time she resided at Paddington, having established there an academy for music with great success. See CORRI.

DUSSEK, OLIVIA, daughter of the preceding, was born in London in 1801. Inheriting the talents of her parents, she excelled on the piano-forte and harp. She received her musical education from Madame Dussek, and played on the piano-forte at the Argyle Rooms, when only eight years old, having then only learned music one year. She has composed some very pleasing ballads, and a duet, "Rule, Britannia," for the harp and piano-forte.

DUTCH CONCERT. An expression well known among practical musicians. An aggregation of inconsonant melodies; a concert in which every man plays simultaneously his own tune.

DUTILLIEU, IRINE YOMMEONI. See YOMMEONI.

DUTILLIEU, PIERRE, was born at Lyons in 1765, and became, in 1791, composer to the Royal Opera at Vienna, where he produced several comic operas and ballets, between the

years 1791 and 1796. He also published, at Vienna, some violin music.

DUVAL, Mlle. A singer at the opera at Paris, in great repute about the year 1720. She composed the music of the ballet "*Les Génesis*," and afterwards published a "*Méthode de Chant*."

DUVERNOY, FREDERIC. A celebrated French performer on the horn, and professor of his instrument at the Paris Conservatory. He has also published a method, and much music, for his instrument, which bear date from 1793 to 1804.

DUVERNOY, CHARLES. Brother to the preceding, a distinguished performer on the clarinet, and professor of his instrument at the Conservatory. He has published much instrumental music since the year 1795.

DUX. (L.) A leader. The name formerly given to the leading voice or instrument in a fugue. That which followed was called the *comes*.

DYNE. A celebrated English counter tenor singer. He sang at the Ancient Concerts on their first establishment in the year 1776.

DYNAMICS, (from the Greek word *dunamis*, signifying *power*,) is the doctrine of whatsoever relates to the strength of sounds. He is master of the *dynamics* of music who knows how to give to each and every sound that power which the subject requires, including the soft and loud, the swell and diminish, the abrupt and gentle, and every other possible variety. The contrast and great variety in this department is very rich, and never fails to please the most uncultivated ear, when properly applied. Loud sounds are connected with ideas of power and majesty; and soft sounds are expressive of gentleness and delicacy.

There are five principal dynamic degrees, technically termed *pianissimo*, *piano*, *mezzo*, *forte*, and *fortissimo*. Those produced by a careful exertion of the vocal organs, yet distinctly, and sufficiently loud to be audible, are called *pianissimo*. Those produced by some restraint of the vocal organs are called *piano*. Those produced by the ordinary exertions of the vocal organs are called *mezzo*. Those produced by a full exertion of the vocal organs are called *forte*. Those produced by the greatest possible exertion of the vocal organs, but not so loud as to degenerate into a scream, are called *fortissimo*. These several terms, when introduced into music, are generally abbreviated; as PP. for *pianissimo*, P. for *piano*, M for *mezzo*, F. for *forte*, and FF. for *fortissimo*. They are Italian terms, but used by all nations. The following diagram will illustrate the five dynamic degrees:

There are six dynamic tones: 1. The organ tone, thus: ——— which is commenced, continued, and ended with an equal degree of power. 2. The *crescendo*, thus: which commences soft and gradually increases to loud. 3. The *diminuendo*, thus: which commences loud and gradually decreases to soft. 4. The *swell*, which is a union, thus: of the

crescendo and diminuendo, and which is in one sense applicable to all music. There is something of it upon every note played, and every syllable sung; and it is numbered among the most refined and delicate beauties of melody.

5. The *pressure tone*, < which is a very sudden crescendo: 6. The *explosive tone*, which is an instantaneous diminuendo, thus: >

In explaining or practising the explosive tone, the pupil should select some syllable commencing with a consonant, and aspirate the first letter with great power. The following example shows the

characters which are used to express the dynamic tones:

The image shows a musical staff with a treble clef and a 2/2 time signature. Above the staff are six dynamic markings: a double bar line, a wedge opening to the right, a wedge opening to the left, a diamond shape, a less-than sign, and a greater-than sign. Below the staff, the notes are grouped under these markings with the following labels: Organ, Crescendo, Diminuendo, Swell, Pressure, and Explosive.

The character used for the *organ tone* is generally omitted in all music; and the words *crescendo* and *diminuendo* are frequently abbreviated; as, *cres.* for *crescendo*, and *dim.* for *diminuendo*. The proper application of dynamic degrees and tones constitutes the beauty of musical expression.

E.

E. This letter is the nominal of the mediant or third note in the natural scale, thus :—

E, or, before a vowel, *Ed*, the Italian conjunction, signifying *and*; as, *Violino e Flauto*, violin and flute.

EAGER, JOHN, was born in 1782, in the city of Norwich, where his father had obtained some degree of reputation as a manufacturer of musical instruments, and in organ building. Eager commenced his studies under the patronage of the Duke of Dorset; but the death of his master left him without means. This was the more unfortunate, since, from a natural vivacity and boldness of disposition, he had unconsciously created a number of enemies in the family, so that he was soon thrown upon the world again, with no resources but his talents. At the age of eighteen he married a young lady at Yarmouth, with some dowry, which he soon exhausted. Renewed industry as a music teacher soon placed him above dependence again; and he has since been chiefly known as an active defender of Logier's system of instruction. The opposition he encountered on this occasion would have overwhelmed almost any other man; he was attacked, ridiculed, and abused by the county newspapers and various pamphlets, which were written purposely to annoy him; but he steadily supported the cause he had undertaken, and replied to the abuse and invectives levelled against him by publicly challenging his accusers to an examination of pupils instructed by himself and Logier, as to their knowledge of theory and fundamental principles of harmony, the result of which may be found in a pamphlet published by him on the occasion. Logier, indeed, has been often heard to declare that Eager was not only the boldest and most enthusiastic champion and advocate of his system, but also had a more perfect knowledge of it than almost any other individual. As a composer, Eager is not known to the musical world; his occupations having ever been too numerous to allow him to attend to original composition. There is, however, a "Concerto for the Piano-forte," which he published, dedicated to the Duchess of Dorset, and a "Collection of Songs," composed by him, dedicated to Lady Beddingfield, which have been much admired.

EAR. The ear is a mechanical structure for conveying undulations of the air to the nerves and brain. The external cartilage collects the sound into the concha, at the bottom of which is the tympanum, like the skin of a drum; and beneath the tympanum is a cavity, terminated by a

tube; and farther on are several winding passages, filled with a watery fluid, in which the nerves are situated. The ear is usually divided into the external and internal parts. The external part of the organ is called the *auricula*. It consists of a fibrous cartilage, elastic and pliable. On the projecting or external part are certain muscular fibres; and it receives several nerves and vessels from the head and body, which render it very sensitive, and cause it easily to become red. The auditory passage extends from the exterior or front opening of the ear to the membrane of the *tympanum*; it is not so wide in the middle as at the ends, and it presents a slight curve above and in front. The cavity of the *tympanum* is full of air, for air is essential to hearing as well as breathing. Hearing presupposes motion, and motion produces excitability or sensation, which we call sound. There is nothing in nature that arouses our attention or impresses our feelings more quickly than a sound, and there is no doubt that the ear is an instrument of the pulsatile order, in action similar to that of a drum. It has been ingeniously supposed that the small bone termed the *mallet*, which falls upon the *tympanum*, may be compared to the dampers on the piano-forte, from the action of which we probably derive our ideas of loud and soft, as this machinery may have effect in extinguishing loud sounds and keeping up weak ones.

The word *ear*, as figuratively used by musicians, implies that sensitive, clear, and true perception of musical sounds by which we are offended at dissonance and pleased with harmony. *To have an ear* is to be capable of distinguishing the true intonation from the false; to be sensible of metrical precision, and to feel all the nicer changes of artificial combination.

The formation of the *musical ear* depends on early impressions. Infants who are placed within the constant hearing of musical sounds soon learn to appreciate them, and nurses have the merit of giving the first lessons in melody. The musical perceptions of every person are capable of being very much extended and strengthened. At first we are apt to cling with most pleasure to the simplest relations of notes, because they do not perplex or overtask the musical faculty. As the ear becomes exercised, and as we grow familiar with varied musical combinations, we begin to perceive the beauty of more remote relations and the connection of more distant parts. The order and the purpose of what originally had only the effect of confusing and stupefying becomes apparent. At the same time it must be admitted that in order to understand some pieces completely, and perceive the purpose of them, it is necessary to have not only a good ear, but also a knowledge of the principles of music. The old notion, that a favored few only can sing, is becoming obsolete; and, since all can learn, if taken young, it is at once perceived to be important that youth should enjoy instruction in music as well as in other branches of a common

education, as they will evidently feel the need of musical knowledge hereafter in their varied social relations, as often as that of arithmetic, for instance, especially beyond the first four rules. In fact, when musical education shall become general, it will be found that it will a hundred times come in use where a knowledge of the rule of three will be used once. No question oftener arises, on surveying the auditory apparatus, than this, viz. : Why has one person an ear for music, when another, whose internal organ is as beautifully and nicely constructed, is totally unable to appreciate harmonious sounds? The difficulty, probably, is in the peculiar development of some portion of the brain, and therefore does not arise in consequence of a defect in the original conformation of the ear. It obviously requires as delicate auricular perception to appreciate and imitate articulate sounds as it does to sing in concert. It is by no means uncommon for an individual to cultivate the highest departments of instrumental music, and at the same time be wholly unable to sing. This is entirely owing to some defect of the vocal organs. A perfect organization of both in the same individual, united to that inscrutable condition of the brain which gives the taste for music, constitutes the highest gift of performers, such as Handel, Mozart, Beethoven; Mm. Catalani, Gareia, the wonderful Paganini, and a few others, have exhibited to the highest degree of human perfection. Another circumstance in relation to the musical ear is the following: Some persons have the ear as well as the taste for music, and yet find it impossible to accompany others in a performance. This arises, probably, in most cases, in consequence of a non-agreement in the tension of the drumheads of the two ears, or a want of correspondence in the calibre of the internal tubes; hence one ear perceives sounds to be half a tone above or below the other. The same occurs in respect to the focal distance, oftentimes, of the eyes. Time rarely corrects the former, though in the latter it finally modifies the aberration. Philosophers of antiquity were more conversant with the doctrine of sounds than the modern. The remarkable cavern, hewn in a solid rock by a celebrated tyrant, and called *Dionysius's Ear*, is said to have been an exact model of the windings of the human ear. Vitruvius gives an interesting account of the manner in which the Greeks contrived to augment the compass of the voice in theatres, by placing large metal vases in different parts of those edifices.

EARSDEX, JOHN. An English musician at the commencement of the seventeenth century, who, together with George Mason, wrote the music of a small opera, which was subsequently published under the following title: "The Ayres that were sung and played at Brougham Castle in Westmoreland, in the King's Entertainment, given by the Right Honourable the Earle of Cumberland, and his right noble Sonne, the Lord Clifford," London, 1618.

EASTCOTT, RICHARD. Author of a work entitled "Sketches of the Origin, Progress, and Effects of Music, with an Account of the ancient Bards and Minstrels," London, 1793.

EASTERN MUSIC. In some parts of Asia they use very curious musical instruments; some

made of iron and beat with a stick; some in the shape of a fish, made of wood, hollow, and mounted on a stand, where it is played by striking on it with a stick. Some of the North American Indians dance to the music of a kind of wooden drum, singing at the same time. It is evident from a good many proofs, that music came from the East. The finger board of the *oud*, Arabian guitar, is divided according to the Arabian gamut, and produces intervals which in our system do not exist at all. The Arabs divide their octave into twenty-four intervals, while we have only twelve for the same space, and our ears cannot conceive such nice and acute variations of sound. In the heart of Asia we find, even now, a kind of music, which, to our ears, seems but a combination of discordant sounds, but which, to the less refined but more accurate ears of the native, possesses every requisite of a good melody.

EBDON. An English composer of sacred music and glees, also of some sonatas, previously to the year 1797.

EBELL, HEINRICH CARL, court secretary at Breslau in 1810, has composed an opera for the theatre of that town, entitled "Anacreon in Ionia." He has also published some other vocal music.

EBERL, ANTOINE. A celebrated pianist and composer, born at Vienna in 1765. His talent for music showed itself at a very early age, and, like Mozart and many other great musicians, he performed in public on his instrument in early childhood. He commenced composition at about the age of sixteen, and soon after went to Petersburg, where he was patronized by the court. In 1801, he returned to Vienna, since which time he has published much vocal and instrumental music there. Eberl died at Vienna, in 1807, in the forty-second year of his age.

EBERLE, JOHANN JOSEPH, a composer of songs and light piano-forte music, died at Prague in 1772.

EBERLIN, DANIEL. A celebrated amateur violinist, and composer for his instrument. Some of his music was published at Nuremberg in 1675.

EBERLIN, JOHANN ERNST. A celebrated organist, born at Jettenbach, in Suabia, about 1757. He was at first court organist at Salzburg, and then chapel-master to the archbishop. His style was original, his manner large and learned. He left a prodigious number of compositions of all kinds in manuscript, but only published nine sonatas and fugues for the organ. This remarkable work passed through many editions, and was inserted by Clementi in his collection of organ music.

EBERS, CARL FRIEDRICH, chamber musician to the Duke of Mecklenburg-Strelitz, was born at Cassel in 1772. He was educated for another profession; but his taste for music was so predominant, that he engaged himself in early life as *chef-d'orchestre* to a strolling company of players. He subsequently settled at New Strelitz, where he was engaged as musician to the court, and, since the year 1796, has composed many dramatic pieces for the theatre of that town, also much instrumental music.

EBFRWEIN, MAXIMILIAN. A German violinist and composer, born at Weimar in 1775. After visiting Italy, and some of the principal towns of Germany, he composed some dramatic pieces and other music, published at Leipzig. He died at Rudolstadt in 1831. Full of enthusiasm for his art, he was remarkable for the number and originality of his productions.

EBNER, maestro di capella to Frederic III., published an air with thirty-six variations, said to have been written by the emperor, in 1655.

ECBOLE. A term in the ancient Greek music, signifying a change in the enharmonic genus, by the accidental elevation of a chord, or string, five *dieses* above its ordinary pitch.

ECHEIA. The harmonic vases used by the Greeks and Romans, in their theatres, for the purpose of augmenting the sound of the voices of the actors. These vessels were tuned in the harmonical proportions of fourths, fifths, and eighths, with their replicates, and were placed in cells, or niches, between the seats of the spectators.

ECCLES, JOHN, was the son of Solomon Eccles, a professor of the violin, and the author of sundry grounds with divisions thereon, published in the second part of the "Division Violin," printed at London, in 1693. John Eccles was instructed by his father in music, and became a composer, for the theatre, of act tunes, dance tunes, and such incidental songs as frequently occur in the modern comedies, a collection whereof was published, and dedicated to Queen Anne. He composed the music to a tragedy, entitled "Rinaldo and Armida," written by Dennis, and performed in 1699, in which is a song for a single voice, "The jolly breeze," which, for the florid divisions in it, was by many greatly admired. Eccles likewise set to music an "Ode for St. Cecilia's Day," written by Congreve, and performed on the anniversary festival of that saint, in 1701. He also composed music for Congreve's masque, entitled "The Judgment of Paris." About the year 1698, Eccles was appointed master of the queen's band; but in the latter part of his life, he was known to the musical world only by the New Year and Birthday Odes, which it was part of his duty to compose. Eccles is chiefly remembered from being the author of the duets, "Fill, fill all your glasses," and "Wine does wonders."

ECCLES, HENRY, younger brother to the preceding, was a violinist in the chapel of the King of France, and published some music for his instrument at Paris in 1720.

ECCLES SOLOMON. An English violinist and composer of rare musical ability, who, in the zenith of his fame, turned Quaker, and destroyed all his instruments and music. He died in 1673.

ECCLESIASTICAL. An epithet applied to all compositions written for the church, but more particularly to anthems, services, masses, and other cathedral music.

ECCLESIASTICAL MODES, or TONES. See **MODES.**

ECHELLE. (F.) The scale or gamut.

ECHO. The word *echo* is frequently found in church voluntaries, over those passages of repetition which are performed on the *siceli*, and intended as echoes to the great organ. The word

was formerly used in various species of composition, and bore the sense of *dolce*, or *piano*, signifying that the passage over which it was placed should be performed with the sweetness or softness of an *echo*. At Milan there is said to be an echo which reiterates the report of a pistol fifty-six times, and if the report be exceedingly loud, the reiteration will exceed that number. The celebrated echo at Woodstock, in Oxfordshire, England, repeats the same sound fifty times. But the most singular echo hitherto spoken of is that near Rosneath, a few miles from Glasgow, Scotland; if a person, placed at a proper distance from this echo, plays eight or ten notes of a tune with a trumpet, they are correctly repeated by the echo, but a third lower; after a short pause, another repetition is heard, in a lower tone; and then, after another interval, a third repetition follows in a still lower tone.

"She was a nymph, though only now a sound;
Yet of her tongue no other use was found
Than now she has; which never could be more
Than to repeat what she had heard before."

In the whole hemisphere of sounds, there is no circumstance more strikingly curious than that of an echo. To hear one's own voice returned, as if it were the voice of another, is perhaps more surprising than the reflection of one's self in a glass. Echoes are produced by the voice falling upon a reflecting body, as a house, a hill, or a wood. One of the most perfect the writer ever heard he met with at a little pond near the White Mountains of his native state, New Hampshire. Words and whole sentences are here distinctly repeated three times. On firing a cannon at the head of this little pond, which was christened Echo Lake, the report is so bandied about from mountain to mountain, as to produce an effect like thunder, which continues for a time, expiring in the distance with a noise not louder than a whisper.

ECHOMETER. A graduated scale for measuring the duration of sounds, and determining their different powers, and the relations of their intervals.

ECK, JOHANN FRIEDRICH, was born at Mannheim, in 1765. He was a celebrated violinist and composer for his instrument. In 1802, he resided at Nancy.

ECKART, or ECKARD, JOHANN GOTTFRIED, was a native of Germany, but he resided upwards of fifty years in Paris. His compositions are principally for the harpsichord; and, although they afford great proofs of skill and a thorough knowledge of the instrument, are but little known. The writer of an account of this musician, in Rees's Encyclopædia, states, that in his compositions there is an elegance of style built upon such sound principles of harmony and modulation as few have surpassed; and that, in particular, his variations to the minuet *D'Eau-dit*, or Marshal Saxe's minuet, are in the highest degree ingenious, elegant, and fanciful. Eckart died at Paris, in 1809, aged seventy-five years.

ECKERSBERG, JOH. WILT., organist at Dresden in 1783, published some collections of songs there.

ECKERT, CARL A. F., a talented young composer, conductor, and pianist, was born at Potsdam, in Prussia, on the 7th December 1820. His

father was a military officer. He first performed in public and in a manner that gave high promise, in Berlin in 1832. Rungenhagen was at that time his teacher. He has since distinguished himself by the composition of an opera, "William of Orange," and as conductor with Ferdinand Hiller, of the operas at the *Théâtre Italien* in Paris. In the summer of 1852 he left this situation, and accompanied Mme. Sontag to America, as conductor of her concert and operatic performances.

ECKHARDT, C. F. An amateur pianist and composer for his instrument, residing in Suabia. Since the year 1798, several of his works have been published at Offenbach.

ECLOGUE. A pastoral poem. The word is of Greek origin, and applied by Virgil to his pastorals.

ECOI. The name applied by the modern Greeks to the tropes, or modes, which they sing in their churches during passion week.

ECOLE. (F.) A school or course of instruction.

ECOSSAIS, or ECOSSAISE. (F.) A dance, tune, or air, in the Scotch style.

EDEL, GEORGE. An instrumental composer at Vienna. His works are dated from the year 1798.

EDELMANN, JOHANN FRIEDRICH, was a native of Strasburg, and born in the year 1749. He resided for several years as a teacher of music, but principally of the harpsichord, at Brussels. Previously to the breaking out of the French revolution, he had, however, been induced to settle in Paris. During the time of Robespierre, though usually considered an innoxious and well-disposed man, he became involved in the dreadful calamities of that ill-fated country, and suffered under the guillotine at Strasburg.

EDER, CHARLES GASPARD, was born in Bavaria in 1751. He was a celebrated violoncellist, and has composed much instrumental music, which has been published in various towns of Germany.

E DUR. (G.) E major.

EDWARDS, RICHARD. An English composer and poet, born in Somersetshire in 1523. He was musician to Henry VIII. and Elizabeth, and died in 1561.

EFFECT. That impression which a composition makes on the ear and mind in performance. To produce a good effect, real genius, profound science, and a cultivated judgment are indispensable requisites. So much does the true value of all music depend on its *effect*, that it is to this quality every candidate for fame as a musical author should unceasingly attend. The most general mistake of composers, in their pursuit of this great object, is the being more solicitous to load their scores with numerous parts and powerful combinations, than to produce originality, purity, and sweetness of melody, and to enrich and enforce their ideas by that happy contrast of instrumental tones, and timely relief of fulness and tenuity, which give light and shade to the whole, and, by their picturesque impression, delight the ear and interest the feelings.

E FLAT. The minor seventh of F, and the second flat introduced in modulating by fourths from the natural diatonic mode.

EGLISE. (F.) Church; as, *musique d'église*, church music.

EGLI, JOHANN FRIEDRICH, a Swiss musician, was born in 1742, in the canton of Zurich, at the town of Zurich, and has published a great variety of church and other vocal music.

EGUALMENTE. (I.) Equally.

EGYPTIAN FLUTE. The Egyptian flute was only a cow's horn, with three or four holes in it.

EGYPTIAN HARP, TIMBREL, AND SISTRUM. After Noah left the ark we find he built an altar and returned thanks to God, after the manner of the children of Seth; and in the thirty-first chapter of Genesis, twenty-seventh verse, we find that Laban, having overtaken the fugitive Jacob on the mountains of Gilead, says to him, "Wherefore didst thou flee away secretly, and steal away from me, and didst not tell me, that I might have sent thee away with mirth and with songs, with tabret and harp?" This proves that the discoveries of Jubal were preserved by the descendants of Noah; and also that instruments of wind, strings, and percussion were then in use. After the miraculous escape of Moses through the Red Sea, the Hebrews break out in a song of praise and thanksgiving to the Lord, which song was accompanied by Miriam, the sister of Aaron, together with all the women; and Miriam the prophetess, the sister of Aaron, took a timbrel in her hand, and all the women went out with her, with timbrels and with dances, and Miriam answered them, saying, "Sing ye to the Lord," &c., and is an early instance of women being permitted to bear a part in the performance of religious rites, as well as of vocal music being accompanied by instrumental, and by dancing. The instruments with which these songs were accompanied are decided, by all the ancient authorities, to have been the ancient cymbal, made exactly like our modern tambourine, but the name timbrel was applied to all kinds of instruments of percussion. Now, as Miriam was an Egyptian, and just escaped from the country where she had been educated, it is natural to suppose that the dance used now, and established afterwards by the Hebrews in the celebration of religious rites, was but the continuation of an Egyptian custom. After the death of Saul, there appears to be little doubt that the lyre was greatly improved, and many strings added to it, for we find it used with six, eight, ten, but not exceeding twelve or fifteen in number; and mention is made that David, returning from the conquest of Goliath, met the women of the Hebrew city singing and dancing with timbrels and sistrums, which latter instrument belonged to the Egyptians, and consisted of a bar of metal formed into an oval, and terminating in a handle; this handle was on a line with some small pieces of iron, bent a little at both ends, and extending from one side of the oval to the other, and these being struck with a small metal stick, produced various sounds. Bruce says, "In Abyssinia it is used in the quick measure, or in allegros. In singing psalms of thanksgiving, each priest has

a sistrum, which he shakes in a very threatening manner at his neighbor, dancing, leaping, and turning round, with such indecent violence that he resembles rather a priest of paganism, than a Christian." The Abyssinians have a tradition that the sistrum, lyre, and tambourine were brought from Egypt into Ethiopia by Thoth, in the very first ages of the world.

EGYPTIAN MUSIC. The opinion of the ancients was pretty general that Pythagoras was indebted to the lessons of the Egyptian priests for nearly all the science he possessed, and especially that of music. Though Diodorus Siculus assures us that the Egyptians were not allowed to cultivate music, and that they considered it useless, and even injurious to society, and the cause of effeminacy, yet Plato, who had visited Egypt, observes, in one of his Dialogues, that none but excellent music was allowed where the youth were assembled. Though he admits others of their habits were bad, he excepts the music. Strabo tells us that the youth were instructed, at the earliest age, in music; that the songs were fixed by law, and that the sort of music used was established by the government, exclusive of every other sort. The Greeks even attributed the invention of some of their musical instruments to the Egyptians, such as the triangular lyre, the single flute, the drum, and the sistrum. Herodotus says the Dorians were of Egyptian extraction; and, as the three most ancient modes of Grecian music were the Dorian, the Phrygian, and the Lydian, it is probable that the Egyptian colony that peopled that province carried thither the music and instruments of their country. Like all other professions in Egypt, that of music was hereditary. A similar custom, as we have above stated, prevailed among the Jews; and Herodotus tells us that the inhabitants of Lacedæmonia, who were Dorians, re-embled their ancestors, the Egyptians, in this, that their musicians were all of the same family; and that their priests, like those of Egypt, were taught medicine, and the art of playing upon stringed instruments, when they were initiated into the mysteries of religion. The same author mentions that, in the processions of Osiris, the Egyptians carried statues of the god, singing his praises, and were preceded by a flute. There is a singular proof of the antiquity of this art to be met with at Rome, on the Guglia Rotta, which Augustus brought to Rome, being one of the largest obelisks that was removed from Egypt, and which was thrown down and broken at the sacking of the city in 1527, by the Constable of Bourbon. It is, among other hieroglyphics, the representation of an instrument very like the *colacione*, (a species of guitar,) still in use in Naples. From the pegs, it is evident two strings were employed; and the length of the finger board, if the strings were tuned at a great interval from each other, would afford a very considerable scale of notes. This instrument alone proves to what extent music was cultivated in Egypt, and that its inhabitants were acquainted with the method of repeating the scale. Hermes, Thoth, or the ancient Mercury Trismegistus, to whom is ascribed the invention of writing, astronomy, the religious rites and ceremonies, has the credit, also, of having invented the lyre with three strings, which, it is pleas-

antly said, were types of the three seasons of the year, there being a fourth season neither in Egypt nor among the ancient Greeks. The lowest chord, say they, was the type of winter, the middle one of spring, and the highest of summer. The following, according to Apollodorus, was the origin of the invention: The Nile, after its inundation on one occasion, left, on retiring, a quantity of dead animals, and among the rest a tortoise. The flesh soon perished and dried up, from the heat of the sun; nothing but the shell and the cartilages were left, and, from their contraction, they had become sonorous. Mercury, strolling on the banks of the river, struck his foot against this tortoise shell, and was agreeably surprised by the sound it produced; and this furnished him with the first idea of a lyre. He gave his instrument the general form of a shell, and strung it with the dried tendons of animals, resembling the gut strings of the present day. The single flute, however, *monaulos*, also invented in Egypt, seems to have greater claims to antiquity than the lyre itself. It was called *photinx*, or curved flute, by the Egyptians, its form being something like that of a bullock's horn. Apuleius, describing the mysteries of Isis, tells us the form of this instrument, as well as the manner in which it was held; and all the representations of it show that it resembled the bullock's horn. Indeed, there can be no doubt that, in the remotest period, the horns themselves were made use of. But it is certain that the Egyptians had instruments much more susceptible of inflection than those whereof we have been speaking; for, on the ceilings of the walls of the chambers of the tomb of Osymandyas, at Thebes, which are described very circumstantially by Diodorus, are, among other decorations, several representations of musical instruments; one of which, from Denon, proves conclusively that the harp of the present day is, in general form, not very dissimilar to that in Egyptian use, and that performance upon it must have required considerable skill. Other representations of harps occur. One has been given by Dr. Burney. There is one at Ptolemais, a city built by Ptolemy Philadelphus, with fifteen strings, or two complete octaves; this, however, is more triangular in shape, and much more similar to the modern harp. The instruments in Abyssinia were found by Mr. Bruce to have a close resemblance to those of Egypt. The arts which flourished in this nation at so early a period would, doubtless, have continued to do so under their own kings; but after the subjugation of the nation by Cambyses, 525 years before Christ, the arts and sciences, under a foreign yoke, disappeared, or, rather, ceased to be indigenous in Egypt. The Ptolemies, indeed, encouraged them; but under their reigns the professors of the arts were chiefly Grecian. The Egyptians had degenerated from the knowledge of their ancestors whose hieroglyphics they themselves no longer understood. It is probable, however, that music was cultivated under those princes, for, at a feast of Bacchus, given by Ptolemy Philadelphus, Athenæus says that the choir was composed of six hundred musicians, and of that number one half were performers on the cithara. According to the same author, under the seventh Ptolemy Egypt abounded with musicians; and at that period the practice of music was so common in the

country that there was not a peasant or a laborer in the vicinity of Alexandria that was unable to play on the lyre and flute. The father of Cleopatra, who was the last of the Ptolemies, from his skill on the flute, took the title of Auletes, that is, player upon the flute. Strabo says that, notwithstanding the debauched life he led, he found time to apply himself particularly to the practice of this instrument. He thought so highly of his talent in this respect, that he established musical competitions in his palace, and himself disputed the prize with the first musicians of the day. Such was the flourishing state of the art in Egypt up to the time of Cleopatra's misfortunes — an event which ends the history of the empire, and that of the Egyptians. Among the modern Egyptians no remains or traces of the ancient state of the art are now to be found. Still they are passionately fond of music; and there are, according to Savary, to be found among them both male and female musicians who sing and accompany themselves. This author describes them as most successful in their plaintive music; to which, he says, even the Turks themselves, the enemies of the art, will pass whole nights in listening.

EIBLER. See EYBLER.

EICHHOLZ, FRIEDRICH WILHELM, chamber musician to the King of Prussia, was born in 1720. He composed some dramatic and other music. He died in 1800.

EICHNER, ERNEST, was a German organist of considerable eminence. His writings consist chiefly of sonatas and concertos for the piano-forte, and quartets. With respect to the former, he introduced a style somewhat betwixt that of Schobert and the music of the present day; with less fire, indeed, than Schobert, but with more taste and expression. The instrument on which he himself chiefly excelled was the bassoon. About the year 1776, he went to England; but, owing to the infirm state of his health during the time he was there, he seldom played in public. Eichner died at Berlin, in the year 1778.

EIDENBENZ. A vocal and instrumental composer at Stuttgart. His compositions bear date from the year 1790 to 1798. He died at Stuttgart in 1799, in the thirty-seventh year of his age.

EIGHTEENTH. An interval comprising two octaves and a fourth; the replicate of the seventh.

EIGHTH. An interval comprehending seven conjunct degrees, or eight diatonic sounds. See OCTAVE.

EINFACH. (G.) Simple.

EINHEIT. (G.) Unity.

EINLEITUNGSSATZ. (G.) An introductory movement.

EINSCHNITT. (G.) A phrase or imperfect musical sentence.

EIS. (G.) E sharp.

EISTEDDOD. (W.) The name of the session appointed by Queen Elizabeth, at Caerwys, in North Wales, for the election of chief bards, and teachers of instrumental song.

EKLYSIS. By the term *eklysis*, the ancient Greeks meant a particular kind of tuning in the enharmonic genus, in which, from a certain sound, the performer dropped by an interval of three quarter tones. The opposite of *spondiasm*. See that word.

ELA. The name originally given to the highest note in the scale of Guido; and since proverbially applied to any hyperbolic saying.

ELDING, JOHANN. A celebrated performer on the clarinet, and composer for his instrument. He was born near Eisenach, in Upper Saxony, in 1754, and died in 1786.

ELECTRIC PIANO. Thomas Davenport, of Salisbury, Vermont, invented, 1851, the electric piano-forte. Mr. D. claims to have been the first man who has turned a wheel by means of electro-magnetism. He has succeeded in vibrating musical wires by the same power. The perpetual and hitherto incurable defect of the piano-forte is the impulsive and evanescent nature of its tone; and though great improvements have been made upon it, and various devices have been elaborated to prolong its notes in some degree, yet the want of a sustained vibration is still an inherent want in that excellent instrument. The simple but vastly important fact of the science of electro-magnetism is, that common iron, being encircled by currents of electricity, becomes instantly and intensely magnetic, and again becomes instantly destitute of magnetic properties on the suspension of electric currents. The problem with which Mr. Davenport has grappled, and which he has solved, is, first, whether this twofold transition can be perfectly effected as rapidly as a musical chord will vibrate; (say, for example, five hundred times in a second;) and, secondly, whether this rapid alternation of attraction and absence of attraction can be made to concur exactly with the vibrations of the chord, so as to sustain those vibrations. We have seen a rude instrument, constructed under his directions, similar in form to an Æolian harp, and furnished with three wires, which continue to vibrate, under the influence of electro-magnetics, with a clear and full note for any desired length of time after the first impulse is imparted. So far, success is demonstrated.

ELEGAMENTE, or CON ELEGANZA, ELEGANTE. (I.) With elegance, gracefully.

ELEGIAC. An epithet given to certain plaintive and affecting melodies. See ELEGY.

ELEGY. An elegy, with the ancient Greek musicians, was a certain composition for the flute, said to have been invented by Sacados of Argos. In modern times, the sense of this word has been restricted to vocal music of a tender and pathetic kind. By an elegy we now mean simple, mournful, affecting tale, told in lyric measure, and set to music for one, two, or three voices.

ELEMENTS. The elements of music comprise the gamut, rules of time, simple harmonies, and all the first or constituent principles of the science, all of which will be found more fully explained under the various and appropriate heads in this Encyclopædia.

ELER. A professor of several wind instru-

ments at Paris, and instrumental composer. His works are dated from the year 1796 to 1801. He has composed several operas.

ELEVATION. A term applied to the progression of the tones of a voice or instrument, from grave to acute; also used to signify the raising of the hand, or foot, in beating time.

ELEVENTH. An interval consisting of ten conjunct degrees, or eleven diatonic sounds; the octave of the fourth. It was long a dispute with the ancient writers on music, whether the eleventh was a concord. Hubald, however, insists that it is among the consonant intervals.

ELFORD, RICHARD, an English singer, was educated in the choir of Lincoln, but, his voice settling into a counter tenor, he was invited to Durham Cathedral, where, however, he did not long remain, being advised to go to London, to try his fortune on the stage. In 1706, his name appears in Downes the prompter's list of performers, in D'Urfey's opera of "The Wonders of the Sun, or the Kingdom of Birds." But his person and action being clumsy and awkward, he quitted the theatre, and was admitted as a gentleman of the Chapel Royal, as well as to the places of lay vicar of St. Paul's and Westminster Abbey. He had likewise an addition of a hundred pounds a year made to his salary in the chapel, on account of the uncommon excellency of his voice.

ELINE. A name given by the ancient Greeks to their song of the weavers.

ELISI, PHILIP. An Italian singer, who performed at the opera, in London, in the years 1760 and 1761. Elisi, though a great singer, was still more eminent as an actor.

ELIZABETH, QUEEN, was, as well as the rest of Henry VIII.'s children, and, indeed, all the princes of Europe at that time, instructed in music early in life. Camden, in enumerating the studies of his royal mistress, says, "She understood well the Latin, French, and Italian tongues, and was indifferently well seen in the Greek. Neither did she neglect musick, so far forth as might become a princess, being able to sing, and play on the lute prettily and sweetly." There is reason to conclude that she continued to divert herself with music many years after she came to the throne. Sir James Melvil gives an account of a curious conversation which he had with this princess, to whom he was sent on an embassy by Mary, Queen of Scots, in 1561: "After her majesty had asked him how his queen dressed; what was the colour of her hair; whether that, or hers, was best; which of the two was fairest; and which of them was highest in stature; then she asked, what kind of exercises she used. 'I answered,' says Melvil, 'that when I received my despatch, the queen was lately come from the Highland hunting; that when her more serious affairs permitted, she was taken up with reading of histories; that sometimes she recreated herself with playing on the lute and virginals.' She asked, if she played well. I said, reasonably well for a queen. The same day, after dinner, my Lord of Hunsdon drew me up to a quiet gallery, that I might hear some music, and (but he said that he durst not avow it) where I might hear the queen play on the virginals. After I had hearkened a while, I took up the tapestry that

hung before the door of the chamber, and seeing the queen's back was toward the door, I entered within the chamber, and stood a pretty space, hearing her play excellently well. But she left off immediately, so soon as she turned about and saw me. She appeared to be surprised to see me, and came forward, seeming to strike me with her hand, alleging that she used not to play before men, but when she was solitary, to shun melancholy. She asked how I came there. I answered, as I was walking with my Lord Hunsdon, as we passed by the chamber door, I heard such a melody as ravished me, whereby I was drawn in ere I knew how; excusing my fault of loneliness, as being brought up in the court of France, where such freedom was allowed; declaring myself willing to endure what kind of punishment her majesty should be pleased to inflict upon me for so great an offence. Then she sat down low upon a cushion, and I upon my knees by her; but with her own hand she gave me a cushion to lay under my knee, which at first I refused, but she compelled me to take it. She inquired whether my queen or she played the best. In that I found myself obliged to give her the praise."

If her majesty was ever able to execute any of the lessons that are preserved in a manuscript known by the name of "Queen Elizabeth's Virginal Book," she must have been a very great player; as some of those pieces, which were composed by Tallis, Bird, Giles, Farnaby, Dr. Bull, and others, are so difficult that it would hardly be possible to find a master in Europe who would undertake to play one of them at the end of a month's practice. Besides the lute and virginals, it has been imagined that Elizabeth was a performer on the violin, and on an instrument something like a lute, but strung with wire, and called the poliphant. A violin of a singular construction, with the arms of England, and the crest of Dudley, Earl of Leicester, this queen's favorite, engraved upon it, was purchased at the sale of the Duke of Dorset's effects many years since. From the date of its make, 1578, and from the arms and crest engraved upon it, it has been conjectured that Queen Elizabeth was its original possessor. It is very curiously carved; but the several parts are so thick, and loaded with ornaments, that it has not more tone than a mute, or violin with a sordine; and the neck, which is too thick for the grasp of the hand, has a hole cut in it for the thumb of the player, by which the hand is so confined as to be rendered incapable of shifting, so that nothing can be performed on this instrument but what lies within the reach of the hand in its first position. The music of the queen's establishment differed but little from those of Mary and Edward. Burney says that the musicians, through all the changes of religion, tuned their consciences to the court pitch, that is, in unison with the orders of their sovereign, the supreme head of the church. But let us see if they had not reason on their side. In the reign of Henry VIII., Testwood, one of the choir at Windsor, was burned for being a Protestant, and another musician only escaped the same fate through the interference of a friend, who obtained his pardon on the ground that it was not worth while to burn him, "as he was *only* a musician;" and Marbeck was condemned, and saved "because he was a musician."

ELOUIS, J. A celebrated French harpist and composer for his instrument, at the latter end of the last century. Many of his works are published at Paris.

ELSNEL, JOSEPH, born in Prussia in 1769, chapel-master at Warsaw in 1802, is the composer of many operas and two melodramas, the words of some of which are in the Polish language. He has also composed much instrumental music, published at Vienna, Leipsic, and Offenbach.

ELSPERGER, JOHANN CHRISTOPH ZACHARIAS, born at Ratisbon, composed much sacred and instrumental music. He died in 1700.

EMBOUCHURE. (F.) The aperture of a Hautboy, flute, or other wind instrument, at which the breath of the performer is received. The name is also applied to the shaping of the lips to the aperture or mouthpiece; thus we say of a flute player, he has a good *embouchure*.

EMMERT, ADAM JOSEPH, an amateur composer, was born at Wurtzburg in 1765. He composed a great variety of vocal and instrumental music, between the years 1797 and 1806.

E MOLL. (G.) E minor.

EMPFINDUNG. (G.) Emotion, passion.

EMPHASIS, is the giving forcible utterance to the important words of any piece, which, in order to due effect, should be previously studied. Hence it cannot, in general, be applied to metre psalmody, except so far as to prevent the rhythm from appearing mechanical. But in chanting, the rules of emphasis should be perpetually in view. There is no proper rhythm in a chant, its accentuation being that of prose. But by an emphatic rhetorical style in the recitative of the strain, and by care to bring the accents of the cadence upon accented syllables, chants the most devotional will rank among the sublimest branches of music. Emphasis differs from accent in this—accent always occurs on certain parts of a measure; and emphasis shows that unaccented parts of any measure may be made emphatic. To give definite rules for placing emphasis, or for expression, is far more difficult than to determine the accent: but such words as *by, with, of, but, than, as, be, to,* and others, and the articles *a* and *the,* should never be emphasized, but be passed over as lightly as possible, with proper articulation. A cultivated taste, and an extensive acquaintance with the science of harmony, are the best directions for emphasis and expression.

ENCORE, (F.) Again, once more. A well-known expression, used by audiences at theatres, and in concert rooms, to express their desire that the performance of a song, or instrumental composition, should be repeated.

ENDERLE, WILHELM GOTTFRIED, was born at Bayreuth in 1722. He was one of the best violinists of his time, and composed much music for his instrument. He died at Darmstadt in 1793.

ENERGICO, CON ENERGIA, or **ENERGICAMENTE.** (I.) With energy.

ENGE. (G.) Close, condensed.

ENGEL, CARL IMMANUEL, an organist at Leipsic, published some piano-forte and organ music at that town, from the year 1790. He died in 1795.

ENGLISH MUSIC. While the music of all other countries has in it something distinctively and peculiarly characteristic, English melodies (if we except their glees and madrigals) have none. The late operas which have been brought out in London betray an attempt at servile imitation of the Italian school; but the English have not a writer at the present day whose compositions manifest the slightest originality; and, with the exception of Dr. Arne, Calcott, Bishop, Rolf, Rooke, and one or two others, their musical works are devoid of conception, character, or beauty. At the same time it must be admitted that there is nothing finer in the world than the English glees and madrigals. These possess a truly distinctive character. They are really English, and bear about the same relation to the smooth strains of Italy and Germany, as the bluff, straightforward yeoman does to the French exquisite. They are at once original, heart-stirring, and amusing. Many of the madrigals exhibit a great amount of artistic skill and musical acquirement, and, when well executed, they are extremely entertaining. Some of the English anthems are also very excellent, but the attempt to imitate the German school is too apparent throughout. They are not the less agreeable on this account, but they lose the charm which would attach to originality. The English are, as a nation, fond of music, but their love for it seldom reaches the enthusiasm which is felt for the art by a German, an Italian, a Frenchman, or a Spaniard. It would, perhaps, be more correct to say that the English admire music, rather than that they love it. The uneducated classes will gladly listen to music, but they are never moved by it. They may learn or become acquainted with certain airs, but they never impart to what they sing or whistle that elegance or depth of feeling which a really musical mind never fails to throw into an air which pleases him. The organ builders of England may be taken at four hundred in number, and putting their gross returns at five hundred pounds per annum each, we have two hundred thousand pounds a year in this branch alone. The materials employed by the piano-forte maker are oak, deal, pine, mahogany, and beech, besides fancy woods; baize, felt, cloth, and leather, brass, steel, and iron. Of the two leading houses in this branch, the Messrs. Collard sell annually one thousand six hundred instruments, and the Messrs. Broadwood two thousand three hundred, which, at the very low average of sixty guineas, gives, as the annual business of these two firms only, about two hundred and fifty thousand pounds. If the whole number of piano-forte makers of London—about two hundred—is taken into account, the annual return in this trade cannot be less than one million pounds. Violins, and instruments of that class, are almost entirely imported, the prejudice being in favor of the foreign makers. The annual import duty on them is probably not less than forty-five thousand pounds. The cost of the wind instruments required for a regimental band, exclusive of drums and fifes, was said to be two hundred and twenty-four pounds; and there are in all about four hundred regiments.

the capital represented by these is nearly one hundred thousand pounds. The number of workmen employed by Messrs. Broadwood and Colclard respectively is five hundred and seventy-five and four hundred; these are all more or less skilled workmen, some of them to a very high degree. It is probable that the wages of the artisans employed in this trade do not amount to less than five hundred thousand pounds per annum. The great power exerted by music is evinced by the large number of musical and choral societies, both instrumental and vocal, which exist, as well as by the large and increasing audiences which are attracted to their public performances. There can be no doubt that this influence is in a right direction, and that by it the social and moral condition of the people is being elevated and improved. In the first fifteen years during which the Sacred Harmonic Society had been established, two hundred and seventy-one concerts had been given, attended by more than six hundred and ten thousand persons.

