his health; and he accepted the situation of organist of the cathedral of Carlisle, in 1780. Here, though the emoluments were small, he passed some of the happiest days of his life. He spent two evenings of each week in a select society, in which were included Dr. Percy, Bishop of Dromore, (then Dean of Carlisle,) Dr. Charles Law, Bishop of Elphin, and Archdeacon Paley. The continual admission of Greatorex to bear a part in the conversations of such men is a powerful testimony of his rank in intellect. In 1784, Greatorex resigned his situation at Carlisle, and went to Italy, where he studied vocal music, and received instructions in singing from Signor Santarelli, (the most celebrated singing master of his time,) at Rome, for the space of two years. He also made a considerable stay at Naples, Florence, and Venice; and visited, on his return, Bologna, Pisa, Leghorn, Padua, Verona, Vicenza, Mantua, Parma, Milan, and Genoa, entering Switzerland by Mount St. Gothard, and passing down the Rhone to Cologne; from whence he returned to England, through the Netherlands and Holland, at the end of the year 1788. He now established himself in London, and very soon had his time fully occupied as a teacher of singing. In the year 1793, on the resignation of Mr. Bates, as conductor of the Ancient Concert, the noble directors did Greatorex the honor, without any application on his part, to appoint him to that distinguished situation, which he held for twenty-seven years. In 1801, Greatorex, in conjunction with Harrison, W. Knyvett, and Bartleuan, revived the Vocal Concert, and afterwards succeeded to the situation of his respected master, Dr. Cooke, as organist and master of the boys at Westminster Abbey, which was, perhaps, amongst the most grateful compliments he could receive. The publications of Greatorex are, a compilation of "Psalm Tunes," harmonized by himself, and dedicated, by permission, to the king. His labors have been chiefly confined to the arranging many musical compositions for the Concert of Ancient Music, and the Vocal Concerts, by adding complete orchestral, vocal, and instrumental parts, to what, perhaps, was only a duet or air. Of this sort are, "Sing unto God," Dr. Croft; "This is the day," Dr. Croft; "We will rejoice," Dr. Croft; "Great is Jehovah," Marcellò; "Hark, my Daridear," Purcell; and a great number of harmonized glees. He also put wind instruments to the musette in Handel's sixth grand concerto, arranged the minuet to Gluck's overture in "*Iphigenie*," and adapted the favorite movement in Handel's lessons for a full band.

GREAT SIXTH. The appellation given to the chord of the fifth and sixth, when the fifth is perfect and the sixth major.

GREBER, GIACOMO. A German musician, who went to London, in 1703, with Margarita de l'Épine, afterwards Mrs. Pepusch. In 1705 Greber composed at the New Haymarket Theatre an Italian pastoral, called "The Loves of Ergasto." This was the first attempt at dramatic music in the Opera House.

GRECO, GAETANO, born at Naples in the early part of the eighteenth century, was director of the conservatory of *I Poveri di Gesù Christo*. It is not known whether he devoted himself ex-

clusively to tuition, as none of his compositions have lived; but his reputation, as a learned professor, has survived him, and if he has not been immortalized by his works, he has by his pupils. He was Pergolesi's first master, and is said to have bestowed particular care on his illustrious disciple, and to have foreseen his talents and genius.

GREEK SCALE. This, in the time of Aristoxenus, consisted of two octaves; and the whole system was composed of a different series of four sounds, with one note added to the bottom of the scale to complete the double octave; all these sounds had different denominations, like our gamut. The Greeks used all the four and twenty letters of the alphabet for musical characters, or symbols of sound. The Greek and Chinese scales of music have a very evident resemblance to the Scottish; the old national airs of Greece and those of Scotland have so strong a similitude, that one would imagine them to have been composed at the same time by the same genius, and in those ages when harmony and nature went hand in hand.

GREENE, DR. MAURICE, born at London, in 1696, was the son of the Rev. Thomas Greene, sergeant at law. He was brought up in the choir of St. Paul's, and when his voice broke, was bound apprentice to Brind, the organist of that cathedral. He was early noticed as an elegant organ player and composer for the church, and obtained the place of organist of St. Dunstan in the west, before he was twenty years of age. In 1717, on the death of Daniel Purcell, he was likewise elected organist of St. Andrew's, Holborn; but the next year, his master, Brind, dying, Greene was appointed his successor, by the dean and chapter of St. Paul's; upon which event he quitted both the places he had previously obtained. On the death of Dr. Crofts, in 1726, he was appointed organist and composer to the Chapel Royal, and on the death of Eccles, in 1735, master of his majesty's band. In 1730 he obtained the degree of doctor in music, at Cambridge, and was appointed public music professor in the same university, in the room of Dr. Tudway. Greene was an intelligent man, a constant attendant at the opera, and an acute observer of the improvements in composition and performance, which Handel, and the Italian singers employed in his musical dramas, had introduced. His melody, therefore, was more elegant, and his harmony more pure, than that of his predecessors, though less nervous and original.— Greene had the misfortune to live in the age and neighborhood of a musical giant, with whom he was utterly unable to contend, but by cabal and alliance with his enemies. Handel was but too prone to treat inferior artists with contempt; what provocation he had received from Greene, after their first acquaintance, when he had a due sense of his great powers, I know not, (says Dr. Burney;) but for many years of his life, Handel never spoke of him without some injurious epithet. Greene's figure was below the common size, and he had the misfortune to be very much deformed; yet his address and exterior manners were those of a man of the world, mild, attentive, and well bred. History has nothing to do with the infirmities of artists; who, being men, in spite of uncommon gifts and inspirations, are

subject to human frailties, which enthusiasm, praise, and the love of fame, more frequently augment than diminish. We shall not omit to notice, that Greene, in conjunction with Festing, has the credit of being the first institutor of the charitable fund for the support of decayed musicians. See FESTING.

Greene, during the last years of his life, began to collect the services and anthems of the old English church composers, from the single parts used in the several cathedrals of the kingdom, in order to correct and publish them in score—a plan which he did not live to accomplish; but, bequeathing his papers to Dr. Boyce, it was afterwards executed in a very splendid and ample manner. Greene died in 1755, and was succeeded, as composer to the Chapel Royal, and master of his majesty's band, by his worthy pupil, Dr. William Boyce.

GREGORIAN MUSIC. Sacred compositions introduced into the Catholic service by Pope Gregory.

GREGORY, ST., called **GREGORY THE GREAT**, a Roman pontiff, was born at Rome, of an illustrious family, about the year 550. His rank and talents recommended him to the notice of the Emperor Justin, who appointed him prefect of that city. Being of a religious turn of mind, and finding that the duties of his office attached him too much to the world, he retired to a monastery; but he was soon summoned from his retirement by Pope Pelagius II., who appointed him one of his deacons, and sent him to Constantinople in the capacity of nuncio. Upon his return to Rome, he was employed by Pelagius as his secretary, but at length obtained leave to retire to his convent. Here he hoped to devote his days to study and contemplation; but a plague, that raged with violence in the capital, drew him from his seclusion. He came forth from his retreat, and instituted litanies, which were sung in procession about the streets of the city. On its arrival at the great church, it is said that the contagion ceased. Of this distemper Pelagius died, and Gregory was unanimously chosen to fill this high dignity. Though of an infirm and weakly constitution, he possessed a vigorous mind, and discharged the duties of his station with equanimity and firmness. One of the greatest events which, by his prudence and judicious management, he effected, during his pontificate, was the conversion of the English nation to Christianity. But what particularly entitles Gregory to notice in this work, is his having effected a reformation in the music of the church. About two hundred and thirty years before the period in which Gregory lived, St. Ambrose, who was then Bishop of Milan, became one of the patrons of church music, and instituted, in his church at Milan, a peculiar method of singing, which received the name of *cantus Ambrosianus*, or Ambrosian chant. St. Augustine, the disciple of St. Ambrose, speaks of the great delight he received in hearing the psalms and hymns sung there. "As the voices," says he, "flowed into my ears, truth was instilled into my heart, and the affections of piety overflowed in tears of joy. The church of Milan," he continues, "had not long before begun to practise this method. It was here first ordered that hymns and psalms should be sung

after the manner of Eastern nations, that the people might not languish and pine away with a tedious sorrow; and from that period it has been retained at Milan, and imitated by almost all the other congregations of the world." Tradition says that it was upon occasion of St. Ambrose receiving St. Augustine into the church, on his conversion, that the Bishop of Milan composed the celebrated "*Te Deum*," which has since exercised the talents of the most celebrated composers. The chant thus established by St. Ambrose continued in use, with few alterations, till the time of Gregory the Great, whose object in reforming it seems to have been twofold; he enlarged the former plan, by introducing four new modes or tones into the "*canto fermo*," and banished from the church the "*canto figurato*," as being too light, and destitute of that gravity and simplicity suited to the solemn offices of the church. John Diaconus, the author of Gregory's Life, informs us that he established a singing school at Rome, and that it subsisted three hundred years after his death, which happened in 604. He assures us that the original "*Antiphonarium*," or volume of anthems of this pope, was still existing, as well as the whip with which he used to threaten the restive scholars, and also the bed on which his infirmities obliged him to recline, when, in the latter part of his life, his zeal still led him to visit his favorite school, and hear the scholars practise. This pontiff is likewise said, by ecclesiastical writers, to have been the first who separated the chanters from the regular clergy; for it was his observation, that singers were more admired for their fine voices than for their precepts or their piety. At present this kind of singing has become venerable from its antiquity, and from the use to which it is appropriated; for though the more rich and varied strains of a Haydn and a Mozart have been adopted in the general service of the Roman Catholic church, yet, on particular occasions, the Gregorian chant is exclusively used, and heard in all its ancient glory, especially during the penitential season of Lent, and in the holy week. It is true that its simplicity, and its total dissimilitude to secular music, preclude all levity in the composition, and all licentiousness in the execution, and that to ears long habituated to artificial and refined music, its simple tones may have little charm; yet the amateur will delight to trace in these inartificial movements some of the melodies of the olden time, and, perhaps it may not be too much to add, of the days of Athenian glory.

GREGORY, WILLIAM, a gentleman of the Chapel Royal in the reign of Charles II., was a composer of several anthems. The best are, "Out of the deep have I called," and "O Lord, thou hast cast us out."

GRENER, JOHANN M., a good violinist, was born at Constance in 1724. He filled the office of chapel-master to several German courts, up to the year 1784.

GREINER, JOHANN THEODOR, published in 1774, at Amsterdam, two works, comprising symphonies, each containing six different pieces and six duets.

GRENET, a French dramatic composer, produced, in 1737, the opera "*Le Triomphe de l'Harmonie*," and in 1759, "*Apollon, Berger d'Admète*."

GRENET, CLAUDE DE, born at Châteaudun, in Beauce, in 1771, was an officer in the French army. He was a piano-forte pupil of Kuhn, and composed several concertos and sonatas for his instrument, likewise some romances, published at Paris.

GRENIER, a musician at Paris, published there, about the year 1786, some airs for the violin and violoncello.

GRENIER, GABRIEL. A harpist and composer for his instrument at Paris since the year 1792. He has also published some romances.

GRENSER, or GRENZER, JOHANN FRIEDRICH, professor of the hautboy to the King of Sweden, about the year 1783, was born at Dresden. In 1779 he published at Berlin six trios for the flute, and other instrumental music.

GRESNICK, ANTON, born at Liege in 1753, went at an early age to Italy, where he studied under the celebrated Sala, member of the Conservatory at Naples. He afterwards visited London, where he composed the music for the opera of "*Demetrius*," and obtained the situation of chamber musician to the Prince of Wales. He published much dramatic music at Paris, amongst which was the four act opera of "*La Forêt de Brama*," a work that he himself thought would establish his reputation, but which is said to have caused his death, from his great disappointment at its being only received at the theatre à correction. He died soon after, at the early age of forty-six years.

GRÉTRY, ANDRÉ ERNEST MODESTE. The father of Grétry was a teacher of music at Liege, where André Grétry was born, in the year 1741. At an early age, he became sensible to the charms of music, and to this sensibility, when he was only four years old, he was near falling a sacrifice. It is related of him, that being left alone in a room where some water was boiling in an iron pot over a wood fire, the sound caught his ear, and for some time he amused himself by dancing to it. The curiosity of the child, however, was at length excited to uncover the vessel, and in so doing he overset it. The water fell upon and dreadfully scalded him from head to foot. From the great care and attention that were paid to him by his parents, he at length recovered in every respect from this accident, except having a weakness of sight, which continued ever afterwards. When he was six years old, his father placed him in the choir of the collegiate church of St. Denis, and unfortunately, but necessarily, under the tuition of a master who was brutal and inhuman to all his pupils. Young Grétry had his full share of ill treatment; yet such was his attachment to this man that he could never prevail upon himself to disclose it to his father; fearing that, by his influence, the chapter might be induced to take some steps that would be injurious to him. What little the youth acquired, during this time, "was not," as he said, "so much from the lessons, as in spite of the lessons, of his master." An accident, however, which for some time put a stop to his studies, deserves here to be related. It was usual, at Liege, to tell children that God would grant them whatever they asked of him at their first communion. Young Grétry had long proposed to pray on this

occasion, "that he might immediately die if he were not destined to be an honest man, and a man of eminence in his profession." On that very day, having gone to the top of the tower to see the men strike the wooden bells, which are always used during the passion week, a beam of considerable weight fell on his head, and laid him senseless on the floor. A person who was present ran for the extreme unction, but, on his return, found the youth upon his legs. On being shown the heavy log that had fallen upon him, "Well, well," he exclaimed, "since I am not killed, I am now sure that I shall be an honest man and a good musician." He did not, at first, appear to have sustained any serious injury, but his mouth was full of blood, and the next day a depression of the cranium was discovered: on which, however, no operation was ever attempted. From this time, but whether owing to the accident or not is not known, his disposition was considerably altered. His former gayety gave way, in a great measure, to melancholy, and never after visited him, except at intervals. On his return to the choir, he acquitted himself by no means to the satisfaction of his father, who, for a time, withdrew him, for the purpose of his receiving further instruction. He was now placed under the care of a master as mild as the other had been severe. When his father replaced him in the choir, his improvement both in singing and playing was found to have been very great. The first time he sang in the choir, the orchestra, delighted with his voice, and fearing to lose the sound of it, was reduced to the *pianissimo*; the children of the choir drew back from respect; almost all the canons left their seats, and were deaf to the bell that announced the elevation of the host. All the chapters, all the city, all the actors of the Italian theatre, applauded him, and the savage master himself took him by the hand, and told him that he would become a musician of great eminence. Some little time afterwards, his voice began to break. It would then have been prudent to have forbidden his singing; but this not being done, a spitting of blood came on, to which, on any exertion, he was afterwards subject. Not long subsequently to this, he was placed under the care of Moreau; but such was the exuberance of his genius, that he had previously attempted several of the most complicated kinds of music. He has himself stated, that one of the first things he did was to carry his master a mass, which he had just completed. "Stay, stay," said Moreau; "you proceed too fast;" at the same time, returning to the young composer his score without looking at it, he wrote down on a slip of paper five or six semibreves. "Write," says he, "a treble to this bass, and show it me to-morrow, but attempt no more masses." Grétry withdrew, a little humbled, saying to himself, "My father was right in thinking my late master too indulgent." He carried Moreau the bass the next day, ornamented with three or four trebles. "You still proceed too fast," he exclaimed; "I only asked for note against note to this bass." Grétry could not restrain his musical impetuosity. "Sir," said he, "I had a thousand musical ideas in my head, and was eager to make use of them." "*Dominus vobiscum*, in contrary motion," said his master; "that is the way the parts should move." Grétry then quitted him, saying to himself, "I have learned nothing by these two les-

sons; but let us go on gently." Yet he could not help scribbling. He next composed six symphonies, which were successfully executed in the city. Hasler, the canon, begged him to let him carry them to the concert, encouraged him greatly, advised him to go to Rome in order to pursue his studies, and offered him his purse. His master in composition thought this little success would be mischievous to Gretry, and prevent him from pursuing that regular course of study so necessary to his becoming a sound contrapuntist. He never even mentioned his symphonies. Grétry walked to Rome, in the early part of 1759, being then only eighteen years of age. Here, in order that his genius might be as much unfettered as possible, he studied under several masters, and almost every day visited the churches, in order to hear the music of Casali and Lustrini; but particularly that of the former, with which he was greatly delighted. The ardor with which he pursued his studies was so great, that it suffered him to pay but little attention to his health, which, consequently, became so much impaired, that he was obliged, for a time, to leave Rome, and retire into the country. One day, on Mount Melini, he met a hermit, who gave him an invitation to his retreat, which he accepted, and became his inmate and companion for three months. He then returned to Rome, and, young as he was, distinguished himself by the composition of an *intermezzo*, entitled "*Le Vendémiaire*." His success was so decisive, that he was very near suffering fatally from the jealousy of a rival in his profession. Admired and courted in the capital of Italy, Grétry here continued his labors and his studies with assiduity and perseverance, till M. Mellon, a gentleman in the suite of the French ambassador, incited in him a desire to visit Paris. In his way to this city, in 1767, he stopped at Geneva, and composed there his first French opera of "*Isabelle et Gertrude*," which was so successful, that he was called for after the performance. It was some time before Grétry could obtain in Paris a piece to compose; and he was first introduced to public notice there in 1728, by writing the music to Marmontel's opera of "*Le Héros*." This was received with the most flattering applause. The opera of "*Lucile*" followed, which was even more successful than the former. His fame was now established in France, and he produced nearly sixty comic operas for the great Opera House in Paris. Of these, "*Zémire et Azor*," and "*Richard Cœur de Lion*," have been translated, and successfully brought on the English stage. The taste of the Parisians tended greatly to corrupt that of Grétry, but he has done much towards improving theirs. They have met about half way, and perhaps the genius of the French language, the style of singing, and the national prejudices, even if he had determined to continue inflexible, could not have admitted of a nearer approximation than we find in his music. Sacchini has been known to say of Grétry, that he remembered him at Naples, where he regarded him as a young man of great genius, who wrote as much in the style of that school as even any of the Italian masters; but when he heard his comic operas at Paris, many years afterwards, he did not find that he was much improved by composing to French words, and for French singers. Grétry died at Montmorency in 1813.

GRETRY, Mlle. LUCILE, second daughter of the preceding, composed the music of the Italian comedy of "*Le Mariage d'Antonio*," in 1786. She afterwards produced the opera of "*Louise et Toinette*," performed in 1787.

GRETSCH. Violoncellist at the chapel of the Prince of Thurn and Taxis, at Ratisbon. He composed much music for his instrument, which is considered excellent in its kind. He died in 1784.

GREVILLE, Rev. R. An English amateur composer of glees and other vocal music. His glee, "Now the bright morning star," is a highly celebrated composition in that style. His compositions appeared about the year 1787.

GRIESBACH, JOHN HENRY, eldest son of a German musician in the service of George III. of England, was born at New Windsor, in 1798. At the age of eight his father placed him under his uncle, G. L. J. Griesbach, to be instructed in the theory of music and the piano-forte. He performed before their majesties for the first time in 1810, being then twelve years old, and in the following year was appointed pianist to her majesty, and had the honor of playing a solo piece for the piano-forte every night, at her majesty's private concerts. This honor he enjoyed till the demise of her majesty; when, wishing to have the advantage of instruction from Kalkbrenner, which he had previously obtained at different periods, for about a month each time, he went to London, and resided with him, where he had also the great advantage of improving by constantly hearing the extraordinary performance of that great master. The following is a list of J. H. Griesbach's works, published up to the thirtieth of October, 1823: "A Quartet for Piano-forte, Violin, Viola, and Violoncello," dedicated to Mr. Kalkbrenner; "Two Fantasias for the Piano-forte;" "Romance for the Piano-forte;" and some duets. These works are highly spoken of by the editor of the "Quarterly Musical Review."

GRIFFIN, GEORGE CHARLES. An English professor of music, and composer, born at London in 1770. He was one of the original members of the Philharmonic Society. Some of the instrumental compositions of this gentleman are of a very superior order, especially "A Quartet for two Violins, Tenor, and Violoncello," which was performed at the British concerts, and highly appreciated there.

GRILL, FRANZ. A German composer of instrumental music, published at Offenbach and Vienna, between the years 1790 and 1795, in which year he died.

GRILLO, NICOLO. An Italian composer of vocal music about the year 1750. His cantatas were much admired.

GRIMAREST, J. L., a French musician, published, about the year 1707, a work entitled "*Traité du Récitatif*." He is believed to have died about the year 1713.

GRIMM, HEINRICH, singer at Magdeburg, and subsequently at Brunswick, in the beginning of the seventeenth century. He wrote many musical works, also much sacred music.

GRIMM, FREDERIC MELCHIOR, commonly called the "Baron Grimm," was born at Ratibou in 1723. He went to Paris in 1747, became attached to the literary and philosophical coteries there, and an associate of Rousseau. He was deeply interested in music and the fine arts generally, and wrote much about them. He was a friend of Grétry, and aided Gluck's dramatic reform greatly by his writings; hence the Parisians hold his memory in honor. He died at Gotha in 1807.

GRISI, JULIA, or GIULIETTA. This greatest Italian dramatic singer since the day of Malibran, is, according to one account, the oldest of the two nieces of the celebrated Grassini, (both great singers,) and was born on the 28th of July, 1811, at Milan. Fétis, however, places her birth in 1812, and that of her sister (see below) in 1805. At all events, Julia is the Grisi for years past in every one's mouth, and who has become so identified with Bellini's Norma, as to be often called "the Diva." She commenced her musical education in her native city; afterwards her vocal studies were directed by the composer Marliani. After a *début* of no great mark in Italy, she arrived in Paris in 1832, and appeared for the first time on the 16th of October of that year, in the *rôle* of Semiramide, (Rossini's.) The regular beauty of her features, the truth, flexibility, and compass of her voice made her success certain from the first, although there were marks of inexperience in her singing. Success did not blind her to the necessity of further persevering studies; her progress was rapid, and she grew in public favor day by day. Several operas, particularly Bellini's "*I Puritani*," were written at Paris for this young cantatrice; in that she created an enthusiastic partiality for the singing "*à demi-voix*," of which she made frequent use. For five years after this she sang alternately in Paris and London. In 1836 she married, in London, a very wealthy Frenchman, by the name of August Giraud de Meley; but in the world of art she has always retained the name of Grisi, and resided for years alternately in London and on her husband's estate between St. Cloud and Versailles. For dramatic intensity and grandeur in those parts which she has made peculiarly her own, she is the most celebrated prima donna of the day. She is the universally quoted type of what the lovers of Italian opera call *passion* in a singer. St. Petersburg and the other European capitals have also been the scenes of her triumphs. At the date of this article a concert tour of Grisi, with the tenor Mario, is soon expected in the United States.

GRISI, JUDITH, or GIUDITTA, sister of the preceding, was born about the year 1812, (some say 1805,) at Milan. She entered the Conservatory there at an early age, and received lessons first from Minoja, and afterwards from Banderali. Her voice, a mezzo soprano, hard and inflexible, required great study to produce an equality that never was quite satisfactory. For this she made up by her energetic musical and dramatic feeling. Her first *débuts* were in the concerts of the Milan Conservatory. Afterwards she sang in Vienna, in the "*Bianca e Faliero*" of Rossini, and was at once classed among the distinguished artists. Returning to Italy, she sang at Milan, Parma, Florence, Genoa, and

Venice. In this last city Bellini wrote for her the part of Romeo in "*I Capuleti*." In 1832 she appeared in Paris in "*La Straniera*" with little effect; but her Romeo, and her Malcolm in the "*Donna del Lago*," placed her in a more favorable light. In 1833 she returned to Italy, and since then married Count Barni. She died in 1840, at her husband's villa in Robecco, (province of Lodi,) leaving a large property.

GROENEMANN, ALBERT, born at Cologne, was organist and composer at the great church of the Hague about the year 1756. In 1739 he resided at Leyden, where he was esteemed a good violinist. He published at that time much music for the violin and flute. About the year 1760 he became insane, and died some years afterwards in confinement.

GROENEMANN, JOHANN FRIEDRICH, brother to the preceding, resided, about the year 1761, at Amsterdam, and published there and at London some compositions for the flute, &c.

GROS, A. J., published at Paris, in 1783, his fifth work, containing airs for the harpsichord and harp.

GROSE, an organist at Copenhagen, published some pleasing vocal and instrumental music between the years 1780 and 1792.

GROS FA. The name formerly given to certain compositions of the church, which were written in square notes, semibreves, and minims.

GROSHEIM, GEORG CHRISTOPH. A German musician, born at Hesse-Cassel in 1764. He has composed much vocal and instrumental music, some of which is for the organ, between the years 1790 and 1800.

GROSSE. (G.) Major, in regard to intervals.

GROSSE CAISSE. (F.) The great drum.

GROSSE SONATE. (G.) Grand sonata.

GROSSE, SAMUEL DIETRICH. A celebrated German violinist and composer for his instrument. His playing was much admired at Paris in 1780. He died in 1789, at the early age of thirty-two. His compositions were published by Imbault in Paris.

GROSSE, Sen. An excellent violinist, in the service of the prince royal of Prussia in 1779, and at the Chapel Royal of Berlin in 1790. He was a pupil of Lulli, and published some music for his instrument.

GROSSE, II., eldest son of the preceding, was a violoncello pupil of Duport, and was professor of his instrument at the Chapel Royal, Berlin. He has published some instrumental music. His younger brother was second hautboy at the same theatre.

GROSSE, WILLIAM LEOPOLD, was born in Dessau, the capital of Anhalt, in Upper Saxony. His father was an officer of the forests belonging to the dukedom of Anhalt-Dessau, and intended his son William for the same business, which his activity of mind and body particularly adapted him for. Having, as a child, a great predilection for music, his father allowed him to learn the piano-forte and French horn, to which he was much induced, by the facility of procur-

ing excellent teachers from among the many eminent professors then in the service of the reigning duke. At the age of fifteen W. Grosse left school, and assisted his father till about the age of nineteen, when he was employed by the duke as surveyor of his estates, in which occupation he continued to be chiefly employed during six years, and then requested his discharge, with the intention of establishing himself in a music warehouse. Scarcely had he succeeded in his wishes for the short space of fourteen days, during which he had opened a music shop at the University of Halle, when the battle of Jena took place, and the French army, with Napoleon at their head, being victorious, entered Halle, and ordered all the professors and students to leave the town within twenty-four hours. Grosse, as a teacher, was included in this order, and his prospects in business were in consequence completely blasted. From Halle he proceeded to Berlin, where he lost his little remaining property in an unsuccessful speculation in the horse trade, between Berlin, Wittenberg, and Leipsic. He was now reduced to the necessity of entering one of the German regiments which the French were then raising, and in less than six months was promoted to a lieutenantancy, on account of his good conduct. His regiment was then ordered to Flushing, where he narrowly escaped death, and being taken prisoner, was carried over to England. Soon after this, having no wish to rejoin the French eagle, he applied to serve in the German legion under the Duke of Cambridge, but was unsuccessful in his application. He then betook himself again to music, and, after many severe struggles and privations, was enabled to form a connection in England, which gradually led to extensive business as a teacher, and to his permanent settlement in London, where he published much music for the piano-forte, also many songs.

GROSSI, ANDREA, a violinist and composer for his instrument, in the service of the Duke of Mantua, in 1725, published sonatas for two, three, four, and five instruments.

GROSSO. (I.) Great, grand, full; as, *concerto grosso*, a concerto for many instruments.

GROTTI, ANTONIO. A dramatic composer at Vicenza in the year 1800. His compositions for the theatre and chamber are much approved in Italy.

GROUND. The name of any composition in which the bass, consisting of a few bars of independent notes, is perpetually repeated to a continually varying melody; as in Purcell's ground, Pepusch's ground, &c.

GROUP. A word formerly applied to a certain kind of diminution of long notes, by breaking them into smaller ones for the purpose of embellishment; which operation formed of one note, or knot, a group of notes. Group is now applied to notes of less value than the crotchet, when sung to one syllable; for they are there grouped, or tied together, by their hooks or blocks, thus: —

The term *gruppo*, or group, was formerly limited

to those passages of four notes in which the first and third were on the same degree, and the second with the fourth a degree higher and lower.

GRUA, FRANZ PAUL VON. Counsellor to the Elector of Bavaria, and chapel-master at Munich in 1786, at the time when that chapel was in the zenith of its glory.

GRUBER, GEORG WILHELM. Born at Nuremberg in 1729. At seven years of age he was chorister at the chapel of that town. At eighteen he sang with much applause at Frankfort, Leipsic, and Dresden. In 1750, on his return to Nuremberg, he was elected member of the chapel there, and made chapel-master in 1765. Gruber composed much sacred and other music. He died at Nuremberg in 1796.

GRUBER, JOHANN SIEGMUND, son of the preceding, and doctor of laws at Nuremberg, published there, in 1783, a German work in octavo, entitled "Literature of Music, or Means of knowing the best Musical Works." In 1785, he also published "*Beiträge zur Literatur der Musik.*" It is an alphabetical catalogue of authors. Likewise, among other choice works, "*Biographien einiger Tonkünstler, ein Beytrag zur Musikalischen gelehrten Geschichte,*" Frankfort and Leipsic, 1786.

GRUBER, JANN, a celebrated musician at Nuremberg, was born at Simitz, in Carinthia, in 1693.

GRUND, CHRISTIAN, harpist at the court of Wurtzburg, was born at Prague in 1722. He was considered one of the greatest masters on his instrument.

GRUNDIG, JOHANN Z. Tenor singer at the Chapel Royal, and afterwards at the school of St. Croix, at Dresden, in 1713. He died at Dresden in 1720. He was Graun's first master in vocal music.

GRUNDSTIMME. (G.) The bass.

GRUNDTON. (G.) The bass note.

GRUNER, NATHANIEL GOTTFRIED, singer and director of music at the Gymnasium at Gera, in Saxony, was considered among the best Geruau composers. He composed much sacred and instrumental music, published at Lyons and Leipsic. Gruner lost all his property by a fire which happened at Gera, and nearly consumed the whole town, in 1781. On that occasion, he published six sonatas at Leipsic, by subscription, and soon got nearly fourteen hundred subscribers. He died in 1795.

GRUPPO, or GRUPETTO. (I.) A word formerly used by the Italians to signify a trill, or shake; brought into England, together with that embellishment, about the middle of the seventeenth century. The grupetto is never expressed by any sign, but requires the notes to be written as in example 1; or it is placed before the first note of a phrase, instead of between two notes of a passage, as at example 2.

G, THE TREBLE CLEF NOTE. The ninth above the F, or bass clef note, and the fifth above the C clef note.

GUADAGNI, GAETANO, of Vicenza, went to England in 1748, at an early period of his life, as serious man in a burletta troupe of singers. His voice was then a full and well-toned counter tenor; but he was a wild and careless singer. He attracted, however, the notice of Handel, who assigned him the parts in his oratorios of "Samson" and "The Messiah," which had been originally composed for Mrs. Cibber. During his first residence of about four or five years in England he was more noticed in singing English than Italian. He quitted London about the year 1753. In 1754 he was at Lisbon, as second serious man under Gizziello; and in 1755 very narrowly escaped destruction during the earthquake. After this dreadful calamity, Gizziello, seized with a fit of devotion, retired into a monastery, where he spent the remainder of his life. Having a friendship for Guadagni, and being pleased with his voice and quickness of parts, he persuaded the young singer to accompany him in his retreat, where, for a considerable time, he took great pains in directing his studies; and it is from this period that Guadagni's reputation as a refined and judicious singer may be dated. His ideas of acting were imbibed much earlier from Garrick, who, when he performed in an English opera called "The Fairies," took no less pleasure in forming him as an actor, than Gizziello did afterwards in polishing his style of singing. After quitting Portugal, he acquired great reputation as first man in all the principal theatres in Italy, and, the year before his return to England, excited great admiration by his talents, as well as disturbance by his caprice, at Vienna. His figure was uncommonly elegant and noble; his countenance replete with beauty, intelligence, and dignity; and his attitudes and gestures so graceful, that they would have been excellent studies for a painter or statuary. But though his manner of singing was perfectly delicate, polished, and refined, his voice seemed at first to disappoint every hearer. Those who remembered it when he was before in England found it comparatively thin and feeble. For he had now changed it to a soprano, and extended its compass from six or seven notes to fourteen or fifteen; and let a fluid of six feet in depth be spread over more than double its usual surface, it will, of necessity, be shallower, though of great extent. The music he sang was the most simple imaginable; a few notes with frequent pauses, and opportunities of being liberated from the composer and the band, were all he wanted. And in these seemingly extemporaneous effusions he proved the inherent power of melody totally divorced from harmony, and unassisted even by unisonous accompaniment. Those who were surprised at such great effects, from causes apparently so inconsiderable, in analyzing the pleasure he communicated to the audience, discovered that it chiefly arose from his artful manner of diminishing the tones of his voice, like the dying notes of the Æolian harp. Other singers captivated by a swell or *mezzo di*

voce; but Guadagni, after beginning a note or passage with all the force he could safely exert, fined it off to a thread, and gave it the entire effect of extreme distance. And though neither his voice nor execution contributed much to charm or excite astonishment, he had a strong party in England of enthusiastic admirers and adherents, of whom, by personal quarrels and native enprice, he contrived to diminish the number very considerably before his departure. He had strong resentments, and high notions of his own importance and profession, which disgusted many of his warmest friends, and augmented the malice of his enemies. The serious operas in which he performed, during the season of 1769 and 1770, were "*Olimpiade*," a *pasticcio*, chiefly by Piccini; "*Ezio*," by Guglielmi; and "*Orfeo*," by Gluck. In this last admirable drama, his attitudes, action, and impassioned and exquisite manner of singing the simple and ballad-like air, "*Chè farò*," acquired him very great and just applause; but in the zenith of public favor, by his private difference with the honorable Mr. Hobart, at that time patentee of the Opera House, concerning a supposed affront put upon his sister in favor of Zamparini, together with his determined spirit in supporting the dignity and propriety of his dramatic character, by not bowing when applauded, or destroying all theatrical illusion by returning to repeat an air when encoored at the termination of an interesting scene, he so greatly offended individuals, and the opera audience in general, that at length he never appeared without being hissed. His enemies, knowing him to be passion's slave, frequently began an *encore*, with which they knew he would not comply, on purpose to enrage the audience. Guadagni was allowed to be the first billiard player in Europe; but his antagonists, discovering his irritability, used, when playing for large sums, to dispute as unfair something that was clearly otherwise, by which he was so agitated, as not to be a match for a child. He quitted England for the last time in the summer of 1771.

GUADAGNI, SIGNORA, wife of the preceding, was a celebrated Italian singer, and performed at the opera in London between the years 1759 and 1770.

GUAJETTA, GIOV. A celebrated Venetian female singer, about the year 1750. She was the wife of the tenor singer Babbi.

GUALANDI, MARGARETTA, called CIAMPOLI. A celebrated Venetian singer in the service of the Landgrave of Hesse-Darmstadt, about the year 1710.

GUAMI, GIUSEPPE, organist at Lucca, published, about 1586, many motets, and was a celebrated performer on the violin.

GUARDASONI, DOMENICO. An Italian dramatic composer. He was manager of the Italian opera at Prague and Leipsic. He died in 1806 at Prague.

GUARDUCCI, TOMMASO, of Montefiascone, one of the greatest singers of Italy, was a pupil of Bernachi. He flourished about the year 1750. Guarducci sang at the opera in London during several seasons, commencing with that of 1767. The tide of prejudice ran high against him on his first appearance in London; but he had the good

sense to discover, before it was too late, that a singer cannot captivate the English by tricks or instrumental execution; and many years afterwards, he told Dr. Burney, that the gravity of English taste had been of infinite service to him.

GUARNERIUS, ANDREA, of Cremona. Born about 1630, a celebrated maker of violins, and pupil of Amati. Most of his instruments are defined thus: "*Andreas Guarnerius fecit Cremonae sub titulo Sancte Terese, 1680.*"

GUARNERIUS, PIETRO, son and pupil of the preceding, was also born at Cremona, about 1670. The violins which he made in his native city bear dates anterior to 1700. After that time he removed to Mantua. His violins are inferior to those of his father in brilliancy of tone, yet they often sell for 1000 to 1200 francs.

GUARNERIUS, GIUSEPPE, nephew of Pietro, was born at Cremona, and the most celebrated of the musical instrument makers of that name. He is said to have studied with Stradivarius. His violins sell for 2000 to 3000 francs.

GUENÉE, LOUIS, born at Cadiz in 1781, was one of the principal violins at the grand opera at Paris. He was a pupil of Rode. Guenée published several works, containing "Duets for the Violin," "Two Trios," "A Volume of Quartets," "A Concerto," &c.

GUENIN, A., formerly first violin at the grand opera at Paris, and afterwards in the service of the King of Spain, was born at Landrecias, about the year 1745. He was a pupil of Gavinié, and has published much music for his instrument.

GUENIN, MADEMOISELLE, of Amiens, composed, at the age of sixteen, the music of the opera of "*Daphnis et Amathée*," which was generally admired.

GUERILLOT, H., member of the Conservatory at Paris, and of the grand opera band. He was a good violinist, and composed some concertos for the violin, some of which were published at Lyons in 1782.

GUERINI, FRANC. Of Naples, chamber violinist in the service of the Prince of Orange, between the years 1740 and 1760. He composed some instrumental music. Guerini resided for some years in London.

GUERRE, ELIZABETH CLAUDE JACQUETTE DE LA, a female musician, the daughter of Marin de la Guerre, organist of the chapel of St. Gervais, in Paris, was born in that city in 1669, and instructed in the practice of the harpsichord, and the art of composition, by her father. An opera of her composition, entitled "*Céphale et Procris*," was represented in the Royal Academy of Paris, in 1694. She died in the year 1729.

GUERRENO, VIANA, of Seville. A celebrated Spanish musician in the sixteenth century. He passed the greatest part of his life in Italy, and composed some excellent church music.

GUEST, RALPH, was born in the year 1742, at Basely, in Shropshire. At six years of age he began to discover a powerful propensity to music, which he was able to indulge and improve

by joining a very respectable church choir in his native parish. At fourteen years of age, he pursued with increasing ardor his musical studies, and soon became leader of the choir above mentioned. At twenty-one he left the country, and through the introduction of a friend obtained a situation in business in London. There he determined to relinquish his pursuit, and apply solely to his business; but on attending Portland chapel one Sunday, by accident, his resolution gave way, in consequence of again hearing the music in which he had taken so much delight in his native parish. From this moment he formed a part of this excellent choir, at that time so justly celebrated in the metropolis. He now lost no opportunity of hearing the best public musical performances in London; and after a five years' residence there, an advantageous offer presenting itself, he became an assistant to Henry Bullen, of Bry St. Edmunds, in which place, in the course of a few years, he set up business for himself. Here, under the friendly instructions of Frost, the then organist of St. James's parish, he not only became a performer on the organ, but also greatly improved his musical taste and acquirements. About the year 1705, the choir of St. Mary's Church was intrusted to Gnest, and when an organ was subsequently erected, he became organist. What had been in early life merely an amusement, afterwards became his sole employment; he relinquished other business, and devoted himself entirely to the organ, and the instruction of private pupils in music. In the midst even of constant employment, he found time to publish "*The Psalms of David*," arranged for every day in the month, many of the last old tunes being retained, and more than sixty new ones introduced. To this work was prefixed a short introduction to singing and thorough bass. Soon afterwards he published a sort of supplement to his former work, entitled "*Hymns and Psalms*," the music to which he adapted and composed. In addition to his compositions in sacred music, he published many songs.

GUEST, GEORGE, son of the preceding, was born in 1771. He was very early instructed in the rudiments of music by his father, and manifested a great precocity of musical talent and capability. When no more than two years old he began to practise the diatonic scale; at three he could sing "God save the king;" at five he sung in public at St. James's Church, Bury, Handel's song, "He shall feed his flock," accompanied by a full band; at seven he took the first treble at the opening of the organ at Stow Market. Here he attracted the notice of Mr. Taylor, organist of Chelmsford, by whom he was immediately recommended to Dr. Nares, who, after having heard him sing some of Handel's music, appointed him to a situation among the boys in the King's Chapel. In this excellent school he made great proficiency in musical knowledge, and so distinguished himself by his skill in singing, that by Dr. Ayrton, who succeeded Dr. Nares, in conjunction with Messrs. Stanley and Linley, he was brought to sing two songs in an oratorio performed before his majesty. Upon this occasion, the king, who was an excellent judge of music, expressed great approbation, and gave commands to Stanley & at Master Guest

should always sing two songs in the succeeding oratorios. At the commemoration of Handel in 1784, young Guest having obtained the situation of principal treble singer in the King's Chapel, Bartleuan enjoying the same honor at Westminster Abbey, they each acquitted themselves with great credit in the prominent parts which were assigned them. The circumstances of these contemporaries in after life were widely different; Bartleuan acquired a degree of popularity which Guest could not possibly attain. In 1787, having been solicited to accept the organ at Eye, Suffolk, he left the King's Chapel, to undertake the duties of that situation. He remained at Eye only two years, being in 1789 appointed to the organ erected by Green, at Wisbeck, in the county of Cambridge. For this office there were at first no fewer than nineteen candidates; but when it was understood that Guest was one, and that they were to undergo an examination by Dr. Randall, in St. Mary's Church, Cambridge, they all withdrew their claims, except three. Guest having performed several difficult pieces of music, and having extemporized upon a given subject of a few bars in a masterly manner, he was recommended to the capital burghesses of Wisbeck by Dr. Randall, and by them accepted. Guest resided at Wisbeck, where he was celebrated as a teacher of the piano-forte, and as an extemporary performer upon the organ. In this last respect he long excited admiration by the correctness and elegance with which he poured forth the impulses of the moment. To a thorough knowledge of his art, and a complete mechanical command of his instrument, he superadded the further excellence of a claste yet brilliant original conception of musical ideas, which he never failed to develop with precision and effect.

Guest was the author of a variety of musical publications, which were well received, particularly his "Figures and Voluntaries for the Organ," "An Anthem for Christmas Day, inscribed to Dr. Clarke," "A Set of Hymns for the Service of the Church," and "Six Grand Pieces for a full Military Band." He was also the author of several admired glees, duets, and songs.

GUGEL, II. A celebrated performer on the horn, and composer for his instrument. He was resident at St. Petersburg, and went from thence to Paris. His knowledge of his instrument was great, and his powers upon it beyond all expectation. Born at Stuttgart in 1780.

GUGL, MATTHEUS, organist at the cathedral of Salzburg, published there, in 1719, "*Fundamenta Partitura in Compendio Data.*" A third edition of this work was published at Augsburg in 1777.

GUGLIELMI, PIETRO, son of Joachim Guglielmi, master of the chapel of the Duke of Modena, was born at Massa di Carrara, in 1729. He studied music under his father till he was eighteen, when he was sent to the Conservatory of Loretto, at Naples. The celebrated Durante then directed this school, from whence Piccini, Sacchini, Cimarosa, Maio, Trajetta, Paisiello, &c., have issued. Guglielmi did not announce any great disposition for music, but Durante subjected him to the dry studies of counterpoint and composition. He left the Conservatory at the age of

twenty-eight, and composed, nearly directly, for the principal theatres of Italy, comic and serious operas, in both of which he succeeded equally well. He was sent for to Vienna, to Madrid, to London, and returned to Naples, being then in his fiftieth year. It was at this epoch that his faculties acquired their greatest activity, and that his genius shed its greatest lustre. He found the theatre at Naples occupied by the great talents of Paisiello and Cimarosa, who there disputed the palm. He revenged himself nobly on the latter, of whom he had cause to complain. He opposed a work to each work of his adversary, and constantly conquered him. Pope Pius VI. offered Guglielmi, in 1793, the situation of master of the chapel of St. Peter. This retreat gave him, being then sixty-five, an opportunity of distinguishing himself in church music. Guglielmi's works are reckoned to be more than two hundred. The best are the operas of "*I due Gemelli*," "*La Pastorella Nobile*;" and among his oratorios, "*La Morte d'Oloferne*," and "*Deborah*." Zingarelli looked upon this last as the *chef-d'œuvre* of Guglielmi. Musicians discover in this composer simple and elegant melodies, a clear and supported harmony, and whole pieces full of fancy and originality. He died in 1804, in his seventy-seventh year.

GUGLIELMI, PIETRO CARLO, a Neapolitan musician, and eldest son of the preceding, was in London during several years, and much esteemed there as a dramatic composer. Among many successful comic operas, his "*I due Gemelli*" is considered his best work. He also composed an oratorio, called "*La Distruzione de Gerusal-emme*," which was performed at the theatre del Fondo, at Naples.

GUGLIELMI, GIACOMO. Younger brother to the preceding. He resided at Paris for some years, and was engaged at the opera buffa in 1810. G. Guglielmi was born at Massa di Carrara, in 1782. His first *début* was at the theatre of Argentina, at Rome; he then went to Parma, afterwards to Naples, Florence, Bologna, Venice, Amsterdam, and lastly to Paris.

GUICCIARDINI, LUDOVICO. An historian, born at Florence in 1523. He resided at Antwerp, where he published some historical works, in which is to be found the biography of thirty of the principal Flemish musicians. He died in 1589.

GUICHARD, NICOLAS. A French professor of the guitar. He published a collection of airs, among which are "*Bouquet de Romarin*," "*Le Coin du Feu*," "*Il est passé bon temps*," &c. Guichard died in 1807.

GUICHARD, LOUIS JOSEPH, born at Versailles in 1752, was appointed chamber musician to the King of France in 1776. In 1784, he became professor at the Royal School of Singing, and in 1792, singing master at the Academy of Music. Guichard was professor of declamatory singing at the Conservatory, and has composed some romances.

GUIDA. (I.) A guide. A word frequently forming, in conjunction with some other, the title of didactic musical works; as, *Guida Armonica*, An Harmonic Guide, or a Guide to Harmony.

GUIDE. The name given to that note in a fugue which leads off, and announces the subject. The guiding note. See *Dux*.

GUIDO. See *ARETINUS*.

GUIDON. (F.) A direct. See that word.

GUIDONIAN HAND. The figure of a left hand, with the syllabic signs of the intervals of the three hexachords, instituted by Guido, marked on the joints of the fingers; called the *Guidonian hand*, because first adopted by the celebrated monk of Arezzo, the father of the modern notation.

GUIDO'S GAMUT, OR SCALE. The ancient music notes are very mysterious and perplexed. Boethius and Gregory the Great, first put them into a more easy and obvious method. In the year 1204 Guido Aretinus, a Benedictine of Arezzo in Tuscany, introduced the use of a staff with five lines, on which, with the spaces, he marked his notes by setting a point up and down upon them, to denote the rise and fall of the voice; though Kircher mentions this artifice to have been in use before Guido's time. Another contrivance of Guido's was to apply the six musical syllables, *ut, re, mi, fa, sol, la*, which he took out of the Latin hymn :

UT *queant lazis* REsonare fibris
 MIRA gestorum FAMuli tuorum
 SOLve polluti LABii reatum
 O Pater Alme.

Besides his notes of music, by which, according to Kircher, he distinguished the tones, or modes, and the seats of the semitones, he also invented the scale, and several musical instruments, called *polypletra*, as spinets and harpsicords.

GUIDO'S GAMUT OR SCALE.

Invented in the year 1204.

The next considerable improvement was in 1330, when Joannes Muria, or de Muris, doctor at Paris, invented the different figures of notes, which express the times, or length of every note — at least their true relative proportions to one another, now called *longs, breves, semibreves, minims, crotchets, quavers*, &c. Iasus Hermionensis is the most ancient writer on music. Aristoxenus, a disciple of Aristotle, is the oldest author

extant on the subject; and after him came Euclid.

GUIGNON, JEAN PIERRE. Born at Turin in 1702. He was a celebrated violinist, and gave lessons to the dauphin, (father of Louis XVI.,) and to Madame Adelaide of France. Guignon held for thirty years an absurd appointment, named "*Roi des Violons, et Maître des Ménestriers*," which he afterwards gave up; and at his request the office was suppressed. He gave gratuitous lessons to many young violinists, who requested them of him. Guignon's compositions consist of some sonatas, ducts, trios, and concertos for his instrument. Guignon died at Versailles in 1774.

GUILLEMAIN, GABRIEL, born at Paris in 1705, was celebrated as a violinist. He composed some sonatas for the violin and harpsichord. Guillemain lost his senses late in life, and in 1770 destroyed himself, inflicting on his person no less than fourteen wounds.

GUILLOU, a French musician, published, about the year 1780, at Lyons, some quartets for the violin, also some instrumental music at Paris.

GUILLOU. First flutist at the grand opera at Paris.

GUITAR. The guitar, or *guitarra*, is a stringed instrument, the body of which is of a somewhat oval form, and the neck somewhat similar to that of a violin. The strings, six in number, are distended in parallel lines from the head to the lower end, passing over the sounding hole and bridge, and are tuned by *fourths*, all except the third string, which is tuned a third below the second string. The three first strings, E, B, and G, are usually like the gut strings of the violin, and are called the treble; the other three, called bass strings, are either of gut or of silk, and usually wound with silver wire. These strings are, when tuned, —

The intermediate intervals are produced by bringing the strings, by the pressure of the fingers of the left hand, into contact with the *frets* fixed on the key board, while those of the right agitate the strings, and make the measure. To learn this instrument, it will be necessary that the pupil should possess a general knowledge of the rudiments of music, after which a few lessons from any competent teacher will enable the student to practise the scales, with which, when once familiar, and having learned how to tune the instrument, any person will be enabled to learn tunes without difficulty. Instruction books, and guitar music, fingered, can now be purchased at any regular music store, and we need here only give the natural scale for the instrument: —

In the above scale, 0 represents the open string; the figures 1, 2, 3, 4, the fingers of the left hand, which stop the strings to produce the several notes.

The Spaniards, the reputed inventors of the guitar, derived the name they gave it, *guitarra*, from *cithara*, the Latin denomination for almost every instrument of the lute kind. The people of Spain are so fond of music, and of the guitar in particular, that there are few, even of the laboring classes, who do not solace themselves with its practice; it is with this instrument that the Spanish gentlemen at night serenade their mistresses; and there is scarcely an artificer in any of the cities, or principal towns, who, when his work is over, does not go to some public place, and entertain himself and his auditors with his guitar.

About the middle of the last century, the guitar was so fashionable in England as to threaten the ruin of those persons engaged in the manufacture of other instruments. The use of the guitar is said to have been stopped by Kirkman, a harpsichord maker. Having bought a number of cheap guitars, he gave them to ballad singers, and persons in the lowest sphere of life, teaching them at the same time how to play a few popular songs. As soon as it became common, those who had been most interested in it as a fashionable toy threw it by in disgust, and commenced again the study of the piano-forte. Thus it is that fashion governs the inventions of the wisest, and consigns to neglect, or raises into estimation, the talents, genius, and industry of the greatest men in all ages and countries.

The demand for this beautiful and graceful instrument has of late so increased, that several American houses have commenced the manufacture of them. The guitar seems to be coming into very general use. Until within a few years most of the guitars were imported from France or Germany, and some few from Spain. Those of the French and German make, though very pretty in outward appearance, were, many of them, weak in tone, and would not stand the severe changes of our climate. The Spanish instruments, though very much superior to the French and German in point of tone, were of but little use here, as they soon went to pieces. We have seen some American-made guitars of superior tone and finish, made after the Spanish model, which we think will prove rich in tone, and being made here, will stand the severest tests of this climate.

GUMPENHUBER, an amateur performer at the Pantalon, was engaged for three years at St. Petersburg, in 1755, as chamber musician, where his capriccios and concertos were much admired. He quitted that country in 1757.

GUNG'L, JOSEPH. Among renowned composers of that kind of music applied to dancing, Joseph Gung'l occupies a preëminent rank. He is by birth an Hungarian; and hence the soft and effeminate waltz does not run so naturally in his veins as the more stirring and more elevated measure of the "three-quarter tact," a kind of music and species of harmony in which M. Gung'l not only shines with brilliant *éclat*, but in which he even surpasses all who have preceded him in this kind of music and composition. Joseph Gung'l was born at Zsambek, in Hungary.

His father was a stocking weaver. Benedict Tschammer, the village schoolmaster, was the first instructor of young Gung'l. If any one had prophesied to him the event, he would hardly have believed that the time would arrive when his little pupil would fill the palaces of Berlin with rapture and delight, by his music and musical compositions, especially as the parents of Gung'l intended him for a schoolmaster, and not for a musician.

At the age of fifteen, young Gung'l was already engaged as a teacher in the village schools of his native country, or rather he was the plain usher or assistant of more mature teachers. The profession, however, did not please young Gung'l, and in April, 1823, he enlisted as a cannonier in an artillery regiment at Pesth. He served seven years in this capacity, and during all this period, had neither time nor opportunity to exercise his yet undeveloped talents in music. But, in 1835, the dormant faculty waked up to fresh life and to stronger energy than it ever had exhibited before, and he became the chief performer on the hautboy in the band of the artillery regiment in garrison at Gratz. Very soon, as hautboyist, he obtained a great reputation, and at last came to be called the Strauss of Gratz. From this time he went on augmenting in fame and increasing in talent and acquirements. In 1841, Gung'l's first composition appeared before the world, being published by Bote & Bock, music publishers of Berlin. The title of the piece was "The First Hungarian March." After he had left the regiment, in which he had attained the highest eminence and reputation as leader of the band and choir master, he travelled for some time in various parts of Germany, with a company of musicians of which he was the soul and the head. Every where his compositions, and the skill and performances of the band conducted by him, met with the greatest applause.

At Berlin he gave his first concert on the king's birthday, in Sommer's saloon. The modest artist himself had not, at this time, the least idea of the great fame which would follow this concert, and with what applause and rapture his musical performances would henceforth be received by the connoisseurs and the public. The interest which his musical talent and execution excited, continued, henceforward, to increase in Berlin, which is to say much for a city where they can only endure what is excellent, great, and new.

Since his first publication, above referred to, a great number of marches, polkas, quadrilles, &c., of his composition, have appeared before the public, and have uniformly brought the author increasing and deserved fame. Some of his marches were taken up by the army, and immediately became favorites with the soldiers. Gung'l has done much to improve orchestral music, especially by introducing the violin in those orchestras of public music in which it was never known. He has, in this and other respects, rendered a great service to the musical world.

Gung'l, with a small orchestra, gave concerts of light music in the United States in 1847-8, but with indifferent success.

GUNTHER, organist at Neustadt, was named, in 1789, to the church of St. Croix, at Dresden.

GUNTHER, FRIEDRICH, a bass singer at

the theatres of Weimar and Gotha, between the years 1770 and 1780.

GUSTO. Taste. *Con gusto*, with taste.

GUSTOSO, or **CON GUSTO.** A word signifying that the movement before which it is written is to be performed in an elegant and finished style.

GUTHMANN, FRIEDRICH, second violinist at the Italian Theatre at Paris, published there, in 1786, six duets for the violin. He also published a method for the guitar, and other works, in Germany.

GUTTURAL. An epithet given to that tone

and style of intonation which the Italians call *singing in the throat*.

GUY D'AREZZO. See **GUIDO**.

GYMNASTICS. Public contests of personal skill instituted by the ancients, in which the performance of music formed a principal part.

GYROWETZ, ADALBERT, was born in Bohemia in 1765. He received his musical education at Vienna, and soon became an excellent pianist and violinist. In 1785, he went to Naples, from thence to England, and returned in 1793 to Vienna, where he remained, enjoying the place of imperial chapel-master. Gyrowetz composed very numerous instrumental works, also some romances and other vocal pieces.

H.

H. This letter is used by the Germans for B natural. In music, *h* is the seventh degree in the diatonic scale, and the twelfth in the chromatic. In the Guidonian solmization this tone was called *b mi*, the hexachord commencing with *g*. It is the seventh major of *e*, the pure fifth of *e*, and the third major of *g*.

HAACH, HAAK, or HAACK, CARL, was born at Potsdam in 1757, and was appointed, about the year 1790, first violin and chapel-master to the Royal Chapel in Berlin. The following are among his compositions: "Six Sets of Violin Concertos," published at Berlin between the years 1791 and 1797; "Three grand Sonatas for the Piano-forte," Berlin, 1793.

HAACH, HAAK, or HAACK, FRIEDRICH, the younger brother of the preceding, was an organist at Stettin. He has published "*Concerto pour le Clav.*" Op. 1; "*Three Trios pour le Clav.*" Op. 5; "*Three Trios pour le Clav.*" Op. 6. F. Haak was a celebrated pianist, and a pupil in counterpoint of Fasch.

HAAS, IGNAZ. A celebrated organist and composer at Königgratz, in Germany. He published at Vienna, in 1797, "*Variationi sopra l'Andante in A dur del Sig. Mozart.*"

HAAS, PATER ILDEFONS, a librarian and monk in Germany, was born at Offenburg in 1735. He was an excellent theorist, composer, and violinist. He died in 1791. Haas's publications are chiefly for the church.

HABENECK, F. A. There are three brothers of this name, all of them violinists. F. A. Habeneck, born at Mezières in 1781, is the eldest, and was adjunct and one of the best violin pupils of Baillot, at the Conservatory at Paris. He was afterwards adjunct with Krentzer for solo playing, at the Imperial Academy of Music. Since 1806 F. A. Habeneck has been distinguished as a conductor of concert orchestras in Paris. At that time the prize violinists at the Conservatoire alternately conducted its concerts for a year; but such was Habeneck's superiority that he held the position alone until 1815, when the allied armies entered Paris. Here he produced, for the first time in Paris, the first symphony of Beethoven and other great works; but it was not until the organization of a new society, the "Société des Concerts," in the Conservatory, in 1828, that these great compositions excited the liveliest enthusiasm, through the fire and energy which Habeneck infused into the performance. He was director of the Opera from 1821 to 1824. After the revolution of July, 1830, he became first violinist to the king. Habeneck has composed but little: two concertos, and some smaller pieces for the violin; a grand polonaise for orchestra, written for the musical festival at Lille, in 1829; a grand fantasia for violin and piano; and some morceaux added to the opera "*La Lampe merveilleuse*,"—are distinguished for originality

and elegance. His most distinguished scholars are the violinists Cavillon and Alard.

HABENECK, JOSEPH, younger brother of the preceding, also pupil of the Conservatory and of Baillot, was second orchestra director at the Opera Comique in Paris. Born in 1785.

HABENECK, CORENTIN, youngest brother of the preceding, born in 1787, gained the first violin prize at the Conservatory in 1808. He has recently held the place of first violinist and solo player in the orchestra of the Grand Opera in Paris.

HABERMANN, FRANZ JOHANN, director of music at Prague, in Bohemia, was born in that city in 1712. He was particularly esteemed as a contrapuntist about the middle of the last century. Twelve masses of his composition were published at Prague in the year 1746, and in 1747 six litanies, in folio. He has composed also many symphonies and sonatas.

HACKBRETT. (G.) The dulcimer.

HACKER, BENEDICT. A German composer, born in Bavaria in 1769. The following are among his principal works, up to the year 1800: "*Liebe und Treue, an Emma*," a song, Munich, 1797; "*Six Songs*," 1798; "*Six Songs*," 1799; "*Je früher, je lieber*," song; "*Four-Part Songs*;" "*List gegen List*," an operetta. He was a friend and pupil of Michael Haydn.

HACKMEISTER, KARL CHRISTOPH, organist at the Church of the Holy Spirit at Hamburg, published, in 1753, a work entitled "*Klavierübung, bestehend in 50 auserlesenen Variationen über eine Menuet zum Nutzen der Information componirt, &c.*," first volume; in which he discovers not only good taste, but a thorough knowledge of counterpoint.

HADRAVA, or HADRAWA, was an Hungarian by birth. He was a good amateur violinist, and published in 1782, at Berlin, six sonatas for the harpsichord.

HAEFFNER, chapel-master, in 1797, to the King of Sweden at Stockholm, was born in Germany. He studied Gluck's style of dramatic composition, and when quite a young man, in 1789, brought out an opera at Stockholm, called "*Electra*," which was very successful.

HAEMMERLEIN, FRANZ JOSEPH, was born at Augsburg. He was an excellent pianist, and resided, after the year 1771, at Munich.

HAEMPELN, superintendent of the music of the Dukes of Furstenberg, was considered, about the year 1795, as one of the best violinists and composers for his instrument in Germany.

HAENDEL. See HANDEL.

HAENDLER, chapel-master to the Bishop of

Wurtzburg, was born at Nuremberg, towards the close of the seventeenth century. He was a pupil of Pachelbel. Soon after the year 1712, he was named organist of the court of Wurtzburg. He died in 1742.

HAENEL, or HAENDL, JACOB, called also GALLUS, was one of the greatest German contrapuntists, about the year 1550. His works consist chiefly of motets and church music. He died at Prague in 1591.

HAENSEL, PETER, chapel-master to a nobleman at Vienna in 1798, was a pupil of Haydn. He published "*Neuf Quatuors à deux Violons, Tenor, et Violoncello*," Ops. 1, 2, 3, (Offenbach, 1798.) "*Trois Thèmes variés pour le Violon, avec Acc. de Viola*," Op. 4. "*Air, avec Variations pour la Harpe*," Op. 4, (Offenbach, 1799.) "*Six Quatuors à deux Violons, Tenor, et Violoncello*," Ops. 5, 6, (Offenbach, 1799.) "*Six Quatuors à deux Violons, Tenor, et Violoncello*," Op. 7, (Offenbach, 1800.) "*Trois Quatuors à deux Violons, Tenor, et Violoncello*," Op. 8, (Offenbach, 1801.) "*Trois Quatuors à deux Violons, Tenor, et Violoncello*," Op. 9, (Offenbach, 1802.)

HERLEMME, A. G., an Italian composer of the seventeenth century, published, in 1664, "*I sacri Salmi di David, messi in rime volgati da Gio. Diotati*," Lucca.

HAESER, JOHANN GEORGE, born in Germany in 1729, was, till the year 1808, chapel-master of the university church at Leipsic. He died, much lamented, in the year 1809, leaving five children, all of whom are respectable musical characters in Germany.

HAESSLER, JOHANN WILHELM, director of music, and organist at Erfurt, was born in that town in 1747. He was an excellent performer, and likewise a good tenor singer. Haessler went to England in 1791, and performed on the piano before their majesties, and also in several churches. He afterwards proceeded to St. Petersburg and Moscow; where he remained until his death. His works are numerous for the organ and piano.

HAEUSSLER, ERNST, a violoncellist and composer, born at Stuttgard in 1760, resided, in 1801, at Augsburg. He published much vocal and other music between the years 1792 and 1800. His "*12 Canzonette Ital. Acc. p. il Piano-forte e Chitarra*," published at Vienna, in 1800, are said to be extremely beautiful.

HAGUE. DR. CHARLES, was born in the year 1769, at Tadcaster, in Yorkshire. From early youth he manifested great fondness for music. A violin was placed in his hand, and his brother, who was many years older than himself, became his preceptor. In 1779 he left his native place for Cambridge, where his brother had begun to reside. From the last-mentioned period, he had the advantage of excellent instruction, both in the practice and the theory of his future profession. He became the pupil of Manini, an eminent performer on the violin, and studied the rudiments of thorough bass, and the principles of composition, under the elder Hellendaal, a man of undoubted attainments in musical science. Under these favorable circumstances, Charles Hague rapidly acquired celebrity, by his

exquisite performance on the violin, which to the close of life continued to be his favorite instrument.

About the year 1785 Manini died; and by the advice, as it is believed, of his university friends, young Hague then resided for a time in London, and became the pupil of Salomon. Already an excellent performer, he could avail himself to the uttermost of the instructions of that great master; and from Salomon, without doubt, he acquired no small portion of that skill and power which enabled him to give such delightful effect to the compositions of Haydn. During this period he had the good fortune to be assisted in the study of vocal harmony by Dr. Cooke, of glee writers in modern times second to few in point of elegance, and perhaps the most learned. On his return to Cambridge he had the satisfaction of numbering among his pupils many members of the university, eminent both for rank and talent. In 1794 he was admitted to the degree of bachelor of music in the University of Cambridge. In 1799 the professorship of music became vacant, in consequence of the death of Dr. Randall; when, encouraged by his numerous friends among the members of the senate, he became a candidate for the appointment, and was successful. Soon after his election to the professorship, he proceeded to the degree of doctor of music. Dr. Hague, from that time, considered himself as completely settled in Cambridge, where he continued to reside. During the spring of 1821, he frequently complained of being unwell; but no danger was apprehended.

Towards the end of May, he was making arrangements for some concerts on a grand scale, which were to be performed at the approaching commencement, when he became alarmingly ill. He remained two or three weeks in a state which gradually destroyed all hopes of his recovery, and on the 18th of June, 1821, he expired, deeply regretted by his family and his friends. Dr. Hague was well acquainted with the principles of playing on keyed instruments, although not a performer himself. Besides the violin, he was a complete master of the tenor and the violoncello. On public occasions, on which his services were more particularly called forth, he was accustomed to lead the musical performances with a precision and a certainty which showed that he was clearly entitled to the situation in which he was placed. In quartets, his style of playing was the most delightful that can be imagined. If, however, we were required to state one department in which he more particularly excelled, we should mention his violin accompaniment to the piano-forte. In that we are almost inclined to think he was unrivalled, so prompt was the intelligence with which he seized the meaning of the composer, so fascinating the eloquence with which he developed his ideas. Dr. Hague was well acquainted with the theory of music. Whoever would understand the principles of composition will find it an advantage to consult many writers for the purpose of illustration; but it is indispensable that he study one standard author thoroughly. We may observe that students in music are not the only students to whom this hint may be useful. In the last age Rameau was generally held to be the great master theorist — the hierophant of the mysteries. Dr. Hague had studied in the school

of Rameau. He had read many modern writers, but Rameau he had studied. On subjects of this kind Dr. Hague was always glad to converse, and often has "the witching time o' night" found the professor and his biographer with music paper before them, and black-lead pencils in their hands, discussing concords and discords in all their forms, and estimating

"Their bearings and their ties,
Their nice connections and dependencies."

The late professor had no exclusive admiration, either of ancient or of modern music: he knew the peculiar value of each. He was anxious to preserve a sensible distinction between the secular and the ecclesiastical style. To record his opinions of the great composers of different ages is beyond the scope of this memoir. It may, however, be observed, that he was very copious and animated in his praise of Tartini, whose works he had studied with assiduity. His master, Hellen Dahl, had been a pupil of Tartini; and from Hellen Dahl he had derived several of Tartini's precepts of composition, which he used to repeat with great pleasure. Of the productions of his contemporaries, Dr. Hague was always disposed to speak with kindness and liberality. He spoke with rapture of the music of "Palestine," and in his copy of the words of that oratorio he had made remarks on each movement, in a style which manifested the justness of his taste and the acuteness of his critical powers. The mention of Dr. Crotch has brought to mind a circumstance which will probably be thought not uninteresting, and which might otherwise have been forgotten. For a short period during the early years of that extraordinary genius, he was the pupil of Charles Hague, who was also at that time very young, being but six years older than his pupil. In a journal of Dr. Hague's yet remaining, the circumstance is stated, with admiration of the rapid progress which his pupil had made; and with a declaration, that to have had such a pupil would always appear to him the greatest honor of his life. In due time Crotch became professor of music at Oxford. It is pleasing to consider that the tutor and the pupil invariably regarded each other with the greatest affection. Numerous must have been the good qualities of that man of whom it may be said—as it may with truth be said of Dr. Hague—that many were the friends who were attached to him when living, and who lamented his death. Of the single songs which he published, few are known to the present writer. They are said to possess considerable merit. In 1805, "A Collection of Songs" was published by the Rev. Mr. Plumpton, then fellow of Clare-hall, Cambridge. To this work Dr. Hague rendered his assistance in adapting the music, and in a few instances as a composer. The volume was compiled for the most praiseworthy purposes. It contains many pleasing and popular melodies, which are as much as may be freed from difficulty. All that was intended to be done was ably performed. The title page of a musical publication seldom affords a date; hence it is not easy to say in what year Dr. Hague introduced to the public (by permission of the composer, Mr. Wheeler of Cambridge) "Six Glee's for three and four Voices." These are productions of great sweetness and elegance. If any person should be

induced to become acquainted with them on this recommendation, he can hardly fail, we think, to be delighted with such compositions as "Happy the man," "Welcome, dear Siella," "My Phillida, adieu, love!" Some of our readers will not perhaps despise the information, that the words of the last-mentioned glee may be found in Percy's "Reliques," vol. ii. p. 292, 5th edition. Dr. Hague's principal publications are the following: 1. "An Anthem composed for the Degree of Bachelor of Music, and performed June 29, 1794;" the subject is the 137th Psalm—"By the waters of Babylon," &c. In this production the author shows that he had completely overcome the mechanical difficulties of composition. The parts proceed without embarrassment, and the harmony is pure. Over the whole there is thrown a character of simplicity and of learning. The opening trio, "By the waters of Babylon," is tender and pathetic. The subject of the chorus, "As for our harps," was employed by the author, on another occasion, with much greater effect. "For they that led us away captive," and "How shall we sing the Lord's song in a strange land?" are deeply affecting. In listening to the entire composition, we appear to be surveying scenes of desolation and of melancholy grandeur. 2. "Glees." These are worthy of a pupil of Dr. Cooke. They consist of *real parts*. 3. "Twelve Symphonies by Haydn, arranged as Quintets." What is here attempted is accomplished in a very masterly manner. 4. "The Ode as performed in the Senate House at Cambridge, at the Installation of his Royal Highness, the Duke of Gloucester, Chancellor of the University." The ode itself is from the pen of William Smyth, Esq., professor of modern history. We have here the most elegant and the most sublime of Dr. Hague's productions. It would not be easy to find any thing more beautiful than the following air, or more sublime than the chorus which succeeds it. "The master of the British shell," it will be recollected, is the poet Gray.

AIR.

"O thou last master of the British shell
Pleased in the calm of academic bowers
To win the spoils of meditative hours,
And from thy studious cell
See thy loved arts, and virtue's lovely train,
Wide round the world secure! reign!—
Alas! how is that world defiled,
How changed each scene that peaceful smiled,
Since in this crowded dome, thy skill divine
Did laurel wreaths round Grania's spectre twine!"

CHORUS.

What countless forms, with frantic mien,
Have filled o'er yon darkened scene?
They come — they rage — they disappear
The storm is woe — the pause is fear!"

HAGUE, HARRIOT, eldest daughter of the preceding, died in 1816, at the early age of twenty-three. Her performance on the piano-forte indicated a power of executing all that the most capricious fancy of the composer could imagine; but it was a power which was always under the dominion of taste and of feeling. She could give effect to the finest inventions of Mozart, and triumph, even when listened to by Samuel Wesley, over the most intricate combinations of Sebastian Bach. In 1814 she published, by subscription, "Six songs, with an Accompaniment for the Piano-forte," which are said to be eminently beautiful compositions.

HAIN, GEORGE J. J., a singer and director

of music at M nnerstadt, in Franconia, has published, since the year 1748, many theoretical and practical works, chiefly in the German language. His "*Officium Vespertinum tum rurale tum civile*," consisting of six masses and psalms for a full orchestra, was published at Augsburg in 1759, and the second edition of his "*Generalbass-schuler*" in the same town in 1768.

HABIBEL. An actor and good tenor singer in Vienna, subsequently to the year 1794. He composed an operetta, called "*Der Tyroler Was-tel*," which was very successful, and published in different ways in several of the large towns of Germany.

HAIIGIL, T. An English pianist and composer. He was a pupil of Joseph Haydn, and has not only arranged for the piano many of his master's most celebrated works, but has made himself known by several very excellent original compositions. Among his works may be mentioned a "Single Violin Concerto," (Preston.) "Three Duets, with favorite Airs for Piano-forte," Op. 5, (Preston.) "Three easy Duets," Op. 7. "Divertimento." "Twenty-eight Sonatas, with Preludes and two easy Duets." "Twenty-eight Sonatas, second Set." "Six Sonatas," Op. 4. "Three Sonatas," Op. 6. "Six Sonatas," Op. 8, dedicated to Dr. Haydn. "Three Sonatas," Op. 9. "Two Sonatas," Op. 12. "Sonatas," Op. 16. "Sonatas," Op. 19. "Eight Divertimentos," Op. 42. "Divertimento, with Blue Bells." "Crown Prince of Sweden's March." "Sonata, with Care the Canker." "Sonata, with Fal, lal, la." "Sonata, with Louis XVI's March." "Thema, with Variations," dedicated to Miss Thornton. "Air from 'Zauberfl te' of Mozart, with Variations." (All published by Preston.) "Three Sonatas," Op. 30. "Two Sonatas," Op. 31. "Twelve Petits Pieces. Second Edition," Op. 32. "Three Sonatas," Op. 39. "Prelude, Minuet, and Dance Cossaque." "Second Divertimento for Flute or Violin," Op. 40. "Arrangement of Haydn's Symphonies, Nos. 1, 2, and 3, (Letters A, B, and C,) in which are introduced the admired Canzonettas, 'Far from this throbbing bosom,' 'My mother bids me,' and 'Now the dancing sunbeams play,' for Piano-forte and Flute."

HAIL COLUMBIA. This, the most popular of all the national songs of America, was written by the late Judge Joseph Hopkinson, under the circumstances related in the notice given below.

Joseph Hopkinson, son of Francis Hopkinson, one of the signers of the Declaration of Independence, was born in Philadelphia, November 12, 1770. He was educated at the University of Pennsylvania; studied law with Judge Wilson and Mr. Rawle; and practised with brilliant success in his native city; was twice elected to Congress from Philadelphia, (1815 and 1817.) In 1828 he was appointed judge of the district court for the eastern district of Pennsylvania — this being the same office which his father held by Washington's appointment. Judge Joseph Hopkinson remained in office till his decease, which took place June 15, 1842. He was the delight of the circle of society in which he moved. "His accomplished mind," says Mr. Walsh, "observant of all the events, characters, and opinions of the day, was peculiarly qualified

to delight, besides instructing, in convivial intercourse, by a strong relish for refined society, cheerful and vivacious spirit, and a peculiar poignancy of remark and raciness of anecdote."

The following is Judge Hopkinson's own account of the origin of "Hail Columbia," written August 24, 1840, for the Wyoming Band, at Wilkesbarre, at their desire.

"This song was written in the summer of 1798, when a war with France was thought to be inevitable — Congress then being in session in Philadelphia, deliberating upon that important subject, and acts of hostility having actually occurred. The contest between England and France was raging, and the people of the United States were divided into parties for the one side or the other; some thinking that policy and duty required us to take part with republican France, as she was called; others were for our connecting ourselves with England, under the belief that she was the great preservative power of good principles and safe government. The violation of our rights by both belligerents was forcing us from the just and wise policy of President Washington, which was to do equal justice to both; to take part with neither, but to keep a strict and honest neutrality between them. The prospect of a rupture with France was exceedingly offensive to the portion of the people which espoused her cause; and the violence of the spirit of party has never risen higher, I think not so high, as it did at that time, on that question. The theatre was then open in our city. A young man belonging to it, whose talent was good as a singer, was about to take his benefit. I had known him when he was at school. On this acquaintance, he called on me on Saturday afternoon — his benefit being announced for the following Monday. He said he had no boxes taken, and his prospect was, that he should suffer a loss instead of receiving a benefit from the performance; but that if he could get a patriotic song adapted to the tune of the 'President's March,' (then the popular air,) he did not doubt of a full house; that the poets of the theatrical corps had been trying to accomplish it, but were satisfied that no words could be composed to suit the music of the march. I told him I would try for him. He came the next afternoon, and the song, such as it is, was ready for him. It was announced on Monday morning, and the theatre was crowded to excess, and so continued, night after night, for the rest of the season — the song being encored and repeated many times each night, the audience joining in the chorus. It was also sung at night in the streets by large assemblies of citizens, including members of Congress. The enthusiasm was general, and the song was heard, I may say, in every part of the United States. The object of the author was to get up an American spirit, which should be independent of and above the interests, passions, and policy of both belligerents, and look and feel exclusively for our honor and our rights. Not an allusion is made either to France or England, or the quarrel between them, or to which was the most in fault, in their treatment of us. Of course the song found favor with both parties — at least neither could disavow the sentiments it inculcated. It was truly American, and nothing else and the patriotic feelings of every American heart responded to it. Such is the history of

this song, which has endured infinitely beyond any expectation of the author, and beyond any merit it can boast of, except that of being truly and exclusively patriotic in its sentiments and spirit."

HAINDEL, or **HEINDL**, was, in 1793, court musician and *chef-d'orchestre* at the theatre at Pussau.

HAKART, CAROLO. A viol-da-gambist and composer, who died about the year 1730.

HAAKE, HANTZ. A violinist at Stade, in the middle of the seventeenth century. He published some music for his instrument.

HAKENBERGER, ANDREAS. Chapel master at Dantzic in the beginning of the seventeenth century. He was one of the most eminent composers of his time. His works, which are chiefly sacred, bear date from the year 1612 to 1645.

HALBCADENZ. (G.) A half cadence, or cadence on the dominant.

HALBERTON. (G.) A semitone.

HALBNOTE. (G.) A minim.

HALEVY, JACQUES FROMENTAL, one of the best dramatic composers of the French school, was born at Paris in 1799. He entered the Conservatory in 1809. He is best known by his operas "*La Juive*," and "*L'Eclair*," and his completion of Herold's "*Ludovic*." In 1827 he was appointed teacher of harmony in the Conservatory, and pianist at the Italian Opera. In 1829 he became director of singing at the Grand Opera, and in 1833 he succeeded Fetis as teacher of composition at the Conservatory. In 1835 the king of the French conferred on him the cross of the legion of honor; and in 1836, when Reicha died, he was elected to the vacant place as member of the Academy of Fine Arts of the Royal Institute of France.

HALF BEAT. This *Zusammenschlag*, being the inferior note, is struck only once, and at the same time with the principal note, and is immediately quitted. Kollman terms it a *base-grace*, and says it is employed to strengthen the parts, and to supply the want of pedals in the organ. It may be written by a small note, like a short appoggiatura, thus:—

The half beat is very similar to the acciacatura of the Italians. The chromatic licenses are derived from the half beat.

HALF NOTES. Semitones are sometimes called half notes, though improperly. Butler says, "From Mi to Fa, and from La to Pha, is but half a tone; between any other two notes there is a whole tone; but in singing, how to tune each note and half note to his fellow, cannot be declared by precept."

HALL, HENRY. The son of Captain Henry Hall, of New Windsor, was born about the year 1655, and educated in the Royal Chapel, where he had for his first master Dr. Blow. His first promotion was to the place of organist of Exeter. After that he became organist of Hereford, and a vicar choral in that church. He died in 1707.

He had a son named after himself, who was also organist of Hereford, and died in the year 1713. The similar situation of these two persons, and the short distance of time between their death, rendered it difficult to distinguish one from the other; and this difficulty is increased by the additional circumstance that each had a taste for poetry. The elder was a sound musician, and composed many anthems, well known to those who are conversant in church music; and most of the musical compositions with the name Henry Hall are to be ascribed to him; for it has not been ascertained that the younger was the author of any; and indeed it seems that his character of a musician is lost in that of a poet.

HALL, WILLIAM, a violinist in the Chapel Royal of King William II., died in the year 1700. There are some printed airs of his composition. See **HAWKINS, SIR JOHN.**

HALLELUJAH, or ALLELUJA (Hebrew.) Praise ye the Lord. The singing of *Hallelujahs* was a sort of invitation, or call to each other, to praise the Lord. St. Austin says, that in some churches it was sung only on Easter day, and the fifty days of Pentecost; but that it was never used during the time of Lent. St. Jerome informs us in his epitaph of Fabiola, that it was commonly sung at funerals, and speaks of the whole multitude joining in the *Hallelujah*, and making the golden roof of the church shake with the peals of the chorus. This expression occurs often in the Psalms, and its full, fine sound, together with its simple and solemn meaning, has rendered it a favorite of musical composers. The vowels in it are very favorable for a singer.

HALTER, WILHELM FERDINAND, organist of the reformed church at Königsberg, in Prussia, published some excellent music for the piano-forte. He died in 1806. Several sets of his sonatas are published at Leipzig and Augsburg.

HAMBOYS, JOHN. One of the oldest doctors of music in England. He flourished about the year 1470, and left the following works: 1st. "*Summum Artis Musicæ*," in manuscript; and 2d. "*Cantiones artificiales diversi Generis*." He was an excellent musician for the age in which he lived.

HAMERTON, WILLIAM HENRY, was born in Nottingham, in the year 1795. At an early age he became a chorister of Christchurch Cathedral, Dublin, where he received his musical education. In 1812 he visited London, with the intention of studying vocal music, and for that purpose became the pupil of Thomas Vanhan. He returned to Dublin in 1814, and then commenced business professionally, as teacher of vocal music, the organ, and piano-forte. In 1815, on the resignation of John Elliott, Hamerton was appointed master of the musical academy, in which he had been himself educated, and in which several of his pupils have distinguished themselves, particularly Master Ormsby, who so much attracted the attention of his majesty on his visit to Dublin, as also Master Hill, a chorister. In 1822 Hamerton officiated gratuitously as organist and preceptor to the Molyneux asylum for blind females, and was appointed one of the gentlemen of his majesty's Chapel Royal

n Dublin. His compositions, which are all vocal, consist of a few songs, duets, and harmonized airs, some anthems and chants written for Christ-church Cathedral, and an elementary work, of which the title is, "Vocal Instructions, combined with the Theory and Practice of Piano-forte Accompaniment."

HAMMEL, STEFFAN, an organist, of a convent at Wurtzburg, published some good sacred music between the years 1786 and 1807.

HAMMERSCHMIDT, ANDREW, a Bohemian, born in 1611, was organist, first of the church of St. Peter's, at Freiberg, and afterwards of that of St. John, at Zittau. He was chiefly celebrated for his assiduity in the improvement of the church music in Saxony, and some of the other German provinces. He died in 1675, at the age of sixty-four. His compositions were chiefly motets for four, five, and six voices.

HAMMOND, HENRY, an English doctor of divinity, born in 1603, was one of the preachers to the court of Charles I. To his "Paraphrase and Annotations upon the Book of Psalms" he has added a curious dissertation on the use of music in divine service. He died in 1660.

HAMPEL, ANTON JOSEPH. A celebrated performer on the horn, in the Chapel Royal at Dresden, in 1748. He was the master of Punto.

HAN, GERARDO, published at Amsterdam, in 1730, "*Sonata a tre*," Op. 1.

HANDEL, properly HAENDEL, GEORGE FREDERIC, the son of an eminent surgeon and physician at Halle, in the duchy of Magdeburg, and circle of Lower Saxony, was born on the 24th February, 1684. In his early youth, he discovered such a passion for music as could not be subdued by the commands of his father, who intended him for the profession of the law. He had made a considerable progress in this art by stealth, before he was allowed a master; but at seven years old, his father, finding it impossible to fix his attention to any thing but music, for which he seemed to have been endowed by nature with very uncommon propensities and faculties, placed him under Zachau, organist of the cathedral of Halle, a man of considerable abilities in his profession. By the time he was nine years old, our young musician was not only able to officiate on the organ for his master, but began to study composition; and, at this early period of his life, is said to have composed a service, or, as it is called in Germany, *spiritual cantata*, every week, for voices and instruments, during three successive years. Mr. Weideman was in possession of a set of sonatas in three parts, which Handel composed when he was only ten years old. In the year 1698, at the age of fourteen, he was carried to Berlin, where operas were then in a very flourishing state, at the court of the Elector of Brandenburg, afterwards King of Prussia, who at that time retained in his service not only many Italian singers of eminence, but likewise Buononcini and Attilio, to compose. Handel distinguished himself so much in this city as a wonderful performer for his age, that his electoral highness offered to send him into Italy at his own expense, for the completion of his musical studies. His father, however, perhaps from a mistaken spirit of independence, declined this honor, and

the young musician returned to Halle. The death of his father happening soon after he left Berlin, Handel, unable to support the expense of a journey to Italy, whither he was ambitious of going, removed to Hamburg, in order to procure a subsistence by his musical talents, this city being, next to Berlin, then the most renowned for its operas. John Matheson, an able musician, and voluminous writer on the subject of music who resided at Hamburg during the whole time that Handel remained in that city, informs us that he arrived at Hamburg in the summer of 1703, endowed with genius and a good disposition. "Here," says Matheson, "almost his first acquaintance was myself, as I met him at the organ of St. Mary Magdalen's Church, on the 30th of July, whence I conducted him to my father's house, where he was treated with all possible kindness and hospitality; and I afterwards not only attended him to organs, choirs, operas, and concerts, but recommended him to several scholars. At first he only played a ripieno violin in the opera orchestra, and behaved as if he could not count five, being naturally inclined to dry humor. At this time he composed extremely long airs, and cantatas without end, of which though the harmony was excellent, yet true taste was wanting, which, however, he soon acquired by his attendance at the opera." As these young musicians lived much together, they frequently had amicable contests and trials of skill with each other, in which, it appearing that they excelled on different instruments, Handel on the organ, and Matheson on the harpsichord, they mutually agreed not to invade each other's province, and faithfully observed this compact for five or six years. "Handel," says Matheson, "pretended ignorance in a manner peculiar to himself, by which he made the gravest people laugh, without laughing himself. But his superior abilities were soon discovered, when, upon occasion of the harpsichord player at the opera being absent, he was persuaded to take his place, for he then showed himself to be a great master, to the astonishment of every one except myself, who had frequently heard him before upon keyed instruments." Soon after this, an opera called "*Cleopatra*," composed by Matheson, was performed on the Hauburg stage, in which he acted the part of Antony himself, and Handel played the harpsichord; but Matheson being accustomed, upon the death of Antony, which happens early in the piece, to preside at the harpsichord as composer, Handel refused to indulge his vanity by relinquishing his post; which occasioned so violent a quarrel between them, that, as they were going out of the house, Matheson gave him a slap on the face, upon which they both immediately drew their swords, and a duel ensued in the market-place, before the door of the Opera House; luckily, the sword of Matheson broke against a metal button upon Handel's coat, which put an end to the combat, and they were soon after reconciled. This rencounter happened on the 5th of December, 1704; and, as a proof of a speedy reconciliation, Matheson tells us, that on the 30th of the same month, he accompanied the young composer to the rehearsal of his first opera, "*Almira*," at the theatre, and performed the principal character in it; and that afterwards they became greater friends than ever. On the 25th of February, 1705, Handel produced a *secundo* d

opera, called "Nero," which, as well as "Almira," met with a very favorable reception. After the run of these two dramas, Matheson, who performed the principal character in both, quitted the stage, on being appointed secretary to the British resident at Hamburg — an office in which he continued till his death, at the distance of near sixty years from his first appointment. From 1705 to 1708, when Handel set two other operas, "Florindo," and "Dafne," he did not compose any thing for the stage, but had many scholars, and composed harpsichord pieces, single songs, and cantatas innumerable. Handel, having acquired at Hamburg a sum sufficient to enable him to visit Italy, set out for that seat of the Muses, a journey after which every man of genius so ardently pants. He staid some time at Florence, where he composed the opera of "Rodrigo." Thence he went to Venice, where, in 1709, he produced his "Agrippina," which is said by his biographer to have been received with acclamation, and to have run thirty nights. Here he met with Domenico Scarlatti, Gasparini, and Lotti. He then visited Rome, where he had an opportunity of hearing compositions and performers of the first class. Here the elder Scarlatti and Gasparini had brought vocal music, and Corelli instrumental, to great perfection. At Cardinal Ottoboni's, by whom Handel was greatly caressed and patronized, he had frequently the advantage of hearing the natural and elegant Corelli perform his own works. Here the young composer produced a serenade, "Il Trionfo del Tempo." Afterwards he proceeded to Naples, where he set "Acis e Galatea," in Italian, but totally different from the English drama, written by Gay, which he set, in 1721, for the Duke of Chandos. When he returned to Germany, on quitting Italy, in the beginning of 1710, he proceeded immediately to Hanover, where he found a munificent patron in the elector, who afterwards, on the death of Queen Anne, ascended the English throne by the name of George I. This prince had already retained in his service, as *maestro di capella*, the elegant and learned composer Steffani, whom Handel had before met at Venice, and who now resigned his office in his favor. This venerable musician served as a model to Handel for chamber duets, and facilitated his introduction to the smiles of his patron, the elector, who settled on him a pension of fifteen hundred crowns, upon condition that he would return to his court, when he had completed his travels. Handel, according to this proposition, went to Dusseldorf, where he had a flattering reception from the elector palatine, who likewise wished to retain him in his service. But, besides the engagement into which he had already entered, he was impatient to visit England; having received invitations from several of the nobility, whom he had seen in Italy and at Hanover. It was at the latter end of the year 1710 that Handel first went to London. His reception was as flattering to himself as honorable to the nation, and decided him to remain in that country, where fortune and renown awaited him, instead of returning to more limited engagements at Hanover. On the arrival, however, of George I. in England, Handel, conscious of his deficiency in respect and gratitude to a prince who had honored him with such flattering marks of approbation and bounty, durst not approach the court, till, by the ingenuity and

friendly interposition of Baron Kilmanssegge he was restored to favor in the following manner: The king, soon after his arrival, having been prevailed on to form a party on the water, the design was communicated to Handel, who was advised to compose some pieces expressly on the occasion the performance of which he secretly conducted in a boat, which accompanied the royal barge. Upon hearing these compositions, which have been since so well known, and so justly celebrated under the title of water music, his majesty, equally surprised and pleased by their excellence, eagerly inquired who was the author of them; when the baron acquainted the king that they were the productions of a faithful servant of his majesty, who, conscious of the cause of displeasure which he had given to so gracious a protector, durst not presume to approach his royal presence till he had assurances that, by every possible demonstration of duty and gratitude in future, he might hope to obtain a pardon. This intercession having been graciously accepted, Handel was restored to favor, and honored with the most flattering marks of royal approbation. And as a ratification of the delinquent's peace, thus easily obtained, his majesty was pleased to double a pension of two hundred pounds a year, previously settled on him by Queen Anne; and not many years after, when he was employed to teach the princesses, another pension of two hundred pounds was added to the former grants, by Queen Caroline. From the year 1715 to 1720, we do not find that any opera was set by Handel. During the first three years of this period, he chiefly resided with the Earl of Burlington, a nobleman whose taste and judgment in the fine arts were as exquisite as his patronage to their votaries was liberal. And the other two years Handel was employed at Cannous, as *maestro di capella* to the Duke of Chandos, who, among other splendid and princely features of magnificence, established a chapel, in which the cathedral service was daily performed by a choir of voices and instruments, superior, at that time, perhaps, in number and excellence, to that of any sovereign prince of Europe. Here Handel produced, besides his anthems, the chief part of his hautboy concertos, sonatas, lessons, and organ fugues; which are all so masterly, spirited, and exquisite in their several kinds, that if he had never composed an opera, oratorio, "Te Deum," or any other species of vocal music, his name would have been had in reverence by true musicians as long as the characters in which they are written continue to be legible. The most splendid era in the opera annals of England, when the King's Theatre was under the direction of the Royal Academy of Music, and Handel the acting manager and composer, was likewise the precise moment when this great musician had arrived at the stage of existence which Dante calls "Il mezzo del cammin di nostra vita;" when the human frame and faculties have attained their utmost strength and vigor. He was endowed with extraordinary natural powers, by that time highly improved by cultivation; with a hand which no difficulties could embarrass; a genius for composition original and inexhaustible; at the head of a profession which facilitates access to the great, and with extraordinary abilities insures their patronage; high in the favor of the sovereign, nobles, and public of a rich and powerful

nation, at a period of its greatest happiness and tranquillity; when it was not only blessed with leisure and zeal to cultivate the arts of peace, but with power and inclination liberally to reward those whose successful efforts had carried them beyond the regions of mediocrity. Such were Handel's circumstances when he first entered into the service of the Royal Academy of Music. In his treatment even of first-rate singers, Handel was somewhat despotic, as the two following anecdotes will evince. The very simple and well-known air, "*Verdi prati*," in "*Alcina*," which was constantly encoired, was at first sent back to Handel by Carestini, as too trifling for him to sing; upon which he went in a great rage to his lodgings, and with a tone in which few composers except Handel ever ventured to accost a first-rate singer, exclaimed, in his usual curious dialect, and with his accustomed impetuosity, "You tog! don't I know better as yourseluf vaat is pest for you to sing? If you will not sing all de song vaat I give you, I will not pay you ein stiver." On a similar occasion, upon Cuzzoni insolently refusing to sing his admirable air, "*Fu'sa imagine*," in "*Otho*," he told her that he always knew she was a *very devil*, but that he should now let *her* know, in her turn, that he was *Beelzebub*, the *prince of devils*; and then taking her up by the waist, declared, if she did not immediately obey his orders, he would throw her out of the window.

During the first years of Handel's retreat from the opera stage, the profits arising from his oratorios were insufficient to indemnify his losses; and it would remain a perpetual stigma on the taste of the British nation, that his "*Messiah*," that truly noble and sublime work, was not only ill attended, but ill received, on its first performance in 1741, were not its miscarriage to be wholly ascribed to the resentment of the many great personages whom he had offended in refusing to compose for Senesino, by whom he considered himself affronted, or even for the opera, unless that singer was dismissed. This inflexibility, being construed into insolence, was the cause of that powerful opposition, at once oppressive, mortifying, and ruinous to its victim.

Finding it impossible to stem the torrent of persecution, Handel visited Ireland, in order to try whether, in that kingdom, his oratorios would be out of the reach of prejudice and enmity. Pope, on this occasion, personifying the Italian opera, put into her mouth the following well-known lines, which she addresses to the goddess of dulness:—

"Strong in new arms, lo! giant Handel stands,
Like bold Briareus with his hundred hands;
To stir, to rouse, to shake the soul, he comes,
And Jove's own thunders follow Mars's drums.
Arrest him, enpress l or you sleep no more.—
She heard, and drove him to the Hibernian shore."

"When Handel went through Chester this year," (1741,) says Dr. Burney, "I was at the public school in that city, and very well remember seeing him smoke a pipe over a dish of coffee, at the Exchange Coffee House; for, being extremely curious to see so extraordinary a man, I watched him narrowly as long as he remained at Chester; which, on account of the wind being unfavorable for his embarking at Parkgate, was several days. During this time, he applied to Mr. Baker, the organist, my first music master, to know whether there were any choir men in

the cathedral who could sing *at sight*, as he wished to prove some books that had been hastily transcribed, by trying the choruses, which he intended to perform in Ireland. Mr. Baker mentioned some of the most likely singers then in Chester, and among the rest, a printer of the name of Janson, who had a good bass voice, and was one of the best musicians in the choir. At this time Harry Alcock, a good player, was the first violin at Chester, which was then a very musical place; for, besides public performances, Mr. Prebendary Prescott had a weekly concert, at which he was able to muster eighteen or twenty performers, gentlemen and professors. A time was fixed for this private rehearsal at the Golden Falcon, where Handel was quartered but, alas! on trial of the chorus in the '*Messiah*,' '*And with his stripes we are healed*,' poor Janson, after repeated attempts, failed so egregiously, that Handel, after swearing in four or five different languages, cried out in broken English, '*You schautrel! tit not you dell me dat you could sing at soite?*' '*Yes, sir,*' said the printer, '*and so I can, but not at first sight.*'"

Handel, on his arrival in Dublin, with equal judgment and humanity, began by performing the "*Messiah*," for the benefit of the city prison. This act of generosity and benevolence met with universal approbation, as well as his music. Handel was assisted by Dubourg, as leader, and Mrs. Cibber, who sang "*He was despised and rejected of men*," in a manner truly touching. Her voice was a mere thread, and her knowledge of music inconsiderable; yet in this song, (which was originally composed for her,) by a natural pathos, and perfect conception of the words, she often penetrated the heart, when others, with talents infinitely superior, could only reach the ear.

Handel remained eight or nine months in Ireland, where he extended his fame, and began to repair his fortune. On his return to London in the beginning of 1742, as he had relinquished all thoughts of opposing the managers of the opera, former enmities began to subside; and when he recommenced his oratorios the Lent following, he found a general disposition in the public to countenance and support him.

"*Samson*" was the first oratorio he performed that year, which was not only much applauded by crowded houses in the capital, but was soon disseminated in single songs throughout the kingdom; and, indeed, has ever been in greater favor than any one of his works, with the exception of the "*Messiah*," which that season, for the honor of the public at large, and to the disgrace of cabal and faction, was received with universal admiration and applause; and from that time to the present hour, this great work has been heard in all parts of Great Britain with increasing reverence and delight. It has fed the hungry, clothed the naked, fostered the orphan, and enriched succeeding managers of oratorios, more than any single musical production in England or any other country. This sacred oratorio, as it was originally called, on account of the words being wholly composed of genuine texts of Scripture, appearing to stand in such high estimation with the public, Handel, actuated by motives of the purest benevolence and humanity, formed the laudable resolution of performing it annually for the benefit of the Foundling Hospital; which resolution was con-

stantly put in practice to the end of his life, under his own direction, and long after his death under that of Mr. Smith and Mr. Stanley. In consequence of these performances, the benefactions to the charity from the year 1749 to 1759, by eleven performances, under Handel's own direction, amounted to 6935*l.*; from 1760 to 1768, by eight performances, under the conduct of Mr. J. C. Smith, 1332*l.*; from 1769 to 1777, by nine performances, under the direction of Mr. Stanley, 2032*l.*; being, in all, 10,299*l.* The organ in the chapel of this hospital was likewise a present from Handel, and he bequeathed, as a legacy to this charity, a fair copy of the original score of the "Messiah." From the time of his return from Ireland, with little opposition, and a few thin houses, in consequence of great assemblies of the nobility and gentry, manifestly and cruelly collected together on his nights of performance, with hostile intentions, by some implacable remains of his most powerful adversaries, he continued his oratorios till within a week of his death.

But though the "Messiah" increased in reputation every year, and the crowds that flocked to the theatre were more considerable every time it was performed, yet to some of his other oratorios, the houses were so thin as not even to defray his expenses; which, as he always employed a very numerous band, and paid his performers liberally, so deranged his affairs, that, in the year 1745, after two performances of "Hercules," January 5 and 10, before the Lent season, he stopped payment. He, however, resumed the performance of his oratorios of "Samson," "Saul," "Joseph," "Belshazzar," and the "Messiah," in March. "But," says Dr. Burney, "I perfectly well remember, that none were well attended, except 'Samson,' and the 'Messiah.'" Dr. Burney likewise informs us, that he has frequently heard Handel, as pleasantly as philosophically, console his friends, when, previous to the curtain being drawn up, they have lamented that the house was so empty, by saying, "Never mind; de moosic vil sound de petter."

In 1749, "Theodora" was so very unfortunately abandoned, that he was glad if any professors who did not perform would accept of tickets or orders for admission. Two gentlemen of that description having applied to Handel, after the disgrace of "Theodora," for an order to hear the "Messiah," he cried out, "O, your sarvant, mein herren! your are tammable tainty! you would no go to 'Theodora:' der vas room enough to dance there, when that was perform." His majesty, King George II., was a steady patron of Handel during these calamitous times, and constantly attended his oratorios, when they were abandoned by his court.

Handel, late in life, like the greatest of poets, Homer and Milton, was afflicted with blindness, which, however it might dispirit or embarrass him at other times, had no effect on his nerves or intellect in public; as he continued to play concertos and voluntaries between the parts of his oratorios to the last, with the same vigor of thought and touch for which he was ever so justly renowned. To see him, however, led to the organ, after this calamity, at upwards of seventy years of age, and then conducted towards the audience to make his accustomed obeisance, was a sight so truly afflicting and deplorable, to

persons of sensibility, as greatly diminished their pleasure on hearing him perform. During the oratorio season, he practised almost incessantly; and, indeed, that must have been the case, or his memory uncommonly retentive, for after his blindness, he played several of his old organ concertos, which must have been previously impressed on his recollection. Latterly, however, he rather chose to trust to his own inventive powers than those of reminiscence; for giving the hand only the skeleton or ritornels of each movement, he played all the solo parts extempore, while the other instruments left him *ad libitum*, waiting for the signal of a shake, before they played such fragments of symphony as they found in their books.

Handel not only continued to perform in public, after he was afflicted with blindness, but to compose in private. The duet and chorus in "Judas Maccabeus," "Sion now his head shall raise," were dedicated to Mr. Smith by Handel, after the total privation of sight. This composition so late in life, and under such depressing circumstances, confirms an opinion of Dr. Johnson, "that it seldom happens to men of powerful intellects and original genius to be robbed of mental vigor by age; it is only the feeble-minded, and fool-born part of the creation, who fall into that species of imbecility which gives occasion to say that they are superannuated; for these, when they retire late in life from the world on which they have lived, by retailing the sense of others, are instantly reduced to indigence of mind." Dryden, Newton, Dr. Johnson himself, and our great musician, are admirable illustrations of this doctrine. Indeed, Handel not only exhibited great intellectual ability in the composition of this duet and chorus, but manifested his power of invention, in extemporaneous flights of fancy, to be as rich and rapid a week before his decease as they had been for many years. Subsequent to his privation of sight, he was always much disturbed and agitated whenever the affecting air in "Samson," "Total Eclipse," was performed. The last oratorio at which he attended and performed, was on the 6th of April, and he expired on Friday, the 13th, 1759. Dr. Warren, who attended him in his last sickness, said that he was perfectly sensible of his approaching dissolution; and, having been always impressed with a profound reverence for the doctrines and duties of the Christian religion, that he had most seriously and devoutly wished, for several days before his death, that he might breathe his last, as actually happened, on Good Friday, in hopes, he said, of meeting his good God, his sweet Lord and Savior, on the day of his resurrection, meaning the third day, or Easter Sunday following. The loss of sight was an awful warning, which wrought a great change in his temper and general behavior. Throughout life he was a man of blameless morals, and manifested a deep and rational sense of religion. In conversation he would frequently declare the pleasure he felt in setting the Scriptures to music, and how much contemplation of the many sublime passages in the Psalms had contributed to his edification; and now that he found himself near his end, these sentiments were improved into solid and rational piety, attended with a calm and even temper of mind. For the last two or three years of his life, he constantly attended divine

service in his own parish church of St. George, Hanover Square, where his looks and gesticulations indicated the utmost fervor of unaffected devotion. He was buried in Westminster Abbey, the dean, Dr. Pearce, Bishop of Rochester, assisted by the choir, performing the funeral solemnity. Over the place of his interment is a monument, designed and executed by Roubilliac, representing him in full length, in an erect posture, with a music paper in his hand, inscribed, "I know that my Redeemer liveth," with the notes to which these words are so admirably set in his "Messiah."

Those who were but little acquainted with Handel were unable to characterize him otherwise than by his excellences in his art, and certain foibles in his nature, which he was never studious to conceal. Accordingly we are told that he had an enormous appetite, that he preferred Burgundy to Port, and that when provoked he would break out into profane expressions. These are facts that cannot be denied; but there are also particulars which mark his character but little known, and which possibly may be remembered elsewhere, when those that serve only to show that he was subject to human imperfections are forgotten. In his religion he was of the Lutheran persuasion, in which he was not such a bigot as to decline a general conformity with that of the country which he had chosen for his residence, at the same time that he entertained very serious notions in regard to its importance. These he would frequently express in his remarks on the constitution of the English government; and he considered as one of the greatest felicities of his life that he was settled in a country where no one suffers molestation on account of his religious principles. His attainments in literature cannot be supposed to have been very great. The prodigious number of his compositions will account for a much greater portion of his time than any man could well be supposed able to spare from sleep and the necessary refreshment of nature; and yet he was well acquainted with the Latin and Italian languages; the latter of which was so familiar to him that few natives understood it better. Of the English also he had such a degree of knowledge as to be susceptible of the beauties of our best poets; and this he has sufficiently evinced by the admirable manner in which the sound is almost constantly an echo to the sense of those passages which he has selected and set to music. The style of his discourse was very singular; he pronounced English as the Germans do, but his phraseology was exotic, and partook of the idiom of the different countries in which he had resided—a circumstance which rendered his conversation exceedingly entertaining. His habits of life were regular and uniform. For some years subsequent to his going to England, his time was divided between study and practice, that is to say, in composing for the opera, and in conducting concerts at the Duke of Rutland's, the Earl of Burlington's, and at the houses of others of the nobility who were patrons of music. There were also very frequently concerts for the royal family at the queen's library, in the Green Park, in which the princess royal, the Duke of Rutland, Lord Cowper, and other persons of distinction performed. Of these Handel had the direction; and as these connections dissolved, he gradually retreated into

a state of retirement, showing no solicitude to form new ones. His residence was on the south side of Brook Street, near Hanover Square, in a house afterwards in the occupation of Sir James Wright, four doors from Bond Street, and two from the passage to the Stable-yard. His permanent income was six hundred pounds a year, arising from pensions, that is to say, one of two hundred pounds, granted by Queen Anne, and two others of two hundred pounds each, granted, as already related, by George I. and Queen Caroline. The rest was precarious; for some time it depended upon his engagements with the directors of the academy, and afterwards upon the profits arising from the musical performances which he undertook on his own account.

We have seen that, in his ruinous contest with the nobility, he sold out ten thousand pounds, the whole of his former savings, without being able even then entirely to extricate himself from his difficulties. However, he had at all times the prudence to regulate his expenses by his income. Equally untainted by avarice or profusion, when, some years afterwards, he again found himself in a state of affluence, he reassumed his former course of living. His social affections were not very strong, and to this it may be imputed that he spent his whole life in a state of celibacy; that he had no female attachment of a less honorable description may be ascribed to a better motive; and we may truly say that Handel, endowed with many virtues, was addicted to no vice, or even foible, that was in the remotest degree injurious to society. A temper and conduct like this was, in every view of it, favorable to his pursuits; no impertinent visits, no idle engagements, or rather expedients to kill time, were ever suffered to interrupt the course of his studies. He had a favorite Rucker harpsichord, the keys of which, by incessant practice, were hollowed like the bowl of a spoon. He wrote very fast, but with a degree of impatience proportioned to the eagerness that possesses men of taste to see their conceptions reduced into form. Like many others of his profession, he was passionately fond of paintings; and, till his sight failed him, viewing collections of pictures upon sale was one of the few recreations in which he indulged himself. Handel in his person was large, and rather corpulent, ungraceful in his gait, which was ever sauntering, and had somewhat of that rocking motion which distinguishes those whose legs are bowed. His features were finely marked, and the general cast of his countenance placid, bespeaking dignity tempered with benevolence, and every quality of the heart which has a tendency to beget confidence and insure esteem. Though he was impetuous, rough, and peremptory in his manners and conversation, yet he was totally devoid of ill nature or malevolence; indeed, there was an original humor and pleasantry in his most lively sallies of anger and impatience, which, united with his broken English, rendered him rather the cause of merriment than uneasiness. His natural propensity to wit and humor, and happy manner of relating common occurrences in an uncommon way, enabled him to throw persons and things into very ridiculous attitudes. Had he been as great a master of the English language as Swift, his *bons mots* would have been as frequent, and of a similar cast.

At the coronation of the king in 1727, Handel had words sent to him by the bishops for the anthems, at which he murmured and took offence, as he thought it implied his supposed ignorance of the Holy Scriptures. "I have read my Bible very well," said he, "and shall choose for myself." And his own selection of the words, "My heart is judging of a good matter," &c., was very judicious, and inspired him with some of the finest thoughts that are to be found throughout his works. This anthem was sung at the coronation, while the peers were doing homage.

Dr. Burney informs us that, besides seeing Handel at his own house in Brook Street, and at Carlton House, where he had rehearsals of his oratorios, by meeting him at Mrs. Cibber's and at Frasi's, who was then Burney's scholar, he acquired considerable knowledge of his private character and turn for humor. Handel was very fond of Mrs. Cibber, whose voice and manners had softened his severity, and atoned for her want of musical knowledge. At her house, on Sunday evenings, he used to meet Quin, who, like Handel, in spite of native roughness, was almost as fond of music as of good cheer.

Mrs. Cibber, the first time these giants met, prevailed on Handel to sit down to the harpsichord, when he played the overture of "Siroe," and particularly delighted the company by the wonderful neatness with which he played the jig at the end of it. Quin, after Handel was gone, being asked by Mrs. Cibber whether he did not think Mr. Handel had a charming hand? "A hand, madam? You mistake; it is a foot." "Poh! poh!" said she; "has he not a fine finger?" "Toes, my dear madam." In fact, his hand was so fat, that the knuckles, which usually appear convex, were like those of a child, dented or dimpled in, so as to be rendered concave; however, his touch was so smooth, that his fingers seemed to grow to the keys. They were so curved and compact when he played, that no motion, and scarcely the fingers themselves, could be discovered.

"I remember," says Dr. Burney, "at Frasi's, in the year 1748, he brought in his pocket the duet from 'Judas Maccabæus,' 'From these dread scenes,' in which she had not sung, when that oratorio was first performed in 1746. When he sat down to the harpsichord, to give her and me the time of it, while he sung her part, I hummed, at sight, the second over his shoulder, in which he encouraged me, by desiring that I would sing out; but unfortunately, something went wrong, and Handel, with his usual impetuosity, grew violent—a circumstance very terrific to a young musician. At length, however, recovering from my fright, I ventured to say that I fancied there was a mistake in the writing, which, upon examination, Handel discovered to be the case; and then, instantly, with the greatest good humor and humility, said, 'I see your barton—I am a very odd tog: Maishter Schmitt is to blame.'"

Handel wore an enormous white wig, and when things went well at the oratorio, it had a certain nod or vibration, which manifested his pleasure and satisfaction. Without this signal, nice observers were certain that he was out of humor. At the close of an air, the voice with which he used to cry out, "Chorus!" was extremely formidable indeed; and, at the rehearsal of his oratorios at Carlton House, if the Prince

and Princess of Wales were not exact in entering the music room, he used to be very violent; yet such was the reverence with which his royal highness treated him, that, admitting Handel to have had cause of complaint, he has been heard to say, "Indeed, it is cruel to keep these poor people," meaning the performers, "so long from their scholars and other concerns." But if the maids of honor, or any other female attendants, talked during the performance, it is to be feared our modern Timotheus not only swore, but called names; yet at such times, the Princess of Wales, with her accustomed mildness and benignity, used to say, "Hush! hush! Handel is in a passion!" Though totally free from the sordid vices of meanness and avarice, and possessed of their opposite virtues, charity and generosity, in spite of temporary adversity, and frequent maladies of body, which sometimes extended to intellect, Handel died possessed of twenty thousand pounds, which, with the exception of one thousand to the fund for decayed musicians, he chiefly bequeathed to his relations on the continent.

In regard to his performance on the organ, the powers of speech are so limited, that it is almost a vain attempt to describe it, otherwise than by its effects. A fine and delicate touch, a volant finger, and a ready execution of the most difficult passages, are the praise of inferior artists; they were scarcely noticed in Handel, whose excellences were of a far superior description. His amazing command of the instrument, the fullness of his harmony, the grandeur and dignity of his style, the copiousness of his imagination, and the fertility of his invention, were qualities which absorbed every subordinate attainment. When he gave a concerto, his usual method was to introduce it with a voluntary movement on the diapason, which stole on the ear in a slow and solemn progression; the harmony close wrought, and as full as could possibly be expressed, the passages concatenated with stupendous art, the whole at the same time being perfectly intelligible, and carrying the appearance of great simplicity. This kind of prelude was succeeded by the concerto itself, which he executed with a degree of spirit and firmness that no one ever pretended to equal. Such, in general, was the manner of his performance; but who shall describe its effects on his enraptured auditory! Silence, the truest applause, succeeded the instant that he addressed himself to the instrument; silence so profound, that it checked respiration, and seemed to control the functions of nature, while the magic of his touch kept the attention of his hearers awake only to those enchanting sounds to which it gave utterance.

Wonderful as it may seem, this command over the human passions is the acknowledged attribute of music; and by effects like these the poets have ever described it, always supposing in the hearers a mind susceptible of its charms. But how are we to account for the influence of that harmony, of which we are now speaking, on those who, as far as regards music, may be said to have no passions, no affections, on which it could operate? In all theatrical representations, a part only of the audience are judges of the merit of what they see and hear; the rest are always drawn together by motives in which neither taste nor judgment have any share; and with respect to music, it is

notorious that the greater number of mankind are destitute, though not of hearing, yet of that sense which, superadded to the hearing, renders us susceptible of the fascination of musical sounds; and in times when music was less fashionable than it is now, many of both sexes were ingenious enough to confess that they wanted that sense, by saying, "I have no ear for music." Persons such as these, who, had they been left to themselves, would have interrupted the hearing of others by their talking, were, by the performance of Handel, not only charmed into silence, but were generally the loudest in their acclamations. This, though it could not be regarded as genuine applause, was a much stronger proof of the power of harmony than the like effect on an audience composed only of judges and rational admirers of his art.

There seems to be no necessary connection between those faculties which constitute a composer of music and the powers of instrumental performance; on the contrary, the union of them in the same person, in the superlative degree, appears scarcely practicable; nevertheless, in the person of Handel, all the perfections of the musical art were concentrated. He had never been a master of the violin, and had discontinued the practice of it from the time he took to the harpsichord at Hamburg; yet, whenever he had a mind to try the effect of any of his compositions for that instrument, his manner of touching it was such as the ablest masters would have been glad to imitate. But what is still more extraordinary, without a voice, he was a most excellent singer of such music as required more of the pathos of melody than a quick and voluble expression. At a concert at the house of Lady Rich, he was once prevailed upon to sing a slow song, which he did in such a manner that Farinelli, who was present, could hardly be persuaded to sing after him.

To enter upon a critical inquiry into the several merits of the various works of this great master would far exceed the limits of this work. Of some of his productions a transient view has already been taken. Among those of the first and highest class, no competent judge will hesitate to rank his first "*Te Deum*," and "*Jubilate*," his "*Coronation* and other Anthems," the "*Dettingen Te Deum*," and the truly sublime choruses in his oratorios. To point out the various excellences in the choruses of Handel would be an endless task. In general, it may be observed that they are fugues, in which the grandest subjects are introduced, and conducted with such art as only himself possessed. Some are in the solemn style of the church, as that of the conclusion of the first part of "*Saul*;" others have the natural and easy elegance of madrigals; others are in the highest degree expressive of exultation, such as that in "*Israel in Egypt*," "I will sing unto the Lord," and those in the "*Messiah*," "For unto us a child is born," and "*Hallelujah*, for the Lord God omnipotent reigneth." Lastly, there are others in a style peculiar to himself, and calculated to excite terror, such as, "He gave them hail-stones for rain," "But the waters overwhelmed their enemies," and "Thy right hand, O Lord, hath dashed in pieces the enemy," in "*Israel in Egypt*." And though, perhaps, it may be said that Handel, agreeably to the practice of his countrymen, has too much affected imitation, particularly in the latter of the above-

mentioned unrivalled productions, by passages broken in the time to express the hopping of frogs, and others calculated to resemble the buzzing of flies; and that in "*Joshua*," he has endeavored, by the harmony of one long-extended note, to impress upon the imagination of his hearers the idea of the great luminary of the universe arrested in his course, or, in other words, to make them *hear* the sun stand still, it may be justly said that they abound with innumerable examples of the true sublime and beautiful in music, and that they far surpass in majesty and dignity the productions of every other deceased or living author.

The lessons of Handel for the harpsichord were composed for the practice of the Princess Anne, and consist of suites of airs, intermixed with fugues, the latter, perhaps, more proper for the organ, and because they require a masterly hand, but little practised. The character of an author is but the necessary result of his works, and the permanent fame of Handel must ultimately rest on the merits of his oratorios, and other sacred productions. Many of the excellences, which, as a musician, recommended him to the patronage of the public during a residence of fifty years in England, he might perhaps possess in common with a few of the most eminent of his contemporaries; but till they were instructed by Handel, none were aware of that dignity and grandeur of sentiment which music is capable of conveying, or that there is a sublime in music, as well as in poetry and painting. This is a discovery which we owe to the genius and inventive faculty of this great man; and there is little reason to doubt that the many examples of sublimity with which his works abound will continue to engage the admiration of judicious hearers as long as the love of harmony shall exist. We shall conclude the foregoing account of this great musician by an extract from a very able criticism in the "*Quarterly Musical Review*," where the author, in an Essay on the Formation of an English School of Music, introduces the following observations on the works of Handel:—

"Though not, strictly speaking, an English composer, Handel has always been the first and most continual object of English admiration. But his popularity is fast ebbing away, and the higher classes are almost universally devoted to Italian music. Handel was a composer of great majesty and strength; even his elegance partakes of sublimity. His style is the great, and is simple in the degree which contributes most to this end. From a singer he requires more legitimate and genuine expression than any other master. In the hands of a common performer, Handel's best pieces are heavy and fatiguing; but when we hear them from one who is alive to his subject, and whose expression is at all equal to the task, they awaken the noblest and best feelings of humanity. They produce in us a reverential awe for the power which they celebrate, while they elevate the soul into adoration and thanksgiving. But, alas! these sensations are now hardly ever felt; that dignified simplicity of manner, and that pure elocution that spoke so sweetly and so well, the finest accordance of sentiment and of sound, are almost gone.

"Let us endeavor to ascertain the causes. It is admitted universally that one of the strongest impulses to pleasure is novelty. To this feeling

perhaps, may be traced the mental preparation which is now leading, or has led, to an entire change of musical opinion in England. The managers of public music used not to be sufficiently attentive to variety in selection: not content with confining the bill of fare to Handel, they kept to particular songs; and I think I am warranted in saying, that while certain portions of his works have been performed night after night, much of very glorious composition is almost unknown. Satiety palled the appetite. Education has advanced hand in hand with the fine arts; the modern languages are now every where taught and understood. In every family of tolerable breeding, Italian is thought indispensable; there is no longer that bar to Italian music — the ignorance of the language. Not to understand Italian, and not to sing Italian music, are now something allied to the disgrace of a defective education. Pride is therefore become a powerful advocate for the foreigner. The power of escaping the nice observation of English critics upon pronunciation, which the Italian language affords to professional singers, must not be overlooked; there is no judgment for them to dread in this respect, since, even at the opera, the performers are often known to use a provincial dialect without censure, and almost without discovery. It also happens that the expression of Italian singing is not required by the English themselves to be so precise and absolute as the expression of their own words. It may be very easily imagined, that the vocal expression of a passage may be agreeable in a language with which we are not thoroughly conversant, although we do not perceive that is not the genuine and exact expression, which we should not fail to do were it in our own tongue. Hence Italian singing does not ask for an English audience the same nice finish which, in English singing, we cannot dispense with. We are apt, too, to consider what we do not entirely comprehend, to be idiomatic and peculiar. And we are certainly much more easily satisfied with Italian than with English expression. Though these causes may appear somewhat subtle and remote, they have, I am persuaded, a very powerful operation. I shall now proceed to others, which arise more immediately from the nature of the compositions of this English favorite, and of Italian music.

"A certain portion of terror frequently mixes itself with the emotions of the sublime. In music this is frequently effected by association. When we hear and feel 'I know that my Redeemer liveth,' 'The trumpet shall sound,' or any song of a like cast, the ideas of death, resurrection, and judgment fill all the mind. We cannot dwell without strong emotion upon such subjects; the sensation produced is too sublime and too awful; and when it is passed away, we are not solicitous to recall it but at certain and solemn occasions. Such are the genuine effects of Handel. I have already remarked that even his lighter compositions partake of grandeur. In his 'Acis and Galatea,' in despite of music so exquisitely beautiful, descriptive, original, and impassioned, the mind is strained beyond its common pitch, and we are not affected by the tenderness of the lovers, in the same manner, or in the same degree, as we are by the auatony compositions of the Italian masters. In the story itself, love is mingled with apprehension, and

pathos with ideas of the bulk, the ferocity, the strength, the hideous figure, and the rage of Polypheme. These serve to give the mind a contrary determination, and prevent it from sinking into that delicious languor which it is the sovereign art of the Italian school to produce.

"The genius of the Italian language, of its poetry and its music, is principally calculated to excite the gentler passions. The frequent recurrence of soft syllables, the sweetness of the passages, and the lubricity with which a true Italian singer glides through melody, melts us at once into a dream of pity or of love. Thus then we see that the passions which most agreeably bias and affect the mind, are all on the side of Italy. If it should be urged that only one master is adduced against the whole Italian school, I reply, that I have selected the man to whom the English are most devoted, and in truth, the only one, nationally speaking, who is extensively known to the British public. The works of early English composers, Purcell, Croft, Blow, Greene, Boyce, and Arne, though high in the estimation of sound taste, are now seldom heard. Their style, with an exception, perhaps, in favor of the last master, is considered obsolete. It certainly lacks the improvement of modern art and modern taste, while the reasons produced against Handel bear still more strongly upon these really English writers. It appears to me that so far as appertains to composition, the Germans have already effected for themselves what I propose to the English. They have blended and incorporated, with the happiest success, the sweetness, the tenderness, and the variety of Italian melody with a strong and natural character of German music. Haydn and Mozart rank in the very highest order of genius; and so truly do their notions of expression accord with our own, that we may assert, no composers have treated the expression of most peculiar subjects with such eminent propriety. It is of little importance, I think, whether they wrote to the words, or whether the words were written to the music, in particular works. No Englishman could desire or conceive a more exquisite consent between sound and sense, than is to be found in the writings of both these composers. The 'Creation' of Haydn contains most singular imitations; and although not comparable for grandeur, simplicity, and solemnity, and indeed, not comparable at all with the 'Messiah' of Handel, which is addressed to a totally different class of thoughts and perceptions, it is, nevertheless, full of beauty, tenderness, and grace. I do not mean to draw a parallel between these great works of great men, but rather to contrast them, because they are really of a totally opposite nature, and because they ought never to be considered together as objects of comparison. Their beauties are as distinct and different as the poetry of the 'Paradise Lost' and of the 'Seasons,' to which, in point of style, they bear, perhaps, some analogy. The 'Creation' of Haydn, then, if it seldom rises into magnificence, is full of elegance and invention; nor can I point out a single weak or uninteresting melody. Joy, gratitude, benevolence, and love are expressed with as much purity and as much ecstasy by Haydn, in the 'Creation,' as are the sublime emotions which inspire all the hopes and the terrors of religion, all the blessing, and honor, and glory, and power, we assign to

the great Creator and Preserver of mankind, in the 'Messiah' by Handel."

The following is a chronological list of Handel's works:—

Operas: "*Almira*," an opera performed at Hamburg, 1705; "*Nero*," an opera performed at Hamburg, 1705; "*Florindo*," "*Dafne*," 1708; "*Rinaldo*," London, 1711; "*Teseo*," "*Pastor Fido*," 1712; "*Anadige*," 1715; "*Rhadamisto*," 1720; "*Muzio Scevola*," 1721; "*Ottone*," 1722; "*Giulio Cesare*," "*Floridante*," "*Flavio*," 1723; "*Tamerlano*," 1724; "*Rodelinda*," 1725; "*Alessandro*," "*Scipione*," 1726; "*Ricardo Primo*," 1727; "*Rodrigo*," performed at Florence, 1709; "*Agrippina*," Venice, 1709; "*Ammeto*," London, 1727; "*Tolmeo*," "*Siroe*," 1728; "*Lotario*," 1729; "*Partenope*," 1730; "*Poro*," 1731; "*Orlando*," "*Sosarme*," 1732; "*Arianna*," "*Ezio*," 1733; "*Ariodante*," 1734; "*Alcina*," 1735; "*Arminio*," "*Atalanta*," "*Giustino*," 1736; "*Berenice*," "*Faramondo*," "*Alessandro Severo*," "*Pasticcio*," 1737; "*Serse*," 1738; "*Imeneo*," "*Parnasso in Feste*," "*Deidamia*," 1740. Miscellaneous works: "Authems," 8 vols.; "Cantatas," 4 vols.; "Te Deum and Jubilate," 3 vols.; "Opera Songs," 2 vols.; "*Laudate*;" "Collections of Songs and Chorusses;" "*Motetti e Duetti*;" "*Il Trionfo del Tempo*," Rome, 1709; "*Aci e Galatea*," Napoli, 1709; "*Oratorio Italiano*;" "*Cantate*;" "*Concerti*;" "*Concerti Grossi*;" "Transcript of six Sonatas for two Hautboys and a Bass," 1694; "Sonatas for two Violins and a Bass," two sets; "Harp-sichord Lessons," two books, 1720; "Fugues for the Organ;" "Organ Concertos," three sets; and "Cantatas, composed at Hamburg and Rome, between 1703 and 1710." Oratorios: "Esther," composed 1720; "Esther," publicly performed in London, 1732; "Deborah," "Athalia," Oxford, 1733; "Acis and Galatea," (at Cannons, 1721,) 1735; "Ode, St. Cecilia's Day," 1736; "Israel in Egypt," 1738; "*L'Allegro ed il Penseroso*," 1739; "Saul," 1740; "Messiah," 1741; "Samson," 1742; "Semele," "Belshazzar," "Susanna," 1743; "Hercules," 1744; "Choice of Hercules," and "Occasional Oratorio," 1745; "Joseph," and "Judas Maccabaus," 1746; "Alexander Balus," and "Joshua," 1747; "Solomon," 1749; "Theodora," 1750; "Jephtha," and "Tune and Truth," 1751.

HAND-GUIDE. An instrument invented by Kalkbrenner to insure a good position of the hands and arms on the piano-forte.

HANF, JOHANN N., organist at Schleswick, died in the year 1706. He published some vocal and instrumental music.

HANISCH, FRANZ. A celebrated performer on the hautboy, and composer for his instrument. He was born in Bohemia, in 1749. There was another of the same name, who was celebrated at Vienna as a performer on the trombone.

HANKE, CARL, singer and director of the music at Flensburg, in Germany, has composed much vocal music for the church and theatre; also much instrumental music. His works bear date between the years 1780 and 1800. Hanke was for some time *chef-d'orchestre* at the theatre at Hamburg.

HANSMANN, born at Potsdam in 1764, was chamber musician and violoncellist at Berlin. He was a pupil of the celebrated Duport.

HARANC, LOUIS ANDRÉ, first violin of the Royal Chapel, and chamber musician at Paris, was born in that city in 1738. When only six years of age, he executed the most difficult sonatas of Tartini. He travelled in foreign countries from 1758 to 1761, when he returned to France, and was received in the Chapel Royal. The dauphin, father of Louis XVI., chose Haranc, in 1763, for his violin master, and took lessons till his death in 1765. Haranc composed much instrumental music, which has, however, remained in manuscript. He died in 1805.

HARBORDT, GOITTFRIED, a German composer, has published some music for the piano-forte and flute at Brunswick, since the year 1796.

HARD, J. D., chapel-master to the Duke of Wurtemberg, was born at Frankfort on the Maine in 1696. He was a celebrated performer on the viol da gamba.

HARDER, AUGUSTUS. A musician, resident at Leipzig. Since the year 1802, he has published a considerable quantity of vocal music, with accompaniments either for the piano or guitar. He has also published some sonatas and *polonaises* for the piano-forte, and progressive pieces; also variations for the guitar.

HARDIMENT. (F.) Bold, brisk, animating.

HARDOUIN. Several songs by a composer of this name are in the *Recueil d'Airs sérieux et à boire*, Paris, 1710.

HARDOUIN, ABBÉ LOUIS, probably a son of the preceding, resided at Rheims in 1788, and published there "*Douze Messes en Musique à quatre Parties*."

HARMATIAN, or CHARIOT AIR. This term is derived from the Greek, and is the name given by the ancients to a certain air composed by Olympus. According to Hesychius, it derives its name of *chariot air* from its imitating the rapid motion of a chariot wheel, or as being, from its fire and spirit, proper to animate the horses that drew the chariot during battle.

HARMONIA. A daughter of Mars and Venus. Her name was first used to indicate music in general. She is said to have introduced music into Greece.

HARMONIC HAND. Guido's diagramma.

HARMONICA. A musical instrument constructed with glasses. See article GLASSES; also FRANKLIN, BENJAMIN.

HARMONICI. (I.) Harmonics in violin music.

HARMONICS. 1. An epithet applied to those concomitant, accessory sounds which accompany the predominant, and apparently simple tone of any chord or string. 2. The mathematical mensuration of musical sounds; whatever appertains to harmony; as the harmonic divisions of the monochord, the harmonic proportions, &c. The ancients reduced their doctrine into seven parts, namely, sounds, intervals, systems, genera, tones, mutations, and melopœia.

HARMONICAL TRUMPET. An instrument which imitates the sound of a trumpet, and

which resembles it in every thing, excepting that it is longer, and consists of more branches. This is sometimes called the sackbut.

HARMONIC TRIAD. The common chord. The union of any sound with its third and its perfect fifth forms the *harmonic triad*. Triad, in music, signifies three different sounds combined together, at the distance of a third and a fifth from the lowest.

HARMONIE. (F.) Harmony in general; also music expressly composed for a military band.

HARMONIOUS. A term applicable to any two or more sounds which form a consonant or agreeable union. Authors, especially poets, frequently apply this epithet to the tones of a single voice or instrument; but only those sounds can be properly called *harmonious* which are so with respect to each other, when heard together; consequently, that epithet, when confounded with the word *melodious*, is used in an improper sense.

HARMONIST. A theoretical musician. One who, to a thorough knowledge of the principles and constructions of all the received *combinations*, adds an intimate acquaintance with the various *transitions* and *evolutions* of harmony, and the principles on which they are conducted.

HARMONIZED. A melody is said to be *harmonized* when additional parts are subjoined, so as to give it body, or a fulness of effect. To *harmonize* is to combine two or more parts agreeably to the established laws of counterpoint.

HARMONOMETER. An instrument formed for the purpose of measuring the harmonic relations of sounds, and consisting of a monochord so disposed as to be capable of being divided at pleasure by movable bridges.

HARMONIZER. A practical harmonist. In the extended sense of the word, any one who fabricates or produces harmony, not excluding even the original composer; but in its usual acceptation, a musician whose talents reach no farther than to the applying additional parts to the productions of others; filling up scanty pieces, garnishing popular airs with accompaniments, or subscribing new basses to old tunes.

HARMONY. (From the Greek.) The agreement, or consonance, of two or more united sounds. *Harmony* is either natural or artificial. Natural harmony, strictly so called, consists of the harmonic triad, or common chord. Artificial harmony is a mixture of concords and discords, bearing relation to the harmonic triad of the fundamental note. The word *harmony* being originally a proper name, it is not easy to determine the exact sense in which it was used by the Greeks; but from the treatises they have left us on the subject, we have great reason to conclude that they limited its signification to that agreeable succession of sounds which we call air, or melody. The moderns, however, do not dignify a mere succession of unaccompanied sounds with the appellation of harmony; for the formation of harmony, they require a union of melodies, a succession of combined sounds composed of consonant intervals, and moving according to the stated laws of modulation. But as the laws of

harmony were not digested into a code but by very slow degrees, its principles, for a long time, consisted of no other than almost arbitrary rules, founded, indeed, on the approbation of the ear, but unsanctioned by that science which accounts for effects rationally, and deduces its conclusions from minute, profound, and satisfactory investigation. At length, however, writers arose, to whose patience, talents, and learning the present age is indebted for a complete system of harmony and modulation; and to whose labors we only have to resort, to be informed on every point connected either with the improved theory itself, or its application.

Harmony, as exhibited in nature, may be studied in the Italian harp; the instrument and its tuning are indeed artificial, but nature regulates the music, for the strings will not vibrate except in harmony. One might collect from the strings of this harp the several tones and simple harmonies, and afterwards other harmonies more complicated. A large bell, not struck too rudely, sounds a variety of chords with its fundamental tone. All these notes are distinctly produced by the organ and by other instruments, and in greater perfection by the few voices which are naturally good. An ordinary singer, to acquire accurately these tones, should cultivate his ear, by which his voice will be kept in unison with the leading instruments or chorister; for his sounds are not correct as long as there is the least jar between them and the organ. Many male voices, however, are not adapted to the air or melody of a tune; and when any such find it impossible, or even difficult, to sing the air in correct unison with the organ, by studying the bass, (which may easily be acquired,) they will add to their own pleasure and to that of the congregation. Indeed, in almost all strict arrangement of harmony, the air belongs to the voices of females and children.

Harmony is the combination of sounds and succession of chords, and may be said to combine the *life*, the *beauty*, and the *soul* of music. This department is comparatively a modern invention; and the laws regulating the succession of chords were at first rather arbitrary, although subject in some measure to the approbation of the ear. The ancients knew very little of harmony, or of the combination of sounds. Harmony is the agreeable result or union of several sounds heard at one and the same time. Melody is produced by a succession of musical sounds, as harmony is produced by their combination. The word *harmony* is of Greek origin, and denoted anciently an agreeable succession of sounds, which is now called melody. In China and other Eastern nations, harmony is not yet introduced into their music. The Shakers have no music in parts, but all sing in unison. Harmony is the agreeable result of the union of two or more concurring musical sounds heard in consonance, i. e., at one and the same time; so that harmony is the effect of two parts at least. As, therefore, a continued succession of musical sounds produces melody, so does a continued combination of these produce harmony.

Harmony may be divided into simple and compound. Simple harmony is that where there is no concord to the fundamental above an octave; and compound harmony is that which to the simple harmony of an octave adds that of

another octave. Melody and harmony united form music; the former, indeed, may perhaps subsist independently of the latter; but harmony cannot well exist without the melodious arrangement of each of the several parts of which it is composed.

Harmony we will consider as consisting of three fundamental chords, viz., the common chord, the dominant seventh, and the flat ninth, which, with their inversions, are alike traceable in major and minor modes, or keys, to one common origin or basis. We consider all other combinations as suspensions or anticipations of these three primary or elementary principles, and we believe this method will not bewilder nor mislead the student. The true object in studying harmony should be not only to learn how to read, but how to write correctly. The following examples are plain, and will be easily understood.

FIRST CHORD, OR COMMON CHORD.

The primary concord, or common chord, consists of any given bass note, in any key or mode, with its octave, third, and fifth. It has three positions, (or changes of the right hand,) and two inversions, (or changes of the left hand.)

POSITIONS. 1st. 2d. 3d. INVERSIONS. 1st. 2d.

Fundamental Bass.

It is quite evident that, as no new element is introduced, the chord remains the same in its inversions as well as positions. The same remark will apply equally to the following chords:—

SECOND CHORD, OR CHORD OF THE FLAT SEVENTH.*

The chord of the flat seventh is the common chord with the addition of the flat seventh, and has four positions and three inversions.

POSITIONS. 1st. 2d. 3d. 4th. INVERSIONS. 1st. 2d. 3d.

Fundamental Bass.

In the chord of the $\frac{6}{4}$, or third inversion of the flat or dominant seventh, the bass is rarely repeated or included in the upper harmony; and the chord itself may be easily known by reflecting that it is the common chord of the note above the bass, or the half note when it bears the same literal or syllabic name as the whole tone.

* It is customary to call the dominant seventh a flat seventh, although its intervals may, in different keys, be expressed by any of the following signs: $b7$, $\sharp 7$, $\natural 7$, or $\flat 7$. For brevity's sake, the term *flat* has been adopted when there is occasion to mention the chord.

EXAMPLE.

Com. chord of C. Ditto. Com. chord of G. Ditto.

Whole tone. Half tone.

THIRD CHORD, OR CHORD OF THE FLAT NINTH.

The chord of the flat ninth includes the two foregoing chords with the addition of the interval of a flat ninth or second, and has four inversions. In the inversions of the flat ninth the fundamental note is omitted; and in elegant writing the bass note is avoided in the upper harmonies, which is the occasion of its having but four positions.

POSITIONS. 1st. 2d. 3d. 4th.

INVERSIONS. 1st. 2d. 3d. 4th.

Fundamental Bass.

These last chords, or inversions of the flat ninth, preserving their visual notation, admit of prefixed signatures, which change their effect to the ear, and render them audibly different; little changed in appearance, but most materially in their expression: the fundamental basses, however, in some instances, vary according to the prefixed signs — of which more will be found in another section.

The common chord may have either a major or minor third, the fundamental remaining unchanged.

EXAMPLE.

Major. Minor. Major. Minor. Major. Minor. Minor. Major. Major.

Minor. Major. Major. Major. Minor. Major.

When a *b*, *♯*, or *♮*, is placed over or under a bass note, it signified, in old thorough bass, that the third from the bass should be *b*, *♯*, or *♮*. This usage is yet retained by the moderns sometimes in the basses to recitatives, and it is fitting that the student should be made acquainted with it; also that he should know every other conventional telegraph belonging to the said mystery. A stroke or dash through a figure signifies that the interval represented by that figure shall be played half a tone higher; as does also the + attached to the figures 4 or 2, thus: 4+, 2+.

A dash also, thus —, after a figure or figures, signifies that the same harmony is to be played in the right hand, though the bass may change. It is generally used as a short hand for the figures $\frac{6}{2}$; but it also serves for others, which will be explained in due place. It denotes likewise the continuance of one or more notes, or figures representing notes.

EXAMPLE.

The chord of the seventh is more licentious than the common chord, and may have its third, fifth, or even seventh, minor or major. When the third is minor, it is usual to prepare the interval of the seventh in a foregoing chord, which is nothing but a lingering or delay of some member of a previous harmony; but we have bold instances of this not being always the case. Mozart, who alone is a tower of strength, furnishes us with an instance of an unprepared seventh with a minor third; and when remonstrated with on the monstrous innovation, as it was then deemed by witless critics, he coolly replied, "Formerly it was wrong; henceforth it will be right!"

EXAMPLES OF THE DIFFERENT SEVENTHS.

Simple Flat Seventh. Flat Seventh, with Minor Third.

Be it remembered that a *♮*, *b*, or *♯*, over a bass note, signifies that the third is to be *♮*, *b*, or *♯*, and that the use of any of these signs is equivalent to the figure 3, regulated by their respective influences.

Flat Seventh, with Flat Third and Flat Fifth. Simple or Dominant Flat Seventh, with Major Third. Flat Seventh, with Minor Third.

Flat Seventh, with Minor Third and Flat Fifth.

Flat Seventh, with Minor Third.

EXAMPLES OF THE FLAT NINTH AND ITS INVERSIONS.

The first inversion of the flat ninth is generally called the diminished seventh, and by some writers is esteemed a fundamental chord, but erroneously.

OF SIMPLE SUSPENSIONS, THEIR PREPARATIONS AND RESOLUTIONS.

There are but three simple suspensions, namely, those of the fourth, seventh, and ninth. The first is that of the fourth, in which some note that had been in the foregoing chord is delayed or prolated, so as to detain the ear's anticipation of the interval of a third major or minor in the ensuing, into which it imperatively must fall.

EXAMPLE OF THE SUSPENSION OF THE FOURTH IN MAJOR AND MINOR KEYS.

The figure 3 placed after the 4 signifies that the interval of the fourth resolves itself or falls into that of the third.—Suspensions are generally denoted by a tie, thus, even when a bar intervenes, as:—

EXERCISE UPON THE SUSPENSION OF THE FOURTH.

The second simple suspension is that of the interval of the seventh, which, like the fourth, must be prepared in the previous chord, unless it be a dominant or flat seventh, and is resolved into the note or half note below it.*

EXAMPLE.

* Handel, and almost all the writers of his time, used a favorite close or cadence to a phrase, in which the prepared seventh was made to ascend before it was finally resolved; but this was only for melodic grace. A thousand instances similar to the following might be cited:—

EXAMPLE OF THE SUSPENSION OF THE SEVENTH, CALLED A SEQUENCE.

A sequence of dominant sevenths, or sevenths with major thirds, may also be used, and by great men has been frequently made productive of the noblest effects; but a prodigal use of it only shows "a little learning."

EXAMPLE.

which might be continued until the initial chord is arrived at again. This could not be the case but for temperament.

ANOTHER SEQUENCE OF SEVENTHS RESOLVING INTO SIXTHS.

The third simple suspension, that of the ninth, consists of the ninth, instead of the eighth, and must be prepared as the fourth and seventh in the preceding harmonies; namely, the note which produces the dissonances, so called, must have existed in the foregoing chord, which must be resolved into the note or half note below.

EXAMPLES OF THE SUSPENSION OF THE NINTH.

The resolution of the suspension of the ninth has been licentiously treated by the best of writers, and made in moving basses sometimes to take place upon the third note above the one on which its dissonance first occurred, or upon a third below it.

EXAMPLE FROM BACH.

The image shows two systems of musical notation. Each system consists of a treble clef staff and a bass clef staff. The first system shows a treble staff with a melody and a bass staff with figured bass notation, including figures like 9, 3, and 9. The second system shows a treble staff with a melody and a bass staff with figured bass notation, including figures like 9, 4, and 9. There are also some trills (tr) and other ornaments indicated in the treble staff of the second system.

HARMONY, FIGURED. Figured harmony is that harmony in which, for the purpose of melody, one or more of the parts of a composition move, during the continuance of a chord, through certain notes which do not form any of the constituent parts of that chord. These intermediate notes not being reckoned in the harmony, considerable judgment and skill are necessary so to dispose them, that, while the ear is gratified with their succession, it may not be offended at their dissonance with respect to the harmonic notes.

HARMONY FOR AN ORCHESTRA. The adaptation of music for an orchestra depends upon the imagination, taste, habit, experience, particular knowledge of the instruments to be employed, and even on the whim of the composer. It is therefore impossible to prescribe precise rules for arranging a piece of music in score. If thirty clever harmonists were to adopt the same ideas for an orchestra, there would result thirty different scores, all of which might be good. But this great diversity does not prevent us from giving general principles on the art of treating an orchestra, nor from indicating the numerous resources which harmony offers us in this species of labor. The principal instruments used in an orchestra are violins, tenors, violoncellos, double basses, flutes, hautboys, clarinets, bassoons, horns, trumpets, trombones, and kettle drums. A complete orchestra is adapted only to large places, as theatres, concert rooms, &c.

Music in which there is much detail, too many notes, too rapid a movement in the different parts, too quick a succession of chords, much complication of harmony arising from too minute an elaboration of the parts, produces no effect in such places. All that results is a kind of indistinct and buzzing noise, which says nothing to the soul, and affords but little pleasure to the ear. For such an orchestra the movement should be bold and moderate. Passages in unison; noble and well-pronounced traits of melody; occasional majestic passages in the bass, which part, indeed, should always march with a certain degree of gravity; great masses of sound, provided they do not last too long, and thus degenerate into mere noise; little rapidity in the succession of the chords; and, in fine, whatever partakes of grandeur and simplicity, will not fail to produce

its proper effect. In writing for a small orchestra, usually destined for a confined space, it is almost always necessary to proscribe all such instruments as are too shrill or noisy; such as the trumpets, trombones, and drums. It will also be requisite to treat the wind instruments rather as solo instruments than in aggregate masses, as otherwise by their superior power they will infallibly drown the stringed instruments, which latter ought always to predominate in the orchestra. Indeed, at any time, ten or twelve wind instruments are more than sufficient for eighteen or twenty stringed instruments. In arranging music for any particular orchestra, the composer will of course be guided by the instruments which it contains, and by the talents of the performers. A complete orchestra may be divided into two parts or masses of instruments, viz., stringed instruments and wind instruments. In orchestral compositions, the principal parts are universally assigned to the stringed instruments. Nor is this preference without good foundation; they are easily tuned to any required pitch, they may be played upon for any reasonable length of time without fatiguing the performers; they admit of the utmost rapidity of execution; they are capable of perfect intonation in all keys, and that with almost equal facility in each; and, lastly, by their power, sweetness, variety, and delicacy of tone, they are admirably adapted to every style and to every variety of expression.

The wind instruments are used to enhance and diversify the effect, and to impart light and shade to orchestral compositions. Besides their use in the *forte* passages, where they usually double the stringed instruments either in the unison or octave, they are often employed alone, or alternately with the former; occasionally, too, short solos, duets, &c., are given to one or more of them; or, when the stringed instruments contain rapid successions of notes, the wind instruments proceed by notes of long duration; this preserves the impression of the full harmony, while it superadds the advantages of variety and contrast. Harmony in four parts forms the basis of orchestral composition; but it is often intersected by that in two or three parts, or even by passages in unisons and octaves. All the parts of these harmonies may be doubled, tripled, or quadrupled, according to the relief which the composer may desire to give to them.

Harmony as for Instruments, in Two Parts with the Two Masses combined. In grand conceptions it is sometimes necessary to consider the whole orchestra as a single instrument; consequently, in two-part harmony we may give one part of the duet to the stringed instruments, and the other to the wind instruments, thus:—

The image shows a musical score with two staves. The top staff is in treble clef and the bottom staff is in bass clef. Both staves are in 2/2 time. The top staff contains a melody with some ornaments and rests. The bottom staff contains a bass line with some ornaments and rests. The two parts are written in a way that suggests they are meant to be played together as a duet.

The upper part of the above phrase may be executed by the mass of wind instruments, and

the lower part by that of the stringed instruments; thus:—

Flutes, Hautboys and Clarinets.

Wind Instruments in three different octaves.

Bassoons

Stringed Instruments in three different octaves.

Double Basses.

ARRANGEMENTS IN FOUR DIFFERENT FORMS, FOR THE ENTIRE ORCHESTRA.

No. 1.

Flutes.

Hautboys & Clarinets.

Horns added.

Bassoons.

String'd Ins'ts in unison forming the base of the Trio.

HARMONY IN THREE PARTS FOR THE TWO MASSES.

We have said before that one entire mass may be considered as a single instrument; as each mass is capable of executing several parts of the harmony, they may be distributed in any of the several following ways:—

1. The upper parts of the trio may be given to the wind instruments, and the third part or bass to the stringed instruments, in unisons or octaves. This arrangement is the best when the lower part contains a striking melody.
2. The bass and one of the upper parts may be given to the stringed instruments, and the other upper part to the wind instruments in unison.
3. The parts of the trio may be executed by the wind instruments, and at the same time also by the stringed instruments.

EXAMPLES.

No. 1.

Harmony in three parts, to be executed by the two orchestral masses combined.

No. 2. Similar phrase in three parts.

No. 2.

Flutes & Hautboys.

Hautboys an octave lower than the Flutes.

Clar'ts. Cl'ts doubling the Bassoons, as frequently occurs.

Horns.

Bassoons.

Violins.

Tenors an octave lower than the Violins, or octave higher than the Violoncellos.

Basses.

No. 8.

Flutes.

Wind instruments in unison.

Hautboys & Clarinets.

Extended position of Wind instruments.

Horns.

Bassoons.

Two Violin parts.

Tenors in octaves to the Bass.

No. 4.

Flutes and Hautboys.

Clarinets.

Horns.

Bassoons.

Violins.

Tenors an octave lower than the 1st Violin.

Basses.

HARMONY IN FOUR PARTS FOR THE TWO MASSES COMBINED.

The different combinations of which this species of harmony is capable are as follows : —

Firstly. The three upper parts may be executed by wind instruments, and the bass by all the stringed instruments in unison.

Secondly. One upper part may be played by the wind instruments in unison, and the other three by the stringed instruments.

Thirdly. Two parts may be given to the wind instruments, and the other two, one of which must be bass, may be executed by the stringed instruments.

This arrangement can be used with success only when each mass, considered separately, forms a correct harmony in two parts.

Fourthly. The four parts may be executed by each of the two masses ; each one thus forming a complete quartet.

Flutes.

Hautboys.

Wind Instruments as a Trio.

Clarinets.

Horns added.

Bassoons.

Stringed Instruments playing the bass of the harmony.

UNISONI PASSAGES. The unison is of great importance in the orchestra. When it is employed to express a simple and melodious idea, the effect is certain. It varies the harmony by allowing it to repose, without robbing the orchestra of its energy and richness. The unison is susceptible of different modifications, viz. : with stringed instruments only ; with wind instruments only ; with both masses combined ; the unison varied in different manners, as follows :

1. By Syncopating. 2. By Appoggiaturas. 3. By Rests.

EXAMPLES OF SIMPLIFICATION FOR WIND INSTRUMENTS. As the wind instruments do not generally admit of the same degree of distinct and voluble execution as the stringed instruments, it often becomes necessary to simplify passages of rapid notes, so as to adapt them for instruments of less powers of volubility, as follows:

The image shows three examples of musical passages. Each example consists of two staves. The top staff is labeled 'Original Passage' and the bottom staff is labeled 'Simplification'.
 Example 1: 'Original Passage' shows a rapid sixteenth-note scale. 'Simplification' shows the same notes as quarter notes.
 Example 2: 'Original Passage' shows a rapid sixteenth-note scale with some grace notes. 'Simplification' shows the main notes as quarter notes.
 Example 3: 'Original Passage' shows a very rapid sixteenth-note scale. 'Simplification' shows the notes as quarter notes.

PEDAL PASSAGE FOR A NUMEROUS ORCHESTRA. Pedal passages frequently occur in orchestral music. In which case the stringed instruments may play the pedal note in unisons and octaves, and the upper notes of the harmony may be given to the wind instruments; or both masses may combine in playing such passages, the brass instruments taking the pedal-note, and the more acute instruments the upper parts of the harmony. As the following passage for both masses combined.

The image shows an orchestral score for a pedal passage. The parts are:
 - Flutes and Hautboys: Treble clef, playing a melodic line. A note: 'The two Flutes an octave higher than the Hautboys.'
 - Clarinets: Treble clef, playing a melodic line.
 - Bassoons: Bass clef, playing a melodic line.
 - Horns and Trombones: Bass clef, playing a sustained harmonic accompaniment.
 - Kettle Drums: Bass clef, playing a rhythmic pattern with a trill (tr) above the staff.
 - Violins: Treble clef, playing a melodic line.
 - Tenors: Treble clef, playing a melodic line.
 - Violoncello: Bass clef, playing a melodic line. A note: 'These notes in reality sound an octave lower than written.'
 - Double Basses: Bass clef, playing a melodic line.

HARMONY OF THE SPHERES. A hypothesis of Pythagoras and his school, according to which the motions of the heavenly bodies produced a music imperceptible by the ears of mortals. He supposed these motions to conform to certain fixed laws, which could be expressed in numbers, corresponding to the numbers which give the harmony of sounds.

HAROLD, the elder. An organist at Vienna, celebrated for his compositions in fugue about the year 1796.

HARPER, THOMAS. This celebrated performer on the trumpet was born in Worcester, in the month of May, 1786, it is believed in the parish of St. Nicholas. At about ten years of age he quitted his native city for London, where he studied music under Eley, and soon entered the East India volunteer band, his instruments being the horn and trumpet. In this situation he remained about eighteen years, performing also at some of the minor theatres during the first seven years of his military service, after which he was engaged as first trumpet at Drury Lane Theatre and the English Opera. He afterwards engaged as first trumpet at the King's Theatre, Ancient and Philharmonic Concerts, and at other principal concerts and music meetings both in town and country.

He continued to be connected with the East India Company during his whole life, having held the appointment of inspector of musical instruments up to the time of his death—a fact which forms no slight testimony to that regularity of life which is too frequently absent in members of his profession distinguished for their talents. It is scarcely necessary to note here, that in all the great musical festivals of the last forty years, Harper sustained a part, and that he long held the supremacy on his own instrument. Among other remarkable occasions on which he assisted, it may be mentioned, that he played at the funeral obsequies of the two great commanders, Nelson and Wellington. Sir George Smart, in a letter to Mr. Surman, of Exeter Hall, after his death, says, "I took much interest in his professional career, which commenced at the oratorios under my direction at the Theatre Royal, Drury Lane, by his accompaniment of 'The trumpet shall sound,' in the performance of the 'Messiah,' on January 30, 1813."