ENHARMONIC. The epithet given by the ancient Greeks to that of their three genera, which consisted of quarter tones and major thirds. They, however, had, originally, another kind of *enharmonic*, more simple and easier of execution than this, and upon which the quarter tones, or *dieses*, were considered by the theorists of the old school as innovations too refined and artificial.

ENHARMONIC. Equivocal; as, *enharmonic change*, where the notation is altered, but the same keys of the instrument are used. Thus a modulation from the key of F sharp into the key of G flat would be an *enharmonic change*.

ENHARMONIC SCALE. This is a gradual progression by quarter tones; but as these progressions are not found on keyed instruments, there is no real *enharmonic scale* used in modern music. These imaginary progressions have their origin in the chord of the diminished seventh and its inversion, and will be more fully explained if you examine that chord. The *enharmonic*, or scale of quarter tones, was used by the Greeks until the time of Alexander the Great, when the chromatic scale came into use. When a scale is formed which contains in some places *quarter tones*, it is called *enharmonic*. The *enharmonic scale* divides each tone into two chromatic semitones and the quarter tone, thus:—

EN RONDEAU. (F.) In the manner of a *rondeau*. See that word.

ENT, DR. GEORGE, (born in 1603, died in 1689,) wrote a paper in the *Philosophical Transactions*, volume twelve, under the title "An Essay tending to make a probable Conjecture of Temper, by the Modulations of the Voice in ordinary Discourse."

ENTERTAINMENT. The appellation formerly given to little musical and other dramatic afterpieces, but which has some time been changed for that of *opera*, or its diminutive, *operetta*.

ENTRACTE. The name given by the French

to the music played between the acts of their dramas.

ENTREMÉS. (S.) A short musical interlude, much used in Spain. It never consists of more than one, two, or three scenes, and the number of interlocutors is seldom more than four.

ENTRE-METS. (F.) The inferior and lesser movements which are inserted between the greater and more important movements of a composition, for the purpose of relief.

ENTRIES. The name formerly given to the acts of operas, burlettas, &c.

ENTUSIASMO, CON. (I.) With enthusiasm.

ENTWURF. (G.) Sketch or rough draught of a composition.

ENVOYS. One of the names by which the old English ballads were known.

EOLIAN. An epithet applied to one of the five chief modes in the Greek music, the fundamental chord of which was immediately above that of the Phrygian mode. See *MODE*.

EPIAULA. A name given by the ancient Greeks to their song of the Millers, called also *Hymen*. See *SONG*.

EPICEDIUM. (From the Greek.) A dirge. See that word.

EPIGONIUM. An instrument of antiquity, so named from Epigonius, the inventor. It is said to have contained forty strings; but the time of its invention, though we do not precisely know when Epigonius lived, is too remote to render it probable that these strings formed a scale of forty different sounds. It is more reasonable to suppose that they were tuned in unisons and octaves, or regulated by the intervals of the different *modes* and *genera*.

EPIGONIUS invented an instrument of twenty strings, of the harp kind. Little is known of it, however, and it was very little used, being difficult to practise.

EPILENIA. The name given by the ancient Greeks to their song of the grape gatherers.

EPINICION. (Gr.) A song of victory.

EPISODE. A term applied to those portions of a fugue which deviate from the subject matter, or *motivo*, and supply the embodying harmony.

EPITHALAMIUM. A nuptial ode, or song. Compositions of this kind were formerly much in use, and in remote times were usually sung at the door of the newly-married couple.

EPITRIE. The name given by the Greek musicians to one of the rhymes with which they proportioned the time in *sesquialtera*.

EPODE. The name given to the third couplet of the *periods* of the Greek odes, or to the air to which it was sung. The period consisted of three couplets—the *strophe*; the *antistrophe*, and the *epode*. The priests walking round the altar, singing the praises of the gods, repeated at their first entrance, when they turned to the left, those verses called the *strophe*; those which they sang turning to the right, were denominated the *anti-*

trophe; and lastly, those which they sang standing before the altar, the *epode*. The invention of this *third* and concluding part of the period, is attributed to Archilochus. Any short lyric poem, composed of trimeter iambs of six feet, and dimeters of four feet, alternately, was also called an *epode*.

E POI. (1.) And then; as, *e poi la coda*, and then the coda.

EPINGER, HEINRICH. A violinist, resident at Vienna. He has published much music for his instrument, at Paris and Vienna, since the year 1796.

EQUISONANCE. The name by which the ancient Greeks distinguished the consonances of the octave and double octave.

EQUISONANT. Of the same or like sound; a unison. This term is often used in guitar playing, to express the different ways of stopping the same note.

EQUIVOCAL. Those chords are called *equivocal* whose fundamental bass is not indicated by the intervals by which they are formed.

ÉRARD, SEBASTIAN, founder of the celebrated piano-forte and harp manufactories at Paris and London, which still bear the name, was born at Strasburg, in 1752, and was the fourth son of a cabinet maker, who did not marry till the age of sixty-four. He inherited from his father a robust constitution, and evinced in childhood a courageous spirit; for it is said that at the age of thirteen he climbed the steeple of the Strasburg Cathedral, and seated himself upon the summit of the cross. At the age of eight years he was sent to the schools to study architecture, perspective, linear drawing, practical geometry, &c. Throughout his life he was continually occupied with new inventions; in the latter half of it he slept but little, and his bed was always covered with papers and plans of instruments. This fertility of invention and execution accounts for the multitude of models still found in his workshops at London and Paris. He lost his father at the age of sixteen and sought employment at Paris, where he became apprentice, and soon foreman, in a harpsichord manufactory. The young workman's ingenious questions so puzzled his master that he dismissed him, reproaching him for wishing to know every thing. But another famous maker, having received an order to construct a harpsichord requiring knowledge that was out of his daily routine, had heard of the young Erard, and offered him a certain sum if he would make it, and allow him (the employer) to put his name upon it. Erard consented, and the person who had ordered the instrument was so astonished at the perfection of the workmanship that he asked the manufacturer if he were really the author of it; the latter, taken by surprise, confessed that the instrument had been constructed for him by a young man of the name of Erard. The fame of this adventure soon spread through the musical world, and drew attention to the young artist, who soon signalized himself by his *clavécin mécanique*, a masterly invention and achievement, which caused a great sensation among the artists and amateurs of Paris.

Sebastian Érard was not yet twenty-five years old, and already his reputation was so established, that he was applied to for all sorts of new things which people wished to have constructed. Distinguished persons sought him; and the Duchess de Villeroy, a great patroness of artists, and passionately fond of music, tried to attach him to her household. But preferring his independence, and having long desired to visit England, he was only prevailed upon to remain with the duchess long enough to execute several ideas of hers, having a suitable work room in her hotel, and enjoying the most perfect liberty. It was here that he constructed his first *piano-forte*. This instrument, known for some years in Germany and England was not yet common in France; the few pianos found in Paris having been imported from Ratisbou. It was *de bon ton* in great houses to have these foreign instruments. Mme. de Villeroy one day asked Erard if he could make a piano; the piano was already in his head; he set immediately about it, and this first piano from his hands bore the stamp of a man of invention and taste. It was heard in the saloon of the duchess by all the amateurs and artists of distinction, and many noble seigneurs were eager to order and possess instruments like it; but they were not so eager to discharge *their* part of the contract — the most of them never paid.

About this time, his brother, Jean Baptiste Erard, joined him; and this indefatigable worker, and upright, loyal man, from that time shared the labors and the fortunes of Sebastian. The great demand for their pianos soon obliged them to quit the hotel de Villeroy, and found a large establishment in the Rue de Bourbon, (faubourg St. Germain,) which gradually became the first in all Europe. The jealousy of other musical instrument makers was roused, and one actually procured a seizure upon the Erard establishment, under the pretext that they had not subscribed the laws of a certain guild; but Erard found protectors, who made known his merit to the king, Louis XVI., from whom he received a flattering patent. Under this protection the establishment of the two brothers developed more and more, and the sale of their two-string and five-octave pianos (such as they made at that time) was immense.

Among other inventions which continually occupied him, Sebastian Erard made at this time an instrument with two key boards, one for the piano and one for the organ. This was prodigiously popular in high society. One was ordered for Marie Antoinette. The queen had a voice of little compass, and all music seemed written too high for her. Erard made the key board to slide so as to transpose the music from a scutitone to a tone and a half, at will, without any mental labor on the part of the accompanist.

The troubles of the revolution, so injurious to all industry, induced Sebastian to go to England, and open new channels for the products of his manufactory. There he remained several years, and founded an establishment like that in Paris, filled with instruments entirely of his own invention. In 1794 he took out his first patent for improvements in the piano and harp, and his instruments were soon in great demand. But the desire to return to France never forsook him, and he arrived at Paris in 1796. Then, for the first time, he manufactured grand pianos, in the shape

of harpsichords, after the English system, of which he had greatly perfected the mechanism, and brought out his harps of single action, which he had invented some ten years before, but had not made public at that time. These pianos were the first instruments with *escapement* ever made in Paris; they had the defect of all the instruments of that kind, that of slowness of action in the levers and the hammers—a fault complained of much by artists accustomed to the easy play of the small pianos. This difficulty Erard labored to overcome; and after many trials he produced, in 1808, a new kind of grand piano, in which the action answered more promptly to the touch, while its smaller dimensions were more suited to the size of the Parisian saloons. Dussek played upon one of them with great success in the concerts given at the *Odéon* by Rode, Baillot, and Lamarre, on their return from Russia; amateurs and artists were well satisfied, but not so Erard himself, as we shall see.

In 1808 he returned to England, where he put the seal upon his reputation by the invention of his double action harp. By giving to each pedal the double function of raising the string a half or whole tone, as might be required, he overcame the whole difficulty of completing the gamut of the harp in all the keys. It cost him years of labor and great outlay, but the success was complete. The double action harp appeared in London in 1811, when paper money was in the greatest circulation, and the sales in one year amounted to twenty-five thousand pounds. Returning to Paris, he introduced the same manufacture there.

Frequent visits to France made him neglect the manufacture of pianos at London, and his establishment there became devoted to the harp exclusively; but in all the fifteen or twenty patents which he took out in England, new ideas for the perfecting of the piano, as well as harp, were expressed. These he proposed to execute in France. At every exposition of the products of industry, his works were crowned; he had received every kind of public testimonial, when in 1823 he exhibited the model of his *chef d'œuvre*, his grand piano, a *double échappement*. These new instruments were since established in the London manufactory by his nephew, Pierre Erard. The naturally robust constitution of Sebastian Erard began finally to yield to the incessant labors of so active a life upon the vast theatre of two such capitals as Paris and London. In 1824 he was afflicted with the stone, yet still devoted himself, from the moment of a successful operation, to improvements in organs and other instruments, until an aggravated return of the disease put an end to his career in the month of August, 1831.

ÉRARD, PIERRE, nephew of the preceding, was born at Paris, about the year 1796. His early studies were with a view to his continuing the manufacture of instruments invented by his father and uncle; he was taught music, mathematics, and linear design. Sent to London, when quite young, to direct the manufacture of Sebastian Erard's harps, he has passed there the greatest part of his life. In 1821 he published an account of his uncle's double action harp, under the title of "The Harp in its present improved state, compared with the original pedal Harp." After the death of his uncle, he became

his heir, and took charge of the manufactory in Paris, where in 1834 he exhibited several new models of pianos. At the same time he published an historical description of "The improvements introduced into the mechanism of the Piano by the Érards, from the origin of the instrument to the exposition of 1834," fol., with eight lithographic plates. M. Pierre Erard has since lived alternately at London and Paris, directing the two great establishments which he has inherited.

EREMITA, GIULIO, an organist at Ferrara in the sixteenth century, composed three books of madrigals, which were subsequently reprinted at Antwerp.

ERHÖHUNG. (G.) The raising the pitch of a note by a sharp.

ERICH, DANIEL, an organist at Custrow, in Germany, was a pupil of Buxtehude, and published much music for the harpsichord about the year 1730.

ERLEBACH, PHILIP HEINRICH, was born at Essen in 1657. He published much instrumental music for the organ and piano-forte, which bears date from the year 1692. He died in 1714.

ERNIEDRIGUNG. (G.) The depression of a note by means of a flat.

ERNST, FRANZ ANTON. A celebrated German violinist and musical mechanic. He died at Gotha in 1805.

ERNST, HEINRICH, one of the greatest violinists of the day, by many esteemed the equal, if not the superior, of De Bériot and Molique, was born in Brünn in 1814. He was a pupil in the Vienna Conservatory, where Mayseder exerted a good influence upon him. He was long more distinguished in the saloon, and in chamber concerts, than before great audiences; but in the autumn of 1839 he played with great success in Hamburg, which led him to make an artistic tour; since which, he has been continually deepening and extending his fame by concerts in all the musical cities of Europe. He has been the intimate associate of Liszt, and all the foremost artists of the day.

EROTIC. An epithet applied to a certain subdivision of the Greek *melopœia*, otherwise called amatory. See MELOPŒIA.

ERWEITERT. (G.) Extended.

ES. (G.) E flat.

ESCHIENBURG, JOHANN JOACHIM, professor of the *belles lettres* at the College of St Charles, at Brunswick, was born at Hamburg in 1743. He has rendered great service to music in Germany by his translations from foreign languages, especially from the English and Italian, of various works on the theory and practice of music.

ESCHSTRUTH, HANS ADOLPH, BARON VON, counsellor of the regency at Cassel, and member of the principal literary societies of Europe, was born in 1756. He published, between the years 1784 and 1790, several works on music also some vocal compositions. He died at Cassel in 1792, in the thirty-seventh year of his age.

ES DUR. E flat major.

ESES. (G.) E double flat.

ES MOLL. (G.) E flat minor.

ESPAGNUOLO. (I.) In the Spanish style.

ESPRESSIONE. (I.) Expression. See that word.

ESPRESSIVO, or CON ESPRESSIONE. (I.) With expression.

ESSEMPIO. (I.) An example.

ESSEX, DR. A native of Coventry, in Warwickshire. At thirteen years of age he amused himself with the flute and violin, and made a rapid proficiency, though destitute of any professional aid, which induced his father to let him study the science and practice of music as a profession. In 1806 he obtained a bachelor's degree in music at Oxford. His exercise was an anthem taken from the fifty-seventh Psalm. In 1812 he gained his doctor's degree, the subject of which was an entire oratorio in verse, written expressly for the purpose, by his friend R. A. Davenport. The following are some of the popular productions of this composer: "The Seaside Sonnet;" "The Juvenile Song;" "The Moonlight Sonnet," from Mrs. Anna Radcliffe's "Romance of the Forest;" "Mine be a Cot," from "The Pleasures of Memory," by Rogers; "To all you Ladies now on Land, a Glee for three Voices, Words by Pratt, written expressly for Dr. Essex;" "A Canadian Boat Song, for three Voices;" "A Set of Six Duets for two German Flutes;" "A Set of Slow and Quick Marches for the Piano-forte, with the full Scores added for a Military Band;" "A Piano-forte Duet," Op. 11; "A Duet for the Piano-forte, with Accompaniments for two German Flutes;" "A Military Rondo Duet for the Piano-forte, with Accompaniments for a Harp or Piano-forte;" "The Britannia, a Rondo for Piano-forte, with Violin Accompaniment, characteristic of the English Style;" "The Hibernia, a Rondo, characteristic of the Irish Style, for Piano-forte and Violin;" "The Caledonian, a Rondo, in Imitation of the Scottish Style, for Piano-forte and Violin;" "The Guaracha, a Rondo, in Imitation of the Spanish Style, for Piano-forte and Flute;" "An Introduction and Fugue for the Organ."

EST, or ESTE, MICHAEL, bachelor of music, and master of the choristers of the cathedral church of Litchfield in the latter half of the sixteenth century, was the author of several collections of madrigals, and other vocal compositions. His publications are much more numerous than those of any composer of his time. One of these is entitled "The Sixth Set of Bookes, wherein are Anthemes for Verses, and Chorus of five and six Parts, apt for Violls and Voices." It is probable that this person was the son of that Thomas Est who first published the Psalms in parts, and other works, assuaging, on some of them, the name of Snodham. One of Michael Est's three-part songs, "How merrily we live," has been a public favorite; and there are several others among his works which are equally deserving of notice.

EST, or ESTE, THOMAS, father to the preceding, edited "The whole Book of Psalms, with their wonted Tunes, as they are sung in Churches, composed into foure Parts, by nine sondry

Authors, so laboured in this Work, that the unskilful, by small Practice, may attaine to sing that Part which is fittest for his Voyce." London, 1594.

ESTERHAZY, PRINCE NICHOLAS, of Austria, one of the noblest protectors and patrons that art and artists ever found, was born in 1765, and passed his early years in travelling through Europe, especially in England, France, and Italy. Thus was cultivated a taste for art, which had been handed down from father to son, and which he did not cease to prosecute after he had entered the military profession. Many branches of art and science are indebted to him. Overflowing with wealth, he maintained his own private chapel, which became the school of not a few of the greatest heroes of music. His princely residence in Eisenstadt, where he had the bones of his favorite Haydn laid with distinguished ceremony, and where he erected a marble monument to him in 1820, became a real temple of music. His musical library is, perhaps, the richest in existence, containing the rarest treasures, such as complete collections of the works of Haydn, Albrechtsberger, Mozart, &c. Especially rich is it in manuscripts of unprinted compositions. Many artists, with enthusiastic gratitude, have called him the foster father of the Muses. Since the year 1833 he withdrew, with his son Paul, from public and diplomatic life, and devoted himself to the management of his vast estate, extending from Vienna almost to Belgrade. He died in 1849, at Como.

ESTINTO. (I.) Becoming extinct, dying away, in regard to time and tone.

ESTREE, JEAN D'. Professor of the hautboy to the King of France in the middle of the sixteenth century, and editor of a work entitled "*Quatre Livres de Danseries, contenant le Chant des Branles communes, gais, de Champagne, de Bourgogne, de Poitou, d'Ecosse, de Malthe, des sabots, de la guerre, et autres; Gaillardes, Ballets, Voltes, Basses Danses, Hauberrois, Allemandes.*" Paris, 1564.

ET. (L.) And.

ET INCARNATUS EST. (L.) A portion of the Credo.

ETOUFFÉ. (F.) Stifled, damped, in harp playing.

ET RESURREXIT. (L.) Part of the Credo.

ETRUSCAN. An epithet applied by the ancient Greeks to the music of *Etruria*, the people of which country were remarkably attached to that science.

ÉTUDE. (F.) A study.

ET VITAM. A part of the Credo.

EUHARMONIC. (From the Greek.) Sweetly or perfectly harmonious.

EUHARMONIC ORGAN. This is the name of a very ingenious instrument, invented and first constructed by Messrs. Alley & Poole, organ builders at Newburyport, Mass., about the year 1848. It is believed to be the first entirely successful attempt to solve the problem of perfect intonation. The name is not to be confounded with enharmonic, — a term whose occupation is entirely gone in the true theory of the scale, as il-

lustrated in this "eu-harmonic organ," which means simply *well*-harmonized or perfectly-tuned organ.

Its peculiarity is, that it is perfectly tuned, in every note of every key, according to the strict mathematical ratio of vibrations. This never has been done before, nor, save by a few, thought possible. To tune *one* scale, or key, or series of tones, springing from one given key note, was easy enough. But how to have *the twelve* scales perfect, without multiplying degrees of pitch and finger keys, so as to confuse and baffle the quickest pair of eyes and hands, there was the puzzle. For it was found in tuning in the usual way, by fifths and octaves, that if the fifth was made a perfect mathematical interval, then the circle of fifths would never come round into itself again; hence the true fifth to one key would not serve for a true third, sixth, or what not, to any other key. Accordingly, a compromise, called *temperament*, was resorted to. By flattening every fifth a very little, so that only the nicest ear could perceive the variation, and by sharpening every third to a degree offensive to almost any ear, the discord, or *wolf*, was so distributed amongst all the tones as to be nowhere very preceptible, unless in the aforesaid major third. This is called equal temperament. There *was* a way, in earlier times, of tuning the natural and its few most kindred keys as nearly true as possible, and throwing the bulk of the discord into the (so called) *remote keys*, making the latter strangely and wildly expressive, as it was fancied.

All this was done to simplify the tone elements, and reduce them to a practicable number, so that the same twelve fixed tones of an octave might serve well enough for the forty or fifty shades of tone that would be required within the same compass to furnish each key with a perfect set of intervals. The ear so readily accommodates itself to a slight swerving from true intonation, the mind so readily catches the intention in music, and hears right even when the actual sounds do but approximate their mark, that this compromise or temperament has never been entirely unendurable. We have had a plenty of true musical enjoyment in spite of it. Yet how false it is, when two contiguous sounds, as A sharp and B flat, which should be quite distinct, are represented by a common intermediate sound different from either of them!

The truth about this matter has not been under a bushel all this time. A good violinist discriminates tones which are merged into one in organs and pianos. Singers by instinct often intonate their scales more truly than the instruments to which they sing. In the quickly vanishing sounds of the piano-forte the discord is less painful, but it cries out in the prolonged vibration of an organ pipe. The evil has been felt, but all attempts to remedy it have shrunk away before the mechanical difficulty. They have all proceeded on the idea that finger keys would have to be frightfully multiplied.

The euharmonic organ solves the difficulty. It has three or four times the usual number of distinct sounds within the compass of an octave, furnishing the precise intervals for every key. The tones composing the scale of each key are selected out by pressing a pedal corresponding to its key note. The key board remains the same as in all instruments. There is not *one* C, *one* A,

one G, only; but a C and an A of different pitch for each place which it may occupy, with reference to a new key note. All this is accomplished by a simplicity and compactness of mechanism which was incredible to our old organ builders until they saw it in operation.

The advantages of the instrument are, —

1. That it gets rid of the whole mystery of *temperament*, of all uncertain intervals, and gives you sounds that are perfectly true in every key. You hear nothing of the *wolf*, the *beat* that is so unpleasant in most organ tones. Every chord is perfectly smooth and pure. No desirable intervals have to be avoided, as for instance the flat seventh, which in the tempered scale is never flat enough.
2. It presents a perfect standard of true intonation, which it is always safe to sing by, and to form the ear by.
3. It makes available many chords and combinations of sounds, which, in the tempered system, would be unendurable.
4. The quantity of sound from the same pipes is increased. It goes farther. A musical tone is heard farther than a mere noise. Pipes or voices perfectly attuned penetrate farther than those imperfectly attuned. There is therefore economy of power in this organ.
5. It keeps in tune longer.
6. And finally it is invaluable as illustrating the true theory and genesis of the musical scale. A great many theoretical conjectures about the science of harmony, when brought to this test, are soon settled.

It is beautiful for a choir or choral accompaniment. In music of a plain and massive character, which does not modulate a great deal, it is a decided improvement. But whether the management of these key pedals will not complicate the task of the performer in music which modulates continually, and abounds also in ambiguous chords which may be construed in several ways, — say in the music of Beethoven and Mendelssohn, Bach's fugues, &c., — so as to shut such compositions out from use, is still a question that remains to be solved. As yet, we are not aware that any thorough organist in the fugue style has mastered the peculiarity of this organ enough to prove that every kind of music may be played upon it. What can be done with it, beyond the most simple uses, is what we do not yet see. Whether the "compromises" of our tempered harmony must not be accepted for the complex purposes of musical art, and whether the euharmonic "higher law" would not, if insisted on, restrict the range of musical invention, are questions upon which time must enlighten us.

If the reader will look more deeply into the rationale of the matter, he will find it most thoroughly and ably exposed in an "Essay on Perfect Intonation and the Euharmonic Organ," by Henry Ward Poole, republished from Silliman's Journal for January and March, 1850."

EUCHASTIC. (From the Greek.) An epithet applied to that subdivision of the *melopœia* which constituted the calm and assuaging.

EUCHERO, PASTORE ARCADE, an Italian singing master, published at Venice, in 1746, "*Riflessioni sopra la maggior facilità che trovasi nell' apprendere il canto con l'uso di un Solfeggio di*

docui monosyllabi, atque illo frequente uso degl' acci-denti."

EUCLID. This great geometrician flourished in the time of Ptolemy Lagus, that is, about 277 years before Christ. His "Elements" were first published at Basil, in Switzerland, 1533, by Simon Grinaus, from two manuscripts, the one found at Venice, and the other at Paris. His "Introduction to Harmonics," which in some manuscript was attributed to Cleonidas, is in the Vatican copy given to Pappus. Meibomius, however, accounts for this by supposing those copies to have been only two different manuscript editions of Euclid's work, which had been revised, corrected, and restored from the corruptions incident to frequent transcription by Cleonidas and Pappus, whose names were, on that account, prefixed. It first appeared in print, with a Latin version, in 1498, at Venice, under the title of "*Cleonida Harmonicum Introductorium.*" Who Cleonidas was, neither the editor, George Valla, nor any one else, pretends to know. It was John Pena, a mathematician in the service of the King of France, who first published this work at Paris, under the name of Euclid, in 1557. After this, it went through several editions with his other works. His "Section of the Canon" follows his Introduction; it went through the same hands, and the same editions, and is mentioned by Porphyry, in his Commentary on Ptolemy, as the work of Euclid. This tract chiefly contains short and clear definitions of the several parts of Greek music, in which it is easy to see that mere melody was concerned; as he begins by telling us that the science of harmonics considers the nature and use of melody, and consists of seven parts: sounds, intervals, genera, systems, keys, mutations, and melopœia. Of all the writings upon ancient music that have come down to us, this seems to be the most correct and compressed; the rest are generally loose and diffused, the authors either twisting and distorting every thing to a favorite system, or filling their books with metaphysical jargon, with Pythagoric dreams and Platonic fancies, wholly foreign to music. But Euclid, in this little treatise, is like himself, close and clear, yet so mathematically short and dry, that he bestows not a syllable more upon the subject than is absolutely necessary. According to Dr. Wallis, Euclid was the first who demonstrated that an octave is somewhat less than six whole tones; and this he does in the fourteenth theorem of his "Section of the Canon." In the fifteenth theorem, he demonstrates that a fourth is less than two tones and a half, and a fifth less than three and a half; but though this proves the necessity of a temperament upon fixed instruments, where one sound answers several purposes, yet he gives no rules for one, which seems to furnish a proof that such instruments were at least not generally known or used by the ancients. What Aristoxenus called a *half tone*, Euclid demonstrated to be a smaller interval, in the proportion of 256 to 243. This he denominated a *limma*, or *remainder*, because giving to the *fourth*, the extremes of which were called *soni stabiles*, and were regarded as fixed and unalterable, the exact proportion of 4 to 3, and taking from it two major tones, $\frac{8}{9} \times \frac{8}{9}$, the *limma* was all that remained to complete the *diatessaron*. This division of the *diatonic*

genus being thus, for the first time, established upon mathematical demonstration, continued in favor, says Dr. Wallis, for many ages.

EUMOLPUS, according to the Oxford marbles, was the son of Mææus, and at once priest, poet, and musician — three characters that were constantly united in the same person during the first ages of the world. He was the publisher of his father's verses; and, like him, having travelled into Egypt for the acquisition of knowledge, he afterwards became so eminent at Athens, as hierophant in the Eleusinian mysteries, that, as Diodorus Siculus informs us, the priests and singers at Athens were afterwards called *Eumolpides*, from *Enmolpus*, whom they regarded as the founder of their order.

EUPHONIAD. This instrument was invented by Peter L. and George Grosh, of Petersburg Pennsylvania. They claim that it differs from all other musical instruments ever invented, and combines in its tones those of the organ, clarinet, horn, bassoon, and violin. It possesses decided advantages over other instruments in the regulations of its tones. In playing sacred music, the accent may be placed on any syllable or word, almost as distinctly as if pronounced by the voice, and the sounds may be swelled at the will of the performer, by means of bellows attached. There are thirty-six keys, with their semitones, which are so arranged that any performer upon the organ, piano, &c., can, in a very short time, become perfect master of it.

EUPHONIOUS, or EUPHONICAL. (From the Greek.) An adjective implying agreeableness, or sweetness of sound.

EUPHONY. (From the Greek.) Sweetness. A term alluding to sound; as, the *emphony* of a language, the *euphony* of a voice or instrument.

EUTERPE, or EUTERPIA. The seventh muse, celebrated for the sweetness of her singing. She is called *Tibicina*, because she presides over the pipes.

EUTHIA. A term used in the ancient Greek music, and signifying a continuity of notes from grave to acute.

EVIRATI. Those male vocal performers among the Italians who, from the elevated scale of their voices, are capable of singing soprano parts.

EVOLUTIO. (L.) Inversion of the parts in double counterpoint.

EVOUË. A barbarous word, formed of six vowels; denoting the syllables of the two words *secutorum amen*, and which is found in the psalterly and antiphonaries of the Catholic church.

EXAMINING A SCORE. Most scores published before 1750 present but little difficulty to the reader, as the orchestral parts are but few and simple; but, as these simple forms lost their attraction, it became necessary to employ more complicated effects, and to combine a greater number of instruments; so that the reading from a score has every day become more difficult. The orchestral luxury in which composers now indulge gives to their scores the appearance of a laby-

rinth, in which an inexperienced accompanist is totally bewildered. On opening a score, a practised accompanist sees at the first glance the *ensemble* of the page upon which he casts his eye, and discerns with the rapidity of lightning what ought to fix his attention, and what may safely be neglected. In an orchestra there are, in fact, certain instrumental parts which contain the forms most interesting to the accompaniment, and others which, with respect to the harmony, serve merely to fill up. As it is impossible to transfer all to the piano-forte, the accompanist is obliged to choose only what is really essential. The first glance being given, the arrangement of the parts of the score ascertained, and the choice of what shall be retained and what rejected being made, we must then occupy ourselves with the details. When the form of the accompaniment has a continued or prevailing design, or symmetrical groupings of notes, the eyes have only to seek the harmony, and apply it to this design. Such established designs have the remarkable advantage of exclusively occupying the ear, and allowing the accompanist to neglect all minor details. In these cases, the eye fixes itself upon two or three staves only, and thus simplifies its operation. In all scores prior to the time of Mozart, we may pretty safely trust to the orchestral quartet for the means of forming an accompaniment. But in his works, and since his time, the interest of the accompaniment is as often to be found in the wind as in the stringed instruments. It becomes necessary, therefore, to run our eyes rapidly across the whole page. To accustom ourselves insensibly to this, we must practise reading scores for some time, without actually playing from them, and thus habituate ourselves to hear the effect from the simple perusal, such as if the orchestra were really executing the piece which we examine. This exercise will be found extremely useful.

Coolness is a quality indispensable to an accompanist. If he be without this quality, his eyes will become troubled at the sight of some scores, which, crowded with notes and different designs, seem to offer an inextricable labyrinth; though most frequently this apparent multiplicity of subjects is reducible to matter sufficiently simple and of easy execution. With a calm eye and a little attention, we shall easily recognize the intention of the author, and perceive what may be transferred to our piano, and what rejected. Very often the parts double one another in unisons or octaves; and the difference of clefs alone gives an appearance of diversity to things which in fact are identical; so that many pieces appear extremely complicated, which nevertheless may be reduced to two or three parts only.

EXECUTION. A term applicable to every species of musical performance, but more particularly used to express a facility of voice, or finger, in running rapid divisions, and other difficult and intricate passages. Taking the word in this latter sense, *execution* is no uncommon quality; but if we give the term its due latitude, and include in its meaning *just intonation, taste, grace, feeling, expression*, and the other higher requisites to fine performance, we must acknowledge that the examples of real *execution* are very rare.

EXERCISE. A term applied, in a general way, to any composition calculated to improve the voice, or finger, of the young practitioner; also significative of the action of practising.

EXIMENO, ANTONIO, a Spanish Jesuit, resided at Rome about the year 1780. He published, in 1774, a large volume in quarto, entitled "*Dell' origine e delle regole della musica, colla storia del suo progresso, decadenza e rinuovazione.*" The Italians say of this book, "*Bizzano romanzo di musica con cui vuol distruggere senza poter più rifabricare.*" See *Elogii Italiani*, vol. viii. In 1775, Eximeno published, at Rome, "*Dubbio sopra il saggio di contrapunto del Padre Martini.*" It was an answer to Padre Martini, who, in his "*Saggio contrap.*," had criticized Eximeno. A detailed analysis of this work is to be found in "*Efemeridi di Roma*," 1775, vol. iv.

EXPLOSIVE TONE. This mark > indicates that the note over which it is written should be struck suddenly, with great force, and that the sound should instantly cease. The tone is sometimes marked > and sometimes ^ . This is sometimes recommended to be used for the purpose of bringing out the voice, and to give it power and strength. It should not be so used. In order to cultivate the voice, the pupil should sing the scale first in the organ tone, as slow and as loud as he can do in exhaling the breath gently from the lungs, and without exhausting them. This gives strength to the voice; and afterwards it should be exercised on the swell under the same conditions as before; this gives pliability, and brings the voice under command.

EXPRESSION. That quality in a composition, or performance, which appeals to our feelings, and which constitutes one of the first of musical requisites. The *expression* of a piece of music may be the ideas it expresses, as of joy, sorrow, &c. — the tune of it, whether simple melody or full harmony, considered apart from all performance. Musical expression and mere execution essentially differ; the one is solid and lasting, the other frivolous and inconstant. The composer or player who does not make his appeal to the feelings, — to the judgment, — though he may enjoy for a time the applause of the thoughtless and low minded, can never please those whose praise is valuable, or ultimately and permanently satisfy himself. However beautiful a piece of music may be, if those who perform it have not caught the spirit which exists therein, the true effect will not be produced. The student who has at most but a knowledge of the notes in the several parts cannot do justice to the composition; and his performance cannot be genuine, unless he understand the sentiment of the subject. He should, therefore, endeavor to acquire a correct knowledge of the air, its connection with the different parts, its peculiar accent, and the force and energy with which it is characterized. By these means he will learn how and when to ornament and diversify his performance, so as to render his expression agreeable and energetic; the sentiment will then be communicated, the ear delighted and the heart moved.

EXTEMPORE. A term applied to a performance consisting of the unpremeditated effusions of fancy. We use this word both adjectively and adverbially; as when we speak of an *extempore fugue*; or say, such a performer *plays extempore*.

EXTENDED PHRASE. Whenever, by repeating one of the feet, or by any other variation of the melody, three measures are employed instead of two, the phrase is termed *extended*, or *irregular*.

EXTENT. The compass of a voice, or instrument; *i. e.*, the distance, or interval, between its gravest and most acute tones.

EXTRANEIOUS. An epithet applied to those sharps and flats, and those chords and modulations, which, forsaking the natural course of the diatonic intervals, digress into abstruse and chromatic evolutions of melody and harmony.

EXTRAVAGANZA. (I.) The appellation given to a certain species of composition, the distinguishing characteristics of which are wildness of idea and incoherence of construction. Popular pieces of this kind are those by Vivaldi, composed about the middle of the last century.

EXTREME. An epithet given to those intervals which are at the greatest possible extension, without changing the numeral name of the extended notes; as in the extreme sharp sixth, extreme sharp fifth, &c.; also applicable to the acutest and the gravest sound, of any scale or compass.

EXTREME FLAT THIRD consists of two diatonic semitones, being composed of three degrees, and is the minor third diminished by the chromatic semitone. Upon keyed instruments, this is the same as the tone which contains only two degrees. This interval being very harsh for vocal music, the intermediate sound is generally inserted, thus:—

EXTREME FLAT FOURTH consists of a tone and two diatonic semitones, being composed of four degrees, and is the perfect fourth, diminished by a chromatic semitone. Upon keyed instruments, this is the same as the major third, which contains only three degrees, thus:—

EXTREME FLAT SEVENTH. The minor seventh, diminished, consists of four tones and two diatonic semitones, forming seven degrees.

EXTREME FLAT EIGHTH. The octave, diminished by the chromatic semitone; never used in melody, but sometimes found in transient passages of harmony.

EXTREMES. The name applied to those parts in a composition, or in any particular harmony, which are at the greatest distance from each other, in point of gravity or acuteness.

EXTREME SHARP SECOND consists of a tone and a chromatic semitone, being composed of two degrees. Upon keyed instruments, this is the same as the minor third; which, however, consists of a tone and a diatonic semitone, and therefore contains three degrees, thus:—

EXTREME SHARP FIFTH. The perfect fifth, increased by the chromatic semitone, consisting of four tones, forming five degrees.

EXTREME SHARP SIXTH. The major sixth, increased as the fifth, consists of five tones, forming six degrees.

EXTREMITY. The last note of any compass of sounds, reckoning from grave to acute, or from acute to grave.

EYBLER, JOSEPH. An organist and pianist at Vienna. He has published much vocal and instrumental music, bearing date between the years 1795 and 1805. Eybler was vice chapel-master to the court.

EZRA mentions two hundred singing men and singing women who came back with him from the captivity at Babylon. What their music was in those days we do not so well know. It is probable that it was a mixture of several voices, all singing together in the same tune, and that it consisted of only one part, and was not made up, as now, of bass, tenor, treble, &c. They also accompanied singing with music on instruments, of which they had very many kinds, such as the harp, the pipe, the viol, the tabret, the lyre, the psaltery, the cymbal, the sackbut, the flute, trumpet, drum, &c. You will find singing mentioned in nearly every book, in both the Old and New Testaments, and sometimes in every chapter for a considerable space together.

F.

F is the subdominant or nominal of the fourth note in the natural diatonic scale of C, thus : —

This note is called *Fa* by the French and the Italians. The letter F is also used as an abbreviation of *forte*, *fortissimo*, &c. For an increased loudness, the letters are doubled ; as, *ff*, or trebled, *fff*.

FA is the name given by Guido to the fourth note of his hexachord. In the natural hexachord, it is expressed by the letter F, and is applied as a syllable, in solfaing, to the fourth degree of every scale.

FABER. A native of Freiburg, in the grand duchy of Baden, and inventor of the *Sprachmaschine*, (speaking machine,) which was capable of uttering words and singing. He was formerly attached to the Observatory at Vienna, but owing to an affection of the eyes, was obliged to retire upon a small pension ; he then devoted himself to the study of anatomy, and soon offered the result of his investigations, and their application to mechanics, in the speaking machine.

FABER, BENEDICT. A celebrated German composer of sacred music at the beginning of the seventeenth century.

FABRE, ANDRÉ, was born at Riez in 1765. He published at Paris, about the year 1800, some piano-forte music, also several admired romances, especially the one called "Raimonde."

FABRE D'OLIVET, M., was born in 1768 in Languedoc. He is well known as the author of "*Lettres à Sophie sur l'Histoire*." He was likewise a good musician, and published many romances, and some instrumental music.

FABRICI, DON PIETRO, a Florentine monk, published at Rome, in 1678, "*Regole di Canto firmo*."

FABRICIUS, WERNER, an organist at Leipzig, published, towards the middle of the seventeenth century, much vocal music, also some pieces for the organ. He died in 1679.

FA BURDEN. A term applied by the old English musical writers to a certain species of counterpoint.

FACCO, GIACOMO, an instrumental composer, published twelve concertos at Amsterdam in the year 1720.

FACILITA. (I.) Ease, facility ; as, *con facilità*, with facility, in an easy manner.

FACKELTANZ. (G.) Torch dance. A very pompous, march-like kind of dance, much prac-

tised in old times, with imposing festal music and in which the dancers carried torches.

FADINI, ANDREA, an instrumental composer, published twelve sonatas at Amsterdam in 1710.

FAGO, NICOLO. A celebrated Italian composer about the year 1700. He was a pupil of Alessandro Scarlatti, and studied in the Conservatory *Dei Poveri di Giesu Cristo*, which he afterwards directed, as well as that of *La Pietà*. Fago's compositions were both for the church and theatre. "Eustachio" is the most celebrated of his operas.

FAGOTTO, or FAG. (L.) Bassoon. See that word. There was formerly in use a large bassoon, an octave lower in tone, called *fagottone*.

FAIGNIENT, NOE. A composer of madrigals and other vocal music, published at Antwerp between the years 1568 and 1595.

FAIRFAX MANUSCRIPT. A very curious and valuable manuscript, supposed to have been written before 1511, has been preserved in the British Museum, which once belonged to Dr. Robert Fairfax, or Fayrlax, an eminent English composer in the reigns of Henry VII. and VIII. ; it was afterwards in the possession of General Fairfax, and in the year 1777 was the property of Mr. White, of Newgate Street — a collection of very ancient English songs, the music of which has been carefully preserved. The writing is clear and intelligible, though, from the times in which it was written, the want of modern punctuation in some parts renders it difficult to be ascertained. In the year 1512, the third year of Henry VIII., a memorandum is made that three minstrels were retained as a part of the household of the Earl of Northumberland, viz., a taberet, a bugle, and a rebee ; every minstrel, if a taberet, to be paid four pounds, and every bugle and rebee thirty-three shillings and fourpence. Dr. Fairfax wrote as early as 1500. His music was not barred.

FA LA. A short song set to music, with a repetition of the syllables *Fa La* at the second and fourth line, and sometimes at the end of every stanza. *Fa La's* were much in fashion during the seventeenth century, and are to be found in the works of Morley, Hilton, and other eminent composers.

FALCO published, about the year 1776, in London, his Op. 2, consisting of six solos for the violin. He also published some solfeggi in 1780.

FALCONIUS, PLACIDUS, a Benedictine monk, composed some church music, published at Venice between the years 1575 and 1588.

FALKNER. A German musician, resident in England about the year 1760, and author of a work entitled "Instructions for playing the Harpsichord, Thorough Bass fully explained

and exact Rules for tuning the Harpsichord." London.

FALSE. An epithet applied by theorists to certain chords, because they do not contain *all* the intervals appertaining to those chords in their perfect state; as a fifth, consisting of only six semitonic degrees, is denominated a *false fifth*. Those intonations of the voice which do not truly express the intended intervals are called false, as well as all ill-adjusted combinations; and those strings, pipes, or other sonorous bodies, which, from the ill disposition of their parts, cannot be accurately tuned, are called false. Certain closes are likewise termed false, in contradistinction from the full or final close. We apply false, in music, to any violation of acknowledged or long-established rules, to any thing imperfect, or incorrect.

FALSE ACCENT. When the accent is removed from the first note of the bar to the second or fourth, it is called a *false accent*. This, by disturbing the rhythm, imparts a peculiar movement to the strain, upon which depend its leading features and character, as instanced in national airs, the polonaise, the waltz, the polka, &c.

FALSE FIFTH. An interval containing six semitonic intervals, and consequently smaller than the perfect fifth.

FALSE INTONATION. The reason that false intonation so generally prevails, is the want of sufficient attention to tuning and managing the voice. The following positions of the voice are requisite to good intonation. First, place the voice at the back part of the throat, as is done in pronouncing the word *alt*; a second may be produced by the means of the vowel *a*, as pronounced in the word *art*; and a third upon the vowels *ea*, as pronounced in the word *earth*. These several positions will give that sweetness and fullness of tone which constitute what the Italians call a "*roce di petto*," and will bring the vocal organs into that position most proper for acquiring a correct and rapid execution.

FALSETTO. (I.) That species of voice in a man, the compass of which lies above his natural voice, and is produced by artificial constraint. In the voices of men, the *roce di testa*, or high register of the voice, is sometimes termed a falsetto, or feigned voice, the tone of which is similar to the constrained effect produced by overblowing an organ pipe or a flute. This fictitious voice is abandoned by the composers of the present day, as being devoid of strength and expression. — Falsette, or Falset, is that part of a person's voice which lies above the natural compass, and which generally is somewhat untrue.

FALSO BORDONE. (I.) A term applied, in the early days of descant, to such counterpoint as had either a drone bass, or some part constantly moving in the same interval with it.

FANCIES. An old name for little lively airs or tunes.

FANDANGO. A dance much practised in Spain, and of which the natives of that country are particularly fond. Its air is lively, and much resembles the English hornpipe. The *seguidilla* is another kind of dance peculiar to the Spaniards; it in some respects resembles the fandango, though it is a more decent dance. The *bolero* is another species of the fandango; its motions and steps very slow and sedate, but growing rather more lively towards the end. In all these dances, the time is beat by castanets.

FANFARE. (F.) A short, lively, loud, and warlike piece of music, composed for trumpets and kettle drums. Also, small lively pieces, performed on hunting horns, in the chase. From its first meaning is derived *fanfaron*, a boaster.

FANTASIA, (I.) or **FANTASIE.** (F.) The name generally given to a species of composition supposed to be struck off in the heat of imagination, and in which the composer is allowed to give free range to his ideas, and to

disregard those restrictions by which other productions are regulated. Some writers limit the application of this term to certain extemporaneous flights of fancy, and say that the moment they are written, or repeated, they cease to be fantasias. This, they add, forms the only distinction between the fantasia and the capriccio. The capriccio, though wild, is the result of premeditation, committed to paper, and becomes permanent; but the fantasia is an impromptu, transitive and evanescent, exists but while it is executing, and when finished is no more. Fantasias being, however, daily written and published, it is evident in which of the above senses the word is now to be understood. The term *fantasia*, which means fancy, something imagined, is frequently misapplied, and its meaning is now almost unknown to many. A fantasia, according to the modern acceptation of the word, is a continuous composition, not divided into what are called movements, or governed by the ordinary rules of musical design, but in which the author's fancy roves under little restraint. It is written as it would extemporaneously have proceeded from the finger of a ready and powerful genius; that is, it shows all the characteristics of sudden thought and immediate development.

FANTASIREN. (G.) To improvise, to play in the fantasia style.

FARCE. A musical farce is a short, extravagant comedy, the dialogue of which is interspersed with suitable airs, arranged for the voice with instrumental accompaniments.

FARINA, CARLO, of Mantua, published, in 1628, "Pavans and Sonatas for the Violin," and was a celebrated performer on that instrument, in the service of the Elector of Saxony.

FARINELLI, called also *Carlo Broschi*. This renowned singer, whose voice and abilities surpassed the limits of all anterior vocal excellence, was born at Naples in 1705. He was instructed in the rudiments of music by his father, and in singing by Porpora. In 1722, at the age of seventeen, he went from Naples to Rome, with his master, then engaged to compose for the Alberti Theatre, where Farinelli contended with a famous performer on the trumpet. Every night, during the run of an opera, this struggle was repeated, which, at first, seemed amicable and sportive, until the audience began to interest themselves in the contest. After severally swelling out a note, in which each manifested the power of his lungs, and tried to rival the other in brilliancy and force, they had both a swell and a shake together, by thirds, which was continued so long, while the audience eagerly waited the event, that both seemed to be exhausted; and, in fact, the trumpeter, wholly spent, gave it up, supposing, however, his antagonist as much tired as himself, and that it would be a drawn battle; when Farinelli, with a smile on his countenance, showing he had only been sporting with him all this time, broke out, all at once, in the same breath, with fresh vigor, and not only swelled and shook upon the note, but ran the most rapid and difficult divisions, and was at last silenced only by the acclamations of the enraptured audience. From this period of his life may be dated that superiority which he ever maintained over

all his contemporaries. In the early part of his life, he was distinguished by the name of "Il Ragazzo," (the Boy,) as Homer was called "the Poet," and Swift "the Dean." From Rome, Farinelli went to Bologna, where he had the advantage of hearing Bernacchi, a scholar of the famous Pistocchi, of that city, who was then the most scientific singer in Italy. Thence he went to Venice, and from Venice to Vienna, in both which cities his powers were considered as miraculous. Farinelli himself told Dr. Burney, that at Vienna, where he received great honors from the Emperor Charles VI., (and admonition from that prince was of more service to him than all the precepts of his masters, or the examples of his competitors,) his imperial majesty condescended one day to tell him, with great mildness and affability, that in his singing he neither moved nor stood still like any other mortal; all was supernatural. "Those gigantic strides," said he, "those never-ending notes and passages, (*ces notes qui ne finissent jamais*) only surprise, and it is now time for you to please. You are too lavish of the gifts with which nature has endowed you: if you wish to reach the heart, you must take a more plain and simple road." These judicious remarks effected an entire change in his manner of singing: from this time he united pathos to spirit, simplicity with the sublime, and by these means delighted, as well as astonished, every hearer. In the year 1734, he went to England, where the effects which his surprising talents had upon the audience were ecstacy, rapture, enchantment! In the famous air "*Son qual Nave*," which was composed for him by his brother, the first note he sang was taken with such delicacy, swelled by minute degrees to such an amazing volume, and afterwards diminished in the same manner to a mere point, that it was applauded for full five minutes. After this, he set off with such brilliancy and rapidity of execution, that it was difficult for the violins of those days to keep pace with him. But it was not in speed only that he excelled, for he united the perfections of every celebrated singer. His voice was equally eminent for strength, sweetness, and compass; and his style equally excellent in the expression of tenderness, grace, and rapidity. In a word, he possessed such powers as were never before or since united in any one singer — powers that were irresistible, and which subdued every hearer, the learned and the ignorant, the friend and the foe. With these talents he went to Spain, in the year 1737, intending to return to England, having entered into articles with the nobility, who had, at that time, the management of the Opera, to perform during the ensuing season. In his way thither, he sang to the King of France, at Paris; where, according to Riccoboni, he enchanted even the French themselves, who universally abhorred Italian music. The very first day he performed before the Queen of Spain, it was determined he should be taken into the service of the court, to which he was ever after wholly appropriated, not being once permitted to sing in public. A pension was then settled upon him for life, amounting to upwards of two thousand pounds sterling. He told Dr. Burney, that, for the first ten years of his residence at the court of Spain during the reign of Philip V., he sang to that monarch, every night, the same four airs, two of

which were "*Pallido il sole*," and "*Per questo dolce amplesso*," both composed by Hase. He was honored also by his first royal master, Philip V., with the order of St. Jago, and by his successor, Ferdinand VI., under whom also he continued in favor, with that of Calatrava, in 1750. His duty now became less constant and fatiguing, as he persuaded this prince to patronize operas; which were a great relief to Farinelli, who was appointed sole director of these performances, and engaged the best Italian singers and composers, as also Metastasio for poet. The goodness of Farinelli's heart, and the natural sweetness of his disposition, were not exceeded even by the unrivalled excellence of his vocal powers, as some of the following anecdotes will testify. It has been often related, and generally believed, that Philip V., King of Spain, being seized with a total dejection of spirits, absolutely refused to be shaved, and was, in other respects, incapable of transacting the affairs of the state. The queen, who had in vain tried every common expedient that was likely to contribute to his recovery, determined that an experiment should be made of the effects of music upon the king, her husband, who was extremely sensible of its charms. Upon the arrival of Farinelli, of whose extraordinary performance an account had been transmitted to Madrid, her majesty contrived that there should be a concert in the room adjoining the king's apartment, in which this singer executed one of his most captivating songs. Philip at first appeared surprised, then affected, and, at the conclusion of the second air, commanded the attendance of Farinelli. On his entering the royal apartment, the enraptured monarch overwhelmed him with compliments and caresses, demanding how he could sufficiently reward such talents, and declaring that he could refuse him nothing. Farinelli, previously instructed, only entreated that his majesty would permit his attendants to shave and dress him, and that he would endeavor to appear in council as usual. From this moment the king's disease submitted to medicine, and the singer had the whole honor of the cure. By singing to his majesty every evening, his favor increased to such a degree, that he was regarded as a prime minister; but what was still more extraordinary, and most highly indicative of a superior mind, Farinelli, never forgetting that he was only a musician, behaved to the Spanish nobles attendant upon the court with such unaffected humility and propriety, that, instead of envying his good fortune, they honored him with their esteem and confidence. The true nobility of this extraordinary person's soul appears still more forcibly in the following rare instance of magnanimity. Going one day to the king's closet, to which he had at all times access, he heard an officer of the guard curse him, and say to another, "Honors can be heaped on such scoundrels as these, while a poor soldier, like myself, after thirty years' service, is unnoticed." Farinelli, without seeming to hear this reproach, complained to the king that he had neglected an old servant, and actually procured a regiment for the person who had spoken so harshly of him in the antechamber, and on quitting his majesty, he gave the commission to the officer, telling him he had heard him complain of having served thirty years, but added, "You did wrong to accuse th.

king of neglecting to reward your services." The following story, of a more ludicrous cast, was frequently told and believed at Madrid, during the first year of Farinelli's residence in Spain. This singer, having ordered a superb suit of clothes for a *gala* at court, when the tailor brought them home, he asked for his bill. "I have made no bill, sir," said the tailor, "nor ever shall make one. Instead of money, I have a favor to beg. I know that what I want is inestimable, and only fit for monarchs; but since I have the honor to work for a person of whom every one speaks with rapture, all the payment I shall ever require will be a song." Farinelli tried in vain to persuade the tailor to take his money. At length, after a long debate, giving way to the earnest entreaties of the humble tradesman, and perhaps more highly gratified by the singularity of the adventure than by all the applause which he had hitherto received, he took him into his music room, and sang to him some of his most brilliant airs, delighted with the astonishment of his ravished hearer; and the more he seemed surprised and affected, the more Farinelli exerted himself in every species of excellence. When he had concluded, the tailor, overcome with ecstasy, thanked him in the most rapturous and grateful manner, and prepared to retire. "No," said Farinelli; "I am a little proud, and it is perhaps from that circumstance that I have acquired some little degree of superiority over other singers. I have given way to your weakness; it is but fair that, in your turn, you should give way to mine." Then taking out his purse, he insisted on his receiving a sum amounting to nearly double the worth of the suit of clothes. Farinelli, during two reigns, resided upwards of twenty years at the Spanish court, with a continual increase of royal favor, and the esteem of the principal nobility of the kingdom. During his greatest favor at the court of Madrid, he is said to have been no more elated than with the acclamations which his extraordinary talents commanded whenever he sang in public. In the year 1759, Farinelli returned to Italy. After visiting Naples, the place of his nativity, he settled at Bologna, in 1761; in the environs of which city he built himself a splendid mansion, which in Italy is called a *palazzo*. Here he resided for the remainder of his life, in the true enjoyment of affluent leisure. He was remarkably civil and attentive to the English nobility and gentry who visited him in his retreat, and appeared to remember the protection and favor of individuals, more than the neglect of the public, during the last year of his residence in London. When the Marquis of Caermarthen honored him with a visit at Bologna, upon being told that he was the son of his patron and friend, the Duke of Leeds, he threw his arms round his neck, and shed tears of joy in embracing him. This extraordinary musician and blameless man died in 1782, in the seventy-eighth year of his age.

FARINELLI, uncle to the preceding, was composer, violinist, and concert master at Hanover, about the year 1684. He was ennobled by the King of Denmark, and was, by King George I., appointed his resident at Venice.

FARMER, JOHN, an English musician under the reign of Elizabeth, and author of the

following works: 1. "Divers and sundrie Waies of two Parts in one, to the number of fortie upon one playn Song; sometimes placing the Grounde above and two Parts benethe, and otherwise the Grounde benethe and two Parts above. Or again, otherwise the Grounde sometimes in the Middelst betweene both. Likewise other Conceites which are plainlie set downe for the Profite of those which would attaine unto Knowledge;" by J. Farmer, London, 1591. 2. "The first Sett of English Madrigals to four Voyces," London, 1599.

FARMER, THOMAS, originally one of the waits in London, was nevertheless admitted to the degree of bachelor in music of the University of Cambridge, in 1684. He composed many songs, printed in the collections of his time, and particularly in "The Theatre of Music," and "The Treasury of Music," and was the author of two very fine collections of airs, the one entitled "A Consort of Music in four Parts, containing thirty-three Lessons, beginning with an Overture;" and another, "A second Consort of Music in four Parts, containing eleven Lessons, beginning with a Ground;" both printed in oblong quarto, the one in 1685, the other in 1690. In the *Orpheus Britannicus* is an eulogy on his death, written by Tate and set by Purcell, by which it appears that he died young.

FARNABY, GILES, was of Christchurch, Oxford, and, in 1592, admitted bachelor of music. There are extant of his composition, "Canzonets for four Voices, with a Song for eight Parts," London, 1598. He also assisted Ravenscroft in putting parts to some of the psalm tunes published at the beginning of the next century. There are about twenty lessons in Queen Elizabeth's "Virginal Book," by Giles Farnaby, nearly as difficult as those of Bird and Bull.

FARRANT, RICHARD, a fine old composer of church music, was a gentleman of the Chapel Royal in the year 1564, and afterwards master of the children of St. George's Chapel, at Windsor. He was also clerk, and one of the organists. On his appointment to the latter office, however, he resigned his place in the chapel; but being called to it again, he held it till 1580. He is supposed to have died in the year 1585. His compositions are in a remarkably devout and solemn style: many of them are printed in Barnard's collection of church music, and a few in Dr. Boyce's cathedral music. The full anthem, "Lord for thy tender mercy's sake," is at this day in frequent use; and Dr. Crotch, who has inserted it in his work, has justly observed that "it is remarkable for its serene effect, and for being as beautiful as the nature of plain counterpoint will admit."

FARRENC. A flutist and composer for his instrument, born at Marseilles about 1795. He was a pupil of Berbiguier. He has published many compositions for the flute which are highly esteemed.

FASCH, JOHANN FRIEDRICH, was born in Germany in 1688, and died in 1759. He composed some good church and instrumental music.

FASCH, CARL FRIEDRICH CHRISTIAN, son of the preceding, was chamber musician to

the King of Prussia, and pianist at Berlin. He died in 1800. Fasch composed much highly-esteemed church music, and also some piano-forte music. His Op. 1 consists of "Three Church Cantatas," anthems. 2. "A Miserere." 3. "A Mass," of great merit. 4. "Psalmus." 5. "A Kyrie." 6 and 7. "Two Cantatas." 8. Some very ingenious "Canons." 9. "A Lesson for the Piano-forte." 10, 11, and 12. "Psalms."

FASTOSO. (I.) With a lofty and splendid style of execution.

FAUSTINA. See **HASSE.**

FAUX BOURDON, F. See **FALSO BORDONE.**

FAVANTI, alias **MISS EDWARDS,** made her *début* at the Italian Opera House, London, in 1844, with success. She possesses a powerful, rich, and pleasant voice, without a single weak note. On her first appearance, such was the intensity of her feelings that she fell apparently lifeless, within a few steps of the stage, on retiring; but by medical aid she soon recovered, and at subsequent appearances was received with the most flattering plaudits of the house.

FAVI, ANDREA, an Italian composer at Forli, in Italy. He is the author of the opera buffa called "*Il Creduto Pazzo*," performed at Florence in 1791.

F CLEF. This is a compound character, formed originally of three notes, one placed on the line, and two others in the adjoining spaces. The F clef must be placed on the fourth line of the staff, so that the two dots are in the third and fourth spaces; all the notes on that line are called F; the other degrees take their names from that, as the clef line. The C clef was distinguished from the F by having only the two notes in the spaces; and these clefs were adapted in the Gregorian, while colored lines were used for the more ancient Ambrosian Chant. When the added lines between the treble and the bass frequently occur, it is usual in old music to find the C clefs in both upper and lower staves. Before the invention or introduction of the clef, letters were placed upon the line, signifying the same thing as the clefs, thus:—

The clefs as now established, and the letters as applied to the staff with the F and G clefs, are also stationary.

FEBURE, ANTON. See **LEFEBURE.**

FEBURE, JEAN I.E. Chapel master at Mentz, and composer of church music between the years 1595 and 1609.

F DUR. (G.) F major.

FEDERICI, VINCENZO, a native of Pesaro, was member of the conservatory at Milan, and a dramatic composer of merit. He went to England in 1790, and several of his serious operas were performed about that time in London, where he also published some sonatas for the

piano-forte. Two of the songs from his opera "*I Giochi d'Agrigento*," and two from "*Teodolinda*," have been printed by Birchall. The aria "*Grazie ti rendo*" of Federici is one of his most admired vocal compositions, and was frequently sung at private concerts.

FEBRE, J. A., Jr. A pianist in Germany and composer of music for his instrument, published at Riga and other towns in Germany between the years 1792 and 1797.

FEIGNED. An epithet applied to a certain description of voice. A falsetto is a feigned voice.

FELDMAYER, JOHANN. An organist and composer at Berchtoldsgaden, in the duchy of Salzburg. He published some sacred music at the beginning of the seventeenth century.

FELICI. An Italian dramatic composer about the year 1768; he also composed some quatuors for the violin.

FELTON, REV. WILLIAM, prebendary of Hereford, was celebrated in his time (about the middle of the eighteenth century) for a neat and rapid execution on the organ and the harpsichord. He published three sets of concertos for these instruments, in imitation of those of Handel, and two or three sets of lessons, which have been in considerable request. They are not, however, now to be met with, except occasionally among collections of second-hand music.

FEMALE FLUTE PLAYERS. Horace speaks of bands of female flute players and of schools for their instruction. There were many who were celebrated, in their time, as flute players; the most renowned of these was Lamia. She was beautiful and witty, and a prodigy in her profession. An exquisite engraving of her head on an amethyst was in the collection belonging to the King of France, which is sufficient to prove that history has not exaggerated the beauty of her person. She travelled from Athens to Egypt in order to ascertain the merits of the famous flute players of the latter country. Her person and performance soon attracted the notice of the court of Alexandria. In the conflict between Ptolemy, Sates, and Demetrius, for the Island of Cyprus, about 312 years before Christ, Ptolemy being defeated at sea, his wife, servants, and military stores fell into the hands of Demetrius. Lamia was among the female captives; though her beauty was on the decline, and Demetrius much younger than herself, yet her conqueror became completely her captive; at her instigation he conferred on the Athenians extraordinary benefits. In Horace we find mention made of whole bands of female players, but as they became numerous, so their manners became licentious, and so much so that their occupation was forbidden in the code of Theodosius.

FEMALE SINGERS. The first hymn to the Supreme Being upon record, is that where Miriam, the sister of Moses, took a timbrel in her hand, and sang the song of thanksgiving, after escaping the dangers of the Red Sea. And all the women went after her with timbrels. The songs of Deborah and Barak are mentioned in Judges as being sung without instruments.

Della Valle, speaking of the female singers of his time, says of some at Rome, "Who hears without rapture Signora Leonora sing to her own accompaniment on the arch-lute, which she touches in so fanciful and masterly a manner? And who will venture to say which is the best performer, she or her sister, Caterina? Nor is there one who, like me, has seen and heard Signora Adriano, their mother, when, during her youth, she sailed in a felucca, near the Pausilippan grotto, with her golden harp in her hand, but must confess that in our times these shores were inhabited by Sirens that are not only beautiful and tuneful, but virtuous and beneficent." He mentions the nuns of his time, and says that those of the two convents at Rome had for many years astonished the world; he also mentions those of several other places, whom the people flocked to hear as miraculous. He asserts that he brought the Sicilian airs to Rome from Naples in 1611, and afterwards from Sicily. There were many celebrated female singers who had sung in operas in the sixteenth century. One writer gives a list of about fifty. One of them was frequently encored, as early as 1608, at Mantua, in the opera of Dafne. She died the same year, when only eighteen, to the great regret of the Duke of Milan and all Italy. Another, who was the original singer of the part of Euridice, in Peri's opera, is said to have drawn tears from every hearer.

FEMY, HENRI. A French violocellist and composer for his instrument since the year 1810. He obtained the violoncello prize at the Paris Conservatory in 1808.

FENAROLI, FIDELE, was born at Naples in 1734, and educated at one of the conservatories there. He was for some years principal of the conservatory of *La Pietà* in that town. Fenaroli published a small work, entitled "*Regole per gli Principianti da Cembalo*," which is succeeded by a collection of "*Partimenti*," forming an excellent series of lessons in fundamental bass. Choron, the celebrated French composer, republished this work in Paris, with additions; and a young composer, named Imbimbo, has also published a supplement to this work.

FE0, FRANCESCO, born about the year 1699, was a pupil of Gizzi. This composer, equally celebrated by his labors for the church and theatre, and for his ability in teaching his art, founded a school for singing at Naples, to which that city and the whole of Italy owed a great number of singers, as famous for the beauty of their voices as for their talent and skill in the use of them. This school spread the reputation of its founder throughout Europe. Feo commenced his labors by composing for the church: he displayed talents worthy of the style, and his works were distinguished for their grandeur and strength, science and energy. Satisfied with the approbation bestowed by his fellow-citizens on his superb masses, and among others on a justly celebrated "*Kyrie*," he next devoted himself to the theatre, and composed several operas, among which his "*Ariana*" and "*Arsace*" are preëminent. From the latter Gluck borrowed a motive for his overture of "*Iphigenia*." After having thus shone equally in compositions for the church and theatre, he at length devoted himself entirely to instruction;

and it was he who completed the musical education of Jomelli. The talents and labors of Feo procured him a high station among the classical composers of the most brilliant school of Italy. Besides his operas, there remain some of his masses, psalms, and other pieces for the church, which complete the nomenclature and the merit of his works.

FERABOSCO, ALPIONSO, Sen., an Italian composer of madrigals and motets, about the year 1544. Peacham says of Ferabosco's madrigals, "They cannot be better'd for sweetness of ayre and depth of judgment."

FERABOSCO, ALPHONSO, Jr., son to the preceding, was born at Greeuwich, in England. He composed some songs at the beginning of the seventeenth century.

FERANDEIRO, DON FERN. A Spanish guitarist, and author of an excellent method for his instrument, published at Madrid in 1799.

FERANDINI, GIOVANNI. Director of the music, and counsellor to the Elector of Bavaria, at Munich, in 1786. About the year 1760, he made himself known by several compositions for the viol and guitar. In 1756, he composed, for the court of Parma, the opera called "*Il Festino*," the words by the celebrated Goldoni. Ferandini died at Munich, in 1793, at an advanced age.

FERDINAND III., Emperor of Austria between the years 1637 and 1650. All historians agree in representing this prince as an excellent connoisseur and composer of music. Wolfgang Ebner, court organist at Vienna, published, in 1646, an ariette, with thirty-six variations, the composition of this prince.

FERDINAND, PRINCE FRIEDRICH CHRISTIAN LUDWIG, of Prussia, was born in 1792, and was an excellent pianist. He was killed in an engagement with the French army in the year 1806. Nine operas of piano-forte music, the composition of this prince, have been published at Leipsic and Paris.

FERLENDIS, GIUSEPPE, a celebrated performer on the hautboy, was born at Venice. He went to London in 1793, at the same time with Dragonetti, and afterwards, we believe, settled at Lisbon. Ferlendis composed much music for his instrument.

FERLENDIS, ALEXANDER, younger son to the preceding, was born at Venice, in 1783. He was a pupil of his father on the hautboy and English horn. His playing was greatly admired at Paris, and several other of the European capitals.

FERMATA. (I.) A pause, or hold, thus marked, 

FEROCE, CON FEROCITA. (I.) Fiercely, with an expression of ferocity.

FEROCE. A Florentine composer. Dr. Burney speaks highly of a mass by Feroce, which he heard at Florence in 1770.

FERRADINI, GIOVANNI. A flutist and composer for his instrument. Some of his works were published at Amsterdam, in 1799.

FERRANDINI, ANTONIO, a Neapolitan

composer, born in 1718, left the Conservatory at an early age, and after having travelled throughout Italy, where he was remarkable for more than one learned and agreeable composition, repaired to Germany, to make himself acquainted with its masters, productions, and theatres. He acquired many friends, and nature had bestowed on him very estimable qualities. His travels finished, he settled at Prague. This city, as well as the whole of Bohemia, is particularly favorable to music, in consequence of the number of inhabitants by whom it is cultivated, and of masters who teach it. It appears that the works of Ferrandini were admired; but the justice rendered to his merit did not save him from misfortune. He had especially adopted the ecclesiastical style, and in this he particularly excelled. He composed, amongst other pieces, a "Stabat Mater," which was long sung in Prague, and generally admired. He died in 1779.

FERRARI, BENEDETTO, a native of Reggio, was both a poet and a musician. He resided principally at Venice, where, about the year 1638, he established an opera, which he himself superintended, and for which he was both poet, composer, and singer. His best known operas are those of "Armida," composed in 1630, and "Il Pastor reggio," in 1640. But in these there are no airs, the dialogue being only carried on in recitative. Ferrari was himself so excellent a performer on the lute, that he has not unfrequently been styled *Ferrari della Tiorba*.

FERRARI, GIACOMO GOTIFREDO, the son of Francesco Ferrari, a respectable merchant and silk manufacturer at Roveredo, in the Italian Tyrol, was born in 1759. G. G. Ferrari, after the usual course of study in the public school at Roveredo, was sent by his father to Verona, to finish his education under the Abbate Pandolfi. There he began *sol fa*, and to learn thorough bass, first under Abbate Cultri, and subsequently under Marcola, and at the same time to play on the harpsichord, under Borsaro; these being esteemed the first masters at Verona at that time. Ferrari showed immediately a great natural genius for music, and, in the course of two years, sang, accompanied, and played at sight. He then returned to Roveredo, and was taken into his father's counting house. But music was already so much his delight, that he determined in his own mind to become a composer, and to learn the theory of every instrument for that purpose. He persuaded his father to let him learn to play on the flute; assigning as a reason, that being on the change of his voice, and therefore unable to sing, the study of the flute would prevent him forgetting his singing. His father, who could refuse him nothing, agreed to his request, and in a few months afterwards he played with fluency on that instrument. After this, his family conceiving that he became too much attached to music, he was sent to Marienberg, near Chur, in the German Tyrol, with the intention of being instructed in the German language. But the good man, his father, did not imagine that the institution of the convent and college of Marienberg, was, that the thirty-two monks belonging to it should be all musicians, and could not enter into it without having proved that they could sing or play upon some instrument at sight; that every day, and sometimes two or three times a day, sacred music

was performed in the church of the convent; and that the scholars belonging to the college had the right to receive instructions in any branch of music they liked, by paying only ninety Tyrolese florins (eight pounds sterling) a year, including board in a luxurious style, a bed room to each, washing and instructions, and no extra charge. Here Ferrari perceived that he was in a situation agreeable to his wishes. By constantly hearing both sacred and profane music performed, and by copying a great deal of it, he became a solid musician at an early period of life. He pursued his other studies at school just for the sake of not being punished; but music was his forte. He learned also to play on the violin, hautboy, and double bass, in a slight manner, of course, but well enough to be able to take his first part with other instruments. The celebrated fuguist Pater Marianus Stecher, who was the school-master, gave him also a great many lessons on the piano-forte and in thorough bass. After spending two years at Marienberg, Ferrari returned again to his father's counting house, where he attended for three years, but more from obedience than inclination. His father then died, and being ill treated by his partners, he determined, without further delay, to try his fortune as a composer. Prince Wenceslas Lichtenstein, who was then on his way to Rome, took young Ferrari with him. From thence he repaired to Naples, with the intention of taking lessons in counterpoint from Paisiello; but that great dramatic composer, having no time to spare, recommended him to Latilla, an able contrapuntist, under whom he studied for two years and a half. At the same time, however, Paisiello gave him advice, and, as a friend, instructed him almost daily in theatrical composition. At that period, M. Campan, *maître d'hôtel* to the Queen of France, offered to take him on a tour through Italy, and from thence to Paris, which proposition was accepted. M. Campan introduced him to his wife, *première femme de chambre* to the queen, and Madame Campan introduced him to her majesty, whom he had the honor to accompany on the piano for several hours. Her majesty approved his manner of accompanying, and also admired some Italian *notturni* of his composition which he sang to her. Some time afterwards, the queen sent Madame Campan to inform Ferrari, that it was her intention to appoint him her singing master, should the public affairs take a good turn; but the revolution came rapidly on, and every thing was overthrown. When the *Théâtre Feydeau* was built in Paris for the Italian opera, Ferrari was appointed conductor, when he composed several pieces of music, which were received with great applause. In the year 1791, having witnessed the horrors of the French revolution, he emigrated to Brussels and Spa, where he gave concerts. He also composed there, and performed a concerto and several sonatas, which were favorably received. He was, however, never a very great player, but his feelings, taste, and compositions made him appear greater in that respect than he really was. In the same year, he set the opera "*Les Evénemens imprévus*," for the *Théâtre Montansier*, which was very much admired, although it had been composed before by Gretry. The favorite duet of "*Serviteur à Monsieur la Fleur*" was rapturously encored; also, after the opera was over, Ferrari was called out. During the four years

he remained in Paris, he composed and published several Italian *notturmi*, duets, modern canons for three voices, some sets of romances, the favorite of which are "*Théonie, pour aimer j'ai recu la vie*," "*A l'ombre d'un myrthe fleuri*," "*Quand l'amour naquit à Cythère*," &c., several sets of sonatas for the piano-forte, and for the piano-forte and violin, or flute, &c., &c. Ferrari was next engaged as a composer to the Theatre Montansier, with three hundred louis d'or a year; but, fearing that the public affairs would become worse and worse, he emigrated to Brussels, and in the year 1792 to London, highly recommended to some of the first noblemen's and gentlemen's families, as well as to several foreign ambassadors, by whom he was constantly well received and employed for musical tuition, particularly in singing. His first composition in London was performed at Salomon's concerts, and was a recitative and rondo, "*Se mi tormenti amore*," sung with great success by Simoni. In the course of thirty-one years' residence in London, he composed a great many pieces for public concerts, and for the Opera House, some of which are, "*Io son capriccioso*," "*Nospiro e mi vergogno*," "*Belle Enee abbandonate*," "*Quando verrà la sopra*," "*Qu' Zimira che adora*," "*Per pietà ben mio perdona*," "*Le belle mie speranze*," "*Solo amor*," "*Tornate al prato*," "*V' e come nobile*," "*Vedete Vedete*," "*Senti dirò così*," "*Scena di Petrarca*," "*Sento nel core*," "*Un bacio tenero*." He also composed four Italian operas, two of which became favorites, "*I duè Seizzeri*," and "*L'Eroina di Raab*;" two ballets, "*Borea e Zeffiro*," and "*La Dama di Spirito*;" a great deal of music *di camera*, such as sets of Italian and English canzonets, duets *canone* for three voices, sets of sonatas for the piano-forte, sometimes with an accompaniment for the violin, violoncello, flute, &c.; a great many duets and divertimentos for the harp and piano-forte, the first of which (Op. 13) has been deemed quite a model for a duct for those instruments. In the year 1804, he married Miss Henry, a celebrated piauist, by whom he had a son and a daughter. In the year 1809, he was afflicted with a complaint in his eyes, and was blind for nearly three years. At this period he used to dictate his compositions to his friends; but at length he recovered well enough to be able to write for himself, with the help of a magnifying glass, and to resume his instructions. Ferrari's last compositions are without doubt the best; for, without changing either his school or style, he has followed the modern taste with effect. As a part of his latter compositions, we shall mention "*L'Addio*," "*Studio di Musica teorica e pratica*." We do not know why Ferrari left London for Edinburgh; but he was well received there; his compositions and singing were admired in many private concerts, and his instructions were eagerly sought after in the first families and schools of that metropolis.

FERRARI, MADAME VICTOIRE, wife of the preceding, and daughter of Monsieur Henri, a celebrated dancing-master, was born in 1785. From the age of seven years, she studied music under Kreusser, and acquired such proficiency on the piano, that at nine years old she was introduced to Haydn, and performed before him. Between eleven and twelve she played in public at Raimondi's concerts, before his majesty, who expressed his approbation of her talent.

FERRARI, CARLO. A celebrated violoncelloist and composer for his instrument. Dr. Burney heard him at Parma in 1770, and speaks highly of his talents. He published six solos for the violoncello at Paris.

FERRARI, DOMINICO, brother to the preceding, was a violin pupil of Tartini, and published at London and Paris some violin music, which was much esteemed. He died on a passage from Paris to London in 1780.

FES. (G.) F flat.

FESCA, FRIEDRICH ERNST, concert master to the Grand Duke of Baden, virtuoso on the violin, and composer in all styles, was born in Magdeburg, in 1789, of musical parents. In 1805 he became a member of the theatre and concert orchestra in Leipsic, from which place he was tempted by a better offer, the next year, from the Duke of Oldenburg. But even here his restless spirit sought a higher sphere, which he found, in the spring of 1808, as solo violinist in the new chapel and opera at Cassel, where, through the influence of Reichardt, a brilliant array of talent was assembled and well paid. Here, until 1813, Fesca passed his happiest days, notwithstanding repeated visitations of sickness. Here he came forward publicly, and with honor, as a composer. Here he wrote his first seven violin quartets and his first two symphonies. In 1814, after the dissolution of the kingdom of Westphalia, he went for a few months to Vienna, to visit a brother. Already had his feeble health compelled him to renounce concert playing, so that in Vienna he only performed his quartets in private circles, where they found acceptance, and his playing was warmly admired. In 1815 he became concert master in the chapel of the Grand Duke of Baden. Here, for eleven years, he gave himself chiefly to composition, evidently inclining more and more to the church style. In his psalms, his childlike, pious spirit expresses itself with clearness and beauty; and they reveal a lofty inspiration and an inwardness which he hardly reaches in his other works. He wrote these psalms in certain significant periods of his life; for instance, the 13th psalm, when he lay in a state of hopelessness from long and painful sickness; and the 103d psalm in gratitude for his recovery from repeated attacks of bleeding, which brought him near to death in the spring of 1821. From this sickness he never quite recovered: declining various offers of better situations, he saw his strength waste away, while other bitter experiences made him shy of other men, and drew him into solitude. Only a few friends came near him to revive his drooping spirits for an hour occasionally. Yet in art his soul continued free and active; indeed, his latest works, compared with his earlier, show more cheerfulness, if not even humor. The use of the springs at Eus, in the summer of 1825, appeared to benefit him, and so revived his energies that he wrote an overture for the orchestra, and his last quartet with flute. But this was only the last flickering up of the dying flame; in January 1826, he took to his bed again, which he never left; he longed to die, and on the 24th of May, 1826, his longing was fulfilled. His departure was tranquil. "I see nothing more!" were his last words. Then he had himself seated upright, summoned up his last energies, raised his folded hands in prayer, and expired without

one momentary spasm of death being visible upon his countenance. His head, always beautiful, now manifested a transfiguration which astonished the bystanders. He was scarcely thirty-seven years old. Rochlitz, his biographer, thus speaks of him as a composer: "He belongs among those composers of our day who make less noise than they find sympathy; who are less imposing and transporting than they are apt to excite our respect and good feeling; who are less praised than enjoyed." To praise, as an artist, he was by no means indifferent, but it never led him to sacrifice his convictions of what he thought was right and beautiful in composing. His was a pure, disinterested striving to that end; if he ever failed, it was from mistaken judgment or from sickness. His works, about the merit of which the world is divided in opinion, are quite numerous. For the church he wrote a "Pater Noster," for four solo voices, with chorus, and several psalms; for the theatre, the operas "*Cantemire*" (1819, much admired) and "*Omar and Leila*," (romantic, in 1823; and for the chamber and the concert room, twenty quartets, (for string and wind instruments,) five quintets, (ditto,) three grand symphonies, four overtures, four pot-pourris for violin, one rondo for French horn; and a great many songs and ballads of various characters; among which his Op. 17, consisting of four four-part songs, his four-part song "*An die heilige Cæcilia*," and his Op. 33, (aria, *Ja, des Wiedersehens Freude*, for soprano and organ or piano,) are especially worthy of mention. Some of his songs have been republished to English words, in this country.

FESCENNINE VERSES. So called from the town of Fescennia, in Etruria, where they were first used. They were in the form of a dialogue, between two persons, who satirize and ridicule each other's failings and vices; also a sort of dramatic poem, perhaps extemporaneous. *Fescennina* was the name given to the first nuptial songs. This species of lyric poetry, which was afterwards improved into the epithalamium, though, in its early state, not quite so chaste as modern delicacy would exact, was long sanctioned by the customs of ancient times. The young Romans sang Fescennine verses, particularly at the harvest festivals, accompanying them with mimic motions. The Emperor Augustus prohibited them, as tending to corrupt the public morals.

FESTA, CONSTANTIUS. The compositions of this master are generally considered to be excellent. One of his motets is to be found in the fourth book of *Motetti della Corona*, printed so early as the year 1519. In the third book of Arkadelt's madrigals, published at Venice in 1541, there are seven of Festa's compositions. "In these," says Dr. Burney, "more rhythm, grace, and facility appear than in any production of his contemporaries that I have seen. Indeed, he seems to have been the most able contrapuntist of Italy during this early period, and, if Palestrina and Constantius Porta be excepted, of any period anterior to the time of Carissimi. I could not resist the pleasure of scoring his whole first book of three-part madrigals, from the second edition, printed at Venice in 1559; for I was astonished as well as delighted to find the composition so much more clear, regular, phrased, and unembarrassed, than I expected."

FESTA, LUIGI, a celebrated Italian violinist and composer for his instrument, resided at Naples about the year 1805.

FESTING, MICHAEL CHRISTIAN. A German violinist and composer for his instrument, resident in London in the first half of the last century. He was a pupil of Geminiani. His solos for the violin are well composed, but little known, having been originally sold only by private subscription. To Festing appertains the principal merit in establishing the fund for the support of decayed musicians and their families. This society took its rise in the year 1738, from the following occurrence: Festing, then resident in London, being one day seated at the window of the Orange Coffee House, at the corner of the Haymarket, observed a very intelligent-looking boy driving an ass and selling brickdust. He was in rags, and on inquiry was found to be the son of an unfortunate musician. Struck with grief and mortification that the object before him should be the child of a brother professor, Festing determined to attempt something for the child's support, with the assistance of Dr. Morrice Green. These worthy men soon after established a fund towards the support of decayed musicians and their families.

FÉTIS, FRANÇOIS JOSEPH, the learned musical theorist, critic, and journalist, known also as an industrious composer, was born at Mons, in Belgium, in 1784. He manifested a passion and talent for music at a very early age, and had his first instruction from his father, who was organist at the cathedral and conductor of the concerts in that city. He entered the Conservatory at Paris in the year 1800, where he became the pupil of Rey, in harmony. In 1804 he studied under Albrechtsberger in Vienna. He tried his fortune in many branches of musical composition, not excepting symphonies and the larger forms of church music; but his true vocation more and more developed itself in the sphere of musical learning and criticism. He published first, in 1823, his "*Traité élémentaire d'Harmonie et Accompagnement*" (Elementary Treatise on Harmony and Accompaniment); afterwards, in 1824, a valuable treatise on counterpoint and fugue, "*Traité du Contrepoint et de la Fugue*," which was adopted as the basis of instruction at the Conservatory. His next work was a memoir on the question, "What was the merit of the Flemish musicians in the fifteenth, sixteenth, and seventeenth centuries?" which received a prize from the Royal Institute of the Netherlands. In 1829 he published his "*Traité de l'Accompagnement de la Partition*" (Treatise on the Accompaniment of a Score), and in 1830 his popular little work, which has been translated into English and German, "*La Musique mise à la Portée de tout le Monde*," (Music made plain to all the World.) In 1827, Fétis commenced the publication of his very valuable musical journal, "*La Revue Musicale*," which he continued without interruption till November, 1835, nearly nine years. Of the labor and responsibility of this task we may form some idea from his own description of it in his "*Biographie Universelle*." With the exception of ten or twelve articles, Fétis edited the first five years alone, making an amount of matter equal to about eight thousand octavo pages. During the first three years he gave every week twenty-

four pages of small, close type, and in the fourth year, thirty-two pages of a larger size. During this time he had to be present at all representations of new operas or revivals of old ones, at the *débuts* of singers, at all kinds of concerts; to visit the schools of music; inquire into new systems of teaching; visit the workshops of musical instrument makers, to render account of new inventions or improvements; analyze what appeared most important in the new music; read what was published, in France or foreign countries, upon the theory, didactics, or history of music; take cognizance of the journals relating to this art, published in Germany, in Italy, and in England; and even consult a great many scientific reviews, for facts neglected in these journals; and finally keep up an active correspondence; and all this without neglecting his duties as professor of composition in the Conservatory, or interrupting other serious labors." At the same time M. Fétis edited the musical "*Feuilleton*," in the newspaper "*Le Temps*;" and he says that several times he has written three articles upon a new opera on the same day, amounting in all to about twenty-five octavo pages, namely, one for his own "*Revue*," one for the "*Temps*," and one for the "*National*;" each article considered the opera under a different point of view, and all three appeared the day but one after the performance. Fétis commenced the collection of materials for his great biographical dictionary of musicians as early as 1806. The first volume appeared in 1837, (Brussels: Meline, Cans, & Co.) and the continuation in 1844, (Mayence: Schott & Sons.) It is the most complete work of the kind in existence, filling eight large octavo volumes, under the title of "*Biographie Universelle des Musiciens, et Bibliographie Générale de la Musique*," (Universal Biography of Musicians, and General Bibliography of Music.) It is a work invaluable for reference, though the Germans complain, doubtless with some justice, of the partiality displayed in this and other writings of Fétis. In the year 1833, Fétis was appointed director of the newly-established Belgium Conservatoire at Brussels, which position he still holds. His musical journal has also been revived for some years past, under the title of "*Revue et Gazette Musicale*," at Paris, and principally edited by himself and his son. He has also continued to compose music, to write and publish books and treatises, theoretic, critical, philosophical, and didactic, and to give historical concerts and lectures upon music. For a fuller catalogue of his works, see article Fétis in his "*Biog. Universel*."

FF, PRINCIPALMENTE IL BASSO. Very loud, especially the bass. It is also an abbreviation of *fortissimo*. FFF is still louder.

FEVIN, or FEUM, ANTOINE, a native of Orleans, is mentioned by Glareanus with great encomiums, as a successful emulator of Josquin de Prez, and a youth whose modesty and diffidence were equal to his genius. There are three of his masses, in the collection of masses and motets deposited in the British Museum, all of which are said to be excellent, but particularly the one entitled "*Sanctæ Trinitatis*."

FLASCO. (I.) The technical term for a failure, a complete *break down* in a musical performance. Thus the Italians, and in imitation of

them the *habitués* of operas and concerts, say of a singer, she made a *flasco* of such a piece. Perhaps derived from *flasco*, a round-bottomed *flask*, which cannot stand up.

FIBICK, ANTON, a performer on the trumpet at Prague. He composed some masses previous to the year 1796.

FIDDLE. This instrument is mentioned in the legendary "*Life of St. Christopher*," written about the year 1200.

"Christofre hym served longe:
The kyng loved melodye of fithle and of songe."

The fiddle is a well-known strung instrument, invented before the twelfth century, and in old English called *fithle*, a name supposed by some writers to have been derived from the Latin word *fidicula*, a little lute or guitar. See VIOLIN.

FIDDLER. One who practises, or professes to perform upon, the fiddle, or violin.

FIDLESSTICK. A utensil so called because used in performing on the fiddle. See ARCO.

FIDICINAL. An epithet common to all stringed instruments.