The attack which terminated his valuable life occurred on the 20th of January, 1853. He left his home (Chad's Row, King's Cross) to attend rehearsal. During the rehearsal of Weber's "*Concert Stück*," he complained of coldness, and a violent pain between his shoulders. Medical aid was promptly called, and he was removed from the hall to Mr. Surman's residence; but, in spite of every attention, he expired about half past two o'clock, from disease of the aorta, as appeared by a post-mortem examination. It is worthy of remark, that he breathed his last, as he lay upon a sofa beneath a portrait of the great author of "I know that my Redeemer liveth." The evening's performance, in which he should have taken a part, was commencing with the "Dead March in Saul," and Calceott's beautifully expressive glee,—

"Forgive, blest shade, the tributary tear
That mourns thy exit from a world like this."

The last time Harper visited Worcester was in September, 1852, after the Birmingham festival, in which he was engaged; and it is a pleasing trait in the character of this worthy native of that city, that he never missed, if he could help it, whenever he was in the neighborhood, of spending the Sunday in Worcester, and attending his parish church, St. Nicholas. It was also a most gratifying sight, at the various festivals, to

see the veteran, with his three talented sons, all seeming so much attached to each other, and all vying in the respect they paid to their honored parent.

A correspondent of the "London Musical Times" says, "Mr. Harper may be considered the last of that fine group of instrumentalists to which Lindley, Willman, Mori, Cramer, Nicholson, &c., belonged. As a performer on his instrument, in his best days, Mr. Harper for years held the highest post of honor; for purity and delicacy of tone, and in wonderful facility of execution, no rival has approached him; his imitation of the voice part in 'Let the bright seraphim' may be pronounced one of the greatest achievements in the whole range of musical executive art. And here the writer would pause, to bring into notice how strictly has been fulfilled a prophecy made by Mr. Harper after playing the accompaniment to the solo just mentioned to Clara Novello's singing, when yet in the earliest stage of her career: he told the writer that it was his conviction that the lady here named would stand at the head of her profession. 'I may not live to see it,' he said, 'but her position is assured: there is no voice in the country, English or foreign, to equal hers.' He lived to see his presentiment fulfilled; but we have now to deplore the sudden, if not premature, close of the honorable and useful career of one who invariably held out the hand of encouragement to the youthful professors of the art of which he was so distinguished an ornament.

"The late Mr. Harper was an active supporter of the Royal Society of Musicians, of which association he became a member as early as the year 1815. Finding improvements about to be made in the orchestra of the Philharmonic, a year or two since, Mr. Harper, anticipating rather than feeling the inroads age usually makes at the time of life at which he had arrived, resigned his post of first trumpet, yet without sacrificing other engagements: hence his name has frequently appeared, even up to the day of his death, in the programmes of some of the principal miscellaneous concerts of the metropolis, as well as in those of the provincial festivals. Mr. Harper, with that disinterestedness which characterized his general actions, frequently gave his services in the cause of charity; nor were they withheld from some of the minor amateur associations in the metropolis: he was a frequent visitor of and performer at the concerts of the Cecilian Society.

"Mr. Harper has several sons in the profession, upon the eldest of whom his mantle may truly be said to have descended. Mr. Thomas Harper stands now as the first trumpet player in this or any other country; nor is his ability confined to the trumpet: he is, singularly enough, a very masterly cornet player—the two instruments differing widely in the qualifications necessary to be possessed by him who would excel in each. Mr. C. Harper is also a distinguished performer on the horn; and Mr. Edmund Harper, located at Hillsborough, in Ireland, has earned a high reputation as a pianist and composer."

HARPSICHOORD. A stringed instrument, consisting of a case formed of mahogany or walnut-tree wood, and containing the belly, or sounding board, over which the wires are distended, supported by bridges. In the front the

keys are disposed, the long ones of which are the naturals, and the short ones the sharps and flats. These keys, or levers, being pressed by the fingers, their enclosed extremities raise little upright, oblong slips of wood, called jacks, furnished with crow-quill plectrums, which strike the wires. The great advantage of the harpsichord beyond most other stringed instruments consists in its capacity of sounding many notes at once, and forming those combinations, and performing those evolutions of harmony, which a single instrument cannot command. This instrument, called by the Italians *clavi-combalo*, by the French *clavecin*, and in Latin *clave cymbalum*, or *clave-cimbalum*, is an improvement upon the *clarichord*, which was borrowed from the harp, and has, for more than a century, been in the highest esteem, and in the most general use, both public and private, throughout Europe; but since the invention of that fine instrument, the grand piano-forte, its practice has considerably declined.

HARRER, GOTTLÖB. A director of the music at Leipsic about the year 1745. He studied counterpoint in Italy. Frederic the Great, during his stay in the above town, much admired Harrer's performance on the piano, and commanded his daily attendance at his chamber concerts.

HARRIES, HEINRICH, a clergyman in the duchy of Schleswick, wrote some works on music, and some vocal compositions, in the latter part of the last century.

HARRINGTON, DR., a physician at Bath, was a celebrated amateur musician and vocal composer in the latter part of the last century. He was a lineal descendant of Sir John Harrington, the godson of Queen Elizabeth, and translator of "*Orlando Furioso*." A volume of glees, sung at the Bath Harmonic Society, and published in the year 1797, contains the principal part of the following compositions by this master; the remainder are to be found in a volume of glees published by the doctor, in conjunction with Edmund Broderip, organist of Wells Cathedral, and the Rev. William Leeves, of Wrington, Somersetshire, composer of the still prevailing melody of "*Auld Robin Gray*:" "*Now we're met like jovial fellows*," glee, three voices. "*How happy, how joyous are we!*" glee, five voices. "*I gave her cakes, and I gave her ale*," canon, three in one. "*Ianthe the lovely*," ballad harmonized. "*Success to our innocent social delight*," glee, three voices. "*The Bath Toast*," glee, three voices. "*The Alderman's Thumb*," glee, three voices. "*O syng unto my roundelaies*," glee, three voices, words from Rowley's poems. "*O thou whose notes could oft remove*," glee, three voices. "*The rose's life is one short day*," glee, three voices. "*How happy, how joyous*," glee, five voices. "*O that I had wings like a dove*," rota, three voices. "*Give me tho' sweet delights*," catch, three voices. "*Sweet doth blush the rosy morning*," duct. "*How sweet in the woodlands*," duct. "*Life's short moments still are wasting*," glee, three voices. "*How great is the pleasure*," catch, three voices. "*At the close of the day*," glee, three voices. "*See o'er the brow the moon doth peep*," fairy glee, three voices. "*Come, follow, follow me*," fairy glee, four voices. The last of the doctor's publications that we are acquainted with appeared in March, 1800, with a

dedication to the king. It is a sacred dirge for passion week, "*Eloi! Eloi!* or the Death of Christ," and was sung by Madame Mara, Nield, and Welch.

HARRINGTON, a celebrated performer on the hantboy, was born in Sicily. He was a pupil of Lebrun. He performed at Salomon's concerts in London, in the years 1793 and 1794.

HARRINGTON, JOHN. An old English composer in the reign of Henry VIII. He studied counterpoint under Tallis. See HAWKINS, SIR JOHN.

HARRIS, JOSEPH. Many years organist of St. Martin's Church, Birmingham. His abilities as a composer were well known; the works of Handel were his chief model. He died at Liverpool in the year 1814.

HARRIS, JOSEPH MACDONALD, was placed at an early age as a chorister in Westminster Abbey, under the late Mr. Guise, where he remained till the breaking of his voice, when he received from the dean and chapter a marked testimony of their approbation of his conduct. On leaving the choir he became the pupil of the late Robert Cooke, then organist of Westminster Abbey, but is principally indebted for his professional acquirements to the works of Purcell, Corelli, S. Bach, Handel, Haydn, and Mozart, all of which he has carefully studied. Harris has subsequently been employed as a conductor of concerts, public and private; also as a piano-forte and singing master and composer.

In the following list will be found the principal part of his compositions. Vocal trios: "*Ye sleeping echoes wake, again*." "*The heart that bends at beauty's throne*." "*The May Bird*." "*Daylight when the storm is o'er*." "*Virtue chains the conquer'd soul*." "*Zephyr, whither art thou straying?*" Duets: "*Adieu, loved youth*." "*O, dinna weep*." "*The rainbow's lovely in the eastern cloud*." "*Come, all ye youths*." Songs: "*Come, if thou prize a love like mine*." "*The Indian Hunter's Song*." "*Must it be?*" "*We part, forever part, to-night*." "*Visetto amabile*." "*The Evening Song*." "*The Child of Tantalus*." "*The Old's Rising*." "*The charmed Bark*." "*One Set of harmonized Airs*." Piano-forte: "*The Oddity*," a rondo "*Introduction to an original Theme, and Variations*." "*Variations on a Scotch Air*." "*Variations on a Welsh Air*." "*Fantasia for the Piano-forte*." "*La Suisse*, as a Rondo." "*Introductory Exercises for the Piano-forte*."

HARRISON, ROBERT. This celebrated English singer, born in 1760, was trained from his earliest years among the choristers of the Chapel Royal of England. In this school and its adjuncts, the king's concerts, and those meetings which are supported by the gentlemen of the chapel, he continued till his death. His voice was a legitimate tenor, of no extensive compass, (about two octaves, from A to A.), of very limited power, but of a tone enchantingly rich and sweet. Harrison's conception was chaste, and it is probable that he owed the peculiar superiority he enjoyed over all others in this respect, and the infinitely minute finish of what he did, to the limited power of voice we have already spoken of. But this natural disqualification for the bolder flights of imagination ought not to

impeach the character of his judgment. In all that he voluntarily attempted it was scarcely possible to conceive any thing more pure. We say in what he voluntarily attempted, because it is a necessary reservation against the general cast of songs which provincial meetings, where oratorios are done entire, entail upon the profession. Harrison's choice we should estimate by the songs which he adopted in concerts of selection. They were commonly Dr. Pepusch's cantata of "Alexis," Handel's "Lord, remember David," and "Pleasure my former ways resigning," Dr. Boyce's "Softly rise," Zingarelli's "*Ombra adorata*," Webbe's "A rose from her bosom had strayed," and, in later days, Attwood's "Soldier's Dream," and Horsley's "Gentle lyre." In fine, in the true *aria cantabile*, Harrison was the most finished singer of his age or country, or perhaps of Europe. He died in 1812, at the age of fifty-two.

HART. (G.) Major, in regard to keys and modes. Same as *dur*.

HART, PHILIP, supposed to be the son of James Hart, one of King William's band, and whose name frequently occurs in the "Treasury of Music," and other collections of that time, was organist of the Church of St. Andrew Under-shaft, and also of St. Michael's, Cornhill. There are extant of his composition a collection of fugues for the organ, and the morning hymn from the fifth book of the "Paradise Lost," which latter work he published in March, 1729. He died about the year 1750, at a very advanced age.

HART, JOSEPH, was born in London in 1794, and entered St. Paul's Cathedral, as one of the chorists, at the age of seven years and a half, under the instruction of J. B. Sale, Sen. At the age of eleven, he acted as deputy for Mr. Attwood, the organist, on several occasions. Whilst in the cathedral choir, Hart received private instructions on the organ from S. Wesley and M. Cook, organist of Bloomsbury; he also had lessons on the piano-forte from J. B. Cramer. He remained in the choir nearly nine years, and at sixteen years of age was elected organist of Walthamstow church, Essex, which situation he left to become organist of Tottenham, Middlesex; this last appointment he held in 1825. It should be mentioned that Hart was elected organist of Tottenham, after a public competition and trial of skill of nine candidates. After Hart left St. Paul's Cathedral, he went also as domestic organist to the Earl of Uxbridge, where he remained three years; and it was at his lordship's decease that he entered the profession as a teacher, composer, &c. At the termination of the war in 1815, quadrille dancing became the fashion, when Hart attended private parties as a piano-forte performer, and wrote several popular sets of quadrilles; for instance, a set from "*Il Don Giovanni*," "Fifth Set from *Il Turco in Italia*," "Sixth Set from *La Gazza Ladra*," &c., &c. He published "An easy Mode of teaching Thorough Bass and Composition," a work especially intended for schools and young professors. He was during three years chorus master and piano-forte player at the English opera, during which time he composed several musical farces: "Amateurs and Actors," "Bull's Head," "Walk for a Wager," and the popular dramatic opera of "The Vampire."

HARTMANN, C. A German composer, for some time in the Russian service, and subsequently resident at Paris, where he was a member of the Royal Academy of Music, and much celebrated as a flutist. Among his works are "*Six Airs, Français et Russe, Variations pour la Flute, avec Accompagnements d'un V. ou Violoncello*," "*Recueil de Préludes dans toutes Sortes de Modulations pour la Flute*," "*Recueil d'Airs nouveaux*," "*Recueil de Points d'Orgue dans tous les Tons majeurs et mineurs*," "*Trois Duos pour deux Flutes*," Op. 7. The whole of the above were published at Paris.

HARTMANN, C. II., an organist at Limbeck, in Germany, has published, since the year 1781, several sets of sonatas for the piau, and some dramatic music.

HARTMANN, H. A. F. *Chef-d'orchestre* at the French theatre in St. Petersburg. His son was director of the music at Moscow in 1801, on the occasion of the coronation of the Emperor of Russia.

HARTMANN, JOHANN, a musician at Ploen, died in Copenhagen in 1791. He composed much vocal music to Danish words; also some music for the piano.

HARTUNG, CARL AUGUST, one of the most famous organ builders of the eighteenth century, lived at Erfurt, and died in 1780.

HARTUNG, CARL AUGUST. Organist of the reformed church at Brunswick. He has published some vocal music since the year 1783.

HASER, CHARLOTTE HENRIETTA. A celebrated singer, born at Leipsic, in 1784, daughter of the director of music in the university at Leipsic. In 1804 she was engaged at the Italian opera at Dresden. In 1807 she went through Prague and Vienna to Italy. Her fine voice, her execution, and her persevering efforts to combine the advantages of the Italian and German methods, gave her a brilliant success. In private life, she was distinguished for the correctness of her morals, and her uncommon modesty. The most celebrated theatres in Italy contended for her. She was repeatedly called to Rome, where she obtained great applause. She was the first female singer in Italy who appeared in male characters, and ventured to cope with the celebrated artists Crescentini, Veluti, &c. In Naples, she was engaged at the Theatre of San Carlo for a year, and was commonly known by the name of *La Divina Tedesca*. She afterwards married Vera, a respectable advocate in Rome, and retired from the stage.

HASLER, JOHANN LEONHARD, son of Isaac Hasler, a musician at Nuremberg, and born in 1554, was court musician to the Emperor of Germany. In 1584 he went to Venice, where he studied counterpoint under the celebrated Andrea Gabrieli. In 1601 he proceeded to Vienna, where the Emperor Rudolph II. not only took him into his service as musician, but granted him a patent of nobility. He died in 1612. His works were very numerous, but chiefly vocal, and for the church. He had two brothers, who were also very eminent as organists.

HASSE, GIOVANNI ADELFO, called, in Italy, *Il Sassone*, chapel-master to the King of Poland, (Elector of Saxony,) was born at Berge

dorf, near Hamburg, in the year 1699. He learned the first elements of music at Hamburg, where he went to school. His extraordinary talents for the science were first observed by Johann Ulric König, a celebrated poet and musical amateur, who recommended him, in 1718, as tenor singer at the opera in Hamburg, to which theatre the renowned Keiser was then composer, and whose compositions served as a model to Hasse. He made extraordinary progress in the succeeding four years, at the expiration of which his protector König obtained for him the situation of singer to the court and theatre at Brunswick. His studies had, however, been by no means confined to singing, as he had become an excellent pianist, and in the year after his arrival at Brunswick, composed an opera called "*Antigono*," which was well received in that town. Still, Hasse had abandoned himself too much to his genius, without studying any of the profound rules of counterpoint; and he began to feel the inconveniences of this negligence, and resolved to travel into Italy for the purpose of studying composition in one of its most celebrated schools. In 1724 he went to Naples, where he placed himself for a short time under the tuition of Porpora. Amongst the great musicians who were then in that city, Alessandro Scarlatti was the most conspicuously eminent, and Hasse ardently desired to profit by his instructions, but dared not make the proposition to him, fearing that his pecuniary means would not permit his affording a proper remuneration. His good genius, however, carried him through this difficulty; for meeting Scarlatti in society, he so gained on the venerable composer's affections by his talents, modesty, and respectful manner towards him, that he in a short time called Hasse his son, and offered to give him lessons gratuitously. It may well be supposed that Hasse accepted this offer with no common delight. In the year 1725 he received an order from a rich banker to compose a serenata; this was the first opportunity of making known his talents in composition which had offered itself in Italy. His serenata was for two voices, and sung by Farinelli and Fosi before a brilliant audience with unanimous applause. This first success was extremely favorable to him, and he was soon after desired to compose an opera for the Theatre Royal. His piece was "*Se-sostrate*," and so perfectly established his reputation, that he was afterwards called in Naples *Il Caro Sassone*. After this epoch, all the great theatres of Italy disputed the honor of possessing him as *maestro* at the head of their orchestras. In 1727 he went to Venice, where he was nominated chapel-master to one of the conservatories. His success in this city was still increased through the interest of the celebrated Faustina, who afterwards became his wife. Amongst the compositions which he produced in consequence of his situation as chapel-master, a "*Miserere*," for two soprano voices and two altos, with an accompaniment for two violins, violoncello, and double bass, was so peculiarly admired, that the great Padre Martini called it divine music. In 1730 he made himself further known at Venice by the composition of two operas, "*Dalila*," and "*Artaserse*," the words of the latter being written for him by Metastasio. His reputation had by this time extended to Germany, and he was offered the situations of chapel-master and opera

composer to the King of Poland and Elector of Saxony, with a salary of twelve thousand dollars per annum for himself and Faustina, to whom he was now married. They accepted these terms, and arrived at Dresden, where Hasse shortly afterwards composed the opera of "*Cleofide, o Alessandro nelle Indie*." This piece was played for several successive weeks, and the most celebrated singers of Italy performed in it. We find Hasse, soon after this, again journeying to different towns in Italy, and he thus seems to have divided his time between Italy and Germany. It was at this period that the spirit of party which reigned in the opera establishment of London had reached its acme. The noble directors, not being able to appease the differences between Handel and the singers, at length separated from that composer, and opened a second Italian theatre in Lincoln's Inn Fields, of which Porpora had the management, who engaged the renowned Farinelli, Senesino, and Cuzzoni as principal singers. The compositions of Porpora could in no way, however, compete with those of Handel, and Hasse was accordingly invited to England, and arrived there in 1733, when his opera of "*Artaserse*" was performed for the *début* of the matchless Farinelli, and became such a favorite with the town that it was played forty times during Farinelli's stay in England. Nothing, however, could induce Hasse to remain in England, probably from the virulence of the musical cabals at that time, and he returned to Dresden, where at length, in the year 1740, he settled. In the campaign of 1745, Frederic the Great entered Dresden on the 18th of December, after the battle of Kesseldorf, when, being desirous of witnessing the talents of Hasse, he commanded one of his grand operas. "*Armenio*" was chosen, which so enchanted the king, that he sent Hasse a present of one thousand dollars and a diamond ring. In 1755 Hasse lost his fine voice so completely as hardly to be heard in speaking. In 1760, at the bombardment of Dresden by the Prussians, all the property in furniture, &c., of Hasse, and among the rest his manuscript music, was destroyed by fire. This loss the more deeply affected him, as he was on the point of publishing a complete collection of his works, the expenses of which the king had promised to defray. In 1763 the court of Dresden experienced such reverses, that many persons attached to it were dismissed from their employments, among whom Hasse and his wife were obliged to retire on a small pension. Soon after this he went to Vicenza, and in the following three years composed six operas for that capital. In 1769 he brought out "*Piramo e Tisbe*," an interlude, remarkable for a character of music distinct from all his other compositions. His last opera was "*Ruggiero*," performed at Milan in 1771, on the marriage of the Archduke Ferdinand. After this he retired to Venice, and in 1780 composed a "*Te Deum*," which was sung in the presence of the pope. This was his last composition, and he died at Venice in 1783, in his eighty-fourth year. He had composed, only a few years before his death, a "*Requiem*," which he meant to be performed at his funeral service. This work proves that he had retained his full powers for composition to a very advanced age. Dr. Burney considered Hasse to be the most learned, natural, and elegant, and at the same time the most voluminous composer of his age.

An equal judge of music and poetry, he showed as much judgment and genius in the expression of his words as in the sweetness and melody of his accompaniments; he considered the voice as the essential object of dramatic music, and paid every attention to make it conspicuous in his operas, and not hidden by loud and chromatic instrumental accompaniments. He had also his detractors. The learned Homilius reproaches his works with want of harmony; and, in point of fact, he was in this respect much below Bach, Handel, and Graun; occasionally, however, there are *morceaux* in his works most powerfully harmonious. It should be remembered that his taste was formed under Porpora, Searlatti, Leo, Vinci, and Pergolesi, at a period when the simple and natural were considered sufficient to charm the ear and please the public taste. To this ancient partiality for simplicity he always remained faithful. Hasse composed so much that it is said he often could not recognize his own music when played. He set all the operas of Metastasio in two, three, or four different ways. Hasse was agreeable in person, and of excellent disposition and principles. The following is a list of some of his compositions: "*Sesostrate*," Op. Naples, 1726. "*Attalo*." "*Re di Bitinia*," Naples, 1728. "*Dalila*," Venice, 1730. "*Demetrio*," Venice, 1732. "*Olimpia in Eruda*," 1740. "*Antigono*," "*Leucippo*," "*Dido*," "*Semiramide*," all operas. Church music, oratorios: "*Serpentes in Deserto*," "*La Virtu a piè della Croce*," "*La Deposizione della Croce*," "*La Caduta di Gerico*," "*Magdalena*," "*Il Canto dei fanciulli*," "*La Conversione di S. Agostino*," "*Il Giuseppe riconosciuto*," and "*Pellegrini al Sepulchro di nostro Salvatore*," all published at Leipzig in 1784. "*S. Elena all' Calvario*," twice composed. A "*Te Deum*," Venice, 1780. "*Te Deum*," at Dresden. "*Litania of the Virgin*," Venice, 1727. "*Litania for two Sopr., Alto, and Organ*." "*Litania for two Sopr., with Instrumental Accompaniments*."

HASSE, FAUSTINA BORDONI, wife of the preceding, born at Venice in 1700, was a pupil of Michael Angelo Gasparini, of Lucca. She may be said to have invented a new mode of singing, by running divisions, with a neatness and velocity which astonished all who heard her. She had the art of sustaining a note longer, in the opinion of the public, than any other singer, by taking her breath imperceptibly. Her beats and trills were strong and rapid, her intonation perfect, and her professional perfections were enhanced by a beautiful face, a symmetric figure, though of small stature, together with a countenance and gesture on the stage which indicated an entire intelligence and possession of the several parts which she represented. She first appeared as a theatrical singer at Venice, in 1716, in the opera of "*Ariodante*." In 1719 she appeared on the same stage with Cuzzoni and Bernachi, in an opera composed by her master, Gasparini. Here she is called *Virtuosa di Camera* of the elector palatine. In 1722 she sang in Leo's opera of "*Bajazet*," at Naples; and in 1725, at Vienna, where, according to Apostolo Zeno, she received great honors, as well as presents. At the palace of Prince Lichtenstein, after singing to a great assembly, she was presented with a purse containing a hundred pieces of gold, and nearly as much more at the French ambassador's. She re-

mained in England but two seasons, and then returned to Venice, where, in 1732, she was married to Hasse, and soon after went with her husband to Dresden, in the service of which court she continued till the year 1756. During the war they retreated to Vienna, and remained there till the year 1775; then retiring to Venice, the place of Faustina's nativity, they ended their days in that city. Faustina died in 1783, at the great age of ninety, and her husband soon after.

HASSE, NICOLAUS, organist and composer at Rostock in 1650, published "*Delicie Musica*," and other collections of instrumental music.

HATTASCH, HEINRICH CHRISTOPHE. An actor and composer of some German operettas, between the years 1780 and 1795.

HATTASCH, DISMA, a violinist in the Royal Chapel of Saxe-Gotha, born in 1725, entered, in 1751, the service of the Duke of Gotha. Two symphonies and six violin solos of his composition are known. He died in 1777.

HATTON, DAVID, of Thornton, North Britain, was born in 1769. He had great musical talents, and invented a musical instrument, called *fluto rum*, something in the shape of an Irish bagpipe, upon which he played, with tolerable accuracy, most of the old Scotch tunes. His house, both internally and externally, was a perfect curiosity with figures, devices, and emblems of the most incongruous beings in nature; many visitors resorted thither in consequence. He had a coffin made for himself some years before his death, and realized the cost, by exhibiting the eloquent though mute *memento mori*. He died November 22, 1847, leaving a considerable property to be divided among some distant relations, as he never was married.

HATZFELD, COUNTESS OF. A celebrated amateur musician. She performed, about the year 1793, at a private theatre in Vienna, several principal characters in Italian operas, and was considered equal to almost any professional singer of her time.

HAUDIMONT, ABBÉ D', a pupil of Rameau, was worthy of his master in the expression of his compositions, and perhaps surpassed him in taste. He wrote much for the church about the year 1780.

HAUFF, WILH. GOTTL. A singer in a regiment of Saxe-Gotha, in the service of Holland. He published at Paris, in 1774, six symphonies, and afterwards, in 1776 and 1777, six sextuors for wind instruments, three trios for the harpsichord, and six quatuors for violins.

HAUG, VIRGILIUS, published a work called "*Erotemata Musica Practica ad captum puerilem formata*," Breslau, 1541.

HAUPTMANN, MORITZ. As a contrapuntist and harmonist, Herr Music Director Hauptmann is now acknowledged to stand at the head of the profession. He was born in Dresden, A. D. 1794. His father was "king's master builder," and educated his son Moritz for an architect, at the same time giving his son a good musical education, he manifesting an early taste for music. The father, seeing finally that his son's preference

was decidedly in favor of music as a profession, let him take his own choice; and from his seventeenth year he devoted himself entirely to his favorite study. His last teacher was Dr. Spohr, then concert master in Gotha, with whom he studied composition and the violin. In 1812 he returned to Dresden, where he accepted an engagement as "chamber musician" to the king. In 1813 he made a tour to Prague and Vienna, and from this time his popularity increased, and his fame spread quite extensively. In 1815 he gave up his engagement at Dresden, and made a tour to Russia. Here he remained in St. Petersburg, Moscow, and the other cities, teaching and composing, about five years, after which he returned to Germany, and in 1822 accepted an engagement at Cassel. During this engagement he made a professional journey into Italy, obtaining leave of absence for a year. In 1842 Professor Hauptmann was chosen cantor to the Thomas School, and director of music in the two principal choruses, viz., St. Thomas and St. Nicolas, at Leipsic, which post he still occupies. Soon after his settlement in Leipsic, he was called to take the head of the profession of counterpoint and fugue at the Conservatory. Professor Hauptmann's compositions for the church are very much sought after, being of an artistical and also of a devotional style. His songs, one and four-voiced, are also very popular, and of the former, especially, he has composed very many. A set of Italian songs, written while in Italy for a contralto voice, (the voice of his bride,) are very beautiful. Besides a great quantity for the piano-forte and for stringed instruments, he has composed a full mass for chorus and orchestra, an "Offertorium"—"Salve Regina"—for four voices, very celebrated, and deservedly so; also an opera, called "Matilda." Professor Hauptmann is also an excellent mathematician. But, notwithstanding his great popularity and enviable position in public, either as a teacher, composer, or director, it is in private that Professor Hauptmann's life is the most enviable. As a teacher he is patient, faithful, and most thorough. He is small of stature, a little bald, with a high, broad forehead, and a countenance lined with the marks of hard study, but beaming with gentleness and amiability. In 1841 Herr Hauptmann married Fraulein Hummel, a young and highly accomplished lady, a fine alto singer, and a superior *artiste* in painting and drawing. Her pencillings are highly spoken of by good judges.

HAUPTMANUAL. (G.) The set of keys belonging to the great organ.

HAUPTPERIOD. (G.) A capital period.

HAUPTSATZ. (G.) The principal subject or theme.

HAUPTSTIMME. (G.) A principal part.

HAUPTWERK. (G.) The great organ.

HAUSCHKA, VINCENZ, a celebrated violoncellist at Vienna, was born in Bohemia in 1766. Among other works, he has published "Six Sonates pour Violoncello avec Accompagnement de Bass, Op. 1, Première et Deuxième Partie," Vienna, 1803, and "Deutsche Gesänge für 3 Stimmen," Vienna.

HAUSSE. (F.) The nut of a violin or other bow.

HAUSEN, JOHANN, harpist to the Duke of Weimar, died in 1733.

HAUSEN, WILHELM, an ex-Jesuit, published some sacred songs at Dillingen in 1763 and 1764.

HAUSER, URIEL, a Franciscan monk, was born in 1702. He wrote "*Instructio Fundamentalit Cantus Choralis ad usum Reform. Prov. Tirl.*" 1765.

HAUSIUS, CARL GOTTLÖB, an amateur musician at Leipsic, was born in 1755. He published several collections of songs at Leipsic, between the years 1784 and 1794.

HAUSMANN, a musician at Paris, published, about the year 1792, several pieces from operas, as airs, overtures, &c., arranged for the piano-forte.

HAUSMANN, VALENTIN. Son of Valentin Hausmann, a musician at Nuremberg, at the time of the reformation. The father wrote some music for the reformed churches, as did the son, with the addition of much other vocal music, consisting chiefly of madrigals, between the years 1590 and 1610. The two grandsons and great-grandson of the elder Hausmann were also organists and musicians, and all named Valentin; consequently music under that name is to be found in Germany, bearing date as early as 1510 and as late as 1750, which is about the period of the decease of the last of that name.

HAUT. (F.) Acute, high, shrill; as, *haut contre*, high, or counter tenor; *haut dessus*, first treble.

HAUTBOY. Called in orchestral scores by the Italian name *oboe*. A portable wind instrument of the reed kind, consisting of a tube gradually widening from the top towards the lower end, and furnished with keys and circular holes for modulating its sounds. The general compass of this instrument extends from the C clef note to E in alt; but solo performers frequently carry it two or three notes higher. In order to sound its lowest C the instrument requires a key for that express purpose. The oboe, now most commonly in use, has eight keys, which enables it to produce all the flats and sharps throughout a compass of two octaves and a half. The tone of the hautboy, in skillful hands, is grateful and soothing, and particularly adapted to the expression of soft and plaintive passages. Its name is French, — *haut bois*, that is, high wood, — and was given to it because its tone was higher than that of the violin, originally. The hautboy is shaped much like the flute, only that it spreads or widens more at the bottom, like the clarinet.

In order to play this instrument, you must hold it aslant, and fix your reed between your lips about half way from the extremity of the scraped part, forcing in with your reed, as it were, the under part of your upper lip, which will give you a greater power over your instrument, and prevent its tiring you. Blow strong with all the holes stopped, and you will sound C, the lowest note of the instrument. Then raise the fourth finger of the right hand, which must be the low

rest, and you will sound D : when you have come to D on the fourth line, pinch the reed with your lips for the rest of the notes. The third finger of the left hand generally covers two holes; but it is sometimes slipped on one side. See the scale of flats and sharps. The black dots signify the holes which are to be stopped, and the white ones those which must be left open. You will observe that some letters will admit of two ways of blowing; you will find by practice which

will be the easiest and best. In trying the reeds for the hautboy, make choice of that which crows freely without a pressure of the lips. Before you fix the reed to the instrument, wet it a little, which will make it go easier than when dry. The celebrated Mr. Fischer introduced a method of softening and improving the tone of the instrument, by inserting some cotton or wool in the bell, which, however, must not be put up higher than the air holes.

SCALE FOR THE HAUTOY WITH EIGHT KEYS.

The scale is written on a single staff in treble clef, showing notes from C to G in two octaves. Below the staff is a fingering chart for the left and right hands. The left hand uses the 1st, 2nd, and 3rd fingers. The right hand uses the 1st, 3rd, 2nd, 4th, 3rd, 5th, 6th, 7th, and 8th fingers. Specific notes are marked with 'A' or 'E' and a degree symbol to indicate intonation. Some notes have a line through them, indicating they should be stopped.

In rising and falling these octaves, the beginner will be ready to think that the lower D sounds flat, and out of tune, which may be the case, unless the low notes are blown strong and full, and the middle A rather soft, which should be remembered, as A is the pitch of your instrument in concert.

SCALE OF SHARPS AND FLATS.

The scale is written on a single staff in treble clef, showing notes from F to F in two octaves, including sharps and flats. Below the staff is a fingering chart for the left and right hands, labeled with 'f' for flat and 'k' for sharp. The chart shows fingerings for each note, with some notes marked with 'B' or 'E' and a degree symbol. Some notes have a line through them, indicating they should be stopped.

A. Either of these ways of fingering may be used.—B. The keys are marked only when they are to be used.—C. This key is employed merely to ensure the proper intonation of E which is uncertain in some hautboys.—D. The o- with a line drawn through it indicates that only one half of the hole which it represents must be stopped.—E. This key may be pressed down from C to G if necessary; this will sometimes be found useful in maintaining the proper position of the instrument.—F. This hole must be scarcely open. Indeed this note and the adjacent F# are seldom used.

HAWES, WILLIAM, was born in London in 1785, and became a chorister in the Chapel Royal, under Dr. Edmund Ayrton, in 1793, where he remained till 1801. In 1802 he first engaged publicly in his profession, by becoming a performer on the violin in the band of Covent Garden Theatre, and about the same time commenced business as singing master; he also attended the Ancient, Vocal, and most other concerts. In 1803 he was appointed deputy vicar choral of Westminster Abbey, and continued in that office till fully appointed. In July, 1805, he obtained the appointment of gentleman in ordinary of his majesty's Chapel Royal. In 1806 he became an honorary member of the Noblemen's Catch Club. In 1807 he was elected a member of the Royal Society of Musicians; and in 1808, honorary member of the Somerset House Lodge, and of the societies called the Madrigal and Concoctores. He was one of the original associates of the Philharmonic, which commenced in 1813, and a member of the professional concert, which followed shortly after, but on account of the party spirit which then prevailed so widely in the profession, quitted the former society, on the breaking up of the latter. In 1814, he was appointed almoner, master of the boys, and lay vicar of St. Paul's Cathedral, and in 1817, master of the children of his majesty's Chapel Royal, and lutenist to his majesty; in the same year he was also fully appointed vicar choral of Westminster Abbey, but resigned the latter situation in 1820, considering himself treated with undue severity, in being refused privileges which others had before, and have since enjoyed. He was the first promoter of the Royal Harmonic Institution, under the design of giving composers the means of publishing their own works, and consequently reaping the whole advantage which should arise from their sale. For this purpose the old Argyle rooms were rebuilt, and a magnificent establishment opened. The following are among the more favorite original works and arrangements of this composer. Songs: "Barbara Allan," "Charlie is my darling," "Comin' through the rye," "Father William," "Friendship," "He's dear, dear to me," "John Anderson my jo," "I think on thee," "Logie o' Buchan," "Lang syne," "My harp alone," "My Ellen, alas! is no more," "O this love," "O that I could recall the day," "O, saw ye my father," "O Bothwell bank," "O for ane-an'-twenty, Tam," "O, Kenmure's gone awa'," "Sleep, baby mine," "The land o' the leal," "The green spot that blooms o'er the desert of life," "Tak' your auld cloak about ye," "The Beacon," "To the Moon," "There grows a bonny brier," "Wert thou like me," "We're a' noddin at our house at hanc," "He's far, far frae me." Glee: "Allen a dale," three voices; "Bring me flowers, bring me wine," four voices; "Boy, who the rosy bowl doth pass," four voices; "Fairy glee, (We fairy folks)," four voices; "Gallant and gayly," three voices; "Henry cull'd the floweret's bloom," four voices; "John Anderson my jo," three voices; "Lovely Phillis," four voices; "O, saw ye my father," four voices; "O, Bothwell bank," three voices; "Sweet, modest floweret," four voices; "Since then I'm doomed," four voices; "The Shepherd's Daughter Sally," four voices. He has also republished Morley's collection of madrigals, entitled "The Triumphs of Oriana."

HAWKINS, SIR JOHN, was the son of an eminent surveyor and builder, and born in 1719. After having passed through the usual course of school education, he was placed under the care of Mr. Hoppus, for the purpose of being brought up to his father's business. This, however, having been found contrary to the general bent of his inclination, he was afterwards articled as a clerk with an attorney. In this situation, by abridging himself of rest at night, and rising every morning at four o'clock, he not only found an opportunity for reading all the most eminent law writers, but also the works of the most celebrated authors both in verse and prose. About the year 1741, a club having been instituted by Mr. Immyns, an attorney of his acquaintance, the amanuensis of Dr. Pepusch, and some other musical men, called the Madrigal Society, to meet every Wednesday evening, Mr. Hawkins became a member of it, and continued so for many years. He became also a member of the Academy of Ancient Music. In the year following, Mr. Stanley and he published, at their joint expense, six cantatas for a voice and instruments, the words of which were furnished by him, and the music by Mr. Stanley. These succeeding beyond their most sanguine expectations, a second set was published a few months afterwards, which succeeded equally well. As these compositions were performed at many of the public places, the author acquired considerable reputation as a poet; and being a modest and well-informed young man, of unexceptionable morals, they obtained for him an extensive acquaintance. Among these was Peter Storer, Esq., of Highgate, whose daughter he afterwards married. In the winter of 1749 Dr. (then Mr.) Johnson instituted a club at the King's Head, in Ivy Lane, near St. Paul's, and Mr. Hawkins was invited to become one of the first members. On the death of his wife's brother, in 1759, having received a large addition to his fortune, he retired from business, and bought a house at Twickenham; and two years afterwards, his name having been inserted in the commission of the peace for the county of Middlesex, he became a most active and useful magistrate. Mr. Hawkins's love of music induced him to form a collection of the works of the best composers, and among other acquisitions, he had the good fortune to become possessed of several most scarce and valuable theoretical treatises on the science, which had formerly been collected by Dr. Pepusch. With the knowledge which he acquired from these books, he was requested by several eminent musical men to set about the preparation of materials for a work, then much wanted, the "History of the Science and Practice of Music." After sixteen years' labor, he, in 1776, published, in five quarto volumes, his History, which he dedicated to the king. Few works have been attacked with more acrimony and virulence than this. Its merit, however, as containing much original and curious information, which, but for its author, must have forever perished, has been amply attested by the approbation of some of the first judges of science and literature. The University of Oxford, in consequence of its publication, offered to him an honorary degree of doctor of laws, as indicative of their opinion of the value of his book. This honor he thought proper to decline. From a long and very intimate acquaintance with Dr. John-

son, and, as it is generally believed, in consequence of a conversation that passed between them on the subject, Sir John Hawkins, at his death, undertook to write a life of the doctor, which he afterwards published. Scarcely three months after the commencement of this undertaking, he sustained a most severe loss in the destruction of his library by fire. This lamented catastrophe, for a short time, put a stop to the progress of his undertaking. Yet, as soon as he could collect his thoughts, he recommenced his office of biographer to Johnson, and editor of his works, which he completed, and published in 1787, in eleven volumes octavo. With this production he terminated his literary labors; and having, for several years, been accustomed to pass all his leisure time in theological and devotional studies, he now still more closely attended to them, in order to prepare himself for that event, which, in the common course of nature, he knew could not be at a great distance. On the 14th of May, 1789, he was seized with a paralytic affection, under the effects of which he lingered until the 21st of the same month, when he expired. He was interred in the cloisters of Westminster Abbey, in the north walk, near the eastern door into the church, under a stone, containing, by his express injunctions, only the initials of his name, the date of his death, and his age.

HAYDEN, GEORGE, was organist of the church of St. Mary Magdalen, Bermondsey. He composed and published, about the year 1723, three cantatas. There is also extant of Hayden's compositions a pretty song in two parts, "As I saw fair Clara walk alone," which is well known to the proficients in vocal harmony.

HAYDN, FRANCIS JOSEPH, was born in March, 1732, at Rohrau, a small town about fifteen leagues from Vienna. His father was a wheelwright, and his mother, before she married, was cook at the chateau of Count Harrach, a nobleman residing in the neighborhood. Haydn's father, besides his trade of wheelwright, was the parish sexton. He had a fine tenor voice, and liked music in general, but was particularly fond of the organ. During one of those excursions which are often undertaken by German artisans, being at Frankfort on the Main, he learned to accompany himself a little on the harp; and on holydays, after the service of the church, he always amused himself with this instrument, while his wife sang. Joseph's birth did not in the least change the peaceable habits of this family. The little concert was renewed every week, and the child, placing himself before his parents, with two pieces of wood in his hands, one for a violin, and the other for a bow, accompanied his mother's voice. Haydn, full of years, and covered with glory, has frequently called to mind the simple airs she sang, so deeply were these little melodies impressed on his musical soul! A schoolmaster of Hainburg, of the name of Frank, and cousin to the wheelwright, came one Sunday to Rohrau, and was present during the performance of one of these family trios; when he noticed that the child, then not six years old, beat time with the utmost correctness and precision. Frank understood music, and begged his relations to allow him to take little Joseph back to Hainburg with him, and attend to his education. They accepted the proposition with delight, in

the hopes of getting Joseph more easily into holy orders, if he should be made to understand music. He set off, therefore, for Hainburg, and had been only a few weeks at his cousin's house, when he found there two tambourines. By patience and repeated trials, he at length actually produced by means of this instrument, which has but two tones, a kind of tune, which drew the attention of all those who visited at the school.

Haydn had by nature a sonorous and pleasing voice. Frank, who, to repeat Haydn's own words, treated his young cousin with more blows than bouillons, soon made the little tambourinist play not only the violin and other instruments, but likewise taught him to understand Latin, and to sing at the parish church, in a style that ere long made him known throughout the canton. Chance now brought to Frank's house Reuter, chapel-master of St. Stephen's Cathedral at Vienna, who was searching round the country for additional voices for his choir; the schoolmaster immediately introduced his little relation to him, when Reuter gave him a canon to sing at first sight.

The precision, distinctness of tone, and fire with which it was performed by the child, astonished Reuter; but, above all, he was enchanted with the beauty of the boy's voice. He remarked, however, that he did not *shake*; and on asking him, smilingly, the reason, the child replied with quickness, "How should I know how to shake, when my cousin himself does not?" "Come to me," said Reuter to him, "and I will teach you." He took him on his knees, showed him how to make two sounds succeed each other quickly, by holding his breath and agitating the top of the pallet. The child succeeded immediately. Reuter, delighted with the success of his little pupil, took a plate of fine cherries, and emptied them into the boy's pocket. The joy of the latter may be conceived. Haydn often mentioned this little incident, and added, laughing, that whenever he made a shake, he fancied he still saw those fine cherries. It may easily be concluded that Reuter determined on not returning alone to Vienna, and the little shaker, then about eight years old, accompanied him thither. Haydn has said, that, dating from this time, a single day never passed at Reuter's without his having practised sixteen, and sometimes eighteen hours. This is especially remarkable, because, whilst at St. Stephen's, he was almost entirely his own master, the children of the choir being only obliged to practise two hours a day. When Haydn attained the age of composition, the habit of study was thus already acquired: indeed, a musical composer has this great advantage over other artists, that his productions are no sooner conceived than they are finished.

With less precocity of genius than Mozart, who, when only thirteen years old, wrote a much admired opera, Haydn, at the same age, tried to compose a mass, which was, not without some reason, ridiculed by Reuter, to the great astonishment, at first, of the young musician; his good sense, however, even at that early age, soon convinced him of the justice of its condemnation. He now began to perceive that a knowledge of counterpoint and of the rules of harmony was requisite; but how was he to learn them? Reuter did not instruct the children of the choir in composition, and never gave more than two lessons in it to Haydn. Mozart had an excellen-

master in his father, who was a good violin player. But poor Joseph was less fortunate, being only a discarded chorister at Vienna, who must pay for any lessons he received, and who had not a halfpenny to apply to that purpose; for his father, although he had two trades, was so poor, that Joseph having once had his clothes stolen, and having informed his father of the circumstance, the poor man with difficulty sent him six florins towards refitting his wardrobe. Of course no master in Vienna would give lessons *gratis* to a little unpatronized chorister; his situation was therefore truly embarrassing. He persevered, however, and in the first place, like Jean Jacques Rousseau, he purchased, at a second-hand shop, some old books on the theory of music, among others the treatise by Fux, which he began to study with a degree of assiduity, not to be checked even by the tremendous abstruseness of Fux's rules. Alone, and without a master, he labored on, and made a number of little discoveries which were subsequently useful to him. Poor, freezing with cold in his garret, without fire, and overcome with sleep, he studied on, by the side of his old broken harpsichord, and thought himself happy. Thus days and nights flew rapidly by, and he has frequently been heard to say, that he never in after life experienced so much felicity. Haydn's predominant passion was rather the love of music than the love of fame; and yet his aspirations after fame had not a tinge of ambition in them. He sought more to please himself, in composing music, than to acquire celebrity.

It was not of Porpora that Haydn learned recitative, as has been represented; his recitatives, so inferior to those of the inventor of this kind of music, prove this; but he acquired through Porpora the true Italian style of singing, and the art of accompanying on the piano-forte, which, to do well, is more difficult than is commonly imagined. He was so fortunate as to obtain these lessons in the following way: A noble Venetian, named Corner, was then at Vienna, as ambassador from that republic. He had a mistress, who was excessively fond of music, and had retained old Porpora in the hotel of the embassy. Haydn contrived, solely from his love for music, to get introduced into the family. He was liked, and used to accompany Porpora and the above lady to the baths of Mancensdorff, which was then a fashionable place. Our young friend, who was indifferent to everybody but the old Neapolitan, employed all methods to get into favor with him, and to obtain his patronage. He rose very early every morning, beat his coat, brushed his shoes, and arranged in the nicest order the old man's wig. Porpora was ill-tempered beyond conception, and poor Haydn seldom obtained more for his trouble than the polite epithet of "fool," as soon as he entered his room of a morning. But, at length, the bear finding he was served *gratis*, and having discovered some of the good qualities of his volunteer servant, would occasionally relax in his severity, and give Haydn some good advice. Haydn succeeded more particularly in obtaining this, whenever he accompanied the beautiful Wilhelmina in singing any of Porpora's own airs, which were filled with difficult basses. Joseph at length acquired the Italian taste in singing. The ambassador, surprised at the improvement of the poor young man, settled on him, on his return to the city, a

monthly pension of six sequins, (about three pounds sterling,) and admitted him to the table of his secretaries. Haydn was now independent; he bought a black coat, and thus attired, went, as soon as it was light, to take the part of principal violin at the church of the Fathers of Mercy; from thence he proceeded to the chapel of Count Haugwitz, where he played the organ; and afterwards sang the tenor at St. Stephen's. He then returned home, having been fully employed all day, and passed a great part of the night at his piano. His taste and knowledge in composition were thus formed upon the rules and examples which he could collect from the different musicians with whom he associated. Availing himself of every opportunity of hearing good music, and following no one master in particular, he began to form his own opinion of what was beautiful in music, but without any idea, at that time, of introducing a style of his own.

At the age of nineteen, his voice broke, and he was obliged to leave his situation in the class of *soprano* at St. Stephen's, or rather he was expelled from it. One day, in a lively frolic, he took it into his head to cut off the tail of one of his companions' gowns—a crime which was judged unpardonable. He had sung eleven years at St. Stephen's, and the day he left it his only fortune was his rising talent, a poor resource indeed till it becomes known. He had, however, one admirer. Forced to seek a lodging, by chance he met with a wig maker, named Keller, who had often noticed and been delighted with the beauty of his voice at the cathedral, and now offered him an asylum. This Haydn most gladly accepted, and Keller received him as a son, insisted upon his participation of their frugal repast, and intrusted to his wife the care of the young man's wardrobe.

Haydn, finding himself thus established in the house of the wig maker, and exempt from all pecuniary cares, pursued his studies without interruption, and made rapid progress. His residence here had, however, a fatal influence on his after life. Keller had two daughters; his wife and himself soon began to think of uniting the young musician to one of them, and even ventured to name the subject to Haydn; who, completely engrossed in his studies, had no thoughts to bestow on love, but made no objection to the proposal. He afterwards kept his word with that scrupulous honor which was his greatest characteristic, and this union proved far from happy. He now began to think of procuring money by some of his compositions, and his first productions were some little sonatas for the piano, which he sold at a moderate price to the few scholars whom he had been able to meet with; also some minuets, allemandes, and waltzes for the Ridotto. He then wrote, for his amusement, a serenade for three voices, which, with two of his friends, he used to perform on fine nights in the streets of Vienna. A celebrated buffoon named Curtz, commonly called Bernardone, was then director of the theatre of Carinthia, and afforded much entertainment to the public by his jokes. Crowds were attracted to the theatre by his originality, and by his good buffa operas. He had, besides, a pretty wife—an inducement, doubtless, to our nocturnal adventurers, to perform their serenade under the harlequin's windows. Curtz was struck with the originality of this music, that he

came into the street to inquire who was the composer. "I," answered Haydn, confidently. "How! you? at your age?" "Every one must have a beginning." "Well, this is singular enough; come in with me." Haydn followed the harlequin, was introduced to the pretty wife, and took his leave with the poem of an opera, entitled "The Devil on Two Sticks," to which he was to compose the music. It was finished in a few days, was received with applause, and Haydn received twenty-four sequins (twelve pounds) for it. But a nobleman, who had no beauty to boast, discovering that he was alluded to under the name of "The Devil on Two Sticks," had the piece prohibited. In the composition of this opera, Haydn often said that it cost him more trouble to find out a way to represent the movement of the waves in a tempest, than it afterwards did to write a difficult fugue. Curtz, who had much mind and taste, was very difficult to please about this tempest, and neither he nor Haydn had ever seen either the sea or a storm. How then could they describe either one or the other? Could the happy art be discovered of describing things unknown, many great politicians would speak better of virtue. Curtz, in the greatest agitation, walked to and fro, and round and round the composer, who was seated at his piano. "Imagine," said he to him, "a high mountain and then a valley, then another mountain and then another valley; these mountains and valleys following each other rapidly, alps and abysses alternately succeeding." This fine description had no effect. In vain did Curtz add to it thunder and lightning. "Come," he incessantly repeated, "now, Haydn, describe all these horrors distinctly in music, but especially the mountains and valleys." Haydn ran his fingers rapidly over the keys, then across the semitones, was prodigal of sevenths, and modulated in an instant from sharp to flat; still Bernardone was not satisfied. At last, the young musician, completely out of patience, extended his hands to the two extremities of the instrument, and drawing them quickly together over the whole keys, exclaimed, "The devil take the tempest!" "That's it! that's it!" cried Bernardone, throwing himself on his neck, and almost smothering him with his embraces. Haydn added, that, passing some years afterwards the straits of Calais in bad weather, he could not help laughing the whole time, at the remembrance of the tempest in "The Devil on Two Sticks."

When Haydn composed this opera he was in his nineteenth year. Mozart, that prodigy of music, wrote his first opera at thirteen, in competition with Hasse, who said, after hearing the rehearsal, "This child will eclipse us all." Haydn's success was not, however, so great; his talent was not for dramatic music; and though he has composed operas which would do credit to any master, he never attained to a "*Clemenza di Tito*," or a "*Don Juan*." About a year after the production of the "Devil on Two Sticks," Haydn entered on his proper career, presenting himself in the lists as composer of six trios. The singularity of the style, and the novelty of this description of music, gave these pieces an immediate celebrity; but the grave German musicians warmly attacked the dangerous innovations in them, and especially the members of the Musical Academy, a sort of club of amateurs who were patronized by the Emperor Charles VI., himself

one of the most ardent dilettanti of his capital. We may here take the opportunity of stating that, before Haydn, no one had an idea of an orchestra composed of eighteen sorts of instruments. He is also the inventor of the *prestissimo*, the bare idea of which made the old square-toes of Vienna tremble. Indeed, in music, as in every thing else, we have little idea of what the world was even a hundred years back. The *allegro*, for instance, was then only an *andantino*. Other improvements of Haydn were, the obliging the wind instruments to execute *pianissimo*, also the extension of the scale into the heights of *altissimo*. It was at about the age of twenty that he produced his first quartet in B flat, which all the musical amateurs soon learned by heart. About this time he quitted the house of his friend Keller, for what cause is not known; but it is certain that his talents, though they had already spread his fame, had not yet raised him from indigence. He was now offered board and lodging by a Mr. Martinez, on condition of giving lessons on the piano and in singing to his two daughters. It is a singular circumstance that two apartments in the same house then contained the first poet of the age, and the greatest symphonist in the world, as Metastasio likewise lodged at the residence of Mr. Martinez. The poet, however, being in the employ of the Emperor Charles VI., lived comfortably at least, whilst poor Haydn remained in bed most of the days of winter for want of fuel. The delicate and profound sensibility of Metastasio had produced in him a just taste in all the fine arts. He was enthusiastically fond of music, and had a considerable knowledge of it. The merits of the young German were therefore not lost on him; but, on the contrary, he cultivated his friendship—a circumstance highly advantageous to Haydn. The latter dined with the poet every day, and derived from his conversation some general rules relative to the fine arts, at the same time that he learned Italian.

For six long years Haydn endured this conflict against penury, which has been the usual concomitant, in the early part of their career, of most young artists who have attained to celebrity. If at that time he had been patronized by some man of distinction, and sent into Italy for two years, with a pension of a hundred louis, nothing would perhaps have been wanting to the perfection of his talent; but he had not, like Metastasio, his Gravina. At length an opportunity presented itself of improving his circumstances, and he quitted the house of Martinez, entering into the employment of Count Mortzin in 1758. This nobleman gave evening musical parties, and had a private orchestra in his pay. By chance the old Prince Esterhazy, a passionate amateur of music, was present at one of these concerts, which very properly commenced with Haydn's symphony in A, $\frac{3}{4}$ time. The delight of the prince at this piece was unbounded; and he immediately begged Count Mortzin to allow him to receive Haydn into his own orchestra, of which he proposed making him sub-director. Mortzin consented. The author had been prevented that day by indisposition from attending the concert, and as the will of princes, if not instantly complied with, is liable to change, or to be forgotten, many months elapsed before Haydn, who of course, was extremely anxious to enter the service

of the first nobleman in Europe, heard any thing more on the subject.

A means of recalling the young artist to the mind of the prince was eagerly sought by Friedberg, a composer attached to his highness; and he conceived the idea of making him compose a symphony, to be performed at Eisenstadt, the residence of Prince Antony, on his birthday. The composition was completed, and was worthy of its author. On the day of the ceremony, the prince, surrounded by his suite, and seated on his throne, was present, as usual, at the concert. Haydn's symphony began; but scarcely was the first *allegro* half over, than the prince, interrupting the performers, asked whose was that fine composition. "Haydn's," replied Friedberg; and poor Haydn, trembling from head to foot, was made to advance. The prince, on seeing him, exclaimed, "What, is that the music of this little Moor?" (It must be owned Haydn's complexion justified the appellation.) "Well, Moor, henceforth I retain you in my service. What is your name?" "Joseph Haydn." "Why, I remember that name; I had already engaged you; why have I not seen you before?" Haydn, awed by the majesty which surrounded the prince, made no answer. "Go," added the prince, "and dress yourself as my chapel-master; I command you never to appear again in my presence as you are now. You are too little, and have a pitiful looking face. Get a new coat, a curled wig, a collar, and red-heeled shoes; but above all, they must be high, that your stature may agree with your mind. You understand; go, and every thing requisite shall be given you." Haydn kissed the hand of the prince, and went and placed himself in a corner of the orchestra, rather unhappy at being obliged to give up wearing his own hair, and to disguise his youthful figure. The day following, he appeared at the prince's levee in the grave dress which had been appointed to him. He was nominated second professor of music, but always retained among his new companions the name of *the Moor*.

In consequence of the death of Prince Antony, which took place a year afterwards, the title descended to Prince Nicolas, a yet more enthusiastic amateur, if possible, of music than the former. Haydn was now obliged to compose a great number of pieces for the baryton, a very complex instrument, not now in use. It was, however, the favorite of his prince, who performed on it himself, and every day desired to have a new piece for it on his desk. Most of Haydn's compositions for the baryton were accidentally burned; those that remain are useless. Haydn said, that the obligation he was under to compose so much for this instrument improved him considerably.

An event occurred about this period which for some time disturbed the tranquillity of Haydn's life. As soon as he had obtained the means of subsistence, he did not forget to fulfil his promise to his old friend Keller, of marrying his daughter Anne; but he soon found that she was a prude, who had, in addition to her tiresome parade of virtue, a mania for priests and monks. The house of our poor composer was thus constantly beset by them, and he was himself incessantly annoyed and interrupted in his studies by their clamorous conversation. Added to all this, he was under the necessity, as the only means of living at all

on good terms with his wife, of composing, gratis, masses and motets for the convents of these good fathers; but such an employment, imposed on him by her troublesome importunities, could not but be extremely disagreeable to a man whose productions were from the impulse of his own mind, and poor Haydn at length sought consolation in the society of a beautiful singer, named Mademoiselle Boselli, in the service of the prince. It may be imagined this did not increase his domestic happiness, and at length he separated from his wife, whom, however, he always, in pecuniary concerns, treated with perfect honor.

Attached to the service of a patron immensely rich and passionately fond of music, Haydn now enjoyed, in the family of Prince Esterhazy, that happy union of circumstances where every thing concurred to give opportunity for the display of his genius. From this period his life was uniform, and devoted to study. He rose early in the morning, dressed with extreme neatness, and seated himself at a little table by the side of his piano, where the dinner usually still found him. In the evening he went to rehearsals, or to the opera, which took place four times a week at the palace of the prince. Occasionally he devoted a morning to hunting; but in general his spare time was spent either with his friends or with Mademoiselle Boselli. Such, without variation, was the tenor of his life for above thirty years, and may account for the amazing number of his works, consisting of three classes, instrumental, church music, and operas. In symphony he was the greatest of the great, before Mozart and Beethoven; in sacred music he discovered a new path, capable, certainly, of criticism, but which ranks him among the first masters. In the third style, namely, theatrical music, he was estimable only, chiefly because he was but an imitator.

Haydn produced, in the space of fifty years, five hundred and twenty-seven instrumental compositions, without ever copying himself, unless intentionally. Leonardo da Vinci always carried about with him a little book, in which he sketched the singular faces he met with. In the same way Haydn also carefully noted down in a pocket book the ideas and passages which occurred to him. When he was in a happy and cheerful mood, he would hasten to his little table, and write subjects for airs and minuets; if he found himself in a tender or melancholy mood, he would write themes for andantes and adagios; thus afterwards, when composing, if he wanted any particular sort of passage, he had recourse to his magazine. Haydn, however, never undertook a symphony unless he felt himself quite disposed for it. He had a diamond ring, which had been given him by Frederic II., and he often confessed, that if he had forgotten to put this ring on before he sat down to his piano, he could not summon a single idea. The paper on which he composed he would have of the finest and best description; and such was the neatness and care with which he wrote, that the regularity and distinctness of his characters could scarcely be equalled by the best copyist; indeed, his notes had such small heads and slender tails, that he himself, not without justice, called them his flies' legs. All these preparations made, Haydn commenced his work, by noting down his principal idea or theme, and choosing his key. He had a perfect knowledge of the greater or less effect

produced by the succession of certain chords; and he sometimes would picture to himself a little history, which might convey musical sentiments and colors to his mind.

It has been remarked, that no man ever understood the various effects of colors, their relations, and the contrasts that they may form, so well as Titian. So Haydn had the most perfect acquaintance with all the instruments of which his orchestra was composed. No sooner did his imagination furnish him with a passage, a chord, or a simple idea, than immediately he saw by what instrument it ought to be executed to produce the most agreeable and most sonorous effect. He has no doubts on this subject when composing a symphony, the situation which he occupied while at Eisenstadt afforded him the easiest means of clearing them. He assembled the musicians, and had a rehearsal; he made them execute in two or three different ways the passage he had in his head, selected which he preferred, then sent away the musicians, and continued his work. We often meet with singular modulations in Haydn's compositions; but he felt that what is extravagant draws the attention too much from the beautiful. He never attempted any extraordinary change without having first prepared the ear by degrees for it by the preceding chords; and thus, when it occurs, it does not shock the ear by the suddenness of the transition. He said that he had borrowed the idea of many of his modulations from the works of Bach, and that Bach himself brought them from Rome. Haydn confessed the obligations he was under to Emanuel Bach, who, previous to Mozart's birth, was esteemed the first pianist in the world; but he assures us that he owes nothing to the Milanese San Martini, whom he considered as very confused. Haydn, in listening to sounds, had early found, to use his own expressions, "what was good, what was better, what was bad." If the question was put to him, why he had written such and such a chord, or why he had assigned such a passage to one instrument, he never made any other than the following simple reply: "I did it because it went best."

Haydn had some particular and singular rules for composition, which he never would divulge to any one. It is well known that the ancient Greek sculptors had certain invariable rules of beauty, called *canons*. These rules are lost, and their existence is buried in profound obscurity. Haydn, it seems, had discovered something of the same nature in music. The composer Weigl begged him one day to instruct him in these rules, and could obtain nothing more from Haydn than this reply: "Try and find them out."

He had another very original habit: when he did not intend to express by music any particular passion, or any particular images, all subjects were alike to him. "The whole art consists," said he, "in the manner of treating and pursuing a theme." Frequently, when a friend entered as he was about to commence a piece, he would say, smiling, "Give me a subject." Give a subject to Haydn! Who would have presumed to do so? "Come, come," said he, "give me any subject that first strikes you, let it be what it may;" when the person perhaps felt himself obliged to obey. Many of his finest quartets prove this; as they commence by the most insignificant idea, but by degrees this same idea assumes a

character which strengthens, increases, and develops itself, till the dwarf rises into a giant before our astonished senses.

Haydn, when asked to which of his works he gave the preference, replied, "The Seven Words." The following is an explanation of the title. A service called the "*Entierro*" (Funeral of the Redeemer) was celebrated at Madrid about the year 1770. The serious and religious feeling of the Spaniards invested this ceremony with amazing pomp and magnificence. The seven words uttered by Jesus on the cross were successively explained by the bishop from the pulpit, the intervening time between each exposition being filled up by music worthy of the sublimity of the subject. This sacred performance was circulated by order of the directors, throughout Europe; and a considerable reward was offered to any composer who would write seven grand symphonies, expressive of the sentiments which the seven words of the Savior were calculated to inspire. Haydn alone made the attempt, and produced those symphonies which are very generally considered to be the finest of his compositions. Fully to enter into their spirit, however, they must be heard with the feelings of a Christian. Michael Haydn, the brother of our composer, afterwards added words and an air to this sublime instrumental music, and, without altering it in any respect, rendered it an accompaniment. Some of Haydn's symphonies were composed for holidays; and even in the sorrow which they express, the characteristic vivacity of Haydn is discernible; and in some parts there are movements of anger, which are probably meant to designate the feelings of the Jews and Hebrews crucifying their Savior.

With rather a severe cast of countenance, and a laconic method of expressing himself in conversation, which are usually indications of an ill-tempered man, Haydn was gay, humorous, and agreeable. This vivacity, however, it is true, was easily repressed by the presence of strangers, or people of superior rank. His genius naturally led him to employ his instruments to produce laughter; and often, at his rehearsals, he gave little pieces of this kind to his brother musicians. But we possess few of these compositions. Of all Haydn's comic pieces, the only one extant is that well-known symphony, in which all his instruments cease successively, one after the other, so that, at the conclusion, the violin is left to perform alone. There are three anecdotes connected with this piece, which being all attested by eye witnesses, it is difficult to say which is correct. Some say that Haydn, perceiving that the innovations he had made in music were offensive to the prince's musicians, determined to play them a trick. He had his symphony performed, without a previous rehearsal, before the prince, who had been made acquainted with the intention of the thing. The confusion of the performers, who all thought they had made some mistake, and especially that of the first violin, when at the close of the piece he found he was playing alone, afforded much entertainment to the court of Eisenstadt. It is asserted by others, that, the prince intending to dismiss all his band, with the exception of Haydn, this ingenious method of describing the general departure, and the melancholy that would follow in consequence, occurred to him: as soon as each musician had finished his part, he left the room

The third may be dispensed with. At another time Haydn contrived the following singular method to amuse the prince and his company. There was a fair held in a small town of Hungary, not far from Eisenstadt: thither Haydn went, and bought a basket full of children's whistles, little fiddles, cuckoos, wooden trumpets, and other such instruments. He then took the trouble of studying their compass and character, and composed a most amusing symphony with these instruments alone, of which some even performed solos: the cuckoo is the bass of this piece. Haydn, being in England many years after this, observed that the English, who liked his compositions much when the movement was *allegro*, generally went to sleep when it was *andante* or *adagio*, whatever their beauties might be. He, in consequence, wrote an *andante*, full of sweetness and flowing melody, the sound of all the instruments in which gradually diminishes; when, from the moment they all arrive at *pianissimo*, they strike up again together, and, aided by the beating of the kettle drum, make the drowsy audience instantly attend.

Haydn worked incessantly, but with difficulty; which in him could not possibly arise from any deficiency of ideas; but his taste was not easily satisfied. A symphony cost him a month's labor, a mass almost double that time. His rough copies are filled with different passages, and for one symphony, sufficient ideas are noted down for three or four. Haydn himself has said that his greatest happiness was study. Solitary and sedate as Newton, and wearing the ring given him by the great Frederic, Haydn would seat himself at his piano, when, in a few moments, his imagination soared among the angelic choirs. Nothing disturbed him at Eisenstadt; he lived solely for his art, exempt from any earthly cares, and this uniform and peaceable life, devoted to the occupation most pleasing to himself, continued till the death of the Prince Nicolas, his patron, in 1789.

At one time he was requested by the principal managers of the theatres of Naples, Milan, Lisbon, Venice, London, &c., to compose operas for them. But the love of peaceful retirement, his attachment to his prince, and to his own methodical habits, retained him in Hungary, and were even more powerful than his wish to pass the mountains. It is probable, had not Mademoiselle Bosselli died, he would never have quitted Eisenstadt; but he then began to feel a void in his life. He had sent a refusal to the directors of the *concert spirituel* at Paris; but since his favorite no longer existed, he accepted the proposals of Salomon, who was then giving concerts in London, and who thought that a man of such genius as Haydn being on the spot, and composing expressly for his concerts, would certainly make them fashionable. He gave twenty concerts a year, and offered Haydn one hundred sequins (fifty pounds) for each one; and accordingly he set out for London in 1790, when in the fifty-ninth year of his age. He remained there rather more than a year, and the music he composed for these concerts met with universal approbation. His amiable manners, in addition to his genius, rendered his success highly flattering to his feelings.

In 1794 Haydn again visited London, when he was engaged by Gallini, manager of the King's

Theatre, Haymarket, to compose an opera, which should be got up in the most splendid manner. The subject was the descent of Orpheus into hell. Haydn began the work; but some difficulties having arisen as to the opening of the theatre, the composer, who secretly regretted his peaceful home, could not wait till the permission to do so was obtained, and quitted London with eleven pieces of his "*Orpheus*," which, it is said, are the best of his theatrical compositions: he then returned to Austria, and never afterwards left it.

George III., who was fond of no music but Handel's, still highly appreciated that of Haydn, and the German professor met with the most flattering reception from him and the queen. Haydn had further the honorary degree of doctor of music conferred on him by the University of Oxford—an honor which Handel himself had never obtained, and which had been bestowed on only four persons since the year 1400. Being expected, according to custom, on this occasion to give a specimen of musical science to the university, Haydn sent a composition, which, whether read from top to bottom, bottom to top, or from the middle of the page, or on either side of it, formed an air, and a correct accompaniment. The following is a copy of this singular piece of music, which, to be read double, the paper on which it is written must be held against the light.

CANON CANCIZANS A 3 VOCE. HAYDN.

Thy Voice, O Har-mo-ny, is Di-vine.
Thy Voice, O Har-mo-ny, is Di-vine.
Thy Voice, O Har-mo-ny, is Di-vine.

Haydn left London, delighted with Handel's music, and in passing through Germany, on his return, gave several concerts, which increased his little fortune rather more than usual. He received little in money from the family of Prince Esterhazy; but the respect he ever met with from the members of that noble house was infinitely more grateful to a man of Haydn's disposition than any pecuniary advantages would have been. He was admitted at all times to the prince's table, and was always presented by his highness with a court dress, when he gave a uniform to his orchestra. Haydn brought no more with him from London than fifteen thousand florins, (one thousand four hundred pounds;) but some years subsequently he obtained the additional sum of one thousand pounds from the sale of the scores of the "*Creation*" and the "*Four Seasons*," with which he bought a small house and garden in the faubourg of Gumpendorf, near Schonbrunn. Here he received a very flattering letter from the French Institute, nominating him one of their members. As Haydn perused this letter he melted into tears, and never afterwards alluded to it without expressing a feeling of gratitude; in fact, the letter was expressed in that dignified and elegant style of compliment peculiar to the French nation.

Haydn, who had early discovered the barrenness of ancient sacred music, the profane luxuriousness of the modern Italian masses, and the monotonous and insipid style of the German hymns, felt that, to compose sacred music as it really should be, he must work on a system altogether different: he borrowed, therefore, few ideas from dramatic music, but preserved, by the solidity of the harmony, some resemblance to the fine and solemn airs of the ancient school, sustaining, by the richness of his orchestra, melodies, solemn, tender, and at the same time dignified and brilliant; he even permitted, in his sacred airs, occasional graces and ornaments which happily relieve, from time to time, the general loftiness and magnificence of his sacred style.

His only precursor in this style of sacred music was San Martini. Long before the composition of the "Creation," Haydn had composed, in 1774, one of his first oratorios, entitled "*Tobie*," a work of moderate merit, in which but two or three movements announce the great master. We have before said that, when in England, he was much struck with the music of Handel; and it was from this musician that he learned the art of the sublime. One day he was present at the performance of Handel's "*Messiah*," and on hearing one of the most sublime choruses in this piece much admired, remarked, in the most pensive tone, "He is indeed the father of us all."

It was in 1795 that Haydn, then sixty-three years of age, undertook his great work of the "Creation;" he labored at it two whole years. When any one hastened him in the work, he replied with tranquillity, "I am long about it, for I wish it to last long."

At the commencement of the year 1798, the oratorio was finished, and the following Easter was performed, for the first time, in the room of the Schwartzenburg palace, at the expense of the Dilettanti Society, who had purchased it of the author. The enthusiasm, delight, and applause expressed at this first performance, can scarcely be depicted; every thing united to render it more imposing. The choicest society of men of letters and amateurs of music filled the saloon, which was in every way perfectly adapted for music; Haydn himself led the orchestra. The most profound silence, and an almost universal feeling of devotion and respect, reigned throughout the assembly as the first chords resounded from the instruments. Expectation was not deceived. A rapid succession of hitherto unknown beauties unfolded themselves to the ear, overcame every hearer, and all agreed they had felt, for two successive hours, a delight scarcely possible to analyze, produced by excited desires, ever renewed and ever satisfied.

The "Creation" met with rapid success: at that time every German paper was filled with eulogiums on this great effort of genius, and the astonishing effect it had produced in Vienna, and the score which appeared a few weeks subsequently satisfied all amateurs of music as to the correctness of this statement. The wonderful sale of this score augmented by some hundred louis the limited income of the author. The librarian had set both German and English words to the oratorio; which were afterwards translated into the Swedish, French, Spanish, Bohemian, and Italian languages. The French version is pompously flat, as may be judged by its coming

from the Conservatory of the Rue Bergère; but still the translator was totally innocent of the slight effect the "Creation" produced the first time it was executed at Paris; the fact is, all minds were engaged on another subject, for, a few minutes before it began at the opera, the infernal machine of the 3d Nivose burst in the Rue Saint Nicaise. Two years after his composition of the "Creation," Haydn, animated by success and encouraged by his friend Van Swieten, composed a new oratorio, entitled "The Four Seasons." The descriptive baron had drawn the text for this work from Thomson. The music contains less sentiment than the "Creation," but the subject admitted of sallies of gaiety, joy at the harvest, and profane love: "The Four Seasons" would be the finest production, in that style, in the world, if the "Creation" did not exist. The music is more scientific and less sublime than that of the "Creation;" but it nevertheless surpasses its elder sister in one point, namely, its quartets. The best critique on this work is that of Haydn himself, when he was told of the flattering approbation it had met with in the palace of Schwartzenburg. "I feel much delight at the manner in which my music has been received," said he, "but I should not wish to hear any compliments on the occasion. I am persuaded all must feel, as I feel myself, that it is not a 'Creation,' for the following reason: In the "Creation," the characters are angels, in this they are peasants." It was an admirable distinction.

Haydn's musical career finished with "The Four Seasons." Old age, and the labor which this work had cost him, exhausted his strength. "I have done," he said, some time after he had completed this oratorio; "my head is no longer what it has been. Formerly, ideas came to me unsought; now I am obliged to seek them, and I am not equal to this."

He composed, however, a few more quartets, but he never could finish that numbered eighty-four, although he worked at it, almost uninterruptedly, three years. Latterly, he amused himself with putting accompaniments to some of the ancient Scotch melodies, for which a London music seller gave him two guineas per song; he arranged nearly three hundred in this way; but, in 1805, he discontinued this employment likewise by order of his physician.

From this time he never left his villa at Gumpendorf. When he wished to remind his friends that he was still living, he sent them a visiting card, with some of his own composition on it. The words on the cards were, —

"Hie ist alle meine kraft. Alt und schwach bin ich."
(My strength fails me. I am old and feeble.)

The music to these words stops in the middle of the period, and without arriving at the cadence, well expresses the languid state of the author's health.

MOLTO ADAGIO.

Hie ist alle meine kraft. Alt und schwach bin ich.

About this time it was determined that the "Creation" should be performed, with the Italian words of Carpi; and a hundred and sixty musicians met, for this purpose, at the palace of

Prince Lobkowitz. They were greatly assisted by the beautiful voices of Madame Frischer, of Berlin, Messrs. Weitmüller, and Radich. More than fifteen hundred people were present. The poor old man insisted, notwithstanding his weakness, upon once more seeing that public assembly for whom he had labored so much. He was conveyed in his arm chair into the magnificent saloon, where every heart was affected. The Princess Esterhazy, and Madame de Kurtzbeck, the friend of Haydn, met him. The flourishes of the orchestra, and still more the agitation of the spectators, announced his arrival. He was placed in the middle of three rows of seats, occupied by his friends and the principal persons at Vienna. Before the music began, Salieri, the director of the orchestra, came to receive Haydn's orders. They embraced; Salieri then hastened to his place, and amidst the general emotion of the assembly, the orchestra commenced. The effect produced by this sacred music, added to the sight of its great composer on the point of quitting this world, may be conceived. Surrounded by the nobility of Vienna and by his friends, by artists, and by lovely women, whose eyes were all fixed on him, listening to the praises of God, which he himself had imagined, Haydn bade a glorious adieu to the world and to life.

So much glory and love frequently caused him to weep, and he found himself much exhausted at the conclusion of the first act. His chair was then brought in, and as he was about to leave the concert room, ordering those who carried him to stop, he first bowed to the public, and then turning to the orchestra, with real German feeling, he raised his hands to heaven, and with tears in his eyes, blessed the former companions of his labors.

Before Haydn had entered his seventy-eighth year, he had become extremely infirm. It was the last of his life. The moment he went to the piano-forte, the vertigo returned, and his hands quitted the keys to have recourse to his rosary, which was his last consolation. War broke out between France and Austria: this intelligence troubled Haydn, and exhausted the remains of his strength. He every moment inquired what news there was, went to his piano, and with a feeble voice sang, "God save the Emperor."

The French armies advanced rapidly, and on the night of the 10th of May, having reached Schönbrunn, about half a league distant from Haydn's little villa, they fired, the next morning, fifteen hundred cannon shot, only a hundred yards from his house, upon Vienna, that town so much beloved by him. He pictured it to himself destroyed by fire and sword. Four bombs then fell close to his house, when his two servants, with terror depicted in their countenances, ran to him; the old man, by an effort, rose from his arm chair, and with a dignified air, cried, "Why such alarm? Know that where Haydn is, no evil can happen." But this exertion was beyond his strength; a convulsive shivering prevented him from adding more, and he was immediately conveyed to his bed. On the 26th of May, he was almost completely exhausted; notwithstanding, he had his piano moved towards him, and sang three times, with as loud a voice as he could, "God save the Emperor." They were his last words. At his piano he became insensible, and expired on the morning of the 31st, at the age of

seventy-eight years and two months. Madame Kurtzbeck had sent to him, during the occupation of Vienna, to beg that he would suffer himself to be removed into the city; but he could not be persuaded to quit his beloved retreat. Mozart's "Requiem" was performed a few weeks afterwards, in honor of him, at the Scotch church. The same homage was rendered to his memory at Breslau, and at the Conservatory at Paris, and a hymn of Cherubini's composition was sung. The music is worthy of the great man it celebrated.

Haydn was very religious; it may even be said that through his firm faith in the truths of religion, his talent was increased. The commencement of all his scores is inscribed with some of the following mottoes: "In Nomine Domini," or "Soli Deo Gloria;" and at the end of them all, "Lauds Deo." If, when he was composing, he felt his imagination cool, or that some insurmountable difficulty prevented his proceeding, he rose from his piano, took his rosary, and began to repeat it. He said this method never failed. "When I was working at the 'Creation,'" said he, "I felt myself so penetrated with religion, that before I sat down to my piano, I prayed confidently to God to give me the talent requisite to praise him worthily." Haydn's heir was a farrier, to whom he left thirty-eight thousand florins in cash, deducting twelve thousand florins which were bequeathed by him to his two faithful servants. His manuscripts, sold by auction, were bought by the Prince Esterhazy.

HAYDN, MICHAEL, brother of Joseph Haydn, was formerly director of music at Salzburg. In 1801, at his brother's solicitation, he was appointed to an advantageous situation in the chapel of Prince Esterhazy, where he met with that regard which his great abilities deserved. Many of his compositions are for the church, and said to be of the most excellent kind. A few specimens are inserted in Latrobe's admirable selection of sacred music: these consist of verses taken from a mass, written for the use of country churches, and they serve to show how wide a difference there is between the taste and ability of English and German parish singers. According to the testimony of his brother, Michael Haydn was in no way inferior to himself as a musical genius, though he has not been equally distinguished and successful.

HAYDON. An English composer of vocal music, in the early part of the last century. The most remembered of his works is the duet "As I saw fair Clara."

HAYDON, THOMAS, son of a respectable attorney, formerly of some eminence in the city of London, was born in 1787. He began the practice of the piano-forte about the age of seven years, under the tuition of Edward Frith, a London organist; but as it was intended he should follow his father's profession, music received, at that time, but a moderate share of his attention; and the practice of it was, from accidental circumstances, discontinued when he was about twelve years old, and until he was sixteen or seventeen; at which time he spontaneously and vigorously renewed his studies with Frith, for whom he occasionally officiated as organist. Finding a growing dislike to the quirks and quiddities of the law, he at length began to think

seriously of music as a profession, and to that end continued his studies with Charles Neate, from whom he received much valuable instruction in the art of piano-forte playing. In 1810-1811 he performed several times in public, and became soon after a member of the Royal Society of Musicians. Feeling the imperfections of the piano-forte, and observing that those professors most eminent for time and manner were often performers on some concert instrument, Haydon, at an early part of his professional career, attended also to the practice of the violin and tenor, in the hope of appreciating and enjoying the inestimable quartets of Haydn, Mozart, Beethoven, &c.; and the establishment of the Philharmonic Society furnished him, as well as others, with an opportunity of studying the effects which so powerful an orchestra was capable of producing, and of witnessing the manual skill and excellent talent of his own countrymen, when put in competition with some of the most eminent professors of the continent. Haydon, for a short time, devoted his attention to vocal music, and had the advantage of some excellent instruction from Thomas Welch, whose knowledge of dramatic effect, and of the connection between sound and sense, tended much to exalt his ideas of the powers of his art. To Dr. Crotch he was also indebted, in a great degree, for his knowledge of musical science.

On the establishment of the Royal Academy of Music, Haydon was chosen one of the professors of that institution. The compositions published by him are bagatelles, which appear to have been written more for the amusement of a leisure hour than with the design of distinguishing the author as a composer.

HAYES, CATHERINE, a native of Limerick, Ireland. When she was yet a mere child, it was the good fortune of "Katie Hayes" to attract the notice of the late Right Rev. Edmund Knox, then the Bishop of Limerick, by the singular precocity of her vocal powers. As he was boating on the Shannon with some others of his family, he passed the town mansion of the Earl of Limerick, and was attracted by the melody of a sweet but childish voice, singing in the garden. He listened, and was fascinated by the girl, and determined on discovering her. Accordingly, after a few days, he found that she was the relative of an aged lady who resided in the mansion, and was generally to be found there when the earl was not in town. "Katie Hayes" was shortly after invited to the episcopal dwelling, where the kindest encouragement overcame her timidity, and she soon became the star of a series of musical reunions that were given principally for her improvement, by her kind patron. Soon after this, Bishop Knox, who had formed an even higher opinion of the capabilities of "Katie," determined, so far as might be in his power, to secure her instruction in her art, and by the subscription of several of his friends, a sum of money was collected for the purpose of placing her under the instruction of Signor Sapio, then a resident in Dublin. Here she arrived at the commencement of the spring in 1811, and immediately commenced a course of hard and unremitting study, in which her improvement was so unmistakable, that her first appearance in public was made at Signor Sapio's annual concert,

exactly one month after her arrival in the Irish metropolis. Her timidity was still very great; yet her progress had been so rapid under the instruction of Signor Sapio, that her friends were astounded by it, and she at once became one of the most popular singers at this period to be found in Ireland. She remained with this instructor until 1813, a year which is signalized in her memory by her first having listened to an opera, and having heard Madame Grisi, with the Signori Mario and Lablache, who then appeared in Dublin. From this moment her destiny was cast, and she determined on becoming an operatic singer. After, at length, overcoming the opposition of her friends, she was in the following year enabled to repair to Paris, where she placed herself under the tuition of Manuel Garcia — in every respect the greatest teacher of singing at present living, as may be readily divined, when it is remembered that he is the brother of Malibran and Viardot Garcia, and in addition to this, has been the channel through which Mario, Jenny Lind, Mademoiselle Nissen, and many others of the leading vocalists of the day have acquired the instruction necessary to attain their present position. Somewhat more than eighteen months did Miss Hayes remain with Garcia, who was, to use her own words, "the kindest and most generous of masters." He then declared that it would be impossible, by mere study, to add a grace to the fully developed and beautiful voice she then possessed, so extensive was it in its compass, and so perfect was it both in its upper and lower register. She therefore made up her mind to proceed to Italy, and appear on the stage, under the auspices of the Signor Felice Ronconi. Accordingly, about a month after, she made her first appearance on the stage at La Scala, in the "*Linda di Chamounix*." So unspeakably triumphant, indeed we may say, so absolute was her success, that at the conclusion of the opera, she was summoned before the curtain no less than twelve times. She next visited Vienna; and here her triumph was so flattering, that in a letter home she mentioned her fears that she should be quite "spoiled" by it. On the first night of the Carnival, she appeared in Venice in a new opera. Her performance of the principal character realized its success, in spite of the poverty of the music. She then once more repaired to Vienna, and subsequently visited Naples, Florence, and Genoa. Everywhere her course was attended by the same triumphs. She afterwards returned to England, to dazzle and enchant the lovers of music in her own land. Here she made her first appearance at the Royal Italian Opera, in Covent Garden, and her success was at the same time unequivocal and most decided. The crowd around the doors of the theatre was almost numberless, and when they were opened, the lovers of melody thronged into the building in a manner sufficiently regardless of decorum. At the close of the opera she was recalled before the curtain, and the applause of the audience burst forth with an energy that rendered it obvious to her that she had attained one of the highest points of her ambition. She had succeeded on a stage that witnessed the almost nightly appearance of Grisi and Mario. From this moment her course has been consistently onward. In the following season she was selected by Mr. Lumley

to replace Jenny Lind, who had retired altogether from the scenes, and reaped an even greater triumph at Her Majesty's Theatre, than any which she had previously gathered. She was also honored by an invitation to sing at Buckingham Palace, where the queen herself complimented her on the thoroughly "deserved success" which she had gained, and she received from Prince Albert, who is very essentially a thorough judge of music, a warm and well-merited tribute of his admiration for her talent. At the close of the season, she appeared also in oratorio, and in the "Messiah" of Handel, and the "St. Paul" of Mendelssohn, made a success so decided, that it at once established her reputation as the greatest interpreter of sacred music at present to be found. She had now determined upon visiting her own native land, and in November she reappeared in Dublin, at the Philharmonic Concerts in that city. Here her reception was beyond conception enthusiastic, and she was the recipient of an ovation of popular delight which is almost beyond belief. She then made her appearance at the Theatre Royal, under Mr. Calcraft's management. Subsequently she appeared at her own native city, Limerick, and in Cork, where the enthusiasm, high as indeed it mounted, could but equal that which had been displayed in Dublin. Indeed, her success in Europe has been remarkable. She has sung repeatedly in private before the Queen of England, both at Windsor Castle and Buckingham Palace. She was honored by the wish, personally expressed to her, by the Emperor of Austria, that she should return to Vienna. In every portion of her professional career, her reputation for virtue as a woman has gone hand in hand with her reputation for genius and talent as an artist.

She sang in New York, September, 1851, and has since made the tour of the United States and Canada, giving concerts with considerable success. She has also sung to enthusiastic crowds in California and in South America.

HAYES, DR. WILLIAM, was, early in life, organist of St. Mary's Church, Shrewsbury, which situation he retained, until, a vacancy occurring in the place of organist of Christchurch, Oxford, he was sufficiently fortunate to succeed to it, and consequently left Shrewsbury for his new appointment. Here he was admitted to the degree of doctor of music, and afterwards appointed professor of music in the university, as well as organist of several of the colleges. Few of his compositions are at present known. Whilst at Shrewsbury, he composed and printed a set of "English Ballads." There are extant, in manuscript, several of his ecclesiastical compositions, which were written for the different colleges, and a few of his catches, glees, and canons have been printed. He also assisted in the publication of Dr. Boyce's cathedral music. Dr. Hayes was considered a studious and active professor, as well as an excellent performer on the organ. He had the sole conduct and management of the concerts and music meetings in Oxford until the time of his death, about the year 1779.

HAYES, DR. PHILIP, son of the preceding, was born about the year 1739, and received his musical education principally from his father. Early in life, he was admitted one of the gentlemen of the Chapel

Royal; in consequence of which appointment he resided almost wholly in London, until his father's death, to whose situation in the university he succeeded. Respecting his compositions, which consist chiefly of anthems and services, little is known; they are, however, said, in many respects, to have great excellence. For several of the concluding years of his life, Dr. P. Hayes is supposed to have been by much the most corpulent man in England. He is even said to have equalled in weight the celebrated Mr. Bright, the miller of Malden, in Essex. The writer of the article respecting him in Dr. Rees's Cyclopædia is by no means liberal in his remarks. He says, that, "with a very limited genius for composition, and unlimited vanity, envy, and spleen, he was always on the fret, and by his situation had a power, which he never spared, to render all other musicians uncomfortable. No one entered the university occasionally, or from curiosity, who did not alarm him. His extreme corpulency will be longer remembered than his abilities, of which he has left no example, that we can recollect, worthy to be recorded." In the month of March, 1797, Dr. P. Hayes went to London, for the purpose of presiding at the ensuing festival for the Musical Fund. He had dressed himself in the morning of the 19th of March, in order to attend the Chapel Royal, but was suddenly taken ill, and expired shortly afterwards. His body was interred in St. Paul's Cathedral, the gentlemen of the chapel, and the choirs of St. Paul's and Westminster, singing Dr. Green's funeral anthem, "Lord, let me know my end." Several of the most eminent musical men attended as mourners.

HAYM, NICOLA FRANCESCO, was born at Rome, of German parents, about 1679, and early in life settled in London, as professor of music, where he was engaged, at the beginning of the last century, with Clayton and Dieupart, in an attempt to establish an Italian opera. The merits of Haym, as a musician, entitled him to better encouragement than he seems to have met with. He published two operas of sonatas, for two violins and a bass, which show him to have been an able master. He was a man of learning, and is to be regarded in other respects than as a mere musician. Being well skilled in medals, he published a work entitled "*Il Tesoro di Ve Medaglie Antiche*," in two volumes quarto, Italian and English. He also wrote "*Le Meropé*," and "*La Demidice*," two tragedies, and published a fine edition of the "*Gerusalemme Liberata*" of Tasso, in two volumes quarto, with cuts; he was also the compiler of a book, very useful to the lovers of Italian literature, entitled "*Notizia de' Librari Italiani*." He further published, about the year 1730, proposals for printing by subscription a history of music, in two volumes quarto, which he had written in Italian, and which was to have been translated into English; but it is to be presumed he met with small encouragement, the work having never been published.

HAYN, F. G., a pianist, published some music for his instrument at Dresden and Brunswick, in the years 1797 and 1798.

H DUR. (G.) B major.

HEAD. The name by which that part of a note is distinguished which determines its posi-

tion in the staff, and to which the filum, or tail, is joined. Also applied to that part of a violin in which the pins, or pegs, are screwed.

HEAD-STALL. A utensil employed by the ancient musicians. See **CARISTRUM**.

HEADS OF NOTES. The heads of notes are either open or close, that is, white or black, and must always be placed on a line or in a space, thus:—

HEARING. That of the five senses to which harmony and melody refer. See **EAR**.

HEATHER, WILLIAM EDWARD, was born in 1784. Manifesting at a very early age an excessive fondness for the creation of musical sounds, young Heather first tried his skill in generating a scale, by suspending irons, called holdfasts, used by cabinet makers and joiners, proportioning them according to their acuteness or gravity, and then striking them with a wooden mallet so as to produce what he then termed music. Saws, chisels, mortises, scrapers, and other tools, were put in requisition for the same purpose of yielding sound, during the absence of his father's journeymen at meals, and to their inexpressible torment and loss of time and tools. At about four years of age, he succeeded in prevailing upon his father to look out at some broker's shop for an old spinet; and after much discussion as to the merits of the different instruments examined, the father considering the workmanship of the case of primary importance, while the son looked for a very contrary quality, one was approved and purchased for a few shillings. After hammering this away until it had lost all vitality, it was bartered for an old virginal, which then appeared to Heather the *ne plus ultra* of all musical instruments. To pass over a variety of other childish efforts, he now approached the time when he may be said to have entered upon his eventful life. As his father's family had much increased, and his parents had not the means, with their limited capital, of supplying their son with efficient instruction in the musical profession, which he was bent on following, and as it appeared pretty evident that some of the children must eventually seek good or evil in the wide world, it was recommended by a worthy friend, a clergyman, that the subject of this memoir should be the first started from the paternal roof. From the boy's rambling and romantic propensities, the proposition was at first met with reluctance by his parents; but in the end the son's good star prevailed, and the before-mentioned friend undertook to procure his admission on the establishment of St. Paul's Cathedral as a chorister. Dr. Chard, of Winchester, leaving the school, young Heather was elected to the vacancy, and placed under the late Mr. Hudson, then almoner and master of the boys. He here completed his time of five years, and received the usual gratuity from the dean and chapter; but as the choir was not then over strong in soprano voices, and Heather's voice being then in its best state, he was retained in the cathedral, and turned over, with the other boys, to the care and tuition of Mr. Bellamy, who succeeded Hudson as master. The children in those days were wholly provided for in the

house, and had masters to superintend the other branches of their education. While in the cathedral, he was occasionally borrowed to assist in the services of other dioceses, so that from incessant employment therein for many years may be traced his constant predilection for cathedral duty although the fashion of the day, in a degree obliged him to relinquish it for more profitable employment. Having benefited by the instructions of Bellamy, and becoming restless (as he himself expresses) "to cast my bread upon the waters in the hope of its returning unto me after many days," he became urgent for his release, which at last was granted. He then engaged as anthem singer to various chapels of ease at the west end of the town, and united himself with choirs, (both Protestant and Catholic,) wheresoever established. During the week he got engagements in harmonic societies and private glee parties, filling up occasional vacancies by provincial employment. With all his practical experience, however, he found, as he increased in years, that his theoretical information was too limited; he therefore followed his studies closely, and haunted the sides of the musicians he chiefly esteemed; whilst, under the plea of turning over for them, he watched their management of their instruments, and humbly sought half a dozen hints for his improvement, when they had finished their performance. His voice still remaining undiminished in strength, he accepted a permanent engagement under the celebrated Rev. S. Parry, to sing at his chapel, near Bedford Square, on Sunday mornings. This employment brought him in contact with the then organist Costellow, to whom he became so much attached, that in the end he prevailed on his father to place him under articles to that gentleman for five years. Costellow had just then succeeded the late Stephen Storace at the piano-forte in the orchestra of Old Drury, and his practice being very great, Heather occasionally supplied his place in the orchestra at rehearsals, and sometimes on the evening of performance. In the year 1798, he commenced a new career by making his first appearance on theatrical boards, in the character of Edward, in "The Smugglers." While his voice lasted, he continued to represent the characters previously so ably filled by the then master Welsh, who had retired; this occupation, combined with provincial and minor engagements, terminated his theatrical career. His articles having expired with Costellow, he parted from his master with regret, whose peaceable and paternal roof he left, to throw himself once more upon a turbulent and sorrowful world. He then entered gay life, became what is termed jolly and convivial, and as his voice had settled into a pleasing counter tenor, found a knife and fork ready for him at most tables he chose to approach. This employment of his time leading to endless engagements in town and country, he found his health giving way, and his opportunities of study totally broken in upon; he consequently formed a resolution to break the charm, and with a small fiddle in his pocket, and but little money, commenced his travels on foot. Poetry, history, and biography constituting his delight, Goldsmith came in for his share of admiration; and, with a light heart and empty purse, he determined upon seeking adventures. To be brief, he returned from the contemplation of lovely nature, and

man in his half wild state, to the metropolis, and commenced teaching, to the great improvement of his finances. He then became organist to the parish of Walthamstow, after a severe contest, on the erection of an organ in that church, and took up his abode in a secluded part of Epping Forest. Here he read with more avidity, and improved his musical erudition with more effect, than he had done for several preceding years. He ultimately succeeded in establishing a very lucrative practice, furnished a house in the village of Walthamstow, and received several pupils intended for the profession. But, alas! the melancholy and restlessness which had at times before afflicted him were now renewed; he therefore speedily determined upon once again striking his colors, and after apologizing to the neighborhood through whose kind exertions he had been seated, after a most unprecedented and arduous contest, in his actual situation, he made a final retreat from Walthamstow, tendering his resignation as organist. He now returned to the grand focus, London, and engaged in several periodical publications. Here, once more, he succeeded in establishing himself comfortably, and increasing his practice. The old leaven of vagabondizing, however, returned, and he must fain leave all present happiness and prospective advantage to see once more a change of country and scenery. In due time he returned to London, and undertook the management of the musical proceedings of the Caledonian Institution, then in its infancy, for the support of Scotch soldiers and sailors and their families. About the same period, he agreed to produce a musical piece at Covent Garden Theatre, called "The Nondescript," which, however, was not successful. He next engaged to supply the late Duke of Kent with manuscript symphonies for his excellent band; also in writing for the music trade, and preparing young authors' works for the press, at the same time increasing a very considerable professional and private practice. Engagements and wealth now once more flowed in apace, with the usual consequences—desire of change. He now pictured to himself the services he might render mankind by becoming a disciple of Esculapius; the thought had no sooner existed than the change was determined upon. He sold all his goods, and exchanged music for the dissecting room. These studies were pursued for some time very industriously; but his ruling passion again returning for music and a wandering life, he deserted the table of the demonstrator, and renewed his visits to former patrons at their residences in the country, remaining for a time at different gentlemen's homes. Conceiving his health to be on the decline about this period, he next decided on trying the sea air and bathing for a month or two in the west of England. He therefore proceeded to Sidmouth with the intention of remaining only a few weeks; but as the residence of a very short period brought him into contact with the surrounding neighborhood, music became the order of the day, and in the course of a few months he mustered an orchestra, vocal and instrumental, (purely amateur, with the exception of himself) of all the beauty and fashion of that part of Devonshire. Monthly dinners took place among the gentlemen, at which Heather states he has heard four and five part glees executed with a precision that would have been creditable to

some of his brother professors. The kindness and liberality he experienced here from all parties became, in the end, the cause of extending his stay from three or four weeks to three years. Solicitations constantly arriving for his return to the metropolis, to which place he had only once gone, from Devonshire, for a few years, to get married! he once more shifted his quarters, and quitted the seclusion and peace of "Devon's myrtle vales" for the huge leviathan London, where he remained.

HEBENSTREIT, PANTALEON. The inventor of the famous Pantaleon, and at the same time one of the most skillful violinists of his time, followed, in 1697, the profession of a dancing master at Leipsic, and had attained, even at that period, such proficiency on his instrument, that Count Logi cried out on hearing him, "*Comment! j'ai été en Italie, et je n'ai pas entendu de pareil.*" In 1705, Hebenstreit went to Paris, and played there before Louis XIV. This prince not only loaded him with his favors, but even deigned to give his new instrument the Christian name of its inventor. The year after his return from Paris, he entered the service of the Duke of Eisenach, as chapel and ballet master to the court, where he played double concertos of his own composition with Telemann. In 1708, he went to Dresden, as chamber musician to the King of Poland, and there received a salary of a thousand crowns. The exact time of his death is not known, but he is supposed to have lived beyond the year 1730.

HEBREW MUSIC. Notwithstanding the great labors of the early fathers of the church, and of many other learned men, there are few materials, even in the Scriptures themselves, for a very satisfactory account of the music of the Jewish nation, whose restricted intercourse with other nations prevents our receiving any illustration of it from contemporary writers. All that can be done is to cite a few passages from holy writ, relative to the first ages of the world, from which it will be seen that, from a very early period, the art constantly ministered to the religious ceremonies of the Hebrews. Moses (Gen. iv. 21) tells us that Jubal, sixth in descent from Cain, was "the father of all such as handle the harp and organ." This must have been but a short period after the deluge. Six hundred years after this period Laban reproaches Jacob thus: "Wherefore didst thou flee away secretly, and steal away from me, and didst not tell me, that I might have sent thee away with mirth and with song, with tabret and with harp?" So that at this time vocal and instrumental music was not unusual. For two hundred and fifty years after this period nothing occurs relative to music, when we find Moses, after passing the Red Sea, singing with the Israelites on the occasion. Miriam, Aaron's sister, "took a timbrel in her hand, and all the women went out after her with timbrels and with dances." There seems ground for conjecturing that Miriam, by birth Egyptian, and educated in Egypt, might have learned the use of the timbrel and the dance in that country. The instruments mentioned during the administration of Moses appear to have been confined to the trumpet and the tambourine. After the siege of Jericho, where the rams' horns that were blown were rather military signals than instruments of

music, we have no record of music till the appearance of the canticle of Barak and Deborah, which seems to have been sung in dialogue without instruments, excepting the timbrel and the trumpet before mentioned. From several passages music appears to have been united with prophecy. Samuel (book i. ch. x. v. 5) says to Saul, "Thou shalt meet a company of prophets coming down from the high place, with a psaltery, and a tabret, and a pipe, and a harp before them." These prophets were doubtless poets or psalmodists, *improvisatori* of verses which they sang to the accompaniment of an instrument; and many of the fathers have supposed that the Jews had a college or school of prophets, which was also a school of music, for they almost universally accompanied themselves, or were accompanied by others, with musical instruments. David, who had cultivated music from his infancy, seems to have been destined by his family to the profession of a prophet; and St. Ambrose says that he was chosen by God, above all the other prophets, to compose the Psalms. The power that the harp of David had upon Saul, when he was tormented with the evil spirit, is an example, among many others, of the influence of music on the maladies of the mind, and especially in cases of melancholy. Under the reign of David music was much esteemed. He appointed a great corps of musicians for the celebration of religious ceremonies, and his patronage necessarily extended its influence. David, on all occasions, seems to have been interested in the solemnities of his time: we find him continually dancing and playing before the Lord, with songs, harps, psalteries, timbrels, cymbals, cornets, and trumpets. As in Egypt, the musicians were confined to one family, that of Levi, which was exclusively consecrated to the service of the Lord and the cultivation of music. When Solomon was made king, four thousand were the number "which praised the Lord with instruments." Dr. Burney calls the reign of Solomon the Augustan age of the Jews; and though Solomon, unlike his father, was not himself a performer, and ranked "men singers and women singers, and the delights of the sons of men, such as musical instruments," among the vanities of the world, yet he continued the priests and Levites in his employ. In the reign of Jehoshaphat, the Levites were useful in the field of battle, and were, by their songs, the cause of the victory that was gained; and, indeed, this was not the only instance in which they were similarly serviceable. Some time before the destruction of the temple and the first Babylonish captivity, music and the sacred rites had met with interruption, both on account of war and by their intercourse with foreign nations. The captivity was a mortal blow to the endeavors they had made to recover their music; and sixty-six years, the period of its duration, were sufficient to efface all from their remembrance. This oblivion is feelingly deplored in the 137th Psalm: "How shall we sing the Lord's song in a strange land?" Re-established, but soon afterwards captives a second time, again delivered, and then conquered by the Egyptians, Persians, and Romans, successively, the unfortunate Jews had no leisure to cultivate the arts; and it appears probable that their music, which scarcely deserved the name till the reign of David, even at its best epoch, depended for effect more upon the

number of the performers than upon any refined knowledge of the art. Among the modern Jews, instrumental as well as vocal music was excluded from the synagogue from the time of the destruction of Jerusalem. The singing they allow at the present day is a modern innovation; for, according to a passage of their prophets, the Jews consider it contrary to their law, or at least improper, to sing or rejoice until the coming of the Messiah. The German are the only Jews in the present day who have a regular musical establishment in their synagogues. They sing in parts, and have preserved traditional melodies, which are considered very ancient. At Prague an organ is used to accompany the singing.

HECK. A writer of a treatise on thorough bass, published previously to the year 1797.

HEEREN, ARNOLD, II. L., professor of philosophy at Gottingen, was born in 1760. He wrote "*Dissert. de Chori Græcorum tragici Natura et Indole, Ratione Argumenti habita*," Gottingen, 1784.

HEERINGEN, VON, of New York, in March, 1850, patented a new system of musical notation, and several works on this system were published the same year by Huntington & Savage, New York. Professor Heeringen's system dispenses with the use of flats and sharps, and of what we call the signature. Instead of our seven syllables, do, re, mi, &c., it has twelve, giving a syllable for each letter, sharp and natural. Doe, dee, ray, rec, me, ia, fee, sole, see, la, lee, da, doe. The music is then written in black and white notes, the color having no reference to the length of the note; that is, the white notes are to be sung natural, or to be played upon the white keys of the piano-forte, and the black ones sung flat, or sharp, or played upon the black keys. Then the key is indicated by the syllable which belongs to the key note, as the key of fa, &c. There are other important changes introduced.

HEIBERGER, JOSEPH, a German composer, resided at Rome in 1777, and wrote there the opera "*Il Colonnello*," which was considered the best piece of the year in which it was produced.

HEINDL, or HAINDL, director of the concerts at Innsbruck, about the year 1782, composed there the music of an opera called "*The Merchant of Smyrna*."

HEINECHEN, JOHANN DAVID, chapel-master to the King of Poland and Elector of Saxony, was born in 1683. He wrote much music for the church, theatre, and chamber, also several didactic works on music. His compositions bear date from the year 1709 to 1728.

HEINEKEN, NICHOLAS. Composer of "Eight Psalm Tunes in Score, with an Accompaniment for the Organ or Piano-forte." A critic in the "*Harmonicon*" observes of this publication: "Mr. Heineken's eight psalms do him infinite credit, as a harmonist. We have not often met with sacred music of this description, the inspection of which has afforded us so much pleasure as this modest, meritorious work. The sweetness of the melodies, the skilful arrangement of the parts, and the unexampled moderation of the price (three shillings) ought to recommend them, not only to all congregations that promote devo-

tional singing, but to every private family that wishes to cultivate serious music."

HEINLEIN, PAUL, director of the music and organist at Nureuberg, died in 1686. He resided for some time in Italy, and was celebrated for his performance on the harpsichord and several wind instruments. His compositions were also in high estimation.

HEINRICH, ANTHONY PHILIP, is a Bohemian by birth, but has so long resided in this country as to be generally known as "Father Heinrich," the veteran Kentucky composer. He was bred to the mercantile profession, but ultimately became principal in an extensive banking house. In his early life he does not seem to have given much attention to music, and not until, during his travels, he visited Malta, did the passion for it take decided possession of him; then (to use the words of his German biographer) he met with a Cremona lady, who from that moment became his constant companion through all his wanderings, until she was stabbed by a careless musician in the Drury Lane orchestra. For long years they were never separated, and in the crowded city and the solitary prairie she was his only and constant comfort and cheering companion. No marriage vow consecrated their love! — the lady was only a fiddle. Several strange anecdotes are related of him and his violin, which we have not room now to relate. By one of those mutations of fortune common to commercial countries, he lost his large fortune; he neither quailed nor repined at it, but only gave himself up the more to music. He was at Philadelphia when the news of his loss came, and he started from there and travelled on foot over the Alleghanies, and sought, in the solitude of the Kentucky forests, to hold more strict communion with his musical being. For twelve months he dwelt in a solitary log cabin, with no companion but his violin: the cabin is still pointed out as the residence of the musical enthusiast, by the old settlers. From there he proceeded to Europe, played there for several years in the large orchestras, studying hard, and publishing his works; he then returned to this country, but still had to struggle with adversity, which he bore up manfully against; then feeling a desire to see his daughter in Bohemia, he embarked for that country, was still unfortunate, was taken sick, suffered from poverty, as it seems to be the fate of genius always to do: when he arrived his child had left, and he followed her over the continent, and finally rejoined her in New York. Over sixty winters had shed their snows upon his brow, but he still toiled on his musical path; and although some of his compositions have been published in Germany, and his name finds an honorable place in the musical circles of that chosen land of harmony, still he desired that his latest and most mature works should first be given to the land of his adoption.

HEINROTH, J. C. G., published some music for the harp and piano-forte at Dresden, between the years 1788 and 1795.

HEINSIUS, ERNEST, an organist at Arnheim, published at Amsterdam, about the year 1760, six concertos for the violin, and six four-part symphonies.

HELBERT, a German musician, and violinist

at Paris, published, in 1780, twelve trios for the violin, six duos for the flute, and an ariette.

HELD, a violinist in the Chapel Royal at Munich, was considered, in the year 1794, one of the best pupils of the celebrated Eck.

HELD, JOH. THEO., a doctor of laws at Prague, was an excellent amateur singer, guitarist, and composer of vocal music. His first work was published in 1796. It is called "*Rätschen, von Pfeffer, in Musik*," Prague. Another of his publications is "*6 Lieder mit Klavier*," Leipsic, 1803.

HELDERUS, BARTHOLOMEUS, a church composer in the seventeenth century, was born at Gotha. His compositions bear date from 1615 to 1621.

HELE, G. DE LA, chapel-master at the cathedral of Dornick, in Flanders, lived in the latter half of the sixteenth century, and published some masses and other sacred music at Antwerp.

HELPER, CHARLES D', canon and choir master of the cathedral of Soissons, composed several masses and vespers, bearing date from 1653 to 1678.

HELIA, CAMILLO DI. A contrapuntist of the fifteenth century. Several of his compositions were published by De Antiquis at Venice, in 1585, in which work may be found, also, some pieces by Vittorio di Helia.

HELICON. The name of a curious ancient instrument constructed for demonstrating the consonances. It is said to have been originally suggested by Ptolemy; however, Zarhmo and Salinas made such important improvements in it, as to entitle themselves to a considerable share of the honor of its invention.

HELLER lived, probably, about the year 179 as an instrumental performer at Paris, where, in the above year, Pleyel published two of his quatuors for wind instruments.

HELLER, JONATHAN, a doctor in theology, published, in the first half of the last century, several works on music; among others, "*De Saltationibus religiosis*," Leipsic, 1737.

HELLER, STEPHEN, one of the most graceful and original of the modern piano-forte composers, was born at Pesth, in Hungary, on the 16th of May, 1815.

HELLMUTH, FREDERIC, musician to the Elector of Mentz, was born in 1744. He evinced great talents for music from his earliest infancy, and had a fine tenor voice. Three sonatas for the harpsichord, with accompaniments for violin and violoncello, of his composition, were published at Offenbach in 1774.

HELLMUTH, CARL, younger brother of the preceding, was a musician at Mentz, and husband to Josepha Hellmuth, a celebrated singer in Germany.

HEMBERGER, F. A German pianist and good composer, resident in France. He published at Lyons and Paris several operas of instrumental and vocal music, between the years 1787 and 1790.

HEMI. A Greek word, used in music, signifying half; as *hemitone*, half a tone.

HEMIDIAPENTE. (From the Greek.) A false or imperfect fifth. See **FALSE FIFTH**.

HEMIDITONE. *Gr.* A term used in the ancient music, signifying the interval of a major third diminished by half a tone; that is, reduced to a minor third. In the formation of this compound term, the first two of its component syllables are not used in their literal sense, as *half*, but as *less*, or *lesser*; as, hemiditone, a *less*, or *lesser* third.

HEMIOPE, or **HEMIOPEUS.** (*Gr.*) A wind instrument used by the ancients, consisting of a tube with three holes. A kind of flûta, or flute.

HEMMERLEIN, J. C., director of the concerts at Fulda, was considered, in the year 1800, an excellent violoncellist. He was a pupil of Schlick for that instrument, and of Uhlmann for composition. He published a concerto for the violoncello (his Op. 1) in 1801.

HEMMERLEIN, J., a German composer, published, chiefly at Offenbach and Paris, twenty operas of instrumental music, between the years 1783 and 1795.

HEMMERLIN, J. N., chamber musician to the Prince of Bamberg, published there, in 1748, a collection of six masses, entitled "*Chorus Musarum.*" The third of the collection is of his own composition.

HEMMIS, F., chapel-master and organist at Osnabruck, published at Cassel, in 1781, a book of Catholic hymns, in octavo, and in 1792 and 1800, some music for the piano-forte.

HEMPEL, GEORGE CHRISTOPHER, chamber musician and violinist to the Duke of Saxe-Gotha, is known by his publications, since the year 1764, of different concertos and symphonies, and by twelve solos for the violin. He died at Gotha in 1801, in the eighty-sixth year of his age.

HEMPEL, CHARLES WILLIAM, was born at Chelsea, near London, in the year 1777. He showed very early indications for musical talent, and was placed under the tuition of his relation, the celebrated A. F. C. Kollman. With such advantages he could not fail making rapid progress; and at the age of eight, he performed during the service at the King's German Chapel, in St. James's. Some years after this, he was placed at a boarding school in Surrey, where those hours which others devoted to sport and idleness, were by him dedicated to music and drawing. In the years 1793-1794, he went on the continent, principally to Leipsic and Dresden, where he had the most enviable opportunities of cultivating the chief pleasure of his life, music. On his return to London, he became acquainted with some of the most eminent professors, and lost no opportunity of the improvement which such acquisitions afforded him. He had at this time the honor of being introduced to the immortal Haydn. Various circumstances, some years after this period, induced him to have recourse to music as a profession, (which hitherto had not been the case;) and a prospect of succeeding to the organ at Truro being held out to him, he was induced, in 1803, to quit the metropolis. In May, 1804, he was elected organist of St. Mary's, Truro, which post he filled for many years. Sacred music now became his chief delight, and he spared no pains in producing a choir, the performance of which was rarely to be equalled out of a cathedral. It was long ere he turned his thoughts to composition; but after having composed a few psalms, which were

much admired, he was induced to proceed farther. The principal work he published is a volume of "Church Services, Anthems, and Psalms," dedicated to the Bishop of Lincoln. This was received with the most flattering applause, and passed to a second edition. He has also published an "Introduction to the Piano-forte," and a second edition of "Twenty Sacred Melodies," dedicated to the Earl of Falmouth. Hempel acquired the whole of his knowledge of counterpoint from the works of Kolmann, which alone he studied. Hempel also published a poem, and painted many landscapes in oil.

HEMPSEN. Denys A. Humpsey, or Hemptsen, the celebrated Irish harper, was born in the year 1695. He had been in Carolan's company when a youth, but never took pleasure in playing his compositions. Hemptsen was the only one of the harpers at the Belfast meeting, in 1792, who literally played the harp with long crooked nails, as described by the old writers. In playing he caught the string between the flesh and the nail; not like the other harpers of his day, who pulled it by the fleshy part of the finger alone. He learned to play that way. Hemptsen's harp is preserved at Doonhill as a relic of its interesting owner. The following lines are sculptured on it:—

"In the days of Noah I was green;
After his flood I've not been seen,
Fifteen hundred I was found,
By Cormac Kelly, under ground;
He raised me up to that degree,
Queen of Music they call me."

The harp was made by Cormac O'Kelly, about 1700, at Ballynascreen, in the county of Derry; a district famous for the construction of such instruments, and for the preservation of ancient Irish melodies in their original purity. Hemptsen died in 1807, at the great age of 112 years. It will be satisfactory to such as take an interest in the simple annals of the harpers, to learn that the close of Hemptsen's long life was rendered comfortable by the humanity of the Rev. Sir H. H. Bruce, from whose hand he was often literally fed. The day before his death, upon hearing that this gentleman had come to his cabin, he desired to be raised up in his bed, and the harp placed in his hands. Having struck some notes of a favorite strain, he sank back unable to proceed, taking his last adieu of an instrument which had been a companion, even in his sleeping hours, and was his hourly solace through a life protracted to the longest span.

HENFLANG, CONRAD, of Anspach, a celebrated mathematician, published, in 1708, an epistle to the president of the Academy of Sciences at Berlin, in which he very learnedly treats on the theory of music. This paper is republished in the "*Miscellanea Borolin.*" T. 1, P. 3. pp. 245 to 294, of the year 1711, under the title of "*Specimen de novo suo Systemate Musico.*"

HENKEL, MICHAEL, conductor of the music and organist at the Dome Church in Fulda, was born there in 1750. He was a pupil of Vierling, and has composed and arranged much music for the organ. He has also published some pieces for the guitar and flute.

HENNEBERG, JOHANN BAPTISTE, organist of one of the churches of Vienna, composed several dramatic pieces for one of the thea-

tres of that city, and has also published "*Notturmi à quatre Voci e Piano-forte*," and some military music. These compositions bear date from the year 1793 to 1802.

HENNET, FREYHERR VON. A noble amateur of music, resident at Prague in 1796. The musical meetings in his house were very celebrated, where he not only took the first violin himself, but composed much of the music which was performed, namely, symphonics, quartets, &c.

HENNIG, C. F., chapel-master at Sorau, published at Berlin, in 1775, a trio for the harpsichord, and in 1781, at Leipzig, a "*Quodlibet*," for young musicians, in two volumes. The latter work is a collection of different pieces for the voice and piano-forte. In 1782 he brought out another collection of songs. Besides these vocal compositions, twelve symphonics, six violin quatuors, and six divertimentos for twelve instruments, have been published by him at various periods.

HENNIG, J. C. A flutist and composer for his instrument. His works have been published at Offenbach, Berlin, and Paris, and from Op. 1 to 19, bear date from the year 1796 to 1800.

HENRY, B., a violinist at Paris, has published, since the year 1780, "*Concerto pour Violon, à neuf, No. 1.*" "*Etudes pour le Violon, en deux Parties.*" "*Gammes et Caprices en double Corde.*" "*Thèmes variés dans les vingt-deux Tons les plus usités.*" These themes were adopted by Kreutzer, of the Conservatory, for the practice of his pupils.

HENRY VIII. was a composer and player upon instruments. He composed two masses, which were often sung in his chapel. He sang and played upon the recorder, flute, virginals, and set songs and ballads. An anthem of his composition, in E minor, has been printed in England. When he was journeying, six of the boys and six gentlemen of the choir attended him, who sang every day "Masse of our Ladie before noon, and on Sondaies and holidais, Masse of the daie, besides our Lady Masse, and an Anthempne in the afternoon."

HIENSEL, JOHANN DANIEL. Born at Goldberg, in Silesia, in 1757. He wrote the words and music of an oratorio, called "Jesus," in 1798. He also published some dramatic and other music, and a didactic work on the piano-forte.

HENSELT, ADOLPH, chamber virtuoso to the Empress of Russia, was born at Swabach on the 12th of May, 1814. Henselt's piano-forte compositions are full of sound, deep feeling, and imagination, and perfectly clear and well rounded in their form, even when they are elaborate and richly ornamented. Played by the composer himself, they are said to stream forth with a fullness of melodic and harmonic euphony, and some of them are deeply affecting. His excellence as a player resides in a remarkably energetic fullness of tone. In those left-hand passages peculiar to the *Etudes* of Chopin he is unsurpassed by any of his contemporaries. He is highly esteemed in Germany as a sincere, genuine artist, full of fire and generous enthusiasm, and belonging somewhat to that select class of pianists and composers, of whom Chopin, Stephen Heller, &c.,

may be considered types. Two of his exquisite little romances for piano, viz., the "*Polme d'Amour*," and "If I were a bird, I'd fly to thee," have been favorites in chamber concerts in New York and Boston.

HENSTRIDGE, DANIEL, organist of the cathedral at Canterbury, about the year 1710, composed many anthems. The words of some of them are in the collection entitled "*Divine Harmony*," published by Dr. Croft, in 1712.

HEPP, SIXTUS, an organist at Strasburg, was born in 1732. He was a pupil of Jomelli. Two sonatas of his for the harpsichord were published at the above town, and much more of his music is known in manuscript.

HEPTACHORD. A term which, with the ancients, implied two conjunct tetrachords, or a system of seven sounds. It was also the name given to a lyre, or cithara, with seven chords. In the ancient poetry the word *heptachord* signified certain verses that were sung to the sound of seven chords; that is, to seven different notes, or tones. The interval of the heptachord was equivalent to our seventh.

HEPTAMERIS. (Gr.) In the ancient music, the seventh part of a *meris*, or forty-third part of an octave.

HEPTAPHONOS. (Gr.) The name given to each of the ten musical notes used in the middle ages.

HERALDS, or DES HERAULTS. This appellation the French formerly applied to the minstrels, because, on account of the strength and clearness of their voices, they were qualified, not only for animating the soldiers in battle, but for making proclamations at tournaments and public ceremonies.

HERBERTH, ROBERT. Born in Franconia in 1770. He published some cantatas and piano-forte music. Several of his masses (manuscript) have been much admired.

HERBING, A. B. V., assistant organist to the cathedral at Magdeburg, died in the prime of life in 1767. He published much vocal music of a comic cast, which was very popular in Germany.

HERBST, JOHN ANDREAS, was born at Nuremberg, in the year 1588. At the age of forty he was appointed chapel-master at Frankfort on the Maine. He continued in that station about thirteen years, when he was called to the same office at Nuremberg. In 1650, at the solicitation of his friends, he returned to Frankfort, and kept his former place until the time of his death, in 1660. He was deeply read in the theory of music, and in composition he had few equals. Like most of the Germans, he was a sound and judicious organist. In the year 1643 he published, in the German language, a work entitled "*Musica Poetica*;" and ten years afterwards, a translation into the same language of the "*Arte Præctica e Poetica*" of Giovanni Chiodino. He was also the author of a tract entitled "*Musica Moderna Præctica, ovvero Maniere del buon Canto*," printed at Frankfort in 1658, in which he strongly recommends the Italian manner of singing. His other works are, "A small Tract on Thorough Bass," and "A Discourse on Counterpoint." Of his musical compositions there are only extant "*Meletemata sacra Davidis*," and "*Suspicia S. Gregorii ad Christum*," for three voices. These were printed in the year 1619, at the same time with another of his compositions for six voices.

HERDER, JOHANN GOTTFRIED VON. First preacher at the court of Weimar. He died about 1804. He published many works relating to music; among others, one "On the Spirit of Hebrew Poetry," the second volume of which contains dissertations on the music of the Psalms, and on the union of music and dancing.

HERING, CARL GOTTLIEB, organist of a town near Leipsic, published eleven operas of piano-forte and vocal music, between the years 1789 and 1812. Among them are several didactic works of merit. They are all published at Leipsic.

HERMANN, J. D., a German musician and celebrated pianist and composer for his instrument, resided from the year 1786 at Paris, where he published many works up to the year 1802.

HERMES, HERMANN DANIEL, a clergyman of Breslau, born in 1731, composed some vocal music in a printed collection of music at Breslau, in 1790.

HERMANNUS, CONTRACTUS. A Benedictine monk, born in 1013. He received the name of Contractus from being paralytic in his lower extremities from infancy. He was equally celebrated as historian and composer, of which Walther in his lexicon, and the Abbé Gerbert in his collection of composers, have given sufficient proof; the latter having collected together the rare works of Hermannus, and inserted them in the second volume of his collection, under the title "*Opuscula Musica.*" In the same place he has given specimens of the method of notation at that period. Hermannus died in 1054.

HEROLD, LOUIS JOSEPH FERDINAND, was born at Paris, of German parents, in 1791. He studied composition with Mehul, and the piano with Adam; when more advanced, he received lessons from Cherubini. In 1810 he obtained the first prize for piano playing at the Conservatory. Two years later he won the first prize in composition, which gave him the means of a visit to Italy, where he spent some time in Milan, Florence, Rome, and finally Naples. There, in 1815, he composed his first opera, "The youth of Henry V.," which had no great success. Returning to Paris he produced many works for the Opera Comique. The first, "Charles of France," an operetta in two acts, he composed in company with Boieldieu. This pleased, and his operatic way was open. He composed, in 1817, "*Les Rosières,*" and "*La Clochette;*" in 1818, "*Le Premier venu;*" in 1819, "*Les Troqueurs,*" and "*L'Amour Platonique;*" in 1820, "*L'Auteur mort et vivant;*" in 1823, "*La Muletier,*" "*Lasthénie,*" and "*Le Vendôme en Espagne,*" the latter with M. Auber; in 1824, "*Le Roi René;*" in 1825, "*Le Lupin Blanc;*" in 1826, "*Marie;*" in 1827, several ballets; and in 1829, "*Emmeline.*" These works were of various success; but in 1831 he rose into the first rank of French composers by his "*Zampa,*" in three acts. Soon after this his health began to decline; but he would not change his laborious Paris life. The new administration of the Opera Comique wanted new pieces, and Herold composed the "*Pré aux Clercs,*" and "*La Médecine sans Médecin.*" The former was the last produced, and was his swan song. He died on the 18th of January, 1833, at Thernes, near Paris, and was buried at Père Lachaise, not far from the tomb of Méaul. He

left an unfinished opera, called "*Ludovic,*" which was completed by Halevy, and successfully brought out in 1834. The list of Herold's piano-forte works is considerable, including sonatas caprices, rondos, fantasias, variations, &c.

HERSCHEL, JACOB, brother of the celebrated astronomer, was born about the year 1734. He was master of the king's band at Hanover and an excellent composer of music for instruments, somewhat in the style of Abel and other musicians of his day. One set of his "Sonatas for Two Violins and a Bass" have been reprinted in England. He died in 1792.

HERSCHEL, DR. FREDERIC WILLIAM, younger brother of the preceding, was born at Hanover in 1738, where his father was a musician, and by whom he was educated both in the theory and practice of music. In the course of his theoretical studies, he turned his mind to the higher branches of the mathematics, still, however, considering music as his profession. In the year 1757 he procured the situation of organist in Yorkshire, which he held till 1766, when he accepted a place of the same nature at Bath. It was here that he renewed with ardor his astronomical studies, and, with the aid of a telescope of an immense size, at length discovered the planet which is still known by his name. After this discovery, his majesty George III. desired Herschel to bring his telescope for his inspection to Greenwich, and subsequently to the neighborhood of Windsor, where the king allowed Herschel a pension, on the condition of his giving up music as a profession, and devoting himself entirely to astronomy. We have never heard of any compositions by Dr. Herschel, but understand there are some in manuscript.

HERSTELL, CONRAD, court organist at Cassel, was born in 1770. He is considered in Germany as an excellent pianist and organist, and has published some works for his instrument.

HERSTRICH, or HERABSTRICH. (G.) A down bow.

HERTZL, JOHANN CHRISTIAN, director of the concerts of the Duke of Mecklenburg-Strelitz, and performer on the viol da gamba, was born in Suabia in 1699. He was very celebrated in Germany, as a composer of instrumental music. He died in 1754.

HERTEL, JOHANN WILHELM, son of the preceding, was born in 1727. He was also director of the concerts of the Duke of Mecklenburg-Strelitz, and subsequently of the Duke of Mecklenburg-Schwerin. In his youth he was considered one of the best violinists of the school of Benda; but the weakness of his eyes having obliged him to give up that instrument, he attached himself to the piano-forte, on which, in a short period, he arrived at the highest degree of perfection. His practical works are, 1. "Two Sets of Songs," 1757-1760. 2. "Two Romances," 1762. 3. "Six Sonatas for the Harpsichord." 4. "A Concerto for the Harpsichord, with Accompaniments," Nuremberg, 1767. 5. "Six Symphonies," 1767. 6. "Six Symphonies." He also composed many vocal pieces for the court, among which two Passions are very highly spoken of, the first of which appeared in 1762, and the latter in 1783. Others of his sacred pieces are, "*Jesus in Banden,*" 1782. "*Jesus*

vor Gericht," 1782. "*Jesus in Purpur*," 1783. "*Die Gabe des heiligen Geistes*," 1787. "*Der Ruf zur Busse*," 1787. "*Die Himmelfahrt Christi*," 1787, and "*Die Geburt Jesu-Christi*," 1787. He further published some critical observations on the Italian and French operas. He died in 1789.

HERZ, HENRI, the distinguished pianist, was born at Vienna, in 1806, and commenced his studies at Coblenz, under his father's direction. At the age of eight he played Hummel's variations (Op. 8) in a concert with applause. To obviate a weakness of the left hand, his father had him taught the violin. The organist Hunten gave him some ideas of writing, and at the age of eight years and a half he composed his first sonatina for the piano. In 1816 he entered the Conservatory at Paris, where he studied under M. Pradher, and obtained the first prize in the execution of a concerto of Dussek, and an *étude* of Clementi. From this time his reputation grew rapidly. He studied harmony and composition under Dourlen and Reicha. His first two productions, published in 1818, were "*L'air Tyrolien varié*," and the "*Rondo alla Cosacca*." Moscheles' arrival in Paris had a great influence on his manner; his playing acquired more elegance, lightness, and brilliancy. His greatest successes date from this time; for about twelve years the success of his piano works surpassed that of all other works of the same kind, and publishers offered three or four times as much for his manuscripts as for those of the best composers for the piano. They were widely reprinted in Belgium, Germany, England, Italy, and afterwards in America. Herz has published over a hundred works. The most remarkable are his three concertos for piano with orchestra; a trio for piano, violin, and violoncello. (Op. 54); grand polonaise, with orchestra, (Op. 30); "*Rondo brillant*," dedicated to Moscheles; fantasia (for four hands) in "*Guillaume Tell*;" variations on "*Norma*," on "*Otello*," on "*Le Pré aux Cleres*," on "*Eurianthe*," &c., &c. He also prepared a piano-forte method. In 1831 Herz, with the violinist Lafont, gave concerts with brilliant success in Germany. In 1834 he visited England, where, as well as in Dublin and Edinburgh, he gave many concerts, and produced great enthusiasm. He passed some months of each year after this in England. In 1824 Herz, who had been associated with Klepfer in the making of pianos, established a manufactory himself, which is still in activity. As a teacher of the piano, he is one of the most renowned in Paris. In 1837 he received the decoration of the Legion of Honor. In 1846-7 Herz passed a year or more in giving concerts in this country, and he was one of the first of the virtuosos to reap the new field of public wonder in California, before his return to Paris. The music of Herz is distinguished for its brilliant, polished, elegant, drawing-room manner, but is without much depth or originality of ideas.

HESELTINE, JAMES, a pupil of the celebrated Dr. Blow, was, during nearly half a century, organist of the cathedral of Durham, and was considered one of the finest extemporary performers and church composers of his day. He composed many beautiful anthems for the use of the choir; but on some misunderstanding taking place between him and the dean and chapter, he destroyed the whole of them.

HESSE, ADOLPH FREDERIC, one of the most celebrated organists of this day, was born at Breslau in 1809. He is son of the organ builder, Frederic Hesse. Among his compositions are three symphonies; "*Tobias*," an oratorio; several overtures; cantatas; a psalm for chorus and orchestra; a sonata for piano, (four hands); a piano concerto; a string quintet, and two quartets; motets; a choral book, and thirty-two organ compositions of all kinds. In 1828 and '29, he gave organ concerts in the German cities, and became the intimate friend of Spohr and Rink.

HESSE, ERNEST CHRISTIAN, counsellor of war to the Landgrave of Hesse-Darmstadt, was born in 1676. He was a celebrated performer on the viol da gamba. In 1698 he went to Paris to perfect himself on his favorite instrument. There he remained three years, and took lessons at the same time from the two celebrated masters, Marais and Forqueray. These two professors being bitter enemies, Hesse was obliged to change his name and call himself Sachs to one of them, whilst to the other he was known by his right name. Both the masters were so satisfied with the extraordinary progress and talents of their pupil, that they boasted of him throughout Paris, and finished by challenging each other to a public trial of their pupil's skill, which was decided on, and a concert fixed for that purpose. Their astonishment may easily be conceived, when they both recognized their pupil in Hesse, on the appointed day. That the public might not, however, be disappointed, Hesse performed at the concert, in the style of each of his masters, and was considered to do equal honor to them both. In 1705, he undertook a journey to Holland, England, and Italy. On his return, he visited Vienna, and performed before the emperor, who presented him with a chain of gold. About the year 1713, he accepted the situation of court chapel-master to the Prince of Hesse-Darmstadt. He died in 1767. Besides his compositions for the church, he left much music for the viol da gamba.

HESSE, JOHANN GEORG CHRISTIAN, a celebrated performer on the bassoon, was born in Germany in 1760. He resided for some time in England.

HESSE, JOHANN HENRICH. Author of "*Kurze Anweisung zum General Basse*," published in Germany in 1776. He was previously known as the author of some sacred songs.

HEUDIER, ANTOINE FRANÇOIS, born at Paris in 1782, published some violin music, and composed the music of several melodramas.

HEUGEL, JOHANN, author of several pieces published in Salbinger's "*Concentus* 4, 5, 6, et 8 voces," Augsburg, 1545. He was chapel-master to the Marquis and Landgrave of Hesse-Cassel.

HEUSCHKEL, JOHANN PETER, a chamber musician to the Duke of Hildburghausen, was born in 1773. He was a celebrated performer both on the hautboy and on the organ, and has published some instrumental music.

HEWITT, D. C., is by birth a Scotsman, and went to London about the year 1819. He has written a work entitled "*New Principles and Theory of Musical Harmony*," which is highly spoken of by musical critics.

HEXACHORD. A series of notes consisting of four tones and one semitone, thus: —

The hexachord was invented by Guido. He supposed four parallel lines to be placed one above the other, and the lowest line to represent *ut*, the first space *re*, the second line *mi*, the second space *fa*, the third line *sol*, and the third space *la* thus: —

But finding that the human voice extended to a greater compass, he supposed a second hexachord to commence at *fa*, and rise by degrees through *sol*, *la*, *si* flat, and *ut*, to *re*; and a third to commence at *sol*, and run through *la*, *si* natural, *ut*, and *re*, to *mi*, thus: —

That which begins with *ut*, or C, is the natural hexachord; that which begins with *fa*, or F, is the soft hexachord; and that which begins with *sol*, or G, is the harsh hexachord. The representation of these chords, as given by Hawkins, will be found to contain twenty notes naturally, and six generations of hexachords. The following diagram is copied from Hawkins: —

G A B C D E F G A B B C D E F G G A A B B B B C C D D E E

1 Durum Hexachord.	5 Natural do.
2 Natural do.	6 Mille do.
3 Molle do.	1 Durum do.
4 Durum do.	

Such was the improvement of this ancient writer; and his contemporaries speak of it in terms of highest praise. They say that it enabled one to learn in twelve months more than he could have learned for ten years previous to that time. So enthusiastic were many of Guido's disciples, that they believed and asserted that he received this knowledge by divine inspiration.

HEYDEN, J. B. VON. A German composer of vocal music, published at Berlin and Hamburg, since the year 1797.

HEYNE, FRIEDRICH. Chamber musician to the Duke of Meeklenburg-Schwerin, and second husband to Madame Benda, the celebrated German singer. He has published "*Trois Duos pour deux Flutes*," Op. 1, Berlin, 1792, and a collection of songs, with piano-forte accompaniment, in 1800.

HEYSE, A. G., a harpist and composer at

Halle, has published several works for his instrument, and for the flute, since the year 1792.

HEYTHIER, WILLIAM. This gentleman was made a doctor of music on the following occasion. William Camden, the justly celebrated antiquary, having, a few years previously to his decease, determined to found a history lecture in Oxford university, his friend Mr. Heyther was commissioned to wait on the vice chancellor with the deed of endowment. Heyther, having been very assiduous in the study of music, expressed a desire to be honored with a musical degree; and accordingly that of doctor was conferred upon him in 1622, at the same time with his friend Orlando Gibbons. It is supposed that he then examined into the nature of musical instruction at Oxford, and found that although there was a professorship of music founded by King Alfred, yet the stipend was not sufficient to induce any skilful man to become a candidate for the office; and the reading of an old lecture over and over again had long been considered a matter of form. He therefore proposed, in a convocation held in 1626, to found a new and more useful lecture; and having gained the permission of the university, gave to them by deed, dated the 26th of February, 1627-8, an annual rent charge of sixteen pounds, sixteen shillings and eight pence, to found the above lectureship. Of this, thirteen pounds, six shillings and eight pence were to constitute the wages of the music master, and the remaining three pounds were to be given to the reader of a lecture on the theory of music, once every term, and of an English lecture on music at the time of keeping the acts. Dr. Heyther's endowment was increased by the addition of the ancient stipend, and was afterwards further augmented by Nathaniel, Lord Crew, Bishop of Durham. Dr. Heyther, for some time previously to his taking his degree, was a member of the choir of Westminster, and a gentleman of the Chapel Royal. Camden and he were on so intimate a footing as to reside together in the same house. He was appointed executor in Camden's will, and upon his death, came in for a considerable life estate in his property. Dr. Heyther's knowledge of music does not appear to have been very extensive. Wood informs us that the musical exercise performed as the act for his degree was composed by Orlando Gibbons. He died in 1627.

HEYWOOD. An English musician and poet, born in London. It is said that Queen Mary was so fond of his performance, that she wished to hear him on her death bed. After the decease of that princess, he was obliged to quit England on account of his religion, and terminated his life at Mecklin, in 1577.

HEY-TROLY-LOLY. An old Scotch burden. See BURDEN.

HIEN, L. C. Chamber musician to the Duchess of Wurtemberg, in 1771.

HIGH. An epithet given to any note or tone considerably acute in respect of some other. A word arbitrarily used, and of various meanings, as applied to bass, tenor, or treble voices, or instruments.

HIGH TREBLE. In old French music, the

G clef is placed on the first line, and called the *high treble*, thus:—

HIDDEN. This term is applied to those passages of harmony in which a third or a sixth moves to a fifth; i. e., in which two consecutive fifths may be imagined, though they do not really exist.

HILARD. An eminent harpist. He received from Edmund, the son of Ethelred, a magnificent villa as a present, which, in his declining years, he presented to the church at Canterbury, England, when setting out on a pilgrimage to Rome.

HILARODI. (Greek pl.) Certain itinerant poet musicians among the ancient Greeks, who went about singing little diverting poems or songs. They were dressed in white, and crowned with gold, and originally wore shoes, but afterwards assumed the *crepida*, or sole braced to the foot with straps. The *hilarodi* did not sing alone, but were accompanied on some instrument by a boy or girl, who always attended them in their excursions. From the streets they were introduced into tragedy, as the *magodi* were into comedy.

HILARODIA. (Gr.) The name given by the ancients to those songs, or short lyric poems, sung by the *hilarodi*.

HILARY, ST., Bishop of Poitiers in the fourth century, and born in the same town, was the great adversary of the Arians, who drove him from his native place, and obliged him to seek refuge in Phrygia. After some time he was recalled, and died at Poitiers in the year 367. He composed, in 355, the first hymns in Latin verse, which St. Ignatius ordered to be sung in the churches.

HILDEBRAND, WILHELM, a musician in Germany, published, about the year 1811, at Leipsic, "9 Lieder mit Begl. d. Guitar," and "4 Weinlieder mit kleinen Choren mit Begl. d. Guitarre."

HILL, FREDERIC, of the city of York, a professor of distinguished eminence, was born at Louth, in Lincolnshire, about 1760, where his father filled the office of organist with respectability for many years. At an early age he was invited to the new organ at Loughborough in Leicestershire. Afterwards he returned to London, and, at the solicitation of some of the leading musical characters in York, ultimately settled in that city. As a performer on the piano-forte and violin, he exhibited considerable ability, and as a teacher probably still more, having been employed in the family of the archbishop and the surrounding nobility for many years. The following list of his works bear evident marks of taste and genius: "Grand March," "Caledonian Melody," "Divertimento," "Lady of the Lake," "Six Military Pieces for a full Band," "Canzonet," dedicated to Kalkbrenner, "Six Airs," "Six single Songs."

HILL, THOMAS, brother to the preceding, was organist at Pontefract, and a professor of eminence on the organ, piano-forte, flute, and violoncello.

HILL, JOSEPH, younger brother of the preceding, was organist of Stockton. He was a performer of great ability upon the organ, piano-forte, and harp. His principal compositions are, "Prelude and Fugue, Organ or Piano-forte;" song, "Blow, blow, thou vernal gale;" glee, three voices, "When Aurora's soft blushes;" "The Dawn, or the Shepherd's Call;" "An Introduction, Air, and Rondo;" "Two Numbers of Progressive Lessons for the Piano-forte;" "An Introduction, March, and Finale;" also several productions for the harp.

HILLER, properly HÜLLER, JOHANN ADAM, chapel-master of the Duke of Courland, and conductor of the music at the church of St. Thomas, at Leipsic, was born in 1728. In his childhood he learned to play on the violin, flute, hautboy, and trumpet. He next took lessons on the harpsichord of the celebrated Homilius, then organist of Notre Dame Church at Dresden, where Hiller had been sent to school. Singing, however, was his principal occupation in music; and what most contributed to form his talents in this respect were fourteen operas by Hasse, which he had the opportunity of hearing during nine years that he remained at Dresden, and of which he studied the scores with assiduity. An idea may be formed of his zeal in this pursuit, from the circumstance of his having in three months copied the scores of seven operas by the above master. In 1758 he went to the University of Leipsic to study jurisprudence. There he still continued, however, to cultivate music, and composed six symphonies, besides some sacred cantatas. He next began to occupy himself with the theory of music, and published a dissertation on music, or the imitation of nature by musical sounds. In 1766 he commenced editing a periodical work, entitled "*Wöchentliche Nachrichten und Anmerkungen die Musik betreffend*," (Weekly Reports and Observations concerning Music.) This was the first periodical musical work in Germany. In 1762 he established a concert at Leipsic, which is cited by Gerber as a model for that species of entertainment. In 1771 he opened a singing school for young ladies, and, four years afterwards, founded a sacred amateur concert, in which his pupils sang. In 1786 he joined the Duke of Courland at Berlin, and had the honor of executing, in the cathedral of that city, the "Messiah" of Handel, with an orchestra of three hundred musicians. Besides his periodical work, he wrote "Instructions for Singing correctly, with Examples," also "Instructions for ornamental Singing, with Examples." He translated a French work on music; wrote also the biography of celebrated modern musicians; an account of his performance of the "Messiah" at Berlin; and three small dissertations respecting the same oratorio, on the occasion of its performance at Leipsic. He composed his cantatas for the church in 1753, 1759, and 1761; a new melody to the hundredth psalm, in 1785. He produced the "*Stabat Mater*" of Pergolesi, with the parody of Klopstock, in 1774, the same full choir as in 1786; a collection of motets for the use of the schools, in six volumes, from 1776 to 1787; the "*Te Deum*" of Handel for the peace of Utrecht, with the Latin text, in 1780; the "*Stabat Mater*" of Haydn, with the German translation of Hiller, for the harpsichord, in 1782

"The Pilgrims in Golgotha," an oratorio of Hasse, translated into German, and published for the harpsichord in 1784; and, lastly, the "*Tot Jesu*," an oratorio by Graun, arranged for the harpsichord, in 1785. He composed also some operas and chamber music. He died in 1804.

HILLER, FREDERIC ADAM, son of the preceding, was born at Leipsic in 1768, and easily, as may be imagined, obtained a musical education from his eminent father. Early in life, he appeared on the theatrical boards as a tragedian, and made his *début* in the character of Romeo. He soon, however, quitted the stage, and was appointed, in 1796, *chef-d'orchestre* to the national theatre at Altona. He published much vocal and instrumental music, and some light dramatic pieces.

HILLER, FERDINAND, one of the most promising of the modern composers, was born at Frankfurt on the Maine, in 1812, of a Jewish family. He gave himself to the study of music while very young, and received lessons from Rink, the famous organist, and from the pianist and composer Hummel. He went to Paris in 1818, and entered Choron's institution for sacred music as an accompanist; but he did not remain there long: placed by his family in an independent position, he occupied himself entirely with the development of his talent as a pianist and composer. In 1830 he gave his first concert at the Conservatory, to make known some large works of his own. A symphony, part of a piano concerto, and a "Prayer of the Levites," justified the high opinion of him already formed by the connoisseurs upon the hearing of his two string quartets. As a pianist he was distinguished by the pure and elegant manner of Hummel's school. At a second concert, in December, 1831, he brought out a second symphony, an overture to "Faust," and a piano concerto. Since then he has frequently had new compositions performed and admired in Paris, and as a pianist has played in four-hand pieces with Liszt, Kalkbrenner, and others. But it was by his classical piano and violin *soirées*, with Baillet, in 1835, that he most approved his mastery. After that he left Paris for a time, and retired to Frankfurt. As late as 1852 he was conductor at the Italian Opera in Paris.

HILLMER, GOTTLÖB FRIEDRICH, counselor to the Duke of Wurtemberg, was born in 1756. He published at Frankfurt, in 1781, a collection of odes and songs, and another volume of the same at Breslau, in 1785.

HILTON, JOHN, bachelor of music of the University of Cambridge, was organist to the Church of St. Margaret, Westminster, and also clerk of that parish. He died during the time of the usurpation, and was buried in the cloisters of Westminster Abbey. He was the author of a madrigal in five parts, printed in "The Triumphs of Oriana." In 1627, he published a set of *fa-las* for three voices, which are remarkable for the excellence of their melodies; and, in 1652, a valuable collection of catches, rounds, and canons, for three or four voices, under the title of "Catch that catch can," containing some of the best compositions of this kind any where to be found. Many of them were written by himself, and others by the most eminent of his contem-

poraries. In the books of some of the cathedrals there are preserved a morning and evening service of his composition, which were never printed.

HIMMEL, FREDERIC HENRY, chapel-master to the King of Prussia, was born in 1765, at Treuenbrietzen, a small town in the district of Brandenburg; which same place also gave birth to the venerable Niehlmann, who was not only a great piano-forte player, but also a profound composer. Himmel was intended for the church, and went to the university at Halle, to study theology. After remaining there two years, chance afforded him an opportunity of surprising the King of Prussia (Frederic William II.) by his skill on the piano-forte, which prepossessed the king so much in his favor, that his majesty settled on him an annual stipend, to assist him in cultivating the talent which he evinced for composition. In pursuit of this object, Himmel went to Dresden, where he selected for his master in counterpoint the celebrated Naumann, under whose careful and able tuition he advanced rapidly in the science of composition; so much so, that after two or three years he returned, in 1792, to Berlin, and presented to the king a part of the fruit of his studies at Dresden, namely, the oratorio of "*Isaaco*," the words by Metastasio. This composition was, by his majesty's orders, immediately performed at his private chapel, by the principal musicians of the court, and met with such applause, that the king appointed Himmel his chamber composer, and presented him also with about five hundred pounds: his majesty further gave him permission to visit Italy for two years, supplying him with an ample stipend to defray all his expenses. Before he left Berlin for Italy, his cantata "*La Danza*" was performed with much *éclat*: this was also one of his Dresden compositions. It is probably at Venice that Himmel first resided in Italy, as we find, in the year 1794, his pastoral, "*Il primo Navigatore*," composed for the theatre of that city. At Naples the king requested him to undertake the music for a serious opera, to be called "*Il Semiramide*," and to have it ready for his majesty's birthday, on the 12th of January, 1795. Whilst occupied with this work, the place of chapel-master becoming vacant through the dismissal of Reichardt, the king appointed Himmel to the office before his return from Italy. On his arrival in Prussia, at the end of the same year, a great fire broke out in Potsdam, when he very honorably performed his professional duties, by giving a series of concerts of sacred music for the benefit of the unfortunate sufferers. In the year 1797, some splendid *fêtes* were given by the king in honor of the princess's marriage with the hereditary Prince of Hesse-Cassel. This afforded Himmel an opportunity of showing the fertility of his talents in the highest perfection. His "*Semiramide*" was got up in the most magnificent style at the great Opera House; besides which, he composed, for the occasion of the wedding, two cantatas, entitled "The Hessian Sons," and "The Prussian Daughters;" also a grand cantata, called "Confidence in God." Many of his airs, duets, choruses, fugues, hymns, &c. were also performed on that occasion in concert. A biographer, who was present at the performance of "*Semiramide*," says, that "the music contains such stores of rich thoughts and inventive gen-

ius, that an Italian might easily carve out ten works from Himmel's one, and still be interesting." Himmel himself presided at the piano-forte. Some critics have remarked, that many of the vocal compositions of Himmel, especially his early ones, are overburdened with instrumental accompaniments. This seems to have arisen from his superabundance of ideas, which age corrected. Woe to that juvenile talent which has no shoots that will bear pruning! Very shortly after the above-named festival, Himmel's cheerful music was changed into notes of woe, by the death of his munificent patron, Frederic William II. On this occasion he composed a "Requiem," which was performed in the Dome Church, at the king's funeral, in 1797, by an orchestra of one hundred and fifty performers. For the coronation of Frederic William III., in 1798, Himmel composed a "Te Deum." He then requested leave of the king to take a journey to Stockholm and Petersburg. After having performed before the Russian court, the emperor gave him a ring set with brilliants; his majesty also commanded him to compose a new opera for the following winter; in consequence of which order, and with the permission of the King of Prussia, he remained during that winter in Petersburg, and produced the opera of "Alessandro;" the first representation of which was for his benefit, and brought him the large sum of six thousand rubles, besides many valuable presents. About the year 1801, Himmel visited France, England, and Vienna. In December, 1802, he resumed his functions at Berlin, where he died in 1814. The following list contains his principal published works: "Vingt Variations pour le Clavécin," 1790. "Der Leyermann," 1796. "Blumenstrauss, meinen Gönnern und Freunden gewidmet bey meinem Abschiede aus Berlin im J." 1797. "Der Bergmann," 1796. "Deutsche Lieder am Klavier, ein Neujahrs-Geschenk," 1798. "Musique Champêtre exécutée à Pyrmont le 14 Juillet, 1797, à l'Occasion d'un Fête donnée à S. M. le Roi de Prusse, Fr. Guil. II., par la Société des Eaux de Pyrmont," 1798. "Matrosenlied aus Roberts Eiland," "Deutsches Lied zur Geburtsfeyer R. Friedrich Wilhelm III.," 1798. "Douze Variations sur l'Air, Marlborough s'en va l'en guerre," 1798. "Frauer cantate zur Begräbnissfeyer Fr. Wilh. II. von Horklots," 1799. "6 Deutsche Lieder, mit Begleitung einer Flöte, eines Violoncello, und des Piano-forte." "Six Romances de Florian, avec Piano-forte ou Harp." "Six Romances Françaises, Œuvres de Florian, avec Accompagnement du Piano-forte, Cah. 2." "Sonate pour le Piano-forte, avec la Flute." "Grande Sonate, pour deux Piano-fortes," 1801. "Grande Sestette, pour le Piano-forte, avec Accompagnement de deux A., deux Cors, et Violoncello," 1802. "Quatuor pour le Piano-forte, avec Flute, Violon, et Violoncello," 1803. "Fanchon; das Leyer mädchen," an operetta often printed. "Trois Sonates pour le Piano-forte, avec Violon et Violoncello, dédiés à S. M. la Reine de Prusse, Nos. 1, 2, 3." "Trois Sonates, pour le Piano-forte, avec Violon et Violoncelle," Op. 16. "12 Deutsche Lieder, mit Klavierbegl." "Gestänge aus Tiedge's Urania."

All the following works are published by Kuhncl, at Leipzig: "Air des Matelots, varié pour le Piano-forte, et Violoncello, ou Violon." "Musica Vocale Let. E. Terzetto p. 2 sopr. e Tenore coll' Armonica." "Erossaise pour deux Piano-fortes, ou à quatre m." "Fanchon, arr. en Quatuors, pour deux,

Violons, A. B. Livre, 1, 2." "Polonoise favorite, pour le Piano-forte." "Marche Militaire, pour le Piano-forte, Nos. 1, 2, 3." "6 Gedichte aus dem Kullenion, mit P. F. oder Guit." "6 Lieder v. Göthe, m. P. F. oder Guit." "Die unsichtbare Welt v. Elisa v. d. Recte, m. P. F." "Ouvert. de l'Op. Die Sylphen, à gr. Orch. O. 22." "Klopstock's Auferstehungsgesang für 2 sopr. auch Tenor und Bass, (aa lib.) m. P. F. 23 Op." "Gesellschaftslied: Es kann schon, mit P. F. oder Guit." "3 Gedichte von Friederike Brun, mit P. F." "Zum Jahreschluss, ein Lied, m. P. F." "Concert. p. P. F. Oc. 25 (in D.)" "Souvenir de Pyrmont, Musique de Gluck, avec P. F." "Romance: Assise au bord, avec P. F. ou Guit." "12 Alte Deutsche Lieder des Knaben Wunderhorn, m. P. F. oder Guit." "Freude, Friede, Hoffnung, m. P. F." "Glaube, Liebe, Hoffnung, v. Hufeland, mit P. F. Op. 29." "6 Grosse Walzer für Liebhaber des P. F." "6 Gedichte von Tiedge, Mahlmann, m. P. F. oder Guit." "Grösse im Unglück, von Mahlmann, m. P. F. oder Guit." "Bewusstsein und 5 Gedichte v. Tiedge m. P. F." "Lied von Fr. Schlegel, m. P. F." "Vater Unser, von Mahlmann." "Marches, p. 2 Clar. 2 Fag. &c." "3 Lieder, der Abend auf d. Wasser, u. s. r. c. mit P. F." "Ossian und die untergehende Sonne, nach Herders Uebersetzung und mit Engl. Text, mit P. F. und V." "Trost in Thränen, v. Göthe, für Sopr. und Tenor, m. P. F." "Die Blumen und der Schmetterling, 10 Lieder v. Muckler, mit 10 nach der Natur illuminierten Kupfern, m. P. F. und V." "Die Unschuld, Gedicht v. Muckler, m. P. F." "Romanzen aus Göthe's Faust, f. e. mannl. Stimme, m. P. F." "Wiegenlied, dreystimmig zu singen, m. P. F."

HINDLE. An English counter tenor singer and vocal composer towards the close of the last century. He performed in the years 1791-2 at the Vocal Concerts, and was chiefly eminent as a singer of part songs. He published several sets of canzonets and other vocal music in a pleasing style. His glee, "Queen of the silver bow," is much admired.

HINDMARSH, an English violinist, was considered an excellent performer on the tenor. He was a pupil of Salomon, and performed at his concerts. He died in 1796.

HINGSTON, JOHN, a pupil of Orlando Gibbons, was organist to Oliver Cromwell, who, notwithstanding the rage of the Puritans in general against it, was himself a great admirer of music. Hingston had been retained in the service of the king, but, being tempted by the offer of one hundred pounds a year, he went over to the party of the Protector, and instructed his daughter in music.

HINNER, chamber musician to the Queen of France, was a celebrated harpist. He was in London in 1781, and very much admired for his performance of adagios. He published much music for his instrument at Paris, and four sonatas (his Op. 7) in London. He also wrote the music of an opera called "La fausse Délicatesse."

HINRICHS, JOHANN CHRISTIAN, a professor of statistics at St. Petersburg, was born a Hanburg. He published in the former city a work on the origin, progress, and actual state of the music of the chase in Russia. Suard states

that this work is extremely curious. The author was a friend of Maresch, who invented the style of music for the hunting horns, which has been since brought to such perfection in Russia as to produce effects of which no other music can give an idea.

ILNSTRICII. (G.) An up bow.

ILNZE, AUGUSTUS HIMBERT, doctor of medicine in Schleswic, composed some operettas about the year 1797.

ILIRE, PHILIPPE DE LA, a mathematician and professor of architecture at Paris, died in 1718. In a work written by him, entitled "*Mémoires de Mathématiques et de Physique, &c.*," Paris, 1694, is to be found the following essay: "*Eplacatio diversorum illorum sonorum, quos chorda super instrumentum musicum buccinæ sonitum æmulans tensa edit, laudatâ expositione P. de Chales, et supplementis particularibus non nullis ad que dictus pater non attendit.*" Ilire also wrote in the "*Mémoires de l'Académie des Sciences*," for the year 1716, a dissertation entitled "*Expériences sur le Sm.*"

HIRSCH, LEOPOLD. An excellent violinist in the chapel of Prince Esterhazy, when under the direction of the celebrated Haydn. The following of his works are published at Vienna: "*Trois Duos pour deux Violons*," Op. 2, 1801, and "*Trois Duos pour deux Violons*," Op. 3, 1803.

HIS. (G.) B sharp.

HISTORY OF MUSIC. The following summary is from the French of Alexandre Choron: It is not the intention of the author of the following sketch to comprise in it strictures on every department of the musical art, a labor which would lead far beyond the limits assigned to this article, but simply to give an abstract of the modern European system of music, considered in its essential and constituent parts, which comprehend the laws of sounds or of notes; rhythm; *sembio-technie*, or the system of musical characters; and, lastly, composition, which is so closely allied to the former subjects, that it would be difficult to divide them without a diminution of perspicuity and interest. I shall treat, then, in the most summary manner, of all these compartments together; and this union will be the more easy, as the progress of these different subjects is simultaneous, and is often comprised in the writings of the same author. Although no great improvement is effected in any art suddenly, and without much previous thought and consideration, and though every such discovery is introduced in so gradual a manner as to be hardly perceptible, yet there are periods when accumulated observations, and wants generally felt, lead men who are happily organized, or placed in favorable circumstances, to seize on more extensive views of a subject, and to create more powerful methods of arriving at a knowledge of it, the superiority of which soon becomes generally experienced, and eventually leads the habits and ideas of the whole mass of mankind in a new direction. These rare moments, which are, however, renewed at intervals, form what is called *periods*. They are more or less remarkable, according as the object attained is more or less important. Whenever they have occurred, and whatever may have been the system of ideas that has occasioned them, they may

always be traced to and classed under one of those periods which are regarded as *principal*, and are therefore designated by the term *æpe*. Five of these *principal periods* may be distinguished, namely, that of formation, development, progress towards perfection, permanence and decline. In the subject I am now about to treat, the first three *principal periods* of the musical art, namely, its formation, development, and progress towards perfection, are those I shall have occasion to consider. The existing state of things appears to me to belong to the fourth or permanence period; but I do not feel authorized to speak on that subject, lest I should be taxed with establishing myself as arbiter, and with undertaking to appreciate immaturely the merits of those of whom posterity alone will have the right to judge.

FIRST ERA. *Origin and Formation of the Modern System of Music.*—Music, as well as all other arts, is chiefly derived from the ancients; and, as it is remarked of the French language, that it is merely a corruption or derivation from that of the Greeks and Romans, so it may equally be observed of modern music, that it is only a corruption or derivation from that of the same people, who probably owed *their* knowledge of the art to other nations still more ancient. I do not wish to intimate, by this remark, that, had the Greeks and Romans never existed, language, arts, or music had never been known, as some persons appear to imagine. Nature bestows on all the human race the same faculties; but, supposing the whole race of mankind were endowed in the same proportion with these faculties, which is certainly very doubtful, all are not placed in equally favorable circumstances for the development of their talents; thus, if a backward race of people unite or associate with a more enlightened race, mixed systems are naturally formed in every branch of knowledge. This is precisely what occurred in Europe in the early centuries of the Christian era, when whole nations of barbarians invaded and overspread the Roman empire. How this amalgamation was accomplished is indeed a question worthy the pen of the most able writer, and the discussion of which would probably require an extent of detail that the limits of this sketch will not permit. In tracing the origin and formation of the modern system, I find four principal periods, of which I must, successively, take a short survey: 1. Antiquity; 2. The introduction of chanting in the Christian churches; 3. The Ambrosian and Gregorian constitution; and 4. The invasion of the barbarians.

1. *Of Antiquity.*—Although there remain to us many works on the music of the ancients, still the obscurity which prevails in them, their contradictory assertions, and, above all, the want of models, have precluded the possibility of our having any very distinct and decided ideas on the subject. According to Aristides Quintilianus, who has certainly left us the most complete treatise that now exists on the music of the ancients, some authors of his time defined music to be the art of singing, and all that relates to it; others, the contemplative and active art of perfect and organic singing; others, the art of the beautiful in sounds and movements. As to Quintilianus himself, he looks upon the following exposition of music as the most correct, namely, that it is the art of the beautiful in bodies and movements, (*γρησικία τῶν ἡρῶν καὶ τῶν κινήσεων καὶ ἡρῶν*.) This is a very

general definition, though little so in comparison to some authors, who affirm music to be the universal science. Quintilianus, however, afterwards designs to reduce his definition of music to the study of the voice and accompanying action. To give a further idea of his doctrine, I shall here demonstrate some of the principal divisions of it, from which I have formed the following table, adding a few observations of my own.

TABLE OF THE PRINCIPAL DIVISIONS OF MUSIC, ACCORDING TO ARISTIDES QUINTILIANUS.

Music.	Contemplative.	Natural.	{ General. Arithmetical.
		Artificial.	{ Harmonic. Rhythmic. Metric.
	Active or Eruditive.	Usual.	{ Melopœia. Rhythmopœia. Poetry.
		Enunciative.	{ Organic. Odic. Hyperætic.

The author divides music into contemplative and active. The former lays down the principles, and searches the causes; the latter applies and employs them. In the foregoing table we are alone interested in that subdivision of contemplative music which the author has designated artificial; this treats of harmony, of rhythm, and of metre, to which subjects he devotes the first book of his treatise. By the word "harmony," in the meaning of which all modern authors agree, the ancients understood what the French call intonation, or arrangement of the sounds of the system. Keeping in view this distinction in the ancient signification of the word "harmony," we may proceed to observe, that Quintilianus understood the division of the three genera with which we are acquainted; that is to say, the diatonic genus, the chromatic, and the enharmonic. The diatonic genus, in a space of two octaves and a half, comprised the interval between the *la*, below our bass clef, (example 1,) and the *re* on the fifth line, above our soprano clef, (example 2,) being the full extent of a man's voice: it contained eighteen strings or notes, which had separate names.

The following example shows how these notes, beginning at the second, were divided into tetrachords, that is to say, assemblages of four notes succeeding each other by a progression of one semitone and two tones.

It may easily be conceived that either of these notes might be the final one of an air, which would give so many modes, i. e., keys, each mode being superior or inferior, according as the air either extended above the key note, or as the key

note occupied the centre. Every note was represented by a particular mark, according to the mode and genus. I should here observe, that each genus introduced a number of new notes, which notes were represented by different marks, varying with each mode, thus forming an almost endless vocabulary; and as, in the formation of these marks or signs, analogy was in no way attended to, nothing could possibly be more confused, and the study of music became, of course, extremely difficult. As to rhythm and metre, music was entirely subservient, in these respects, to poetry. Musical composition, it seems nearly certain, was, at the time we are speaking of, exclusively confined to vocal pieces; for the ancient authors never speak of composition, unless in treating of the vocal part of that science; and it is impossible to discover in their productions one single precept relative to the use of intervals as harmonies, nor a single passage clearly proving that they were in the habit of using that style of composition. We may therefore conclude that the ancients were unacquainted with our harmony; whilst another decisive argument, in favor of this statement, is derivable from our positive knowledge of the origin and progress of the modern harmonic art. This I shall endeavor to prove in a succeeding part of this article.

2. *First Centuries of the Christian Era.*—Music, very generally cultivated by the Greeks, was equally esteemed by the Romans, in the reigns of some of their first emperors; some of whom, particularly Caligula and Nero, piqued themselves upon excelling in this art, and on obtaining the public prizes for it. "What a pity to kill so good a musician!" exclaimed Nero, when about to stab himself, that he might escape the ignominious death with which he was menaced. It is well known that he kept five thousand musicians at his own expense. After his death they were all expelled the city; and music, which under his reign had enjoyed the greatest encouragement, from that moment sensibly declined. But what it particularly concerns us to remark is, the influence that music received from its admission into the religious ceremonies of the first Christians, who alone have transmitted to us all the ancient practical music with which we are acquainted. It is well known that, in their assemblies, every person present joined in chanting the different parts of the liturgy, that is to say, the hymns and psalms, &c. This chanting must, of necessity, have been of the most simple and easy description, being sung in chorus, without any preparation, by people who, generally speaking, had not the least idea of music, and who professed also, in every thing, to observe the greatest simplicity. Another cause which, no doubt, contributed to denaturalize the ancient music, was the manner in which it was first set, in Christian churches, to a semi-barbarous prose, or to still more barbarous poetry. The result was, that the rhythm of their music being derived solely from the words, it retained but a slight impression of any sort of measure, and was generally drawn out in slow and unequal time, to a language without harmony. Nevertheless, even in this state of degradation, it still retained some constituent rules, and a certain variety in its changes and character, which rendered it capable of being applied to other kinds of performances.

3. *St. Ambrose's and St. Gregory's Institution of the*

Ecclesiastical Chant. — During the first four centuries of the Christian church, the state of music is not known with precision. The principles were, at the expiration of that time, probably still the same as from the beginning, at least if we may judge from a treatise of St. Augustine; but it appears that the practice of ecclesiastical chanting was then falling into great confusion, which induced St. Ambrose, who was consecrated Archbishop of Milan in 374, to undertake to give a fixed constitution to church music. These two holy fathers were, as their works prove, great amateurs of the art; and there still exist, in the Latin church, both the music and words of a piece of their composition, which is admired even to the present time, and has met with a success equalling that of the *chef-d'œuvres* of more modern masters; I allude to the celebrated canticle of the "*Te Deum*." We have no other specimen of St. Ambrose's peculiar constitution of the chant; and, indeed, on examining the chants of the Milanese church, we find no obvious difference from that of other churches. It appears, however, that St. Ambrose actually left some degree of musical rhythm, in which, however, Pope Gregory, who flourished two hundred years after, far surpassed him. (See the article GREGORY in this Encyclopædia.) We need not repeat what we have there stated, and shall only observe, that with the intention of simplifying music, St. Gregory substituted the Roman letters in place of the more complicated Greek notes. By A, B, C, D, E, F, G, he designated the seven notes of the lower octave, (*octave grave*;) which begins at *la*; and by a, b, c, d, e, f, g, those of the higher octave, (*octave supérieur*;) and by the same letters doubled, the third octave. He applied himself likewise to the completion of the ritual, which he made up of select pieces, chosen from the best remains of antiquity. As the result of these various labors, he formed the system known by the name of the *Roman* or *Gregorian Chant*, which is used to this day, precisely in the form in which it was then established. Not satisfied with having formed this code of musical doctrine, he maintained and propagated it by the establishment of a school for young orphans, who were brought up as singers for the different Christian churches.

4. *The Invasion of the Barbarians.* — To enable us to continue the history of music with some regularity, it is requisite to notice those nations who will soon be found to act a principal part in the history. Long previous to the period of which we have been speaking, that is to say, in the time of the Roman republic, and during the whole duration of the Roman empire, that nation was disturbed by the irruptions of swarms of barbarians. Whilst the government continued wise and vigorous, these attempts were easily repelled; but when, with the children of Theodosius, cowardice and imbecility mounted the throne, the barbarians found but few obstacles to oppose them, and, inundating whole provinces of the empire, soon reduced them to submission. At the commencement of the fifth century, the Goths ravaged Italy; Rome was taken and sacked by Alaric. The Vandals, traversing Gaul and Spain, penetrated into Africa, the Huns into Italy, and the Franks, under Pharamond, made themselves masters, in 493, of the northern part of Gaul, which entire country his successors soon afterwards got possession of. In 476, Odoacer, King

of the Herules, overturned the western empire, soon after which he was taken prisoner and killed in Ravenna, by order of Theodoric, who founded, in 493, the kingdom of the Goths in Italy. It may easily be imagined that, in the midst of such revolutions, the arts were entirely neglected, amongst which music suffered greatly; so that, at the commencement of the sixth century, when the whole western empire was become barbarous, its music was entirely reduced to the chants of the church and the national songs of these barbarians. But the Goths who settled in Italy cultivated the arts, and soon began to imitate the enlightened manners of the people whom they had subdued. From that time the Roman school of music shone with renewed lustre; and about the same time we find Clovis, King of France, requesting Theodoric to send him a musician. Theodoric, wishing to please the king, sent him the singer Aicordé, who had been selected as the best by the learned Boethius, whom Theodoric afterwards caused to be beheaded. "On the arrival of this musician and instrumental performer," observes William du Peyrat, in his researches on the King of France's chapel, "Clovis's priests and singers formed themselves after his style, and sang with greater gentleness and sweetness; having, also, learned to perform on various instruments, this great monarch used them ever after at divine service; which practice was continued under all his successors to the end of that generation: thus, it appears, music was much in use at the courts of our first sovereigns." The Roman chant was first introduced into England by the monk St. Augustine, (whom St. Gregory had commissioned to preach the Christian religion in his country, about the year 590,) and some few years later was propagated in Germany by St. Boniface of Mentz, who is considered as the apostle of that country. Amongst so many different nations, the national taste tended, of course, sooner or later, to corrupt and denaturalize the primitive purity of the Roman chant. With regard to France, we have a positive confirmation of this fact by an ancient anecdote, inserted in the annals of the Franks, and which occurred under the reign of Charlemagne. This prince being at Rome in 787, to celebrate the festival of Easter, a quarrel arose, whilst he was there, between the Roman and French singers; the latter affirming their singing to be superior to that of the former, who in their turn accused the French of having corrupted the Gregorian chant. The dispute was carried before the emperor, who decided it by the following question: "Declare to us," said that prince to his singers, "which is most pure, water drawn from its source, or that which is taken from a distant stream." "Water from the source," replied the singers. "Well, then," said the emperor, "return to the original source of St. Gregory, of whom you have evidently corrupted the chant." The prince then requested the pope to give him some singers, who would correct the defects of the French singers. The pope immediately deputed two very learned singers, named Theodore and Benoit, to undertake this office, and gave them antiphonaries noted by St. Gregory himself. One of these singers the emperor placed at Soissons, and the other at Metz, commanding all the French singers to correct their books from theirs, and to learn singing as well as instrumental accompaniment of them.

Though this command met with some obstacles from the obstinacy or incapacity of the various singers, yet the Roman chant which Charlemagne thus established in France continued generally in use till the commencement of the eighteenth century; about which time the French bishops took it into their heads to reform the liturgy, and consequently the church music. This attempt succeeded, though, with regard to chanting, its effects were deplorable; for being now left almost entirely to the management of ignorant people, devoid of taste, and even, at times, to illiterate schoolmasters, they substituted for the Roman chant, — which, notwithstanding its extreme simplicity, had always retained some sort of rhythm, — they substituted, I repeat, a slovenly and insipid style of church music, which indeed had little more of singing than the name. I must here avow the wish that at the next reformation of the French liturgy, which it appears is to take place sooner or later, the Roman plain chant may be substituted for these miserable compositions, and reestablished in those rights of which it should never have been deprived. It was about the same period, that is to say, in the reign of Pepin, father of Charlemagne, that organs were first introduced in the west. In 757, the emperor of the east (Constantine Copronymus) sent one to that prince, who presented it to the church of St. Cornelle, at Compiègne. They soon became universally used in the churches of France, Italy, and England. The organ was at that time very little understood, and was exclusively confined to the performance of the *regal*, which is now no longer known; though its introduction is not the less remarkable, from the influence which this instrument has at all times possessed over the progress of the art, as we shall presently perceive.

SECOND ERA. Development of the Modern System. — We have now noticed in what manner the *mélange* of the musical ideas of barbarous nations with the remains of Grecian music gave birth to the modern system, and shall next proceed to observe the gradual development of this system. This development may be traced to three principal periods: first, the creation of the gamut or scale, and of modern notation; secondly, the invention of modern rhythm; and thirdly, the determining of the value of notes, and of the rules of counterpoint. To these same periods may be traced the origin and progress of composition. We shall therefore discuss them simultaneously, as we originally intended.

Invention of the Gamut and Origin of Counterpoint. The invention of the gamut presupposes a certain degree of progress in the musical system, in the same manner that the alphabet conveys the preliminary idea of the existence of a language. I make this remark that the scale of music may not be confounded with the *system*, which might otherwise easily be the case. It was in the commencement of the eleventh century, in the year 1022, that the musical scale first took the form which it now retains. This reformation was chiefly owing to Guido, a Benedictine monk of the monastery of Pomposa, born about 990, at Arezzo, a little town of Tuscany; for which reason he is commonly called in France Guy d'Arezzo, but elsewhere he is known as Guido. Duly to appreciate the talents of this celebrated man, we should recall to mind what we have already said in regard to the tetrachords of the

Greeks, and the reform of St. Gregory; and we should know that, in the intervening time between the death of that great pontiff and the period of which we are now speaking, many attempts were made to improve musical notation. Indeed, it may easily be conceived, that letters placed on syllables, to indicate sounds, could not be quickly understood; it was therefore found necessary to seek some more intelligible method. That which most naturally occurred was, to place the letters at different degrees of height from each other, analogous to the elevation or depression of the voice, and to mark these degrees in a more accurate manner by means of parallel lines. This was the method employed before Guy, and he only simplified and regulated it. Instead of repeating the letter, Guy merely wrote it at the commencement of the line, and, whenever it afterwards occurred, simply put a dot in its place. Shortly after, he rendered this still plainer, by placing dots in the intervals of the lines; using these intervals to denote degrees, by which he reduced the distances from one note to another, and made the scale much easier to perform at sight. Guy likewise added to the ancient system a bass note answering to *sol*, on the first line of the clef *Fa*: he designated this note by the *gamma* of the Greeks, (Γ), and it is from this sign that the series of sounds in the system take their name of *gamut*. To these inventions he added another — that of counting by hexachords instead of tetrachords, and of designating by the syllables *ut, re, mi, fa, sol, la*, the *major* hexachord, upon whatever degree of the system it was placed: this was the foundation of his method of soluzion, which, however, it would be tedious to explain here. The invention of counterpoint is likewise attributed to him, though without any foundation. It is true he was one of the first who wrote on the subject, but he was not the inventor; for though this art had made little progress, still it was known before Guy's time, and the following was its real origin: —

We just now observed that the organ was introduced into France in the year 757, and soon became universal in the churches of the west. It was directly used as an accompaniment to the voice. This accompaniment was at first entirely in unison; but the facility with which several sounds could be distinguished at once, occasioned the remark, that, among the various unions of sounds, many were agreeable to the ear. The minor third was one of the first remarked for its pleasing harmony, and was therefore generally used, though only at the close of an air, as we shall perceive from the following example: —

and this method was called *organizing*. There were likewise many other methods; for instance, holding on the sound of the organ on some note below the chant, or singing part, or playing the air a fourth below or a fifth above, and frequently both together, which last was called *double organization*. Soon after, this method was adopted in singing without the organ; and from thence the terms *descant*, meaning double chant, *triple*, *quadruple*, *medius*, *motet*, *quintet*, *quart-et*, &c., all of which preceded the term *counterpoint*. An unin

errupted series of authors anterior to Guy, as Notker, Reuui, of Auxerre, Huebald, and Odon de Cluny, testify the origin and progress of this art, and historically demonstrate its being a modern invention, totally unknown to the ancients. Their writings, as well as those of Guy and of J. Coton, (his commentator,) are to be found in the valuable collection which the Prince Abbé Gerbert published under the title of "*Scriptores Ecclesiastici de Musica Sacra potissimum*," &c.

2. *The Invention of Modern Rhythm.*—As the plain chant consisted of notes of equal value, and as, up to the period of which we have been speaking, it was the only music studied by the learned, rhythm was never mentioned, for being almost entirely null, it could not be considered an object of speculation. From that time, either from the circumstance of profane music, which contained a more distinct rhythm, having risen to a greater degree of importance, or from musicians having begun to feel the necessity of stricter time when the organ and voice moved together, it is certain that this branch of the art began more fully to be considered. The first author who wrote on the subject was Franco, called by some Franco of Cologne, and by others Franco of Paris. This author, whose birthplace, it appears, was uncertain, was supposed to have been a scholar of the cathedral of Liege in 1066; that is to say, in the year in which William, Duke of Normandy, conquered England, and introduced into that country, which was still in a state of barbarism, the germ of manners and civilization. Before Franco, many attempts at the improvement of this part of the musical art had been made, as he himself affirms; but it appears he was decidedly the first who reduced into a system the rules respecting rhythm, which had been established before his time, also extending and correcting them: this entitles him, at least, to be considered as the first classical author on the subject, if not the inventor, and as the source from whence, for some time, all subsequent authors resorted for information. The whole of Franco's work, entitled "*Franconis Musica et Cantus Mensurabilis*," is inserted in the collection of M. Gerbert. It contains an introduction and thirteen chapters; the ten first, with the exception of the second, are on rhythm; the second and three last relate to descent. Without entering into the details of the work, I shall endeavor to give an adequate conception of his doctrine. Measured music, which he considers far superior to plain music, he describes as a chant measured by long and short intervals of time; these intervals of time being expressed either by the voice or by rests. The subsequent details clearly prove that the organ and organization were the origin of musical rhythm. He distinguishes three degrees of time—the long, the breve, and the semibreve. The long may be divided into the perfect, imperfect, or double. It is perfect when in the time of three, or triple; for, says the pious doctor, three is the most perfect number, being the emblem of the Holy Trinity, and it is imperfect when in the time of two; the double it is unnecessary to explain. There are also two kinds of breves, which, however, he does not describe. The semibreve is major or minor. The forms of the notes are as follows: the long ; the double long, ; the breve, ; and the semibreve, . Besides their own proper value,

they have many accidental properties, which, for the sake of brevity, must here remain unnoticed. He indicates, also, the mark of relative rests or pauses. He then proceeds to distinguish five modes, or elements of rhythm: the first mode contains longs, or a long followed by a breve; the second, a long preceded by a breve; the third, a long and two breves; the fourth, two breves and a long; and, finally, the fifth, composed of two semibreves and two breves. These are the elements of his rhythmuopœia. With regard to descent, he defines it to be the union of several melodies, concordant with each other, and composed of different figures: he distinguishes four species of descent, namely, simple, prolate, (*prolatus*), truncate, (*truncatus*), and copulate. To these four species belong consonances and dissonances. There are three kinds of consonances, the perfect, imperfect, and middling. The first kind consists of those of which the sounds can hardly be separately distinguished, as in the octave and unison; the second, where the sounds are perfectly distinct, as in the major and minor third; the middling consonance includes the fifth and fourth. Dissonances are of two kinds, perfect and imperfect: the perfect are the semitone, the tritone, and the major or minor third with the fifth; the imperfect are the major and minor third. He speaks afterwards of the use of consonances, and points out some rules, which, however, are difficult to understand, on account of the imperfection of the examples. An obvious progress is nevertheless visible in these examples, in which we particularly remark the use of the major or minor sixth between two octaves: this is the first example of the kind to be found in the records of the art.

After Franco, music remained in the same state, particularly with regard to harmony, for more than a century; which may be attributed to the crusades taking place about that time, and so completely occupying the attention of all Europe. I shall therefore merely mention, in a cursory manner, Walter Odington, a Benedictine monk of Evershau, in England, who flourished in 1240, and whose work, "*De Speculatione Musicæ*," is only a commentary on the doctrine of Franco, enriched with a few developments relative to time. As much may be said with regard to the work of another English author, Robert of Handlo, entitled "*Regula cum maximis Magistri Franconis, cum Additionibus aliorum Musicorum, compilate per R. de H.*," dated 1326. To give, however, some idea of the composition of that time, I shall here cite a specimen taken from a manuscript of the thirteenth century.

This descent was composed on the following rule: "Those who chant should remark if the chant ascends or descends. If it ascends, the

double note is sung; if it descends, the fifth note." Towards the close of the thirteenth century, we find another commentator on Franco, far more interesting than the before mentioned, and who, in some respects, may be styled an inventor. This was Marchetti, of Padua, author of several works, particularly one on plain chant, bearing date Verona, 1274. He must have written this work when very young, for we have another of his, on measured music, dedicated to Robert, King of Naples; and this prince reigned from 1309 to 1344. We find by these writings, that, at this period, they had admitted a new degree of subdivision of time, by adding a fourth to the three before-mentioned times or values, namely, the *minim*. Descant had also advanced a little; and about this time, chromatic passages were first used. The following are specimens:—

The author gives the theory of them, and treats of chromatic and enharmonic genera at some length. In short, it is evident the art had then sensibly advanced. This remark is confirmed by the writings of John de Muris, doctor of the Sorbonne, who, some say, was an Englishman, others, a Parisian, and others, again, a Norman—the latter of which is most probable. He was long looked upon as the author of all the inventions we have been mentioning, particularly of rhythm and the form of notes, and would most probably still have been considered so, if the researches of M. Gerbert and Dr. Burney had not proved the contrary. It even appears he did not considerably aid the advancement of musical notation; in regard to harmony, however, we are much indebted to him. The impropriety of making two consecutive perfect consonances by similar movement was first suggested in his writings; as were many other precepts relating to the succession of intervals, which are observed to this day. We also find in his works, for the first time, the term *counterpoint* used instead of *descant*. It would appear that, about this time, there was a great variety of opinions respecting the rules of counterpoint, for the doctor complains of the continual changes in the art of music; and about the same period, that is to say, in the year 1322, Pope John XXII. issued a bull forbidding the use of the descant in churches, it having degenerated into abuses, and having no longer any fixed principles. It is believed that John of Muris was still living in the year 1345. He, as well as Franco, had many commentators; amongst whom were Philip de Vitry, of whom little more is known than the name, and Prodoseimo de Beldomando, of Padua, who was a professor of music in that town in the year 1422, but whose writings are now lost. From the thirteenth century to the close of the fifteenth, there is a complete vacancy in the history of counterpoint. It is generally supposed that no vestige now remains of the compositions of that period; but Mr. Perne, of Paris, has discovered, amongst the manuscripts of the royal library of France, some sufficiently important

materials to authorize the hope that this interval may yet be filled up.

3. *Fixation of the System of the Values of Notes, and of the Principles of Counterpoint.*—Towards the close of the fourteenth century, the rhythmical feet, as determined by Franco, began to be abandoned, and as many sounds were introduced into the measure or metre as the subdivision of the different orders of notes at that time would permit. New forms or figures now became necessary to represent new values of time; these were formed towards the close of the fourteenth and beginning of the fifteenth century. Not that we discover any traces of their origin in the writings of that period; nor does Prodoseimo, who wrote in 1412, mention them; but we find them not only instituted, but fixed and regulated, in authors of rather a later date, particularly in the writings of John Tinctor, who was first chapel-master to Ferdinand, King of Naples, and subsequently canon and doctor at Nivello, in Brabant; he must, therefore, have lived in the second half of the fifteenth century. This author left many musical works; amongst which is his dictionary of music, the first ever formed. He published it under the title "*Definitorium terminorum Musicae*," the best possible title for a dictionary; as works of this sort should be simply collections of definitions, and not alphabetical treatises. The doctrine we find in John Tinctor is much better developed in the works of Franchino Gafforio. This writer forms, in truth, a memorable epoch in the history of music, as well by the extent as the stability of his doctrine. He was born at Lodi in 1451, and was named, in 1484, chapel-master of the cathedral at Milan, and professor at the public school of music founded in that town by L. Sforce. Of the works he left, or rather with which we are now acquainted, the most valuable is that entitled "*Practica Musica*," printed at Milan in 1496, and one of the first musical treatises ever published by means of the press. It is divided into four books. The first treats of harmony, that is to say, intonation, for at that time the word *harmony* possessed the same signification as with the ancients; the second treats of measured chant; the third of counterpoint; and the fourth of musical proportions. The second and third are the only books interesting to us, the first containing nothing new. As to the value of notes, Gafforio considers five as essential, which are the five principal notes and their corresponding rests, namely, the maxim, (1;) the long, (2;) the breve, (3;) the semibreve, (4;) and the minim, (5.) There are likewise lesser figures, as the semi-minim, of which there are two kinds, the major semi-minim, (6,) and the minor semi-minim, (7.) Each of these have also a corresponding rest; the long has two rests, one denoting perfection, (a,) the other imperfection, (b.)

The relation these notes bear, one to the other, is denoted by different terms. The relation of

the maxim with the long is called the *major mode*; that of the long with the breve, *minor mode*; that of the breve with the semibreve is called *time*; lastly, that of the semibreve with the minim, *prolation*. At rather a more remote period, this prolation was styled *minor prolation*, and the relation of the minim to the semi-minim, *major prolation*. Each of these relations may be perfect or imperfect, that is to say, triple or double; and that *quoties* is designated by different signs. Besides this, these relations are perfectly independent of each other, which occasions innumerable combinations. The most generally used, as we find from Glareanus, were, first, those in which all the relations are double; secondly, that in which all are doubled, except time: these correspond, the first to our common time of two, and the second to our measure in triple time, using figures of double value; the remainder are included in our compound measures, with a similar modification. Here then the system of values is fixed, if we except some slight modifications, of which we shall presently have to speak. The third book of Gafforio is divided into fifteen chapters. The first two treating, in a general manner, of counterpoint and its different kinds; the third containing eight rules on the succession of consonances, which rules are much the same as those in use at the present day; the fourth chapter is on dissonances, and plainly proves that they employed those intervals in the time of the writer,

but with much circumspection, not longer than for the value of a minim, in passages and by syncope, and even this very rarely. Upon this point he cites various composers who made use of them without any scruple, as Dunstable, Binchois, Dufay, Brasart, &c.; and concludes by agreeing that many of these intervals may be used with propriety. The fifth and sixth chapters are on fourths, and show how they were at that time used; the seventh treats of sixths and thirds; the remaining chapters relate to the arrangement of the different parts. The last but one is remarkable for a singular specimen of a piece, entirely composed of discords; it used to be chanted on the eve of the festival *des Morts*, in the church of Milan, and was called "*Litanie Mortuorum Discordantes*." The following is a verse of it:

Gafforio remarks, with great truth, that it is totally in opposition to good sense, and to every description of good taste. Satisfied with laying down general precepts, Gafforio avoids all details with regard to the form of musical pieces, or to the composers of his time. We find, however, from J. Tinctor, that, at that time, canons were used, and were termed *figures*; even enigmatical canons were known. We also observe the division of music into spiritual and profane; the

former called *motet*, the latter *cantilena*. The collections of that period, and others of rather a later date, offer a choice of compositions, and display the talents of some composers still worthy of our investigation. We shall now, therefore, turn our attention to this point, resuming events from an earlier period. We have previously seen, that when the invasions of northern nations had completed the final destruction and dismemberment of the western empire, music was reduced to the ecclesiastical chant and the national songs of the barbarians; to which may be added those of the nation whom they had conquered. The first distinction between the severe and ideal style is here easily perceived. A collection of popular songs of the middle age, mostly composed by the troubadours, successors of the ancient bards, or by priests and musicians of the same period, such as Raoul de Concy, Thibaut, Count of Champagne, and others, will give a correct notion of the ideal style; whilst as to the severe style, it was confined to plain chant and the counterpoints composed on it. At the period, however, to which we now allude, counterpoint rapidly advanced; the invention of canons soon leading to that of fugues, and many other artificial compositions: the revolution was indeed so sudden and complete, that the art of composition appeared entirely new. According to the testimony of ancient writers, the composers who appear to have acted the principal part in this revolution were, first, J. Dunstable, an Englishman, who died in 1453 or 1458, and who, from the resemblance of the name, has been often mistaken for St. Dunstan, who flourished in the eleventh century; and next, his contemporaries in France, Dufay and Binchois. These were immediately succeeded by Ockenheim, Busnois, Regis, and Caron. This is Tinctor's account, who also wrongly attributes the invention of measured chant to J. Dunstable; in which mistake he has been followed by Seb. Heyden, who wrote in 1537, and subsequently by J. Nuciuz, who joins to Ockenheim, Busnois, &c., many other composers, as Josquin de Pres, H. Isaac, L. Senfel, B. Ducis, &c.: these last, however, are of posterior date. It is believed that the compositions of Dufay and Busnois are now extinct, as well as those of Regis, Caron, and Binchois, who flourished at the commencement and middle of the fifteenth century. Of that period we have but one canon, in six parts, which is rather a good composition, and may be found in Dr. Burney's "*History of Music*," vol. ii. p. 405; many works, however, still remain of the ancient masters of the Flemish and French schools, who flourished about 1480, and subsequently. These two schools were at that time highly renowned. According to Guichardin and others, the Flemish was the more ancient of the two, and furnished all Europe with singers and composers. Amongst the most celebrated of the Flemish masters were James Obrecht, or Hoebrecht, J. Ockenheim, and, above all, Josquin de Pres. The earliest of these three was Obrecht, music-master to the celebrated Erasmus; he was born in 1467, and, it is said, had such facility in composition, that in one night he composed a beautiful mass. This appears an amazing effort of genius, when we reflect on the extraordinary difficulty of his compositions. He lived towards the close of the fifteenth century. John Ockenheim was a composer of rather later date; he

composed a mass for nine choirs and thirty-six parts, replete with artificial passages. The celebrated Josquin de Pres was his pupil, who was unanimously regarded by his contemporaries as the best composer of his time. Of this celebrated man we have still various pieces which evince the most profound knowledge of his art. He was a singer at Rome, and subsequently chapel-master to Louis XII. of France; he died about the year 1520. After him, we may place Pierre de la Rue, B. Dueis, and other composers, who, up to Orlando de Lassus, maintained the glory of the Flemish school. The ancient French school was likewise very celebrated; its principal composer was Ant. Bromel, a pupil of Ockenheim and contemporary of Josquin. We remark, likewise, Fevini, of Orleans; J. Mouton, chapel-master to Francis I.; Arcadelt, Verdelot, L'Heritier, Goudimel, and others that I cannot here enumerate. In Germany, about the same period, we find H. Finck, H. Isaac, L. Senfel, and others. The collections of Peutingger, Bodenschaft, and several more, make known the names and works of above two hundred composers who flourished between the years 1450 and 1580, or thereabouts, and to whom fugues and the most difficult compositions were mere diversions, which they wrote with the greatest ease and correctness. The "*Do-decachordon*" of Glareanus contains a collection of *chef-d'œuvres* of the ablest of these masters, sufficient to gratify the curiosity of any reader. I propose myself to devote one of the parts of my collection of classical music to these works, thus rendering due homage to the memory of these patriarchs of harmony.

THIRD ERA. *Perfecting of the Modern System.*—The era which we have now attained is certainly the most important of all, being the goal and result of the preceding. It appears to offer to our notice the permanency of various parts of the art, as well of those which regard the foundation of the system as of those that relate to the different kinds of musical composition. In fact, when we see doctrines, established without any variation for nearly three centuries, being considered as fundamental principles,—when we see *chefs-d'œuvres* admired for an equal length of time, and regarded as impossible, I will not say to be eclipsed, but even to be equalled,—it may with reason be supposed, that, in many points, the art has attained the utmost limits of perfection, and that, if it does not now remain stationary at the same point, it can only recede, unless, indeed, the whole system were to experience a complete revolution, equal to that which has already taken place with the music of the ancients. To proceed with regularity, I must divide this article into two parts. In the first I shall speak of the art itself, and its progress, without any express allusion to the individuals or nations who contributed to its advancement; in the second part I shall consider the question in an opposite point of view, and allude at some length to the schools and individuals.

FIRST PART. *Of the Art itself.*—What we have to say with regard to the art itself, must be discussed under two principal heads, namely, the musical system, properly so called, and the different styles of composition: this will be the substance of the two following sections.

FIRST SECTION. *Of the Musical System.*—Amongst the various combinations which resulted

from the perfection or imperfection of the ancient modes, themes, and prolations, there is one which, according to Glareanus and other authors, was at all times the most prevalent; I mean that one in which all the values of the notes were imperfect, that is to say, in a double or sub-double ratio. After a time, this combination became so general, that it was in some sort exclusive, and was regarded as the foundation of all the musical relations. To this first simplification of the system of values, various modifications succeeded, which were brought about by the use of bars. As far as I can discover, bars were first introduced by composers who were desirous to render their calculation of corresponding values easier, and therefore hit on the idea of enclosing within the same fixed space as many notes of the score as would agree with one note of great duration, such as a maxim or a long; thus, in the origin of bar writing, they only drew a bar at every eighth or every fourth measure. The works published in 1600 are printed in this manner, and are the first known with any kind of bars, which were not very generally adopted till about one hundred years after. The distance between the bars was in time diminished, till they enclosed but one measure, as in the present day; the only exception now being the *d capella* time, namely, in two semibreves, with a quick movement, when the bars are still marked only every second measure, to avoid their too frequent repetition: this time is, however, rarely used, except in Italy, the French and German composers having mostly submitted this measure also to the prevailing custom. The introduction of bars, with their gradual increase, has produced the natural result of bringing into disuse notes of great value, and at the present period the note of highest value is the semibreve, if we except the breve in *capella* time. As for the round and the maxim they are now no longer known, except by the learned. But in lieu of these the moderns have wonderfully multiplied the diminished notes, by forming crotchets, quavers, semiquavers, &c., which are now very common, though formerly they were scarcely known, except in instrumental music, and then but rarely. The form of these notes has likewise sustained an alteration, though scarcely worth noticing. Formerly, the head of the note was square; towards the middle of the seventeenth century they were formed round, or of an inclined oval; and in the course of one hundred years the round became universal, and is the form retained up to the present time. Rhythm, as we have previously seen, has sustained but slight variation; but it has been quite the reverse with sounds, and consequently with harmony and counterpoint. Till the close of the fifteenth century, the degenerated tones of the Greeks, as preserved in the chant of the Roman church, served not only as a foundation to ecclesiastical chanting, and to the works of composers who endeavored to harmonize those chants, or to compose according to that system, but various profane songs of that time, which we still possess, and some of which are to this day popular, appear to have partaken of the ecclesiastical modes. In the course of the sixteenth century, however, a movement appeared, which led the art to that state of perfection to which it has now attained. To dispel whatever may appear vague or obscure in this remark, it is neces-

nary to give a clear idea of what is meant in music by tone or mode, and subsequently to demonstrate the relations subsisting between the modern and ecclesiastical modes. No one endowed with the most ordinary musical organization, or capable of the slightest observation, can fail to have remarked the tendency that every musical piece has to terminate on some particular note or sound, for which, if another were substituted, the air would be rendered incomplete. This experiment may be tried on the most simple tunes known. You say of a piece of music, it is in the *key* of such a note, when it ends on that note or sound, and which note is called the tonic or principal; now, if you decompose a piece of music which is supposed to be, throughout, in the same key, you will find it is composed of a certain number of different keys, each having a direct affinity to the principal key note. The *ensemble* or system of these affinities constitutes the *musical mode*; and if, from the tonic to the octave, you place all the intermediate sounds in regular succession, you will form the scale of your mode. It is possible to imagine a great number of different modes, from which may be formed a variety of systems. Each of these systems of modes will constitute essentially the same number of idioms or musical languages, which will belong to various races of men. Thus the Eastern nations appear to have had a system of modes quite different from ours, and, indeed, we have not to this day any very distinct idea of them. We have already explained in what the tones of the Greeks consisted, from which were derived the ecclesiastical tones. At the present day the Europeans have but two modes, namely, the major mode, the scale of which is contained in *ut, re, mi, fa, sol, la, si, ut*; and the minor mode, in which the ascending scale is *la, si, ut, re, mi, fa, sol, la*, and in descending, *la, sol, fa, mi, re, ut, si, la*: this is, at least, according to the notions at present existing; though, according to my idea, there is still much want of precision and accuracy in the theory of this subject. However this may be, these modes are entirely modern, it being hardly more than one hundred or one hundred and fifty years (I cannot precisely state the period) since they have become prevalent, indeed exclusively so, and to the extent of rendering it a doubtful question, whether or not the modern nations of Europe can ever accustom their feelings to any other system of tones, and further whether all other such systems are not, for them, rather systems of modulation, that is to say, of concatenation of modes, than a *system* of modes, properly so called. I shall not stop to examine this question, but merely remark, *en passant*, that it was in the sixteenth century that this modern tonality first became universally known, and began to exercise its influence in composition. It was in the school of Naples, and particularly in that of Durante, that it was finally established, at least so far as concerns its practice; for, with regard to its theory, it is still imperfect, as I have already noticed. Modern tonality has not influenced melody alone, but likewise harmony and counterpoint. If the system of tones had experienced no variation, the science would have attained its utmost limits nearly three centuries past. The system remaining the same, there would have been nothing to add to the labors of Ockenheim, Josquin, Bromel, Larue, Mouton,

Orlando, and other learned masters of the ancient French and Flemish schools; and this we find Zarlino, Artusi, and all didactic authors declaring, who wrote under the impression of the ancient opinions on the subject; but the alterations which subsequently took place in the tonal system necessarily led to changes in the other branches of composition. In the first place, harmony experienced, though slowly, a complete revolution. The ancient contrapuntists had an established and almost exclusive rule, to add the third and fifth to all the notes of the scale, with the exception of that which bears the minor fifth, to which they put the sixth: they looked upon all harmony as allowable which was exempt from a succession of fifths and octaves; but the doctrine of the new modes soon displayed the errors of this harmony, which formed an infinity of bad combinations, such as the sixth with the third, or frequently on many other degrees of the scale: it was on the above principle that Palestrina and all his school wrote. But the most important point had yet to be divulged. A schoolmaster in Lombardy, (Charles Monteverde,) who flourished about 1590, invented the harmony of the dominant; he was also the first who dared to use the seventh and even the ninth of the dominant, openly and without preparation; he likewise employed the minor fifth as a consonance, which had always before been used as a dissonance. Thus the tonal harmony became known; and his principle being once admitted, all its consequences were naturally deduced, and musicians arrived, almost insensibly, at the conclusion, that only three essential harmonies were to be acknowledged in the mode, namely, that of the tonic, of the dominant, and of the sub-dominant; which are all that should be placed, either direct or inverted, on these notes and on those comprised in their harmony. Charles Monteverde likewise introduced into composition double dissonances, which were soon succeeded by triple dissonances, and diminished and altered chords. It must naturally be supposed that counterpoint was in some degree affected by these innovations; it now became usual to employ intervals in melody, which had, till then, been totally interdicted, and the intervals in harmony soon succeeded each other in a way till then unknown. About this time L. Viadana de Lodi formed the idea of giving to the instrumental bass a different melody from that of the vocal, to which it had hitherto strictly adhered; he further proposed to make this new bass reign throughout the piece, to consider it as the basis of the whole composition, and to represent by figures the chord it was to carry. In these points alone can he be considered as the inventor of fundamental bass, for it does not appear he in any way added to harmony. All these innovations excited the indignation of the masters attached to the ancient rules; but at length sense and experience overcame their vague and abstract reasonings. At first, indeed, these new methods were merely applied to profane and modern music, and the ecclesiastical chants continued to be formed on the ancient rules, somewhat mitigated, however, according to the method of Palestrina and the Roman school; but, towards the close of the seventeenth century they began, in practice, to consider the church tones merely as a form to enchain or keep within bounds the modern tones, and according to this

principle they applied tonal harmony to their ecclesiastical compositions. It is thus that the school of Naples, particularly Durante, considered the subject, and the modern tones are now universally acknowledged in church music. Practice has ever, in all the arts, preceded theory, or rather doctrine; and indeed it should always be thus, for doctrine should merely observe the operations of genius and reduce them to principles; it should not advance too quickly, thereby exposing itself to be contradicted by experience. If we examine the successive doctrines of the period we have been surveying, we shall find an additional proof of the truth of these observations. P. Aaron, L. Fogliani, and all those who wrote during the first two generations of the sixteenth century, added little to the improvements of the fifteenth. Zarlino, who published in 1571 his "Harmonic Institutions," collected and developed all the theories and precepts established up to his time; and his work was then considered, and for long after, as the most eminently classical ever written on music. Far, however, was he from preceding in knowledge the composers of his day, for he appears not to have heard of Palestrina, who flourished about 1552. All Zarlino's doctrine was established on the practice of the masters of the Flemish school, of whom he himself was a pupil. In this he was followed by Artusi, Zaccagni, and others, who wrote towards the close of the sixteenth century. D. P. Ceroni, who published at Naples, in 1613, his "*Melopoio y Maestro*," narrowed the boundaries of the doctrines of music. He modified his instructions according to those of Palestrina and other masters of the Roman school. Galeazzo Sabbatini, who, in 1644, gave rules for thorough bass, wrote on the same principles. But it was not until we possessed the treatises of Berardi, Buononcini, and Gasparini, towards the close of the seventeenth or commencement of the eighteenth century, that the practice in counterpoint, introduced at the close of the sixteenth century, were reduced into a theoretical system; from that time to this, these doctrines have remained nearly the same as they were established by the last-named authors. Hitherto I have cited neither French nor German authors; for this reason, that they have generally been behind-hand with the Italian in precept, and I have merely wished to trace the progress of the art, and not the history of different schools. But towards the commencement of the eighteenth century, a French writer produced some sensation with regard to doctrine; I mean Rameau, who affirmed that all rules, up to his time, were merely blind traditions, without connection or foundation, and proposed reducing them to a few precepts, which he pretended to deduce from the laws of physics. As the opinions of this celebrated man have for some time been much in vogue in France, and have had a useful influence on certain points of musical doctrine, I cannot here dispense with giving some idea of them. If we examine the various chords used in accompaniment, we shall find they may all be traced to different combinations of certain groups of sounds. For example, the chords ut, mi, sol; mi, sol, ut; sol, ut, mi, are evidently but three combinations of the sounds ut, mi, sol; the chords sol, si, re, fa; si, re, fa, sol; re, fa, sol, si; fa, sol, si, re, are four combinations of the sounds

sol, si, re, fa; in which each sound becomes successively the bass, the arrangement of the higher sounds being perfectly indifferent. Now, if we consider one of the chords which are composed of the same sounds as principal, the others may be viewed merely as dependents. With this idea the ancients were perfectly acquainted, and they considered that chord as principal in which all the sounds were placed at intervals of thirds, the remaining chords (composed of the same sounds) being inversions of the first. Some ignorant writers have attributed the origin of this idea to Rameau. In this they are mistaken, and to be convinced of their error, they have only to glance at the writings of Zarlino, Berardi, and others, when they will find that the above idea, which is indeed founded in truth, had long been familiar to the ancients. What may with truth, however, be attributed to Rameau is his having endeavored to include all the laws of harmony in those laws which govern the principal chords. To this end he names these chords *fundamental chords*; the note which acts as bass he calls the *fundamental note*; and finally he terms *fundamental bass* that hypothetical bass which is formed solely by the fundamental note. This being decided, he next proceeds to prescribe rules for the formation of this bass, or rather for the succession of fundamental chords; and, according to his doctrine, harmony will be regular whenever the chords of which it is formed, being brought back to their fundamental chords, offer successions in the bass correspondent to the rules which he has established. Unfortunately, nothing can be more erroneous than this doctrine: experience and a survey of those cases in which this method has been adopted, prove, first, that a fundamental succession of notes, according to the method of Rameau, may have very bad derived successions; secondly, that on the contrary, from excellent and generally admitted derived successions, frequently arise fundamental successions, which he rejects as faulty. We should add, that Rameau, likewise, takes no notice of many chords universally practised as good, nor can he explain their successions. For these different reasons, Rameau's system never obtained the approbation of any clever practitioner: for a short time it met with some success in France, but now it is entirely laid aside; indeed, it never was of any other use than to attract the attention of didactic writers to the theory of inversions, and to procure us some lists of chords more or less complete, considered under this point of view, as, for instance, they have been by Marpurg, De Knecht, De Sabbatini, &c. The habit thus acquired in France of considering harmony in a systematic point of view, at length produced a much more important advantage. When the Conservatory, established at Paris towards the close of the eighteenth century, determined, for the benefit of the pupils, to invent and adopt an elementary work, a professor of that establishment (Catel) proposed a treatise on harmony, which, of all those hitherto published, agrees best with the practice observed for nearly two centuries past. He considered as *natural* chords all such as are commonly termed consonances, also all dissonant chords used without preparation; he examines in a summary manner their principal successions, and demonstrates in what way, by means of the anticipations, retardations, and alterations of

which they are susceptible, they produce all *artificial* chords or dissonances, properly so called. This doctrine had been previously taught by the school of Durante, as we find from the small treatise of Fenaroli, entitled "*Regole per li principianti*," &c., and was likewise established in Germany, as we find by the history of Forkel, (Introduct. art. 67;) but Catel produced it in a much clearer and more decided form, and it has been adopted in France by all able musicians; indeed, it must be considered a most important step in the doctrine of harmony. I imagine it is possible to effect still greater improvements in this point; but to do this, it would be necessary to dissipate some errors which still obscure the theory of tonality, and we cannot discuss that point here. If we now take a general survey of the past and present state of the science, we shall clearly perceive how our system has succeeded to that of the Greeks, from which it differs wholly with regard to modes, and over which it has sustained considerable improvement with regard to rhythm; we shall observe its progressive rise and attainment of its present state of perfection; we shall see how the theory of the art, originally established on the ancient system, and without any regard, at least but little, and that merely from condescension, to the developments of the new system, has continued in some degree up to the present day, and has diffused a universal influence; in the same manner as the generality of our grammars now in use are founded on those of ancient languages, notwithstanding the difference that exists in their genius and construction. From this conviction, acquired by analogy and close observation, we arrive at the conclusion that the didactic part of music is now in want of a master, who, with clearness and decision, shall be able to fix the limits of the different systems and different styles, and to determine the requisites for each. What we are now about to state concerning the various styles of composition may furnish some new ideas on this subject.

SECOND SECTION. *Of the Styles of Composition.* — If we have so long deferred alluding to the different styles of composition, it is not from an idea that the period we are now discussing is the first in which these various styles could be distinguished. For ages past they have existed; and though, in their developments, they have exercised a reciprocal influence, yet there have always existed constitutive and characteristic distinctions between them; but the fact is, it would have been by far too arduous a task, and would have led me into long details, to trace the origin and progress of each of these styles separately; I have therefore reserved till now the little I intend stating on the subject, being aware that I shall find it occasionally requisite to retrace events some way back. Four principal styles are admitted in music: church music, chamber music, dramatic music, and instrumental music: these will be the subject of the following articles.

ARTICLE FIRST. *Church Music.* — It is well known that church music admits of four distinct species: the style *à capella*, the accompanied style, the concertante style, and lastly, the oratorio.

Of these kinds, that which most decidedly belongs to the church is the style *à capella*. This is a kind of composition generally written on the tones of the plain chant, in the time of two, and for voices, without any accompaniment. This spe-

cies is subdivided into four sorts: the plain chant, the *faux bourdon*, the counterpoint on the plain chant, and the ecclesiastical figured counterpoint. One of these sorts (the plain chant) we have already sufficiently mentioned; indeed, as it has undergone no variation since the time of St. Gregory, we have nothing further to relate concerning it.

With regard to the *faux bourdon*, we have already traced its origin; and from this style is derived composition with many parts. This is the most simple style of all, and consists of a counterpoint of note against note, in which the bass bears only perfect chords; it has not received any alteration since the period when the rules of simple composition were unalterably fixed, which may be traced to a more remote period than the Flemish school. This style exists to the present day, but is only used in psalmody and a few canticles.

Counterpoint on the plain chant is frequently mistaken for and confounded with the *faux bourdon*; it immediately succeeded the former, and we should certainly understand in this light the famous bull of Pope John XXII, which forbade the use of the *faux bourdon*, as tending to produce confusion and impiety in divine service. Counterpoint on the plain chant consists in forming on the plain chant, which is preserved unaltered in one of the parts, various other parts, and displaying in them all the ingenuity of counterpoint, as imitations, fugues, canons, &c. Its history is blended imperceptibly with that of composition itself. It was brought to great perfection by the masters of the Flemish school, who have left many fine productions in this style; but they have been eclipsed by those of the Italian school, which possess much more taste and elegance. The finest specimens of this style were produced in the sixteenth century. Since that period it has been little attended to in France, and instead of employing the riches they possessed, the clergy allowed the substitution of a sort of counterpoint, *alla mente*, which is sung at sight in chorus, and is called chant from the book, (*sur le livre.*) Padre Martini says he heard some excellent music in this style: we have never been so fortunate, as all we have yet known in this style has been most disgusting. The contrapuntists of the fifteenth and sixteenth centuries did not always confine themselves, in the basis of their compositions, to the chant of the church books; they frequently employed a plain chant, composed at the moment from their own idea; and not unfrequently introduced vulgar airs, sometimes French songs, and many of them very popular at the time. Among these we may particularly notice the famous air of "*L'Homme Armé*," supposed to be the ancient song of Roland, upon which the most celebrated composers of those two centuries made a point of composing difficult and scientific masses. They soon after this deviated from the rule of confining the leading chant to one particular part, and derived their successive subjects from the principal traits in the song or plain chant, introducing in the parts various kinds of imitations; this was the origin of the fugue style. In this sort of composition the sense of the words was completely overlooked, and their music tended solely to the display of the talents of the composer or powers of the singers; in fact, it was so much abused, that the

Council of Trent deliberated on the means of suppressing music in churches, and the decree would certainly have passed, had not some particular and local considerations prevented it. In the time of Pope Marcellus II., who reigned in 1552, the impiety of this style of church music had reached its utmost height, and he had resolved to reduce it to the simple Gregorian chant, when a young composer, till then hardly known, named Palestrina, presented to the pontiff a mass, in a style entirely new. It was arranged in the same manner as that of which we have been speaking; but instead of tumult and noise, this composition offered a religious and noble style, pure harmony, and sweet and majestic expression. These are the distinguishing features that characterize the style of Palestrina, and by which he differs from the fugue style of his predecessors; add to this that he points in a more distinct manner to the principles of the modern tones, without discarding those of the ancients. This author may therefore be justly considered as the inventor of these united properties, though in fact he only improved them, and by that means fixed them, which, in reality, is a much greater advantage. Palestrina was considered by his successors as a model that could not be equalled; and this conviction, joined to the continual changes in the foundation of the system, soon induced all composers to renounce a style in which they could acquire but little glory or advantage. Thus, although it is much admired, this style is now so little in use, that it would be difficult, perhaps, to find throughout Europe three composers who would agree in the manner of using it.

The decline of the style *à capella*, all the varieties of which, in the course of the sixteenth century, had risen to a degree of perfection since unparalleled, was useful to the other kinds of ecclesiastical music, and particularly to the accompanied and concerted styles. I mean by accompanied style, that in which the voices are accompanied by the organ alone, or, at most, with some other low instruments to sustain the basses; and by the concerted style, I mean that in which the voices are accompanied by all sorts of instruments, as well those of a high as of a low pitch. It is not easy to determine the precise origin of these styles, nor to trace their progress, there being nothing very decided with regard to them. It appears, however, that the organ or other instruments, or both together, have at all times been employed to accompany the voice in church singing; but this has varied considerably, according to the time or place; neither of them having had any peculiarity of progress or development. The first has been much influenced by the progress of the madrigal style, and the second by that of the theatre, of which we shall presently speak; simply observing for the present, that inasmuch as we consider the first of these styles, that is to say, the one accompanied by the organ or any other bass instrument, to be properly adapted to the church, in so much do we consider the second style, or that accompanied with various instruments, as misplaced in a church, and only adapted to produce confusion and impiety, as well from its connection with the dramatic style of composition, as from the circumstances necessarily attendant on its execution.

The preceding reflections are entirely applicable to that kind of composition styled oratorio.

This is a sort of drama, the subject of which is an action selected from the Scriptures, frequently a pious allegorical piece, meant to be performed in a church by singers representing the different persons of the drama. We may observe from this in what respect the oratorio differs from the sacred drama; the subject of both may be the same, but the sacred drama is intended for the theatre, the oratorio for a church. The invention of the oratorio is commonly ascribed to St. Philip of Neri, born in 1515, and who founded in 1540, at Rome, the Congregation of the Oratory. This pious ecclesiastic, wishing to turn towards religion the mania which the inhabitants of Rome displayed for the theatre, (a mania that frequently caused them to absent themselves from church, particularly in the time of the carnival,) formed the idea of having these sacred interludes written by good poets, set to music by the first composers, and performed by the most celebrated singers. The experiment succeeded to the utmost extent of his wishes. Crowds were attracted to these concerts, which took the name of oratorios, from the Church of the Oratory, where they were performed.

The first oratorios were very simple and short poems; after a time the words acquired more importance, and finally they have become genuine dramas, the pomp of scenic effect being alone wanting, from its being inapplicable to the place in which they are meant to be performed, at least in Catholic countries. The most celebrated poets and composers have exercised their talents on the oratorio. Giov. Animuccia, one of the companions of St. Philip of Neri, was the first composer of them. The style of the oratorio was at first a *melange* of the madrigal style, and of the cantata; but since the modern dramatic style has usurped the place of all others, the oratorio music differs little, or not at all, from that of the theatre; and this ought not to surprise, when we consider that the modern masses and other regular music for the Catholic church vary only from dramatic compositions, by being, if possible, still more affected and *maniéré*.

Chamber Music.—Didactic authors, such as Berardi and Padre Martini, commonly distinguish three styles of chamber music, namely, simple madrigals, accompanied madrigals, and cantatas. To these three I have ventured to add a fourth, which, under the title of fugitive pieces, contains an immense number of different sorts and varieties.

The madrigal is a species of composition much resembling the fugue, but the style of which, being less dry than that of the latter, is susceptible of every kind of expression. It was so called because it was usually set to a peculiar kind of little poem, known also by that name. Two kinds of madrigals may be distinguished: simple madrigals, i. e., those executed by voices alone, without the assistance of any instruments; and accompanied madrigals, i. e., those in which the voices are supported by the organ or piano-forte; for in this kind of composition no other instruments are used with the voices.

Simple madrigals appear to have been the first invented, but it is impossible to say by whom. Many authors have considered James Arcadelt, chapel-master to the Cardinal of Lorraine, who flourished towards the close of the sixteenth century, as the first who composed this species of music; but on reading P. Aaron, and other didac

ti authors of that time, and subsequent to it, it will be seen that this assertion is evidently erroneous, other madrigals of more ancient masters being there cited, and even some by the composers of the ancient Flemish school. We may thence conclude that simple madrigals are an invention of the commencement of the sixteenth century. This style was singularly cultivated during the whole of that and the following century; but it has been completely abandoned since the early part of the eighteenth century, as much on account of the recognized impossibility of equalling the early composers in this kind of music, as on account of the attention given exclusively to dramatic and instrumental music, which are in some respects completely the antipodes to this system. This style has likewise been greatly varied. If, as Berardi says, we examine the madrigals of the earliest composers of them, the style will be found to differ little from that of their sacred works; but, as we advance, we see this kind of composition assume a style and construction peculiar to itself: this improvement may be remarked more particularly in the madrigals of L. Marenzio, a composer a little posterior to Palestrina, and who acquired great celebrity in this kind of music; the same advancement may also be traced successively in the works of G. Gesualdo, Prince of Vernosa, in Monteverde, in Mazocchi; and lastly, it seems to have attained its utmost limit in the celebrated Alessandro Scarlatti, the last great composer cited for his compositions in the madrigal style.

Accompanied madrigals are, necessarily, a more modern invention; they can only have existed since the time when the custom was introduced of putting an instrumental bass, differing from the vocal one, below the voices. This plan, as we have seen, may be dated from the commencement of the seventeenth century. A great number of composers of this species of madrigal are known, but the most celebrated flourished between the middle of the seventeenth and of the eighteenth centuries. These are Frescobaldi, Carissimi, Lotti, Scarlatti, Clari, Marcello, and Durante; the three last of whom, in particular, have left some *chefs-d'œuvre* in this style of composition, which are known to most musicians. Since these great madrigalists, no one has attempted to excel in this kind of music, not only because the taste and direction of musical ideas have changed, but, we must not fear to add, because the studies in composition are, at the present period, generally defective or altogether bad; in fact, no sooner has a pupil learned to put harmony to a bass, often systematic and incorrect, and to place a badly-contrived bass under a vulgar, commonplace air, than he considers himself a composer, and hastens to push himself forward, especially in the theoretical line of composition, following the footsteps of his master, who perhaps knew no more about the matter than himself. The ancients were persuaded that to form a composer, and to merit the title of master, it was absolutely requisite that a pupil should devote many years to the study of the science, and exercise himself laboriously on each separate rule, meditating attentively on the character of different models, and thus gradually capacitating himself to treat with equal facility all kinds of music. The musician of the present time limits all his glory to the composition of an air or a

song, and even does not blush to place at the head of such trifles the pompous titles of pupil, and even professor, of some school in reputation.

A cantata is a little poem, which, considered in a literary sense, has no very determinate character, though it is usually the recital of a simple and interesting fact, interspersed with reflections, or the expression of some particular sentiment. It may be in all styles and all characters, sacred, profane, heroic, comic, and even ludicrous, representing the action or feeling of either a single or several persons; it even sometimes assumes the character of the oratorio, as, for instance, in "The Passion" of Rauler, "The Creation" of Haydn, and others.

The cantata takes its origin from the lyric *Lyra*. The time of its invention is considered to be about the beginning of the seventeenth century, (about 1620.) Poliaschi, of Rome, Loteri Vittorii, of Spoleto, and B. Ferrari, of Reggio, (called Ferrari of the Theorbo,) are the first composers cited as having acquired any degree of celebrity in this style. After them are mentioned T. Merula, Graziani, Bassani, and especially Carissimi; about the middle of the same century, M. A. Cesti, a pupil of Carissimi, who perfected recitative; L. Rossi; Legrenzi; and lastly, the celebrated A. Scarlatti, who surpassed all his predecessors as well by the fecundity as the brilliancy of his talent. At the commencement of the eighteenth century, we may mention Fr. Gasparini; Giov. and Ant. Buononcini; the celebrated B. Marcello, who composed many much admired cantatas; Pergolesi, whose "*Orpheus*" is cited as a *chef-d'œuvre*; Vivaldi, known by his works for the violin; and lastly, the Baron d'Astorga, and the celebrated N. Porpora, both of whom have left collections considered perfectly classical in this style. Unhappily we are under the necessity of making the same remark with regard to the cantata as we made respecting madrigals: it is a style of composition which has been generally abandoned and neglected for nearly two generations; so much so, that learned amateurs alone now deign to study the masterpieces in this style left us by preceding generations.

Fugitive pieces consist, as we have before said, of an immense number of styles, and an amazing variety of subjects. Every nation has its own peculiar style of music. Italy has the *canzonette*, the *villanelle*, the *flûte*, the *estrambotte*, &c.; Spain, the *bolero*, &c.; France, the *romance*, the *vau-deville*, &c. The history of this branch, though apparently of slight importance, is, however, as respects the art in general, of much greater interest than would be at first imagined; first, because the musical character of every nation is expressed in its songs; and secondly, because it is in this kind of music that is to be found, as we have already noticed, the foundation of the ideal style, and the elements of the modern system. This makes us regret that our limits in this essay will not permit us to enter into any details on national music. Laborde, in his voluminous essay, has made a collection of the vocal music of different nations and ages; but it is very incorrect; first, because many of the airs are altered, often, even, replaced by modern ones; and secondly, because they are overcharged with a harmony both ill imagined and incorrect. In short that collection merits no consideration whatever

Dramatic Music.—The invention of the lyric

drama of the moderns is considered by many persons to be of very distant date; that is to say, if by the lyric drama we are to understand every representation accompanied by music. And, in fact, although these older representations differ widely from the lyric drama of our time, (as much by reason of the changes that have taken place in music in general, as on account of the variations that have been sustained in the particular kind of music which we are now treating,) still we cannot fail to remark in the former the foundation and principle of the latter.

Ancient writers speak of representations, both sacred and profane, as having been performed since the thirteenth century. An "Orfeo" of Angelus Politianus is cited, which was composed about the year 1475. A musical tragedy is spoken of as having been performed at Rome in 1480. It is said that in 1555, Alphonso della Viola set to music, for the court of France, "*Il Sacrifize*," a pastoral drama by Agostino Beccari; and that, in 1574, an opera was performed at Venice for the reception of Henry III., when, on his return from Poland, he passed through that town, in order to take possession of the crown of France, to which he succeeded on the death of his brother, Charles IX. But all these facts are too remote, and so very few vestiges of them remain, that it is impossible to deduce any thing positive as to the state of this branch of the musical art at that period, which, however, is not so very distant, being scarcely more than two hundred and fifty years. We may, however, venture to remark, that, up to that time, the lyric drama had no style of music peculiar to itself, but borrowed from the style then in use in the church, also from the madrigals and popular songs.

The real epoch to which the birth of dramatic music, properly so called, may be fixed, is that of the invention of the recitative or recited music, which gave to the lyric drama a peculiar language and construction. The following, it is said, was its origin.

Three Florentine gentlemen, J. Bardi, P. Strozzi, and J. Corsi, amateurs of the art, being little satisfied with the attempts made, up to their time, to bring dramatic poetry to perfection, conceived the idea of having a lyric drama written by their best lyric poet, and composed by the most eminent of their musicians. They consequently selected Ott. Rinuccini and Jacq. Peri, both of them Florentines: the former wrote a poem entitled "*Daphne*," to which the latter applied a sort of recitation, in notes, having all the sounds of music, without its regular support and marked time. This work, thus disposed, was performed in 1597, at the house of Corsi, and obtained the utmost success; so much so as to determine Rinuccini to write two other works of the same kind, namely, "*Euridice*" and "*Ariana*." In the same year in which "*Ariana*" was performed at Florence, an oratorio, with the same description of recitative, composed by Emilio del Cavallere, and entitled "*Di Anima e di Corpo*," was performed at Rome. His work, together with that of Peri, was published in 1608; and in their prefaces the two authors claim the honor of the invention of recitative, which they both maintain to be the revival of the chanting declamation of the Greeks. Each of them, in support of his claim, cites different works written previously to the time of which we have just been speak-

ing; and Emilio, especially, mentions a drama of his own, "*La Disperazione del Satiro*," composed and performed in private since the year 1590, and "*Il Gioco della Cieca*," represented in 1595. If we may credit J. B. Doni, the invention or revival of recitative belonged neither to one nor the other, but to Vincent Galileo, father of the celebrated Galileo, the astronomer, who, feeling, as well as Bardi and the other amateurs of Florence, the defects in the music of that age, and filled with the ardor of research, occupied himself in recovering the musical declamation of the Greeks, and having imagined the recitative, applied it to the episode of the Count Ugolino, of Dante. He composed also, in the same style, "*The Lamentations of Jeremiah*," and sang them himself, with a viol accompaniment, before a numerous assembly. Julius Caccini, of Rome, a young singer, who frequented, with many other musicians, the house of Bardi, was enthusiastic in his admiration of this new style, and himself composed several pieces, with recitative of a very improved description. J. Peri soon became his rival in improvements, and both, according to Doni, coöperated in setting to music the "*Daphne*" of Rinuccini. Peri afterwards composed "*Euridice*," and Caccini "*Cephalus*." These pieces were followed by "*Ariana*," which was put into recitative by Cl. Monteverde, of whom we have already spoken.

However the above inquiry may be decided, it is certain that, of all the above-named works, the "*Euridice*" of Peri was the first which was performed in public. This representation took place in 1600, at Florence, on the occasion of the marriage of Henry IV. of France with Mary de Medicis. In the preface to the poem, which was printed the same year, Rinuccini states that the music composed by Peri to his "*Daphne*" had made him cease fearing that he should never witness the revival of the musical declamation of the Greeks. In fact, nearly the whole of this work is in recitative; and it is difficult to discover any difference from the rest of the music, in those passages at the head of which is placed the word *aria*. The same observation applies to all the works composed up to the middle of the same century. It is only in the opera of "*Jason*," written by Cioquini, and set to music in 1649 by Cavalli, that we begin to perceive airs having a melody differing from that of the recitative; yet still these airs are usually insipid, and generally (to give some idea of them) a kind of minuet, written in the time of *two-three*, and varying repeatedly. A greater degree of progress is perceptible in the operas of Cesti, who, in his "*Doria*," composed in 1663, began to introduce airs in which the talent of the singer might be displayed to advantage. But what is particularly remarkable at this epoch is, that the opera began to degenerate into a *spectacle* calculated to please the sight alone; insomuch that, in the works represented about the end of the seventeenth century, no mention whatever is made either of the poet, the composer, or the singers, but only of the machinist and the decorator. This, however, did not discourage an immense number of composers from devoting themselves to this style. So great indeed is their number, that it would be impossible to enter into any details with regard to them, without the risk of being carried too far.

Among these composers, there were many who had great knowledge and genius; to prove which, it is sufficient to name Fr. Gasparini, Perti, Colonna, Lotti, and, above all, the celebrated Alessandro Scarlatti, to whom the invention of the *obbligato* recitative is generally attributed. The principal characteristic of these celebrated composers of operas is, however, their science; and perhaps this was all they could do at a period such as that in which they wrote.

In the midst of this confusion, some few among them, and particularly Scarlatti, felt the necessity of making the melody conformable to the expression of the words; and some attempts made to this effect were very successful. This great improvement was, however, left to be completed by the first generations of the eighteenth century; and it is to the illustrious pupils of Scarlatti, namely, to Leo, Vinci, Surro, Hasse, Porpora, Feo, Abos, and especially Pergolesi, that this approach to perfection is attributable. They were well seconded by the poets of their time, and particularly by Apostolo Zeno, and his pupil Metastasio, who presented them with poems, written with purity and elegance, and full of interesting situations. Three generations may be considered as having followed this same system, profiting by the successive embellishments of melody and of the orchestra. In the first generation are comprehended the men we have just named; the second presents to our notice names not less celebrated, such as Jomelli, Piccini, Sacchini, Guglielmi, Traetta, Anfossi, Terradellas, and others; and the third, formed from the pupils of these last, has been rendered famous by Paisiello and Cimarosa.

This period, however brilliant, as it certainly was, was not exempt from faults; for instance, though their poems present some interesting and dramatic situations, essential errors may be found in the general construction of them, and even in the form of the detailed parts, where dramatic consistency is frequently sacrificed to the music; added to which, the singers, who then began to display abilities before unknown, exacted generally of the poet and composer such situations as would best suit their talents; the result of which was, that though dramatic music was indeed invented, the true lyric drama did not as yet exist. These abuses, deeply felt, and exposed by the best lyric poets, (by B. Marcello and by Metastasio himself,) induced men of the greatest talent to make some efforts to create, at length, a perfect lyric drama, that is to say, a drama composed according to all the dramatic rules, and in which the music should be entirely subservient to the action. The first essays towards this were made by B. Marcello, who soon, however, disgusted with the vexations he met with at the theatre on this account, contented himself with laying open his principles in his writings, and giving examples of them in his sublime collection of psalms, an incomparable masterpiece of melody, harmony, and truth. The application of these principles to the stage, with all the fulness of truth, was left to the celebrated Gluck, who, without possessing, as a composer, either the profound science or elegance of the great Italian and German masters, had sufficient talent and genius to complete, about the middle of the last century, (in 1764,) this important revolution. He was considerably aided by the poet

Calzabigi, who was the first that wrote an essentially dramatic lyric poem, his "*Orpheus*." Gluck thus became a model to his contemporaries, several of whom, such as Piccini, Sacchini, and others, followed in the same track.

After such successful endeavors, the art seemed to be forever fixed on a firm basis, with the exception of the changes that the variations of melody would probably occasion in it; and, indeed, up to the present time, revolutions have taken place in this respect, of which it appears impossible to foresee the term. However, towards the close of the last century, the advancement of instrumental music caused a sensible movement in that of the drama; some composers having endeavored to introduce into operatic accompaniment the richness of the symphony. It is on this plan that Haydn, Mozart, Cherubini, and all of their school worked. This very brilliant system has great advantages, but a difficulty naturally results from it not easily to be overcome, which is, that the most essential part, the *vocal*, supposing it even to have all its requisite qualities, is apt to be eclipsed, and even sometimes to appear less important than the accessory part.

On recapitulating the preceding observations, it will be found that at least six distinct epochs may be traced in the history of dramatic music within the space of two centuries. The first, which we shall name that of the recitative, under Peri, Monteverde, and their imitators; the second, that of the birth of dramatic melody, under Cavalli, Costi, &c.; the third, that of science, under Perti, Colonna, and Scarlatti; the fourth, that of expression, under Vinci, Porpora, Pergolesi, and the other pupils of Scarlatti; the fifth, that of the *lyric drama*, properly so called, under Gluck and his followers; and the sixth and last, that of dramatic symphony, under Haydn, Mozart, and Cherubini; besides the delays, deviations, and modifications of each kind, which we shall consider in treating of the different schools, and even of individuals.

In all that we have as yet said, we have principally had in view the tragic drama, or rather lyric tragedy. It will be easily conceived that in what concerns melodic language, the comic drama, otherwise called lyric comedy, comic opera, opera buffa, interludes, &c., must have experienced the same revolutions; we shall therefore speak of them here in a very summary manner, and this with the view of pointing out those variations that have taken place in the proper construction of comedy, and of recalling to the memory those persons who have most distinguished themselves in it. The invention of lyric comedy is considered to be as remote as that of lyric tragedy. The origin both of one and the other is, however, lost in the obscurity of the middle age; probably we ought to seek it in the farces, moralities, and mysteries with which our ancestors were amused in the fourteenth and fifteenth centuries.

The most ancient lyric comedies expressly mentioned seem to be of the sixteenth century: of this kind are cited the "*Sacrificio*" of Beccheri, set to music in 1555 by Alphonso della Viola; "*I Pazzi Amanti*," in 1569; "*La Poesia rappresentativa*," in 1574; "*La Tragedia di Frangisani*," the music by Cl. Merula; "*La Poesia rappresentata*," &c., 1678; "*Il Re Salomone*," 1579; "*Poesia e Vittoria*," 1580; "*Pallade*," 1581; "*L'Anfitrione*" of O. Vecchi, 1597; all of which

were represented at Venice. The music of these works was completely in the madrigal style; and if it had its beauties, it had also its absurdities, which were still more apparent on the stage, where every thing should appear true. Amongst these inconveniences, we shall name, as one of the most remarkable, the use of *monologues*, sung by *several voices*, on account of the want of instruments for accompaniment. It is not precisely ascertained when the recitative was introduced into lyric comedy. Several comic operas are known, written in the course of the seventeenth century; but without resting on objects, of the details of which we are ignorant, let us hasten to reach the period when Scarlatti and his pupils introduced expression in dramatic music. Among these masters we find Pergolese, who distinguished himself by his talent in introducing declamatory modulation into dramatic music. Logroscino is likewise remarkable, as having, by the invention of finales, given to dramatic melody a new kind of development; and although, in the two generations which we have indicated as succeeding this, the greater part of the composers and poets, who rendered themselves illustrious, cultivated lyric comedy equally with tragedy, still many peculiarly distinguished themselves in comedy; such as N. Piccini, for instance, whose "*Buona Figliola*," a masterpiece of grace and truth, announced the composer who was to surpass his model. In this same generation flourished the illustrious Gretry, who made Pergolese his especial model, also the composers who, following his steps, have given to France the true lyric comedy. In fine, comic music, after having been embellished by the genius of Guglielmi, Paisiello, Cimarosa, and other pupils of Piccini and their contemporaries, could not escape from the inroads of symphony: it supported the yoke under the reigns of Mozart and his imitators. Let us not, however, exclaim against an innovation which has produced masterpieces of an entirely new character, but rather let us endeavor to convince all those who would be tempted to take Mozart as a model, that, to give effect to such a school of writing, the genius of a Mozart is indispensable.

Instrumental Music.—The subject of musical instruments should be considered under two heads: first, as to the sonorous principle which forms the basis of each one separately; secondly, as to the mechanism of execution. First, in respect to the sonorous principle, instruments are divided into stringed, wind, and vocal instruments, (*à timbre*), &c.; as relates to their mechanism, they may be divided into six classes, namely, first, bowed instruments; secondly, wind instruments; thirdly, keyed instruments; fourthly, stringed instruments, (*pincks*); fifthly, instruments of percussion; sixthly and lastly, mechanical instruments, (*instruments-machines*.) At the head of these six divisions must be placed the human voice, the first, the most beautiful of all instruments, and which serves as a type to all others.

All instruments have not always been in use, even amongst different nations, and less amongst the same people; every nation and every age have had their own. Without entering here into details which would lead me too far, I shall confine myself to remarking which are the instruments now most in use amongst the nations whose musical system resembles our own. These are,

first, amongst bowed instruments, the violin, the viola or tenor, the violoncello or bass, and the double bass; secondly, amongst wind instruments, the German flute, the clarinet, the hautboy, the bassoon, the horn, the trumpet, the trombone, the serpent, the fife, and the flageolet; thirdly, amongst keyed instruments, the harpsichord, the spinet, the piano-forte, and the organ; fourthly, amongst stringed instruments, (*pincks*;) the harp, the guitar, the lyre, and the mandolin; fifthly, amongst instruments of percussion, drums of different kinds, and cymbals; sixthly and lastly, amongst mechanical instruments, the bird-organ, and the bulalo or organ of Barbary.

To abridge this article, already too long, we shall not here speak of the history of instruments, but proceed to consider instrumental music, which is nothing more than a melody, or a system of melodies, appropriated either to a single instrument or to several together. This leads us to consider it in two points of view; first, as single music; secondly, as concerted music.

Single music is that which is composed or adapted peculiarly for a single instrument, whether it be in fact produced by that one instrument, or, in order to increase the effect, be accompanied by one or more additional instruments, they being entirely subservient to the principal. This music is the solo, properly so called, and the accompanied solo, of which the concerto is the most brilliant style. There are as many styles of solos as there are of instruments; but as it is impossible that we should enter into all the details which this variety presents, we shall confine our notice to the solo of the violin, which is regarded, and justly, as the first of all instruments.

Solos, whether simple or accompanied, comprehend, under the names of *études*, *fantasias*, *capricci*, *sonatas*, *concertos*, &c., &c., an infinite number of pieces in various forms and styles. We cannot here trace their histories, but shall simply point out some historical marks, relative to their construction, performance, and style of composition.

The construction of solos, whether simple or accompanied, comprehends their melodic form, and the choice of instruments, both which objects have varied repeatedly, previously to attaining their present degree of perfection. The melodic form, indeed, is still constantly changing, so much so that there appears to be no fixed rule on this head. With regard to the selection of instruments, a subject that concerns the whole series of accompanied solos, from the sonata (which is the simplest of all) to the concerto, there have also been a great number of changes. The sonata, first imagined in the course of the seventeenth century, has been fixed, in many respects, by Corelli; the concerto, invented by Torelli, his contemporary, under the name of *concerto grosso*, employed at first only five instruments, namely, the quartet (*quatuor*) and the leading part. Fr. Benda and J. Stamitz made the addition of wind instruments, forming it, thus, into a kind of symphony. In every thing relating to the execution of instrumental music, it is of the utmost importance to dispel a very common error, which consists in believing that music was formerly very simple, and easily performed. This error arises from the circumstance of the old writer, having made use of notes of very great value and its not being remeul cred, at the same time

that these notes were executed with great rapidity, so that they had, in fact, no greater value than those in use with us at the present time. Besides which, if we cast our eyes upon the collections of pieces remaining to us from the preceding centuries, for example, upon the "Virginal Book" of Queen Elizabeth, published in 1578, difficulties will be found which would puzzle the most able of our modern performers.

There have been the same revolutions, as to taste and style, in instrumental music as in singing; it has, indeed, always been influenced by the existing style of vocal composition. Without referring to the periods anterior to the seventeenth century, concerning which we have little or no information, we know that, during the first two generations of that century, music was entirely in the madrigal style. When dramatic music began to prevail under Corelli, the contemporary of Perti, Colonna, and Scarlatti, it was scientific, and rather dry; Geminiani first enriched it by expression; but it was under Tartini, contemporary of Leo and of Jomelli, that it attained the highest degree of expression, both as to composition and execution. Soon after this period, the concerto, in particular, was greatly improved in the hands of the elegant Jarnowick and of the graceful Mestriano; both of whom were still surpassed by Viotti, who gave to this style the character which seems so peculiarly its own, and brought it to a degree of perfection which it seems incapable of exceeding.

All we have said concerning solos applies equally to concerted music; by which term we understand instrumental music with different parts, in which all the instruments are equally *obligato*, either because each of them has its appropriate part, or because each takes up the strain successively, the others alternately becoming accompaniments. These two methods are practised alike, in the duet, the trio, the quartet, the quintet, and other pieces where each instrument has its separate part, and in the symphony, where all the parts are doubled for effect, according to justly determined proportions. Boccherini was the first who, in 1768, gave to the trio a fixed character; after him came (Fred.) Fiorillo, Cramer, Giardini, Pugnani, and lastly Viotti. It is also Boccherini who, at the same period, first fixed the *quartet*; he was followed by Giardini, Cambini, Pugnani, and, in another school, by Pleyel, Haydn, Mozart, and Beethoven. Boccherini likewise about this time fixed the *quintet*, in which he has no rival but Mozart.

The symphony, improved since the middle of the same century, by Gossec, Toeski, Wanhall, and Emmanuel Bach, was perfected by Haydn, who, following the steps of Bach, brought this branch of music to a degree of superiority till then unknown, and which has since become, for his followers, a model scarcely to be equalled.

On a recapitulation of the contents of the preceding pages, we shall find that, within the space of three centuries, (since 1550,) all the parts of the musical system, namely, melody, the principles of musical construction and design, and every kind of composition, have attained a stability, and arrived successively at a degree of excellence, which, it would seem, cannot be surpassed; and this during the same period in which our languages, our literary character, in a word, all the various parts of modern science, (founded

for the most part, as well as our music, on the system of the barbarians from whom we are descended, and combined with the remains of Greek and Roman art,) have attained a similar appearance of perfection and stability. Far, however, from allowing this consideration to discourage us, or indulging an idea that nothing more remains to be done, we should, on the contrary, only rejoice at living in an age in which we enjoy the advantage of possessing an infinite variety of *chefs-d'œuvres* of every kind and every style, for models to improve upon, where improvement is possible.

SECOND DIVISION. *Of the Schools.*—Although all the nations of Europe, to whom our musical system is common, have different tastes, customs, and principles peculiar to themselves, and in this sense each one may be said to have a particular school of music, we still, as regards the art in general, can only consider those nations as having a school, which have contributed, in a sensible manner, to the progress of the art, either by the suggestion of universally adopted principles or methods, or by the production of works universally regarded as classical. In this sense, there are, in fact, in Europe, but three schools, the Italian, the German, and the French, with those springing from them; and we would here have it understood, that we circumscribe the limits of each school to those countries where the language is spoken from which each one derives its name.

This being premised, I purpose, in this last division of my summary, to examine briefly the rights of each school, and to point out, in a summary manner, the part that each has had in the common fund of musical knowledge during the period, with the sketch of which we are about to conclude. In order to proceed regularly, I shall confine all I have to observe on this subject to a few principal points, namely, their general history; the most remarkable traits by which they are characterized; and how far they have been serviceable relatively to the different branches of the art, reduced to four heads, namely: first, the system itself, and its general principles; secondly, the four styles of composition already developed; thirdly, vocal and instrumental execution; fourthly, the culture of music; including under this last head the state of musical instruction, and the literature of the art.

The Italian School.—According to Padre Martini, in his "*Saggio di Contrapunti*," five great schools may now be reckoned in Italy, which are subdivided into a number of others, namely: first, the Roman school, which comprehends those of Palestrina, of J. M. and J. Bern. Nanini, of O. Benvenuti, and of P. Foggia; secondly, the school of Venice, divided into those of Ad. Willaert, of Zarlini, of Lotti, of Gasparini, and his pupil B. Marcello; thirdly, that of Naples, the principal masters of which are Rocco Radio, D. C. Gesualdo, Prince of Venosa, Leonardo Leo, and Fr. Durante; fourthly, the school of Lombardy, which comprehends those of P. Const. Porta, of Cl. Monteverde, both of Cremona, of P. Pontio Parmigiano, of O. Vecchi, of Modena; fifthly, and lastly, the school of Bologna, the masters of which are And. Rota, D. Gir. Ginecchi, Giov. P. Colonna, and And. Perti; to which may be added Sarti, and the Padre Martini himself. This learned historian of music does not mention that of Florence, although cited by various masters,

doubtless because those who rendered it illustrious by the invention of recitative, were only amateurs, and because the great men which it has since produced were most of them pupils of the schools of Rome and Bologna.

However this may be, all these schools are commonly considered as belonging to three regions, namely, Upper, Middle, and Lower Italy. The first comprehends the schools of Venice and Lombardy; the second, those of Rome and Bologna; the third, that of Naples.

The traits which principally characterize all the schools of Italy, are a nice feeling, and profound knowledge of the essential and constitutive principles of the art, united to grace and expression. But independently of these general traits, each of the schools has features peculiar to itself: that of Lower Italy has, more particularly, vivacity and truth of expression; those of Middle Italy, science, purity of design and grandeur; and those of Upper Italy, energy and force of coloring.

There have always been schools in Italy, but they have not always been equally celebrated. In this respect, they have, indeed, frequently varied. We have seen that, from the time of St. Gregory and Guy d' Arezzo, Italy was the source of music; but it appears that the horrible wars of which that country was the theatre during the middle age, extinguished the arts there, and particularly music. We have likewise seen that, from the thirteenth up to the sixteenth century, the most important improvements in the art were due either to the French or to the Flemish. These last people merit peculiar consideration, as having formed, during the last half of the fifteenth and early part of the sixteenth century, a school which was destroyed during the wars, towards the close of the latter century, but which was the source of all those now subsisting in Europe. The French were the first who, by reason of their proximity to, and habitual intercourse with, the Flemish, participated in the impulse they had given. At this period, the chapels of the pope and princes of Italy were filled with singers from Flanders and Picardy, and throughout Italy, even at Rome itself, the music of French and Flemish composers was sung; some of the professors of those countries were invited to Naples and Milan, and so great a uniformity then existed between all the nations of Europe, that they seemed to form but one school. The Italians followed the same doctrine, but it must have been with little success, since not one of their compositions of that period are cited, whilst a considerable number of those of the Flemish, French, and German composers are on record. But, towards the middle of the sixteenth century, the schools of Italy began to appear on the scene. The most ancient is that of Rome, in which Palestrina is considered to be the head; he was pupil of Goudimel, under whose care he went to France to study composition. Adrian Willaert, pupil of Josquin and of J. Mouton, was the founder of that of Venice; C. Porta, his pupil, founded that of Lombardy; and that of Naples, equally ancient with the preceding, was celebrated in the sixteenth century under Gesualdo; but its principal fame is due to Scarlatti. The school of Bologna is only an emanation from that of Rome. What is, however, particularly remarkable, is, that since their origin or revival, these schools have attained a superiority in almost every kind of

music, and which they will probably always retain. This opinion is the result of a close examination and study of all their works, in every branch of the art.

In the first place, with regard to the foundation of the system, and its general principles, the Italians have ever excelled other nations. Having received the old ecclesiastical counterpoint from the Flemish and French, they were the first who gave to it the sentiment of modern sounds. They have, in short, determined and fixed these sounds; they have made phrases and melodie periods, and have created tonal harmony; indeed, so superior have they always been considered to all other nations in this respect, that the chord formed by the second and the *sensible* or leading note of the mixed mode, has long been called the *Italian sixth*, it being generally allowed that they were the inventors of it. The Italians have likewise perfected counterpoint or musical design; fugue and intricate counterpoint also owe to them their greatest beauties. All the schools of Italy have concurred simultaneously in these improvements; but, in this latter point, those of Rome and Naples appear entitled to particular merit.

With regard to the various branches of sacred music, from the plain chant to the most highly ornamented styles, it is in Italy that they have been successively developed. In fact, on taking a survey of them in succession, we shall find that, in the style *d' capella*, plain chant itself comes to us from the Italians, and that the best *faux bourdons* known are those which, from time immemorial, have been chanted in the Sixtine Chapel. The finest counterpoint now extant on the plain chant is that of P. Constanzo Porta, of the school of Lombardy. The fugued style, by preserving the name of Palestrina, announces, at the same time, the master and the school which perfected it. The accompanied style is indebted to the Roman school for its finest models: aud, with regard to the concerted style, although very beautiful works of that kind have been produced by all the schools of Italy, yet, as it approaches nearer than any other kind of music to the dramatic style, models of it must be sought for more particularly in the school of Naples.

Chamber music, in its principal kinds, is so peculiar to Italy, that it may be considered as belonging exclusively to that country. Madrigals, whether simple or accompanied, are to be found in Italy alone. In the former, or simple madrigals, it is the Roman school that bears away the palm; those of Venice and Lombardy may claim the best works amongst the latter. The school of Naples has produced the most beautiful cantatas, namely, those by Scarlatti, Porpora, and Astorga. Of the fugitive kind of chamber music, the *canzoni* in various styles, and always full of grace and beauties, are possessed by every people of Italy.

The theatrical style belongs almost entirely to Italy; it was invented at Florence, and perfected at Naples, after having been attempted by all the other schools.

That the Italians have perfected every sort of vocal composition is generally agreed; but a fact which is apt to be overlooked is, that they have been the instructors of all Europe in instrumental composition, and that to them we are indebted for the first and most esteemed models in this department of the art. It is the Italians who

invented all the different kinds of instrumental music which we have called single pieces or solos, from the sonata to the concerto. In violin music, Corelli, Tartini, and their pupils, preceded the composers of all the other nations of Europe, to whom they have served as models. The same may be said with regard to the harpsichord, from Frescobaldi to Clementi. All other single pieces have been constructed on the model of the compositions for the two last-named instruments.

In concerted pieces, the schools of Italy have furnished some *chefs-d'œuvres*, especially the quintet, which cannot be alluded to without recalling to mind the name of Boccherini. But to the symphony, properly so called, the Italians have little or no claim; in fact, they have no pretensions whatever on this head, but rest satisfied with remarking, that, as relates to concerted music, the symphony differs only from other pieces by effects added to forms and ideas, which are its essential objects, and in which their superiority cannot be disputed. Thus, in painting, they acknowledge themselves to be generally inferior, as to coloring, to the Flemish, whom they surpass in every other respect.

In musical execution, the schools of Italy have ever retained a marked superiority over the rest of Europe; and first in singing; the multitude of excellent performers of both sexes that they have produced can hardly be numbered: their superiority in this respect arises from three causes, the first two of which belong to them exclusively, and the third is a natural consequence of the others: these are the climate, the organization of the inhabitants, and the excellence of their rules. I cannot here speak of these causes at length, but shall simply mention the observation made on the first by the celebrated Haydn: he said that the climate of Germany was certainly injurious to the voice of Italian singers, and that he frequently sent those belonging to the chapel of Prince Esterhazy into Italy to improve their organ. Secondly, with regard to instruments, and particularly the violin and harpsichord, it is Corelli, Tartini, and Viotti who have instructed all Europe in the use of the former; and the same may be said of the school of Frescobaldi with regard to the harpsichord, and we may add, of that of the Besozzi with regard to the hautboy. The Italians were indeed the inventors of the harpsichord, the bassoon, and the trombone, as well as many other instruments, and taught the use of them.

We shall conclude this article by a few observations on the literature and culture of the art in Italy.

The preceding centuries had produced some much esteemed works in the different branches of the art, and which were, in fact, very estimable in many respects; although, as I have before said, they were constantly behindhand in the practical parts. I have already made known the best of these works. The eighteenth century has been less productive, and for the following reason: that, in these latter times, the improvements in the art have been much more rapid than they were formerly, and of a nature infinitely less susceptible of being analyzed and reduced to rules. Indeed, most of the treatises and other compositions which have existed in Italy are obsolete. But the conservatories of that country possess excellent collections of models, and the principles of music

are there taught by oral instruction, the masters having found, that it is not by books, but by personal lessons, that able artists are formed. As to the culture of the art in Italy, it has always tended to the same end: first, in what concerns execution, the Italians devote themselves much to singing, which is, in fact, the essential object. The number of their amateurs and professors in this style is very great; instrumental execution is much less cultivated by them, and notwithstanding the excellence of their rules, they are in this respect little above mediocrity. In Italy, instruments are regarded only as the means of accompaniment, and the scores being always very clear, it is not requisite that the performers should be particularly expert; indeed, so far is this from being the case, that probably considerable difficulty would be found in having a symphony well performed in Italy; nor do I even think that such an attempt has ever been made either in Middle or Lower Italy. The number of their composers in every style of music is immense; the most indifferent of them have at least the merit of possessing a style, but the greater part are very well instructed in all the principles of composition. Musical theory is little cultivated by them; erudition rather more; but still only by a few learned amateurs, the generality of professional men being very ignorant.

It must also be confessed that, since the latter years of the last century, music has experienced a sensible decay in Italy, and that it is no longer what it was during the greater part of that and of the two preceding centuries, if not as to the number, at least as to the excellence, of its professors. Formerly, there were always twelve singers of the first order to be found in Italy, such as Farinelli, Pacchierotti, Guadagni, and Marchesi, and from sixty to eighty of the second order, such as Mandini, &c. Several masters, likewise, of the first order were always to be found, such as Scarlatti, Durante, and Leo; and a great number of the second rate, together with innumerable inferior composers; and so of the rest. But now, it would be difficult to find two singers of the first order, or five or six of the second; and the same with regard to composition and the other branches of the art. What is the cause of this decay? It arises, we imagine, from the preference universally given to dramatic music, to acquire considerable success in which a very superficial knowledge of the art is requisite. At this time, however, we must remark, notwithstanding this very sensible decay, Italy, in our opinion, still preserves her superiority in music over all the nations of Europe, which, we think, may be easily proved, both by the principles and by the number of professors whose talents do her honor at the present time. The Italian school, too, is still excellent; and, although public instruction is generally feeble, yet many scientific masters are still to be found, as well as all the models left by preceding generations: in a word, it is still in Italy that the best musical instruction may be obtained by those who know how to study.

The German School. — In Germany, as well as in Italy, numerous schools are recognized; in fact, properly speaking, there are as many schools as capitals. In a detailed account of music, it would be proper to give the history of each of these schools, but in this sketch we are obliged to

confine ourselves to a general mention of them. The Germans are in many respects in music, what the Flemish are in painting, less scrupulous in the design than in the effect of the coloring; that is to say, they prefer those chords the effects of which are the most brilliant, and those instruments which are the most sonorous, such as wind instruments; and this makes them pass for excellent harmonists amongst those who confound the tumult of complicated sounds with harmony. This science, which consists in the simultaneous employment of sounds, is the same throughout Europe; it is perhaps that part of the art on the foundations of which all nations best agree, notwithstanding the diversity of language; but the choice of instruments, and consequently the effects differ in every nation. Thus the Italians prefer pure harmony, the Germans brilliant harmony, and the French, who erroneously suppose they follow the example of the latter, are generally accused of being rather fond of noise.

The origin of the German schools is considered to be as ancient as that of the Flemish; several German masters are cited as having flourished at the same period with the French and Flemish; and under this point of view the German schools should claim priority to those of Italy. But the wars which devastated Germany during the latter part of the sixteenth and beginning of the seventeenth century, and particularly the terrible *thirty years' war*, during which five great armies overran that unhappy country, carrying desolation and havoc in every part of it—all these wars destroyed the arts, which can only flourish in the bosom of peace and happiness. It is certain that at this period the school of Germany was greatly inferior to that of Italy; it even appears that the French school, then much degenerated, began before the other to emerge from obscurity. It seems not to have been till about the end of the seventeenth century that Germany received a marked impulse from the works of Keyser, the first German composer who, after the renovation, evinced an original and superior talent. What follows will point out the progress that music has since made in that country; and, in order to render it more complete and more capable of comparison, we shall observe exactly the same order here as in the preceding article.

In all that relates to the foundation of the system, the Germans, like all other nations, have only followed the Italians: they have never equalled them in melody, and especially vocal melody; but with regard to instrumental music, the Germans can boast some masterpieces of the first class. In fugues, canons, and every kind of musical design, they have also been imitators; besides which, they have always chiefly considered counterpoint as it relates to instruments; from which it frequently results, that the voice parts harmonize badly in their compositions, because they affect passages and intervals contrary to the nature and character of the human voice.

As to the different kinds of style, and first with regard to that of the church, the Germans received the Gregorian chant from Italy, and they have composed some peculiar pieces, in several parts, for the church, which they call *chorals*; these are sung by all the congregation, and have an extremely fine effect. This kind of music is quite peculiar to themselves, and it is to be regretted that other nations do not imitate it. They have

counterpoint, it is true, in the plain chant, als fugues, but they are not equal to those of Italy. In the other kinds of church music, that is to say in the accompanied and concerted style, they have long possessed very fine works by their best masters, which are not inferior to the Italians; such, for instance, are the masses of Graun, Haydn, and Mozart; only, we should remark that these partake of the style of the symphonic drama. They possess also oratorios of the greatest beauty, such as "The Ascension" and "The Israelites" by Bach, "The Death of Jesus" by Graun, "The Messiah" by Handel, with many others.

With respect to the chamber or concert style: in madrigals they have nothing very remarkable; in the cantata, they have some extremely beautiful works, at the head of which we may name the cantatas of "The Creation" and "Seasons" by Haydn, which are by some erroneously called oratorios.

They do not appear to excel in fugitive pieces, that style requiring a simplicity and purity of melody little known amongst them. Such of their compositions in this style as we are acquainted with are for the most part uninteresting.

The German theatre is of very ancient origin, although not so early as that of Italy; but it had not attained any celebrity until about the close of the seventeenth century, when Keyser undertook to compose for the theatre at Hamburg, which was then very flourishing. As, however, few traces of the works of this master remain, we cannot speak of his style; but since the commencement and during the course of the eighteenth century, the composers of the school of Naples, or rather the German composers formed in that school, such as Hasse, &c., conveyed that style, into Germany: it became predominant, and served as a model to all others. The German style, thus improved, became that of Graun, Naumann, Gluck, and even of Haydn and Mozart, with the addition only of a few modifications, according to the impulse of their genius, and the latest improvements in instrumental music.

I have just named Gluck, by which it would appear that I class his works among those of Germany; but it will be seen that they belong rather to France; and although this master was much admired by a few Germans of merit in his time, yet his talent was not by any means duly appreciated by the nation in general. Indeed, it is only lately that his French works, translated into German, have been performed in their theatres, and have there operated the same revolution that they effected in France thirty years ago, to the great scandal of the partisans of the symphonic drama, who were indignant at seeing their countrymen abandon the brilliant Mozart for the dramatic Gluck.

The German school derives its greatest lustre from its instrumental music. With regard to music for single instruments, and first, as to that for the violin, although the composers for that instrument which Germany has produced have only followed the steps of Corelli, yet they have done so with so much success, that they merit particular notice. Thus, from the time of Corelli, whilst Locatelli and Geminiani, his two best pupils, spread his school, the one in Holland and the other in England, we remark in Germany Fr. Benda and J. Stamitz, formed on the same

model. Their successors, still improving, created a school of their own, at the head of which stand Leop. Mozart, Franzl, and Cramer, who nearly approached Tartini, his contemporary. In harpsichord music they have produced, since Kerler and Froberger, who were formed in the Italian and French schools, a number of excellent composers, who require only to be named to make known the titles of the German school; these are J. S. Bach and his children, Haydn, Kozeluch, Mozart, Dussek, Cramer, and others whom I cannot name. It is the same with regard to their music for wind instruments, a species of composition which belongs almost exclusively to Germany, and in which she possesses an amazing number of good composers. In instrumental concerted music, the claim of the Germans is not inferior. We have already cited the quartets of Haydn, and the trios and quintets of Mozart; but Haydn, by bringing the grand symphony to a degree of perfection which it seems impossible should be surpassed, has raised his own glory and that of his nation to the greatest height.

Musical execution, in Germany, is a mixture of good and bad; singing is generally but moderate: we do not know one German singer enjoying high repute out of his own country. Execution upon stringed instruments, and particularly on the violin, is solid, but is generally thought wanting in grace and expression. That on wind instruments appears to be very superior. There are a great number of excellent German organists; indeed, with regard to that instrument, no nation can compare with Germany. The orchestras are good, but not so much so as they might be, especially as to their proportions.

The Germans are rich in musical literature, possessing a prodigious number of excellent works on all the branches of the art, most of which were published in the course of the eighteenth century; such are the writings of Fux, Mattheson, Marpurg, Kirnberger, E. Bach, Kuecht, Vogler, Albrechtsberger, Forkel, M. Gerbert, Nickelman, Koch, and many more whom I cannot at the moment cite. In this respect, Germany is, without exception or comparison, the richest country in Europe.

The culture of music in Germany is astonishing; even down to the most insignificant *charity schools*, the art is publicly taught; no schoolmaster is allowed to exercise his profession unless he is capable of teaching at least the elements of music and some instruments. In the principal towns there are public and special schools, where any one is admitted unconditionally, and where all the parts of composition are taught. Besides this, the means of ordinary education being very numerous, and easily attained by every class, the artisan, and even a man of the lowest order in society, if he does not require the assistance of his son's industry to attain a livelihood, may give him a good education free of all expense. From these united causes it results, that in general the musicians of Germany are very numerous and well informed. Their methods of instruction are moreover the same as in Italy, with some modifications; they tend directly to the point. Such, in few words, is the history and present state of music in Germany, which country, as has been seen, possesses its full share of merit.

The French School. — If the Italians were the

inventors of every part of the musical art, if they have brought them nearly all to perfection, and if the Germans have brought those parts to the same point, which the former had left imperfect, what then have the French done, will be asked, and what right have they to figure as a school with those nations which seem to have completed every thing? We answer briefly, that the French have been the inventors of some particular branches, and have, so far, exercised a real influence; in many other instances they have successfully imitated, and have introduced into their imitations a sentiment and style peculiarly their own, observing at the same time an order and respect for consistency which has frequently been neglected by other nations. Hence, in these respects, they are justly esteemed models, and are consequently considered, in many points of view, as possessing a school of their own.

The French, as we have already had occasion to observe several times, were, at the period of the revival of the arts, the first to follow the example of the Flemish. Several French composers, such as Regis, Du Fay, Caron, Binchois, and others, are even said to have preceded them; but we shall not here speak of these, as none of their compositions remain; others, such as Bromel, J. Mouton, Fevin, &c., are considered to have flourished at the same period with the Flemish; and N. Gombert, whose name is evidently French, is distinguished by H. Finck as having surpassed his master, the celebrated Josquin, and having much improved the art of fugue. We shall not repeat what we have already said, and shall only here remark, that the eminence of the French school at that time lasted during the whole of the reign of Francis I.; but the religious disturbances which began about the year 1550, and lasted till near the end of the reign of Henry IV., the bloody wars and the ravages they occasioned, the profanation of most of the churches, then the only repositories of music, gave a destructive blow to the art, as well by the death of a great number of artists, as by the loss of their employment. Henry IV. was indifferent about music; Louis XIII. liked it much; but the gloomy and tyrannical Richelieu, who reigned under his name, did not place it among the number of those arts which he thought proper to patronize. The disturbances that prevailed during the minority of Louis XIV. were still more fatal to the arts. Music, therefore, for more than a century, was not only generally neglected in France, but impeded in every possible way; and the French school remained all that time far behind that of Italy. It produced only a few musicians, the best of whom scarcely attained mediocrity. At length the reign of Louis XIV. commenced, when that prince, who was passionately fond of music, and sang and played well on the guitar, powerfully patronized the art which he himself cultivated. Lulli, a Florentine, introduced Italian music into France as it then existed in Italy; and it seemed, as it were, to receive a new existence. It was reestablished in the churches, the theatres, and concerts; and since that time it has been constantly cultivated with more or less success, as will be seen by the account we are about to give of the progress of the French in the different branches of the art.

As to the foundation of their system, the French have simply followed the steps of the Italians

and they have done the same with regard to melody, though at a greater distance. Indeed, although the French, when left to their natural impulse, have a style of melody peculiar to themselves, and which interests by its freedom and simplicity, yet they gave way, at the period of which we are speaking, to a very extraordinary deviation from their natural taste, and which unfortunately carried them far out of the right path. Lulli, a man of taste and science, coming when young into France, introduced into French melody that of Cavalli and Cesti, and formed from the two a mixed style, estimable in many respects, and especially on account of its simplicity. The French soon became tired of this mixed melody, and the successors of Lulli, who possessed neither sufficient taste to perfect what he had begun, nor sufficient good sense and learning to follow the steps of the Italian school, which was advancing towards perfection under Scarlatti and his pupils, attempted, by the most affected embellishments, to conceal the poverty of their melody. The bad taste displayed at that time in painting, by Coypell, Lemoyne, De Troy, and others, successors of Lebrun, manifested itself in music. This corruption was carried to a still further extent under Rameau, who, in science and taste in music, was precisely what Boucher and Vanloo, his contemporaries, were in painting. Without hearing this music, it is impossible to form an idea of it; having, however, done so, we naturally ask how it could ever have reached such a degree of depravation, and we are tempted to admire the astonishing efforts that must have been made to produce any thing so absurd and monstrous. A violent struggle took place at the beginning of the seventeenth century, between French and Italian melody, which lasted nearly the whole of that century; and to the disgrace of the art be it known, that twice, French melody, supported by all the agents of ignorance and pedantry, — twice, we repeat, — the degenerated French melody, notwithstanding public clamor, triumphed at the opera and in the cathedrals of France. At length, after a musical war of sixty years, the national taste overcame the obstinacy of a few individuals interested in upholding a false system. The works of Duni, Philidor, Monsigny, Grétry, Gluck, Piccini, Sacchini, and some others, have since given to France a melody of a peculiar character, in which Italian grace is united, as much as possible, to French decorum. It is to be hoped that this order of things will be long maintained.

With regard to practical harmony, if by this term is understood not the art of stuning by a confused collection of sounds and a deafening noise, but that of determining the chords which agree the best, according to the nature of modulation, and of selecting and disposing the different sounds which compose these chords, so as to produce the purest and sweetest effect; in this respect the French have been for a long time far behind the Italians and Germans. Laborde himself, even whilst sustaining an opposite opinion, and likewise J. J. Rousseau, prove the truth of this assertion when they affirm, that none understand better than the great masters of Italy the choice of bass notes, and the selection of notes most proper, in the construction of the chords, to invest the harmony with its required effect. The French do not in general know so well how to write music as the Italians and Ger-

mans, which is to be accounted for from the difference of their methods: let us explain this.

In Germany, as well as in Italy, in teaching composition, they proceed directly to the point. They begin by showing the pupil some very simple, but good basses, properly modulated; they enumerate the various positions in which a bass may be placed; they show which chords are most appropriate to each of these different situations, and then exercise the pupil a long while in playing *partimenti* or figured basses on the pianoforte. After this first study, an air or melody is given him, and he is instructed which are the best basses to be placed under particular notes of the melody, according to their several situations, which are soon ascertained; having put the proper harmony to the bass, according to the given rules, he is next taught to write this harmony for two, three, four, or a greater number of parts, in every kind of simple counterpoint; in the same way he proceeds to more difficult counterpoint, fugue, and all other styles; the whole without any discussion or loss of time in useless arguments. This method has a double advantage; it unites all possible rapidity; and, whensoever the studies of the pupil may be interrupted, what he already knows will prove useful to him. The only fault that can be found with the Italian, and even German professors, is, that they do not sufficiently enforce the motives of their precepts, and do not give, as it would be easy for them to do, reasons deduced from practice itself. This renders the study laborious, and sometimes disgusting, and gives an appearance of routine to a method in itself excellent, both as respects its general order and the foundation of its principles. Still, when a pupil is industrious, this inconvenience does not arrest his progress, and he is richly repaid for his perseverance by the advantage he derives from this method of acquiring style and a great facility in writing.

In France, on the contrary, they generally pursue a plan completely opposite; for although the above method at one time was in use with the French, as well as with the Italians and Germans, the same errors which retarded their advancement in the art influenced their progress in the principles of instruction. When, after the reform effected by Lulli, the French were desirous of following the path he had traced out, the means were found to be reduced to a few scattered traditions, become perfectly inadequate, and which appeared still more so, when laid down in badly conceived and badly written works, such as those of Paron, Mignot, Madin and others. It was therefore deemed necessary to make some efforts to produce methods more appropriate to the state of the science; but instead of seeking them in the study of the *chefs-d'œuvres* of the great masters, and establishing a musical grammar drawn from the best results of experience, they had recourse to different sciences having little or nothing to do with music. Rameau, who flourished at a period when the taste for physics and mathematics began to prevail in France, having read or heard that the vibration of a sonorous body generated, besides its principal sound, its twelfth and seventeenth, endeavored to found upon this phenomenon the theory of the inversions of harmony which we have already described. We shall not here enter into further details upon this article, but content ourselves with saying that, for want

of good didactic works, those of Rameau (expounded, simplified, and commented on by celebrated authors) became much in vogue; consequently there are, at the present time, a great number of professors, who, according to the method introduced by him, begin by setting forth to their pupils physical and geometrical propositions, of which they understand nothing, and which, besides, have not the slightest relation to the question. They, however, persist in it that all this nonsense is the foundation of the great, the sublime science of harmony. After having encumbered the mind with this useless trash, the pupil is instructed in the definition of trasony, which is the knowledge of the chords. The chords are then defined and explained to him, and he is made to learn a catalogue of them so large, that the best memory cannot possibly retain them all in less than a year. He is shown all the different ways in which they succeed each other; he is accustomed to see the whole of harmony in common chords, to find which alone he has regular rules, consequently he is obliged continually to have recourse to the inconvenient calculation of inversions; added to which, these rules are in themselves so vague, so imperfect, and so little capable of being applied in most cases, that if, after a year or two of study, the unhappy pupil is presented with the simplest bass, he is not able to place the same harmony to it that a pupil of Italy or Germany would do, without hesitation, at the expiration of a few weeks. What then is the result? The pupil becomes wearied and disgusted, renounces the study, and, if his profession or taste lead him again to attempt composition, he hastens to acquire, as he can, from bad principles, a certain *trading* knowledge of the art sufficient for his purpose, but ever remains ignorant of its fundamental principles.

Such is the certain result of the system of thorough bass, so cried up by people entirely ignorant of music, as facilitating the means of learning the art; we should rather say, of talking of it, without understanding any thing about it, as did Roussier, Bethisy, and so many more of Rameau's commentators. We have already named the only advantage arising from this system, relatively to the classification of the chords; we shall not say more here on this subject. Finally, there is no study of counterpoint, or, at most, that of the *venering* (*placage*) of chords; no study of the styles; no knowledge of the models, even the names of whom are unknown. Such is a summary and unexaggerated account of the usual mode of studying musical composition throughout France.

It must, however, be confessed, that the plan of instruction adopted by the Conservatory of Paris, and that instituted by several professors, according to the Italian and German methods, are exempt from some of these defects; but it is easily to be perceived, that, withheld by local considerations, and by the fear of encountering prejudices, they have not yet done, in this respect, all that perhaps they would have wished to do.

This, then, is the actual state of the system in France, so far as regards its principles and foundation. Let us now see what she has done in the different kinds of composition. First, as to church music, we shall begin by the various spe-

cies of the style *à capella*. After having received from St. Gregory the Roman chant, that valuable remnant of the Greek music, and having, by degrees, made great alterations in it, it was at length totally abandoned for absurd *plain chants* composed at the period when the art was most depraved in France, and which, for the most part, discover great ignorance and bad taste. Their *faux-bourbons* are nearly the same as those used in Italy; but it is relatively to the counterpoint on the plain chant that the French school is greatly defective. They have no writings on the subject; which is not surprising, as the French chapel-masters understand so little of the plain chant, that we have seen the most experienced of them (*soi-disant*) mistake the tone of the *aunt*. And besides, writing this kind of music is not taught in France, but they practise instead, in the cathedrals, extemporary counterpoint, which is called *chant sur le livre*. To give some idea of it, imagine fifteen or twenty singers of every description of voices, from the bass to the highest soprano, singing as loud as they can bawl, each according to his own fancy, without either rule or intution, and making every note in the system, both diatonic and chromatic, heard at the same time with the plain chant, which is performed by discordant and harsh voices: you will then begin to have some conception of the plain chant or counterpoint, called in France *chant sur le livre*. But what will be thought still more incredible is, that there are actually choral preceptors and chapel-masters of sufficiently depraved taste to admire and encourage this horrid mockery of music in their churches. Such people do, indeed, make the house of God a den of thieves; it may be truly called an *abomination and desolation in the holy place*.

Church music with instrumental accompaniment has, in France, as every where else, undergone the same changes as dramatic music, with which it has always had great connection. The French long pretended to excel and surpass all other nations in this style; and although the falsity of such a pretension is now acknowledged by those who sustained it only a few years ago, yet it should be admitted, that in this kind of music the French have really considerable merit. Notwithstanding the variations that have taken place in the melody, there have, at all times, been French composers who have acquired a just reputation in church music; the most celebrated of whom, reckoning from Lulli, are that composer himself, Campra, La Sœur, of Rouen, La Lande, Blanchard, and Mondonville; and amongst the moderns, Gossec, D'Haudimont, Giroust Roze, and lastly, Le Sœur, director of the Emperor Napoleon's chamber music, who has produced some works in this style fraught with beauties of the first order.

As to chamber music, the French have no madrigals, except a few by some masters who were contemporaries with the Flemish, all of whose works are now forgotten. This style of music flourished in Italy at the period of the troubles in France, during which music was not at all cultivated in that country. In the cantata, the works of Clerembaut and De Bernier, pupil of Caldara, were formerly cited. Fugitive pieces are one of the styles in which the French succeed the best; they possess some very beautiful specimens in all styles and of every character, and

perhaps no nation of Europe is superior to them in this respect.

But the greatest glory of the French school is in dramatic music. They were not precisely the inventors of it, but by borrowing the dramatic melody of the Italians, and combining it with that of their own nation, they have formed, as I have before said, a melody peculiar to themselves, and of an excellent character; and by applying this to well-imagined and well-written poems, they have given birth to the *lyric drama*, properly so called, which may be considered, therefore, in some degree, as exclusively belonging to France.

It was, however, only by following, at first, the example of the Italians, that France attained to this brilliant result. In fact, it is well known that when Mary de Médicis, wife of Henry IV., came to France, she brought with her the poet Rinuccini; from which time lyric representations took place at the court. None, however, are mentioned as having been performed during the reign of Louis XIII.; his minister, Richelieu, turned all his attention towards the French drama. The Italian Mazarin, who succeeded him, brought the taste of his country into France, and caused the first Italian opera that had ever been heard in that country to be performed at the Louvre, in 1646. In 1670, Perrin the poet, and Cambert the musician, brought out the first French opera, entitled "*Pomona*," at the Tennis Court in the Rue Mazarine. Two years afterwards, Lulli obtained their privilege, and enjoyed it till his death, which took place in 1687. We have already described the kind of music which he set to the French poems of Quinault; we have also shown in what respects his successors erred, amongst whom are distinguished Campra, Destouches, and Montéclair. Rameau, who made his *début* in 1733, by "*Hippolite*" and by "*Arcie*," substituted for the true recitative and airs, which were, doubtless, too simple, and for the most part obsolete, and for the paltry accompaniments of Lulli, an emphatic recitative, more brilliant airs, but often irregular and in bad taste, more ornamented accompaniments, but frequently badly written, although, with all this, there might generally be found in them features and parts which demonstrated both science and genius.

His successors flourished after him in the French lyric drama, till about 1775; but, since 1750, the comic opera had appeared in France on the model of the interludes and buffa operas then in vogue in Italy. It was in this style that the French melody began to regenerate under Dauvergne, La Borde, Floquet, J. J. Rousseau, Duni, and Philidor; to whom succeeded Mousigny, Gossec, and Grétry, who completed the improvements in French lyric comedy. Amongst their contemporaries and imitators were Martini, Dalayrac, Champéin, and many others. The reform operated by them in comedy, and prepared in lyric tragedy, was consummated by Gluck, who, in 1774, gave at Paris his "*Iphigénie*," and soon afterwards enriched the French theatre by several other works. His rivals, Piccini and Sacchini, with the same object in view, endeavored, at the same time, to preserve the essential forms of melody more than Gluck had done. This diversity of pretension occasioned warm disputes, which are now, however, terminated. Vogel, Lemoyne, and others, followed the steps of these great masters. This generation of celebrated men was suc-

ceeded by French composers still worthy to touch the lyre; the principal of whom were, in tragedy, Berton, Catel, Le Sueur, Mehul; and in comedy, the same; to whom may be added Boildieu, Eler, Gaveaux, Kreutzer, Plautade, Persuis, and Solié. Many Italians and Germans, also, came into France about this time, and attempted composition in the French dramatic style with success; the most celebrated are Cherubini, Dellamaria, Nicolo, Steibelt, Spontini, Tarchi, and Winter. Some composers of the present generation have tried to introduce into the lyric drama the effects of the symphony; but they appear, at length, to have discovered the abuses of this style, and to have since renounced it entirely.

It is to the superiority of its national theatre, that France owes that of its lyric drama. The great resort of company to the Théâtre Français, considered to be the best of all of them, has rendered the feeling of dramatic propriety so general that the French spectator cannot endure a work in which it is not duly observed, whatever may be its other merits. Penetrated with the same feeling, and imbued with the same principles, the French lyric poets and composers, whether natives or foreigners, directed by national taste, have, with one accord, constantly worked upon the same system. It would, certainly, be very *à propos*, in sketching the history of the French lyric theatre, to give some idea of the revolutions that have taken place in the French drama itself, and to make some mention of the poets who have contributed to its progress; but I must here limit myself to naming a few of the most celebrated, such as Quinault, Lamotte-Houdart, Fontenelle, Labruère, G. Bernard, Sedaine, Favart, Marmontel, Marsollier, Monvel, Duval, Guillard, Bouilly, Hoffman, Picard, Etienne, and Dupaty, and refer the reader to their names in this work.

The French have also some celebrated names in instrumental composition, although, in this style, they have only been imitators; and first in *music for single instruments*, Leclair, Guignon, Guillemain, Mondonville, Gaviniés, Leduc the elder, Bertheaume, and Lahoussaye are justly esteemed. In *concerted music*, the quartets of Davaux, and the symphonies of Gossec, are cited, which preceded, in France, those of Haydn, and some of which are still heard with delight. During a later period, some new attempts have been made in this style, but we must wait a future period to decide on them with impartiality.

The principal merit of the French school consists in the different branches of execution.

Beginning this part of our examination by singing, we distinguish three epochs: that of Lambert, in the time of Louis XIV.; that of Rebel and Francœur, in the time of Louis XV., who displayed all the ridiculous faults and affectation of that period; and lastly, the modern epoch, whose style has great analogy to that of melody, that is to say, is an Italian style modified, and rendered conformable to the French language, and the principles of which are developed in the excellent method of singing of the Conservatory. Each of these periods boasts celebrated singers; the first has Bontelon, the second, Jelyotte; the third, Garat, Chardini, Lays, and Mautin, to whom we must add Ellefion, for grace and elegance united to expression and dramatic truth.

But with respect to execution, the style in which the French have real and undisputed merit, and

Inded, in many respects, have a marked superiority, is the instrumental in general, and especially that of the violin. On this point, the French have always had great pretensions, and often founded in justice. The excellence of the twenty-four *petits violins* of Louis XIV. formed by Lulli, and of other French violinists, was highly spoken of so far back as the seventeenth century. I do not, however, know how to reconcile these facts with the following remark of Corette in his preface to his "Method of Accompaniment," published at Paris about the year 1750: "At the commencement of this century," says that author, "music was very dull and slow, &c. . . . When Corelli's sonatas were first brought from Rome, (about 1715,) nobody in Paris could play them. The Duke of Orleans, then regent, being a great amateur of music, and wishing to hear them, was obliged to have them sung by three voices: the violinists then began to study them, and at the expiration of *some years*, three were found who could play them. Baptiste, one of these, went to Rome to study them under Corelli himself." Be this as it may; since that period, instrumental music has been studied with ardor by the French, and they have made astonishing progress in it. France has now an excellent school for the violin, founded upon that of Italy. We have already named its best masters in speaking of instrumental composition; to those names must be added Pugin, the celebrated pupil of Tartini, and Viotti, who, during his residence (of some years) in France, formed many excellent pupils, at the head of whom stands Rode. These, in their turn, have communicated their skill to a number of others, and the French violinists are now, both in number and in talent, unrivalled in Europe. The artists of greatest repute at this time, are Baillot, Grasset, Kreutzer, Lafont, and their pupils, Habeneck, Mazis, Fontaine, &c. The same may be said with regard to many other instruments, and particularly the piano-forte: amongst the principal masters and amateurs on which are Adam, Rigel, Jadis, Boildieu, Madauc de Montgeroult, Prüdher, her pupil, &c; but for the organ, which was in its glory under Couperin, Marchand, Calvière, and Daquin, there is now scarcely any master worthy of citation, if we except Sejan, who has followed their steps. Lastly, to conclude this article by a panegyric as just as it is important: what cannot be too much admired in France is, the excellence of the orchestras in the execution of the symphony: in this respect they not only infinitely surpass, we will not say those of Italy, which are beneath consideration in this respect, but rival those of Germany, where instrumental music has attained the highest reputation. This fact is acknowledged to be true even by the most prejudiced of other countries.

The musical literature of France is of little value: among her works of this kind, some, compiled by artists who neither knew how to think nor how to write, are as vicious in their principles as in their plan; others, edited by learned men, or by literati ignorant of the art, teach only systems and errors. From this condemnation, however we must except, first, some methods which concern execution, and particularly those published by the Conservatory of Paris; secondly, concerning composition, the little treatise of harmony by M. Catel, which is a good introduction to the study of accompaniment. We consider also

the principles of composition of the schools of Italy, which we have formed from the union of what we have found best on the subject in the French and other languages, to be the only authentic and complete work for the student of this art, and, notwithstanding some just imputations, the least imperfect of any existing of the same kind.

Of the three nations of which we have spoken, it is in France that music is the least generally cultivated; it is also, of all the fine arts, the one least attended to in France, and the only one in which there are no public lectures, an advantage which it possesses in almost every other country of Europe. Before the French revolution, music was principally taught in the *maitrises*; but notwithstanding the number of four thousand pupils, who were constantly supported by these establishments, they so much felt the corruption and decay of the art in France, during the seventeenth and eighteenth centuries, that, in the whole course of that time, they produced at most but five or six singers, and as many composers worthy of mention. Their reestablishment was on a still worse footing. The ancient chapel-masters were at all events composers; but lately, for want of better, it has been found necessary, with few exceptions, to employ any musicians that could be had. Here the chapel-master is a parish chanter; there a violinist; elsewhere even a trumpeter, or some such person; and these men are intrusted to form singers. It will readily be imagined that the *maitrises* thus organized would be even less productive than they were formerly; and up to the present time, it would be difficult to find, out of two or three hundred pupils which they contain, one who could sing the seven notes of the scale in tune. The Conservatory, established since the revolution, has certainly, however, produced a great number of instrumental performers, and many good singers.

Formerly, the plain chant, at least, was taught in many of the primary schools; now, neither plain chant nor any other kind of music is taught, and the bulk of the nation is totally ignorant of the art. Amongst the higher classes of society it is more cultivated; amateurs devote themselves chiefly to instrumental music. In general, singing is neglected; and nothing is so rare in France as good singers. Composition is but slightly cultivated; the studies for it being, as we have before explained, for the most part bad and very expensive. Besides, the profession of a composer leads to nothing advantageous in France; there is no employment for his talents, either in the chapel or the theatre, the latter of which is occupied in a great measure by foreigners. In such a state of things, composers are formed with difficulty, and, in fact, there are very few in France; the number of those who have met with success in the dramatic style, at present the most cultivated of any, is very inconsiderable. Many of these men are now old, and we find but few successors to their talents. Theory is little known in France, and musical erudition is still more rare; the French are, indeed, almost ignorant of the name.

From this examination of the French school, it nevertheless results, that it holds a much more distinguished rank amongst other schools than many, blinded by national prejudice, will allow, or than is believed by some Frenchmen themselves, who have been too easily led astray by presumptuous arguments; that it possesses a

marked superiority in two essential branches, namely, lyric drama and instrumental execution; that, notwithstanding its deviations from the didactic, it has been very serviceable in this respect to the art; that its inferiority in many other points at the present moment arise from circumstances which have before produced the same effects in those very nations which now appear to excel France. History declares that, at different periods, the French school has held a superiority over these same nations, and proves likewise, that, by pursuing wise measures, it would be easy to replace it upon the same level.

On taking the trouble to compare successively the labors of the three schools, a sketch of which I have endeavored to draw with as much exactness and order as impartiality and truth, it will be found easy to judge of the merit of each of them; that spirit of party, those prejudices or national antipathies, which eagerly attribute every thing to the one side and nothing to the other, will thus be avoided. The good and the excellent will be sought for where it really exists, and will be duly appreciated wherever it may be found.

HISTRIO. (L.) In the ancient drama, this word signified a comedian, or a stage singer; but more particularly a mime who exhibited his part by gestures and dancing.

HINSTRICH. (G.) An up bow.

HITZELBERGER, SABRINA, born in 1755, was a celebrated German singer. She sang with great applause, in the year 1776, at the *concerts spirituels* and *des amateurs*, at Paris, and was afterwards engaged as chamber musician to the royal family. Shortly after this, she returned to Germany, and sang at Mentz, Frankfort, and other cities in her native country, retiring from the musical profession about the year 1795, and devoting her attention to the musical education of two of her daughters.

HITZELBERGER, JOHANNA, third daughter of the preceding, was, in the year 1807, a singer in the service of the King of Bavaria at Munich. Her younger sister, Regina, also held the same situation, and was likewise a principal singer at the theatre. Napoleon was so delighted with her performance, that he wished to engage her for his chamber music in Paris.

HITZENAUER, CHRISTOPH, published in 1585, in Germany, "*Ratio componendi Symphonias, Concertusve Musicos.*"

H MOLL. (G.) B minor.

HOBELN, JOHANN FRIEDRICH, organist at Wollenbuttel, died there in 1782. He published "*Elysium,*" a German drama for the harpsichord, in 1781, Wollenbuttel; "*A Collection of Songs,*" Cassel, 1778; and "*Six Sonatas for the Harpsichord,*" Cassel, 1780.

HOBUE, or OBOE, (L.) in French HAUTOBOIS. See HAUTOBOIS.

HOBRECHT, JACOB, a Fleming, was the preceptor in music to Erasmus, and has the credit of having been an excellent musician. He is said to have had so great a celerity of invention, that he composed in one night a whole mass, to the admiration and astonishment of all who knew him. Glareanus asserts that the compositions of Hobrecht are grand and majestic.

HOCHBRUCKER, an inhabitant of Donawert in 1700, was an excellent performer on his father's newly-invented pedal harp. He played before the imperial court at Vienna in 1729.

HOCHBRUCKER, probably a descendant of the above-mentioned family, was a celebrated harpist at Paris, in the latter part of the seventeenth century. He published much music for his instrument.

HOCHREITER, JOS. BALTHASAR, organist at Lambach, in Austria, published "*Vesperæ Dominicales et Festivæ,*" for four voices, Augsburg, 1706, and "*Vesperæ de B. V. Maria,*" for four voices, two tenors, and bass, Augsburg, 1710.

HOCHZETMARSCH. (G.) A nuptial march.

HOCKET. The name formerly given to a rest, or the cutting a note short, without accelerating the time. A manner of execution corresponding with that of our *staccato* passages.

HODERMANN, G. C., a pianist and excellent instrumental composer, resided at Amsterdam, where he published fourteen works for various instruments, between the years 1789 and 1795.

HOECKE, C., a celebrated violoncellist, resident in Russia, published a concerto for his instrument, with accompaniment for a full orchestra, at Moscow, in 1799.

HOECKH, CHARLES, was born at Ebersdorf, near Vienna, in 1707. His father began to teach him the violin at a very early age, and sent him at fifteen to Pruck, to learn his art thoroughly. At the termination of his apprenticeship, he entered the band of a regiment as a hautboy player. He remained two years in Hungary, and two more in Transylvania. The time of his service having expired, he returned to Vienna, and there meeting with Francis Benda, who was just going into Poland, he accompanied him through Breslau to Warsaw, where the Staroste Sukaschewsky received them both into his service. In 1732, Hoekch went to Zerbst, as concert master. He died in 1772, with the renown of having been one of the greatest violinists of his time.

HOEFFELMAYER, MARIA JOSEPH ANTON, born at Rastadt, was considered a good violoncellist and performer on the kettle drums. He was for some time in England, and afterwards at Hamburg, and finally, we believe, settled in Paris. He is the younger brother of Thaddeus.

HOEFFELMAYER, THADDEUS, born at Rastadt in 1750, was violinist to the Elector of Mentz.

HOFFER, MADAME, a celebrated female singer at Vienna, was the sister-in-law of the renowned Mozart, who composed, among other music for her, two airs, sung by the Queen of Night, in the *Zauberflöte*.

HOFFMANN, ERNST THEODOR AMADEUS, composer, painter, poet, and romancer, was born at Königsberg, in 1776. His "*Fantasy Pieces,*" and his "*Sufferings of the chapel-master Kreissler,*" contain some of the most genial, romantic, and appreciative things ever written about music. Among them may be noticed, as especially popular and influential, his papers on

Mozart's "Don Juan," on the "Ritter Gluck," and on Beethoven's symphony in C minor. He also wrote several novels and composed some operas, the principal one of which was called "Undine." He died in 1822.

HOFFMANN, HEINRICH ANTON, in the year 1810 violinist at Frankfort, was born at Mentz in 1770. He studied composition under the celebrated Kreutzer. The following are among his published works: "Sechs Englische und Deutsche Tänze," Op. 1, Mentz; "Concerto pour deux Violons princip.," Op. 2, Offenbach, 1795; "Trois Violin quartettes," Op. 3, Offenbach, 1795; "Six Duos Concert. pour deux Violons," Op. 4, Mentz and Paris; "Gestänge beim Klavier," Offenbach, 1799; "Sechs Deutsche Lieder mit Guitarre und Klavier," 1802.

HOFFMANN, H. R., a singer at the German theatre in Hauburg, in 1797, published there, about the same year, several pieces of vocal music.

HOFFMANN, GEORG, composed some instrumental music at Vienna previously to the year 1799.

HOFFMANN, JOHANN GEORG, organist at Breslau, was born in the year 1700. He published much sacred music, which was held in high estimation.

HOFFMANN, JOSEPH. Composer of a "Notturno à deux Violons et Bass," published at Vienna before the year 1799, also of a "Grand Trio pour le Violon, Tenor, et Violoncello, No. 1," Vienna, 1803.

HOFFMANN, LEOPOLD, a celebrated composer at Vienna, died there in 1782, and was succeeded in several public situations by Albrechtsberger. He composed much sacred and instrumental music.

HOFFMANN, PHILIP CARL, musician to the court at Mentz, and afterwards chapel-master at Offenbach, was born in the former town in 1769. He published much piano-forte music at Mentz and Offenbach, between the years 1795 and 1805.

HOFFMEISTER, FRANZ ANTON, chapel-master at Vienna, and very celebrated as a composer, was the proprietor of a music warehouse in that city. He commenced publishing, in the year 1785, a monthly collection of instrumental music, which contains several of the compositions of Haydn, Mozart, and other celebrated masters, as well as of his own. He died in 1812.

HOFFMAYER, JOHN, organist to the Emperor Maximilian I., in the fifteenth century, is stated, by the musical historians of Germany, to have been a very skilful performer.

HOHLFELD, a mechanic of Berlin, in the middle of the eighteenth century, is worthy of mention in this work as the projector of two curious musical inventions. The first is a machine which writes down the notes as the performer plays them on the harpsichord. It is true that the Rev. Mr. Creed, an Englishman, had written a paper on the same subject in the Philosophical Transactions for the year 1747, and that Ungel, a German, had, in 1751, also written on

the possibility of constructing such a machine; still Hohlfeld has the credit of being the first who put the idea in execution. The celebrated Euler having accurately explained to him the proposed mechanical problem, he succeeded quickly in manufacturing the machine, and soon presented it to the academy at Berlin. It consisted of two cylinders, applied to the piano-forte in such a manner that the one received the music paper, which was given out again by the other, the notes played during the time having been marked in small dots on the paper in such a way that they could subsequently be written in regular notes. This process, however, being still attended with difficulties, the academy gave its simple approbation of the ingenuity of the machine, and awarded a small sum to the constructor, who, a few years afterwards, took it to a country house near Berlin, where it was consumed by fire. The second invention of Hohlfeld was an instrument in the form of a piano-forte, presented to the King of Prussia in 1754. It is mounted with catgut strings, under which is a horse-hair bow, put in motion by a small wheel, small hooks being attached to the keys of the instrument to draw the strings towards this bow. This last invention has been since very much improved upon, as may be seen from one of the *Gazette di Milano* of the year 1823, where is announced a new instrument called the *violiccembalo*, professedly invented by Abbate Gregorio Trentin, of Venice. It is described as a piano-forte, and played by a bow. It has been rewarded by the gold-prize medal, and is patronized by various amateurs and musicians, at the head of whom is Perotti, chapel-master of Santo Marco. The exterior form of the *violiccembalo* of the Abbate Trentin is the same as that of a piano-forte of six octaves. The strings are of catgut of various dimensions, of which the lowest are covered with metal wire, and each string is appropriated to a single tone. At the extremity of each key is a horizontal lever, by means of which the string is raised upwards to meet the action of the bow. This bow consists of a piece of woollen stuff, inwrought with silk threads instead of hairs, which is drawn backwards and forwards by means of two cylinders affixed to the sides, and set in motion by means of a fly-wheel, worked by the right foot.

What appears new in this instrument is as follows: 1. That in the down pressure of the key, the string is compressed between a little piece of thick leather, and retained in the same manner as the violin string between the fingerboard and the finger of the performer. 2. That in the pressure upwards of the strings, by means of a quill affixed to the lever, the greater extension of the string which without this would take place, is avoided as well as the impurity of the after sound.

That the formation of this instrument may have been attended with great difficulties, of which an account is given in the description of it, and that in overcoming them, much perseverance was necessary, cannot be doubted; particularly as the arrangement itself, as described by the inventor, appears sufficiently complicated. The editor of the *Harmonicon* considers the *violiccembalo* to be only a revival of the *Celestina stop*, invented and performed on, sixty or seventy years ago, by Mr. Adam Walker, the well-known lecturer on experimental philosophy.

HOLCOMBE, HENRY, was a singer in the opera, at its first introduction into England, in the beginning of the eighteenth century. He did not, however, continue long upon the stage, but left it, and obtained a livelihood by teaching the harpsichord. "Happy hours all hours excelling," is a song of his composition, in the "Musical Miscellany." A few years before his death he published a collection of twelve songs, yet in print, set to music by himself; among which is that of "Arno's Vale," written by Charles, Earl of Middlesex. Holcombe died about the year 1750.

HOLDEN, JOHN. An English musician, and author of "An Essay towards a rational System of Music," Glasgow, 1770.

HOLDER, WILLIAM, doctor of divinity. Besides his eminence as a divine, and deep knowledge in music, he distinguished himself as a philosopher, mathematician, and philologist. He composed some anthems, of which three or four are preserved in Dr. Tudway's collection, in the British Museum. From the regularity and unembarrassed arrangement of the several parts in these specimens of his composition, it is easy to discover that he had not studied and practised counterpoint in the superficial manner of an idle *dilettante*, but with the application of a diligent professor. He published also "A Treatise on the natural Grounds of Harmony." Dr. Holder died in 1693, aged eighty-two.

HOLDER, JOSEPH WILLIAM, bachelor of music at Oxford, was born in the year 1765, in the parish of St. John's, Clerkenwell, London, of respectable parents, and was, by his father's side, a real descendant of Cardinal Wolsey. Having shown an early disposition for music, he was, at the age of seven years, and through the interest of a particular friend, (Mr. George Courtup), admitted as one of the singing boys at the Chapel Royal, St. James's, under the much-respected Dr. James Nares, with whom he remained seven years; his conduct and assiduity during that time rendering him a great favourite with his master, who did every thing in his power to promote his pupil's profound knowledge in music. Indeed, the pains that were taken by that worthy man to instil the principles of the science were very evident; for, on leaving the Chapel Royal, Dr. Nares would not, on any account, permit Holder to study under any other master, so great was his conviction of his pupil's knowledge of the theory of music. During the last two years he was in the Chapel Royal he was of considerable use to his master, both in the care of the junior boys, and in assisting him in playing the organ at the Chapel Royal. It was at this period that he experienced much kindness from Major John Lemon, of the Royal Horse Guards, who was well known as an amateur: this gentleman was extremely desirous of having Holder as a musical companion, but Dr. Nares strongly opposed it, and it was ultimately given up. On leaving the Chapel Royal, he remained with his father between two and three years, studying and practising regularly twelve hours a day, which his father compelled him to do. During this time, he became assistant to Mr. Reinhold, and played the organ at St. George the Martyr, Queen's Square, London. He was then appointed organist of St. Mary's Church, Bungay, in Suffolk, where he remained

seventeen or eighteen years. From that time, he removed into Essex, near Chelmsford. In the year 1792, he took his bachelor's degree in music at Oxford, under Dr. Philip Hayes; he was admitted an honorary member of the Royal Academy of Music, and was one of the examiners of the pupils for admission to that establishment; he was also unanimously elected an honorary associate of the Concoctores society. These distinguished honors were particularly flattering, as they were conferred without his knowledge. Holder's works are numerous, both vocal and for the piano-forte; amongst them are, "A Collection of Glee's and Canons, for three, four, and six voices." "O dear, what can the matter be, with variations;" this little work has long been a favorite. "A second Collection of Glee's and Songs." "A third Collection of Glee's." "A Grand Duet," Op. 18. "A Collection of Preludes," Op. 26. "A Military Divertimento," Op. 27. "Sonata," Op. 29. "Trio for three Performers on one Piano-forte," Op. 31. "Sonata," Op. 34. "Sonata," Op. 38. "Ariette, with Variations," Op. 40. "Le Retour de Ghent," Op. 53. "Sonata," Op. 56. "Trio for three Performers on one Piano-forte," Op. 60. Holder has arranged very many of Handel's celebrated *choruses* as *duets*, and the same *choruses* to *single pieces*; likewise a *mass* for three voices. Besides the above works, he has composed several canons, glee's, *Te Deums*, and many anthems.

HOLDING-NOTE. A note that is sustained, or continued, whilst others are in motion.

HOLLAND, JOHANN DAVID, conductor of the music at the cathedral of Hamburg, was born in 1748. He composed, about the year 1780, the music of an oratorio called "The Resurrection of Jesus Christ;" he also published some instrumental music and songs. The last of his works is dated in 1790.

HOLLBUSCH, JOHANN SEBASTIAN. Author of a good didactic work, entitled "*Ton-system, abgefasst in einem Gespräche zweyer Freunde*," Mentz, 1792. He also composed some instrumental music, published at Manheim and Amsterdam.

HOLMES. A celebrated English performer on the bassoon. He performed at Salomon's concerts in 1793, and for many years afterwards at all the principal concerts and music meetings in England.

HOLMES, JOHN. An organist of Salisbury Cathedral, at the beginning of the seventeenth century. Some of his part-songs are to be found in a work called "The Triumphs of Oriana," published in London in 1601.

HOLZBAUER, IGNAZ, chapel-master to the elector palatine, was born at Vienna in 1711. He first studied counterpoint under the celebrated Fux, and afterwards made two journeys to Italy; in the second of which he resided nearly two years at Milan. On his second return to Vienna, in 1745, he was nominated *chef-d'orchestre* at the court theatre. He had, at the same time, the opportunity afforded him of applying his great talents to the composition of a great number of works for the church, as well as theatre. In 1751, he was invited by the Duke of Wurtemberg to Stuttgart, and appointed his first chapel-master

In 1753, he was charged with the composition of the music for the pastoral opera, "*Il Figlio delle Scelte*," which was to be performed at the opening of a new theatre. This composition had such success, that the elector gave him, the same year, the places of chapel-master and composer at Mannheim. There he commenced his career by setting several Italian operas. In 1756, he undertook a third voyage to Italy, principally with a view of becoming acquainted with the music performed at the pontifical chapel in Rome. He soon again returned to Germany. In 1757, he was charged with the composition of a new opera for the Theatre Royal at Turin, where he in consequence went, and gave his "*Nitetti*," which was very successful. The following year he brought out at Milan "*Alessandro nell' Indie*," which was enthusiastically received, and was performed for thirty successive nights. In 1776, he composed his opera of "*Gunther von Schwarzburg*," for the theatre at Mannheim, which met with the greatest success: it was the only German opera he wrote. He died in 1783. Others of his works, not named above, are "*Isaac*," and "*La Betulia Liberata*," two oratorios, with many masses, motets, &c., for the church; also the three operas, "*La Clemenza di Tito*," "*Le Nozze d'Arianna e di Bacco*," and "*Tancredi*." He further wrote very numerous instrumental pieces, amounting, according to Gerber, to no less a number than two hundred and five.

HOLYOKE, SAMUEL, son of the venerable Dr. Holyoke, of Salem, Mass., was born at Boxford, in 1771, soon after which his father and family moved to Salem. In 1790, Mr. Holyoke prepared the copy of his first collection of Sacred Music, at Salem, and it made its appearance in January, 1791. This book is entitled "*Harmonia Americana*." Containing a concise Introduction to the Grounds of Music. With a variety of Airs, suitable for Divine Worship and the use of Musical Societies. Consisting of three and four parts. By SAMUEL HOLYOKE, A. B." It was "Printed at Boston, *Typographically*." By Isaiah Thomas and Ebenezer T. Andrews, at Faust's Statue, No. 45, Newbury street. — MDCCXCI. Sold at their Bookstore, by said Thomas at his Bookstore in Worcester, and by the Booksellers in Town and Country." This book was published by subscription; and at the time of its publication, the author had received subscribers for 260 copies. Holyoke was only about twenty when the *Harmonia Americana* was published, and must have commenced the study of music at a very early age. He was one of the reformers who undertook to do away with fugue in sacred music, and says in his preface, "Perhaps some may be disappointed that fuguing pieces are in general omitted. But the principal reason why few were inserted was the trilling effect produced by that sort of music; for the parts, falling in, one after another, each conveying a different idea, confound the sense, and render the performance a mere jargon of words. The numerous pieces of this kind, extant, must be a sufficient apology for omitting them here." In this collection we find *Arnheim*, written by Holyoke at the age of fourteen, the first piece of music he ever composed and the last piece he ever sang. This was at a social gathering of his musical friends, at the house of JACOB B. MOORE, Esq., in the spring of

1816. Mr. Holyoke had been teaching at Concord, N. H., during the winter, and died of an attack of lung fever, at Lang's Tavern, East Concord, after a short illness of four days, aged forty-five. Five days previous to his death, at the gathering above spoken of, at the close of the musical exercises, he requested the choir present to sing "*Arnheim*," remarking that perhaps he would never meet with a choir on earth so well calculated to do justice to his first composition. It was sung twice, and Mr. Holyoke was affected to tears. He never sang again. Mr. Holyoke was extensively and favorably known as a teacher and composer of both vocal and instrumental music. In 1860, he published, at Exeter, N. H., vol. i. of the "*Instrumental Assistant*," a quarto of 80 pages, and in 1807, was published, at the same place, vol. ii. of the *Assistant*, containing 104 pages quarto. In these two volumes were given "rules for learning music, and complete scales for all the instruments used," and about 200 pieces of music for instruments arranged in parts from two to eight. In 1809, appeared "*The Columbian Repository of Sacred Harmony*." By Samuel Holyoke, A. M. This was the most extensive collection of sacred music ever published in this country; it contained 472 quarto pages, and about 750 pieces of music, including the whole of Dr. Watts's Psalms and Hymns, to each of which a tune is adapted, and some additional tunes suited to the particular metres in Tate and Brady's, and Dr. Belknap's collection of Psalms and Hymns. The book was "Published according to Act of Congress." "From the Music Press of Henry Ranlet, Exeter, New Hampshire." It is a very good specimen of printing, and from it have been selected a large number of tunes which help to make up the various collections of church music which have since appeared. This work was published by subscription, the price per copy being three dollars. Holyoke was concerned in the publication of the "*Massachusetts Compiler*," with Oliver Holden, of Charlestown, Mass., and at the time of his death was engaged in preparing for publication a third collection of instrumental music. He died poor, though highly respected and esteemed by those who knew him. In early life he possessed a remarkably good voice; but in latter years it had become so harsh that he was obliged to use a clarinet in his vocal schools.

HOMATI, TOMASO, an Italian composer, probably of the sixteenth or seventeenth century, published a collection of masses and psalms for eight voices.

HOME, GEORGE, was a doctor of divinity at Canterbury, and published, in 1784, a work entitled "*The Antiquity, Use, and Excellence of Church Music*."

HOMILIUS, GOTTFRIED AUGUST, chapel-master of the three principal churches, and singer at the school of the Holy Cross, at Dresden, was born at Rosenthal, on the frontiers of Bohemia, in 1714. He was one of the greatest organists of his time, and also highly celebrated for his sacred compositions. Among his numerous excellent works for the church, there have only been printed his cantata on the passion of our Savior, in 1775; the rejoicing of the shepherds on the birth of Jesus, in 1777; and some motets, in the collection published in six volumes by chapel-master Miller.

HOMMERT, a musician in the private band of his majesty George III., published, among other works, "Three Concertos for the Piano-forte," dedicated to the Duke of York, Op. 1, London, 1790, and "Six Sonatas for the Piano-forte," dedicated to the queen, Op. 2, London, 1790.

HOMOLOGOÏS. An epithet applied by the ancients to certain correspondences in their letrichoria.

HOMOPHONOUS. (Gr.) Unison: duplicates of the same sound.

HOMOPHONY. The word homophony was applied by the ancients to that kind of music which was performed in unison, and was used in opposition to *antiphony*, or music performed in octaves.

HONICKE, JOHANN FRIEDRICH, a musician, and *chef-d'orchestre* for twenty-five years of the theatre at Hamburg, composed, in 1784, the music of an opera entitled "*Le Mariage par Amour*," and some other vocal pieces. He also published a musical journal, consisting of a collection from the German and French operas, arranged for the piano-forte. He died in 1809.

HONORIO, ROMUALDO, a monk, and composer of masses, psalms, litanies, &c., about the year 1642.

HOOGH, DIRK VAN DER, a Dutch musician, and author of a didactic work entitled "*De Gronden van het Vocaal Muzyk*." Amsterdam, 1769.

HOOK, JAMES, was born at Norwich, in the year 1746, and was instructed in the first principles of music by Garland, an organist in that city. His early attachment to the art, by which he rendered himself so popular in England, was not more remarkable than the immense number of his musical productions. These, which amount to more than a hundred and forty complete works, consist chiefly of musical entertainments for the theatres, concertos, sonatas, and duets for the piano-forte, an excellent instruction book for that instrument, entitled "*Guida di Musica*," an oratorio entitled "The Ascension," written in 1776, and more than two thousand songs. Shortly after Hook first went to London, he appears to have been engaged as organist to Mary-le-bone Gardens, and he was subsequently invited to accept of a similar situation at Vauxhall, which he held between forty and fifty years. He was also, for several years, organist of St. John's Church, Horsleydown. The principal of his operatic pieces are, "Cupid's Revenge," Arcadian pastoral, 1772; "Lady of the Manor," comic opera, 1778; "Too civil by half," farce, 1783; "Double Disguise," musical entertainment, 1784; "Fair Peruvian," comic opera, 1786; "Jack of Newbury," opera, 1795; "Wilmore Castle," comic opera, 1800; "Soldier's Return," comic opera, 1805; "Catch him who can," musical farce, 1806; "Tekeli," melodrama, 1807; "Music Mad," dramatic sketch, 1807; "Seize of St. Quintin," drama, 1808. Hook was still living in 1829.

HOOPER, EDMUND, organist of Westminster Abbey, and gentleman of the chapel royal, (where he also acted as organist,) was one of the composers of the psalms, in four parts, published in 1594, and some of the anthems in Barnard's collection. He died in 1621.

HOPKINS. The person engaged with Sternhold in introducing metrical psalms.

HOPSWALZER. (G.) Quick waltzes.

HORMANN, J., a musician at Vienna, published there some music for the piano-forte in the year 1800.

HORN. A wind instrument chiefly used in hunting, to animate the chase, and call the dogs together. The hunting horn was formerly *compassed*, whence the old phrase to *wind a horn*.