FIELD, JOHN. A native of Bath, and celebrated piano-forte pupil of Clementi. He accompanied his master, in the year 1802, to Paris, where he delighted every one who heard him, playing some of the great fugues of Sebastian Bach with such precision and inimitable taste as to call forth from his Parisian audience the most enthusiastic applause. From Paris he proceeded to Vienna, where Clementi intended to place him under the instruction of Albrechtsberger, and to this Field seemed at first to assent with pleasure; but when the time arrived for Clementi to leave him, and set out for Russia, poor Field expressed so much regret at parting from his master, and so strong a desire to accompany him, that Clementi took him on to Petersburg, in which city he left him with proper introductions. The following summer Clementi revisited Petersburg, and found Field in the full enjoyment of the highest reputation, which he has ever since maintained in that capital, where he continued to reside till 1833, when he revisited London and Paris, and made the tour of France and Italy, with great applause. Sickness detained him in Italy until 1835, when he again returned to Russia. He died January 11, 1837. Field has published many concertos of considerable merit, and much other music for the piano-forte. Among his works are the following: Piano-forte: "First Concerto in E flat." "Second Concerto in A flat." "Third Concerto in E flat." "Fourth Concerto in E flat." "Fifth Concerto, or L'Incendie par l'Orage, in C." "First Divertissement, with Accompaniment of two Violins, Flute, and Bass," Bonn. "Second Divertissement, with Accompaniment of two Violins, Flute, and Bass," Moscow. "Quintet for Piano, two Violins, Flute, and Violoncello." "Rondo, with Accompaniment of two Violins, Tenor, and Bass." "Grand Waltz," London. "Variations to a Russian Air," Leipsic. "Fantaisie and Variation to the Air Ma Zetube," Bonn. "Fantaisie to an Andante by Martini," (Op. 3.) "Fantaisie upon Guarda mi un poco dal capo al piede." "New Fantaisie, upon the Polonoise Ah, quel dommage," (Leipsic.) "Three Sonatas," (Op. 1,) Leipsic. "Rondo Ecossoise,

(ad lib.) "Rondos from his Concertos." "Sonata." "Three Romances," (ad lib.) "Air du bon Roi Henry IV., with Variations." "Exercise in all the major and minor Keys," Leipsic. "Three Nocturnos." "Fourth Nocturno in A." "Fifth Nocturno in B flat." "Sixth Nocturno in F." "Seventh Nocturno in C." "Eighth Nocturno in G." "Rondo, No. 1." "Rondo, No. 2." "Rondo, No. 3." "Rondo, No. 4." "Sonata in B." "Grand Waltz, in A." "Favorite Polonoise, in form of a Rondo, in E flat." "Favorite Rondo in A," dedicated to the Countess d'Orloff. Also some *Nocturnos*, considered his best works.

FIENUS, JOANNES. A composer of madrigals, published in the Netherlands, between the years 1559 and 1580. He died at Dordrecht in 1585.

FIESCO, GIULIO. A madrigal composer about the middle of the sixteenth century. He was born at Ferrara, and his works were all published at Venice.

FIFE, or FIFFARO. A shrill wind instrument of the martial kind, consisting of a short, narrow tube, with holes disposed along the side for the regulation of its tones. It is blown at the side, like the common flute. The first thing to be learned on this instrument is the blowing or filling it sufficiently to sound the notes clear and distinct. Observe, therefore, the lips must be close except just in the middle, to give passage to the wind, and likewise contracted smooth and even.

Then, resting the fife just under the opening of the lips, place the mouth-hole of the fife opposite this opening, and blow aslant into the hole, turning the fife outward or inward till you can make it sound. It is not the great quantity of wind that is wanted to make the fife sound, but the manner of disposing of it, letting it come out quick and in as small a quantity as is necessary, according to the shrillness of the tones you want to produce; the lower the notes are, the more gently you must blow, and the higher they are, the stronger.

When you can thus fill the fife, put down the three first fingers of your left hand upon the three holes nearest the mouth hole, and the three first fingers of your right hand upon the other three holes, placing your thumbs on the opposite side between each of the two first fingers, taking care to stop the holes firm and close; then blow gently, and you will sound the note D. To sound E, take off the third finger of your right hand. To sound F, put down the third finger of your right hand, and take off the second finger. To sound G, take off the second and third fingers of the right hand; and so on for the other notes, as will be seen in the scale below.

There are several kinds of fifes, that is, keyed on different letters. Those in use are from a foot to sixteen inches in length. The longest are B fifes; but those keyed on C are the most common.

The fife is a very simple instrument, and within the reach of all; and it affords a degree of pleasure in playing flowing and lively melodies. The following directions for selecting and using the instrument will be found of value:—

Picking out a Fife.—One with the mouth-hole slightly oval, and not too large, is generally filled the easiest.

Black ebony fifes, or such as are made from heavy wood, with a smooth bore, usually produce tones of the best quality. A fife made from lead or gold, would probably be the most powerful. One with a joint in it is not the better for playing on that account.

Holding and blowing.—Hold it in the left hand; lay it quite down between the thumb and fore finger, the fingers tightly placed on the holes. Put underneath the thumb of the right hand. The fingers the same as for the left.

It will be easily filled, by directing into it a small, smooth current of air, from the mouth, in a slightly oblique direction, which will set the column of air in the fife in vibration, and a shrill sound will be produced. But little wind is required to fill this instrument. Very much depends upon the skill of the performer in adjusting his lips so that none shall be spilled. The learner should not blow as though he were kindling a fire. It will be better understood if we say the wind should be *whistled* into the fife. Every one, in beginning, blows five times as much as is necessary. Nothing like a buzzing should be suffered, which results from the blowing more wind over the hole than is forced into it.

The same sound is made sharp by rolling the fife out; flattened by rolling it in. The learner often supposes that he does not blow properly, when the difficulty results from not completely covering the holes. Sounds in the second scale are produced by blowing a little harder; in the third by blowing with a little more force, and by a different fingering, as may be seen in the gamut for the scales.

Let the scale be learned before attempting to play a melody.

These six dots represent the six holes on the fife; the black dots are the holes stopped; and the small circles represent the fingers off. When you can play the first eight notes, (or octave,) then try to play the next, to perform which, you must draw your lips tighter, and let the wind come out finer and stronger; when you have learned that, then try at the remainder, still forcing the wind out stronger; and then practise the whole from the lowest to the highest, and back again, until you have learned every note perfectly, and can play every note in the gamut without stopping.

FIFFER. A performer on the fife.
FIFFARO (I.) Fife. Same as **FIFFERO.**
FIFFER. (F.) A fife.

FIFTEENTH. An interval consisting of two

octaves; also the appellation given to a certain stop in the organ.

FIFTH. A distance comprising four diatonic intervals: that is, three tones and a half. The fifth is the second of the consonances in the order of their generation. Consecutive fifths are not allowable in harmony, because they do not produce a good effect, and are offensive to the ear. The reason of this is, they have the effect of two successive keys, without the necessary modulation, or connecting link between them; and it is painful to the ear to leave the key in which we are playing or singing, without proper preparation. If consecutive fifths are played, we have exactly the same melody, at the same time, in fifths, in two different keys, the one destroying the effect of the other; so that the pleasing effect of each is lost. There is no more real difficulty or impropriety in fifths or octaves, "perfect concords," as they are called, as such, succeeding each other in similar motion, than there is in any other succession of chords; and it is only where, so succeeding, they become a part of another scale in a new and distant key, that any difficulty is felt, and they are to be avoided; and when no such change is the result, they may be, and are, as freely used as any other succession of chords, whether perfect or imperfect; and a single rule, capable of universal application, a rule always sure, true in all cases, and which never need to be departed from, varied, or excepted to, this simple rule,—that in a progression of chords, whether classed as discords or concords, perfect or imperfect, an abrupt change to a new and distant key, without modulation or preparation, is to be avoided—will include all that need be said, and may supersede all the various and contradictory rules which have been made upon this point.

FIFTH, SHARP. The sharp fifth is an interval consisting of eight semitones.

FIFIN, JAMES. An English musician. He published, in 1801, "The Musical Calendar, or Vocal Year, for one, two, or three Voices, with introductory Symphonies expressive of the four Seasons," London.

FIGURANTES. (F.) Those dancers of a ballet who do not dance singly, but many together, and serve to fill up the background during the exhibition of individual performers. They correspond to the *chorus* in the opera. In the drama, people are called *figurantes* who figure without having to say any thing.

FIGURED. A term applied to that descent, which, instead of moving note by note with the bass, consists of a free and florid melody. A bass accompanied with numerical characters, denoting the harmony formed by the upper or superior parts of the composition, and directing the chords to be played by the organ, harpsichord, or *piano-forte*, is called a *figured bass*. By a figured bass we mean a bass with figures attached to it for the purpose of indicating the harmony. It is a sign or notation of harmony, though not harmony itself. Figured bass indicates the particular chord to be taken in connection with each successive bass tone. Figures were originally used for the purpose of saving the labor and

expense of writing out the parts upon the staff in full. See *BASS THOROUGH*.

FIGURED BASS. This term is also used in another sense, (called sometimes *figural bass*), to denote a bass which, while a certain chord or harmony is continued by the parts above, moves in notes of the same harmony. For example, if the upper parts consist of C, E, G, (the common chord or harmony of C,) and while they are held on, or continued, the *bass* moves from C, the fundamental note of that harmony, to E, another note of the same harmony, that *bass* is called a *figured bass*.

FIGURES OF DIMINUTION reduce the time of the notes over which they are placed one third of their relative length, thus:—

The notes with a figure 3 are called triplets, and when two triplets come together, as in the above example, a figure 6 may be used, which has the same effect over the six notes as the figure 3 has over the three. Diminution takes place when there are a number of words which are to make tones, and several hasty motions in the space of a cadence; several quavers and semiquavers corresponding to a crotchet or minim.

FILIBERI, ORAZIO. A composer of sacred music in the seventeenth century.

FILS. A French violinist, and author of a method for his instrument, published at Paris in 1800.

FILUM. (L.) The name formerly given to the line drawn from the head of a note upwards, or downwards, and which is now called the *tail*, or the *stem*.

FINAL. An old appellation given to the last sound of a verse in a chant, which, if complete, is on the key note of the chant; if incomplete, on some other note in the scale of that key.

FINALE. (I.) A word signifying the last composition performed in any act of an opera, or part of a concert. The finale consists of compositions of various characters. In instrumental pieces, it has mostly a character of vivacity, and requires a quick movement and lively performance. In the opera, the finale mostly consists of a series of compositions for many voices, and of different character and different time and movement.

FIN ALT. The seventh above G in alt; the seventh note in alt.

F IN ALTISSIMO. The octave above F in alt; the seventh note in altissimo.

FINAZZI, FILIPPO. A singer and composer, born at Bergauo in 1710. After performing at the Italian opera at Breslau, and remaining for some years in the service of the Duke of Modena, he purchased a country house near Hamburg, where he married, and remained till his death, which took place in the year 1776. Much of Finazzi's music was published at Hamburg.

FINCH, EDWARD. A deacon of York in the year 1700. In Dr. Tudway's collection of services and anthems are a "Te Deum" and a "Jubilate" of Finch's composition.

FINCK, HERMANN. Author of a work published at Wurtemberg in 1556, under the title "*Practica Musica, Exempla variorum Signorum, Proportionum et Canonum, Judicium de Tonis ac quædam de Arte suaviter et artificiose cantandi.*" This is a very rare book, and contains much valuable matter respecting the early history of music.

FINE, or FIN. (I). The end. *Fine del atto*, end of the act. *Fine del aria*, end of the air.

FINETTI, GIACOMO. A Franciscan monk and composer, born at Ancona. He published much sacred music at Venice in the early part of the seventeenth century.

FINGER. A word metaphorically applied to ability in execution in general, but especially on keyed instruments; as when we say, such a master possesses an expressive or an elegant finger; that lady displays a rapid or a delicate finger.

FINGER BOARD. That thin, black covering of wood laid over the neck of a violin, violoncello, &c., and on which, in performance, the strings are pressed by the fingers of the left hand, while the right manages the bow.

FINGERED. A term applied to piano-forte exercises, over or under the notes of which figures are placed, to signify the finger with which each corresponding key is to be struck.

FINGER, GOTTFRIED. A German musician, and chapel-master to King James II. of England in 1685. He published an opera in London in 1691, called "The Judgment of Paris," and afterwards, on the continent, various other dramatic music, and some instrumental pieces.

FINGERING. Disposing of the fingers in a convenient, natural, and apt manner, in the performance of any instrument, but more especially the organ and piano-forte. Good fingering is one of the first things to which a judicious master attends. It is, indeed, to this that the pupil must look, as the means for acquiring a facile and graceful execution, and the power of giving passages with articulation, accent, and expression. Easy passages may be rendered difficult, and difficult ones impracticable, by bad fingering; and though there are many arrangements of notes which admit of various fingering, still, even in these, there is always one best way of disposing of the hand, either with regard to the notes themselves, or those which precede or follow them. But there are an infinite number of possible dispositions of notes, which can only be fingered in one particular way; and every attempt at any other is but risking the establishment of some awkwardness, which the practitioner will have to unlearn, before he can hope to attain the true fingering. Hence it is obvious that no qualification requisite to good performance is of more importance to the learner than that of just fingering, and that whatever talents and assiduity may be able to achieve, independently of instruction, in this great particular, the directions of a skilful master are indispensable.

FINISHED. An epithet habitually applied to musical practitioners supposed to be advanced to the ultimate stage of manual or vocal execution. He, or she, whose performance is conceived to be superlatively excellent, is said to be *finished*.

FINITO. (I). Finished, or ended.

FINTO, or FINT. (I). A feint. A term applied to the preparation for a cadence which is not executed; when the performer, having done every thing that is requisite to a full close, instead of falling on the final, passes to some other note, or introduces a pause.

FIOCHI, VINCENZO, was born at Rome in 1767. He studied at Naples under Fenaroli, at the conservatory of *La Pietà*, after which he composed in Italy sixteen operas, some of which were successful in the performance. He was next appointed organist to St. Peter's at Rome, from whence he went to Paris about the year 1802, when he produced the opera "*Le Valet de deux Maîtres.*" Afterwards he was engaged in tuition in Paris, and published, conjointly with Choron, "*Les Principes d'Accompagnement.*"

FIORAVANTI, VALENTINO. A dramatic composer, born at Rome in 1767, and a resident of Florence, especially distinguished by his comic operas, which are remarkable for native wit, for lightness, vivacity, and spirit. In July, 1816, he was appointed chapel-master of St. Peter's in Rome. He studied at Naples, but entered on his theatrical career at Turin. He set many comic operas for the Italian theatres, between the years 1787 and 1810. In 1807 he went to Paris, where he produced "*I Virtuosi ambulanti,*" the words of which Picard has imitated in his "*Comédiens ambulans.*" This had the same success as his "*Capricciosa pentita,*" which had appeared in Paris in 1805. He has also obtained great favor in Germany by his comic opera, "*Le Cantatrice villane*"—a piece full of sprit, lively wit, and beautiful melody, and which may be considered as classic among comic operas. He has also written a number of beautiful songs, with the music for the piano-forte, which have been printed in London.

FIORE, STEFANO ANDREA. Chapel-master to the King of Sardinia. He was a good vocal and instrumental composer in the early part of the last century.

FIORILLI, AGOSTINO. A dramatic composer of Palermo between the years 1783 and 1790.

FIORILLO, IGNAZIO, was born at Naples in 1715. The name of his master is unknown, but the method transmitted to the pupil bespeaks that of Durante or Mancini. After having composed several operas in Italy, which were favorably received by the public, Fiorillo was called to Germany in consequence of the reputation he had acquired. He was appointed chapel-master at Brunswick in 1754, where he composed the music to Nicolini's ballets, who then disputed precedence in this kind of spectacle with the first ballet masters in Europe. From this time the talents of Fiorillo were specially sought in this style of composition. He was subsequently engaged to direct the chapel at Cassel, where he was equally successful. In 1790, he obtained

pension from the elector, and in the bosom of retirement and repose he ended his days, in one of the villages near the town of Wetzler, in the year 1787. Fiorillo is the author of many works, which have cemented the union of Italian melody with German harmony. "*Demofonte*," "*Andromeda*," and "*Nileti*" are regarded as his best operas.

FIORILLO, FEDERICO, son of the preceding, was a good violinist. He was born at Brunswick in 1753, remained in Poland some time, and was appointed *chef-d'orchestre* to the theatre at Riga in 1783. From thence he went to Italy, and afterwards to France, where he published much violin music about the year 1785. From Paris Fiorillo proceeded to London, where his performance and compositions were much admired, especially his trios, which were thought little inferior to those of Bocherini. The instrumental compositions of F. Fiorillo are very numerous, and bear date from the year 1780 to 1800. He also published "*Etude de Violon, formant trente-six Caprices*," a work of high authority in the art of violin playing.

FIORINI, GIOV. ANDREA, a Milanese, pupil of the celebrated Leo, flourished about the year 1750. He was chapel-master to the cathedral of Milan, also to that of Como. His compositions for the church were much admired.

FIORINI, IPPOLITO, chapel-master to the Duke Alphonso II. of Ferrara, composed much sacred music about the year 1570.

FIORITURE. (I.) Literally, little flowers. Embellishments in singing; divisions of rapid notes.

FIRST. A word applied to the upper *part* of a duet, trio, quartet, &c., either vocal or instrumental; also to the upper *part* of each kind, in overtures, symphonies, concertos, and other full pieces. Such *parts* are called *first*, because they generally express the air, and from their superior acuteness, possess a preëminence in the combined effect.

FIS. (G.) F sharp.

FISCHER, JOHANN NICHOLAS, was born in 1707 at Belhen, in the bailiwick of Königssee, in the county of Schwartzburg. He was a violinist of some repute, and served the Duke Augustus William of Brunswick in that capacity for nine months. Amongst others of his compositions are the following for the violin: "Six Symphonies for two Violins, two Flutes, Viol. and Bass," "Six Concertos for the Violin," and "Two Books of Solos for the Violin."

FISCHER, A. J., son of Ludwig Fischer, is a celebrated buffo bass singer at Berlin. He was born about the year 1782. He has composed some piano-forte music, published at Offenbach and Leipsic.

FISCHER, CHRISTIAN FRIEDRICH. A celebrated singer at Kiel about the year 1740.

FISCHER, CHRISTOPH HEINRICH, a musician at Brunswick, composed some piano-forte music, of a popular description, about the year 1792.

FISCHER, FERDINAND, court musician at Brunswick, has published there much instrumental music. In the year 1800, he received a mag-

nificent present from the Emperor Paul, of Russia, for a military cantata, composed on the occasion of the emperor's birthday.

FISCHER, JOHANN, was born in Suabia. He went very early to Paris, and became copyist to the celebrated Lulli. On leaving France, he engaged himself as violinist at several of the principal towns in Germany, and at length settled at Schwedt, a town of Brandenburg, where he died at an advanced age, towards the middle of the last century. His compositions consist of both vocal and instrumental music, published chiefly at Augsburg, Hamburg, and Berlin, and bearing date from the years 1681 to 1708.

FISCHER, JOHANN CASPER FERDINAND. Chapel-master to the Margrave of Baden, and pianist. He published much vocal and instrumental music at Augsburg, between the years 1696 and 1738.

FISCHER, JOHANN CHRISTIAN, a celebrated performer on the hautboy, and composer for his instrument and for the flute, was a native of Friburg, in the Brisgau. He resided for some years in London. In the spring of the year 1800, while performing a solo part in his concerto at the queen's house, after having executed his first movement in a style equal to his best performance during any part of his life, in the course of his adagio, he was suddenly seized with an apoplectic fit, and fell down. Prince William of Gloucester, observing the accident, supported him out of the apartment, whence he was conveyed to his residence in Greek Street, Soho, where he expired in about an hour afterwards. The king was very much affected, and had the first medical assistance called to his aid. In his last moments, Fischer desired that all his manuscript music might be presented to his majesty George III.

FISCHER, JOHANN GEORG. Author of a Latin work on vocal music, published at Göttingen in 1680.

FISCHER, JOHANN GOTTFRIED. A singer at Friburg since the year 1800. He composed some vocal and instrumental music, published at Leipsic and Dresden, between the years 1785 and 1795.

FISCHER, LUDWIG, a celebrated singer at the Italian Opera at Berlin, was born at Mentz in 1745. His singing was much admired both in Italy and Germany. After singing in all the continental capitals, he crossed over to London in 1795. He was there several times afterwards before he finally left the stage, which was about 1812. He died in 1825. Fischer's voice was one of extraordinary compass, and reached far down below the bass staff, the lower notes being of mighty power. The C below the staff was a favorite note with him, and he embraced every possible opportunity to hold it, swell it to his full power, and then let it die away amid the perfect silence of the house. Once, however, he found his match. He was singing, one evening, an aria, in which he introduced the following passage:—

As his tone died away, and the intense stillness of the house was about to be broken by the usual

thunder of applause, a sailor in the upper gallery took up the tone, and to the astonishment and mirth of the whole audience, robbed Fischer of a portion of his laurels, by closing the aria for him thus:—

FISCHER, MADAME BARBARA, wife to the preceding, was also a celebrated singer in Germany at the latter end of the last century.

FISCHER GEORG WILHELM, composer of piano-forte music in Germany, between the years 1784 and 1799.

FISCHER, J. P. A. A Dutch author of some didactic works on music, published at Utrecht in the year 1728.

FIS DUR. (G.) F sharp major.

FIS FIS. (G.) F double sharp.

FISH, W., was born at Norwich in the year 1775, and spent the early part of his life as a practical musician in the theatre, whilst holding which situation he composed several *bagatelles* for the stage, which were introduced and applauded, but were never published. On leaving the theatre, and determining, on his marriage, to reside in Norwich, he found it necessary to turn his attention more particularly to the piano-forte—a study that he was the more stimulated to by his natural inclination for composition, and which at that time he had an opportunity of cultivating under Hugh Bond, formerly organist of Exeter Cathedral. Since this period, Fish has exercised his profession in various ways. On the death of his former preceptor, the justly celebrated Michael Sharp, it fell to his lot to be appointed to the situation he vacated as principal hautboy at the public concerts at Norwich, then under the direction of the Rev. E. Glover. On this instrument he continued to perform several years, occasionally playing concertos. The following is a list of his principal works: Song, "To pity's voice." Song, "Maid of the Vale." Song, "How sweet were the days that are gone," (words and music.) Song, "Shipwrecked Sailor," (words and music.) Song, "When in the tented field," (words and music.) Duet, "The Lark," (words and music.) Glee, "O thou that rollest above." Song, "Invocation to Sleep." Song, "Maria's Adieu." Song, "Maid of Marwall." Song, "Go, balmy zephyr." Song, "The Evening Star." Song, "Joy to my love," (words by Mrs. Opie.) "Grand Sonata, Piano-forte," Op. 1, dedicated to Miss Head. "Grand Sonata, Piano-forte," Op. 2, dedicated to Miss Lovelace. "Concerto, Hautboy," performed at the provincial meetings and professional concerts. "Polsnoise Rondo, Piano-forte." "Tekeli, a Rondo, Piano-forte." "Lute let us cherish, Harp," dedicated to Miss L. Woodhouse. "Nol' eor piu, Harp," dedicated to Miss Stracey. "Winters of the Alps, Rondo, Piano-forte." "Fantasia, Harp," dedicated to Miss Beevor. "Introduction and Waltz, Piano-forte," dedicated to Miss Lukin. "Montpellier Rondo," dedicated to Mrs. Opie, (manuscript.) "A Cantata," (words by Mrs. Opie.) "Grand Duet, Harp and Piano-forte," dedicated to Miss F. Jerningham. "Fantasia and Rondo," dedicated to Lady Maria Belders.

FISHER, JOHN ABRAHAM, doctor of music, was born in London in 1744. The following are some of his compositions: 1. "Monster of the Wood," opera, published by Clementi. 2. "Sylphs," opera, published by the same. 3. "Canzonets," published by Broderip. 4. "Nine Concertos for the Piano-forte," published by Clementi and Broderip. 5. "Four Concertos for the Hautboy," published by Clementi. 6. "Diversifications for two Flutes," published by Clementi. 7. "Violin Solo," published by Clementi. 8. "Violin Trios," Ops. 1 and 2, published by Preston.

FISIN, JAMES, was born in Colchester, and received the first acquirements of his musical education under the tuition of the well-known Frederic Charles Reinhold, whose abilities and talents were highly appreciated by the most eminent professors of his time. After quitting Colchester, in the year 1776, he was so fortunate as to be placed under the auspices of the late Dr. Burney, from whom he experienced infinite advantages, as well from his friendship as his transcendent knowledge of music. For many years Fisin was patronized by the late Sir Edward Walpole, from whose exalted protection and benevolent attention he derived great benefit. In the year 1801, in consequence of the ill state of his health, Fisin fixed his abode at Chester, in which city he resumed his professional pursuits, teaching and composing music: there he remained three years, in the enjoyment of much respect in a circle of distinguished characters. The following are among the published works of Fisin: "One Set of Canzonets," dedicated to Miss Crew. "One Set of Canzonets," dedicated to Lady Vernon. "Three Sets of Canzonets," dedicated to Mrs. Wright. "Twelve Ballads," dedicated to Mrs. Norman. "Six Vocal Duets," dedicated to Lady Hume. "Three Glee's for four Voices," dedicated to Sir George Smart. "The Seasons, or Vocal Year," dedicated to the Princess Mary. "Judgment of Paris," dedicated to the Countess of Bridgewater. "Sacred Songs." "Three Sonatas," dedicated to Mrs. Burney. "Three Sonatinas," dedicated to Miss Graham; besides a variety of single pieces.

FIS MOLL. (G.) F sharp minor.

FISTULA DULCIS. (L.) See FLUTO-A-BEC. *Fistula* was an epithet which was applied anciently to all instruments derived from the pipe or reed.

FISTULA GERMANICA. (L.) The German flute.
 FISTULA PANIS. (L.) Pipe of Pan. A wind instrument of the ancients, consisting of reeds or canes cut just below the joint and forming stopped pipes, like those of the stopped diapason of the organ.
 FISTULA PASTORICA. (L.) The name given by Cleero, and other classical writers, to the oaten pipe used by the audience at the Roman theatres, in expression of their disapprobation. It was louder and more harsh, than hissing, and in some degree, similar in tone, as well as in use to the English catcall of the past century.

FITHELE. The old English appellation of the fiddle, and supposed to have been derived from the Latin word *fidicula*. See FIDDLE.

FITZWILLIAM, EDWARD, long known in the musical profession, died in London, January, 1853, in the sixty-eighth year of his age. He was formerly a dramatic performer of some eminence; but he has, till within a short period of the termination of his life, been known as a glee and dinner singer. Mr. Fitzwilliam was formerly very popular at the Surrey theatre, musical pieces having been written for him by Mr

T. Dibdin. In characters written for his peculiar humor, he was considered unsurpassable. For a few years past he has been an annuitant upon the Drury Lane theatrical fund.

FIXED SYLLABLES. Syllables which do not change with the change of key. The Italians fix their syllables on particular tones; thus giving to the mind a *positive representation*, while by movable syllables we get only a relative idea.

FLAGEOLET. A small pipe or flute, the

notes of which are exceedingly clear and shrill. It is generally made of box, or other hard wood, though sometimes of ivory, and has six holes for the regulations of its sounds, besides those at the bottom and mouthpiece, and that behind the neck. This instrument was formerly much used as a solo instrument. There is also a **DOUBLE FLAGEOLET**, consisting of two tubes. This is not much used, as it only adds second notes to such as can be performed with the left hand upon the principal tube.

A DIATONIC SCALE FOR THE PATENT FLAGEOLET.

In order to produce the low notes, the pupil must blow very gently, and as he gradually ascends, so in proportion blow harder. The delicacy of this kind of instrument will not admit of much force, particularly on the low notes.

Thumb. D E F G A B C D E F G A B C D E

Left Hand Fingers.

Right Hand Fingers.

Fourth Finger.

Keys.

The flats and sharps are produced as follows : —

Thumb. D \sharp E \flat F \sharp G \flat G \sharp A \flat A \sharp B \flat C \sharp D \flat D \sharp E \flat F \sharp G \flat G \sharp A \flat A \sharp B \flat C \sharp D \flat D \sharp E \flat

Left Hand Fingers.

Right Hand Fingers.

Fourth Finger.

Keys.

The long key, which is occasionally added to the flageolet, takes the semitones in every octave throughout the scale.

FLAMMINI, FLAMMINIO, a Roman nobleman, published at Roue, in 1610, "*Villanelle, à une, duo, e tre Voci, con Stromento e Chitarra Spagnola.*"

FLANDRUS, D. ARNOLDUS. Composer of madrigals, some of which were published at Dillengen, at the commencement of the seventeenth century.

FLASCHNER, GOTTHELF BENJAMIN. A composer of songs, published at Zittau and Leipsic between the years 1789 and 1796.

FLAT. A sign of depression. A character

which, being placed before a note, signifies that the note is to be sung or played half a tone lower than its natural pitch. The natural scale of music being limited to fixed sounds, and adjusted to an instrument, the instrument will be found defective in several points; as particularly in that we can only proceed from any note by one particular order of degrees; that for this reason we cannot find any interval required from any note or letter upwards and downwards; and that a song may be so contrived, as that, if it be begun by any particular note or letter, all the intervals or other notes shall be justly found on the instrument, or in the fixed

series; yet were the song begun with any other note, we could not proceed. To remove or supply this defect, musicians have recourse to a scale proceeding by twelve degrees, that is, thirteen notes, including the extremes, to an octave; which makes the instruments so perfect, that there is but little to complain of. This therefore is the present system or scale for instruments, viz., betwixt the extremes of every tone of the natural scale is put a note, which divides it into two unequal parts, called semitones, and the whole may be called the semitonic scale, containing twelve semitones betwixt thirteen notes, in the compass of an octave. Now, to preserve the diatonic series distinct, these inserted notes either take the name of the natural note next below, with a character called a sharp, or they take the name of the natural note next above, with a mark called a flat. This semitonic series, or scale, is very exactly represented by the keys of a piano-forte or organ, the foremost range of keys being the natural notes, and the keys behind, the artificial notes, or the flats and sharps.

When a note representing an intermediate sound is written on the same degree of the staff as the *lower* note of the two sounds between which it occurs, the sharp is used; and the note, letter, or sound is said to be *sharped*; but when the note stands on the same degree with the *upper* note of the two sounds between which it occurs, the flat is used; and the note, letter, or sound is said to be *flatted*.

The mark now used for the flat was originally the letter B, introduced to avoid the tritone, or sharp fourth, between F and B natural. This character was formerly of such importance, that it is enumerated by Gafurinus among the clefs, and was accounted the clef of the F hexachord, as the other two clefs, now called the tenor and the bass, were of the G and C hexachords. These letters were selected from the seven, to show the places of the three semitones, in the three different scales of Guido, termed *naturale*, *durum*, and *molle*; and, being the highest sounds of the two which formed each semitone, were always sung with the syllable FA. The Germans add the syllable ES to the names of the letters which are flat. The French use the term *bemol*, from the Latin, and annex it to the vocal syllable; thus, *si bemol* is B flat.

FLATS AND SHARPS are placed, in all compositions, upon the letters where we find them, because they could not be placed differently without carrying the semitones from their natural situation. The use of flats and sharps is to enable the composer of music to place the key note on such a letter as he pleases, and yet to preserve the natural state of the octave.

FLAT SECOND. The minor second is formed by two sounds at the distance of a diatonic semitone as, B C and E F. C is a minor second higher than B, and B is a minor second lower than C. The same is true with respect to E and F. This interval is sometimes called the *flat second*; and the term is useful in harmony. It is found also in the other scales, between F sharp and G, B flat and A, &c., as in the following example:—

all these are diatonic semitones, and form minor or flat seconds. FLAT, DOUBLE, or DOUBLE FLAT. A character compound of two flats, and signifying that the note before which it is placed is to be sung, or played, two semitones lower than its natural pitch. FLAT FIFTH. This is composed of five degrees, and contains two tones and two semitones—not three tones: it may be divided into two minor thirds.

FLAUTO. (I.) A flute.

FLAUTATO, FLAUTANDO. (I.) With a flute-like tone. This term is sometimes met with in violin music, and the desired quality of tone is obtained by drawing the bow smoothly and gently across the strings, over that end of the finger board nearest the bridge.

FLAUTINO. (I.) The diminutive of *flauto*; signifying an octave flute. *Flauto piccolo* is a small flute or flageolet. *Flauto traversa* is a German flute.

FLEBILE. (I.) An expression implying that the movement before which it is placed is to be performed in a soft and doleful style.

FLECHE, J. A. MARSEILLE DE LA, gentleman of the chamber to the King of Westphalia, at Cassel, in 1812, was born at Marseilles in 1779. He was a celebrated singer and amateur vocal composer. Previously to the year 1811, he had composed "*Le Troubadour*," opera, in two acts; "*L'Amour Paternel*," a cantata; and a great variety of romances.

FLEISCHER, FRIEDRICH GOTTLIEB, a chamber musician to the Duke of Brunswick, and organist of that town, was born at Gotha in 1722. He was considered, in 1790, as one of the first German pianists of the school of Bach. He published much vocal and instrumental music at Brunswick, where he died in 1806, in his eighty-fifth year.

FLEISCHMANN, FRIEDRICH, chapel-master and private secretary to the Duke of Saxe-Meiningen, died, at an early age, in 1798. He published much music for the piano-forte, in different towns of Germany. Fleischmann was a man of letters, and of considerable taste in the arts.

FLEISCHMANN, JOHANN GEORG, violoncellist and chamber musician to the King of Prussia, has been celebrated in Germany since the year 1790, both for his performance on his instrument and his compositions, none of which, however, have been published.

FLEISCHMANN, JOHANN NICOLAUS, organist at Gottingen, published some vocal and piano-forte music at that town, between the years 1785 and 1794.

FLEURY, FRANCOIS NICHOLAS DE, published a didactic poem on music, at Paris, in 1678. He also composed some sacred music, and a method for the theorbo.

FLIES, BERNHARD, a composer of piano-forte music, was born at Berlin, of Jewish parents, in 1770. He has published some piano-forte music at Berlin and Zerbst since the year 1790, also some canzonets, and an opera, called "*The ridotto at Venice*," which has been successful at the Berlin theatre.

FLOQUET, ETIENNE JOSEPH, was born at Aix, in Provence, in 1750. After being engaged in the choir of one of the churches at Paris, from a very early age, and having even attempted the composition of church music, he went to Naples, and studied under Sala and P. Martini. Whilst at Naples, he composed a "*Te Deum*" for a double orchestra, which the Italians much admired. On his return to Paris, he devoted himself to the composition of dramatic music, and brought out several operas, which were only moderately successful. He died in 1785.

FLORID. An epithet applied by modern musicians to any movement, or passage, composed in a brilliant, fanciful, rich, and embellished style.

FLORID SONG. An expression used by the musicians of the fourteenth and fifteenth centuries, and applied to the invention of *figured descant*, to distinguish it from the old chant, or plain song.

FLOURISH. An appellation sometimes given to the decorative notes, which a singer or instrumental performer, adds to a passage, with the double view of heightening the effect of the composition, and displaying his own flexibility of voice or finger. There is nothing of which a sensible performer will be more cautious than of the introduction of flourishes, because he is never so much in danger of mistaking, as when he attempts to improve his author's ideas. With performers of little taste, plain passages are indiscriminate invitations to ornament; and too frequently, in the promptitude to flourish, the beauty of a studied simplicity is at once overlooked and destroyed. Auditors who are fonder of execution than of expression, and more alive to flutter than to sentiment, applaud these sacrifices to vanity; but those who prefer nature to affectation, and listen in order to feel, know exactly how to value such performers, and their performances.

FLORSCHUTZ, EUCHAR. A composer of vocal and instrumental music, published at Leipsic between the years 1792 and 1802. His duets for the piano-forte are much admired.

FLÔTE. The German for *flute*.

FLOTOW. A young and popular composer of German operas, much in vogue, of late, at Vienna, and elsewhere. His "*Alessandro Stradella*," first gave him celebrity. This was followed by "*Martha*." The overtures to these two works are much played by the concert orchestras of the day.

FLÜGEL. (G.) A harpsichord.

FLUTE. This is a common and well-known instrument, which has always held a high place in public estimation, its tones being exceedingly rich and musical, affording a beautiful accompaniment to the human voice, piano, guitar, &c., and an indispensable auxiliary to the orchestra. It has existed in many forms. The Latins called it *fistula*, and sometimes *tibia* or pipe; from the former of which some derive the word *flute*, though Borel will have it derived from *flutta*, thus called a *fluitando in fluvio*; inasmuch as a flute is long, like the lauprey, and has holes all along it, like that fish. The ancient *fistula*, or *flutes*, were made of reeds; afterwards they were of wood, and at length of metal. But how they were blown, whether as our flutes, or hautboys, does not appear. It is plain some had holes, which at first were but few, but afterwards increased to a greater number, and some had none. Some were single pipes, and some a combination of several, particularly Pau's *syringa*, which consisted of seven reeds, joined together sidewise. These seven reeds had no holes, each giving but one note — in all seven distinct notes; but at what intervals is not known. Perhaps they were notes of the natural or diatonic scale. The

fistula, in ancient music, was an instrument of the wind kind, resembling our flute, or flageolet. The principal wind instruments of the ancients were the *tibia* and *fistula*; though how these were constituted, or wherein they differed, or how they were played on, does not appear. All we know is, that the *fistula* was at first made of reeds, and afterwards of other matters. The flute has had many names, as *flauto*, *flautino*, *flauto traverso*, *flauto tedesco*, *flautone*, *fluta*, &c.

FLUTE-A-BEC, or FISTULA DULCIS. This was once a common flute, and was blown at the end; it was also termed the *English flute*, and by the French *la flute douce*. The flute-à-bee was held perpendicularly to the mouth like the clarinet.

FLUTE, ANCIENT. An instrument, which had some sort of mouthpiece, and was double as well as single. It was often composed of two tubes, both played together, which would seem to show that the enlightened nations of antiquity possessed some knowledge of harmony.

THE BOEHM FLUTE was completed by M. Boehm, of Munich, in Germany, in December, 1832, and Mr. Badger, the American manufacturer, claims for it — *perfection of tune*, because every aperture is in its proper and natural position; *equality of tone*, because the holes are equal in size and distance, relatively, to the conical form of the instrument; *superior quality of tone*, because the bore of the instrument is not sacrificed (as in the ordinary flute) to a false arrangement and size of the finger holes; *greater susceptibility of sweetness*, because every note can be produced without exertion or difficulty; *increase of power*, because every hole is enlarged to the most available extent consistently with purity of sound.

FLUTE, COMMON. This instrument consisted of a tube about eighteen inches long and one inch in diameter, with eight holes disposed along the side, by the stopping and opening of which with the fingers, the sounds were varied and regulated. This was an improvement on the flute-à-bee, which name came from the old Gaulish word *bee*, signifying the beak of a cock, because the end at which it was blown is formed like the beak of that animal. The common flute is still so called to distinguish it from the German flute. Lucretius says "the common flute had its origin from the breathing of western winds over certain reeds;" and thus, he tells us, was suggested to man the rural pipe, the simple tube, which the ingenuities of later ages have improved into one of the most fascinating instruments of which art can boast.

FLUTE, GERMAN. A wind instrument of German invention, consisting of a tube formed of several joints, or pieces, screwed together or into each other, with holes along the side, like those of the common flute. It is stopped at the upper end, and furnished with movable brass or silver keys, which, by opening and closing certain holes, serve to temper the tones to the various flats and sharps. In playing this instrument, the performer applies his under lip to the hole about two inches and a half from the upper extremity, while the fingers, by their action on the holes and keys, accommodate the tones to the notes of the composition. The flute was held in much

esteem in days of antiquity; it filled an important place at festivities, in the service of the temple, in triumphant strains, and in the sadness of funeral obsequies. It was deemed so essential to oratory, that speakers regulated their discourse, and poets the rhythm of their verses, by its sounds. It was invented at a very early period, and passed through many changes; but only in modern times has it obtained that degree of perfection which we may be justified in terming its culmination point. The flute has become a new instrument. Not only is its treatment and mode of performance altogether different in our days from what it was formerly, in respect to its being more free and more decisive, but the taste for this instrument has become more extended and more refined, and the important part which has been assigned to it in the modern opera has so far extended the circle of its utility, that the flute may be almost said to rival the violin. In a word, such is the degree of perfection to which it has attained, that all the acquirements of our ancestors on this instrument would now appear mean and contemptible. This most delightful of wind instruments, and which, of all others, is thought to approach the nearest to the human voice, is, however, sometimes misemployed by players, in forcing it to produce a kind of trumpet tone, instead of its natural mellifluous sound. This tone is quite foreign to the character of the flute, and has, in a great measure, been the means of strengthening the prejudice that prevails against it, and which will not allow it to be a proper instrument for concertos. This prejudice is still more confirmed by the generality of compositions of this kind, as they are, in many instances, much too uniform to keep attention alive, or to interest strongly the hearers during any long series of passages. If players were more studious to imitate the varied and more delicate bowings of the violin, and particularly its effects in *legato*, and above all in *staccato* passages, then the flute concerto, instead of resembling the tones of a musical clock, could not fail to touch the heart, and to produce the powerful effects of the human voice, to which the sounds of this instrument so much assimilate. The *virtuoso*, who, to justify his very name, ought to be one who prizes excellence only, is, according to the taste that now prevails in the musical world, rather solicitous to excite surprise by the powers of execution, and by artificial difficulties, than by simplicity and purity of taste; he considers that which costs the most the most worthy of attention. Art is now every thing; and, as this always stands opposed to nature, the *virtuoso* who studies only to excite admiration and surprise frequently exercises his powers at the expense of the ear, to which he ought always to pay the greatest deference, and without whose approval all music is vain and ineffectual. The true master of his instrument is able to show on that alone all the power which music possesses of touching the heart, of unlocking all the sacred sources of the feeling, and will require nothing from his instrument that is contrary to its genius. Real art is only from within; where she reigns, mechanical art must always yield due submission. She holds the command over the powers of execution, and creates a language peculiar to herself, in order to give utterance to deeply-seated feelings, and to impart them to others. Devoutly is it to be

wished that those performers who are ambitious of drawing from the flute the tones of the bassoon or the clarinet would well consider this, and be governed by the predominant character of their instrument, which is confessedly the elegiac — a character of the greatest sweetness, and of that pathos which goes at once to the heart. Within a few years, Mr. A. G. Badger, of New York, has commenced in this country the manufacture of the Boehm flute, which he considers an improvement on all others. In his "History of the Flute," he says, "At the commencement of the last century, the German flute, which, in allusion to the position in which it was held, was also termed the "*Flauto traverso*," or transverse flute, began to divide the public favor with the flute-à- bec. The superiority of the German flute over the flute-à- bec consisted in its improved quality of tone and somewhat better intonation. On the flute-à- bec no skill of the performer enabled him to vary, to any extent, the quantity and quality of its tone, or the pitch of the notes, owing to its being voiced with the tongue, like the pipe of an organ, or like a common whistle; but on the German flute the notes were produced by the immediate agency of the lips; comparatively a greater variety of tone, and certain improvements, even as to intonation, were consequently obtained. At that time the German flute had but six holes, which were stopped by the first three fingers of each hand. From these holes, combined with the note given by the entire tube, — that is, when all the holes were closed, — was produced the diatonic scale of one key or mode, that of D major. Shortly after, however, an additional hole was added by Phillipbert, a Frenchman, stopped by a key, (D sharp, or E flat.) This, which constituted the one-keyed flute, or flute with seven holes, as seen in the one-keyed flute of the present day, was a death blow to the flute-à- bec. It improved the quality of some of its tones, and extended its compass upward. Many a kindly prejudice, many a grateful recollection of past enjoyment, was enlisted in favor of an old servant, and lingered to the last, but in vain. The flute-à- bec is now among the things that were, or is to be met with only in the hands of the antiquary. The flute remained in this state until the time of Quanz, who flourished from about the year 1720 to 1770, and was celebrated as a performer upon the flute, and as a composer for that instrument. He was also celebrated as a manufacturer of flutes. He added another D sharp or E flat key, and contrived a method of lengthening and shortening the head joint, so as to raise or lower the pitch half a tone. The discovery of this additional key was made in 1726, and the new head joint in 1752. The use of the latter is obvious; but it has puzzled the critics to divine what could possibly have been the object of this additional D sharp key, which, in conjunction with the new turning head, were said at the time to have corrected "all the imperfections of this instrument in point of bad notes and false tuning." They could not suppose it intended to make the enharmonic difference between D sharp and E flat. This would have been attributing a refinement of perception to Quanz utterly inconsistent with the obtuseness of ear which could endure the extreme imperfection, not only of the chromatic, but of the diatonic intervals of his instrument. We know by

the flute music of his time, that several of the scales nearest related to that of D major were then employed, as well as the chromatic scale; but we know also, by a reference to the one-keyed flute of the present day, how grossly defective all these were, all the notes not belonging to D major having been produced by what may be termed artificial fingerings, and the scale of D major itself having been also very imperfect. That it afforded no great advantage, may be concluded from the fact that the application of it was ultimately discontinued. The next great improvement was the addition of three other holes, stopped by three additional keys, constituting the four-keyed flute, that is, the flute with ten holes. Some difficulty has been experienced in ascertaining the exact time of the introduction, and the name of the originator of these keys; but the most approved authorities among the Germans give the honor of this contrivance to Joseph Tacet, an Englishman, who was popular both as a performer on and as a manufacturer of the flute, in London, about seventy years since. This was really a great step in the progress of the flute. The notes G sharp or A flat, A sharp or B flat, and F natural, were, by means of these keys, produced upon the same principle as the D sharp or E flat, which had been obtained by the first key and the notes of the original six holes; and thus all the notes of the chromatic scale in the fundamental octave, excepting the C natural, were each produced by opening its legitimate hole, and the artificial fingerings for these notes, which produced tones of wretched quality and intonation, were no longer necessary. This improvement, great as it was, made its way at first but slowly. It was not until the beginning of the present century that the four-keyed flute began to be generally adopted in the English orchestras. After this the attempt was made to obtain a C natural by means of a key, the artificial C of the four-keyed flute, fingered thus, 0 2 0 | 1 2 3, being very imperfect. For this purpose a long key, acted upon by the first finger of the right hand, known as the C shake key, was added; but although a good note was thus produced, it has been of little use, except-

ing in the shake with B, owing to the necessity, when using it, of moving the right hand. About the same time the tube was lengthened, and two long keys were added at the foot of the instrument, giving the two additional low notes, C sharp and C natural. This was the seven-keyed flute. The duplicate long F key, acted upon by the little finger of the left hand, was next added, to facilitate the execution of the notes D natural or E flat, in connection with F natural; and thus was completed the ordinary eight-keyed flute. As many as seventeen keys have been added to some flutes, but the standard number has long been eight. Attempts were also made, from time to time, to improve the tone of the instrument, by enlarging the holes, and by variations in the bore. Joseph Tacet, before mentioned as the originator of the four-keyed flute, made experiments with large holes, as also did the late Mr. Nicholson. But these efforts, both as to the size of the holes and the variations in the bore, could only be partially successful, owing to the radically incorrect position of the holes and the erroneous principle upon which the keys were constructed. The first thing to be learned on the flute is to make it sound properly, for which purpose take the top piece only, and blow gently, turning it outward or inward till you can make it sound, and readily produce a good tone; then add another piece of the flute, blowing as before, proceeding thus till you have put the flute together. Then place one finger, and blow, adding the other fingers by degrees, endeavoring at the same time to get the right tone. After you can easily fill the flute, attend to the plain scale of the places of the fingers. The black dots in the scale signify the holes which are to be stopped, and the ciphers those which are to be left open. The figures represent the fingers of each hand. The lowest row of dots and ciphers signifies the key. Observe that as C has two columns of dots and ciphers, either may be used, as you may choose. Blow rather strong upon the high notes, placing your lips closer, and moving your tongue nearer to the lips. All the notes above C are said to be in alt, and all from C in alt are called double, as double D, double E, &c.

SCALE FOR THE COMMON GERMAN FLUTE.

The flats and sharps are produced as follows: —

The diagram shows a musical staff with notes and fingerings for both hands. Below the staff, the notes are grouped into pairs for each hand, with fingerings indicated by numbers 1, 2, and 3. The notes are: D#F#, F#G#, G#A#, A#B#, C#D#, D#E#, E#G#, G#A#, A#B#, C#D#, D#E#, E#G#, G#A# for the left hand, and 1, 2, 3 for the right hand. The 4th Finger Key is also indicated.

On the flute, D# and Eb are the same. So are F# and Gb, and G# and Ab, &c.

F MOLL. (G.) F minor

F, or **BASS CLEF.** The name given to the indicial character placed at the beginning of the staff designed for the bass part, to determine the names and powers of the notes on that staff.

FOCKERODT, JOHANN ARNOLD. A composer, born at Muhlhausen. His works, which are chiefly for the church, are dated from the years 1692 and 1718.

FOCOSO, or FUOCOSO, or CON FUOCO. (L.) Used adverbially, to signify that the movement, or passage, over which it is placed, is to be sung or played with spirit.

FODOR, ANTOINE. A French pianist, and composer for his instrument. He left France during the revolution, and settled for some time at Amsterdam, where, and at Berlin, many of his works have been published, between the years 1795 and 1802.

FODOR, JEAN, elder brother to the preceding, was also a good violinist, and composer for his instrument. His works are voluminous, and have been published at Paris and in Germany. He remained some time at Petersburg during the French revolution.

FODOR, MADAME MAINVILLE, an accomplished singer, was born in Paris, in 1793; passed her childhood in St. Petersburg, and made her *debut* at the Opera Comique, in Paris, in 1814. She performed in England, in the seasons of 1817 and 1818. She subsequently performed in Paris, and from thence went to Italy, where she was received with much enthusiasm. She was at Vienna in 1823, in which capital her popularity was also very great. Madame Fodor made her *debut* at Vienna in the character of Desdemona, in Rossini's "*Otello*," Donzelli performing *Otello*, Ambroggi, Elmira, and David, Rodrigo. Educated in a fine school, Madame Fodor obtained such flexibility of voice, that every passage in her singing was executed with indescribable lightness and tenderness. It has been said of her at Vienna, that her ability consists in making art appear like artlessness.

FOERSTER, CHRISTOPH. A celebrated instrumental and church composer, in Germany, at the commencement of the last century. His works are very voluminous.

FOERSTER, EMANUEL ALOYSIUS. Chapel-master at Vienna, where he has composed much vocal, piano-forte, and church music, since the year 1790. He has also written a treatise on thorough bass.

FOGGIA, FRANCESCO, of Rome. A pupil of Paolo Agostino, from 1645 to 1681. In his youth, he was several years in the service of the court of Bavaria, and of the Archduke Leopold, afterwards emperor; but returning to Rome, he was appointed *maestro di capella* to the Church of St. John Lateran, and other great churches in that city. Antonio Liberati calls him the prop and father of music, and true ecclesiastical harmony.

FOLLIA. (L.) A species of composition, consisting of variations on a given air, invented by the Spaniards, and hence frequently called *follia di Spagna*.

FONTAINES, R. DES. A French poet and composer of songs, at the end of the seventeenth and beginning of the last century.

FONTANA, BENIGNUS. A composer of sacred music at Goslar, in Lower Saxony, in the first half of the sixteenth century.

FONTANA, FABRIZIO, an Italian composer and organist, was born at Turin, in 1650, and published some music for his instrument at Rome in 1677.

FORAMINA. (L.) The name given by the Romans to the holes made in the pipe, for the purpose of varying its sounds.

FORD, DR., the rector of Melton, England, was an enthusiast in music, very singular in his manner, and a great humorist. His passion for sacred music was publicly known from his constant attendance at most of the musical festivals in the kingdom. One who knew him says, "I have frequently met him, and always found him in ecstasies with Handel's music, especially 'The Messiah.' His admiration of this work was carried to such an excess, that he told me he never made a journey from Melton to Leicester, that he did not sing it quite through. His performance served as a pedometer by which he could ascertain his progress on the road. As soon as he had crossed Melton bridge he began the overtures, and always found himself in the chorus 'Lift up your heads' when he arrived

at Brooksby gate, 'Thanks be to God' the moment he got through the Thurmasten toll gate. As the pace of his horse was pretty regular, he contrived to conclude the Amen chorus always at the cross in the Belgrave gate. Though a very pious person, eccentricity was at times not restrained even in the pulpit. It need not be stated that he had a pretty good opinion of his own vocal powers. Once, when the clerk was giving out 'he tune, he stopped him, saying, 'John, you have pitched too low — follow me;' then clearing up his voice, he lustily began the tune. When the psalmody went to his mind, he enjoyed it, and in paroxysms of delight, would dangle one or both of his legs over the side of the pulpit during the singing. When preaching a charity sermon at Melton, some gentlemen of the hunt entered the church rather late. He stopped, and cried out, 'Here they come; here come the red coats; they know their Christian duties. There is not a man among them that is not good for a guinea!' The doctor was himself a performer. I think it was at the Birmingham festival that he was sitting with his book upon his knee, humming music to the performers, to the great annoyance of an attentive listener, who said, 'I did not pay to hear you sing.' 'Then,' said the doctor, 'you have that into the bargain.'"

FORD, THOMAS, one of the musicians in the suite of Prince Henry, the son of King James I., was the author of some canons and rounds, printed in Hilton's collection, and also of a work entitled "Musick of sundre Kinds, set forth in two Books, &c." This work was published in folio, in the year 1607. Thomas Ford composed the beautiful madrigal, "Since first I saw your face."

FORKEL, JOHANN NICOL., a doctor of philosophy, and director of the music at the University of Gottingen, was born in 1749. His knowledge of musical literature is universally allowed to have been very extensive, and his theoretical works on that science are considered as the highest authority among modern musicians. The following list embraces his principal works: 1. "Über die Theorie der Musik," (the Theory of Music,) Gottingen, 1774, in 4to. 2. "Musikalisch Kritische Bibliothek," Gotha, 1778, 3 vols. 8vo. 3. "On the better Arrangement of Public Concerts," Gottingen, 1779, in 4to. 4. "A Definition of certain Musical Ideas," Gottingen, 1780, in 4to. 5. "Almanac of Music, for 1782, 3, 4, and 9." 6. "Allgemeine Geschichte der Musik," (General History of Music,) Leipsic, 1788 and 1801, 2 vols. 4to. This is Forkel's most celebrated work; it contains the history of ancient as well as modern music. 7. "History of the Italian Opera, translated from the Italian, with Notes," Leipsic, 1789, 2 vols. 8vo. 8. "Numerous Critiques in the Literary Journal of Gottingen." 9. "General Literature of Music, or Instructions for knowing the Books on Music which have been published in Europe, from the earliest Ages to the present Time; drawn up in the Form of a Dictionary, and accompanied by Notes and Critical Discussions." Besides his merits as an author on the science of music, Forkel was an excellent pianist of the school of Bach, of whom he published a life, with a critical view of his compositions. Forkel

also composed much vocal and instrumental music.

FORMULARY. The name formerly applied to the stated and prescribed number and disposition of the ecclesiastical tones.

FORNAS, PHILIPPE, a French musician, published "*L'Art du Plain-chant*," in 1672.

FORSTER, GEORG, chapel-master at Dresden, and composer of church music, died in 1537.

FORTE, or F. (I.) A word implying that the passage over which it is placed is to be sung or played loudly. Used in opposition to *piano*.

FORTEMENT. (F.) A word signifying that the movement, or passage, before which it is placed, is to be performed with strength and energy.

FORTIA DE PILLES, ALPHONSE, governor of Marseilles, was born in that city in 1758. He studied composition under Ligori, a Neapolitan pupil of Durante. Fortia composed four operas, which were performed at Mauci. He also published much instrumental music.

FORTISSIMO, or FORTISS., or FF. (I.) Very loud. The superlative of *forte*.

FORTUNATO, GIOVANNI FRANCESCO. A dramatic composer at Placenza between the years 1783 and 1791.

FORTZETZUNG. (G.) A continuation.

FORZA, or FORZATO. (I.) Force; as, *con forza*, with force, vehemently.

FORZANDO, or FORTZ., or FZ. (I.) A term signifying that the note to which it applies, is to be struck with particular force, and held on. This term is expressed by *ff*, *sf*, or *>*. Its effect forms a strong feature in the character of modern music; we never find it expressed in any author before the time of Haydn. It may be described as a forcible expression of sound, which is no sooner uttered than it drops into the utmost degree of softness. It has its origin in the ebullition of our passions. We hear it in the expressions of joy, rage, and despair; indeed, it is natural to persons under any violent emotion. Like all other forcible expressions, its meaning will depend upon the situation and manner in which it is used. As used in the following passage, its effect is rather that of violence.

This effect is produced upon the violin by striking the note with a firm and strong bow; which is no sooner commenced than it is lightened, and falls into a soft and continued sound. Its influence upon the wind instruments is similar to that upon the voice.

FOURNIER, a French dramatic composer, brought out the opera "*Les deux Aveugles de Bagdad*," at Paris, in 1782.

FOURTH. A distance comprising three diatonic intervals; that is, two tones and a half. The fourth is the third of the consonances in the order of their generations.

FOURTEENTH. The octave, or replicate, of the seventh; a distance comprehending thirteen diatonic intervals.

FOUTENELLE. A French dramatic composer. His principal work, the opera of "*He-cuba*," was brought out in 1799, but most of the music is said to have been borrowed from Gluck and Sacchini. He has also composed some admired violin music.

FOY was many years a professor of music at Dorchester, Dorset, and he was of a truly religious and consequently of a very friendly disposition. His hospitality was so great that it became almost proverbial. He was a great friend to the poor, and, indeed, if he could render service to any one, it always afforded him the greatest pleasure. Foy was a fine performer on the violin. He died suddenly in London, while on a visit, in 1820.

FOY, JAMES, son of the preceding. From the early proofs which he manifested of a talent for music, his father determined to bring him up to that profession, and commenced teaching him the piano-forte. In the year 1814, when the lamented Princess Charlotte was on a visit to Abbotsbury Castle, in Dorsetshire, the seat of the countess dowager of Hechester, her ladyship introduced Foy to play the piano-forte to the princess. Her royal highness was delighted with his performance. His father, in some of the pieces, accompanied him on the violin. The princess was extremely affable to both father and son, and thought, from the boy's performance on the piano-forte, he had studied under the first masters in London; but was astonished to find that the father had been his only instructor. Foy was from this time a great favorite with the princess; she frequently observed how much she was delighted with his performance and interesting manners. He shortly after sent her royal highness a piece of his composition, the first he ever wrote; she was highly pleased with it, and desired the countess dowager of Hechester to write to his father to that effect; and there is no doubt, if that princess had lived to occupy the throne, she would have rendered Foy great service. He continued to practise the piano-forte and to compose, and some time afterwards he commenced learning the harp; and through the kindness of his uncle, William Maddick, Esq., of London, who took great interest in his welfare, he was enabled, in his occasional visits to the metropolis, to study the harp, piano-forte, and the rules of composition, under the most celebrated masters. When his father died, the maintenance of his mother, three brothers, and a sister devolved on him; and though he was not at this time eighteen years of age, he, by his teaching, managed to support the family in a very respectable manner. He used to lead the concerts which were given at Dorchester. In the year 1823, he gave a musical festival in that town, when two new overtures of his own composition, for a full orchestra, were performed; and the reception they met with must have been truly gratifying to his feelings. The following is a list of his compositions: "Three Concertos for the Harp," "Three Overtures for a full Orchestra;" "Thirteen single Songs, some of which have Orchestral Accompaniments;" "Three Vocal Duets;"

"Four single Gleees, for three and four Voices;" "One Quartetto and Chorus;" "Two Sacred Pieces;" "Four Fantasias for the Harp;" "One Fantasia for the Piano-forte;" "Two Duets for Harp and Piano-forte;" and "One Quartette for Harp, Flute, Clarinet, and Bassoon."

FRAMERY, NICOLAS ETIENNE. A French writer on music. He wrote the article *Musique*, in the "*Encyclopédie Méthodique*." He also published, in 1802, "*Discours qui a remporté le Prix de Littérature et Beaux Arts de l'Institut National de France*." Framery also wrote the music, as well as the words, of "*La Sorcière par Hazard*," an opera, performed at Paris in 1783.

FRANC, GUILLAUME. One of the fifty musicians who composed the tunes to the French version of psalms by Marot. These tunes were first printed at Stra-burg, in the year 1545, and were afterwards, with several others, set in parts by Bourgeois and Gondinuel.

FRANCESCO, D. FRANCESCO. An Italian writer on music, and editor of an edition of the works of Metastasio, with copious notes on the subject of music, published at Lucca in 1789. This work is considered by the Italians as a *chef-d'œuvre* in musical literature.

FRANCEUR, FRANÇOIS, chamber musician to the King of France, was born at Paris in 1698. He was a good violinist, and composed some instrumental music and several operas. He died at Paris in 1787, aged eighty-nine.

FRANCEUR, LOUIS, first violin at the opera at Paris, died in 1745. He was generally called *L'honnête homme*.

FRANCEUR, LOUIS JOSEPH, eldest son of Louis Franceur, was born at Paris in 1738. He was educated by his uncle, François Franceur, who placed him at the opera, as a violinist, in 1752. In 1767 he was appointed *chef-d'orchestre* at the opera. In 1772 Franceur published a work entitled "*Diapason de tous les Instrumens à Vent*." He also composed some operas.

FRANCK, JOHANN WOLFGANG. A composer of dramatic and instrumental music, chiefly published at Hamburg between the years 1679 and 1686.

FRANCK, MELCHIOR. A celebrated German church and secular vocal composer. His works, which are very numerous, and chiefly written in the Latin language, were published at different towns of Germany, between the years 1600 and 1636. He died in 1639, at Cobourg.

FRANCO, a monk of Cologne, born in the eleventh century, wrote about fifty years after Guido, and was the next who improved descant. He admitted the fifth as a concord, but called major and minor sixths discords. He was the first who wrote descant to secular airs, called *roundelays*. He also made some improvements in measuring time. He used five kinds of measure: 1st., three longs; 2d, a breve; 3d, a long and two breves; 4th, two breves and a long; and 5th, a breve and a semibreve. Franco used the dotted note, and bars; but his bars were for the purpose of indicating breathing places or musical phrases, and not for dividing the music into measures.

FRANCUS, JOANNES. A composer of sacred music published at Augsburg in 1600.

FRANKLIN, BENJAMIN, a philosopher and statesman, the son of a soap boiler and tallow chandler, was born in Boston, 1706, and died in 1790. He invented a musical instrument called the harmonica, or armonica, which he concealed from his wife till the instrument was fit to play, and then awoke her with it one night, when she took it for the music of the angels. It is said that one Mr. Pockrich, of Ireland, was the first who thought of making use of drinking glasses for the purpose of producing music. He collected a sufficient number of glasses to produce all the necessary tones, and tuned them by putting more or less water into each, as each note required. Mr. Dechval soon after made an instrument in imitation, and from this instrument Dr. Franklin took the hint of constructing his armonica. The glasses for this musical instrument are blown as nearly as possible in the form of hemispheres, having each an open neck or socket in the middle. The thickness of the glass near the brim is about one tenth of an inch, increasing towards the neck, which, in the largest glasses, is about an inch deep, and an inch and a half wide within; but these dimensions lessen as the size of the glasses diminishes; the neck of the smallest being about half an inch in length. The diameter of the largest glass is nine inches, and that of the smallest three inches. Between these there are twenty-three different sizes. The largest glass in the instrument is G, a little below the reach of a common voice, and the highest G, including three complete octaves; and they are distinguished by painting the apparent parts of the glasses withinside, every semitone white, and the other notes of the octave with the seven prismatic colors; so that glasses of the same color (the white excepted) are always octaves to each other. When the glasses are tuned, they are to be fixed on a round spindle of hard iron, an inch in diameter at the thickest end, and tapering to a quarter of an inch at the smallest. For this purpose, the neck of each glass is fitted with a cork, projecting a little without the neck. These corks are perforated with holes of different diameters, according to the dimensions of the spindle in that part of it where they are to be fixed. The glasses are all placed within one another; the largest on the biggest end of the spindle, with the neck outwards; the next in size is put into the other, leaving about one inch of its brim above the brim of the first; and the others are put on in the same order. From these exposed parts of each glass the tone is drawn, by laying a finger upon one of them as the spindle and glasses turn round. The spindle, thus prepared, is fixed horizontally in the middle of a box, and made to turn on brass gudgeons at each end by means of a foot wheel. This instrument is played upon by sitting before it, as before the keys of a pianoforte, turning the spindle with the foot, and wetting the glasses, now and then, with a sponge and clean water. The fingers should be first soaked in water, and rubbed occasionally with fine chalk, to make them catch the glass, and bring out the tone more readily. Different parts may be played together by using both hands; and the tones are best drawn out when the glasses turn from the ends of the fingers, not when they turn to them. The advantages of this instrument, says Dr. Franklin, are, that

its tones are incomparably sweet, beyond those of any other, and that they may be swelled or softened at pleasure, by stronger or weaker pressures of the finger, and continued to any length; and when it is once tuned, it never wants tuning again. From the effect which it has, or is supposed to have, on the nervous system, it has been suggested that the fingers should not be allowed to come in immediate contact with the glasses, but that the tones should be produced by means of a key, as upon the pianoforte. Such a key has been invented in Berlin or Dresden, and an instrument constructed on this plan, called the harpsichord harmonica. But these experiments have not produced any thing of much value; and it is impossible that the delicacy, the swell, and the continuation of the tone should be carried to such perfection as in the first-mentioned method. The harmonica, however much it might excel all other instruments in the delicacy and duration of its tones yet is confined to those of a soft and melancholy character, and to slow, solemn movements, and can hardly be combined to advantage with other instruments. In accompanying the human voice, it throws it in the shade; and in concerts, the accompanying instruments lose in effect, because so far inferior to it in tone. It is therefore best enjoyed by itself, and may produce a charming effect, in certain romantic situations. Besides the proper harmonica, there is the pegged or nailed harmonica, the pegs of which are of steel, and, being placed in a semicircle, are played with a strung bow. This has no resemblance to the proper harmonica, except some similarity in tone.

FRANZ, JOHANN CHRISTIAN, a singer and vocal composer at Berlin, was born in 1762. He published twelve songs in 1795, and is also the author and composer of the operetta "*Edekmuth und Liebe*," produced at Berlin in 1805.

FRANZONI, AMANTE. A composer of madrigals, published at Venice at the beginning of the seventeenth century.

FRASI. (I.) Phrase; short musical sentences.

FREDDI, AMADEO, chapel-master at Padua, published four operas of sacred music at Venice, between the years 1617 and 1642.

FREDON. A word formerly used to signify a short flight of notes sung to the same syllable. A kind of extempore flourish.

FREISLICH, JOHANN BALTHASAR CHRISTIAN. *Chef-d'orchestre* at Dantzic in 1731. He composed much chamber and church music, very little of which has been published.

FRENCH HORN. See HORN.

FRENEUSE, J. L. A writer in defence of the French school of music against the Italian, at the commencement of the last century.

FRERE, ALEXANDRE. Member of the Academy of Music at Paris in the early part of the last century. He published, at Amsterdam "*Transpositions de Musique, réduites au naturel, par le Secours de la Modulation. Avec une Pratique des Transpositions irrégulièrement écrites, et la Manière d'en surmonter les Difficultés.*"

FRERON, ELIAS CATHARINA, was a Jesuit, born at Quimper in 1719. He published

at Paris, in 1753, "*Deux Lettres sur la Musique Française, en Réponse à celle de J. J. Rousseau.*"

FRESCHI, GIOVANNI DOMENICO. A monk, born at Vicenza. He was chapel-master, and a much admired church and dramatic composer at Venice. His publications bear date from the year 1660 to 1685. In 1680, the opera of "*Berenice*," set by this composer, was produced at Padua in a most splendid manner. There were choruses of one hundred virgins, one hundred soldiers, one hundred horsemen in iron armor, forty cornets of horse, six trumpeters on horseback, six drummers, six ensigns, six sackbuts, six great flutes, six minstrels playing on Turkish instruments, six others on octave flutes, six pages, three serjeants, six cymbalists, twelve huntsmen, twelve groons, six coachmen for the triumph, six others for the procession, two lions led by two Turks, two elephants by two others, Berenice's triumphal car drawn by four horses, six other cars with spoils and prisoners drawn by twelve horses, and six coaches for the procession. Among the scenes and representations in the first act was a vast plain with two triumphal arches, another with pavilions and tents, a square prepared for the entrance of the triumph, and a forest for the chase.

Act second, the royal apartments of Berenice's temple of vengeance, a spacious court, with a view of the prison, and a covered way for the coaches to move in procession. Act third, the royal dressing room completely furnished, stables with one hundred live horses, a portico adorned with tapestry, and a delicious palace in perspective. In addition to all these attendants and decorations, at the end of the first act there were representations of every kind of chase, as of the wild boar, the stag, deer, and bears; and at the end of the third act, an enormous globe descends from the sky, which, opening, divides itself into other globes, suspended in the air, upon one of which is the figure of Time, on the second that of Fame, on others Honor, Nobility, Virtue, and Glory.

FRESCOBALDI, GIROLAMO, a native of Ferrara, was born in the year 1601, and at about the age of twenty-three was appointed organist of the Church of St. Peter's at Rome. Frescobaldi is not less celebrated for his compositions for the organ than for his great powers of execution on that instrument. He was the first of the Italians who composed for the organ in fugue; and in this species of composition, originally invented by the Germans, he was without a rival. He may be truly considered the father of that style of organ playing called by the Italians *toccatas*, and by the English *voluntaries*. In the year 1628, Bartolomeo Grassi, organist of St. Maria in Acquiro, at Rome, published a work of Frescobaldi, entitled "*In Partitura il Primo Libro delle Canzoni, à una, tre, e quattro Voci, per sonare con ogni Sorte di Strumenti.*" From the title, it seems that these were originally vocal compositions, but that Grassi, for the improvement of those who were employed in the study of composition, had rejected the words, and published the music in score. In this form they met with so favorable a reception from the public as to be twice reprinted. Another work of Frescobaldi was printed at Rome, in 1607, entitled "*Il Secon-*

do Libro di Toccate, Canzoni, et altre Partite, d' In tavolatura di Cimbalo et Organo."

FRESCO. (I.) Quick and lively.

FRETS. Certain short pieces of wire fixed on the finger board of guitars, &c., under, and at right angles to, the strings, and which, as the strings are brought into contact with them by the pressure of the fingers, serve to vary and determine the pitch of the tones. The frets are always placed at such distances from each other, that the string which touches any particular fret is one semitone higher than if pressed on the next fret towards the head of the instrument, and one semitone lower than when brought in contact with the next fret towards the bridge. Formerly, these frets, or stops, consisted of strings tied round the neck of the instrument.

FREUBEL, J. L. P. L. An instrumental composer, some of whose works were published at Berlin between the years 1797 and 1802. Freuhel was *chef-d'orchestre* at the Amsterdam theatre in 1804.

FREUNDTHALER, CAJETAN. Composer of church and instrumental music at Vienna previously to the year 1799.

FRIBERTH, CARL. Chapel-master of the Jesuits' church at Vienna. Born in 1736. He composed some church music. Friberth was a friend of Haydn, and furnished many of the particulars published in his life.

FRICHOT. Inventor of the bass horn. In the year 1800 was published, in London, a work entitled "A complete Scale and Gamut of the Bass Horn, a new instrument, invented by Mr. Fricot, and manufactured by G. Astor."

FRICK, PHILIP JOSEPH, formerly organist at the court of the Margrave of Baden, performed curiously well on the harmonica; he was also a good pianist. He died at London in 1798. Frick published in England, 1. "Treatise on Thorough Bass," London, 1786. 2. "On Modulation and Accompaniment." This work was afterwards translated into French. He also published some piano-forte music.

FRIEDBERG. A German composer, attached to Prince Anton Esterhazy, at the time that Haydn resided with him.

FRIEDEL, S. L. A violoncellist of the Royal Chapel at Berlin, and instrumental composer, about the year 1788.

FRIEDRICH, IGN., a Benedictine monk, was an excellent violinist and violoncellist also a composer for his instrument. He died at Prague, in 1788.

FRIECHMUTH, JOHANN CHRISTIAN. A violinist at Berlin, and composer for his instrument. He also brought out some dramatic pieces. He died in 1790.

FRTZ, BARTHOLD, a musical instrument maker. He was the author of a work entitled "*Anweisung*," &c., (i. e. Guide to Temperament,) published at Leipsic, in 1757.

FROBERGER, JOHN JACOB, a pupil of Frescobaldi, an organist to the Emperor Ferd-

nand III., flourished about the year 1650. He was an excellent performer on the organ and harpsichord, and his compositions for those instruments have been highly applauded. He is said to have been partial to imitations in music of different occurrences in life, to which he had the power of giving great expression.

FROELICH, JOSEPH, a professor of music at Wurtzburg, was born there in 1780. He has written some works on the theory of music; also several compositions for the church, and much instrumental music.

FROSCI. (G.) The nut of a bow for the violin, tenor, bass, &c.

F SHARP. The character now used for a sharp was originally designed to represent, by its four cross lines, the four commas of the chromatic semitone. Such is the signification of the mark given by Bontempi, 1695. The sharp was used by Marcheto, in 1274. The Germans consider this character as an alteration of the letter B, and call it a cross, (*Kreuz*), or *latticed B*. They also add the syllable *is* to the names of those letters of the scale which are sharpened. The French use the term *diese*, derived from the Greek word *diesis*, and annex it to the syllables of Guido, thus: *Fa-diese*, F sharp.

FUCHS, GEORG FRIEDRICH, a German instrumental composer at Paris, was born about the year 1770. He has published much instrumental music since the year 1790. Most of his compositions are for wind instruments.

FUEGER, GOTTLIEB CHRISTIAN, born at Heilbronn in 1749, published at Zurich, in 1783, a work entitled "*Characteristische Klavierstücke*."

FUGA. (I.) Fugue.

FUGA DOPPIA. (I.) Double fugue.

FUGATA. (I.) An epithet applied to compositions written in the style of fugues; as, *sinfonia fugata*, a fugued symphony.

FUGHETTA. (I.) A little fugue.

FUGUE. A term derived from the Latin word *fuga*, a flight, and signifying a composition, either vocal or instrumental, or both, in which one *part* leads off some determined succession of notes called the *subject*, which, after being answered in the *fifth* and *eighth* by the other *parts*, is interspersed through the movement, and distributed amid all the *parts* in a desultory manner, at the pleasure of the composer; sometimes it is accompanied by other adventitious matter, and sometimes by itself. There are three distinct descriptions of fugues—the simple fugue, the double fugue, and the counter fugue. The *fugue, simple*, contains but one subject, is the least elaborate in its construction, and the easiest in its composition. The *fugue, double*, consists of two subjects, occasionally intermingled and moving together; and the *fugue, counter*, is that fugue in which the subjects move in a direction contrary to each other. In all the different species of fugues, the parts fly, or run after each other, and hence the derivation of the general name *fugue*.

On the æsthetic character or expression of the fugue, we find the following in an article on the fugues of Bach, by J. S. Dwight:—

"There seems to be no such thing as an exhaus-

tive description of fugue, any more than that ever-growing, kindling, intertwining flight and pursuit of echoes of one melody can exhaust itself. "Bach's fugues," said some one, "have no end; when you have played them through, you have not played them out." With his skill,—that is to say, with his intimacy with the organic secret running through all being, whereby unity unfolds into variety,—the theme could be sustained, still varied, still preserved, *in infinitum*.

"A fugue is the unfolding of a musical germ; it is the development, the opening out, the organic growth of a musical thought, first lying latent in any simple phrase, according to its innate law. In its effect, as you get it on the grand scale from a multitudinous chorus, it is the theme echoed back, reflected from all quarters, till it becomes all-pervading. One snatch of melody wakes all the echoes through the realm of sound. Just so the moon puts out one little point of light in the veiled firmament, and instantly the clouds are luminous, and every streamlet glimmers, and every polished leaf and every gilded spire telegraph the arrival of light above.

"Nature is full of fugue. Through all her phenomena there is this tendency of many to one end; this endless hide-and-seek, of inter-twining, imitative, and yet most sensitively individual lines or curves. The spiral growth of the plant is a fugue. The wheat field bowed before the breeze, the swell of the advancing ocean, wave upon wave, rising and blending into the whole, is a fugue. But perhaps the clearest illustration of it is in flame; there you have the very outline of its motion visibly portrayed—a perpetual, restless soaring up of innumerable little confluent tongues of flame, all tending upward to one point. Thus the fugue kindles and rises, a soaring pyramid of sounds, an harmoniously-blended rivalry of individuals in eager imitation and pursuit of one another. First the theme—a simple phrase of a few bars, but characteristic and piquant enough to fasten on the mind and provoke inquiry into its relations—is uttered by one part or voice; instantly another and another takes it up, till all are swept away in mingled pursuit of one another, all possessed, inspired with the one sentiment, yet each ambitious to exceed the other's illustration and outdo his testimony.

"As a form of art, then, it is analogous to Gothic architecture. There, too, innumerable details of figure, grouped columns, intersecting arches, leaves, flowers, spires, minarets, seem striving, yearning upwards, and the massive, intricate *ensemble* looks light and instinct with aspiration, as if it would float aloft; you cannot convince yourself that it is fixed; such is the mystery of form. It was the expression of the sentiment of that age; the sense of the finite every where losing and finding itself in the infinite—of unity in variety. It seems to say that nothing is finished; no individual form or existence completes itself; but each and every thing relates, refers unto the whole, and in developing its own tendencies reveals a world."

FUGUST. A musician who composes fugues, or performs them extemporaneously.

FULL. An epithet applied to certain anthems; to the organ, when all or most of its *stops* are out; to a *score*, the several *parts* of which are

complete, and its combinations closely constructed; and to a band, when all the voices and instruments are employed.

FUNDAMENTAL. An epithet applied to a chord, when its lowest note is that from which the chord is derived; also the lowest note of such a chord is called the *fundamental* note.

FUNDAMENTAL BASS. The name given to any bass note when accompanied with the chord derived from that note.

FUNEBRE. (F.) Funereal; as, *marche funebre*, a dead march. The Italian adjective is the same; as, *marcia funebre*.

FUNZIONI. (I. Pl.) The general name assigned by the Italians to those oratorios and other sacred compositions occasionally performed in the Romish church.

FUOCO. (I.) Fire, animation.

FURCHEIM, JOHANN WILHELM, a composer of the seventeenth century, published some instrumental music at Dresden in the year 1674 and 1687.

FURIOSO. (I.) Furious, with agitation.

FURLANO. (I.) An antiquated dance.

FURNITURE. The name of one of the stops of an organ.

FURIBONDO. (I.) A word applied adverbially to movements intended to be performed with energy and vehemence.

FURORE. (I.) Fury, rage; as, *con furore*, with fury, with great agitation.

FÜRSTENAU, CASPAR, a celebrated flutist at Oldenburg in 1801, was born at Münster, in 1772. He has published much instrumental music, chiefly at Offenbach, since the year 1802. He died in 1819.

FÜRSTENAU, ANTON BERNHARD, flutist to the King of Saxony, at Dresden, and oldest son of the preceding, was born at Münster in 1792. He has been one of the most distinguished masters of the flute, and his exercises and studies have been frequently reprinted in Germany, England, and France.

FÜRSTENAU, MORITZ, son of the preceding, was born in Dresden in 1824. He began the study of the flute at the age of six. In 1832 he astonished the inhabitants of Dresden at a public concert, and has since accompanied his father on his concert tours through Germany, exciting the greatest interest.

FUSA. (I.) A quaver.

F QUADRATA. The name given by the early writers on counterpoint to the sign which represented sharp F, in their *musica falsa*, or transpositions; and the form of which, like our *natural*, approached that of the square.

FUX, JOHANN JOSEPH. A celebrated contrapuntist, and composer of sacred and theatrical music, was a native of Styria, a province of Germany, in the circle of Austria, and chapel-master to the Emperor of Germany, Charles VI. He was born in 1660. In 1701, he published, at Nuremberg, a work entitled "*Concentus Musico-Instrumentalis, in septem Partitas divisus.*" He also composed several operas, among others, one called "*Eliza*," on the occasion of the birth of the Empress Elizabeth Christiana; this was printed at Amsterdam. Fux, however, is better known to the world by his "*Gradus ad Parnasum, sive Manuductio ad Compositionem Musica regularem, methodo novâ ac certâ nondum antè tam exacto ordine in lucem editâ.*" printed at Vienna, in the year 1725, and dedicated to the Emperor Charles VI., who defrayed the whole expense of the publication. This work, which has been translated into Italian, is, up to the present moment, the guide of all the masters and schools in Italy. Fux died about the year 1750. It is recorded that Charles VI. esteemed him so highly, that he caused the gouty old man to be carried on a litter from Vienna to Prague, in 1723, to superintend an opera at the coronation festival. Fux had great influence on the musical taste of his time by his compositions. His sacred music is still highly esteemed, particularly a *missa canonica*, which was published at Leipsic.

G.

G is the nominal of the fifth note in the natural diatonic scale of C, to which Guido applied the monosyllable *Sol*, thus:

G also stands for one of the names of the highest clef, or the treble clef.

GAA, or GAI, G. M. A good violinist and pianist, at Heidelberg, in 1803. He published at Mannheim, in 1798, "*Six Ausgesuchte Lieder.*"

GABLER, CHRISTOPHER AUGUST, a vocal and instrumental composer at Revel, published much music at Leipzig between the years 1788 and 1802.

GABLER, MATTHIAS, born at Spalt, in Franconia, in 1736, published at Ingolstadt, in 1776, a treatise, in 4to., on the tone of instruments. He died at Wemdingen in 1805.

GABRIELI, ANDREA, a celebrated organist of St. Mark's Church at Venice, flourished in the second half of the sixteenth century. He published many madrigals, and much church music at Venice, between the years 1572 and 1590.

GABRIELI, CATHARINA, one of the most celebrated singers of the eighteenth century, was born at Rome in 1730. She was a pupil of Porpora and Metastasio, and was famed for her astonishing capricci. Of this extraordinary woman, Brydone thus speaks, in his "Tour through Sicily and Malta," vol. ii. p. 319: "The first woman is Gabrieli, who is certainly the greatest singer in the world, and those that sing on the same theatre with her must be capital, otherwise they never can be attended to. This indeed has been the fate of all the performers, except Pacherotti, and he too gave himself up for lost on hearing her performance. It happened to be an air of execution exactly adapted to her voice, in which she exerted herself in so astonishing a manner, that, before it was half done, poor Pacherotti burst out crying, and ran in behind the scenes, lamenting that he had dared to appear on the same stage with so wonderful a singer, where his small talents must not only be lost, but where he must ever be accused of presumption, which he hoped was foreign to his character. It was with some difficulty they could prevail on him to appear again; but from an applause well merited, both from his talents and his modesty, he soon began to pluck up a little courage; and in the singing of a tender air, addressed to Gabrieli in the character of a lover, even she herself, as well as the audience, is said to have been moved. The performance of Gabrieli is so generally known and admired, that it is needless

to say any thing to you on that subject. Her wonderful execution and volubility of voice have long been the admiration of Italy, and have even obliged them to invent a new term to express it; and would she exert herself as much to please as to astonish, she might almost perform the wonders that have been ascribed to Orpheus and Timotheus; but it happens, luckily perhaps for the repose of mankind, that her caprice is, if possible, even greater than her talents, and has made her still more contemptible than these have made her celebrated. By this means her character has often proved a sufficient antidote both to the charms of her voice and those of her person, which are indeed almost equally powerful; but if these had been united to the qualities of a modest and an amiable mind, she must have made dreadful havoc in the world. However, with all her faults, she is certainly the most dangerous siren of modern times, and has made more conquests, I suppose, than any one woman breathing. It is but justice to add, that, contrary to the generality of her profession, she is by no means selfish or mercenary, but, on the contrary, has given many singular proofs of generosity or disinterestedness. She is very rich, from the bounty, as is supposed, of the last emperor, who was fond of having her at Vicenza; but she was at last banished that city, as she has likewise been most of those in Italy, from the broils and squabbles that her intriguing spirit, perhaps still more than her beauty, had excited. When she is in good humor, and really chooses to exert herself, there is nothing in music I have ever heard to be compared to her performance; for she sings to the heart as well as to the fancy, when she pleases, and she then commands every passion with unbounded sway. But she is seldom capable of exercising these wonderful powers; and her caprice and her talents, exerting themselves by turns, have given her, all her life, the singular fate of becoming alternately an object of admiration and contempt. Her powers in acting and reciting are scarcely inferior to those of her singing; sometimes a few words in the recitative, with a simple accompaniment only, produce an effect that I have never been sensible of from any other performer, and inclines me to believe what Rousseau advances on the branch of music, which with us is so much despised.

"She owes much of her merit to the instruction she received from Metastasio, particularly in acting and reciting; and he allows that she does more justice to his operas than any other actress that ever attempted them. Her caprice is so fixed and stubborn, that neither interest, nor flattery, nor threats, nor punishments, have the least power over it; and it appears that treating her with respect or contempt has an equal tendency to increase it. It is seldom that she condescends to exert these wonderful talents, but most particularly if she imagines that such an exertion is expected. And instead of singing her airs as other actresses do, for the most part she only

hums them over, *a mezza voce*; and no art whatever is capable of making her sing when she does not choose it. The most successful expedient has ever been found to prevail on her favorite lover (for she always has one) to place himself in the centre of the pit or the front box; and if they are on good terms, which is seldom the case, she will address her tender airs to him, and exert herself to the utmost. Her present innamorato promised to give us this specimen of his power over her. He took his seat accordingly; but Gabrieli, probably suspecting the connivance, would take no notice of him; so that even this expedient does not always succeed. The viceroy, who is fond of music, has tried every method with her to no purpose. Some time ago he gave a great dinner to the principal nobility of Palermo, and sent an invitation to Gabrieli to be of the party. Every other person arrived at the hour of invitation. The viceroy ordered dinner to be put back, and sent to let her know that the company waited her. The messenger found her reading in bed. She said she was very sorry for having made the company wait, and begged he would make her apology, but that really she had entirely forgotten her engagement. The viceroy would have forgiven this piece of insolence, but, when the company came to the opera, Gabrieli repeated her part with the most perfect negligence and indifference, and sang all her airs in what they call *sotto voce*, that is, so low that they can scarcely be heard. The viceroy was offended; but as he is a good-tempered man, he was loath to make use of authority; but at last, by a perseverance in this insolent stubbornness, she obliged him to threaten her with punishment in case she any longer refused to sing. On this she grew more obstinate than ever, declaring that force and authority should never succeed with her; that he might make her cry, but that he never could make her sing. The viceroy then sent her to prison, where she remained twelve days; during which time she gave magnificent entertainments every day, paid the debts of all the poor prisoners, and distributed large sums in charity. The viceroy was obliged to give up struggling with her; and she was at last set at liberty amidst the acclamations of the poor. She alleges that it is not always caprice that prevents her from singing, but that it often depends upon physical causes. And this, indeed, I can readily believe; for that wonderful flexibility of voice that runs with such rapidity and neatness through the most minute divisions, and produces almost instantaneously so great a variety of modulation, must surely depend on the very nicest tones of the fibres. And if these are in the smallest degree relaxed, or their elasticity diminished, how is it possible that their contractions and expansions can so readily obey the will as to produce these effects? The opening of the glottis which forms the voice is extremely small, and in every variety of tone, its diameter must suffer a sensible change; for the same diameter must ever produce the same tone. So wonderfully minute are its contractions and dilatations, that Dr. Keil, I think, computes that, in some voices, its opening, not more than the tenth of an inch, is divided into upwards of twelve hundred parts, the different sound of every one of which is perceptible to an exact ear. Now, what a nice tension of fibres must this require! I should imagine even the most minute change in the air

must cause a sensible difference, and that in foggy climates the fibres would be in danger of losing this wonderful sensibility, or, at least, that they would very often be put out of tune. It is not the same case with an ordinary voice, where the variety of divisions run through, and the volubility with which they are executed, bear no proportion to those of a Gabrieli."

Gabrieli went to England in the season of 1775-1776, and Dr. Burney, amongst other more minute particulars, speaks of her as follows: "Caterina Gabrieli was called, early in life, *La Cuochetina*, being the daughter of a cardinal's cook at Rome. She had, however, no indications of low birth in her countenance or deportment, which had all the grace and dignity of a Roman matron. Her reputation was so great before her arrival in England, for singing and caprice, that the public, expecting, perhaps, too much of both, were unwilling to allow her due praise in her performance, and too liberal in ascribing every thing she said and did to pride and insolence. It having been reported that she often feigned sickness, and sang ill when she was able to sing well, few were willing to allow she *could* be sick, or that she ever sang her best. Her voice, though of an exquisite quality, was not very powerful. As an actress, though of low stature, there were such grace and dignity in her gestures and deportment as caught every unprejudiced eye; indeed, she filled the stage and occupied the attention of the spectators so much, that they could look at nothing else while she was in view. Her freaks and *espiegleries*, which had fixed her reputation, seem to have been very much subdued before her arrival in England. In conversation she seemed the most intelligent and best bred virtuoso with whom I had ever conversed, not only on the subject of music, but on every subject concerning which a well-educated female, who had seen the world, might reasonably be expected to have obtained information. She had been three years in Russia previous to her arrival in England, during which time no peculiarities of individual characters, national manners, or court etiquette had escaped her observation. In youth her beauty and caprice had occasioned a universal delirium among her young countrymen, and there were still remains of both sufficiently powerful, while she was in England, to render credible their former influence."