HORN, CHARLES FREDERIC, a native of Germany, went to London in the year 1782, where he was kindly received by the Saxon ambassador, Count Brühl, and recommended by him to the Marquis of Stafford, to instruct in music the ladies Leveson Gower. He then dedicated his first work, "Six Sonatas for the Piano-forte," to Lady Charlotte. In the year 1789 he had the distinguished honor of being recommended by Lady Caroline Waldegrave, and his friend Mr. Clementi, to her majesty Queen Charlotte, to instruct the princesses in music, which he did till the year 1811; he was also commanded to attend twice a week on her majesty, from 1789 to 1793. Horn was very eminent as a teacher of the piano-forte and thorough bass, and composed for his instrument various sonatas, and also "Twelve Themes, with variations, with an Accompaniment for Flute or Violin."

HORN, CHARLES EDWARD, son of the preceding, was born in the year 1786, in the parish of St. Martin's, London. He was educated for the musical profession by his father, but, at the age of twenty-two, finding his voice much improved, he resolved to take singing lessons of the celebrated Rauzzini, then residing at Bath, to whom he accordingly went for that purpose; but, unfortunately, owing to Rauzzini's ill health, of which he soon after died, Horn had not more than five or six lessons. They, however, were of essential service to him, and he still purposed cultivating concert singing, but soon found it neither met his wishes, nor answered his expectations in a pecuniary point of view; upon which he at length resolved to appear before the public as a theatrical vocalist, on the opening of the English opera house, and to make his *début* in the opera of "Up all Night." Mr. Arnold (the proprietor) knowing Horn's talent for composition, presented him at the same time with a melodrama, opera, &c. &c., which latter was not so successful as his hopes had anticipated; soon after, however, he produced another piece, called "The Bee-hive," which amply repaid him for past disappointments by the flattering reception it met with. At the close of that season he quitted the stage, and did not return to it till 1814. He then appeared at the English opera house as the Seraskier, in the "Siege of Belgrade," in which part he was eminently successful, having greatly improved his voice by long practice, and the assistance of T. Welch. From that time he was ranked among the principal singers of the metropolis. Besides the before-mentioned works, Horn composed the whole or the greatest part of the music in the following operas: "Persian Hunters," "The Magic Bride," "Tricks upon Travellers," "Boarding House," "Godolphin, the Lion of the North," "Rich and Poor," "The Statue," "Charles the Bold," "The Woodman's Hut," "Dirce," "Annette," "Devil's Bridge," with Mr. Braham, "Elections," "Nourjahad," "M. P.," arranged for Mr. T. Moore, "Lalla Rookh,"

brought out in Dublin, "The Wizard," and "Philandering." He has also published many songs and canzonets.

HORN, FRENCH. The French horn, or *Corne de Chasse*, is a wind instrument, consisting of a long tube twisted into several circular folds, and gradually increasing in diameter from the end at which it is blown, to that at which the sound issues. The intervals of the natural scale of the French horn are conformable to those of the trumpet, but its pitch is an octave lower. The under part of its scale only includes the third, fifth, and eighth of the key, but in the upper octave it takes all the natural notes, and even commands the sharp fourth. Its natural fourth is, however, seldom in tune, and therefore scrupulously avoided by those composers who are acquainted with the constitution of the instrument. The horn may have only the extent of the trumpet. There were various lessons anciently for the Horn; as the reheat, double reheat, royal reheat, running or farewell reheat—all having reference to hunting, and lessons which the huntsman winds on the horn, when the hounds have lost their game, to call them back from pursuing a counter-scent, &c. The Hebrews made use of horns formed of rams' horns, to proclaim the jubilee; whence the name jubilee.

On the Mouthpiece.—The mouthpiece is commonly made of brass, but silver is preferable. Mouthpieces of different diameters are used for the first and second horn, because the compass of the instrument is extensive. A person who practises on the first horn should not attempt to blow the second horn, neither should the person who blows the second blow the first horn, because it will in either case injure the embouchure.

On the manner of holding the Horn.—The common method of holding the horn is with the right hand nearly in the middle of the hoop, the bell hanging over the same arm; but it may sometimes be held in the left hand, the bell hanging over the same arm; and sometimes the bell perpendicular. When two horns are blown with equal strength, the two bells of the horns should be in one direction, that the tones may more equally unite. To make the chromatic tones, let the bell bear against your side, and let one hand be within the edge of the bell, ready to put into the pavilion or bell of the horn, as occasion may require. Practice in this case will give the best direction.

On fixing the Mouthpiece.—The most approved method for fixing the mouthpiece is to take the centre, but convenience will be found perhaps in different methods. In blowing the first horn, it may be best for the major part of the mouthpiece to rest upon the upper lip, though some performers find it answers the same purpose that the mouthpiece rest upon the lower lip in the same manner. In blowing the second horn, the mouthpiece should rather bear equally against both lips, the distance of the notes of the second horn being so great that a confined embouchure cannot execute them. A first horn generally makes use of two octaves, and sometimes more notes. A second horn must use three octaves, and sometimes more.

Of Blowing.—When you blow the horn let not your cheeks be puffed out, as that will deprive

you of a just execution. When you attempt the scales, let the first notes be blown smooth and even. It will require a little more force of breath and contraction of the lips to make the notes in tune as they rise higher.

Horns, as if ordained by nature, generally go in pairs. Certain it is, that the tone, whether in thirds or fifths, produced from two French horns, by experienced performers, is truly mellifluous, particularly in the open air or on the water.

Very rapid and difficult passages may be executed on the horn with the assistance of the hand, which is pushed forward or drawn backward as the artificial notes are required; we say artificial, for the natural scale of the horn is very limited. When we compare the parts by Vanhall, Pleyel, Haydn and Mozart, with what Weber, Spohr, Rossini, &c., have written for the horns, we are ready to exclaim, "What a march of horn playing!" not that we approve of the rapid flights which are too often given; for the beauty of the horns lies in *sostenuto* movements, which sustain the harmony, while other instruments are roving about *ad lib.*

The French horn can be tuned by means of crooks and shanks, into the following keys:

But the music is always written in the key of C; that is, suppose the horn parts to be in E flat, it will be noticed at the commencement of the piece thus: Horns in Eb; or Eb Corni; and the tonic, or key note, will be written C; for example:—

The natural scale of the horn is as follows:—

But, by introducing the hand into the bell of the instrument, the following scale can be performed tolerably perfect:—

And even this scale has been improved by means of two valves or tubes, which Pice of Westminster, and Percival of St. James Street, London, have added to the horn, whereby the following

notes can be produced with ease, in addition to the above:—

The valves are pressed by the first and second fingers of either the right or left hand, as the performer feels disposed; one valve by being pressed, will make a semitone, and the other a whole tone, *below* the natural one; for instance, this passage:—

The G is an open or natural note, the F \sharp is produced by pressing the semitone valve, and the F \natural by pressing the whole tone valve. Before this invention the hand within the bell of the horn was employed, but it never could be done with that certainty with which it may now be performed.

Both the valves are occasionally used together, thus:—

The E \sharp is an open note; E \flat is made by pressing the semitone valve; D \natural the whole tone; C \sharp by pressing both valves at once; A \natural below is produced in the same way.

There is a peculiarity attending the following passage:—

The C is an open note, B is made by pressing the semitone valve, and A also, by the aid of the hand within the bell, and semitone valve, together with the assistance of the lip.

The part of the French horn best for quality of tone is from G on the second line to G above: the notes above are not good, and those below resemble the trombone. Composers should seldom write A above the lines, for it is always a bad note; and the effect produced by it after the fine tone of G, is not unlike a violent squeeze given by a Caldonian to his bagpipes when his bellows are nearly exhausted.

The horn and the trumpet, both introduced into the orchestra within less than a hundred years, have since our boyhood altered their simple appearance by a variety of added valves, tubes, or crooks; and their species have become so numerous under the names of post horn, Sax horn, valve trumpet, cornopeon, tuba, ophicleide, &c., that of the differences between them few have a distinct idea beyond the dealers and virtuosos themselves. The extensive addition of keys to all this class of wind instruments,—a peculiar feature of the last half century,—while it has enlarged greatly their capacity, has to a considerable extent modified, and at times impaired, the original tone; although imparting occasionally a brilliancy which did not formerly belong to them.

HORN, CHARLES E. A well-known vocalist and composer, by birth an Englishman, but for many years a resident in this country, the latter years of his life in Boston, where he died Oct. 21, 1849, aged 56. He was much respected, and there are many now living who can recall with pleasure his "Woodnotes Wild." In 1842 Mr. Horn was in England, and was employed as musical director at Covent Garden Theatre. He had published successful compositions, among which are songs, duets, and glees, an oratorio called "Daniel's Prediction," and a cantata on Shakespeare's "Seven Ages." He had also lectured before the Polytechnic Institution, on the history and use of music, and the condition of the art in all the principal nations of the globe. His wife was also known favorably as a vocalist in this country.

HORN, FRANZ, a doctor of philosophy at Brunswick, has written several musical papers in the *Leipz. Mus. Zeit.*, since the year 1801.

HORN, HENRY, an eminent performer on the harp, was born at Paris in the year 1789, of German parents. He received the rudiments of his education in that metropolis, and went to England at ten years of age, when he was placed under the tuition of Jean Baptiste Mayer, with whom he remained seven years. In the year 1805 he made his first appearance at the oratorios, and continued his public performances till the year 1808, after which period he received further instructions from Jean Elouis, (a harpist of the first celebrity,) during the space of four years. With Elouis, he also made a professional journey through Scotland and Ireland with great success. Horn returned to London in 1812, and was immediately engaged for the Bath concerts, where he had the honor of first introducing to the public Erard's double movement harp, the mechanism of which was the admiration of all the artists and amateurs. On his return to the metropolis, he had an opportunity of introducing this beautiful instrument before a London audience at the King's theatre, and was received with the most flattering applause; since which time he has continued his professional career, patronized by a numerous connection. Henry Horn's principal publications for the harp are, "Rudiments for the Single and Double Movement Harp;" "*Overture d'Albert et d'Adelaide*;" "The Storm Rondo;" "*La Chasse, Rondo*;" "*Le Prince Troubadour*;" "*La Surprise de Diane*," and "Fifteen *Airs and Preludes*."

HORN, JOHANN CASPER. A doctor of laws, and scientific musical amateur, in the latter part of the seventeenth century. He wrote a work in four parts, called "*Parergon Musicum*," consisting chiefly of music in the popular style of his time, also several other works, which bear date from the year 1664 to 1681.

HORNPIPE. An animated dance tune, supposed to have received its name from the instrument anciently played during its performance. That it was not unusual to give to certain airs the names of the instruments on which they were commonly played, appears from the word *Geig*, which, with a little variation, is made to signify both a *fiddle* and the air called a *gig*. The instru-

ment called the *horn-pipe* is common in Wales. Its name in Welsh is the *pib-corn* (horn-pipe.) It consists of a wooden pipe, with holes at stated distances, and a horn at each end. Hornpipe music is supposed to be of English invention. Its measure is compound triple time of nine crotchets in a bar, six down and three up.

HORSLEY, WILLIAM, was born in London, in 1774. In his youth, he was remarkably unhealthy, and, owing to this circumstance, to family misfortunes, and to other causes, his general education was neglected, and he arrived at the age of sixteen before it was finally resolved that he should pursue music for a profession. At that period, he was articled for five years to Theodore Smith, who was esteemed to be a good piano-forte player, and who claimed to be the first who introduced duets for that instrument into England. Smith's theoretical knowledge was very limited. He was, besides, passionate and indolent to an extreme degree, and entirely neglected the instruction of his pupil, who was, at all times, most happy to escape from his violence.

However, while with Smith, the subject of our present article made several valuable acquaintances, who had a vast influence on his future pursuits. In particular, he became very intimate with the three brothers, Jacob, Joseph, and Isaac Pring, and from them he first imbibed that love for vocal music which he ever after cherished. Joseph Pring having obtained the situation of organist in the cathedral at Bangor, removed thither, and his brother Isaac soon afterwards went to Oxford, where he died, after having been organist at the new college for some time. Horsley's great intimacy, therefore, was chiefly confined to Jacob Pring, from whose kindness and friendship he derived advantages which he has never failed to acknowledge. In 1799 he had the misfortune to lose his estimable friend; but previously he had procured an introduction to Dr. Calcott; and the example of those two excellent musicians, and his constant intercourse with them, had determined him more particularly to the practice of glee writing. At this time his ardor for composition was very great, and every moment which he could spare from his occupation, as a teacher, was devoted to it. Besides glees, he wrote services in five, six, seven, and eight parts, "Two Anthems," in twelve real parts, and a "Sanctus," for four choirs. He also employed himself much in the construction of canons, and found considerable improvement in the exercise of that difficult species of writing. In 1798 he suggested to his friends, Dr. Calcott and Pring, a plan for the formation of a society, the object of which should be the cultivation of English vocal music. The members met for the first time in that year, and, on the suggestion of Mr. Webbe, took the name of *Concutores Solales*. The establishment of this society was a great advantage to Horsley. It introduced him to an acquaintance with several eminent professors; and, as each member was to preside in turn, and furnish music for the day, it gave a new stimulus to his exertions. About the same period, he was introduced by Dr. Calcott to the committee of the asylum for female orphans, and was accepted by them as assistant organist of the institution. On this occasion, he resigned his situation of organist of Ely Chapel, Holborn, which

he had held for some years. He now began to employ himself in vocal compositions with instrumental accompaniments, and set, among other things, "Smollet's Ode to Mirth," "The *Cantate Domino*," and an anthem to words beginning, "When Israel came out of Egypt," with which he took his bachelor's degree in 1800, at Oxford. His time was now much occupied by his pupils; nevertheless, when the vocal concerts were revived, in 1801, he applied himself with fresh diligence to composition, and furnished the managers of those concerts with many new works. This he was particularly induced to do, not only from his love to the art, but from his great intimacy with Harrison and Bartleman; and, till the death of the former, he was the most copious and the most successful among the native contributors to their undertaking. In 1802 Dr. Calcott resigned his situation at the Asylum, and Horsley, having been recommended by the committee to the guardians at large, was chosen to succeed the doctor, without any opposition. He continued to perform the whole duty at the Asylum till 1812; when Belgrave chapel, in Halkin Street, Grosvenor Place, being finished, he accepted the office of organist in it. For many years, a very large portion of his time was occupied in giving instruction; but the remainder he devoted, with unabated assiduity, to the study of his art, and to the practice of composition. His published works consist of the services, odes, and anthems already mentioned; "Three Symphonies for a full Orchestra," which were several times performed at the vocal concerts; several trios for violin and violoncello; and a great collection of single pieces, consisting of glees, canons, songs, duets, &c. Of these have been published: "Three Collections of Glees, Canons, and Madrigals, for three, four, five, and six Voices;" "Six Glees for two Trebles and a Bass;" "A Collection of forty Canons, of various species." This work the author has inscribed to his friend Clementi, in language which shows his respect and admiration for that great master. He was likewise a great contributor to the "Vocal Harmony," published by Clementi & Co. That splendid work contains fifteen or sixteen glees, which were purposely composed for it by him. To these publications may be added single glees, songs, &c. Horsley occasionally employed himself in writing for the piano-forte, chiefly, however, with a view to the improvement of the younger class of students. His works for that instrument consist of "A Set of Easy Lessons, containing Familiar Airs." "Six Sonatas for the Use of his Pupils, with the leading fingering carefully marked." "Three Waltzes for Two Performers." "Three Sonatas, composed for the Hon. Miss Ponsonby." "Sonatas, Nos. 1 and 2." These were intended as part of a series, to be published from time to time. He has also printed "An Explanation of the Major and Minor Scales," accompanied with exercises calculated to improve the hand.

HORSTIG, CARL GOTTLÖB, a German Lutheran clergyman at Bucheburg, is celebrated as a scientific amateur of sacred music, and has written many works on that subject since the year 1792. See *Leipz. Mus. Zeit.* from 1798 to 1802.

HORZIZKY. Private secretary to Prince Henry of Prussia, at Rheinsberg, from the year 1780

to 1795. He composed fourteen French operas and other vocal music, all of which have remained in manuscript, except some of his airs which were published by J. A. Niclas, in a collection entitled "*Choix d'airs de plusieurs Opéras, arrangés pour le Clav.*" 1790.

HOSANNA. (L.) Part of the Sanctus, in the mass.

HOSPINIAN, RUDOLPH, a Swiss theologian, died at Zurich in 1626. He wrote a work entitled "*De templis, i. e. de origine, progressu, usu et abusu templorum rerumque omnium ad templa pertinentium.*"

HOSTIE, a clarinetist in the band of the Duke of Montmorency in Paris, in 1788, published six duos and a concerto for his instrument, with accompaniments.

HOTTETERRE, called "The Roman," from being born in that city, was chamber musician to the King of France, at Paris, in 1710, and considered the best flutist of his time, and a good composer for his instrument. Among his works are, "*Principes de la Flute traversière, de la Flute à Bec, et du Hautbois.*" This book was published at Paris, about the year 1707, and republished at Amsterdam in 1708-1710, and in the Dutch language in 1728. 2. "*L'Art de préluder.*" Paris, 1722.

HOWARD, SAMUEL, doctor of music, was educated in the Chapel Royal, London, and was not more esteemed for his musical talents than beloved for his private virtues, being ever ready to relieve distress, to anticipate the demands of friendship, and to prevent the necessities of his acquaintance. He was organist of the churches of St. Clement Dames and St. Bride. His ballads were long the delight of natural and inexperienced lovers of music, and had at least the merit of neatness and facility to recommend them. He preferred so much the style of music of his own country to that of any other, that nothing could persuade him out of a belief that it had not, up to his time, been excelled. He died in 1782, and was succeeded in his situations of organist of St. Clement's by Thomas Smart, and of St. Bride's by Thomas Potter, the son of the flute maker of that name.

HOWELL, THOMAS, was born at Bristol in 1783. His father was a celebrated performer on the flute, and was the first person who opened a regular establishment for the sale of instruments and music at Bristol. At the age of fourteen, young Howell was apprenticed to his father, and being naturally fond of music, practised it for its own sake, when his other various occupations would permit. He had some masters, such as they were; but in reality received more solid information on the science from a few casual interviews with Dr. Busby than from all the regular lessons he took from others. Early in life he was employed as a teacher, and remarking what he considered the desultory manner in which the various books of instruction were written, and being also desirous of rendering himself useful in his profession, he frequently took occasion to write down definitions and examples calculated to elucidate and remove difficulties as they arose in the minds of his pupils. In many cases he

had the mortification to be questioned by the parents of his scholars, who, unfortunately for the teacher, were, in these instances, ignorant of the science of music. "Is there nothing printed, Mr. Howell, that would supply the information you are taking so much pains to write? if so, would it not be better to let my daughter have it, as writing down occupies a considerable portion of the time allotted for your lesson?" His feelings were not a little wounded on such occasions, till at length he determined on publishing what he considered an improved mode of instruction. He first applied the work to his eldest daughter's instruction, whose comprehensive mind indicated it itself at so early a period of life, that he was induced to commence teaching her the rudiments of music at the age of four years; which he so conducted as to cause it to be amusing to her rather than an irksome task. One of the plans he invented for this purpose was the "Musical Game," since published, for teaching the degrees in the treble and bass clefs, and this he found to answer his most sanguine expectations. As the child's astonishing abilities expanded, and called for new matter for study, he continued writing and composing for her, which caused his work to proceed with regularity, and was a strong excitement for him to persevere in his undertaking. His instructions were repaid by a most extraordinary progress: at the age of eight years, the child could play almost any thing that was put before her. When she was between fourteen and fifteen, she was at a party, where being requested to play, and not having provided any music for the occasion, a concerto was presented to her with which she was totally unacquainted; there being several amateurs present, the accompaniments were played, and the piano part executed by the child to the astonishment of the auditors. Her extemporary performances also exhibited a richness of fancy combined with a refined taste and judgment that seemed far beyond the powers of one so young. In addition to her musical abilities, her mind was highly cultivated and her manners unobtrusive; she was fond of philosophical pursuits, and possessed of the highest sense of honor and integrity. In the course of one fatal week's illness, from typhus fever, the unhappy father was bereaved of this inestimable treasure. She was born in 1807, and died in 1822.

HOYLAN, JOHN, the son of a respectable manufacturer of cutlery, in the town of Sheffield, in Yorkshire, was born in 1783, and early in life evincing a taste for music, he was placed under the tuition of William Mather, the organist there, whom he succeeded, in 1808, as organist of St. James's Church, which situation he held till 1819, when he was induced, from pressing solicitations, to remove to Louth, in Lincolnshire, a teacher of music being much wanted in the schools of that neighborhood. A short time after his settling there, the organist's situation became vacant by the death of Hill, when, after a competition with three other candidates, it was decided in Hoylan's favor, and he was accordingly chosen to fill the situation. He is the author of several anthems and pieces of sacred music, amongst which is the very popular tune to "Merriek's Version of the Hundred and Fiftieth Psalm, with appropriate Interludes." Amongst his piano-forte works are, "The Highland Fling Rondo," "Three Waltzes

and Polonaise," "Les Enfants de Brunswick, Quadrilles," "Andante and Polacca," "Think not Resentment Lingers," song, "If thou hadst e'er Strayed," "The Land o' the Leal," &c.

HOYLE, JOHN, professor of music in London, died in 1797. He was author of a work entitled "A Complete Dictionary of Music, containing a full and clear Explanation, divested of Technical Phrases, of all the Words and Terms, English, Italian, &c., made use of in that science, speculative, practical, and historical."

HUBATSCHKEK. A German composer of operettas, at Gotha, about the year 1791.

HUBER, PANCRACE, a violinist and ballet-master to the Court at Vienna in 1772, published at Paris "Six Duos for Vn., and T." Op. 1, and subsequently, at Lyons, "Four Quatuors for Fl., V., T., and Bass." Dr. Burney, in his travels, speaks highly of the compositions of Huber.

HUBERT, or properly UBERTI, ANTONIO, a sopraniat at the opera at Berlin, was born at Verona about the year 1697. He was much admired in his adagios, and was a pupil of the school of Porpora, for which reason he was called, in Prussia, Porporino. He died in 1783.

HUDEMANN, LUDWIG FRIEDRICH, doctor of laws at Hamburg, in 1732, was an excellent theoretical and practical musician, and also a poet. In a published volume of his poems, is a prefatory essay on the advantages of the opera above tragedy and comedy.

HUDSON, ROBERT, bachelor of music, and born in 1732, was during many years senior member of his majesty's chapel royal and of St. Paul's cathedral. He was admitted vicar-choral of St. Paul's in 1756, and a gentleman of the chapel royal in 1758. Hudson was almoner of St. Paul's, and master of the choristers from 1773 till 1793. He was also music-master of Christ's Hospital, and composed many hymns for that institution. In his younger days, he sang at Ranelagh and Mary-le-bone Gardens. He died in the year 1815. His remains were interred in St. Paul's Cathedral.

HUEBER, WENDELINUS, organist and composer at Vienna, published there, in 1650, "*Cantiones sacre*, 1, 2, *et trion Vocum cum Basso ad Organum*."

HUEBSCH, JOHANN GEORG GOTTHELF, a teacher of mathematics in Germany about the middle of the last century, published, mostly between the years 1764 and 1767, many critical works on composition, the manufacture of instruments, and various curious musical questions. He died in 1773, in the eightieth year of his age.

HUGO, a priest at Nientlingen, in Suabia, died about the year 1332, and left a manuscript entitled "*Flores Musice omnis Cantus Gregoriani*," which was published at Strasburg by John Prys, in 1488.

HUGOLINUS, VINCENZO, chapel-master of the Vatican at Rome, was born at Perugia. He appears to have been one of the best church composers of the seventeenth century. Among his works are, "*De Musica*." "*Quatro Motetti Con-*

certini." "*Motetti e Salmi à due e tre chori*." "*Due Madrigali à 5 voci*." "*Messe e Motetti à duo e tre chori*." And "*Salmi à duo e tre chori*."

HUGOT, A., flutist at the comic opera at Paris, and professor of his instrument at the conservatory, was an excellent performer. In an excess of brain fever, in the year 1803, he wounded himself several times with a knife, and threw himself out of a window of the fourth story of a house into the street. He was at the time forty-two years of age. There was another flutist at Paris about the same time, called the elder Hugot, but the principal published works are by A. Hugot. Among them are the following: "*Méthode de Flute*;" this work was written jointly by Hugot and Wunderlick, and was adopted by the conservatory. "*Six Duos Concert. pour 2 Fl.*" Op. 1, 1798. "*Six Duos Concert., pour 2 Fl.*" Op. 2. "*Six Duos Concert., pour 2 Fl.*" Op. 3. "*Six Airs variés, pour Fl. avec B.*" "*Three Trios à 2 Fl. et B.*" Op. 6. "*Three Trios à 2 Fl. et B.*" Op. 7. "*Six Sonat. pour Fl. et B.*" Op. 8. "*Six Duos Concert. pour 2 Fl.*" Op. 9. And "*Quatre Concertos, pour la Fl., Nos. 1, 2, 3, 4,*" 1797 to 1802.

HULLMANDEL, NICHOLAS JOSEPH, nephew of the celebrated Rodolphe, was a very eminent pianist. He formerly resided at Paris, which capital he was obliged to fly in the French Revolution, on account of his political opinions. He then settled in London, where he continued till his death, which took place in 1823, at the age of seventy-two. Among his works are "*Douze Trios de Piano*," Ops. 1 and 2. (Paris, 1780.) "*Three Sonatas for P. F. with Acet. for V.*" Op. 3. (London.) "*Three Sonatas for P. F. with Acet. for V.*" Op. 4. "*Three Sonatas for P. F. with Acet. for V.*" Op. 5. (London.) "*Six Sonatas*." Op. 6. "*Three Sonatas, with V. Ob.*" Op. 8. And "*Sonata V. Ob.*" Op. 10. Hullmandel wrote also the article *Clavécin* in the *Encyclopédie Méthodique*. The celebrated Grottores says of him, "He is the first composer who united the parts of his sonatas, as to prevent their servile repetition; an intermediate passage in them frequently connects the two parts into one."

HUMANE MUSIC. The designation by which the ancients distinguished vocal music, both from instrumental music and the music of the spheres.

HUME, TOBIAS, a soldier by profession, but an excellent performer on the viol da gamba, published in 1607, and dedicated to Anne, the queen of James I., a collection of songs entitled "*Captain Hume's poeticall Musike*, principally made for two Basse-viols, yet so construed that it may be plaied eight several waies upon sundrie Instruments, with much facilitie."

HUMMEL, JOHANN NEPOMUK, the great composer and pianist, was born at Presburg on the 14th of November, 1778, where his father was music-master in the military school of Wartberg. At the age of four he learned to play the violin, but without evincing a decided bias for music. The next year he began to take lessons in singing and on the piano; from that time his faculties were rapidly developed: in a single year he acquired remarkable skill for a child. At this period, his father removed with him to Vienna, and became *chef-d'orchestre* in Schikaneder's the-

tre, when the little Hummel, scarcely seven years old, attracted the attention of Mozart and the other distinguished artists. Mozart, in spite of his repugnance to giving lessons, offered to take charge of the boy's musical education, provided he would live with him, and be always near him. Of course the proposition was gratefully accepted. With such a master, the boy made prodigious progress in two years. At nine, he excited the admiration of all who heard him. His father then thought to turn his precocious talent to account, and they travelled together through Germany, Denmark, and Scotland. His first public appearance was in a concert at Dresden, 1787; next he played before the court at Cassel. At Edinburgh the child pianist created great enthusiasm; there he published his first work, a theme with variations, dedicated to the Queen of England. After spending the years 1791 and 1792 in London, he visited Holland, and returned to Vienna after six years' absence. He was then fifteen years old, and his execution could already be considered the most correct and brilliant of the German school; meanwhile his studies became more serious than before. His father, who was excessively severe, exacted incessant labor from him; and when he had become a man and famous artist, he was still subject to his will. At Vienna he studied harmony, accompaniment, and counterpoint, with Albrechtsberger, and formed a friendship with Salieri, who gave him useful hints about singing and the dramatic style. In 1803 he entered the service of Prince Esterhazy, and composed his first mass, which won the approbation of Haydn. About the same time, he wrote ballets and operas for the theatres of Vienna, which were favorably received. Hummel was now twenty-eight years old; his works, especially his instrumental music, and his fine talent for execution, had rendered him famous in Germany; but his name was absolutely unknown in France, until the year 1806, when Cherubini carried home from Vienna his grand fantasia in E flat, (Op. 18,) which was executed at the *concours* of the Conservatory that same year, and, although only understood by artists, it so raised his reputation in Paris that all the pianists sought his works. In 1811 Hummel left the service of Prince Esterhazy, and until 1816 had no other employment than that of professor of the piano, at Vienna. Then for four years he held the place of chapel-master to the King of Wurtemberg, and then entered the service of the Grand Duke of Weimar, in the same capacity. Two years afterwards he obtained leave of absence to make a pedestrian tour in Russia. St. Petersburg and Moscow gave him the most brilliant reception. In 1823 he went through Holland and Belgium, and finally to Paris, where his success was worthy of his talent. His improvisations on the piano excited the liveliest admiration. Returning to Weimar, he did not leave that place until 1827, when he heard of the approaching end of Beethoven, between whom and himself there had been some unpleasant differences. He hastened to the bedside of the dying artist, and could not repress his tears; Beethoven reached out his hand to him, they embraced, and all was forgotten. Two years afterwards Hummel again visited Paris and London; but his playing did not produce the same sensation as before; pianists noticed the approach of age and a certain timidity of execution in his

performance. After a journey to Poland, he passed the remainder of his days peacefully at Weimar. He died on the 17th of October, 1837, at the age of fifty-nine. Hummel was equally distinguished as a performer, (on the piano,) an improvisator, and a composer. In execution, continuing the mixed school of Mozart, improved by the regular principles of mechanism which he learned of Clementi during his two years in London, he became himself the founder of a new German school, in which many celebrated artists have been formed. The epoch of Hummel among the German pianists was a real epoch of progress and of transformation. Greater difficulties have been conquered, greater power and severity of tone have been produced in piano playing since his time; but no one has gone beyond him in purity, regularity, and correctness of execution, in raciness of touch, in coloring and expression. His execution was less the result of a desire to display prodigious skill, than the attempt to express a thought continually musical. This thought, always complete, manifested itself under his hands with all the advantages of grace, delicacy, depth, and expression.

In his improvisations, Hummel had such power of fixing and giving regular form to his fugitive ideas and inspirations, that he seemed to be executing premeditated compositions. And yet there was nothing cold or mechanical about it; the ideas were so felicitous, the manner so charming, the details so elegant, that his audience were lost in admiration.

Hummel's very remarkable productions, especially in the sphere of instrumental composition, have placed him in the first rank of distinguished composers of the nineteenth century; doubtless, his fame would have been still greater, had he not been the contemporary of Beethoven. The general opinion has hardly estimated his best works highly enough. His great septuor in D minor, (Op. 74); his quintet for piano, (Op. 87); his concertos in A minor, (Op. 85,) in B minor, (Op. 89,) in E major, (Op. 110,) and in A flat, (Op. 113); some of his trios for piano, violin, and violoncello; and the grand sonata for piano with four hands, (Op. 92,) are works of a finished beauty, where all the qualities of the art of writing are united with noble or with elegant and graceful thoughts. But these qualities, beautiful and estimable as they are, cannot compete against those outbursts of genius, those original and overpowering conceptions of Beethoven. A fine composition of Hummel leaves in the mind the idea of perfection; but the pleasure which it causes never amounts to frenzy. Had Beethoven come a quarter of a century later, he would have left to Hummel the undisputed glory of being the first instrumental composer of his age. In the dramatic style and in church music, Hummel also holds a high rank, though his works in these departments are not marked by any very distinctive quality.

The works of this celebrated artist may be classed as follows:—

1. *Dramatic Music*.—1. "*Le Vicende d'Amore*," opera buffa in two acts. 2. "*Mathilde de Guise*," opera in three acts. 3. "*Das Haus ist zu verkaufen*," in one act. 4. "*Die Rückfahrt des Kaisers*," in one act. 5. "*Eloge de l'Amitié*," cantata with choruses. 6. "*Diana ed Endimione*," an Italian cantata with orchestra. 7. "*Hélène et Paris*," bal

let. 8. "*Sappho de Mytilène*," ditto. 9. "*Le Tableau parlant*," ditto. 10. "*L'Anneau Magique*," pantomime, with singing and dances. 11. "*Le Combat Magique*," ditto.

II. *Church Music*. — 1. Mass for 4 voices, with orchestra and organ, in B flat, (Op. 77.) 2. Second Mass, in B flat, (Op. 80.) 3. Third Mass, in D, (Op. 111.) 4. Gradual, (*Quodquid in orbe*), for 4 voices, orchestra and organ, (Op. 88.) 5. Offertory, (*Alma Virgo*), for soprano solo, chorus, orchestra, and organ, (Opera 89.)

III. *Instrumental Music*. — 1. Overture for grand orchestra, in B flat, (Op. 101.) 2. Three string quartets, (Op. 30.) 3 and 4. Grand Serenade, for piano, violin, guitar, clarinet, and bassoon, Nos. I. and II. (Op. 63 and 66.) 5. Grand Septuor, in D minor, for piano, flute, oboe, horn, alto, violoncello, and double bass, (Op. 74.) 6. Grand Quintet, in E flat minor, for piano, violin, alto, violoncello, and double bass, (Op. 87.) 7. Grand Military Septuor, in C, for piano, flute, violin, clarinet, trumpet, and double bass, (Op. 114.) 8. Symphony Concertante, for piano and violin, (Op. 17.) 9. Concerto for piano, in C, (Op. 34.) 10. Easy Concerto for piano, in G, (Op. 73.) 11. Third Concerto in A minor, (Op. 85.) 12. Fourth Concerto, in B minor, (Op. 89.) 13. "*Les Adieux*," Fifth Concerto in E major, (Op. 110.) 14. Sixth Concerto in A flat, (Op. 113.) 15. Brilliant Rondos for piano and orchestra, (Op. 56, 98, and 117.) 16. *Themes Variés* for piano and orchestra, (Op. 97, 115.) 17. "*Le Cor enchanté d'Obéron*," grand fantasia for piano and orchestra, in E major, (Op. 116.) 18. Trios for piano, violin, and violoncello, (Op. 12, 22, 35, 65, 83, 93, 96.) 19. Sonatas for piano and violin, (Op. 5, 19, 25, 28, 37, 50, 64, 104.) 20. Sonatas for piano with 4 hands, (Op. 43, 92, 99.) 21. Sonatas for piano alone, (Op. 13, 20, 36, 81, 106.) 22. Detached pieces for piano solo, viz.: 3 Fugues, (Op. 7;) Rondos, (Op. 11, 19, 107, 109;) fantasias, (Op. 18, 123, 124;) *Etudes* and *Caprices*, (Op. 49, 67, 105, 125;) Variations, (Op. 1, 2, 8, 9, 40, 57, 118, 119, &c.) 23. Complete Method, theoretic and practical, for the piano.

(The above is taken from Fetis's "*Biographie Universelle des Musiciens*.")

HUNGARIAN MUSIC. About the ninth century, the Hungarians left Asia to settle in Europe, when they conquered the country that bears their name. Like all the Asiatics, they were attached to music, and at first, doubtless, used only Asiatic instruments; these were nearly all wind instruments, and consisted of the trumpet, the flute, the cymbal, and several others. Till the time of Mathias Corvin it was in a state of mediocrity; he incited the Hungarians to vie with other nations in sciences and arts, of which he himself was particularly fond. Under Ladislas and Louis II., music was cultivated with great care; their national songs, however, were the only vocal music they possessed till the time of Stephen, King of Hungary, when the ecclesiastical chant appears to have been introduced. In a diploma of Bela III., A. D. 1192, it appears that prince sent an envoy to Paris to be instructed in melody; perhaps induced to do so by his second wife, Margaret, who was daughter of Louis VII. of France.

HUNT, KARL, chamber musician and vio-

linist to the court of Saxony, was born at Dresden in 1766. Among other works, he has published the following: "Sixteen Variations for the pianoforte, on the pastoral air *Come la Rosa*;" "Twelve Variations on *Pace, mio caro sposo*," 1792; "*Andante con 12 Variat.*" 1793; and "*Grande. Sonates tirées d'un Quintetto de Mozart.*"

HÜNTEN, FRANZ, the celebrated pianoforte teacher and composer, is the second of the three sons (all musically distinguished) of a teacher of music at Coblenz, where he was born in 1793. His instruction books and exercises for the piano have been much used in this country. He has composed and published over 200 pieces for his instrument.

HUNTER, MRS. JOHN, wife of the celebrated surgeon of that name, was a lady endowed with a most refined taste, both in music and poetry. She wrote the words of the celebrated canzonets, set to music by Haydn; also composed many very pleasing airs, which she sang herself in a captivating style.

HUNTING SONG. A melody set to words written in praise of the chase. See **ALLA CACCIA**.

HUPFELD, BERNHARD, was born at Cassel, in 1717. He was a violin pupil of Agrell. In 1734, he went to Vienna, and some years afterwards to Italy, where he studied composition under Domenico Ferrari, Tranquillini, and Barba. He published much music for the violin.

HURDYGURDY. A well-known instrument, the tones of which are produced by the friction of a wheel, and regulated by the actions of the fingers.

HURKA, FRIEDRICH FRANZ, chamber musician to the King of Prussia, was born in Bohemia, in 1762. He received his first instructions in singing at Prague, under Biaggio, where he was also attached to the choir of one of the churches. On the change of his voice to a tenor, he came to Leipsic, and after studying further under Bandini, appeared on the theatrical boards, from which period he was considered one of the best German theatrical and concert singers for many years. He composed and published, between the years 1789 and 1802, several collections of German songs, some of which were extremely popular. He died at Berlin, in 1805.

HURLEBUSCH, CONRAD FRIEDRICH, chapel-master to the King of Sweden, and afterwards organist of the old church in Amsterdam, was born at Brunswick, towards the close of the seventeenth century. He travelled from the year 1715 to 1721, through Germany and Italy, and in 1723 went to Stockholm, where he had been promised the situation of organist, but was disappointed, and in consequence, shortly afterwards, returned to his native country, where, after refusing several similar offers of appointment, he at length determined on Amsterdam, in which city he resided till his death. He published much vocal and instrumental music, but surcharged with notes, and in bad taste.

HUTCHINSON, DR., published several beautiful glees, about the year 1772, under the assumed name of Ireland. Amongst them are "How sleep the brave," three voices; "Return

my lovely maid," four voices; "To love and wine," three voices; "Jolly Bacchus," three voices; and "Where weeping yews," four voices.

HUXTABLE, ANTHONY, was an eminent musician and an excellent violinist. In the early part of his life, he was one of the first violins at the opera, principal concerts in London, and at the celebrated commemorations of Handel at Westminster Abbey and the Pantheon. When he retired from London, he settled near South Molton, in Devonshire, as a professor of the violin and piano. He led all the public concerts in the neighborhood. He died in 1818.

HUXTABLE, CHRISTOPHER, son of the preceding, in early childhood began the piano-forte and violin, under his father's tuition, and performed in public when very young. He finished his musical studies in London, under the first masters, and performed at the public concerts during his stay there. He was organist of Barnstaple, in Devonshire, and professor of the piano-forte and violin. He also succeeded his father as leader to the public concerts in his neighborhood.

HUXTABLE, WILLIAM, brother of the preceding, professor of the piano-forte and harp at Barnstaple, shared the same musical education as his brother. The latter instrument he studied under the celebrated P. Meyer. He was also one of the first violin performers at the public concerts in his neighborhood.

HYAGNIS, a native of Celæna, the capital of Phrygia, and contemporary with Erætheus, who instituted the Panathænean games at Athens, 1506 years before Christ, was the inventor of the flute and Phrygian mode, as well as of the *nomos* or airs that were sung to the mother of the gods, to Bacchus, to Pan, and to some other divinities and heroes of that country. Plutarch and Nonnus both tell us that he was the father of Marsyas; and Atheneus, from Aristoxenus and Apuleius, ascribes to him not only the invention of the *single* flute, but of the double.

HYDE. A celebrated English performer on the trumpet.

HYDRAULICA, or WATER ORGAN. An organ actuated by water, and the invention of which is of much higher antiquity than that of the pneumatic or wind organ. Little is known concerning the particular construction or powers of this curious instrument. It is, however, asserted, by some authors, to have produced its sounds by the compression of water on a large vessel filled with air, by which pressure, the air was forced from the vessel into the tibia, or pipes. This is undoubtedly the organ said by Athenæus to have been invented by Ctesibius, and which is alluded to by Plutarch in his Life of Phocion. This instrument Hedyllus, in his elegies, mentions under the title of *Keras*; and from him we learn that it was capable of great variety and discrimination of harmony. Claudian also speaks of its *innumera voces*, or numberless tones, and gives other indications of its great and versatile powers.

The art of constructing hydraulic organs was known no longer than while the Roman empire lasted. The use of them ceased in the time of Cassiodorus; and the barbarians, who succeeded in Italy, labored in vain to recover the art.

HYMEE. A *song of the millers*, so called by the ancient Greeks.

HYMENÆA. A marriage song used by the ancient Greeks, otherwise called *epithalamium*.

HYMN. Anciently, a song in honor of the gods, or of heroes. Orpheus and Linus have been considered as the first authors of this species of composition; a province in which Pindar is supposed to have made the earliest trials of his genius. The hymns, or divine odes, of the ancient Greeks, generally consisted of three couplets; the *strophe*, *antistrophe*, and *epode*. But Menander, the rhetorician, enumerates no less than eight different species of hymns. The hymn appears to be amongst the most ancient of all poetical compositions, and was originally thought to be dictated by the gods themselves, or, at least, by men truly inspired. St. Hilary is said to have first composed hymns for the service of the church, in which he was followed by St. Ambrose and Prudentius, the latter of whom is the supposed author of those contained in the Romish breviary. A hymn, at present, taking the word in its general acceptation, is a short, religious, lyric poem, written either for the regular use of a chapel or conventicle, or for the temporary aid of some parochial charity school; in which latter case, it is sung at church, before, or after, an occasional sermon, by the children for whose benefit it is intended.

HYMNOLOGY. The art of composing hymns.

HYMN OF BATTLE. A song of supplication constantly used by the ancients previous to engagement. Thus Xenophon, in his account of the first battle fought by the Greeks in favor of Cyrus, tells us that the Grecian and Persian armies were not more than four or five hundred paces distant from each other, when the former began to sing the Hymn of Battle.

HYMNOLOGIST. A writer or composer of hymns.

HYPATE, or PRINCIPAL. The epithet applied by the ancient Greeks to the lowest tetrachord, and also to the lowest sound of the two lowest tetrachords.

HYPATE BAREIA GRAVIS. (Gr.) The name given to that tone in the ancient music which was produced by eight winds of the whole string. It was one note higher than *proslambanomenos*, and equivalent to our B natural on the second line in the bass.

HYPATE DIATONUS. (Gr.) One of the names by which the ancients distinguished the third sound of the first tetrachord, which answered to our D natural on the third line in the bass. See *LICHANOS*, *HYFATOS*.

HYPATE-HYPATON, or PRINCIPAL OF PRINCIPALS. (Gr.) The lowest chord of the lowest tetrachord of the Greeks. This chord, or sound, answered to our B natural on the second line in the bass.

HYPATE-MESON, or the PRINCIPAL OF THE MEAN TETRACHORD. (Gr.) The name given by the Greeks to that sound which was last, or highest, of the first tetrachord, and the first, or lowest, of the second tetrachord. It was because these tetrachords had one sound common to both, that they were called *conjoints*; as, indeed, were others under the same circumstances. This hypate-meson was equivalent to our E natural on the third space in the bass.

HYPATOIDES. (Gr.) The general name given by the Greeks to their deep or bass sounds, to distinguish them from the *mesotika*, or middle sounds; and, if *netotika*, or high sounds. Bacchus calls them *spisio gravissimi*. The *melos*, or melody of the ancient tragedy, was also called by this name.

HYPER. (Gr.) Above. This word, in conjunction with the name of any mode, or interval, signifies that it is higher than when without it; as, *Hyper-Lydian*, above the Lydian.

HYPER-EOLIAN. (Gr.) The name given by the ancients to their penultima mode upward, the fundamental, or tonic, of which was a fourth above that of the Eolian. This mode had its lowest note correspondent to our B flat above the fifth line in the bass. Like the *Hyper-Lydian*, it was less ancient than the other modes.

HYPERBOLÆAN, or SUPREME. (Gr.) The epithet given by the ancients to their fifth tetrachord, because its sounds were more acute than those of the other four. This tetrachord was added to the scale long after its original formation.

HYPER-DIAZEUXIS. (Gr.) The name given by the ancient Greeks to that disjunction of two tetrachords in which they were separated by the interval of an octave.

HYPER-DORIAN, or MIXO-LYDIAN. (Gr.) That mode of the ancients, the fundamental of which was a fourth above the Dorian, and which was the same with our G natural on the fourth space in the bass. The invention of this mode is, by some writers, attributed to Pythagoras.

HYPERASTIAN, or **HYPER-IONIAN**. (Gr.) The general name of an ancient mode, called, also, by some, the sharp *mixo-Lydian*, and which had its fundamental fourth above that of the Ionian. Its lowest note was the same with our G sharp on the fourth space in the bass.

HYPER-IONIAN. (Gr.) One of the ancient modes. See **HYPER-ASTIAN**.

HYPER-LYDIAN. (Gr.) The name of the highest ancient mode, and the fundamental of which was a fourth above that of the Lydian. Like the hyper-Eolian, it was less ancient than the other modes. The lowest sound was equivalent to our B natural above the fifth line in the bass.

HYPER-MIXO-LYDIAN. (Gr.) One of the ancient Greek modes, called by Euclid the *hyper-Phrygian*. See **HYPER-PHYRGIAN**.

HYPER-PHYRGIAN, or **HYPER-MIXO-LYDIAN**. (Gr.) The highest of the thirteen modes of Aristoxenus; forming the diapason, or octave, with the hyper-Dorian, or lowest mode. The deepest sound of the hyper-Phrygian mode was the same with our A natural on the fifth line in the bass.

HYPEROCHIE. A word used by ancient authors, to signify the difference between the enharmonic and chromatic diases.

HYPŌ. (Gr.) Below. The word prefixed to the name of any ancient mode, or interval, and which expresses it to be lower than when without it; as *Hypo-Dorian*, below the Dorian.

HYPŌ-EOLIAN, or according to Euclid, **FLAT HYPOLYDIAN**, was an appellation in the ancient music, given to that mode which had its fundamental a fourth below that of the Eolian. Its lowest note corresponded with our C natural on the second space in the bass.

HYPŌCRITIC. (Gr.) The epithet applied by the ancients to the art of gesticulation, which had a considerable share in their public vocal performances.

HYPŌ-DIAZEUXIS. (Gr.) The appellation given by the ancients to the interval of a fifth, found between two tetrachords separated disjunctively, or by the interposition of a third tetrachord.

HYPŌ-DORIAN. The lowest of the ancient Greek modes. This mode, which was sometimes called the *Locrian* mode, had its fundamental a fourth below that of the Dorian, and is said to have been

invented by Pylægenes. Its lowest note corresponded with our A natural in the first space in the bass; and therefore was the same with the *proslambanomenos*. The hypo-Dorian and the hypo-Phrygian modes were appropriated to declamation.

HYPŌ-IASTIAN. (Gr.) One of the ancient modes. See **HYPO-IONIAN**.

HYPŌ-IONIAN. (Gr.) The second of the ancient modes, and which had its lowest or fundamental sound a fourth below that of the Ionian. Euclid calls this mode the *hypo-Iastian*, and flat hypo-Phrygian. Its lowest note corresponded with our B flat on the second line in the bass.

HYPŌ-LYDIAN. (Gr.) The name given by the ancients to the fifth of their modes. The fundamental of this mode was a fourth below the Lydian. By Euclid we learn that there were two distinct hypo-Lydian modes, the higher and lower, the last of which was the same as that of the hyper-Eolian. The hypo-Lydian mode, the invention of which was attributed by some to Polymnestre of Colophon, and by others to Damon the Athenian, was peculiar to funeral songs, and to sublime and sacred poetry. Its lowest sound was the same with our C sharp on the second space in the bass.

HYPŌ-MIXO-LYDIAN. (Gr.) The name of the mode added by Guido to the modes of the ancient Greeks. This mode forms, in reality, the plagal of the mixo-Lydian; and its fundamental, or tonic, corresponds with that of the Dorian.

HYPŌ-PHYRGIAN. (Gr.) A mode in the ancient music whose fundamental was a fourth lower than that of the Phrygian, from which it was derived. It is said to have been invented by Damon, the pupil of Socrates.

HYPŌ-PROSLAMBANOMENOS. (Gr.) The name given to a chord said to have been added by Guido to the ancient scale, and which is a tone lower than the *proslambanomenos*, or lowest sound of the Greeks. The author of this chord adopted the gamma, or third letter of the Greek alphabet, for its sign; whence it is now called *G gamma*. See **GAMUT**.

HYPORCHEMES. (From the Greek.) A certain canticle, or song, used by the ancients in their military dances and feasts of the gods. It was sung during the dance, to the sound of flutes and citharas. The first song of the kind is said to have been composed by Thalates of Crete.

HYPŌ-SYNAPHIE. (Gr.) A term applied by the ancients to the disjunction of two tetrachords, by the interposition of a third, conjoint with both. The homologous or corresponding sounds of the two tetrachords, thus disjoined, have five whole tones or a minor seventh of interval between them.

I.

IAMBICS. Certain songs, or satires, which are supposed to have given birth to the ancient comedy. In the ancient music there were two kinds of Iambic verses, one of which was simply recited to the sound of instruments, and the other sung.

IKEN, CONRAD, doctor of theology at Bremen, died in 1753. He published, in 1745, a dissertation "*De Tubis Hebræorum argenteis.*"

IL. (I.) The article *the*.

ILGEN, KARL DAVID, a German professor of theology, was born in Thuringia in 1768. He published at Leipsic, in 1788, "*Chorus Græcorum tragicus qualis fuerit, et quare Usus ejus hodie revocari nequeat.*"

IL PASSO TEMPO. (I.) The appellation, or title, sometimes given to a collection of light, familiar, and amusing pieces.

IL PONTICELLO. (I.) *The little bridge.* An appellation given by the Italians to that precise part of the voice where the natural tone forms a juncture with the *falsetto*, i. e., where one runs into the other. The close and imperceptible union of the natural with the feigned voice is one of the principal requisites in good singing, and the acquirement of which cannot be too sedulously attended to by the vocal practitioner.

IMBAULT, J. J., a violinist at Paris, was born in 1753. He was a pupil of Gaviniès from the age of ten, and at seventeen years old made his *début*, as a public performer, in the Paris concerts. Imbault is celebrated as the editor of excellent editions of many classical works in music; among which are the treatise on fugue and counterpoint of Marpurz, the instructions for the organ by Joseph Martini, the methods for the violoncello of Tillière, Bréval, and L. Duport, a superb edition of the quartets of Haydn, &c.

IMITATION. The technical term for a studied resemblance of melody between the several passages of the harmonical parts of a composition; a likeness in which only the motion, or the general figure formed by the notes, is imitated, without preserving the exactness in the corresponding intervals, by the rigorous rules of fugue and canon.

IMITATIVE. A term applicable to that music which is composed in imitation of the effects of some of the operations of nature, art, or human passion; as the rolling of thunder, swiftness of lightning, agitation of the sea, gurgling of streams, roaring of beasts, warbling of birds, clashing of swords, explosion of cannon; and the tones of the passions; as sorrow, love, jealousy, hatred, revenge, gayety, joy, exultation. Music, when thus employed, exerts some of its sublimest energies; transports us to the very scenes it describes, or kindles the feeling whose

expressions it copies. By the truth of its resemblance, it paints to our imagination whatever the genius of the composer conceives; and while it submits to its imitation the most striking and interesting circumstances of nature, touches the heart, and asserts its empire over our sensations.

IMMLER, a violoncellist and singer at Cobourg, in the latter half of the last century. He composed several sonatas, and some church music, amongst which is a "*Te Deum*," the words by Klopstock.

IMMYNS, JOHN, the founder of the Madrigal Society in London, in 1741, was a celebrated musical amateur. He died in 1764.

IMPERFECT. A term applied to those chords which are incomplete, or which do not include all their accessory sounds; also to those compound intervals which do not contain their complement of simple sounds; as the false or imperfect fifth.

IMPERFECT. Less than perfect in respect to intervals and chords.
IMPERFECT CADENCE. This, which is termed, by Bameau, the *irregular cadence*, consists of the tonic, followed by the dominant without its added seventh, and is the perfect cadence reversed.

IMPERFECT CLOSE. Butler terms the ancient thick single bar the *imperfect close*.
IMPERFECT CONCORDS. Thirds and sixths are called *imperfect*, because they are liable to change from major to minor, or the contrary, still remaining consonant.

IMPETUOSO, or CON IMPETO. (I.) With impetuosity.

IMPONENTE. (I.) Imposingly, haughtily.

IMPROMPTU. (F.) An extemporaneous production.

IMPRESSING MUSICIANS. In 1454, in the reign of Henry VI, it was so difficult to procure musicians, that the government found it necessary to impress them, as in later times they impressed seamen. Henry VIII. gave power to officers to impress children who had good voices, for the choirs of several cathedrals. In 1550, Edward VI. commissioned Philip Van Wilder to take, in any places within England, to the king's use, such and as many singing children, or choristers, as he or his deputy shall think good. The queen Elizabeth, authorized Thomas Gyles, to take up such apt and meet children as are most fit to be instructed and framed in the art and science of music and singing, as may be had and found out within any place of England or Wales to be by him educated and trained for service in the cathedral church of St. Paul.

IMPRESARIO. A term applied by the Italians to the manager, or conductor, of operas or concerts.

IMPROVISARE. (I.) To compose and sing extempore, a practice once very common with the poet musicians of Italy.

IMPROVISATORI. The name given by the Italians to those poets, or poet musicians, who are gifted with the power of reciting or singing extempore verses, a practice at one time very general in Italy; and to his abilities in which, Metastasio owed his education and good fortune. In 1824, three professors of this extraordinary power were exhibiting at the same time, viz., Pistrasio, in London; S. Gracé, at Paris; and Signora Taddi, at Naples. The latter of these, it is said, could not only adopt as subjects whatever stories or incidents were suggested by her auditors, but would declare her ideas in *any metre* that they prescribed, and apply to her language a melody, the time or measure of which should be dictated at the moment. A Mr. Charles Slowman, brother to the comedian, in October, 1844, announced himself in possession of this extraordinary gift.

IN ALT. (I.) A passage, or note, is said to be *in alt* when situated above F on the fifth line in the treble; as *that passage is in alt*, or it begins on A, B, or C, *in alt*.

IN ALTISSIMO, or IN ALTISS. (I.) A term applied to any passage, or note, situated above F in alt, or the F above the third ledger line in the treble.

INCIDENTAL. An epithet applied to those airs, duets, trios, choruses, &c., the subjects of which rise out of, or have some relation to, the business of the drama in which they are introduced.

INCLEDON, CHARLES. This eminent vocal performer was a native of Cornwall, in which county his father is said to have been a respectable physician. At the age of eight years, he was articled to the celebrated Jackson, of Exeter, a master fully capable of cultivating the talents of his pupil. Young Inledon made a rapid progress, and his fine voice and scientific acquirements soon rendered him the favorite of all the lovers and practitioners of music in the vicinity of Exeter. He, however, was so averse to the restraint he was under at the cathedral, that, after remaining with Jackson six or seven years, he left Exeter, and, unknown to his friends, he entered, in the year 1779, as a sailor, on board the *Formidable*. He sailed to the West Indies, and continued in the navy for four years, during which time he was in several engagements. His vocal abilities gained him the notice of many distinguished officers, among whom were Admiral Hervey, Lord Mulgrave, and Admiral Pigot; the former of whom having ascertained from him how he had been brought up, they all advised him to attempt the stage, and furnished him with letters of recommendation to Colman; but the manager was blind to his merits, and the letters were, of course, useless. Inledon, nevertheless, determined to persist in his stage pursuits, and he consequently about 1783, joined Collins's company at Southampton. After having played with

this company for twelve months, he was invited to Bath. At Bath, however, it was some time before he attained his full popularity. It was to the friendship of Rauzzini that he was indebted for being brought forward in a manner which he deserved. His talents were also cultivated by Rauzzini with the utmost care. It was in October, 1790, that Inledon made his first appearance on a London stage, in the character of Dermot, in the "Poor Soldier," at Covent Garden Theatre. Though deriving little from the helps of science, or from the patronage of scientific men, with the exception only of the short instruction he received from Rauzzini, and with scarcely any other guide than nature, or other aid than voice, ear, confidence, and an infelicitous delight in the practice of singing, the name of Inledon soon spread itself among the great body of the public. His vocal endowments were certainly considerable; he had a voice of uncommon power, both in the natural and falsetto. The former was from A to G, a compass of about fourteen notes; the latter he could use from D to E, or F, or about ten notes. His natural voice was full and open, neither partaking of the reed nor the string, and sent forth without the smallest artifice; and such was its ductility, that when he sang *pianissimo*, it retained its original quality. His falsetto was rich, sweet, and brilliant, but totally unlike the other. He took it without preparation, according to circumstances, either about D, E, or F; or, ascending an octave, which was his most frequent custom, he could use it with facility, and execute in it ornaments of a certain class with volubility and sweetness. His shake was good, and his intonation much more correct than is common to singers so imperfectly educated. His pronunciation of words, however, was coarse, thick, and vulgar. His forte was ballad, and ballad not of the modern cast of whining or want of sentiment, but the original, manly, energetic strain of an earlier and better age of English poesy and English song writing, such as "Black-eyed Susan," and "The Storm," the bold and cheering hunting song, or the love song of Shield, breathing the chaste, simple grace of genuine English melody.

INCOMPOSITE. A term applied to those intervals which are simply constituted, and in the calculation of which we take no notice of the intermediaries, but only consider the terms.

INCONSONANCE. The effect resulting from two disagreeing sounds. A discordance.

INDEX. A direct. See that word.

INFANTAS, FERDINAND DE LAS, a composer of the sixteenth century, was a priest at Cordova, in Spain. Several of his sacred compositions were published at Venice, between the years 1570 and 1583.

INFINITE. An epithet given to those canons which are so constructed that their ends lead to their beginnings, and the performance of which may be incessantly repeated. Hence, they are called *perpetual fugues*.

INFLATILE. An epithet proper to wind instruments, as a hautboy or flute.

INFLECTION. That change and modulation

of the tones of the voice by which it accommodates itself to the various accents and expressions necessary to a just performance.

INFLUENCE OF MUSIC ON ANIMALS. Dogs, says a French writer, are affected in a very lively manner by music; but it is difficult to determine the nature of the impressions which they receive from it. Many naturalists believe that its effect is disagreeable; an opinion which is strongly supported by the fact that dogs, if left at liberty, take to flight, with howls, as soon as the music reaches their ears. It has even been noticed that those dogs which are insensible to ordinary noises, and which the explosion of a cannon would not startle, will nevertheless shudder, and give utterance to involuntary groans, on hearing an instrument of music. Dr. Mead affirms that a dog died of the painful sensations excited by music, which he had been compelled to hear for a considerable time, and which caused him to utter piercing cries. Examples are given of many other animals, and likewise of owls, killed in a similar manner. Cats, also, mew loudly on hearing the sound of musical instruments; but they appear to be more seldom and less painfully affected than dogs. It is well known, on the other hand, that birds, and especially the canary bird, testify the liveliest pleasure when airs are played to them. They sometimes approach the instrument, and remain immovable so long as the sounds continue, and then clap their wings, as we should our hands, in testimony of their approbation of the performance. The horse, also, is extremely sensible to music. The trumpet, and all kinds of copper and brazen instruments, appear most to his liking. Martial airs animate and incite his ardor; his mane bristles; his eyes sparkle; he snuffs and snorts with his nostrils, pricks up his ears, and beats time, as it were, with his feet. In equestrian performances, horses dance with perfect accuracy, in cadence to the sound of instruments. Some wild animals are likewise susceptible to the influence of musical tones. The hunters in the Tyrol, and in certain parts of Germany, affirm that they are acquainted with a method of enticing stags by singing, and female deer by playing upon the flute. Beavers and rats are also said to possess a musical taste; and eight of the latter animals have been seen to dance the rope, at a fair in France. Neither are reptiles nor insects destitute of a musical ear. The lizard displays tokens of being singularly fond of harmony. The instant that he hears vocal or instrumental music, his movements display the most agreeable emotions. He turns over, lying now on his back, now on his belly, now on his side, as if to expose all parts of his body to the action of the sonorous fluid, which he finds so delightful. He does not, however, bestow his approbation on all sorts of music, but is very refined in his taste. Soft voices and tender and plaintive airs are his favorites; but hoarse singing and noisy instruments disgust him. An account is given, in a book of travels, of the taming of rattlesnakes, in Guiana, by playing tunes on a flageolet, or whistling so as to resemble that instrument. M. de Chateaubriand, in his travels in Upper Canada, positively affirms that he saw a furious rattlesnake, which had penetrated into his encampment, lay aside his rage on hearing the music of a flute, and that the serpent followed the musician

to a considerable distance. Among insects, the spider shows the greatest sensibility to music. Immediately on hearing the sound of instruments, she descends rapidly along her thread, and approaches the quarter whence it proceeds; there she remains immovable for whole hours, if the music continue so long. Prisoners, during long confinements, have tamed spiders in this manner, and converted them into companions. One of the most remarkable instances of the effect of music on animals occurred at the Royal Menagerie in Paris, where a concert was given about thirty years ago, and two elephants were among the number of the auditors. The orchestra being placed out of their sight, they could not discover the source of the harmony. The first sensation was surprise; at one moment they gazed earnestly at the spectators; the next they ran to caress their keeper, and appeared to inquire of him what these strange noises meant. But perceiving that nothing was amiss, they finally gave themselves up to the lively impressions which the music communicated. Each new tune seemed to produce a change of feeling, and caused their gestures and their cries to assume an expression in accordance with it. But it was still more remarkable, that when a piece of music, the correct performance of which had vividly excited their emotions, was incorrectly played, they remained cold and unmoved. They must necessarily have possessed, therefore, if not a discernment, at least a perception of combined sounds, and a distinct sensation resulting from them.

IN FUGUE. An expression applied to any composition constructed on a given subject; but particularly to the accompaniments of an *aria fugata*.

INGANNO. (I.) This word, which signifies a deception, is applied to that manœuvre in which, after a due and full preparation for a cadence, the ear is disappointed by the introduction of a pause, or mark of silence, instead of the expected *final*.

INGEGNERI, MARCO ANTONIO, a celebrated composer of the sixteenth century, was chapel-master of the cathedral at Cremona, and published several works of sacred music and madrigals at Venice, previous to the year 1592.

INNOCENTE. (I.) A term given to those compositions, and that manner of performance, of which the chief feature is an artless, unstudied simplicity. It implies a simple, artless manner of performing a strain, without any marked features of expression.

IN PALCO. (I.) *On a stage.* An expression alluding to a stage performance. Oratorios were originally performed in Italy on a stage erected in the church; that is, *in palco*.

INQUIETO. (I.) Perturbed, uneasy, with disquietude.

INSTRUMENT. A musical instrument is any sonorous body, artificially constructed for the production of musical sound. We may divide them into three kinds or classes—wind instruments, stringed instruments, and instruments of percussion. Of the stringed instruments among the ancients, the most known are the lyre, psalterium, trigonium, simmicium, epanoran, &c.; and now

in use, such as the piano-forte, violin, violoncello, double bass, harp, guitar, &c. The principal wind instruments of the ancients were the tibia, fistula, tuba, cornu, and lituus; and those now in common use are the flute, clarinet, bassoon, the variety of brass instruments, and the organ, &c. Those of percussion were the tympanum, cymbalum, &c., similar in effect to our drums, cymbals, &c. The difference between the musical instruments of our time and those of a former age is an interesting subject of inquiry. The Bible mentions the timbrel, the rau's horn, the reed, the harp, silver trumpets, and other equally rude inventions. From later classical writers we learn the existence of the pipe and tabor, the lyre, the lute, and others. In the records of a much more advanced period, we find mention of the harpsichord, whence we have obtained our present tolerably perfect piano-forte. The gradations from the instrumental knowledge mentioned in the Bible down to the astonishing state of improvement to which the art of manufacturing musical instruments has arrived, has been slow, but steady. It is possible that our posterity will look back upon our piano-fortes, our violins, violoncellos, double basses, cornets, sax horns, trombones, bassoons, oboes, clarinets, flageolets, flutes, harps, French horns, serpents, ophicleides, guitars, tenors and kettle drums, with as much contempt as that with which we now view the instruments of antiquity. Perhaps even our organ, which is an ancient invention, will not escape the critical censure of a coming age. We believe that much remains yet to be known in the manufacture of musical instruments. The lyre, in the time of Plato, must have been an instrument of surpassing sweetness. He mentions it as dangerous, its tendency was so powerful to relax the mind from the pursuits of study or business. In the time of Anacreon, it had reached forty strings, and consequently possessed still greater power. Ptolemy describes instruments of great power and sweetness of the flute kind, which are unknown to the moderns. The violin or fiddle was known among the Romans, and it is probable that the moderns have not improved it in any material point. There were numerous kinds of the flute known among the ancients, many of them in a state of perfection equal to the modern. Tertullian mentions an organ invented by Archimedes, which must have certainly been fully equal to the modern organ. He speaks of it as composed of a great "number of pieces, each consisting of so many different parts, connected together by such a quantity of joints, and containing such a variety of pipes for the imitation of voices, conveyed in such a multitude of sounds, modulated into such a diversity of tunes — and yet, all taken together constitute but one single instrument." Many instruments no longer existing are mentioned in the Scriptures. And it may be remembered that wherever we find music, even in its rudest state, there also we find instruments; and consequently there can be little doubt that vocal and instrumental music are nearly or quite coeval. Instruments serve as a pleasing accompaniment, and in all ages they have afforded exquisite pleasure to the great family of man, whether exhibited in the sterile harmony of the Pandean pipe, or the overwhelming chorus of the magnificent organ.

On an obelisk at Rome, erected by Senostris, four hundred years before the Trojan war, there

is represented a musical instrument of two strings, with a neck to it, which much resembles one which was in common use in the kingdom of Naples in the seventeenth century. Father Montfoucon says, that in examining nearly five hundred ancient instruments, he never met with one in which there was any contrivance for shortening the strings during the time of performance, as by a neck or finger board. The single flute was invented in Egypt. Moses mentions the timbrel and the trumpet. The first instruments used by the early Christians in worship were the cithara, the lyre, and the psaltery with ten strings. Organs were used about A. D. 361, and about A. D. 514, organs blown by hand bellows were in common use. The organ was introduced into Rome in the seventh century, and into France in 735; the first upright harpsichord was made by Shudi, about the year 1770; the first horizontal grand piano-forte was made by Bacchus, in 1777; the first organized piano-forte was made at the manufactory of Longman and Broderip, now Clementi, Collard, & Co.; the first upright grand piano-forte was made by Robert Stoddard, in 1780; and the first cabinet piano-forte was made by Southwell, in 1790.

It is wonderful to note the changes which have in time been made in instruments, as well as to observe their ups and downs in the scale of fashion. In 1600 the violin was hardly known in England, and where known it was considered a vulgar instrument; but viols of six strings, fretted like the guitar, were admitted into chaurer concerts. In 1530, at a mask given by Cardinal Wolsey, at his palace at Whitehall, Henry VIII. was entertained with a concert of drums and fifes. Queen Elizabeth used to be regaled, while at her dinner, with a band of twelve trumpets, two kettle drums, with fifes, cornets, and side drums. The lute, fashionable for two hundred years, is now obsolete, and even its shape, and its musical sounds and capacity, are hardly known.

INSTRUMENTS, AND THEIR USE IN AN ORCHESTRA. It is indispensable that whoever composes for an orchestra should be perfectly acquainted with the compass and powers of the instruments for which he is about to write. This species of information cannot, however, be obtained from books alone; it must be sought for in the orchestra itself, and can be fully acquired only by often consulting the performers themselves; in fact, this knowledge is the result of labor and experience. We will give some general rules in regard to orchestral instruments, and indicate the compass and manner of using each.

The stringed instruments are the Violin, Tenor, Violoncello, and Double-Bass.

to 

including all the intermediate semitones

The compass of the Violin extends from

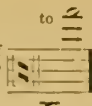

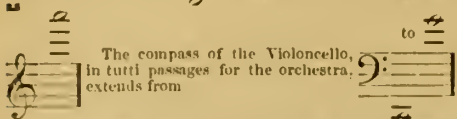

than 

But, in orchestral music, which is intended to be played at sight, passages seldom ascend higher

When two instruments of a sort are employed in the orchestra, as is the case with the violins, the notes for the second instrument are always written lower than those for the first, unless some particular reason obliges us to deviate from this rule

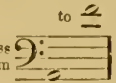

The compass of the Tenor or Alto extends from  including all the intermediate semitones. In solos and concertos for this instrument, the passages sometimes run as high-

The compass of the Violoncello, in tutti passages for the orchestra, extends from 

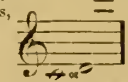

but, in the occasional solos given to this instrument, passages may ascend three or four notes higher. All the intermediate semitones are of course included. In writing for an orchestra, when the violoncellos are to play without the double basses, we must indicate this circumstance by the words *Violoncelli Soli*, or *Violoncelli*. When the double basses are again to join the violoncellos, we must insert the terms *Tutti* or *Bassi*.

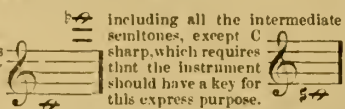

The Double-Bass is mounted with three strings, which are tuned as follows:—

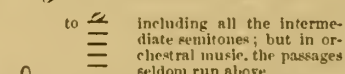

Third String. Second String. First String. 

Its compass extends from  with all the intermediate semitones; but it must be observed, that the notes which this instrument produces are in reality an octave lower in pitch than the notation here represents them. The double-bass is a very important instrument in the orchestra. It generally plays out of the same book or part as the violoncello. This may always be done when the violoncello part is simple, and does not contain rapid passages, but when it contains difficult passages or scales in unusual keys, the double bass can no longer keep pace with the violoncello; and it becomes necessary to simplify the passages so as to suit it. In all such cases, authors, for their own interest, should not neglect to write a distinct part for the double bass, as simple as possible.

The wind instruments used in the orchestra are the Flute, the Hautboy, (or Oboe,) Clarinet, Bassoon, Horns, Trumpets, Kettle-drums, Trombones, Basses Horns, &c.

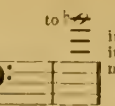

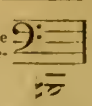

The compass of the Flute extends from  including all the intermediate semitones. The highest notes of the orchestra are given to this instrument.

The compass of the Hautboy extends from  including all the intermediate semitones, except C sharp, which requires that the instrument should have a key for this express purpose.

The compass of the Clarinet extends from  including all the intermediate semitones; but in orchestral music, the passages seldom run above 

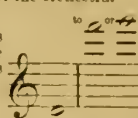

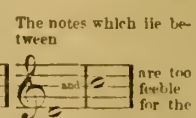

The notes between  are very soft; they are often used in *arpeggios*. Those included between  are more sonorous and brilliant; above this compass they cannot be subdued without great difficulty.

There are three kinds of clarinets used in the orchestra, A, B flat, and C. Those in C execute the notes just as they are written; those in B flat play them a major second lower, and those in A, a minor third lower than they are written. Some keys, even among those in common use, would be imperfect or impracticable on the C clarinet; such keys for example as have more than two sharps or flats for their signature. Therefore the C is used for the keys of C, G, and F major, and their relative minors, A, E, and D. The B flat clarinet for the keys of B flat, E flat, A flat major, and their relative minors, G, C, F. The A clarinet for the keys of A, D, and E major, and their relative minors F sharp, B nat, and C sharp. It will be noticed that the B flat clarinet diminishes the number of flats in the signature, and that of A the number of sharps.

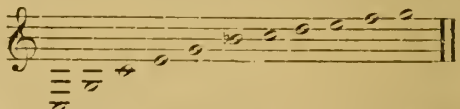

The compass of the Bassoon extends from  including all the intermediate semitones, except 

The two following notes, however, are very bad, and should not be used: 

When the bassoon ascends very high, the notes are generally written in the tenor clef. This instrument serves as a bass to the wind instruments, and frequently doubles the bass of the orchestra.

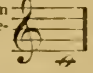

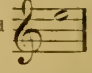

The compass of the Octave Flute extends from  The notes which lie between  are too feeble for the *fortes* of the full orchestra; they can therefore only be employed in *solo* passages. The octave flute always plays the notes an octave higher than they are written.

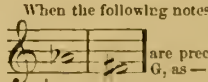

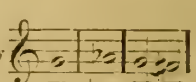

The following are the notes used in orchestral music for the Horn.

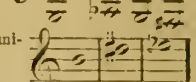

Horn parts are always written in C; but by means of crooks they may be suited to any key.

- The above notes are executed by the instrument:
1. An octave lower than written when the horns are in C
 2. A seventh lower..... D
 3. A major sixth lower..... E flat
 4. A minor sixth lower..... E nat.
 5. A perfect fifth lower..... F
 6. A fourth lower..... G
 7. A minor third lower..... A
 8. A major second lower..... the Acute B flat
 9. A major ninth..... Grave B flat

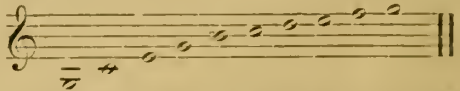

The first horn should not descend below  nor the second ascend higher than 

When the following notes,  are preceded by G, as— 

they may be used with effect. Similarly, the notes— 

though weak, may occasionally be used as notes of passage. In *solos*, many other notes are given to the horn; but, as they are produced artificially, their sound is dull and imperfect, and therefore unfit for the orchestra. As the horn is an instrument of a deep pitch, it may sometimes execute the bass of the harmony. Frequently, the first horn plays in one key and the second in another. This is done in order to obtain the greater number of *open* or natural notes. For example, in D minor, we may use one horn in D and the other in F. Four horns are sometimes used in large orchestras, two in the original key, and two in that of its dominant, &c.

The following are the notes used in writing for the orchestra for the Trumpet:

The trumpets frequently double the horns in the octave above, when they are used to strengthen the mass of the orchestra. Trumpet parts are always written in C, and, like the horns, adapted to other keys by means of crooks. The trumpets in D execute the above scale of notes a major second higher than they are written; those in E, a minor third higher, &c. Trumpets are piercing instruments and must be used but seldom. Like the trombones and drums, they are used only in the *fortes* of the entire orchestra, to enhance the effect and vary the masses. Trumpets with keys or slides are able to supply most of the intermediate notes, at least, in *solo* passages.

The Kettle-Drums have only two notes of the key in whole

they are tuned, the tonic and dominant; but they may be transposed in different keys, as C, D, E flat, E natural, F, G, A, B flat, &c.

In C, In D, &c. or, in F, In G, &c.

Composers indicate this key at the commencement of each piece, but always write the part for the drums as if they were in C. The two notes of the kettle-drums may be used as essential notes of the harmony. The drums may occasionally be used in the pianos as well as in the fortes. They often execute the bass in the harmony, particularly in pedal passages.

The roll of the drum is indicated by *tr* or by the Italian term *tremolo*; but, when it is only of short duration, it is indicated by

Three sorts of Trombones are used in the orchestra—the bass, the tenor, and the alto trombone. Their compass is as follows:

Bass Trombone, Tenor Trombone, Alto Trombone.

This instrument produces a great effect when properly introduced. It is particularly useful in strengthening the basses in the great masses. The trombones play in every key without transposition; hence they are written with sharps or flats at the signature, like the violoncellos, bassoons, and tenors. Trombones are seldom treated as solo instruments; yet, when they are joined to the horns and trumpets, they are adapted to convey ideas of a mournful character—an effect peculiar to brass instruments.

The *Basset Horn*, (Corno di Bassetto, Italian—Cor Anglais, French,) is but seldom used in the English orchestra. Its tone is very sweet, and, in solo passages, it is capable of producing very striking effects; it resembles a hautboy of a large size, a little bent at the top. Its real compass comprises the notes contained between

As the person who plays the hautboy generally takes this instrument, the part for it is usually written a fifth higher than its real pitch, thus:

Note as written, Notes actually produced.

Two basset horns are sometimes used instead of two clarinets or two hautboys; but this is only in compositions of a tranquil and religious character.

INSTRUMENTS PECULIAR TO MILITARY MUSIC.

Military music, very unlike chamber or orchestral music, receives a particular character from the use of some instruments peculiar to itself. Some of these have only a single note, others a compass with which it is necessary that a composer should be acquainted. These instruments may be divided into two classes—the first class comprehends such as in this species of music are added to those already described as belonging to the orchestra. These are the *small flutes* in E flat and F, &c., *small clarinets* in E flat or F, and the *serpent*. The second class comprehends those noisy instruments whose pitch does not enter into harmonic combinations, and which are employed to increase the effect and mark with energy the bar and its rhythmical subdivisions. These instruments are the *triangle*, the *cymbals*, the *great drum*, the *tambourine*, and the *crescent*, a Turkish instrument with bells or jingles. The notation of these latter instruments is as follows:

1. *Great or Double Drum.*

2. *Turkish Crescent.*

3. *Triangle.*

4. *Drum.*

5. *Cymbals.*

These and the other instruments peculiar to military music are only sufferable in the open air; they ought to be banished from every enclosed place consecrated to music.

Small Flute in E flat. The pitch of this instrument is a semitone higher than that of the octave flute. The compass of this species of flute is as follows:

to *tra, al'a.*

but the part for this instrument is written in D, a sixth lower than the notes which are actually played.

Small Flute in F. The compass of this instrument extends from

to *tra, al'a.*

but like the preceding species of flute, all music for it is written in D, a minor tenth lower than the notes indicated.

In English military music, other flutes, a minor third, or a perfect fourth above the pitch of the concert flute, are also used; in all cases however the parts for these instruments are written in D, or at least such as if they were to be played on the concert flute.

Small Clarinet in F. The pitch is a perfect fourth above the ordinary clarinet in C. Its compass extends from

to *ba.*

Parts for this instrument are written in C when the composition is in F; it therefore transposes the notes indicated a fourth higher than they are written.

Small Clarinet in E flat. Its pitch is a minor third above that of the ordinary C clarinet. Its compass extends from

to *ba.*

It plays in C when the piece is in E flat, and therefore transposes the notes indicated a minor third higher than they are written.

Serpent. In the hands of a good player its compass extends from

to *ba.*

Like the bassoon, no transposition is used; that is, the notes are played such as they indicated.

The stringed instruments or orchestral quartet often plays without being associated with the wind instruments. But, by adding one or more of them to the quartet, there results a number of combinations which deserve to be indicated, in order to show the great resources which an orchestra offers to a composer. Any single wind instrument, as a Flute, Bassoon, &c., may be added to the orchestral quartet. Then, if it be introduced merely to diversify the effects of the stringed instruments by its different quality of tone, it may simply double one or other of the parts of the quartet, either in the unison, or the octave above or below, as may best suit its diapason.

WIND INSTRUMENT.
ORCHESTRAL QUARTET.

In like manner the wind instrument might have doubled the second violin or the tenor. But, if the solo instrument is intended to attract the attention of the hearer more particularly, we must assign to it a solo passage more or less extended; and the stringed instruments must then serve it as an accompaniment. This accompaniment will form with it a duet, trio, quartet, or even quintet, according to the number of distinct parts which we employ.

EXAMPLES.

No. 1. Wind Instrument. DUET.

This part may be executed by the Violins, Tenors or Basses.

No. 2. Wind Ins't. Solo. TRIO.

Any two parts of the Orchestral Quartet.

No. 3. Wind Ins't. Solo. QUARTET.

Three parts of the Orchestral Quartet.

No. 4. Wind Ins't. Solo. QUINTET.

1st and 2d Violins, Tenors and Basses.

COMPLETE QUARTET.

No. 5. Wind Ins't. Solo.

All the stringed inst's in unisons and octaves.

No. 6. Bassoon Solo.—Forming also a correct Bass to the harmony above it.

Two violins accompanying the melody, but more acute than it.

Forced entry of the basses to repose on the dominant.

No. 7. Bassoon.

Two Violins.

Tenors

COMPLETE QUARTET.

Basses.

No. 8. Wind Instrument. Solo.

p First Violins.

Second Violins.

Tenors.

Basses.

No. 8. (Continued.)

Musical score for No. 8 (Continued), featuring four staves of music in a key signature of one sharp (F#) and a common time signature (C). The score includes a vocal line and three instrumental parts.

Similarly, two, three, or even four wind instruments may be combined as solo instruments. In this case they should always form correct harmony among themselves, independent of the accompanying quartet. This remark is important, as it equally applies to two or three solo voices, or even several stringed instruments: each class should at all times form correct harmony independent of the others.

EXAMPLES.

No. 1. Two Wind Instruments.

Musical score for No. 1: Two Wind Instruments. It shows three parts of an orchestral quartet. The top staff is labeled "Three parts of the orchestral quartet."

No. 2.

SEXTUOR.

Musical score for No. 2: Sextuor. It features three staves of music in common time (C) and a key signature of one sharp (F#).

Or, as is often preferable, by doubling the duo in the octave.

Musical score for No. 2 (continued), showing the doubling of the duo in the octave. The staves are labeled "Two Violins," "Tenor," and "Bass."

Consecutive octaves between a principal melody and any of the accompanying parts, except the bass, are allowed when the quartet is complete, but not otherwise. The melody is sometimes doubled in the octave by one of the accompanying parts, above or below, according as the wind instrument is grave or acute. The violoncello is often treated as a solo instrument, in which case the other violoncellos and double basses execute the orchestral bass; or, as is more frequently done, all the violoncellos concur in playing the same part. A single voice may be accompanied in the same manner as a solo instrument. Harmony in four parts should be treated with much simplicity when it accompanies a predominant melody; but this simplicity does not exclude variety. The principal wind instruments in the orchestra are the two flutes, two hautbois, two clarinets, two horns, and two bassoons; in all, ten wind instruments, which, when playing together, have sufficient power to counterbalance thirty stringed instruments or more. These ten wind instruments extend from

hence the positions of the harmony as executed by wind instruments are extremely various. For, while the stringed instruments generally play but four different notes at once, the wind instruments may execute as many as ten.

EXAMPLE.

Musical score for Example, showing parts for "Two Flutes, in octaves," "Hautbois," "Clarinets," "Horns," and "Bassoons." The score is in common time (C) and a key signature of one flat (Bb).

Some harmonic phrases will not admit of the parts being inverted at pleasure, because there would result successions of hidden octaves and fifths. In this case, in doubling or tripling the parts, we must not place the upper part below the under one. The following phrase will serve to exemplify the manner in which we must proceed in such a case.

Musical score for Example, showing a phrase where inversion is not permitted. It features two staves of music in common time (C) and a key signature of one flat (Bb).

In the above phrase the two upper parts will not admit of inversion with respect to one another; we must therefore double the parts, as shown in the following example:

Musical score for Example, showing the doubling of parts in the octave. The staves are labeled "Flutes, in octaves," "Hautbois," "Clars.," and "Bassoons." The score is in common time (C) and a key signature of one flat (Bb).

INSTRUMENTAL MUSIC. An expression used in opposition to that of *vocal music*, and applied to music composed for *instruments*. The term *instrumental* is particularly applied to the greater compositions, in which the human voice has no part. The first instrument invented was probably the pipe or straight flute. An idle shepherd might very naturally, from accident, or in imitation of the effects of the wind, blow through a simple reed, and thus invent the pipe, from which the flute would readily originate. The pipe is, in fact, found among many savages. The invention of stringed instruments, as they are more artificial, is of later origin. The instrumental music of the Greeks was confined to a few instruments, among which the flute, the cithara, and the sackbut, though not precisely like those instruments among the moderns, were the most important. The violin was invented in the middle ages, and soon became the principal instrument, taking place above the flute, though the latter is of much more ancient origin, because the playing on a stringed instrument is less fatiguing, and the tone of the violin is more distinct from the human voice, and therefore better fitted to be used with it; besides, the instrument permits much more perfect execution. Until the middle of the last century, the Italian composers used no other instruments in their great pieces than violins and bass viols; at that time, however, they began to use the hautboy and the horn; but the flute has never been much esteemed in Italy, particularly in music exclusively instrumental. These were the only wind instruments in Italy, used in instrumental music, until about the end of the last century; and even to this day, the Italians use wind instruments much less than the Germans, and particularly the French. Since Mozart, every instrument has been used which appeared adapted to answer a particular purpose. This is the cause of the fewness of the notes in the Italian, and of their great number in German, and their excess in the modern French scores. In general, symphonies and overtures, solos, duets, terzettos, quartettos, quintettos, &c., sonatas, fantasias, concertos for single instruments, dances, marches, &c., belong to instrumental music.

INSTRUMENTATION. The art of distributing the harmony among the different instruments of an orchestra or band.

INSTRUMENTAL PERFORMER. A performer on any musical instrument.

INTAVOLARE, or INTAVOLATURA. These, in Italy, are general terms for the notation of music, whether by letters, figures, or any other signs.

INTENTIO. (L.) The word *intentio* was used in the ancient music to denote the passage of the voice from grave to acute.

INTERRUPTED. A term applied by theorists to those closes, or cadences, in which the bass, instead of falling or rising from the fifth to the key note, passes to some other, and interrupts the full close, or final cadence.

INTERLOQUIUM. (L.) The term applied to the introductory excess of words, or syllables, which, in chanting, precede the bar of the second part of the verse.

INTERLUDE. A short musical representa-

tion, introduced between the acts of any drama, or between the play and afterpiece. Interludes were formerly of more frequent use than at present. A song, or dance at least, by way of interlude, was generally given after every act of a tragedy or comedy.

The interlude is not an invention of the moderns; the ancients were acquainted with certain short pieces, loosely connected, which served to make an easy transition from one play to another, and to occupy the interval between the two. At present the term *interlude*, and *intermezzo*, is applied principally to small comic operas, written for one, or at most two persons, but not connected, in any way, either with the play which precedes or that which follows. According to Arteaga, modern interludes were at first madrigals, which were sung between the acts by several voices, and were connected with the play. One of the oldest and most beautiful is *Il combattimento d'Apolline col Serpente*, by Bardi. But these madrigals soon lost their primitive form, and represented some action.

Interludes at this day are short sentences of organ music, of four, eight, or twelve or more measures' length, as the performer may fancy, played between two verses of a hymn. In the performance of sacred music the interlude should express, as far as possible, the feelings excited by the last verse sung, and should be so given as to prepare the mind for the verse next to be performed.

INTERMEDIATE. A term applied to those sharps and flats which do not form any part of the original key of a composition, and which are also called *accidentals*. See **ACCIDENTAL**.

INTERMEZZI. (I.) The name given by the Italians to interludes, or detached dances, introduced between the acts of an opera.

INTERRUZIONE. (I.) An interruption; as, *senza interruzione*, play on without interruption.

INTERVAL. The difference, in point of gravity or acuteness, between any two sounds. Taking the word in its more general sense, we must allow, that the possible *intervals* of sound are infinite; but we only speak of those intervals which exist between the different tones of any established system. The ancients divided the intervals into simple, or incomposite, which they call *diastems*, and composite intervals, which they call *systems*. The least of all the intervals in the Greek music was, according to Bacchius, the enharmonic diesis, or fourth of a tone; but our scale does not notice so small a division, since all our tones concur in consonances, to which order only one of the three ancient genera, viz., the *diatonic*, was accommodated. Modern musicians consider the *semitone* as a simple interval, and only call those composite which consist of two or more semitones: thus, from B to C is a semitone, or simple *interval*, but from C to D is two half tones, or a compound *interval*. We usually name fourteen intervals in music, viz., —

Unison,	Minor Second,	Major Second,	Minor Third,	Major Third,	Perfect Fourth,	Sharp Fourth,
First Fifth,	Perfect Fifth,	Minor Sixth,	Major Sixth,	Minor Seventh,	Major Seventh,	Octave.

Strictly speaking, there are but 12 intervals; because the unison cannot properly be called an interval, though it is considered as such when employed in harmony; and the sharp fourth and the flat fifth, though necessarily distinguished in harmony, are generally struck on instruments with the same keys, and make but one interval. We might make intervals, thus: prime, or unison, minor second, major second, superfluous second, diminished third, minor third, major third, perfect fourth, diminished fourth, superfluous fourth, perfect fifth, diminished fifth, superfluous fifth, minor sixth, major sixth, superfluous sixth, major seventh, minor seventh, diminished seventh, octave. In music written by the best masters, sounds seldom occur which bear any other relations with each other than will form these intervals. The student who becomes acquainted with these intervals will be ready to comprehend with readiness, the relative distances of any given sounds.

INTONATION. A word relating both to the consonance and to the strength or weakness of sounds. Intonation not only includes the art of tuning, but the giving to the tones of the voice, or instrument, that occasional impulse, swell, and decrease, on which, in a great measure, all expression depends. A good intonation is one of the first qualifications in the higher walks of execution. One great reason why false intonation so generally prevails, is the want of proper attention to tuning the voice. The following positions of the voice are requisite to good intonation: first, place the voice at the back part of the throat, as is done in pronouncing the word *all*; a second position may be produced by means of the vowel *a* as pronounced in the word *art*; and a third, upon the diphthong *ra*, as pronounced in the word *earth*. These several positions will give that sweetness and fullness of tone which constitutes what the Italians call a "*voce di petto*," and will bring the vocal organs into that position most proper for acquiring a correct and rapid execution. In church music, those antiphonies are called *intonations*, which are first sung by the priest, and then responded by the choir or the congregation; also the short sentence, mostly taken from the Bible, which the minister sings before the collect, and which is responded by the choir or community; such as the *Gloria*, "The Lord be with you," &c.

INTRADA. The old Italian name for an overture or prelude.

INTRODUCTION. That movement in a composition the design of which is to bespeak the attention, and prepare the ear, for the movements that are to follow. So much of the effect of a whole piece often depends on the proper cast or style of the introduction, that a judicious composer is very solicitous to avail himself of its advantage, and always writes it with an eye to the *contour*, or great outline of the piece.

INTRODUTTORIO. (It.) Introduction. See **INTRODUCTION.**
INTRODUCTORY. A term proper to those movements introduced by composers merely as preparatives of what is to follow: as also to any symphony which does not form a constituent part of the oratorio, opera, or serenade, but is to be performed, but which is temporarily adopted, as a kind of opening to the piece.

INTROITUS. The vocal commencement of the Romish service: so denominated, because it takes place at the entrance of the priest. It is succeeded by certain hymns called the *sequentia*. See that word.

INVERSION. Inversion is a changed position, either of a subject or of a chord. The in-

version of a subject is produced by giving it a higher or lower situation among the several parts of a score, sometimes making it the bass, at other times the tenor, counter tenor, or the treble. The inversion of a chord is that changed position of its component parts, with respect to its fundamental bass, by which, though the harmony remain the same, the order of the intervals is varied, and the compound assumes another name. This inversion is sometimes effected by simply changing the bass; as in the chord of the seventh, if the fundamental bass be shifted to its third, the harmony is no longer called the chord of the seventh, but that of the fifth and sixth.

INVERTED. A term applicable to certain positions of any subject or chord. See **INVERSION.**

IO BACCHE. A burden used in the lyric poetry of the Romans.

IONIAN. (Gr.) The appellation given to that ancient mode which, reckoning from grave to acute, was the second of the five middle modes. Its lowest sound corresponds with our E flat, on the third space in the bass.

IO TRIUMPHE. A burden used by the Romans in their lyric poetry.

IPEREN, JOSUA VAN. A Dutch clergyman, who died at Batavia in 1780. He wrote the following works on musical subjects: "*Von den Wechselgesängen der Heiden und Juden*," 1771. "*Kirkelyke Historie van het Psalm-Gezangder Christenen, van de dagen der Apostelen tot op onzen tegenwoordigen tyd, en inzonderheid van onze vele verbeterde Nedertuutsche Psalm-ryminge uit echte stukken samengebracht*," first vol. Amsterdam, 1777. The second volume of the same work was published at Amsterdam, in 1778.

IRATE. (L.) Angriily.

IRISH HARP. This instrument had a greater number of strings than the lyre, yet for many ages it was only used for playing a simple melody, or a single part; nor had its principal players any idea of playing in parts, or of counterpoint.

IRISH MUSIC. In its infant state poetry has been seldom separated from music, and it is probable that most of the stanzas cited by the annalists were meant originally to be associated with song. Of some of the juvenile works of St. Columbianus, we are told that they were "worthy of being sung," and a scene brought vividly, in a few words, before our eyes, by the Irish biographer of Columbia, represents the holy man sitting, along with his brethren, upon the banks of the beautiful Lake Kee, while among them was a poet skilled, we are told, in modulating song or verse "after the manner of his art." That it was to the accompaniment of a strange instrument, called the *cruit*, they performed these songs or chants, appears to be the most general opinion. In some distichs on the death of Columbia, preserved in the annals of the four masters, we find mention of this kind of harp, in rather a touching passage: "Like a song of the *cruit* without joy, is the sound that follows our master to the tomb;" and its common use in the eighth century, as an accompaniment to the voice, may be implied from Bede's account of the religious poet Ceadmon, who, in order to avoid taking a part in the light songs of society, always rose, as he tells us, from the table when the harp was sent round, and it came to his turn to sing and play. The Italians, who are known to have been in possession of the harp before the time of Dante, are, by a learned musician of their own country, Gal-

lei, said to have derived it from Ireland; the instrument, according to his account, being no other than a cithara with many strings, and having, at the time when he wrote, four octaves and a tone in compass.

How little music, though so powerful in its influence on the feelings, either springs from or is dependent upon intellect, appears from the fact that some of the most exquisite effusions of this art have had their origin among the simplest and most uncultivated people; nor can all that taste and science bring afterwards to the task do more, in general, than diversify, by new combinations, those first wild strains of gaiety or passion into which nature had infused her original inspiration. In Greece the sweetness of the ancient music had already been lost, when all the other arts were but on their way to perfection. And from the account given by Giraldus Cambriensis of the Irish harpers of the twelfth century, it may be inferred that the melodies of the country, at the earlier period of which we are speaking, were, in some degree, like the first music of the infant age of Greece, and partook of the freshness of that morning of mind and hope which was then awakening around them.

With respect to the structure of the ancient Irish harp, there does not appear to have been any thing accurately ascertained; but, from that retentiveness of all belonging to the past which we have shown to have characterized this people, it appears most probable that their favorite instrument was kept sacredly unaltered, and remained the same, perhaps, in later times, when it charmed the ears of English poets and philosophers, as when it had been modulated by the bard Crocan, in the sixth century, upon the banks of the Lake Kee.

It would appear that the church music, likewise, of the Irish, enjoyed no inconsiderable repute in the seventh century, as we find Gertrude, the daughter of the potent Maire de Palais, Pepin, sending to Ireland for persons qualified to instruct the nuns of the Abbey of Nivelles in psalmody; and the great monastery of Bangor, or Benchoir, near Carrickfergus, is supposed by Ware to have derived its name from the White Choir which belonged to it. A certain set of antiquarians, whose favorite object is to prove that the Irish church was in no respect connected with Rome, have imagined some mode, through the medium of Asiatic missionaries, by which her chant or psalmody might have been derived from the Greeks. But their whole hypothesis is shown to be a train of mere gratuitous assumption; and it is little doubted that before the introduction of the Latin or Gregorian chant, by St. Malachy, which took place in the twelfth century, the style of music followed by the Irish, in their church service, was that which had been introduced by St. Patrick and his companions from Gaul.

IRISH TUNES. Tunes peculiar to the Hibernians, and so far similar to those of the Scotch as to partake of their wildness and irregularity. Between the Scotch and Irish melodies there is, however, a striking distinction. The dulcet mellowness of the former seldom characterizes the latter.

IRLANDAIS, or IRLANDAISE. (F.) An air or dance tune in the Irish style.

IRRELATIVE. A term assigned to any two chords which do not contain some sound common to both.

IRRESOLUTO. (I.) Irresolute, hesitating, dubiously.

IRRIG, SEBASTIAN, a German musician, published at Paris, in 1756, twelve sonatas for the harpsichord, in the style of Albertini.

ISAAC, HEINRICH, chapel-master to the Emperor Maximilian I., was a pupil of Josquin, and born in the year 1440. In 1475, he held the situation of chapel-master at the church of San Giovanni at Florence, where he set to music for three voices the songs of "*Lorenzo de' Medici*," and also composed some sacred music. He probably entered the emperor's service soon after his accession to the throne in 1493.

ISHAM, JOHN, was the deputy of Dr Croft for several years. He died in 1726, having met with very little encouragement in his musical studies, though he wrote sundry valuable compositions for the use of the church. The words of two anthems composed by him, namely, "Unto thee, O Lord," and "O sing unto the Lord a new song," are in the collection made by Dr. Croft, and published in 1712. Isham joined with William Morley in the publication of a collection of songs composed by them both.

ISINARDI, PAOLO, a celebrated poet and composer, born at Ferrara, flourished there in the second half of the sixteenth century. He was a pupil of Monara. He composed a great number of sonnets and madrigals, as also sacred music.

ISMENIAS, a pupil of Antigones, was a celebrated musician of Thebes, who, according to Lucian, gave three talents, or £581 5s. for a flute, at Corinth. The extravagance, however, of this popular musician, was even more conspicuous than his professional abilities. He is recorded, by Pliny, as a prodigal purchaser of jewels, which he displayed with great vanity; and was once very angry that an emerald had been bought at Cyprus for less than he thought the value of it, though purchased by himself, and said to the person whom he had employed on this occasion, "You have done your business like a fool, and disgraced the gem." Plutarch also relates the following story of him; being sent for to accompany a sacrifice, and having played some time without the appearance of any good omen in the victim, his employer became impatient, and, snatching the flute out of his hand, began playing in a very ridiculous manner himself, for which he was reprimanded by the company; but the happy omen soon appearing, "There," said he, "to play acceptably to the gods, is their own gift." Ismenias answered, with a smile, "While I played, the gods were so delighted, that they deferred the omen, in order to hear me the longer; but they were glad to get rid of your noise upon any terms."

ISO, a French musician, brought out at the academy of music, in 1759, the two following operas, "*Phetuse*," and "*Zémide*."

ISOLA, GAETANO, a Genoese composer, wrote in the year 1791, for the theatre at Turin, the serious opera "*La Conquista del Vello d'Oro*."

ISOU. The name by which the first note of every chant was formerly designated, and which note was significative of the key, or tone of the melody.

ISOUARD, NICOLO, was born at Malta in 1775, where his family held an honorable rank,

His father did not intend him for a musician, but he could not resist his natural inclination for the art. His leisure moments were devoted to the study of music and, on his being placed at Naples, in a banker's house, he particularly applied himself to music, and finished his studies in counterpoint in that city under Sala. He also obtained instruction from Guglielmi in dramatic composition. He finally totally abandoned commerce, and gave at Florence his first opera, "*L'Aviso ai maritati*," the success of which still further confirmed him in his resolution, and thenceforward he assumed the name of Nicolo, in consideration of his father. After having composed for the different theatres of Italy and Malta, he established himself at Paris, where, amongst seventeen operas, both comic and serious, which extended his reputation, he composed "*La Cendrillon*," in 1813, the success of which was unrivalled. Nicolo played on the organ, harmonica, and several other instruments, with superior ability. He died in the midst of his career, leaving "*La Lampe Merveilleuse*," an unfinished opera, which was performed after his death at the Royal Academy of Music. The following list comprises his principal works: "*Hébé*," a cantata. Operas performed in Italy: "*L'Aviso ai maritati*;" "*Artaserse*;" "*Rinaldo d'Asti*;" "*Il Barbiere di Siviglia*;" "*L'Improvvisata in Campagna*;" "*Il Tonneliere*;" "*I due avari*;" "*Ginevra di Scozia*;" "*Il Barone d'Albachiara*." Operas performed in France: "*Le Tonnelier*," 1801; "*L'Impromptu de Campagne*;" "*La Femme avare*," 1802; "*Les Confidences*," 1803; "*Le Médecin Turc*;" "*L'Intrigue aux Fenêtres*;" "*La Ruë inutile*," 1805; "*Idala*;" "*La Prise de Passau*," 1806; "*Les Rendezvous Bourgeois*;" "*Les Créanciers*," 1807; "*Un Jour à Paris*;" "*Cimaroza*," 1808; "*L'Intrigue au Sérail*," 1809; "*Cendrillon*," 1810; "*La Fête au Village*," 1811; also part of "*Le Baiser et la Quitance*;" "*Le petit Page*;" "*Flaminius, la Victime des Arts*."

ISTESSO, or L'ISTESSO. (I.) The same; as, *far l'istesso*, do the same thing; *cantar l'istesso*, sing the same thing, or in the same manner; *istesso valore ma un poco piu lento*, the same time, but rather slower.

ITALIAN MUSIC. The style of music now prevalent in Italy is characterized by the predominance of melody and song, to the neglect of harmony, and is distinguished from the old Italian music. In Italy we first find the proper choral song, the foundation of modern church music, which was at first sung in unison, chiefly in melodies derived from the old Greco-Roman music, and adapted to Christian hymns and psalms. It seems to have had its origin when Bishop Ambrosius, in the fourth century, introduced into the western church songs and hymns adapted to the four authentic modes of the Greeks. In the thirteenth century, the invention of music in measure was spread in Italy, dependent upon which was that of counterpoint and figured music. Instruments were multiplied and improved in the fourteenth and fifteenth centuries. In the sixteenth century we discover distinguished composers and musicians. In the seventeenth century

we meet with the first profane music. The first opera was performed at Venice, 1624, at first with unaccompanied recitatives and choruses in unison; it spread so quickly, that the composers of spectacles were soon unable to supply the demands of the people, and from forty to fifty new operas appeared yearly in Italy. It is evident that Italian music advanced, by rapid strides, far before that of the rest of Europe; and this accounts for the predominance of Italian terms in musical language. The Italian school is yet unequalled in whatever depends upon the mere improvement of the voice; but the slavish imitation of their manner leads to affectation; therefore the German singers employ it no farther than they can without losing the spirit and poetical expression which the German song aims at.

Music owes much to Italy. Here was the birth-place and cradle of harmony. Guido Aretino, who originated counterpoint, Palestrina and Scarlatti, who pushed it to a point which has scarcely been exceeded since, (except in the matter of symphony,) were natives of that country. But it is in melody that Italy stands preëminent. Hers are no cramped and rheumatic airs, hobbling along like some of those generated in our northern climes, bearing upon them evident marks of the patching and propping hand of the composer. They glide along, smooth, elastic, life-like, full of feeling and passion. There is not that depth of thought in them that there is in the music of Germany; but they are ever graceful and touching, and easy to be understood. This is the general character of the airs of Jomelli, Pergolesi, Cherubini, and especially of the modern Rossini, who, though decidedly inferior in science to many of his brethren, has perhaps enjoyed a greater amount of popularity than any other, and that mainly on account of his delightful melodies. Rossini is now an old man; and the modern music of Italy, with the exception of his compositions, has dwindled into nothing but airs, and those of a very shallow and trifling character.

ITALIENNE. (F.) As, *à l'Italienne*, in the Italian style.

ITA MISSA EST. (L.) The termination of the mass, sung by the priest to Gregorian music.

IVES, SIMON, was a lay vicar in the cathedral of St. Paul's, till driven from thence by the usurpation, when he became a singing master. He and Henry Laws were made choice of to compose the airs, lessons, and songs of the masque, performed, by order of the four inns of court, before King Charles I. and his queen, at White Hall, on Candlemas night, 1633. Many catches and rounds of Ives's are to be found in "Hilton's Collection," and in Playford's "*Musical Companion*;" as are also some songs, among the airs and dialogues published in his time. He died in the parish of Christchurch, London, in 1662.

IZAAK, HENRY. Author of a mass found in the library at Brussels, in 1842, entitled *De Assumptione Beate Mariæ Virginis*. He was chief musician to the Emperor Maximilian I., about 1430.

J.

CKET, or JACQUET. See BERCHEM.

JACCHINI, GIUSEPPE. A celebrated violoncellist at Bologna, about the year 1700.

JACK. In the harpsichord, the quill in the hammer which strikes the strings is called *Jack*.

JACKSON, JAMES. A celebrated singer at Trinity College, Cambridge, England, in the middle of the last century.

JACKSON, SAMUEL. Organist at St. Bartholomew's Church in New York, published a "*Te Deum*" in Eb in 1851.

JACKSON, WILLIAM, an eminent musical composer and a man of letters, was born in 1730 at Exeter. He was placed as a pupil to Travers, organist of the cathedral. In 1748, he removed to London, and passed two years under the tuition of John Travers, organist to the King's Chapel, and an eminent song composer. He then returned to his native place, where he settled for life, as a teacher, performer, and composer of music. His talents in musical composition were first made known in 1775, and it is by his vocal compositions that he has acquired the greatest reputation. In 1782, he published "Thirty Letters on various Subjects," two volumes small octavo. This miscellany contains many striking reflections upon men, manners, and opinions, sometimes singular and paradoxical, but generally lively and instructive. An attempt to revive the exploded doctrine of equivocal generation, and another to retrieve the poetical reputation of Quarles, are those in which the ingenious writer deviates from the common judgment. These letters were well received, and were republished in a third edition, with additions and corrections, in 1795. Besides being the author of other literary works, Jackson published in 1791 a pamphlet entitled "Observations on the Present State of Music in London." This book was thought to betray some prejudice against the modern masters, and undue preference of those under whom the writer's musical taste was formed, intermixed, however, with valuable and judicious observations. To his other tastes, Jackson added that for painting, in which art he was no mean proficient. He employed his pencil chiefly in landscape, and by his study of strong and partial lights, produced striking effects. Jackson was a member of a very respectable literary society, instituted at Exeter in 1792, which published an octavo volume of their joint contributions in 1796. He was extremely well qualified for conversation, by extensive information, a turn for pleasantry, and a communicative and social disposition. He enjoyed a very select acquaintance, and was greatly respected by the principal persons in his neighborhood. He died of an asthmatic complaint in 1803.

JACKSON, WILLIAM, the gifted composer of "The Deliverance of Israel from Babylon," and other musical works of great merit, was, until recent period, a resident at Masham, a small

and secluded village in Yorkshire. From early youth Mr. Jackson has evinced an ardent disposition for the study and practice of music; and, unlike many of the great contrapuntists of the last century, has, aided with a moderate degree of what may be called musical science, produced compositions which rank high as specimens of true musical expression. It was the custom of Mozart, when speaking of the difference of mere science as compared with a true feeling for the expressive and imaginative in musical art, to refer to two of the greatest contrapuntists of a by-gone age, as never having produced, in all their lives, a single melody worth hearing. So much for mere science. Nature, however, has taught the composer, who is the subject of the present notice,

"To snatch a grace beyond the reach of art,"

which will assuredly be the most certain means of conveying down his name to posterity. Mr. Jackson, while residing in Masham, carried on a business there totally unconnected with music, being, in fact, rather an ardent amateur in than a professor of that art, and fulfilling the duties of organist at the village church. In the autumn of the year 1852, we believe, Mr. Jackson removed to Bradford, in Yorkshire, at which place he opened an establishment as a musical repository, and is at the present time, we understand, devoting the whole of his attention to his favorite pursuit of music, and also giving instructions in the art. He is the author of several elementary works on music; amongst others, an excellent manual on the art of singing. Mr. Jackson is also the composer of several glees and anthems, most of which have become very popular; we may mention the beautiful glee composed by him, entitled "The Sisters of the Sea." It is about three years since "The Deliverance of Israel from Babylon" was first published; and since that period the composer has given to the world another oratorio, called "Isaiah," a work of great merit, and which has been performed at Liverpool, where it was received with every demonstration of applause.

JACOB, a pupil of Gaviniès, was a violinist in the orchestra of the Grand Opera at Paris. In 1769, he published a "*Nouvelle Méthode de Musique*." He died at Paris about the year 1770.

JACOB, GUNTHER. A Benedictine monk and composer, at Prague, at the beginning of the eighteenth century. He published much church music.

JACOB, BENJAMIN, was born in London in the year 1778. He evinced a love for music at a very early period of life, and was taught the first rudiments of the science by his father, who, being a tolerable amateur performer on the violin, instructed his son on that instrument; by which means he gained such a knowledge of the relations of musical sounds as to be able to name

my note he heard. When seven years old he was instructed in singing by an ingenious chorist singer, named Robert Willoughby, by whom he was introduced as a singing boy into the choir of Portland Chapel, then in a flourishing state, it being composed of the best chorist singers of that day. But harmony was his delight, single sounds not satisfying his ear; he therefore, at the age of eight, began to practise the harpsichord, (the piano-forte being then in its infancy,) but at first without any particular instructor. After some time, he was, however, put under the tuition of Mr. Shrubsole, then organist of Spafields Chapel, and, subsequently, for a short period, under the tuition of Matthew Cooke, organist of Bloomsbury Church; but he was principally advanced in the science by his own observation, study, attention, and perseverance, making whatever he heard or saw in music a lesson. In this manner he may be said to have been under obligations to every musician he fell in company with. At ten years of age he was appointed organist of Saleu Chapel, near Soho Square, in which situation he continued little more than a year. Between the age of eleven and twelve he was invited to Carlisle Chapel, Kennington Lane, some years afterwards occupied by Thomas Adams, until his election to Deptford. In the year 1790, when Haydn was in London, Jacob, then aged twelve, had the honor of tuning the great composer's piano-forte; and as a proof of a correct ear in temperament, Haydn was so well satisfied as to desire Jacob might tune for him again, which he did repeatedly. The next organist's situation he was appointed to was at Bentinck Chapel, Lisson Green, a chapel of ease to St. Mary-le-boue. Here he continued from the latter end of 1790 until 1794; in December of which year he was invited by the Rev. Rowland Hill to succeed Lumyns as organist of Surrey Chapel, in which situation he continued.

In the year 1796 he began to study harmony under Dr. Arnold, from whose friendship he derived much of his early success in the profession; he was also proposed by the doctor as a member of the Royal Society of Musicians, and was elected in 1799. It may here be noted, that so early as the age of eleven, Jacob was frequently engaged to take the organ, when anthems and choruses were to be sung in places of worship for charitable purposes. At this time he could play readily from the full scores of Handel, which he preferred to any arrangement in accompanying. He was one of the treble boys at the musical festivals in Westminster Abbey, in 1790-1791. In this office, William Russel, who afterwards became a celebrated performer on the organ, and organist of the Foundling, was, as on other occasions, for several years, his constant companion; both were pupils of Shrubsole, and about the same age. In the spring of 1800, Jacob conducted a series of oratorios, under the direction of Bartleman, in Cross Street, Hatton Garden. For several years he presided at the organ, at the annual concert for the Choral Fund, while Dr. Arnold conducted the piano, and Barthelemon led the band. In the year 1808 he set on foot an organ exhibition at Surrey Chapel, consisting of a selection of airs, choruses, and fugues, from various authors, performed publicly on the organ, without any vocal accompaniment. In 1809 he and Samuel Wesley united in an organ performance, playing alter-

nately the fugues of Sebastian Bach and Handel, with many of his overtures, airs, and choruses. About three thousand persons of the highest respectability, also many in the first rank of professors and amateurs, were present, and, as a proof of the interest excited, continued to sit, with the greatest attention, through a four hours' performance on the organ only. We are informed that Jacob considers himself under considerable obligations to S. Wesley for his friendship, through which he became acquainted with the works of the immortal Sebastian Bach, and received some of the most useful hints and instructions in his profession. In 1811, 1812, and 1814, these performances were repeated, when Dr. Crotch played alternately with Jacob, and the interest and attendance was as marked and numerous as on the preceding occasion. In 1809, Jacob opened the organ at St. Swithin's, London, built by Gray. On Easter day, 1810, he opened an organ at Camden Chapel, Camberwell, built by Elliot. In 1814, he was chosen umpire in the selection of an organist at St. Paul's, Deptford. Thomas Adams was then chosen, after hearing nineteen candidates. In 1815 he was joint umpire with Attwood and Williams for the choice of an organist at Lambeth. From among thirteen candidates, Warren was chosen. In 1815 he opened the organ at Christchurch, Birmingham, built by Elliot, and gave two organ performances there, for which he was specially engaged from London upon very liberal terms. In April, 1818, he was made umpire at Cripplegate Church, where there were thirteen candidates for the place of organist. Miss M. North was chosen. In 1818, at the Lent oratorios, at Covent Garden Theatre, Jacob conducted at the organ and piano-forte. He performed a concerto on the organ nearly every night; the season was remarkably successful. In October, 1818, he was elected an associate of the Philharmonic Society. In May, 1819, he recommended Mr. Murdie to the Philanthropic Chapel: upon the death of Williams he was chosen by the vestry. In 1819 he also recommended J. Turle to Christchurch, Surrey, who was elected by the parish. In 1821, he was applied to to nominate an organist to Clapham Church, when he recommended Blackburn, who was chosen unanimously. In the same year he also conducted a concert at Hanover Square, for the benefit of Mr. Hyde. He was likewise appointed umpire at St. Bride's, Fleet Street, when there were twenty-four candidates for the organist's situation; six were selected, and Mather chosen from them, by the committee of the vestry. In December, 1823, Jacob was elected one of the court of assistants of the Royal Society of Musicians. He further conducted annually, for several years, a concert at Surrey Chapel, for the benefit of the almshouses belonging to that place, performing the parts of the band on the organ, excepting the double drums of Mr. Jenkinson, and trumpet of Mr. Harpur: the produce of this concert was about £200 annually, the place being always crowded.

His very extensive engagements as a teacher prevented Jacob's attention being much turned to composition; he has, however, produced the following works: "A Second Volume of Tunes, for the Use of Surrey Chapel," partly composed, partly selected, and wholly arranged by B. Jacob; "Dr. Watts's Divine and Moral Songs, as Solos,

Duets, and Trios," composed by Jacob; "A Glee for two Trebles and Bass, 'Stay, O, stay, thou lovely shade,'" dedicated to Dr. Arnold; "A Glee for Alto, Tenor, and Bass, 'Sure not to life's short span confined;'" "A Canzonet, 'Maternal Tenderness;'" "National Psalmody," a collection of tunes, with appropriate symphonies, for the use of the church of England, for every Sunday throughout the year, harmonized, arranged, adapted, and many of the tunes composed by Jacob. This has become, by the very extensive patronage of the bishops, clergy, and parish officers, a standard work for psalmody. The above are the only works which Jacob has printed: he had several other pieces in manuscript, also an "Analytical and Analogical Treatise on Thorough Bass and the Principles of Harmony."

JACOBI, CONRAD, a director of music at Dessau, died there in 1811. There are published some instrumental works of his composition.

JACOBI, MICHAEL. A singer at Luneburg. He performed also on the violin, lute, and flute. His publications, consisting chiefly of sacred music, bear date from 1661 to 1663.

JACOBI, SAMUEL FRANZ. Conductor and organist at the Palace Church in Witteburg in 1730.

JACOBITUS, PETRUS AMICUS, published at Venice, in 1589, "*Motetti à 4, 5, e 6 voci*," Op. 1.

JACOPONUS, a monk, who lived probably in the fourteenth century, is the author of the text and first melody to the "*Stabat Mater dolorosa*," which has since become so celebrated by the compositional of Palestrina, Pergolese, Haydn, and Rossini.

JADIN, JEAN, a violinist, published at Brussels, from 1777 to 1782, five operas of instrumental music, consisting of symphonies, quatuors, and trios for the violin.

JADIN, HYACINTHE, son of the preceding, was a celebrated pianist at Paris, and a professor of his instrument at the Conservatory. He published much vocal and instrumental music between 1789 and 1799. He died about the year 1800.

JADIN, LOUIS, brother of the preceding, was very eminent at Paris as a pianist and composer, and was also a professor of his instrument at the Conservatory. He wrote the music of several comic operas, and also composed many romances and much instrumental music between the years 1796 and 1810. Among his operas are "*L'Heureux Stratagème*," in two acts; "*Le Portrait*," in two acts, 1790; "*Mahomet II.*," in three acts, 1803; the above were performed at the Academy of Music; "*Le Mariage de la Vieille*," in one act, 1796; "*Candas*," in three acts, 1798; "*Jean Bart*," "*Ruse contre Ruse*," "*Porceaugnac*," "*Le Grand Père*," in one act, 1805; and "*La Partie de Campagne*," in two acts, 1810. The last seven were performed at the Théâtre Feydeau.

JAEGER-CHOR. (G.) Hunting chorus.

JAEGER, JOHANN, a violoncellist to the Margrave of Anspach, was born in 1745. In his

youth he was in the service of the court of Holland, as performer on the hautboy and horn. From thence he went to Wurtemberg, where through the instructions of Jomelli, Decler, and Seeman, he arrived at a high degree of eminence. In the year 1802, he retired to Breslau on a pension from the margrave.

JAEGER, JOHANN ZACHARIAS L., son of the preceding, and born at Anspach in 1777, was only eleven years of age when he was named chamber musician and violoncellist in the chapel of the Margrave of Anspach. When scarcely nine years old, he could perform solos on the violoncello with admirable rapidity, precision, and firmness. In 1787, his father went with him to Berlin, when the Queen of Prussia was so delighted with the boy's performance, that she wished to engage him for her chapel; and on the father's expressing a desire that his son should remain with him at Anspach, the queen settled a pension on the child of about twenty pounds a year, which was much increased by a gift from the margrave on his return to Anspach.

JAELL, ALFRED, was born the 5th of March, 1830, at Trieste, where his father had removed, after a long residence in Vienna, where he had been distinguished as a violinist and leader of an orchestra. At Trieste he established a school for music, under the patronage of the government. Ole Bull happened to pass a few months in this city. The little Jaell, who had scarcely left his cradle, heard him play, and his delight was such that he begged for a violin with the same eagerness and impatience that other children would have asked for a plaything. The instrument was given to him, and at three years old he executed the most astonishing and difficult feats, after the manner of the Norwegian violinist. Soon after, his father commenced his musical education, and at six years old he played perfectly the concertos of Rode, Beriot, and Mayseder. The young Jaell fell dangerously ill; his convalescence was long and tedious, and he was forbidden by his physicians to pursue the study of the violin. To divert himself, the child begged to be placed at the piano. His wish being gratified, he amused himself by playing upon it for hours together, without advice and without a master. His progress was so rapid, that in a journey to Klagenfurth, where he went to reestablish his health, he executed upon the piano a piece of Assmayer, with orchestral accompaniment, in a concert given by his father. In 1843, at the age of twelve, he visited Italy, and performed at Venice, at the Theatre San Benedetto, between the acts. A concert was given at the same theatre, the proceeds of which he shared equally with the manager. He there played the *Fantaisie sur Moïse* of Thalberg, the *Regatta* of Liszt, and a study of Döhler. At Milan, and afterwards at Vienna, (where the celebrated Czerny expressed the greatest interest in him,) Alfred Jaell excited the same surprise and admiration as at Venice, and created a perfect furor wherever he stopped in his tour through Germany. In January, 1847, he went to Paris, strongly recommended by Liszt, and was found to possess talents far beyond his years, and to be as extraordinary as Liszt himself at the same age. His playing was full of fire, elegance, expression, and genius. At the concert of the *Gazette Musicale* for January, 1847, he performed

Thalberg's Fantaisie upon "*Don Juan*;" a study of Charles Mayer's; the caprice of Willhuers, "*Pompa di Festa*," with the self-possession, the calm and fire, which distinguish the true artist. The skill and genius shown in the head, eye, carriage, and fingers of this boy were truly extraordinary. In March of the same year, he gave three concerts with Kruger and Osborne, in the rooms of Erard, where it was remarked by the critics that he possessed the rare and difficult power of singing upon his piano. At these concerts he played the Fantaisie of Thalberg upon themes from Massaniello, and gave, in a charming manner, the studies of Wolff and Döhler, "*La Chasse*" of Heller, and the "Dance of the Sylphs," of Rosenheim. At Brussels, he gave a concert in July, 1817, at which he played no less than nine pieces. Here, as every where else, his prodigious mechanism elicited unbounded applause. In December he performed at the first winter concerts of the Philharmonic Society of Brussels, where he was crowned by universal acclamation.

After Jaell had given a series of concerts and classical *soirees* in Brussels, he went to Antwerp, where he also gave concerts entirely without other assistance, and in the last performance was greeted with bouquets and wreaths from the enthusiastic audience. Thence he returned to Holland, where, during the first period of the French revolution, he gave successful concerts. He then left for Frankfort on the Maine, and during the *Reichstag's* period, also gave concerts both in the city and surrounding places. Thence he started for Antwerp, with the intention of embarking for America; but the sudden and serious illness of his father prevented this, and returning to Brussels, he gave a series of concerts there, and in other cities of Belgium, in which he was assisted by the celebrated violinist H. Léonard. During the summer Jaell gave several concerts for the poor in Brussels, and the president of the Philharmonic Society unexpectedly presented him, at one of these concerts, with a very handsome medal. On the 1st of September, 1819, Jaell lost his father in Brussels; he then passed some time in Ostend, to recover from this severe affliction, but in December went thence to Brussels, giving another concert, and thence to Paris. Here, on the 5th of May, he gave a grand concert in Erard's Saloon, in which he was assisted by the principal singers of the Italian and Great Opera, as also by the violoncellist Demunck, and by his friend Gottschalk, with whom he played a piece for two pianos. Jaell was recalled after every piece, and had to repeat several: it may be mentioned, that the pieces which met with the greatest success were Thalberg's "*Stumme von Portici*," Jaell's "*Caprice über Lombardie*" and his "*Nocturne*," a "*Sicilienne*," by Ravina, and also "*Le Bananier*," (a negro dance,) by Gottschalk. Jaell played afterwards at a grand court concert at the Elysee, for Louis Napoleon. After many subsequent performances in Paris, he went to London, and thence to Brussels, where he performed several times in company with Demunck, with whom he also gave concerts in Ostend, Gand, Mons, and other cities of Belgium. Thence he went to Aix-la-Chapelle, where he performed several times alone, and also in company with Miska Hauser, the violinist, so well known in this country. He then left for Vienna,

in which city, as also in Gratz and Trieste, he gave public performances. A writer in a Vienna journal (a city, by the way, of distinguished pianists—in fact, the piano school of Europe) thus writes about one of Jaell's performances: "In the concerto by Mendelssohn, Jaell showed a truly towering talent. I have only a single wish—either to hear this concerto again from Jaell, or never to hear it by another. I have twice heard Liszt, and am free to say that he did not hurry me away, as did Jaell. What must we conclude from this—what, at least, do I conclude? As far as comparisons may avail, that Jaell is one of the greatest pianists now living." This is certainly proof that Jaell is as much at home in classic as in modern music. Thence he went to Presburg, and gave several concerts for himself, and several for the poor of the city; he then left for Pesth and Ofen, in which cities he gave concerts in the public theatres. The Hungarian ladies were so enthusiastic about Jaell, that on one occasion, when a string of his piano broke, they possessed themselves of the pieces, and had them wrought into brooches and bracelets, as souvenirs of the artist! The following, however, appeared in a Pesth journal: "In consequence of Jaell's performing a Hungarian march, he was ordered by the authorities to leave the city in twenty-four hours, and was not even allowed to give a concert which had already been announced." It may be added, that Jaell received *permission* from the authorities to play this march, but as the enthusiasm was unexpectedly great, the police told him coolly, that had he not asked permission he would have been imprisoned—as it was, he must immediately disappear from the place. He left, but in a city not far distant, gave several charitable concerts for the Hungarian poor. Jaell then went to Venice and Trieste, where he gave two farewell concerts. A Venice critic wrote of his performance, "Jaell is difficult to reach, but impossible to surpass." After passing some weeks *en famille* in Trieste, he went through Vienna, Leipsic, Antwerp, and London to Liverpool, where he embarked by steamer for the United States.

JAIN, AUGUST WILHELM FRIEDRICH, born at Arnstadt in the year 1780, was considered an excellent pianist, and also a good performer on the violin, violoncello, flute, and hautboy. He published, in 1801, "*Musikalischer Blumenstraus bestehend in Marschen, Menuetten, Angloisen, &c., für das Klarier*." He printed also at Leipsic, in 1783, "*Six Sonatas for the Harpsichord*."

JAILTAGE. This is the name of the only musical instrument of Tartary. It consists of a box of fir, about four feet long and three inches broad, the upper part of which is open, over which six wire strings are stretched. It is played on with both hands, but chiefly with the left; and produces both treble and bass. To tune this instrument the Tartars place a bridge under each of the strings, and then shift its place till the necessary pitch is obtained. Their melodies are similar to those of the Kalmucks; and so are their dances.

JALEME. The song of lamentation; so called by the ancient Greeks.

JAMES I. On the accession of James I. to the throne of England, the polite arts did not make any very rapid progress, though Rizzio, in

the time of his unfortunate mother, no doubt introduced much improvement in the national music of Scotland; yet we find James neither from birth nor education taking much pleasure in music. Early, however, in his reign, the gentlemen belonging to the Chapel Royal obtained an increase of ten pounds to their annual stipend, so that the king showed himself desirous of encouraging the sons of harmony. But anthems, masques, madrigals, songs, and catches seemed to comprise the whole of the vocal music at that time, either for the church, the stage, or the private concert, to which may be added instrumental productions styled *fancies*, composed chiefly for lutes and viols; they were very insipid, and the lovers of good music can never feel their loss.

We are told by Riceobini that James I., on his coming to the throne in 1603, granted a license to a company of players, in which interludes are included; but an interlude then was only another word for a play. Masques were not mentioned in the patent; they were performed in the houses of the nobility on very festive occasions, the machinery and decorations being too expensive for the theatres. Indeed, the characters were generally represented by the first personages in the kingdom; when at court, the king, the queen, and princesses of the blood often performed in them. He gave an act of incorporation to the musicians of London. It appears, however, not to have had a good effect, as it has ever been held in derision by the best musicians of that city.

JAMES, JOHN. An organist and composer for his instrument in London. He died about the year 1745. The style of his compositions was dignified and scientific, but only three of his vocal pieces were published.

JAN, M. DAVID. A Dutch composer at the beginning of the seventeenth century. He set the one hundred and fifty psalms of David to music for 4, 5, 6, 7, and 8 voices, which he published at Amsterdam in the year 1600.

JANI, JOHANN, a composer and court-organist at Aurisch, in Germany, died in 1728.

JANIEVICS. See YANIEWICZ.

JANITSCH, ANTON. A violinist and composer for his instrument belonging to the orchestra of the theatre at Hanover, in the latter years of the seventeenth century.

JANITSCH, JOHANN GOTTLIEB, chamber musician and performer on the double bass to the court of Prussia, was born at Selweidnitz, in Silesia, in 1708. He composed ten works, cantatas, serenatas, and funeral music, during the period of his residence at the University of Frankfurt on the Oder. He wrote also several quatuors in the style of Graun, which were printed at Berlin about the year 1760. Among his other compositions are a "*Te Deum*," and music on the occasion of the coronation of the King of Sweden.

JANNEQUIN, CLEMENT, a celebrated French composer, flourished about the year 1510. Amongst his works are "*Vingt-quatre Chansons à quatre Voix*," Paris, 1533; "*Chansons*," Paris, 1537; "*Canzoni Francesi à 4 Voci*," Venice, 1538; "*Inventiones Musicales pour quatre et cinq Voix*," Paris and Lyons, 1544; "*Le dixiesme*

Livre des Chansons, contenant la Bataille à quatre de Clement Jannequin, avec la cinquiesme Partie de Philippe Verdelot, si placet, et deux Chasses du Lievre à quatre Parties et le Chant des Oyseaux à trois," Antwerp, 1545. One of Jannequin's pieces was a description of a battle which was fought between the French and Swiss armies in 1515, and lasted two days. There are in it several movements, in which the noise and confusion of a battle are described, together with the sound of guns, trumpets, fifes, and drums. He also wrote music in imitation of birds, which was earlier than it was attempted in England.

JANSEN, HENRY, born at the Hague in 1741, translated into French, from the English and German, numerous works on the arts, among which is one from the writings of Engel, entitled "*Sur la Peinture en Musique*," Berlin, 1780.

JANSON, J. B. A. J., born at Valenciennes in 1742, was a violoncello pupil of Berthaut. He first performed at the *concert spirituel* in 1766. In the following year he accompanied the hereditary Prince of Brunswick to Italy, where his talents were highly esteemed. He returned to Paris in 1789, and was nominated a professor of the Conservatory in 1795. He published several trios, quatuors, sonatas, and concertos for his instrument. He died in 1803.

JANSON, L. A. J., brother of the preceding, was also a violoncellist of great eminence. He was admitted in the orchestra of the Academy of Music, at Paris, in 1789, which situation he still held in 1800. He also published much music for his instrument.

JANUS, JOHANN, published at Bremen, after the decease of Luder Knop, in 1667, the "*Swan Song*" of this latter composer, together with some allemandes and courantes.

JANUS, MARTIN, was considered one of the best composers of simple melodies of the age in which he lived. He died about the year 1660.

JAPANESE MUSIC. In Japan the people have a kind of music, which is not very harmonious. They have but few musical instruments; and that most used among them, and which they are most taken with, is a kind of lute, the belly of which is above a foot square, with a long and narrow neck, being made only for four strings, which are usually of silk, and struck with a peg of ivory about the size of a man's finger. They sing to it, but the Japanese voice is as unharmonious as the sound of the instrument.

JARGON, or JAR. A term applied to the effect resulting from the union of two or more sounds mutually at variance. The sum of a confused multitude of different sounds, whose undulations being inconcinuous and contrary, disconcert and distract the sense.

JARNOWICK, or GIORNOVICKI, GIOVANNI MANE, born at Palermo in 1745, was the favorite violin pupil of the celebrated Lulli, and first performed in public at the *Concert Spirituel*, in Paris, choosing for his *début* the sixth concerto by his master. It is said that he was not at first successful, but nothing could disconcert him, and he soon afterwards played his own first concerto in *la major*, in which he obtained the greatest applause. During ten years, the style of Jarnowick was in fashion at Paris. Correctness, purity

of tone, and elegance characterized this skilful violinist; but he was deficient in vigor of tone and sensibility, his staccato had little brilliancy, and, above all, his graces wanted science and dexterity. Thus the celebrated Lamotte, a German violinist, who possessed the qualities which Jarnowick wanted, shared equally with him the applause of the public. Circumstances having obliged Jarnowick to quit France about the year 1780, his situation was filled by Viotti, whose eminent talents soon caused his predecessor to be forgotten. Jarnowick next proceeded to Prussia, where, in 1782, he was engaged as first violin in the Royal Chapel of Potsdam. In 1792, we find him in London, where he played at all the great concerts till the year 1796, when the well-known dispute took place between him and J. B. Cramer, which terminated in the loss of Jarnowick's popularity in that country. He next proceeded to Hamburg, where he resided several years, and then returned to Berlin, which, after a short residence, he again quitted for St. Petersburg. In that city he died of apoplexy, in the year 1804. The following anecdotes are related of this singular character. On his journey to Lyons, he once announced a concert at six francs a ticket, when, no company arriving, he resolved to be revenged on the avarice of the Lyonesse, and postponed the performance to the following evening, changing the price of the tickets to three francs. A crowded audience was the consequence; but at the moment the concert was about to commence, they were given to understand that Jarnowick had suddenly taken post-horses and quitted the town. Another time, being in the music shop of Bailleux, Jarnowick accidentally broke a pane of glass. "Those who break windows must pay for them," said Bailleux. "Right," replied the other; "how much is it?" "Thirty sous." "There's a three franc piece." "But I have no small change." "Never mind that," replied Jarnowick, "we are now quits," and immediately dashed his cane through a second square. He often quarrelled with the Chevalier de St. Georges, who was a good violinist, but more celebrated swordsman. One day, in the heat of their dispute, Jarnowick boxed the ears of St. Georges, who contented himself with coolly observing to a third party who was present, "*J'aime trop son talent pour me battre avec lui;*" I admire his talents too much to fight him.

JASPER. A composer of some sonatas for the piano-forte and violin, published at Mentz between the years 1794 and 1797.

JASSOU, JOA. AND. Author of a work entitled "*De Cantoribus Eccles. Vet. et Novi Testamenti,*" published at Helustadt in 1708.

JAST, F., a dramatic composer at Vienna, brought out several operettas and ballets in that city about the year 1790.

JAY, DR. JOHN, was sent to the continent in early life, after having received the first rudiments of a musical education under John Hindmarsh, who at that time was one of the first violin players of the age; and secondly, under Francis Phillips, whose great talents as a performer on several instruments, and as a composer, are well remembered. In the year 1800, Dr. Jay settled in London, and after the midsummer va-

cation, in the same year, was engaged by Mrs. Cannon, of Little Chelsea, as resident instructor in music of the young ladies at her seminary. In the year 1809, he received a bachelor's degree in music from the University of Oxford, and at the installation of his royal highness the Duke of Gloucester, he was honored with a doctor's degree from his royal highness's own hands. We should further observe, that Dr. Jay was an honorary member of the Royal Academy of Music, where his eldest daughter was a student, and a fine performer on the harp. She received a medal from the hands of Prince Leopold. Dr. Jay's second daughter was also a fine piano-forte performer.

List of Dr. Jay's principal works: "Air by Fontaine, with Introduction and Variations;" "Hungarian Duet for two Performers on the Piano-forte;" "*Di tanti palpiti,*" duet for two performers on the piano-forte; "Portuguese Air;" "Three Sonatas;" "Grand Overture," &c., &c.

JEEP, JOHANN, a composer in the early part of the seventeenth century, was born in the Duchy of Brunswick. He published "*Geistliche Psalmen und Kirchen Gesang D. M. Luthers und anderer frommen Christen mit 4 Stimmen dem Choral nach componirt durch,*" &c., Nuremberg, 1607; "*Studenten Gärteins, Erster Theil; lustiger Liedlein mit 3, 4, und 5 Stimmen, zu singen und zu spielen,*" Nuremberg, 1607, 1614, and 1617.

JELICII, VINCENTIUS, a countrapuntist of the seventeenth century, published at Strasburg the following three works: "*Parnassia militaria Concertuum 1, 2, 3, et 4 vocum,*" 1623; "*Ari- on Primus,*" 1628. This work contains twenty-one Latin motets for one, two, three, and four voices. And lastly, "*Arion Secundus,*" 1628, containing psalms for vespers, arranged for four voices.

JELIOTTE, PIERRE, a celebrated counter-tenor singer, born at Bearn. He performed at the Academy of Music in Paris, in 1752, and retired with a pension in 1755. He brought out at Versailles, on occasion of the marriage of the dauphin, father of Louis XVI., in 1745, a ballet entitled "*Zelisea,*" which had great success. La Borde states, that Jeliotte composed a great number of delightful songs. He died in a state of great poverty, subsequently to the year 1780.

JENKINS, JOHN, a native of Maidstone, in Kent, and born in the year 1592, was a celebrated composer of music for viols in the reigns of Charles I. and II. His compositions are chiefly fantasias in five and six parts, several of which have been greatly admired. He was also the author of many single songs, of which there are some specimens in Smith's "*Musica Antiqua,*" and he set to music some part of a poem, written by Edward Benlowes, and entitled "Theophila, or Love's Sacrifice." He also composed "Twelve Sonatas for two Viols and a Bass, with a Thorough Bass for the Organ," which were printed in London, about the year 1660, and reprinted at Amsterdam, in 1664. These were the first compositions of the kind that had been published in England.

John Jenkins was the author of the following Round, which has long outlived him.

A musical score consisting of three staves of music in 3/4 time. The lyrics are: "A boat, a boat, to cross the fer-ry, For we are go-lug to be mer-ry, To laugh, and quaff, and drink good sher-ry." The music is written in a simple, rhythmic style with notes and rests.

During the time of Cromwell, Jenkins left London, and passed his time with such families as were fond of music, who were glad to have him with them, and most of whom kept a chamber specially for him, called Jenkins's chamber. Most of his early and lively works are lost—those remaining were composed while he lived in country families. The following epitaph was written soon after his death.

"John Jenkins, though you've crossed the ferry,
We yet do sing your round, so merry,
We're glad we know you, Jenkins, very,
We're glad you were good-hearted, deary,
That you could take life's ill so cheery,
And die in peace, when old and weary."

He died in the year 1678, at the great age of eighty-six years, and has been spoken of by several musical writers in terms of great respect. Wood says of him, "that he was a little man with a great soul."

JENSEN, W. G. M., published at Konigsberg, in 1800, "15 Deutsche Lieder mit Begleitung des Klavier."

JEROME DE MORAVIE. A musical writer, about the year 1260. He resided during some time at Paris, at the Convent of *Saint Jacques*, where he wrote a treatise "*De Musica*."

JESTER, a native of Berlin, composed, about the year 1799, an operetta called "*Der Wunderigel*."

JEWIT, RANDOLPH. An English musician, and pupil of Orlando Gibbons. He was, at first, organist in Dublin, which city he quitted for England, in 1639, having obtained the situation of organist at Winchester, where he died.

JEW'S HARP, or TROMP DE BEARN. The form, size, and character of this insignificant instrument are well known. It is held between the teeth, which gives a sound by the motion of a spring of iron, which, being struck by the hand, plays against the breath. Contemptible as this little instrument may seem to those who are acquainted with superior instruments, it is the only one practised by the ingenious and simple inhabitants of St. Kilda, and forms the constant accompaniment to the performance of their lyric poetry. It would seem to take its name from the nation of the Jews, and it is vulgarly believed to be one of their instruments of music. But, upon inquiry, you will not find any such instrument as this described by the authors that treat of Jewish music. Except with the people of St. Kilda, it is a mere boy's plaything, and incapable, of itself, of being joined either with a voice or any other instrument; and we conceive the present orthography to be a corruption of the French *jeu trompe*, a trumpet to play with. And in the Belgic or Low Dutch, from whence come

many of our toys, a trumpet is a rattle for children. Sometimes they will call it a *jeus harp*; and another name given it is *jeus harp*, because the place where it is played upon is between the jaws.

JIG. A light, brisk movement, generally consisting of six quavers in a bar.

JINGLES. Those pieces of tin, or other metal, which are placed round a tambourine.

JOANELLI BERGANENSIS DEGARDINO, PETRUS, a contrapuntist of the sixteenth century, published at Venice, in 1568, "*Thesaurus Musicus*, for four, five, six, and eight voices."

JOANNES DAMASCENUS. A celebrated church composer in the first half of the eighth century. He died in 760. He resided chiefly at a convent in Jerusalem.

JOANNES, PADUANUS, published at Verona, in 1578, a work entitled "*Institutiones Musicæ*."

JOANNES, SALESBERIENSIS, a native of Salisbury, in England, in 1110, was a doctor of divinity of the University of Paris, and appointed Bishop of Chartres, in France, in 1176, where he died in 1182. He wrote a work entitled "*Polycraticum*," the first book and sixth chapter of which treats "*de musica et instrumentis, et modis, et fructu eorum*."

JOCULATOR. One of the appellations formerly given to a *jongleur*.

JOECHER, CHRISTIAN GOTTLIEB. Professor of history at Leipsic. He published, for his degree in medicine, a treatise "*De Viribus Musicæ in Corpore humano*." He also compiled the principal part of the "*Allgemeines Gelehrten Lexikon*," Leipsic, 1750 and 1751, 4 vols.

JOHNSON, HENRY PHILIP, chapel-master and chamber musician to the King of Sweden, at Stockholm, composed for the theatre of that city the operas of "*Egle*," 1774, and "*Neptun und Amphitrite*," 1775. He wrote also a work on the organ, &c.

JOHNSON, ROBERT, an ecclesiastic and a learned musician, was one of the first of the English church composers who disposed their parts with intelligence and design. In writing upon a plain song, (moving in slow notes of equal length,) which was so much practised in these times, he discovers considerable art and ingenuity, as also in the manner of treating subjects of fugue and imitation.

JOLLY. An English composer of glee. Two of his compositions were much admired at the British concerts.

JOLY. A French musician, published, at Paris, in 1786, "*Six Duos pour Violon*."

JOMELLI, NICOLO. Born at Aversa, near Naples, in 1714. His taste for music manifested itself at a very early age, and he first studied his art at Aversa, under the canon Muzillo. His parents then sent him to a Conservatory at Naples, to complete his musical education under Leo. But it was from Leo that he learned,

as he himself expressed it, the sublime of music. About the year 1736, Leo heard a cantata of Jomelli's performed at the house of his pupil, Signora Barbapiccola, and, transported with pleasure, he exclaimed, "*Signora, non passerà molto, e questo giovane sarà la stupore e l'ammirazione di tutta l'Europa.*" This prediction was shortly realized. Jomelli was only twenty-three years of age when he composed his first opera, "*L'Errore Amorofo*," which was performed in the new theatre at Naples. Vinci and Leo had alone, till this period, given, by their compositions, an idea of such melodious music. In 1738 he gave "*Odoardo*," at the Theatre Fiorentini in Naples. The delight and enthusiasm excited by these operas were unexampled. He was engaged at Rome in 1740, and it was here that he saw his growing reputation greatly increased by the approbation of the Romans. He composed, at Rome, "*Ricimero*" and "*Astianatte*," which operas were so esteemed by the public, that when their author talked of quitting Rome to proceed to the other cities of Italy, they would not allow him to depart, and it was with difficulty that he was enabled to proceed to Bologna, where he arrived in 1741, and gave "*Ezio*." Jomelli was desirous of possessing the friendship of the Padre Martini. A short time after his arrival in this city he visited that master, without making himself known to him, and begged to be admitted amongst the number of his pupils. Martini gave him the subject of a fugue, and seeing that he filled it up excellently, he said to him, "Who are you? you are joking with me; it is I who must learn of you." "I am Jomelli; I am the composer who is to write the opera for the theatre of this city; I implore your protection." The contrapuntist replied, "It is very fortunate the theatre possesses so philosophical a musician; out I compassionate your situation in the midst of a company of such ignorant corrupters of music." Jomelli afterwards avowed that he had learned much from this illustrious master. He added, that if the Padre Martini was deficient in genius, art had supplied him with that which was denied by nature. Jomelli remained at Bologna till 1746, when he returned to Rome, and composed "*Didone*," which had even greater success than "*Ricimero*." The Romans declared they had never heard more beautiful airs, accompaniments better adapted to the words, richer or purer harmony, or a more correct and elegant style, which was majestic without inflation, grand without inequality, and always full of sentiment and melody. These praises, which were in every mouth, and repeated by all the journalists of the day, reached Naples, and the countrymen of Jomelli signified their desire that he should return, and allow them, in their turn, the pleasure of applauding his works. He instantly acceded to their request, and composed his opera of "*Eumene*," which had prodigious success. Venice had not yet seen the new composer, whose fame was spread throughout Italy; and Jomelli felt that the suffrage of the Venetians was necessary to fill the measure of his reputation. He therefore, in compliance with their wishes, proceeded to Venice, where his opera of "*Merope*" caused such delight, that the government appointed him master of the Conservatory for Girls. Here he composed a "*Laudate*" for two choirs of eight voices, which excited the greatest admiration. In 1748

Jomelli returned to Naples, and gave "*Ezio*." Recalled to Rome in the following year, he composed "*Artaserse*," some *intermezzi*, and the oratorio of "*La Passione*," at the request of his patron, Cardinal York.

Jomelli had by this time obtained in Italy all the laurels she could bestow; in 1749, therefore, he repaired to Vienna, to display his genius in a court where Metastasio was the poet. Jomelli imagined that if he had pleased at Naples, whose school abounds in great masters, at Rome, where taste is so refined, and at Venice, where had existed the greatest abilities which can honor harmony, he should succeed in obtaining the same advantages at Vienna, and, above all, in meriting the friendship of Metastasio, and becoming his composer. He was not deceived. On his arriving in that capital, he gave "*Achille in Sciro*," which was equally well received by the court and the city. From this moment, the most sincere and lasting friendship was concluded between the greatest lyric poet and the greatest musician of Italy. Metastasio felt at once, that Jomelli was the composer best adapted to set his verses. After remaining nearly two years at the court of Vienna, which was rendered particularly brilliant by the presence of Maria Theresa, equally celebrated as a sovereign and for her love of the arts, and who presented Jomelli with a diamond ring, he returned to Rome, where, on the vacancy of the place of chapel-master of the church of St. Peter, he was elected to that office, and from the year 1750 until 1753 composed much sacred music for his choir. He, at the same time, composed the opera of "*Ifigenia*," in 1751, and "*Tulostris*" and "*Attilio Regolo*," in 1752. In 1753, he was engaged to furnish several courts with operas, in all ten in number; amongst which are distinguished "*Semiramide*," "*Bajazette*," "*Vulgeso*," and "*Demetrio*."

The reputation of this composer extended on every side; his abilities had never appeared so brilliant as on his third stay at Rome. He was now again engaged in Germany, and that country and Italy appear to have emulously disputed his compositions. The Duke of Wurtemberg, one of the greatest musical connoisseurs of his day, being anxious to possess, as chapel-master, him who had during two years enchanted Austria, made very liberal offers to Jomelli, who accepted them, and during the fifteen years that he resided at that court, he composed his finest operas. We have yet only spoken of his dramatic music. Gifted with a brilliant and varied imagination, and the most profound sensibility, he could not fail to delight equally in sacred music. He was naturally excited to attempt this style in Rome, where it is especially cultivated and rewarded, and where his public situation called for sacred composition. On his third residence in this city, he composed about thirty works, and, amongst others, a *hymn* for the feast of the apostles, which is still sung every year on the festivals of St. Peter and St. Paul; and these compositions, in which the touching is united to the sublime, and the pathetic tenderness of religion to its imposing majesty, were the essays of an inexhaustible mind, that now for the first time signalized its superiority in this style.

In 1763 Jomelli returned to his beloved native country, after a long absence, not foreseeing a disgrace which was destined to imberthe *root*

of his hitherto happy life, and which he had never before undergone. On his arrival at Naples, he composed "*Armida*," for the theatre of San Carlos, which was enthusiastically applauded. In 1770, he wrote "*Demofonte*;" this unfortunately gave less pleasure; and hoping to be more successful, he gave, in 1773, "*Ifigenia*," which was ill sung, and failed. Jomelli was so affected by this misfortune, that he had a paralytic stroke. Immediately on his recovery, he composed a beautiful cantata on the birthday of a prince of Naples. This was soon followed by his last and greatest work, the sublime "*Miserere*," for two voices; for which his friend, the poet Mattei, wrote Italian words, and which is sung wherever good music is known and cultivated.

Jomelli died at Naples in the year 1774. His obscurities were publicly celebrated by all the musicians of that city. A mass for two choirs was performed, expressly composed for the occasion by Sabbatini. The following classed list comprises the principal works for the church and theatre of this eminent musician. For the church: "A Dixit, 4 voc.;" "The Psalm, *In convertendo*, 2 voc.;" "I Responsori of Passion Week, 4 voc.;" "A Dixit, 8 voc.;" "A Miserere;" "A Confitebor, 3 voc.;" "A Laudate, 8 voc.;" "A Graduale, 4 voc.;" "The Hymn, *Urbs Jerusalem*, 4 voc.;" "A Beatus Vir, 4 voc.;" "A Miserere, 4 voc.;" "A Confitebor, 4 voc.;" "A Regnum mundi, 4 voc.;" "A Te Deum, 4 voc.;" "Veni sponsa Christi, à canto solo con ripieni, 4 voc.;" "Victime paschali, 4 voc.;" "Credidi propter quod, 4 voc.;" "Confirma hoc, Deus, Offertorio;" "Graduale, 3 voc., for the Festival of the Virgin Mary;" "Diserne equam ineam, Graduale, 4 voc.;" "Domine Deus in simplicitate, Offertorio;" "Justus ut palma florebit;" "Offertorio, with Hallelujah Chorus, 4 voc.;" "Betulia liberata, Oratorio;" "Oratorio della Passione;" "Lamentationes Jeremie;" "Benedictus Dominus Deus Israel;" "Missa;" "Motetto à 4 voci per la domenica della Palma;" "Sequentia Paschalis;" "Qui tollis;" "Il Salmo 50 à 2 voci, con Stroni;" "Sospiri penitenti à 2 Soprani e piu Stromenti, composto poco inanzi la sua morte;" "Miserere à 4 voci;" "Confirma à 4 voci;" "Requiem;" another "Miserere;" "Magnificat;" "Miserere, o Salmo 50 di Davidde;" "Offertorio, *In partitara et parti separ*;" "Veni Sancte Spiritus, 4 voc." For the theatre: "L'Errore Amorosso," 1737; "Oloardo," 1738; "Recimero, 1740; "Astianatte," 1740; "Ezio," 1741; "La Didone," 1746; "Eumene," 1746; "Artaserso," 1749; "Achille in Sciro," 1749; "Didone," 1749; "Ifigenia," 1751; "Talestri," 1752; "Attilio Rejolo," 1752; "Semi-amide," 1753; "Bajazette," 1753; "Vologeso," 1753; "Demetrio," 1753; "Pelope;" "Enea nel Lazio;" "Il Repastore;" "Alessandro nell' Indie;" "Nitteti;" "La Clemenza di Tito;" "Demofonte," 1772; "L'Olimpiade;" "Il Fittante;" "L'Isola disabitata;" "Endimione;" "L'Asile di Amore;" "La Pastorella illustre;" "La Schiava liberata;" "Il Cacciatore deluso;" "Il Matrimonio per emcorso," and "Armida," 1768.

JONAS, CARL, a celebrated composer and pianist, born probably at Berlin in 1770, was so fortunate as to be patronized in his youth by the Princess Amelia of Prussia, who procured him instructions on the piano and in composition from the celebrated Fasch. After the death of his patroness, the King of Prussia interested himself for

young Jonas, and sent him to the University of Halle, from which town, in 1793, he published his Op. 1, entitled "*Ariette pour le P. F., avec quinze Variat. comp. et dédiée à S. M. le R. de Prusse, par Ch. Jonas*," which composition was highly spoken of by the German critics.

JONES, EDWARD, published, about the year 1785, a work entitled "Musical and Poetical Relics of the Welsh Bards, preserved by Tradition and authentic Manuscripts, never before published." (See Monthly Review, January, 1786.) A second volume of this work appeared in 1789, and an improved edition of the second volume in 1802, under the title, "The Bardic Museum of primitive British Literature, and other admirable Rarities; forming the second Volume of the Musical, Poetical, and Historical Relics of the Welsh Bards and Druids, drawn from authentic Documents of remote Antiquity."

JONES, ROBERT, seems to have been a voluminous composer. Two of the works published by him are, "A Musical Dreame, or the Fourth Book of Ayres; the first part for the Lute, two Voices, and the Viol da Gamba; the second part is for the Lute, the Viol, and four Voices to sing; the third part is for one Voice alone to the Lute, the Basse Viol, or to both if you please, whereof two are Italian Ayres," printed in 1609; and "The Muses Gardin for Delights, or the Fifth Book of Ayres only for the Lute, the Basse Viol, and the Voice." Two songs by this composer, "My love bound me with a kiss," and "Farewell, dear love," are to be found in Smith's *Musica Antiqua*.

JONES, REV. W., of Nayland, in Suffolk, an English musical amateur, who published, about the year 1784, "A Treatise on the Art of Music, as a Course of Lectures, preparatory to the Practice of Thorough Bass and Musical Composition." (See Monthly Review for 1786.) It was considered a work of some authority.

JONGLEURS. A general name assigned to those itinerant musicians, who, during the twelfth and thirteenth centuries, wandered from province to province in France, singing and performing on the viol, flute, and other instruments, at the courts of kings, princes, &c., who rewarded them with clothes, horses, arms, and money. One of the earliest employments of the *jongleurs* was to attend and perform for those troubadours or bards, who, for want of voice or musical knowledge, were unable to sing their own works.

JORTIN, DR. JOHN, vicar of Kensington, was born in London in 1698. He published "A Letter concerning the Music of the Ancients." He died in 1770.

JOSEPH, GEORG, a musician in the service of the Bishop of Breslau in 1690, published some sacred compositions in that city.

JOSQUIN DES PRES, or DEPRES, is enumerated by Guicciardini among the musicians of the Flemish school. He may justly be called the father of modern harmony, and the inventor of almost every ingenious contexture of its component parts, nearly a hundred years before the time of Palestrina, Orlando di Lasso, Tallis, or Bird, the great musical luminaries of the sixteenth century, whose names and works are still held in the highest reverence by all true judges of the genuine style of choral compositions. Adami, in his historical list of the singers in the pope's chap

el, mentions Josquin as one of the greatest cultivators and supporters of church music. He calls him *homo insignis per l' inventione*. After quitting Italy, he was appointed chapel-master to Louis XII. of France, who reigned from 1498 to 1515, and it is scarcely probable that such an honor should have been conferred upon him till he had attained great eminence in his profession. He must have acquired the public favor, either by his works or performance, before he could be noticed by a sovereign; and it has been well observed, that it is as difficult for a prince to get a man of merit, as it is for a man of merit to approach a prince. It appears that Josquin was an ecclesiastic; for it is related that when he was first admitted into the service of Louis, he had been promised a benefice by his majesty; but this excellent prince, contrary to his usual custom, (for he was in general both just and liberal,) forgot the promise he had made to his *maestro di capella*; when Josquin, after suffering great inconvenience from the shortness of the king's memory, ventured, by a singular expedient, to remind him publicly of his promise, without giving offence; for being commanded to compose a motet for the Chapel Royal, he chose part of the 119th psalm, "*Memor esto verbi tui servo tuo*;" "O, think of thy servant as concerning thy word;" which he set in so exquisite and supplicating a manner, that it was universally admired, particularly by the king, who was not only charmed with the music, but felt the force of the words so effectually, that he soon after granted his petition by conferring on him the promised preferment; for which act of justice and munificence, Josquin, with equal felicity, composed, as a hymn of gratitude, another part of the same psalm, "*Bonitatem feristi cum servo tuo, Domine*;" "O Lord, thou hast dealt graciously with thy servant."

Josquin seems to have possessed a certain vein of wit and humor, in addition to a musical genius, of which Glareanus has given his readers several instances, besides those just related.

In consequence of the procrustianism of the performance of Louis XII.'s promise relative to the benefice, Josquin applied to a nobleman in high favor at court, to use his interest in his behalf; who, encouraging his hopes with protestations of zeal for his service, constantly ended with saying, "I shall take care of this business: *let me alone*;" *laissez faire moi*, (*laissez moi faire*;) when at length Josquin, tired of this vain and fruitless assurance, turned it into *solmization*, and composed an entire mass on these syllables of the hexachords, *la, sol, fa, re, mi*; which mass is among Josquin's productions in the British Museum, and is an admirable composition.

The following circumstance, which likewise happened during Josquin's residence at the court of France, has been recorded both by Glareanus and Mersennus. These writers inform us, that Louis, though music afforded him great pleasure, had so weak and inflexible a voice, that he never was able to sing a tune, and defied his *maestro di capella* to compose a piece of music in which it was possible for him to bear a part. However, the musician accepted the challenge, and composed a canon for two voices, to which he added two other parts, one of which had nothing more to do than to sustain a single sound, and the other only the key note and its fifth, to be sung alternately. Josquin gave his majesty the choice

of these two parts, and, beginning with the *long* note, after some practice his royal scholar was enabled to continue it, as a *drone* to the canon, in spite of nature, who had never intended him for a singer.

Among musicians, Josquin was the giant of his age, and seems to have acquired a universal dominion over the affections and passions of the musical world. Indeed, his compositions were as well known and as much practised throughout Europe, at the beginning of the sixteenth century, as Handel's were in England. In the music book of Prince Henry, afterwards Henry VIII., which is preserved in the Pepys collection at Cambridge, there are several of his compositions; and we are told that Anne Boleyn, during her residence in France, had collected and learned a great number of them. In a very beautiful manuscript in the British Museum, consisting of French songs of the fifteenth century, in three and four parts, there are likewise many of Josquin's compositions. It is, perhaps, sufficient to observe, without enumerating the mere names of this great musician's professional contemporaries, either on the continent or in England, that they were every way inferior to him in talent, and that Josquin's fame has chiefly been acquired by his masses, and still more excellent motets; a large collection of which, perhaps the most valuable now extant, is preserved in the British Museum.

JOST, a musician at Vienna, composed, about the year 1780, two operettas called the "Stealer of Apples," and the "Barber of Benzing," together with several ballets.

JOUBERT, organist of the cathedral at Nantes in 1788, brought out in 1776, at the *Concert Spirituel* in Paris, a French oratorio of his composition, entitled "*La Ruine de Jerusalem, ou le Triomphe du Christianisme*." He likewise composed for the theatre of Nantes, in 1778, the opera called "*La Force de l'Habitude*."

JOUBERT, a violinist, and one of the best pupils of Lulli flourished at Paris about the year 1690.

JOUSSE, J., a musician resident in London, born in France about 1760, published an introduction to the art of *solfaing* and *singing*, which was considered a useful work. He translated the principles of accompaniment, or thorough bass, of Albrechtsberger, and also published "Harmonic Cards," to teach the chords, and "*Areana Musicæ*," being a selection of curious and interesting musical problems.

JOVANELLI. See GIOVANELLI.

JOZZI, GIUSEPPE, an Italian soprano, was in London in 1746, and performed in Gluck's opera *La Caduta dei Giganti*. He had little powers of voice, and is more remembered for his impudence in foisting on the London public eight sonatas of Alberti as his own compositions. He even went so far as to have them engraved with his name, and sold at the price of one guinea. Very shortly afterwards, an English gentleman brought these sonatas with him from Italy in the handwriting of Alberti, and gave them over to Walsh, the publisher, who printed them in a six shilling book. Jozzi soon after this quitted Eng-

land, and settled as a singing master at Amsterdam, where he again published eight sonatas, which were most probably the above mentioned of Alberti.

JUBAL, a descendant of Cain, and a son of Lamech, played on musical instruments before the deluge, and taught others to play on the harp and organ. He is called the father of such as handle the harp (kinnor) and organ. This is the earliest mention made of musical instruments in the Bible.

JUBE. The name of a kind of hymn sung by the Greeks, and after them by the Romans, at harvest time, in honor of Ceres and Bacchus, to propitiate the favor of those deities.

JUBILEE. According to Masius and other ancient writers, this word is derived from Jubal, the supposed inventor of musical instruments; whence, say they, the words *jobel*, and *jubilee*, signified, with the Hebrews, the year of deliverance and remission, because proclaimed with the sound of one of those instruments, which originally consisted only of the horn of a ram. The Christians, in imitation of the Jews, have likewise established *jubilees*. They commenced in the time of Pope Boniface VIII., in the year 1300, of which festivals the performance of sacred music forms a considerable part.

JUDELIVS, JOANNES, a German musician, published at Erfurt, in 1625, a work called "*Euconium Gamico-harmonicum*."

JUDICE, CÆSAR DE. A composer of madrigals and motets, published at Messina and Palermo, between the years 1623 and 1666. He was a native of Sicily.

JULIEN, N., published at Paris in 1780, under the name of *Julien Painé*, a collection of comic opera songs for two violoncellos.

JULIEN, PAUL, was born in France, at the town of Crest, in the department of La Drome, in the year 1811. His grandfather was a poor shepherd residing near the little village of Lamothe but having a talent for mechanical invention, he removed to the manufacturing town of Vienna, where he became first a workman in a cloth factory, and afterwards the master of a small establishment of his own. The father of Paul was bred to the same business, and followed it for several years in the capacity of journeyman. Prevented from enjoying educational advantages by the narrow circumstances of his father, he was accustomed to say, that if it should please Providence to bestow a child upon him, and that child should possess a spark of genius, "he would make a man of him." In due time Providence did so please — the child manifested superior talent, and the father has striven to keep his word.

At the age of five years, the boy began to display the usual signs of a quick ear for music. The father, who was a tolerable player upon the clarinet and violin, belonged to an amateur band, and frequently took his little son with him to rehearsal. There the boy was observed to beat time, and to show a remarkable understanding and enjoyment of the music. He sang ballads in a pleasing manner, and in a very short time

acquired much skill in playing upon a little hunting horn, which his father had given him as a toy. He took delight in collecting the children of the neighborhood, and making them march to lively airs which he, at the head of the troop, played upon his horn. His father laid these things to heart, and conceived the idea of giving the boy regular lessons upon the violin, the clarinet being, as yet, beyond the little fellow's strength. But how to procure an instrument suited to the short arm and tiny fingers of the child? There was none such in the town, nor could M. Julien's purse have afforded the money to buy it, if there had been. In this exigency, the father had recourse to an old fiddler of the neighborhood, of whom he borrowed an instrument of the usual size, which, by ingenious alterations, he managed so to reduce that his son could use it. This difficulty overcome, the lessons were begun, and all the leisure moments of day and evening were zealously spent upon them. The child was all eagerness to learn, the father as eager to teach, and the boy's progress was, consequently, rapid beyond belief. The incessant practising, however, was by no means agreeable to the neighbors; and little Paul was once excessively frightened when one of them threatened to break his violin over his head — not that he feared for his head, but for his instrument, which seemed literally to be dearer to him than life. At length, the owner of the violin came to claim his property. When he saw the liberties which the enthusiastic father had taken with it, he was disposed to be very indignant; but M. Julien, with genuine French adroitness, summoned the boy, and told him to play Weber's beautiful "Dream," which he executed with such unexpected and extraordinary expression, precision, and spirit, that the old man's anger was changed at once into affectionate admiration. At this time Paul was in his sixth year.

M. Julien now became anxious to procure for his son better instruction than he could impart himself. For this purpose, against the vehement remonstrances of his friends, he took the boy to Marseilles, confident that he should find some professor willing to assist, without charge, the development of so promising a genius. Disappointment followed his repeated applications; he was unable to procure employment, and he soon found himself, in that populous city, without friends, and without a sou in his purse. Agonized to see his little son shivering with cold and pinched with hunger, he went, as a last resort, to the proprietor of a large *café* near by, and obtained permission to bring the boy in the evening to play to the company. The anxious father ran back to his lodgings, and spent the rest of the day in hearing Paul rehearse, over and over again, the pieces he was to perform at the *café*. In the evening they found a large company assembled, and among the rest several musicians of eminence. The young artist took his position, and began to play. Every eye was fixed upon his pale, engaging countenance, and every ear was soon astonished and charmed at the power, correctness, and sweetness of his playing. At the conclusion of the piece he was overwhelmed with applause. The musicians gathered round, and congratulated both father and son with the enthusiasm which is so natural to Frenchmen and

artists. Late in the evening the father and son returned to their humble residence with their pockets and their hearts overflowing.

Paul now found instructors, and occasional opportunities for the display of his talents in public. He played at grand concerts in many of the large towns in the south of France, and always with marked success. But his father, determined to give him every possible advantage for improvement, was not satisfied till he had procured him admission to the *Conservatoire National* at Paris. He remained a member of that unequalled establishment for some years, during which the father maintained an arduous struggle with circumstances in procuring the means of subsistence; until, in July, 1850, the boy gained the first prize against seventeen competitors. He had then attained the age of nine years and a half, and the instrument upon which he had played at the final examination was one of the commonest quality, having cost but twelve francs. Paul now appeared frequently at concerts in Paris and London, where his playing excited unbounded astonishment and applause. "We were sitting," wrote a noted musical critic of Paris, "beside some artists who play the same instrument, and who play it with distinction. In their astonishment, in their stupor, in their gestures, in their every attitude, we read but this one sentence: '*There remains for us only to break our violins.*'"

The career of Paul Julien in this country is sufficiently well known. They who have heard him perform at the concerts of Madame Sontag will agree with us that he is the most remarkable of the juvenile wonders that has visited our shores. His playing is not merely wonderful as a display of juvenile talent, but possesses an *intrinsic merit*. If a man were to play as he does, it would make his reputation as an accomplished violinist. Paul Julien's devotion to his art and his instrument is as ardent to-day as it was when he received his early lessons in his father's cottage at Crest. He practises daily from four to seven hours, and his improvement, from month to month, is distinctly observable.

JULIEN, PIERRE, a musician of the sixteenth century, born at Carpentras, in France, published, in 1750, "*Le vrai Chemin pour apprendre à chanter toute Sorte de Musique.*"

JULIEN, G., an organist at Chartres, in France, towards the end of the seventeenth century, published in Paris a book of organ music.

JULLIEN, M. There are few men in the musical world who have been more constantly before the English public the past fifteen years, in the several capacities of composer, *impresario*, and *directeur*, than M. Jullien. While the works of writers of loftier pretensions and more sounding names are permitted to fall into comparative neglect, those of M. Jullien have grown familiar to the popular ear, and become what we may not inconsistently term "household sounds."

His father, Antonio Jullien, was band master of the *Cent Suisses* in the revolution of 1789, and his regiment being massacred at the Louvre, he emigrated to Rome, where, attaching himself to the body guard of the pope, he formed an alliance with an Italian lady of some distinction. Some

time after the union the twain determined on re-visiting France, and while on the journey, in the French Alps, on the 23d of April, 1812, at a *chalet*, near Sisteron, Jullien was born. The intervention of circumstances altered the original intention of proceeding to France, and the little family remained at Sisteron amid the wild solitudes of the Alps. Here Antonio taught singing, and his little son, with an intuitive genius for music, it is said, learned the various solfeggios from casually overhearing them several times, so as to be able to repeat them with astonishing precision and fluency. His father, surprised and delighted at this wonderful power of acquirement, cultivated his infant voice, taught him a number of pleasing French and Italian songs, and gave concerts in the most important towns of the south of France, where the child was regarded, in all the fondness of public enthusiasm, as *le petit phenomene*.

At the age of five, doubtless from the too premature exercise of a delicate organ, he lost his voice, and returning to his mountain home he devoted himself arduously to the study of the violin, on which instrument he displayed so much skill as to induce his father to project a series of concerts in the principal Italian cities, where he met with universal favor. On one occasion, after performing the difficult variations of Rode at the *Teatro Reale* at Turin, he was lifted from the stage into the queen's box by command, to receive the regal marks of gratification and delight. This incident brought him into great favor with the court, and for a whole season he was the caressed of the Sardinian noblesse.

While sojourning for professional purposes at Marseilles, his father met the Admiral de Rigny, then commander of the squadron of the Levant, who induced him to abandon his musical pursuits, and enter the service. This strange mutation in their affairs of life led to father and son remaining in the French navy for three years, both being present at the battle of Navarino, in 1827. Returning to France at the end of this time, young Jullien, inspired with a feeling of heroism, enlisted as a soldier, and for six months bore the drudgery of a musket in the 5th regiment of infantry. But this dull routine of stringent discipline was ill adapted to the temper and restless genius of our hero. His regiment being ordered to Briancon on the Piedmontese frontier, he deserted for the purpose of visiting his mother, then living at Turin, whom he had not seen for several years. Returning to the quarters at night in a deep snow, he scaled the walls of the ramparts, and seeking the colonel in command, sued for clemency at his hands. The officer, who, it seems, was a benevolent man, heard his story, and, touched by the filial love of the young soldier, immediately interceded, and thus saved him from the fate of ignominy and death. His father shortly after this occurrence purchased his discharge, and with the secret love of the musical art burning in his soul, he set out on foot, and walked to Paris, determined, if possible, to enter the *Conservatoire*. A firm will and indomitable energy overcame every obstacle, and in less than six months after his arrival he was entered as an *élève* in that institution, under the illustrious Cherubini, who particularly directed the attention of his *protégé* to the study of sacred music. The tuition of such a master was calculated to

rouse all the natural genius of the aspiring youth, and his proficiency attracted general attention. He was also fortunate enough at this time to enjoy the friendship of Rossini, who benefited him by various acts of professional kindness, and indeed gave him a course of lessons in counterpoint. The reverence and dignity that Cherubini associated with his art is well known; and it is said that M. Jullien's first publication of a *vaudeville* cost him the interest and friendship of that distinguished master.

On retiring from the *Conservatoire*, M. Jullien received the important appointment of *directeur* of the concerts at the *Champs Elysées*, and the balls of the *Académie Royale*. In this position he was brought prominently before the public of the French capital, and a well-earned popularity induced him to lease the hotel of the Duke of Padua, which he converted into a grand *salle* for balls and concerts that long were the rage of Paris. So successful was his initial introduction of the Italian *Casino* into France, that several managers of the leading theatres formed a clique to subvert the efforts of the devoted *entrepreneur*, the end of which was, that the year 1839 drove him to England. He commenced his excellent promenade concerts at Drury Lane Theatre at the same period, and from that time to the present his brilliant festivals have created, not only in London, but throughout the United Kingdom, the most enthusiastic feelings of interest among all classes. With a laudable desire to establish, in London, an English opera, M. Jullien organized in 1817 a *troupe* of *artistes* of celebrity, and produced a series of works in a style of splendor unprecedented in the annals of the English lyric stage. But this effort, like many others of a similar nature, was ill requited; and at the end of the season the manager found himself loser of an enormous sum, the results of at least ten years of active professional labor.

It was during this time that M. Jullien introduced to the English public in opera Mr. Sims Reeves, whose fine tenor voice had attracted his attention in Italy. M. Jullien has distinguished himself as quite a musical *ecceur*, having from time to time brought forward Persiani, Dorus Gras, Anna Thillon, and Jetty Treffz. To his taste and enterprise the lovers of music are also indebted for the pleasure they have experienced in hearing Pischeck, Vivier, König, Bottesini, Gioffi, Wuille, and the brothers Mollinshauer; all of whom have appeared in England under his management. At various periods the names of Vienxteups, Ernst, Sivori, Sainton, and *artistes* of similar position, have likewise graced his programmes.

M. Jullien's most ambitious work was the opera "*Pietro Il Grande*," produced in 1853, at Covent Garden, in which Tauberlik so distinguished himself. Its introduction was characterized by a magnificence and splendor of *ensemble* rarely witnessed even at the first opera house of the metropolis.

To enumerate his smaller works — his "waiflets and estrays" of music — would be like counting the leaves of the forest. They have been taken into custody by the world, and not to find a *bona fide* "Jullien" in any civilized country would indeed be a species of musical marvel.

It was a saying of Goethe, that we should do our utmost to encourage the beautiful, for the useful encouraged itself. This sentiment M. Jullien seems to have incorporated in his professional policy, never losing sight, amid the vivacity of his *ad captandum* levities, of the sterling and beautiful compositions of the great masters. In this respect he may be said to have educated the public at large, familiarizing, by degrees, the general ear with a class of music that formerly was confined to the sympathies and appreciation of the select few. This popularization of the works of such authors as Beethoven, Mozart, and Mendelssohn is an achievement in itself worthy of conferring honor on M. Jullien, who undeniably has had the public taste to a considerable extent under his direction. He has been in a position to appeal to the ears of thousands of the masses, and a glance at his programmes from year to year will serve to show how admirably he has sustained that position.

JUMILHAC, LE PERE DE, a Benedictine monk, published in Paris, in 1673, "*La Science et la Pratique du Plainchant*."

JUNGE, JOACHIM, a doctor of philosophy at Hainburg, died in 1657. Among his published works is one entitled "*Harmonica Theoretica*."

JUNGHAUTZ, J. A., organist at Arnstadt, was born in 1745. He was known in Germany by some good compositions for the harpsichord.

JUNIUS, ADRIANUS, a doctor in medicine, born in Holland in 1512, published a work, one of the chapters of which treats of "*Musica Instrumenta eoque spectantia*."

JUNKER, KARL LUDWIG, a celebrated amateur musician in the north of Germany, died in 1797. He published many works on music between the years 1776 and 1786. Two concertos for the harpsichord, and some other small works for the same instrument, composed by Junker, have also been published.

JUSDORF, J. C., a flutist at Göttingen, has published several operas of music for his instrument, at Offenbach, since the year 1799.

JUST, J. A., a musician at the Hague, born about the year 1750, was a pupil of Kernberger. He was considered one of the best performers of his time on the harpsichord. He published at Amsterdam, the Hague, and Berlin, much music for his instrument; besides which he composed the music of the operas, "*Le Marchand de Smyrne*," and "*Le Page*;" also "A Cautata for Whitsuntide, for fifteen Voices."

JUST. An epithet applied to all consonant intervals, and to those voices, strings and pipes, which give those intervals with truth and exactitude.

JUSTIN MARTYR was at first a philosopher of the sect of Plato. In the year 133 he embraced the Christian religion, and died a martyr during the persecutions of Antoninus, in 163, or, according to other historians, in 166. His works, which were published at Paris in 1636 and 1742, contain many excellent remarks on the church music used in his time.

JUSTINIANUS, LEONARDUS, a Venetian nobleman, lived about the year 1428. He was celebrated as a scholar, and also as a musical composer. He wrote a great number of amatory songs, which had such success, that, notwithstanding every effort of the clergy, all Italy was inundated with them. In reparation for his licentiousness, he subsequently wrote as great a

number of vocal pieces in honor of the holy virgin and saints.

JUSTINIAN, I., called "the Great," a Greek emperor in the sixth century, is celebrated for his body of laws. He was an excellent musician, and in the Greek church they still sing a troparius or hymn on the divinity of Jesus Christ of his composition. He died in 565.

K.

KAA, FRANZ IGN. Chapel-master at the cathedral of Cologne, in 1783. He published at the Hague six operas of instrumental music.

KAEBERLE. A celebrated performer on the hautboy, at Beuthen on the Oder, about the year 1740. He composed some music for his instrument.

KAEMPFER, JOSEPH, a celebrated performer on the double bass, resided in London for some years, after 1783. He was by birth an Hungarian, and originally an officer of the Austrian army. Being in garrison in Croatia, with little to do, the idea first struck him to render himself celebrated as a musician. With this intent, he chose the double bass, conceiving that on that instrument he would have fewer rivals than on any other. Without any master, his genius and taste were his only guides. After a certain time, conceiving that he had attained sufficient power to be heard in public, he went to Vienna, where he was received shortly afterwards in the chapel of Prince Esterhazy, then under the conduct of the immortal Haydn. By perseverance in practice, Kaempfer could at length execute on his double bass, (which he used to call his *Goliath*) not only the most difficult violin passages, but also used the upper tones of his instrument with such delicacy that they resembled those of the harmonica. In the year 1776, being desirous of travelling through Germany, and finding the size of his double bass very inconvenient, Kaempfer had one constructed, which, by means of twenty-six screws, he could take to pieces or put together with facility. He extended his travels on the continent as far as St. Petersburg, from whence he sailed for England. He was considered there as a fine solo player, and was constantly engaged at the principal concerts.

KAESERMANN, NICOLAS, a professor of music at Berne, published at Augsburg, in 1797, "*Trois Sonat. pour le Clav. avec F.*," Op. 1. He afterwards published at Berne, in 1804, "*Gellert's geistl. Oden und Lieder, mit ganz neuen Melodien fur 3 bis 4 Singstim men, nebst einer Klavierparthie und Generalbasse.*"

KAESTNER, ABRAHAM GOTTHELF, doctor of philosophy, was born at Leipzig in 1719. He translated from the English language a treatise on ancient and modern music, with their application to the cure of disease, written by Dr. Brocklesby. Kaestner died in the year 1800.

KAFFKA, JOSEPH, a celebrated violinist, born in Bohemia, had been, in the year 1788, during forty-five years, in the service of the Prince of Tour and Taxis, at Regensburg.

KAFFKA, WILHELM, eldest son of the preceding, was an excellent violinist, in the service of the same prince as his father. He has also composed some masses, and music for his instrument.

KAFFKA, JOHANN CHRISTIAN, second son of Joseph Kaffka, was born at Regensburg in 1759, and studied music under the celebrated Riepel. He was first in the service of his prince as violinist, and in 1778 made his *début* as a singer at the theatre at Breslau, from whence he proceeded to St. Petersburg, and lastly performed, in 1802, at the court theatre at Dessau. He has composed much vocal and instrumental music, both sacred and profane.

KAIL, GOTTHARD WILHELM, was, in 1796, a student of music at Halle, and published, at Leipzig, in that year, "*6 Kleine Sonaten fürs Klavier.*" He died in 1824, with the reputation of a distinguished organist.

KAISER, PATER JISTRID, a monk in Suabia, about the year 1750, was celebrated as a church composer.

KAISER, P. L., a musician at Winterthur, in Switzerland, was born at Frankfort on the Maine, in 1736. In 1784 he made a second journey to Italy, having resided there previously during several years. He was considered an excellent performer on the harpsichord, and his compositions are in the style of Gluck, who, it is said, he chose for his model. He published several collections of German songs, also some music for his instrument, between the years 1775 and 1790.

KAISERLY KRIKUHR, an Armenian singer, published at Constantinople, in 1794, a work on Armeniau church music, also a second book of the same description, in 1803.

KALCHER, JOHANN NEPOMUK, court organist at Munich, was a celebrated performer and composer. Among his printed works are "*15 Lieder beyrn Klavier,*" Munich, 1800.

KALKBRENNER, CHRISTIAN. A Prussian Jew, born in 1755, at Munden, in Germany. He was a pupil of Emmanuel Bach, when he so distinguished himself as to be received at a very early age in the chapel of the Elector of Hesse Cassel. He soon afterwards quitted that town for Berlin, where, attached to the suite of Prince Henry, brother of Frederic the Great, he composed for the prince's theatre the following operas: "*La Veuve de Malabar,*" "*Democritus,*" and "*La Femme et le Secret.*" In 1796 he travelled to various parts of Germany and Italy, and finally settled at Paris, where he was appointed singing master to the Academy of Music. For this theatre he produced the opera of "*Olympie,*" but it was unsuccessful; and had written another opera, "*Cénone,*" which was just about to be performed, when he died, in 1806. Kalkbrenner published at Paris, in 1802, the first volume of a "*Histoire de la Musique.*" He had previously written several didactic works on music; he also published many pieces for the piano-forte. Kalkbrenner's history is considered high authority in

what relates to Hebrew and the ancient Greek music.

KALKBRENNER, FRIEDRICH, son of the preceding, was born at Cassel in 1784. He was considered as one of the best piano pupils of the celebrated Adam, and in composition was a pupil of Catel. In the year 1802 he gained two prizes at the Conservatory at Paris, the one for composition, and the other for his performance on the piano, which prizes were presented to him by Chaptal, the minister of the interior. Kalkbrenner's style of playing was peculiar, but his command of the piano was prodigious. He composed voluminously for his instrument, both in England (where he resided several years as a teacher) and in Paris and Vienna. Much of his music evinces a fine taste and rich fertility of invention. Among his more favorite piano-forte pieces, published in England, are, "*Essais sur différentes Caractères pour le Piano-forte.*" "*Taleo, ou la Chasse au Renard, Rondo.*" "*Sonata, for the left hand,*" (obligato.) "*Variations sur la Biondina in Gondolella.*" "*Operatic Airs, No. 1.*" "*La Solitude, Rondo.*" "*Polacca Rondo.*" "*Grand dramatic Sonata.*" "*Duo for the Piano-forte and Violin,*" Op. 49. "*Pastoral Rondo,*" Op. 29. "*Eleventh Fantasia, with We're a' noddin.*" "*Grand Concerto.*" "*Military Rondo,*" Op. 62. "*Rondo, with Bishop's Duet of Maid Marian,*" Op. 65. "*Twelfth Fantasia, with Auld lang syne,*" Op. 62. "*Grand Waltz, with Flute Accompaniment,*" Op. 63. "*Rondo Villageois,*" Op. 67. "*Gage d'Amitie, Grand Rondo,*" Op. 66. Vocal pieces: "*Three Songs,*" "*Tre Canzonette Italiane,*" and "*Hail, George the Fourth.*" These are almost the only vocal compositions of their author. The Italian canzonets are said to be simply elegant. One of the English songs, "*The knell of the brave,*" has a good dramatic effect, but much the most original of the three is "*Woman.*" Friedrich Kalkbrenner died at Paris, in 1849, of cholera, just as he had completed a new musical work, which had engaged him for some time previous.

KALENBACH, G. E. G., an organist at Magdeburg, published many vocal pieces at the above town and Halle, between the years 1787 and 1800.

KALIWODA, JOHANN WENZEL, a distinguished instrumental composer, was born at Prague in the year 1800. He entered the Conservatory there at the age of ten, and during six years received a complete musical education. At the age of sixteen he entered the orchestra of the Prague theatre as violinist, where he remained until his twenty-second year. Meanwhile his talent had been remarked by the Prince of Furstenburg, who made him his chapel-master, at his residence in Donaushingen, where he remained many years, devoting himself to the improvement of his orchestra, and to the composition of orchestral music. He is particularly distinguished for his symphonies, the first of which (Op. 7.) was produced at Leipsic in 1826 with great *clat*.

KAMBRA, R. A composer of vocal and instrumental music, resident in London, in the latter part of the last century. He published some original Chinese songs, with an accompaniment for the piano-forte, also some sonatas and other music for the piano-forte.

KAMMEL, ANTON, a violinist in the king's band, was born in Bohemia. He was a pupil of Tartini. He performed for some time at Prague, where he was especially celebrated for his adagio playing. From thence he proceeded to London, where he married a woman of some fortune. He died about the year 1788. His compositions consisted chiefly of violin music, and some masses.

KANNE, FRIEDRICH AUGUST, born in 1778, near Leipsic, was of the legal profession, but, since the year 1802, has made himself known as a composer. His works are chiefly vocal and dramatic. In 1807 he went to Vienna, where he produced two successful operas "*Orpheus,*" and "*Fernando and Miranda.*" In 1809 he was so highly esteemed in the musical profession as to be appointed *chef-d'orchestre* to the opera in Presburg, with a salary of fifteen hundred guilders. He died in 1833.

KANNENGIESSER, J. J. Chamber musician to the court of Prussia. He published some vocal and instrumental music at Berlin, between the years 1783 and 1800. He was considered the best music master of his time in Berlin.

KAPP, J. CARL, a Prussian organist, published, at Brunswick, nine works of piano-forte music, up to the year 1798. He was a pupil of Hassler and Weimar.

KAPSBERGER, JOHANN HIERONYMUS, a German of noble family, was well known, not only for the variety of his compositions, but also for his great skill and execution on almost all instruments, particularly on the theorbo lute, an instrument invented by a Neapolitan musician, whose name is not now known. Kapsberger rendered essential assistance to Kircher, in the compilation of his "*Musurgia.*" A mean jealousy of the reputation of Palestrina induced him, in conjunction with some others, to make several nefarious attempts to destroy the popularity of that great musician. The conspiracy failed, and the contrivers of it reaped for their trouble only odium and disgrace. Many of the compositions of Kapsberger are for the lute. He wrote some masses, litanies, motets, and other pieces for the church, and a considerable portion of vocal music for the theatre, and for public solemnities. He published, at Rome, a work entitled "*Coro Musicale in Nuptiis D. D. Thaddei Barberini et Anne Columne.*"

KARASEK, or KARASCHEK, a Bohemian violinist, died in 1789. He composed some instrumental music, among which are concertos for the bassoon and violoncello, and symphonies. On the latter named instrument he was an excellent performer.

KARELIN, SILA DEMENTIEWITSCH, by birth a Russian, was, in the year 1796, the director of the *musique de chasse* of some nobleman at St. Petersburg. He was considered the finest performer in Russia on the *cor de chasse*, and his instrument is said to have cost, at Moscow, eight hundred rubles.

KARR, HENRI, an excellent pianist, resident at Paris, was born at Deux-Ponts, in 1784. He has published some music for his instrument.

KARSTEN. A good tenor singer at the opera

at Stockholm, by birth a Swede. He was in London in the year 1792, and sang with much applause in various parties of the nobility.

KAUER, FERDINAND, a musician at Vienna, published there much dramatic and instrumental music, between the years 1794 and 1809. He is said to have been an excellent pianist.

KAUFMANN, CARL, an organist at Berlin, born there in 1766, was a pupil of Fasch in composition, and of Kohn on the violin. He published some instrumental music about the year 1790. His compositions are chiefly for the piano and organ, on which instruments he was an excellent performer. He died at Berlin, in 1808.

KAUFMANN, JOHANN. A violoncellist at Stuttgart, born in 1760.

KAUFMANN, MADAME, wife of the preceding, was a celebrated singer at Stuttgart, in the service of the court.

KAUTII, MADAME. An amateur composer of music for the piano-forte. A concerto of her composition was played by Hummel at a concert in Berlin, in 1792.

KAYSER, ELIZABETH. Not less celebrated for her beauty and fecundity than for her talents as a singer. At the age of fifteen, she sang with great success at the opera in Dresden. She afterwards was married to a tenor singer of the same theatre, and became the mother of twenty-three children, having, four times, twins. From Dresden she went to Stockholm, where her charms were still such as to captivate Frederic, King of Sweden, (from 1720 to 1751,) whose mistress she became, and by whom she had her twenty-fourth child. It was to Madame Kayser that the king owed the preservation of his life, in the fire at the Opera House in Stockholm. Already the machinery at the end of the stage was in flames, without the audience knowing of it, when Madame Kayser, observing the fire to spread, had sufficient presence of mind to approach the royal box without interrupting her singing and action. At first she made signs to the king, who did not understand her; she then, seizing a favorable moment, said to him in a low voice, "Leave the theatre, sire; it is on fire." The king instantly quitted the house; when, after giving him time to escape the crowd, she vociferated *fire!* and gaining her box, threw herself and royal son, who was then about four years old, out of a window, which not being very high from the ground, she escaped without injury.

KEEBLE, JOHN, organist of St. George's, Hanover Square, from 1759 to 1787, was a pupil of Dr. Pepusch. He published in 1784 a work entitled "The Theory of Harmonics."

KEENERS. The name of the Irish singing mourners. The Irish have always been remarkable for their funeral lamentations, and once were celebrated for their musical art, as exercised in their last sad offices to their departed friends. Formerly these duties were performed by dressing the body of the deceased in grave clothes, ornamenting it with flowers, and placing it on a bier; when, the relations and *keeners* ranging themselves in two divisions, one at the head and two at the

feet of the corpse, the chief bard of the head chorus, softly accompanied by the harp, sung the first stanza of the *Caoinan*, or funeral song; this being ended, the foot semichorus began the lamentation, or *Ullaloo*, in which they were answered by the head semichorus, and then both united in one general chorus. After this, the chief bard of the foot semichorus began the second *Gol*, or lamentation, in which he was answered by that of the head; and then, as before, both united in the general and full chorus. Thus, alternately, were the song and choruses solemnly performed during the night. But whatever merit or decorum there might formerly be in these vocal obsequies of the Irish, they have, at present, little to boast, either of melody, harmony, or dignity. The *keeners* now generally consist of a motley multitude of men, women, and children, and the *Caoinan* is degenerated into a wild and hideous howl.

KEEPER, JOHN, of Harthall, an English church composer, published, in 1574, "Select Psalms, in four parts."

KEIL, JOHANN B., a singer and organist, was born at Cobourg. He published several sonatas for the harpsichord, &c., at Nuremberg, about the year 1770, and left two oratorios in manuscript.

KEIFERERUS, CHRISTIANUS, a monk and church composer, published some sacred music at Augsburg and Ingolstadt, in the year 1612 and 1618.

KEISER, REINHARD, was born at Leipsic in 1673. His first master in counterpoint was his father; and early in life he was entered at the university of his native town, where he much distinguished himself in his general studies, whilst at the same time he greatly improved in the science of music by a close attention to the best productions of Italy. His first attempt at composition was the pastoral of "*Ismène*," which he wrote for the court at Wolfenbüttel just after he quitted the university; it was received with the greatest approbation. His second opera, "*Basilius*," proved not less successful. Shortly after this he went to Hamburg, where the opera was in great perfection, the celebrated Hasse being a tenor singer on that stage at the time. Here he reproduced his "*Basilius*" and "*Ismène*," both of which were received with enthusiasm. He also brought out the opera of "*Janus*," which was equally successful. Gifted with first-rate talents, Keiser now found himself obliged to oppose their whole force to misfortunes which threatened him. He had become director of the Opera House at Hamburg, and the speculation was just on the point of failing, when he saved the concern from ruin, by writing and bringing out no less than eight operas in one year. Every one of them succeeded, and their receipts released the theatre from all pecuniary difficulties. Soon after this time, Keiser married a woman of property, and commenced, in conjunction with the learned Mattheson, giving public concerts at Copenhagen, where he was honored with the nomination of chapel-master to the king. On his return to Hamburg, he brought out "*Circé*," the last and most beautiful of his operas. This was first performed in 1734, and was the one hundred and eighteenth

which this indefatigable artist had produced. Keiser is considered the father of German melody. Exclusive of his dramatic works, he composed divertimenti, serenate, and cantatas. Fancy and originality were the characteristics of all his productions. In fact, the vigor of a fertile imagination, corrected by study and experience, is discernible in all the effusions of the inexhaustible Keiser. He died in 1739. It is to be regretted that hardly any of Keiser's works are now to be procured, though a new edition of some few of them was talked of in Hamburg about the year 1810.

KEITH, ROBERT WILLIAM, was born in 1787, at Stepney. He is the eldest son of Cornelius Keith, organist of St. Peter's Church, Cornhill, and Danish Chapel, Wellclose Square. R. W. Keith received the early part of his musical education from his grandfather, William Keith, organist of Westham Church, Essex, after whose decease he was under several masters for the organ, piano-forte, and violin. His instructors on the latter instrument were Barthelemon and Dietenhoffer, under whom, to complete his musical education, he also studied harmony and composition. The theoretical works written by Keith are instruction books for the violin, German flute, and piano-forte; also a work entitled a "Musical Vade Mecum," in two volumes, 8vo., written in a catechetical form, which commences with the first principles of music, and gradually passes on through the whole of the science, including composition, &c.

KELLER, GODFREY, was a celebrated English master of the harpsichord, about the beginning of the eighteenth century. He published several sonatas, in five parts, for flutes, hautboys, &c.; also a work entitled "A complete Method for attaining to play a Thorough Bass upon either Organ, Harpsichord, or Theorbo Lute."

KELLER, CARL. A German composer of flute music at Vienna, born in 1774. Among his works are "Var. pour Flute, avec Acc. de Piano," Vienna; "Fantaisie, avec Acc. de Piano," Op. 6, Vienna; "Potpourri, avec Acc. de deux V., T., et B., &c." Op. 4; "Gr. Polonoise en Re avec Acc. d'Orch." Op. 13.

KELLER, H. M., a German organist, died in 1710. He wrote some music for his instrument.

KELLNER, DAVID, a musician at Hamburg, published there, in 1732, "Treulicher Unterricht im Generalbass," which, in 1796, had arrived at its eighth edition. It was considered an excellent manual of thorough bass.

KELLNER, JOHANN PETER, cantor and organist at Grafenrode, in Thuringia, was born there in 1705. He composed much, including fugues, preludes, suites, passions, and other forms of church music.

KELLNER, JOHANN CHRISTOPHE, son of the preceding, was an organist at Cassel, and born in 1735. He learned music of his father, and subsequently at Gotha, under the celebrated Benda. He had published, up to the year 1785, fifteen operas of harpsichord music, together with some pieces for the organ. He also wrote several passions and cantatas for the church, besides one opera, "Die Schadenfreude," which was printed in

1782. He also published, in 1788, a work on thorough bass. In 1795, he was residing at Mannheim, as court musician; from which time till 1800, many more of his works were published there, both vocal and instrumental.

KELLNER, ERNEST AUGUSTUS, was born at Windsor in 1792. His father was a native of Saxe-Weimar, and one of the private band of musicians in the service of her majesty, Queen Charlotte. At about two years of age he began to teach the piano-forte to his son; who, at five years old, played one of Handel's concertos on the organ, before the royal family at Windsor. Soon after this, young Kellner began to study singing under Sir W. Parsons, by command of his majesty. At eight years of age, he sang in public; and from that period until his voice changed, sang at the Ancient Concerts, oratorios, &c., &c., with Mara, Banti, Billington, and Grassini, with great success. When his voice broke, he went into the navy, and served as a midshipman for about three years, when he returned to London, and again commenced diligently to prosecute his musical studies. In April, 1815, he married, and the same year went to Italy, where he applied himself with great zeal to the art of singing, under the celebrated masters Porre, Nozarri, and Crescentini. After leaving Italy, where he received distinguished marks of favor from the royal families of Naples and Tuscany, he visited Switzerland and Germany; here he also had the honor of receiving flattering marks of approbation and favor from many of the courts, particularly Bavaria, Saxe-Weimar, Baden, &c. He returned to England in 1820. His compositions are chiefly manuscript, and consequently only known within the circle of his friends. He has, however, written some masses and offertories, which have been sung at the Bavarian Chapel.

KELLY, MICHAEL, a native of Dublin, was born in 1764. His father, Michael Kelly, was an eminent wine merchant in that city, and for several years master of the ceremonies at the Castle. At a very early period, Michael displayed a passion for music; and as his father was enabled to procure the best masters for him, before he had reached his eleventh year he could perform some of the most difficult sonatas then in fashion, on the piano-forte. Rauzzini, when engaged to sing at the Rotunda in Dublin, gave him some lessons in singing, and persuaded his father to send him to Naples, as the only place where his musical propensity would receive proper cultivation. At the age of sixteen, he was accordingly sent there, with strong recommendations from several persons of consequence in Ireland, to Sir William Hamilton, the then British minister at the court of Naples. Sir William took him under his fostering care, and he was placed in the conservatorio of La Madonna della Loretto, where, for some time, he received instruction from the celebrated composer Fenaroli. Sir William Hamilton also did Kelly the honor of introducing him to the King and Queen of Naples, who particularly noticed the young Irishman. Having had the good fortune to meet Aprile, the first singing master of his day, that great artist, being then under an engagement to go to Palermo, offered to take Kelly with him, and to give him gratuitous instruction while there. This proposal

was, of course, gratefully accepted, and he received Aprile's valuable tuition until the end of his engagement at the theatre. Aprile's kindness, however, did not terminate there, for he sent Kelly to Leghorn, with the strong recommendation of being his favorite pupil. From Leghorn, young Michael was engaged at the *Teatro Nuovo* at Florence, as first tenor singer. He then visited Venice, and several of the principal theatres in Italy, in which he performed with distinguished success. He was next engaged at the court of Vienna, where he was much noticed by the Emperor Joseph II. He had likewise the good fortune to be the most intimate friend of Mozart, and was one of the original performers in his "*Nozze di Figaro*," the part of Basilio having been written for him.

Having obtained a year's leave of absence from the emperor, for the purpose of visiting his father, (at the end of which time he was to go back to Vienna, where he was in such favor that he might have ended his days happily,) he returned to England by the same opportunity as Signora Storace. In April, 1787, Kelly made his first appearance in Drury Lane Theatre, in the character of Lionel, in the opera of "*Lionel and Clarissa*." Here he remained as first singer until he retired from the stage. He was also for several years musical director of that theatre. Kelly sang at the king's Ancient Concerts at Westminster Abbey, and at all the principal music meetings and theatres in Great Britain. He was, besides, for several years, principal tenor singer at the Italian Opera in the Haymarket, where he was stage manager.

The death of his dear and lamented friend, Stephen Storace, in the year 1797, first induced Kelly to become a composer, since which time he wrote and selected the following sixty pieces for the different theatres, by which it will appear that no English composer has ever contributed more largely to the public stock of amusement. It may be necessary to add that, in addition to the following list, Kelly has composed a great number of Italian and English songs, duets, trios, &c., &c., which retain their popularity: "*A Friend in Need*," 1797; "*Chimney Corner*," 1797; "*Castle Spectre*," 1797; "*Last of the Family*," 1797; "*Blue Beard*," 1798; "*Captive of Spielberg*," the comic music, the serious being by Dussek, 1798; "*Aurelio and Mirando*," 1798; "*Feudal Times*," 1799; "*Pizarro*," 1799; "*Of Age to-morrow*," 1800; "*De Montford*," 1800; "*Remorse*," 1801; "*Gypsy Prince*," 1801; "*Adelmorn*," 1801; "*Algomah*," 1802; "*House to be sold*," 1802; "*Urania*," 1802; "*Hero of the North*," 1803; "*Marriage Pronize*," 1803; "*Love laughs at Locksmiths*," 1804; "*Cinderella*," 1804; "*Counterfeits*," 1804; "*Deaf and Dumb*," 1804; "*Hunter of the Alps*," 1804; "*Land we live in*," 1804; "*Honeyuoon*," 1805; "*Youth, Love, and Folly*," 1805; "*Prior Chain*," 1805; "*Forty Thieves*," 1806; "*We fly by Night*," 1806; "*Royal Oak*," 1806; "*Adrian and Orilla*," 1806; "*Adelgitha*," 1807; "*Town and Country*," 1807; "*Time's a telltale*," 1807; "*Young Hussar*," 1807; "*Wood Demon*," 1807; "*Something to do*," 1808; "*Jew of Mogador*," 1808; "*Africans*," 1808; "*Venoni*," 1808; "*Foundling of the Forest*," 1809; "*Fall of the Taranto*," 1809; "*Britain's Jubilee*," 1809; "*Gustavus Vasa*," 1810; "*Humpo*," 1812; "*Ab-*

sent Apothecary," 1813; "*Polly*," 1813; "*Russian*," 1813; "*Nourjahad*," 1813; "*Peasant Boy*," 1814; "*Unknown Guest*," 1815; "*Bride of Abydos*," 1818; "*Abudah*," 1819; "*Grand Ballet*," 1819. Kelly died in 1825. He has left a most entertaining account of his own musical career, in a book published in London in 1814, in two vols. 8vo., called "*Musical Biography of Michael Kelly*."

KELWAY, THOMAS. There are few church composers of whose personal history so little is known, and yet whose works are in such constant use in English cathedrals, as those of Thomas Kelway, organist of Chichester in the early part of the last century. Of Kelway's early life nothing certain is known; he was probably a native of Chichester, and brought up in the choir of that cathedral. That he was a pupil of John Weldon, who also was born and bred in that ancient city, is rendered highly probable, not only by traditional evidence, but by the style of his compositions, which bear traces of a mind schooled under that sweet and elegant composer. Thomas Kelway succeeded John Reading as organist of Chichester Cathedral in 1726, and held the situation twenty-three years, till his death in 1749, which is supposed to have happened in the prime of life. He was succeeded in his office by John Capel. Kelway's grave stone, after having been lost sight of for nearly a century, was a few years since accidentally discovered; it was found to be broken and much defaced, but has quite lately been restored, and set up in the south aisle of the cathedral. The inscription is as follows: "In memory of Thomas Kelway, organist of this cathedral 23 years, who died May ye 21st, 1749. My hope is in my Saviour Jesus Christ." The inscription having become almost illegible, has just been recut, which gave occasion to the following pleasing sonnet, by Mr. Crocker, a well-known verger of the cathedral:—

"Kelway! thy memory, fresh as vernal day,
In many a heart's most secret, holiest cell,
Where love of sacred song delights to dwell,
Lives — and shall live while Music holds her sway.
Within these hallowed walls, where, day by day,
Year after year, he plied the wondrous art
Which bids the spirit from its prison start,
And soar a while to happier realms away,
His strains full oft still fall upon the ear
Of those who tread yon aisle: while at their feet
His name and record of his hope appear,
Peace to his ashes — be his slumbers sweet,
Till that glad morn when he shall wake to hear
Th' angelic choir in nightless Heaven's bright sphere."

Kelway's style of composition, though not perhaps the highest, is pleasing and original, and perfectly free from plagiarism. In the library of Chichester Cathedral is a MS. volume containing scores of nearly all his compositions, probably collected and arranged by himself. The following list of them may not be unacceptable:—

SERVICES.

1. A Morning and Evening Service, full, in F major; 2. A Morning Service in E♭ major; 3. A Morning Service in C; 4. An Evening Service in A major; 5. An Evening Service in A minor, printed in Dr. Marshall's volume of Services; 6. An Evening Service in B minor; printed in Dr. Rimbault's volume of Services, and also by Dr. Marshall; 7. An Evening Service in G minor, for Sir F. Ouseley's, Bart., volume of Services.

ANTHEMS.

1. O praise the Lord, all ye heathen. Full, 4 voices. 2. Not unto us, O Lord. Full. 3. Unto

Thee, O Lord. Full, with verse. Both these Anthems (Nos. 2 and 3) are printed in a volume of Anthems, edited by Sir W. H. Cope, Bart. 4. Sing we merrily. Full. 5. Sing unto God. 6. Thy way, O God. Verse. 7. The mighty God. Solo, bass, with chorus. 8. Blessed be the Lord God. Full. 9. Let the words of my mouth. Full, with verse.

KELWAY, JOSEPH, younger brother of Thomas, was a great musician and an excellent organ player. He was music master to the then royal family, and succeeded John Weldon as organist of St. Martins-in-the-Fields, in 1714. He was a pupil of Geminiani, and so superior was his style of playing, that Handel is said to have often gone to the church where he performed. Some harpsichord sonatas of his composition were published.

KELZ, MATTH., a German musician in the seventeenth century, published several sacred works, and wrote a treatise on composition, in the Latin language, between the years 1626 and 1669.

KEMP, DR. An English musician, of much talent as a theorist. He has also composed some very pleasing vocal music. Among his works are "Musical Illustrations of the Beauties of Shakspeare." Songs: "A lover's eyes will gaze," "Doubt thou the stars are fire," "Fair ladies masked," "Lady, by yonder blessed moon," "Love, love," "Lover's eyes," "O for my beads," "When I beheld thy blue eye." (Clementi's Cat.)

KENDAL, JOHN, an English organist, published, in 1730, some music for his instrument.

KENN, a performer on the horn, was engaged, in 1798, in the orchestra of the Grand Opera at Paris, where he also published some music for his instrument.

KENNIS, WILLIAM GOMMAR, director of the music at the Church of St. Peter, at Louvain, about the year 1768, was considered, in 1772, as the first of all violinists in the Austrian Netherlands, principally in the execution of difficulties. About that time he published nine works, at Paris and elsewhere, of which only the fourth and ninth are known in Germany; they are both duets.

KENT, JAMES, was a native of the city of Winchester, and born in 1700. At an early age he was admitted into the choir of that cathedral, under the superintendance and tuition of Mr. Vaughan Richardson, the organist. After having been some time in this situation, he became one of the children of the Chapel Royal. Here, under the care of Dr. Croft, he laid the foundation of his future excellence. He studiously observed the style, and happily caught the manner, of that justly celebrated composer. The first public situation which Kent obtained in his profession was that of organist of the chapel of Trinity College, Cambridge; and, lastly, in 1737, of the cathedral church of the chapel of the college at Winchester, in which city he continued to reside until the day of his death. Whilst he was the organist of Trinity Chapel, he conducted himself so much to the satisfaction, and was, in

other respects, in such high esteem with the members of that college, that, when he was promoted to his situation at Winchester, they presented him with an elegant piece of plate, in token of their great esteem and regard. As a composer of sacred music, Kent followed closely the style of Dr. Croft; and few persons have succeeded better than he in that due intermixture of harmony and melody which renders this species of music interesting both to learned and unlearned auditors. In his compositions, the full sense and meaning are generally given to the words; and, although we sometimes observe in them what may be thought to border on conceit, yet their merit is for the most part so conspicuous, that we readily overlook their defects. By any one conversant in church music, it will easily be discovered that Kent was a pupil of Dr. Croft. Indeed, he often, without hesitation or scruple, followed the ideas of this great master, in his compositions. He once said to that excellent singer, J. Norris, who was attending the rehearsal of a new anthem, "I know your thoughts; there is the same passage in Dr. Croft; but could I have possibly done better than copy him in this place?" His talents were too great, and his disposition too ingenuous, to allow him to dissemble that he occasionally availed himself of the excellences of his favorite master. Of his own originality he has left ample proof. The subject of St. John's chapter is not much calculated for musical expression; yet, induced chiefly by his sincerely Christian principles, he set it to music; and few composers could have executed the task so well as he has done. His anthems, "Hearken unto this, O man," and "When the Son of man," are truly sublime compositions in the solemn style. "Give the Lord the honor due unto his name," is equalled by few anthems in force and dignity. The fourth verse in "The Lord is my Shepherd," as a bass solo, and the sixth verse, in which the two voices unite, produce a striking and most pleasing effect, the one by its majestic simplicity, and the other by its pastoral, yet elegant harmony. Few anthems have obtained more celebrity than "O Lord, our Governor," "My song shall be of mercy," and "Hear my prayer." So modest and unassuming was this excellent man, that it was not until towards the decline of his life that he could be prevailed with to give his works to the public; and he then printed and published a second volume, containing a morning and evening service and eight anthems. Some of these have since been printed separately, and a few of them have been admitted into Page's "*Harmonia Sacra*." Kent was remarkably mild in his disposition, amiable in his manners, and exemplary in his conduct; and, as an organist, was conscientiously diligent in performing all the duties of his situation. His performance on the organ was solemn and expressive; and he was reputed by some competent judges to have been one of the best players of Dr. Croft's music in the kingdom. Kent died at Winchester, deeply regretted by all who had the happiness of his acquaintance, in the year 1776, having resided in that city, in the character of organist and composer, for nearly forty years.

KEPLER, JOHANN, a great astronomer and mathematician, was born at Weil, in the duchy of Wurtemberg, in the year 1571, and died in 1630

We shall pass unnoticed all Kepler's mathematical and astronomical works, and speak only of that entitled "*Harmonica Mundi*." The third book of this work treats of the subject of musical harmony. Several of the first chapters are confined entirely to discussions relative to the music of the ancients. In the seventh chapter he treats of the proportions throughout all the eight usual sounds of diapason. He also speaks of the modern method of notation by lines and letters of the alphabet, and gives his opinion respecting the origin of the clefs. It may, however, with truth be observed, that if Kepler had made no greater discoveries in mathematics than he did in music, it is probable that his conceits might have remained, but his discoveries would all long since have been forgotten. Kepler denies that the ancients had any idea of harmony; he compares their accompaniments to their melodies to the droning of a bagpipe. All the information we have been able to collect shows them to have been ignorant of counterpoint, and we cannot think they had much variety in their performances.

KERANA. The name of a wind instrument forming a kind of long trumpet, much used by the Persians. Every evening, at sunset, and two hours after midnight, they sound the *kerana*, together with hautboys, timbrels, drums, and other instruments.

KERANIM. The name given by the Hebrews to the sacerdotal trumpets.

KERAS. The appellation applied by Hedyus, and other writers, to the hydraulica, or water organ of the ancients.

KEREN. A horn. Ram's horns were the first used by the Hebrews. Afterwards they were imitated in metal, and still called horns.

KERLE, JACOB DE, canon of the cathedral church of Cambrai, was born at Ypres, in Flanders. His compositions, which are chiefly for the church, were published in different parts of Europe, from 1562 to 1573. His masses were printed at Venice in 1562. Their style is dry and uninteresting; the harmony, however, is good, and his answers to the fugues are warrantable.

KERL, JOHANN CASPAR, born in 1625, was a native of Saxony. Having, during his youth, shown a great taste for music, he was sent to Vienna, and, at the expense of the Archduke Leopold, placed under the tuition of Giovanni Valentino, chapel-master to the imperial court. His patron afterwards ordered him to be sent to Rome, in order to complete his musical studies under Carissimi. At his return he had a highly advantageous offer from the elector palatine, but he refused it, and settled in Bavaria, where he became chapel-master to the Elector Ferdinando Maria. Kerl's principal work is his "*Modulatio organica super magnificat, octo tonis ecclesiasticis responsulens*," printed at Munich in 1686. He is justly esteemed one of the most celebrated organists that the world ever produced. In a competition that he had with some Italian musicians, at the court of the Elector of Bavaria, he composed a piece for the organ so difficult that none but himself could execute it.

KEROU-JEBEL. Jubilee horn.

KERPEN, F. H. FREIHERR VON, a canon of the cathedrals of Mentz and Wurtzburg, was an excellent amateur musician, and published much vocal and piano-forte music between the years 1780 and 1800.

KERZEL, or KERZELLI, MICHAEL. A musician at Vienna, where he published, up to the year 1783, much violin music. About the year 1787, he went to Moscow, where he wrote some Russian operas.

KESSEL, JOHANN C. B., a singer at Eisleben, was born in 1766. In the year 1790, he published, at Leipsic, "*Unterricht im Generalbasse zum Gebrauche für Lehrer und Lernende*," an improved edition of which appeared in 1792.

KESSLER, JOHANN WILHELM, an organist at Heilbronn, published at Stuttgart, in 1793-94, "*Württembergisches vierstimmiges Choralbuch*," also, at Darmstadt, in 1796, "*Divertissemens Sociaux, ou six Anglaises pour le Clavecin avec leur Chorégraphie*."

KETTE, ALBRECHT, a celebrated organist of the court and cathedral at Wurtzburg, was born in 1726, and learned the elements of music from his father. He afterwards became a pupil of the renowned organist Bayer, at whose death, in 1749, he succeeded to his public situations. He composed much church music and music for the organ, and died in the year 1767.

KETTLE DRUM. A drum, the vellum head of which is spread over a body of brass.

KEYS. The names of the pieces of wood or ivory in an organ, piano-forte, or other instrument, which are struck by the fingers in playing the instrument.

KEYED VIOLIN. In 1848 there was exhibited in New York a newly-invented instrument called the keyed violin. It is played like the parlor organ, by means of a key board. There are forty strings (five octaves) stretched upon a horizontal frame, and brought to the proper tension by means of the same apparatus as that employed in tuning the piano-forte. At right angles with these strings are four horse hair implements, each resembling that part of an ordinary violin bow which comes in contact with the string; these are all attached to and stretched upon a frame, and by ingenious machinery are worked up and down with a steady motion, each bow passing within a minute distance of its corresponding string. The motion of the perpendicular frame and bows is caused by the use of the pedal, and the music executed in the same manner as upon the organ or piano-forte. The pressure upon a key causes a simultaneous pressure against one of the bows, bringing it in contact with its neighboring string, and thus producing a sound similar to that made by bowing and fingering upon the violin.

At the same time was exhibited an instrument which produced tunes by tuning forks. The sound of the tuning fork by itself is feeble; but if, while vibrating, it be held over the mouth of a vessel, to give the vibration in unison with the note of the fork, the sound is very much increased. This fact has been long known, but the inventor has availed himself of it in a peculiar manner, in

the production of this instrument. By means of keys like those of a piano-forte, the forks are struck with a hammer of a peculiar kind—an essential difference being made in the hardness of the hammer for the high tones. The resonance of sound is obtained by means of boxes of thin wood immediately behind the tuning forks. The lower tones are produced by spiral wires, similar to those used as substitutes for bells in common clocks. Some of the notes in this instrument are very sweet, and of considerable volume. There appear, however, some difficulties to be overcome, such as the want of volume of tone in extremities of the scale—limited range—and the different character of sound from the wires; but which the inventor believes to be surmountable.

KEY, or KEY-NOTE. With theorists, a certain fundamental note, or tone, to which the whole of a movement has a certain relation or bearing, to which all its modulations are referred and accommodated, and in which it both commences and concludes. There are but two species of keys; one of the major, and one of the minor mode; all the keys in which we employ sharps or flats being deduced from the natural keys of C major and A minor, of which, indeed, the other keys are only transpositions. See articles **MAJOR** and **MINOR**.

Every practitioner in the art must have noticed the various *complexions*, so to speak, by which different keys are characterized. Each of the twelve semitones in the scale is capable of further division almost to infinity: it is possible to tune a hundred strings or more, in regular ascent of pitch, between C and C, so as to be perceptibly different to the ear. When all these gradations of sound are mingled together, we hear only a confused noise; when they are made to follow each other at harmonic distance, melody is produced. In the fifteenth century, music was generally written in the key of F and its relative, D minor. This order of sounds was first adopted, probably, on account of its being the most familiar to the ear, as Gardiner, in his "Music of Nature," asserts that the blended impression of the cries of animals, the buzzing of insects, the roar of storms, the murmurs of brooks, and some of the grandest sounds of the natural world, is to be referred to this harmony, and may be denominated *the key of nature*. As science improved, other notes were taken as the centres of systems, by which other keys were formed; and we have now not less than twenty-four keys, both major and minor. Some of them have been characterized by Gardiner, in his notes to the "Lives of Haydn and Mozart."

"The major of C is bold, vigorous, and commanding, suited to the expression of war and enterprise; and its relative, A minor, is plaintive, but not feeble.

"The major of G is gay and sprightly: being the medium key, it is adapted to the greatest range of subjects; and its relative, E minor, is persuasive, soft, and tender.

"The major of D is grand and noble: having life and animation, it is suited to the loftiest purposes; and its relative, B minor is bewailing, but in too high a tone to excite compassion.

"The major of A is golden, warm, and sunny; and its relative, F sharp minor, is mournfully grand.

"The major of E natural is bright and pellucid, adapted to the most brilliant subjects: though higher than the major of D, it is less loud, as it stretches the voice beyond its natural power; and its relative, C sharp minor, is seldom used. In this key Haydn has written some of his most elegant thoughts.

"The major of F is rich, mild, and contemplative; and its relative, D minor, possesses similar qualities, more solemn and grand.

"The major of B flat is the least interesting of the major keys; it has not sufficient fire to render it majestic or grand; and its relative, G minor, is replete with melancholy.

"The major of E flat is full, soft, and beautiful: it is a key in which all musicians delight: though less decided in its character than some others, the regularity of its beauty renders it a universal favorite; and its relative, C minor, is complaining, and seldom used.

"The major of A flat is unassuming, delicate, and tender; and its relative, F minor, is penitential and gloomy.

"The major of D flat is awfully dark. In this remote key Beethoven has written his sublimest thoughts. He never enters it but for tragic purposes."

We have observed, in tuning the piano-forte, the notes F sharp, C sharp, and G sharp, which form the major thirds of the keys in sharps, are tuned sharper than the major thirds belonging to the flat keys. Hence the evident brilliancy of the one, and tender, melancholy expression of the other: and on stringed instruments it is obvious the character of the keys G, D, A, and E must be more brilliant than any other, from the circumstance of the open strings forming the key note.

The keys are removed from their natural situation upon the staff by the aid of flats and sharps, placed at the beginning of the staff. If there be one sharp, the keys are the major of G and minor of E natural; if two, the major of D and minor of B natural; if three, the major of A natural and minor of F sharp; if four, the major of E natural and minor of C sharp; thus:—

One sharp. Two sharps. Three sharps. Four sharps.

If there be one flat, the keys are the major of F and minor of D natural; if two, the major of B flat and minor of G natural; if three, the major of E flat and minor of C natural; and if four, the major of A flat and minor of F natural; thus:—

One flat. Two flats. Three flats. Four flats.

Speaking of the different keys, a celebrated writer observes, "that in the tones of woe we invariably recognize the minor third; and in those of joy or exultation, the major third. If four minor thirds be combined, they form the chord of the extreme flat seventh, which excites in us fear and alarm. When the minor third forms the seventh of the relative key, by being compounded with brighter sounds, it loses much of the melancholy which before characterized it, and becomes highly sympathetic. We never fail to utter this

tone in moments of the greatest interest; and it may be regarded as the most affecting chord in music. It is the business of every composer, then, to supply the modulation by which the passions may be awakened; and very much of the effect produced will depend upon the manner in which this modulation is given. And it should always be the object of the vocal performer to copy the manner in which the instinctive tones are uttered;

and the power of either to move us will be in proportion to his just conception of the sentiment of his author, and his skill in giving to that sentiment the tone which nature has assigned to it." And we are confident that effects still more novel and interesting may and will be produced, in proportion as the principles of music and the science of harmony, in the variety of keys, are more closely studied and more correctly known.

MAJOR KEYS AND THEIR RELATIVE MINOR.

	C	G	D	A	E	B	F sharp.	F	B flat.	E flat.	A flat.	D flat.
MAJOR.												
MINOR.												
	A	E	B	F sharp.	C sharp.	G sharp.	D sharp.	D	G	C	F	B flat.

In every octave, or regular succession of eight notes, either ascending or descending, there are five whole tones and two semitones; and, in their natural order, the semitones are fixed between three and four, and seven and eight of the scale; or between E and F, and B and C. For the sake of variety, it becomes necessary to change the key, or tonic, which is done by the aid of sharps and flats; and these, placed at the beginning of a piece of music, serve to regulate the leading note, and remove the semitones from letter to letter into any part of the scale.

The following example exhibits the seven major tonics in sharps, and the seven relative minor keys:—

In the above example, the lower notes show one of the major scale, and the upper notes one of the minor scale.

The following example exhibits the seven major tones in flats, with the seven relative minor keys:—

In the above example, the upper notes show one of the major scale, and the lower notes one of the minor scale.

In speaking of the signatures, the pupil should always name the altered letters, for each and every transposition. The following table shows the situation of the tones and semitones in the several major keys, as well as the effect which flats and sharps have in changing the tonic:—

Explanation.—First column, the letters; second column, natural scale; third, first transposition in sharps; fourth, second transposition; fifth, third transposition; sixth, fourth transposition; seventh, fifth transposition; eighth, sixth transposition;

and the ninth, the seventh transposition. The same order to be observed in flats.

When a partial transposition of the scale occurs, the melodious relations of the sounds are changed; and it is necessary for the pupil to understand this change, and be governed by it. In such changes as usually occur in psalmsody, namely, *sharpening the fourth and flattening the seventh*, and extending only for one or two measures, it is unnecessary to change the syllables; but when the change is continued for several measures, the solmization of the new key should be adopted. The change, if possible, should be made before the note of modulation.

KEY BOARD. An instrument for dividing the intervals of the octave. In order that the localities of all the notes on an instrument may be fully explained, we will here expose the

KEY-BOARD OF A SIX-OCTAVE PIANO-FORTE, WITH THE SIGNS WHICH REPRESENT THE DIFFERENT KEYS.

The same, written for the Two Hands.

Right Hand.

Left Hand.

Musical notation for the right and left hands. The right hand part is written on a single staff with a treble clef, and the left hand part is written on a single staff with a bass clef. Both parts show a sequence of notes corresponding to the keyboard diagram above, starting with F and ending with F. The notes are connected by stems and beams, showing the flow of the melody. The right hand part includes some notes with slurs, indicating phrasing.

This *key-board* represents forty-three *white* keys and thirty *black* keys. The *white* keys are all marked by the repetition of the seven letters used in the six octaves. Begin at F, bass, the lowest left hand key, and the name of each *white* key may be learned by the letters. The *black* keys have also signs or names. The lowest left hand *black* key is F♯, the next G♯, the next A♯, and so on. When the sign ♯ is placed before B or E, the *white* key to the right must be played, as there is only an interval of half a tone between them, and consequently no use for a *black* key. In descending, or moving down from right to left, you have first F, then E, and then the *black* key F♭; next D, D♭, C, B, B♭, &c. If the sign b is placed before either C or F, the *white* key next to the left must be played, as there is only an interval of half a tone between them, and consequently no use for a *black* key.

It will be seen by this, that the signs connected by the curved lines (*c*, express the same keys, or notes: the upper notation being used when the right hand descends so low into the bass, the *under*, when the left hand ascends so high into the treble. But sometimes each notation is indifferently used.

Though there is generally a great deal of time lost in the outset in this art, owing to the difficulty of knowing the keys by their notes or signs, the following mnemonic rule, it is hoped, will greatly facilitate the acquirement, and that too in a very short space of time. Observe, there are alternate groups of three white and two black keys. The white key between the two black ones is invariably D. Of course the two white keys immediately above D are E and F. Again: the two white keys between the three black ones are invariably G and A; and consequently the two white ones immediately above G and A are B and C.

EXAMPLE: THE BARS  REPRESENT THE BLACK KEYS.

KEYS OF AN ORGAN. Those movable, projecting levers in the front of an organ, so placed as to conveniently receive the fingers of the performer, and which, by a connected movement with the valves, or pallets, admit, or exclude, the wind from the pipes. When a single key of an organ is pressed down, as many sounds are heard as all the stops which are then out furnish to that key: *i. e.*, all those pipes are heard which are permitted by those stops, and that key, to receive the wind.

KHUSEL, GIOVANNI GIACOMO, a contrapuntist of the 16th century, and probably a German, resident in Italy, published at Venice, in 1591, "*Libro I. de Madrigali et Motetti à 4 e 5 voci.*"

KHYM, or KYHN, CARL, an instrumental composer, published much music at Augsburg and Vienna since the year 1798.

KIALLMARK, E., was born at Lynn Regis, in Norfolk, in the year 1781. His father was a native of Sweden, and an officer in the service of that state. His mother was a descendant from Mr. Banks, of Yorkshire, a cousin of Sir Joseph Banks. His parents, dying when he was very young, left E. Kiallmark, their only child, without provision, when he was kindly adopted by his maternal grandfather, who spared no expense in his education, and finding that he had a strong

passion for music, consented eventually to bring him up to that profession. His grandfather first placed him, at the age of fifteen, (giving a considerable premium,) with a German musician of great pretension; after two years' residence with whom (the only two disagreeable years of his life) he was removed, and from that period depended on his own exertions for a livelihood. Having by the end of his apprenticeship gained a tolerable practical knowledge of the piano-forte, harp, and violin, he commenced professionally by teaching those instruments at a cheap rate, and, not caring about personal fatigue, succeeded in gaining several pupils. He always, however, appropriated a portion of his receipts, to the acquirement of musical instruction, and became successively a pupil of Barthelemon, Cobham, Spagnoletti, &c., till at last he found himself, to his great delight, capable of playing in an orchestra, and became a performer, either as deputy or principal, in the oratorios, concerts, music meetings, and theatres. At the early age of twenty-two, he married a young Scotch woman, and at that time, having succeeded in obtaining a very tolerable connection, gave up all his public engagements, and became a piano-forte master. Soon after that period he became intimately acquainted with Von Esch, and although he (as himself would acknowledge) was but an indifferent theorist, yet to his taste and talents, and his friendly hints and instructions, Kiallmark confesses himself deeply indebted. Soon after this, he ventured to publish two or three pieces, although almost unacquainted with the earliest rules in composition. This success induced the music sellers to make fresh applications to him; and, after a short time, he became known as a composer. Kiallmark has since had great success as a piano-forte instructor, seldom teaching less than from nine to twelve hours per day, and for some years has had one or two assistants constantly in his employ. At the suggestion and desire of some of his connections, he was induced to become a party with Logier at the time of his great success in England; and although such was the state of Kiallmark's engagements that he could but seldom find time to see Logier, he yet acknowledges to have derived great pleasure and advantage from his acquaintance. The following are amongst the most favorite pieces of Kiallmark's composition. Piano-forte: "Introduction and Variations to 'Roy's Wife.'" "Introduction to 'Last Rose of Summer.'" Fantasia, "*L'Espérance.*" Fantasia, "*Pas Amour.*" "Fanfare and German Air." "Second German Air." "Harriot, Air with Variations." "Marian, Air with Variations." "*La Revenue,*" divertimento. "*Divertimento Scossise.*" "Second *Divertimento Scossise.*" "*Divertimento Scossise from Naderman.*" "Second *Divertimento Scossise from Naderman.*" "*Rondo, Carnival de Venice.*" "Airs from Rossini." "Russian Air, with Variations." "*Les Fleurs de Printemps,*" six books. "Is there a heart, Variations." "There's kauld cail, Variations." "Cease your Funning, Variations." "Bower of Eveleer, Variations." "Robin Adair, Variations." "Rest, weary traveller, Variations." "Caledonian Fantasia." "*Chant Militaire.*" "Young Love's Dream." "Home, sweet Home, Variations." "My pretty page," rondo. "*Les petits Délassemens.*" "Romance, Variations." "Rosabella," &c., &c.

KIESER, J. J., an organist at Erfurt about the year 1750, composed much music for his instrument.

KIESEWETTER, JOHANN FRIEDRICH, first violin at the Royal Chapel of Anspach, and one of the best performers of the school of Benda, was born at Coburg. He obtained his public situation in the year 1754.

KIESEWETTER, CHRISTOPH GOTTFRIED, son of the preceding, was born at Anspach in 1777. He was a very celebrated violinist, and spent much time in England since the winter of 1821, when he performed at the Philharmonic Concerts in London. An eminent critic states of Kiesewetter's talents as follows: "His first performance at the Philharmonic Concert of London — perhaps the severest test to which power can be brought, because the major part of the audience consists of professors or persons most immediately connected with music — his first performance, we might almost say, was greeted with the very extravagance of approbation and applause. For although his extraordinary ability deserved the most complete expression of the delight which could not but be felt, yet it was remarked amongst the judicious, that the loudest plaudits were mingled with an expression of pleasure bordering on a laugh, a manner which praise adopts when caught by surprise at quaint or unexpected turns, rather than when captivated by solid excellences. By this remark we would not be thought to detract a particle from the abundant talent which we willingly admit Kiesewetter to possess: his abilities are, in every sense of the word, admirable indeed: we merely wish to have it understood that there are points of peculiar skill which, when pushed beyond certain limits, run into defeat, however vehemently applauded these very exertions may be by the multitude of auditors, who are ever more stimulated by novelty and surprise, than by the appropriate disposition of parts and of the whole, which is the result of deep consideration and fine taste. Kiesewetter's command of the instrument appears to render him superior to every possible difficulty, and out of this superabundant power, perhaps, arise those temptations which almost necessarily lead to excess. For, although sobriety of judgment rejects superfluous execution as well as superfluous ornament, yet, when warned with exercise, there are few who can resist the power of demonstrating acquirements which others have not reached." Kiesewetter performed at the spiritual and other concerts, in London, in the season of 1824. He died, in a state bordering upon misery, in 1827.

KIN. A Chinese instrument possessing a body of thin wood, carved like the top of a violin, to increase resonance — with five strings of silk of different sizes.

KINDERMANN, JOHANN ERASMUS, a celebrated organist at Nuremberg, died in 1655. He composed many practical works, both vocal and instrumental, the latter being chiefly for the organ. His writings bear date from the year 1640 to 1653.

KINDERVATER, JOHANN HEINRICH, a German clergyman, died in 1726. He wrote

several works on music; among others one entitled "*De Musica literatis necessariâ.*"

KINDSCHIER, L., a singer at the court church at Dessau, published there, in 1792, a collection of twenty-four songs, and at Leipsic, in 1801, a similar collection.

KING. A Chinese instrument, consisting of a frame of wood, with pendent stone, graduated through sixteen notes, and struck with a hammer.

KING, WILLIAM, organist of New College, Oxford, set to music Cowley's "Mistress," and published it with the following title: "Poems of Mr. Cowley and others, composed into Songs and Ayres, with a Thorough Basse for the Theorbo, Harpsceor, or Base Violl," Oxford, 1688.

KING, ROBERT, bachelor in music of Cambridge, in 1696, was one of the band of William and Mary. He composed various airs, printed in the "*Tripla Concordia*," and set to music many songs, printed in the "Theatre of Music."

KING, CHARLES, educated in the choir of St. Paul's, under Dr. Blow, was at first a supernumerary singer in that cathedral for the small stipend of fourteen pounds a year. In the year 1704, he was admitted to the degree of bachelor in music, in the University of Oxford. King composed some anthems and services, and thereby gave occasion to Dr. Green to say, and indeed he was very fond of saying it, as he thought it was a very witty sentiment, that "Mr. King was a very *serviceable* man." As a musician, he was but little esteemed.

KING, M. P. An English composer, chiefly of vocal music, since the year 1790. Among his works are — Operas: "False Alarms," "Invisible Girl," "Matrimony," "One o'Clock," "Timour the Tartar," "Eight songs and Cantata," Op. 2. Glee for three voices: "It was the nightingale," "Minstrels three, lady, are we," "O, could I flow like thee," "O, whiter than the swan," "When shall we three meet again?" "Who rides on that meteor of fire?" Duets: "What virtue prompts," "Vows are but breath," "Do not call it sin," "Say, beauteous tyrant," "By the roses of the spring," "Eagle Wings," "Hush, softly." He also published "A general Treatise on Music, particularly on Harmony or Thorough Bass, and its Application to Composition, written on a new Plan," &c.; likewise, several sonatas, rondos, &c., for the pianoforte.

KINOR, or KINNOR. The appellation given to the harp used by David in the curing of Saul. Of the *kinnor*, generally translated *harp*, there is a diversity of opinion; but the one most generally received is, that by it is meant the *lyre* or *harp*, or any stringed instrument of that character. In the Septuagint and the Vulgate, *kinnor* is so rendered that the name is equivalent to that given by the Greeks and Romans to different forms of lyres, of which there were many. Such being the case, we think the words *kinnor* and *harp* synonymous. The ancient lyre or harp was so small that it was intended to be carried in the hand, and it was so light that the player usually danced during his performance. Whether the ancients, particularly the Greeks and Romans,

had harps like the moderns, large, heavy, and resting on the ground when played, is very doubtful; for, in almost every instance where mention is made of this instrument, it is described as being taken in the hand when played. The Egyptians, however, had large harps, as is evident from preserved paintings and sculptures. We have in its proper place alluded to Jubal as the inventor of the kinnor and organ, or rather as the father of such as handle them; and this is the earliest mention made of the use of musical instruments. Nowhere in the Pentateuch is the kinnor again mentioned; but in 1 Samuel we find that the prophet foretold to Saul that he should meet a company of prophets "coming down from the high place, with a psaltery, a tabret, a pipe, and a kinnor." Then it is noticed as used by private persons, shepherds, with a belief that it had a powerful influence over the human passions, and for that purpose David was employed to play before Saul, as previously noticed. From David's time, whose example as sultan, no doubt, recommended it to general use, the kinnor is frequently mentioned. It was one of the leading instruments in the orchestra of the tabernacle, and also in the temple in the time of Solomon. Eusebius, one of the early Christian fathers, says that David always carried his lyre with him, to soothe him in his many afflictions, and to sing praises to God. He is said also to have been generally in the tabernacle with his kinnor among the prophets, and sang and played as the inspiration came upon him. In 1 Kings, an intimation is given of the material of which the harp was composed. It says that Solomon made harps (*kinnoroth*) of the almug trees, and also psalteries for the singing. It was the harp which the captives at Babylon "hung upon the willows;" and so celebrated were the Hebrews in the use of this instrument, that their conquerors bade them sing their native songs, accompanied with the harp. Among the Hebrews it was played by females as well as males, and was used at feasts, or on occasion of mourning, for its tones might be cheerful or sad, as the occasion might require.

KIRBYE, GEORGE. An English musician, and good madrigalist at the close of the sixteenth and beginning of the seventeenth century. In the year 1597, he and Thomas Weelkes published their first books of English madrigals. Some of his compositions are to be found in the "Triumphs of Oriana."

KIRCHER, ATHANASIUS, a native of Fulda, was born in the year 1601. At the age of eighteen he was admitted into the Society of Jesuits, and after having passed through a regular course of study, became a teacher of philosophy, mathematics, and languages, in the University of Wartzburg. In the year 1631, when the Swedes, under Gustavus Adolphus, entered Germany, he retired into France, and settled in the Jesuits' college at Avignon, where he continued four years. He was then called to Rome to teach mathematics in the Roman college, and he afterwards became professor of the Hebrew language in that city. He died in 1680, having written and published different works to the number of twenty-two volumes in folio, eleven in quarto, and three in octavo. The chief of Kircher's musical works is his "*Musurgia Universalis*." This is divided

into ten books. In the preface, the author states that he was aided in the compilation of it by Antonio Maria Abbatini, chapel-master of the churches of Sta. Maria Maggiore, and Pietro, Heredia, in Rome, also by Kapsberger and Carissimi. He apologizes for his attempting to write on the subject of music, who was not a professed musician; but he states, in his defence, that from his youth he had assiduously applied himself to the study of this science. In the first book he treats of the anatomy of the ear, not only in man, but in various kinds of quadrupeds and birds. From this he passes to the consideration of the voice in the human race, and also of the vocal organs in several species of animals. In the second book he speaks of the music of the Hebrews, and gives the forms of some of their instruments. He then proceeds to the music of the Greeks, and of which he gives a general and superficial account. The next book enters deeply into the doctrine of harmonics, first explaining the several kinds of proportion, and afterwards demonstrating the ratios of intervals. This book contains a system of arithmetic, taken from the writings of Boethius and others, in which are contained rules for the addition, subtraction, multiplication, and division of intervals by means of characters adapted to the purpose. The fourth book is entirely on the division of the monochord, and the method of finding the intervals by various geometric and algebraic processes. The fifth book contains directions for the composition of music in consonance. In this he explains the nature of counterpoint, both simple and figurative, and also of fugue, and gives some general rules for composition in one, two, three, and more parts. Towards the close of the book, he speaks of that spurious kind of fugue, called *fuga in nomine*, and not only explains the nature of canon, but gives examples of canons, some of which are very wonderful in their contrivance. He mentions one, which he says might be sung by twelve millions two hundred thousand voices. In the sixth book, he treats of instrumental music, and of the various instruments in use among the moderns. Nearly the whole of this book is taken from the Latin work of Merseusus. At the conclusion he gives a particular description of the great bell at Erfurt. The seventh book contains a comparison between the ancient and modern music, with some specimens of the ancient Greek musical characters, taken from Alypius. This book is of a miscellaneous nature, and, amongst other things, comprises a general enumeration of the most eminent musicians of the author's time, and contains a great variety of fine compositions selected from their works.

The second volume begins with the eighth book. In this is inserted tables of all the possible combinations of numbers, as they relate to musical intervals; as also some minute investigations into the various kinds of metre used in poetry, and particularly Greek and Latin poetry, which are illustrated by musical characters. In the ninth book there is a chapter "*De Sympathiâ et Antipathiâ Sonorum Ratione*," and an experiment here mentioned is truly curious. The author says, if five glasses of the same magnitude are filled, one with aqua vitæ, the second with wine, the third with aqua subtilis, the fourth with a thickish fluid, such as sea water or oil, and the fifth or middle one with common water, and a finger wetted, the

following effects will be produced: the aqua vite will be much agitated, the wine greatly shaken, the aqua subtilis less shaken, and the sea water or other fluid not moved at all. From this experiment we may probably date the invention of musical glasses. He then produces instances of the surprising effects wrought by music, beginning with the disposition of Saul, as recorded in sacred writ, which he endeavors to account for mechanically; and he concludes by relating the whole process for the reputed cure of the bite of a tarantula. In treating of echoes, he relates an interesting story from Cardan, which we shall give in his own words. "A friend of mine, having set out on a journey, had a river to cross, and not knowing the word, cried *O*, to which an echo answered, *O*; he, imagining it to be a man, called out in Italian, *Onde devo passar?* it answered *Passa*; and when he asked, *Quit?* But as the waters formed a deep whirlpool there, and made a great noise, he was terrified, and again asked, *Devo passar quit?* the echo returned, *Passa qui*. He repeated the same question often, and still had the same answer. Terrified with the fear of being obliged to swim, in case he attempted to pass, and it being a dark and tempestuous night, he concluded that his respondent was some evil spirit, that wanted to entice him into the torrent. He therefore returned, and on relating his story to Cardan, was convinced by him that it was no demon, but only the sport of nature." The author next proceeds to the description of such instruments as produce music by the rotation of a cylinder; and mentions one, in the form of a star, in the church of a monastery of St. Fulda, so contrived, as, by the motion of a cylinder round its axis, to produce music from a number of small bells. He then describes an instrument to resemble, in its sound, a concert of viols. This was, in fact, a harpsichord with a circular belly, under which was a wheel, one sixth part of which rose above the belly; the strings, which were of the intestines of animals, like those of the harp, were strained into contact with the edge of this wheel, and being rubbed with powdered rosin, produced the tone he speaks of. Kircher mentions, as a contrivance of his own, the *Folian harp*, which he describes at considerable length. But although he might have been ignorant of the fact, St. Dunstan is said, by Fuller, to have had one which must have been of a nature very similar to Kircher's. In this book it is that he gives an account of the celebrated hydraulic organ of Vitruvius, which no one has hitherto been able to comprehend. The tenth book is on the subject of analogical music, as Kircher has termed it, and the chief intention of it is to demonstrate the harmony of the four elements and of the planetary system. The author endeavors to prove that the principles of harmony are discoverable in the proportions of our bodies, in the passions of the mind, and even in the seven sacraments of the church of Rome. From these he proceeds to the consideration of political and metaphysical harmony; and, in conclusion, to that harmony, if any one can understand what he means by it, which subsists in the several orders of intellectual beings, and which is consummated in the union between God and the universe. In the year 1673, Kircher published his "*Phonurgia Nova*," a work in which he explains the nature, properties, and effects of sound.

In this work the author gives a very circumstantial account of that useful instrument called by us the speaking trumpet, the invention of which he claims as his own. Of the power of this trumpet, he says, that with one of fifteen palms in length, he and some companions made themselves heard from different stations, at the distance of two, three, four, and five Italian miles.

To speak in general terms of the works of Kircher, they are chiefly either on subjects of the most remote antiquity, or on such as, from their nature, seem to elude all inquiry; notwithstanding this, the world is under great obligations to him for the "*Musurgia Universalis*." In availing himself of the researches of other learned men, and of all the assistance that he could possibly derive from an extensive correspondence, and the communications of persons eminent both in the theory and practice of music, he has been able to exhibit such a fund of instruction and entertainment, such a variety of curious particulars relative to the principles and gradual progress of the science, and such a number of curious anecdotes respecting the professors of his own time, and the opinions entertained of their works, that we know not which to admire most, his ingenuity or his industry. Notwithstanding the merits of Kircher, his "*Musurgia*," soon after its publication, underwent most severe censures from Meibomius, a German writer of considerable celebrity.

KIRCHHOF, GOTTFRIED, an organist at Halle, died in 1746. He published, at Amsterdam, a work called "*L'A, B, C, Musical*."

KIRCHHOFF, a Saxon harpist, was celebrated in Denmark and Russia, in the latter half of the last century. He wrote much music for his instrument.

KIRCHNER, JOHANN HEINRICH, a singer at Rudolstadt in the year 1799, published, early in the present century, at Armstadt, "*Theoretisch-practisches Handbuch zu einem für künftige Landschullehrer nöthigen Musikalischen Unterrichts*," and "*12 Arien zum Gebrauch für Singchöre in Partitur, 1te und 2te Sammlung*."

KIRKMAN. A composer of piano-forte music, resident in London in the latter half of the last century. He published, among other works, "*Duets for the Piano-forte*," Op. 5. "*Trois Sonnet, à quatre Mains*;" "*Three Sonatas for the Harpsichord, with V.*," Op. 8. "*Sonata for the Piano-forte*;" "*Duets for the Piano-forte*." He also published "*Eight Ballads*," dedicated to the Marchioness of Salisbury, Op. 10; and in conjunction with Keeble, "*Forty Interludes, to be played between the Verses of the Psalms*."

KIRMAYER, WOLFGANG, chamber musician to a nobleman at Munich, was known by his composition of serenatas, nocturnos, and other violin music. He died in 1795.

KIRMAIR, FRIEDRICH JOSEPH, was, in 1803, appointed chamber musician to the Duke of Saxe-Gotha. He is celebrated as a pianist, and performed in public in almost all the large towns of the continent. In 1795, he was appointed music master to the Queen of Prussia. His works for the piano forte are numerous, and

have been chiefly published at Berlin and Offenbach. The following are among his more favorite compositions: "Deux Sonat. pour Clav., F. Oblig., et B., ad lib., composés de divers Thèmes et Passages tirés de l'Opéra 'La Fl. Magique,' arrangés par les Amateurs," Op. 9, Offenbach. "Trois Sonat. progress. pour le Clav. avec V. et B.," Op. 8, Offenbach. "Gr. Sonat. avec Aco. Oblig.," Op. 21, Offenbach. "Gr. Sonat. avec V. Oblig. et B. ad lib.," Offenbach. "Sonat. avec Acc. de V. et B.," Op. 23, Offenbach. "Trois Sonat. pour les Amateurs," Op. 12, Offenbach. "Sonat. avec un Toccato pour le Clav. dans le Stile de Clementi," Op. 17, Offenbach.

KIRNBERGER, JOHANN PHILIP, a native of Berlin, was a pupil of Sebastian Bach, and possessed great musical learning. His knowledge of counterpoint and of all the laws and subtleties of canon and fugue are indisputable; but in his compositions he is often dry and crude, and he appears to have been perpetually striving at new passages and effects, with which his invention did not very liberally supply him. He died in the year 1783. His principal works were theoretical and didactic, and are as follows: "Die Kunst des reinen Satzes, &c.," i. e., the art of pure composition explained on certain principles and by means of examples, 1774. "Grundsätze des Generalbasses, &c.," i. e., principles of thorough bass, forming the first elements of composition, 1781, with many plates. "Gedanken über die verschiedenen Lehrarten, &c.," i. e., ideas on the different methods of composition, 1782. "Anleitung zur Sing-komposition mit Oden in verschiedenen sylbenmassen," i. e., instructions for learning vocal composition, 1782. "Die wahren Grundsätze zum Gebrauch der Harmonie," i. e., principles of harmony, &c., 1773. This last work is attributed to Kirnberger by Kollmann and the editors of the "Diet. Hist. des Musiciens," but by Gerber it is said to be from the pen of Schulzen. The chief of the musical articles in the first volume of Sulzer's "Theory of the Fine Arts," were also written by Kirnberger. His practical works are chiefly sacred.

KIRSTEN, FRIEDRICH, an organist at Dresden, published, between the years 1770 and 1797, several works of piano-forte music, also "Lieder für gesellige und einsame Freuden gedichtet von Fr. Voigt und fürs Clavier gesetzt," Hamburg.

KIRSTEN, MICHAEL, organist at Breslau, died in 1742. He wrote some church music.

KIT. The name of a small or pocket violin, used by dancing masters. Its length is about sixteen inches, and that of the bow about seventeen.

KITTEL, CHRISTOPH, court organist and composer at Dresden, published there, in 1657, twelve canticles for four voices.

KITTEL, JOHANN CHRISTIAN, organist at Erfurt, was born there in 1732. He was a pupil of the great Sebastian Bach, and in all respects worthy of his master. He published "6 Sons. fürs Klavier," 1787; "Der angehende practische Organist oder anweisung zum Zweckmäßigen gebrauch der Orgel bey Gottesverehrungen in Beyspielen, Erste Abtheilung," Erfurt, 1801; "Neues Choralbuch 200 theils bezifferte, theils vierstimmig ausgesetzte Chorale, desgleichen kleine vorspiele ent-

haltend," Altona, 1803; "Hymne an das jahrhundert vierstimmig," Hamburg, 1801; "Grosses Präludien für die Orgel 2d abtheilungen," Leipsic Kittel died at Erfurt, in the year 1809.

KLACKEL, STEPHAN, or PATEN, chapel-master at Prague, was born in 1753. He was an excellent violinist, and was heard in most of the capitals of Europe. He died in 1788.

KLANG. (G.) Sound.

KLANGESCHLECHT. (G.) A genus of sound; as. *chromatisches klangeschlecht*, the chromatic genus.

KLAPPE. (G.) A key belonging to any wind instrument.

KLAPPEN FLUGELHORN. (G.) The keyed bugle.

KLAPPTROMPETE. (G.) A keyed trumpet.

KLEEBERG, C. G., an organist and composer at Gera, in Upper Saxony, published, among other works, "Trois Duos pour deux Violons," Op. 1, 1794, and "Tänze am Klavier," Op. 6. He died in 1811.

KLEIN, JACOB, an instrumental composer, published at Amsterdam, about the year 1750, "Six Sonates à Hautbois et B. C.," Op. 1. "6 Dergl.," Op. 2, and "Six Sonates à une B. de Violon et B. C.," Op. 3.

KLEIN. (G.) Minor, in regard to intervals.

KLEIN, JOHANN JOSEPH, organist at Eisenach, published at Gera, in 1783, a work entitled "Versuch eines Lehrbuchs, &c.," i. e., an essay towards systematic instruction in practical music. In 1785 appeared his "Choralbuch mit einem vorberichte, &c.," i. e., a choral book, with an introduction relative to that style of music in the church service. He also published "Vorschläge zur verbesserung der gewöhnlichen Singschulen in Deutschland," Leips. Mus. Zeit. 1799, No. 30. "Ueber die Tonzeichen, nebst vorschlag einer kleinen veränderung in absicht der benennung der Töne," Leips. Mus. Zeit. 1799, No. 41. "Lehrbuch der theoretischen Musik in systematischer ordnung entworfen von u. s. w. mit kupfern," Leipsic and Gera, 1801. The plates in this work consist of scales and passages for most wind instruments. Lastly, "Neues vollständiges Choralbuch zum Gebrauche bey Gottesdienste, nebst einem kurzen Vorbericht von der Choral Mus.," Rudolstadt, 1802.

KLEIN, HEINRICH, a professor of music at Presburg, in Hungary, born in 1756, was a pupil of Kirnberger, and an excellent pianist. He has written many masses, besides other vocal and instrumental music.

KLEINE, ANDREAS, a celebrated organist, was born in Thuringia in 1650. He composed some church and dramatic music, and died at Copenhagen.

KLEINHEINZ, FRANZ XAVER. A pianist, who first resided at Vienna, and then at Pesth, in Hungary. He was considered in Germany as an excellent composer. The following are among his principal compositions: "Trois Sonates pour le Clav. avec V. Obl.," 1789. "Var. sur 'La ci darem la mano, &c., pour le Clav.'" "Var. sur 'Ein Mädchen oder Weibchen, &c.' No. 2," 1797. "Doux Var. pour le Clav. sur 'Chaste Fille de Latone, &c.

de Gluck, No. 3." "Douze Var. pour le Clav.," Op. 4, 1799. "Gr. Sonate pour le Clav.," Op. 5, 1800. "Sonate pour le Clav.," Op. 6, 1800. "Sonate pour le Clav.," Op. 7, 1801. "Deux Sonates pour le Clav., avec V.," Op. 8. "Trio pour Clav., V., ou Clar. et B.," Op. 13. "Sonate à quatre Mains pour le Clav.," Op. 12, 1803. "Hektors Abschied, der Handschuh, die Erwartung, alle drey mit Begleitung der Klaviers." "Der Kampf, für Gesang mit Klavierbegleitung," and "Trois gr. Sonates pour P. F.," Op. 17, Leipsic.

KLEINKNECHT, JOHANN WOLFGANG, concert master to the Margrave of Anspach, was born at Ulm in 1715. He commenced his studies of gymnastics in that town, and there acquired the extensive attainments which he afterwards displayed. His father instructed him in music, and he made such wonderful progress, that at eight years old he played the violin before the Duke of Wurtemberg, and at different courts, where he was generally admired. Encouraged by his first success, he resolved to devote himself entirely to music. Chance favored his design. The Duke of Wurtemberg named him, in 1773, his chamber musician, and sent him in this capacity to his chapel at Stuttgart, where Brecianello, one of the first violinists of his time, was then chapel-master. He was the first model upon which young Kleinknecht attempted to form himself.

After the death of the duke, he travelled to different courts, and obtained a situation as violinist at the chapel of Eisenach. Here the consort of the Margrave of Bayreuth heard and engaged him for a fête, to be given on the birthday of the margrave. The comforts he observed at this court, and the favor showed him by the prince, made him forget Eisenach, and he accepted the situation of concert master at Bayreuth. About this time he became acquainted with Benda, and his style pleased him so much that he adopted it. His first enthusiasm being evaporated, he remembered the Duke of Eisenach, who had treated him so kindly, and began to reproach himself with ingratitude for having left his patron without permission. With the design of atoning for his fault, he feigned a desire to visit again the different musical academies, and demanded his dismissal. As soon as he obtained it, he went to Eisenach to offer his services to his old master, who received them with undiminished kindness. He employed the time he remained there (till the death of the duke) in cultivating his talents. He was then made leader of the excellent orchestra of the theatre of Dresden, for which Hasse composed, and filled this station with the greatest *éclat* till his death, which happened in 1775. He was considered a very good leader.

KLEINKNECHT, JACOB FRIEDRICH, second son of the preceding, was born at Ulm in 1722. He published many instrumental compositions, and was chapel-master to the court of Anspach at the time of his death, which took place there in 1794.

KLEMME, JOHANN, a Saxon by birth, and a celebrated organist and church musician, was patronized for his early proficiency in music by Christian II., Elector of Saxony. That prince committed him to the tuition of the ablest masters in the court of Dresden, and he was instructed and maintained at his expense for nearly six

years, when the elector died. Fortunately for Klemme, the succeeding elector was also a lover of music; and observing his desire for improvement, he placed him for further instruction under Christian Erbach, an organist and composer at Augsburg, with whom he studied three years. At the expiration of this term he returned to Dresden, and was soon afterwards appointed master of the electoral chapel, and organist to the elector.

The works of Klemme are thirty-six for the organ, composed after the manner of voluntaries, and published at Dresden in the year 1631. He was likewise the author of a set of spiritual madrigals, in the German language, for four, five, and six voices, and he assisted in the publication of the second part of the *Symphonie Sacra* of Schütz. Klemme is considered to have been one of the most skilful harmonists of his time.

KLENGEL, A. A. A German composer, residing in Austria. In the review of his "6 *Notturni*" for the piano-forte, the editor of the Quarterly Musical Journal speaks very highly of Klengel, whose compositions, he says, remind him of Haydn. (Musical Review, vol. iv. p. 117.) Among his works are, "Premier Concert. en Si, avec Orch. ou deux V. T. et Vc.," Op. 4. "Air Suisse pour P. F. et Clav.," Op. 30. "Divertissement," Op. 6. "Rondo Militaire," Op. 12. "La Promenade sur Mer interrompue par la Tempête, Souvenir d'Italie," Op. 19. "Rondo Pastoral," Op. 20. "Fantaisie sur un Air Cosaque," Op. 22. "Fantaisie sur un Air Russe," Op. 25. "Ronde sixième," Op. 26. "Rondo huitième," Op. 28. "Quinze Sonatines faciles et progressives," "Variations d'un Andante," Op. 16. *Variations d'un Thème tiré de Figaro*, Op. 17.

KLES, F., a German instrumental composer, published some violin concertos at Breslau, since the year 1786.

KLETZINSKI, JOHANN, an instrumental composer of some eminence, resided at Vienna in the latter part of the last century, and published there several operas of violin music.

KLINGENSTEIN, BERNHARD. Director of the music at Augsburg in the year 1600. He published many sacred compositions for the church.

KLOCKENBRING, FRIEDRICH ARNOLD, secretary to a government office at Hanover, published there, in 1787, a work entitled "*Aussetzungen verschiedenen, &c.*" in which may be found the following dissertations: 1st, On the state of music in the countries newly discovered in the South Seas, and especially on the difference of the system of intervals of those people from our harmonic rules. 2dly, A letter on the question, If young persons in the higher ranks of society ought to learn music? 3dly, The answer of a lady to the preceding letter. Klockenbring was a very celebrated musical amateur. He died in 1795.

KLOEFFLER, JOHANN FRIEDRICH, an instrumental composer, published many works for the flute, violin, and piano-forte. He died at Steinfurt about the year 1792.

KLOSE, F. J., a native of London, studied composition and the piano-forte under a variety of masters, among the principal of whom was the celebrated Francesco Tomich. Klose was an able instrumental performer and a member of

most of the orchestras in London, particularly of the King's Theatre, and Concert of Ancient Music, the whole of which, with the exception of the last, he resigned, to devote himself exclusively to teaching and composition. As a composer, he was most esteemed for facile works. He also excelled in ballads of a pathetic and sentimental cast, of which several have acquired some degree of celebrity, as for instance, "The rose had been washed," by Cowper; "My native land, good night," by Lord Byron; and "Canst thou bid my heart forget," from Glenarvon, &c., &c. He is likewise the author of several ballets and detached pieces, which have been performed with success at the King's Theatre. The catalogue of his works is too extensive for insertion in this place, but the following are, (in addition to the above,) we believe, among the most useful and popular of his publications: "Practical Hints for acquiring Thorough Bass." "Instruction Book for P. F." "Six Sonatinas for P. F. and Violin." "Grand Sonata for P. F., Fl., and Violon." "Fourth Divertimento, with Henri Quatre, for P. F. and Fl., or Horn." "Preludes for P. F." "Selected Melodies, Books 1, 2, and 3." "Selected Melodies, Hibernian, Book 1." "Selected Melodies, Caledonian, Book 1." "Selected Melodies, Cambrian, Book 1." "Selected Melodies, French, (Duets,) Books 1 and 2." "*Les Desguisemens Amoureux, grand Ballet, performed at the King's Theatre, in six numbers.*" Various songs, &c.

KLUGLING. Organist of the Church of St. Peter and St. Paul at Dantzic, in 1782. He was considered among the best composers of his time on the organ and harpsichord, in the style of Schobert.

KNAFEL, JOSEPH LEOPOLD. A musician, resident at Vienna, known by the following compositions: "*Sept Variations pour le Clav. sur le Chœur des Papagenos,*" Vienna, 1799. "*Six Variations pour la Harpe, sur le Trio, 'Pria ch' io l'impegno,*" Vienna, 1799. *Aud Recueil pour la Harpe à crochets, cah. 1,* 1803.

KNAPTON, PHILIP, was born at York in the year 1788. He received his musical education under Dr. Hague, professor of music in the University of Cambridge, after which he returned to his native city. He published "Three Sonatas for the Piano-forte," and various other works for the voice, the piano-forte, and the harp, which have been favorably received by the public: of these, his song, "There be none of beauty's daughters," and his "Mrs. Macdonald," "Greck Air," "Caller Herring," &c., for the piano-forte, are generally known. He has composed several overtures for a full band, piano-forte concertos, &c.

KNECHT, JUSTIN HEINRICH, master of a Lutheran school, and director of the music at Biberach, in Suabia, was born there in 1752. His father was his first master in music, who, however, was not sufficiently versed in the science to do more for his son than teach him a few songs and tunes on the violin. Cramer, organist of the Catholic church in the same town, first taught young Knecht the principles of composition, in which he made such progress as, at the end of six months, to render his master's further services unnecessary. At the age of twelve he made his first public attempt at composition by an opera

entitled "*Abel und Cain.*" The genius which he evinced in this work attracted the notice of the privy counsellor Wieland, who felt the liveliest interest for the young composer, and not only encouraged him to continue his studies, but admitted him into his household, where he had access to the works of the greatest masters, and was also taught the Italian language. From this time, Knecht familiarized himself with the sacred, dramatic, and chamber music of the most celebrated composers of the various countries of Europe, increasing, during the same period, his theoretical knowledge by the perusal of the best didactic works. He further taught himself the flute, hautboy, horn, and trumpet; but the delicacy of his lungs obliged him soon afterwards to renounce these instruments. In 1768, he went to the collegiate church of Esslingen, where he continued the study of music under Schmidt, then chapel-master of that church. Here the lessons on the organ of Schmidt, and the perusal of the scores of Bach, Marpurg, and Graun served to complete his taste, and to develop those talents for which he afterwards became so eminent. After having remained three years at Esslingen, he prepared to go to the university, when Doll, director of the music in his native town, resigned his office, on account of his advanced age, and young Knecht, then only nineteen, was unanimously chosen his successor. He since resided almost continually at Biberach, and published, chiefly at Leipsic and Munich, a great variety of theoretical and practical works for the organ and piano-forte. Among these are the following: "The Musical Portrait of Nature, a Gr. Symph." "Short practical Piano-forte School, consisting of Exercises and easy Pieces in the most usual Major and Minor Modes, with marked Fingers and written-out Graces, four books." "Complete School for the Organ, for Beginners and those farther advanced, in three Parts, forming one thick Volume folio." "Organ Pieces for Beginners and Practitioners, No. 1." "New and complete Collection of all kinds of Preludes, Finales, Fantasies, Verettes, Fugettes, and Fugues, for Beginners and such as are more advanced on the Organ and Piano." "The 23d Psalm, for four Voices and Orchestra." And "Miriam and Deborah, from the tenth Canto of Klopstock's 'Messiah.'" "

KNELL The slow, periodical sound of a single deep-toned bell, rung at a funeral.

KNOEP, LUDER, an organist and composer of light instrumental music, resided at Bremen in the middle of the seventeenth century.

KNOOP, GEORGE, whose abilities as a performer on the violoncello were highly esteemed in this country, died at Philadelphia on the 25th day of December, 1849. The orchestras of the theatres performed a dirge at his burial in honor of him.

KNUPFER, SEBASTIAN, a singer and director of the music at Leipsic, was born in 1633. Some of his compositions for the church were much celebrated in Germany. He died in 1676.

KNYVETT, CHARLES, eldest son of Mr. Knyvett, organist to his majesty, an immediate descendant and representative of Sir John Knyvett, of the county of Norfolk, who, in the

reign of James I., arrested Guy Fawkes, and for that service was created Lord Knyvett, Baron Fkrygg or Askrygg. The family is ancient, and can be traced to William the Conqueror. Charles Knyvett received the vocal department of his musical education under Sir William Parsons, and studied the organ and piano under S. Webbe. He was appointed organist to the parish church of St. George, Hanover Square, in 1802. He was also a director of the Vocal Concerts in Hanover Square, conjointly with his brother, W. Knyvett, and Messrs. Grentorex and Bartleman. He afterwards engaged as a teacher of thorough bass and the piano-forte, in London, in which capacity he was very eminent.

KNYVETT, WILLIAM, younger brother of the preceding, was an eminent counter tenor singer, equally admired for the sweetness of his voice and the high finish and delicacy of his style in part singing. This gentleman and his brother are among the very few English singers remarkable for correctness in the musical enunciation of the words of the English language. He first commenced orchestral singing at the Concert of Ancient Music about the year 1795, since which period he has assisted in all the most important concerts and music meetings in London and the provincial towns. As a writer of glees, his productions are airy and elegant.

KOBELIUS, JOHANN AUGUSTIN, a German chapel-master at a town near Halle, was born in 1674. He wrote several operas for the German theatres between 1716 and 1729. He died at Weissenfels in 1731.

KOBRIGHT, JOHANN ANTON. Organist at Landsberg, in Bavaria, between the years 1748 and 1767. He published at Nuremberg and Augsburg thirteen works, consisting chiefly of harpsichord and organ music. The last of his publications that we have heard of was dated in the year 1788.

KOCH, ANTON ALBRECHT, chapel-master to the Prince of Bernstadt, resided chiefly at Breslau, and published many operas and other music. He died at Oels in 1745.

KOCH, HEINRICH CHRISTOPH, chamber musician to the Prince of Schwartzburg Rudolstadt, was born, 1749, at Rudolstadt; and in the year 1772 he was sent by his prince to Weimar, to complete his studies on the violin under the celebrated Goepfert, then principal chamber musician at that court. Koch published, in 1782, at Rudolstadt, "*Versuch einer Anleitung zur Mus. Composition*," (first volume,) which is considered a work of great merit and perspicuity. The second volume appeared in 1787, and the third in 1793. "*Journal der Tonkunst*," first and second parts, 1795. "*Tranerkantate*," 1790. "*Kantate bey der glucklichen Zurueckkunft der beyden Prinzen*," 1790. "*Die Stimme der Freude in Hygæens Haine*," 1790. And lastly, his most celebrated work, "*Musikalisches Lexicon, welches die theoretische und practische Tonkunst, encyclopædisch bearbeitet, alle alten und neuen Kunstwörter erklärt, und die alten und neuen Instrumente beschrieben enthält*," Frankfurt, 1802.

KOCH, JOHANN A. C., director of the opera buffa at Potsdam, in 1774. He was a good violin-

ist and performer on the double bass. He composed some dramatic music, and translated into German the French opera, "*Le Bûcheron*," music by Philidor.

KOEHLER, GOTTLIEB HEINRICH, a musician at Leipsic, published, since the year 1789, at the above town and at Dresden, various light instrumental pieces for the piano-forte, violin, flute, &c.; also, several collections of songs.

KOELLNER, BERNHARD WILHELM, author of "*Specim. Acad. de Principiis Harmonia Musicae*," Londini Gothorum, 1777.

KOELLNER, W. M. L. A German composer of vocal and instrumental music subsequently to the year 1791.

KOENIG, JOHANN M., of Ellrich, in Prussia, published, in 1782, 1783, and 1784, some vocal and dramatic music.

KOENIGSPERGER, R. S. MARIANUS, a Benedictine monk, published at Augsburg, between the years 1740 and 1760, twenty-two works of vocal and instrumental music. Some of these contain six masses, others six litanies.

KOENIGSLOW, JOHANN WILHELM VON, organist at Lubec, was born in Lubec in 1745. He composed and arranged much sacred music.

KOERBER, IGNAZ, chamber musician and performer on the horn to the Duke of Saxe-Gotha, was born at Mentz about the year 1744, and was very celebrated on his instrument. He resided during many years at Paris, where he rivalled the celebrated Punto. In 1785 he established a music warehouse at Gotha. It is said that late in life he changed his instrument for the bassoon, on which he attained an equal degree of eminence.

KOHATH, GERSHOM, and MERARI. These three families, in the time of David, furnished those who took the lead of the choral services; and those of Heman, a descendant of Kohath, Asaph of Gershon, and Ethan, sometimes called Jeduthun, of Merari, were the chief musicians. Four thousand Levites were divided into twenty-four classes, who chanted the inspired songs employed in their magnificent and impressive worship, accompanying their voices with various kinds of instruments. Each of these classes was under the superintendance of a leader, and performed their duties by turns—each class a week at a time. The whole were under the direction of Heman, Asaph, and Ethan, and probably, on certain occasions, were brought together and united in the performance. Their knowledge of harmony was very small: perhaps they knew nothing of the science as at present understood.

KOLB, JOHANN BAPTIST, a musician at Farth, near Nuremberg, was born in 1743. He was a pupil of Haydn and published at Paris, about 1782, six violin quartets. Many of his manuscript publications are to be found at Hamburg.

KOLBERER, CAJETAN. A Benedictine monk

in Bavaria, and composer of sacred music in the early part of the last century.

KOLLMAN, AUGUST FRIEDRICH CARL, organist of his majesty's Geruan Chapel, St. James's, was born in the year 1756 at Engelbostel, a village near Hanover, where his father was organist and schoolmaster. Though the son was intended for a similar station in life, he improved the opportunity of learning Latin with the son of the pastor of his village; and from the age of fourteen he frequented, during two years, the gymnasium at Hanover, in the second class. The succeeding five years he passed partly with his parents and partly at Hanover, where he learned music of J. C. Boettner, an able organist in J. S. Bach's style. In 1779 he was admitted into the academy (improperly called seminary) for intended schoolmasters to the electorate, now kingdom, of Hanover. Here he learned that methodical and systematical manner of teaching, which was very advantageous to him, not only in school instruction, but also in teaching music, and particularly in writing his musical treatises: he, at the same time, constantly heard or assisted Boettner on the organ of the principal church, (*marktkirche*,) also entirely officiated for him during six weeks that he was ill. At the end of 1781 he went to Lane, a Protestant establishment for noble ladies, still called a convent, near Lunenburg, where he had been appointed organist and schoolmaster, and had the encouragement of meeting with much approbation. But his majesty commanding that a person should be sent by the Hanoverian government to fill the place of organist and schoolmaster at the Royal Geruan Chapel, St. James's, Kollman was fixed on, and, in consequence of his new appointment, went to London in the autumn of 1782.

Here, though the school took him up part of four days every week, it left him sufficient time for attending to musical pursuits, as his publications will evince. Since the demise of Queen Charlotte, the school has been altogether discontinued. With respect to music, though Kollman, in England, applied himself principally to its theoretical department, he still found some time for practical composition and giving instructions in the science. His works divide themselves into three classes, namely, first, theoretical works, and other musical writings; secondly, theoretico-practical works, being compositions with theoretical explanations; and thirdly, practical works only. A distinct analysis of the contents of the first class of his works is given in the "Quarterly Musical Register," No. 1 and 2. The following is a list of the books: 1. "An Essay on Musical Harmony," folio, London, 1796. 2. "A new Theory of Musical Harmony," folio, London, 1806; and a second improved edition of it in 1812. 3. "An Essay on Practical Composition," folio, London, 1799; and a second improved edition of it in 1812. 4. "A Second Practical Guide to Thorough Bass," folio, London, 1807. N. B. This supersedes the first guide, and is not a second part of it. 5. "The Quarterly Musical Register," Nos. 1 and 2, octavo, 1812. 6. "Remarks on what Mr. J. B. Logier calls his new System of Musical Education," in the *Musicalische Zeitung* of Leipzig, 1821; and a sequel to the same, March, 1822. The second class, or theoretico-practical works, are,

1. "Twelve Analyzed Fugues for two Performers, with double Counterpoints in all Intervals, and Introductory Explanations," Op. 10, second edition, London, 1823. 2. "The Melody of the Hundredth Psalm, with Examples and Directions for a hundred different Harmonies, in four Parts," Op. 9, London, 1809. 3. "An Introduction to extemporary Modulation," Op. 11, London, 1820. 4. "The First Beginning on the Piano-forte, according to an improved Method of teaching Beginners," Op. 5, London, 1796. 5. "An Analyzed Symphony for the Piano-forte, Violin, and Bass," Op. 8, London, 1789. 6. "A Rondo on the Chord of the diminished Seventh," one sheet, 1810. Of the third class, the principal work is, "Concerto for the Piano-forte and an Orchestra, with the Cadences, as performed in public by Master Kollman," Op. 8, 1804. He died in 1829.

KONINCK, SERVAAS DE, a Dutch composer, died at Amsterdam about 1720. He published several collections of songs and some motets.

KONIZEK, a celebrated violinist at Prague, flourished about the year 1722. He was the master of the renowned A. F. Benda.

KOPPRASCH. A German performer on the bassoon, and composer for his instrument, towards the latter end of the last century.

KOSPOTH, OTTO CARL ERDMANN FREYHERR VON, chamberlain to the Prussian court, and canon at Magdeburg, was one of the most distinguished musical amateurs of Berlin. He published several vocal works for the church and theatre, also some instrumental music. His compositions bear date from the year 1787 to 1798.

KOSSLOWSKY, J. Chapel-master to the last King of Poland at Warsaw. He followed his royal master into Prussia, and on his decease, shortly afterwards, wrote the music for his funeral. He subsequently was appointed inspector of the Imperial Chapel at St. Petersburg, and in 1804 the funeral music which he wrote for the king was performed by the whole band of the Imperial Chapel on the death of Giornovich, Madame Mara taking the principal solo part. Kosslowsky also published some songs, and collections of *Polonoises*.

KOTZWARA, FRANZ. This musician was born in Prague, and went to London about the year 1791, after which he published some songs and instrumental music.

KOZELUCH, LEOPOLD, was born in Bohemia in 1753, and resided during the greater part of his life at Vienna. He wrote a great number of concertos, sonatas, and other pieces for the piano-forte; and his works first became celebrated in England in the year 1785, by the neat and accurate execution of them by Mlle. Paradies, the blind performer on the harpsichord. They are in general very excellent, possessing solidity, good taste, and correct harmony. Those of his sonatas, with obligato accompaniments for a violin and violoncello, are eminent for their taste, elegance, and propriety, for the adagios, and the art with which the passages are varied to suit the characters of the several instruments. The

following list contains Kozeluch's principal works. Vocal: "*Mazel*," a French comic opera; "*Didone Abandonnata*," a serious Italian opera; "*Mosé in Egitto*," an oratorio, 1787; this was performed at Vienna, for the benefit of the widows of musicians, by an orchestra of five hundred performers; many ariettes for Italian operas; many choruses and ariettes for German operas; many cantatas, among which latter are, "*Complainte sur la Mort de Marie-Thérèse, pour le Clavécin*," 1781. "*Joseph le Bienfaiteur de l'Humanité, un Extrait pour le Clav.*" "*Eine Hirtin, die die liebe*," recitative and air, 1785. "*Cantate pour un Soprano, en Italien, avec Vc. et le Clav., et avec Acc. de deux Violons, deux Hautbois, deux Cors, deux Violes et Basse*." Besides these, there are several collections of songs, with an accompaniment for the piano-forte; the last opera of which, entitled "*Douze Ariettes Ital., Fran., et Allemandes, tirées de Metastase*," was published in 1799. For the piano-forte: "*About fifty Concertos, with Accompaniments*;" "*Trois Concertos, à quatre mains*;" "*A Concerto for two Piano-fortes*;" eight or nine only of these concertos have been printed; above "*Sixty Sonatas*," of which more than forty have been printed, and among them three "*à quatre mains*." For other instruments: "*Serenades for Wind Instruments and others*;" "*Trios and Quatuors for Violin*;" "*Thirty Symphonies*," some of which have been printed at Vienna; "*Two Concertos for the Clarinet, and six Concertos for the Violoncello*."

KOZELUCH, JOHANN ANTON, chapel-master at the metropolitan church at Prague, was born in Bohemia, in 1738. He is considered as having been one of the greatest masters of his time, both in his compositions for the church and theatre. Among the latter, his two operas, "*Demophon*" and "*Alessandro in Indie*," were highly celebrated. Chladni speaks very highly of an oratorio by J. A. Kozeluch, entitled "*La Mort d'Abel*."

KRACHER, JOSEPH MATTHIAS, an organist near Salzburg, in Germany, was born in 1752. Previously to the year 1803, he had composed some excellent sacred music.

KRANZ, JOHANN FRIEDRICH, chamber musician and violinist, in the service of the Duke of Saxe-Weimar, was born in that town in 1754. He received his musical education partly in Italy, and in 1803 was appointed chapel-master at Stuttgart, succeeding in that situation to Zumsteeg. He has composed some pleasing vocal music.

KRAUS, JOSEPH, chapel-master to the King of Sweden, was at Mannheim in 1756. He was a pupil of the Abbé Vogler. His compositions were numerous, consisting of dramatic and instrumental music. He died at Stockholm in 1792.

KRAUSE, CHRISTIAN GOTTFRIED, an advocate at Berlin, was born in Silesia. He wrote "*Lettre sur la Différence entre la Musique Française et Italienne*," Berlin, 1748; "*De la Poésie de la Musique*," Berlin, 1782. This is a highly esteemed work. He also composed some vocal and instrumental music. Among the former are some sacred pieces highly esteemed. He died in 1770.

KRAUSS, BENEDICT, a good German composer for the church and theatre, was chapel-master to the Duke Clemens of Bavaria, and *chef-d'orchestre* of the court theatre at Weimar, in 1785. He wrote many works, among which, however, only six violin quartets have been published.

KREBS, JOHANN LEWIS, court organist to the Duke of Saxe-Weimar, at Altenburg, was a pupil of the great Sebastian Bach. He died in the year 1780. Among his compositions are "*Collections of Exercises for the Harpsichord*;" "*Easy Sonatas for the Harpsichord and Flute*;" "*Six Trios for the Flute*;" "*Six Sonatas for the Harpsichord and Flute*;" "*A Magnificat for four Voices and Bass*;" and "*Two Sanctuses for a full Orchestra*."

KREIBICH, FRANZ, a celebrated German violinist, flourished in Vienna about the year 1760, and composed some music for his instrument. He died in 1797.

KREITH, CARL, a flutist and composer for his instrument at Vienna, died previously to the year 1787.

KRESS, GEORGE FRIEDRICH, a virtuoso on the violin, and a native of Darmstadt, was, about the year 1756, in the chapel of the Duke of Mecklenburg, at Schwerin. In 1764 he went to Gottingen, where he was named concert master to the university. He died about 1775. One solo for the violin, of his composition, was printed at Nuremberg in 1764; besides this, there are manuscripts of his, consisting of six solos and a concerto for the violin.

KREUTZER, RODOLPH, born at Versailles in 1767, was the son of a musician in the King of France's band, and very early in life evinced considerable talent for music. He received lessons on the violin from Ant. Stamitz, and, at the age of thirteen, played in public a concerto of his master's composition, at the *Concert Spirituel*, with great success. When nineteen years old he had already composed two *grands opéras*, which were performed before the whole court. He subsequently travelled in Germany, Holland, and Italy, where he was generally considered one of the first violinists in Europe. He then received the appointments of first violin in the chapel and private music of Napoleon, *chef-d'orchestre* at the Grand Opera at Paris, and professor of his instrument at the Conservatory. Kreutzer composed many dramatic pieces, and much violin music. Among his principal works are the following. Dramatic: "*Jeanne d'Arc à Orleans*," 1790. "*Lodoïska*," 1791. "*Paul et Virginie*," 1791. "*Le Franc Breton*," Op. com. 1792. "*Charlotte et Werter*," 1792. "*Le Déserteur de la Montagne du Hamm*," Op. com. "*Le Siège de Lille*," Op. com. 1793. "*Armodius et Aristogiton*," 1794. "*Le Journée de Marathon*," 1793. "*Le Lendemain de la Bataille de Fleurus*," 1795. "*Le petit Page*," 1800. "*Flaminius à Corietto*," Op. com. 1801. "*Astianax*," 1801. "*Le Brigand*," Op. com. 1794. "*Imogène, ou la Gagure indiscrète*." Chamber music: "*Six duos pour Violon dialog. pour deux V.*," Op. 2. "*Trois Duos pour Violon dialog. pour deux V. Lie. 1.*" Zurich. "*Trois Duos pour Violon dialog. pour deux V.*," Op. 6. "*Etude de Violon ou Caprices. Recueil 1 et 2.*" 1796. "*Airs*

variés pour deux V. Liv. 1," 1798. " *Sinfonie Concert. pour deux V. et Vc. princip. avec Orch.*," 1795. " *Six Quat. pour deux V., A., et B.*," Op. 1. " *Ouverture de Marathon, à l'usage militaire.*" " *Onze Concerti à V. princip. avec gr. Orchest.*, No. 1," 1791. " *Symphon. Concert. pour deux Violons princip. avec gr. Orch., exécutée par l'Auteur et Rode*," 1800. " *Six Nouv. Quatuors pour deux V., A., et B., dédiés à M. Pleyel*," Op. 2, 1801. " *Trois Quat. pour V.*," 1801. " *Deuxième Potpourri, ou Air var. pour Violon, avec Acc. de Violon et B.*" " *Sonate pour le P. F., avec V. Oblig.*," 1802. " *Méthode de Violon, par les Citoyens Ballot, Rode, et Kreutzer, Membres au Conservatoire de Musique, rédigée par Baillet, adoptée par le conservatoire pour servir, à l'Étude dans cet Établissement*," 1803. " *Gr. Conc. pour Violon*," Op. 12. " *Six Airs, Variés pour deux V.*" " *Trois Sonatas faciles pour V. avec B. Let. A.*" " *Dix-huit nouv. Caprices ou Etudes du V.*"

KRIEGER, ADAM, chamber musician to the Elector of Saxony at Dresden, and a good poet, died in 1660. He composed many vocal pieces, some of which were published after his death.

KRIEGER, JOHANN PHILIP, the son of a merchant at Nuremberg, was born in the year 1649, and very early in life began the practice of music. After being under the care of several masters, he went into Holland, and from thence into Bayreuth, where he became first chamber organist to the margrave, and afterwards chapel-master in that city. In 1672 he travelled into Italy; and at Rome he considerably improved himself by the instructions of Abbatini, and of Pasquini, the famous performer on the harpsichord. On his return homeward, he continued some time at Naples, and took lessons from Rovetta, the organist of the church of St. Mark, in that city. On his arrival at Vienna, he was immediately invited to play before the emperor, who presented him with a purse of ducats, a gold medal and chain. He continued in the service of the emperor for some years, retaining, during all this time, his place of chapel-master at Bayreuth. Afterwards, being invited to Halle, he went thither, and at length became chapel-master to the Elector of Saxony at the court of Weissenfels, which function he exercised for nearly forty years. He died in 1727.

The works of Krieger are of various kinds. They consist of sonatas for the violin and viol da gamba; of field music, or overtures for trumpets, and other military instruments; of Latin and German psalms set to music; and songs in the several dramatic entertainments, composed by him, entitled "Flora," "Cecrops," and "Procris." Several lessons for the harpsichord, by Krieger, are also to be met with in manuscript, which appear to be written in a masterly style; but it is nowhere said that he published any compositions for that instrument.

KRIEGER, JOHANN GOTTHILFF, son of the preceding, was also chapel master at Weissenfels, and born there in 1687. He was an excellent organist.

KRIEGER, JOHANN, younger brother to J. P. Krieger, was chapel-master and organist at Zittau. He was born at Nuremberg in 1652. He composed some light harpsichord and organ music. He died suddenly in 1735.

KRIEGK, a violoncellist and chamber musician, to the Duke of Saxe-Meiningen, was born in 1750. He published several works for his instrument at Offenbach, between the years 1795 and 1798.

KROHN, CASPAR DANIEL, organist of two churches at Hamburg, about the year 1790, published there several easy pieces for the pianoforte.

KROMMER, FRANZ, chamber musician to a nobleman at Vienna, is considered not only an excellent violinist, but a very ingenious composer for his instrument. His works, both printed and manuscript, are numerous, and consist of symphonies, quintets, quartets, trios, &c. They bear date between the years 1793 and 1805.

KRONER, JOHANN VON, chapel master to the Elector of Bavaria, at Munich, died there about the year 1792.

KROUSTA. (Gr.) A general name applied by the ancients to all pulsatile instruments.

KRUMBHORN, CASPAR, was a native of Lignitz, in Silesia, and born in the year 1542. In the third year of his age, he lost his sight by the small pox, and became totally blind. He was placed by his brother, who was many years older than himself, under the care of a famous musician, of the name of Knobeln, by whom he was taught first to play on the flute, then on the violin, and lastly on the harpsichord. On each of these instruments he became so excellent, that he excited the admiration of all who heard him. His fame procured him, from Augustus, the Elector of Saxony, an invitation to Dresden. This prince was greatly astonished that a young man, deprived of the faculty of sight, should not only be an excellent performer on various instruments, but likewise be deeply skilled in the art of practical composition. He endeavored, in vain, to retain Krumbhorn in his service; for, preferring his own country to all others, he returned to Lignitz, and was appointed organist of the church of St. Peter and St. Paul there. This station he occupied for fifty-six years, during which time he had frequently the direction of the musical college. He died in 1621, and was interred in the church which he so long had served.

Although Krumbhorn is said to have been the author of many musical compositions, it does not appear that any of them were ever printed.

KRUMPHORN. (G.) The name of a portable wind instrument formerly much in use, the formation and tone of which resembled that of a small cornet. Some writers suppose it to have been the same with the *eromorne* and not unlike the bassoon. Organ builders corrupt this word into *eromona*, and apply it to one of their cornet stops, erroneously supposing that stop to have originally derived the name from its imitation of the tone of the Cremona violin.

KRUMPHOLZ, J. B., a celebrated harpist, also improver of and composer for his instrument, was born in Bohemia, and quitted Germany for Paris about the year 1775. Though a sound musician, as his works testify, he had the German manner of playing the harp. About the year 1793, he married, for his second wife, Mlle. Steckler, (afterwards the celebrated Madame Krump-

holz,) who went to London without her husband in 1795 or 1796. A few years subsequently, Krumpholz followed her to England, endeavoring to prevail on her to return with him to Paris: on her refusing to do so, he quitted England alone, for the latter capital, in an extremely unhappy state of mind, and in a short time put a period to his existence, by leaping into the River Seine. Krumpholz improved the harp, with the assistance of Naderman, senior, by extending its compass, and adding a swell pedal, for which he received the approbation of the committee of arts and sciences at Paris. He published eighteen operas for the harp; the first four of which consist of sonatas, the fifth is a duo, the sixth a concerto, and, among the rest, the tenth consists of airs with variations, and the rest are sonatas. He also published harp variations on an andante, by Haydn.

KRUMPHOLZ, MADAME, was born at Metz, where her father, a German, was teacher of music. She was very celebrated in that country as a harpist, and her style of playing was totally different from that of her husband, owing, as is supposed, to her having adopted P. Meyer's principles, which were published a few years before the period of her celebrity.

KUCIARZ, JOHANN, in the year 1800 *chef-d'orchestre* at the Italian opera at Prague, and organist there, was a pupil of Sager. He has composed several dramatic pieces for his theatre, also some organ music.

KUCHLER, JOHANN, a celebrated performer on the bassoon, resident at Bonn, about the year 1780. He published at Paris eighteen quatuors for different instruments, two symphonies, a concerto, and six duos for the violin. He also wrote the music to an operetta called "*Azakid*."

KUCKEN, FRIEDRICH WILHELM, one of the best German song composers of this century, was born in Lüneburg in 1810. He has written many popular songs and duets for the voice, sonatas, &c., for the piano, and some operas.

KUFFNER, JOHANN JACOB PAUL, organist at Nuremberg, was born there in 1713. He published some harpsichord music. He died in 1786.

KUFFNER, son of the preceding, was a good pianist. He resided several years at Paris, and was also in England. He published some music for his instrument.

KUIII, LORENZ, chapel-master at Hamburg about the year 1770, composed, among other works, an oratorio entitled "*La Passione di Gesu Christo*," the words by Metastasio.

KUIIIAU, FRIEDRICH, a good German composer and flutist, was born in 1786. He understood his instrument well, and evinced much taste in composition, and but for his untimely death would have attained high celebrity.

KUINAU, JOHANN, was the son of a fisherman of Geysinghen, a town near Altenburg, on the borders of Bohemia. In the year 1684, he was appointed organist of the church of St. Thomas, at Leipsic. During his residence at this

place, he wrote and published a dissertation "*De Juribus circa Musicos Ecclesiasticos*," which he afterwards defended against the censures of his adversaries. In 1689, he published two sets of lessons for the harpsichord; and, some years afterwards, two other sets; the one consisting of six, and the other of seven lessons. About 1700, he was appointed director of music in the University of Leipsic. In this station he died, in the year 1772, in the sixty-third year of his age.

Kuhnuu left behind him two musical manuscripts in Latin, which have never been published — "*Tractus de Monochordo, seu Musica Antiqua ac hodierna*," and "*Disputatio de Triade Harmonico*."

KUINAU, JOHANN CHRISTOPH, a singer and preceptor at the royal school of Berlin, may be reckoned among the most profound ecclesiastical contrapuntists of Germany, towards the close of the last century. His most celebrated work is "*Vierstimmige alte und neue Choralgesänge, mit Provinzial Abweichungen*," Berlin, 1786. Besides the above volume, he published "*Choralvorspiele für die Orgel und das Klavier*," Berlin, 1791, and "*Einige neue vierstimmige Choralgesänge*," 1797. J. C. Kuhnau died at Berlin in 1805.

KUINEL, AUGUST, chapel-master at Leipsic in 1682, published several works for the viola gamba and other instruments.

KUHNEL, JOHANN MICHAEL. A viol da gambist at Berlin, and afterwards at Dresden and Hamburg, in the beginning of the last century. He published at Amsterdam some works for his instrument.

KUMMEL, BERNHARD CHRISTOPHE, a German clergyman, published some vocal and instrumental music at Leipsic, between the years 1788 and 1802.

KUMMEL, JOHANN VALENTINE. An instrumental composer at Hamburg in the early part of the last century.

KUMMER. A performer on the bassoon at Dresden. In 1799 he was much admired at Leipsic, where he also published some music for his instrument.

KUMMER, FRIEDRICH AUGUST, a distinguished violoncellist and composer for his instrument, was born at Meiningen in 1797. He entered the chapel of the King of Saxony in 1822, where he became first violoncellist.

KUNZ, THOMAS ANTON, was born in 1759, at Prague, where he has chiefly resided, and has been considered an excellent composer and pianist. He published there, in 1781, a cantata entitled "*Pygmalion*;" since which time he has published several collections of songs. Kunz is likewise the inventor of a sort of organized pianoforte, called the *Orchestrion*, which has twenty-one stops, imitating almost every description of instrument.

KUNZE, C. H., a professor of music and instrumental composer at Heilbronn, published several pieces for the horn and flageolet, between the years 1793 and 1800.

KUNZEN, JOHANN PAUL, organist at Lubeck, was born in Saxony in 1696. From the age of seven years he was chorister in the church, and, within two years from that time, played the organ of the cathedral in the absence of the regular organist. At nine years of age, his father took him to Torgau and Freyburg, where he performed on the organ in public. In 1716, being then twenty years of age, he was sent to the University of Leipsic, with only about two shillings in his pocket. His distinguished talents, however, soon terminated his pecuniary embarrassments by procuring him access to the house of a distinguished family in the town, who treated him with generosity. As soon as he became better known, he was admitted to the orchestra of the opera, till at length the lessons which he gave in many of the first houses, the concerts at which he led, and the situation of organist of the church of St. Nicholas, which he held during the absence of Vetter, so spread his fame through the surrounding country, that he was invited to settle in several towns. In 1719, he established himself at Wittemberg, and founded a concert in that town, which was well attended. There also he married. After a residence of several years at Wittemberg, he became acquainted with a person high in a government office, who took him to Dresden, where he was introduced to Schmidt, Heinichen, and Volumier, with the latter of whom he formed a strict friendship. Here also he perfected his musical taste, under the directions of Christian Rau and Johann Kuhnau. His friends also procured him the opportunity of executing several of his compositions for the church, also his overtures and concertos, were so much applauded, that the queen had resolved to confer on him the office of chapel-master. At this time, 1723, the offer of the direction of the opera at Hamburg being made to him, he quitted Dresden for that town, where he wrote several operas, an oratorio, and other music. In the mean time his son, Karl Adolph, had attained the age of eight years, and his abilities were such that his father determined, in 1728, to exhibit his powers in Holland and England. In 1732, J. P. Kunzen accepted the situation of organist at Lubeck, where he remained till his death, which took place in 1781.

KUNZEN, KARL ADOLPH, according to others **JOHANN ADOLPH**, son of the preceding, was born at Wittemberg in 1720. The extraordinary precocity of his talent in harpsichord playing caused his father to carry him to England in 1729. He remained long in that country, and continued to improve in proportion to the expectations raised by his early talents. He published in London a book of lessons, which, Dr. Burney says, required genius to compose and hand to execute. He finally succeeded his father as organist at Lubeck. The whole of his works, which

were numerous, have remained in manuscript, with the exception of the sonatas above mentioned, and a few pieces published in 1787 by Cramer, in his "Flora."

KUNZEN, FRIEDWICH LUDWIG EMIL, chapel-master to the King of Denmark in the year 1813, was born at Lubeck in 1763. He studied at Kiel, in Holstein, and lived much in his youth with Professor Cramer. He was in early life remarkable for his ability as a pianist, his readiness in reading music, and his brilliant extemporaneous performance. His first composition of importance was an opera, produced at Copenhagen in 1790, and entitled "*Holger Danske*." After which he composed many other operas in the Danish language, also several oratorios, with other sacred music, besides many instrumental pieces. His works are very highly considered in the north of Germany.

KURTZWEIL. An instrumental composer, who probably resided at Vienna. He died before the year 1806.

KURZ. (G.) Short.

KURZINGER, IGN. FRANZ XAV., a court musician at Mergentheim, in Franconia, published at Augsburg, about the year 1758, a work entitled "*David et Apollo, iste profanus Parnassi, is sacer cæli uterque rex et jubilaris archiphonascus chori, sive 8 symphoniæ solemniores sed breves à 6, tam pro ecclesiâ quam aulâ compositæ*," Op. 1; also, "*Gelehrter Unterricht zum Singen mit manieren, und die Violin zu spielen*," Augsburg, 1763.

KURZINGER, PAUL, son of the preceding, was, in 1807, resident as a musician at Vienna. He has written several short dramatic pieces, and has also published several collections of songs, and some light music for the piano-forte. Kurzinger was born at Wurtzburg in 1760.

KUSSIR. An instrument in use among the Arabians, resembling the ancient lyre.

KUTTNOHORSKY, JOHANN NEPOMUK, chapel-master and singer at Prague, died in 1781. Among his works are two masses and eight symphonies.

KUZZI, ANTON JOSEPH, a musician, resident at St. Petersburg in 1796, was a pupil of Dittersdorf. He has published symphonies and concertos for almost all instruments, likewise several operas, among which we can name "*Belmont und Konstanze*," and many German and Italian songs.

KYRIE. The vocative of a Greek word signifying *Lord*. Masses and services frequently begin with this word. It is sometimes used as the designation of a sacred composition; as when we call a mass, or service, opening with it, a *fine Kyrie*.

L.

L. Left hand. Notes to be struck by the left hand, or foot, are sometimes written with an L. over them.

LA. The monosyllable by which Guido denominated the last sound of each of his hexachords. In the natural hexachord, it answers to the note A, and is applied to that note in sol-faing.

LABADENS, a French musician, published in 1797, "*Nouvelle Méthode pour apprendre à jouer du Violon et à lire la Musique.*"

LABARRE, MICHEL DE, a celebrated flutist, died at Paris in 1744. He composed two operas, "*Le Triomphe des Arts,*" and "*La Vénitienne.*"

LABARRE, LOUIS JULIAN CASTELS DE. Born at Paris in 1771, of a noble family of Picardy. Viotti was his master for the violin. In 1791 he went to Naples, where he studied composition under Sala, at the Conservatory of La Pietà. In 1793, he returned to France, and perfected himself in the science of music, under Mehul. After having remained during two years as first violin at the Théâtre Français, he entered the orchestra of the Grand Opera. He has published several works for his instrument, and some romances; has also composed the music of a petit opera, entitled "*Les Epoux de seize Ans.*"

LABARRE, TRILLE, a guitarist at Paris, towards the close of the last century, published several practical works, and a method for his instrument.

L'ABBE, FILS, a French violinist, published, in 1772, "*Principes de Violon.*" He is also known by eight other works for his instrument.

LABIAL. (From *labium*, the lip, L.) Uttered chiefly by the aid of the lips. The letters B, P, M, are called *labials*, because they can only be pronounced by closing the lips; and, when these occur at the beginning of a word, no sound can, of course, be emitted till the lips are again opened, which must, therefore, be done as quickly as possible.

LABIUM. (L.) The lip of an organ pipe.

LABLACHE, LUIGI. Luigi Lablache, the famous singer, who may safely be called, from the universal admiration which he excites, the first bass singer of our times, was born at Naples, on the 6th December, 1794. He is the son of the merchant Nicola Lablache, from Marseilles, who left his native country in 1791, and opened a mercantile establishment in Naples. He married there an Irish lady, by the name of Franziska Bietak, by whom he had the son who is the subject of this memoir. The father fell, in 1799, a victim of the revolution in Naples. Joseph Napoleon took an interest in this early orphaned

countryman of his, and procured him a place as pupil in the *Conservatorio della pietà de' Turchini*, in Naples, since he showed much talent and inclination for music. Here Lablache, then twelve years old, studied vocal and instrumental music. At first, he was rather negligent and idle; and only on being threatened with dismissal, he took up his studies more seriously. His musical talent was extraordinary and highly diversified. Thus he offered once, when a fellow-pupil, who was to play the double bass, suddenly fell sick, to take his part, although he had never once touched the instrument. After practising for three days, he played the part with complete success. Although he was yet very young, he wished to devote himself in particular to the stage, and not solely to music, especially not to instrumental music. Five times he secretly escaped from the Conservatory, trying to find an engagement in one of the theatres of the capital. His repeated attempts caused a royal law to be issued, that any theatre director in the whole kingdom, who should engage, without the express permission of the government, a pupil of the Conservatory, should pay a fine of 2000 ducats, and besides close his theatre for a fortnight. This prevented all further attempts of Lablache, and he quietly finished his course of instruction. On leaving the Conservatory, he was immediately engaged as "*Buffo Napolitano*" (comic) for the theatre *San Carlino*. He was only eighteen years old; yet five months after, he married the daughter of the celebrated actor Pinotti. She procured him the engagement of *Buffo Napolitano* at Messina, and soon after as bass singer at the theatre of Palermo, where he made his *début* in Pavesi's "*Marc Antonio.*" After a stay of five years he went to Milan on an engagement at the Scala, where he first appeared as Dandini in Rossini's "*Cenerentola,*" and where Mercadante wrote his opera "*Elisa e Claudio*" for him. His success was extraordinary; his voice, his style of performance, his action, in short his whole ensemble, was generally and highly admired. Thus he lived very happily for seven seasons in Milan, and might be there still, if the desire of a more general reputation had not led him to travel through nearly all Europe. He went first to Turin, and sang in the difficult part of Uberto in Paer's "*Agnese*" with great applause, and from there he went in a short time, as in a triumphal tour, over all the theatres from Naples to Venice. In 1824 he appeared in Vienna, and enraptured the audiences in four successive evenings in the different parts of Figaro, Assur, Geronimo and Uberto so much, that a medal was coined for him, which bore the inscription by the Marchese of Gargallo: "*Actione Roscio, Iope cantu comparandus, utraque larvu consorta ambobus major.*" Even Madame Fodor and Rubini, these favorites of the Vienna public, had to stand back. After the congress of Laybach, Lablache had an audience at Vienna with Ferdinand I., King of Naples. He was received by this monarch in the

most flattering manner, nominated singer of the Royal Chapel, and dismissed with the promise of a pension for life for his father-in-law. After an absence of ten years, he returned to Naples, but now not to the little theatre of San Carlino, but to the vast one of San Carlo. He made his *début* there in the part of Assur, in Rossini's "*Semiramide*." From there he went to Parma, where he sang on the occasion of the opening of the theatre in Bellini's "*Zaira*;" from 1830 to 1832, he sang in Paris and London. His formerly high, noble, truly beautiful, and therefore, from its first appearance, imposing figure, has in later years lost much by a rapidly acquired and increasing stoutness; but his voice and wonderful art are unimpaired; and if, on his first entrance, the audience can hardly help laughing at his extraordinary, stout figure on the stage, this lasts only until his charming voice is heard, and until he enters into action, when their feelings immediately are changed to high rapture, which regularly breaks out in enthusiastic applause. He is as excellent an actor as he is a beautiful singer, and as wonderful in comic as in serious parts. His voice, among the most sonorous ever heard on the stage, is pure, full, powerful, and flexible; his style of performance truly artistic, and what we prize not less highly, his behavior always that of a refined gentleman. Not only his qualities as an artist are excellent, but also his private virtues. He is modest, frank, generous, benevolent, an amiable husband and father, and thus a celebrated artist on the stage, and a pleasant, virtuous man in society.

LABORDE, JEAN BENJAMIN, born at Paris in 1734, was of an opulent family, and received a distinguished education, both in the classical sciences and arts. He received lessons on the violin from the celebrated Dauvergne, and in composition from Rameau. Destined by his friends for the department of public finance, he soon got access to the court, where, from first valet de chambre to Louis XV., he became in a short time the confidant and favorite of that prince, whose liberality placed at his disposal large sums of money, which he soon dissipated. Still he did not neglect music, and in the year 1758 produced the comic opera "*Gilles Garçon Peintre*," which was well received, and which he followed up by several successful dramatic works. At the death of Louis XV., in 1774, Laborde quitted the court, married, and commenced leading a more steady life. He reentered the company of *fermiers-généraux* to which he had belonged several years preceding, and devoted himself to various studies. In 1780 he published his "*Essai sur la Musique Ancienne et Moderne*," 4 volumes in 4to., with plates — a book, which, in a literary point of view, did him little credit, as it was got up in haste, and abounds in errors and contradictions. He afterwards published other works of no greater merit. At length the French revolution brought with it ruin to Laborde, who, as a *fermier-général*, was particularly obnoxious to the revolutionists. He was soon imprisoned, and, in 1794, suffered death by the guillotine. As a vocal composer, Laborde was celebrated by several peculiarly pleasing romances, among others, "*Tois-tu ces côteaux si noirs!*" "*L'amour me fait, belle brunette*," and "*Jupiter un jour en fureur*."

LA CHASSE. (F.) An expression applied to a composition written in the hunting style.

LACHNER, FRANZ, Maitre de Chapelle of the King of Bavaria, was born in 1804, at Krain, a little town of that kingdom, where his father was organist. From his earliest infancy he was instructed in music, and so rapid was his progress that it was soon necessary to think of giving him more skilful teachers. He was sent first to Nuremberg, and then to Munich, where Winter became his master in composition. Winter dying before Lachner had completed his studies, he was placed under the direction of Eisenhofer, with whom he completed his musical education. Already his learning was extensive in the theory and practice of his art; nevertheless, believing that much yet remained for him to learn, he went to Vienna, where he hoped to find favorable opportunities for the development of his talent: he was not deceived in his expectations, for he soon formed friendship with the most distinguished artists of the Austrian capital, and especially with the Abbé Stadler, whose counsels were of much service to him. At this time he read with avidity all the best works extant on the theory, practice, and aesthetics of his art; his taste and judgment were formed from the best models; and, finally, to the talent of a skilful executant on the organ, piano, and violin, he added the merits of a great erudition. At a trial for the place of organist of the evangelical church of Vienna, he bore away the palm among thirty competitors; but he did not long retain the position, abandoning it in the following year for that of director of music at the theatre of the Porte de Carinthie. In 1834 he resigned the latter post for that of Maitre de Chapelle of the ducal court at Manheim. He received the most brilliant reception in this city, where he celebrated his arrival by the execution of his third grand symphony. In 1835, a prize being offered at Vienna for the best symphony, Lachner composed one with the title "*Sinfonia Passionata*," and handed it in to the jury who were to decide on the merits of the competitors. The first prize was awarded to him; M. Strauss, Maitre de Chapelle at Carlsruhe, obtained the second. Lachner had no sooner completed his symphony than he received his appointment as Maitre de Chapelle to the King of Bavaria, and he departed to Munich, leaving to his brother his place of director of music at the court of Manheim.

Previous to Lachner's establishment at Munich, the larger part of his great compositions had only been heard in Vienna, where they enjoyed the highest consideration. Among his principal works are, 1. "The Four Ages of Man," oratorio. 2. "*Moïse*," idem. 3. "First Symphony for Grand Orchestra, in *mi bémol*." 4. "Second do, in *fa*." 5. "Third do." 6. "Fourth do." (*Sinfonia Passionata*), which received the prize at Vienna. Among his lesser works are, 1. "*Sonate pour piano et violoncelle*," Op. 14, Vienne, Mechette. 2. "*Grande Sonate, pour piano à 4 mains*," Op. 20, Vienne, Leidesdorf. 3. "*Premier nocturne à 4 mains sur des thèmes français*," Op. 12, Vienne, Pennauer. 4. "*Deuxième idem sur des thèmes d'Oberon*," Op. 22. 5. "*Des caprices et des marches à quatre mains*," *ibid.* 6. "*Deux grandes Sonates détachées pour piano seul*," Op. 25 et 27, Vienne, Pennauer et Machetti. 7. "*Rondeaux brillans pour le piano*," Op. 8 et 17, *ibid.* 8. "*Introduction et variations brillantes sur un thème original*," Op. 15, *ibid.* 9. "*Des recueils de chansons allemandes*."

LACHNITH ANTON. This industrious composer, born in 1756, was a native of Prague, and probably changed his first residence, which was in Zweybruck, about the year 1780, for Paris, where, in 1812, he enjoyed, and justly, a very high reputation as an artist. In his youth he was an extraordinary performer on the clarinet. He was also considered a good player on the violin and piano-forte. In Paris he seems to have devoted himself entirely to the latter instrument; and has published in that city, in conjunction with Adam, a didactic work on the piano-forte, which the Conservatory has given the preference to, and ordered that the students in that establishment should be instructed from it. The following is its title: "*Nouvelle Méthode, ou Principe général du doigté pour le Forte-piano, suivie d'une collection complète de tous les traits possibles, avec le doigté en commençant par les plus aisés, jusqu'aux plus difficiles, terminée par un dictionnaire de passages aussi doigtés et tirés des auteurs les plus célèbres, par L. Adam et Lachnith.*" Paris, 1798. His practical works had, towards that year, already reached their fifteenth number, of which we can only mention here, "*Six Violin Quartets,*" Op. 7; "*6 Conc. pour le P. F.,*" Ops. 9 and 10; "*6 Gr. Symph.,*" Ops. 11 and 12; "*12 Trios Conc. pour P. F. et V.,*" Ops. 14 and 15. There is, however, a much greater number of symphonies, overtures, and operas, originally composed by others, which have been arranged for the piano-forte and published by Lachnith.

LACHRIMÆ. (From the Latin.) The name formerly given in England to the dolorous strains of the Calvinists.

LACHRIMOSO. (L.) Tearful. A word implying that the movement to which it is prefixed is to be performed in a mournful, pathetic style.

LACY, ROPHINO. This eminent violinist was by birth a Spaniard; but his parents, though many years established in Spain, were British. His father was in the commercial line, and had, at one period, acquired a very considerable fortune. Rophino, his youngest son, among other branches of education, being instructed in music from the early age of five years, was fortunate enough to make so rapid an advancement, that, when only six years old, on the arrival of a celebrated violinist from Madrid, named Andreossi, the child performed (as a young amateur) for the first time in public, at his concert, one of Giornovich's concertos, and was flattered with a general *encore*. In order to be seen by the audience, he was obliged, during his performance, to stand upon a table. He was at this time considered as a little *prodigy* in music, and shortly afterwards his father, being called by business to Madrid, took Rophino with him. During a short residence in that city, he performed at court with many encomiums, and received the most flattering notice from the principal grandees. About the beginning of the year 1802, he was sent to college at Bourdeaux, in France, where he remained eighteen months, and then went to Paris to complete his education at one of the principal seminaries in that city, where he made a very creditable progress in the classics, taking precedence of boys nearly double his age, and obtaining various prizes at the yearly public examinations. His principal instructor in music, at this period,

was the celebrated Kreutzer, for many years leader of the Grand Opera in that city. About the year 1804, some little time after the coronation of Napoleon I., Lacy had the honor of performing before the emperor at the Tuileries, and of being distinguished by his particular notice. He was known by the name of *Le petit Espagnol*.

His father about this time, having met with many pecuniary losses in his speculations to America, resolved, from the favorable reports made to him of his son's musical attainments, to devote him entirely to the musical profession; accordingly, repairing to Paris, he took Rophino, very much to his regret, from his scholastic pursuits, with the intent of proceeding to England, and there obtaining for him the instructions of the far-famed Viotti. They proceeded on their journey by way of Holland, at the principal cities of which country Lacy had numerous introductions to the higher classes, and was fortunate enough to obtain some reputation. He performed, likewise, at the then court of *Schimmelpeunick*, at the Hague, with great success. Having obtained passports at that difficult period, he was carried to England, and arrived in London at the end of October, 1805, being then ten years and three months old. There he was introduced into the first circles, his reception in which was greatly improved by the fortunate facility with which he spoke the French, Italian, Spanish, and English languages. For more than a year and a half after going to England, his name was not publicly known, his general appellation being that of *the young Spaniard*.

At the musical parties of the Duke of Sussex at Kensington, and of the Austrian ambassador Count Starhemberg, Lacy's performances were honored by the approbation of George IV., the Prince of Wales, and other members of the royal family, and his first concert at the Hanover Square rooms was under the patronage of their royal highnesses the Prince of Wales, the Duchess of York, and the Duke of Sussex.