GABRIELI, FRANCESCA, of Ferrara, was a pupil of Sacchini, in 1770, at the conservatory of the *Ospedaletto*, at Venice. In 1786 she sang at the Opera in London, and was second only to Madame Mara.

GABRIELI, GIOVANNI, a celebrated composer and organist of St. Mark's Church at Venice, died in 1612. He published much sacred and other vocal music at Venice.

GABRIELSKY, JOHANN WILHELM, chamber musician to the King of Prussia, and first flutist in the Royal Opera at Berlin, was born in that city in 1791. He was considered one of the best flutists in Europe; and his compositions for that instrument are held in high esteem. They consist of solos, duos, trios, quatuors, concertos, and various other flute solos, with orchestral or piano-forte accompaniment. He also wrote some songs, most of which were published at Leipsic.

GADE, NIELS W., a Danish composer of symphonies, overtures, and other instrumental music, who, since the death of Mendelssohn, has greatly occupied the attention of Germany and the musical world generally. His style has many points of resemblance with that of Mendelssohn, whom he succeeded in the direction of the Gwandhaus Concerts at Leipsic. But there is a certain wild, northern, sea shore, Ossianic charm in his music, which is quite individual. His concert overture, called "*Nachklänge aus Ossian*" (Echoes from Ossian) is full of this. His first symphony, too, in C minor, is remarkable for its richness of instrumentation, and its romantic, dreamy tone. These works have become great favorites in the concert room.

GAENSBACHER, JOHANN, a composer at Prague, and pupil of the Abbé Vogler, has published much vocal and instrumental music since the year 1803.

GAFFORINI, ELISABETA, was one of the most charming virtuosos of the nineteenth century. She shone in Italy, and in the principal cities of Europe, through nearly the period of 1796 to 1815. She possessed a very supple and very sonorous contralto voice, which went up to F, and down to A.

GAFOR, or GAFURIUS, FRANCHINUS, was a native of Lodi, a town in the Milanese, and born about the year 1451. His youth was spent in a close application to learning, but particularly to the study of music. He was elected professor of music at Verona; and he afterwards resided successively at Genoa, Naples, Monticello, Bergamo, and Milan. In the latter place he was appointed conductor of the choir of the cathedral, and received many distinguishing marks of honor. He was living in 1520, so that he must have been at least seventy years of age when he died. His first work, "*Theoreticum Opus Armonice Disciplina*," was printed at Naples in the year 1480, and was little more than an abridgment of Boethius, with some additions from Guido. In 1496, he published at Milan his "*Practica Musica utriusque Cantus*," which treats chiefly of the elements of music, and the practice of singing, according to the method of Guido. This is written in so clear and perspicuous a manner as to show plainly that Gafor was perfectly master of his subject. Another work by this writer was entitled "*Angelicum ac divinum Opus Musica*." It was printed at Milan in 1508, and, from its style and manner, seems to have contained the substance of the lectures which he had read at Cremona, Lodi, and other places. It, however, contains little more than what may be found in the writings of Boethius and other preceding harmonists. His treatise "*De Harmonia Musicorum Instrumentorum*," printed at Milan in 1518, contains the doctrines of such of the Greek musical writers as had come to the hands of the author. The writings of Gafor, in the course of a very few years, became so famous, that they were spread almost all over Europe; and the precepts contained in them were inculcated in most of the schools, universities, and other public seminaries of Italy, France, Germany, and England. The benefits arising from his labors were manifested, not only by an immense number of treatises on music that appeared in the world in the succeeding

age, but also by the musical compositions of the sixteenth century, formed after the precepts of Gafor, which became the model of musical perfection.

GAGLIANO, GIOVANNI BATTISTA DA. A composer of madrigals and motets in the first half of the seventeenth century. He was a native of Florence.

GAGLIANO, MARCO DA. A celebrated Florentine composer of the seventeenth century. He was one of the earliest dramatic composers of Italy.

GALEMENT. (F.) A word signifying that the movement to which it is prefixed is to be performed in a cheerful, lively style.

GAIL, MME. SOPHIE, born at Melun, published several sets of admired romances at Paris in the early part of the present century. She also composed the music of "*Les deux Jaloux*," and one or two other dramatic pieces of great merit. Madame Gail died in the year 1819.

GAILLARD, JOHN ERNEST, was the son of a peruke maker, and a native of Zell. He was born about the year 1687, and was instructed in composition first by Marschall, and afterwards by Farinelli, the director of the concerts at Hanover; likewise by Steffani, who also resided at that place. After finishing his studies he was taken into the service of George, Prince of Denmark, who appointed him a member of his chamber music. On the marriage of that prince, Gaillard went to England, where he seems to have studied the English language with considerable diligence and success, and, on the death of Battista Draghi, he obtained the place, then become a sinecure, of chapel-master to the queen dowager, Catharine, the relict of King Charles II., at Somerset House. He composed a "*Te Deum*," a "*Jubilat*," and "*Three Anthems*," which were performed at St. Paul's and the Royal Chapel, on thanksgivings for victories obtained in the course of the war, and he was generally esteemed an elegant composer. His merits and interests afforded some reason, at one time, to suppose that he would obtain the direction of the musical performances in the kingdom; but not being able to stand in competition either with Handel or Buononcini, he wisely declined it. He, however, set to music "*Calypso and Telemachus*," performed at the Haymarket Theatre in 1712. This, notwithstanding the excellence both of its poetry and music, was condemned by the friends of the Italian Opera, and it was therefore represented under unfavorable circumstances; but some years afterwards it was revived, and with better success, at the theatre in Lincoln's Inn Fields. Gaillard published, at different times, "*Six Cantatas*," "*Three Cantatas*," "*Six Solos for the Flute, with a Thorough Bass*," and "*Six Solos for the Violoncello or Bassoon*;" in 1728, "*The Morning Hymn of Adam and Eve*," taken from the fifth book of "*Paradise Lost*," the latter of which has lately been republished, and in 1742, a translation of Tosi's "*Opinioni de Cantori antichi e moderni*," under the title of "*Observations on the florid Songs or Sentiments of the ancient and modern Singers*." He also published some operas. His principal employment for several years was composing for the stage. He set to

music an opera in one act, performed at the theatre in Lincoln's Inn Fields in 1717, called "Pan and Syrinx;" and by virtue of his engagements with Mr. Rich, he was doomed to the task of composing the music to all such entertainments as that gentleman thought proper to give him, which consisted of a strange mixture of opera and pantomime. These, as far as can now be collected, were "Jupiter and Europa," "The Necromancer, or Harlequin Faustus," "The lives of Pluto and Proserpine," and "Apollo and Daphne, or the Burgomaster tricked." One of his last works of this kind was the music to an entertainment called "The Royal Chase, or Merlin's Cave," in which is that famous song, "With early horn," by singing which for some hundred nights, Mr. Beard first recommended himself to the notice of the public. He composed also the music to the tragedy "Œdipus," which had before been set by Purcell. This was never printed, but is preserved in the library of the Academy of Ancient Music. Many of his songs were inserted in the Musical Miscellany; and about 1740 he published a collection of twelve songs, which he had composed at different times. About the year 1745, he had a concert for his benefit at Lincoln's Inn Fields Theatre, in which were performed the choruses to the Duke of Buckingham's two tragedies of "Brutus" and "Julius Cæsar," set to music by himself, and a curious instrumental piece for twenty-four bassoons and four double basses. Mr. Gaillard died in the beginning of the year 1749, leaving behind him a small but curious collection of music, containing, besides other things, a great number of scores of valuable compositions in his own writing, and an Italian opera of his composition, not quite completed, entitled "*Or-ste e Pilade o vera la Forza dell' Amicizia.*" This collection, together with his musical instruments, was sold by auction a few months after his death.

GAILLIARDE, (F.) GAGLIARDA, (I.) and sometimes written *Galliard*, is the name of an ancient Italian dance, of a sportive character and lively movement, the air of which was in triple time. It was called, likewise, *Romanesque*, because it was said to have come originally from Rome. *Galliard* is frequently placed at the beginning of lively airs and movements, to indicate that they are to be performed in a gay and cheerful style.

GAIO (I.) Gayly, cheerfully.

GALANTEMENTE. (I.) Gallantly, boldly.

GALOP, (G.) GALOPPE. (F.) A quick species of dance, generally in $\frac{2}{4}$ time.

GALILEI, VINCENZO, father to the celebrated astronomer Galileo, was a Florentine nobleman, and excellent musician. He published, in 1581, "*Dialogo della Musica Anticha, e della Moderna in sua difesa, contra G. Zarlino.*" In this dialogue is a precious fragment of the ancient Greek music. Galilei also published "*Il Frontino, Dialogo sopra l'Arte del bene intavolare, ed rettamente suonare la Musica negli Stromenti artificiali, si di corde, come di fiato, ed in particolare nel Liuto.*" Ven. cc, 1568.

GALLIA, SIGNORA. A performer of considerable celebrity on the stage of the King's Theatre, in the Haymarket, and the last of Handel's

scholars. That celebrated musician composed several of his most favorite airs expressly for her, both in his operas and oratorios, in which she sang with great applause, and appeared so lately as the year 1797, in Ashley's oratorios at Covent Garden Theatre. After quitting the stage, she resided as a companion with the unfortunate Miss Ray, and was in company with her at Covent Garden Theatre on the evening she was shot by the Rev. Mr. Hackman, April 7, 1779. She died poor, in 1804.

GALLEAZZI, or GALEAZZI, FRANCESCO, a musician of Turin, published at Rome, in 1791, a much esteemed work, entitled "*Elementi Teoretico-Pratici di Musica, con un saggio sopra l'Arte di suonare il Violino.*" 2 vols. Svo.

GALLI, FILIPPO, one of the greatest buffo singers of the Italian stage, died at Paris, in the summer of 1853, aged seventy. He was a native of Rome, and made his *début* at Boulogne in 1804. He sang for the first time at Paris in 1825, where he was engaged at the Italian at a salary of twenty-five thousand francs for six months. Rossini wrote for him "*L'Inganno Felice*," "*L'Italiano in Algieri*," "*Il Turco in Italia*," "*La Cenerentola*," "*La Gazza Ladra*," "*Muometto*," and "*La Semiramide*." Lablache was his legitimate successor in the principal parts written for him.

GALLIARD. See GAILLARDE.

GALLIMARD published at Paris, in 1754, a treatise entitled "*La Théorie des Sons, applicable à la Musique, où l'on démontre, dans une exacte Précision, les Rapports et tous les Intervalles diatoniques et chromatiques de la Gamme.*"

GALLIMBERTI, FERDINAND. A distinguished violinist and instrumental composer at Milan, about the year 1740.

GALLO, DOMENICO, of Venice, was a violinist and church composer. He composed likewise some instrumental music, about the year 1760.

GALLO, IGNAZIO, or ANTONIO, born at Naples in 1680, was a pupil of Alessandro Scarlatti. On the completion of his studies he displayed great talents for tuition, and became master of the Conservatory of *La Pietà*, and on its suppression, of that of *Loretti*. Gallo devoted himself wholly to instruction, and superintended several Conservatories. His pupils occupied his whole attention, and his labors in this branch were too incessant to allow him time for composition. If he has left a great name, without leaving any great work, it must be attributed to his principles of instruction, which were so excellent as powerfully to contribute to the rapid progress of the art. In fact, the school of Naples was daily strengthened by the zeal of such men as Gallo, and by the researches of those who devoted themselves exclusively to the production of theoretical works. When an art expands, and is purified by the acquisition of great compositions, the homage of public gratitude is not only due to those who have produced them, but in a great degree to those who inculcate precepts and principles upon which they are founded, or which they establish. Such was Gallo, and his labors have not been less valuable to his school than the works of the best composers.

GALLOPADE. (F.) A galop, a quick German dance tune.

GALUPPI, BALDESSARO, was born in 1703, in the little island of Burano, near Venice, and was the most captivating composer of the Venetian school. His father taught him the first rudiments of music, and afterwards he had Lotti for his master. His two first operas were produced in 1722, and he succeeded equally in every species of vocal music. For the Church St. Mark, at Venice, of which he was long the chapel-master, and for the Conservatory of the *Incurabili*, where he also presided several years, he composed many masses, oratorios, and motets. The number of operas, serious and comic, which he composed for the principal theatres of Italy before his departure for Petersburg in 1766, exceeded seventy; one of them, that of "*Siroe*," has been published in England. This ingenious and fertile composer died at Venice in 1785, at the age of eighty-four; and he seems, during his long life, to have constantly kept pace with all the improvements and refinements of the times, and to have been as modern in his dramatic music, to the last year of his life, as ever.

GAMBIST. A performer on the *viol di gamba*. The place of gambist was, at one time, a part of the regular establishment of the chapels of the German princes, but is now, like that of lutenist, totally suppressed.

GAMBLE, JOHN. An English violinist and composer, in the service of Charles II. He published "*Ayres and Dialogues*," London, 1657.

GAMMA. (Gr.) Gamut.

GAMME. (F.) The gamut, or scale of any key.

GAMUT. The name given to the table, or scale, laid down by Guido, and to the notes of which he applied the monosyllables *Ut, Re, Mi, Fa, Sol, La*. Having added a note below the *proslambanomenos*, or lowest tone of the ancients, he adopted for its sign the gamma, or third letter of the Greek alphabet; and hence his scale was afterwards called *gamut*. This gamut consisted of twenty notes, viz., two octaves and a major sixth. The first octave was distinguished by capital letters, as G, A, B, &c.; the second by small letters, g, a, b, &c.; and the supernumerary sixth by double letters, as gg, aa, bb, &c. By the word *gamut*, we now generally understand the whole present existing scale; and to learn the names and situations of its different notes is to learn the gamut. It, however, sometimes simply signifies the lowest note of the Guidonian, or common compass.

The gamut seems but a small fountain; yet from that "harmonious spring" a thousand times ten thousand rills, streams, rivers, "their mazy progress take." The human mind cannot comprehend the almost infinite variety of combinations of which even these few fundamental tones are susceptible. And when we are tempted to believe that music must have advanced to a point beyond which she cannot go, we shall do well to imitate the simple faith of Stölzel, who, surrounded by the then deemed unsurpassable music of his day, believed "that the world would yet hear something greater than the canon;" or of the old teacher Fux, who, in his "*Gradus ad Parnassum*," says to his pupil, "Though you were to live to the age of Nestor, you would still have an infinity before you."

The following scale exhibits the G clef as variously used, the F clef, and the relative situation of the letters and notes upon the staff. C on the leger line below the treble, and on the lower line above the bass staff, is in unison with C on the third space in the alto and tenor, thus:—

GANZE. (G.) Whole; as, *ganze note*, a whole note or semibreve; *ganzeton*, a whole tone.

GARAT, JOSEPH DOMENICO FABRY, born at Bourdeaux in 1775, was the son of a celebrated advocate to the parliament of that town, and brother of Pierre Garat, the celebrated professor of singing. J. Garat published eight collections of romances.

GARAT, PIERRE JEAN. Professor of singing at the Conservatory of Paris. He received his first instructions of Lamberti, and subsequently studied under Francis Beck, at Bourdeaux. P. J. Garat was esteemed an excellent tenor singer of the French school, with an astonishing compass and variety of voice. He first sang in public at Paris in the year 1795, after which time he visited different towns of Germany, and also Madrid, and in the year 1802 was engaged in the service of the Emperor of Russia, from whence he returned to France with a pension. Garat has composed several collections of romances, also an excellent "*Méthode de Chant*." He died in 1823 at Paris, in the sixty-third year of his age.

GARAUDÉ, ALEXIS DE, born at Nanci in 1779, where his father was a counsellor to the parliament, found himself obliged, in the course of the French revolution, to take advantage of the musical art, which had only been considered as an ornamental part of his education. After having studied for some time under several Italian masters, he devoted himself to the teaching of singing and composition. Garaudé published several collections of romances, of which he also wrote the words. He likewise composed much instrumental music, and a "*Méthode de Chant*," which was very highly esteemed in Paris.

GARBO, CON. (I.) With simplicity, without pretension, unaffectedly.

GARBRECHT, a mechanic at Königsberg, with the assistance of the Deacon Wasiansky, manufactured a bow-harpsichord of superior quality. He is said by Gerber, in his *Lexicon*, to have been unwearied in his application to the

improvement of this instrument. See HOLLFELD.

GARCIA, MANUEL. This celebrated tenor singer, the father and teacher of Malibran and Viardot, was born at Seville, in Spain, in the year 1775. He received his first musical instruction, from the age of seven, at the *collegiale* of his native town, and subsequently studied under Ripa. He sang with the greatest applause at the principal Italian theatres of Madrid, Paris, Rome, Naples, Turin, and London. Garcia composed much music for the church and theatre. Amongst his principal dramatic works are, "*El Posto calculista*," Op. com.; "*La Florida*," Op. com.; "*Le Califfe de Bagdad*," Op. com.; "*La Donzella di Raab*," Op. ser.; "*Le Prince d'Occasion*," Op. com.; "*Il Fazzoletto*," Op. com.; "*La Mort du Tasse*," Op. ser.; "*Florestan, ou le Conseil de Dix*," Op. ser.; "*Gulistan*," Op. com.; "*Zemire and Azor*," Op. com.; "*L'Inconnu*," Op. com.; "*Le Joseph*," Op. ser.; "*Le Grand Lama*," Op. ser.; "*Les deux Contrats*," Op. com.; &c. His other compositions consist of "*Endimione*," a cantata for three voices; and several masses, one of which was greatly admired in 1822, when performed at the Bavarian Chapel in London. Garcia was engaged as principal male singer at the King's Theatre in the season of 1824. His voice had extensive compass, considerable power, and extreme flexibility; and his acting, both in tragedy and comedy, was in the highest degree impressive and energetic. Garcia, however, has been chiefly distinguished as the foremost vocal teacher of the age. From his school, which he founded at Paris, many of the most celebrated singers have proceeded. In 1824 he established a school also in London, which had frequently not fewer than eighty scholars, including his renowned daughter Malibran. During the same year he went to America to conduct an operatic troupe at New York, consisting of himself and the younger Crivelli for tenors, his son Manuel and Angrianni as buffo singers, Rosich as *buffo caricato*, and Mme. Barbieri, Mme. Garcia and his daughter, as sopranos. Such an array of talent was something wholly new to Americans. They performed "*Otello*," "*Romeo*," "*Il Turco in Italia*," "*Don Juan*," "*Tancredi*," "*Cenerentola*," &c. Such was their success, that nothing but the severity of the climate led them to abandon the undertaking. In 1827 Garcia went from New York to Mexico, where he gave operas, and to Vera Cruz, on the way to which he was robbed of all he possessed. But his energy did not fail him. He returned to Paris, and resumed his school with the same *éclat* as before. He also appeared again on the stage in his great characters of Don Juan and the Barber; but age and fatigue had impaired his voice; he retired to the quiet occupation of teaching and composing, and died at Paris on the 2d of June 1832, in his fifty-eighth year.

GARCIA, PAULINE VIARDOT. Pauline Garcia is born of a musical family, which for three centuries has illustrated the lyric stage. Her father was the famous tenor, Manuel Garcia, and her mother Joaquina Siches, was a celebrated actress, under the name of Brianes, on the Madrid stage. The sister of Pauline was the lamented Malibran, and her brother Manuel Garcia, professor of singing at the *Conservatoire*

in Paris, who has written one of the best standard works on the art of singing, was master to Jenny Lind. The school of Garcia in vocalization is in fact European.

Pauline Garcia was born in Paris, on the 18th of July, 1821. At four years of age, she spoke with fluency four languages—Spanish, her maternal tongue; French, that of the country in which she was born; English, which she acquired in the family travels; and Italian, destined to be the study of her future art. At a later period, when invited to appear on the great lyric stages of Germany, she made herself thoroughly conversant with the Teutonic language. Her genius in painting and drawing was as soon developed as her faculty for languages and her aptitude for music. Her surpassing talents for sweet sounds were developed from her earliest infancy. At seven years of age, she accompanied on the piano-forte her father's pupils, when he gave his singing lessons. Such was her manual dexterity, facile fingering, and poetical touch, that at first it was proposed she should pursue the career of a pianist, and she became one of the most accomplished scholars of Liszt. Curiously enough, she never received any regular lessons in singing. Her father died in 1832, before her voice was fixed, and her gifted sister, Maria Malibran, was wandering unceasingly throughout Europe, so that Pauline never heard her but twice on the stage. Her brother, Manuel, resided in Paris, whilst her education was going on in Brussels; so that what she acquired in vocalization was the result of her spontaneous studies—guided, however, by the good taste and counsels of her mother. After having accompanied the family migrations, first to England, then to New York, and afterwards to Mexico, Pauline returned to Europe in 1828, and completed her education in the Belgian capital, drawing and painting occupying her earnest attention as much even as music and singing. At sixteen years of age her voice became fixed. Like the organ of her sister, in quality it combined the two registers of the soprano and contralto, having that soul-stirring tone which exercised such a potent spell on her hearers. In compass her voice had three octaves. In the month of May, 1830, before she had attained her eighteenth year, she made her first appearance on any stage at the King's Theatre, in the character of Desdemona, the same season that Mario first made his *début*. Her success was most brilliant. She sang an aria composed by Costa, introduced in "*Otello*;" she was recalled several times during the progress, and at the end of the opera. In the month of October following, engaged for the Italian Opera in Paris, then playing at the *Odéon*, she created equal enthusiasm, by her *début* in the same character. Her *repertoire* was confined, however, to Tancredi, Cenerentola, Arsace in "*Sémiramide*," and Rosina in "*Il Barbier*." In the month of April, 1840, she was married to M. Louis Viardot, *homme-de-lettres*, at that time director of the Italian Opera, who on his marriage resigned that post. M. Viardot is a distinguished publicist in Paris, and was recently offered the post of *charge d'Affaires* at Madrid, by the provisional Government of the republic.

The appearance of Pauline Viardot Garcia was indeed quite a musical event, and European

managers were eager to offer her engagements. Her last appearance in London was in the season of 1841, when she sang in Cimarosa's "*Orazi et Curiazi*," with Mario. Her health was not in the best state, and her physical strength not sufficient to answer to the calls upon her ardent nature in giving vent to the dramatic excitement of the scene; as the peculiar characteristic of Garcia is, that her stage abstraction is so perfect that all traces are lost of the *artiste* in the character she is so vividly presenting. It was for this reason that she declined to receive the offers made to her by the *Academie Royale de Musique*, in Paris. She preferred to travel, and visited Spain, singing in Madrid and Grenada, and then passed another season in Paris, singing with Grisi and Persiani. Her next engagement was for two seasons in Vienna, where her triumph was immense, singing every school of music, so as to satisfy the exigencies of the most classic musician, as well as to astonish and delight the general body of amateurs of Italian music. When Rubini formed the troupe at St. Petersburg, Mme. Viardot Garcia was the selected *prima donna*; and there, by the side of Madame Castellan and Mlle. Alboni, she had three triumphal seasons, the rigor of the climate alone compelling her to try a more congenial atmosphere. Finally she appeared at the Italian Opera, Berlin, and when Mlle. Lind quitted the German Opera, Mme. Viardot took her place in the *repertoire*.

Hamburg, Dresden, Frankfurt, Leipsic, &c., were cities in which she created unparalleled enthusiasm. Her last engagements were at Berlin and Hamburg, in German opera.

The following are the operas in which Mme. Viardot Garcia has sustained characters: Desdemona, in Rossini's "*Otello*;" Rossini's "*Cenerentola*;" Rosina, in "*Il Barbiere*;" Camilla, in Cimarosa's "*Orazi et Curiazi*;" Arsace, in "*Semiramide*;" "*Norma*;" Ninetta, in "*La Gazza Ladra*;" Amina, in "*La Sonnambula*;" Romeo, in the "*Capuletti et Montecchi*" of Bellini and Vaceaj; "*Lucia*;" "*Maria di Rohan*;" Leonora, in Donizetti's "*Favorita*." In Mozart's "*Don Giovanni*" she has been equally successful as Zerlina and Donna Anna. In Meyerbeer's "*Robert le Diable*" she has doubled, in one night, the parts of the Princess and Alice, the latter, being one of her best assumptions. In Berlin she took the amateurs by storm in Gluck's "*Iphigenie en Tauride*" and in Halevy's "*Juive*." In the last-mentioned work, the sensation she produced by one exclamation in the last scene, when Rachel is on the point of being immolated, and says to Eleazar, "Father, I fear death," was electrical.

As a tragedian her powers are transcendent: every action, every gesture, every expression, are in accordance with the dramatic situation. Her "*Valentine*" in Meyerbeer's "*Huguenots*," has been also the admiration of the Berlinese connoisseurs, among whom we may mention, as enthusiastic admirers of her vocal and histrionic genius, the distinguished composer of that opera, and the Earl of Westmoreland. Her vocalization is characterized by its invariable adherence to, and identity with, the pervading sentiment.

In every relation of private life Mme. Pauline Garcia Viardot is endeared to her family and friends. In every circle she shines by the brilliancy of her varied talents; and royalty, rank, and fashion have in turn, in every country,

whilst acknowledging the supremacy of the *artiste*, admired the character of the woman.

GARDI, FRANCESCO. An Italian dramatic composer between the years 1785 and 1794.

GARNERIUS, a learned musical theorist, lived at the close of the fifteenth century. He was fixed on by Ferdinand, King of Naples, to form an academy of music, conjointly with Gafurius.

GARNIER. Professor of the hautboy to Louis XVI. He published some music for his instrument at Paris in 1788.

GARNIER, le jeune. A professor of the flute, and performer in the opera orchestra at Paris in 1799. He published some music for his instrument.

GARNIER, musician to the King of Poland, published a method for the piano-forte in 1766.

GARNIER, a violinist at Paris, published some instrumental music since the year 1792.

GASPAR. A composer, whose works are much praised by Franchinus. He lived in the latter half of the fifteenth and beginning of the sixteenth century. Dr. Burney discovered a mass by this composer among the collection of music in the British Museum; it is dated 1508.

GASPAR, MICHAEL, printed in London, in 1783, a work entitled "*De Arte Medendi apud priscos, Mueices ope atque Carminum, &c.*"

GASPARINI, FRANCESCO, born at Lucca about the year 1660, was one of the most celebrated vocal composers of his time. He excelled equally in chamber and theatrical music. His cantatas are esteemed among the finest of the kind that have ever been published, and his operas, of which he composed a great number, are scarcely exceeded by those of Scarlatti. He joined with Albinoni in the composition of the opera of "*Engelberta*," and was living at Rome in the year 1723. His printed works are "*Cantate da Camera à Voce sola*," published at Lucca in 1697; and a treatise entitled "*L'Armonico pratico al Cembalo, regole per ben suonare il Basso*," published at Venice in 1708.

GASPARINI, QUIRINO. A composer of church music, and also some instrumental pieces, previously to the year 1797. He was chapel-master to the King of Sardinia at Turin, about the year 1770.

GASSE, FERDINAND, a Neapolitan, was pupil of Gossec at the Paris Conservatory, and gained the prize for composition in 1805. He afterwards went to Rome, where he composed some sacred and dramatic music.

GASSMAN, FLORIAN LEOPOLD, chapel-master to the Emperor of Germany, and supervisor of the imperial library of music at Vienna, was born in Bohemia in 1729. He composed some church music, likewise some operas and instrumental pieces. His quartets, when compared with those of Haydn, are stiff and ice-cold compositions. Gassman was one of the masters of Salieri, who succeeded to his appointments of chapel-master, &c., at Vienna.

GASTOLDI. See CASTOLDI.

GATAYES. (G.) A harpist at Paris; he has published a method for the guitar, and much harp music, since the year 1800; also some romances, among the most pleasing of which is "*Le pauvre Aveugle.*"

GATES, BERNARD, was teacher of the choristers at the Chapel Royal in London, about the year 1710. Handel's oratorio of "Esther" was performed in the house of Gates, and met with considerable applause, inducing, as it is said, its composer to persevere in that style of music. Gates died in 1773, in the eighty-seventh year of his age.

GATTI, J. THEOBALDE, called **THEOBALDO,** was born at Florence. It is said of him, that, being charmed with the music of Lulli, which had reached him even in his native country, he went to Paris to compliment that celebrated musician, and in all his compositions studied to emulate him; and at length discovered himself to be a meritorious pupil of that great man, by two operas, which he had caused to be represented in the Royal Academy of Paris. He died at Paris, in the year 1727, at an advanced age, having for fifty years been a performer on the bass viol in the orchestra of the opera.

GATTI, ABBÉ, was born at Mantua, and reckoned one of the most agreeable composers of Italy, about the year 1790. His opera "*Olimpiade*" was performed at Placenza in 1784, and his "*Demofonte*" at Mantua in 1788.

GAULS. This ancient people had acquired great reputation in every part of the country where they were known, both for their warlike and musical character. Manlius, in an address to the Roman soldiers, says, "I am not surprised that the Gauls should have made their names formidable, and spread the strongest terrors in the minds of a nation of so soft and effeminate a cast as the Asiatics. Their tall stature, their flowing hair, which descends to their waists, their unwieldy bucklers, their long swords, add to this their songs, their cries and howlings at the first onset, the dreadful clashing of their arms and shields,—all this may indeed intimidate men not accustomed to them, but not you, Romans!"

GAUTHIEROT, LOUISE, MADAME, a celebrated female violinist, was considered, in 1790, among the most celebrated players on that instrument. She died in 1808.

GAUTHIER, DENIS, surnamed the Elder. An admired French luteist. The principal pieces of the elder Gauthier are those entitled "*L'Immortelle,*" "*La Nonpareille,*" and "*Le Tombeau de M. angean.*" There was also another Denis Gauthier, who composed some much admired lessons for the lute, of which the most esteemed are those entitled "*L'Homicide,*" "*Le Canon,*" and "*Le Tombeau de Lenclos.*"

GAUTHIER, PIERRE, a musician of Provence, was director of an opera company, which exhibited, by turns, at Marseilles, Montpellier, and Lyons. He embarked at the Port de Cette, and perished in the vessel, at the age of fifty-five, in 1697. There is extant of his composition a collection of duos and trios, which is much esteemed.

GAUZARGUES, CHARLES. Chapel-master

to Louis XV. He was the author of "*Traité de l'Harmonie à la Portée de tout le Monde,*" published at Paris in 1798.

GAVEAUX, PIERRÉ, composer to the *Opera Feydeau* at Paris, was born at Beziers in 1764. He became chorister in the cathedral of that town at seven years of age, and in less than two years was able to read every description of music, and in all clefs, at sight. He subsequently went to Bourdeaux, and was attached to one of the churches as tenor singer; here he received lessons in composition from Francis Beck, and composed several motets, which met with the approbation of his master. Gaveaux then engaged in the theatrical career, first at Bourdeaux, and afterwards at Montpellier; at length, in 1789, he made his *début* at the *Théâtre des Tuileries*, (then named *Théâtre de Monsieur*,) taking the principal tenor parts, and becoming the chief support of that theatre till the time of the union of the *Feydeau* and *Opera Comique*, in 1800. The following is a list of the principal operas composed by Gaveaux: Op. 1. "*L'Amour filial, ou Jambe de Bois,*" in 1792. 2. "*La Chantière Indienne, ou le Paris,*" 1791. 3. "*La Famille Indigente.*" 4. "*Les deux Hermites,*" 1792. 5. "*La Partie quarrée.*" 6. "*Delmon et Nadine.*" 7. "*Le petit Matelot.*" 8. "*Le Traité nul,*" 1796. 9. "*La Gasconade.*" 10. "*Les Noms supposés.*" 11. "*Les deux Jockies.*" 12. "*Sophie et Moncars.*" 13. "*Léonore, ou l'Amour Conjugal.*" 14. "*La Locataire,*" 1799. 15. "*Le Diable Couleur de Rose.*" 16. "*Le Trompeur trompé.*" 17. "*Lise et Colin.*" 18. "*Ouin-ska.*" 19. "*Céline.*" 20. "*Tout par Hasard.*" Besides these dramatic pieces, most of which were successful, Gaveaux has composed some romances and instrumental music. His lively air "*La Pipe de Tabac,*" has been popular throughout Europe.

GAVINIES, PIERRE, a celebrated French violinist, was born at Bourdeaux in 1728. At fourteen years of age he made his *début* as a performer at the *Concert Spirituel* at Paris, when Viotti, having heard his playing, designated him as *Le Tartini de la France.* Gavinies published three operas of sonatas, and several concertos. A year before his death, which took place in 1799, he published a collection of violin music, entitled "*Les vingt-quatre Matinées;*" most of the pieces in it are extremely difficult. The only dramatic work of Gavinies is "*Le Pretendu,*" *en intermède*, performed with success at the Italian theatre at Paris in 1760. In 1794, he was appointed professor of the violin at the Paris Conservatory.

GAVOT. A dance consisting of two light, lively strains, in common time, of two crotchets, the first of which contains four or eight bars, and the second, eight or twelve, and sometimes sixteen, each beginning with two crotchets, and ending with one, or the half of a bar. Some authors say, that the first strain of the true *gavot* has its close in the dominant, or fifth of the key, and that if it be in the tonic, or key note, it is not a *gavot*, but a *rondeau*.

GAVOTTA. (I.) Gavot; the air of a dance. See *Gavot*.

GAWLER. An organist in London, and author of, 1. "*Harmonia Sacra, a Collection of*

Psalm Tunes, with Interludes, with a Thorough Bass, forming a most complete Work of Sacred Music;" London, published by Clementi. 2. "Dr. Watts's Divine Psalms." 3. "Lessons for the Harpsichord." 4. "Eleven single Voluntaries for the Organ." 5. "Twenty-four Interludes or short Voluntaries for the Organ."

GAYE. Chamber musician to Louis XV. An anecdote is related of him, that, having spoken disrespectfully of the Bishop of Rheims, he feared being deprived of his situation at court: falling, therefore, at the feet of the king, he acknowledged his fault, and requested pardon. A few days afterwards, as he was singing mass in the king's presence, the Archbishop of Rheims took occasion to remark to his majesty, with a view of procuring the dismissal of the musician, "*C'est dommage, sire, le pauvre Gaye perd sa voix.*" "*Vous vous trompez,*" dit le Roi, "*il chante bien, mais il parle mal.*"

GAYER, JOHANN JOSEPH G., chamber musician to the Landgrave of Hesse Darmstadt, was born in 1748. He composed an oratorio entitled "*Der Engel, Mensch, und Fiend*," six masses, and some motets; also a variety of instrumental music.

GAZZANIGA, GIUSEPPE, of Venice, was chapel-master at Verona, and a pupil of Sacchini. He resided for a long time at Vienna, and composed many Italian operas between the years 1783 and 1792.

G CLEF. This is a compound character of the letters G and S, for the syllable *Sol*. In old music, the two letters G and S are sometimes seen distinctly marked. The earliest use of our present character is ascribed to Lampadius. The G clef must turn on the second line of the staff; all the notes on that line are called G; the other degrees take their names from that, as the clef line:—

All other added degrees are reckoned from these, whether above or below.

G DOUBLE, or DOUBLE G; the octave below G gamut; the lowest note of the letter G, on the piano-forte.

GEBAUER. There were four brothers of this name, resident at Paris; each of them composed instrumental music between the years 1790 and 1800, chiefly for wind instruments. Many of their quartets, which they played together in public, were much admired. One of the brothers published "Sixty Methodical Lessons, as Duets, for two Flutes, for the Use of Beginners," a work which is much esteemed in Germany.

GEBEL, GEORG, the elder, organist at Breslau, was born there in 1685. He published much music for the harpsichord, and many compositions for the church. He died about the year 1750.

GEBEL, GEORG, the younger, son of the preceding, and born at Breslau in 1709, was chapel-

master to the Prince of Schwartzburg Rudolstadt. His works are very voluminous, consisting chiefly of compositions for the church, and five operas. He died in 1753.

GEBUNDEN. (G.) Connected, syncopated, in regard to the style of playing or writing.

GEDECKT, sometimes written **GEDACKT**. (G.) Stopped, in opposition to the open pipes in an organ.

GEERE. A composer of church music about the year 1770.

GEGENBEWEGUNG. (G.) Contrary motion.

GEHOT, JOHIN. A violinist and composer in London in 1784, published in that year "A Treatise on the Theory and Practice of Music;" also "The Art of Bowing the Violin," and "The complete Instructor for every Instrument." He is likewise the author of some instrumental music, published at Berlin and Paris.

GEHRICK. Author of some instrumental music for the piano-forte, published at Vienna in 1796.

GEHRING, JOHANN WILHELM, chapel-master at Rudolstadt after the death of Gebel, was a celebrated performer on the bassoon, and composer for his instrument. He died in 1787.

GEIGE. (G.) The violin.

GELINEK, G. A performer on the double bass, at the Grand Opera at Paris, and composer of a collection of waltzes, &c., for the harp, published about the year 1798.

GELINEK, HERMANN ANTON, called **CERVETTI**, was born in Bohemia in 1709. He was a celebrated violinist, and spent much of his life in France and Italy. He died at Milan in 1779.

GELINEK, ABBÉ JOSEPH, a good pianist, and admired composer for his instrument, was born in Bohemia in 1760. About the year 1795, he resided in the house of a nobleman at Vienna, in which town he published much piano-forte music, especially airs with variations.

GEMINIANI, FRANCESCO, a native of Lucca, was born about the year 1666. He received his first instructions on the violin of Carlo Ambrogio Lunati, of Milan, commonly called Il Gobbo, a celebrated performer on that instrument, who set the opera of "*Ariberto and Flavio*," for Venice, in 1684. After this, Geminiani studied counterpoint at Roue, under Alessandro Scarlatti; he also, in that town, became a pupil of Corelli on the violin. Having finished his studies, Geminiani went to Naples, where, from the reputation of his performance at Rome, he was at once placed at the head of the orchestra; but, according to the elder Barbella, he was soon discovered to be so wild and unsteady a timist, that, instead of regulating and conducting the band, he threw it into confusion; as none of the performers were able to follow him in his *tempo rubato*, and other unexpected accelerations and relaxations of measure. After this discovery, the younger Barbella assured Dr. Burney that his father, who well remembered Geminiani's arrival at Naples, said he was never trusted with a better part than the tenor, during his residence in that

city. He went to England in the year 1714. In 1716 he published, in London, his first work, dedicated to Baron Kilmansegg, consisting of twelve solos for the violin, which, though few could play, yet all the professors allowed them to be still more masterly than those of Corelli. In 1726, he formed Corelli's first six solos into concertos, and soon after, the last six. He likewise selected six of his sonatas for the same purpose; and imitating his style in composing additional parts to them, manifested how much he respected the originals. It was not till the year 1732 that Geminiani published his first six concertos, which he called his "*Opera Seconda*," and dedicated to the Duchess of Marlborough. Soon after this, his "*Opera Terza*," or second set of concertos, appeared, which established his character, and placed him at the head of all the masters then living in this species of composition. His second set of solos, commonly called his French solos, either from their style, or their having been composed and engraved in France, was published in 1739. These were admired more than played; as, about this time, it became more than ever the fashion for public solo players to perform only their own compositions, and others were unable to execute them. His third set of concertos, which appeared about the year 1741, was so labored, difficult, and fantastical, as never to be played in either public place or private concert. His long-promised work, with the title of "*Guida Armonica*," published in 1742, appeared too late; for, though there are many combinations, modulations, and cadences, that would open the mind and enrich the memory of a young student in harmony, he promised too much, and his authority in the kingdom was diminished by new music and new performers, as well as by his own frequent change of sentiment: setting up, at one time, as a mode of perfection, what he would despise and condemn at another.

His "Treatise on Good Taste, and Rules for Playing in Good Taste," did not appear till about 1747; but that was too soon for the times. Indeed, a treatise on good taste in dress, during the reign of Queen Elizabeth, would now be as useful to a tailor or milliner, as the rules of taste in music, forty years ago, to a modern musician.

In 1748 he published his "Art of Playing on the Violin," which was a very useful work in its day; the shifts and examples of different difficulties and uses of the bow being infinitely superior to those in any other book of the kind, or, indeed, oral instruction, which the English nation could boast, till the arrival of Giuliani.

His composition called the "Enchanted Forest," in which he endeavored, by mere sound, to represent to the imagination of an audience all the events in the episode of the thirteenth book of Tasso's "Jerusalem," was published about 1756. But music has never the power, without vocal articulation, to narrate or instruct; it can excite, paint, and soothe our passions, but is utterly incapable of reasoning or conversing to any reasonable purpose.

Besides these practical and theoretical works, he published two books of "Harpichord Pieces," that are rendered impracticable by crowded harmony and multiplied notes; and two books upon the "Art of Accompaniment," which are only intelligible to those who no longer want such assistance, and, if practised, would be intolerable to

singers and solo players, who wish to be heard through the tinkling of a harpsichord.

Geminiani was seldom heard in public during his long residence in England. His compositions, scholars, and the pre-ents he received from the great, whenever he could be prevailed upon to play at their houses, were his chief support. In 1731 he advertised a weekly concert of music, to be carried on at Hickford's room by subscription, and at which he played the first violin himself. In 1741 he had a benefit concert at the little theatre in the Haymarket, by command of some of the royal family, and in 1749 a *concerto spirituale*, during Lent, at Drury Lane Theatre, in which he led the band, and played a concerto from the fifth solo of his fourth opus, and the tenth solo of the same set. The unsteady manner in which he led seemed to confirm the Neapolitan account of his being a bad mental arithmetician or calculator of time. After this he went to Paris, where he continued till 1755, when he returned to England, and published a new edition of his two first sets of concertos. In 1761 he went to Ireland, to visit his scholar Dubourg, master of the king's band in that kingdom, who always treated him with great respect and affection. It is supposed that his death was accelerated there, the next year, by the loss of an elaborate treatise on music, which he had been many years compiling, and which, by the treachery of a female servant, was conveyed out of his room, and could never be recovered. Surviving this loss but a short time, he died at Dublin, in 1762, at the great age of ninety-six.

GEMMINGEN, EBERHARD FRIEDRICH, BARON DE. Privy counsellor to the Duke of Wurtemberg about the year 1784. He was a musical amateur of superior taste and acquirements, and composed six symphonies, and much piano-forte music, which has been greatly admired.

GEMSEN HORN. An instrument formed of a small pipe made of the horn of a quadruped called the *gens* — a chamois, or wild goat. Some suppose the *gemsen horn* to be the same with the modern *hautboy*.

GENERA. (L.) The different scales by which the Greeks regulated their division of the tetrachord. These *genera*, as agreed by Aristoxenus, Bacchius, Euclid, Boetius, and other ancient writers, were principally three — the enharmonic, chromatic, and diatonic. Aristides Quintilian, however, mentions many other *genera*, and enumerates six, as very ancient, viz., the Lydian, Dorian, Phrygian, Ionian, Mixolydian, and Syntonydian. These six *genera*, which we must not confound with the tones, or modes, of the same names, differed no less in their degree, than in their compass. One did not extend to the octave, while others reached, and some exceeded it. Independent of the various subdivisions of the three principal *genera*, there was a common genus, consisting only of the stable sounds of the *genera*; as also a mixed genus, partaking of two, or of all the three *genera*. It is worthy of notice that, in this collection, or combination of *genera*, which was rarely used, not more than four chords, or strings, were employed, which were tightened or relaxed during performance — a practice of

great apparent difficulty, and of which we can have no true idea. Indeed, the whole musical system of the ancients being only conveyed to us by speculative authors, and not by any specimens of its practice, we are necessarily left in great uncertainty respecting its execution; nor will the varying accounts of the different writers on the subject afford us a permanent resting-place for our opinions concerning the niceties of its theory.

GENERAL BASS. Thorough bass. See **BASS**, **THOROUGH**.

GENERALI. An Italian composer of the comic opera, "*La Contessa di colle erboso*," performed at Munich in 1823; also of "*La Testa naravigliosa*."

GENERATEUR. (F.) The name first given by Rameau to the fundamental note of the common chord, and since adopted by other French writers in the same sense. It was but a new name given to an old and well-known combination, but had, however, the merit of being particularly appropriate, inasmuch as the *triad* is absolutely generated from its fundamental.

GENEROSO. (I.) Noble; in a dignified manner.

GENIALIA. (L.) The name given by the ancient Romans to cymbals, because they were used in the celebration of weddings.

GENRE. A word used by French connoisseurs in the sense of *style* or *manner*. They prefer the *genre* of this to that composer. The *genre* of this singer, or instrumental performer, is more elegant or impressive than that of another.

GENUS. (L.) The singular of **GENERA**; which see.

GEORGE, SEBASTIAN, a pianist and composer for his instrument at Moscow, was born at Mentz; his publications bear date from the year 1796.

GEORGE, J. P., son of the preceding, also a pianist and composer for his instrument at Moscow; his compositions are dated from the year 1797.

GEORGES, LE CHEVALIER DE SAINT, born at Gundaloupe, died at Paris in a state of indigence in 1801. He was equally remarkable for his skill in gymnastic exercises, and for his talent as a violinist. He led the band at the concert of amateurs at Paris in 1770. St. Georges composed some violin music, and also an operetta, called "*La Chasse*."

GERADE TAKTART. (G.) Common time.

GERADEBEWEGUNG. (G.) Similar motion.

GERARD, HENRI PHILIPPE, was born at Liege in 1763. At the formation of the Paris Conservatory, he was appointed professor of singing. Gerard has published but few works, though much of his music in manuscript is known and admired by amateurs.

GERBER, HEINRICH NICHOLAS, organist to the Prince of Schwartzburg, at Sondershausen, was born in 1702. He studied composition at Leipzig under Sebastian Bach. His works consist chiefly of preludes and fugues for the organ and piano.

GERBER, son of the preceding, was born in

1746, and succeeded his father as organist at the court of Sondershausen. He is well known as the author of the "*Neues Historisch-Biographisches Lexicon der Tonkünstler*," Leipzig, 1812, 4 vols. 8vo. This was by far the most valuable work on musical biography which had been published on the continent, and was especially rich in its accounts of the composers of the German school.

GERBERT, MARTIN, Prince Abbot of the convent of Benedictines, and of the congregation of St. Blaise, in the Black Forest, was born in 1720, at a small town in Austria. He united to extensive learning the most elevated mind, and simple and amiable character. Having frequently in his youth had opportunities of hearing excellent music in the chapel of the Duke of Wurtemberg, at Ludwigsburg, and even of occasionally singing himself, he imbibed that affection for music to which we are indebted for his learned and toilsome researches on the history of that art. With a view to render these researches more profound and useful, he undertook to travel for three years in France, Germany, and Italy, and was enabled, through his authority in the church, to discover the most secret treasures of musical literature, by obtaining admittance into the libraries of the convents, and thus collecting from the fountain head the materials for his history of church music. At Bologna he became intimate with P. Martini. They agreed to communicate to each other their different knowledge, and that P. Martini should write the history of music in general, while Gerbert confined himself exclusively to that of the church. The number of seventeen thousand authors, that Martini had collected, certainly astonished Gerbert; but he says that he acquainted him with a still greater number existing in the German libraries. In 1762 he announced his intention of writing a history of church music, by a printed prospectus, and soliciting any information that could be given on the subject. This prospectus is to be found in the critical letters of Marburg. He finished this work in six years, though, in the interval, (the 23d of July, 1768,) the abbey and valuable library belonging to it became a prey to the flames, occasioning the loss of a great part of his materials, and likewise of his time, which he was obliged to employ in giving directions for the construction of a new edifice. This work is in two volumes, and contains many prints; it is entitled "*De Cantu et Musica Sacra, a primâ ecclesiæ ætate usque ad præsens tempus. Auctore Martino Gerberto, Monasterii et Congregationis St. Blasii de Silvâ Nigrâ Abbate, Sacræ Romanæ Imperii Principe. Typis San-Blasianis, 1774*." Gerbert divided his history of church music into three parts: the first finishes at the pontificate of St. Gregory; the second goes as far as the fifteenth century; and the third to his own time. But the work which has given the Prince Abbot Gerbert the greatest title to gratitude from artists and literati, is one of far more importance, published in 1784, under the title of "*Scriptores Ecclesiastici de Musica Sacra potissimum. Ex variis Italia, Galliæ, et Germaniæ codicibus Manuscriptis collecti et nunc primum publicè luce donati, à Martino Gerberto monasterii et Congregat. S. Blasii in Silvâ Nigrâ Abbate, S. Q. R. I. P. Typis San-Blasianis, 1784*." This is a collection of all the ancient authors who have written on music since the third century to the invention of printing,

and whose works had remained in manuscript. The learned amateur has by this work rendered an immortal service to the science of music. Unfortunately, it is now very difficult to procure a copy of this book. Forkel has given an extensive analysis of it in his "History of Music." The Abbot Gerbert kept up a constant correspondence with the celebrated Gluck. He died in his seventy-third year, in 1793.

GERBINI, MILE. LUGIA. An amateur performer on the violin, and pupil of the celebrated Viotti. In 1799 she went to Lisbon, where she performed some concertos on the violin, between the acts, at the Italian Theatre. She afterwards engaged at the same theatre as singer, and proved herself equally powerful as in instrumental music. In 1801 she went to Madrid, and afterwards performed on the violin at some public concerts in London.

GERMAN SCALE. This scale of the natural notes is A, H, C, D, E, F, G; not A, B, C, &c.: the B is always reserved to express B flat.

GERMAN SIXTH, or EXTREME SHARP SIXTH. A sixth consisting of ten semitonic intervals, as from F natural to the D sharp immediately above.

GERSTENBERG, JOHANN WILHELM VON, consul to the King of Denmark, was born at Tondern in 1737. He was a most able and enlightened amateur musician. He wrote two dissertations, the first on Italian lyric poetry, the second on the manner of figuring chords.

GERVAIS, CHARLES HUBERT. A French composer of dramatic and other vocal music. He died at Paris in 1744.

GERVAIS, P. N., the elder, was born at Mannheim. He was one of the best violin pupils of Fraenzl. He died at Lisbon in 1795. Some of his music for the violin was published at Paris.

GERVASONI, CARLO, chapel-master at Borgo-Taro, published, in 1800, two volumes octavo, entitled "*La Scuola della Musica.*"

GES. (G.) G flat.

GESCHWIND. (G.) Quick; as, *geschwind marsch*, a quick march.

GES DUR. (G.) G flat major.

GESTEWTZ, FRIEDRICH CHRISTOPH, was born in Germany in 1753, and studied music under Hiller. In 1790 he was director of the music at the Italian Theatre at Dresden. He composed some sacred music, also several dramatic pieces and piano-forte music. He died at Dresden in 1805.

GESTOURS. (F.) The name by which those itinerant minstrels were formerly distinguished who interlarded their songs and tales with jokes and witticisms, accompanied with humorous gesticulations.

GESUALDO, CARLO, Prince of Venosa, (a principality of the kingdom of Naples,) flourished about the latter end of the sixteenth century. He was the nephew of Cardinal Alphonso Gesualdo, Archbishop of Naples, and received his instructions in music from Pomponio Neuma. The writers of all countries give to this prince the character of being an extremely learned, inge-

ious, and artificial composer of madrigals. He is generally supposed to have imitated and improved that plaintive kind of air which distinguishes the Scots melodies. Dr. Burney, however, says, that, in a very attentive perusal of the whole six books of the Prince of Venosa's madrigals, he was utterly unable to discover the least similitude to, or imitation of, the Caledonian airs; and, instead of giving to his compositions the unlimited praise that has been so liberally bestowed by others, he says, that "so far from Scots melodies, they seem to contain no melodies at all; nor, when scored, can we discover the least regularity of design, phraseology, rhythm, or indeed any thing remarkable, except unprincipled modulation, and the perpetual embarrassments and inexperience of an amateur in the arrangement and filling up of the parts." Notwithstanding this opinion of Dr. Burney, which, indeed, few persons would venture to question, it is well known that Geminiani has often declared that "he laid the foundation of his studies on the works of the Prince de Venosa." The first five books of his madrigals were published in parts, in 1585, by Simon Molinaro, a musician and chapel-master of Genoa. In the year 1593 the madrigals of the Prince of Venosa (six books) were published together by the same person. The pieces contained in this edition were upwards of a hundred in number. Two other collections were afterwards printed; but it is probable that the edition of 1613 contains the whole of his works.

GEYER, JOHANN EGDIDUS. An amateur musician, resident at Leipsic since the year 1799. He composed much piano-forte and vocal music of merit. He died in the prime of life, in the year 1808.

GEZEK, WENZEL. An organist at Prague, of some celebrity as a church composer. He was born in 1733.

G GAMUT. The first G below the bass clef note. Guido, who first added this note to the ancient scale, applied to it the Greek letter gamma, from which it derives its present name.

G FLAT. The flat seventh of A flat; the fifth flat introduced in modulating by fourths from the natural diatonic mode.

GHERARDESCA, FILIPPO, born at Pistoia, was a pupil of Martini. He published, subsequently to the year 1767, some operas, which were performed at different Italian theatres. In 1770 he composed for Pisa. Some time afterwards, he published at Florence six sonatas for the piano-forte, with a violin accompaniment. Among his best compositions is a "Requiem," composed after the death of Louis I., King of Etruria. It is considered a masterpiece of its kind. Gherardescas died at Pisa, in 1808, aged seventy.

GIACOBBI, GIROLAMO. Born at Bologna. He wrote some church and dramatic music. In 1610 he composed the music of the opera of "*Andromeda.*" Giacobbi is one of the earliest musical classics of the Bolognese school.

GIACOMELLI, GEMINIANO, of Parma, first appeared at Venice as an opera composer, in the year 1724. He was a pupil of Capelli, and had a lively imagination, that furnished him with agree-

ble flights, which, from their novelty, afforded much pleasure, and contributed not a little to propagate and establish the taste of subsequent ages.

GIALI, GIOVANNI ANTONIO, an Italian composer, composed for the theatre at Vienna an opera entitled "*Mitridate*," which was afterwards performed at Venice in 1730.

GIANNOTTI. A performer on the double bass, at the Grand Opera at Paris, in the year 1739. He wrote a treatise on composition, published in the year 1759, entitled "*Le Guide du Compositeur*."

GIARDINI, FELICE, was born in Turin in 1716. When a boy, he was a chorister in the *Duomo* at Milan, under Paladini, of whom he learned singing, the harpsichord, and composition; but having previously manifested a disposition and partiality for the violin, his father recalled him to Turin, in order to receive instructions on that instrument of the famous Somis. But though his preference for the violin, upon which he soon became the greatest performer in Europe, seems a lucky circumstance, yet he had talents which would have made him a superior harpsichord player, had he continued to practise that instrument. But he told Dr. Burney that he was perfectly cured of that vanity at Paris, by the performance of Madame de St. Maur, a scholar of Rameau, who played in such a manner as not only made him ashamed of his own performance, but determined him never to touch the instrument again in serious practice. He went to Rome early in life, and afterwards to Naples, where, having obtained a place among *ripiens* in the opera orchestra, he used to flourish and change passages much more frequently than he ought to have done. "However," says Giardini, "I acquired great reputation among the ignorant for my impertinence; yet, one night during the opera, Jomelli, who had composed it, came into the orchestra, and seating himself close by me, I determined to give the *maestro di capella* a touch of my taste and execution; and in the symphony of the next song, which was in a pathetic style, I gave loose to my fingers and fancy, for which I was rewarded by the composer with a violent slap in the face; which," adds Giardini, "was the best lesson I ever received from a great master in my life." Jomelli, after this, was, however, very kind, in a different way, to this young and wonderful musician. Giardini went to England in 1750. His first public performance in London was at a benefit concert for old Cuzzoni, who sang in it with a thin, cracked voice, which almost frightened out of the little theatre of the Haymarket the sons of those who had, perhaps, heard her at the great theatre of the same street with ecstasy. But when Giardini played a solo and concerto, though there was very little company, the applause was so long, loud, and furious, as nothing but that bestowed on Garrick had ever equalled. Dr. Burney had met him the night before, at a private concert, with Guadagni and Frasi, at the house of one of the best dilettanti performers on the violin at that time, and says, "We were all equally surprised and delighted with the various powers of Giardini, at so early a period of his life; when, besides solos of his own composition, of the most brilliant kind, he played several of Tartini's in manuscript at sight,

and at five or six feet distance from the notes, as well as if he had never practised any thing else. His tone, bow, execution, graceful carriage of himself and instrument; playing some of my own music, and making it better than I intended, or had imagined it in the warm moments of conception; and, lastly, playing variations extempore, during half an hour, upon a new but extraordinary kind of birthday minuet, which accidentally lay on the harpsichord,—all this threw into the utmost astonishment the whole company, who had never been accustomed to hear better performers than Festing, Brown, and Collet." Such was the esteem which Giardini acquired in London, from his talents, that in 1754 he was placed at the head of the opera orchestra. Two years afterwards he joined Mingotti in the management of the opera; but although they acquired much fame, their management was not attended with much success. During this period Giardini composed several of the dramas which were performed. After the year 1763, Giardini retired from his situation with considerable loss, and entered upon the occupation of teaching in families of rank and fortune, at the same time continuing unrivalled as a leader, a solo player, and a composer for his favorite instrument. He resided in England till the year 1784, when he went to Naples, under the patronage of Sir William Hamilton. Here he continued five years, and then returned to England; but his reception was not what it had formerly been. His health was greatly impaired, and, sinking fast under a confirmed dropsy, all his former excellence was lost. Instead of leading in all the most difficult pieces, he now played in public only the tenor in quartets, which he had recently composed. He attempted, but without success, a burletta opera, at the little theatre in the Haymarket, and at length, in 1793, was induced to go to Petersburg, and afterwards to Moscow, with his burletta performers. But he experienced only the most cruel disappointment in each of these cities. The general capricious character and splenetic disposition of Giardini were his bane through life. He spoke well of few, and quarrelled with many of his most valuable friends. Nothing but his very superior musical talents could have upheld him during the time he was in favor with the public. Careless of his own interest, and inattentive to all those means which would have promoted his success in the world, he at length sank under misfortunes of his own creating, and died in 1796, at Moscow, weighed down by penury and distress.

GIBBONS, EDWARD, elder brother of Orlando Gibbons, was a bachelor of music at the University of Cambridge, and was incorporated at Oxford in 1592. He was organist of the cathedral church of Bristol, and was also priest, vicar, sub-chantor, and master of the choristers there. In 1604 he was appointed a gentleman of the Chapel Royal. It is said that, in the rebellion, he furnished the king with the sum of a thousand pounds, for which act of loyalty he was afterwards very severely treated by those in power, who deprived him of a considerable estate; and, though at that time more than eighty years of age, he and three grandchildren whom he maintained were actually turned out of their home. He was musical preceptor to Matthew Lock

and Anthony Wood says that several of his compositions were deposited in the music school at Oxford.

GIBBONS, ORLANDO, one of the most celebrated English musicians of his time, was a native of the town of Cambridge, and born in the year 1583. At the age of twenty-one, he was appointed organist of the Chapel Royal, and in 1622 (along with Dr. Heyther) obtained the degree of doctor of music in the University of Oxford. Three years after this, being ordered to go to Canterbury for the purpose of attending the marriage solemnity between King Charles I. and Henrietta of France, (for which he had composed the music,) he was seized with the small-pox, and died there at the age of forty-five. He was buried in the cathedral church of that city. In 1612 he published "Madrigals in four Parts, for Voices and Viols;" but the most excellent of his works are his compositions for the church, namely, his services and anthems, of which there are many extant in the cathedral books. His anthem of "Hosanna" is one of the most perfect models for composition in the church style now to be found. He composed the tunes to the "Hymns and Songs of the Church, translated by George Wiltbers;" and some of his lessons for the virginal are preserved in the collection entitled "Parthenia." The compositions of Orlando Gibbons are for the most part truly excellent. The characteristics of his music are fine harmony, unaffected simplicity, and an almost unexampled grandeur. For choice of subjects, for skill in the management of them, and for flow of melody in all the parts, this great master was inferior to none of his contemporaries, and infinitely superior to most of them. Specimens of his anthems are to be found in nearly all the miscellaneous collections of ancient sacred music that are extant. His five part madrigal, "The Silver Swan," which is a remarkably fine specimen of this species of music, is inserted in Dr. Crotch's publication, and also with a piano-forte accompaniment, in "The Vocal Anthology." There is likewise a *preludium* for the organ, and other organ pieces of his composition, in Smith's "Musica Antiqua."

GIBBONS, ELLIS, brother to the celebrated Orlando Gibbons, flourished about the year 1600. Two of his compositions are to be found among the collection of madrigals for five and six voices edited by Morley, in London, in 1601, under the title of "The Triumphs of Oriana."

GIBBONS, CHRISTOPHER, the son of the celebrated Orlando Gibbons, was, from his childhood, educated to the profession of music under his uncle, Ellis Gibbons, organist of Bristol. He had been a chorister in the chapel of Charles II., organist in private to his majesty, and organist of Westminster Abbey. The king had so great a partiality for this musician, that he was induced to give him a personal recommendation to the University of Oxford, requesting that he might be admitted to the degree of doctor in music. This he was in consequence honored with in 1664. He died in the year 1676. C. Gibbons was more celebrated for his skill in playing the organ than for his compositions. There are, however, many of his anthems extant, though we know of none that have been last printed. Those most celebrated are, "God be merciful unto us," "Help me, O Lord," "Lord, I am not high

mind," and "Teach me, O Lord." It is said that he assisted in the work entitled "*Cantica Sacra*," containing English and Latin hymns and anthems, published in 1674.

GIBEL, OTTO. Director of music, singer, and composer at Minden. He was born at Borg, in the Island of Femern, and died in 1682.

GIBERT, a French musicien, composed many operas for the Italian Theatre at Paris, and has published a work entitled "*Solféges ou Leçons de Musique*." He died at Paris in 1787.

GIGA. (L.) A jig, or lively species of dance.

GIGNE. (F.) A species of dance in compound common time.

GILES, NATHANIEL, was born either in or near the city of Worcester, and was admitted, in 1558, to the degree of bachelor in music, and about forty years afterwards, to that of doctor, in the University of Oxford. He was one of the organists of St. George's Chapel at Windsor, and master of the boys there. In 1597 he was appointed master of the children, and afterwards, in the reign of King Charles I., organist of the Chapel Royal. He died in 1633, at the age of seventy-five. His compositions are chiefly services and anthems.

GILLES, JEAN, born in 1669 at Tarascon, in Provence, was director of the music, or chapel-master, in the church of St. Stephen, in Toulouse. He was a singer in the choir of the Cathedral of Aix, and a fellow-pupil with the celebrated Campra. There are many fine motets by Gilles; several of them have been performed in the *concert spirituel* at Paris with great applause, particularly his "*Diligam te*." But his capital work is a "*Messe des Morts*," of which the following history is recounted by Laborde: "Two counsellors of the parliament of Toulouse died nearly at the same time, each of them leaving a son. The two youths were united in the closest friendship, and they agreed to join in celebrating a grand funeral service for their parents. They, consequently, engaged Gilles to compose a *requiem*, allowing him six months to complete the work. When the mass was finished, Gilles collected all the musicians in the town to assist at the rehearsal, inviting the most celebrated masters of the neighborhood, and among others Campra and the Abbé Madin. The composition was found to be admirable; however, the two young counsellors had changed their opinions, and would not have it performed. Irritated by this circumstance, Gilles said to one of them, "*Eh bien! elle ne sera exécutée pour personne; j'en veux avoir l'éternité*."—Very well, then, its first performance shall be for myself. In fact, he died a very short time after, when this mass was sung for him. It was subsequently used in 1764, at the funeral service in honor of Rameau, at the Oratoire church in Paris.

GIMMA, HYACINTO. A learned Italian priest. He published a work at Naples in 1724, entitled "*Idea della Storia dell'Italia Letterata*," in 4to., in which is a dissertation on the rise and progress of Italian music.

G IN ALT. The octave above the G, or treble clef note; the 6th note in alt.

G IN ALTISSIMO. The octave above G in *alt*, and the fifteenth above the G, or treble clef note; the first note in *altissimo*.

GINGUENÉ, P. L. A French author and warm partisan of Piccini in the disputes between the Piccinists and Gluckists. He was born at Rennes in 1748. He published a pamphlet entitled "*Entretien sur l'Etat actuel de l'Opéra de Paris*." This book caused a violent critique from Monsieur Suard, which appeared in the *Mercure* of that time. He subsequently carried on a paper war with MM. Suard and l'abbé Arnaud, under the name of *Mélophile*. Ginguene occupied himself much in the study of Italian literature, and the history of music. He wrote, conjointly with Framery, the article *Musique* in *L'Encyclopédie Méthodique*. Much of Ginguene's "*Histoire de la Musique*" is translated from Dr. Burney, whom, by the by, he might as well have quoted throughout the whole article of *Cantate*, which is one of the most interesting in the volume. In 1801 this writer published a very interesting memoir of the life and writings of Nicolas Piccini, where he appears to have acknowledged the errors of his youth. The partisans of Gluck, and even those of Piccini, were pleased with the moderation he at length observed towards the reformer of the French opera.

GINI, GIOVANNI ANTONIO. Chapel-master to the King of Sardinia, at Turin, about the year 1728. He composed the music of the operas of "*Mitridate*" and "*Tamerlano*," also much other vocal music.

GIOCOSAMENTE, or GIOCOSO. (I.) Merri-ly, playfully, with sportiveness. Synonymous with *scherzando*, which see.

GIOJOSO. (I.) Joyously, with buoyant hilarity.

GIORDANI, GIUSEPPE, was born in Naples in 1753. He went to England early in life, and resided so many years in London, that he was at length almost as well acquainted with the English language, and English style of music, as any individual of his time. In the year 1779, he entered into a speculation with Leoni, the singer, by taking the theatre in Chapel Street, Dublin, for the performance of operas, in which the whole of the musical department was to be under his management. This connection continued about four years, Giordani composing the music, and Leoni superintending the singing. They had considerable encouragement; but owing, as it is supposed, to several unpropitious engagements which they made, they at length became bankrupts, and the concern was, of course, transferred to other hands. Giordani from this time continued to reside at Dublin, as a teacher of music, where he had several pupils of distinction. He married there the daughter of Mr. Wilkinson. He not only wrote, but published, much music of his Italian operas, which were in general well received. Those that are now in print are, "*Artaserse*," "*Antigono*," and "*Il Baccio*." Of his English operas, the first that was published appears to have been "*Perseverance, or the Third Time the best*," performed in Dublin in the year 1789. His sonatas and other pieces for the pianoforte, as well as his single songs, both Italian and English, had a great sale. Besides the above, Giordani composed an oratorio entitled "*Isaac*."

GIORGIS, JOSEPH, a violin pupil of Viotti, published, at Paris, some concertos and airs with variations for his instrument. He was violinist at the chapel of the King of Westphalia about the year 1810.

GIORNOVICHI. See JARNOWICH.

GIOVANELLI D'AVELLETRI RUGGIERO, born about 1560, was a chapel-master and successor to Palestrina in the church of St. Peter at Rome. He was also a singer in the pontifical chapel. There is extant a collection of madrigals by Giovanelli, that were printed at Venice. He composed many masses, some of which have been much celebrated. He also published a work on music in 1581.

GIRANEK. Member of the chapel of the elector of Saxony, at Dresden. He died in 1760, and left some music of his composition for the violin, harpsichord, and lute.

GIRAUD, member of the French Academy of Music, composed, in conjunction with Berton, the opera of "*Deucalion et Pyrrha*," which was performed in 1755. In 1762 he composed alone, "*L'Opéra de Société*." His motets also met with much success in France.

GIRBERT, CHRISTOPH HEINRICH, director of the music at the theatre of the Margrave of Anspach, Bayreuth, in 1785, was a celebrated pianist and composer for his instrument. Girbert was born in 1751.

GIROLAMO, DU NAVARRA, a Spaniard and renowned musician, flourished in Italy about the year 1550.

GIROUST, FRANCOIS, was born at Paris in 1730. At seven years old he was chorister at the church of Notre Dame, where he learned composition under Goullit, music master of that church. In 1775 the king named him master of the Chapel Royal, and afterwards superintendent of his music. Giroust composed several oratorios, any one of which would have rendered a composer celebrated. In that of "*Le Passage de la Mer Rouge*," he surpassed himself. He also composed for the opera; but, through cabal and envy, his works did not appear there. It was affirmed by connoisseurs who heard the overture of his "*Téléphe*," that it was at least equal to that of "*Iphigénie*." Giroust died at Versailles in 1799.

GIS. (G.) G sharp.

GIS MOLL. (G.) G sharp minor.

GITTER, J., published at Manheim and Mentz, in 1784, three quatuors for the flute, violin, viol, and violoncello, and three duets for the violin.

GITTETH. An instrument which David brought from Gath, of the harp kind.

GIULINI, ANDREAS, chapel-master at Augsburg. He was a profound theorist in music; he taught singing for the church, also composed much sacred and other music. He died in 1771.

GIULINI, CONTE GIORGIO, a celebrated poet and composer at Milan in 1714. He died in 1780.

GIULLARI, or GIOCOLARI. The name formerly given in Tuscany to those bands of buffoons, dancers, actors, singers, and instrumental performers, retained in the courts of princes, and other great persons, and who by their gambols

farces, sports, and songs, amused and diverted the company.

GIUSTO. (L.) A term signifying that the movement before which it is written is to be performed in an equal, steady, and just time.

GIVING OUT. A term used by the organists to signify the previous or prelude performance, by which the psalm tune about to be sung is announced, or *given out*, to the congregation.

GIZZI, DOMINICO, was born at Aprino, in the kingdom of Naples, in 1684, and died at that capital in 1745. He was a celebrated singer, and in 1720 founded a school of singing, in which he formed the famous Conti, surnamed Gizziello, in honor of his master. The reputation of Gizzi as a musician is purely traditional, as none of his works are now existing.

GIZZIELLO. See **CONTI**.

GLAESER, CARL LUDWIG TRAUOGOTT, born at Weissenfeld in 1747, was director of music at the seminary there, and composed much church and instrumental music. He died in 1797.

GLAREANUS, HENRY LORIS, or LORIT, so called because he was of Glaris, in Switzerland, was born in 1488. He first taught music at Cologne, and afterwards at Bâle, Paris, and lastly at Friburg, where he died in 1563. His music master was J. Cochläus, and his preceptor in literature the celebrated Erasmus, with whom he was united in the strictest friendship. Erasmus, in his letters, represents Glareanus as a man of profound and universal learning, joining to the knowledge of philosophy, theology, and mathematics, that of poetry, geography, and history. The Emperor Maximilian I. gave him a crown of laurel and a ring, as a mark of his esteem for his person and poetry. It is known that the Swiss, assembled at Zurich, recompensed magnificently the "*Panegyrique de l'Alliance des Cantons*," which Glareanus put into verse. In 1547, his "*Dyleachordon*," in one volume, appeared at Bâle. This work, which has now become scarce, is of great importance, inasmuch as it shows the state of practical music about the year 1500, that is to say, at the epoch of the Flemish school. The author establishes the twelve tones of the ecclesiastical chant, and gives on each of them a choice of musical pieces, for two, three, four, and frequently more parts, selected from the *chef d'œuvres* of the best masters of his time. In this work are to be found documents respecting many of the best composers. Choron has republished much from this writer, in his great work on music.

GLASER, JOHANN MICH., horn at Erlangen in 1725, was a violinist in the Chapel Royal at Aupsach. In 1775 he returned to Erlangen as town musician, where he resided till his decease. Some symphonies of his composition were published at Amsterdam.

GLASSES. The musical glasses is an instrument consisting of a number of glass goblets, resembling finger glasses, which are tuned by filling them more or less with water, and played upon with the end of the finger damped. There are few persons at a dinner table who have not tried their skill in producing the sound which

the vibration of a finger glass will yield in the way above described. The less the quantity of water in glasses of similar forms and equal capacity, the lower will be the scale; hence the facility of forming a complete scale by the quantity of water contained in each. The skill, or rather knack, of operating upon the sets of glasses for the production of melodies and harmonies, is that of procuring instantly the required vibration by a gentle and rapid action of the finger upon their edges, and so quickly from one to another as to be able to introduce harmonies to the sounds of the air or melody before the vibrations of its glasses have ceased. A touch of the finger on the edge of a glass puts, of course, a stop to its vibration, and thus prevents confusion. See article **FRANKLIN, BENJAMIN**.

GLEE. A vocal composition in three or more parts, generally consisting of more than one movement, and the subject of which, notwithstanding the received sense of the word *glee*, may be either gay, tender, or grave; bacchanalian, amatory, or pathetic. When the glee was first introduced is not exactly known, but it is of modern invention, and was originally, as appears evident from its name, confined to themes of cheerfulness and conviviality. The term itself is derived from a Saxon word signifying *music*, and therefore, in very strictness, every piece of vocal music in which melody and harmony are combined, whatever may be the nature of the subject on which it treats, partakes more or less of the glee, as some might suppose; but the term *glee* was not given to vocal concerted music at all, until long after the madrigal had become known. Glee music is extended in its signification, and has ever been significant of joy, pleasure, and mirth; and the music itself is, or should, be calculated to produce such sensations. When we speak the word *glee*, we use a musical term significant of joyous, mirthful, cheerful, compositions. The first use of the term *glee*, we believe, is found in a publication by Playford, 1667, entitled "Dialogues, *Glees*, Ayres, and Ballads, of two, three, and four voices," in which the glees are all of that mirthful nature which the word indicates. There seems to be a distinction between the terms madrigal and glee. "As fair as morn" a madrigal for three voices, was composed by Wilbye in 1598. Whatever distinction there may have been in early times, and large as the difference may have been between the madrigal and glee, modern writers confound the terms; the glee no longer remains in the narrow bounds of its first definition, but makes inroads over the boundary line of the madrigal on the one side, and that of the catch on the other. The beautiful glee, as it is generally called, of "Hark, the lark at heaven's gate sings," by Dr. Cooke, partakes of the nature of the madrigal; and so likewise does the canonet of "Canst thou love and live alone?" by Ravenscroft, which dates back as far as 1611. But composers early began to refer the term *glee* to its origin—that of music generally, instead of the confined and corrupted meaning of ancient authors; and the moderns have been inclined to merge madrigal, catch, and canon, in the general appellation *glee*. It is thus in the economy of science as in that of moral or of animal economy, that the gradations

are so nice that they may almost be said to run into each other; and this remark, as applied to our present subject, is equally correct when we approach the line of separation between the glee and the catch. The early glees were nothing more than vocal music in parts, in which the singers began and ended together, singing the same words. Gradually, however, this narrow limitation, like that of which we have already spoken, was overstepped, and the play of words and phrases was introduced; certain words were elongated in musical expression, and points were taken up after the manner of the catch; in short, on this side as well as the other, the word glee has become of catholic acceptance.

The minstrels, troubadours, minne-singers, gleemen, &c., were the direct successors of the bards, scalds, &c., who were the poets of early times; and they were not only the lyric historians of their times, but also the historians and *cantanti* of their own compositions. They were consequently invested with a dignity in the general eye, were feasted, honored, cherished, and rewarded; and although this settled indulgence to the class had the effect of corrupting them, and rendering them gradually licentious and practised in buffoonery, yet this was but a departure from a higher caste, and it is a lesson of human nature. The term *joeculator* was but one, and that the lowest, of those by which the minstrels and *gleemen* of later days were distinguished in legal documents, when the art itself was slowly falling into desuetude. In the first published books of glees, two parts were sufficient to constitute a glee; this is no longer the case, for by common, yet tacit consent, the last sort of composition obtains now no other title than that of *duet*, whatever be the nature of the subject.

GLEEK. (Saxon.) Music, or musician. Obsolete in English, but in Scottish phraseology still used.

GLEEMEN. Before the Norman conquest "gleemen" was the name applied to those who were afterwards called "minstrels." The minstrel's art, under the Normans, consisted of many branches: he was the rhymist, singer, story teller, juggler, relator of heroic actions, buffoon, and poet of the times; and the Saxon gleemen held nearly the same important social relations. These branches were filled generally by those most skilled in each of the particular arts, but in some cases a gleeman was professor of the whole. Among the early Saxons who came to England professedly to aid the Britons against the Danes and Celts, but who, as soon as they had gained a foothold, invited others of their countrymen to join them, and then turned their arms successfully against the Britons, gleemen were distinguished by two appellations, the one signifying merry-makers, and the other harpers. Mimicry, dancing, tumbling, sleight of hand, and various deceptive tricks, were used by gleemen to amuse their spectators, and they became the jugglers and merry-makers as well as the minstrels of their time.

GLEICHMANN, JOHANN ANDREAS, was born in Germany in 1775. In 1794 he was made director of music to the court at Hildburghausen. He has composed much vocal and instrumental music.

GLEISSNER, FRANZ, musician to the court at Munich, has composed an oratorio of considerable merit, called "*Lazarus*," also much other vocal and instrumental music since the year 1795.

GLIDING. A term applied by flute performers to the action of gently sliding the finger forwards from off the hole it has been employed in stopping, by which the ear is imperceptibly led to the succeeding sound.

GLISANDO, or **GLISSICATO.** (I.) In a gliding manner.

GLOEGGL, FRANZ XAVER. Chamber-mas-ter at Lintz in 1799, and founder of a music school there.

GLOESCH, CARL WILHELM, born at Berlin in 1732, was the only son of Peter Gloesch, a celebrated performer on the hautboy. Carl Gloesch was, in 1765, chamber musician and music master to the royal family of Prussia. He died at Berlin in 1809.

GLORIA. (L.) A principal movement of the mass or Catholic service.

GLORIFICATION. Singing in praise, and to the honor, of God.

GLOSSOP, MRS. Formerly Miss Fearon, an excellent English singer. She went to Italy for improvement in her art, and was engaged at the Theatre of San Carlos, at Naples, to supply the place of Madame Fodor, and at a salary, it is reported, of thirty thousand francs (one thousand two hundred and fifty pounds) per annum.

GIOTTIS. (Gr.) Two semicircular membranes, situated at the top of the larynx, and forming a small oblong aperture, which can be dilated or contracted at pleasure, and by the various vibratory motions of which the tones of the voice are modified. The same name is also applied by the ancients to an additional and movable part of the flute, which they placed between their lips in performance, and which is supposed to have been similar to our reed. The name which answers to the Latin word *lingula*, the tongue, seems sufficient to explain that this was an essential part of the instrument, and perfectly agrees with our being told that "the flutes could scarcely be made to *speak* without it."

GIOTTOCOMEIA. The name given by the ancient Greeks to the little boxes in which they carried the *lingula*, or tongues of their flutes.

GLUCK, CHRISTOPHER. This celebrated musician was born in 1714, according to an authenticated certificate of his baptism, at Weidenwangen, in the Upper Palatinate, where his father was head forester to Prince Lobkowitz. Early in his childhood, his family removed into Bohemia, where the father died, leaving his son still under age, and without either education or fortune. Nature, however, had in a great measure compensated young Gluck for these deficiencies, by gifting him with musical talents of the first order. This natural taste for music is common in Bohemia, where the rural population, as well as the inhabitants of towns, may be heard singing in parts and playing on various instruments in the fields or streets, and in groups, consisting of men, women, and children. Young Gluck, with very little instruction, soon became so remarkable for his skill on various instruments, that he determined on journeying from town to town to procure a livelihood as an itinerant musician. At length he wandered as far as Vienna, where his talent met with sufficient encouragement to enable him to obtain some little instruction, both in general education and in the principles of his favorite science. In 1736, he went in the suite of a nobleman to Italy; and at Milan, after taking lessons of the celebrated Martini, he was put upon Prince Melzi's establishment as musical composer. Having given many proofs of his genius, he was at length

selected to compose a grand opera for the theatre in that city. This work was entitled "*Arlesense*," and was produced at Milan in 1741. In this composition, Gluck depended entirely on his own genius, without asking the advice of any one, and by so doing he avoided the usual routine of other composers. In fact, expression seemed to be his principal study, whilst he disregarded the dictates of usage and fashion. At the first rehearsal, which was attended by a considerable number of amateurs, one aria was wanting on account of some required alteration in the words; when Gluck, perceiving that his music was much criticized, took advantage of the deficiency of the above air, and brought it out entirely after the Italian model, merely to please the ear, and without paying the least attention to the words, to the relation of the music, or to the general character of the drama. This little *ruse* operated wonders at the second grand rehearsal, when it was whispered about by the dilettanti that this song was not the composition of Gluck, but of their favorite San Martini. Still Gluck took no notice of the above remark, and the first public representation of the opera took place when the audience were almost unanimous in their approbation of the entire music, with the single exception of the air *à l'Italienne*, which they condemned as dull and inappropriate, the general outcry being, that it destroyed the unity and character of the whole opera. It was then that Gluck took signal vengeance on his hypercritics at the rehearsals, by himself avowing the air in question to be San Martini's composition. This opera so established his fame, that he immediately received orders to compose for several of the principal theatres in Italy. He in consequence produced "*Demetrio*" and "*Ipermestra*" for Venice, "*Artamene*" for Cremona, and "*Alessandro nell'Indie*" for Turin; also composed successively, for Milan, "*Demofonte*," in 1742, "*Siface*," in 1743, and "*Phædra*," in 1744. Almost all these works were successful, and placed him in the highest rank of his profession. In 1745 he was invited to England, where he composed an opera entitled "*La Caduta de Giganti*," and a pasticheo called "*Pyramo e Tisbe*;" he also reproduced his "*Artamene*." His "*Caduta de Giganti*" was performed at the King's Theatre before the Duke of Cumberland, in compliment to whom the whole was written and composed. The music had considerable merit, and the opera was tolerably well received, though it had only five representations. His "*Artamene*," which was produced in the same season, (1746,) was also successful, and Monticelli was every night encored in the beautiful air "*Rassarena il nusto ciglio*." "*Pyramo e Tisbe*" was a selection of the most beautiful airs from all his other works; but from their inapplicability, as thus collected, to the scenic representation, the pasticheo, as a whole, disappointed the public; and soon after its representation, the composer quitted England, being much astonished to find that those airs which had been most effective in the operas for which they were originally composed, were without effect when reproduced with other words and action. Gluck next proceeded to Copenhagen, and from thence to Germany, where he composed several theatrical and other works, and zealously applied himself to repair the defects of his education, both

by the study of languages and by associating himself with individuals distinguished in the literary world. One result of these pursuits was, his acquirement of bolder and more comprehensive ideas than had ever previously been conceived as to the effects producible by the union of poetry and music. He soon felt that those beautiful melodies, on the powers of which the Italians chiefly relied for the success of their vocal compositions, were in themselves only capable of pleasing the ear, and could never reach the heart. When spoken to concerning the pathos of certain celebrated Italian airs, he was known to reply, "They are charming, but," adopting an energetic Italian expression, "they do not draw blood." It was from about this time that Gluck totally abandoned the Italian school of composition, seeming to think with the Abbé Arnaud, that their opera is a concert to which the drama is a mere cloak. He now, as the Giulio Romano of music, commenced turning his mind to a new dramatic system, where every thing should be in strict keeping, the music never varying from the style demanded by the passing scene; where, in fact, the interest should result from the perfect *ensemble* of all the parts of the drama and music. He determined further, that it was hopeless to bestow that energy and those charms on music, of which it is susceptible, if it be not intimately allied with animated and simply expressive poetry, such, in fact, as truly depicts natural and determinate sentiments; that vocal music may be made to become a language expressive of all the affections of the human heart, but that, in order to bring it to this degree of power, the melody must follow with precision the rhythm and the accent of the words, and the instrumental accompaniments must assist by their own expression, either in strengthening the voice part, or affording a contrast to it, as the scenic situation may require. In the year 1754, the high reputation of Gluck caused him to be invited to return to Italy, when he brought out at Rome his "*Clemenza di Tito*," and "*Antigonus*." He then gave an opera named "*Clelia*," for the opening of a new theatre; and proceeded to Parma, where he composed "*Baucis e Phænon*," and "*Aristeo*," all of which were successful; in his own opinion, more so than they deserved, because they were written too much in the Italian taste, and against the convictions of his own mind on the subject of dramatic music. He next returned to Vienna, and between the years 1760 and 1764 produced his operas of "*Helen* and Paris;" and "*Alexis*:" he also brought out his "*Orfeo*," concerning the composition of which it is now necessary to state some particulars. Gluck, having become convinced that the poetry of Metastasio, though fraught with various beauties, was not capable of eliciting the greatest possible effect of which dramatic music is capable, communicated this opinion to M. Calzabigi, an ingenious Italian poet, whom he met at Vienna; particularly stating his conviction, that it would be proper to introduce choruses with action, nothing tending more to produce powerful theatrical effect than the sentiments of an impassioned multitude. Calzabigi had himself reflected on the imperfections of the Italian opera, and as he took the same view of the subject as Gluck, he was delighted to find so

great a musician ready to join with him in attempting a revolution in this department of literature and the fine arts. He accordingly wrote the poem of "*Orpheus*," which Gluck set to music, and it was first performed at Vienna in 1764. It excited more astonishment than pleasure on its first representation; the public ear having been accustomed to the routine of recitative, and to the mannerism of the usual Italian airs. Still, however, its great musical beauties surprised the connoisseurs, whilst its simple and affecting situations and expression excited hitherto unknown emotions in the sensitive mind. These feelings so prevailed, that at the fifth performance of the opera all objectors were silenced, the piece was generally applauded, and its success became more confirmed by a very considerable number of successive representations. In 1765 Gluck was again invited to Parma, on occasion of the marriage of the infanta. He then proposed to give "*Orpheus*," but that performance was not agreeable to the court; the opinion of the citizens of Vienna having no weight with the Italian amateurs, who could not imagine the possibility of writing better poems than those of Metastasio, or finer music than that of Jomelli, Sacchini, or Piccini. Millico, the principal singer at Parma, being requested to appear in the part of Orpheus, said, at first, that such a request was made only to destroy his reputation. Gluck, however, overcame all obstacles, and insisted on risking the performance, esteeming the Italians to be more attached to their sensations than their opinions; in which judgment it would seem he did not err, for the opera met with perfect success on the first representation, and had twenty-eight successive performances, the "*Armida*" of Traetta, who was engaged at the same time with Gluck, not being allowed to be brought forward. "*Orpheus*" was afterwards performed with success in almost every theatre of Europe. Amongst others it was, in 1773, brought out at the court theatre at Naples, when, on a duet in the third act by another composer being substituted for the original, the audience called loudly for the restitution of Gluck's music. This opera obtained the honor of being the first ever printed in Italy, those composed antecedently having been only copied for sale.