In May, 1807, there was published a well-executed print of Rophino Lacy, engraved by Cardon, from a drawing by Smart, and bearing the first public announcement of his name, namely, "*Master M. M. J. R. Lacy, the celebrated young Spaniard, born in Bilbao, July 19, 1795.*" About this period Rophino was taken to Dublin, with letters of introduction to the then lord and lady lieutenant, the Duke and Duchess of Richmond, and performed at Catalani's first concert in that city. He was next engaged for Corri's concerts at Edinburgh, receiving twenty guineas per night.

About this period, in obedience to his father's will, Rophino sacrificed the musical for the theatrical profession, and success favoring his efforts, he long supported a principal rank in the drama, performing at the theatres royal Dublin, Edinburgh, Glasgow, &c., the first characters in genteel comedy for many seasons, only making use of his musical abilities as an attraction on his benefit nights, which were generally very productive.

His return to the musical profession did not take place till the middle of the year 1818, when application was made to him to succeed Yaniewicz in the department of leader to the Liverpool concerts, which are always frequented by the best singers from the Italian Opera House, and the two principal theatres of the metropolis

There he continued till the end of the year 1820, when he returned to London, and was engaged at the Opera House, in the season of 1821, as leader of the ballets; but shortly after the commencement of the season, disagreeing with one of the directors, quitted the situation until the season of 1824, when he once more resumed his place at the head of that orchestra.

Rophino Lacy's works, hitherto published, are mostly for the piano-forte, or piano-forte and flute. The principal are, an arrangement of four of Rossini's most celebrated operas, namely, "*Il Tuvo in Italia*," "*La Gazza Ladra*," "*Otello*," and "*Mosè in Egitto*." Three rondos, namely, one on the carnival of Venice, dedicated to the right honorable Lady Emma Sophia Edgcombe; one on a popular Irish air by Whittaker; another dedicated to Mrs. St. Alban. "A Quintetto, for two Violins, Tenor, Flute, and Violoncello, with Piano-forte Accompaniment," dedicated to William Graham, Esq., and "Six Popular Songs, with Guitar Accompaniments."

LACY. This celebrated English singer received the rudiments of his musical education at Bath, under Rauzzini, and subsequently studied in Italy, where he so entirely mastered both the language and the style of singing of the natives, that he appeared to superior advantage, even by the side of the most approved Italians. From the weak state of his health, Lacy was induced, in the year 1818, together with his wife, to accept an engagement at Calcutta. Lacy was considered by competent judges to be, without question, the most legitimate English bass singer, the most accomplished in various styles, and altogether the most perfect and finished that had appeared in that country. He was endowed by nature with organs of great strength and delicacy; his voice was rich and full-toned, particularly in the lower notes; his intonation perfect, and his finish and variety in graces remarkable. So considerable were his attainments thought by the Italians, that he was offered engagements at the operas of both Florence and Milan.

LACY, MRS. BIANCHI, wife of the preceding, first became known in England as an orchestra singer, in the year 1800, when she appeared at the Ancient Concert, being then Miss Jackson. She first married Francesco Bianchi, the composer, who lived but a short time afterwards. She accompanied her second husband to Calcutta. Mrs. B. Lacy was celebrated for her pure and chaste style of singing, fine intonation, and, above all, her beautiful articulation.

LADORNER, S., a musician in Paris, living in 1812, seems, with the exception of the initial *c.*, his Christian name, to be identical with the following. Gerber finds, however, the name spelt as above in the *Journ. de la Littér. de Fr.* An. 6, p. 127, and before the following work, composed by him, "*Trois Grandes Sonates, avec la Charge de Cavalerie, pour Clav.*," Op. 4, Paris, 1798.

LADURNER, N., a Parisian composer, has written for the theatres there, "*Les vieux Four*," and "*Senzel, ou le Magistrat du Peuple*," 1794. He has also published "*Trois Sonates pour le Clav., F., et Vc.*," Op. 1, Paris, 1793, and "*Trois Sonates pour le Clar. avec V.*" Op. 5, 1802.

LAELIUS, D. DANIEL. A professor of the lute in the beginning of the seventeenth century. He published "*Testudo Spiritualis*," Frankfurt, 1616, 4to. This work contained the "*Lobweasser Psalms*," with French melodies for the lute.

LAETIUS, JACOBUS, a learned author, the period of whose birth is uncertain, was a native of Louvain. He published a treatise under the title of "*Encomium Musicæ*," Maestricht.

LAFFILARD, a French musician, published, in 1710, a very easy method for the attainment of singing at sight. In this work we find the first idea of the *Metronomæ*.

LA FINALE. The last figure of a quadrille.

LAFOND, a good French violinist, and pupil of the celebrated Rode, made his first appearance in public at Paris, in 1800. He was then only fifteen years old. His excellent performances procured him the greatest applause.

LAFONT, CII. PH., a celebrated French violinist, resident during many years in Russia, was a native of Paris. His first violin master was Bertheaume, (his uncle,) and he received lessons in composition from Navoigille the elder, and Berton. Early in life he travelled to various courts of Europe with his uncle Bertheaume. On his return, Garat introduced him to the public, in 1794, as a singer, in which art he was entirely self-instructed. He next appeared, with great success, as a violinist, at the opera and other concerts in Paris. He published some concertos and other music for his instrument. Lafont was highly esteemed in France for his *chantant* and graceful performance of the violin.

LAFORET, a celebrated French bass singer, was a pupil of Lully. He sang at the French Grand Opera immediately after its establishment, and Lully composed several scenes for him.

LAGARDE, a French musician, was, in 1788, at Paris, as *surintendant de la musique* of the Count d'Artois, also *maître de musique* of the Enfants de France. He was the composer of the opera "*Egle*."

LAGKNER, DANIEL. Organist at Lisdorp, in the beginning of the seventeenth century. He was composer to Count Losenstein, and published "*Melodia funebris 6 vocum*," Vienna, 1601; "*Solo's Musica*," i. e., "*Cantiones Sacre 8 vocum*," 1602. It contains twenty-eight Latin hymns. "*Florum Jessæorum semina vocibus quatuor per musicos numeros disseminata, per, etc.*" Nuremberg, 1607, and "*Neuwe teutsche Lieder mit 4 Stimmen*," Nuremberg, 1606, 4to.

LAGO, GIOVANNI DEL, a native of Venice, flourished towards the middle of the sixteenth century, and wrote "*Breve Introduzione alla Musica Misurata*," Venezia, 1540.

LAGRANGE, JEAN LOUIS DE, member of the French Institute, and born at Turin in 1736, wrote a dissertation on the propagation of sound which appeared in the first volume of the *Mémoires de Turin*, 1759.

LAGRIMOSO. (I.) In a mournful, dolorous style

LAIHARPE, J. F. This celebrated French *homme de lettres*, was the author of the "*Lyce, ou Cours de Littérature ancienne et moderne*," tom. xii., Paris, 1801, gr. 8vo. In the twelfth volume of that work, he treats of every sort of opera, also of Italian music. He also examines the novelties in modern French music, and, in a supplement, especially considers the *Mémoires sur la Musique* of Gretry.

LAIHOSSAYE, PIERRE, one of the best pupils of Tartini, was born at Paris in 1735. Gifted with a happy organization for music, he instructed himself on the violin in early childhood, and at only seven years of age could play several tunes very agreeably. Piffet, (called *le grand nez*), a musician at the Grand Opera at Paris, gave him his first instructions in music, and enabled him, when only nine years old, to make his *début* at the *Concert Spirituel*. A short time after this he was introduced at a musical party given by the Count of Semeterre, where he heard the first violinists of the age, especially Pagin, Gaviniés, Pugnani, Giardini, Vanmalder, and Domenico Ferrari. Each of these celebrated men played a solo, and they all remarked the enthusiasm with which the young Lahoussaye attended to their performance. Ferrari then gave the boy a violin, when he not only preluded in a brilliant style, but repeated from memory several passages in a sonata of Tartini, that Pagin had just before played, which pleased the latter so much, that he took the boy for his pupil; he also immediately procured him the place of chamber musician to the prince Count of Clermont. The good fortune which Lahoussaye was now enjoying, did not, however, prevent his continuing to cherish a strong desire to see Tartini. He therefore attached himself to the suite of the Prince of Monaco, and went with him to Italy, proceeding immediately to Padua, to pay his respects to his favorite master. He found him in the church, just about to commence a concerto; and it would be impossible to express the surprise and admiration of the young Frenchman, at the purity, accuracy, quality of tone, and expression of the great Tartini. He felt so humbled as scarcely to wish to hazard an introduction. He did so, however, when Tartini received him with kindness, and observing in his performance the manner of his own school, took him as a regular pupil. Lahoussaye was, however, to his great regret, soon recalled from Padua, by the Prince of Monaco, with whom he next went to Parma, where he much delighted the court. In this town he received instructions in composition from the celebrated Traetta, and composed many *airs* for ballets, which had the greatest success at Parma and Venice. After this he found means to return to Tartini at Padua, and continued for a long time under his tuition, remaining in Italy altogether during fifteen years. He then, in 1769, went with P. Guglielmi to London, where he remained three years, and from thence returned to Paris. He was now nominated to the situation of *chef-d'orchestre* at the *Concert Spirituel*, and at the Italian Opera. In 1789 he succeeded Mestrino as *chef d'orchestre* of the theatre of Monsieur, and afterwards of the Feydeau. At the first establishment of the Paris Conservatory he was appointed professor of the first class. Lahoussaye died at Paris.

LAIOLLE, FRANC DE. We meet with some

of this composer's melodies in a collection of songs of various languages, printed in the Netherlands between the years 1530 and 1540.

LAIRE, M. DE, or DELAIRE, a French artist, wrote "*Traité d'Accompagnement*," Paris, 1700. He was the first, after Rousseau in his dictionary, who made the French acquainted with the *règle de l'octave*, or the harmony upon the ascending and descending scale.

LAIS, or LAYS, FRANÇOIS. First tenor of the Grand Opera in Paris in 1798. He attracted the universal applause of French amateurs by his clear and agreeable voice and tasteful delivery. Chapel-master Reichardt says, that in expression he excelled even the celebrated David. Laïs was born in 1758, and was equally celebrated as a church and theatrical singer.

LALANDE, MICHAEL RICHARD DE, born at Paris in the year 1657, was the fifteenth child of his parents, and discovering in his infancy a strong propensity to music, he was entered as a chorister of the church of St. Germain l'Auxerrois, and was there distinguished for the fineness of his voice. At the age of about sixteen his voice left him, but before that time, by diligent application, and frequently spending whole nights in practice, he had attained to great perfection on various instruments; on the violin in particular he played with great facility and judgment. He enjoyed in succession the two offices of music master of the king's chamber, and that of superintendent of music in the Royal Chapel. His motets, which were always performed before Louis XIV. and Louis XV. with great applause, have been collected and published in two volumes in folio. The "*Cantate*," the "*Dixit*," and the "*Miserere*" are principally admired. He died at Versailles in 1726.

LALOUETTE, JEAN FRANÇOIS, a pupil of Lully, successively conducted the music in the churches of St. Germain l'Auxerrois and Notre Dame. He composed many motets for a full choir, which are much admired; but none of his compositions have been published, except some motets for the principal anniversary festivals, for one, two, and three voices, with a thorough bass. He died at Paris in 1723, at the age of seventy-five.

LAMARRE, N. DE, a French violoncellist, was a pupil of Henri Levasseur; he also took some lessons of the celebrated Duport. Lamarre was much admired in Paris about the year 1800.

L'AME. (F.) The sound post of a violin, tenor, &c.

LA MAUPIN. La Maupin, the successor of La Rochois, may be noticed on account of her wild and lawless character, and the strangeness of her adventures. She was born in 1673, and married at a very early age, but soon ran away with a fencing master, from whom she learned the use of the small sword. After remaining for some time at Marseilles, where she narrowly escaped the punishment of being burned alive for setting fire to a convent, she went to Paris, appeared on the opera stage at the age of two and twenty, and was for a considerable time the reigning favorite of the day. Having on some occasion been

affronted by Dumoni, a singer, she put on male attire, watched for him in the Place des Victoires, insisted on his drawing his sword and fighting her, and, on his refusing, caned him and took his watch and snuff box. Next day, Dumoni having boasted in the Opera House that he had defended himself against three men who had attempted to rob him, she told the whole story, and produced his watch and snuff box in proof of her having chastised him as a coward. Thevenard, another singer of note, was nearly treated in the same manner, and had no other way of escaping but by publicly begging her pardon, after hiding himself in the Palais Royal for three weeks. At a ball given by Monsieur, the brother of Louis XIV., she appeared in men's clothes, and, having behaved imperpetually to a lady, was called out by three of her friends. Instead of avoiding the combat by discovering her sex, she drew her sword, and killed all the three; and then, returning very coolly to the ball room, told the story to Monsieur, who obtained her pardon.

LAMB, BENJAMIN, organist of Eton College, and vergier of the chapel of St. George, at Windsor, composed many anthems, at the beginning of the seventeenth century.

LAMBERT, G. L., was born at Beverley, in Yorkshire, in the year 1795, and received the rudiments of his musical education under his father, who was organist of the minster, the principal church in that town. The son was particularly well grounded in the rules of harmony, and in playing upon the organ, and, at the age of sixteen, was sent to London to complete his education: he was first placed under S. T. Lyon for two years, and lastly under Dr. Crotch. His earliest attempt at composition was made a short time previously to leaving Lyon, when he composed a trio for the piano-forte, violin, and violoncello, and a sonata for the piano-forte: the latter, in compliance with the wishes of his friends, he published. During his studies under Dr. Crotch, he composed several fugues, overtures, &c. In 1818 he had the misfortune to lose his father, when, his relations wishing him to reside with them, he applied for the organist's situation at Beverley, and obtained it. He has composed and published "A Duet for two Performers upon the Piano-forte," also "Three Trios for the Piano-forte, Violin, and Violoncello," "A Sextet for the Piano-forte, Violin, Viola, Violoncello, two Horns, and Double Bass."

LAMBERT, MICHAEL, was born in the year 1610 at Vivonne, a small village of Poitou. He is supposed to be the first who gave his countrymen a just notion of the graces of vocal music. His compositions, however, are not very numerous, consisting only of some little motets, music for *leçons de tambour*, and a collection, containing various airs of one, two, three, and four parts, with a thorough bass. He died at Paris in 1690.

LAMBERT, M. A composer in Paris, from whose works Pleyel has published, in 1799, a "*Rondeau, à six et à Plume*." It is for the voice and piano-forte. His Op. 3, dedicated to Madame de Genlis, appeared in 1805.

LAMBERT, JOHANN HENRY, A French architect. His treatise, which he read before the Academy of Berlin in 1774, entitled "*Remarques sur le Tempérament en Musique*," was inserted in

the Memoirs of the Academy of Berlin of the same year. The following excellent treatises on acoustics of this mathematician deserve also to be named here: "*Observations sur les Tons des Flûtes*." It is a very interesting subject, and well treated in the *Mémoires de l'Académie de Berlin*, 1775. "*Sur le Son des Corps Élastiques*," in the *Nouv. Act. Helv.*, tom. i. p. 42. "*Sur la Vitesses du Son*," in the *Mémoires de l'Académie de Berlin*, 1768; and "*Sur quelques Instrumens Acoustiques*," in the *Mémoires de l'Académie de Berlin*, 1763.

LAMBERTINI, GIOVANNI TOMASO, a composer, who flourished in Venice about the middle of the sixteenth century. He printed there, in 1569, the seven penitential psalms, for four voices. In the elector's library, at Munich, are also to be found "*Madrigals à 4 voci*," by him, Venice, 1560.

LAMBO, C., organist of St. Nicholas Church, Hamburg, published, in 1754-1755, a collection of odes, set to music, which are much admired.

LAMENTABILE, LAMENTOSO, LAMENTANDO. (L) Plaintively.

LAMETATIONE. (L) A term denoting that the movement before which it is placed is to be sung, or played, in a doleful, melancholy style.

LAMENTATIONS. The funeral music of the ancient Jews was called by this name. At the death of any one, it was not only usual to employ tubicines, or flute players, to perform over the body of the deceased, but to hire at least one vocal female mourner, or lamentatrix. From the rabbi Maimonides, we learn that the husband was obliged to provide mourners to weep over the corpse of his deceased wife, and at her funeral; or, at least, that this was the established custom of the country. The poorest persons among the Israelites, he tells us, engaged two flutes and one female mourner; and if the husband were rich, the expense and pomp of the ceremony were proportioned to his wealth and dignity.

LAMENTATRICES. The name given by the ancient Hebrews to certain female vocal performers, who were hired to chant over the dead, and to sing dirges at funerals; on which occasions they were accompanied with flutes.

LAMENVELOLE. By this term the performer understands that the music before which it is placed is to be executed in a slow and mournful style.

LAMENTS. The name given by the Scotch to some of their old, serious, and melancholy airs.

LAMIA. The most celebrated female flute player in antiquity was Lamia; her beauty, wit, and abilities in her profession made her regarded as a prodigy. The honors she received, which are recorded by several authors, particularly by Plutarch and Athenæus, are sufficient testimonies of her great power over the passions of her hearers. Her claim to admiration from her personal allurements does not entirely depend, at present, upon the fidelity of historians; since an exquisite engraving of her head, upon an ame-

thrust, with the veil and bandage of her profession, is preserved in the King of France's collection, which, in some measure, authenticates the accounts of her beauty.

As she was a great traveller, her reputation soon became very extensive. Her first journey from Athens, the place of her birth, was into Egypt, whither she was drawn by the fame of the flute players of that country. Her person and performance were not long unnoticed at the court of Alexandria; however, in the conflict between Ptolemy Soter and Demetrius for the Island of Cyprus, about three hundred and twelve years before Christ, Ptolemy being defeated in a sea engagement, his wives, domestics, and military stores fell into the hands of Demetrius.

Plutarch, in his life of this prince, tells us, that "the celebrated Lamia was among the female captives taken in this victory. She had been universally admired at first on account of her talents, for she was a wonderful performer on the flute; but afterwards, her fortune became more splendid by the charms of her person, which procured her many admirers of great rank." The prince whose captive she became, and who, though a successful warrior, was said to have vanquished as many hearts as cities, conceived so violent a passion for Lamia, that, from a sovereign and a conqueror, he was instantly transformed into a slave; though her beauty was now on the decline, and Demetrius, the handsomest prince of his time, was much younger than herself.

At her instigation, he conferred such extraordinary benefits upon the Athenians, that they rendered him divine honors; and, as an acknowledgment of the influence which she had exercised in their favor, they dedicated a temple to her, under the name of Venus Lamia.

LAMIRAS, a poet and celebrated musician of ancient Greece, was a native of Thrace. He flourished before Homer, and, it is said, not only invented the Doric measure, but was the first who accompanied his voice with the harp.

LAMMERHIRT, G., lived, in 1797, as steward to Count Erbach, at Erbach, from whence he gave publicity to the following compositions: "*Gr. Sonat. pour le P. F., avec C.*," Op. 1, Offenbach, 1791, and "*Deux Sonat. faciles à quatre mains pour le Clav.*," Op. 20, 1798.

LAMOTTE, FRANCOIS, first violin at the Imperial Chapel at Vienna, was born there in the year 1781. Some, however, make him a native of Flanders. At the age of twelve, he played a concerto of his own composition before the whole court. In 1797, the emperor allowed him to travel. His talent at that time promised what Dr. Burney said of him five years afterwards, "that he would, some day, be the first violinist in Europe." He could play entire pages of music without changing his string. In 1799, he went to London, where he was imprisoned for debt, and escaped, with many others, at the time of Lord George Gordon's riot. He then fled to Holland, where he died, in 1781, aged only thirty. His published works are, "*Trois Concertos pour le Violon*," Paris, 1790; "*Six Solos pour le Violon*," London; and "*Alto variés pour le Piano*," Paris. Lamotte was a remarkable sight player, which Jarnowick was once desirous to put to the test, by proposing to perform with him a symphonic

concertante; to which offer Lamotte replied, "*Quel est le virtuose qui peut se distinguer par ce ? Je vous offre autre chose moi, apportez un concerto de votre composition, j'en apporterai un de la mienne, vous jouerez le mien, et je jouerai le votre.*" Probably Jarnowick found this proposal un peu forte, at all events, it was never put in execution.

LAMPADARIUS. The name given to that of the two principal singers, in the patriarchal church of Constantinople, who held the first place on the left side of the choir. The appellation of *Lampadarius* is supposed to be derived from the musical writer and composer of that name, who flourished about the year 1100, and is conjectured to have been the first who filled the office.

LAMPADIUS, a singer in Lunenburg, in the first half of the sixteenth century, published the following small work: "*Compendium Musicae non figurate quam Plains Cantus, ad formam dialogi, in vocem impendit punctis et cruxibus Musarum Scriptis accuratè compositione, quæ antequam nunquam visum, et jam recens publicatum, Adjectis etiam regulis concordantiarum et componenda cantus artificis; summam omnia Musica præcepta pulcherrime Exemplis illustrata, succinte et simpliciter complectens*," Bernæ, 1539. Walther quotes an edition of this treatise, Bernæ, 1557. This latter work is still in the Electoral Library at Munich.

LAMPARELLI. An Italian musician, resident at Paris in 1812. The following vocal productions were published by him: "*Romanzo, tertio du Roman de Possidita, avec Accompagnement pour le Piano-forte*," Paris, 1798, eighth collection; "*Les Noctelles Romanzo, avec Accompagnement pour le Piano-forte*," Paris, 1799, eleventh collection; to which belong also all the numbers not mentioned here: "*Le soleil respire l'Amour*," romance, Paris, 1799; and "*Le Chien de la Saint*," romance, Paris, 1799.

LAMPE, JOHN FREDERIC, was, as he asserted to write himself, some time a student of music at Helmsstadt, in Saxony, and going to England about the year 1755, obtained employment in the opera band. About the year 1760, he was engaged by Rich. of Covent Garden Theatre, to compose some dramatic music. In 1761, he published, in a quarto volume, - A plain and compendious Method of teaching Thorough Bass after the most rational Manner, with proper Rules for Practice." There are extant many single songs, composed by Lampe at different times, some of which are printed in the Musical Miscellany, in six volumes, published by Watts. Lampe died in London, in the year 1751.

LAMPUGNANI, GIOV. BATTISTA, of Milan, was, in 1744 and 1745, in London, where some of his operas were performed, which, though not written in a grand style, contained some agreeable and lively melodies and songs. His principal works were "*Alfano*," 1744, and "*Sera*," 1745, besides some detached airs and pastorals.

LANCE, LE CHEVALIER DE LA, resided, in 1801, at Verdun. He was, previous to the year 1790, an officer in the royal French guards, but, during the revolution, quitted both the service and his country, and resided for some time at Frankfort on the Maine, where he was under the necessity of seeking a subsistence by giving lessons on the piano-forte. After wards he went

to Silesia, where he lived on the estate of a nobleman, to whom he gave instruction on the piano-forte. He published the following compositions: "Romances et autres Chantes de Zilla," Paris. "Trois Sonates pour le Clavecin, avec Violon," Op. 2, Paris. "Six Airs variés pour le Clavecin," Op. 3, Paris. Op. 4 is not known. "Sonate brillante pour le Clavecin," Op. 5, Paris. "Trois Sonates pour le Clavecin et Violon," Op. 6, Paris. Op. 7 is not known. "Trois Sonates pour le Clavecin, avec Violon et Bass," Op. 8, Offenbach, 1793. "Grand Concerto pour le Clavecin," Op. 9, Frankfurt, 1794. "Trois Trios pour le Clavecin, Violon, et Bass," Op. 10, Offenbach, 1795. "Naiante de Venus sur la Mort d'Adonis, Cantate, avec Accompagnement de Piano-forte, deux Violons, A., et Bass," Mentz, 1795. "Recueil des Allemandes, Angloises, &c., pour le Clavecin," Vienna, 1798. "Thème, avec douze Variations pour le Clavecin," 1801. "Air Russe, avec sept Variations pour le Clavecin." "Quartet pour le Clavecin, avec deux Violons et Violoncello," Op. 13. "Deux Grands Trios pour le Clavecin, Violon, et Violoncello obligato," Op. 2, Augsburg, 1802. In the year 1788, a violinist, of the name of La Lance, was engaged at the Théâtre Français in Paris.

LANCELOT, CLAUDE, a Benedictine monk, born at Paris in 1615, was master in Greek to the celebrated Racine. Amongst other works he published "Nouvelle Méthode pour apprendre le Plain-chant," Paris, 1668, and reprinted in 1685.

LANDI, STEFFANO, a composer, lived, about the year 1619, as *maître de chapelle* to the Bishop of Padua; and afterwards, about 1634, was at Rome, as member of the Pope's Chapel. We possess information of the following of his printed works: "Madrigale," Venice, 1619; "La Mort d'Orfeo," Venice, 1619; and "Il S. Alessio, Dramma Musicale," Rome, 1634.

LANDLER. (G.) A country dance or air in a rustic and popular style, generally in three eight time.

LANDMANN, a German musician, is known since the year 1770 by an oratorio of the passion and three quatuors, in manuscript, of his composition.

LANDRIANO, CARLO ANTONIO, is considered a prodigy as a soprano, by Picinelli, in his *Aten. dei Letterati*, Milan, p. 106. His greatest triumph was at the festivals celebrated on occasion of the marriage of the Duke of Parma, Odoardo Farnese, where he procured great presents. He obtained, afterwards, the place of organist at St. Raphael's Church, and was appointed, at the same time, singer in the cathedral at Milan. He died in the thirty-third year of his age. The following of his works is printed: "Motetti à voce sola," Milan, 1655.

LANETTI. This Italian musician published at Amsterdam, in 1762, six very agreeable violin trios.

LANFRANCO DA TERENCE PARMIGIANO, GIOVANNI MARIA, a professor and musical author, lived in the beginning of the sixteenth century, and was, in the opinion of Dr. Forkel, either *tinger* or *maître de chapelle* in the cathedral of Brescia. A work of his, highly es-

teemed by his contemporaries, is entitled "*Scintille di Musica, che mostrano à leggere il canto fermo e figurato, gli accidenti delle note misurate, le proporzioni, i tuoni, il contrapunto e la divisione del monochordo, con la accordatura da varii instrumenti, della quale nasce un modo, onde ciascun per se stesso imparare potrà le voci di la, sol, fa, mi, re, ut*," Brescia, 1533. This work is so rare, that neither Hawkins nor Burney, indeed not even Padre Martini, appear to have seen a copy of it. It is only now to be found in Germany, in the ducal library at Gotha, where Dr. Forkel saw it, and has consequently been enabled to give us not only the complete title of the work, but also much other interesting information respecting its author.

LANG, E. G. B., a harpist and painter at Nuremberg, died there in 1780, aged thirty-six. He composed much music for his instrument.

LANGDON, RICHARD. An English composer, in the middle of the last century. Among his works are "Songs, two Books;" "Canzonets," Op. 7; "Divine Harmony, Book I." This contains about sixty psalms in score, with a part for the bassoon or violoncello. The second book of the same collection contains "Anthems, &c.," and "Twelve Gleees."

LANGE, or LANGIUS, HIERONIMUS GEORGIUS, was born in Havelburg, in the duchy of Brandenburg, and published "*Cantiones Sacrae*, 4, 5, 6, et 8 Voc., Pars I.," Nuremberg, 1580, and a second volume of the same, Nuremberg, 1584. Both volumes are inscribed to the council of Breslau, on which occasion the author mentions that an unforeseen misfortune had compelled him to resign his employments. The misfortune he here alludes to was a paralytic affection of the hands and feet, which put an end to his life in 1587.

LANGE, JOHANN, flourished as a composer, in Germany, about the year 1651. He set several melodies in "*Zeschn's Dichterischen Liebes flammem*," i. e., poetical love flames.

LANGE, JOH. CASPAR, a vocalist at Hildesheim, in the latter half of the seventeenth century, published "*Methodus nova et perspicua in Artem Musicam*," i. e., "Rudimental instructions for acquiring the noble art of music, with every thing belonging to it, in the easiest and surest way, and within a short time, according to the present manner. To which is added an appendix of the musical terms most in use at present; also, forms for practice illustrative of the text," Hildesheim, 1688. The work is in question and answer.

LANGE, JOSEPH, a performer in the National Theatre at Vienna, and dramatic composer, not without talents and science, was born in Wurtzburg in 1752. He appeared on the stage for the first time in 1770, and afterwards married the celebrated vocalist, Maria Antonia Weber. He wrote, about the year 1796, the music for the opera "*Adelheit von Ponthieu*."

LANGE, LOUISE, wife of the preceding, and sister to Madame Mozart, was born in Mannheim. She made her debut on the stage in 1779, went afterwards to Vienna, and was engaged there at

the Grand Opera. She afterwards sang at Schroder's theatre, in Hamburg, from whence she went to Amsterdam in 1798. The German critics greatly admired her.

LANGE, CATHARINE, court singer and performer at Munich, born in Mannheim in 1774, was a pupil of Madame Wendling, of Mannheim, and appeared for the first time on the stage in 1792. Great praise was bestowed on her in Germany for her musical knowledge, her powerful and pure voice, and tasteful execution. In the year 1793, she went to Italy with her father.

LANGLÉ, HONORÉ FRANÇOIS MARIE, born at Monaco in 1741, was sent to Naples, when sixteen years of age, by the Prince of Monaco, that he might be instructed in music. He entered the Conservatory of La Pietà, that he might study under Caffaro, who was considered the most learned pupil of the renowned Leo. Here Langle remained eight years, till he became principal chapel-master of the institution. During this period, he composed several masses and motets, which were applauded by the first masters in Italy. In 1768, he went to Paris, and soon distinguished himself there, at the spiritual and other concerts, for which he composed several lyric scenes. In the year 1791, his opera of "Corisandre" was first represented at the Royal Academy of Music: the success of this piece led him to compose others of the same description, which, however, were not performed. Langle also wrote several didactic musical works, namely, "*Traité d'Harmonie et de Modulation*," 1793; "*Traité de la Bass sous le Chant*," 1797; "*Traité de la Fugue*," 1800; and "*Nouvelle Méthode pour chiffrer les Accords*," 1801. Langle was master to the celebrated Dalayrac, who is called, in France, the second Gretry of the comic opera. He was also a professor and librarian at the Conservatory. He died at Paris in 1807.

LANGMAFIUS, GOTTFRIED, a composer, and lastly, chamberlain and bass singer at the court of Eisenach, was born in Guben, in 1684. He remained six years at the academy at Leipsic, and in 1710 was called to Eisenach, and appointed to the above situation, which he held in 1732. He composed some music for both the church and chamber.

LANGSHAW, Sen. This ingenious organist and mechanic was engaged by the Earl of Bute to set the barrels for his celebrated organ, and continued in his lordship's sole employ for above twelve years. The setting of these barrels is mentioned in the following very flattering terms, in the lives of Handel and Smith: "He [Smith] was engaged at this time in arranging music for some barrels belonging to a large organ, the property of the Earl of Bute. The barrels were set by an ingenious artist, of the name of Langshaw, in so masterly a manner, that the effect was equal to that produced by the most finished player."

Langshaw, wishing to reside in the country for the benefit of his health, accepted the situation of organist at Lancaster in 1772.

LANGSHAW, JOHN, son of the preceding, was born in London in 1763. He received his education chiefly at Lancaster, but did not devote much time to music till he was thirteen years of

age. In his sixteenth year he went to London, and there studied under Charles Wesley, from whom, as also from his brother, Samuel Wesley, he experienced the most unremitting kindness. To these instructions, and to the frequent opportunities he had of hearing the Wesleys' performances in private, he attributes all his subsequent improvement.

After visiting London three times, he commenced his career as a teacher of music, and in 1798 succeeded his father, as organist, at Lancaster.

His publications, which are not numerous, consist chiefly of "The Farewell," an anonymous ballad, much sung by Mr. Meredith; "Can joy that wretched bosom cheer," which is thought to convey much of the spirit and pathos of the words; with several other songs, some choruses from the works of Handel, and the "Creation" of Haydn, arranged as duets; also "A Theme, with Variations for the Piano-forte or Harp," originally composed for the Countess of Dunmore.

LANGUEMENTE, or LANGUENDO. A word implying that the movement before which it is placed is to be sung, or played, in a soft and dolorous style. The term LANGUENTE and LANGUIDO, have a similar meaning — languishingly, or with languor.

LANIERE, LANIER, or LANEARE, NICOLAS, was born in Italy in the year 1563. In the early part of his life, however, he went into England, where he continued to reside until the time of his death.

He was the composer of a masque, performed at Lord Hay's, mentioned in Ben Jonson's works, and also joint composer with Coperario of another, performed on the marriage of the Earl of Somerset with Lady Francis Howard. Many of his songs are to be found in different collections published during the reign of King Charles I., but they have, in general, very little merit. Smith, in his *Musica Antiqua*, has inserted one of them, taken from the masque called "Luminalia, or the Festival of Light," performed at court, on the evening of Shrove Tuesday, 1637, in which the queen and her ladies were the masquers.

Laniere, as well as musician, was a painter and engraver. There is an excellent portrait of him, painted by himself, in the music school at Oxford.

LANNOY, LE COMTESSE DE, was a good musical amateur, and resided some years in Germany. She published "*Deux Romances Franç. avec Acc. de Piano-forte*," Berlin, 1793; "*Trois Sonates pour le Clav., avec Acc. d'un Violon et Violoncello*," Berlin, 1798; "*Romances Acc. de Piano-forte ou de la Harpe*," Part II.; "*Romances Acc. de Piano-forte ou de la Harpe*," Part III., 1801.

LANUSSE, (fils.) Under this name have been printed in Paris, in 1800, "*Quatre Romances avec Acc. de Piano-forte*."

LANZ, J. M., a German composer, is known by several works for the piano and for the voice, namely, "*Lugentlieder*," Dresden, 1788; "*Quatre Sonates pour le Clav. d'une Exécut. facile*," Op. 3 Brunswick, 1795; "Twenty-one Variations upon 'God save the King,' for the Piano," Op. 4; "Twenty-one Variations upon 'God save the

King," for the Piano," 1795; "*Sonate à quatre mains*," Op. 5; "*Sonate à quatre mains*," 1796; "Eight Variations for the Piano-forte, upon '*Freut euch des Lebens*,'" Hanover, 1796.

LANZA, GIUSEPPE, an Italian composer, published at Naples, in 1792, "6 *Arie Notturme con Accomp. di Chitarra Francese e V. a piacere*." Lanza resided during many years in England, and, for a considerable time, was resident in the family of the Marquis of Abercorn. He published in London several sets of very pleasing and tasteful canzonets, for one and two voices. The following of his works were printed by Birchall: "Six Trios," Op. 13, and "Six Canzonets, with Recitatives," Op. 14.

LANZA, GESUALDO, son of the preceding, resided in England from an early age. He was considered an excellent singing master, and has published one of the best works on that art, entitled "The Elements of Singing familiarly exemplified," &c. (See Quarterly Musical Review, vol. i. p. 351.)

LA POULE. The second figure in a quadrille.

LAPPI, PIETRO, an ecclesiastic and composer, of Florence, flourished about the beginning of the seventeenth century, as chapel-master in the church of St. Maria Gratiarum of Brescia. He published much church music, of which we can only mention the following pieces: "*Litanie della Madonna à 4, 5, 6, 7, et 8 voci*;" "*Salmi Concertati à 5 voci*;" "*Misse à 3, 4, e 5 Chori*," Venet. 1616; these were burned in 1794, in the castle of Copenhagen. "*Sacra Melodie*, 1, 2, 3—6 *voci decantande, una cum Symphoniiis et B. ad Organum*," Frankfurt, 1621; "*Compieta à 3 e 4 Chori*," Op. 16, Venice, 1626; "*Rosarium Musicale*," Venice, 1629: this last work contains a mass, psalm, Magnificats, litanies, and *Te Deums*, for two and three choirs.

LA PRIMA INTENZIONE. An expression applied by the Italians to the form of any composition, as originally designed by the composer, and distinguished from the improved or altered copy.

LARBA, GIOV. LEONARDO, a composer of the sixteenth century, published "*Canzonette Napolitane d 3*," Venice, 1565.

LARGAMENTE, LARGAMENTO. (I.) In a full, free, broad style of performance.

LARGE. A character, or note, formerly in use, of the greatest value or duration; equal in length to two longs, four breves, eight semibreves, sixteen minims, thirty-two crotchets, sixty-four quavers, and so on in duple proportion.

LARGHETTO. A word specifying a time not quite so slow as that denoted by *largo*, of which word it is the diminutive.

LARGHISSIMO. (I.) Extremely slow.

LARGO. (I.) A word by which is to be understood a movement one degree quicker than grave, and two degrees quicker than adagio.

LARIGOT. The former name of a flageolet.

LAROCHE. A French composer of many songs which were popular at the court of Louis XIV.

LAROON, MARCELLUS, an amateur musician at Oxford, was a skilful performer on the violoncello, and wrote several solos for his instrument. He died at Oxford in 1772.

LARIVEE, M. One of the greatest, if not the greatest, of French musical artists. From the humble station of a barber's boy, he attained the nearest approach to the perfect standard of excellence, as established by the French critics. It was his peculiar good fortune to attract the notice, and soon after to receive the invaluable instructions, of the celebrated Gluck, under whose anxious care he acquired "a more impressive manner of delivering recitative" than had been known to the French before, and which approached nearer than had been conceived possible to the genuine style of French declamation. He is said to have united in a surprising degree all the qualities of a singer and actor; his voice was full and melodious; his taste and judgment pure and sound. It is said that the best performances of Garcia, father of Malibran, might, perhaps, in their force, variety, and truth, give some idea of Larivee's excellence.

LARRIVEE, HENRI, born at Lyons in 1733, entered as a singer at the Grand Opera at Paris in 1755. He was much admired, but sang with rather a nasal tone; which caused a wit in the parterre to remark, on hearing him for the first time, "*Voilà un nez qui a une belle voix!*" He died in 1802.

LARUE, PIERRE DE, a Frenchman by birth, called sometimes PETRUS PLATENSIS, was chapel-master at Antwerp. He composed some masses and motets about the year 1549.

LARYNX. (Gr.) The upper part of the *trachea*. The *larynx* is composed of five annular cartilages, placed above one another, and united by elastic ligaments, or fibres, by which it is so dilated and contracted, as to be capable of producing all the various tones of the voice.

LASCEUX, GUILLAUME, an organist at Paris, was born at Poissy in 1740. He was a pupil of Noblet for composition, and published many works for the organ and harpsichord, between the years 1768 and 1806.

LASKA, FRANCIS, one of the best organists in Bohemia, was born in 1750, and lived, in 1788, at Mokarzow, as an ex-Benedictine monk. He died January 19, 1795, leaving in manuscript several organ compositions.

LASSER, JOHN BAPTIST, court and private singer at Munich, was born at Steinkirchen, in Lower Austria. About the year 1790 he was tenor singer and performer at the theatre of Gratz. He has not only given proofs of his activity and talents as an author and composer, but has made his son a distinguished pianist. The younger Lasser first performed in public in 1794, at the Academy of Music at Vienna, where he was greatly applauded. Among the father's works are the following operas: "*Das rettende Heer*"—The Mad Army; "*Die glückliche Maskerade*"—The Fortunate Masquerade; "*Der Kapellmeister*."

"*Die Kluge Wittve.*" "*Die unruhige Nacht*" — The Boisterous Night. "*La Marchande de Modes*" — The Milliner. "*Der Jude*" — The Jew. "*Die Huldigung der Treue*" — The Homage to Fidelity. He also wrote several masses. The following, however, is his only work which has become known through the press: "*Vollständige Anleitung zur Singkunst, sowohl für den Sopran als auch für den Alt,*" i. e., "Complete Introduction to the Vocal Art, for the Soprano as well as Alto." Munich, 1798.

LASSO, ORLANDO DI, or LASSUS, also ROLAND DE LATTRE, a native of Mons, in Hainault, born in the year 1520, was the contemporary of Cipriano Rore, and much resembled him in genius, abilities, and reputation. Orlando not only spent many years of his life in Italy, but had his musical education there, having been carried thither, surreptitiously, when a child, on account of his fine voice. The historian Thuanus, who has given Orlando a place among the illustrious men of his time, tells us that it was a common practice for young singers to be forced away from their parents, and detained in the service of princes; and that Orlando was carried to Milan, Naples, and Sicily, by Ferdinand Gonzago. Afterwards, when he was grown up, and had probably lost his voice, he went to Rome, where he taught music during two years; at the expiration of which he travelled through different parts of Italy and France with Julius Cæsar Brancaccio, and at length, returning to Flanders, resided many years at Antwerp, till, being invited by the Duke of Bavaria to Munich, he settled at that court, and married. He had afterwards an invitation, accompanied with the promise of great emoluments, from Charles IX., King of France, to take upon him the office of master and director of his band, an honor which he accepted, but was stopped on the road to Paris by the news of that monarch's death. After this event, he returned to Munich, whither he was called by William, the son and successor of his patron Albert, to the same office which he had held under his father. Orlando continued at this court until his death, in the year 1593, at upwards of seventy years of age. His reputation was so great that it was said of him, "*Hic ille Orlandus Lassus qui recreat orbem.*"

As he lived to a considerable age, and never seems to have checked the fertility of his genius by indolence, his compositions exceed, in number, even those of Palestrina. There is a complete catalogue of them in Drandius, amounting to upwards of fifty different works, consisting of masses, Magnificats, passions, motets, and psalms, with Latin, Italian, German, and French songs, printed in Italy, Germany, France, and the Netherlands.

To form a comparative idea of the style of the two composers, Orlando and Cipriano, with that of Palestrina, the specific difference seems to be this: that the two Netherlanders, by having spent the chief part of their time in the courts of princes, had acquired a lighter and more secular cast of melody than Palestrina, who, residing constantly at Rome, and writing chiefly for the church, had a natural and characteristic gravity in all his productions. Indeed, the compositions à capella of Cipriano Rore and Orlando di Lasso are much inferior to those of Palestrina, in this particular; for by striving to be grave

and solemn they only become heavy and dull, and what is unaffected dignity in the Roman is little better than the strut of a dwarf upon stilts in the Netherlanders. They were, however, great masters of harmony, and out of the church, prepared the colors, and furnished the musician's pullette with many new tints of harmony and modulation, which were of great use to subsequent composers, particularly in dramatic painting.

In the same collection of songs, printed in 1555, we have a Latin poem set by Orlando di Lasso in the manner of a madrigal, in which the modulation is curious; but, though elaborate and *recherché*, it is pleasing, and has had many imitators. Cipriano and Orlando were the first who hazarded what are now called chromatic passages. A statue has been erected to the famous old composer, Orlando di Lasso, at Mons, his birth-place. Judging from the accounts, the ceremonies on the occasion were not very imposing. At 11 o'clock, Lasso's Mass: *Or — hy à coup*, which he had set, after the manner of his time, to a well-known theme, was performed — not in the cathedral, nor in the church of St. Nicholas, where Lasso used to sing, as choir boy — but in a little obscure church of the society which has assumed the name of *Roland de Lattre*; and performed, too, with many modern embellishments, and with an organ accompaniment. After the mass, there was a procession to the public garden, where the statue was consecrated, and the various musical bodies of the place were put in requisition. The statue was uncovered amid the thunder of artillery, several speeches were made, &c., &c. In the expression of the statue there is something very noble. With one hand Lasso touches the keys of a portable organ; the other is raised to heaven, as if he had just discovered a new chord. The house where Orlando was born is no longer identified.

LASSO, RUDOLPH VON, eldest son of the preceding, born in Munich, was organist to Duke Maximilian, of Bavaria, and seems to have met with more encouragement, considering the number of his works, than his younger brother Ferdinand. We can mention the following of his compositions: "*Cantiones, 4 vocum,*" Munich, 1606. "*Circus Symphonicus,*" Augsburg, 1611. "*Modi sacri ad convivium sacrum à 2, 3-6 voc.,*" Munich, 1614. "*Virginalia Eucharistica, 2, 3-7 voc.,*" 1615: Walther supposes this to be the same work as the preceding. "*Alphabetum Marianum triplici Cantionum serie ad multifariam, 2, 3, 4 vocum harmoniam,*" Munich, 1621: this work contains fifty-seven pieces, and is dedicated to the Bishop of Freysingen. He had also probably the greatest share in the labor and care bestowed on collecting and arranging the Latin works of his father, which, after his death, were published by the two brothers, under the title of "*Magnum Opus Musicum Orlandi de Lasso, Capella Bavaricæ quondam Magistri complectens omnes cantiones, quas Motetas vulgo vocant tam antea editas, quarum hactenus nondum publicatas à 2-12 voc. a Ferdinando, Serenissimi Bavaricæ Ducis Maximiliani Musicorum Præfecto et Rudolpho, eidem Principi ab organis; Authoris filiis, summo studio collectum, et impensis eorundem typis mandatum,*" Munich, 1604.

LASSO, or LASSUS, FERDINAND, brother

of the preceding, was principal chapel-master to the Duke Maximilian, of Bavaria, at Munich. In the year 1583, he was in the service of Count Hohennollern. By a work which he published in 1604, it would, however, appear, that he must, before that year, have been resident at Munich as chapel-master, in which situation he probably continued till his death. Besides the editions of his father's works, in which he was engaged in 1604, in Munich, conjointly with his brother Rudolph, he also published the following works of his own: "*Cantiones Sacre 6 vocum cum Instrum.*" 1588. "*Apparatus Musicus 8 vocum, varias easque sacras et divinis officiis aptas complectens odas concinnatas a Ferdinando di Lasso Sereniss. Maximiliani utriusque Bavaria Principis supremo Musicæ Prefecto.*" 1622.

LASUS, according to Suidas, was a native of Hermione, a city of Peloponnesus, in the kingdom of Argos. He flourished in the fifty-eighth Olympiad, five hundred and forty-eight years before Christ, and was the most ancient author known who had written upon the theory of music.

With respect to the musical discoveries of Lasus, both in theory and practice, all that we know of them may be reduced to three heads.

1. Aristoxenus, in speaking of the nature of sound, attributes to him, in common with certain Epigonians, a heterodox opinion, that sound had a latitude. Meibomius is perplexed by the passage, but is inclined to think it means only that, in sustaining a note, the voice varied a little up and down, and did not strictly keep to one mathematical line of tone. This explication, however, is not satisfactory; for the expression naturally leads to the idea of a temperament, and seems to say, that the intonation of the scale admitted of some variety; in other words, that the exact ratio of intervals might be departed from without offending the ear. And what is said of Lasus by Plutarch, in his dialogue on music, renders this idea still more probable. He is there mentioned as a great innovator, who imitated the compass and variety of wind instruments, as well as Epigonius, who was the inventor of the instrument of forty strings. Among the corruptious complained of in the new music, the frequent audacious transitions from one mode and genus to another, was not the least. If, therefore, the object of this multiplication of strings may be supposed to have been the convenience of having an instrument ready tuned for all the modes, like our harpsichords, it seems probable that both Lasus and Epigonius might have been temperers, and have accommodated their doctrine to their practice.

2. Theon of Smyrna testifies that Lasus, as well as the Pythagorean Hippiasus of Metapontus, made use of two vases of the same size and tone, in order to calculate the exact ratio or proportions of concords. For, by leaving one of the vases empty, and filling the other half full of water, they became octaves to each other; and filling one a fourth part full, and the other a third, the percussion of the two vessels produced the concords of fourth and fifth; from which process resulted the proportions of these three concords, contained in the numbers 1, 2, 3, 4.

3. Lasus, according to Plutarch, introduced a dithyrambic license or irregularity into musical measure, or rhythm, and upon his lyre imitated the compass and variety of the flute.

LATES, JOHN JAMES, received his musical instruction under the first masters in Italy, and was considered an excellent performer on the violin. He led the concerts at Oxford with credit to himself and great satisfaction to his employers. The Duke of Marlborough honored him with his patronage, and gave him a lucrative professional situation at Blenheim, which he enjoyed to the day of his death. He was modest and unassuming in his manners, an affectionate husband and father, an honest and sincere friend, and died very much respected in 1777. He was the author of several violin solos, duets, and trios.

LATES, CHARLES, bachelor of music, Oxon, son of the preceding, received a regular cathedral education, under the late professor of music to the University of Oxford, Dr. Philip Hayes, and the first London masters. He was well known to be an able extempore fuguist on the organ, and a capital player on the piano-forte. In early life he published a "Set of Sonatas for the piano-forte," "Songs in Scores," &c. His experience in the science, and long practice as a professor, together with the approbation of the public, fully proved him to be a sound musician.

LATILLA, GAETANO, born at Naples about 1710, distinguished himself by his talents, at a time when the school of Naples was most fertile in great masters. A friend of Pergolesi from their tenderest infancy, he did honor to the ties which bound him to the Orpheus of Ausonia, by the sincere attachment he showed to him, both in prosperity and adversity, and he softened his last moments by the most tender consolation and the most lively grief. Latilla was, moreover, the maternal uncle of Piccini, and these titles to the consideration of the friends of harmony, did not fail to be increased by multiplied proofs of real talent.

On quitting the Conservatory, he first composed the serious opera of "*Orazio*," and afterwards, "*Madama Giana*," a comic opera, thus showing himself almost simultaneously, equally great in both styles. He set the second opera in conjunction with Galuppi, afterwards known under the title of *Buranello*, and the first master of the learned school of that city. We shall say nothing of the first of these works, but that it succeeded, and laid the foundation of the reputation of its author; but we may judge of the success of the second from the alliance of a good rising composer, of the Neapolitan school, with the most famous of the old masters of the rival school of Venice.

Latilla, satisfied with having succeeded in both styles, did not change his method of composition. To "*Madama Giana*" succeeded "*La Tarentola*;" and to "*Orazio*," "*L'Olympiade*," "*Demofonte*," "*la Pastorella*;" and to "*Merope*," "*La Giardiniera Contessa*." Afterwards, devoting himself exclusively to the comic opera, for which he probably felt a predilection, he composed "*La Commedia in Commedia*," "*Don Calascione*," and "*La Buona Figliuola*," a subject frequently employed by other composers. These operas, performed in the different theatres of Italy, were esteemed like those of the greatest masters. On the whole, it would even appear that the comic style was that in which Latilla was most distinguished.

LATOURE, T. This elegant writer for the

piano-forte, was born in Paris in 1766, and in the early part of the French revolution went to London, where he earned a substantial reputation by the composition of very unnumbered works, throughout which a refined taste and lively mind are always distinguishable. He received the appointment of pianist to the Prince of Wales, afterwards George IV. In 1810 he established himself in business as a music dealer, under the name of Chappell & Co. In 1830 he abandoned business, and returned to Paris. Having become, in some sort the *Gelineck* of England, by his compositions and easy arrangements for the piano, he multiplied varieties, potpourris, and fantasias, which obtained considerable vogue, and from which he realized considerable sums of money.

LATRE, JEAN DE, commonly called PETIT JEAN, a composer of the 16th century, published "*Motetti à 5, 6, e 7 Voc.*," Dusseldorf, 1566.

LA TRENISE. The fourth figure in a quadrille, also called *pastorale*.

LA TROBE, REV. CHRISTIAN IGNATIUS, eldest son of the Rev. Benjamin La Trobe, for many years superintendent of the congregations of the United Brethren in England, was born, in 1758, at Fulnee, near Leeds, in Yorkshire. He received his early education at the place of his nativity, and went to Germany in 1771, to prosecute his studies at the college of the United Brethren at Niesky, in Upper Lusatia. Returning in 1784, he entered into holy orders in the same church, and remained in London. He was usefully and honorably employed for nearly forty years, in the service of the church in general, and of its missions among the heathen in particular, and was enabled, by his public and private eunctions, in various ways, to promote their welfare. He never cultivated music as a profession, though, as a science, from his earliest years it engaged his attention. In all his compositions he has endeavored to bear in mind the great and important use to which music should be applied; and, agreeably to his convictions upon this subject, not less than to the received ideas concerning the clerical character, he has confined himself, in vocal music, to sacred or devotional words. To encourage the same application of this divine art in others has also been one great object of his publications.

Among his earlier compositions were several for instruments alone. Besides concertos for single instruments, accompanied by a full band, he occasionally wrote sonatas for the piano-forte. A set of three sonatas, having met with the approbation of the great Haydn, was published about the time of that master's second visit to England: the circumstance of their dedication to him is mentioned by Haydn in a short memoir of himself.

Mr. La Trobe's compositions for the church, or for private devotion, are by no means few in number; particularly when it is considered that they are the production of very irregular intervals between official engagements, which demand an ordinary share of time and labor. They consist of solos, anthems for several voices, and oratorios, only part of which have been as yet given to the public. It would be difficult to say on what

model these compositions have been formed. Mr. La Trobe is certainly no copyist, but in general displays a character of his own. His taste was originally grounded upon the simple yet majestic modulations, and the rich harmonies, which characterize the psalms of the Lutheran and Moravian churches. From these the transition was easy to the works of the great masters of the German school, at the head of whom may be placed Hæssle and Graun: the compositions of their mighty successors, Haydn and Mozart, who seemed to have carried that peculiar combination of natural and scientific beauty to its height, led him still further into the knowledge and practice of the true ecclesiastical style of music. He has been heard frequently to observe that the "*Tod Jesu*" (Death of Jesus) of Graun, and the "*Stabat Mater*" of Haydn, first gave him the idea of the powers of vocal music, in the expression of every feeling of which a devotional mind is capable. His acquaintance with the foreign masters, which increased with the gradual acquisition of an extensive musical library, at length suggested the idea of a publication, by which Mr. La Trobe's name has become better known than by his original compositions, and which has, according to the testimony of impartial judges, contributed more, perhaps, than any other work, to the introduction into England of a taste for the church music of Germany and Italy. "*The Selection of Sacred Music*," commenced in the year 1806, extended to five volumes; and the approbation it almost universally met with, wherever it became known, may be considered as no unfair test of its merits. An idea has been entertained by some persons that this work was published in a spirit unfavorable to the reputation of Handel; as if admiration of the compositions which have assisted to form the taste of the most musical nations of Europe were inconsistent with the full enjoyment of the works of that sublime composer. So far from this being correct, it may be affirmed, without hazard, that few Englishmen, even of the most rigid Handelians, have viewed with more regret and surprise the increasing neglect which seems to be the lot of some of the finest monuments of Handel's genius.

The following is a list of Mr. La Trobe's published compositions: "Three Sonatas for the Piano-forte," dedicated to Haydn. The "*Dies Ira*," a hymn on the last judgment. "The Dawn of Glory," a hymn on the bliss of the redeemed. "A Jubilee Anthem," for the fiftieth anniversary of the accession of King George III. "A *Te Deum*," as performed in the cathedral at York. "*Miserere*," (Ps. li.) Various anthems published in a "Collection of Anthems in Use among the United Brethren." "Six Airs," the words by Cowper and Miss Hannah More.

LAUCHIER, JOSEPH ANTONY, *Musices Director Delingæ ad Danubium gloriosissima Domus Austriacæ*, published the following works: "18 *Vesper Hymnen mit 4 geistl. Singstimmen*, 2 Viol., Orgel, Violon, und 2 Waldhörnern, mit angehängtem vollstimmigen *Te Deum* und *Veni Sancte*, etc.," 1786. "*Sacrificium Mortuorum, seu 3 Missæ Solennes, breves tamen, de Requiem, occasione exequiarum felicissimæ Memoriam Josephi II., Leopoldi II., Romanorum Imperatorum, et Elisabethæ Imperatricis, in insigni Ecclesia Collegiata D. Petri ibidem ritibus persolutarum decantate, nunc vero in lucem publicam*

sdite 4 voci. ordin. concinnentibus, 2 Violinis, Alto-Viola, et Organo necessariis, 2 Cornibus vero, 2 Clarinetis vel Obois et Violone partim obligatis, partim non obligatis," Op. 2, Speyer, 1792.

LAUDAMUS. (L.) *We praise thee.* A part of the mass.

LAUDI, or **LODI.** The name formerly given to certain sacred or spiritual songs, of Italian invention, distinct from the common hymns, and composed in praise of God, the Virgin Mary, and the saints and martyrs.

LAUDISTI, or **LAUDESII.** The name applied to the members of a society first instituted at Florence so early as the year 1310, for the performance of those spiritual songs called *Laudi*.

LAUDUNO, NICOLAS DE. In the Barberini library is preserved a manuscript treatise on music by this author.

LAUDUS, VICTORIUS, chapel-master in the cathedral church at Messina, about the year 1597, was born at Alcar, in Sicily. He published "*Il Primo Libro de Madrigali à 5 Voci, con Dialogo à 8 Voci,*" Palermo, 1597.

LAUER, J. F. L., published at Gotha "*Klavierliedersammlung,*" 1786.

LAUGIER, the **ABBÉ MARC ANTOINE**, born at Manosque, in Provence, in 1613, was a Jesuit, and preacher to the King of France. He published the first musical journal which appeared in France, under the title "*Sentiment d'un Harmoniphile sur différens Ouvrages de Musique,*" Lyons, 1756.

LAURA, DOMINICO, flourished, according to Cerreto, as one of the best composers in Italy, about the year 1600.

LAURENBERG, DR. PETER, a physician and professor of poetry at Rostock, died there in 1639. In the title of a fourth edition of the "*Musomachia,*" of 1642, he is called its principal contributor. He was also the author of a work published by Sartorius at Hamburg, and entitled "*Bellum Musicale.*"

LAURENTI, LAURENTIUS, a chapel-master at Bremen, died in 1722. His principal work bears the title "*Evangelia Melodica.*" It consists of spiritual songs and hymns, arranged according to the different gospels for Sundays and holidays, and adapted to known melodies. Bremen, 1700. As a musician, he seems to have done little or nothing in this work.

LAURENTII, PIETRO PAOLO, of Bologna, set to music the following three operas: "*Attilio Regolo in Africa,*" 1071; "*I diparti d'Amore in Villa,*" 1710; and "*Esone Ringiovenito,*" 1716.

LAURENTII, GIROLAMO, an ecclesiastic of Bologna, flourished, as one of the first violin players of Italy, about the year 1720. There have been published of his works "6 *Concerti à 3 V., 4., 5., 6., e Organo.*"

LAURENTIO, MARIANUS DE, a priest and canon in Sicily, flourished as a composer, and published many works, about the year 1620. We can now only meet with the following: "*Primo libro*

di Madrigali à 5 Voci con un dialogo à 8," Venice, 1602; and "*Salmi, Magnificat, Falsi Cardoni e Messa, à 4 Voci, con B. continuo per l'Organo,*" Op. 5, Palermo, 1624.

LAURIETTI, an Italian musician, published at Paris, in 1780, "*Six Quatuors pour le Violon.*"

LAURUS, DOMINICUS, leader of the orchestra at Mantua, was born at Padua. He flourished about 1550, and published many works.

LAUSKA, FRANZ IGNAZ, chamber musician to the Elector Palatine of Bavaria, and one of the best German pianists, travelled on the continent during many years. He remained, probably, the whole of the year 1794 in Hamburg, whence his fame first began to spread over Germany. After this, he gathered equal praises at Copenhagen. In 1799 he went to Berlin, where he wrote and published a concerto for the piano. His works for that instrument are quite original, and are as follows: "*Grande Sonate pour le Clavécin,*" Op. 1, Hamburg, 1795. "*Nine German Songs, with Variations for the Piano,*" Op. 2, Hamburg, 1792. "*Rondo pour le Clavécin, pour les Dames,*" Op. 4, Munich, 1797. "*Four Sonatas for the Piano-forte,*" (each separate,) as Op. 4, Op. 6, Op. 7, and Op. 8, Hamburg, 1797. "*Der Greis und sein Stub.,*" i. e., "*The Old Man and his Staff,*" Königsberg, 1797. "*Eight Variations for the Piano-forte on Reichardt's Song, 'Ich kusse dich, Schleier,'*" Munich, 1799. "*Deux Grandes Sonates pour le Clavécin,*" Ops. 9 and 10, Hamburg. "*Deux Petits Rondeaux pour Piano-forte,*" Berlin.

The following of his works have been published by Kuhnelt, of Leipsic: "*Six Variations pour Piano-forte.*" "*Sonate pour Piano-forte,*" Op. 20. "*Trois Petits Rondeaux pour Piano-forte,*" Op. 23. "*Grande Sonate pour Piano-forte,*" Op. 24. "*Polonoise pour Piano-forte,*" Op. 25. "*Dix-neuf Grandes Sonates pour Piano-forte,*" Op. 26. "*Capriccio pour Piano-forte,*" Op. 32. "*Angenehme und nicht schwere Tonstücke mit applikator f. d. Piano-forte,*" i. e., "*Pleasant and not difficult Exercises, with Applications, for the Piano-forte,*" Op. 33. About the year 1804 he went to Vienna, to study counterpoint under the celebrated Albrechtsberger.

LAUTE. (G.) The lute.

LAUS PERENNIS: (L.) The name given by papistical writers to the *Perpetual Psalmody* preserved at Antioch by an order of monks established there in the early ages of Christianity, and whose discipline obliged them to render it perennial, like the vestal fire or perpetual lamps of antiquity.

LAUXMIN, SIGISMUND, a Polish Jesuit, from Samogitia, was rector of several colleges, and, lastly, vice provincial of Lithuania, in which situation he died in 1670, in the seventy-first year of his age, or, according to others, in his seventy-fourth. He wrote, amongst other works, "*Ars et Praxis Musicae,*" Wilna, 1664.

LAVIGNA, VINCENZO. A Neapolitan musician, recommended by Paisiello, in 1802, to the directors of the theatre there, as a composer. He wrote in the same year, for the Theatre della Scala, the opera buffa "*La Muta per Amore ossia i Medici per Forza,*" which obtained distinguished success.

LAVINETTA, BERNHARDUS DE, or LAVINETTE, a learned monk, about the year 1523, wrote "*Compendiosa Explicatio Artis Lullianæ*," in which he treats, in nine chapters, on musical subjects.

LAVIT, J. B. O., formerly a pupil of the *École Polytechnique* at Paris, published there, in 1808, "*Tableau comparatif du Système Harmonique de Pythagore, et du Système des Modernes*."

LAVOCAT, PIERRE, a French composer, flourished about 1700, in Burgundy, and is known by the following work: "*Concert des Dieux pour le Mariage de S. A. S. Myr*." Of this work, the text only, by Derequeleyne, has been printed at Dijon.

LAVOLTA, or LA VOLTE. A lively, animated tune, performed to an old dance, the action of which consisted chiefly of quick turns and high leaps.

LAWATZ published songs for the piano-forte, Altona, 1790.

LAWES, WILLIAM, the son of Thomas Lawes, a vicar choral of the church of Salisbury, and a native of that city, having shown an early propensity to music, was, at the expense of Edward, Earl of Hereford, placed under the tuition of Coperario. He was a member of the choir of Chichester, and was called from thence, in 1602, to the office of gentleman of the Chapel Royal; but, afterwards, resigning that situation in favor of Ezekiel Wood, he became one of the private or chamber musicians to King Charles I. Fuller says, that "he was respected and beloved by all who cast any looks towards virtue and honor." His gratitude and loyalty for his master were such, that he took up arms in his cause; and although, to exempt him from danger, Lord Gerard made him a commissary in the royal army, yet the activity of his spirit disdained this intended security, and at the siege of Chester, in 1645, he lost his life. The king is said to have been so much affected at his death, that he wore particular mourning for him.

His compositions were, for the most part, fantasias for the viols and the organ; but the chief of his printed works were "Choice Psalms put into Music for three Voices." Many of his songs are to be met with in the collections of the day, and several catches and rounds, and a few of his canons, are published in "Hilton's Collection."

LAWES, HENRY, brother of the preceding, was likewise a pupil of Coperario. He was a native of Salisbury, and born in the year 1600. In the month of January, 1625, he was made pisteller, and in November following, a gentleman of the Chapel Royal. After this, he was appointed clerk of the check, and a gentleman of the private music, to King Charles I.

He had the credit of introducing the Italian style of music into England; but this rests upon no better foundation than his having been educated under Coperario, and having composed a song on the story of "Thescus and Ariadne," in which there are some passages that a superficial peruser might mistake for recitative. This song is published among his "Ayres and Dialogues for one, two, and three Voices," printed in Lon-

don in 1653. In the preface to this collection, the author mentions his having formerly composed some airs to Italian and Spanish words. He speaks of the Italians as being great masters of music, but, at the same time, that his own nation had produced as many able musicians as any in Europe. He censures the particularity of the age for songs sung in a language which the hearers do not understand; and, in ridicule of it, speaks of a song of his own composition, printed at the end of the book, which was nothing more than an index of the initial words of some old Italian song or madrigal. He says that this index, which he had set to a varied air, and, when read together, was a strange medley of nonsense, passed with a great part of the world as an Italian song.

The first composition in the above collection is "The Complaint of Ariadne," (before mentioned,) the music to which is neither recitative nor air, but in such a medium between the two, that a name is wanting for it. The circumstance which contributed to recommend it to notice cannot now be discovered, but the applauses that attended the singing of it almost exceed belief.

Lawes also composed tunes to Mr. Sandys's "Paraphrase on the Psalms," published in 1638, and afterwards in 1676. These tunes are different from those composed jointly by the two brothers, and published in 1648. They are for a single voice, with a bass, and were intended for private devotion.

Milton's "Comus" was originally set to music by Lawes, and was first represented on Michaelmas night, 1634, at Ludlow Castle, in Shropshire, for the entertainment of the family of the Earl of Bridgewater, and others of the neighborhood. Lawes himself played in it the character of the attendant spirit, who, towards the middle of the drama, appears to the brothers habited like a shepherd.

The songs of Lawes, to a very great number, are to be found in the collection entitled "Select Musical Ayres and Dialogues," by Dr. Wilson, Dr. Charles Colman, Henry Lawes, and William Webb, published in 1652; "Ayres and Dialogues," published by himself in the year following; "The Treasury of Music," 1669; and several others printed about that time. In these are contained the songs of Waller, all, or nearly all, of which were set to music by Lawes, and, as an acknowledgment of the obligation, that poet has celebrated his skill in the following lines:

"Let those who only warble long,
And g-rgle in their throats a song,
Content themselves with ut, re, mi;
Let words of sense be set by thee."

Lawes continued in the service of the king no longer than the breaking out of the rebellion. From that time he employed himself in teaching ladies to sing. He, however, retained his place in the Chapel Royal, and composed the coronation anthem for King Charles II. He died in 1662, and was interred in Westminster Abbey.

Were we to judge of the merits of Lawes, as a musician, from the numerous testimonies of contemporary writers, we should be compelled to rank him amongst the first which England has ever produced; but if we examine his works, his title to fame will not appear quite so well grounded. He was engaged in the service of the church, but contributed nothing towards the increase of

its stores. His talent lay chiefly in the composition of songs for a single voice, and in these his greatest excellence consisted in the correspondence which he kept up between the accent of the music and the quantity of the verse.

Dr. Burney says, that the greater part of his productions are "languid and insipid, and equally devoid of learning and genius."

LAY. (From the Anglo-Saxon word *ley*.) The name of an ancient elegiac kind of French lyric poetry, formerly much imitated by the English. The *lay* is said to have been formed on the model of the trochaic verses of the Greek and Latin tragedies. There were two sorts of *lays*; the *greater*, which consisted of twelve couplets of verses in different measures, and the *lesser*, comprising sixteen or twenty verses. The word *lay* is now generally applied to any little melancholy song or air, and is, for the most part, used in that sense by Chaucer, Spenser, Milton, Waller, Dryden, and other classical English poets.

LAY CLERK. A vocal officiate in a cathedral, who takes a part in the services and anthems, but is not of the priesthood.

LAYMEN. Those vocal officiates in a cathedral who are not of the priesthood.

LAYOLLE, ALEMAN, organist at Lyons, about the middle of the sixteenth century, published "*Chansons et Voix-de-ville à quatre voix*," Lyons, 1561.

LAYS, FRANCOIS, a singer of the opera at Paris, who had a brilliant reputation, was born in 1758, and was destined for the ecclesiastical profession, but, induced by the rare beauty of his voice, abandoned the church for the stage. He took an active part in the revolution of 1789, and travelled through the provinces as an ardent missionary of the system of terror. He was professor of singing in the Conservatoire from 1795 to 1799, and subsequently first singer in the chapel of Napoleon I. from 1801 to 1815. He died in 1831, aged 73.

LAZZARI, ALBERTO, published at Venice, in 1637, "*Gloria di Venetia, e altre Musiche à Voce sola*," &c. Op. 3.

LEADER. A performer, who, in a concert, takes the principal violin, receives the time and style of the several movements from the conductor, and communicates them to the rest of the band. The leader, after the conductor, holds the most important station in the orchestra. It is to him that the other performers look for direction in the execution of the music; and it is on his steadiness, skill, and judgment, and the attention of the band to his motion, manner, and expression, that the concinnity, truth, and effect in a great measure depend.

LEADING NOTE. The seventh note of the scale of any key, when at the distance of a semitone below the key note. A leading note is the sound by which the scale is known and its tonic or key note ascertained. For instance, the leading notes in two flats are, A \sharp or F \sharp . A natural leads to B \flat ; F sharp leads to G natural. In minor keys the $\sharp 7$ is the leading note. In major keys the *mi* is the leading note. The key note of two flats is either B \flat or G natural.

LEAL, MIGUEL, a friar of the Cistercian order, and a good composer, was born in Lisbon, and entered into the order at Alcobaca in 1646. Among the works which he has left behind, there is one particularly distinguished, namely, "*Missa a nove coros*." Leal became, at last, prior of a convent in Lisbon.

LEANDER, two brothers, performers on the French horn, resided many years in London, up to about 1805. They were excellent virtuosi on their instrument, and were engaged in the orchestra of the King's Theatre, and at most of the public concerts. One of the brothers composed a very pleasing duet for two voices, "By those eyes whose sweet expression."

LEAPS. This word is properly applicable to any disjunct degree; but it is generally used to signify a distance compounded of several intermediate intervals.

LEBHAF. (G.) Lively.

LEBRUN, LOUIS SEBASTIAN, a French dramatic composer and singer, was born at Paris about the year 1765. He was, in childhood, admitted as a chorister at the cathedral of Notre Dame, in which situation he remained twelve years. He was there taught composition, and the practice of music, by the Abbé Dugué, chapel-master of the cathedral. Lebrun was next appointed chapel-master to the church of St. Germain l'Auxerrois; after two years, however, he resolved to make his *début*, as a singer, at the Royal Academy of Music, where he first appeared in 1787, in the part of Polydice in "*Edipe*." He next came before the public at the *Concert Spirituel*, in the double capacity of composer and singer. His compositions for this concert consisted in several scenes and grand choruses from oratorios. In 1790 he produced his first dramatic work at the Théâtre Montansier; it was entitled "*L'Art d'aimer au Village*." He next gave, at the Théâtre Louvois, "*Emilie et Melcour*," "*Un Moment d'Amour*," and "*La Veuve Américaine*;" at the Théâtre des Variétés, "*Les petits Aveugles*," and "*La Suite de la Cinquante*;" at the Théâtre Feydeau, "*Le bon Fils*," "*Plus de Peur que de Mal*," "*L'Astronome*," "*Le Maçon*," and "*Marcelline*." After being engaged at the Théâtre Feydeau during several years, Lebrun reentered at the Grand Opera, as one of the principal singers. He was afterwards first tenor singer at the Chapel Royal of Napoleon I. and also chamber singer to the emperor. In 1809 a grand "*Te Deum*" of his composition was executed at the cathedral of Notre Dame, in honor of the victories of Wagram and Enzerdoff.

LEBSDEFF, a Russian composer, went to London in 1798, with a squadron from India. He was engaged, at that time, in writing a collection of airs in the style of the music of Hindostan and Bengal. As he was fully master of the Eastern languages, as well as of their musical expression, he was much looked to at the time for the explanation of modern Oriental music, which, even yet, has not been fully made known. The airs are, in the opinion of connoisseurs, very melodious and pathetic, and are a medium between Scottish and Italian music. We have not been able to obtain any further information respecting this musician or his works.

LEBUGLE, ABBÉ, published much music of his composition for the harpsichord, at Paris, subsequently to the year 1783.

LEBEUF, THE ABBÉ JEAN, was canon and sub-chantor of the cathedral of Auxerre, where he was born, March 6, 1687. The Academy of Inscriptions and Belles Lettres chose him, in 1740, to fill the place of Lancelot. He was the author of many treatises and works relating to music, and died in 1760.

LECCIO, SCOZZESE AGOSTINO DI. A composer of the sixteenth century, of whose works there is yet preserved, in the Munich library, '*Canzonette Neapolitane à 3, 4 e 5 Voci*,' Venice, 1579.

LECLERC, J. B., deputy for the department of the Maine et Loire, in the Legislative Assembly at Paris, in 1796. He had been a member of the Convention, and was obliged to leave Paris to escape persecution and imprisonment. During his retirement from public business, he laid the plan of a great musical work, and submitted it to the committee for public instruction in France. As, however, this body took no notice of it, the author published it in 1796, (improved and enlarged,) under the title of "*Essai sur la Propagation de la Musique en France, sa Conservation, et ses Rapports avec le Gouvernement*." This treatise begins with a brief history of music among the Chinese, Egyptians, Greeks, and other ancient nations, amongst whom it was considered as a foundation of religion and morality. Then he proceeds to the influence which it has had upon modern nations; on which subject he says that Gluck's music in Paris laid the foundation of the revolution, as the want of church music gave rise to the civil war in La Vendée. He endeavors to prove the necessity of music to the French nation, amongst other arguments, by the conduct of certain peasants in Lower Poitou, whose only business is to sing incessantly whilst the oxen are drawing the plough. From this, he proceeds further, and endeavors to prove that the cultivation of the science of music leads us to the practice of every public and private virtue, by means of the satisfaction and calmness which it imparts to the mind; and that, for this reason, all governments ought particularly to take it under their observation, and to fix its use and abuse by proper laws. He examines, further, how far the then existing operas, and other public musical performances in France, either may tend to promote or to diminish human perfectibility.

LEÇON. (F.) A lesson or instructive composition for some instruments.

LE CHANT ROYAL. Certain verses sung in chorus to the virgins and saints, by troops or companies of pilgrims returning from the holy sepulchre. This practice was first introduced by the French in the fourteenth century.

LEDERER, JOSEPH, an Augustine monk, in St. Michael's convent at Ulm, and professor of divinity there, was born in Suabia in 1733, and published the following musical works, practical as well as theoretical: "*Neue und erleichterte art zur Solmisiren*," Ulm, 1756. Second edition under the title, "*Neue und erleichterte art zur Solmisiren*,

nebst andern Vortheilen, die Singkunst in kurzer zeit zu erlernen," Ulm, 1766. A Song: "*Aus den frohen Liebeslund*." "6 Messen, kurz, leicht und sangbar, hauptstuechlich zum Gebrauch der Chora aus dem Lande und der Frauenkloster aufgesetzt," Augsburg, 1776. "*Eticas aus China*," operetta, Ulm, 1777. "5 Vespere, sammt 5 andern Psalmen, welche das Jahr hindurch vorkommen, einen besondern Magnificat, und einen Stabat Mater, kurz, leicht, singbar," Ulm, 1780. "*Musikalischer Vorrath, bestehend aus 18 Versen, 17 Preambulen, Menuetten, Trio, 3 Sonaten und eine Arie in Partitur*," Augsburg, 1781. "*Die jungen Rekruten, eine Romische operetta*," Ulm, 1781. This worthy divine and excellent artist died in 1793.

LEDERZ, PAULUS, a bookseller at Strasburg, published "*Kirchengesangbuch, darinne die fuernehmsten und besten, auch gebrueuchlichsten Lieder und Gesange zu finden*," Strasburg, 1616.

LEDGER LINES. Those lines which are added above or beneath the five composing the staff, for the reception of such notes as are too high or too low to be placed upon or within the staff. The word *legere* being the Latin for *to read*, it follows that *ledger lines* are to facilitate the reading of the notes.

LEDUC, SIMON, the elder, one of the directors of the *Concert Spirituel* at Paris, was born in 1748. He was a violin pupil of Gaviniès. There are known, of his compositions, two books of sonatas for one violin, and several concertos and symphonies. About a month after the decease of Leduc, in 1777, there was a rehearsal of one of his symphonies for the *concert des amateurs*. In the middle of the *adagio*, the Chevalier de St. Georges was so affected by the expression of the movement, joined to the recollection of the death of his friend, that he let his bow fall, and burst into tears.

LEDUC, PIERRE, brother and pupil of the preceding, was born in 1755. He was a violinist at the spiritual and amateur concerts at Paris, and subsequently engaged in the music trade. He died in Holland, in 1816.

LEDWICK, EDWARD, an Irish author, published "*Antiquities of Ireland*," Dublin and London, 1790. Part of this work treats of the music of the ancient Irish, as it was cultivated by their bards. The author states, that the music of the ancient inhabitants of Ireland consisted merely in the tunes of their poems and songs, which they called *pheateath*, or *peiteagh*, that is, relating in music. They had also some knowledge of wind instruments, some of which were the *goll-trompo*, or the foreign trumpet. This was the metal horn which the Danes, Normans, and English made use of. 2dly. The *trompa*, which resembled the modern trumpet. This was the war instrument of the Saxons, Gauls, and Normans. 3dly. *Pi-obamala*, or harp, which, according to our author, is either of Scythian or Teutonic origin. They may, perhaps, have earlier known the *timpan*, or drum, and the *crotalin*. Their oldest and most celebrated harp players, about the year 1330, were O'Carrol and Cruise, who had probably learned from the Christian clergy to tune their harps according to the eight diatonic notes, on the principles of harmony.

LEE, ALEXANDER, died, after a long illness, at his residence in Newton Terrace, Kensington, in 1849. On that very evening a concert had been organized for his benefit at Frampton's Dancing Academy, in the York Road; but he expired in the afternoon. Alexander Lee was the son of Harry Lec, a well-known boxer in his day, whose son had the patronage of Lord Barrymore. He was, at one period, the lessee of Drury Lane Theatre, in partnership with Captain Polhill, and had been musical director of the Olympic and Strand Theatres, of Vauxhall Gardens, &c. He wrote the music for the piece of the *Invincibles*, which had great success with Madame Vestris in the chief part, at Covent Garden Theatre. To name the ballads of the late Alexander Lee would occupy a large space, for a more prolific song writer never existed; and many of his compositions will perpetuate the name of Alexander Lee as a composer of the English school of simple and unaffected melody.

LEEDER, JOHANN WILHELM, chapel-master at Hildesheim, died in 1785. He published, at Amsterdam, some music for the flute and violin.

LEEVES, REV. W., of Wrington, in Somersetshire, is the composer of the still prevailing melody of "Auld Robin Grey," which has been erroneously attributed to Lady Anne Lindsey. He also published a volume of glees, about the year 1790, in conjunction with Dr. Harrington, of Bath, and Edmund Broderip, the organist of Wells Cathedral.

LEFEBURE DE WELEY, ANTOINE. A composer at Paris. Among his works may be mentioned "*Nouveau Solfège*," Venice et Paris, 1780. It is an easy method of solmization. "*Quatre Sonat. pour le Clav.*," Op. 2, Paris. "*Première, deuxième, et troisième Recueil d'Airs, pour le Piano-forte*," Ops. 3, 4, 5, Paris. In 1801 he read, in a public sitting of the National Institute, a treatise on the effects of music on the nerves.

LEFEBURE, JACOB, violinist in the chapel of Prince Henry of Prussia, at Berlin, was born in 1723. He studied music under Graun and Emmanuel Bach. He composed much music for his instrument.

LEFEVRE. Organist at the church of St. Louis, in Paris, in the year 1760. He executed at the *Concert Spirituel* several of his motets, of which "*Quam bonus*," "*Conserva me*," and "*Coronate*," have been engraved.

LEFEVRE, JACQUES. Chamber musician to the King of France in 1613. He composed about the same time several works for three, four, five, and seven voices, of which Laborde has given two airs in his second volume.

LEFEVRE, XAVIER, an excellent performer on the clarinet, and composer for his instrument, was born in 1763. In 1798 he was first clarinet at the Grand Opera in Paris. He published a variety of music for his instrument, of which, however, only the following can be mentioned: "*Duos Concertin. pour 2 Clav.*," Ops. 1, 3, 4, and 10. "*Petits Duos faeil. Liv.*," Ops. A and B, 1 and 2; each work contains six pieces, Paris,

1791 to 1798. "*Trios pour deux Clar. et Fagotte*," Ops. 5 and 9, each six pieces, Paris, 1793 to 1797. "*Recueil de Marches et Pas redoublés suivi d'une Marche religieuse de Gossee*," Paris, 1793. "*Sinfon. Concert. à Clarinette et Fagotte*," Paris. "*5 Concert. à Clarinette*," Paris, from 1793 till 1795, Nos. 1, 2, 3, 4, 5, each separate. The pupil who played on the clarinet in 1799, at the National Institute of Paris, gained the prize with No. 5 of the foregoing. "*Méthode de Clarinette, par A. Lefevre, adoptée par le Conservatoire*," Paris, 1803. It is uncertain whether the initial of A. to the last work indicates another author; probably it is only a second Christian name of X. Lefevre.

LEFFLOTH, JOHANN MATHIAS. Organist at Nuremberg. He published many instrumental works, among which are, "*Sonate et Fugue pour le Clav.*," Nuremberg. "*Divertimento Musicale, consistente in 1 Partita da Cembalo*," Nuremberg. He died in 1733.

LEGARE, CLAUDE, published at Geneva, in 1657, "*Les Pseaumes de David réduits sur une seule Clef*."

LEGAT DE FURCI, ANTOINE, was born at Maubeuge. He published "*Seconds Solfèges avec basse Chiffrée, contenant des Leçons dans tous les Genres des duos et des Ariettes, avec Paroles*," Paris, 1790. He was organist to the church of St. Croix de la Bretonnière in Paris, and assisted Laborde in writing his essay on music. He also composed several dramatic pieces.

LEGATO. (L.) A word used in opposition to *staccato*, and implying that the notes of the movement or passage to which it is affixed are to be performed in a close, smooth, and gliding manner, each note being held down till the next is struck; also binding them in that manner which is called syncopation. (See SYNCOPATION.) A passage is said to be in legato style when performed in a close, smooth, graceful manner, thus:

In common psalmody the tie is considered unnecessary, and is generally omitted, when notes are connected with their blocks, as in the above example.

LEGATISSIMO. (L.) The superlative of *legato*. Most closely or tenaciously bound. See *LEATO*.

LEGEREMENT. (F.) A word denoting that the movement before which it is placed is to be performed in a light and gay style.

LEGLIADRO. (L.) Brisk, lively.

LEGGIERAMENTE, or LEGGIERISSIMO. Lightly, gently; with the utmost lightness and facility. *Leggiero*, or *Con Leggierezza*, has the same meaning.

LEGRENZI, GIOVANNI, born about 1625, was organist of the church of Santa Maria Maggiore, in Bergamo, afterwards chapel-master in the church Della Spirito Santa, in Ferrara, and in his

later years, chapel-master of the church of St. Mark, at Venice. His works consist of masses, motets, *sonata per chiesa e de camera*, psalms, litanies, and cantatas.

LEGROS, JOSEPH. A French musician, born in 1739. In 1777 he was manager of the *Concert Spirituel* at Paris.

LEHMANN, FREDERIC ADOLPH VON, counsellor of legation at Dessau, in the year 1801, was previously in the elector's infantry. Although but an amateur, he has proved by his published works that he had not only made unusual progress in the art of playing the piano-forte, but also acquired a familiarity with counterpoint and the rules of strict composition. The following of his works have appeared in print: "*Gesänge am Klavier, in Musik gesetzt*," Dessau, 1793. "*Des Mädchens Klage von Schiller, fürs Klavier in Musik ges.*," 1801. "*Onze Variat. pour le piano-forte*," Augsburg, 1802. "*Kleine Gesänge am Klavier*," Leipsic, 1802. "*Kleine Gesänge, in Klav.*," Op. 4. "*Six Marches, qui peuvent exécuter aussi bien en entr'actes à plein orch. qu'en harmonie pour l'instr. à vent*," Op. 4. "*Six Marches pour le Piano-forte*," Op. 4.

LEHMKE, CHRISTINE WILHELME CATHARINE, wife of Christian Lehmké, singer to the Duke of Mecklenburg-Schwerin at Lunwigslust, was born at Minden, in Prussia, about the year 1774. She was engaged by the duke, in 1796, as singer, in consequence of her great talents, and afterwards became the great attraction of the chapel there. The compass of her voice was very considerable. Her melting softness in the *adagio*, and charming style of taking *bravura* passages, caused her to be considered in Germany as one of the first singers of the age. She was likewise an excellent pianist, and possessed much knowledge of the science of music. Her husband was an actor, and together with his wife performed the first parts in every good opera (comic and tragic) that was given at the court theatre.

LEHIT. (G.) Easy.

LEJEUNE, a Parisian composer, has become known by a "*Recueil de Romances et Chansons*," Op. 1, published in Paris in 1792.

LEJEUNE, CLAUDE, also known as CLAUDIN, or CLAUDIN LEJEUNE, was a celebrated musician, born at Vincennes; probably about 1540. He was composer to King Henry IV. of France. He enjoyed a high and perhaps exaggerated reputation as a composer in France. Burney considers him a learned and laborious musician rather than a man of genius, while Fétis thinks that the fact is precisely the reverse. His Psalms, in four parts, in simple counterpoint, had great success, and many editions of them have been published. He died probably about the year 1603.

LEIGHTON, SIR WILLIAM, knight, one of the honorable band of gentleman pensioners, published in 1614, in conjunction with some other persons, a work entitled "The Teares or Lamentations of a sorrowful Soul, composed with musical Ayres and Songs, both for Voices and divers instruments."

LEISRING, VOLCKMAR, was born at Gebtadt, near Buttstädt, in Thuringia. He pursued

his studies at Jena, and about the year 1617 was appointed rector at Schkölen, near Naumburg. In the year 1619, he became pastor at Nohra, near Weimar; and lastly, in 1626, pastor at Buchfarth, where he died in 1637. His practical works are, according to Walther, "*Braultied aus dem 26 Cap. Sirach's*," Jena, 1609. "*Cymbalum Davidicum 4, 5, 6, et 8 vocum*," Jena, 1611. "*Toda Nuptiales, in 16 latein und deutschen Hochzeitgesängen von 4, 5, und 8 Stimmen*," Erfurt, 1624. "*Strenophonie, in 21 latein und deutschen Neujahrs Gesängen*," Erfurt, 1623.

LEM, PETER, first violin at the Royal Chapel in Copenhagen, was born there about the year 1753. He had first a pension of one hundred rix dollars, and was dispensed with playing in the orchestra. After the death of the chamber musician Hartmann, his pension was increased to twenty dollars, and the title of professor was given to him. From that time he played only solos at concerts, and instructed the pupils, who from time to time were appointed to the Royal Chapel. Traeg mentions a "*Rondo pour le Clav.*" in manuscript, written by this musician.

LE MAIRE. This French musician was singing master in Paris in the year 1660, and contributed much to the propagation and general adoption of the seventh note of the octave, (*si*.) His son Charles was a vocal composer, as appears from the following of his printed works: "*Les quatre Saisons ou Cantates, Lib. 1*," Paris. "1, 2, 3, 4, 5, 6 *Recueil d'Airs à chanter*," Paris.

LEMIERE, JEAN FREDERIC AUGUSTE, was born in 1770. He became a director of the Conservatory of Music in Paris, and was a pupil of Berton. He brought out at the Théâtre des Amis des Arts, "*Les deux Orphelins*," "*Les deux Crispins*," with the poetry, "*La Paix et l'Amour*," all three printed in Paris in 1798; "*La Reprise de Toulon*," the overture of which, *à grand orch.*, was printed at Paris in 1797, "*Andros et Almona*," 1794, and "*Le Tombeau de Mirabeau*." Most of the above little pieces were successful. He also published "*Sept Romanc. avec Acc. de Clav.*" Op. 14, and "*Deuxième Duo Conc. pour Harp et Piano*," Paris, 1803. He died in 1832.

LEMLIN, LAURENTINUS. A contrapuntist about the middle of the sixteenth century. Of his works are still to be found some melodies, in a collection of songs for four voices, made in 1548, and yet preserved in the Zwickau library.

LEMOYNE, or MOINE, JEAN-BAPTISTE, a French musician, was born at Eymet in 1751. In his youth he went to Germany, and studied composition under the celebrated masters Graun and Kirnberger. Whilst at Berlin he composed a storm chorus for an old opera, "*Toinon and Toinette*," which had the greatest success, so much so, that the Prince Royal of Prussia gave him, as a reward for its composition, a superb gold snuff box filled with ducats. He was then nominated director of the music at the theatre of this prince, and had the honor of giving several lessons to Frederic the Great, by whom he was much esteemed. After this he produced, at Warsaw "*Le Bouquet de Colette*," an opera in one act, in which Madame St. Huberty performed, who afterwards, by Lemoyné's instructions, became

celebrated actress and singer at Paris. On his return to France, he composed for the Royal Academy of Music, "*Electre*," an opera in three acts, 1783; "*Phèdre*," in three acts, 1786; "*Néphé*," in three acts, and "*Les Prétendus*," in two acts, 1789; "*Louis IX.*," in three acts, and "*Les Pommiers et le Moulin*," in one act, 1790. Subsequently to this, he gave, at the same theatre, "*Miltiade à Marathon*." The above works were all successful, especially "*Phèdre*," "*Néphé*," and "*Les Prétendus*." Lemoyne was the first composer who had the honor of being called on the stage by the public at the Grand Opera. This took place on the first representation of his "*Néphé*." Lemoyne also composed several operas for the Théâtre Feydeau, namely, "*Elfrida*," "*Le petit Bâtelier*," and "*Le Mensonge officieux*." He was the only French composer of his time whose works succeeded by the side of those of Gluck, Piccini, Sacchini, &c. He died at Paris in 1796.

LEMOYNE, G., son of the preceding, was born at Berlin in 1772. He was an excellent pianist, and composed much music for his instrument, as also a great number of romances, amongst which is the admired one "*Le Tombeau de Myrthe*."

LENAIN published at Paris, in 1766, a work entitled "*Des Elémens de Musique*."

LENCLOS, DE, chamber musician to Louis XIV., was a guitarist and theorist. He died in 1630. He was the father of the celebrated Ninon de Lenclos.

LENE. An old term applied to a note sustained in one of the harmonic parts of a composition, whilst the other parts are in motion.

LENTANDO. (L.) A word indicating that the notes over which it is written are to be played, from the first to the last, with increasing slowness.

LENTEMENT. (F.) A word signifying that the movement to which it is prefixed is to be performed in a slow time.

LENTEMENTE. (I.) Somewhat slow.

LENTO, or LENT. A term implying slowness of time.

LENTEUR, or LENTEZZA. (I.) With a sedate and lingering movement.

LENTON, JOHN, one of the band of King William and Queen Mary, was a professor of the flute. He composed and published, in conjunction with Mr. Tollit, a work entitled "A Concert of Music, in three parts." Some catches of his composition are printed in the "Pleasant Musical Companion."

LENTZ, H. G., a German composer and professor of the piano-forte, seems to have resided some time in London, between the years 1784 and 1794. He then went to Hamburg, where he styled himself a member of the Society of Arts and Sciences at Paris, and played two new concertos for the piano-forte, and symphonies, which compositions were distinguished for so much genius, art, and taste, that they obtained the approbation of all connoisseurs. He published various pieces, of which we may mention the fol-

lowing: "*Trois Concertos pour le Clav.*," Nos. 1, 2, 3; "*Neuf Trios pour le Piano, avec V.*," Op. 5; "*Neuf Trios pour le Piano, avec V. et B.*," Op. 8; "*Neuf Trios pour le Piano, avec V.*," Op. 9, Paris; the last also at Offenbach, 1793 and 1794; "*Airs variés pour le Clav.*," No. 70, Paris, 1792; "Three Trios for Piano-forte," London, 1795; "6 *Deutsche Lieder*," Hamburg, 1796; "Preludes for the Piano-forte," London, about 1794; "*Air varié, 'O ma tendre Musette,' pour Piano-forte*," Leipsic.

LENZI, CARLO. Formerly *chef d'orchestre* at Bergamo. It is said that he obtained no small degree of fame as an artist in Italy. He retired, probably on account of his old age, in 1802.

LEO, LEONARDO, born at Naples in 1694, was, after Durante, one of the most laborious, brilliant, and sublime composers of Italy. Like Durante, a pupil of Alessandro Scarlatti, he did not adopt also the severity of the style of the latter in the opera, nor of the former in church music; he preserved all their dignity, which he blended with pathos, his peculiar excellence. Flexibility was the source of the talent of this composer; he adapted his style with equal success to the serious and to the comic opera. He was alike brilliant in each, and his first opera, "*Cioè*," in the latter species, was received by the Neapolitans with such applause, that it was represented in several of the other Italian theatres. The subject of this piece is a man who has the habit of adding "*that is to say*" to every thing he says, and who, in endeavoring to be explicit, is only the more obscure. His serious operas were approved as much as the "*Cioè*," for their expression, grace, truth, and melody.

Emulous of Vinci and Porpora in dramatic composition, Leo was equally desirous of rivaling Durante in sacred music; and as in the one he had been by turns pathetic and gay, scientific and natural, so in the other he was imposing and elevated, grand, and at times sublime. Amongst his compositions for the church, his "*Misereve*" is particularly celebrated for its profound knowledge of counterpoint, its grandeur and purity of style, and its natural and ingenious employment of modulation and imitation; it has even been judged equal to that of Jomelli. Leo invented that species of air called, by the Italians, *aria d'os'inazione*, or obligato airs; his compositions in this style are highly classical, particularly that beginning "*Ombra diletta e cara*."

Leo was the founder of a school of singing in Naples, which tended to increase the fame of his country as a nursery for those celebrated singers which have filled the Italian theatres of the different European courts. The solazzi he composed for his scholars are still eagerly sought and studied. Leo was in every respect eminently serviceable to the progress of his art. That which Alessandro Scarlatti began, he continued; that which Porpora and Sarra had only indicated, he completed. By his assistance, melody was greatly released from those elements which destroyed its power; it was purified on leaving his hand; without any injury to expression, he gave it its delightful alliance with grace and truth; his style was always elevated without affectation, expressive without extravagance, and grand without inflation. Leo died at Naples in 1745, aged fifty one.

The following list comprises his principal works. Sacred music: "Santa Elena," oratorio; "La Morte d'Abele," oratorio; "Ave Maria stella," "Miserere alla Capella," for eight voices; "Heu nos miseros, Motetta alla Capella à 5 voci," "Missa à 2 Sopr., A., T., e B.;" "3 Messe à 5 voci;" "3 Dixit;" "Te Deum à 4 voci;" "Credo à 4 voci;" "Magnificat à 5 voci;" "Magnificat à 4 voci. con 2 V. e B.;" "Cantata per il glorioso S. Vincenzo Ferreri, ossia Motetto à 5 voci. con Strom.;" "Cantata per il Miracolo del glorioso S. Genuaro à 5 voci. e grande orch.;" "Motetta Jam surrexit dies gloriosa, à 5 voci;" "Miserere mei à 4 voci. soli col Basso." Operas: "Caio Gracco," 1720; "Tamerlano," 1722; "Timocrate," 1723; "Catone in Utica," 1726; "Argene," 1728; "La Clemenza di Tito," 1735; "Siface," 1737; "Ciro riemsciuto," 1739; "Achille in Sciro," 1740; "Vologeso," 1744; "Sofonisha," 1748; this, according to Dr. Burney, was Leo's first opera; "Artaserse;" Dr. Burney could only find in Italy one air from this opera; "Arianna e Teseo," "Olimpiade," "Demofonte," "Andromacha," "La Nozze di Psiche con Amore," "Festo Teatrale," 1739; "La Zingarella," intermezzo, 1731; and "Il Cidè," opera buffa. Other vocal works: "Serenata per Spagna, 2 parte," and "Componimento pastorale, 2 parte."

LEONACCINI, born at Modena, was reckoned by Piccini among the principal Italian masters in music. He flourished from the year 1600 till 1650.

LEONARDI, GIOVANNI. A composer in the beginning of the sixteenth century, some of whose works are yet to be found in a collection of songs for four voices, printed in 1548. A copy of this work may be seen in the Zwickau library.

LEONE, ERASMO, a Carmelite monk, probably at Turin, published "The Lamentations of Jeremiah set to Music," Turin, 1798.

LEONETTI, GIOV. BATTISTA, an Italian composer of the last century, published "Litania à 4, 5, 6, 7, et 8 voci."

LEONI, LEO, chapel-master of the cathedral at Vicenza, published "Salmi à 3 voci," Venice, 1625, also some works of motets and other music, early in the seventeenth century.

LEONI, a Jew, was considered, in 1777, as one of the best singers in England. He was engaged both at concerts and at the opera. In 1778 he went to Dublin. Before this period he had sung at synagogues in London, where people of the first rank went to hear him. The Jews, however, afterwards dismissed him from their church service, because he had sung in "The Messiah" of Handel, and at the theatres. The Jews of Berlin did not evince the same intolerance in 1786, when thirteen persons of their persuasion sang in "The Messiah," at the church of St. Nicholas in that town.

LEONINE. An epithet applied to certain hymns, or verses, of which the middle line rhymes with the last. They are supposed to have derived this appellation from Pope Leo, their author, in the seventh century, and are, by some, thought to have been the first attempt at rhyme. Others, however, imagine the hymn to St. John the Bap-

tist, written by Paul Diaconus, to be rendered memorable not only by Guido's scale, but by having been the model of all other monkish rhymes in Latin, as well as in the modern languages.

LEOPOLD, GEO. AUG. JULIUS, born at Leimbach in 1755, published "Gedanken und Conjecturen zur Geschichte der Musik," Stendal, 1780.

LEPIN. Under this name was published in Paris, in 1794, "Concerto pour le Clav. avec deux V., A., et B."

LÉPINE. A musician not much known, who composed the music of "Acys et Galathée," an opéra which was represented in 1787.

LEPRINCE, a French violinist, died in 1781. On his voyage from Holland to St. Petersburg, the vessel he was in was taken by an English privateer, when he continued to play so cheerfully on his violin, that the English made him play to their dancing, and gave him back all his property.

LEPSIS. A term used in the ancient music for one of the three branches of *melopœia*, and by which the composer discerned whether he ought to place the notes of his melody in the lower part of the octave, called *hypatoides*, the upper part, called *netoides*, or among the middle sounds, called *mesoides*. See MESOCLEMENTS, and USUS.

LE PANTALON. The first figure of a quadrille.

LEROY, ADRIEN, an excellent luteist and composer, was the first establisher of musical printing in France, and published, in 1583, a treatise on music.

LEROY, EUGENE, a composer at Paris, published there, previously to the year 1798, four works of sonatas for the piano-forte. He died in 1816.

LESCOT, singer at the Théâtre Italien in Paris, in 1788, was the composer of the printed opera "La Nègresse," 1789.

LESGU, a French composer, lived in the year 1678.

LESSEL, V. F., a musician at Vienna, one of the three pupils of Haydn, published there "Ariette pour le Clav. avec Var.," 1797, and some other compositions.

LESSING, GOTTHOLD EPHRAIM, counsellor at Brunswick-Wolfenbittel, and librarian, was born at Pasewalk, in Pomerania, in 1729. Though he never understood the science of music, he, by his genius and learning, acquired such deep insight into what is really beautiful, that, even to professional musicians, he could give hints and excellent rules for the use and application of the art. The proofs of this are to be found in the following of his writings: "Ueber die Regeln der Wissenschaften zum Vergnügen besonders der Poesie und Musik;" this is a small instructive poem, Berlin, 1753-1756. "Ueber die Musikalische Zwischenspiele bey Schauspielen," 1767; this is in his "Uamb. Dramaturgie," 1769. "Scriptores Rerum Brunsvicensium," Hanover, 1770, three voi-

umes folio. This is an historical work. He died in 1781.

LESSON. A word formerly used by composers, to signify those exercises for the harpsichord, or piano-forte, which are now generally called sonatas. The length, variety, and style of lessons are not regulated by any acknowledged rule, but entirely depend on the fancy, taste, and abilities of the composer, and the class of practitioners for whose use the pieces are designed. The word lesson is also applied to that instruction which a master communicates to his pupil at each visit, or sitting.

LESUEUR, JEAN FRANCOIS, chevalier of the legion of honor, and conductor of the Emperor Napoleon's chamber music, was born about the year 1766. He first studied music at Amiens, where he was educated. He was appointed in early life chapel-master of several cathedrals, among others of Notre Dame at Paris, for which he composed many oratorios, masses, and motets. The extraordinary success of these pieces at Notre Dame, the Chapel Royal, and the *Concerts Spirituel*, and the favorable critiques on them, written in the journals by such men as Sacchini, Piccini, Philidor, and Grétry, placed Lesueur, during the space of thirty years, in the very first rank of the church composers of Europe. As early as the year 1785, before Lesueur was twenty years of age, Sacchini said of him, "I know only two chapel-masters in Italy who can equal him." Lesueur not only wrote for the church, but he also composed five operas, which are considered in the highest order of dramatic compositions. His first opera was "*La Caverne*," in three acts, represented at the Théâtre Feydeau, in 1793. The second, "*Paul et Virginie*," in three acts, also performed at the Feydeau, in 1794. The hymn to the sun in this piece was greatly admired, and has frequently been sung at concerts. Third, "*Télmaque*," in three acts, Théâtre Feydeau, in 1796. Fourth, "*Les Bardes*," five acts, performed at the Royal Academy of Music, in 1804. French critics have agreed, in speaking of this opera, that the sublime is the true characteristic of Lesueur's music. He always writes with simplicity, but still forms his taste on the antique. In his opera of "*Les Bardes*," he had proposed to himself to renew the impressions which many of the audience must have felt on reading the works of Ossian, and, in fact, the extraordinary character of his melodies produced the effect he expected. He has borrowed many of the musical ideas from his sacred compositions. There are two choruses of bards in it, of very different character, and in two different scenes; these in a third scene he joins together in one piece, so as to form some highly-wrought and striking contrasts. Fifth, "*La Mort d'Adam*," in three acts. This was first represented at the Royal Academy of Music in 1809. The character of the music is said, by the editor of the French dictionary of musicians, to be truly biblical, simple, and sublime. The Emperor Napoleon appointed Lesueur his chapel-master, on the return of Piesicello to Italy, accompanying the order of appointment with a gold snuff-box, inscribed "*L'Empereur des Français à l'Auteur des Bardes*." In 1787, Lesueur published a volume in 8vo., entitled "*Exposé d'une Musique, une, imitative, et particulière à chaque solennité*." Among his other works, we should also name "*Let-*

tre en réponse à Guillard sur l'Opéra de la Mort d'Adam, dont le tour de mise arrive pour la troisième fois au Théâtre des Arts, et sur plusieurs points d'utilité relatifs aux Arts et aux Lettres," 1802. The subject of this pamphlet is the differences which had arisen between Lesueur and the then director, or rather despot, of the Paris Conservatory, Sarette. In this controversy, another work appeared, entitled "*Mémoire pour J. F. Lesueur, contenant quelques vues d'améliorations et d'affermissement dont le Conservatoire paraît susceptible, par C. P. Ducancel, défenseur officieux et ami de Lesueur*," 1803. In consequence of this last pamphlet, Napoleon interfered, and Sarette was deprived of his situation in the Conservatory, whilst Lesueur obtained much favor and reappointment to his situation in the National Institute, of which he had been before deprived. It was about this period that he was appointed chapel-master to the emperor, as before stated.

LESSUS. A word in the twelve tables of the Romans, supposed by some to mean a funeral song; but of the real signification of this word, even Cicero was doubtful.

LETENDART, N. a pianist, born at Paris in 1770, was considered in France as the best pupil of Balbitre. He composed some music for his instrument.

LETTERIO, MARINO, an instrumentalist, probably from Italy, acquired notoriety in Paris, by his "*Six duos faciles et progress. pour deux Hautbois*," Op. 2, Paris, 1801.

LETTERS. The first seven letters of the alphabet, A, B, C, D, E, F, and G, are used to form the letters of the scale, and are repeated in every octave. These letters serve to distinguish the notes; they have been used since the time of Gregory to determine the pitch of the sounds, and are stationary upon the lines and spaces.

LEUTHARD, JOHANN DANIEL, chamberlain to the Crown Prince of Rudolstadt, born at Kerkberg, near Rudolstadt, in 1706, was taught the piano-forte by the celebrated Vogler, and, in 1727, the violin by chapel-master Graff. After this he entered, in 1730, as musician in the service of the Duke of Weimar. Here he composed several instrumental works for the court band, till, at length, he obtained the above-mentioned situation at Rudolstadt, in 1735. The following of his works have been printed: "6 Klaviersonaten," Op. 1; "6 Arien und 6 Mennetten fürs klavier."

LEVARE ANTIPHONAM. An expression used in the old church music, and signifying to begin, or open the leading part of an anthem.

LEVASSEUR, PIERRE FRANÇOIS, called Levasseur the elder, was born at Abbeville in 1733. He was a celebrated violoncellist, and, at the beginning of the present century, was still a performer in the orchestra of the Grand Opera at Paris, where he died in 1815.

LEVASSEUR, JEAN HENRI, called Levasseur the younger, was chamber musician to Napoleon, and first violoncellist at the Grand Opera. He was professor of his instrument at the conservatory in Paris, and composed much music for the violoncello and piano-forte. He died in 1823

L'ÉVEQUE, JOHANN WILHELM, royal chapel-master at Hanover, was born at Cologne in 1759. He left his native town when he was only three years old, and was taken by his parents to Paris, where he was intended for the learned profession, in order to obtain afterwards the prebendary stall of his uncle, who lived there. At Paris he first learned to play the violin for his amusement. But the great progress he made so increased his passion for music, that at last he resolved to devote himself entirely to this science, and quitted his father's house in consequence. His first engagement was with the reigning prince of Nassau-Weilburg. This prince, however, was soon obliged, in consequence of the French revolution, to discontinue the music in his chapel, when L'Éveque went to Switzerland, where he remained two years. Afterwards, he travelled through Austria and Hungary, and returned from thence to Passau, where the reigning bishop appointed him his chapel-master. After having filled this station for three years, the situation of chapel-master in Hanover was offered him, which he accepted immediately, and remained there till his death in 1816. His compositions consist of solos, duets, trios, concertos, and quartets, for the violin, &c.

LEVERIDGE, RICHIARD, was a bass singer at the theatre in Lincoln's Inn Fields, where he made himself useful in performing such characters as Pluto, Faustus, and Merlin, in the pantomimical exhibitions contrived by Mr. Rich. He had a taste both for poetical and musical composition. The first appears from several jovial songs written by him, and adapted to well-known airs; the latter by the songs in the play of "The Indian Princess," altered by Motteaux, which have considerable merit, and some others. His singing consisted chiefly in strength and compass of voice, without much grace or elegance. In 1730, he thought his voice so good, that he offered, for a wager of a hundred guineas, to sing a bass song with any man in England.

About the year 1726, he opened a coffee house in Tavistock Street, Covent Garden, and published a collection of his songs in two pocket volumes, neatly engraved. In Rowe's edition of Shakspeare, the music of the second act of Macbeth is said to have been set by Leveridge; but whether the editor has not mistaken the music of Matthew Lock for his, may deserve inquiry. His manners were coarse, but the humor of his songs and conversation obtained for him a welcome at all clubs and assemblies, where the avowed purpose of meeting was an oblivion of care; and being ever ready to aid in the promotion of social mirth, he acquired many friends, from whose bounty he derived all the comforts that, in extreme old age, he was capable of enjoying. A physician in the city procured from a number of persons an annual contribution, which Leveridge continued to receive until the time of his death. This took place about the year 1758, at the age of nearly ninety years.

LÉVESQUE, a musician in Paris about 1790, published, conjointly with Bêche, "*Solfèges d'Italie, avec la Basse chiffrée par Leo, Durante, Scarlatti, Hasse, Porpora, &c.*" Paris.

LEVETT, an English composer, published the following works: "Introductory Lessons on Sing-

ing, particularly Psalmody, to which are annexed several Psalm Tunes, in four Parts, proper for practice," "New Year's Anthem," "Hymn for Easter Day," "Hymn for Christmas Day," and "Hymn for Whitsunday."

LEVI, STEFFANO, formerly organist in the church of St. Blasius, at Codogno, in the Milanese, published "*Salmi*," Milano, 1647.

LEVIS, ANTONIO. An artist, placed among the composers of the first rank in the "*Indice de Spettac.*" 1791. He was in 1788 at Novi, in Italy, and the following of his compositions had then been produced on the stage: "*La Contadina in Corte*," opera buffa, and "*Isabella e Rodrigo*," opera buffa, 1788.

LEXICON, MUSICAL. A book teaching the signification of musical terms; a musical dictionary. John W. Moore published the "Musician's Lexicon, or Treasury of Musieal Knowledge," at Bellows Falls, Vt., 1845.

LIAISON. (F.) Smoothness of connection; also a bind or tie.

LIBRETTO. The name given by the Italians to the book containing the words of any opera.

LICENSE. A liberty taken in composition, or performance, by which the master, with some particular view, violates, for the moment, those received rules and regulations which form the established system of harmony and modulation. This kind of freedom is, at best, a hazardous resource; and the composer, or performer, who ventures it, should possess as much genius as boldness, and always compensate his trespass by some felicitous and striking effect.

L'HOYER, ANTOINE, formerly a member of the French company of performers to Prince Henry at Rheinsberg, and afterwards, from the year 1800, a guitarist in Hauburg, published there "*Six Adagios pour la Guitare, avec Acc. d'un Violon obligé*," 1797; "*Grande Sonate pour la Guitare*," 1799; "*Six Romances pour la Guitare*," Op. 14, 1799.

LIBERATI, ANTONIO, during his youth, was a singer of the imperial chapel of Ferdinand III., and afterwards in the pontifical chapel. When arrived at manhood, he was appointed chapel-master and organist of the church Della Santissima Trinità de' Pellegrini, and also chapel-master and organist of the church Di Santa Maria dell' Anima at Rome. During the time he held the latter situation, the place of chapel-master of the metropolitan church of Milan became vacant, and Liberati was requested to give his opinion of the respective merits of five persons who were candidates for it. In consequence of this request, he wrote a letter, dated the 15th of October, 1684, which he afterwards published under the title of "*Lettera scritta dal Sig. Antonio Liberati, in Riposta ad una del Sig. Ovidio Persapegi*." In this he discusses the merits of the compositions presented by the candidates in evidence of their abilities, and then traces the rise and progress of music, from the time of Pythagoras downwards, and gives his opinion respecting most of the eminent musicians who had lived both before and during his own time. Th

letter contains many curious particulars of musical history, but is written in such a vein of general panegyric, that it is much more likely to produce scepticism than conviction in the minds of modern readers.

LIBLER, JOHANN. Under this name there were published in Hamburg, about 1796, "Two Songs for the Piano-forte."

LICHNOWSKI, COUNT, an amateur at Vienna, printed there, in 1798, "*Sept Variations pour le Piano-forte sur l'Air 'Nel cor piu uon, &c.'*" In the year 1796 there was a prince of this name in Vienna, who was considered one of the first pianists of that city.

LICHTENSTEIN, LOUIS, BARON VON, of Lahm and Heiligersdorf, formerly intendant of the court theatre, and chamberlain to the Prince of Dessau, obtained a high rank among German amateurs, both as a dramatic poet, composer, and singer. When a student in the University of Göttingen, he first appeared as a performer on the violin, in Forkel's concerts, which were held there. After this time, he became page to the Elector of Hanover, in which capacity he wrote the words of the following operas, in 1795, at Bamberg, composing the music for them, and appearing on the stage in the principal characters. About 1798, he entered upon his first-named situation at Dessau, where he not only immediately enriched the orchestra with several able artists for almost every different instrument, but invited also a select number of the best vocal performers in Germany, of both sexes. In the mean time he had composed the opera "*Bathmendi*," for the opening of the theatre on the 26th December, 1798. In his following opera, "*Die Steinernen Braut*," i. e., "The Stone Bride," he and his wife performed the two principal characters, with universal approbation. By his great activity, Von Lichtenstein at length brought to such perfection the *personale* of the Dessau theatre, and the singing even of the most difficult and intricate finales of grand operas, that the musical public of Leipzig were not a little surprised, when he brought his company to their town, in the beginning of the year 1800. Notwithstanding this success, however, he resigned his situation in August of the same year, and after having, for the first time in Leipzig, introduced his own compositions, in the musical pieces "*Mitgefühl*," and the operetta "*Ende gut alles gut*," i. e., "All's well that ends well," he went to Vienna, where the Baron Von Braun gave him the direction of the court theatre and its orchestra, reserving only the financial part of the concern to himself. In 1831, Von Lichtenstein was still in this capacity at Vienna. His most known works are, "*Knall und Fall*," i. e., "Crash and Fall," an operetta in two acts, poetry and music, Bamberg, 1795. This was first performed privately for the nobility, and afterwards publicly for the benefit of the hospital for sick servants. "*Bathmendi*," an opera, 1798. This opera was in the following year entirely rewritten, not only all the words, but also the subject and contents, being entirely changed, and absolutely nothing but the name left. It gained greatly in interest by the change. "*Die Steinernen Braut*," Dessau, 1799; "*Mitgefühl*," a musical piece, the words of the songs by favorite poets, Dessau, 1800; and "*Ende gut alles gut*," an operetta, Dessau, 1800.

LICHTENTHAL, PETER, a physician and composer at Vienna, published "*Der Musikalische Arzt oder Uebandlung von dem Einflusse der Musik auf den Körper, &c.*," Vienna, 1807.

LICINO, AGOSTINO. An Italian contrapuntist of the 16th century, of whose works the following are still preserved in the elector's library at Munich, "*Duo Cromatici, Libri 2*," Venet., 1545 and 1546.

LICKL, JEAN GEORGE, a musician at Vienna, has composed much music, among which the following may be named: "*Der Zauberpfel*," i. e., "The Magical Arrow," an operetta for the Schikander theatre at Vienna, 1792. This has been repeatedly represented. "*Trois Quatuors, à 2 V., A., et B.*," Op. 1, Offenbach, 1797; "*Trois Sonat. pour le Clav. avec V. et Ve.*," Nos. 1, 2, 3; "*Six Var. pour le Clav. sur Gott erhalte, Franz, &c.*," Vienna, 1798; "*Cassatio pour Oboe, Clarinette, Fag., e Cornu*," Vienna; "*12 Var. p. il cemb. sopra Mein Steffel ist ja ein*," Vienna; "*Trois Quat. pour Fl., V., A., et Ve.*," Op. 5, Vienna, 1798; "*9 Var. p. il cemb.*," Vienna; "*Trois Sonates pour le Piano-forte*," Vienna, 1799; "*Trois Duos pour 2 Fl.*," No. 4, Vienna, 1799; "*3 Terzetti à Clar., Corn., e Fag., 1 Mst. bey Traeg*," and "*Trois Trios pour V., A., et B.*," Op. 17, Augsburg, 1800.

LIDL, ANTON. Dr. Burney states him to have been an able and tasteful viol da gambist. He also made many improvements on an instrument called the baritono, which was invented about the year 1700, and much resembled the viol da gamba. Lidl was a native of Vienna. He was still living in 1800, according to Choron. Dr. Burney, however, states that he died before the year 1783.

LIEBERT, chapel-master to the Prince of Thurn and Taxis, at Regensburg, in 1796, was a pupil of the able Riepel. He was also a good composer.

LIEBESKIND, GEORG GOTTHILF, a celebrated flutist, in the service of the Margrave of Anspach, was born in 1732. He was the favorite pupil of Quatz.

LIEBESKIND, JOHANN HEINRICH, a son of the above, lived, in 1807, at Bamberg, being a doctor of laws and chief justice to the King of Bavaria. He is one of those amateurs, says Gerber, of whom it is to be wished there were many in our science, who not only seek for entertainment in music because it gratifies their senses, but because they can employ their abilities for the benefit of the science. He is equally familiar with musical literature, and with the nature and powers of the flute. Of this he gave a convincing proof in 1807 and 1808, in the *Leipzig Mus. Zeit.*, in which he published a learned, ingenious, and instructive treatise on the notes of the flute, under the title of "*Bruchstücke aus einem noch ungedruckten philosophisch-praktischen Versuche über die Natur und das Tonspiel der deutschen Flöte*."

LIEBICH, GOTTFRIED SIEGMUND, chapel-master and private secretary to the Count of Reuss-Plamischen, was born at Frankenberg, in Meissen, in 1672. He received a good foundation in musical education from his father, who was a singer in the same chapel, and went afterwar

to the school at Bautzen, and from thence to Jena, to study medicine. Here, however, he did not remain more than a year, when he proceeded to Dresden, where he devoted himself entirely to music, in which profession his beautiful tenor voice afforded him a great advantage. About the year 1695, he obtained the office of notary in Schläetz, in Voigtland, and afterwards the chapel-master's situation above mentioned, in which he died in 1727. Among various other works, there are manuscripts of his entitled "*Einen Jahrgang über die Evangelien, für 1 Singstimme, 2 Violinen, 2 F., et B.,*" and "*Einen dergleichen Jahrgang, für 4 Singstimmen mit verschiedenen Instrumenten.*"

LIGATURE. A *ligature* is a band, or link, by which notes are connected or tied together. At present we only tie the tails of quavers and notes of shorter duration; but the old masters tied, or linked, together the heads of their square notes.

LIGHT. A word adjectively applied to any thin, airy composition; also to the keys of an organ, harpsichord, or piano-forte, when they make very little resistance to the pressure of the fingers. Instruments with such keys are said to be of a *light touch*.

LIGNE, PRINZ KARL DE, published at Vienna, of his own composition, "*Recueil 1, 2, 3, de Six Airs François pour le Clavécin,*" Vienna, 1791.

LIGOU, PIERRE, an abbé, born at Avignon in 1749, was appointed organist at Alais, in 1769. He composed several operettas, also some church music, which had much success.

LILIEN, BARONESS ANTOINETTE DE. An amateur at Vienna, whose compositions are praised for their powerful style. She published, in 1799, "*Huit Variations pour le Piano-forte sur le Thème du Trio 'Priu ch' io l'impegno,*" Vienna; "*Sept Variations sur un Thème dans le Ballet d'Alcinoë,*" Op. 2, Vienna; and "*Nuf Variations pour le Piano-forte,*" Vienna.

LILIEN, BARONESS JOSEPHINE DE, probably sister to the preceding, has published "*Dix Variations pour le Clav. sur une Romance,*" Vienna, 1800, and "*Dix Variations pour le Clav. sur l'Air La Rachelina,*" Op. 2, Vienna, 1800.

LIMMA, or REMNANT. An interval used in the ancient Greek music, which is less by a comma than a major semitone. When taken from a major tone, it leaves the *apotome* for a remainder.

LINES. Those members of a stave on and between which the notes are placed; also those horizontal parallels which are placed above or beneath the stave. The invention of *lines* is generally attributed to Guido. At their first introduction the spaces between them were not used.

LINC, or LINK, WENZEL, a coöperator with Luther in the reformation, was born at Colditz in the year 1483. He was first a monk of the order of St. Augustine, in the convent at Meisnisch, near Waldheim; became, in his twenty-eighth year, a preacher; and, lastly, in consequence of his thorough acquaintance with the

Holy Scriptures, professor, in 1512. From thence he was, in 1518, appointed first as friar, and afterwards, in 1525, as first Lutheran minister, in the hospital at Waldheim, where he died in 1547. Among his numerous writings is to be mentioned "*Die letzten 3 Psalmen von Orgeln, Pauken, Glocken und dergleichen ausserlichen Gottesdienst, ob und wie Gott darinnen gelobrt wird, verteutsch durch W. Link, zu Altenburg,*" Zwickau, 1523.

LIND, JENNY, (GOLDSCHMIDT,) who stands, by common consent, at the head of living soprano singers, was born in Stockholm on the 8th of February, 1820. Her father, we believe, was an advocate of respectable character and moderate circumstances. She was a lovely and modest child, and from her earliest days was passionately fond of melody. One day, when she was five or six years of age, a Swedish actress heard the child singing, and was so surprised by the marvellous purity of her voice, and the talent and native skill displayed by the child in its management, that she spoke of it to the Herr Crelius, a music master resident in Stockholm. He heard the child sing, and instantly determined on presenting her to the Count Pöcke, as a candidate for admission to the musical school attached to the Royal Theatre, of which he was the manager. The Count Pöcke at first made some difficulties; but, after hearing her sing, was even more astonished than Herr Crelius had been, and consented to her admission. She accordingly entered the Conservatory at this early age, and was placed under the tuition of Erasmus Berg, a profound and skillful musician. After studying under this master for several years, the public were surprised one evening at seeing a child appear in a *vaudeville*, in which she had to sing. This child was Jenny Lind. Such was her success, that she became a public favorite, and, after a short time, began to appear in opera. At this period of her life every thing seemed to bid fair for the future, and the child looked forward to the day in which she might hold a high position in her art. This, however, was a dream, which was destined to be dispelled by a misfortune to which she had not looked forward. It was the loss of her voice, when she was about fourteen years of age. She was compelled to retire from the theatre, and again practise her art alone, and in the privacy of her own apartments.

At length her voice returned to her, but it was no longer the voice which she once had, nor had it yet acquired the wonderful beauty and purity which now marks it. She now managed to go to Paris, and place herself under the tuition of Signor Garcia, the father of the famous Malibran, and the master of so many distinguished vocalists of the present day, who, however, at first little foreboded the future eminence which his pupil was to obtain, greeting her, on being presented to him, with the discouraging remark, "*Mon enfant, vous n'avez plus de voix.*" And very frequently has he said, "If Lind had more voice at her disposal, nothing could prevent her becoming the greatest of modern singers; but as it is, she must be content with singing second to many who will not have one half her genius."

Her voice, nevertheless, gradually strengthened, and she was at length summoned back to Stockholm. Here she again entered the theatre, and speedily became again a public favorite; and

Sweden. But during her residence in Paris, she had made the acquaintance of Meyerbeer, the celebrated composer. This great man had formed a friendship for Jenny, and two years later she received an invitation from him to join the opera at Berlin. To this she consented, and soon after repaired to Berlin, in 1844. At first she made little impression upon the public, for her voice had not yet completely returned to her. One evening, however, when she was singing in *Robert le Diable*, she felt that it had returned, and inspired by the consciousness, sang the music of Alice with such a force and power, combined with the sweetness to which the public had become accustomed, that she electrified them, and astonished Meyerbeer, who from that moment regarded her as the first of modern singers. Every thing was now changed for her. She rapidly progressed in public estimation, and her reputation soon spread through the whole of Germany, which at present is, perhaps, the most musical nation in continental Europe. Soon after this, a musical festival was held at Bonn, upon the Rhine, and the Queen of England, who was then on a visit to his Prussian majesty, attended it. Jenny Lind was engaged at the festival, and the English critics who attested it wrote back such warm accounts of her genius, that it was not difficult to foretell that she would soon come to England. Accordingly, towards the end of the year, M. Belinaye came to Berlin, and through the medium of Lord Westmoreland, was presented to Jenny Lind, whom he had the satisfaction of engaging to appear, under Mr. Lunuley's management, the following season.

Her success in England was such as at once to rank her, in the estimation of London, as the very first of modern singers, and this, too, at a season when Alboni had made her first appearance there, and Viardot Garcia had returned to the English stage in all the triumph of a continental reputation. From this period her reputation has been unaltered.

Jenny Lind sang in opera in London for several years, with increasing reputation, and realized from her efforts very large sums of money. Her principal rôles in opera were Alice in "*La Sonnambula*," "*La Fille du Regiment*," Agatha in "*Der Freischütz*," &c., &c.

She also sang, with wonderful success, in Handel's oratorios, and gave many concerts in England during the last season in which she sang there, having withdrawn entirely from the lyric stage. In September, 1850, she visited the United States, and gave upwards of a hundred concerts, in all parts of the country, exciting every where an unparalleled enthusiasm. Soon after the termination of those concerts she was married, in Boston, Mass., in February, 1852, to Mr. Otto Goldschmidt, of Hamburg, a young pianist of distinction, who had accompanied her during a part of her tour, and they shortly afterwards returned to Europe. They now reside in Dresden.

Jenny Lind's voice is a soprano of great compass and power. Not less remarkable is its sweetness and perfect purity of tone. Her execution is truly remarkable, and, it would seem, unequalled. Difficulties seem to her to be no difficulties, and, in the possession of her full physical powers, she is able to give the most complete effect to whatever she undertakes. Her private character is spotless; her generous liber-

ality almost prodigal. The immense proceeds of her American tour (where she dispensed large sums in charity) are devoted to the establishment of a free school system in her native country.

M. Jules Benedict, the conductor of Jenny Lind's concerts in America, and an excellent writer and critic as well as musician, ascribes the secret of her triumphs to the fact "that the great singer makes a conscience of her art." We translate what follows.

"The child, brought up and fashioned in the school of adversity, and finding in music all the consolations which a cruel destiny had refused to her; the young girl who, thanks to the care of her excellent masters and friends, Berg and Lindblad, learned in good season to identify herself with the masterpieces of the great composers; and finally Jenny Lind, at the apogee of her glory, shunning the world and society, and knowing, loving, dreaming nothing but her art, had certainly some powerful elements of success.

"It would not be easy, in our time, to meet any *cantatrice* whosoever, who could play and sing to you from memory, from the first note to the last, the *Armida* of Gluck, the *Chateau de Montenero* of Dalayrac, the *Festale* of Spontini, the *Deux Journées* of Cherubini, the operas of Mozart, Weber, and Meyerbeer, the oratorios of Handel and Haydn, all the melodies of Mendelssohn, of Franz Schubert, of Schumann, the *Mazurkas* and *Etudes* of Chopin, without counting a very extensive dramatic *repertoire*, comprising the scores of Rossini, Donizetti, Bellini, Verdi.

"It would, perhaps, be yet more difficult to name an artist who could appreciate and comprehend these great schools, become penetrated with their genius, preserve their local colors, and appropriate to herself their styles. It would be almost impossible to find a *musicienne* who could at sight decipher the most difficult pieces, retain melodies of an irregular and unusual rhythm, and repeat them, after several days, as if she had created them herself. Mlle. Lind unites these precious qualities. But this is not all. The grand thing — I repeat it — is, that she makes a conscience of her art; that in the smallest city of Germany or of America, she will put the same zeal, the same *verve* into the execution of the airs she may have selected, or the rôles she may have undertaken, that she would if she were making her *début* in the *Salle Ventadour*, in her majesty's theatre, or in Tripler Hall; that she never concerns herself about what is said by critics, friends, enemies, or the public in general, but thinks of her art, and of her art only.

"Detached from what surrounds her, abandoning herself entirely to her inspiration, she impresses on the music that she sings a stamp of originality that is irresistible. With an inexorable rigor towards herself, she punishes the slightest imperfection, which she thinks she has discovered in her execution, by a redoubled, tripled labor. But then, when by sufficient trials she has enriched her *repertoire* with a new piece; when, in the plenitude of her means, she gives free scope to the resources of her genius so rich and various, who can remain cold and insensible? The sacred flame communicates itself to her audience; a thrill runs through the seats; a profound emotion is engraved upon all countenances; and when at last the solemn silence is replaced by

universal acclamations, when we try to account for the impression we have experienced, and ask why we have been seized with admiration and astonishment, the answer is, that *we have heard an artist who makes a conscience of her art!*"

LINDLEY, ROBERT, born at Rotheram, in Yorkshire, in the year 1777, was from early infancy extremely fond of music, so that even at the age of four years his father could not please him so much as by playing to him on the violoncello. Shortly afterwards his father, who was an amateur performer, commenced teaching his son the violin, and, as soon as he attained the age of nine, also the violoncello, which instruction he continued for the space of seven years, when the celebrated Cervetto heard the youth play, and undertook, in the most friendly manner, and gratuitously, to give him lessons. He went to England, and was engaged at the Brighton theatre, when George IV., then Prince of Wales, honored him with his commands to perform at the pavilion, and expressed himself highly gratified with his playing. In 1794, he succeeded Sperati as first violoncello at the King's Theatre. Lindley was almost universally considered as second to no violoncellist in Europe. He composed several concertos and other works for his instrument.

LINDLEY, WILLIAM, son of the preceding, was born in the year 1802, and commenced the study of music under the instruction of his father, and first performed on the violoncello in public, at the age of fifteen, on which occasion he was presented with very flattering testimonials from Sir George Smart and other professors. The performance was at the King's Theatre, for the benefit of the Musical Fund, in the year 1817; since which time W. Lindley has regularly played at the Philharmonic, Ancient, and other concerts, and been engaged in the orchestra of the King's Theatre since the year 1819.

LINDNER, FRIEDRICH, singer at Nuremberg, was born in Silesia, and was entered in his youth as chorister in the chapel of the Elector Augustus, at Dresden. He was educated at the expense of the elector, and first went to school in Dresden, and afterwards to the university at Leipsic; on leaving which, he entered the service of Count George Frederic, at Auspach, in whose employ he remained ten years, when he received, in 1574, his appointment at Nuremberg. He published several of his own compositions, as appears from the following list: "*Cantiones Sacre*," Nuremberg, 1583; "*2 Pars Cantionum Sacrarum*," Nuremberg, 1588; "*Missa, 5 vocum*," Nuremberg, 1591; also works of various other composers, under the title "*Gemina Musicalis*," vol. i., Nuremberg, 1588. This work contains sixty-four Italian madrigals, by the following among other composers: Lelio Bertani, Jean de Macque, Jacques Werth, Joan. Mar. Naniuo, Joan. Baptist Moscog, Franc. Soriano, Annibal Zoilo, Ginnetto da Palestina, Alfonso Ferahoseo, Cipriano de Rore, Baldassar Donato, and Huberto Waelrent. "*Gemina Musicalis*," vol. ii. 1589. "*Gemina Musicalis*," vol. iii. 1590. He has also published "*Corollarium Cantionum Sacrar. 5, 6, 7, 8, et plurius voc. de festis precipuis anni, quarum antea a prestantissimis nostræ ætatis musicis Italia separatim editæ sunt,*

quædam vero in perrime concinnatæ nec uspiam typis excussæ at nunc in unum quasi corpus reductæ studio et opera Friderici Lindneri," Norimberge, 1590. The works of the following composers are to be found in this last-mentioned volume: Marcus Anton Ingignierius, Bernard Klingenstein, Jacob Corsini, Jacobus Florus, Orlandus de Lasso, Annibal Stabilis, Ant. Scandelli, Oratius Columbanus, Julianus Cartarius. "*Corollarium, &c.*," being the same work continued. This contains fifty-six Latin songs, amongst which are to be found some by the following contrapuntists: Constantius Porta, Don Ferdinand de las Infantas, Vencentius Ruffus, Nicolaus Parma, Jul. Ces. Gabutius, Jacobus Ant. Cardilli, and Felix Anerius.

LINDPAINTRNER, PETER JOSEPH, was born on the 8th of December, 1791, at Coblenz, on the Rhine, and in 1853 was conductor of the "New Philharmonic" concerts in London. His father, Jacob Lindpaintner, an opera singer, settled, with his family, in 1795, at Augsburg, where he placed his son at the Gynnasium, to be educated for the medical profession. The early indications which the boy gave, however, of a strong predilection for music, altered the intention of his parents, and Lindpaintner became a pupil of the celebrated composer Winter, who then resided at Munich. Some years later he studied counterpoint with Joseph Gratz, who at that time was reputed one of the most learned masters in Germany. Under such favorable circumstances the progress of the young musician was very rapid, and he speedily acquired a knowledge of all the secrets of his art. He was encouraged by several distinguished persons, and among others by the Elector of Treves, who promised to supply him with the means of making an artistic tour in Italy. The unexpected death of his friendly patron, in 1811, however, prevented the realization of his plan, and he accepted the post of music director at the opera, which had just been opened at Munich. Although only twenty years of age, Lindpaintner performed the duties of this office with such success that he rapidly obtained fame as a *chef d'orchestre*, and after six years' residence at Munich, he received proposals from Stuttgart to undertake the post of Capellmeister to his majesty the King of Wurtemberg. The terms were so highly advantageous that Lindpaintner did not hesitate to accept them. He went to Stuttgart in 1819. Besides having been chiefly instrumental in forming an orchestra which holds the reputation of being one of the most efficient in Europe, Lindpaintner otherwise employed his time to good purpose. The largest number of his works for the church, the theatre, and the concert room, were written at Stuttgart, and established his name as one of the most prolific and successful composers of his country. The music of Lindpaintner has no decided school, but may be said to mingle the characteristics of two of the greatest modern masters — Weber and Spohr — with the light, brilliant, "*ad captandum*" manner of the French. The *mélange* is of itself highly agreeable, more especially when combined with such clear and masterly orchestration as distinguishes the overtures to "*Der Vampyr*" and other operas.

A list of the vocal and instrumental compositions of Lindpaintner would occupy a larger space than can be afforded in this work. A specimen-

tion, by name, of some of those which are the most highly esteemed, will suffice to present some notion of their number and variety. Among these are "The Young Man of Naezi," a short oratorio; "Abraham," an oratorio in three parts; and "The Lord's Prayer," for solo voices and chorus; the operas of the "Vampyr," "Genesirinn," "Sicilianische," "Vesper," "Die Macht des Liedes," and "Giulin," the ballets of "Joko," and "Zeila," and several concert overtures. Lindpaintner has written, in all, fifteen operas and operettas, fifty psalms, and four masses. His instrumental compositions are very numerous, including solos for almost every instrument, two concertantes for wind instruments, twenty concert overtures for the orchestra, besides *entr'actes* and melodramatic music. As a song writer he has been no less prolific, having composed no less than two hundred *lieder*, some of which have obtained a wide popularity in Germany. In England one of these *lieder* (known under the titles "With Sword at rest" and the "Standard Bearer") was made famous by the singing of Herr Pischek, who first introduced it at one of the concerts of the Philharmonic Society, in Hanover Square.

Lindpaintner, besides being a member of nearly all the musical societies of Germany, is Chevalier of the Order of the Crown of Wurtemberg, and member of the Royal Academy of Berlin. His majesty the King of Prussia presented him with the large gold medal of the Arts and Sciences, and H. R. H. the Duke of Coburg with that of the Ernestine Order of Merit. Her majesty the Queen of England, through Prince Hohenlohe, also presented him with a golden medal, bearing her majesty's likeness, as an acknowledgment of her majesty's having received the score of the oratorio of "Abraham."

LING, W., a musician in London, about the year 1790, published "Three Sonatas for the Piano-forte, with a Flute Obligato to one and two, with a Violin Accompaniment," Op. 1, London; "Ducts for the German Flute," Op. 2, London; "The Rising of the Lark, with Variations for the Piano-forte," London; "Grand March," inscribed to the gentlemen of the London Royal Association, London.

LINGKE, GEORG FRIEDERICH, counselor of the mines to the King of Poland and Elector of Saxony, published at Leipsic, in 1779, "*Kurze Musiklehre, &c.*"

LINIE. (G.) A line of the staff.

LINKE, JOHANN GEORG, a composer of vocal music, violinist, and excellent *chef d'orchestre*, learned the art of composition of the celebrated Johann Theil, of Berlin, and became afterwards a member of the Chapel Royal in that city, and chamber musician, where, on the occasion of a public funeral, he was first obliged to take the place of the *maître de chapelle*, who happened to be absent. In the year 1713, he was called to the court of Weissenfels, in the capacity of chapel-master, from whence he went to England, after having obtained leave from the duke. In England he remained three years, and went afterwards to Hamburg, as *chef d'orchestre* in the opera there. He wrote in that town small pieces for the theatre and several concertos. We can mention the following of his compositions: "Cantata,

Lungi da me pensier, &c. à Sopr., 2 V., Viola, e Cembal." manuscript, in Breitkopf's collection; "Cantata, Ho una pena intorno al Core, à Sopr., 2 V., Viola, e B.," manuscript, in Breitkopf's collection; "Cantata, Crudel Amore, à Sopr. e Cemb.," manuscript, in Breitkopf's collection.

LINLEY, THOMAS, a distinguished vocal composer, received the rudiments of his musical education from Thomas Chilcott, organist to the abbey church at Bath; and it was completed afterwards by the celebrated Venetian, Paradise, a composer, whose twelve admirable sonatas would have alone immortalized him, had he written nothing else. Linley was for many years the conductor of the oratorios and concerts, then regularly performed at Bath, and might with great truth be considered as having restored the music of Handel, and the performance of it, to the notice and patronage of the public, as Garrick restored the plays of Shakspeare. Through his taste and ability as a manager, assisted greatly by the exquisite singing of his two eldest daughters, afterwards Mrs. Sheridan and Mrs. Tickell, music was cultivated generally at Bath and its vicinity, and concerts and oratorios were successfully performed not only there, but in the metropolis, beyond all former precedent since the death of the illustrious Handel himself. As a singing master and a composer, Linley possessed a taste and style peculiarly his own, but still modelled on the principles of that pure English school, which, however overshadowed at present by the foreign structure that has been opposed to it, can never be totally eclipsed while there are any feelings of nature and good sense remaining.

Linley left Bath to reside with his family in London, in consequence of becoming joint patentee with his son-in-law, Mr. Sheridan, of Drury Lane Theatre. Here he conducted, for many years, the musical department, and gratified the public, from time to time, with many beautiful operas. "The Duenna" had been previously brought out at Covent Garden Theatre, and was the joint production of Linley and his eldest son. The operas and musical entertainments which Linley set for Drury Lane were "The Carnival of Venice," "Selima and the Royal Merchant," "The Camp," "The Spanish Maid," "The Stranger at Home," "Love in the East," and many minor pieces. They all, particularly "The Duenna," "The Carnival of Venice," and "Selima and Azor," possess proofs of a rich and cultivated fancy, a sound judgment, and scientific construction. Among those which may be considered the minor pieces, the music in the first act of the pantomime of "Robinson Crusoe" must not be passed over in silence; it is strikingly original and characteristic. But one of the most delightful efforts of this charming composer's mind, whilst connected with the theatre, was the harmonies and accompaniments he added to the songs, &c., of "The Beggar's Opera." Instead of the treble only, and a meagre and sometimes incorrect bass, the piece is now performed with the advantage of a full orchestra, wind instruments being introduced so as to give to many of the airs the most effective variety. It is impossible to listen to the songs of "O, ponder well," "When my hero in court," and the air, "Would I might be hanged," and not be struck with the effect produced by the horns and clarinets, &c.

the pizzicato accompaniment of the stringed instruments. Linley's six elegies were composed at Bath, in the meridian of his life, and it would be difficult to place any compositions of the same description in competition with them, for originality of conception, elegance, and tenderness. Burney, who, in his "History of Music," has classed English masters rather too much in the lump, (indeed, he was no very great admirer of his native school,) has yet particularly distinguished these, as well as the elegies of Jackson.

Mr. Sheridan's monody on the death of Garrick was originally recited by Mrs. Yates, the actress, at Drury Lane Theatre, in the month of March, 1779, parts of it having been previously set to music by Linley, and introduced in songs, duets, and choruses at occasional pauses of the recitation. The style of these, though necessarily funeral, is at the same time tenderly melodious, and pathetic in the highest degree. It is greatly to be regretted that this beautiful composition was never published. The twelve ballads were published not long after the untimely death of his eldest son, and the first sweetly-sorrowing strain, "I sing of the days that are gone," decidedly refers to that melancholy event. These ballads are too purely, too entirely English to promise, were they republished, any great attraction at the present time; but it is impossible to name any compositions, or so simple a construction, which unite so much pathos, spirit, and originality. The posthumous works of Linley and T. Linley were presented to the public not many years after the father's death. The two volumes contain a rich variety of songs, madrigals, elegies, and cantatas, which are unknown, and consequently neglected, because English music is no longer fashionable, nor compositions, indeed, of any kind sought after, but Italian, or such as are close imitations of the Italian and German schools. There is, however, one production of the elder Linley, in this work, which no variation of taste, and no lapse of time, will ever consign to oblivion. This is his madrigal for five voices, to Cowley's beautiful words,

"Let me, careless and unthoughtful lying,
Hear the soft winds above me flying."

The upper part is for a soprano voice, and was evidently intended to display, in their fullest perfection, the taste and feeling of Mrs. Sheridan. There is nothing superior, and very few of the old madrigals equal, to this charming specimen of vocal harmony: the almost imperceptible change of the time, which introduces a new subject in the upper part, and which the other voices echo and reply to in accompaniment, is a thought not more strikingly beautiful than singularly original. This fine madrigal is still performed unusually at the Ancient and other concerts, as well as at the catch and glee clubs, and seems to acquire strength by repetition. Linley died at his residence in Southampton Street, Covent Garden, in 1795, and was buried in Wells Cathedral, in the same vault with his beloved daughters, Mrs. Sheridan and Mrs. Tickell. A monument was soon after erected to their memory, near the spot, by William Linley, Mr. Linley's youngest son.

LINLEY, THOMAS, eldest son of the preceding, was a highly gifted man, and an accomplished musician, both practical and theoretical.

If he was inferior to his father in the purity and pathos of his melodies, he was perhaps superior to him in his knowledge of orchestral effect, and instrumental compositions generally. He was born at Bath, in the year 1756, and displayed, at a very early age, extraordinary powers on the violin. When he was eight years old only, he performed a concerto on that instrument in public, and at seventeen composed an anthem in full score to the words, "Let God arise," which was sung in Worcester Cathedral at the meeting of the three choirs, on the 8th of September, 1773.

Linley senior soon discovered the extraordinary genius and capacity of his son; and with the view of instructing him for the profession, sent him to London to complete his theoretic knowledge, under the able tuition of Dr. Boyce, thus laying the foundation, on which an elegant structure was afterwards to be built, from the studies of the Italian and German masters. He was accordingly, in due time, sent to Florence, principally to make himself master of his favorite instrument, under the celebrated Nardini. This distinguished instructor, who had been himself a scholar of Tartini's, proud of his pupil, and desirous of his receiving every aid by his associating with the rising genius of the age, introduced him to the great Mozart, then a youth himself, and a warm friendship immediately commenced between them; so attached, indeed, was Mozart to the young *Thomasino*, (as young Linley was called,) discovering in him, as he did, so much of his own fire and fancy, and so gratefully was that attachment returned, that their separation, when they parted at Florence, was attended with tears on both sides.

On Linley junior's return from the continent, he repaired to Bath, to lead his father's concerts and oratorios, which he did with such precision and animation as astonished and delighted every hearer. In the masterly manner of his performance of the concertos of Handel and Geminiani, no English violin player had ever excelled him, and in the neatness and delicacy of his execution he stood unrivalled. His own solos and concertos, which he occasionally introduced, also gave evident tokens of his continental studies, being full of imagination and spirit, but requiring in almost every bar the touch of the finished master to do justice to their merit. The comic opera of "The Duenna" was brought out at Covent Garden Theatre in the year 1776, the music to which was composed and selected by Linley senior chiefly, but Thomas contributed some charming pieces; the spirited overture is his composition, and the air in D, of the opening serenade; the following songs: "Could I each fault remember," "Friendship is the bond of reason," and that very fine one, "Sharp is the woe;" the little duet, "Turn thee round, I pray thee," and the trio which concludes the first act. On the revival of "The Tempest," at Drury Lane Theatre, he introduced the chorus of spirits that raise the storm, one of the most effective, as well as scientific, compositions: the brilliant and highly fanciful airs, "O, bid your faithful Ariel fly," and "Ere you can say come and go," are so completely in character, that they could suit no other being but the "dainty Ariel" himself, and are fairly entitled to stand by the side of Purcell and Arne. But the most delightful production of his genius was an "Ode on the Witches and

Fairies of Shakspeare," written by Dr. Laurence. It was performed at Drury Lane Theatre in 1776, when he led the band himself, and his two sisters, Mary (afterwards Mrs. Tickell) and Maria, sustained the principal soprano parts, for Mrs. Sheridan never sang in public after her marriage.

In imitation of his father, T. Linley added parts for wind instruments to the music in "Macbeth," Dr. Boyce having previously supplied the other orchestral accompaniments. The wind instruments are made to produce a very fine characteristic effect, but the parts were unfortunately destroyed when Drury Lane Theatre was burned down. Besides the anthem previously mentioned, he some years after composed a sacred oratorio in one act, "The Song of Moses," which was also performed at Drury Lane Theatre. It is replete with admirable specimens of fugue and choral harmony, occasionally in the style of Handel, but interspersed with much of that grace and variety which he had gleaned from the Italian masters. The greatest part of his miscellaneous music, consisting of songs, elegies, and cantatas, will be found in the posthumous works, published by Preston. Among these, the cantata of "Daughter of Heaven, fair art thou," from Ossian, and the beautiful madrigals, "Hark, the birds," and "Alinda's Form," are to be particularly distinguished. He composed these for Mrs. Sheridan, after her marriage.

LINLEY, WILLIAM, the youngest of Mr. Thomas Linley's children, was sent at an early age to Harrow school, from whence he was removed, to finish his classical education, to St. Paul's, in order that he might reap advantage at the same time from his father's instructions in his favorite art. Mr. Linley's time, as patentee and acting manager of Drury Lane Theatre, was, however, too much occupied to allow of his bestowing any regular attention upon the youth, and he was, consequently, placed with the celebrated Abel, under whom he studied counterpoint for some time, receiving occasional lessons from his father in harpsichord playing and singing. It does not appear that Mr. Linley intended his son William for the profession, but he had always expressed his determination that as many of his numerous family as evinced any musical talent should receive the benefit of a musical education; and William had, from a child, been distinguished for the accuracy of his ear, the sweetness of his voice, and the facility with which he remembered and played favorite passages of songs and lessons. But though the young gentleman loved music, and dearly delighted to ramble over the organ or harpsichord keys, as fancy chose to guide him, he was no great admirer of the plodding part. The crude digest of double counterpoint, canon, and fugue, under a peppery instructor, (for Abel, like most other German masters, was very impatient, and not very clear in his explanations,) was not so much to his taste as frequenting the Drury Lane orchestra, to hear his father's, Arne's, or Dibdin's charming operas. About this time, an appointment was offered him by Charles Fox; this was a writership to Madras, whither he sailed accordingly, in the spring of 1790.

His career in the East India Company's service received a severe check in the year 1795, when ill health, and every tendency to consumption, obliged him to return to England, where he ar-

rived just in time to see his venerable father, and to close his eyes. William resumed his situation at Madras in the year 1800, and during a residence of seven years longer in India, discharged, very satisfactorily, the duties of two situations of equal labor and responsibility; viz., provincial paymaster at Vellore, and that of sub-treasurer at the presidency, Fort St. George. It was while abroad that his hours of leisure and relaxation were employed in retracing his musical studies under his old master Abel, and perfecting himself in the knowledge of the science. He had given specimens of his taste and fancy, during his visit to England in 1795, in the production of two comic operas, namely, "The Honey Moon" and "Pavilion," besides supplying some exceedingly ingenious and characteristic music to a very popular pantomime, called "The Magic Fire." In all these pieces there were to be discovered marks of genius, but not to be mentioned, in point of scientific construction, to what he afterwards produced. A collection of fairy glees, which were published in 1797, possess imagination indeed, but are very faulty in the vocal arrangement; and there are disallowed intervals in the harmonies, evidently the consequence of neglect. In the year 1809, Birchall published a set of William Linley's songs of a very superior order; the melodies are elegant and original, and the accompaniments, though rather exuberant, very ingenious. The last song "Ariel's Adieu," would be a sparkling gem even among the brilliants in the *witches and fairies* of his incomparable brother. Two sets of canzonets, published at different periods, are composed in a similar style, and it is unquestionably a style of his own; the subjects, if not all striking, are at least new. That these songs and canzonets of William Linley's are not more generally known, only can be attributed to the overwhelming preference that is now given to foreign compositions of every description. But his chief musical undertaking was published in the year 1816, entitled "Shakspeare's Dramatic Songs, in two volumes, consisting of all the Songs, Duets, Trios, and Choruses in Character, as introduced by him in his various Dramas, the Music partly new and partly selected, with new Symphonies and Accompaniments for the Piano-Forte, from the Works of Purcell, Fielding, Drs. Boyce, Nares, Arne, and Cooke, Messrs. J. Smith, J. S. Smith, Thomas Linley, Jr., and R. J. S. Stevens. To which are prefixed a General Introduction of the Subject, and explanatory Remarks to each Play."

The reader is referred, for a very full and entertaining critique of this ingenious work, to the European magazines of 1816. It is also reviewed and much distinguished in the "Monthly Review" and "Ackerman's Repository."

LINLEY, FRANCIS, though blind from his birth, became an excellent performer on the organ. Nor were his abilities confined merely to the science of music; he was a charming companion, an acute reasoner, and well acquainted with the works of the most eminent authors, ancient and modern. Having completed his musical studies under Dr. Miller, of Doncaster, he went to London, and was the successful candidate, among seventeen competitors, for the place of organist of Pentonville chapel, Clerkenwell. He was soon after married to a blind lady of large fortune; but having sustained great losses by the

treachery of a friend, and being deserted by his wife, he came to America, and here his performance and compositions soon brought him into notice. He returned to England a short time previous to his death, which took place in London in the year 1800.

LINOS. A kind of rustic air used by the ancient Greeks, who had also a dirge of the same name. Some say the *linos* was of Egyptian invention, while others attribute its origin to Linus of Eubœa.

LINUS. Diodorus Siculus, who is very diffuse in his account of Linus, tells us, from Dionysius of Mitylene, the historian, who was contemporary with Cicero, that Linus was the first among the Greeks who invented verse and music, as Cadmus first taught them the use of letters. The same writer likewise attributes to him an account of the exploits of the first Bacchus, and a treatise upon Greek mythology written in Pelasgian characters, which were also those used by Orpheus, and by Pronapides, the preceptor of Homer. Diodorus says that he added the string *lichanos* to the Mercurian lyre, and gives to him the invention of rhythm and melody, which Suidas, who regards him as the most ancient of lyric poets, confirms. He is said by many ancient writers to have had several disciples of great renown, among whom were Hercules, Thamyris, and, according to some, Orpheus.

Hercules, says Diodorus, in learning of Linus to play upon the lyre, being extremely dull and obstinate, provoked his master to strike him, which so enraged the young hero, that, instantly seizing the lyre of the musician, he beat out his brains with his own instrument.

LIONS, JEAN DES, a French divine, particularly well acquainted with the religious customs of the middle ages, was born at Pontoise in 1615. He wrote, among other works, "*Critique d'un Docteur de Sorbonne sur les deux Lettres de Messieurs Deslyons et de Bragelonne touchant la Symphonie et les Instrumens, qu'on a voulu introduire dans leur Eglise aux Leçons de Ténèbres,*" 1689.