Gluck now visited the principal cities of Italy, and amongst others, Naples, where he was engaged to compose two operas: in one of these he wrote for Caffarelli the celebrated air, "*Se mai senti spirarti sul volto*," with which the Neapolitan professors found much fault, chiefly on account of a long pause in the vocal part, during which the instrumental accompaniments continued the movement. They even laid the score of the air before Durante, to hear his opinion of it. "I will not pretend to decide," said that great master, "how far this is strictly agreeable to rule; but one thing I can assure you, that we should, any of us, be very proud to have imagined and composed a similar passage." The brilliant success of "*Orpheus*" induced Gluck and Calzabigi to unite their efforts in treating upon the same plan a still more tragic subject: they accordingly composed "*Alceste*," which was first performed at Vienna in 1768. Never did any opera obtain such great applause or draw so many tears; no other drama was even allowed at the court theatre for the two

succeeding years, every performance during that time being "*Alceste*." In 1769 it was printed, with the following dedication prefixed to it, written by Gluck: "When I determined," says he "to compose music for this poem, I proposed to myself to shun various abuses in composition, which the vanity of singers, or excessive complacency of composers, had introduced, and which had rendered the Italian opera a most fatiguing and ridiculous, instead of a splendid and beautiful spectacle. I endeavored to reduce music to its legitimate purpose, which is that of seconding poetry, in order to strengthen the expression of the sentiments, and the interest of the fable, without interrupting the action, or weakening it by superfluous embellishments. It struck me that music ought to aid poetry, as vivacity of coloring, and a happy agreement of light and shade, strengthen the effect of a correct and well-designed picture, by animating the figures without altering the outline. I have, therefore, never in this opera interrupted a singer in the warmth of a dialogue, in order to introduce a tedious *ritornello*, nor have I stopped him in the midst of a discourse, to display his agility of voice in a long cadence. I have never deemed it requisite to hurry over the second part of an air when it consisted of the most impassioned and important portion of the subject, in order to repeat the words of the first part four times over; or to finish where the sense does not conclude, in order to give the singer an opportunity of showing that he can vary a passage in several ways, and disguise it in his own peculiar manner. In short, I have attempted to reform those abuses against which good sense and good taste have so long declaimed in vain. I have considered that the overture ought to prepare the audience for the character of the coming action and its subject; that the instrumental accompaniments should be used only in proportion to the degree of interest and passion of the drama; and also, that it is principally requisite to avoid too marked a disparity in the dialogue between air and recitative, in order not to break the sense of a period, or interrupt in a wrong place the energy of the action. Lastly, I have thought that I should use every effort in aiming at simplicity, and have accordingly avoided making any show of difficulties at the expence of clearness. I have set no value on novelty, unless it naturally sprang from the expression of the subject. In fine, there is no rule of composition that I have not willingly sacrificed for the sake of effect. Such are my principles, and fortunately the poem strongly seconded my project. The celebrated author of '*Alceste*,' having conceived a peculiar plan for the lyric drama, had substituted for flowery descriptions, for useless comparisons, for cold and sententious morality, strong passions, interesting situations, the language of the heart, and a constantly varying scene. Success has justified my ideas, and the unanimous approbation of the public, in so enlightened a city, has proved to me that simplicity and truth are the first principles of the beautiful in the productions of the fine arts, &c." These opinions abound with sense and good taste, and are well deserving the serious attention of dramatic composers.

Gluck now turned his mind to another field for his exertions. Notwithstanding his renown in Italy and Germany, he felt himself capable of still further advances in the career that he had

entered on: he considered that a tragedy in music, where the principal performers were castati, must always want theatrical illusion; and that he could not fulfil the idea he had formed of dramatic perfection, unless, in addition to good poetry and a magnificent theatre, he could command actors capable of uniting the art of singing with correct, noble, and pathetic action. These ideas he communicated to the Bailli du Roulet, who belonged to the French embassy of Vienna in 1772, stating that all the dramatic advantages he so much desired were, as he understood, united on the French stage. This was sufficient for the Frenchman, who adopted Gluck's opinions with warmth, and in concert with him chose the "*Iphigenia*" of Racine, as the subject best adapted to unite strong tragic interest with great musical and scenic effect. The "*Iphigenia in Aulide*" was accordingly completed, and performed at Vienna in the autumn of 1772. The Bailli du Roulet then wrote to the director of the Academy of Music at Paris, strongly recommending the piece for the French stage. The offer was accepted, and Gluck accordingly, when in his sixtieth year, departed for Paris, where he was immediately patronized by the queen, (Marie Antoinette,) who had been his pupil at Vienna, and without whose powerful assistance, he soon found it would have been impossible to have obtained the performance of his new composition. All the musicians and amateurs of Paris formed an almost insuperable cabal against him, having taken up the prejudiced notion that it was a disgrace to the poetry of their immortal Racine to be coupled with the music of a foreign composer; and, above all, that it was an insult to the taste of their metropolis, to admit such a heterogeneous production on the boards of one of their principal theatres. Under such circumstances, the composer solicited the interference of the queen: upon whose positive mandate the piece was performed for the first time on the 19th of April, 1776, when it excited the liveliest sensation, and the Abbe Arnaud wrote several eloquent pages in favor of the opera, ably interpreting the general enthusiasm which it had excited. "It should be remembered," say the editors of the French Encyclopædia, "in what state the Academy of Music was before the arrival of Gluck; the coldness of the performers, the immovability of the chorus, the want of skill of the orchestra. Let the zeal and ability be called to mind that now animate all parties, and what moral activity and physical effort must have been required to effect such a change; then it will be acknowledged that Gluck was precisely the individual to bring about so fortunate a revolution." The success of "*Iphigenia*" was the last blow aimed at the ancient French grand opera. But if Gluck triumphed without difficulty over Lulli and Rameau, he soon found in Piccini a more formidable competitor. This musician, whose reputation was well known to the Parisians, arrived in their capital in December, 1776, not unannouncing himself by any of the means employed by Gluck. He had previously composed no less than three hundred operas; but still modestly determined to make himself master of the French language, and especially of their declamation and poetry, before he competed for their favor as a dramatic composer. The assistance he received in this respect from the celebrated Marmontel will be found in our article "Piccini."

He had only just commenced his opera of "*Rolland*," when Gluck, with his partisans, formidably opposed him, and a (so called) "musical war" commenced, which for a very considerable time divided the theatrical circles of Paris. The aggression was evidently on the part of Gluck. To the "*Iphigenia in Aulis*" of Gluck succeeded a French translation of his "*Orfeo*," and of "*Alceste*," in 1776; of "*Armida*," in 1777; of "*Iphigenia in Tauris*," and of "*Echo and Narcissus*," in 1779. "*Alceste*" was established with more difficulty than either his "*Iphigenia in Aulis*," or his "*Orpheus*," on which account his panegyrist doubled their enthusiasm. The musical revolution in Paris was now far advanced. Some few French operas were still performed, but it was nearly impossible to hear them. To complete the triumph of Gluck, it only remained for him to compose new music to some poems already set by Rameau or Lulli, in order that, the same verses appearing with different music, the question of superiority might be no longer left in doubt. With this view Gluck determined to set the poem of "*Armida*;" during the time of his being employed on which work Piccini came to Paris, as before related. "*Armida*" was performed with moderate success in March, 1777. It was the same with this opera as with "*Alceste*;" the public accustomed themselves to it by degrees. With respect to "*Iphigenia in Tauris*," and "*Echo and Narcissus*," the former redoubled the enthusiasm of Gluck's admirers, and the latter (though condemned) could not cool it. The public were not at first favorable to "*Iphigenia in Tauris*;" but by keeping the work on the stage, being careful in the performances, adding superb ballets, and causing its praises to be heard every where, numerous audiences were attracted. The two last-named operas were the latest complete productions of their great composer. He resided several years after at Vienna, where he peacefully enjoyed in quietude his reputation and fortune. He had projected, and even begun, the opera of the "*Danaïdes*;" but being attacked by apoplexy, he was unable to continue it, and afterwards gave the poem to Salieri, who subsequently produced it with success. Gluck died of a second apoplectic attack in 1787, leaving a fortune of nearly six hundred thousand francs, (about twenty-five thousand pounds.) J. J. Rousseau's admiration for the genius of Gluck, as soon as he became acquainted with his works, is well known. All Paris observed him frequenting the theatre at every representation of Gluck's "*Orpheus*," although for some time previously he had absented himself from such entertainments. To one person he said on this subject, that Gluck had come to France to give the lie to a proposition which he had formerly defended, namely, that good music could never be set to French words. At another time he observed that all the world blamed Gluck's want of melody; for himself he thought it issued from all his pores.

Gluck was one day playing on his piano the part in "*Iphigenia in Tauris*," where Orestes, left alone in prison, after having experienced his accustomed agitation, throws himself on a bench, saying, "*Le calme rentre dans mon cœur*." Some one present thought he observed a contradiction in the bass, which prolonged the preceding agitation, after Orestes had declared that his heart was calm; they mentioned this to Gluck, adding,

"but Orestes is calm; he says so." "He lies," exclaimed Gluck; "he mistakes animal exhaustion for calmness of heart; the fury is always here," striking his breast: "has he not killed his mother?"

On the day appointed for the first representation of his "*Iphigenia in Aulis*" at Paris, Gluck was informed that the principal singer had been taken suddenly ill, but that another would perform his part for that evening. Gluck, suspecting cabal, immediately replied, "No; the performance must be postponed." That was declared impossible, the piece having been already advertised and announced to the royal family, under which circumstances there was no precedent of a postponement. "I will sooner," replied Gluck, "throw the piece into the fire than submit to its being murdered in the way proposed." All remonstrance was in vain, and the circumstance was obliged to be reported to the royal family, who kindly allowed the performances of the night to be altered.

GLUCK, JOHANN, born at Plauen, published at Leipsic, in 1660, a sort of oratorio, entitled "*Sept Paroles de Jésus Christ sur la Croix.*" It was the same idea to which Haydn has since done more complete justice.

G MOLL. (G.) G minor.

GNECCO. (F.) An Italian dramatic composer. A piece by him, entitled "*La Prova di un Opera Seria,*" was performed with success at the opera buffa at Paris, in 1806, and since.

GNUGAB. The name given by the ancient Hebrews to the organ.

GOAT-SONG, or TRAGEDY. A song or anthem, sung by the ancient Greeks to their god Dionysus, whilst the goat stood at his altar to be sacrificed.

GOCCINI, GIACOMO, an Italian dramatic composer, set, in 1713, the music of the opera, "*Amor fra gl' incanti.*"

GOD SAVE THE KING. This is the burden and common appellation of a well-known English national song, which has become very popular as a church tune in this country, entitled "America." Concerning the author and composer opinions differ. It has been generally believed that Henry Carey (see his biography) was the author, and that he employed Dr. Thornton, of Bath, and Christopher Smith, Handel's clerk, to correct the words as well as music. This gave rise to the assertion that Handel was the composer. The words, with the air, appeared in "The Gentleman's Magazine," in 1745, when the landing of the young Stuart called forth expressions of loyalty from the adherents of the reigning family. After Dr. Arne, the composer of another English song, "Rule Britannia," had brought it on the stage, it soon became very popular. Since that time the harmony of the song has been much improved, but the rhythm is the same as originally. According to a notice in "The New Monthly Magazine," vol. iv. page 389, there is a copy of this national song, published without date, by Riley and Williams, in which Anthony Young, organist in London, is called author of the air. There is also a story, that this national song, as Burney, the author of "The History of Music," maintained, was not made for a King George;

but that, in older versions, it ran thus, "God save great James our king;" and Burney adds, that it was originally written and set to music for the Catholic chapel of James II., and no one durst own or sing it after the abdication of James, fearing to incur the penalty of treason, so that the song lay dormant sixty years, before it was revived for George II. It is very interesting to observe how this song, of which the words have no great merit, has become dear to the whole English nation, on account of the associations connected with it. The French *Marseillaise* Hymn is of a much higher character, and equally a national favorite. The Paris correspondent of the Boston *Atlas*, says, "God save the king," is of great antiquity, and of French origin, having been used for centuries as a vintage hymn in the south of France. The same writer claims "Old Hundred" as a French tune, originally written in the key of G.

GOEPFERT, JOHANN GOTTLIEB, singer and director of music at the collegiate chapel of Weesenstein, near Dresden, was an excellent composer. He died in 1766.

GOEPFERT, CARL GOTTLIEB, son of the preceding, was one of the most esteemed violinists in Germany. He was born at Weesenstein about the year 1733. He was chorister at the school of St. Croix, and at the chapel at Dresden. At the moment of quitting his paternal home, for the purpose of proceeding to the university of Leipsic, his father is said to have given him a violin with these words: "*Voilà, mon fils, un instrument; tu connais ma position, et tu sais que je ne puis guère te donner davantage. Si tu es heureux, tu pourras te passer aisément de mon faible secours, et si tu es malheureux, tout ce que je peux te donner ne saurait t'aider.*" Goepfert, soon after this, experienced the vicissitudes of fortune till the year 1764, when, on occasion of the coronation of the Emperor Joseph II., he went to Frankfort, where he met with the celebrated Dittersdorf, and took him for his model in music. In a short time the fauce of Goepfert as a violinist spread throughout Germany, and he afterwards held various lucrative musical situations at the German courts, admired for his talent, and beloved for his private character, by all his countrymen. He died in 1798. Very little of his music has been published.

GOEPFERT, CARL ANDREAS, chapel-master to the Duke of Saxe-Meiningen, was born in Franconia in 1768. He was a celebrated performer on the clarinet, and has composed much valuable music for his instrument.

GOETZE, NICOLAS, pianist and violinist at Rudolstadt, in the service of the Prince of Waldeck, resided, about the year 1740, at Augsburg, where he published some harpsichord music.

GOETZEL, FRANÇOIS JOSEPH, flutist at the chapel of the Elector of Saxony at Dresden, in 1756, was celebrated for his talent and compositions for his instrument. He resided in London for many years.

GOL. One of the vocal deplorations used by the Irish in their funeral obsequies.

GOLDBERG, chamber musician to Count Brühl, at Dresden, about the year 1757, was a pupil of Sebastian Bach, in composition and harpsichord playing. He died very young.

Few, if any, of his compositions have been published; those which are known in manuscript are of extreme difficulty.

GOLDWIN, or GOLDING, JOHN, was a pupil of Dr. William Child, and on the 12th day of April, 1697, succeeded him as organist of the free chapel of St. George at Windsor. In the year 1703, he was appointed master of the choristers there, in both which stations he continued till the day of his death, in 1719. Of the many anthems of his composition, Dr. Boyce has selected one for four voices,—"I have set God always before me,"—which, as regards the modulation, answers precisely to the character which the doctor has given of the music of Goldwin, namely, that it is singular and agreeable.

GOMBERT, NICHOLAS, a native of the Netherlands, was chapel-master to the Emperor Charles V. He was a pupil of Josquin, and was well skilled in the science of harmony; so much so, indeed, that he is distinguished by Finch as having surpassed his master, and as having advanced the art of fugue. Gombert furnished a very considerable portion of nearly all the books of songs and motets that were printed in Antwerp and Louvain during the middle of the sixteenth century, besides a set of masses, published at Venice in the year 1541, and two sets of motets in 1550 and 1554, all in four parts.

GONG. A Chinese instrument of the pulsatile kind. Its form is that of a shallow, circular concave; its material, a composition of silver, lead, and copper; and its tone, which scarcely consists of any note that the ear can appreciate, is loud, harsh, and clanging. The gong is never introduced, except to give a national cast to the music in which it is employed, or to awaken surprise, and rouse the attention of the auditors.

GOODBAN, THOMAS, was born about 1780, of musical parents, who were both natives of and residents in Canterbury. His mother (whose maiden name was Saffery) was a singer above mediocrity, and his father a violin player, and one of the lay clerks of the cathedral. They kept a tavern called the Prince of Orange, where his father, with the assistance of his musical friends, established a weekly musical society, during the six winter months, called the Canterbury Catch Club, the performances at which were conducted by his brother-in-law T. N. Saffery, and afterwards by his son Osmond Saffery. T. Goodban was placed in the choir of the cathedral at the age of seven years, under Samuel Porter, the organist, but, showing no particular disposition to the study of music, did not begin to practise the violin until fourteen years of age, when, a change occurring in his father's circumstances, his mother's death soon following, he was placed in a situation as clerk in the office of a very respectable solicitor in Canterbury. There, although laboring under the disadvantage of daily employment at the desk, Goodban made such progress on the violin, that upon the death of his father he succeeded to his teaching, though only then eighteen years of age. Being left, with two younger brothers, to his own resources, Goodban next began seriously to apply himself to the study and practice of the piano-forte, and the science of music generally. In

1809, he was appointed one of the lay clerks in the cathedral, and soon afterwards took to the profession as a teacher of the violin, piano-forte, and singing, as his only means of support. In 1810 (the society being then in a declining state) O. Saffery gave up the leading and direction of the orchestra at the Catch Club, when, at the solicitation of the members of the society, Goodban undertook the duties of that honorable situation, and to this circumstance principally attributes the success of his subsequent professional career. Goodban's principal publications are as follows: "A complete Guide to the Violin," published in 1810; "A Guide to the Piano;" "A new Game of Musical Characters, adapted for the Improvement of Beginners and Amusement of Performers in general," published in 1818; "The Rudiments of Music, with progressive Exercises to be written upon Slates, being a new System of Musical Instruction, and adapted as well for teaching in Classes as for private Tuition," published in 1820; "A Glee to Apollo and Bacchus, for four Voices," dedicated to the President and Members of the Catch Club, Canterbury.

GOODGROOM, JOHN. An English composer and singer at the Chapel Royal, London, about the year 1750. Some of his sacred music has been published.

GOODSON, RICHARD, bachelor of music and organist at Christchurch, Oxford, was elected professor of music there in 1682. He died in 1717.

GORDON, JOHN, a professor of music at Gresham College. He died in 1739.

GORGIEGGI, (L.) Rapid divisions, as exercises for the voice in singing.

GOSS, JOHN JEREMIAH, was a native of Salisbury, and became a chorister boy of that cathedral. His superior abilities procured him the situation of a gentleman of the Chapel Royal, and vicar choral of St. Paul's and Westminster Abbey. He was much admired as a singer, his voice being, not as is frequently the case, a falsetto, but a genuine counter-tenor of beautiful quality; his taste in part-singing was both chaste and elegant. J. J. Goss possessed many most amiable qualities in private life, which will long be remembered by his professional and other friends. He died in 1817, aged forty-seven, and was buried in St. Paul's Cathedral.

GOSS, JOHN, son of the preceding, was born in 1800, at Farcham, in Hants. At nine years of age he was entered as one of the children of the Chapel Royal at St. James's, under John Stafford Smith. On leaving that establishment at the breaking of his voice, he became a pupil of Attwood, under whose excellent tuition he completed his musical education. John Goss was a member of the Conceratores Society, also an associate of the Philharmonic. He has published a canon for six voices, "I will always give thanks," dedicated to his master, Attwood; also some songs.

GOSSEC, FRANCIS JOSEPH, member of the institute and of the legion of honor, was one of the three inspectors of instruction, and professors of composition, at the Conservatory of Music in Paris. He was born in 1733, at Verguies, in Hainaut. When seven years of age he

was sent to Antwerp, and remained for eight years in that city as a singing boy in the cathedral. Gossec was nearly self-instructed in music, chiefly by means of a profound study of the scores of the great masters. It appears that he was never able to visit Italy, but in 1751 went to Paris, where he afterwards fixed his residence. Soon after this he was attached to the suite of the Prince de Condé, as leader of his band, and composed several operas for it. In 1770, he founded the concert of amateurs, where the Chevalier de St. George was first violin, and which had the greatest success during ten seasons. In 1773 Gossec took the management of the spiritual concert, and in 1784 was appointed a principal professor in the royal school of singing and declamation, founded at the *Ménus plaisirs* by M. le Baron Breteuil. At the commencement of the French revolution, he accepted the situation of director of the band to the national guard; and many symphonies, hymns, &c., for wind instruments, were at that time composed by him, and performed by this band on different public occasions. In the year 1795, a law was passed by the National Convention, definitively fixing the organization of a Conservatory of Music, when Gossec was chosen, conjointly with Messrs. Mehul and Cherubini, inspector of the establishment and professor of composition; Catel, his principal pupil, being at the same time named professor of harmony. The pupils of Gossec have, for the most part, obtained the great prizes at this institution. Gossec at the age of seventy-eight composed a "*Te Deum*." After the dissolution of the Conservatory, in 1815, he was rewarded with a pension, and continued to frequent the sessions of the Academy of Fine Arts until 1823; but then, having reached the age of ninety years, his faculties grew feeble, and he retired to Passy, where he passed the remainder of his days in peace. The following anecdote is related respecting the celebrated "*O salutaris*" of this master. In the year 1780, Messrs. Lais, Cheron, and Rousseau, three French singers, were in the habit of frequently accompanying Gossec to dine with M. de la Salle, secretary of the Opera, at Chenevières, a village near Paris. The curate of the parish, who was well known to them, one morning requested the three singers to perform in his church the same day, on the occasion of some festival. "With all my heart," said Lais, "if Gossec will write something for us to sing." Gossec immediately asked for music paper, and whilst the parties were at breakfast, wrote his "*O salutaris*," which, two hours afterwards, was sung in the church. This composition has been printed in England, in a very elegant musical work, entitled "Vocal Anthology."

GOTTI, ANTONIO, a celebrated Italian singer, was engaged at the opera at Stuttgart, when under the direction of Jomelli, in the year 1663. He was still living in Italy in 1774.

GOTTSCHED, JOHANN CHRISTOPH, first professor of philosophy, senior at the University of Leipzig, and colleague of the grand college of the princes. He has published several treatises on music, comprising, 1. "*Idées sur l'Origine et l'Antiquité de la Musique, et sur les Qualités de l'Ode*;" 2. "*Idées sur les Cantates*;" 3. "*Idées sur l'Opéra*." Gottsched died in 1765.

GOUDIMEL, CLAUDE, a musician of Franche Compté, who seems to have lost his life at Lyons, on the day of the massacre of Paris, for setting the psalms of Marot, is ranked among the most eminent composers of music to Calvinistical psalms and spiritual songs. Goudimel has been much celebrated by the Calvinists in France for this music, which was never used in the church of Geneva, and by the Catholics in Italy, for instructing Palestrina in the art of composition, though it is doubtful whether this great harmonist and Goudimel had ever the least acquaintance or intercourse together. He set the "*Chansons Spirituelles*" of the celebrated Marc-Ant. de Muret, in four parts, which were printed at Paris in 1555. We may suppose Goudimel, at this time, to have been a Catholic, as the learned Muret is never ranked among heretics by French biographers. Ten years after, when he set the psalms of Clement Marot, this version was still regarded with less horror by the Catholics than in later times; for the music which Goudimel had set to it was printed at Paris by Adrian Le Roy and Robert Ballard, with a privilege, in 1565. It was reprinted in Holland in 1607, for the use of the Calvinists, but seems to have been too difficult; for we are told by the editor of the psalms of Claude le Jeune, which were printed at Leyden in 1633, and dedicated to the States General, that, in publishing the psalms in parts, he had preferred the music of Claude le Jeune to that of Goudimel; for as the counterpoint was simply note for note, the most ignorant of music, if possessed of a voice, and acquainted with the psalm tune, might join in the performance of any one of them; which is impracticable in the compositions of Goudimel, many of whose psalms, being composed in fugue, can only be performed by persons well skilled in music.

GOUGELET, a musician at Paris, published there, in 1768, two collections of ariettes from French operas, with accompaniment for the guitar. He afterwards produced his "*Méthode, ou Abrégé des Règles d'Accompagnement de Clavecin*," and "*Recueil d'Airs, avec Accompagnement d'un nouveau Genre*."

GOUPILLIER, or GOUPILLET. Chapel-master at the church of Meaux, in France, and subsequently at the chapel of Versailles, in the year 1683. Several of the motets of Goupillier were composed by Desmarests. Louis XIV., having been apprised of this fact by Goupillier himself, said to him "*Avez-vous du moins payé Desmarests?*" Goupillier replied, "*Oui*." The indignant monarch commanded Desmarests never again to appear in his presence. Such was the sensation created by this affair, that Goupillier was obliged to retire. The king, however, granted him his pension of retreat, and likewise conferred on him a good canonry, to console him in his disgrace. He did not long enjoy these benefits, as he died a very few years afterwards.

GOW, NEIL. The following interesting account of this extraordinary musical character was written by the reverend principal Baird, of the college at Edinburgh. "Neil Gow was born in Strathband, Perthshire, of humble but honest parents, in the year 1727. His taste for music was early decided. At the age of nine he began to play, and was, it is said, self-taught, till about

his thirteenth year, when he received some instruction of John Cameron, an attendant of Sir George Stewart of Grandtully. The following anecdote of a competition, which happened a few years after this, deserves to be related, not only as a proof of natural genius assuming its station at an early period, but on account of the circumstance with which it concluded, and which was perhaps the first acknowledgment of that peculiar professional ability to which he afterwards owed his fame. A trial of skill having been proposed, amongst a few of the best performers in the country, young Neil for some time declined the contest, believing himself to be no match for such masters in the art. At last, however, he was prevailed on to enter the lists, and one of the minstrels, who was blind, being made the umpire, the prize was adjudged to Neil Gow, by a sentence, in the justice of which the other competitors cheerfully acquiesced. On this occasion, in giving his decision, the judge said, that he could distinguish the stroke of Neil's bow among a hundred players. Having now obtained the summit of his profession at home, the distinguished patronage, first of the Athol family, and afterwards of the Duchess of Gordon, soon introduced him to the notice and admiration of the fashionable world. From this period Gow's excellence was doubtless unrivalled in his department of Scotch national music, and formed, in truth, an era in the progress of its improvement which has since been completed by his sons. The livelier airs which belong to the class of what are called the strathspey and reel, and which have long been peculiar to the northern part of the island, assumed, in his hand, a style of spirit, fire, and beauty, which had never been heard before. It is curious and interesting to inquire, on the principles of art, in what consisted the peculiar character of a performance which had thus charmed and enlivened the scenes of gayety and innocent pleasure, with equal effect, in every rank and age of life. There is perhaps no species whatever of music executed on the violin, in which the characteristic expression depends more on the power of the bow, particularly what is called the upward or returning stroke, than the Highland reel. Here accordingly was Gow's forte. His bow hand, as a suitable instrument of his genius, was uncommonly powerful; and where the note produced by the up bow was often feeble and indistinct in other hands, it was struck, in his playing, with a strength and certainty which never failed to surprise and delight the skilful hearer. To this extraordinary power of the bow, in the hand of great original genius, must be ascribed the singular facility of expression which he gave to all his music, and the native Highland *gout* of certain tunes, such as '*Tulloch Gorum*,' in which his taste and style of bowing could never be exactly reached by any other performer. We may add the effect of the sudden shout, with which he frequently accompanied his playing in the quick tunes, and which seemed instantly to electrify the dancers, inspiring them with new life and energy, and rousing the spirits of the most inanimate. Thus it has been well observed, 'The violin, in his hands, sounded like the harp of Ossian, or the lyre of Orpheus, and gave reality to the poetic fictions which describe the astonishing effects of their performance.' The

different publications which have appeared under the name of Neil Gow, and which contain not only his sets of the older tunes, but various occasional airs of his own composition, for instance his '*Lamentation for Abucainney*,' and '*Loch Eroch side*,' are striking specimens of feeling and power of embellishment. These were set and prepared for publication by his son Nathaniel, whose respectable character and propriety of conduct long secured him the esteem and favor of the public, and whose knowledge of composition, and variety of talent in the art, joined with the greatest refinement of taste, elegance of expression, and power of execution, rendered him, beyond all dispute, the most accomplished and successful performer of Scottish music whom that country has produced. In private life Neil Gow was distinguished by a sound and vigorous understanding, by a singularly acute penetration into the character of those, both in the higher and lower spheres of society, with whom he had intercourse, and by the conciliating and appropriate accommodation of his remarks and replies to the peculiarities of their station and temper. In these he often showed a high degree of forcible humor, strong sense, and knowledge of the world, and proved himself to have at once a mind naturally sagacious, and a very attentive and discriminating habit of observation. But his most honorable praise is to be drawn from a view of his character, which was not so obvious to the public. His moral and religious principles were originally correct, rational, and heartfelt, and they were never corrupted. His duty in the domestic relations of life he uniformly fulfilled with exemplary fidelity, generosity, and kindness. In short, by the general integrity, prudence, and propriety of his conduct, he deserved, and he lived and died possessing, as large a portion of respect from his equals, and of good will from his superiors, as has ever fallen to any man of his rank. Though he had raised himself to independent and affluent circumstances in his old age, he continued free from every appearance of vanity or ostentation. He retained to the last the same plain and unassuming simplicity in his carriage, his dress, and his manners, which he had observed in his early and more obscure years. His figure was vigorous and manly, and the expression of his countenance spirited and intelligent. His whole appearance, indeed, exhibited so characteristic a model of what national partiality conceives a Scottish Highlander to be, that his portrait has been repeatedly copied. Four admirable likenesses of him were painted a few years ago for the Duke of Athol, Lord Gray, Hon. William Maule, M. P., and for the County Hall, Perth, by Sir Henry Raeburn; and he has been introduced into the view of a Highland wedding, by the ingenious Mr. Allan, to whom he was requested to sit for the purpose. In this picture, too, Mr. Allan has preserved an admirable likeness of Donald Gow, the brother of Neil, his steady and constant violoncello, and without whose able and powerful accompaniment Neil could scarcely, in his latter days at least, be prevailed on to play a note. He died at Inver, near Dunkeld, in 1807. Besides his son Nathaniel, mentioned below, he left another, John, who long resided in London, and was also distinguished and admired, as inheriting much of

nis father's musical taste and power of execution. Two other sons, of equally eminent musical talents, William and Andrew, died before their father, but not till after they had completely established their reputation as true descendants of old Neil. On the whole, a family of such celebrity in national music as that of the Gows, Scotland is not likely soon to witness again."

GOW, NATHANIEL. Son of the preceding. His ability as a performer being alluded to in the foregoing sketch, we need here only subjoin the following list of the works published by him: "The Beauties of Neil Gow, in three Parts," "Fourth, Fifth, and Sixth Collections to follow the above." These six books contain the chief compositions of the Gows. "The complete Repository, in four Parts." The above are mostly all old, original, slow, and dancing tunes. "The Vocal Melodies of Scotland, in two Parts." This work contains slow airs only, without the words. "The curious Collection of Scotland, arranged by Nathaniel Gow."

GRAAF, C. FRIEDRICH, a musician, born at Rudolstadt, in Germany, composed much vocal and instrumental music towards the close of the last century. Most of his compositions are published at Berlin; some few at the Hague, where, from the year 1762, he was chapel-master to the Prince of Orange.

GRAAF, FRIEDRICH HERMANN, younger brother of the preceding, was born at Rudolstadt, about the year 1730. He was an excellent flutist and composer for his instrument, and was for some time in London. He died at Augsburg in 1795.

GRABUT, a French musician, was chapel-master to Charles II., King of England, and director of the music at one of the London theatres. The first dramatic piece produced at London under the name of opera was of his composition, entitled "Ariadne, or the Marriage of Bacchus." It was performed for the first time in 1674. His second complete opera, with recitatives, was "Albion and Albanus," performed in 1685.

GRACE. Grace, either in vocal or instrumental performance, consists not only in giving due place to the appoggiatura, turn, shake, and other decorative additions, but in that easy, smooth, and natural expression of the passages which best conveys the native beauties and elegance of the composition, and forms one of the first attributes of a cultivated and refined performer.

GRACES. The general name given to those occasional embellishments which a performer introduces to heighten the effect of a composition. The old English graces, used about 1667, are divided into two classes—the smooth and the shaken. In the first class are the beat, backfall, double backfall, elevation, springer, and cadent; in the second are the shaken backfall, close shake, shaken beat, shaken elevation, shaken cadent, and double relish. The principal graces of melody are the appoggiatura, the shake, the turn, and the beat; with the mordent, beat, slide, and spring, peculiar to the Germans. The chief ornaments of harmony are the arpeggio, tremando, &c.

GRACE-NOTE. Any note added to a composition as a decoration or improvement. See GRACES.

GRADO, sometimes written **GRADDO.** (I.) A degree. A word which, together with the preposition *di*, is applied to the notes of any passage moving by conjoint intervals; as when the sounds gradually rise or fall, through the lines and spaces, without making any hiatus or skip, they are said to be *di grado*.

GRADUAL, or GRAIL. A service book, formerly used in the Romish church, containing all that was sung by the choir at high mass; as the *tracts, sequences, and hallelujahs*; the *creed, offertory, and trisagium*; as also the *office* used at sprinkling the holy water. The *gradual* was always performed in the *ambo*, or desk.

GRADUATE IN MUSIC. A person who has taken the degree of doctor, or bachelor, in the faculty of music.

GREFE, JOHANN FRIEDRICH, counsellor of the chamber and of the posts of the Duke of Brunswick, was born in the year 1711, at Brunswick. He was an enlightened and zealous amateur of music. He wrote on singing, and composed many songs, which have been much admired. He published six collections of airs, the first of which appeared in 1736; likewise "*Les Psaumes de Cramer*," with an accompaniment for two violins, in 1760, and a French ariette in parts, also much other vocal music. He died at Brunswick in 1787, aged seventy-six.

GRAEFF, JOHN GEORGE, a distinguished performer on the violin and flute, was born about the year 1762, at Mentz, (where his father held a considerable post under the government,) and originally intended for the church, but having a strong predilection for music, was placed under the tuition of the celebrated Charles Frederic Abel, and subsequently under Haydn. He quitted his native city at an early age, and successively visited Basle, Berne, and Lausanne, meeting with encouragement equal to his most sanguine expectations, during a period of five years' residence in Switzerland. At Lausanne he was intimate with the celebrated Monsieur Bonnet de la Rève, and Duverdin, the friend of Gibbon the historian. Leaving Switzerland, Graeff made a year's stay in Paris, where his performances were received with the most marked applause. Among the number of his more intimate friends, there was the Abbé Vogler.

GRÆSER, J. C. A musician at Dresden. He published at Leipzig, in the years 1786 and 1787, three series of sonatas for the harpsichord, of great taste. He died about the year 1790.

GRAETZ, a pianist and composer for the Chapel Royal at Munich in 1803, was a pupil of Haydn and Berton. He published an oratorio called "The Death of Jesus," also much other sacred, and some dramatic music.

GREVEN. A German amateur composer of music, excellent pianist, and composer for his instrument. He died young in 1770. Cramer has inserted a sonata of his composition in his "Flora," and speaks highly of his taste in music.

GRAHL, ANDR. T., a German musician,

born about the year 1715, published some vocal and instrumental music at Leipzig.

GRAMMATICAL ACCENT is the common measure accent, and is marked by the length of words, and with a regular succession of strong and weak parts.

GRAN CANTORE. (I.) A *fine* or *great* singer — an expression the application of which is generally confined to the first man or woman of the serious opera.

GRAN GUSTO. An expression applied by the Italians to the style of any full, rich, and high-wrought composition. A song, chorus, overture, sonata, &c., the cast of which answers this description, is said to be composed in the *gran gusto*. These words sometimes apply also to performance: the manner of a fine and great singer is said to be in the *gran gusto*.

GRAND. An epithet applied to compositions and performances which derive importance from their style, length, or fullness of parts. Hence we say *grand sonata*, *grand overture*, *grand concert*, &c.

GRANDFOND, EUGENE, was born at Compiègne in 1786. He studied the violin at the Conservatory under Kreutzer, and composition under Berton. He composed many collections of romances, some of which have been published, two concertos for the violin, and the music of a comic opera, in two acts, performed at the *Théâtre Feydeau*.

GRANDI, ALESSANDRO, a celebrated Italian church composer, was a Sicilian by birth. He was chapel-master at Bergamo. His compositions bear date from the year 1619 to 1640.

GRANDIOSO. (I.) In a grand and elevated style.

GRANDVAL. A French musician. He published a work at Paris, in the year 1732, entitled "*Essai sur le bon Goût en Musique*." He likewise composed some cantatas.

GRASSET, M., *chef-d'orchestre* at the Italian opera at Paris, during Madame Catalani's management, was born 1769. Some of his concertos for the violin have been published. He was looked upon as the best pupil of Bertheaume. Grasset was one of the professors of the violin at the Paris Conservatory.

GRASSINI, GIUSEPPA, an Italian female singer of great celebrity, between the years 1795 and 1810. Her voice was a contralto of uncommon sweetness, and which she managed with a judgment still more rare. She was engaged as *prima donna* at Venice in the year 1797. After the battle of Marengo, Bonaparte, then chief consul of France, invited her from Milan to Paris, where she sang at the great national *fête*, on the 22d of July 1800. In 1801, she quitted Paris for Berlin, and the following year proceeded to London, where she was engaged as the successor of Banti, at a salary, it is said, of three thousand pounds for the season. Her acting was considered, by the English, as unrivalled on the Italian stage, and her voice esteemed as the finest example ever heard of the low soprano. One evening in 1810, she and Signor Crescentini performed together at the Tuileries, and sang in

"Romeo and Juliet." At the admirable scene in the third act, the Emperor Napoleon applauded vociferously, and Talma, the great tragedian, who was among the audience, wept with emotion. After the performance was ended, the emperor conferred the decoration of a high order on Crescentini, and sent Grassini a scrap of paper, on which was written, "Good for twenty thousand livres — Napoleon."

"Twenty thousand francs!" said one of her friends — "the sum is a large one."

"It will serve as a dowry for one of my little nieces," replied Grassini quietly.

Indeed, few persons were ever more generous, tender, and considerate towards their family than this great singer. Many years afterwards, when the empire had crumbled into dust, carrying with it, in its fall, among other things, the rich pension of Signora Grassini, she happened to be at Bologna. There another of her nieces was for the first time presented to her, with a request that she would do something for her young relative. The little girl was extremely pretty, but not, her friends thought, fitted for the stage, as her voice was a feeble contralto. Her aunt asked her to sing; and when the timid voice had sounded a few notes, "Dear child," said Grassini, embracing her, "you will not want me to assist you. Those who called your voice a contralto were ignorant of music. You have one of the finest sopranos in the world, and will far excel me as a singer. Take courage, and work hard, my love; your throat will give you a shower of gold." The young girl did not disappoint her aunt's prediction. She still lives, and her name is Giulia Grisi. Grassini was the first female singer who appeared in the Italian theatre with a contralto voice; previously the part was sustained by men. Her tones, purely feminine, were received with distrust; and some time elapsed before listeners could become reconciled to a voice deemed much too low for a woman. Such, however, was the rich and mellow quality of her new tones, extending only from A in the bass to C in the treble, that a new source of delight in the vocal art seemed to have been opened. She was beautiful and graceful, and her acting inimitable, while her pathos and feeling were the more evident when contrasted with the cold and fluty tones of Billington. From Grassini we may date the *duetto* for female voices, which has proved so great an improvement to the opera, and afforded Rossini the opportunity of displaying such exquisite and incomparable taste. Grassini was at Florence in 1823, and she died at Milan in 1850.

GRATIAS AGIMUS. (L.) Part of the Gloria.

GRAUN, CARL HEINRICH, chapel-master to Frederic the Great, at Berlin, was born at Wahrenbrück, in Saxony, in the year 1701, and educated in the school of the Holy Cross at Dresden. He was first engaged by the king, when Prince of Prussia, in the year 1735, as a singer and composer, and was afterwards sent for his improvement into Italy. There he remained about two years, during which time the king constructed one of the most complete and most magnificent theatres in Europe, to which Graun was the composer during the remainder of his life. At the onset of his musical career, Graun de-

voted his talents chiefly to the service of the church. He, however, afterwards composed a great number of operas, a few of which are in the German, but by far the greater part in the Italian language. Of the latter, he composed as many as seventeen, between the years 1742 and 1756. He wrote also the overture and recitatives to the pastoral opera of "*Galatea*," of which the king himself set part of the songs. His other compositions consist of several sets of harpsichord concertos, for the Princess Amelia of Prussia. These are graceful and pleasing in melody, artful in the disposition of the parts, excellent in harmony, and yet easy of execution. His sacred music consists of a "*Te Deum*," masses, and spiritual cantatas or oratorios, almost innumerable; among which is a very celebrated one, entitled "*Der Tod Jesu*." Part of his oratorio, "*The Death of Jesus*," and some other compositions of Graun's, are in Latrobe's selections, who has also published an edition of his "*Te Deum*." Specimens of his works are also to be found in Dr. Crotch's "*Specimens*." Graun, who was as much revered in Prussia as Handel was in England, died at Berlin, universally lamented, in the year 1759.

GRAUN, JOHANN GOTTLIEB, brother of the preceding, was an excellent performer on the violin, and a respectable composer of the old school. He was concert-master to the King of Prussia, and there are extant of his writings several overtures, symphonies, concertos, a "*Salve Regina*," and some masses.

GRAUPNER, CHRISTOPH, chapel-master to the court of Hesse-Darmstadt, and a celebrated composer of harpsichord music, was born about the year 1683. He also composed several operas for the theatre at Hamburg, between the years 1707 and 1710. He died in 1760.

GRAVE is applied to a sound which is of a low or deep tone. The thicker the cord or string, the more grave is the note or tone; and the smaller, the more acute. *Grave*, in Italian music, denotes a very grave and slow motion, somewhat faster than *adagio*, and slower than *largo*.

GRAVERAND, N., was born at Caen in 1770. At the age of nine years, he received instruction on the violin from Queru, a pupil of Capron, and afterwards perfected himself under Baillot. Graverand was during several years a violinist, and then *chef-d'orchestre* of the theatre at Caen. He published much music for his instrument.

GRAVITY. Gravity is that modification of any sound by which it becomes deep, or low, in respect of some other sound. The gravity of sounds depends on the thickness and distention of the chords, or the length and diameter of the pipes, and in general on the mass, extent, and tension of the sonorous bodies. The larger and more lax are the bodies, the slower will be the vibrations, and the graver the sounds.

GRAVIUS, JOHANN HIERONYMUS, was born of a noble family, at Sulzbach, in 1648. In 1672, he went to Leyden for instruction in the law, and there studied also instrumental and vocal music, in both of which he attained to a high degree of perfection. In 1677, he went to Bremen as singer and under master to the gymna-

sian academy of that town. He remained there thirty years, until he obtained the same situation at Berlin, where he died in 1729, aged eighty. Gravius played on most instruments, and composed with facility. King Frederic offered him the situation of chapel-master, which he refused. The following are among his works: "*Description de la Trompette marine*," Brême, 1681; "*Chansons Spirituelles à deux Dessus, avec B. C.*," Brême, 1683, in octavo; "*Leçons de Chant, en Dialogue*," Brême, 1702, in octavo; "*Rudimenta Musicæ practicæ*," Brême, 1685, in octavo.

GRAZIANI. An excellent Italian violoncellist. He published at Berlin, in 1780, six solos for the violoncello, Op. 1; and afterwards, at Paris, six solos for the violoncello, Op. 2. He died in 1787.

GRAZIANI, BONIFACIO, of Marino, near Rome, and chapel-master to the Jesuits' church in that city, published, between the years 1652 and 1672, much church and other music.

GRAZIOSO, or GRAZIOSAMENTE, or CON GRAZIA. (L.) A term implying that the movement to which it is prefixed is to be performed in a smooth, flowing, and graceful style.

GREAT OCTAVE. The lowest series of seven notes, which includes both the divisions of the short keys in the key board, beginning with the two, is called by the Germans the great octave, being expressed by capital letters. On some old instruments, particularly organs, the lowest note on the left hand is the great C; but, in general, pianos, &c., extend down to FF. In our old scales, the letters below the bass A were made double, and those above the treble staff termed *in alt*; but the septenaries were then reckoned from A, not from C.

GREATER SCALE. That in which the thirds are greater, as a scale composed of major thirds. Same as *Major Scale*.

GREATOREX, THOMAS. A native of Derbyshire. He went to London in the year 1772, and became a pupil of Dr. Cooke, organist and master of the boys of Westminster Abbey, under whose excellent tuition the following eminent professors (as well as many others) were educated, namely, Sir William Parsons, Crosdill, Kuyvett, Bartleman, M. Rock, Spofforth, &c., &c. In the years 1774-6, Greatorex attended the oratorios which Lord Sandwich gave, during Christmas, at Hinchbrook, and there he derived the greatest advantage, not only from hearing Handel's music executed with a precision and effect till then unknown, but also from the acquaintance and friendship of Mr. Bates, who conducted those performances. The opportunity Greatorex thus enjoyed of an intimate understanding of Mr. Bates's theory and practice could not fail to be beneficial, to the highest possible degree, in turning the taste, and directing the inquiries and intelligence, of the young musician. Greatorex has given the strongest proofs that the friendship of Mr. Bates was not extended to him in vain. At the establishment of the Ancient Concert, in 1776, Greatorex assisted in the choruses, and continued a performer there, till he was advised to try a northern air for the reestablishment of