LIPAWSKY, JOSEPH, a teacher of the piano-forte and composer, in Vienna, about the year 1796, had made himself known, some years previously, by his compositions, of which we shall mention the following: "*Douze Variat, pour il Cembal, dédiée à S. Mozart,*" Op. 1, Vienna, 1791. "*Neuf Vars. pour le Clav. sur l'Air 'Eine Rose hold und rein,'*" Vienna, 1798. "*Dix Vars. pour le Clav.,*" Vienna, 1799. "*3 Klaviersonaten mit Violin,*" "*Neuf Vars. pour le Clav. sur l'Air 'Die Milch ist gesünder,'*" "*Vars. pour le Clav. sur le Ballet 'La Fille retrouvée,'*" Vienna. "*Six Vars. pour le Clav. sur 'Gott erhalte Franz,'*" Op. 4, Vienna. "*Huit Vars. pour le Clav. sur un Danse Russe,*" Op. 5, Vienna. "*Douze Vars. pour le Clav. sur Terzetto di Camilla,*" Vienna. "*Neuf Vars. sur une Polon, de l'Op. 'Lodoviska,'*" 1802. "*Grande Sonate pour le Clav. avec V.,*" Op. 9. "*Grande Sonate pour le Clav. et V.,*" Op. 10. "*Eine dergl.,*" Op. 11. "*Six Polonoises pour le Clav.,*" Op. 13, 1803. "*Vars. pour le Clav. sur l'Air de Cherubini, 'Guide mes pas,'*" Op. 14. "*Mina, Gedicht mit Klavierbegleit.,*" Op. 15. "*Trois Romances ou Andantes pour le Clav.,*" Op. 19. "*Onze Vars. pour le Clav. sur l'Air de Dalayrac, 'La Tour de Neustadt,'*" Op. 20, Vienna, 1803.

"*Grande Sonate pathétique pour le P. F. composée et dédiée à M. Ant. Salieri,*" Op. 27, Leipzig.

LIPPARINO, GUILIELMO, a monk of the order of St. Augustino, and an industrious composer of sacred music, was born at Bologna. He flourished in the beginning of the seventeenth century, as chapel-master in the cathedral church of Como. He published the following works: "*Madrigali à 5 Voci,*" Venice, 1614. "*Missa à 8 e 9 Voci, con Te Deum laudamus à 8 Voci,*" "*Motetti,*" Venice, 1635. "*Salmi à 8 Voci,*" Venice, 1637. "*Concertine Litanie de B. Virgine à 1, 2, e 3 Voci,*" "*Litanie à 3-8 Voci,*" Venice.

LIPPIUS, JOANNES. According to Von Blankenburg, in the appendix to Sulzer's *Art Musik*, the "*Themata Musica*" of Lippius, *Jena*, 1610, are nothing but three musical disputations which he held in Wittenberg, in June and September, 1609, and on the 27th of October, 1610, Lippius was a professor of theology at Strasburg, and died in 1612.

LIQUID. An epithet metaphorically applied to a smooth succession of the sweet and mellow sounds of any voice or wind instrument; also to certain clear and sweet tones, separately considered.

LIRA GRANDE. The Viol da Gamba.

LIROU, JEAN FRANCOIS ESPIC, CHEVALIER DE, an officer in the French army, was born in 1740. He was an enthusiastic amateur of music and poetry, and produced in 1784, at the Royal Academy of Music, in conjunction with Piccini, the opera of "*Diane et Endymion,*" which was successful. The following year he published, at Paris, his "*Système de l'Harmonie,*" in one volume 8vo., a work which is considered as obscure, but founded on good principles. He died at Paris in 1806.

LISARDO, GASPARO. During the early part of the sixteenth century a violin was made by the famed *Gasparo Lisardo*, for Cardinal Aldobrandini, in his best style: the head was designed and carved in the most beautiful manner by Benvenuto Cellini, with mythic figures representing the musical goddess and her attendants; the fret board and sounding board are beautifully inlaid in mosaic of pearl and ebony. This instrument was sold by the heirs of the cardinal to a person who carried it to Innspruck, and at the taking of that city by the French army, in 1800, it became part of the booty of a dragoon, by whom it was sold to a *fanatico per la musica*, in Vienna, who could not be induced to part with it, though incredible sums were offered for it. Chevalier Bull wished to purchase it, but was not successful, though the owner promised that if Bull would give 15 concerts in that city he should have the preemption of the violin at his death. The chevalier complied with his wishes, and the proprietor, dying soon after, bequeathed the instrument to him, to whom it now (1843) belongs. The editor of Alexander's Philadelphia Messenger, who had heard Bull upon this instrument, said in 1843, "The unearthly, fairy-like sounds he drew from the violin, seemed to lull the house like a magic spell — like the soft tones from another world, breaking upon earth at last."

LIST, a German student in divinity, announced, in 1797, the edition of a choral book for the Lu-

theran church of Schaumburg, possessing the following advantages: 1. The chords fully written. 2. Interludes. 3. About sixteen new melodies composed by himself. 4. Several corrections of the old melodies. 5. A short introduction to thorough bass, and a short treatise on choral playing.

LISTE, ANTHONY. Professor of the piano-forte and composer, born at Hildesheim in 1774, studied at Vienna under Mozart and Albrechtsberger, and was afterwards a teacher of music in the family of the Count of Westphalia. He also gave private instructions in 1804, in Heidelberg, where he made his first *début* as an extraordinary composer for the piano-forte, by his two sonatas for that instrument, to be found in No. 9 of Nageli's "*Répertoire des Clavécinistes.*" According to the opinion of connoisseurs, his last compositions are excellent, as well in regard to the original and correct arrangement as to their attractive style.

LISTENIUS, NICOLAUS, a professor of music in the beginning of the sixteenth century. His small introductory work on music has, in the course of fifty years, gone through seventeen editions, an almost unrivalled number for a musical publication, and a proof of the value which was placed on its merit and utility. Gerber has but little information of the comparative value of the different editions of this work. Notwithstanding the merit of Listenius, the ungrateful indifference of his contemporaries towards him went so far, that all which is at present known about him consists merely in this, that he was a native of Brandenburg, (which he accidentally had mentioned in his dedication to John George, hereditary prince to the Elector Joachim II. of Brandenburg.) As soon as his little work issued from the press, the booksellers all considered it as their property, and printed and reprinted the same as often as it suited their interests, without taking any further notice of the author. They did not even do him the honor, in the later editions of his work, to reprint the well-written preface of Dr. Bugenhagen, which speaks highly of the merits of the author. "But," says Gerber, "why should I feel indignat at the ingratitude of the sixteenth century? Have I not sufficiently experienced the ingratitude of the eighteenth century towards their most useful and talented authors, even in the course of my writing this dictionary? I should advise, therefore, every man of merit, whenever he has an opportunity, to write at least something about himself, and to speak well of himself when necessary, despising the sneers of envy. If they do not thus gain the good will and respect of their contemporaries, posterity will at least not deny them that boon." The first edition of Listenius appeared under the following title: "*Indimenta Musica in gratiam studiosæ juventutis diligenter compoertata,*" Wittenberg, 1533 and 1537. A new edition followed, with the addition to the title of "*Ab auctore denno recognita, multisque novis regnibus et exemplis adducta,*" Wittenberg, 1542, 1544, and 1554. It was also printed in Leipsic, by Michael Blum, 1513, 1546, and 1533, also in Frankfort on the Oder, without date, and in Breslau, 1573, and lastly, at Nuremberg, by Joh. Petreio, in 1540, 1548, 1553, 1557, 1588, and 1600, with the addition "*Ac correctius quam antea edita.*" This last is probably also the

last edition, as, in the beginning of the seventeenth century, the subjects which it contained began partly to be useless.

L'ISTESSO TEMPO. A word implying that the movement before which it is placed is to be played in the same time as the previous movement.

LISZT, FRANZ, was born at Raeding, Hungary, October 22, 1811. He is the son of Adam Liszt, an enthusiastic amateur, and during his life an intimate friend of Haydn. The father was a good pianist, and played several different instruments. Franz received his first lessons on the piano-forte from his father; and at the age of nine years he performed Ries's Concerto in E flat, in public. Soon after Franz was placed under Czerny, the pianist, at Vienna, and at the same time received instructions from Salieri. When he had been eighteen months at Vienna, he gave a concert at which Beethoven was present. In 1823 he visited Paris with the intention of becoming a student in the Conservatory; he carried letters of recommendation from the highest sources, but could not gain admittance *because he was a foreigner!* In 1824 Franz visited London, where his playing surprised every body. In 1825 he produced, at the Royal Academy of Music, an opera, "*Don Sanche, ou le Chateau d'Armour.*" In 1826 he and his father made a tour through the French provinces, and in the same year he returned to Paris to study counterpoint under Reicha. In 1829 he returned to London, where he was most favorably received. His father dying in 1830, Liszt became his own master, and maintained himself by teaching. In 1830, he returned to Paris, and since then has become particularly celebrated as a pianist. He is the owner of the instrument played on by Beethoven, and in 1853 he purchased the old harpsichord formerly belonging to Beethoven, which was offered for sale at Weimar, where Liszt now resides.

LIUTO. (L.) The lute.

LIVERATI, GIOVANNI, was born in 1772 at Bologna, in the pontifical states. Giuseppe and Ferdinand Tibaldi, celebrated composers, gave him his first lessons in the rudiments of music: they died when he was about fourteen years of age. He then began, and continued during the space of thirteen years, to be a pupil for the piano, organ, thorough bass, and composition of the renowned master Padre S. Mattei, successor to Padre Martini, which latter eminent musician was to have been his master, had he lived.

Finally, he took lessons of singing from Lorenzo Gibelli, justly celebrated for his church music, as his many compositions and beautiful fugues will testify, and who was one of the first masters in the renowned Bolognese school of singing, which has since produced Crescentini, Babbini, Roncaglio, Concialini, and many others. Having perfected himself in that school also, Liverati was able to take the part of first tenor, with the best performers in the music at the Italian churches, as also in concerts and oratorios, both public and private.

His country still remembers with delight the success he met with in an oratorio by the Padre Mattei, and in another by Guglielmi, in the parts of Giovanni and Siro. Liverati next refused a

pressing invitation to the Venetian theatre from the celebrated Paechiarotti, who came as far as Bologna to treat with him; he likewise declined several other similar theatrical offers in Italy, and went as first tenor to Barcelona and Madrid, continuing, at the same time, his studies in composition. Before he quitted Italy, he was elected a member of the Philharmonic Academy of Bologna, and of other musical societies. Some psalms were the first of his compositions, and were performed at the Bolognese church of San Francesco, in the year 1789. In 1790 he wrote, at Bologna, his first theatrical piece, "*Il Divertimento in Cambragna*," a little opera in one act, which was successfully performed by his scholars. He composed about the same time a mass for two voices, with an organ accompaniment; also, "The Seven Words of Jesus Christ on the Cross," for three voices, with wind instruments; and, finally, "A Grand Requiem Mass."

He next produced three instrumental quartets, by an order of his majesty the King of Prussia, obtained through the interest of his father, Matteo Liverati, a distinguished professor of music at that court, and director of the theatre at Potsdam. In consequence of these productions, Giovanni Liverati was called to the court of Berlin, as successor to Carl Fasch, the celebrated contrapuntist and composer to the above theatre. He arrived in Prussia in 1799, and was soon ordered to compose a grand cantata with choruses, but had not time for the completion of it before the king's death. In 1800 he became composer to the Italian theatre of Prague, where, during the space of three years, he brought out several short pieces, airs, duets, finales, &c., for the stage; also a grand cantata for his highness Prince Winski, entitled "*Il Trionfo d'Amore*," and a grand mass by order of the same prince.

In 1804 he went to Trieste, where he produced his first complete opera, "*Il Maestro di Musica*," in two acts. Encouraged by the success of that work, he immediately undertook some others. He had before attempted that style in his "*Maestro Fantastico*," an operetta, performed with great effect in Vienna and Prague. The year after this, he went to Vienna, where he established himself, and remained fourteen years. He was there intimate with the distinguished masters Haydn, Beethoven, Kozeluch, and Salieri, taking their instrumental compositions for his models, particularly those of the last-named composer, to whom he owed much instruction concerning the clear pronunciation of his words in singing.

Liverati has composed the following operas: 1. "*David*," a grand opera, with twelve choruses, in two acts. 2. "*Eneas in Cartagine*," with choruses, in two acts. 3. "*La Prova Generale*," in two acts. 4. "*La Presa d'Egea*," grand opera, twelve choruses, in two acts. These four operas were performed in the imperial and royal palaces. 5. "*Il Siro D. Spuluto*," one act. 6. "*Gonsalvo in Cordova*," grand opera, choruses, in two acts. (These two operas ordered by the Prince of Lobcowitz.) 7. "*Il Tempio dell' Eternità*," twelve choruses, in two acts. 8. "*Il Convito degli Dei*," in two acts. 9. "*Il Trionfo d'Ausonia*," with choruses, in two acts. 10. "*Miltiade*," in two acts. 11. "*L'Adorazione dei Pastori e dei Magi al Presepe*," a grand oratorio, with twelve choruses, ordered by her majesty Maria Theresa of Naples, Empress of Austria, who herself condescended to

sing the part of Maria, at its performance before the court. 12. "Grand Mass," ordered by his highness Prince Esterhazy. Besides, No. 25, a cantata of one, two, and three pieces. Music published: Five numbers of "*La Lyse d'Orfee*," a periodical work, with airs, duets, sextets, and quartets, vocal and some instrumental pieces. Two arias in "*Ginevra di Scopia*." "Three Duets," dedicated to Count Pallfi. "Three Terzetti," dedicated to the Countess Warrentfeld. "Three Ariettas," dedicated to the Princess of Himski. "Three Ariettas," dedicated to Count de Fries. Romances Françaises: "Two Ariettas," collected from many authors who composed the air "*In quella tomba oscura*." Different pieces from David, from which Signors Maseek and Gelinek took many passages in composing their variations on the piano-forte. Lastly, different pieces from "*La Prova Generale*."

In 1814 he went to London as a composer to the King's Theatre, in which situation he remained three years, and brought out the following operas: 1. "*I Selvaggi*," grand opera, with choruses, &c., two acts. 2. "*Il Trionfo di Cesare*," with choruses, two acts. 3. "*Il Gastone e Bojardo*," grand opera, with choruses, two acts. 4. "*Gli amanti Fanatici*," two acts: this opera was not performed. 5. "*Il Trionfo d'Albione*," twelve choruses, two acts, likewise not performed. The following music has also been published by him in London: "Three Ariettas," dedicated to Mr. Dragonetti, Op. 2. "Duet in *Dama Soldata*," "Cantata on the Death of Princess Charlotte," Op. 3, (Goulding.) "Three small Ariettas," dedicated to Miss Culling Smith. Duetto, "*O lieta cara*," Op. 5. Air, "*Rendi agli amplessi usati*," composed for Mrs. Salmon, Op. 5. "Three Ariettas," dedicated to Asioli, Op. 7. "Recit. and Duet," dedicated to Miss Cox, Op. 8. "Duet," dedicated to Lady Gordon, Op. 9. "*Tre Notturni e Terzetti*," dedicated to the Duke of Leeds, Op. 10. "*Tre Canzonetti*," dedicated to M. S. Antrobus, Op. 11. "*Tre Duetti*," dedicated to Mrs. Bellochi, Op. 12, (Liverati.) "Three Ariettas," dedicated to Lady Fane, Op. 13. Terzetto, "*Proteggese*," Op. 11. "Recit. and Air," Op. 15. "*Terzetti in David*," Op. 15. Polacca, "*Chi a voi o nomin*," Op. 17. Grand duet in an opera (Op. 18) not yet published. "First Set Italian Duets," Op. 19. "Second Set Italian Duets," Op. 20. "Three Duets," dedicated to his royal highness Prince of Saxe-Cobourg, Op. 21. Different passages of the opera "*I Selvaggi*." Some passages from "*Gastone e Bojardo*." "Cantata in two parts," performed at the house of his friend Signor Boldi. Many other fugitive pieces written for Madame Camporese, Miss Stephens, Miss Paton, and others.

LOCATELLI, PIETRO, was born at Bergamo in 1690. In his infancy he was sent to Rome, where he took lessons on the violin from Corelli. After having travelled much, he settled in Holland, and established a public concert in Amsterdam. He died in 1754. Dr. Burney says, that "Locatelli had more hand, caprice, and fancy than any violinist of his time." He was a voluminous composer of concerti, capricci, sonate, &c., many of which were published at Amsterdam. His Op. 10 of sonatas is considered his masterpiece, and has been greatly admired.

LOCCHINI, chapel-master to the Conservatory

of the Ospedaletto at Venice, was born at Naples. His opera seria, "*Scipio in Carthago*," was performed at Padua in 1770.

LOCHNER, JOACHIM, a composer of the sixteenth century, published "*Magnificats, von 4 Stimmen, aber die 8 Kirchentone gerichtet*," Nuremberg, 1578.

LOCHNER, CARLO, a violoncellist in the orchestra of Mannheim, died in consequence of a spitting of blood, in the year 1795, just as he had begun to make progress in composition. Reichardt, however, says in his "*Almanack*," that he was yet far from perfection. He published, in conjunction with J. A. André, "12 *Lieder*," Offenbach, 1792; also, of his own composition, "6 *Lieder 1ste Samml.*," 1793. "6 *Dergleichen, 2te Samml.*," 1793. "*Lieder von J. B. Reck, 3te Samml.*," 1794; "*Zeehied von Reck*," 1794; "*Lieder, 4te Samml.*," 1795; also "*Orphæus*," a melodrama.

LOCHON, a French composer of the seventeenth century, born at Tours, published some Latin motets.

LOCHON, CHARLES. A French violinist at Paris, about the year 1788. He was born at Lyons, in 1760.

LOCK, MATTHEW, was originally a chorister in the cathedral church of Exeter, and a pupil of Edward Gibbons. Very early in life he attained a considerable degree of eminence in his profession. He was employed to compose the music for the public entry of King Charles II., and not long afterwards was appointed composer in ordinary to that monarch.

Dramatic music was that in which he chiefly excelled, but there are likewise extant many valuable compositions for the church. Amongst others is a morning service composed for the Chapel Royal, in which the prayer after each of the commandments is set in a different way. This was deemed by many persons an inexcusable innovation, and, on the whole, was so much censured, that he was compelled to publish the entire service in score, with a vindication by way of preface.

Lock appears to have been a man of an unpleasant and quarrelsome disposition, and consequently he involved himself in almost continual broils. About the year 1672, he was engaged in a controversy with Thomas Salmon, A. M., of Trinity College, Oxford, on the subject of a book written by him, and entitled "An Essay to the Advancement of Music, by casting away the Perplexity of different Cliffs, and uniting all sorts of Music into one universal Character." Lock could not refrain from attacking this work. Accordingly he published "Observations upon a late Book, entitled an Essay, &c.," which lying immovable upon the booksellers' shelves, he afterwards republished it with a new title. Salmon answered it in "A Vindication of an Essay to the Advancement of Music from Mr. Lock's Observations." The subject matter of this dispute is not of sufficient importance to demand from us any detail of the arguments; suffice it to say, that, under a studied affectation of wit and humor, the pamphlets, on both sides, are replete with the most scurrilous invective and abuse.

The musical world is indebted to Lock for the first rules that were ever published in England on the subject of thorough bass. A collec-

tion of these were inserted in a book entitled "*Melothesia*," which also contains some lessons for the harpsichord and organ, by himself and other masters. It is well known that Lock was the composer of the music to Shakspeare's plays of "Macbeth" and "The Tempest," as altered by Sir William Davenant, and, in conjunction with Draghi, to Shadwell's opera of "Psyche." He was also author of a collection of airs, published in 1657, entitled "A little Consort of Three Parts, for Viols and Violins," and of the music to several songs printed in "The Treasury of Music," "The Theatre of Music," and other collections. In the latter there is a dialogue by him, "When death shall part us from these kids," which may be ranked among the best vocal compositions of the time.

LOCKMANN, JOHANN, an English poet of the eighteenth century, wrote "Some Reflections concerning Operas, &c.," prefixed to *Rodelinda*, a Musical Drama, 1740. This essay treats of the origin and progress of operas in general.

LOCO. A word used in opposition to *8va alta*, and signifying that the notes over which it is placed are *not* to be played an octave higher, but just as they are written.

LOCRIAN. The name sometimes given by the ancient Greeks to the Hyperdorian mode.

LODER, the celebrated leader, died in London, September, 1815, in his fifty-eighth year. He was an excellent tenor, as well as violin player. He has left five sons and two daughters; amongst the former are E. J. Loder, the Lyceum leader, and W. Loder, the leading violoncello of the Drury Lane Orchestra. George Loder, of New York, was a member of the family.

LODI, DEMETRIO, a monk, born at Verona, flourished as a composer of church and instrumental music in the beginning of the seventeenth century. Of three of his works for the church, only one is known, entitled "*Canzoni o Sonate Concertate per Chiesa, à 1, 2, e 3 voci*." Another of his sonatas was printed at Venice in 1623.

LODI, GIOV. LUIGI, called STERKEL. Through one of his works he became known in Germany, in 1798, as an excellent and original composer for the piano-forte. He seems, however, to have followed sometimes too much the impulse of his enthusiastic feelings, according to the opinion of a reviewer of the "*Mus. Zeit.*," 1799, p. 28. His works, of which the successive order is but incorrectly known, were, up to the year 1799, as follows: "*Sonate pour le Clav.*," Op. 9, Augsburg, 1796. "*Grand Concer. pour le Clav., à 14*," Op. 10, Augsburg, 1797. "*Capriccio p. il P. F.*," Op. 16, Leipsic, 1798. "*Sonate pour le Clavéin*," Op. 18, Leipsic, 1798. "*La Morte di Mozart, Sinfon. pour le Clav.*," Op. 27, Leipsic.

LOEBER, JOHANN ERNST, town organist at Weimar about the year 1730, published at Erfurt, "*Hochzeit-Conzert von 2 Stimmen und General Bass*," Erfurt, 1732.

LOEFGROEN, ANTON, a Swede, was the editor of an acedemical work, published under the title "*De Basso fundamentali*," Upsal, 1728.

LOEHLEIN, GEORG SIMON, was born 14

Dantzie in 1727. The first part of his "*Klavierschule*," 1765, was reprinted in 1772; again in 1779, with improvements; for the fourth time in 1781; and for the fifth time, revised and enlarged by J. G. Witthauer, in 1797. His instructions for the violin appeared first in 1774; a second time in 1781; and a third edition, improved and with additions, also with twelve ballet pieces from the opera "*Brenno*," was published by J. Fr. Reichardt, in 1797. Lochlein was a chapel-master at Dantzie, and died there in the year 1782. He served for some time in the Prussian army, and at the battle of Collin was left for dead on the field. The Austrians, however, who were conquerors in that engagement, discovering some signs of life in him, had him taken to their hospital; from whence, a few months afterwards, he returned to his native country, where he found all his family in mourning for his supposed death.

LOEHNER, JOHANN, a favorite composer and organist at Nuremberg, was born there in 1645. He published several collections of music between the years 1682 and 1700.

LOEILLET, JEAN BAPTISTE, of Ghent, a famous master of the flute, and the author of four operas of solos for that instrument. He was also a celebrated performer on the harpsichord. He played in the opera band, in London, at the same time with Corbett and others. He died about the year 1728, having, by his industry, acquired a fortune of sixteen thousand pounds.

LOEWE, FRIEDRICH AUG. LEOPOLD. Born at Schwedt in 1777. He was a celebrated performer on the tenor; he also composed an operetta, called "*Die Insel der Verführung*," which was performed at Brunswick in 1797.

LOEWE, J. HEINRICH, an instrumental composer and performer on the violin, tenor, and the piano-forte, resident in Bremen, was born at Berlin in 1766. He received his education under the celebrated concert master Haack, went afterwards into the service of the Viscount Von Schwedt, then gave private instructions in Hamburg, and finally settled at Bremen, where the place of *chef d'orchestre* was offered to him by Dr. Schulte, of the amateur concert of that town. It is said that Loewe was particularly happy in entering into the spirit of Haydn's quartets. He had written, before the year 1794, "*Die Pfarrers Tochter von Taubenheim*," for the piano-forte; also several sonatas for the piano-forte, and concertos for the violin and bassoon, with several smaller operas of variations. Since 1794, there have been printed of his works, "*Concert pour le Violon*," Op. 1, Offenbach, 1795. "*3 Grosse Sonaten für das Pianofort mit Begl. einer B., und eines Fc.*," Op. 2, Offenbach, 1798. "*Coucert pour le Violon*," Op. 3, Offenbach, 1798.

LOEWE, JOHANN JACOB, a musician highly celebrated in his time, was born at Eisenach. He was formed under the auspices of the first professors of the art at Vienna, and afterwards in Italy, under several great masters. In 1660, he was *chef d'orchestre* at the court of Brunswick, and, some years later, at that of the Duke of Zeitz. Amongst his works are the following: "*Sinfonen, Intraden, Gayliarden, Arien,*

Balletten, Couranten, und Sarabanden, mit 3 oder 5 Instrumenten," Bremen, 1657. "*12 Neue geistliche Concerten mit 1, 2, 3 Stimmen zu singen und 2 Violinen nebst der Grundstimme für die Orgel*," Wolfenbuttel, 1660. "*Canones, 1, 2, 3, 4 bis 8 Stimmig, theils für Instrumente und theils für Sanger, theils leicht und theils schwer, über M. Mart Kempens Arien*," 1664, with a dedication to his patron, Duke Maurice, and a preface, in which he complains of the great labor which these canons had cost him. The worthy Henry Schutz has published an eulogium on this work, in which he calls its author, "*Edler, vester, sinnreicher, insouder, und als sohn vielgeliebter freund*;" i. e., noble, faithful, able, particular friend, and beloved like a son, &c.

LOEWENSTERN, MATH. APELLES VON, a musician, born at Neustadt, in Silesia, in 1594, was, in the beginning of 1625, treasurer and music director to the Prince of Bernstadt; afterwards, in 1626, president of the school there; and, lastly, chamberlain to the prince. Afterwards he entered the service of the Emperors Ferdinand II. and III., when the latter raised him to the rank of a noble. Finally, he was made counsellor of state to the Duke of Oels, where he died, in 1648, after having left proof behind him, that a musical artist may also ably fulfil other weighty occupations in life.

LOFEIER, JOSEPH FRIEDRICH, superintendent of the public buildings at Salzburg, was born in 1766. He distinguished himself as an amateur by his active study of the piano and the tenor, the latter being a favorite instrument, which he played with taste and correctness. He also made himself acquainted with the theory of music, and has written several symphonies, overtures, some sacred music, and several minuets and dances. Some of his compositions are printed, among which are "*12 Varia. in D, fürs P. F.*," Nuremberg, 1801.

LOGIER, JOHN BERNHARD, is descended from a family of French refugees, who, like many of their unfortunate countrymen, during the reign of Louis XIV., were obliged, in consequence of religious persecutions, to fly their native country, and seek an asylum in Germany. His ancestors settled in Kaisers Lautern, a town in the electorate palatine, where his grandfather was music director and organist, and from whom his father received his musical education. The latter played, as is customary in Germany, on several instruments, and was esteemed an excellent organist. The violin was, however, his principal instrument, upon which he was a great performer, inasmuch that the director of Hesse-Cassel, in the year 1796, offered him the situation of first violin in his chapel, which he accepted. In the above town the subject of this memoir was born, in the year 1780. He had one sister, who died at the age of sixteen, and was an excellent piano-forte player for her years. Some time after the death of the elector, considerable retrenchments in the expense of the court were proposed by his successor; in this arrangement the members of the chapel had their choice, either to have their salaries reduced, or to seek for situations elsewhere. Logier's father resigned, and, about the same time, the celebrated Dr. Forkel invited him to Gottingen, and offered

him the situation of leader in his concerts, which he accepted, and retained till his death. At this time young Logier was in his ninth year, and had received from his father the first lessons on the piano-forte, and a few rules on composition. His favorite instrument, however, was the flute, on which he made considerable progress under the tuition of Weidner, the father of a celebrated flute-player, residing in Dublin. On this instrument, in his tenth year, he performed with young Weidner a double concerto in public. His inclination decidedly leading him to make music his profession, he now received instructions from a person named Quake, from which he benefited but little. Shortly after this his mother died. The person appointed as his guardian would not hear of his becoming a professional musician, but desired him to choose some other occupation. Seeing that nothing could induce his guardian to accede to his wishes on this point, young Logier left Göttingen, and took refuge with an uncle in Marburg. His guardian insisted on his being sent back, which, however, was frustrated by the following circumstance. An English gentleman, then on his travels, happening to hear Logier play at one of the concerts, proposed that he should accompany him to England: happy at such an opportunity of escaping the persecution of his guardian, he instantly consented, and the next day set out for England.

During two years this gentleman treated Logier as his son, and the only duty he required from him was to play on the flute and the piano-forte, on which latter instrument he had him instructed by Baron de Griffe. At this time the Marquis of Abercorn was desirous of raising a band for his regiment, then quartered in the north of Ireland, and Logier being tired of the monotonous life which he led, and desirous of enlarging his sphere of action, obtained, with much entreaty, his patron's consent to his becoming one of its members, and departed with three others for Ireland. Here he met in the director of the band his own countryman, (Willman, the father of the celebrated clarinet player of that name in London,) whose daughter he married, being then only in his sixteenth year. From this period he was chiefly engaged in instructing and composing for military bands, and at the same time in giving lessons on the piano-forte to the inhabitants of the different towns where he occasionally resided. It was during this time that the possibility suggested itself to him of considerably facilitating the acquirement of music, both practically and theoretically, and that he formed the basis of the system which he afterwards so successfully carried into effect. At the conclusion of the war, his regiment being disbanded, he accepted the proposal of Lord Altamont to become organist of the church at Westport, in Ireland. Here his professional engagements frequently interfering with his duty as organist, he determined to try if it were not possible to teach his daughter, a child of seven years old, sufficiently to undertake the duty of organist in his absence. In this, however, he found a great obstacle from her intractability of hand, which seemed to bid defiance to all his exertions; and being unavoidably so frequently from home, he saw no probability of succeeding in his object, unless some means could be adopted which would compel her, during his absence, to retain a proper position of the

hands. Execution on the piano-forte being purely mechanical, he considered that mechanical assistance might be afforded to facilitate or remove those difficulties which naturally present themselves to every beginner on that instrument, and this led him to the invention of the chiroplast. He now succeeded rapidly in his object, and in six months his daughter was enabled to perform the duty of organist; and in a year afterwards she played a souata in public, on which occasion T. Cooke, of the Drury Lane Theatre, accompanied her on the violin. Having now resolved to settle in Dublin, and being considered one of the first teachers of military bands, many were sent to him from various parts of the country by their colonels to be instructed. This employment was so much more profitable than the tuition of private pupils on the piano-forte, that he totally gave up the latter. Soon after his arrival, he was employed by the corporation of the city of Dublin to compose an ode in commemoration of the entrance of the king, George III., into the fiftieth year of his reign, which was performed before the lord lieutenant, the corporation, and upwards of a thousand persons. The same year he was engaged by H. Johnstone, as composer and director of music for his theatre in Peter Street, where he remained till its dissolution. Logier now determined no longer to postpone the plan he had formed of introducing his system of musical education to the public; but being deeply engaged in mercantile affairs, which would not allow him to dedicate that attention to it which such an undertaking required, he proposed to several professors, then in Dublin, that if they would teach on his plan, he would communicate it to them without any remuneration. This was declined. But the person who was the first to refuse was also the first afterwards to apply for it, and to pay one hundred guineas for the communication.

Logier, believing that he had nothing to hope from the professors in the promulgation of his system, set seriously about introducing it himself. Every thing had already been prepared for this event. A patent for the chiroplast had been obtained, and having given the year before (1814) two courses of lectures on harmony, a certain degree of public attention was excited towards his object. He took a few young children, who had never learned before, and three months afterwards held a public examination of them; the result of which was, that several of the professors in Dublin immediately adopted the system, and their academies being soon filled with pupils, others followed their example. In the following year it made its way into England and Scotland. Professors from various parts came to Dublin to be initiated; and academies were soon established in Liverpool, Manchester, Chester, Glasgow, Preston, &c. In July, 1816, Samuel Webbe, of London, paid Logier a visit, in order to form his own judgment of the merits of his plan, which he immediately adopted, and introduced into the metropolis of England. About this time an anonymous pamphlet appeared in Edinburgh, the object of which was, if possible, to put a stop to the progress of this system. This pamphlet being industriously circulated in England, and being likely to be prejudicial to him in the eye of the public if allowed to go unrefuted, Mr. Logier considered it advisable to repair to London, and

in person counteract its effects. His first object was to invite the Philharmonic Society to an examination of the pupils taught by Webbe, as also of three others from Dublin, that they might form an impartial judgment of the nature of his plan. This examination took place on the 17th of November, when he experienced very warm opposition. Notwithstanding this, his system continued its successful career. His academy was resorted to by the first nobility, and it was adopted by upwards of eighty professors in different parts of the United Kingdom. Among these was Kalkbrenner, at that time member and director of the Philharmonic Society. This gentleman and Webbe united with Logier in conducting his extensive academy, and the increase of pupils soon obliged them to open a second, and many others rapidly followed.

In 1821, the Prussian government sent a gentleman from Berlin to London, to ascertain the merits of the system, of which much had been heard, and with a view to its introduction into the Prussian states. The result was, that in the same year Logier received an invitation from that government, through his excellency Baron Altenstein, minister for public education, to reside some time in Berlin, and undertake in person its promulgation. He was too happy in such an opportunity of disseminating his system in a country so justly celebrated for musical knowledge to hesitate, though the acceptance of the proposal was attended with considerable difficulty. On the 16th of August, 1822, he arrived in Berlin, and in the same month commenced an academy. Five months afterwards, at the desire of government, he held an examination of the pupils, to which were officially invited several of the best musicians in Berlin, in order to investigate the plan. The result was, that Logier received a proposal from the minister, by order of the king, to instruct twenty professors, through whom it was to be disseminated through the Prussian dominions. This was accompanied by a pecuniary offer, and also of a handsome house and academy. Logier now accepted the invitation to remain there three years, being allowed three months in each year to devote to his affairs in London. He thus established a national system of musical education throughout the Prussian dominions, which gradually spread in other countries.

The following list comprises almost the whole of Logier's works published in the United Kingdom: "The first Companion to the Chiroplast," with a description of that invention, and an explanation of its use; the rudiments of music and the art of piano-forte playing simplified; with a series of progressive lessons, adapted to the capacity of the youngest pupil. "A Sequel to the first Companion," being a series of new lessons, similarly constructed to those in the first book, but chiefly in the minor mode, and completing the practical exemplification of all the characters used in musical notation; with the diatonic scales in all the keys, major and minor, ascending and descending, for both hands; also the chromatic scale, plain and in octaves. "A Sequel to the second Companion," containing lessons, to be played either in concert with the exercises in that book, or as single lessons, completing the exemplification of the different styles of variation on a given progression of harmonies. The above four works were published at Cadiz in

the Spanish language, at Berlin in German, and at Paris in French; and since in London. "Juvenile Duets and Trios," for two and three performers on one piano-forte, constructed chiefly on five notes for each hand, so that the chiroplast may be used where the pupil is not sufficiently confident without it. "Exercises for the Hands," in a familiar style, chiefly on modulations through all the keys, as an intermediate step to those by Cramer, Kalkbrenner, &c., dedicated to Miss Onseley. "Military Duets," for two performers on one piano-forte, dedicated to the Ladies Paget, (Book I.) "A second Set," dedicated to Lady Flora Hastings, (Book II.) "Logier's Theoretical and Practical Study of the Piano-forte," consisting of classical works, ancient and modern, with inverted and fundamental basses, fingered. "No. 1, Corelli's first Concerto." "No. 2, Corelli's eighth Concerto." "No. 3, Handel's occasional Overture." "No. 4, Handel's overture to Esther." "Nos. 5 and 6, Haydn's Symphony in D." "No. 7, Mozart's Overture to Zaubertlöte." "No. 8, Mozart's Overture to Figaro." "No. 9, Clementi's Sonata in D." "No. 10, Scarlatti, with the Cat's Fugue." "Nos. 11 and 12, Beethoven's Trio arranged for two Piano-fortes." "Logier's Practical Thorough Bass," being studies on the works of modern composers; with a separate figured bass, having a space above for the addition of the playable harmonies. "No. 1, Kalkbrenner's Sonata in C, and Andante." "No. 2, ditto, ditto." "A Trio in E, for two Performers on one Piano-forte," with an accompaniment for another piano-forte, dedicated to the Marchioness of Anglesea, Op. 16. "A Second Trio in A, arranged as the above," dedicated to Major P. Hawker, with *ad lib.* accompaniments for violin and violoncello, Op. 17. "A Third Grande Sonate à quatre mains." "Thirty-four Lessons," arranged as pleasing accompaniments to Logier's first and second Companions, so as to be played by another performer on the same piano-forte. "A Concerto in E flat," dedicated to the prince regent, with a piano-forte accompaniment; also with accompaniments for a full band, if required, Op. 13. "An easy Sonata, with the Irish Air, 'O, breathe not his name,'" and "A Polacca, fingered," Op. 10. "Sonata in B flat, and Rondo on an Irish Air, with Accompaniments for the Flute and Violoncello," Op. 7. "Sonata in E flat, with Accompaniments *ad lib.* for the Flute and Violoncello," dedicated to J. B. Cramer, "Sonata in D, with 'Blue Bells of Scotland,' and Accompaniment for a Flute," Op. 8. "Introduction, Fugue, and two Canons, for two Performers on one Piano-forte." "Ditto, and Grand March," dedicated to Ladies G. and A. Paget, (duet.) "Strains of other Days, five Numbers, as Rondos and Airs with Variations;" containing "No. 1, O blame not the Bard," and "The Legacy." "No. 2, Graunachree," and "Eveleen's Bower." "No. 3, The Young Man's Dream," and "Fly not yet." "No. 4, *Haleendhus Crostheen amoe*," and "O, 'tis sweet to think," with an accompaniment for the flute. "No. 5, *Savourna Delish*," "Heigh-ho, my Jockey," and "Robin Adair." "Bugle Andante, with Variations." "English Military Air, with Variations." "Spanish Bolero, from the ballet of 'Don Quichotte.'" "Admiral Benbow, English Air, with Variations." "Believe me, I never can rove," song. "Ten favorite Irish Melodies for two

Flutes." "Set of Pieces," Op. 7. "Irish Melodies," Op. 8. "Original Pieces for two keyed Bugles Obligato." "Haydn's Sonata," Op. 40. "God save the King, as a Polacca." "Sterkel's Duet and Spanish Bolero." "Sacred Music." "Music in Macbeth." "Overture to Zauberflöte." "Country Dance, as Quick Steps." "Seven Italian Pieces." "The Last Battle," dedicated to the King. "Military Sonatas for the Piano-forte." "Battle of Trafalgar." "Battle of Vittoria," and "Surrender of Paris." "Ten favorite Irish Melodies, for two Flutes." "Thirteen Sets of Military Pieces, arranged for a full Band."

Mr. Green, the publisher of Logier's works connected with his system, says, that previous to 1826 there had been published of the elementary works upwards of fifty thousand copies, and of the Chiroplast nearly sixteen hundred had been sold. He further states, that about one hundred professors have paid Logier one hundred guineas each to be initiated in his method.

LOGROSCINO, NICOLÒ, was born at Naples, towards the end of the seventeenth century. Leo, in his "*Cioè*," had skilfully arrayed Euterpe in the mask and buskins of Thalia, but without aiming at the sardonic grin of Aristophanes. Logroscino, whose comic name appears to reveal his facetious genius, endeavored, on his first entrance in his musical career, to enrich the comic muse by new subjects. He threw such gaiety into his compositions, selected such agreeable and burlesque subjects, that his fellow-citizens, on the first appearance of his works, surnamed him *Il Dio dell'Opera Buffa*, (the god of the comic opera.) To Logroscino is due the merit of the invention of the finale; and this single fact would suffice to assign to him an honorable place in the history of his art. None of his works are now in existence, and he is but little known out of his own country, as he would only compose in the Neapolitan dialect.

LOHMANN was organist at Osterode probably in the year 1740. Gerber is in possession of a concerto for the piano-forte by this master.

LOHR, MICHAEL, singer at Dresden, in the first part of the seventeenth century, was born at Marienburg, and published "*Neue Teutsche und Lateinische Kirchen-Gesänge und Concerten in fünf- und 8 stimmigen Moteten*," Dresden, 1637.

LOKENBURG, JOANNES A. A contrapunctist of the sixteenth century, of whose works there are yet in the library of Munich (Cod. 51 and 54) two masses. He has also, as Walther informs us, published a "*Missa à 5 voc.*"

LOLLI, or LOLLY, ANTONIO, a celebrated violinist, was born at Bergamo in 1728. From the year 1762 to 1773, he was concert master to the Duke of Wurtemberg. He afterwards went to Russia, where he so excited the admiration of the Empress Catherine II., that she ordered a violin how to be made for him, on which she wrote, with her own hand, "*Archet fait par ordre de Catherine II., pour l'incomparable Lollì.*" In 1785 he went to England, and from thence visited Spain. He then proceeded to Paris, where he performed at the spiritual and other concerts. In 1788 he returned to Italy. He was most celebrated for playing quick movements, and being

once requested to perform an adagio, positively refused, saying, "*Je suis de Bergame, et les habitants de cette ville sont trop fous pour pouvoir jouer l'adagio.*" We will now give some further information, from Gerber, respecting the unsettled life of this musician. When he entered on his engagement at Stuttgart, in 1762, he found Nardini there, who excelled him by far in ability. He therefore requested the duke to allow him a year's leave of absence to travel; instead of which, he retired to a secluded village, and applied himself with indefatigable exertions to his instrument. After having been absent for this period, he returned from his pretended journey, and excited such universal admiration, that Nardini gave up the contest and returned to Italy. His engagement at St. Petersburg seems to have taken place between 1775 and 1778. After remaining there three years, he requested of the empress a year's leave of absence; at the same time he declared to Von Dittersdorf, in Johannisberg, that he did not wish to remain any longer in Russia, and that his intention was never to return; that through the friendship of a physician, (who had promised him a certificate of the weak state of his breath,) he, however, hoped to obtain an honorable discharge from the empress; that he then would visit all the principal towns in Europe, add the profits which he might thus make to ten thousand guilders which he had already realized, and place these sums together in one of the banks of Europe, living afterwards on the interest. In 1788 A. Lollì was residing in Italy, and entitled himself there concert master to the Empress of Russia. In the year 1791, he went to Berlin with his son, then a child of only eight years old, when the latter received from the king a present of one hundred richfriedrichs-d'or for his ready and correct performance on the violoncello: the child also gave a concert in the same year at Copenhagen; but no mention is made in any of these places of the performance of the father. In the year 1791 both father and son were in Vienna, where the former styled himself first concert master to the King of Naples: only the son, however, performed in public. In the year 1796, Romberg found the father in Naples, where he played to him; but to Romberg's utter astonishment, not a trace was left of those excellent performances which had established his former fame. He had then become a feeble old man, whose power and energy were all gone.

That he was once a great artist on the violin is proved by Schultz in various documents which he sent to Gerber. Lollì gave a striking instance of the command which he had over his instrument in the presence of Schultz and Kirnberger. His bow happening to be too short for a long-continued note, he turned it, to their great astonishment, so nimbly and quickly, that, with the greatest attention, they were unable to observe the slightest stop in the sound. Dittersdorf mentions Lollì, in his biography, as a man of prepossessing appearance, gentlemanly in his manners, and an agreeable and social companion. He died, after a lingering illness, in Sicily, in 1802. Respecting his works, it is known that he never wrote more than the theme, and then desired one of his friends to write the bass or the parts for the different instruments. Three collections of his solos have been printed by Hummel, at Berlin, Ops. 1, 2, and 3. In Vienna there have also been printed two sets of six solos,

Ops. 9 and 10. There are also editions in Paris of his "*Ecole pour le Violon*," Op. 11, and also in Offenbach, 1794. "*12 Var. p. il Vc. e V.*," Vienna, 1801. These last are, perhaps, his son's compositions.

LOLLI, PHILIPPO, son of the preceding, performed on the violoncello at a concert in Berlin; also shortly afterwards at Copenhagen, and in 1794 in Vienna. At this last town were printed "*12 Var. p. il Vc. con Acc. del Basso*," Op. 2, 1799; which probably were from the pen of this composer.

LOMBARDO, GIROLAMO, a celebrated contrapuntist, flourished in Sicily about the year 1600, and published, among other works, "*4 Misse à 4 e 5 voci, col B contin.*"

LONG. An old character of the greatest duration after the *large*; equal in length to two breves, or four semibreves, or eight minims, or sixteen crotchets, or thirty-two quavers, and so on in duple proportion.

LONGHI, LEOPOLDO, a Neapolitan musician, was mentioned among the opera composers in the *Indice pe Spectac. Theatr.* of 1790.

LONG-SPIEL. The name of an ancient Icelandic instrument, of a narrow and long form, and performed upon with a bow. Its strings, one of which is used as a drone, are of copper, four in number, and the finger board is furnished with three wooden frets. The general construction of the *long-spiel* is highly curious; and the instrument is so ancient, and at the time of the visit of Sir Joseph Banks and Dr. Solander to Iceland, had so far grown out of use, that they could only find one man capable of performing upon it. The frets of this instrument prove the reality and antiquity of music in Iceland — of music strictly so called; for they imply a scale, or scientific arrangement of intervals.

LOOS, JOHANN. Schoolmaster and organist at a small town near Prague in 1768. He wrote various masses and operas. He died previously to the year 1788.

LOOSEMORE, HENRY. Bachelor of music in Cambridge in 1640, and organist, first of King's College, Cambridge, and afterwards of the cathedral of Exeter. He composed some services and anthems.

LOPEZ, or LOBO, EDVARDUS, also called LUPUS. *Beneficiarius* and *maître de chapelle* in the cathedral church at Lisbon, in the year 1600. He published, or left in manuscript, the following works: "*Natalitiæ noctis Responsoria*, 4-8 voc." "*Missa ejusdem noctis*, 8 voc." "*B. Mariæ Virginis Antiphona*, 8 vocum." "*B. Mariæ Virginis Salve*," for eleven voices in three choirs. "*B. Mariæ Canticum Magnificat*, 4 voc.," Antwerp, 1605. "*Canticum Magnificat*, 4 voc.," Antwerp, 1605, gr. fol., containing sixteen Magnificats, in different tones. "*Missa à 4, 5, 6, et 8 voc.*," Antwerp, 1639. "*Officium Defunctorum em canto chão*," Lisbon, 1603. "*Liber Processionum, et Stationum Ecclesiæ Olyssiponensis in meliorem formam redactus*," Lisbon, 1607. "*Dez Psalmos de Vesperas de diversas Vozes*." "*Cinco Missas à 4 Liçoes de Defuntos, e a Sequencia da Missa à 4, 6, 8, 9 e mais Vozes*." "*Motetes de Defuntos*." "*Duos Vilhancicos ao Santissimo Sacramento*."

Towards the end of his life when in his one hundred and third year, he was made rector of the archiepiscopal seminary. His master in music was Manoel Mendes, of Evora, and his countrymen speak in the highest terms of his musical talents.

LORD, JOHN, Sen., was a native of Wiltshire. He went to London and studied under Messrs. C. and S. Wesley, becoming, at length, a good organ and piano-forte player. He always held some situation of organist in the church of England, and has written some piano-forte music.

LORD, JOHN, Jr., a native of London, and the eldest son of the above, was made to play the piano-forte before he was six years of age. He studied with his father and Mr. Dance on the piano-forte, and under Dr. Crotch in theory. He was a teacher in the highest circles, and was employed as the assistant professor to Dr. Crotch, in the Royal Academy of Music, London; he was likewise an organist. He has composed sonatas, rondos, and duets for the piano-forte.

LORD, WILLIAM, a native of London, second son of John Lord, Sen., was a piano-forte player, and likewise appeared in public as a harpist, on which occasions he was well received. He studied the harp under Dizi, and made it his principal instrument.

LORELLI, father and son, both musicians at Naples in 1791, composed music for the ballet called "*Ruggiero e Brandamante*."

LORENTE, ANDREAS, organist of the principal church at Alcala, published, in the year 1673, a work in the Spanish language, entitled "*El Porque de la Musica*." The first book contains the elements of plain song; the second treats of consonance and the *cantus mensurabilis*; the third of counterpoint; and the fourth of the composition of music.

Of this work Geminiani has been heard to declare that it was not to be equalled in any of the modern languages; that it is a musical institute, and may be said to contain all that is necessary for a practical composer to know. In the course of the work are interspersed hymns and offices for the church, and some motets, composed by the author himself and others, which possess great merit.

LORENZ, A. W., professor at the royal college in Berlin, in 1798, was a musical amateur of good taste, and well acquainted with harmony. He published "*Eginhard und Emma, eine Ballade von Langhein, durchaus in Musik gesetzt*," Berlin, 1799. He also published "*Ode an die nachtigall von Rosegarten*," Berlin, 1798. "*Sinna und Selmar, eine Romanze von Rosegarten*," Berlin, 1798. It is not certain whether the other twelve songs of various poets, which have been published in 1792 without a Christian name, are of his composition, or by J. F. Lorenz, an organist at Halle. And lastly, "*Der Sieg der Unschuld, eine Ballade, in Musik*," Berlin, 1801.

LORENZANI, PAOLO, a Roman by birth, and a pupil of Oratio Benevoli, was chapelmaster, first in the Jesuits' church at Rome, and afterwards in the cathedral of Messina, in Sicily, from whence he was invited by Louis XIV. to Paris. He composed and published in that city a collection of excellent motets. He died at Rome in 1703.

LORENZINI, BERNIARD, violinist in the orchestra of the Grand Opera at Paris, published several instrumental works in that city, towards the end of the last century. It is difficult to know his precise works, owing to the bad custom of music sellers in suppressing the Christian names of authors, and there being another, and contemporary, Antonio Lorenzini, who published works of nearly the same description, in contest, as it were, with the subject of this article. Gerber's list of Lorenzini's works is as follows: "*Six Trios pour deux Violons et B.*," Op. 2, Paris, 1780. "*Six Duos à Violon et A.*," Op. 3, London, 1792. "*Six Trios à deux Violons et B.*," Op. 4, Paris. "*Six Duos à deux Violons.*," Op. 5, Paris. "*Six Quatuors Concert.*, à deux V., A., et B.," Paris, 1792. "*Airs variés à V. avec deuxième Violon.*," Paris, 1798. "*Premier Concerto pour A.*," Paris, 1787. "*Principes, ou Nouvelle Méthode de Musique pour apprendre à jouer facilement du Violon, suivies de douze Duos progressifs.*," Paris, 1798 and 1800. "*Six Duos à deux V. d'une difficulté progressive.*," Paris, 1798.

LORENZO, DIEGO, by birth a Spaniard, was a celebrated contrapuntist in the sixteenth century. He lived chiefly in Italy.

LORENZO. Under this name were published, in Germany, some Italian airs with accompaniments, about the year 1793. The author was an Italian sopranoist.

LORTZING, the German composer, died in his forty-eighth year, at Berlin, in 1851. He was engaged to go to London to superintend the production of his opera, "*Czar und Zimmermann.*," which was performed on all the stages of Germany within six months of its first appearance, and had one of the greatest successes ever known. Besides that, he wrote "*Ali Pacha, of Janina.*," and various other operas, all of which were successful, being full of flowing natural melodies and great dramatic effects. He also composed a great number of vaudevilles and detached *noœaux*, particularly for flute and piano, on which instruments he was an excellent performer.

LOSSIUS, LUCAS, during more than fifty years rector at Luneburg, was born at Vacha, in Hesse, in 1508. He not only collected a complete and correct Protestant psalmody, such as Luther left it at his death, but published the same, which is perhaps the only classic work of the kind, joining to it Melanchthon's eulogium of music in general, and his encouragement to similar undertakings, for the improvement of vocal church music. He also tried to promote the amelioration of church singing in a separate small work. He died universally esteemed in 1582. The titles of his works are, "*Psalmodia, hoc est, Cœntica Sacra veteris ecclesiæ selecta. Quo ordine, et melodiis per totius anni curriculum cantari usitate solent in templis deo, et de filio ejus Jesu Christo, de regno ipsius, doctrina, civi, passione, resurrectione, et ascensione, et de Spiritu Sancto. Item de sanctis et eorum in Christum fide et cruce. Non primum ad ecclesiarum, et scholarum usum diligenter collecta, et brevibus ac piis scholiis illustrata, per Lucam Lossium Luneburgensem. Cum præfatione Philippi Melanchthonis.*," Nuremberg, 1553. The first edition is in folio, and contains Melanch-

thon's preface. A second edition appeared with the following alteration in the title after the word *cruce*: "*Ad ecclesiarum et scholarum usum diligenter olim collecta, et brevibus ac piis scholiis illustrata. Nunc autem recens accurata diligentia et fide recogniti, et multis utilibus ac piis emendationibus aucta per Lucam Lossium, cum præfatione P. Melanchthonis.*," Wittenberg, 1569, without a table of contents or preface. Gerber was in possession of this latter copy. It contains, in four volumes, four hundred and thirty-eight songs, with their melodies, in notes, among which there are only four in the German language. All the rest are in Latin. The first song of each festival is ornamented with a wood cut. A third edition of the same appeared, with only a few alterations in the title. His second work is, "*Erotemata Musicae practicae, ex probatissimis hujus dulcissimæ artis scriptoribus accurate et breviter selecta, et exemplis puerili institutioni accommodatis illustrata, jam primum ad usum scholæ. Luneburgensis et aliarum pueritum in lucem edita. Item melodie sex generum carminum usitatiorum imprius suaves in gratiam puerorum selectæ et editæ.*," Nuremberg, 1563. Then a second edition, in 1570, with some alterations and additions by the singer, Christoff Prætorius, of Luneburg. Further editions appeared in 1579 and 1590.

LOTII, URBANUS, a church composer in the beginning of the seventeenth century, published "*Musica Melica, oder 1, 2, und 3 stimmige Fest-Concerten.*," Passau, 1616.

LOTHERUS, MELCHIOR, a German composer in the beginning of the sixteenth century, published "*Responsoria.*," Leipsic, 1522.

LOTICHIUS, JACOB, a German author, probably belonging to the ancient Hanau family of that name, wrote "*Oratio de Musica.*," Dorpati Livonorum, 1640.

LOTTI, ANTONIO, a pupil of Legrenzi, was born in Venice about 1665. He was the master of Marcello, Galuppi, and Precectti; was organist, and afterwards chapel-master, of St. Mark's Church, at Venice, and one of the most able men in his profession. To all the science and learned regularity of the old school he united grace and pathos. He is said to have regarded his compositions as the most perfect of their kind. His choral music is at once solemn and touching. Mr. La Trobe has published some specimens of it in his very excellent collection of sacred music. Between the years 1698 and 1717, he composed fifteen dramas for the Venetian theatre. His cantatas also furnished specimens of recitative which do honor to his professional character. In the year 1718, he was opera composer to the court of Dresden, and in 1720 returned to Venice, where he died in 1740.

LOTIN, DENIS, a violinist at Orleans, was born there in 1773. At the age of twelve he studied music for his amusement, when he improved so rapidly that his friends procured him the best masters of the neighborhood, and took him several times to Paris, where he received lessons from Grasset. He is author of the following works: "*Méthode de Violon*," "*Trois grands Duos Concertans.*," "*Concerto dédié à son ami Demar.*," "*Six Duos.*," "*Trois grands Duos.*," "*Deuxième Concerto.*," "*Six Duos fa-*

ciles." "Recueil de Walses pour deux V.," and "Recueil d'Airs variés pour V."

LOUET, ALEXANDRE, an amateur at Paris about the year 1783, published several operas of chamber music, also the following operetta, "*La double Clef, ou Colombine Commissaire.*"

LOUIS, PIL. Under this name is found the following works: "*Von der Fingersetzung, den Manieren und dem Geiste des Vortrags auf dem Klavier.*" "*Grundriss zum Lehrbegriffe des Accompaniments,*" (manuscript) Vienna, 1799. This work is also conjectured to have been by Madame Louis, below.

LOUIS, MADAME. Under this name, which is probably that of a Parisian amateur, have been published "*Six Sonates pour le Clav. seul,*" Paris. "*Recueil d'Ariettes choisies, avec Acc. de Clav.,*" Paris. "*Fleur d'Epine,*" an operetta.

LOULIÉ, FRANCOIS, a French musician, was the author of an ingenious and useful book, published in 1698, by Estienne Roger, of Amsterdam, entitled "*Elémens ou Principes de Musique mis dans un nouvel ordre.*"

LOURE. A short composition, or dance, sometimes of three, and sometimes of four crotchets in a bar; of a slow time and dignified character. One of its chief features is, its generally having a dot after the first crotchet of the bar, in which particular it resembles the *ciacone*.

LOUVET, or LOUVE, ALEXANDRE, a composer and pianist at Paris, published there, about 1796, "*Instructions théoriques et pratiques sur l'accord du Piano-forte, ouvrage qui apprend en très-peu de tems aux personnes les moins exercées à accorder parfaitement cet Instrument,*" one vol., Paris, 1798. "*Anelia,*" an opera, in three acts, by this author, was represented in Paris, for the first time, at the Théâtre de l'Opera Comique. The music is deemed more scientific than agreeable. The rest of his works are, "*Trois Sonat. pour le Clav. avec V.,*" Ops. 1, 2, 3, 4, Paris, from 1794 to 1796. "*Quatre Sonat. pour le Clav. avec V.,*" Op. 5, Paris, 1796.

LOUVRE. A term applied singly to a well-known French air, otherwise called *L'amiable Vainqueur*, for which Louis XIV. had a remarkable predilection. This air has since formed a well-known dance.

LOUYS, MAITRE JEAN, a French contrapuntist: of the sixteenth century, of whose writings there are still preserved, in the Munich library, "*Pseaumes 50 de David,*" Anvers, 1555.

LOVE-SONG. A song the words and melody of which are expressive of love.

LOW. A word of relative signification, and arbitrarily applied to any part, passage, or note, situated towards the bottom of the compass of that species of voice, or instrument, by which it is designed to be executed.

LOW, EDWARD, originally a chorister in Salisbury Cathedral, was organist of Christchurch, Oxford, and professor of music in that university. He died in 1682.

He published, in 1661, "Short Directions for the Performance of the Cathedral Service."

LOYSEAU, a French composer, flourished, about the year 1679, as organist of St. Martin's Church at Tours.

LOZEK, the elder, organist at Prague in the year 1800, is described as an excellent musical theorist, organist, and teacher. It is also said that he is equally as familiar with Tacitus, Horace, and Cicero as with Haydn and Mozart.

LUBI, MARIANE, probably an amateur, has published, in Germany, "*12 Lieder fürs Klavier,*" 1801, and "*12 neue deutsche Lieder fürs Klavier,*" 1803.

LUCA, SEVERO DE, a Roman composer, flourished in the year 1700, in which year his oratorio, "*Il Martirio di S. Eusmo,*" was performed in the church Della Pietà, at Rome.

LUCATELLO, GIOV. BATTISTA, belonged, according to Terreto, to the celebrated composers of Italy at the end of the sixteenth century. Some of his works are still to be found in the *Fab. Constantini Selectæ Cautiones excellentiss. Auctorum*, Rome, 1614.

LUCCHESI, ANDREA. His opera "*Ademira*" was represented at Venice in 1775.

LUCCHESI, J. M., made himself known by the following pieces of instrumental music: "*Trois Duos a deux V.,*" Op. 1, Vienna, 1794. "*Trois Duos à deux V.,*" Op. 2, Augsburg, 1795. "*Six Duos à deux V.,*" Op. 1, Basil, 1795. "*Six Sonatines pour le Clav. dont trois avec V.,*" Op. 3, 1796.

LUCCHINI, ANTONIO MARIA, flourished, in 1730, at Venice, as one of the first composers for the theatre there. (See Burney, vol. iv. p. 538.) A concert master of this name was also celebrated at Milan about the year 1750.

LUCELBURGER, or LUCELBURGIUS, ANDREAS. Nothing more is known of him than that he is the author of the "*Musica Practica, lib. 2,*" Cobourg and Jena, 1604.

LUCINDA, FRANCESCO, chapel-master to the King of Sicily, was born in that island. He composed, in 1692, the opera "*Gelidaura,*" for the theatre at Venice. See Burney, vol. iv. p. 79.

LUCINI, FRANCESCO. Walther calls him a bass singer, and mentions the following of his works: "*Concerti diversi, à 2, 3, e 4, con Partitura,*" Milan, 1616; and the sequel to this work, Milan, 1617.

LUDOVICI, THOMAS, a contrapuntist of the sixteenth century, seems to have resided in Italy, where there has been printed of his works, "*4 Psalmi præcipuis festivitatis, 8 voc.,*" Rome, 1591.

LUGUBRE. (I.) Mournfully, sadly.

LUIDERS, a good violinist, was first in the service of Prince Ferdinand of Prussia, in Berlin. He then went, in 1785, to Moscow; and having remained about five years in that city, continued his travels, intending, after his return, to have established himself at Moscow, in a music warehouse.

LUIGI. An Italian composer, of whose composition the opera buffa, "*L'Abergatrice rivace,*" was represented at Dresden in 1782.

LUIJA, C. F., an artisan in Paris, published, in the year 1791, "*Trois Sonates pour le V.*," Op. 1, Paris.

LUNIG. The name of a species of song much used in the Hebrides, and on the western coasts of Scotland, and which is generally short and plaintive. It is mostly sung by the women, at their diversions, and during their work.

LUTGERT, F. H., a musician in Hamburg, published the following works: "*12 deutsche Lieder am Klavier zu singen, in Musik gesetzt*," Hauburg, 1797. "*Six Variat. sur l'Air 'Contre les chagrins de la vie,' pour le Piano-forte*," Op. 2, Hamburg, 1798. He edited also the following musical selection, which is much admired: "*Musikalisches Journal, aus den neuesten deutschen und franz. Opern ausgezogen und fürs Klavier eingerichtet. Erster Jahrgang, in 12 Monatsheften, jeder d 4 Bogen*," Hauburg, 1798.

LUTTICH, JOHANN, a musician of the seventeenth century, born in Plauen, published "*Venusglöcklein, oder neue weltliche Gesänge*," Jena, 1610.

LUIZ, FRANCISCO, a Portuguese monk and chapel-master in the cathedral church at Lisbon, died there in 1693. He was eminent both for his theoretical knowledge and practical talents in music. He left the following works in manuscript: "*Texto da Paixao de Dominga de Ramos, e de sexta feira mayor, à 4 Vozes*," and "*Psalmos e Villancicos à diversos Vozes*."

LULLO, ANTONIO, a musician and contemporary of Zarlino, flourished in 1550. He wrote a treatise entitled "*L'Arte intiera della Musica*." Zarlino was doubtful whether this work had ever been printed, as all his endeavors to obtain a copy of it were in vain.

LULLY, or LULLI, JEAN BAPTISTE, was born of obscure parents at Florence, in the year 1634. Having, whilst a child, showed great taste for music, a Cordelier, from no other consideration than the hope of his some time becoming eminent in the art, undertook to teach him the guitar.

While Lully was under the tuition of this benevolent ecclesiastic, a French gentleman, the Chevalier Guise, then on his travels, arrived at Florence. This person had been requested by Mlle. de Montpensier, a niece of Louis XIV., to find out for and bring her some pretty little Italian boy as a page. The countenance of Lully did not answer to the instructions, but his vivacity and ready wit, in addition to his skill on an instrument as much the favorite of the French as of the Italians, determined the chevalier to engage him; and then, about ten years of age, he was sent to Paris. On his arrival, he was presented to the lady; but his figure obtained for him so cool a reception, that, instead of making him her page, she commanded the officers of her household to enter his name in their books as her under scullion.

Neither the disappointment he experienced nor the employment to which he was destined affected the spirits of Lully. In the moments of his leisure from the kitchen, he used to scrape upon a wretched fiddle, which he had contrived to procure. A person employed about the court, happening one day to hear him, informed the princess he had an excellent taste for music. She imme-

diately directed that a master should be employed to teach him the violin; and, in the course of a few months, he became so great a proficient, that he was elevated to the rank of court musician. In consequence of an unlucky accident that took place, Lully was dismissed from this situation; he afterwards, however, found means to get admitted into the king's band of violins, and applied himself so closely to the study of music, that in a little time he began to compose. Some of his airs having been noticed by the king, the author was sent for, and his performance of them was thought so excellent, that a new band was formed, called *les petits violons*, and he was placed at the head of it. Under his direction they soon passed the famous band of twenty-four, till that time so much celebrated throughout Europe. This was about the year 1660, at which time the favorite entertainments at the French court were dramatic representations, called *ballets*. These consisted of dancing intermixed with singing and speaking in recitative; and to many of them Lully was employed to compose the music.

An academy had been established at Venice for the performance of operas, and Louis wished to have one in France that should excel it. Accordingly, in 1669, he granted to the Abbé Perrin, master of the ceremonies to the Duke of Orleans, a privilege for the conducting of an opera after the model of that at Venice, but to be performed in the French language.

Cambert, the organist of St. Honore, was engaged to compose to music; but after a little while Lully, who had risen high in the king's favor, contrived to get him to be removed, and himself to be appointed in his stead. Possessing now the situation of composer and joint director of the opera, he not only left his former band and instituted one of his own, but formed the design of building a new theatre near the Luxemburg palace, which he afterwards accomplished. This was opened in November, 1670, with a musical entertainment, consisting of a variety of detached pieces, included under the title of "*Le Combat de l'Amour et de Bacchus*."

Lully, some time previous to this, had been appointed superintendent to the king's private music, and had neglected almost entirely the practice of the violin; yet, whenever he could be prevailed with to play, his excellence astonished all who heard him. For the guitar, though so trifling and insignificant an instrument, he, throughout his whole life, entertained the greatest partiality.

In the year 1686, the king was seized with an indisposition that threatened his life; but recovering from it, Lully was required to compose a "*Te Deum*." Accordingly he wrote one, which was not more remarkable for its excellence than the unhappy accident with which its performance was attended. Nothing had been neglected in the composition, nor in the preparations for the execution of it, and the more to demonstrate his zeal, he himself beat the time. With the cane that he used for this purpose, in the heat of action, (from the difficulty of keeping the band together,) he struck his foot, which caused such considerable inflammation, that his physician soon advised him to have his little toe taken off; and, after a delay of some days, his foot; and at length the whole limb. At this dreadful juncture, an empiric offered to perform a cure without ampu-

tation. Two thousand pistoles were promised him if he should accomplish it; but all his efforts were in vain. Lully died in 1687, and was interred in the church of the Discalceat Augustines, at Paris, where an excellent monument has been erected to his memory.

A singular story of a conversation between Lully and his confessor in his last illness is related, which shows the natural archness of his disposition, even at so critical a moment, at the same time that it exposes the weakness and folly of the priest. Having been, for many years, in the habit of composing for the opera, the priest, as a testimony of his sincere repentance, and the conditions of his absolution, required of him to throw the last of his compositions into the fire. Lully, after some excuses, at length acquiesced, and pointing to a drawer in which the rough draft of "Achilles and Polixenes" was deposited, was taken out and burned, and the confessor went away satisfied. Lully grew better and was thought out of danger, when one of the young princes came to visit him. "What, Baptiste," says he to him, "have you thrown your opera into the fire? You were a fool for thus giving credit to a gloomy Jansenist, and burning good music." "Hush! hush! my lord," answered Lully, in a whisper; "I knew well what I was about; I have another copy of it!" Unhappily, this ill-timed pleasantry was followed by a relapse; the gangrene increased, and the prospect of inevitable death threw him into such pangs of remorse, that he submitted to be laid on a heap of ashes with a cord round his neck; and in this situation he expressed a deep sense of his late transgression. On being replaced in his bed, he became composed, and died shortly afterwards.

At the time when Lully was placed at the head of *les petits violons*, not half the musicians in France were able to play at sight. A person was esteemed an excellent master who could play thorough bass on the harpsichord or the theorbo in accompaniment to a scholar; and, with respect to composition, nothing can be conceived more inartificial than most of the sonatas and airs for violins at that time. The treble part contained the whole of the melody; the bass and the tenor parts were mere accompaniments; and the whole was a gross and sullen counterpoint. The combination of sounds then allowed were too few to admit of sufficient variety; and the art of preparing and resolving discords was a secret confined to few. Lully contributed greatly to the improvement of French music. In his overtures he introduced fugues, and was the first who, in the choruses, made use of the side and kettle drums.

It is somewhat difficult to characterize his style. It seems, however, to have been completely original, and derived from no other source than the copious fountain of his own invention.

His compositions were chiefly operas and other dramatic entertainments; these, though excellent in their kind, would give but little pleasure at the present day; the airs being short, formed of regular measures, and too frequently interrupted by recitatives. Louis XIV. was fond of dancing, and had not taste for any music but airs, in the composition of which, a stated number of bars was the chief rule to be observed. Of harmony or fine melody, or of the relation between poetry and music, he seems to have had no conception;

and these, of course, were all so many restraints upon Lully's talents.

The merits of Lully ought to be estimated from his overtures and works of a more serious nature than his operas. There are extant several of his motets, and some other good compositions for the church, though not in print. His operas and other theatrical performances, which were very numerous, have been nearly all published. He composed symphonies for violins in three parts; but these are not to be met with in print.

He is said to have been the inventor of that species of composition, the overture; and more particularly that spirited movement, the *largo*, which is the general introduction to the fugue; for, though it may be said that the symphonies or preludes of Carissimi, Colonna, and others, are in effect, overtures, yet the difference between them and those of Lully is very evident; the former were compositions of a mild and placid kind, the latter are animated and full of energy.

LULLY, LOUIS, and LULLY, JEAN LOUIS, sons of the preceding, were also musicians. They composed, in conjunction, the music to the opera of "*Zéphire et Flore*," written by Michael du Boullai, secretary to the Grand Prior of Vendôme, and represented in the Académie Royale in 1688. They also set the opera of "*Orpheus*," written by the same person, and an opera called "*Aloide*."

LUPI, DIDIER. A French contrapuntist of the sixteenth century. Of his works the following are yet extant: "*Chansons Spirituelles*," 1548. "*Chansons Spirituelles à quatre*," Paris, 1571. "*Pseaumes 30 de David à quatre voix*," Lyons, 1549.

LUPI, LUPUS, a Flemish contrapuntist, flourished about the year 1550. He was a composer of great eminence among his contemporaries, but no entire work can be pointed out of his composition. Many single songs and motets by him are to be found in collections, especially in "*Sablinger Concentus 4, 5, 6 et 8 voc.*," Augsburg, 1545.

LUPPACHINI, BERNADINO DEL VASTO, an Italian composer, about the year 1550, published "*Madrigali à 4 voci*," Venice, 1546, and "*Madrigali à 5 voci*," Venice, 1547.

LUPPINO, T. W. Organist of Ware, Herts. At about nine years old, Francis Cramer, from friendship to Luppino's father, (an English artist,) took the son as a violin pupil; at the same time, and from a similar kind motive, Frank Lanza, a son of the singing master, commenced teaching him the piano-forte. After studying three years, his parents then being called to the continent, F. Cramer took him entirely under his roof, and introduced him as a violin ripieno, at the Vocal and other concerts. In another three years the celebrated J. B. Cramer received him into his house as a piano-forte pupil, with whom he remained till 1808. To these gentlemen, particularly to the Messrs. Cramer, Luppino expressed the warmest gratitude, not only for his musical education, but for nearly all the good which accompanied his career in life. In 1808, with the advice of his friends, Luppino accepted a proposal to assist C. Bridgeman (many years established in Hertford) as teacher, tuner, and organist. In 1812, an organ having been erected in the neigh-

soring town of Ware, he and Bridgeman became joint organists of both places. In the following year Luppino's marriage severed the above connection; after which time Luppino alone retained the Ware organist's situation, and at the age of thirty-one possessed a tolerably extended connection of teaching. He has published "A Selection of Psalms and Hymns for the Use of Ware Church," part of which are adapted, and part composed by himself.

LUSCINIUS, properly NACHTIGALL, OTTOMARUS, a learned Benedictine friar, born at Strasburg, studied music first in his native town, and then at Vienna, where he first became known as a teacher of music. He was afterwards a preacher in St. Maurice's Church, at Augsburg, and at the same time lecturer on the Greek language in the Benedictine convent of St. Ulrich and Afra. Thence he was called to Basil, and, lastly, again to his native place, as canon of St. Stephen's Church. According to Le Long, he died in the year 1535. An estimate may be formed of his learning, by his translation into German of the book of Psalms from the original Hebrew text; also by his translations of the symposiaka of Plutarch, and the orations of Isocrates, together with several other learned works. Luscinius was early in life a great friend of Erasmus, but became afterwards his most violent adversary. He was also concerned in the controversies with the famous Ulrich von Hutten, whom he attacked with such powerful satire, that at last Melancthon gave him to understand, by an epigram, that his name could not possibly be Nightingale, but that he ought rather to be called Vulture. The following works by Luscinius give him the greatest claim to the admiration of posterity: "*Musica Institutiones*," 1515, and "*Musurgia, seu Praxis Musica*," Strasburg, 1536 and 1542. The most interesting part of the latter work is the correct representation of all the instruments then in use. These, as well as the whole book, would have been as good as lost to us, after a lapse of about three hundred years, had not Hawkins fortunately given (vol. ii. p. 441 of his history) correct representations of all these instruments, to the number of forty-nine.

LUSINGANDO. (L.) Soothingly, persuasively.

LUSITANO, VINCENTINO. A musician at Rome, about the middle of the sixteenth century. His principal work is entitled "*Introduzione facilissima et novissima di Canto fermo e figurato contrapunto semplice*," Rome, 1553; Venice, 1558 and 1661.

LUSTRINI, ABBATE, flourished in 1755, at Rome, as one of the first chapel-masters.

LUTE. A stringed instrument formerly much in use; anciently containing only five rows of strings, but to which six, or more, were afterwards added. The lute consists of four parts, viz., the table; the body, which has nine or ten sides; the neck, which has as many stops, or divisions; and the head, or cross, in which the serews for tuning it are inserted. In playing this instrument, the performer strikes the strings with the fingers of the right hand, and regulates the sounds with those of the left. The origin of this instrument is not known, though generally believed to be of very early date. Indeed, authors are not agreed as

to the country to which we are indebted for the invention. Some give it to Germany, and derive its name from the German word *laute*, while others ascribe it to the Arabians, and trace its name from the Arabic *alland*.

LUTENIST. A performer on the lute. The office of lutenist to the King's Chapel, in the old countries, was formerly an active one, like that of organist; but since the decline of the lute, has become a sinecure place. Songs for a single voice, with lute accompaniment, were of Spanish, or of Eastern origin. The lute, which was a kind of guitar, survived to the time of Handel. The theorbo and arch-lute were the same instruments, but of enlarged capacity and more strings. The lutenist in trunk hose, cap, and feather, and "bearded like a pard," took up a position at the crowded party, in which he evidently expected to be the adured of all observers. Whether he sang songs,

"Such as the starved lover sings to his proud fair,"

is doubtful. If his music bore any proportion to those bulbous and massive legs which still attract the eye in his effigies, he must have been a very extraordinary musician indeed.

LUTHER, DR. MARTIN. This celebrated reformer and professor was born at Isleben, Saxony, November 10, 1483. His "Eulogium on Music" has been published by Dr. Forkel, in the second volume of his "History of Music." Luther also wrote several choral melodies. The following are the titles of some of those which he either composed entirely, or corrected: these titles are taken from the "*Pflichten eines Organisten*," i. e., "The Duties of an Organist," by the Music Direct. Turk, p. 42. 1. "*Wir glauben all an einen Gott, &c.*" 2. "*Jesaja dem Propheten das.*" 3. "*Ein feste Burg ist unser Gott, &c.*" 4. "*Erhalt uns Herr bey deinem Wort.*" 5. "*Es woll uns Gott gnadig seyn.*" 6. "*Ach Gott vom Himmel sich darein.*" 7. "*Es ist gewisslich an der Zeit.*" 8. "*Dies sind die heiligen zehn Gebot.*" 9. "*Nun bitten wir den heiligen Geist.*" 10. "*Gebbet seyst du Jesu Christ.*" 11. "*Vom Himmel hoch da komm ich her.*" 12. "*Komm, heiliger Geist, Herre Gott.*" 13. "*Mitten wir im Leben sind.*" 14. "*Gott der Vater wohne uns bey.*" 15. "*Vater unser im Himmelreich.*" 16. "*Christ unser Herr zum Jordan.*" The music of some of these works is, with much probability, attributed to Luther, especially of the hymn called "*Das grosse glauben*," No. 1; also of No. 2, "*Jesaja dem Propheten*," concerning which Johann Walther, in his epistle, speaks with particular praise, especially as to the manner in which Luther has adapted the notes to the text. On the other hand, the melodies, Nos. 7, 8, 9, 10, 11, 12, 13, 14, were known long before Luther. To these ancient melodies may also be added "*Ein Kindelein so lobelich*," "*In dulci Jubilo*," "*Christ fuhr gen Himmel*," and "*Erstanden ist der heilige*." Luther preferred these beautiful melodies to all the translations and adaptations from the Latin church.

Gerber is not certain whether the old litany to God and all the saints (No. 14) was not originally a Catholic hymn. What, however, is certain is, that the melody was known before Luther. Nor does No. 15 belong to Luther. It was what is called in Germany a *bergkreyen weis*, that is, a melody used in singing histories in rhyme, some-

hing in the style of the romances or ballads of our day. There were, however, in the fifteenth century, spiritual as well as worldly *bergkreyen*. Thus, for instance, a certain Rotenbacher claims the following psalms, from Luther's first psalm book, in his collection of "*Bergkreyen*," printed in 1551, namely, "*Sie ist mir lieb die werthe Mayd*," and "*Ein neues Lied wir heben an*." Three hundred years ago no difficulty was made in introducing the melodies of profane songs in churches. This plainly appears from Joh. Isaack's melody to "*Inspruck, ich muss dich lassen*," "*Inspruck, I must leave thee*," which afterwards became more known as a hymn, to the words "*O welt ich muss dich lassen*," and, after that, again became popular to the profane words, "*Nun ruhen alle Walder*." From the *balletti* of Gastoldi, "*Viver lieto voglio*," &c., and "*A lieta vita Amor ei*," &c., were also introduced into the church, with the text, "*In dir ist Freude*," and "*Jesu wollst uns weisen*," i. e., "*In thee is joy*," and "*O Jesus, wilt thou show me*." The melody No. 16, "*Christ unser Herr*," is not Luther's, but composed by Wolf Heinz, with whose name it was printed in 1544. We are also, perhaps, indebted to Joh. Walther and Ludwig Senfl for many melodies in Luther's collection. Luther's psalm book was at first very small, and in 1524 contained only three sheets, which sheets were also printed separately. They together contained eight psalms, but with only three melodies. Of these are yet sung, in Germany, No 1, "*Nun freut euch lieber Christen*," i. e., "*Now, Christians, fill your hearts with joy*," but much altered, and "*Es ist das heil uns kommen her*," i. e., "*Salvation now is come to us*." The melody of the eleventh psalm, "*Salvum me fac*," &c., is likewise in the first edition of Luther, as the psalm is yet found in German choral books. The songs in that collection, "*Ach Gott von Himmel sich*," i. e., "*O God, from heaven look*;" "*Es spricht der unweisen mund wol*," i. e., "*The lips of fools will speak*;" and "*Aus tiefer noth schrey ich zu dir*," i. e., "*I call to thee in deep distress*," must be sung to this same melody of the eleventh psalm. After Luther's first edition, the number of hymns increased yearly, because he not only wrote thirty more songs for the collection, but other divines did the same. The first edition of the enlarged hymn book was edited by George Rhaw, Joh. Walther, and Bapst, in Leipzig. We shall now mention some later editions in the sixteenth century. "*Gesangbuch Christlicher Psalmen und Kirchen Lieder D. Mart. Lutheri und anderer frommer Christen, allesamt mit den Noten und ihren rechten Melodeyen, dergleichen etliche mit 4 Stimmen kunstlich abgesetzt*," Dresden, 1593. "*Geistliche Lieder, mit einer neuen verrede D. M. Luther*," Nuremberg, 1558. "*Ausserlesene Psalmen und Geistliche Lieder*," Pommern, 1593. "*Teutsch Psalmen und Gesangbuch D. Lutheri mit 4 Stimmen componirt, und auff den oblichen Choral gerichtet*," Eisleben, 1598. Luther was equally fond of figurate descant, which he endeavored also to promote in the church. This appears from a printed collection of motets, with a preface, by him, which well deserves to be made public in some musical periodical work. The title is, "*Symphonia juvende 4 vocum, seu Motete 52, cum prefatione Mart. Lutheri*," Wittenberg, 1538. In the fourth year of the "*Leipz. Mus. Zeit.*," page 497, is to be found an arrangement of Luther's interesting thoughts on

music and science in general; also, his remarkable letter to Ludw. Senfl, translated from the Latin into German. See *Mus. Zeit.* An. 12, p. 35.

LUTTICHIUS, JOHANN, a German composer in the beginning of the seventeenth century, published "*Sales Venerei Musicales, oder neue teutsche Politische Gesänge mit 4 und 5 Stimmen, auch lustige Intraden, ꝛc. mit 3 Stimmen*," Leipsic, 1610.

LUYTON, CAROLUS. Court organist to the Emperor Rudolph II. in 1600. He published "*Cantiones Sacre 5 voc.*," Prague, 1603. "*Opus Musicum in Lamentationes Jeremie*," Prague, 1603. "*Missæ 7 vocum*," Prague, 1609. "*Lib. 1 Missarum*," Frankfurt, 1621. "*Madrigali à 5 voiz*," Venice, 1582.

LUZZASCHI, or LUZZASCO. This musician was considered one of the greatest organists of his time in Italy, being second only to Claudio Merula. He belongs to the four whom Galilei calls "*musicis par excellence*." He published, among other works, "*Madrigali*," Naples, 1576, which excited universal admiration. Luzzaschi was a native of Ferrara, and concert master and organist to Duke Alphonso II. He died in his sixty-second year. His publication of madrigals, above mentioned, may still be found in the library at Munich.

LUZZO, FRANCESCO, an Italian composer for the church, published "*Motelli Concertati à voci 2 e 3 voci*," Venice, 1650.

LYCHANOIDES. (Gr.) The name given by the ancients to the middle sounds of those which Bæchius, and other Greek writers, call *spissi*.

LYCHANOS. (Gr.) The third string of the ancient diapason, or octave. The name given by the Greeks to the third chord of their two first tetrachords.

LYCHANOS HYPATON. (Gr.) The name given by the ancients to the third sound of the first or lowest tetrachord in the diatonic genus; so called from its having been played with the index or fore finger. This sound, which answered to our D on the third line in the bass, was also denominated *hypate diatonos*. See that expression.

LYCHANOS MESON. (Gr.) The name by which the ancients distinguished the third sound of the *meson*, or middle tetrachord. This sound corresponded with that of our G on the fourth space in the bass.

LYDIAN. The epithet applied by the ancient Greeks to that of their modes which was placed between the *Folian* and *Hyperdorian*. From its bearing the name of an Asiatic people, it was sometimes called the *barbarous* mode. The character of the *Lydian* mode is said to have been striking and animated, yet highly capable of pathos and softness. It was for the latter quality that Plato banished it from his republic. This is the mode by which Orpheus is fabled to have attracted the very beasts, and Amphion to have built the walls of Thebes. Some impute its invention to Amphion, the son of Jupiter and Antiope, others to Olympus, the disciple of Marsyas, and others again to Melampides. Pindar informs us, that it was first used at the marriage of Niobe. *Lydian* was also the name of an instrument used by the Greeks, which is supposed

to have been so called from their being indebted for it to their Asiatic neighbors.

LYON, SAMUEL THOMAS, was born in the year 1776. He received instructions in the practical part of his profession from his father, who was a very excellent performer on various instruments, and especially eminent on the bassoon. In the theory of music, he was a pupil of the learned and ingenious Possin. When thirteen years of age he performed in public the tenor part in an obligato quartet of Pleyel's, when the approbation he received caused him to be patronized by Attwood, who invited him to his house, where at that period Bridgetower was an inmate, having been placed under Attwood's care by his majesty. At his music parties Lyon became familiar with the works of Haydn and Mozart, authors at that period comparatively but little known. In the year 1798, he was unanimously elected a member of the Royal Society of Musicians, and in 1819, elected as one of the court of assistants of perpetual governors of that institution.

When the schism took place in the *Philharmonic Society*, and two concerts were established, Lyon was engaged to play the tenor, and made his *début* in the septet of Beethoven. The applause he received obtained him the honor of being selected by Weichsel, Spagnoletti, Mori, &c., to perform in quartets and quintets, in seven concerts during that season. On January 2, 1824, Lyon was unanimously elected an associate of the *Philharmonic Society*.

His publications are exclusively for the piano-forte, and principally composed for the use of juvenile performers; besides a great number of airs that he has arranged as rondos, and adaptations of the works of Handel and other authors.

LYRA DOPPIA, or DOUBLE LYRE. (I.) The name of an instrument not at present known, but supposed by some to have been a kind of *viol da gamba*.

LYRA MENDICORUM. (L.) The name of an ancient instrument, the body of which was formed something like that of a violin. It had four strings, which were distended from the neck to the lower part, and agitated in performance by the friction of a wheel. It owed its name to the circumstance of its having been the favorite instrument of mendicant friars.

LYRA-VIOL. An instrument once much in use; so named because it was tuned in a manner formerly called the *harp way*. It was, in form, something like the common viol, and had six strings, and seven frets, or stops, to which were assigned seven letters of the alphabet; viz., B, C, D, E, F, G, H, the letter A answering to the open string wherever it occurs.

LYRA-WAY. The appellation given by the ancient Greeks to one of their two modes of notation. See NOTATION.

LYRE. One of the most ancient of the stringed species of instruments, and said to have been invented by Mercury, in the year of the world 2000. Its frame first consisted of the shell of a tortoise; but concerning the original number of its strings, there is a variety of opinions; some assert it to have been only three, and that Mercury resembled those three strings to as many seasons of the year, which were all that the Greeks reckoned, viz., summer, winter, and spring; assigning the *acute*

string to the first, the *grave* to the second, and the *mean* to the third. Some, again, say that it had four strings, and others that it had seven. But authors generally agree in giving Mercury the honor of its invention, and say that the knowledge of the instrument, as formed by him, was transmitted by Orpheus, who taught the use of it to Thamyris and Linus, the latter of whom communicated the art to Hercules. From Hercules it passed to Amphion, the celebrated Theban lyrist, and afterwards to the Grecian Terpander, who carried it to Egypt, greatly improved, and exhibited it to the Egyptian priests as his own invention.

With respect to the form of the ancient lyre, there is no more agreement among writers than about the number of its strings. It, however, appears by those found in the hands of the ancient statues of Apollo, Orpheus, and others, that, in its improved state, it consisted of a frame whose sides were curvilinear; one fashioned somewhat like the letter S, and the other like the same letter reversed, meeting at the centre of the base, and inserted at the top in the extremities of a cross bar, to which were fastened the upper ends of the strings, distended to it perpendicularly from the bottom. In these representations of the instrument there are seven strings, and this, according to Nichomachus, was the number contained by the Mercurian lyre.

Lord Elgin took from a tomb at Athens an ancient lyre in a mutilated state, and in fifty pieces; but the parts could be so put together as to leave no doubt of its figure and action. The wood was of cedar, and in size similar to that held in the hand of Apollo. Having lain in the earth about three thousand years, it was surprising that the woodwork was not all decayed, for the metallic parts were completely dissolved. This lyre evidently had eight strings, from the number of little rollers which turned upon the cross bar. On each roller there was a small projecting peg, upon which the string was looped; then, by turning the roller, it was raised in pitch, and the mode of fixing it was by slipping the end of the roller, which was notched, upon a fastened piece of wood of corresponding shape. By a method so clumsy it was impossible to put the instrument into tune, according to the present notions of accuracy; and we need not be long in determining that the ears of the performers were as rude as the instruments upon which they played.

LYRIC. An epithet applicable to odes, hymns, songs, or whatever compositions are intended for musical rehearsal. The word is borrowed from the lyre, and was originally confined to poetry meant to be sung to, or accompanied by, that instrument.

LYRICHIORD. The name formerly given to a vertical harpsichord. The origin of this instrument may be traced to Kircher.

LYRIST. A performer on the lyre. In ancient Greece, the Lesbian lyrists were the most celebrated.

LYRODI. (Gr.) Certain musicians among the ancients, who accompanied their own singing with the lyre. *Lyrodi* was also an appellation given to such as were in the practice of singing lyric poems composed by others.

LYTIFERSE. The name given by the ancient Greeks to the "Song of the Reapers."

M.

M., *Mezzo*. Half, somewhat, rather. This letter is frequently used as an abbreviation, in connection with other letters; as, M. F., *mezzo forte*, rather loud; M. P., *mezzo piano*, rather soft; M. V., *mezzo voce*, with half the usual voice. Also for *mano*, or *main*, the Italian and French for *hand*; as, D. M., *destro mano*, right hand; S. M., *sinistro mano*, left hand; M. G., *main gauche*, left hand; M. D., *main droit*, right hand.

MA. (I.) But, as, *vivace*, *ma non troppo presto*, lively, but not too quick; *allegro*, *ma non troppo*, quick, but not too much so.

MAASS, JOHANN GEBHARD EIRENREICH, magistrate, and (in 1791) professor of philosophy at Halle, was born in Krottdorf, near Halberstadt, in 1766. He wrote, besides several other works, the following: "*Ueber die Instrumental Musik, (in der Neuen Bibl. des schön Wissenschafts,)* B. 48," 1792. "*Zusatz zu dem Artik Accent, in Sulzer, in Hinsicht auf die Musik,*" i. e., "Appendix to Sulzer's article *Accent*, as relates to Music." In the *Nachtrag zu Sulzer Theor. der sch. W.*, Maass; also a paper, under the title "*Charaktere der vornehmsten Dichter aller Nat. von einer Gesellsch. v. Gel.*," i. e., "Character of the principal Poets of all Nations, by a Society of learned Men." In this paper, he answers to a question proposed, "By what means can the oratorical and pathetic accents be expressed in music?"

MACARI, GIACOMO, a Rouan dramatic composer, produced the following operas: "*Adalberto furioso*," 1727. "*Aristide*," 1735. "*Ottaviano trionfante di Marco Antonio*," 1735. "*La Contessina*," 1743.

MACCHI, G. An Italian dramatic composer, resident at Venice about the year 1750.

MACHALATHI. A kind of lute or guitar, used by the Hebrews.

MACHUL. An instrument used by the Hebrews. This name is supposed, by Kircher and others, to have been given to two different instruments, one of the stringed, and the other of the pulsatile species. That of the former sort had six chords, or strings. The second was of a circular form, made of metal, and was either hung round with little bells, or furnished with iron rings, suspended on a rod, or bar, that passed across the circle.

MACDONALD, PHELPS. This gentleman was of Irish extraction, and under the name of Phelps was highly celebrated in London, as an amateur singer and vocal composer. He subsequently held the situation of private secretary to Lord Burghersh, British ambassador at Florence. His works are principally in the style of Jackson, of Exeter, but modernized and improved by a due mixture of the Italian school. Among them are the following: "Bring me an urn of work divine," duet. "An age is each hour," canzonet. "From thy arms, my dear Fanny,"

canzonet. "Hither, gentle zephyr," canzonet. "I whispered her my last adieu," canzonet. "Not soft falling showers," canzonet. "The heart that warmed," canzonet. "Though thine eyes, my sweet girl," canzonet. "Whene'er the howling tempest," canzonet. "When fancy strews," canzonet. "When the maid that possesses," canzonet. "Close by the Wellands," duet. "Haste, ye gales," duet. "O, linger yet," duet.

MACE, THOMAS, born in the year 1613, was one of the clerks of Trinity College, Cambridge, and distinguished, among the writers on music, by a work entitled "*Music's Monument*, or a Remembrancer of the best practical Music, both Divine and Civil, that has ever been known to be in the World;" published in folio in 1676. Under whom he was educated, or by what means he became possessed of so much skill in the science of music as to be able to furnish matter for the above work, he has nowhere informed us. We may collect from it that he was enthusiastically fond of music, and of a devout and serious disposition, though cheerful and good humored even under the infirmities of age and the pressure of misfortunes. His knowledge of music seems to have been chiefly confined to the practice of the lute, (his favorite instrument,) and to so much of the principles of the science as enabled him to compose for it.

As to the above work, a singular vein of dry humor runs through it, which is far from being disgusting, since it exhibits a lively portrait of a good-natured old man. The first four chapters are a eulogium on psalmody and parochial music; the fifth contains a recommendation of the organ for that purpose. The sixth treats of "how to procure an organist." In the eleventh and twelfth chapters he treats of cathedral music, and laments seriously its decline in Great Britain.

In parochial psalmody the author recommends what he calls "short, square, even, and uniform ayres," and is "bold to say that many psalm tunes are so excellently good, that art cannot mend them or make them better." In speaking of the difficulty of singing in tune, even with a good voice, he observes, that, "with an unskillful, inharmonious, coarse-grained, harsh voice, it is impossible." "'Tis sad to hear what whining, toling, yelling, or screeking, there is in country congregations, where, if there be no organ to compel them to harmonical unity, the people seem affrighted or distracted." The liberal use of compounds by the ingenious Master Mace gives his language a very Grecian appearance. The second part of the work treats of the lute, and professes to lay open all the secrets relating to that instrument, which, till the author's time, had only been known to the masters of the science. The third part is on the viol and music in general; and in this he censures the abuse of music in the disproportionate number of bass

and treble instruments in the concerts of his time, in which he says it was not unusual to have but one small weak-sounding bass viol to two or three scolding violins, as he calls them. He gives directions for procuring and maintaining the best music imaginable, and exhibits first the plan of a music room contrived by himself for concerts, with galleries for auditors, capable of holding two hundred persons. The instruments are a table organ (an invention of his own) and a chest of viols, two violins, and basses of strength sufficient "that they may not outery the rest of the music." To these he adds two theorbos, three "full-sized lra viols, lusty and smart speaking; because that in consort they often retort against the treble, imitating, and often standing instead of that part, second treble." "And being thus stored, you have a ready entertainment for the greatest prince in the world." He afterwards gives directions for playing the viol, with a few lessons by way of example; and concludes with a chapter on music in general, which, however, contains nothing more than some reflections of the author on the mysteries of music, which, he says, have a tendency to strengthen faith, and are a security against *the sin of atheism*. Mace does not appear to have held any considerable rank among musicians, nor is he celebrated either as a composer for or a performer on the lute. His book, however, proves him to have been an excellent judge of the instrument, and contains such a variety of directions as to render it a work of great utility. We find in it many curious observations on the choice of stringed instruments, the various kinds of wood of which they are made, the method of preserving them, and the mode of choosing strings.

MACHAULT, GUILLAUME DE. A French composer, born about the year 1284. In 1301 he was in the service of the Queen of Philippe le Bel, King of France, till, in 1307, he became *valet de chambre* to the prince himself. Some time after this, Henry, King of Navarre, placed Machault as secretary to John of Luxemburg, King of Bohemia, who was killed, in 1346, at the battle of Crecy. With this prince Machault remained more than thirty years. He was living in 1370, and after that time wrote a work entitled "The Siege of the City of Alexandria," in which he relates the assassination of Pierre de Lusignan, King of Jerusalem and of Cyprus, which event did not take place till near the end of the year 1369. Amongst other music, Machault composed some French and Latin motets, roundelays, and ballads, also a mass for four voices, which is thought to have been sung in 1364, at the coronation of Charles V., King of France. Francois Perne, of Paris, has reproduced this mass, which is a great curiosity, with a modern score.

MACHICOURT, PETRUS DE. First singer at the church of Tours, in France, about the year 1556. He published at Paris nineteen songs with music, and was a composer much esteemed in the age in which he lived.

MACHOLDUS, JOHANNES, a contrapuntist of the sixteenth century, probably from Thuringia, published "*Die Historie vom Leiden und Sterben Christi mit 5 Stimmen componirt*," Erfurt 1593, i. e., "The History of the Passion and Death of Christ, composed for five voices;"

and "*Fünf Motetten auf die Turken-Gefahr gerichtet*," Erfurt, 1595.

MACK, HEINRICH, chapel-master at Stuttgart, and an able composer, flourished in 1670.

MACKENZIE, J., professor of music at Bampton, in Oxfordshire, is a native of Exeter, and finished his musical education in London under the celebrated J. Field, pupil of Clementi. Mackenzie was a good pianist, and so smooth in his method of fingering, that he once performed with a wine glass of water on the back of each hand. He has published some music for his instrument, amongst which is "Variations on the Copenhagen Waltz."

MACQUE, GIOVANNI DI, a contrapuntist and organist in the service of the King of Naples, about the middle of the sixteenth century, published "*Canzonette alla Napolitana*," 1555, and "*Madrigaletti à 6 voci*," Antwerp, 1600.

MACROBIUS, AMBROSIIUS AURELIUS THEODOSIUS, a domestic of the Emperor Theodosius, who held him in high esteem, was a foreigner, and flourished in the year 420 before Christ. Among his writings the following belongs to musical literature: "*Commentariorum in Somnium Scipionis a Cicerone descriptum*, lib. 2," in which he treats of the music of the spheres, according to the Pythagorean doctrines.

MADIN, HENRI, of an Irish family, was born at Verdun, in France, in 1698. In 1737 he quitted the situation of chapel-master to the cathedral at Tours, which he then held, and was nominated chapel-master to the King of France. He soon after also succeeded Campra, as master of the choristers in the Chapel Royal at Versailles, in which town he died in 1748. The motets of Abbé Madin were much esteemed in France, and were sung, long after his death, in the Chapel Royal. They have remained in manuscript. In 1742, Madin published a work entitled "*Traité du Contre-point simple*," which is considered but a mediocre performance.

MADONIS, GIOVANNI. An excellent violinist, born at Venice. Quantz and several other writers speak very highly of his talent. In 1731 he was invited to St. Petersburg, with a salary of one thousand rubles, and in 1744 was resident there. Several concertos and sonatas of his composition were published at Paris.

MADRE DE DEOS, ANTONIO DA, a Carmelite friar of Lisbon, studied music under the two celebrated Portuguese composers, Duarte Lobo and Manuel Cardoso, and became afterwards vicar of the choir of his convent in Lisbon, where he died in 1690. He composed several psalms, motets, responsoria, and other church music, which is partly distributed among amateurs, and partly preserved in the royal musical library at Lisbon, where they are held in high estimation.

MADRE DE DEOS, FR. FILIPPE DA, a canon and composer, born in Lisbon, flourished about the year 1620. He was chamber musician to King Alphonso VI. of Portugal, and teacher to King John IV., who became afterwards so celebrated in musical science. He left, at his death, several musical works in manuscript, which are preserved in the royal library at Lisbon.

MADRRALE. The name formerly given by the Italians to the *intermezzi*, or pieces performed between the acts of a play or an opera.

MADRIGAL, or **MADRIGALE**. (I.) An elaborate vocal composition, generally in five or six parts. It was much in fashion in England, as well as Italy, during the sixteenth and seventeenth centuries. The principal characteristics of the madrigal are its imitation, fugue, and artificial construction, by which it is subjected to very rigorous laws, while it comprises a complex and intricate assemblage of parts.

To understand the madrigal properly, and to enjoy its beauties completely, it is necessary to consider the *quo animo* which lights up its fires. It is essentially a vocal and musical address, either in the way of serenade or otherwise; the subject chiefly is love, and it expresses hopes, griefs, desires, disappointments, praises, &c., either of women or of long-cherished abodes. The poetry is commonly terse, the expression warm, and the tune of the sentiment simple, high-souled, and delicate; the music abounds in *fugue*, and not unfrequently ingenious specimens of *counterpoint*, *syncopation*, and *inversion*; in short, it is a practical carrying out of the science of harmony in all its relations, effected with delicacy, striking with novelty, but never offending by the abrupt utterance of an unexpected musical phrase. It is a species of music which the vocal performer or composer cannot too carefully study, for he will see there more practical hints in musical resolution and harmony than by any other set of examples whatsoever.

According to Menage, the word madrigal is said to be derived from *mandra*, "a sheepfold," and consequently it means pastoral song; but the true etymology is yet doubtful, for we find some deriving the word from the Spanish *madrigar*, signifying "to rise in the morning," and applied as a name for a serenade; again, it is ascertained to be a corruption of *martegueur*, a people who excelled in a composition of this kind; and Dr. Burney concedes that it is derived from *Alla Madre*, the beginning of certain hymns to the Virgin.

The madrigal must have been fully introduced into England in Shakspeare's time, for we find the bard putting into the mouth of Sir Hugh Evans, in "The Merry Wives of Windsor," the following portion of a song well known at that period.

"To shallow rivers, to whose falls
Melodious birds sing madrigals!
There we will make our beds of roses
And a thousand vagrant posies."

These lines are not Shakspeare's own, but part of a popular composition in his day, and they sufficiently prove that madrigals were then in considerable use. Now, Shakspeare wrote his "Merry Wives of Windsor" in the year 1596, according to Chalmers, but certainly not later than the year 1601. We may arrive, therefore, pretty nearly at the period of the incorporation of madrigal upon the English school of music. There it now remains in the ascendant, and together with a certain species of glee, catch, and round, constitutes a nationality of music altogether distinct from that of any other country. The glees, catches, rounds, canons, and the hunting, bacchanalium, and martial songs of England, are the branches which have grown from the trunk of this school, and, connected with the general consideration of music itself, may well be subject to analysis.

Of the prevailing taste for the madrigal style

of composition, of which we have spoken, we have an additional proof in the following passage from the "Foreign Quarterly Review": "The opera buffa, or comic opera, made its appearance in 1597; it was called '*L'Onfiparnaso*,' composed by Prasio Vacchi. The music of this piece is printed in a score of five separate parts, which are all employed throughout, even in the prologue; each scene is, therefore, nothing more than a *five part madrigal* enactment. There is no solo or recitative throughout the whole performance, neither is there any overture or part for an instrument of any kind."

In fact, according to the authority just quoted, it should appear that the *madrigal* is altogether anterior to the *opera* as a musical composition, for the same writer, speaking of the music of Italy, says, "The musical drama in this country has flourished from a remote period. Sulpitius, an Italian, speaks of it as an entertainment known there as early as the year 1490; he was supposed to have *invented* it, but he only revived it. For a long interval, however, the early operatic spirit, in whatever form it existed, seemed to have slumbered; the principal Italian writers confining themselves to the production of oratorios, masses, *madrigals*, and motets. The popes and nobles of Italy were all patrons of music, excellent artists were numerous, yet the *opera* did not permanently establish itself until the year 1632, at Rome. Burney mentions that the first secular or musical drama performed was '*Il ritorno di Angelica nell' Indie*.'"

The first publication of English madrigals began in the latter part of the reign of Queen Elizabeth, about 1590, and was continued industriously throughout a great part of the succeeding century. Thomas Weelkes, bachelor of music, and a gentleman of the chapel of James I., brought out a collection of madrigals for four, five, and six voices, in 1597; and afterwards published a large number of madrigals, apt for voices and viols — at once showing prolific powers, and the favorable reception which compositions of this kind received.

The following specimen of the commencement of a madrigal by Arkadelt, a disciple of Josquin, was written in 1540. It has still charms for the admirers of clearness and simplicity.

MADRIGALIST. A composer of madrigals.

MAELZEL, JOHN. This very ingenious mechanic was born at Regensburg in 1772. He resided, in 1800, in Vienna, where he constructed an instrument, which, by means of a wheel moved by a weight, performed pieces of Turkish music, as if played by a band of flutes, pipes, four trumpets, cymbals, triangle, and double drum. A double bellows furnished the wind. The sound of the trumpets was particularly admired. It was produced by ordinary trumpets blown by the machinery, with a power not to be excelled by any trumpeter. Maelzel sold this instrument,

in the year of its invention, to an Hungarian nobleman for three thousand florins. Since that time he was assiduously engaged in bringing this sort of mechanical production to the greatest possible perfection, and in trying to increase the number of instruments by two clarinets, and, if possible, also by two stringed instruments. This second instrument, which he called the Pan-harmonicon, was sold, as Gerber has been assured, for twenty-five thousand dollars, in Paris. Lastly, he brought to Vienna a new-invented automaton, which raised, if possible, still greater admiration and satisfaction than his preceding inventions. He first gave in Munich a concert to the court with this machinery, and afterwards a public one, with extraordinary success. In the "*Journal des Modes*," for 1809, p. 251, is found the following description of his automaton: "From a tent Mr. Maelzel led out a fine, manly-looking, martial figure, in the uniform of a trumpeter of the Austrian dragoon regiment Albert, his trumpet being in his mouth. After having pressed the figure on the left shoulder, it played not only the Austrian cavalry march, as also all the signals for the manœuvres of that army, but also a march and an allegro by Weigl, which was accompanied by the whole orchestra. After this, the dress of the figure was completely changed into that of a French trumpeter of the guard; it then began to play the French cavalry march, also all the signals of the French cavalry manœuvres, and lastly a march of Dussek's and an allegro of Pleyel, accompanied again by the full orchestra. The sound of this trumpet is pure, and more agreeable than even the ablest musician could produce from that instrument, because the breath of a man gives the inside of the trumpet a moisture which is prejudicial to the purity of the tone. Maelzel publicly wound up his instrument only twice, and this was on the left hip." Maelzel was also the inventor of the celebrated automaton chess player; likewise of the metronomes, for counting time in music. He died in 1833. See METRONOME.

MAESTOSO. (I.) A word implying that the composition, or movement, to which it is prefixed is to be performed with dignity and majesty.

MAESTRO DEL CORO. (I.) The master of the choir.

MAESTRO DI CAPELLA. (I.) Master of the chapel music; or master of the band. In general, the musician who has the management and direction of a performance.

MAFFEI, GIOV. CAMILLO, a Neapolitan philosopher, born at Solofra, published, amongst other works, "*Discorso Filosofico della Voce, e del Modo d' imparare di Cantar, di Garganto, raccolto da D. Valerio de Paolo di Limosinano*," Naples, 1563.

MAFFOLI, VINCENZO. One of the first tenor singers of his time in Italy, whose person and voice were equally agreeable. He joined to these talents great strength, facility, and much energy and feeling, in his dramatic representations. In the year 1787 he sang in the theatre Aliberti at Rome, where the audience were filled with admiration, and called out to him, "*Maffolo! Maffolissimo!*" He sang also, in 1790, at Reggio, Sienna, and Turin; shortly after which, he was invited to Vienna, to perform at the great theatre there, where he played the more serious parts in

the opera buffa. He seems to have quitted Vienna about the year 1794.

MAGADIS. The name of an ancient Greek treble instrument, furnished with double strings tuned in octaves, like those of a three-stop harpsichord.

MAGADIZING. A term in the ancient Greek music, signifying a vocal performance in octaves, when men and women, or men and boys, joined in the same air; so that *magadizing* was a kind of antiphonizing. This word is derived from *magas*, the bridge of an instrument; the sense of which was extended to an instrument with double chords in octaves, and hence applied to voices in octaves.

MAGALHAENS, FILIPPE DE, court chapel master at Lisbon, was born at Azeitau, a village within the patriarchate of Lisbon. Manoel Mendes was his master in music, in whose school he became so well informed, that shortly after his instructions were ended, he was appointed court chapel-master. He is ranked among the best composers of his country, and left, at his death, the following works: "*Cantica Beatissima Virginis*," Lisbon, 1636. "*Missa 4, 5, et 6 voci-bus*," Lisbon, 1636. "*Cantus Ecclesiasticus commendandi animas corporaque sepeliendi defunctorum; Missa et Stationes juxta Ritum sacrosanctæ Romanæ Ecclesiæ Breviarium Missalisque Romani Clementis VIII. et Urbani VIII. recognitionem ordinata*," Lisbon, 1614, also Antwerp, 1691. Besides these, there are still in the royal library at Lisbon a considerable collection of masses, motets, &c., by this master.

MAGE, DU, organist of St. Quentin's Church, at Paris, about the year 1740, published a collection of music, in the first ecclesiastical tone, for the organ.

MAGERIUS, STEFFANUS, a composer at the end of the sixteenth century, set to music "*Schertzer's Symbolum*," Nuremberg, 1569 or 1599.

MAGGIELLS, JEAN, a French composer in the beginning of the seventeenth century, published "*Chansons à 4, 5, et 6 voix*," Douay, 1600.

MAGGIORE, (I.) or MAJEUR, (F.) MAJOR. Greater, in opposition to minor, less, in respect to scales, intervals, modes, &c.

MAGGIORE, FRANCESCO, a Neapolitan dramatic composer, wrote several operas for different towns in Europe. He died in Holland about the year 1780.

MAGHERINI, GIUSEPPE MARIA, a Milanese composer, born about the year 1752, brought out, in 1770, an oratorio called "The Judgment of Solomon." In 1780, a set of violin trios, by Magherini, were published in London. Another musician of this name lived at Roue at the beginning of the eighteenth century.

MAGIELLUS, DOMINICUS, a contrapuntist of the sixteenth century, published "*Madrigali à 5 voci*," Venice, 1567, and "*Matrigali à 5 voci*," Venice, 1568. Both works are yet in the elector's library at Munich. He was a native of Valeggic.

MAGINI, A vocal composer of the good Italian school, flourished about the year 1700. The following of his solo cantatas were extant in manuscript: "*Cantata: Io non so, quando vi miro, à Sopr. e Cemb.*" "*Cantata: Io mi negate amore, à*

Sopr. e Cemb." "Cantata: *Da che vidde il duo, &c., à Sopr., 2 V., e Cemb.*"

MAGIUS, FRANCISCUS, a Sicilian composer, born at Castro Vetrano, published "*Sacra Armonia, e Musicali Concerti à 2, 3, 4, e 5 voci, con una Messa à 5 concertata,*" Milan, 1670.

MAGNASCO, LODOVICO DA SANTA FIORA, flourished, about 1550, as composer and singer in the papal chapel. He was afterwards made Bishop of Assisi.

MAGNI, BENEDETTO, an Italian composer in the beginning of the seventeenth century, published "*Motetti,*" Venice, 1616. "*Messe Concertate a 8 voci,*" Venice, 1616. "*Concerti a 1, 2, 3-8 voci,*" Ops. 1, 2, and 3, Venice, 1616.

MAGNI, GIUSEPPE, chapel-master of the cathedral church at Foligno, was born there. He may be reckoned among the good composers of his time, that is, about the year 1700. He composed, amongst other works, "*Decio in Foligno,*" a melodrama, represented in the church of the above town in 1697. He also composed the opera "*Tenzzone,*" Milan, 1706.

MAGNI, PAOLO. Chapel-master at Milan, towards the end of the seventeenth century.

MAGNIFICAT. (L.) A canticle sung by the Virgin in the house of Zachariah. A part of the vespers in the Catholic evening services.

MAGNUS, organist of the church of St. Giles in the Fields, in the first half of the last century, was esteemed a great master of harmony, and had a style which none could imitate. Excessive study and application brought on a disorder in his mind, and he died a young man.

MAGODI. Certain itinerant poet musicians among the Greeks, who perambulated the streets, singing humorous poems, or ballads. They were at length employed in the comic representations of the stage.

MAGODIA. (Gr.) The name given by the ancients to those lyric poems sung by the *magodi*.

MAHAUT, ANTOINE, a good composer and flutist, lived at Amsterdam from the year 1740 to 1760, when he fled from his creditors to a convent in France, and about the same time published a work entitled "*Nouvelle méthode pour apprendre, en peu de tems, à jouer de la flûte traversière, à l'usage des commençans et des personnes plus avancés.*" Some years afterwards a second edition of this work appeared. There have further been printed of the works of Mahaut nine collections of solos, duos, concertos, &c., for the flute, also some symphonies, and three collections of Dutch, French, and Italian ariettes.

MAHON. A celebrated clarinetist in London, in the latter half of the last century.

MAHU, STEPHAN, an able German contrapuntist about the year 1520. Of his labors there still exist some choral melodies in Hans Walther's "*Cantionale.*" There are also some profane songs by him, in a collection printed at Nuremberg in 1544. Of these, a five part song has been inserted by Dr. Forkel in the second volume of his *History of Music*, p. 686-691. The song begins with the following words:—

"*Es wolt ein alt man auf die Balsehaft gan,
Da legt er, seine beste Kleider an.*"

In the Munich library are also found "*Officia,*" by Mahu, in manuscript.

MAICHELBECK, F. A., director of the concerts at Freyburg, published there, in 1736 and 1738, two books of sonatas for the harpsichord.

MAIER, GREGORIUS. A composer, about the middle of the sixteenth century, of whose productions Jacob Pair has introduced several pieces in his figures, published in 1587.

MAIER, J. F. B. G., singer and organist at Halle, in Suabia, published there, in 1732, a didactic work called "*Museum Musicum, theoretico-practicum, &c.*"

MAIFIELD, LUDWIG, published "30 *Lieder,*" Leipsic, 1793.

MAILLA, P. JOSEPH ANNA MARIA DE MORYAC DE, a Jesuit, was, during forty-five years, a missionary at Peking, in China, and died there in 1748. He published "*Histoire générale de la Chine, ou Annales de cet Empire, traduites du Tong-Kien-Kang-Mou, et publiées par l'Abbé Grosier,*" Paris, 1777. In this work he speaks of the Chinese practical music, and of the musical books of the Chinese.

MAILLARD, GILLES, a composer at Lyons towards the end of the sixteenth century, was born at Terwanen, in Flanders. He wrote many musical works, of which only the following has become known through the medium of the press: "*La Musique, contenant plusieurs Chansons Françaises à quatre, cinq, et six parties,*" Lyons, 1531.

MAILLARD, or MAGLIARD, PIERRE, a Jesuit, born at Ypres in 1585, applied himself to the study of music, as well as to that of the sciences, for which purpose he followed his master, Gregorius de la Hede, to Spain, when the latter was invited to Madrid as chapel-master to King Philip II. He returned afterwards to Dornick, where he had previously been a singer in the cathedral church, and was then made a prebendary, and, lastly, rector at Herzogenbusch, where he died in 1640. His treatise "*De Tonis Musicis,*" in French, must have been printed, but is only known to Geber by the title, which is as follows: "*Les Tons, ou Discours sur les Modes de Musique, et les Tons de l'Église, et la Distinction entre eux,*" Tournay, 1610.

MAILLERIE, M. DE LA, a French musician, lived about 1710. He published, at Amsterdam, "*Trio pour toutes Sortes d'Instruments,*" and "*Six Sonatas à deux Fl. e B. C.*"

MAIN. (F.) The hand; as, *main droite, main gauche*, or M. D., M. G., the right or left hand in piano music.

MAINBERGER, J. C., chapel-master at Nuremberg, was born in 1750, and died in 1815. He played the piano, organ, and violin, and composed sonatas, concertos, and orchestral symphonies.

MAINZER, a gentleman distinguished for his zeal and philanthropic exertions in the encouragement of a popular taste for music, was born at Treves, in 1801; and at a very early age showed a desire to cultivate the art, in imparting a knowledge of which he subsequently so greatly excelled. He was a performer on several instruments, including violin, piano, oboe, horn, flute, and bassoon; at twelve years of age he could read the most difficult music at sight, and he had

also made some very creditable efforts in composition. After studying mathematics and natural science, at twenty-one years of age he became an engineer of mines; but, finding his health decline, he embraced the church as a profession, though still continuing to study the "divine art." He made, soon after, a tour of Germany, and visited nearly all the great masters in musical science — spending some time in the family of Rinck. After two years' absence, he returned to Treves, formed several choirs, and became the director of the musical department of the Normal School. He afterwards distinguished himself in Paris, as a writer for the public press. After quitting Paris, Dr. Mainzer resorted to England, and resided a short time in London. His efforts have been principally confined to Manchester, where he has had many thousands of young persons under his immediate tuition, and where his memory will long be revered by both rich and poor. His incessant labors produced a malady, under which he suffered much, and which, unfortunately, terminated in his demise. It was under the auspices of Dr. Mainzer that J. Alfred Novello commenced the London "*Musical Times*," the original title of that paper having been "*Mainzer's Musical Times*." Dr. Mainzer died in Manchester, November, 1851, aged fifty years. He was the author of the popular work, "*Singing for the Million*," and also published a work on "*Music and Education*," and a valuable "*Musical Grammar*."

MAIRAN, JEAN JACQUES DORTOUS DE, permanent secretary to the Academy of Sciences, was born at Béziers in 1678. He published, in 1737, in the Memoirs of the above academy, "*Discours sur la propagation du son dans les différens tons qui le modifient*;" also, in the following number, "*Eclaircissements sur de Discours précédent*." He died at Paris in 1770.

MAITRE DE CHAPELLE. (F.) Chapel-master.

MAJO, GIUSEPPE DE. Born at Naples about the year 1698. After having studied in one of the Conservatories of Naples, and given many successful proofs of his abilities, he was appointed master of the Royal Chapel, as successor of Durante. Majo filled this situation to the satisfaction, both of the court and public, who, on occasions of solemnity, repaired in crowds to the Chapel Royal. His reputation did not suffer from the contrast with that of his great predecessor, and he enjoyed the applause and esteem of his fellow-citizens. It appears, however, that Majo chiefly excelled as an instructor, as he has left few compositions, and many excellent pupils.

MAJO, FRANCESCO, or CICCIO DI, born at Naples about 1745, was the son of an obscure musician. From his youth he was educated for the bar, and did not begin to learn music till he was twenty years of age. He then went to Bologna to hear Padre Martini, and, by the advice of this learned theorist, together with the study of the works of Jomelli, which he had always before him, it was not long before he became known as a musician. He was first invited professionally to Rome, where he wrote the music to the opera "*Demofonte*," in which several airs, full of fire and expression, excited universal admiration.

He afterwards wrote the opera "*Montezuma*," which was received with extraordinary applause, particularly the air "*A morir se mi condanna*," which produced tears in every spectator. His sublime and enrapturing songs were not sacrificed to instrumental accompaniment. Afterwards he went to Naples, where he wrote several operas, among which is "*Ipernestra*;" but, strange to say, in his own country alone he met with but little encouragement. He died at Naples in 1773, under thirty years of age. The following is a list of his principal works: "*Artaserse*," opera, words by Metastasio, 1762. "*Ipernestra*," 1762. "*Catone in Utica*," words by Metastasio, 1763. "*Montezuma*," 1765. "*Antigono*," of Metastasio, 1768. "*Didone abbandonata*," of Metastasio, 1769. "*Alessandro nell' Indie*," also of Metastasio, 1774. "*Eunene*," first act only. "*Ifigenia in Tauride*." Sacred music: "*Salve Regina*;" this was performed with great applause at the *Concert Spirituel* at Paris in 1782. "*Dixit Dominus Dominio meo*."

MAJOR. An epithet applied to that of the two modern modes, in which the third is four semitones above the tonic, or key note. Those intervals which contain the greatest number of semitones under the same denomination, are also called *major*; as a third, consisting of four semitones, instead of only three, is termed a *major third*; a sixth, containing nine semitones, instead of eight, is called a *major sixth*.

MAJOR MODE. One of the two modern modes; that in which the third from the key note is major.

MAJORANO, GAETANO. See CAFARELLI.

MAJOR SCALES AND THEIR SIGNATURES:—

The image displays twelve musical staves, each representing a major scale and its signature. The scales are arranged in three rows of four. The first row shows C sharp, F sharp, and B. The second row shows E, A, and D. The third row shows G, C, and F. The fourth row shows B flat, E flat, and A flat. The fifth row shows D flat, G flat, and C flat. Each staff begins with a treble clef and a key signature (sharps or flats) indicating the scale's key.

The following exercise, extended by a tetra-chord added at each end alternately, should be sol-faed in every key which can be formed from it.

The image shows a musical exercise on a grand staff (treble and bass clefs). It consists of a sequence of notes: C4, D4, E4, F4, G4, A4, B4, C5, D5, E5, F5, G5, A5, B5, C6. The notes are grouped into two tetra-chords: C4-D4-E4-F4 and G4-A4-B4-C5. The exercise is written in a single melodic line across both staves.

The following is a table of thirteen keys, beginning in the key of G♭, and rising by tetrachords to the key of F♯. Each note, when once altered, must be considered as remaining so till altered again.

Do re mi fa sol la si do re mi si do re mi si do re mi si do &c.

The following table gives the same notes, beginning in the key of F♯, and descending by tetrachords to the key of G♭

Do si la sol fa mi re do fa mi re do fa mi re do fa mi re do &c.

These three tables are given for reference; the teacher is advised to begin with the scale of C, adding first one tetrachord at each end, then two, then three, and so on till the fourteen tetrachords are gone through.

MAKOWECZKY, chamber musician to the Prussian court, was born in Bohemia; he was a pupil, on the horn, of the celebrated Punto. He published, about the year 1802, several operas of music for his instrument, at Leipsic.

MALCOLM, ALEXANDER, published at Edinburgh, in the year 1721, "A Treatise of Music, speculative, practical, and historical." This work is divided into fourteen chapters. The first chapter contains an account of the object and end of music, and of the nature of the science. The author begins by explaining the nature of sound. He then inquires into the various affections of sounds, so far as they relate to music, of which he makes two divisions; first, the knowledge of the *materia medica*; secondly, the art of composition. The second chapter treats of tune, or the relation of acuteness and gravity in sounds. The third chapter contains an inquiry into the nature of concord and discord, and is concluded with a relation of some remarkable phenomena respecting them. The fourth chapter is on the subject of harmonical arithmetic, and contains an explanation of the nature of arithmetical, geometrical, and harmonical proportions, with rules for the addition, subtraction, multiplication, and division of ratios and intervals. The fifth chapter contains the uses and application of the preceding theory, explaining the nature of the original con cords, and also of the compound ones. The sixth chapter explains the geometrical part of music, and the method of dividing right lines, so that their sections or parts, one with another, or with the whole, shall contain any given interval of sounds. The seventh chapter treats of harmony, and explains the nature and variety of it, as it depends upon the various combinations of con cording sounds. The eighth chapter treats of concinnous intervals, and the scale of music; and in this are shown the necessity and use of discords, and their original dependence on the con cords. It explains further the use of degrees in the construction of the scale of music. The ninth chapter is on the mode or key in music, and of the office of the scale of music. The tenth chapter treats of the defects of instruments, and the remedy for these in general, by means of

sharps and flats. This chapter is concluded by a general approbation of the semitonic division, and the present practice of tuning the organ or harpsichord, corresponding as nearly to that as the judgment of the ear will allow. As to the pretences of nicer kinds of musicians, he demonstrates that they tend to introduce more errors than those under which the present system labors. The eleventh chapter describes the method and art of writing music, and shows how the differences in tune are represented. Under this head the author explains the nature and use of the clefs, and the nature of transposition. He explains, also, the practice of solmization. Lastly, he enters into an examination of Salmon's proposal for reducing all music to one clef, as delivered in his "Essay to the Advancement of Music," of which he approves. The twelfth chapter is on the time or duration of sounds in music. The thirteenth chapter contains the general rule and principles of harmonic composition. These are such as are to be found in almost every book on the subject of musical composition. The account given, in the fourteenth chapter, of the ancient music, is, considering its brevity, very entertaining and satisfactory. In a short history of the improvements in music, which makes part of this last chapter, the author particularly notices the reformation of the ancient scale of Guido, and adopts respecting it the sentiment of a very ingenious man, who says that it is "*crux tenellorum ingeniorum.*"

In the comparison between ancient and modern music, the author gives a decided preference to the latter; and on the controverted question, whether the ancients were acquainted with music in consonance or not, he cites a variety of passages from Aristotle, Seneca, and Cassiodorus, to determine the negative.

This work is replete with musical erudition; and, extensive as the subject is, the author has contrived to bring into consideration all the essential parts of the science. His knowledge of mathematics has enabled him to discuss, with great clearness and perspicuity, the doctrine of ratios, and other abstract speculations, in the language of a philosopher and a scholar. In short, it is a work from which a student may derive

great advantage; and it may be justly deemed one of the most valuable treatises on the subject of theoretical and practical music that is to be found in any of the modern languages.

MALETTI, JEAN DE. A French composer of the sixteenth century, born at St. Maximin, in Provence. He published "*Amours du Ronsard à huit parties*," Paris, 1578.

MALIBRAN, MADAME, afterwards **MADAME DE BERTOT.** The following account of this great singer is abridged from the London "Musical World," September, 1836.

Maria Felicia was the eldest daughter of Manuel and Joaquina Garcia, and was born in Paris in the year 1808. Both her parents being Spaniards, she naturally acquired a knowledge of their native language; and at the age of eight years being brought over to England, where she continued, without intermission we believe, for nearly nine years, her familiarity with the English language may be readily accounted for. Circumstances enabled her to attain to considerable proficiency in German; and as for Italian, the language of the land of melody, her professional duties rendered its attainment a necessity, and her constant intercourse with the performers at the King's Theatre, together with her almost miraculous memory, an affair of intuition. To the question of a person who had heard her conversing with equal idiomatic propriety and freedom in several languages, "which was really her native country," expressing at the same time his admiration of her great facility, she replied, "I was born at Paris, in the parish of St. Pierre; my father, as you know, was a Spaniard; therefore French and Spanish I learned as every child learns a language; early I came to England, and after residing here some years, where I studied your language closely, I went to the United States;" one of her indescribable looks accompanied this part of her narrative; "there my English was kept up — not, I believe, improved; the Italian Opera House has been the cradle in which I was nursed; and German I have acquired, that I might grasp and enjoy its musical wealth. That I may speak it with facility, and every day, my servant is a German. There, that is the history of my being so learned."

Shortly after her going to England, she was placed for education in the convent at Hammer-smith; where, by the petting of her teachers and elder school-fellows, and her own native vivacity and wilfulness of character, (for she always contrived to have her own way,) she ran the risk of being completely spoiled. The rugged discipline of her father, however, who appears, by report, to have been the personification of a tornado, changed the face of those halcyon days. She was taken home, and her musical education commenced; and a stern time poor little Maria had of it. A person, who knew Garcia, gave a ludicrous description of his behavior towards his family. Upon one occasion, when they were alone, and Garcia desired to give his visitor an idea of some piece he had composed, he roared out with the voice of a bashaw, or camel driver, "*La Famiglia!*" and in trooped wife, son, and daughter. The composition was performed, and they "vanished like hail stones." There are others, also, who remember a performance at the Catholic chapel in Warwick Street. The tribe of

Garcia were to sing an offertorium composed by the patriarch; and a fearful wailing the poor things made of it; when the father, unable to endure the noise, ramped into the arena, and bore all before him with his furious blare.

In the London opera season of 1825, a disappointment occurring in one of the performances, on account of the return of Madame Pasta to Paris, Garcia offered the services of his daughter; and she accordingly made her *début*, on the 7th June, 1825, (being under seventeen years of age,) in the part of Rosina, in "*Il Barbiere di Siviglia*." Although, as might be expected, the performance was marked with crudities, yet, in the midst of these, such signal indications of genius betrayed themselves, that many prognosticated her future vocal supremacy. She also appeared with great success in "*Il Crociato in Egitto*," on its introduction in England. Previously to her appearance in public, she had attracted much notice at the private concerts of his majesty George IV., Prince Leopold, the Dukes of Devonshire and Wellington, the Marquis of Hertford, Sir George Warrender, Lady Copley, and other distinguished patrons of music. In the following autumn, she received an engagement as one of the principal singers at the York Festival, where she sang, among other pieces, and indifferently, the "*Una voce poco fa*," and "Rejoice greatly," in the "*Messiah*." The "*Alma invidta*," from Rossini's "*Sigismondo*," was said to be her best performance at that festival. And, at the close of the season, she went with her father to America, who had embarked in the speculation of transplanting the Italian opera in the new world. The soil destined to receive the exotic was that of New York; and the first piece represented was on the 29th November, 1825 — the one in which our youthful heroine made her *début* in London. This was followed by "*Tancredi*," and "*Otello*," she again playing the part of Desdemona. If report be true, her father at no time appears to have fully appreciated her talents; for he would, even in her latter years, when she was spoken of in terms of admiration, rejoined, "There is a younger sister, who is a greater genius than she."

The young Maria's success in America was extraordinary. We perfectly remember the delirium of admiration into which the New York writers were thrown, in speaking of her fresh and beautiful voice — to them miraculous; her amazing vivacity, which mystified them; and her condescension. Their delight, too, in recording her Irish encores, — singing a second air, when required to repeat the first. Notwithstanding her popularity, however, the speculation is said to have failed, and the family to have been involved in difficulties. At this juncture, the young creature, still under age, was married to Monsieur Malibran, a merchant and banker, with the reputation of being a rich man. The union was in every respect a disastrous one, the least of which consisted in the disparity of their ages, he being twenty years her senior; but in consequence of irregularity of conduct on his part, and which she, with her native energy and generosity, endeavored by professional exertions to repair, he became insolvent, and was finally imprisoned for debt. At this juncture, she voluntarily resigned, for the benefit of her husband's creditors, all the provisional claims which had been settled upon herself, as her marriage dowry.

This single act of her life should have rescued her from the subsequent charges of being extortionate and grasping. The act itself being fulfilled in a country essentially commercial, produced such a manifestation in her favor, that, at any subsequent period of her life, had she again visited America, she would have returned loaded with wealth. This epoch in her life, and for some years afterwards, was marked with uncommon mental suffering.

Being now released from paternal domination, and a separation having taken place between herself and husband, Madame Malibran returned to Europe, and made her appearance in the French capital, on the 8th May, 1827. Notwithstanding the fame which had preceded her, she created an immense sensation. She was thrown entirely upon her own resources, and her energy and ambition were commensurate with these. She suddenly expanded into a first-rate actress and singer. A French critic, describing her first appearance in "*Semiramide*," at this time, says, "If Madame Malibran must yield the palm to Pasta in point of acting, yet she possesses a marked superiority in respect to song." In the same season, her performance of Desdemona created a strong sensation, from its display of deep feeling and fine acting. This was in her nineteenth year, and when the performance of Pasta was fresh in the recollections of her audience. In February, 1829, Mme. Malibran and Mlle. Sontag appeared for the first time together.

Her next engagement was at the London Italian Opera, where she appeared on the 21st March, in the famous season of 1829. Her range of characters at that period were, Desdemona, (the first character she performed in upon her return,) Rosina, Semiramide, Romeo, Tancredi, Ninetta, and Zerlina. To the last of these, which she performed on the 28th of May, 1829, she gave a completely new reading, playing it with all the exuberance of a boisterous rustic. The "exclusives" denounced the attempt as being vulgar: well may it be said that there is no vulgarity like the squeamishness of the excessively genteel. With the commonplace, her lot was the same as that of all original and independent minds: what they cannot sympathize with, they underrate. It is sufficient for the fame of Madame de Beriot, that from the moment she demonstrated unequivocal talent, she secured the undivided preference of all the most eminent members of her profession; and to the day of her death, we believe that she maintained this station in their esteem against all her competitors.

On the 25th of April, in the same season, she sang her first song at the Ancient Concerts. It was, we believe, the "*No Perduto*" of Paesello. A contemporary critic — no friend, for he lost no opportunity, at any time, of depreciating her merits — says of her performance on this occasion, "To great flexibility of voice she adds a delicacy of expression we have seldom heard equalled, and her lower tones are as soft and melodious as the upper notes of her voice; nor is there any apparent effort or strain in producing that articulation by which every one of them is distinctly heard. When to these perfections we add great feeling, we think we have said enough." Her first performance at the Philharmonic Concert was, we believe, on the 5th June, 1829, the last of that season, when she sang, "*Nacqui al affanno*,"

from the "*Cenerentola*;" and, with Mademoiselle Sontag, the "*Ebben a te ferisci*," from Scuira-mide. The performance was described, at the time, as being "a high treat, and which would long be remembered." In the same month she first appeared in the character of Fidahna, in the "*Matrimonio Segreto*." She was engaged at the Chester Festival of 1829, where, for the first time, she took the rank of *prima donna*, when she sang "O, had I Jubal's lyre," "Praise the Lord," and "Rejoice greatly;" which pieces, from her not yet having made herself sufficiently acquainted with the style of Handel, were pronounced at the time to be unsuccessful efforts. In the "*Deh parlate*" of Cimarosa, she is described as exhibiting the very triumph of profound and touching expression. At the Gloucester Meeting in September, she sang the "*Ombra adorata*," from Zingarelli's "*Romeo*," with other pieces; and at Birmingham, in the following month, she shone forth in great power. The old musicians said that Handel's "Holy, holy Lord," had never been so finely sung since the days of Mara. Who that heard can forget her last singing of it? Here, too, she sang, for the first time, the "*Non più di fiori*" of Mozart, Willman accompanying.

In a month from this time she made her reappearance in Paris, in the part of Ninetta in "*La Gazza Ladra*," and upon her entrance was received with deafening shouts. "So enthusiastic was the cheering," say the French papers, "at the commencement of the cavatina '*Di piacere*,' that the lady was unable to give that piece with the wanted effect, her voice being manifestly tremulous from emotion." In the succeeding January she assisted at the benefit of Sontag, who selected for the occasion the first act of "*Semiramide*," and the second of "*Tancredi*;" Malibran taking the part of the latter. At the conclusion of the performance, crowns and bouquets were abundantly thrown upon the stage.

On the 28th of April, 1830, she reappeared at the Ancient Concerts, (the seventh in succession,) when she sang the "*Ombra adorata*," and the duetto from Cimarosa's "*Gli Orazzi*," "*Seenammi omai*," with Donzelli; also in the "*Placido è il mar*," from the "*Idomeneo*." The "*Harmonicon*," upon this occasion, bounteously awards her the praise of being "a pleasing, unaffected singer." At the last concert of that season (May 5, 1830) she sang the "Holy, holy Lord," "*Non più di fiori*," and the "*Deh prendi*," from the same opera, ("*La Clemenza*,") with Miss Paton, now Mrs. Wood. At the sixth Philharmonic Concert (May 17, 1830) she repeated the "*Non più di fiori*," and sang, with Mr. H. Phillips, "*Bell' imago*," from the "*Semiramide*."

On the 13th of March, 1830, she played "*Fidalmu*," for two or three nights, upon the celebrated first appearance of Lablache in London, and we perfectly remember, in the trio "*Lei faccio un inchino*," the effect she produced upon the whole house, by her descending run of the double octave.

On the 20th of April she appeared, for the first time, in the character of Angelina, in Rossini's "*Cenerentola*," but with no remarkable success.

At the ninth Ancient Concert, in the season of 1830, (May 12,) Mme. Malibran introduced the son, "*Il caro ben*," from Sacchini's "*Perseo*." The objection made to her performance of this

air, which demands much expression and manifestation of feeling, was that she encumbered it with florid ornament. In the same month, "*Gli Ormuzi e Curiazzi*" (Ciuarosa) was revived; and our heroine appeared, we believe, for the first time, in *Orazzia*. The performance was distinguished by the grandest efforts, both in singing and acting, particularly in the last scene, when she denounces her brother for having slain her lover. Few persons, who witnessed the countenance and attitude of that extraordinary woman upon the occasion, can forget it.

At the Worcester Festival, which took place on the 14th, 15th, and 16th of September, and the Norwich, on the 21st, 22d, 23d, and 24th of the same month, we find her still engaged, but not producing with effect any piece of novelty, if we except the duet "*Vanne*," from Mercadante's "*Andronico*," and which she, with Mme. Stockhausen, sang very admirably. At the Liverpool Festival, in October the 5th, 6th, 7th, and 8th, she performed, among other pieces, the "*Gratias agimus*" with Willman; the "*O sabbataris*" of Cherubini, which was magnificently sung; and, with Mrs. Knayvet, Marcello's psalm, "*Qual anhelante*." The last time she sang this duet was at Manchester, with her young favorite, Clara Novello, when the audience could scarcely be restrained, by the sacredness of the place in which it was performed, from an open demonstration of applause.

After the conclusion of the three festivals this year, for which she received nine hundred guineas, Madam Malibran returned to Paris, and again met with a wonderful reception in the part of Desdemona. A foreign critic, upon this occasion, says, "It is evident that her voice acquires power by exercise. She is often betrayed into faults by the consciousness of this power; but the ardor of her mind, her bold inspirations and ever-active intelligence, cause them to be overlooked. Faults of this kind are offensive only to severe taste, and qualities like these awake our sympathy, and powerfully move us: now, emotion is the grand end and object of the arts. We said that her voice acquires power; it does so; but does she act wisely in forcing it to fulfil the double function of soprano and contralto? The variety of effects she is enabled to produce, by the adroit management of so great a compass of voice, is astonishing; but it may be safely predicted that the day is not far distant when she will be obliged to restrict herself to the lower range of her voice. But if, like a rich spendthrift, she will be lavish of treasures which it were wise to husband for the future, there is no reason why we should not profit by a prodigality which later she alone may have cause to regret." This was in December, 1830: for more than five years subsequently she continued making these enormous demands upon her "stock in trade," and we all can testify how little it had diminished in extent, or depreciated in value; nevertheless, such had been her exertions for the last three years of her life, that she did not hesitate to confess privately her conviction that the organ could not retain its compass and brilliancy for two years longer; hence the excuse for the demand of what were deemed exorbitant terms at the theatres, festivals, &c. We hear much of the grasping nature of musicians; while every day, for articles of necessity, the retail dealers make a profit of

four hundred or five hundred per cent. Let us bear in mind the gains of a retail druggist, when we complain of the overreaching of singers, with their fleeting and precarious capital.

Shortly after her appearance this season in the French capital, her husband (Malibran) suddenly pounced upon her, having "scented from afar his quarry" of her louis d'ors and guineas, and proposed to divide profits, which terms Madame Malibran refused to comply with, and justly: he had deceived her, and she was in no respect indebted to him, having waived her right in the property settled upon her, for the benefit of his creditors. Upon her performance in the part of Zerlina, at this time, the French critic says, "Since last year she has entirely changed her manner of representing this character; paying due respect to the delicious airs of Mozart, she now introduced but very few ornaments, and those were in the best taste."

In September, 1831, the opera season again commenced in Paris. In the intermediate period Madam Malibran appears to have remained in seclusion; at all events we have discovered no traces of her "whereabouts." But in December, 1831, we find her again upon the Parisian theatre, having succeeded Pasta. "*La Gazza Ladra*" was the opera selected for the occasion. In the first act, the accounts say that she lost her self-possession, owing to the extravagant greeting with which she was received. In the second act she recovered herself, and sang the duet, with Rubini, in the very finest style. "The two singers," says the critic, "vied with each other, until it appeared as if talent, feeling, and enthusiasm could go no farther." Immediately after this effort she was compelled by indisposition to withdraw for some time from the stage. In the autumn of 1832, we find her concluding an engagement with the manager of the theatre at Bologna, where she was to perform eighteen nights for the sum of £1440! And in August, or September, she made her appearance in the "*Teatro della Valle*," at Rome, in the character of Desdemona. Her engagement at Bologna commenced on the 13th of October, with "*La Gazza Ladra*;" and, after performing the eighteen nights, she proceeded to Naples, where her career was one continued and splendid triumph. At first the cognoscenti of Naples were inclined to question the justice of the unbounded praises that had been lavished upon the astonishing songstress, and to receive her with *sang froid*, and weigh her pretensions with all the coolness of determined critics; but she no sooner opened her mouth than all this was instantly converted into an enthusiasm of applause and admiration, to which the oldest frequenters of the opera renewer no parallel. For seventeen nights the theatre was crowded at double prices, notwithstanding the subscribers' privileges were on most of these occasions suspended, and although "*Otello*," "*La Cenerentola*," "*La Gazza Ladra*," and pieces of that description, were the only ones offered to a public long since tired even of the beauties of Rossini, and proverbial for its love of novelty. But her grand triumph of all was on the night when she took her leave of the Neapolitan audience in the character of Ninetta: nothing can be imagined superior to the spectacle afforded by the immense theatre of San Carlo, crowded to the very ceiling, and ringing with acclamations and

applause. Six times, after the fall of the curtain, was she called forward to receive the reiterated applauses and adieux of an audience which seemed unable to bear the idea of a final separation from its new idol, who had only strength and spirits left to kiss her hand to the assembled multitude, and indicate by graceful and expressive gestures the degree to which she was overpowered by fatigue and emotion. The scene did not even end within the walls of the theatre; a crowd of the most enthusiastic rushed from all parts of the house to the stage door, and as soon as the lady's sedan came out, escorted it, with loud acclamations, to the Palazzo Barbaja, and renewed their salutations as the charming songstress ascended the steps. Nothing can prove more decidedly the strong impression Madame Malibran made upon the Neapolitans than the fact that the next opera which was performed was received with the most mortifying coolness, though the opera itself, Donizetti's "*Esule di Roma*," was a standing favorite in Naples, and its various revivals for ten preceding years had till then been successful; although Lablache made his first appearance in it on his return to his native city, and Ronzi de Begnis, whose voice, action, and style had all improved considerably during a long retreat from the stage, performed the principal female character.

On the 1st of May, 1833, Madame Malibran made her *début* at Drury Lane in an English version of "*La Sonnambula*," and drew the town in admiring crowds, "*ticking* the ears of the groundlings" with the most provokingly admirable roudades. Shortly after, she undertook the part of Count Bellino in the "*Devil's Bridge*," hut, as might have been anticipated, totally failed. It was performed but twice. On the 22d of the same month, she sang the "*Deh parlate*" of Cinaroso at the Ancient Concerts; also the "*Non più di fiori*," from "*La Clemenza*." In the latter air, the *Harmonicon*, after nibbling at her "unrestrained confidence in her own opinion," says very honestly, "The declamatory part of this was superb, though a little hurried; and the immense compass of her voice gave an effect to the air that, we are almost inclined to say, has never been equalled." This air she repeated at the subsequent Philharmonic, (June 10;) and on the 4th she made the most strenuous exertions to carry through a musical afterpiece called "The Students of Jena, or The Family Concert," the music by that learned musician and amiable man, M. Chelard, who was the conductor of the German company. During the last week but one of the month, she was engaged to sing at the Oxford concerts; hut being taken ill, and led into the orchestra by Mr. Nicks, to convince the audience that she was really so, many of them, it appears, "were not sparing of their exclamations against her when they left the hall." In the last week of the same month, we find her engaged at the Cambridge concerts, where she repeated, among others, the great compositions so often recorded, viz., the "*Deh parlate*," and "*Non più di fiori*." In the early part of July she went for a night or two to the King's Theatre, performing in the opera of "*Cenerentola*." Her last appearance in England this season—so far, at least, as we have been able to ascertain—was at the Worcester Festival, which took place on the 21th, 25th, 26th, and 27th September. From this period till

the 18th of March following, we lose all traces of the course she pursued; when at Rome we find her giving a concert for the benefit of a family in extreme indigence, and for whom she realized the sum of six hundred pieces of gold. Shortly after, this extraordinary woman made a second appearance in Naples, where she performed for forty nights—the terms of her engagement being £3200, with two benefits and a half. But her triumph, in this respect, occurred at Milan, where she appeared on the 5th of May, in Bellini's "*Norma*," with an unprecedented success, for twelve performances; and immediately after concluded an engagement with the manager of t' e "*Teatro della Scala*," Duke Visconti, at £18,000 for one hundred and eighty-five performances; viz., seventy-five in the autumn and carnival seasons of 1835-6; seventy-five in the same seasons of 1836-7; and thirty-five in the autumn of 1837. These were the highest terms ever offered to a theatrical performer since the days of luxurious Rome. Here, and at this time, it was that Madame Malibran received the distinguished compliment of having a medal struck in honor of her, executed by the celebrated sculptor Valerio Nesti. Around the head is the inscription, "*Maria Felicitas Garcia Malibran*;" on the reverse, "*Per universale consenso proclamata mirabile nel Azione e nel Canto; Milano, MDCCCXXXV*."

The resemblance to the original is said to be striking. The "*Teatro San Carlo*," at Naples, next received her, where she sang a duet with her sister-in-law, Ruiz Garcia, in a new opera by Pacini, "*Irene, ossia l'Assedio di Messina*," and in Persiani's new opera, "*Inez de Castro*." On this occasion, the foreign journalist says, "she excelled herself;" adding, "Never did singer in this place excite such an effect."

Having concluded one series of her stipulated performances at Milan, in the early part of 1835, which was in the character of "*Norma*," and having been called for by the audience eighteen times during the progress of the representation, we find her on the following 20th of May, 1835, at the Ancient Concerts, (the sixth of the season,) singing the "*Qual anelante*," with her sister-in-law, and the old favorite, "*Non più di fiori*." The "*Musical Library*," in remarking upon the general performance, and the latter song in particular, says, with a generous enthusiasm, "The recitative and air from '*Tito*' she really makes her own. We can conceive nothing finer than such music, so sung, and so accompanied." It is needless to repeat that Willman, as usual, seconded her upon the occasion. On the 18th of the same month she reappeared for the season at Drury Lane, in "*La Sonnambula*." At the eighth Ancient Concert (June 3) the pieces allotted to her were the "*O salutaris*" of Cherubini, and the "*Che farò senza Euridice*," from Gluck's "*Orfeo*." The critic just quoted observes upon this occasion, that "Madame Malibran is indebted to Lord Burghersh for the two pieces allotted to her: the fine aria of Cherubini exhibited all the best qualities of her voice, and the scena from Gluck's "*Orfeo*" displayed her passionate style of singing to the utmost advantage." If the critic mean, by the term "indebted," that Lord Burghersh introduced Madame Malibran to Cherubini's motet, he is in error: for she sang it years before, at the Birmingham Festival, and by the recommendation of Vincent Novello, who first made her

acquainted with that very beautiful composition. She then sang it with noble expression.

On the 15th of July, at Signor Benedict's concert, Madame Malibran and Mlle. Grisi sang for the first time together (as we believe) in public. The duet selected was "*Ebben a te ferisce*," by Rossini. The spirit of rivalry between the reigning favorites was as generous as it was strenuous; and all agreed that that particular composition had never been so admirably performed. The stay of Madame Malibran in this country, during the season of 1835, was comparatively short. The report went, and we believe correctly, that she suddenly made her appearance here for the principal, if not sole purpose of giving eclat to her sister-in-law's concert, in whose welfare she took an ardent interest; and before the commencement of the provincial festivals, she had returned to the continent to fulfil her several engagements. While she was at Milan the news arrived of the death of Bellini, the composer. Being touched with sympathy at the premature loss of that clever musician and very amiable man, her enthusiastic nature was excited, and she set on foot a subscription for the purpose of raising a tribute to his memory. By her exertions, the donations swelled to a considerable amount; at the head of which appeared her own name for twenty pounds. Bellini died on the 23d of September. On the very day of the same month, in the following year, Madame de Beriot herself left us. Both were, we hear, nearly of an age.

From the 11th of November, on which day she assisted at a concert in Milan, when the room was crammed to suffocation, we lose all record of her till the month of March, 1836, when, having moved the courts in Paris, and obtained a legal divorce from M. Malibran, she solemnized the marriage ceremony with Mons. De Beriot. They had previously lived together as husband and wife, from the year 1829 or 1830. The Queen of the French complimented Madame De Beriot upon this occasion, by presenting her a costly sgraffe, embellished with pearls.

On the 2d of May following, she commenced her last engagement at Drury Lane. On the 9th of May, at the sixth Philharmonic, and on the 11th and 18th, at the fifth and sixth Ancient Concerts, we find her repeating the old favorites from Cimarosa's "*Sacrificio d'Abramo*," and the "*Clemenza di Tito*," "*Deh parlate*," and "*Non più di fiori*." Her exertions, during this concert season, were so excessive as to keep the witnesses of them in continual astonishment. While the rehearsals of "*The Maid of Artois*" were going on from day to day — and Madame De Beriot's rehearsals were not so many hours of sauntering indifference — she would, immediately after they were finished, dart away to one or two concerts, and, perhaps, conclude by singing at an evening party. The same course was pursued during her performances of that arduous character; * and, unless we are mistaken, she sang at one of the Philharmonic Concerts, after having wrought wonders, both bodily and mentally, at Drury Lane. Well might Lablache say, "*Non esprit est trop fort pour son petit corps*." She had, indeed, "a little body with a mighty heart;" and both must have given way much earlier, had she not

possessed the valuable faculty of being able suddenly to unbend and apply her mind to the most cheerful and even childlike amusements. She was an intrepid horsewoman, an elegant dancer, a pleasant caricaturist, a humorous compounder of charades and riddles; and, upon the slightest indication, she would put aside the trifle which appeared to absorb her whole attention, and engage with a fine enthusiasm in discussing the genius of Dante or Shakspeare, Raphael or Michael Angelo. No really great singer was ever indifferent to the charms of poetry and fine art.

At the close of the theatrical season of 1836, Madame Malibran withdrew to her estate near Brussels; and in the month of September returned to conclude her engagement at the Manchester and Liverpool festivals. The particulars of this last act of the eventful drama of her life are fresh in the world's memories.† She died at Manchester, England, September 23, 1836.

MALIMBA. A curious musical instrument used by the Incas before the conquest of South America. It is formed of slats of wood, from ten to fifteen inches in length, which vary in breadth and in thickness. They are laid parallel upon two bamboo canes wrapped with plantain leaves, to which they are fastened with cords run through double holes in the centre of the slats. There are twenty-one of these slats in the instrument, and the tones embrace three complete octaves. The instrument is a very rude contrivance, yet when the slats are struck by a small ball of rubber, attached to supple handles or rods, they emit beautiful and delicate sounds. The tones are regulated by the length of the slats, the shorter ones yielding the sharper sounds. The instrument is tuned by sticking wax upon the ends of the slats, which sharpens the notes. The natives attain great proficiency upon the malimba; two generally play upon it at once. They have a contrivance which swells the notes to great loudness; this is done by suspending hollow tubes of wood immediately under each key, of the same length as the slats, varying as they do in size. The tubes are closed at one end, and suspended with the other, or open end, next the slats. Near the bottom a hole is bored in the tube and a thin piece of gut is spread over it, and made fast with wax. They have the same effect as a sounding board; and so powerful is the assistance of these tubes, that the malimba is heard a great distance. It is still much used by the Mexican Indians, at Susconusco, on the Pacific.

MALINCOLIA, or MALINCONIA. (L.) Melancholy.

MALVEZZI, CRISTOFORO. Chapel-master at the court of the Medicis, in the middle of the sixteenth century.

MALZAT, JOHANN MICHAEL. In Traeg's "Musical Catalogue," Vienna, 1799, a number of manuscript works by this composer are mentioned, which are mostly written for the English horn, (obligato) or for the hautboy. They consist of "3 Concertirnde Sinfon;" "2 Concerte für Hoboe;" "2 Dergl. für das Engl. Horn;" "2 Dergl. für den Fagott;" "1 Dergl. fürs Violoncello;" "Septette fürs Engl. Horn;" "3 Sestetti für Hoboe;" "4

* The "*Maid of Artois*" was performed for the first time, on the 27th May, '836.

† They have been recorded in Nos. 29, 30, and 31, of the "Musical World."

Quintetti, theils für Hoboe und theils für Flote; " 11 Quartetti, in welchen das Hauptinstrument bald Flote, bald Hoboe, ein Engl. Horn oder Fagott ist; " and " 2 Doppelkonzerte für Hoboe und Fagott."

MAN. The universal disposition of human beings, from the cradle to the death bed, to express their feelings in measured cadences of sound and action, proves that our bodies are constructed on musical principles, and that the harmonious working of their machinery depends on the movements of the several parts being timed to each other; and that the destruction of health, as regards both body and mind, may be well described as being out of tune. Our intellectual and moral vigor would be better sustained if we more practically studied the propriety of keeping the soul in harmony, by regulating the movements of the body; for we should thus see and feel that every affection which is not connected with social enjoyment is also destructive of individual comfort, and that whatever tends to harmonize also tends to promote happiness and health. There is every probability that a general improvement in our taste for music would really improve our morals. We should indeed be more apt to detect discords, but then we should also be more ready to avoid their causes, and should not fail to perceive that those feelings which admit not of cheerful, chaste, and melodious expression, are at war with both soul and body. A wholesome musical education is, perhaps, a necessary part of high religious cultivation; and it will be far more valuable to children than the catechistic familiarity with great truths, which, being committed to memory as a task, are, alas! too apt, forever after, to be associated with dark ideas, instead of directing the soul to the Maker of illuminated worlds.

MANCANDO. (I.) A word implying that the passage over which it is written is to be sung or played with a decreasing sound. See DIMINUENDO.

MANCIE. (F.) The neck of a violiu.

MANCINCOURT, PIERRE, a native of Bethune, and director of the music in the cathedral church of Dorniek, who flourished about the year 1580, was a composer of songs and motets. From his compositions that are yet extant, he seems to have been not only a dry but a clumsy contrapuntist.

MANCINELLI, DOM., an Italian composer, published much flute music in Paris, London, and Berlin, about the year 1775.

MANCINI, GIOV. BATTISTA, one of the most celebrated pupils of Bernachi, published at Vienna, in 1774, a work entitled "*Pensieri e riflessioni pratiche sopra il canto figurato.*" This book has been translated into French twice, in one volume, octavo, and is considered to be a publication eminently classical. Mancini died at Vienna in 1800, in the eighty-fourth year of his age. In the latter part of his life, he retired on a pension, as singing master to the court.

MANCINI, FRANCESCO, a pupil of Leonardo Vinci, was born at Naples in 1691. If not the heir of his master's talents, he inherited at least his manners and principles. He first studied his art in the Conservatory of Loretto, of which

he became one of the directors, on the completion of his studies. He excelled as much in composition as in tuition. The numerous and excellent scholars, and the works he has produced, are so many proofs of his merit. Amongst his operas, both in the serious and comic style, "*Il Cavaliere Bretone,*" and "*Maurizio,*" are the most distinguished. The genius of Mancini was equally adapted to both styles. Brilliant, gay, light, and agreeable, full of truth and expression, he delighted in the comic opera; noble, elevated, grave, and even sublime, he charmed in the serious. The character of his melody, in both species, was always appropriate; and this propriety reigned alike in his airs and in his accompaniments. He composed but little; but the works which remain to us are marked by taste and delicacy, grace and truth. He continued the labors of his predecessors, with the view of making the school of Naples the greatest in Italy. He is regarded Mancini among the best masters of the art.

MANDINI, PAOLO, a singer at Venice in 1787, was at Paris in 1790, where he performed at the Opera Buffa with great success. His wife was also an excellent singer.

MANDOLINE, (F.), or MANDOLINO. A Spanish instrument of the violin species, the *cordatura* of which consists of four strings, and with frets like a guitar; it is tuned like the violin.

MANDURA. The name of a lesser kind of lute. See LUTE.

MANELLI, FRANCESCO, of Tivoli, composed the music of the first opera that was given at Venice in 1637; its title was "*Andromeda.*" In 1638 he gave there "*La Maga fulminata.*" The novelty of the singing, which replaced the declamation till then in use at Venice, had so great an effect, that the Venetians immediately began to build proper theatres for these performances. Manelli afterwards composed for them several other operas.

MANELLI, CARLO, a violinist at Rome, born at Pistoja, published there, in 1682, a work of sonatas for his instrument.

MANELLI, PIETRO. An Italian comic singer, towards the middle of the eighteenth century. His performances at Paris, in the buffo style of his country, are said to have prepared the French for a better style of comic music than they had previously practised.

MANENTI, GIOV. PIETRO, is ranked by Cerreto, in 1601, among the most eminent musicians.

MANFREDI, LUDOVICO. A minorite, and composer of church music, in the seventeenth century. Of his works have been printed "*Motetti,*" Venice, 1638, and "*Concerti à 5 Voci, Libro 1, 2, 3, 4.*"

MANFREDI, FILIPPO, born at Lucca, was a pupil of Tartini. He published at Paris, in 1768, "*Six Solos pour Violon,*" Op. 1.

MANFREDI, MUTIO, an Italian composer called *Il Formo Accademico*, lived in the beginning of the seventeenth century. There have been printed of his works, "*Madrigali,*" Venice, 1606.

MANFREDINI, VINCENZO, chapel-master

to the court of Russia, was born at Bologna, and studied composition under Pertiani Fioroni. In 1755 he went to Russia, and in 1769 returned from that country, having amassed a considerable fortune. In 1775 he published a didactic work, of no great merit, under the title of "*Regole Armoniche*." The rest of his compositions consist of sonatas for the harpsichord and violin, operas and motets, hardly any of which are known out of Russia.

MANGEAN. A French violinist at the *Concert Spirituel* at Paris, in 1750. He published, about the same time, several works of solos, duos, and trios for his instrument.

MANGONI, ANTONIO. A composer of the seventeenth century, born at Caravaggio, published "*Missa e Salmi*," Milan, 1623.

MANICORD. One of the names of a stringed instrument somewhat resembling a spinet.

MANICO. (I.) The neck of an instrument of the violin or guitar species.

MANIERE, EXUPERE DE LA, a professor of the harp and piano-forte at Paris, published there, in 1786, "*Sixième Recueil des Airs var. pour la Harpe*," "*Septième Rec. ditto*," and "*Premier Rec. de huit Préludes, trois Chans. et Rom. Acc. de Harpe, Parol. et Mus. du même*," Op. 9, 1785.

MANINI, an Italian dramatic composer, wrote about 1733 in Rome, for the theatre there.

MANKELL, a German musician, has made himself known by the following instrumental music: "*Serenata à deux Clarinets, deux Cors, et deux Bassons*," 1799. "*Six petites Pièces très faciles pour deux Clar., deux Cors, un Basson, et un Fl.*," 1799. "*Divert. à deux Clar., deux Cors, et deux Fag. Part. I.*," Hamburg, 1800.

MANN, JOHANN CHRISTOPH. A professor of the harpsichord at Vienna, about the year 1766. He wrote much music for his instrument.

MANNI, GENARO. A Neapolitan musician, and nephew of D. Sarro. In 1751 he gave, at Venice, the opera "*La Didone abbandonata*," of Metastasio; and in 1753, "*Siroc*," of the same poet. He retired from public life about the year 1780.

MANNI, DOMINICUS MARIA. A learned writer at Florence, in the beginning of the eighteenth century. He published "*De Florentinis Inventis Commentarius*," Ferrara, 1731, in which he speaks of the part which Florence has taken in the invention of the opera.

MANO. (I.) The hand. *Mano dritta*, the right hand; *mano sinistra*, the left hand.

MANOIR, GUILLAUME DU, a celebrated violinist in the service of Louis XIII., was nominated by the king, in 1630, after the death of the violinist Constantine, *roi des violons, maître des ménestriers*, i. e., king of the violins, and master of the minstrels. He published "*Le Mariage de la Musique et de la Danse*," Paris, 1604.

MANSARO, DOM. DELLO. A composer of the sixteenth century, many of whose works have been published in the "*De Antiquis primo libro 12 Voci de diversi Autori di Iuri*," Venice, 1585.

MANUAL. (G.) The key board.

MANU DUCTOR. The name given by the ancients to the officiate whose province it was to beat the time with his hand, at public performances.

MANZIA, LUIGI DE. A musician and composer at Dusseldorf, about the year 1650.

MANZOLI, GIOVANNI, was born at Florence about the year 1725. Having attained much celebrity in Italy as a singer, he was engaged by Farinelli, in 1753, for the opera at Madrid, where he obtained a salary of one thousand six hundred ducats. In 1764 he went to England, and Dr. Burney thus describes his *début*: "The expectations which the great reputation of this performer had excited were so great, that at the opening of the theatre in November, with the pasticcio of '*Ezio*,' it was with great difficulty I obtained a place, after waiting two hours at the door. Manzoli's voice was the most powerful and voluminous soprano that had been heard on the English stage since the time of Farinelli; and his manner of singing was grand, and full of dignity. In this first opera, he had three songs, composed by Pescelli, in three different styles, all of which he executed admirably. The lovers of music in London were more unanimous in approving his voice and talents than those of any other singer within my memory.

"The applause was hearty, unequivocal, and free from all suspicion of artificial zeal: it was a universal thunder of acclamation. His voice alone was commanding, from native strength and sweetness; for it seems as if subsequent singers had possessed more art and feeling; and as to execution, he had none. He was, however, a good actor, though unwieldy in figure, and not well made; neither was he young when he arrived in London; yet the sensations he excited seem to have been more irresistible and universal than I have ever been witness to in any theatre." Manzoli had for his benefit "*Il Re Pastore*," an opera, of which the music was chiefly by Giardini, and with the exception of the songs composed for Manzoli, had been performed in 1755. The public, however, were more delighted with this great singer's performance in "*Ezio*," than in any other opera that was brought on the stage during his residence in England, which was only one season, at the end of which he returned to Italy, and was succeeded by Elisi, who went to London, for the second time, in the autumn of 1756. His last public appearance was at Florence in 1778.

MARA, MADAME, was born at Cassel in 1749. Her maiden name was GERTRUDE ELIZABETH SCHMAELING, and it is stated, on the authority of a foreign correspondent of Dr. Burney, that her early years were devoted to the study of the violin, which, as a child, she played in England, but quitted that instrument, and became a singer, by the advice of the English ladies, who disliked a "female fiddler." It may, therefore, have happened that to this prejudice we owe the delight experienced from the various excellences of one of the most sublime singers the world ever saw. Nor was the objection of the English ladies the only prejudice which she had to encounter; for, on her arrival at Berlin, at the age of twenty-four, Frederic the Great, King of Prussia, who affected as high a skill in music as

in war, could scarcely be prevailed upon to hear her, his majesty declaring that he should as soon expect pleasure from the neighing of his horse as from a German singer. One song, however, convinced him of her ability, which he immediately put to the severest trial, by selecting the most difficult airs in his collection, and which Miss Schmaeling executed at sight, as perfectly as if she had practised each of these compositions all her life. Her earliest singing master was an old man of the name of Paradisi, and at fourteen she sang before the Queen of England with the greatest success. From 1767 to 1783, she passed through Germany and Switzerland; she visited Naples at a period subsequent to her appearance in England. Although it is related that Madame Mara's first impressions led her to songs of agility, yet her intonation was fixed by the incessant practice of plain notes. We know, from her own assurance, that to confirm the true foundation of all good singing, by the purest enunciation, and the most precise intonation of the scale, was the study of her life, and the part of her voicing upon which she most valued herself. Dr. Arnold told the writer of this article, that he had, by way of experiment, seen Mara dance, and assume the most violent gesticulations, while going up and down the scale; yet such was her power of chest, that the tone was as undisturbed and free as if she had stood in the customary quiet position of the orchestra.

The Italians say, that "of the hundred requisites to make a singer, he who has a fine voice has ninety-nine." Madame Mara had certainly the ninety-nine in one. Her voice was in compass from G to E in altissimo, and all its notes were alike even and strong; but if we may be permitted to supply the hundredth, she had that also in a supereminent degree, in the grandest and most sublime conception. At the early age of twenty-four, when she was at Berlin, in the immaturity of her judgment and her voice, the best critics admitted her to have exceeded Cuzzoni, Faustina, and indeed all those who had preceded her. One who had heard Billington and Catalani, said, "We still believe, that, in majesty and truth of expression, (that term comprehending the most exalted gifts and requisites of vocal science,) Mara retains her superiority. From her we deduce all that has been learned concerning the great style of singing. The memory of her performance of Handel's sublime work, 'I know that my Redeemer liveth,' is immortalized, together with the air itself. Often as we have since heard it, we have never witnessed even an approach to the simple majesty of Mara: it is to this air alone that she owes her highest preëminence; and they who, not having heard her, would picture to themselves a just portraiture of her performance, must image a singer who is fully equal to the truest expression of the inspired words and the scarcely less inspired music of the loftiest of all possible compositions."

But Mara was the child of sensibility: every thing she did was directed to the heart; her tone, in itself pure, sweet, rich, and powerful, took all its various colorings from the passion of the words; and she was not less true to nature and feeling in "The soldier tired," and in the more exquisite "Hope told a flattering tale," than in "I know that my Redeemer liveth."

Her tone, perhaps, was neither so sweet nor so clear as Billington's, nor so rich and powerful as Catalani's; but it was the most touching language of the soul. It was on the mastery of the feelings of her audience that Mara set her claims to fame. She left surprise to others, and was wisely content with an apparently, but not really, humbler style; and she thus chose the part of genuine greatness.

The elocution of Mara must be taken rather as universal than as national; for although she passed some time in England when a child, and retained some knowledge of the language, her pronunciation was continually marred by a foreign accent, and those mutilations of English words which are inseparable from the constant use of foreign languages during a long residence abroad. Notwithstanding this drawback, the impression she made, even upon uneducated persons, always extremely alive to the ridiculous effects of mispronunciation, and upon the unskilled in music, was irresistible. The fire, dignity, and tenderness of her vocal appeal could never be misunderstood; it spoke the language of all nations, for it spoke to the feelings of the human heart.

Her acquaintance with the science of music was considerable, and her facility in reading notes astonishing. The anecdote related above will prove how completely all music was alike easy to her comprehension. Perhaps she is indebted to her fiddle for a faculty at that time not very common. We have observed that all players on stringed instruments enjoy the power of reading and writing music beyond most others; they derive it from the apprehension of the coming note, or distance, which must necessarily reside in the mind, and direct the finger to its formation. The two branches of art are thus acquired by the violinist in conjunction; and to her knowledge of the violin we attribute Madame Mara's early superiority in reading difficult passages. Mara's execution was certainly very great; and though it differs materially from the agility of a later period, it may be considered as more true, neat, and legitimate, inasmuch as it was less quaint and extravagant, and deviated less from the main purpose of vocal art—expression. Mrs. Billington, with a modesty becoming her great acquisitions, voluntarily declared, that she considered Mara's execution to be superior to her own in genuine effect, though not in extent, compass, rapidity, and complication. Mara's divisions always seemed to convey a meaning; they were vocal, not instrumental; they had light and shade, and variety of tone; they relaxed from or increased upon the time, according to the sentiment of which they always appeared to partake; these attributes were always remarkable in her open, true, and liquid shake, which was certainly full of expression. Neither in ornaments, learned and graceful as they were, nor in her cadences, did she ever lose sight of the appropriate characteristics of the sense of melody. She was, by turns, majestic, tender, pathetic, and elegant; but the one or the other, not a note was breathed in vain. She justly held every species of ornamental execution to be subordinate to the grand end of uniting the effects of sound sense in their operations upon the feelings of her hearers. True to this principle, if any one commended the agility of a singer, Mara would ask, "Can she sing six plain notes?"

Madame Mara, in her day, was placed at the very summit of her profession, because, in majesty and simplicity, in grace, tenderness, and pathos, in the loftiest attributes of art, in the elements of the great style, she far transcended all her competitors in the list of fame. She gave to Handel's compositions their natural grandeur and effect, which is, in our minds, the very highest degree of praise that we can bestow. Handel is heavy say the musical fashion mongers of the day. Milton would be heavy beyond endurance from the mouth of a reader of talents even above mediocrity. The fact is, that to wield such arms demands the strength of giants. Mara possessed this Heaven-gifted strength. It was in the performance of Handel, that her finer mind fixed its expression, and called to its aid all the powers of her voice, and all the acquisitions of her science.

Madame Mara left England in 1802, with powers astonishingly preserved, considering her long professional labors. Her last performance was on the 3d of June in that year, when Mrs. Billington sang a duet with her, a test of power from which she came off with undiminished reputation. Since that period, Mara resided principally in Russia, and at the conflagration of Moscow suffered severely in her property. Towards the close of the year 1819, or the beginning of 1820, she returned to London, and determined on presenting herself once more to the judgment of the English public, who had revered her name so highly and so long. She, consequently, had a concert at the Opera House; but her powers were so diminished that it proved unsuccessful. She died in Livonia, in 1833, at the age of eighty-four.

MARA, IGNAZ, was born at Teutschbrod, in Bohemia, where he also received his first musical education. He was chamber violoncellist to the King of Prussia, about the year 1755. He died in 1783.

MARA, JOHANN, son of the preceding, and husband of the celebrated Madame Mara, was born at Berlin in 1744. In the French Dictionary of Musicians, his death was stated to have taken place in 1789; but Gerber says that the account of his death in that year was what the Germans call *ship news*, and that he was, in 1799, still living near Berlin, in very low circumstances. Gerber adds, that he was never a very talented violoncellist, and that much of the praise formerly lavished on him was exaggeration. "Still," adds Gerber, "when I became acquainted with him in 1801, in Sadlershausen, he still played an adagio of his own composition so well, that no orchestra need have been ashamed of him; and when, in his allegro, he missed now and then a note, it was not so much the fault of his hand, as of his instrument, which was a had one. He conducted himself, during his stay here, like a sedate, well-informed, gentlemanly man; nor did he ever show the least symptoms of that inclination to intemperance, which has been the bane of his life. He was, however, in very great distress, notwithstanding his noble-minded wife furnished him, from time to time, with considerable sums of money. About this time," continues Gerber, "he went to Holland, where he indulged to such a degree his fatal inclination to drunkenness, that, after having lost every feeling of pro-

priety, he was seen day and night in the lowest pothouses, playing the fiddle for sailors to dance; till at last death overtook him in the summer of 1808, and delivered him from his wretched existence, at Schiedam, near Rotterdam. Such was the melancholy end of a man possessed of talent, great knowledge of mankind, and formed by nature to have been an ornament to society.

MARA, CAJETAN, uncle to the preceding, was a composer and excellent organist. He was a monk of the order of St. Augustine, and chapel-master to St. Wenzel's Church, in the Newstadt, at Prague. He was born in 1719, and after having gone through his course of philosophy, &c., entered, in 1739, the order in which, after a few years, he became a priest. In the mean time, he was not idle as a musician, having previously been appointed chapel-master to the church of his order in his native city; thirteen years after which, he was called to Prague in the same capacity, in St. Wenzel's Church. Here he was unremitting in the study of the scores of the great masters, of which he copied no less than three hundred masses with his own hand; at the same time, he formed a great many pupils in thorough bass, and composed some music for the church and chamber. Ignaz Mara was not a little active in adding to his brother's collection of music. Thus this indefatigable man spent his time during nineteen years, till the Augustine Convent at Prague was dissolved, and he was compelled to return to his birthplace, where he was found, in 1788, by the worthy philosopher Dlabacz, lame from an apoplectic stroke. Dlabacz received the above particulars of his life from his own lips; whilst he added to him, that he greatly bewailed the sudden loss of his faculties to such an extent, as it deprived him of the power of pouring forth his praises to his Creator on the organ.

MARAI, MARIA. Born at Paris in 1656: he made so rapid a progress in the art of playing on the viol, that Sainte Colombe, his master, at the end of six months, would give him no further instructions. He carried the art of playing on this instrument to the highest pitch of perfection, and was appointed one of the chamber musicians to the king. He composed several pieces for the viol, and sundry operas. His works bear the marks of a fertile genius, united to an exquisite taste and judgment. This celebrated musician died in 1718.

MARASTONI, ANTONIO. An Italian organist and composer at Illasi, in the beginning of the seventeenth century. He published "*Motetti*," Venice, 1625.

MARBECK, JOHN, was organist to the chapel of St. George, at Windsor, and a person to whom church music is under great obligation. It is a common but mistaken opinion that Tallis was the first composer of the cathedral service of the church of England: Marbeck certainly preceded him in this labor; and in the original musical notes to the *preces*, the suffrages and responses were undoubtedly of his composition. His "*Te Deum*" is inserted in the first volume of Smith's "*Musica Antiqua*." The history of Marbeck, which has entitled him to a place in the Martyrology of the zealous and laborious John Fox, is

as follows. About the year 1544, a number of persons living at Windsor, who favored the reformation, had formed themselves into a society. Among them were Anthony Person, a priest, Robert Testwood, a singing man in the choir of Windsor, John Marbeck, and Henry Fulmer. On intimation being given that these persons held frequent and improper meetings, the Bishop of Winchester procured a commission from the king to search the suspected houses, and the above-mentioned four persons were apprehended, and their books and papers seized. Among other things, there were found some papers of notes on the Bible, and an English concordance, in the handwriting of Marbeck. Upon his examination before the commissioners of the statute of the six articles, he gave the following account of himself. He said, respecting the notes, that as he was in the habit of reading much, in order to understand the Scriptures, it was his practice, whenever he met with any explanation of an abstruse or difficult passage, to extract it into his note book, and there place under it the name of the author. As to the concordance, he told them, that being a poor man, and not able to buy a copy of the English Bible, then lately published by Matthew, he had set about transcribing one, and had proceeded as far as the book of Joshua, when an acquaintance of the name of Turner, knowing his industry, suggested to him also the plan of writing a concordance, and for this purpose supplied him with a Latin concordance and an English Bible. He said, in conclusion, that by the assistance of these, as his papers would show, he had been able to proceed in his work as far as the letter L. The story seemed altogether so strange that the commissioners scarcely knew how to credit it. Marbeck, however, desired that they would so far indulge him as to take any words under the letter M, and give him his concordance and Bible, and he would endeavor to convince them of its truth. In a single day he filled three sheets of paper with the continuation of his work, and had got as far as the words given him would allow. His ingenuity and industry were much applauded even by his enemies, and Dr. Oking, one of the commissioners who examined him, said, that he "seemed to have been much better employed than some of his accusers." Neither his ingenuity nor his industry, however, could prevent his being brought to trial for heresy, along with his associates. Person and Fulmer were indicted for irreverent expressions concerning the mass; and the charge brought against Marbeck was for copying, with his own hand, an epistle of Calvin against it. They were all found guilty, and condemned to be burned; and the sentence was executed on all except Marbeck the day after the trial. Three of the witnesses on this trial were, however, afterwards accused and convicted of perjury. Marbeck, being a man of harmless disposition, was afterwards given up to the Bishop of Winchester, who, from his persecutor, became his patron. The Catholics held out to him many temptations, but he steadily refused to betray any of the persons with whom his party had been concerned; and at last, through the intercession of Sir Humphrey Foster, one of the commissioners, he obtained the king's free pardon. Having thus escaped martyrdom, he applied himself to the study of his profession; and not having been required to make any public recantation of his

opinions, he indulged them in secret till the death of Henry VIII, when he found himself at liberty to make an open profession of his faith; and accordingly he finished, and in 1500 published, his concordance. He wrote also, amongst other things, "The Lives of Holy Saints, Prophets, Patriarchs, and others," published in 1574; "A Book of Notes and Commonplaces, with their Expositions, collected and gathered together out of the Works of divers singular Writers;" and "The Ripping up of the Pope's Fardels." The musical service composed by Marbeck was formed on the model of the Romish ritual, and first published in quarto, in the year 1550, with this title: "A Booke of Common Praier, noted." The Lord's prayer, the creed, and such other parts as were proper to be read, are written so as to be sung in a certain key or pitch, in a kind of recitative. To the other parts are given melodies of a grave and solemn construction, and nearly as restrained as those of the old Gregorian chant. These have each an harmonical relation with the whole, the dominant of each being in unison with the key note in which the whole is to be sung.

MARCATO. (I.) This term is expressed by a dot put over the head of a note, thus:—

implying that the note should be struck short, or *spotted* in a more light and tender manner; aiming at neatness rather than a sharp brevity. This effect is produced upon the violin by letting the bow rebound from note to note, including many in the same bow. This species of execution, when applied to the voice in quick and lofty passages, is one of its greatest beauties. To achieve this, a peculiar conformation of the vocal organs is necessary; contracting the upper part of the throat to the vowel tone of *ea*, as in the word *earth*, striking every note *separately*, with a delicate distinctness, and in the same breath.

MARCELLO, ALESSANDRO, elder brother to Benedetto, was of a noble family in Venice. He was educated according to his distinguished station in life, and was well grounded in the arts and sciences. Among the latter, he particularly studied mathematics, philosophy, and music. He resided constantly at Venice, where he held a weekly musical meeting, at which his own compositions were almost exclusively performed. These meetings were open to every distinguished stranger. The following of his works were printed, but all under his assumed name, Eterio Stinfalico: "*Cantate da Camera à Voce sola*," Venice, 1715. "6 *Concerti à due Fl. trav. o V. principali, due V. ripieni, Viola, à Vc. Oblig., e Cembalo*," Augsburg, 1738. "*La Cetera, Concerti di Eter. Stinfalico, Academico Arcade, Parte Prima, Oboe 1, à Traversiere col V. principale, publicati da Gio. Christiano Leopold*," Augsburg, 1738.

MARCELLO, BENEDETTO, a noble Venetian, was born in 1680. His father, Agostino Marcello, was a senator of Venice; his mother, Paolina, was of the honorable family of Capello. The male issue of these two persons were Alessandro, a son next to him, whose Christian name

is unknown, and the above-mentioned Benedetto Marcello: Alessandro addicted himself to the study of natural philosophy and the mathematical sciences, as also to music, to which he attained to great proficiency; his younger brother, Benedetto, had been well instructed in classical literature, and having gone through a regular course of education under proper masters, was committed to the tuition of his elder brother, and by him taken into his house with a view to his further improvement in philosophy and the liberal arts. Alessandro Marcello dwelt at Venice; he had a musical academy in his house, held regularly on a certain day in every week, in which were frequently performed his own compositions. Being a man of rank, and eminent for his great endowments, his house was the resort of all strangers who came to visit the city. It once happened that the princes of Brunswick were there, who, being invited to a musical performance in the academy above mentioned, took particular notice of Benedetto, at that time very young, and, among other questions, asked him, in the hearing of his brother, what were the studies that most engaged his attention. "O," said his brother, "he is a very useful little fellow to me, for he fetches my books and papers, the *fittest* employment for such a one as he is." The boy was nettled at this answer, which reflected as much upon his supposed want of genius as his youth; he therefore resolved to apply himself to music and poetry; which his brother seeing, committed him to the care of Francesco Gasparini, to be instructed in the principles of music; for poetry he had other assistances, and at length became a great proficient in both arts. In the year 1716, the birth of the first son of the Emperor Charles VI. was celebrated at Vienna with great magnificence; and upon this occasion a serenata, composed by Benedetto Marcello, was performed there with great applause. Two cantatas of his, the one entitled "*Il Timoteo*," the other "*La Cassandra*," are also much esteemed. Marcello, after this, composed a mass, which was highly celebrated, and was performed for the first time in the church of Santa Maria della Celestina, on occasion of Donna Alessandro Maria Marcello, his brother's daughter, taking the veil in that monastery. He also set to music "The Lamentations of Jeremiah," the "Miserere," and the "Salve." These, with many other sacred compositions, he gave to the clergy of the church of Santa Sophia, and was at the pains of instructing them in the manner in which they were to be performed. For many years Marcello was a constant member of a musical academy held at the house of Agostino Coletti, organist of the church of the Holy Apostles, in which he always sat at the harpsichord, and by his authority, which every one acquiesced in, directed and regulated the whole performance. In the year 1724 were brought out the first four volumes of the "Paraphrase of the Psalms, by Giustiniani, in Italian, set to music for one, two, and three voices, by Benedetto Marcello;" and in the two subsequent years four more, including the whole first fifty of the psalms.

In the year 1726, this great work was completed by the publication of four volumes more, containing a paraphrase of the second twenty-five psalms; and, as an evidence of the author's skill in that kind of composition, and which some of

the most eminent musicians have endeavored to excel, namely, canon, he has at the end of the last volume, given one of a very elaborate contexture.

Mattheson, of Hamburg, in a letter to Marcello, prefixed to the sixth volume, says that the music to some of the psalms had been adapted to words in the German language, and had been performed with great applause in the cathedral of that city. And we are further told, that for the satisfaction of hearing these compositions, the Russians had made a translation of the Italian paraphrase into their own language, associating it to the original music of Marcello, and that some sheets of the work had been transmitted to the author in his lifetime. At Rome, these compositions were held in the highest estimation by all who professed either to understand or love music. At the palace of Cardinal Ottoboni was a musical academy, held on Monday in every week, in which Corelli performed; at this musical assembly one of the psalms of Marcello made constantly a part of the entertainment; and for the purpose of performing there, the author composed to them instrumental parts. When the news of Marcello's death arrived at Rome, his eminence, as a public testimony of affection for his memory, ordered that, on a day appointed for the usual assembly, there should be a solemn musical performance. The room was hung with black, and the performers and all present were in deep mourning; Father Santo Canal, a Jesuit, made the oration; and the most eminent of the learned of that time rehearsed their respective compositions upon the occasion, in various languages, in the presence of the many considerable personages there assembled. Nor has England been wanting in respect for the abilities of this great man. Charles Avison, organist in Newcastle, had celebrated this work in an "Essay on Musical Expression," and had given out proposals for publishing, by subscription, an edition of it, revised by himself; but it seems that the execution of this design devolved on another person, John Garth, of Durham, who was at the pains of adapting to the music of Marcello, suitable words from the English prose translation of the psalms, with a view to their being performed as anthems in cathedrals; and with the assistance of a numerous subscription, the work was completed in eight folio volumes. Marcello was for many years a judge in the council of forty; from thence he was removed to the charge of proveditor of Pola, in Istria. Afterwards he was appointed to the office of chamberlain or treasurer of the city of Brescia. He died at Brescia in the year 1739, and was buried in the church of the fathers, Minor Observants of St. Joseph of Brescia, with a degree of funeral pomp suitable to his rank.

MARCESSO, BARTOLOMEO, an Italian composer, published motets for two and three voices, under the title of "*Sacra Corona*," Venice, 1656.

MARCH. A military air, played by inflated and pulsatile instruments, to regulate the steps and to animate the minds of soldiers. The march, however, has long been adapted to every species of musical instrument, and some of the most celebrated compositions of the greatest masters are in this style; as the "March of the Priests"

in Mozart's "*Zauberflöte*," the "Peasant's March" in Weber's "*Der Freischütz*," and, above all, Beethoven's "Funeral Marches." A march should be always composed in common time, with an odd crotchet or quaver at the beginning. It is usually quick for ordinary marching, and slow for grand occasions; but no general rules can be laid down for its composition.

MARCHAL, or MARECHAL, P. A. Probably a German, resident at Paris. In 1795, he began to publish there a "*Magazin de Musique*," from which the following pieces were published, by Imbault, between 1796 and 1797. "*Segadilla de l'Opéra de la Cosa rara, avec Var. pour P. F.*," Op. 9. "*Six Rondos pour le Clav. avec Acc. de Fl. ou Violon*," Op. 10. "*Marlborough en Var. pour P. F.*," Op. 11. "*Sonate favorite arrangée pour P. F. et Violon*," Op. 12. "*Duo Concertant pour le P. F. et Violon*," Op. 13.

MARCHAL, FRANÇOIS, master of the band of the thirteenth regiment of French light infantry, published, at Leipsic, "*Marche funèbre, exéc. à l'occasion de l'enterr. du Général Macon, pour P. F.*," and "*Pas redoublés Français et Walses, pour P. F.*"

MARCHAND, JEAN LOUIS, was a native of Lyons, and an organist of some church in that city. When very young, he went to Paris, and strolling, as by accident, into the chapel of the college of St. Louis le Grand, a few minutes before service was to begin, he obtained permission to play the organ; and so well did he acquit himself, that the Jesuits, taking pains to find him out, retained him amongst them, and provided him with every requisite to perfect him in his art. He died at Paris in 1732, aged sixty-three, and left, of his composition, two books of lessons for the harpsichord, which are greatly admired.

MARCHAND, II., pianist to the Prince of Thurn and Taxis, was born at Mentz in 1769. He was a pupil of Mozart and Winter, and gave a concert in 1798, at Hamburg, where he was ranked among the most tasteful and brilliant performers. He is probably the author of the following printed pieces: "*Dix Variat. pour le Clav. sur un Thème de Haydn*," Op. 1, Munich, 1800; and "*Marche des Marseillois, variée pour le Clav.*," Op. 2, Munich, 1802.

MARCHE. (F.) In harmony, a symmetrical sequence of chords.

MARCHESI, called also MARCHESINI, LUIGI, a celebrated Italian soprano, was born at Milan about the year 1755. His first *début* on the stage was at Rome, in 1774, in a female character, the usual introduction of a young and promising singer, with a soprano voice and elegant person. In 1775 he performed the second man's part at Milan with Paechierotti, and at Venice with Millico; but the same year he was advanced to the principal character at Treviso. In 1776 and 1777, he sung as first man at Munich and Padua; and in 1778 at the great theatre of San Carlo, at Naples, which is the post of honor of an opera singer. There he continued two seasons; and he since performed with increasing celebrity at Pisa, Genoa, Florence, Milan, Rome, St. Petersburg, Vienna, and Turin. The first opera in which he appeared on the English stage was the "*Giulio Sabino*" of Sarti, in 1788. The

elegant and beautiful music of this drama did not obtain the applause which it deserved, and had already received in other parts of Europe. Marchesi's style of singing was not only elegant and refined to an uncommon degree, but frequently grand and dignified, particularly in his recitatives and occasional low notes. His variety of embellishments, and facility of running extempore divisions, were at that time considered truly marvellous. Many of his graces were new, elegant, and of his own invention; and he must have studied with intense application to execute the divisions and running shakes from the bottom of his compass to the top, even in a rapid series of *semitones* or half notes. Independently of his vocal powers, his performance on the stage was extremely embellished by the beauty of his person and the grace and propriety of his gestures. "We expected an exquisite singer," says Dr. Burney, "and were agreeably surprised by a fine actor." In 1790 Marchesi returned to Italy. He died at Milan, in 1829.

MARCHESI, TOMMASO, one of the most distinguished teachers in the Bolognese school of singing, and one of the cleverest of the most recent Italian church composers, was born in 1776 at Lisbon. In 1836 he was *maestro di capella* over not less than thirty-two churches in Bologna. From an eccentric peculiarity he would never offer any of his compositions to be printed.

MARCHETTO, of Padua, the celebrated commentator of Franco, and the first author who treated extensively of the chromatic and harmonic genera, left two works, first, "*Lucidarium in Arte Musice plane; inchoatum Cœna, perfectum Verona*," 1274, and "*Pomerium in Arte Musica mensurata*," dedicated to Robert, King of Naples about the year 1783. These are the most ancient treatises that make mention of sharps, chromatic counterpoint, and discords. Several of the harmonic combinations proposed by Marchetto are still in use; others again have been rejected.

MARCIA, (I.) or MARCHE, (F.) A march

MARCOLINI, MARIETTA, began to be distinguished as a singer about 1805. Rossini composed several songs for her to sing in 1811 and 1812.

MARCOU, PIERRE, formerly chamber musician to the King of France, was, in 1798, one of the first violinists in the orchestra of the Théâtre Lyrique, at Paris. He published "*Elements théoriques et pratiques de Musique*," London and Paris, 1781. He died in 1820.

MARCUORI, ADAMO, born at Arezzo, was chapel-master to the cathedral of Pisa. He died at Montenero in 1808.

MARCUS, JOACHIM, a German contrapuntist of the fifteenth century, published "*Sacra Cantiones, 5, 6, 7, 8, 9, et plurimum vocum*," Stettin, and a second edition, Leipsic, 1608.

MARD, TOUSSAINT RAYMOND DE ST., was born in Paris in 1682, and died there in 1757. The original title of his treatise is "*Réflexions sur l'Opéra*," Haag, 1741, and is found in his "*Réflexions sur la Poésie en général*," a work which was republished at Amsterdam in 1749.

MARENZIO, LUCA. This ingenious, elegant, and, in his line, unrivalled composer, was born at Coccaglia, in the diocese of Brescia, in

the early part of the sixteenth century. His natural inclination leading him very early to the composition of madrigals, like his contemporary Palestrina, he obtained an acknowledged superiority over all his predecessors; and the number, also, of his publications is prodigious. Nine books of his madrigals for five voices were printed at Venice between the years 1557 and 1601. Besides these, he composed six books of madrigals in six parts; madrigals for three voices; another set for five; and another for six voices, different from all the former; canzonets for the lute, "*Mottetti à 4*," and "*Sacras Cantiones 5, 6, ac 7 Vocibus Modulandas*." All these works were printed at Venice, and afterwards at Antwerp, and many of them in London to English words. (See "*Musica Transalpina*," two books; and "*A Collection of Italian Madrigals, with English Words*," published in 1589, by Thomas Watson.) In the madrigal style, Luca Marenzio was called, by his countrymen, "*Il piu dolce Cigno*." He was some time chapel-master to Cardinal Luigi d'Este; and, according to Adami and others, was caressed and patronized by many princes and eminent personages, particularly by the King of Poland. Upon his return to Rome after quitting Poland, he was admitted into the Pope's Chapel; and dying in that city in 1599, he was buried in the church of St. Lorenzo, in Lucina. Peacham (see "*Complete Gentleman*," p. 101, edition of 1634) speaks of his *delicious aire and sweet invention in madrigals*, and says that "he excelled all others whatsoever, having published more sets than any author else, and without an *ill song*;" adding that his first, second, and third parts of *Thyrsis*, "*Veggio dolce il mio ben*," &c., are songs "the Muses themselves might not have been ashamed to have composed." To this we may readily subscribe, and will not dispute his stature, or the color of his hair, when he further tells us "that he was a little black man;" but when he asserts "he was organist of the Pope's Chapel at Rome a good while, where there *never was an organ*," we can no longer credit his report; nor is it likely, however great the musical merit of this little black man may have been, that the niece of any reigning pope could have been sent for to Poland, as Peacham tells us, with so little ceremony, in the character of lutenist and singer, in order to gratify the curiosity of his Polish majesty, and the affection of Luca Marenzio. In short, the whole account is compiled from hearsay evidence, and abounds in absurdities, and is so much the more incredible, as no other musical writers, eager as they were to record every memorial they could procure concerning this celebrated musician, have ventured to relate these strange circumstances. There are no madrigals so agreeable to the ear, or amusing to the eye, as those of this ingenious and fertile composer. The subjects of fugue, imitation, and attack are traits of elegant and pleasing melody; which, though they seem selected with the utmost care, for the sake of the words they are to express, yet so artful are the texture and disposition of the parts, that the general harmony and effect of the whole are as complete and unembarrassed as if he had been writing in plain counterpoint, without poetry or contrivance.

MARESCALCHI, LUIGI, a composer and proprietor of a music warehouse at Naples, studied

counterpoint under Patre Martini, at Bologna. His principal works are as follows: "*Meleagro*," a ballet, Florence, 1780. "*I Disertori felici*," opera, Placenza, 1784. "*Andromeda e Perseo*," opera seria, Rome, 1784. "*Le Rivoluzioni del Seraglio*," ballet, Naples, 1788; and "*Giulietta e Romeo*," ballet, Rome, 1789. The authors of the French "*Dictionary of Musicians*" state that the Op. 7 of the engraved works of Boccherini, consisting of trios for two violins and violoncello, is really the work of Marescalchi, and nothing but a trading trick.

MARESCI, J. A., born in Bohemia in 1709, was the inventor of the hunting music performed on horns, which has been brought to such perfection in Russia. These horns are all of different lengths and curvature, but each of them is meant to produce only a single tone. To execute the most simple piece of harmony, or even a melody, at least twenty musicians are necessary; but the execution is not complete without forty performers, and often many more are employed. Each of them has only to think of his single tone, and to blow it in precise time, and with a force and shading proper to give effect to the passage. This music more resembles the sound of a large organ than any other instrument. In a calm and fine night, it has often been distinctly heard at above four English miles distance. It has, when far off, an effect analogous to that which is produced by the sound of the harmonica when near. He died at St. Petersburg, in 1794.

MARET, HUGUES. Probably a member of the society of *belles lettres* at Dijon, read to the society, and afterwards printed, "*Eloge Historique de M. Rameau*," 1767.

MARGRAFF, ANDREAS, singer in the school at Schwandorf, in the sixteenth century, and born at Eger, in Bohemia, published the 128th psalm, for five voices.

MARIA, D. JOAO DE ST., a Portuguese priest of the order of St. Augustine, and chapel-master of St. Vincente, in Lisbon, was born at Terona, in the province of Transtagnana, and died at Grijó, in the convent of St. Salvador, in 1654. He left "*Tres Livros de Contraponto*," inscribed to King John IV. They are still to be found in the royal library at Lisbon.

MARIANI, GIOV. BATT., composed at Viterbo, in 1659, a beautiful opera entitled "*Amor vuol Gioventù*."

MARIN, FABRICE, a French composer of the sixteenth century, set to music for four voices some poetry of Ronsard, Baif, Jamin, and Desportes, which was published at Paris in 1578.

MARIN, GUILLAUME MARCEL DE, born in Guadalupe in the year 1737, was of the family of the Marini, some of whom were *doges* of the republic of Genoa. M. de Marin went to Paris at about twelve years of age, and studied at the college of Louis le Grand. When fourteen years old, he embraced the profession of arms, and at fifteen devoted himself to the study of mathematics and music. He then undertook, without a master, the study of the violin, learned composition of Rameau, and at length placed himself under Gaviniès, as a finishing master for the violin. He composed a "*Stabat Mater*," which was published.

MARIN, MARIE MARTIN MARTEL, VIS-COMTE DE, son of the preceding, was born at St. Jean de Luz, near Bayonne, in 1769. He learned music of his father from the early age of four, and at seven composed a sonata for the piano. Nardini gave him lessons on the violin, and stated him to be his best pupil. He also studied the harp under Hösbrüker, but after about thirty lessons, the pupil, apparently feeling an impulse to improve upon the style of his master, desisted from receiving further instructions, and continued his practice on that instrument entirely unaided. M. de Marin might have had rivals in his violin playing; but it is generally acknowledged that he was soon without an equal on the harp. In 1783 he was received and crowned by the musical academicians at Rome. He there extemporized on the harp, and followed up subjects for fugue, which were given to him, in a manner till then quite unknown on that instrument. He played on the harp at first sight, from the scores of Seb. Bach's fugues, and from those of Jomelli, and achieved on the harp what could scarcely be done by another on the piano-forte. Such an impression did his performance at the academy at Rome make on his audience, that the celebrated Corinna, who was present, rehearsed extemporary verses in his honor.

On his return from Italy, De Marin, then only fifteen years of age, commenced his military education at the cavalry school at Versailles. He quitted it at seventeen, as captain of dragoons, obtaining at the same time leave of absence to continue his travels; in the course of which the French revolution closed the doors of his country against him, and he was placed on the list of emigrants. He then proceeded to England, where his performance on the harp was universally admired.

M. de Marin has composed much music, chiefly for the harp, which has been published in Paris and London. Several of his compositions were so much esteemed by Clementi, that he arranged them for the piano-forte. We know not the exact period of M. de Marin's return to France, since which time, however, he has been no more heard on his instrument, but as an amateur.

MARINELLI, P. GIULIO CESARE, *da monte Cicardo Servita*, lived in the latter half of the seventeenth century, and wrote "*Via retta della Voce Corale, ovvero Osservazioni del Canto fermo*," Bologna, 1671. Buononcini, p. 11, c. 21, of his "*Musico Pratic.*," says, that in the third and fourth volumes of this work are to be found much information respecting the *canto fermo*.

MARINELLI, GAETANO, a dramatic composer from Naples, was, about the year 1790, in the Elector of Bavaria's service at Munich. Several of his airs in manuscript are well known to amateurs. He composed "*Litre Rivali, ossia il Matrimonio inaspettato*," opera buffa, Rome, 1784, and "*Gli Uccellatori*," opera buffa, Florence, 1785.

MERINI, ALESSANDRO, *Canonicus Lateranensis* and composer, flourished at Venice about the year 1556, where he published several works. Of these we can only mention "*Vesper Psalms*, for four voices," Venice, 1587, and "*Motteti à 6 voci*," Venice, 1588.

MARINI, BIAGIO, church and chamber composer, and also violinist, born at Brescia, was

first chapel-master in the cathedral church of Brescin. He afterwards went to Germany, and held the same employment in 1624, in the service of the Count Palatine, who granted him the title of chevalier. The period of his return to his native country is not known. All that we know, from the *Cozzando Libreria Bresciana*, is, that he died in 1660 at Padua. Cozzando also mentions the following works: "*Arie, Madrigali, e Correnti à 1, 2, e 3 voci*," Venice, 1620; "*Salmi à 4 voci*," "*Musiche da Camera, à 2, 3, e 4 voci*," "*Miserere à 2, 3, e 4 voci con V.*," "*Composizioni varie, Madrigali à 3, 4, 5, e 7 voci con V.*," "*Madrigali Sinfonie à 2, 3, e 4*," "*Arie à 1, 2, 3*," "*Musiche à 1, 2, 3, 4, e 5, lib. 4, 5, 7*;" and "*Sonata, Canzoni, Passamezzi, Balletti, Correnti, Gagliarde, Ritornelli à 1, 2, 3, 4, 5, e 6*."

MARINI, CARLO ANTONIO, a violinist and composer for his instrument in the church of St. Maria Maggiore, at Bergamo, was born there, and flourished in the latter end of the seventeenth century. He published eight works, of which we can mention the following: "*12 Sonate*," Op. 3; "*Balletti à la Francese à 3*," Op. 5, Venice, 1699; "*12 Sonate*," Op. 6; "*12 Sonate à 2 V., 1c., e Cont.*," Op. 7; and "*12 Sonate à V. solo e Cont.*," Op. 8.

MARINI, GIOSEFFO, chapel-master at Pordenone, in the Venetian states, in the beginning of the seventeenth century, published "*Madrigali*," Venice, 1618.

MARINI, — — —. A celebrated Italian basso now on the stage, and generally held to be second only to Lablache. He has sung in all the principal cities of Europe, and recently visited the United States and Havana.

MARINIS, GIOVANNI DE. A composer of the sixteenth century, of whose works mention is made in "*De Antiquis Primo Lib. à 2 voci de div. Autori di Bari*," Venice, 1585.

MARINI, GIOV. BATTIST., a Neapolitan chevalier and celebrated poet, born in 1569, resided some time at Rome, afterwards at Turin and Paris, and again in Rome. He died at Naples in 1625. Amongst other works, he wrote "*Diceris Sacre tre.*" Turin, 1618 and 1620. The title of the second piece is "*La Musica sopra le Sette Parole dette da Christo in Croce*."

MARIO. "*Motetti del Dottor Mario libri 6*," Venice, 1649. Under this title, a printed work was found in the musical archives at Copenhagen. It was destroyed by the fire there in 1794.

MARIOTIELLUS, FULVIUS, a learned writer in the beginning of the seventeenth century, born at Perugia, published "*Neopædia*," Rome, 1624. This is an introduction to the sciences, and to music among the rest.

MARIOTTINI, chamber singer to the elector at Dresden, published there "*12 Lieder*," words by Blumauer, for the piano, Dresden, 1790. A specimen of this work is to be found in the fourteenth music page of the *Musical Correspondence*, 1790. There are also known by this author "*8 Duettini p. 2 Sopr.*"

MARISSAL, ANTONIUS, *Baccalaureus Juris Pontificii* in the beginning of the seventeenth century, was born at Douay. He published "*Flores melodici*," Douay, 1611.

MARONI, GIOV., chapel-master of the cathedral church at Lodi, where he was considered, in 1620, as an industrious composer, was born at Ferrara. He wrote a number of motets and madrigals.

MAROTTA, ERASMUS, Jesuit, and rector of *Colleg. Menensis*, was, at the same time, an able musician and composer, in the first half of the seventeenth century. He was born at Mandazzo, a town in Switzerland, and was made a Jesuit in 1612, by which means he obtained the above situation. He died at Palermo in 1641. His published works are, "*Cantus pii musicis modulis expressi*," and "*Aminta*," a pastoral, the words by Torquato Tasso.

MARPALU, DE, a French philosopher of the seventeenth century. His name is found to the following two treatises: "*Traité de l'Origine de l'Harmonie, et de ceuz qui l'ont inventé, de son usage et de ses effets*."

MARPURG, FRIEDERICH WILHELM. The following account of this celebrated musician was published by Gerber, in the year 1814: "Marpurg, too, is gone, this venerable veteran amongst the literati of music! What tragic scenes have been presented to the Muses during the last ten years of the eighteenth century! Not one of these years has passed by without leaving the Muses in mourning. The unhappy effects of war on many of the chapels of the German princes I shall here pass over, especially as I have, in my '*History of Music for the Year 1794*,' (see *Annalen Deutschlands des J. 1794*,) found, alas! but too much of such matter to render it requisite again to touch on the same subject. Death, then, has within this period snatched away from us our first professor in musical science, our Marpurg! and just at a time when he spontaneously, with a warm love for the arts, and with an experience of more than fifty years, had begun to write in his own manner, that is, rudimentally, fully, and with excellent arrangement, his '*History of the Organ*,' a work well worthy the wish that he might have lived to complete it, and an undertaking to which I might myself have possibly contributed something. It was in November, 1793, when I passed five weeks at Berlin, that I was received in Marpurg's house almost daily, with the most friendly and hospitable attention. He then still showed the lively, jovial, and witty temper of youth; was corpulent, ate and drank well, and enjoyed perfect health. Only once, and just as he had returned from his lottery business, I found him reserved and dejected. 'My friend,' said he, 'we have had an unlucky day; we have lost much.' With the exception of this single instance, I found him every day more cheerful. When he had company he was the soul of it, and by ourselves our usual subject of conversation was ancient and modern music, dead and living artists. Many delightful hours have I passed with him in this manner. In one of those, he made me acquainted with the whole history of his life; but unfortunately the satisfaction which the enjoyment of his society procured me, as well as the many agreeable diversions and new subjects which presented themselves to me at every moment, in the beautiful and hospitable city of Berlin, allowed me so little time, that I could neither store these particulars in my memory, nor write them down. All that I can

recollect is, that he was born at Seehausen, in Prussia, in 1718; that after his return from Paris, where he resided many months, he acted for some time as secretary to a minister at Berlin; that he afterwards resided some time in Hamburg, after which he was presented with the direction of the lotteries at Berlin. I found, on the long table in his study, a quantity of books dispersed about, and some detached leaves of music: from these I concluded that he still thought much of and wrote music. I once requested him not to leave his pen inactive, but to take it up again for the benefit of musical literature. 'Perhaps,' said he, 'I shall soon be able to publish another volume of "*Legends*."' I replied gratefully, which he seemed to observe, but never touched upon the subject again. On the day of my departure, he called his amiable daughter, then between fifteen and sixteen years old, to the piano, when she played a masterly grand sonata, by chapel-master Schutz, with an expression and firmness which denoted any thing rather than a female hand. After she had withdrawn from the instrument, the worthy man brought the bound copy of the second volume of his '*Chorals and Fugues*,' and played to me himself a choral and part of a fugue, with those hands so long accustomed to labor for the benefit of the art; he then wrote a few flattering lines under the title, and presented me with the book as a remembrance. I parted from him with a heart greatly affected, full of love, esteem, and gratitude, and not long after was informed by my friends in Berlin how actively he was engaged in finishing his '*History of the Organ*,' which was to be published in 1795. What might we not have expected on this subject from a Marpurg, if it had pleased Providence to grant him one year more of life! but I soon, alas! received the melancholy news that his faculties began visibly to weaken, and that probably he was laboring under consumption. His disease, whatever it was, exhausted so quickly the powers of life, that he died early in 1795.

"It was probably by his order," continues Gerber, "that Madame Marpurg, his excellent wife, every way so worthy of him, sent me the materials, writings, and drawings which he had prepared for his work on the organ. By this means I am enabled to give the reader further information respecting this worthy man's undertaking. None of the parts belonging to the history were left in a finished state, but in all of them important progress was made by the author. The treatise on the hydraulic instruments of the Greeks is beyond dispute the most learned part of the work, and at the same time the most advanced. It is treated in a manner indicative of the author's own ingenuity united to extraordinary learning. In his treatise on the first wind organs of the middle ages, I have found several interesting remarks, and much information on the history of the organs of modern times. He seems to have occupied himself particularly in explaining the construction and the notes of the French organs, for which purpose he appears to have had recourse to the great work of *Belos de Celles*.

The following list contains the principal works of this celebrated author. Theoretical, "*Der kritische musicus and der Spree*, i. e., The critical musician of the Spree, fifty numbers 1749, &c. "*Die kunst das klavier zu spielen*," i. e., The art of playing the harpsichord, first volume in 1750.

second volume, containing thorough bass, in 1755. This work was translated into French, and the third edition of the translation appeared in 1760. "*Anleitung zum klavierspielen.*" This is the second and improved edition of the preceding work. "*Abhandlung von der Fuge,*" i. e. Treatise on fugue, Part I., Berlin, 1753, and Part II., 1754. A French translation of it was published at Berlin in 1756. Kollman states this to be the most profound and masterly work of the kind in the German language. "*Historisch kritische Beyträge zur Aufnahme der Musik,*" in five volumes, octavo, published at Berlin between the years 1754 and 1760. "*Handbuch bey dem Generalbass, und der Composition,*" Berlin, 1755, 1760. Kollman says this work treats on harmony in a masterly manner, but according to Rameau's system, concerning which it is certain, that the more harmony is explained by it, the more perplexing it becomes. "*Anfangsgrunde der theoretischen Musik,*" 1757. "*D'Alembert's systematische Einleitung, &c.,*" translated from the French, with notes, 1758. "*Anleitung zur Singkunst,*" 1759. "*Kritische Einleitung, &c.,*" 1756. "*Kritische Briefe über die Tonkunst,*" Berlin, 1760 and 1763, in two volumes, each consisting of four parts. This work is, according to the compilers of the French musical dictionary, filled with interesting matter, and contains many dissertations from the pens of such great masters as Agricola, Kirnberger, &c. "*Anleitung zur Musik überhaupt, &c.,*" 1763. "*Sorgen's Anleitung zum Generalbass, &c.,*" 1760. "*Versuch über die musikalische Temperatur, &c.,*" Breslau, 1776. This work demonstrates different equal and unequal temperaments, by harmonical calculations; and to it is added an appendix on Rameau's and Kirnberger's fundamental bass. "*Legende einiger Musik-heiligen,*" Cologne, 1786. Practical works: besides a vast number of single songs, published either in his memoirs, his letters, or in the collections of German songs, he printed between 1756 and 1762, "Five Sets of Odes." Also the following: "*Raccolta delle più nuove Composizioni di Clavicembalo, per l'anno 1756, and Raccolta 2, per l'anno 1757.*" "*Klavierstücke für Anfänger, &c.,*" three volumes, Berlin, 1762: the above is an interesting and useful work. "*Sei Sonate per il Cembalo,*" Nuremberg, 1756. "*Fughe e Capricci per Clavicembalo e per l'Organo,*" Op. 1, Berlin, 1777; and "*Fugensammlung,*" 1758. This collection of fugues contains the *chef d'œuvres* of Graun, Kirnberger, &c.

MARPURG, JOH. FRED., son of the preceding, was born at Hamburg in 1766. He was, in 1814, chamber musician to the Duke of Mecklenburg, at Ludwigslust, and had previously been first violin in the orchestra of the German theatre at Berlin, also employed by the count of Schwedt. He entered the service of the Duke of Mecklenburg in 1790; still, however, in 1791 he was giving several concerts at Hamburg; soon after which he seems to have given up solo playing, as his father, indeed, told Gerber in 1793. Probably the occupations required for his extensive musical duties did not allow him time for the cultivation of practical music.

MARQUE, AUGUSTE, a musician, and probably a performer on the piano, at Paris, published there, in 1798, "*L'Absence,*" a romance. "*L'Origine de la troisième Grace.*" "*Six Airs*

et Romances avec Accompagnement de Piano-forte." "*L'Amant trahi, Romance, avec Clavécin,*" 1802.

MARQUE, JOHANNES DE, a native of the Netherlands, was chapel-master to the King of Naples in 1616.

MARQUEZ, ANTONIO LESBIO, royal chapel-master at Lisbon, and born there, was not only considered one of the first contrapuntists of his time, but also by the publication of several oratorios, poems and other works, showed that he was possessed of extraordinary knowledge, not in music alone, but also in poetry and languages. He obtained, in 1698, his office of chapel-master, in the possession of which he died in 1709. Of his compositions there has only been printed, "*Vilancicos que se cantarão na Igreja de N. Senhora de Nazareth das Religiosas Descalças de S. Bernardo em as Matinas e Festa do glorioso S. Gonçalo,*" Lisbon, 1708. A great number of his other works, as masses, magnificats, misereres, responses, (all in manuscript,) are in the royal library at Lisbon, and highly esteemed.

MARSCHALL, SAMUEL, born at Dornick, in Flanders, in 1557, was a notary public, university musician, and organist, at Basil, where he was living in 1627, being then seventy years of age. He published "*Der ganze Psalter, II. Ambrosii Lobreassers, mit 4 Stimmen,*" Leipsic, 1594, and "*Psalmen Davids, Kirchengesang und Geistliche Lieder von Dr. M. Luther's und anderer Gottesgelehrten Männern gestellt, mit 4 Stimmen, fertiget durch, &c.,*" Basil, 1606.

MARSCHNER, HEINRICH, a dramatic composer, was born at Zittau, on the 16th of August, 1795. In his earliest youth he displayed remarkable musical talents, so that he soon exhausted the learning of the teachers to whom he was committed. He subsequently entered the choir of the children of the Gymnasium, then under the direction of the celebrated Schneider, where he attracted the attention of the organist of Bautzen, who offered him a situation in the choir of his church; but Bergt (the cantor at Bautzen,) teaching him only Greek and Latin, instead of harmony, Marschner abruptly returned to Zittau, and devoted himself to developing, without assistance, the taste for musical composition which had tormented him from early childhood; here, in his leisure hours, he wrote every thing that came into his head — songs, motets, piano music; he attacked every thing, instructing himself only by his own mistakes. At this time he wrote a ballet, "*La Fièvre Paysanne.*" He afterwards found the opportunity of going to Prague, where Weber directed the opera at that time, (1812.) His condition as a Saxon subject compelled him, at the expiration of the armistice, to leave Prague, and he departed to Leipsic, placing himself under Seilicht, to whose instructions he was much indebted. He also here became acquainted with Beethoven, Kozeluch, and Klein of Presburg. In 1821 he returned to Saxony, and chose Dresden as his residence, and here composed many of his operas, which gained him a high reputation; and here he became, in company with Weber and Morlacchi, director of the Dresden opera.

In 1826 he married Mlle. Marianne Wohlbruck, a well-known singer, and in the same year, on the death of Weber, being unable to succeed him as first director of the opera at Dresden, he

sent in his resignation, and removed to Berlin, where Madame Marschner had most brilliant success on the stage. In 1827 they removed to Leipsic, where, in the next year, "*Le Vampire*," the most celebrated of his works, was produced; and in 1829 he produced "*Le Templier et la Juive*;" in 1830, "*La Fiancée du Fouconnier*." In this year Marschner was called to Hanover as maître de chapelle to the king; and here he wrote, "*Le Château au Pied du Mont Etna*," and subsequently, in 1832, "*Hans Heiling*."

Fétis says of this composer, that "he cannot be denied the merit of being one of the successors of Weber who have shown the highest dramatic sentiment in his works. He succeeded not alone in serious drama, and is one of the very small number of German composers who, in attempting the comic, do not fall into the trivial. His melodies are expressive, but his manner of writing is negligent, and he often abuses the use of transitions. Still the author of the '*Vampire*,' the '*Templier*,' and of '*Hans Heiling*,' will leave no common name in the history of art."

His published works are, 1st. "*Der Holzdieb*." 2d. The overture and entr'actes to the drama "*Le Prince de Hombourg*." 3d. Overture and airs to the drama, "*La belle Ella*." 4th. "*Le Vampire*." 5th. "*Le Templier et la Juive*." 6th. "*Das Braut der Falkner*." 7th. "*Hans Heiling*." 8th. "Ten Collections of Songs for four male voices." 9th. "Twenty Collections of Songs, Romances, and German and Italian Airs for a high voice with piano accompaniment." 10th. "Quatuor for piano, violin, viola, and bass," Op. 36, Leipsic. 11th. "Trios for P. V. and Cello, besides a great number of Sonatas, Rondeaus, Fantasies," &c., &c.

MARSH, ALPHONSUS, was a gentleman of the chapel in the reign of Charles II. Various songs of his composition, as also of a son of his, having both his names, are extant in the "Treasury of Music," and other collections of that time.

MARSH, an English divine, who died a bishop in 1713, wrote a "Discourse on Acousticks." (See Hawkins, vol. iv. p. 443.)

MARSH, J., ESQ. This celebrated amateur was born at Dorking, in Surrey, in 1752, being the eldest son of Captain H. Marsh, of the royal navy, who, in 1758, removed with his family to Greenwich, on being appointed to command one of the royal yachts at Deptford. At this time the attachment of young Marsh to musical sounds began; he being so fascinated with the organ in the hospital chapel, then played by Lupton Relte, that it was not without some degree of force he could be removed from the pew whilst the last voluntary was playing, to which he was afterwards only reconciled by being reminded, that by not staying till it was finished, he should hear it all the way he went down stairs. That he had an innate musical ear, may be evinced by the following circumstance. Having been sent, when in his eighth year, to Greenwich Academy, he then went with the other boys to the parish church, where, besides the organ, his attention was invited to the bells, of which he had heard there were eight. It being, however, the custom, as soon as the chiming to church had ceased, to raise the *little* bell, and to begin tolling the largest when the minister entered the church, by comparing the two sounds of these together,

he perceived they exceeded the *octave*, and, in fact, formed the interval of a *tenth*—not that he had then ever heard or was aware of there being any such terms. On his mentioning his discovery, that the peal consisted of ten bells, to some of the boys, it was quite unintelligible to any of them how he could possibly ascertain this without hearing them all together and counting them. The fact, however, turned out to be just as he had inferred. In the summer of 1761, his father being despatched in the Catharine yacht to Helvoetsluys, to bring back the Dutch ambassador, he took his son with him, where, in a trip to Amsterdam, they were gratified with hearing the famous organ at Haerlem, which made an impression on the boy never to be eradicated. As a few of the boys at his school learned to scrape a little on the violin, Marsh was now desirous of following their example; but his father, foreseeing that it would be apt to divert his attention from his other studies, wisely determined on not letting him learn till he had left school. He however, whilst there, from the simple inspection of a ballad, set to music, that came in his way, discovered the method of musical notation, and wrote a song he then occasionally sang, in similar notes, which his father, who played a little on the flute, told him was accurately written, except that, not then knowing any thing of the time table, he had made the notes all crotchets.

Having left school at the end of the year 1766, his father, who then resided at Gosport, consented to his learning, not indeed on the organ, which he would have preferred, but on the violin, as being a portable instrument, and with which he could accompany his sister, then learning on the pianoforte. Having practised this for a year, under the tuition of Wafer, the organist, he accompanied his master to a weekly practice of amateurs and others, where he began taking a ripieno part at sight, which he soon also did at the concerts at Portsmouth. Hearing there the popular concertos of the ancient school, and the then modern symphonies of Abel, Bach, &c., he now began attempting to compose pieces in both styles, and showed them to his master, when he gave him a few hints as to the avoidance of consecutive fifths and eighths, which, with a year and a half's tuition on the violin, was all the musical learning of any kind he ever had, being sent, in August, 1768, to Romsey, to be articled for five years to a solicitor there, where he was much disappointed at finding no organ in the church, and, of course, no organist. Being now the chief musician of the place, the only method he had of obtaining any further improvement, during five years, was by occasionally attending and performing at the concert at Winchester, and the then annual oratorios there. In the year 1772, his father, then a captain in Greenwich Hospital, died; and, in 1774, the subject of our memoir married the daughter of Dr. Brown, a physician of Salisbury, who had then retired to Romsey; within two years after which, they all removed to Salisbury, where the fortnight subscription concerts were under the direction of Mr. Harris, (known by the name of Hermes Harris,) and were reckoned the best musical performances of the kind in the kingdom. There being several amateur performers in the orchestra, Mr. Marsh was immediately appointed to a respectable station in it, and had thus an opportunity of im-

proving himself on the violin and tenor, and had a few manuscript symphonies he had then composed, so well executed, as to induce him to continue that style of composition. He also, by private practice of an evening, and sometimes on one of the church organs, acquired such a proficiency on the latter, as to be able occasionally to officiate for the organist at the churches of St. Thomas and St. Edmund; but finding the printed voluntaries he met with to be too difficult, and few of them to his taste in other respects, he began composing a series of short voluntaries, some of which he selected for his first set of voluntaries for young practitioners on the organ, published in 1791. On the death of Tewksbury, the leader of the concerts in 1780, Mr. Marsh was requested by Mr. Harris and the principal amateurs to take his place, which he continued to hold whilst he remained at Salisbury.

In August, 1781, by the death of Mr. Winchester, a tenant for life, Mr. Marsh became possessed of a landed estate in East Kent. He therefore, soon afterwards, quitted the dry and husky study of the law, to which he was never much attached, and, in 1783, removed with his wife and four children to his mansion house of Nethersole, near Barham Downs, which he immediately furnished with a large organ, placing it between the entrance hall and the dining parlor, with a front to each, and playable in both rooms. In the following winter the subscription concert at Canterbury was put under his direction, which he led all the time he remained there, and it was attended by the principal families in the neighborhood. Finding it, however, necessary to keep up a larger establishment at Nethersole than he could conveniently afford with his increasing family, he, after remaining three years, determined on disposing of that house, and bought a large one, with a lofty and suitable room in it for his organ, and a good garden, of Mr. Hayley, at Chichester, for the sake of being in the neighborhood of Portsea, where his sister, then married, was settled; but, as the house would not be untenanted till Michaelmas, 1786, and some repairs and alterations would then be wanting in it, he took one of the prebendal houses at Canterbury for a year, from the preceding Lady-day, where he now found himself able to officiate occasionally for the organist at the cathedral. He had before composed an anthem from the one hundred and fiftieth psalm, with symphonies, to show off the stops of the new organ erected there by Green, in 1784; and, whilst resident at Canterbury, he composed a verse service, which, at the request of the dean, was performed at Archbishop Moore's primary visitation, in 1786, also two other anthems—a style of composition he would probably, have cultivated more than any other, had he afterwards met with the same encouragement that he did on the above occasions.

In April, 1787, he removed to Chichester, the subscription concert in which town he managed and led more than a quarter of a century, and where, having a very respectable amateur and professional band at his command, he continued his career of composing overtures in the ancient, and symphonies in the modern style, one of which, under the signature of J. M., was generally put into the concert bill. He also composed several glees, another service, some more anthems, and occasionally officiated for the or-

ganist of the cathedral, as he used to do at Canterbury. For the last eight or ten years of his life, his principal and almost only public musical performance was, taking the morning duty at St. John's free chapel for Mr. Bennett, who, being organist also of the cathedral, could only do the chapel evening duty himself. He occasionally took a violin or tenor at private musical parties, the practice on which instruments he continued principally for the sake of joining in a domestic evening trio with his eldest son, a solicitor of Chichester, who also practised on the violin and tenor with his eldest son, who played on the violoncello. Having mentioned this domestic trio, it may, in conclusion, be noticed, that once, when his brother William (also a musical amateur and performer on the violin and flute) was staying with him at Chichester, a quintetto, composed by Mr. Marsh, for two violins, flute, tenor, and bass, was performed at the subscription concert, by himself, brother, and three sons, the composer and five performers being thus all of the same name. It must not, however, be supposed that, great as was his attachment to it, music was Mr. Marsh's only pursuit after he quitted the practice of the law, as he subsequently became much attached to the science of astronomy, being the author of the "Astrarium improved, and Vertical Planetariums," published by Messrs. Cary, London; and, as a matter of duty more than inclination, he was induced to acquire some knowledge of military tactics, having, in 1803, been appointed first captain of a battalion of volunteers at Chichester, whence he was afterwards promoted to the majority.

The following, among other music, was composed by Mr. Marsh. For instruments, published works: "Eight Symphonies, in several Parts;" "One Symphony for two Orchestras;" "Three Finales in several Parts;" "One Quartetto in imitation of Haydn's first Set;" "Three Overtures in five Parts, for private musical Parties." Organ music: "An Overture and Six Pieces;" "Five Sets of Voluntaries for young Practitioners;" "Four Duets." Military music: "Overture and Ten Pieces for Military Bands." Vocal music: "Eleven Songs;" "Fourteen Glees." Sacred music: "Nine Anthems;" "Sixteen Psalm Tunes and Hymns;" "Twenty-four Chants;" "Walter Scott's Hymn for the Dead;" "Hymn of Benediction to the Bible Society;" (Hayley,) "Ten Sacred Melodies, and New Zealander's Welcome." Treatises: "Rudiments of Thorough Bass;" "Thorough Bass Catechism;" "Hints to young Composers;" "Essay on Harmonies;" "Sixteen Movements from different Composers in Score for the use of Musical Students;" "Tables of Transposition and Consonant Intervals;" "Instructions and Progressive Lessons for the Testor."

MARSHALL, JAMES, was born at Olting, in Buckinghamshire, in the year 1770. He first took up music, early in life, merely as an amusement, his instruments being the violin and violoncello, till evincing a talent for the art, his friends advised him to make it his profession. He was accordingly placed under a master at Oxford, with whom he studied the violin, violoncello, piano-forte, and organ. After this, through the kind patronage of the Earl of Dartmouth, he

was sent to London, and placed with John Ashley, assistant conductor at the Westminster Abbey meetings. In addition to the before-named instruments, Marshall practised the double bass and tenor. After some little time, through Ashley's kindness, he got an engagement to play the double bass at the abbey meeting, in the year 1790; also at several of the provincial meetings, among which was that at Worcester, upon the king's recovery, when his majesty was present. After which time Marshall regularly attended the meetings of the three choirs, namely, Gloucester, Hereford, and Worcester.

After a residence in London of about a year, Marshall went to Northampton, where he was married. He then commenced teaching music, and continued in that place three years and a half. From thence he moved to Rugby, being appointed organist of the church in that town. Here he remained eight years and a half, when, in the year 1801, the situation of organist to St. Mary's Church, Warwick, becoming vacant, Marshall was proposed as a candidate, and was elected. In the April following, he with his family went to reside at Warwick.

MARSHALL, FREDERIC, eldest son of the preceding, was for some years assistant to his father. His instruments were the organ and piano-forte. In the year 1821, a new organ was erected in the chapel at Rugby school, when F. Marshall was appointed organist. He has composed some music for the piano-forte, also hymns and songs; "Preludes in various keys for the Piano-forte;" "Festival Hymns," as sung at St. Nicholas Church, Warwick; "*Dulce Domum*," arranged with variations for the piano-forte; "Britain with unaffected grief;" "Hymn on the Death of his late Majesty;" Song, "Can a rosy lip;" "Harmonious Blacksmith," arranged for the harp, piano-forte, flute, and violoncello; "Rondo," in an easy style, for the piano-forte.

MARSOLO, PIETRO MARIA, is mentioned by Cereseto, in 1600, as one of the first musicians of Italy. He lived at Ferrara.

MARSYAS, a player on the flute, was still more unfortunate than either Pau or his admirer Midas. Having engaged in a musical dispute with Apollo, he chose the people of Nysa for judges. Apollo played at first a simple air upon his instrument; but Marsyas, taking up his pipe, struck the audience so much by the novelty of its tone, and the art of his performance, that he seemed to be heard with more pleasure than his rival. Having agreed upon a second trial of skill, it is said that the performance of Apollo, by accompanying the lyre with his voice, was allowed greatly to excel that of Marsyas upon the flute alone. Marsyas, with indignation, protested against the decision of his judges, urging that he had not been fairly vanquished according to the rules stipulated, because the dispute was concerning the excellence of their several instruments, not their voices, and that it was wholly unjust to employ two arts against one.

Apollo denied that he had taken any unfair advantage of his antagonist, since Marsyas had employed both his mouth and fingers in performing upon his instrument; so that if he was denied the use of his mouth, he would be still more disqualified for the contention. The judges approved of Apollo's reasoning, and ordered a third

trial. Marsyas was again vanquished; and Apollo inflamed by the violence of the dispute, flayed him alive for his presumption. Marsyas was of Celenæ, a town in Phrygia, and son of Hyagnis, who flourished, according to the Oxford marbles, 1506 years before Jesus Christ.

Plato tells us that we are indebted to Marsyas and Olympus for wind music; and to these two musicians is likewise attributed the invention of the Phrygian and Lydian measure. Marsyas is also said by some to have been the inventor of the double flute, though others give it to his father, Hyagnis.

MARTELLATO. (I.) Well articulated, smartly detached.

MARTELLI, chapel-master, in 1790, at Munster, set to music "*Die Reisenden nach Polland*," "*Der Tempel der Dankbarkeit*," and "*Der König Rabe*."

MARTENNE, EDMUND, a celebrated Benedictine monk, born in 1654, published at Paris, in 1719, "*Traité de l'ancienne Discipline de l'Eglise dans la Célébration de l'Office Divin*." There are some interesting details in this work respecting church music. Martenne died at Paris in 1739.

MARTIAL MUSIC. Music adapted for war and warlike occasions. An expression applied to marches, troops, military dirges, songs of triumph, and all compositions, vocal or instrumental, calculated to stimulate to battle, excite commiseration for the fallen, or celebrate heroic deeds.

MARTIAL PIECE. An instrumental composition, the style of which is warlike.

MARTIAL SONG. A song, the subject and style of which are warlike.

MARTIN, the younger, a French composer, who published several *chansons*, flourished in 1678, as a performer on the harpsichord, viol da gamba, and violin.

MARTIN, a musician at Paris about the year 1750. His symphonies, which were published in that city, were much admired, as were also some of his motets, which were sung at the *Concert Spirituel*.

MARTIN, NICOLAS, a composer, born at Morienne, in Savoy, composed several hymns on the birth of Christ, both in French and the Savoy dialect, and published them under the title of "*Patoyes*," Lyons, 1566.

MARTIN, CLAUDE, born at Autun, in Burgundy, published, about the year 1550, two works entitled "*Institution Musicale*," and "*Elémens de Musique*."

MARTIN, JONATHAN, organist of St. George's, Hanover Square, in 1736. He composed the song in Tamerlane, "To thee, O gentle sleep." He died of consumption at an early age.

MARTIN, VINCENZO, called also SPAGNUOLO, Russian imperial counsellor, *chef d'orchestre*, and composer to the Russian theatre at St. Petersburg, had rendered himself, as early as the year 1782, celebrated in Italy by the composition of several operas and ballets. He went afterwards to Vienna, where, in 1785, he wrote his "*Il Barbero di buon core*," which was particularly esteemed by connoisseurs, though his "*Cosa*

Rara," 1786, and "*Arbore di Diana*," 1787, more generally pleased. In 1788 he proceeded to St. Petersburg, where he was immediately appointed *chef d'orchestre* and composer in the Russian opera: he gave at the same time instructions in music. In 1798 the emperor made him counselor. Of his printed and manuscript works, we can mention the following: "*Una Cosa Rara*," Vienna; "*L'Arbore di Diana*," Vienna, 1787; "*Gli Sposi in Contrasto*," Vienna, 1794; "*Il Sogno Cantata à 3 voci*," 1793; "*12 Ariette Italiane con Accom. di Cemb., o Arfid, o Chitarra*," Vienna; "*12 Canoni per Cembalo*," Vienna; "*La Dora festeggiante, Prologo serio*," Turin, 1783; "*L'Accorta Cameriera*," op. buffa, Turin, 1783; "*La capricciosa corrella*," translated into German in 1800.

MARTIN, N., an excellent tenor singer at the Théâtre Feydeau at Paris, was born there about the year 1770. In 1788, he made his *début* at the Théâtre de Monsieur in the character of the Marquis Tulipano, with unparalleled success. During two years, this performance, with the delightful airs Martin sang, attracted all ranks of society in Paris. His songs "*Je croyais ma belle*," "*Pauvre d'atours*," "*Je le jure à toute la terre*," &c., will very long be remembered. Martin was the first singer who established at Paris the Italian style of singing to French words. The other operas in which Martin was principally shone are, "*L'Oncle et le Valet*," "*Les Confidences*," "*Une Folie*," "*Gulistan*," "*L'Habit du Chevalier de Grummont*," "*Koulouf*," "*La Ruse inutile*," "*Picaros et Diego*," "*L'Frato*," "*Jadis et Aujourd'hui*," and "*Maison à vendre*."

Martin was performing at Paris in the year 1822, where he continued attracting crowded audiences to the Feydeau. His singing also at the Chapel Royal in the Tuileries was still greatly admired. We should add, that he is known as a composer by several collections of romances, and by a comic opera, "*Les Oiseaux de Mer*," performed in 1796.

MARTINELLI, VINCENZO, doctor of laws, resided some years in London, about 1750. He afterwards went to Paris, where, in 1762, he inserted several articles in the patriotic writings of the day. The following original works are his: "*Lettere Familiare e Critiche*," London, 1758; among which are Letter 27, "*Al Milady Novedigate a Arbury, invitandola a venire a Londra per veder l'Opera del Siroe*;" 28, "*Alla Sgra. Coniers, sopra la di lei Applicazione al Suono della Cetra*;" 20, "*Sopra una Commissione data all'Autore tocante l'Opera*;" 31, "*Sopra il non avere l'Autore ancor pubblicata la sua Istoria della Musica*;" 65, "*Sopra la Ragione del Canto, e sua Composizione*;" 56, "*Della Ragione del Suono*," and "*Lettre sur la Musique Italienne*," Paris, 1762.

MARTINELLI, N., an Italian singer at Paris, in 1804, excelled in the buffo style.

MARTINEZ, JOHN. A Spanish priest and chapel-master of the cathedral at Seville, lived about the year 1558. He left a work entitled "*Arte de Canto Llano puesta y reducida nuebanente en su entera perfeccion segun la practica*," i. e., The art of plain song brought to entire perfection, according to practical rules, &c.

MARTINEZ, MLE. MARIANE, or, according to others, ELIZABETH, was born at Vienna,

about the year 1750, in the same house which was then inhabited by the celebrated Metastasio, who was an old friend of her father. She was educated under the eyes of this great poet, who, on the death of her father, adopted her, and, among other accomplishments, taught her music. Dr. Burney, when at Vienna in 1772, heard her sing and perform on the piano several of her own compositions, and states that he cannot find words to express the energetic yet tender style of her singing. Metastasio always called her his St. Cecilia. Burney further says that she had a profound knowledge of counterpoint, and cites, among other sacred works of her composition, a "*Miserere*" for four voices, and several Italian psalms, translated by Metastasio, and arranged for four and eight voices and instruments. In 1773 she was elected a member of the Philharmonic Society at Bologna. The Abbé Gerbert states that he possessed a mass, of her composition, written in the genuine church style.

MARTINI, GIUSEPPE SAN, was a native of Milan. He was a performer on the hautboy, an instrument invented by the French, and of small account, till by his exquisite performance, and a tone which he had the art of giving it, he brought it into reputation. Martini went to England in the year 1723, and was favored by Buononcini, Greene, and others of that party, as also by Frederic, Prince of Wales, who was his great patron. When Greene went to Cambridge to take his degree, Martini attended him, and performed in the exercise for it, and had there a concert for his benefit, which produced him a considerable sum. He was an admirable composer; and for instrumental music may, without injury to either, be classed with Corelli and Geminiani. His first compositions were sonatas for two flutes, and others for German flutes: these are scarcely known, but the greatness of his talents is manifested in six concertos and twelve sonatas, published by himself. The first of these works was published in the year 1738, when the concertos of Handel, were become so familiar, there being scarcely any concert in which the compositions of these two masters did not make considerable part of the evening's entertainment; and with respect to those of Corelli, this had been the case for almost thirty years. Martini had therefore a ground to hope that the charm of novelty would recommend these his compositions to the public favor; but he was disappointed in the expectations he had formed of the immediate sale of the whole impression of his book, and, in an evil hour, destroyed not only a great number of the copies, but also the plates from which they were wrought. The work being rendered scarce, Johnson, of Cheapside, was tempted to republish it; and it was so well received, that the author soon found reason to repent his rashness, and was encouraged to prepare for the press eight overtures, and six grand overtures for violins, &c., but just as he had completed it he died: however, it was published by Johnson after his decease, with an advertisement in the title page, that the work was engraved for the author in his lifetime, and was by him intended to be published by subscription. The overtures in this collection are called "*Opera Decima*," and the concertos, Op. 11. Walsh also published

eight overtures, in eight parts, and six grand concertos for violins, &c., by Martini, which, notwithstanding they are a posthumous publication, carry with them undoubted evidence of their genuineness.

The merits of Martini, as a composer of music in many parts, were unquestionably very great. He had a fertile invention, and gave into a style of modulation less restrained by rule than that of his predecessors, and by consequence, affording greater scope for his fancy. Those who ascribe his deviation from known and established rules to the want of musical erudition are grossly mistaken: he was thoroughly skilled in the principles of harmony; and his singularities can therefore only be ascribed to that boldness and self-possession which are ever the concomitants of genius; and in most of the licenses he has taken, it may be observed, that he is in a great measure warranted by the precepts, and indeed by the example, of Geminiani.

He performed on the hautboy in the opera till the time that Buononcini left it; after that he played at the Castle concert, and occasionally at others; but being patronized by Frederic, Prince of Wales, he was at length received into his family, upon the footing of a domestic, and appointed master or director of the chamber music to his royal highness. In the course of this employment he composed a great number of sonatas for the practice of the claunder; and, upon the birth of the Princess of Brunswick, set to music a drama written on the occasion of that event. He also composed a musical solemnity, which was publicly performed at the chapel of the Bavarian minister. In the honorable and easy station above mentioned, Martini continued till about the year 1740, when he died.

As a performer on the hautboy, Martini was undoubtedly the greatest that the world had ever known. Before his time the tone of the instrument was rank, and, in the hands of the ablest proficients, harsh and grating to the ear; by great study and application, and by some peculiar management of the reed, he contrived to produce such a tone as approached the nearest of all instrumental tones to that of the human voice.

MARTINI, BATTISTA SAN, of Milan, was brother to the celebrated player on the hautboy already mentioned, whose performance and compositions were so long and justly admired in London.

The violin does not appear to have been his chief instrument, yet he produced for it an almost incredible number of spirited and agreeable compositions. About the year 1770, he was in such repute as to be chapel-master to more than half the churches in Milan. For these he furnished masses upon all great and solemn occasions.

MARTINI, CHRISTOPHER, a Dutchman, lived in the middle of the seventeenth century, and wrote "*Handboek van den waren Loop der Toonen*," Amsterdam, 1641.

MARTINI, PADRE GIAMBATTISTA, a skilful composer and very erudite musician, was born at Bologna in 1706. After the period of his youth, he entered the order of St. Francis; we do not know whether he had engaged in it when his taste for erudition and his love for antiquity led him to undertake the travels which

he extended to Asia. It was not till his return that he entirely devoted himself to music; he studied under several masters, amongst whom he himself mentions the celebrated Ant. Perti. His progress in composition was so rapid, that in 1723, when but seventeen years of age, he was appointed chapel-master to a convent of his order at Bologna, which situation he filled till his death.

He exercised the functions of professor in the same art, and his school, the most learned in existence in Italy during his life, has produced a considerably larger number of great composers than any other, while artists enjoying a high reputation, and crowned with the most brilliant success, have considered it both an honour and a duty to take his advice, and to attend to his instructions: amongst these was the celebrated Jomelli.

To the talent of forming good scholars P. Martini united that of a composer. He has written a large quantity of highly esteemed church music, but his most celebrated compositions are some duets in the style of Ricercari, and some canons for the harpsichord or organ, which are excessively difficult. Notwithstanding a degree of coldness, his works please by the purity, learning, and good taste which characterize them.

But Martini's principal titles to reputation are his treatises on the different parts of music: Amongst his works there are two which deserve particular attention, namely, his "*Saggio Fondamentale Pratico di Contrapunto*," or "*Essay on Counterpoint*," and his "*History of Music*."

The first of these consists in two collections of models, the one of counterpoint upon plain chant, the other of fugues, for from two to eight voices. In the first collection, the Père Martini takes a survey of the eight sounds generally admitted into plain chants; he gives an example of counterpoint, properly so called, upon each of them, most frequently taken from Coust. Porta, and several examples of plain chant fugated, taken from Palestrina. These examples are accompanied by explanatory notes, the whole preceded by a summary composition of the rules of counterpoint. The second collection is an abridged treatise on the rules of fugue and canon, followed by pieces of fugue in the madrigal style, sacred and profane, rising from two to eight voices, with and without a continued bass, accompanied by notes. The most praiseworthy part of these collections is, without doubt, his choice of examples, drawn from the best masters, and which convey a knowledge of their several styles of composition; this excepted, the work, in the present state of things, possesses but a very moderate utility. In fact, with respect to the counterpoint or plain chant, the examples by P. Martini are written upon a system which is no longer felt in these days, and which consequently cannot be treated with success: as to the fugated pieces, they are more like preludes than fugues, properly so called; a great number are written upon the principles of the preceding, and are therefore useless. With regard to the text accompanying these models, it cannot be denied that the introductions are too much abridged, and consequently useless to the pupils who do not understand them, and also to the masters who know more than they include. With relation to the notes placed below the examples, in spite of some very interesting particulars, it must be owned that they

are in general too simple, since they include no more than what is already known by those who undertake to read them, and merely present them with remarks which they themselves are able to make. As the digressions indulged in by the commentator deserve reproach, they contain nothing to excuse their length; and therefore we must conclude the greatest merit of P. Martini, in this work, is, that of having proved that he perfectly understood Italian antiquity, that is to say, the excellent school of the sixteenth and seventeenth century, while, by the good taste he had displayed in the choice of the *chef-d'œuvres* of this epoch, he was able to induce the reader to appreciate it.

P. Martini's "History of Music" deserves a similar mixture of praise and censure. The work attests immense reading and prodigious erudition; it is a continuation of anecdotes, written with purity, and somewhat interesting, but it has neither end nor plan, nor the least shade of judgment or criticism. He intended to comprise it in five volumes, but thus continued, it would have extended to at least twenty-five or thirty.

With the view of pursuing his labors, P. Martini had amassed an enormous quantity of materials. The libraries of Italy had enriched him with valuable manuscripts. His friend Botrigari had left him his great musical library, which contained many rare works. The generosity of the famous Farinelli furnished him with considerable funds, and enabled him to procure all imaginable materials. These united sources formed a library of seventeen thousand volumes, three hundred of which were manuscripts. They occupied four rooms; the first contained the manuscripts, in the second and third were placed the printed books, and in the fourth the musical works, nearly all manuscript.

The sweetness, simplicity, and modesty which formed the character of Martini, his eagerness to communicate to all who desired it the treasures of science and of erudition he possessed, have conciliated universal esteem and veneration. The great Frederic, to whom he sent, in 1702, his "History of Music," answered him with a letter written with his own hand, accompanied by a snuffbox, and his portrait, enriched with diamonds. All those whom the love of the arts conducted into Italy, visited him in passing Bologna, and quitted him with sentiments of admiration and gratitude. He was attacked, in 1774, with the dropsy in the chest, according to Dr. Burney, who about that time discerned in him symptoms of that disease, and he died August 3, 1784.

MARTINI, MARTIN, a Franciscan friar and church composer in the beginning of the eighteenth century, published "72 ein und zwey-stimmige Arien auf alle Feste in Jahr, mit 2 Instrum., und Gen. Bass," Augsburg; "Fierstimmige Vespern de B. V. Maria et Sanctis Apostolis," Augsburg; "Litaneyen und Salve Regina, mit 2 B. und Gen. Bass," Augsburg, 1717.

MARTINI, GIOVANNI P. E., was born in 1741 at Freystatt, a small town in the Upper Palatinate. He studied early in life music and the Latin language, and at the age of ten had made such progress in the former, that he was appointed organist to the seminary of the town of Neuburg, on the Danube, where he continued for the further space of six years his accustomed

studies. In 1758 he went to the University of Friburg, in Brisgau, where he studied philosophy, and acted as organist to the Franciscans. Having at this time decided on the musical profession he resolved to travel, and uncertain where he should first go, it is said that he took it in his head to mount to the top of his house, which was situated between the town gate leading to France and that to Italy, and to throw a feather in the air, with a determination of following the direction in which it should be blown. As it flew towards the French gate, he followed that route, and arrived in France in 1760. He first stopped at Nancy, where his talent for music, together with the frankness of his character, procured him numerous friends. Here he perfected himself in his art, and had an opportunity of examining, step by step, the construction of a new organ with fifty stops for the cathedral at Nancy. It was this which gave him the idea of his work entitled "*École d'Orgue*," which was published at Paris in 1804. In 1764 he arrived at Paris, and the day after he was requested by some acquaintance to compose a march for one of the regiments of Swiss guards. He did so the same evening, and the following morning it was taken to the Duke of Choiseul, who had fixed that day to give a prize for the best new march. The duke was so pleased with it when played on parade, that he remitted to Martini a *rondeau* of twenty-five louis. Such was his *début* at Paris. He next made himself known by some trios and quatuors for the violin, and by several sonatas and concertos for the piano-forte, which he caused to be published. He then was charged with the composition of a grand mass; this he himself considered as one of his best works, and it was performed at Vienna for many years afterwards on a particular annual festival. He soon after this became director of the chamber music of the Prince of Condé, from whose service he passed to that of the Count d'Artois, with whom he remained till the commencement of the revolution. In the sixth year of the French republic, the directory nominated him one of the five inspectors of instruction at the Conservatory; but neither his talent nor that of Grétry and Monsigny being longer *à l'ordre du jour* with the republicans, they were all three dismissed.

Martini is one of the musicians who have most contributed to the improvement of military music in France. He is also the first musician who, instead of the single line of figured bass which was formerly placed under songs, introduced a separate piano-forte accompaniment with dispersed chords — an improvement which has been since imitated throughout Europe. The works of G. P. E. Martini, up to the year 1811, were as follows: —

Dramatic: "*L'Amonreux de Quinze Ans*," 1771; "*Le Rendez-vous nocturne*," one act; "*Le Fermier cru sourd*," 1772; "*La Bataille d'Iery, ou Henri IV*," in three acts, 1774; "*Le Poëte supposé*," in three acts; "*Le Droit du Seigneur*," in three acts, 1783; "*L'Amant Sylphe*," "*Sappho*," in three acts, 1794; "*Annette et Lubin*," "*Zanoe*," a grand opera, in three acts; "*Sophie, ou le Tremblement de Terre de Messine*," in three acts; "*Le Partie de Campagne*," in three acts. Romances, &c.: "*Six Recueils d'Airs, Romances, Chansons avec Accompagnement de Forté-piano*" Sacred music: "*Six Pseaumes à deux voix avec Accom*

vagnement de l'Orgue ou du Forté-piano;" "*Messe solennelle à grand orchestre et à grands chœurs*;" "*Te Deum à grand orchestre et à grands chœurs*;" "*Messe des Morts, à grand orchestre et à grands chœurs*;" "*La Cantate d'Arcabonne à voix seule, avec Accompagnement à grand orchestre, ou avec le seul Accompagnement du Forté-piano*;" "*Domine Solenn, à quatre voix, sans orchestre*;" "*Grand Cantate, composée pour le Mariage de S. M. l'Empereur, à voix seule, avec Accompagnement de Forté-piano, ou à quatre voix récitantes, avec chœurs et grand orchestre.*" Martini also published, in 1790, "*La Mélodie moderne*;" and, in 1804, his "*École d'Orgue.*" This work is divided into three parts, and is of high authority.

MARTINI, called PEU D'ARGENT. Under this name there were, in the royal academy at Copenhagen, five books of "*Sacræ Cantiones*," Dusseldorf, 1555. They were destroyed by fire.

MARTINO, ORAT. DI, a composer of the sixteenth century, of whose productions something may be found in the "*De Antiquis Primo Libro à 2 voci de diversi Autori di Bari*," Venice, 1585.

MARTINS, FRANCISCO, chapel-master at Elvas, in Portugal, was born at Evora, where, when yet a boy, in 1629, he was placed in a musical seminary. He made such excellent progress in music, that he soon excelled his teachers, and obtained the situation above mentioned. The works which he has left consist of masses, psalms, hymns, responsories, and motets, and are highly esteemed. Machado mentions a musical contest with the chapel-master Remigio, at Badajos, as a proof of the distinguished musical abilities of Martins.

MARTIUS, JACOB FR., organist of the principal church of Erlangen, and born there in 1760, was one of the few able admirers of the art, who spontaneously offered themselves for the arrangement and completion of the old edition of the German "*Lexicon of Musicians*," by the communication of his written observations. The activity of Martius for the benefit, as well of church music as of amateurs, will clearly appear from the following catalogue of his printed works: "*Sammlung vermischter Klavierstücke 1ster, 2ster Jahr*," Nuremberg, 1782; i. e., Collections of mixed pieces for the piano, first and second year. How far these works have been continued is not known. "*Der Klavierauszug der Oper, die drey Pächter von Desoides*," Nuremberg, 1782; and "*Taschenbuch der Musik, 4 Stücke*," Nuremberg, 1786. This *Taschenbuch*, or Almanac, contains, on a plan well calculated for the entertainment of amateurs, not only small pieces for the piano by favorite composers and by the editor himself, but also short biographical sketches, amongst others, of Handel and Graun; likewise several musical enigmas. "*Einige Sinfonien von Pleyel fürs Klavier ausgesetzt, mit Begleit. einer Violin und eines Violonc.*" Speier; "*Sammlung von Religionsgestungen Choren und Duetten, als Texte zu Kirchenmusiken*," Erlangen, 1792; "*Chöre und vierstimmige Arien für bloss Singstimmen mit untermischten Chordalen*," and "*Lieder.*" The appendix to this last work contains some of Klopstock's odes, a Magnificat, Te Deums by several authors, Niemeyer's Lazarus, and an Easter hymn by Seiler. In the preface Martius rejects the use of the recitative in the Protestant church service.

MARTORELLI, ANTONIO, a composer of the sixteenth century, of extraordinary talents, whose madrigals, notwithstanding they were composed early in his youth, were superior to all that were considered beautiful in his time. For this reason a high value was placed on them both in France and Italy. Martorelli was born at Padua in 1531. He went, when very young, to Rimini, where he was generally esteemed as an instructor in music. He died in 1556, at the early age of twenty-five.

MARTORETTA, GLAN DOMINICO. A contrapuntist of the sixteenth century, of whose productions there still exist, in the Munich library, "*Madrigali à 4 voci*," Venice.

MARTYN, BENDALL. Secretary to the board of excise in London, about the year 1710. He played, as amateur, not only on the violin, but wrote also "Fourteen Sonatas" for that instrument, which were printed fifteen years after his death. (See Hawkins, vol. v. p. 126.)

MARVILLE, VIGNEUL DE, called also NATALIS ARGONENSIS, an advocate at Paris towards the end of the seventeenth century, became afterwards a monk in the convent of Gaillon, at Rouen, where he received the name *Bonaventura*, and died in 1705. Besides several learned works on church music, he also published "*Mélange d'Histoire et de Littérature*," wherein much mention is made of music.

MARX, ADOLPH BERNHARD, doctor and professor of music, was born at Halle the 27th of November, 1799. He received instruction in the elements of music and on the piano, and was taught harmony by Türk; but in his youth he cultivated the art only imperfectly, being obliged to give himself to the study of jurisprudence. Having completed his course at the university, he obtained an appointment on the tribunal at Halle, which, however, he soon abandoned for one more important in the college at Naumburg. But the strong desire of abandoning himself entirely to the study of music decided him to remove to Berlin, where for several years, contending successfully against many obstacles, he pursued his musical studies. In 1823 Schlesinger committed to his charge the editorship of the *Berliner Allgemeine Musik-Zeitung*, and the successful manner in which he conducted it for seven years made him advantageously known, and was the cause of his receiving, in 1830, the appointment of director of music in the university at Berlin. He subsequently received the diploma of doctor in music from the University of Marburg, and his published works justify his title to this honor.

Among the productions of Marx are the following: 1st. "*Die Kunst des Gesanges, theoretisch-praktisch*," Berlin, 1826, 4to., 357 pp. This work is in three divisions: the first containing the principles of music; the second treating of the theory of the voice and its formation; the third being made up of detached observations on the application of the art of singing to different styles of music. 2d. "*Ueber Malerei in Tonkunst. Ein Maigruss an die Kunst-Philosophen*," Berlin, 1828, 67 pp., 8vo. 3d. "*Die Lehre von der musikalischen Komposition, praktisch-theoretisch, zum selbst-unterricht*," 2 vols., Leipzig, 1838. 4th. "*Allgemeine Musiklehre. Ein Hülfsbuch für Lehrer und Lernende*."

in jedem Weisc musikalischer Unterweisung," Leipzig, 1839. 5th. "Berliner allgemeine musikalische Zeitung," 1823-1828. 6th. "Ueber die Geltung Händelscher solo-gestänge für unsere Zeit. Ein Nachtrag zur Kunst des Gesanges," Berlin, 1829, 4to. 7th. "Betrachtung ueber den heutigen Zustand der Deutschen Oper," &c. Marx also wrote several articles in the "Universal Lexicon of Music," published by Schilling; among them those on Bach, Beethoven, Gluck, Fasch, Grétry, Haydn, and Handel. He is also known as a composer by several musical dramas, symphonies, &c., and by his oratorio "Saint John the Baptist," which was performed in 1833. He is still living.

MARZIALE. (I.) In a martial style.

MASCARA, or **MASCIERA**, **FIorenzo**, an excellent organist, who flourished nearly forty years, in the last half of the sixteenth century, at Brescia. Most cities in Italy were desirous to hear him. He was also a good violinist, and the first who composed for the organ "*Canzoni Francesc.*" In Johann Woltzen's "*Tabulaturæ Masices Organice*," 1617, are still to be found "10 *Canzoni Francesc.*" by this composer, but under the name *Maschera*.

MASCIARADA. A term applied by the Italians to music composed for the gestures of mimics, buffoons, and grotesque characters.

MASCHEK, **PAUL**, composer and pianist at Vienna, in 1796, played also the harmonica, and was a zealous cultivator of his art. Besides several good motets and quartets by him, which have become known in manuscript, the following have been printed: "*Six Petits Rondos facil. et agréabl. pour le P. F. à l'usage des Connoisseurs*," 1798. "*Das allgemeine Wiener Aufgebot, eine charakteristische Sonate, fürs Fortepiano mit Begl. einer Violine und eines Violoncells*," Vienna, 1798. "*12 Ländersche fürs Klav.*," Vienna, 1798. "*Sammlung aller Stücke, welche bey Gelegenheit des Wiener Aufgebots erschienen sind für 2 B. oder 2 Fl.*," Vienna, 1800.

MASCHEK, **VINCENZO**, probably brother of the preceding, resided at Berlin in 1788. In 1796 he was appointed chapel-master of St. Nicholas Church at Prague. He was well grounded in music and on the piano-forte by Franz Duschek, and afterwards studied counterpoint under Seger. He was one of the improvers of the harmonica, which he played in a masterly manner. As a teacher he possessed the particular gift of communicating his knowledge to others with facility, by which means he succeeded in raising a considerable number of excellent pupils. We can only mention the following of his printed compositions: "*25 Lieder für Kinder von Spielmann. Mit F. Duschek gemeinschaftlich gesetzt*," 1792. "*Die Spiegebrüder, Operette von Kotzebue*," 1795. "*Böhmens Dankgefühl, eine Kantate von Maissner*," Prague, 1796. "*Concertino pour le Clav. à 4 mains, 2 Clar., 2 Fl., 2 C., et 2 B.*," Leipsic, 1802. "*Sonate pour le Clav. à 4 mains*," Leipsic, 1802. "*Grande Sonate pour P. F. avec V. in Es*." There are also to be found of his composition, at Traeg's, in Vienna, "1 *Klavierkonzert aus Es, mit starker Begleitung*," and "2 *Concertini für 10 bis 11 Bogen und Blasinstrumente*." It cannot be ascertained, however, whether the eight above-mentioned orchestral symphonies, and a concerto for three harpsichords, two horns, and two bassoons, are

this author's productions, or whether they be long to the preceding article. Vincenzo likewise composed, in 1800, "*Hymne an die Gottheit*," i. e. A Hymn to the Deity.

MASCHEK, **MADAME**, wife of the preceding and performer on the harmonica, travelled to Denmark, and obtained much celebrity on her instrument. She was also, in the summer of 1791, with her husband, at Karlsbad, where they publicly performed duets on the harmonica and piano-forte.

MASCITTI, **MICHELE**, a Neapolitan violinist, was attached to the household of the regent Duke of Orleans. He died at Paris about the year 1750.

MASI, **GIROLAMO**, was born at Rome in the year 1768. He was instructed in music by his father, a pupil of the famous Durante, and a distinguished harpsichord player of his time. At eighteen years of age young Masi was chosen piano-forte master to the Duchess Braschi, niece of the reigning pope. At twenty-one, his father (who was director and composer of the Royal Spanish Church of Rome) being struck blind, the son succeeded him, and during four years that he served the church, composed a great quantity of sacred music, besides two operas for the theatres. He next went to Naples, where, his piano-forte playing procuring him a number of friends, he was prevailed on to settle. Amongst other music, he composed there a cantata that was performed with great success. On the preparation of the French to invade Italy, Masi set off for England, in company with Sir John Legard, with whom he resided, teaching the piano-forte. He has published a great number of rondos and variations in a popular style. The productions that have most distinguished him are "A Set of Canonets, the Words selected from Pope's *Eloisa*;" "A Set of Preludes," published by Monzani; and "A Toccata." Masi has, besides, contracted into septets and quintets many symphonies of Beethoven, Mozart, Romberg, Woelfl, &c.

MASI, **GIOVANNI**, a chapel-master at Rome in 1793, is mentioned in the "*Indice de Spettacoli*" of Milan, for 1783, as an opera composer. Among his other works, he brought out at Rome an opera buffa, entitled "*Lo Sposalizio per puntiglio*."

MASI, **P.**, chapel-master at the church of the Holy Apostles, and singer in the pontifical chapel at Rome, left many compositions for the church, chaucer, and theatre. He died in 1772.

MASK. A utensil called by the Italians *persona*, from the verb *personare*, to sound through; and which was used by the ancient Roman actors and singers. It was generally formed with a wide mouth, in the shape of a shell, for the purpose of augmenting the power of the voice, upon the principle of the speaking trumpet.

MASON, **WILLIAM**, a clergyman at York, also king's chaplain, was one of the classical poets and musical authors of England. He was born at Hull in 1726, where his father was vicar. At his native town he received his first instructions in the sciences, studied afterwards at St John's College, Cambridge, and obtained, through the interest of the Earl of Holderness, the office of king's chaplain, the living of Aston, also a can

oury in York Cathedral. His last-named office gave occasion to the following very instructive work, an attentive perusal of which was strongly recommended by Dr. Burney to all composers of sacred music: "Essay on Church Music, together with a copious Collection of those Portions of the Psalms of David, Bible, and Liturgy, which have been set to Music, and sung as Anthems in the Cathedral and Collegiate Churches of England: published for the Use of the Church at York. To which is prefixed a Critical and Historical Essay on Cathedral Music," York, 1782. Mason enjoyed excellent bodily health, preserving on which he neglected a slight wound on his foot, when a sudden inflammation took place, and after forty-eight hours' illness, he died at Aston, in 1797, in the seventy-second year of his age.

MASQUE. A musical drama, chiefly consisting of singing, machinery, and dancing. Masques, which preceded the regular or legitimate drama, required such splendid and expensive decorations, that they were necessarily, at first, confined to the palaces of princes, and the mansions of the nobility. Those of Ben Jonson, Beaumont and Fletcher, Sir William Davenant, Milton, and others, originally appeared in that manner; and seem, indeed, to have been written for particular occasions.

MASRAKITHA. A pneumatic instrument used by the ancient Hebrews, composed of pipes of various dimensions, fitted into a wooden chest open at the top, and stopped at the bottom with wood covered with a skin. Wind was conveyed to it from the lips by means of a tube fixed to one end of the chest; the pipes were of lengths musically proportioned to each other, and the melody was regulated at pleasure, by stopping and unstopping, with the fingers, the apertures at the upper extremity.

MASS, MUSICAL. The musical service of the Romish church. The mass consists of several movements, as the Credo, the Gloria, &c.

MASSAINUS, or MASSANIO, TIBURTIUS, an Augustine friar, and very industrious church composer, lived in 1592 at Prague, and belonged to the court of the Emperor Rudolph II. He was born at Cremona, resided for some years at Placenza, became afterwards chapel-master in the church of St. Maria del Popolo, at Roue, after which he went to Prague. Of his numerous works, amounting to upwards of thirty, we can, with the assistance of Draudius, only mention the following: "*Concentus 5 voc. in universos Psalmos in Vesperis omnium Festorum per titum annum frequentatos, cum tribus Magnificis, quorum ultimum 9 vocum modulatione copulatur,*" Venice, 1576. "*Sacri modulorum concentus, qui 6, 10, et 12 vocibus, in duos tresve Choros conlescentes concini possunt,*" Venice, 1567. "*Missa 5 et 6 vocum.*" "*Rorate cali 5 voc.*" "*Nuncium vobis, 5 voc.*" "*Omnes gentes, 6 voc., Liber 1,*" Venice, 1578. "*Cantion. Sacra, 5 voc.,*" Venico, 1580. "*Sacrarum Cantionum, 7 vocibus, Liber 1,*" Venice, 1607. Arisius, in his "*Cremona Literat.,*" p. 454, from which the preceding particulars respecting Massainus are taken, adds, that he himself possesses the following of his works: "*Il Quarto Libro de Madrigali à 5 voci,*" Venice, 1594; "*Musica super Threnos Jeremie Prophete, 5 vocibus,*" Venice, 1599. Besides these, there were also several pieces

by him in the "*Symphonia Angelica,*" edited at Anurghos, in 1585, by Hubert Vaerland. The following works by him are in the Munich library "*Madrigali à 4 voci,*" Venice, 1569, "*Motetti 5 et 4 voci,*" Venice, 1576, and "*Missa, 8 voci,*" Venice, 1600.

MASSART, J. N. A French violoncellist and composer for his instrument, about the year 1768.

MASSE. A celebrated chapel-master in the service of Louis XV. of France.

MASSENTIUS, DOMINICUS, a composer, flourished in 1632 at Roue, where, according to Allatius, he published the following works: "*Motetti à Voce sola,*" "*Motetti à due, e più voci,*" "*Salmi à otto voci,*" and "*Canzonetti à una, e più voci.*"

MASSENSUS, PETRUS, chapel-master to Charles V., at Brussels, was born at Ghent, and flourished about the middle of the fifteenth century. He published "*Declarationes orationis dominice et salutationis angelica,*" Brussels, 1559. Finck mentions him as one of the best composers of his time.

MASSI, FRANCESCO MARIA, a Minorite, flourished about 1696 as chapel-master and composer in Italy. He set to music the "*Peccator pentito al Bambino Gesu nella notte di Natale,*" Perugia, 1696, of the Count Nicolo Monte Mellini, and dedicated it to the *Academici Oscuri* of Lucca.

MASSMANN, ALEXANDER, organist in Kneiphoff, near Königsberg, in Prussia, published at Amsterdam, in 1720, "*Suite pour le Clavécin.*"

MASSON, C. Chapel-master of the cathedral church at Chalons, in Champagne, and of the Jesuits' Church of St. Louis, in the beginning of the eighteenth century, published "*Traité des Règles de Composition de la Musique, par lequel on apprend à faire facilement un Chant sur des Paroles, à composer à deux, à trois, et à quatre parties, &c., et à chiffer la Basse Continue, suivant l'usage des meilleurs Auteurs. Ouvrage très-utile à ceux qui jouent de l'Orgue, du Clavécin, et du Théorbe,*" Paris, 1705. A fourth edition, revised and corrected at the expense of Estienne Roger, was published at Amsterdam under the title "*Nouveau Traité, &c.*" An edition of this work is said to have been printed in 1757, at Hamburg.

MASTER OF HIS MAJESTY'S BAND OF MUSIC. A musician whose department it is to direct the king of England's band, and to set the birthday and new year's odes, as also the minuets for the royal balls.

MASTER OF SONG. The name given, in remote times, to the person appointed to teach the children of the Chapel Royal to sing, and to perform the organ.

MASTER-SINGERS. A class of poets who flourished in Germany during the fifteenth and part of the sixteenth century. They were confined to a few imperial towns, and their chief seat was the city of Nuremberg. They were generally of burgher extraction, and formed regular corporations, into which proficients were admitted by the ordinary course of apprenticeship. Their poetry (generally confined to devotional or scrip

cural pieces, legendary tales, with some admixture of satire and of amatory lyrics) was subjected to a peculiar and pedantic code of laws, both composition and versification; and a board of judges, styled *merker*, assembled to hear the poems recited, and *mark* the faults which might be committed in either particular; he who had the fewest faults received the prize. Hans Sachs, the famous cobbler of Nuremberg, was a member of these societies, although his genius was of too independent a character to submit to the trammels of their poetical regulations.

MASURES, LOUIS DES: A Flemish contrapuntist of the sixteenth century. Of his works the following is yet in the eleanorite library at Munich: "*Cantiques à 4 part.*," Lyons, 1564.

MATAUSCHEK, an abbé, probably resident at Vienna. Of his compositions there were published in that town, in 1803, "*Deux Rondeaux pour le Clav.*," Nos. 1 and 2, and "*Quatorze Variations pour la Flûte, avec Acc.*," Op. 5.

MATHER, SAMUEL, organist at Sheffield, was the youngest son of Mr. Mather, organist of St. Paul's Church, Sheffield, to which situation he was appointed in 1738. His son Samuel was elected organist of St. James's Church, Sheffield, in 1799, and his eldest son, John Mather, (organist and professor of music in Edinburgh,) was appointed organist of the parish church of Sheffield soon after; so that the father and his two sons, at that period, held all the organists' situations in the three churches at Sheffield. His father dying in 1808, S. Mather was in a few days after unanimously elected to fill St. Paul's Church. In the year 1805, he was appointed master of the military band, attached to the Sheffield regiment of volunteers, which situation he long continued to hold, together with a lieutenant's commission. In the year 1806, Mather, in conjunction with his brother and J. Foster, Esq., of High Green, began the Yorkshire Amateur Concerts at Sheffield. In the following year, they were held at Leeds, and the next at York, and have been continued since that time, triennially, at those places, with increasing pleasure to the lovers of music. In the year 1814, he established the Yorkshire Choral Concert, of which he was the sole manager for the first four years, having obtained the names of the noblemen and gentlemen in the county to support it, by an annual subscription of one guinea each, and having an excellent band of vocal and instrumental performers. Here he brought forward every month a performance, which was always numerously attended. "The Messiah," "Judas," "Samson," "Israel in Egypt," "The Creation," "Athalia," "Jephtha," "Acis and Galatea," "Alexander's Feast," with various selections from the best composers, followed in succession. Nearly the same plan has since been adopted in Edinburgh, where his brother has been one of the principal managers. In the year 1813, Yaniewicz and Mather first brought the inimitable Catalani before the Sheffield audience for three days' performance, of which Mather had the entire management. In September, 1822, he was elected grand organist to the provincial lodge of freemasons for the West Riding of the county of York. His publications are not very numerous; but several of them have been well received. He has

published "A Book of Psalms and Hymns," to number about two hundred, composed and adapted to words selected by his grace the Lord Archbishop of York, for the service of the church of England, and for the use of private families; also a number of songs, duets, trios, choruses, Te Deum, &c.

MATINATA. (I.) A lover's matins, or morning song.

MATINS. The name of the first morning service in the Romish church; a service chiefly consisting of singing.

MATTA, FR. JOAO DA, a composer, born at Lisbon in 1716, studied divinity at Coimbra. He died in 1738, in his twenty-fourth year, leaving some motets and masses of his composition.

MATTEI, SAVERIO, an advocate at Naples, published at Padua, in 1780, a work in eight volumes, entitled "*Dissertazioni preliminari alla traduzione de salmi.*" He also published, in 1785, "*Eloges*" of Metastasio and of Jomelli, who were both his intimate friends. He died at Naples in 1802.

MATTHÄL, HEINRICH AUGUST, a composer and solo violinist at Leipsic, was born at Dresden in 1781. He devoted himself to music from inclination, and from his infancy; it is not surprising, therefore, that he soon made himself master of several instruments. Among these, he considered the violin as his principal, and made such progress on it, that when, in 1804, on a journey to Leipsic, he made his first public appearance at a concert, he was immediately admitted as a member of the orchestra. It reflects no less honor on his talents as an artist than on his general character, that shortly after his engagement, a society of musical amateurs at Leipsic, in 1804, provided him with a sufficient capital to undertake a journey to Paris, for the purpose of perfecting himself on his instrument under the great violinist, Kreutzer. He so well fulfilled this praiseworthy intention, that, after a stay of eighteen months in Paris, having returned to Leipsic, he was, at his first public reappearance there, received with universal enthusiasm for his increased abilities and excellence in the art. After his return from Paris, he was also very successful in several attempts at the composition of ariettes, variations, duets, and concertos for the violin, of which the following have been printed: "*Sechs deutsche Arietten, mit Begleit. des Pianof. oder der Guitarre,*" Leipsic, 1807; "*Conc. pour Violon, in E,*" Op. 2, Leipsic, 1808. "*Thecca Deux concert. pour 2 V.,*" Op. 3, Leipsic, 1810; and "*Quatuor brillant, pour 2 V., A., Fc.,*" Op. 6, Leipsic. That he was, in 1814, one of the best performers on the violin in Germany, Gerber testifies from his own experience.

MATTHEES, JOHANN WILHELM, born at Berlin, was concert master to Prince Henry of Prussia at Rheinsberg. He was a very solid and able violinist of the school of Benda, and particularly distinguished by his fine and full tone.

MATTHEES, CARL LUDWIG Younger brother of the preceding. He was chamber musician and performer on the hautboy to the Margrave of Brandenburg-Schwedt. After the death of the margrave, his whole band having been discharged without any pension, Matthees in de-

pair, laid aside the hauthoy, and established a powder and spirit manufactory at Schwedt, but with such bad success, that, after ten years spent in labor and care, he was obliged, in 1799, to leave Schwedt clandestinely, having first taken his hauthoy out of a dirty corner, and put it in his greatcoat pocket as his sole future hope. In "Bach's *Vielerley*" are to be found two solos for the hauthoy by this musician. He was considered a performer inferior only to Besozzi, Fischer, and Lebrun.

MATTHEIS, NICOLA, an Italian violinist, went to England about the latter end of Charles II.'s reign. He was an excellent musician, and performed wonderfully on the violin. His manner was singular; but he excelled, in one respect, all that had been heard in England before: his *arcala*, or manner of howing, his shakes, divisions, and, indeed, his whole style of performance, was surprising, and every stroke of his bow was a mouthful. All that he played was of his own composition, which manifested him to be a very exquisite harmonist, and of a boundless fancy and invention.

When he first went to England he was very poor, but not so poor as proud; which prevented his being heard, or making useful acquaintance for a long time, except among a few merchants in the city, who patronized him; and setting a high value on his condescension, he made them indemnify him for the want of more general favor.

By degrees, however, he was more noticed, and was induced to perform at court. But his demeanor did not please, and he was thought capricious and troublesome, as he took offence if any one whispered while he played, which was a kind of attention that had not been much in fashion at the English court. It was said that the Duke of Richmond would have settled a pension upon him, though he wished him to change his manner of playing, and that one of his pages should show him a better. Mattheis, for the sake of the jest, condescended to take lessons of the page, but learned so fast, that he soon outran him in his own way. But he continued so outrageous in his demands, particularly for his solos, that few would comply with them, and he remained in narrow circumstances and obscurity for a long time.

Nor would his superior talents ever have contributed to better his fortune, had it not been for the zeal and friendly offices of two or three diletanti, his admirers. These were Dr. Walgrave, a prodigy on the arch-lute, Sir Roger L'Estrange, an expert violinist, and Mr. Bridgman, the under secretary, who accompanied well on the harpsichord. These gentlemen, becoming acquainted with him, and courting him in his own way, had an opportunity of describing to him the temper of the English, who, if humored, would be liberal, but if uncivily treated, would be sulky, and despise him and his talents; assuring him that, by a little complaisance, he would neither want employment nor money.

By advice so reasonable, they at length brought him into such good temper, that he became generally esteemed and sought after; and having many scholars, though on moderate terms, his purse filled apace, which confirmed his conversion.

After this he discovered a way of acquiring money which was then perfectly new. For observing how much his scholars admired the lessons he composed for them, which were all duos, and that most musical gentlemen who heard them wished to have copies of them, he was at the expense of having them neatly engraved on copperplates, in oblong octavo, which was the beginning of engraving music in England; and these he presented, well bound, to lovers of the art and admirers of his talents, for which he often received three, four, and five guineas. And so great were his encouragement and profits in this species of traffic, that he printed four books of "Ayres for the Violin," in the same form and size.

He printed lessons likewise for the guitar, of which instrument he was a consummate master, and had so much force upon it as to be able to contend with the harpsichord, in concert.

Another book of his writing was designed to teach composition, air, and thorough bass. Of this work, though it was printed, but few copies are to be met with. His full pieces, concertos, and solos were never published, and are very scarce, if at all to be found.

The two first of the four books mentioned above, of which many copies were dispersed, consist of preludes, allemandes, sarabands, courants, giges, divisions on grounds and double compositions fitted to all hands and capacities. The third book is entitled "Ayres for the Violin, to wit: Preludes, Fugues, Allemandes, Sarabands, Courants, Giges, Fancies, Divisions, and likewise other Passages, Introductions, and Fugues for single and double Stops; with Divisions somewhat more artificial, for the Improvement of the Hand upon the Bass Viol or Harpsichord." The fourth book is called "Other Ayres and Pieces for the Violin, Bass Viol, and Harpsichord, somewhat more difficult and artificial than the former; composed for the Practice and Service of greater Masters upon those Instruments."

Mr. North observes that while the lovers of music were acquainted with his manner of playing from his own books, which often happened in large assemblies, no one pretended to do the like; for none could command that fullness, grace, and truth of which he was master. So that, in his own time, his compositions were thought impracticable from their difficulty; and since, as they were never thrown into the shops, they have been but little known. At present, when the instrument is so much advanced, no one could have the least idea of these pieces having ever been difficult, who was not a witness of his own manner of playing them. Indeed, his books, well studied, are a sufficient rudiment of artful composition.

Another observation of this speculative diletante is that, in a numerous assembly, when Mattheis alone was to entertain the company, having his friends Walgrave, L'Estrange, and Bridgman about him, and flaming with good humor and enthusiasm, he would seize on the attention of the whole audience with such force and variety as to prevent even a whisper for more than an hour together, however crowded the room.

After this, it is easy to imagine that his reputation and abilities would enable him to accumulate wealth, or to live in splendor; he chose the latter, took a great house, and indulging appetite,

lived so luxuriously that he brought on diseases, and soon put an end to his existence.

MATTHEIS, MATTEIS, or MATHYS, NICOLA, son of the preceding, was also a violinist and composer for his instrument. He received, from the very cradle, instructions from his father on the violin, and made such progress, that he was afterwards invited to the Imperial Chapel at Vienna, where, amongst twenty-three violinists, he obtained the first place. This situation he held as late as 1727, according to Walther. He returned afterwards to England, where, in 1737, Dr. Burney became acquainted with him at Shrewsbury, and received instructions from him in the double capacity of music and French master. Mattheis remained in that town till his death, which took place in 1749. Dr. Burney says, that Mattheis executed the solos of Corelli with inimitable simplicity and grace. Walther mentions of his works, "*Arie Cantabile à V. solo, e Vc. o B. continuo*," Ops. 1, 2, 3, 4, 5, Amsterdam. Quanz states, that Mattheis also made a new arrangement of Corelli's solos.

MATTHESON, JOHANN, a native of Hamburg, was born in 1681. In the seventh year of his age, he was placed by his parents under the care of different masters, and instructed by them in the rudiments of learning and the principles of music, in which science he improved so fast, that at the age of nine he was able to sing, to the organ at Hamburg, compositions of his own. At the age of eighteen, he composed an opera, and performed the principal part. In 1703, an offer was made him of the place of organist of the church at Lubeck; but not liking the conditions of the appointment, which was, that he should submit to the yoke of marriage with a young woman whom the magistrates had chosen for him, he thought proper to decline it. In 1704, he visited Holland, and was invited to accept the place of organist at Haerlem, with a salary of fifteen hundred florins a year; but he declined it, choosing to return to his own country, where he became secretary to Sir Cyril Wych, resident at Hamburg for the English court. In this station he made himself master of the English language, and, without abandoning the study of music, took up a resolution to quit the opera stage, on which he had been a singer for fifteen years. In 1709, he married Catharine, a daughter of Mr. Jennings, a clergyman, nearly related to Admiral Sir John Jennings.

In the course of his employment as secretary to the resident, he was trusted with several important negotiations, and made frequent journeys to Leipzig, Bremen, and different parts of Saxony, from which he reaped considerable advantages. Upon the death of Sir Cyril Wych, in the year 1712, the care of the English affairs in the circle of Lower Saxony devolved on Mattheson, and he occupied the office of resident till the son of the former minister was appointed to it. Upon the accession of King George I. to the crown of England, he composed a memorable serenata; and in the year 1715 obtained the reversion of the office of chapel-master in the cathedral of Hamburg, with certain other appointments prefixed to it. During all this time he continued his station of secretary to the British resident; and upon many occasions of his absence, he discharged in his

own proper person the functions of the minister. Amidst that multiplicity of business which necessarily sprang from such a situation, Mattheson found means to prosecute his musical studies; he composed music for the church and for the theatre, and was ever present at the performance of it: he practised the harpsichord at his own apartments incessantly, and on that instrument, if not on the organ, was unquestionably one of the first performers of his time. He wrote and translated books to an incredible number, and this without an exclusive attachment to any particular object; and the versatility of his temper cannot be more strongly marked than by observing, that he composed church music and operas, wrote treatises on music and on the longitude. His writings in general abound with intelligence, communicated in a desultory manner, and are an evidence that the author possessed more learning than judgment.

Mattheson was well acquainted with Handel. Before the latter went to settle in England, they were in some degree rivals, and solicited with equal ardor the favor of the public. Mattheson relates, that he had often vied with him on the organ, both at Hamburg and Lubeck. The terms upon which these two great men lived when they were together, must appear very strange. Handel approved so highly of the compositions of Mattheson, particularly his lessons, that he used to play them for his private amusement; and Mattheson had so great a regard for Handel, that he at one time entertained thoughts of writing his life; yet these two men were in one moment of their lives at so great enmity, that each had the other opposed to the point of his sword; in short, upon a dispute about the seat of the harpsichord at the performance of one of Mattheson's operas, they fought a duel in the market-place of Hamburg, which a mere accident prevented from being mortal to one or both of them. Mattheson died at Hamburg in the year 1764.

MATTHIUS, MAURUS, a monk at Florence flourished, in 1589, as organist and composer, after having given, in 1551, when yet very young, "*Madrigali à 4 voci*," Venice.

MATTHIO, member of the Chapel Royal at Paris, composed the music to the opera "*Arion*," 1715.

MATTIOLI, ANDREA, chapel-master to the Duke of Mantua, and to the Academia dello Spirito Santo, at Ferrara, in the middle of the seventeenth century, enjoyed a great degree of esteem and encouragement from his contemporaries. We can mention the following of his works: "*Missa e Salmo*," Venice, 1653. "*La Palma d'Amore*," opera, Ferrara, 1650. "*Il Ratto di Cefalo*," Ferrara, 1651. "*Eulio d'Amore*," Ferrara, 1651. "*La Didone*," Ferrara, 1656. "*Il Perseo*," Ferrara, 1665. "*Gli sforzi del desiderio*," Ferrara, 1666.

MATTIOLI, GAJETANO, chapel-master to the Elector of Cologne, at Bonn, about the year 1783, was born at Venice in 1750. He was a violin pupil of Morigi. He composed several symphonies, masses, &c.

MAUCOURT, LOUIS CHARLES, a musician at the court of Brunswick, published some trios for the violin at Offenbach, in 1784; also "*Con*

certo p. il V.," Op. 2, Darmstadt, 1793; "*Concerto, p. il V.*," Op. 3, Brunswick, 1796; and "*Sonata p. il V. solo c. B.*," Op. 4, Brunswick, 1797.

MAUGARS, a French ecclesiastic, published at Paris, in 1672, "*Traité des divers d' Histoire, de Morale, et d' Eloquence*;" in which is also a discourse on the music of Italy. The editions of the "*Traité des divers*," in which this latter discourse appears, were not published by the author, but by St. Ussans, at Paris, in 1672. Maugars was not only an able amateur and author, but at the same time so celebrated a violoncellist, that the King of Spain and several other princes wished to hear him.

MAULGRED, or MAULGREUS, PIERRE, a composer in the beginning of the seventeenth century, (probably in the Netherlands,) published "*Chansons Honnestes d' 4 et 5 Part.*," Antwerp, and "*Cantiones Sacræ*, 4, 5, et 8 Voc.," Antwerp, 1604.

MAURICEAU, JEAN, in 1853, published "Some Account of the Mysterious Music of the Bay of West Pascagoula." There are several legends touching these mysterious sounds. One of them relates to the extinction of the Pascagoula tribe of Indians, the remnant of which, many years ago, it is said, deliberately entered the waters of the bay and drowned themselves, to escape capture and torture, when attacked by a neighboring formidable tribe. There is another legend, as well authenticated as traditionary history can well be, to the effect that, about one hundred years ago, three families of Spaniards who had provoked the resentment of the Indians were beset by the savages, and, to avoid massacre and pollution, marched into the bay and were drowned—men, women, and children. Tradition adds that the Spaniards went down to the waters, following a drum and pipe, and singing, as enthusiasts are said to do when about to commit self-immolation. The inhabitants in the neighborhood believe that the sounds which sweep with mournful cadence over the bay are uttered by the spirits of the hapless families; nor will any remonstrance against the supposition abate their terror when the wailing is heard. Mauriceau thus explains the music of the water spirits:—

"During several of my voyages on the Spanish main, in the neighborhood of Baragua and San Juan de Nieheragua, from the nature of the coast we were compelled to anchor at a considerable distance from the shore; and every evening, from dark to late at night, our ears were delighted with Æolian music, that could be heard beneath the counter of our schooner. At first I thought it was the sea breeze sweeping through the strings of my violin, the bridge of which I had inadvertently left standing; but, after examination, I found it was not so. I then placed my ear on the rail of the vessel, when I was continually charmed with the most heavenly strains that ever fell upon my ear. They did not sound as close to us, but were sweet, mellow, and aerial, like the soft breathing of a thousand lutes touched by the fingers of the deep-sea nymphs at an immense distance.

"Although I have considerable 'music in my soul,' one night I became tired, and determined to fish. My luck in half an hour was astonishing; I had half filled my bucket with the finest

white catfish I ever saw; and it being late, and the cook asleep, and the moon shining, I filled my bucket with water and took fish and all into my cabin for the night.

"I had not yet fallen asleep when the same sweet notes fell upon my ear; and, getting up, what was my surprise to find my 'catfish' discoursing sweet sounds to the sides of my bucket."

Music, like every thing else, is now passing from the few into the many. The art of printing has laid before the multitude the written wisdom of ages, once locked up in the elaborate manuscripts of the cloister. Engraving and daguerreotype spread the productions of the pencil before the whole people. Music is taught in our common schools, and the cheap accordion brings its delights to the humblest class of citizens. All these things are full of prophecy. Slowly, to the measured sound of the spirit's music, there goes round the world the golden band of brotherhood; slowly, slowly the earth comes to its place and makes a ehord with heaven.

Sing on, thou truehearted, and be not discouraged! If a harp be in perfect tune, and a flute, or other instrument of music, be near it, in perfect tune also, thou canst not play on one without wakening an answer from the other.

MAURICE, landgrave of Hesse-Cassel, born May 25, 1572, is said to have composed eight or ten sets of motets, and other pieces of solemn music, for the use of his own chapel, the organ of which, on the great festivals, he frequently played himself. He completed and published a work, begun by Valentine Guckins, entitled "*Opera metrici sacri Sanctorum, Dominicalium et Feriarum*." He died March 15, 1632.

MAURO D'ALAY, or MAURINI, an instrumental composer, published, in 1710, "*12 Concerti d' V. princip., 2 V., A., Vc., e Cembalo*," Op. 1, Amsterdam.

MAURUS, a monk, belonging to the convent St. Martini de Scalis, born at Palermo, flourished as a composer in the sixteenth century. He published "*Cantiones Sacræ*," Venice, 1590, for voices and instruments.

MAVIUS, CHARLES, JR., musical professor at Leicester, was born at Bedford in the year 1800. His father (a professor of music, residing at Kettering, in Northamptonshire) was a German, and went to England at the period of the French revolution. Though born at Bedford, the first ten years of the life of the subject of this memoir were spent at Windsor, where, at an early period, considerable natural talent for music was discovered in him; in consequence of which, when about six years old, his father commenced giving him instruction upon the violin. After paying some attention to this instrument, he became anxious to attempt the piano-forte; and accordingly, when little more than seven years of age, he began the study of that instrument, under the daily attention of his father, and made very considerable progress, both in the practical and theoretical branches of the science, insomuch that, in his twelfth year, he was appointed organist to the church at Kettering.

At the age of fourteen he commenced the study of composition, and subsequently received lessons under some of the most eminent profess-

ors in London; viz., M. P. King, on theory and singing, Griffin on practical piano-forte playing, &c. About this period (1814,) Mavius wrote an introduction and rondo, which was not published till 1816. This was well received, and favorably spoken of by the musical reviewers, (see "Monthly Magazine," September, 1817 or 1818,) who were entirely unacquainted with the age of the author. Several other publications by him have appeared. Mavius resided at Leicester in 1820, where he had considerable practice as a teacher. The principal compositions he has published are, "*La Promenade*," an air with variations, dedicated to Miss Simpson; "*La Reconnaissance*," an air with variations, and flute accompaniment, dedicated to Miss Stopford; and "*A Thema for the Piano-forte*," dedicated to Miss Mary and Miss Lavinia Eyles, (Preston.)

MAXIMA. The longest note formerly used in music, being equal to two *longs*, four *breves*, eight *semibreves*, &c. See the word **LARGE**.

MAXWELL, FRANC. KELLY, doctor of divinity, and chaplain of the Asylum, died in 1782. He published "Essay upon Tune, being an Attempt to free the Scale of Music and the Tune of Instruments from Imperfection," with sixteen plates, Edinburgh, 1781.

MAYER, a vocal composer, was, in 1790, director of the music of the Bohemian Dramatic Society. In 1795 he was at Cologne, and belonged to one of the choirs of the church. In the Gotha "Theatrical Calendar," the following of his compositions are mentioned: "*Das Irrlicht*," "*Die Luftkugel*," "*Marlborough*," and "*Die Becker*." The last three are ballets.

MAYER, G. A contrapuntist of the sixteenth century, of whose works are printed "3 *Cantiones Devote*," 1577.

MAYER, J. P., a musical amateur, published in 1802, at Carlsruhe, "12 *Lieder*."

MAYER, SIMON, a very pleasing dramatic composer, was born at Mendorf, in Bavaria, June 14, 1763. He has, since 1798, resided alternately in Italy and Germany, but chiefly in Italy, where he has written much for the theatre, with great success. In 1802, he was appointed chapel-master, in the place of Carlo Lenzi, in the church of Maria Maggiore, at Bergamo. He obtained much honor by this appointment, a great number of competitors being opposed to him. In less than a year, however, he was again in Vienna, where he represented his "*Equivoco*." Of his compositions we can mention the following: "*Sisera*," oratorio, 1795. "*Aride*," opera seria, 1795. "*Un Pazzoze fu Cento*," opera buffa, 1798. "*Lodoisca*," opera seria, Vienna and Dresden, 1798. "*I Misteri Eleusini*," drama, 1802. "*Ginevra*," opera seria, 1802. "*Der Essigkrämer*," operetta, 1802. "*L'Equivoco*," opera buffa, Vienna, 1802. "*Hercole in Lidia*," Vienna, 1803. "*Alonso e Cora*," opera, Vienna. "*Die Burjschaft*," operetta. Mayer has been ranked, by the French critics, as a dramatic composer, nearly equal to either Mozart or Rossini. He excelled principally in harmony.

MAYERBEER. A pupil of the abbé Vogler, and composer of a successful opera called "*Rosilda e Costanza*," performed at Munich in 1823.

MAYERHOFFER, M. A musician, probably

resident at Vienna, of whose works Traeg mentions in his Catalogue for 1799, besides two collections of dances, a "*Sestetto, à 2 Fl., 2 V., A., e Basse*," in manuscript.

MAYNARD, JOHN, a performer on and composer for the lute, was the author of "The Twelve Wonders of the World, set and composed for the Violl de Gamba, the Lute, and the Voyce, to sing the Verse, all three jointly and none several; also Lessons for the Lute and Basse Violl, to play alone: with some Lessons to play lra-ways alone, or, if you will, to fill up the Parts with another Violl set lute-way," published in folio in the year 1611. These twelve wonders are so many songs, exhibiting the characters of a courtier, divine, soldier, lawyer, physician, merchant, country gentleman, bachelor, married man, widow, and maid.

MAYNI, JOHANNES. A contrapuntist of the sixteenth century, of whose works have been printed "*Cantiones Sacrae, 3 voc.*," Munich, 1567.

MAYR, JOH. SIMON, published "*Lieder beyrn Klavier zu singen*," Regensburg, 1786.

MAYSEDER, JOSEPH. A German violinist of the highest order, also an original composer, of acknowledged merit in a certain line. He acquired a considerable share of popularity in a comparatively short time. He settled at Vienna, and was spoken of as a performer that had no rival in his own particular style. Among his works are the following: Concertos: "First Violin Concerto, (Odeon, No. 5)," Op. 22. "Second ditto." "Third ditto," Op. 28. Quatuors: "First Polonaise," Op. 10. "Second Polonaise," Op. 11. "Third Polonaise," Op. 12. "Fourth Polonaise," Op. 17. "Variations," Op. 18. "Variations in F," Op. 25. "New Variations in F," Op. 33. Quatuors: "Quatuor for two Viols, Ten., and Violoncello," Op. 3, No. 1. "Quatuor for two Viols, Ten., and Violoncello," No. 2. "Quatuor for two Viols, Ten., and Violoncello," No. 3. "Fourth Brilliant Quatuor," Op. 8. "Fifth Quatuor in D," Op. 9. "Sixth Quatuor in D," dedicated to Mr. Neuling. "Variations to a Greek Theme, for a Violin Solo, with Acc. of second V., T., and Violoncello." "Variations for ditto," Op. 15. Trios: "Air in E, varied for V., with Acc. of Ten. and Violoncello." Duets: "First Duet," Op. 30. "Second Duet," Op. 31. "Third Duet," Op. 32. Solos: "Six Studies," Op. 29, (Wessel's Cat.)

MAZAS, JACQUES FÉRIOL, a violin pupil of Baillot, gained the *accessit* for the violin, adjudged by the Paris Conservatory in 1804.

MAZI, LUIGI. A composer of the seventeenth century at the court of Ferrara. He composed madrigals and psalms.

MAZZAFERRATA, GIOV. BATTISTA. Chapel-master at the Academia della Morte, in Ferrara. He flourished in the latter half of the seventeenth century. Of several works written by him we can mention the following: "*Cantate de Camera à voce sola*," Bologna, 1677; "*Salmi Concertati à 3 e 4 Voci con F.*," Op. 5, Venice, 1684.

MAZZANTI, FERDINANDO, a celebrated composer, violinist, and singer, resided, in 1770, at Rome. Dr. Burney speaks highly of his talent. He composed dramatic, sacred, and violiz music.

MAZZINGHI, JOSEPH, born in London, was descended from the ancient Corsican family of the Chevalier Tedice Mazzinghi, who, in the year 1697, was attached, in a diplomatic situation, to the court of Naples. Other branches of the same family settled at Florence, Pisa, and Leghorn.

Tomaso Mazzinghi, father of Joseph, appears, in the year 1765, to have been established in London, as a merchant. He married Madame Fredrick, sister to Madame Cassandra Wynne, the wife of Thomas Wynne, Esq., a gentleman of considerable landed property in South Wales. This latter lady, whose rare musical talents as an amateur, were highly appreciated at the court of Versailles, and particularly so by Queen Marie Antoinette, as also by the celebrated Handel, early discovered in her infant nephew evident proof of a musical disposition, as did also his father, who was an eminent performer on the violin; and, in consequence, he was placed under the celebrated John Christian Bach, who, at that period, was music master to Queen Charlotte. The progress of the young tyro was such, that, on the demise of his father, being then but ten years of age, he was appointed organist at the Portuguese chapel, and subsequently received instructions from three celebrated composers, (at the time in England,) Bertolini, Sacchini, and Anfossi. At the age of nineteen he obtained the distinguished situation of composer and director of music at the King's Theatre, which situation he held for several years, and during that period brought out the Italian opera entitled "*Il Tesoro*," and introduced in various other operas, songs, duets, trios, &c., &c.; all of which were sung by Signor Pachierotti, Marchesi, Madame Mara, Mrs. Billington, &c., &c. He likewise composed several opera ballets, amongst which his "*L'Amour et Pysche*" was much noticed. After remaining for several seasons at the Opera House, we find he composed several English operas for the theatres royal Drury Lane and Covent Garden. His other instrumental works are very numerous. He likewise was appointed music master to Queen Caroline when Princess of Wales.

The original subscription Sunday concerts, which were held alternately for several seasons at the houses of the principal nobility, were entirely under his direction; for which he not only composed various vocal and instrumental pieces of music, but likewise performed on the piano-forte.

Independently of being for many years so much occupied as a composer, he continued an extensive practice as a teacher of the piano-forte, and his works testify, by the distinguished names to his dedications, that his pupils had been chiefly among the principal nobility. We cannot conclude without mentioning that when the Opera House was consumed by fire, in June, 1789, the favorite opera by Paesielo, entitled "*La Locanda*," had but recently been performed, the entire score of which, as likewise the whole of the musical library, was destroyed by that melancholy catastrophe. The performances were afterwards continued at the little theatre in the Haymarket, and subsequently at Covent Garden Theatre; but this favorite opera being burned, it was rendered almost impossible to perform it again without sending to the composer, who was then in Naples; but Mazzinghi undertook to reproduce, by memory, the whole of the instrumen-

tal accompaniment; and he so far succeeded, that, with very few exceptions, they were considered to be almost the same, certainly so in effect, as the original.

MAZZOCCHI, DOMENICO, one of the old masters of the Roman school, contributed much to the improvement of the style of music prevalent in his time. Dr. Burney praises in particular his madrigals, (1638.) Kircher also speaks highly of these madrigals, (vol. i. p. 660 of his "*Musurgia*,") but particularly of one of his pathetic recitatives, which he calls "*Thänen der Maria Magdalena*," i. e., the Tears of Mary Magdalen. This is printed in Dr. Burney's history, vol. iv. p. 96. Of his published works we can enumerate the following: "*Catena d'Adone*," Venice, 1626; "*Il Martirio de Santi Abundio prete, Abbundanzio Diacono, Marziano, e Giovanni suo figliuolo, Drama*," Rome, 1631; "*Madrigali*," Rome, 1638; and "*Dialoghi e Sonnetti*," Rome, 1638.

MAZZOCCHI, VIRGILIO, was chapel-master at St. Peter's Church, in Rome, in 1636, and professor at the college for the education of the vocalists of the papal chapel. Bontempi, who was a pupil of his, gives, in the second volume of his history, a particular description of this school, which leaves no slight impression on the mind of its useful arrangements. It is as follows: "One hour in the morning was set apart for exercises on difficult passages; another for the practice of the shake; another for singing before a mirror, in the presence of the master, in order to acquire a good position of the mouth, and pleasing attitudes in singing. In the afternoon, a short time was devoted to the study of the theory of music; then, an hour was employed to put counterpoint to a *canto fermo*; and in another, again, the master explained verbally the rules of counterpoint, whilst the pupils put them in practice by writing. In a third hour, reading was practised. The rest of the day was spent in practice on the harpsichord, or in the composition of a psalm, motet, or canzonet, according to the capacity of the pupil. On the days that the pupils were allowed to go out, they used to pass through the tower gate, called Angelica, near the Monte Mario, where there is an echo; there they used to sing, whilst the echo returned their errors to their own hearing. At other times they went to church, either to hear the music or to take a part in the performance; after which, on their return to the college, they were to acquaint their master with the observations they had made." Della Valle makes mention, also, (1640,) of a young Mazzocchi, who, a short time before, had published in the Roman college motets for six choirs, with great art, and afterwards, for St. Peter's Church, a mass for from twelve to sixteen choirs, of which one choir was placed on the very top of the cupola to act as an echo. This, it is said, produced a most admirable effect. Probably, by the younger Mazzocchi, Della Valle meant Virgilio.

MAZZOLENI, GIACOMO, a Roman professor of music, gave with much success at Rome, in 1694, the opera entitled "*La Costanza in Amor vince l'Inganno*."

MAZZONI, ALFONSO, chapel-master in the cathedral church of the Holy Ghost, at Ferrara, published some motets at Venice in 1640.

MECHANISM OF ACCOMPANIMENT.

The talent of an accompanist consists in rendering by his piano the intentions of the composer as exactly as that admits of being done. But the difficulties of fingering, the want of variety in the tones of the piano, a defect which does not exist in the orchestra, and the impossibility of pointing out to the hearer the various crossings of the parts — all these things often oblige us to change certain passages of accompaniment, in order to substitute others more easy of execution, but still analogous in their nature.

The study of accompaniment should commence with the scores of the works of Cimarosa, Paisiello, Guglielmi, and their immediate successors; for their style, though brilliant, is easy and clear. These works have the advantage of habituating the accompanist to exactness, without calling upon him for much effort. The following fragment will show with how much facility one may accompany a piece written like the celebrated finale in "*La Scuffiara*," an opera by Paisiello.

No. 1. *Moderato.*

Violini.

Oboe.

Corni in D.

Alto.

Voce.

Mie ragazze favo-rite, favorite, favo-rite.

Basso.

&c.

Whoever is endowed with the least intelligence will see, at the first glance over this score, that the violins and hautboys must be played by the right hand as far as the third bar, where the second violin part passes to the left hand. The horns also belong to the left hand, so that the passage will be executed thus without difficulty.

No. 2.

&c.

No composition of this school and period will offer more difficulties, either with respect to arrangement or to fingering.

Some accompanists, abusing the liberty conceded to them of arranging the accompaniment in the manner most convenient as to execution and to their instrument, change the character of the traits, either from want of taste or from mere indolence. Reducing, for example, every variety of arpeggio to one hackneyed species, they give to the music an aspect of monotony and vulgarity which destroys its charm. The passage, for example, is often accompanied as in No. 3, p. 580.

If we are at all endowed with a musical organization, we cannot but be struck with the want of taste manifested by such an arrangement. Doubtless it would be too difficult to accompany it as it is written, that is, to retain the second violin part in its precise form; but the left hand may surely execute a passage analogous to it, as in example No. 4, p. 580.

If, however, the *design* in the second violin part were continued throughout the entire piece, and particularly if much modulation were introduced, the above system of accompaniment would offer great difficulties, and compel the left hand to skip about; in this case, it would be better to abandon the passage contained in the first violin, and to execute the second violin part as in No. 5, p. 580.

Parts for the violin, the tenor, or the bass often contain repeated notes in quick movement, the execution of which on the piano would be both difficult and ineffective. These repeated notes appear under different forms, and admit of being played on the piano in several different ways. In recitatives and other places, these kinds of *tremolos* are disposed as in No. 6, p. 581.

They may be arranged by the accompanist in several ways, the choice among which depends upon his taste or caprice.

Among the examples which I shall give of these arrangements, the first is best suited to recitative; the rest belong rather to measured accompaniment.

Sometimes the repeated notes are grouped in twos, as in example No. 7, p. 581.

If the movement be quick, the accompanist must simplify the doubled notes, as in No. 8, p. 581.

But if the movement is moderate, he must employ arpeggios, as in example No. 9, p. 581.

When the *tremolo* is given to the accompanying parts with a melody in another part, it must be played with the left hand, while the right executes the melody.

As the nature of the piano will not allow us to prolong the sounds at will, as on stringed or wind instruments, we can easily imagine that long notes, such as we sometimes meet with in scores, would produce a very poor effect, particularly in slow movements, if the accompanist were merely to execute what was written. We must, therefore, arrange these kinds of accompaniments so as to mark the different times of the bar. As to the form of the arrangement to be adopted, we must, as far as possible, imitate the air of tranquillity which the composer intended in his accompaniment, and only multiply the notes so far as is necessary to avoid drowsiness and ennui.

To translate the accompaniment on the piano with the requisite calmness, there is no other way than to take the harmony and arrange it as in example No. 10, p. 581.

Each musical or marked stage of cultivation

has its peculiar physiognomy, with which the accompanist should be acquainted. These epochs may be reduced to the following principal divisions:—

1. The style of counterpoint, without any written accompaniment, called the style of "*Palestrina*."

2. Music, accompanied by a figured bass, extending from Carissimi to Durante.

3. The music of the eighteenth century, divided into the Italian, German, and French schools.

4. The music from the time of Haydn and Mozart to the present day, in which the differences of schools or styles are imperceptibly amalgamated.

The art of the accompanist consists in knowing exactly the peculiarities of each of these epochs, so that he may not introduce any thing incongruous in his accompaniments. This is particularly important in music accompanied only by a figured bass.

The *slow* movements of the ancient schools are not to be played so slow as those of Rossini or Beethoven, &c.; while, on the contrary, the *quick* movements must be played with much less rapidity than those of the present day.

In accompanying the music of Palestrina and authors of that school, we must play the four parts simply as they are written, without adding any other notes by way of filling up the harmony.

To accompany the cantatas, duets, or trios of Carissimi, Durante, &c., the accompanist must follow the different voices with his eye; playing them, as they stand, as nearly as possible wherever any imitations occur, and merely filling up the harmony in three parts only, when that is not the case.

The recitative of the compositions of this period is accompanied only by a figured bass, like the Italian comic operas. The accompanist must play the harmony indicated by the figures without re-

gard to regularity of measure, attending only to the declamation of the singer. At the beginning of the recitative, and wherever modulations occur, he must *arpeggio* the chords which indicate the key. These arpeggios should rather precede the singer, for the purpose of facilitating his intonation.

In accompanied recitative, the intermediate *ritornelli* are played in strict measure, and the accompanist follows the singer in the other portions of it.

The music of Paisiello, Cimarosa, and others of that school, offer but few difficulties to the accompanist, as the instrumental parts are few and simple, though brilliant and effective.

When we arrive at Mozart we are completely in the domain of music for effect. He first assigned to the wind instruments the important part which they now enjoy in the orchestra. The effects which he draws from them are magical; they demand from the accompanist great sagacity and experience in transferring them to the piano in a manner analogous to the idea of the composer. "*Don Juan*," "*Figaro*," and the "*Magic Flute*," are works which, in this point of view, cannot be too much studied.

When the student has mastered the works of Mozart, he may proceed to the still more elaborate scores of Cherubini, Spontini, Rossini, and his imitators, &c., &c.

The obligation of discerning the intention of his author, of imagining the means of rendering them on the piano, and of expressing in his performance what he feels, should not give to his accompaniment the appearance of labor. He has other duties to fulfil — that of guiding the singers, keeping them in time, assisting their intonation; things which he could not accomplish if his presence of mind were disturbed. To be calm and vigorous at the same time, is the problem which he must resolve.

MAZOURKE, or MAZURKA. A Polish national dance, in $\frac{3}{4}$ time, with a peculiar rhythmic construction, somewhat like that of the polacca.

MAZZONI, ANTONIO, second chapel-master of the Cathedral at Bologna, and dramatic composer, was born in that town about the year 1725. He composed there, in 1770, in his capacity of member of the Philharmonic Society, a Magnificat, consisting entirely of choruses. Mazzoni studied counterpoint in his youth under the Chapel-master Perdiara, and subsequently travelled, during several years, to Naples, Madrid, and as far as St. Petersburg. In 1756 he brought out at Parma the comic opera, "*I Viaggiatori ridicoli*," words by Goldoni. This piece was eminently successful.

MAZZONI, GIOVANNI, chapel-master of the Cathedral of Lodi, flourished about the year 1600 as one of the first contrapuntists.

MAZZUCHELLI, an Italian musician at Paris, published there "*Recueil des plus agréables Ariettes des Opéras arrang. pour deux Mandolines, Rec. 1 et 2*," Paris, 1792; "*Recueil d'Ariettes des Opéras nouveaux, avec Acc. de Guitare, Rec. 1, 2, et 3*," Paris, 1793.

MEAN. An epithet formerly applied to the tenor or middle parts of any composition, as being the *mean* between the treble and bass extremes. Hence the C clef, in which those middle parts always are, or should be written, was called the *mean* clef.

MEAN CLEF. The tenor clef. See MEAN.

MEASURE. That division of the time by which the air and motion of music are regulated. Some imagine the *measure* of music to be of modern invention. But the ancients not only practised the division of time, but formed it upon rules very severe, and founded on principles unknown to musicians of the present day.

MECHIEL, a French composer at the beginning of the eighteenth century, published "*7 Bücher Sonaten für die Violine*," 1729.

MECHI, GIOV. BATTISTA, organist at Bologna, published at Venice, in 1611, "*Motetti à 6, 3, 7, 8 voci*."

MECHTLER, F., probably a German harpist at Paris, published there, about the year 1794, "*Petits Airs connus, variés pour la Harpe*."

MECK, JOSEPH, a violinist, belonged, in 1730, to the chapel in Mentz. He published "*13 Concerti per il V. à 5 e 6 Strom.*," Amsterdam. Besides these, several of his concertos and solos in manuscript were known at that time.

MEDER, JOHANN VALENTIN, a celebrated chapel-master at Dantzic, was born in 1650. He composed many operas and cantatas and much church music; but only one of his works was published, namely, "*Capricci à 2 Violini col Basso*," 1698.

MEDER, JOHANN GABRIEL, son of a school-master in Gotha, published "*Sinfonie pour l'Orchestre*," Op. 4, Berlin; "*6 Marches pour 2 Clar., 2 Cors, et Fag.*," Berlin, 1795; "*L'Illusion du Printems, Sonate pour le Clar., avec V. et Vc.*," Op. 3, Berlin, 1797; "*Principes de Musique pour le Chant, avec 12 Solfèges et B. cont.*," Berlin, 1800.

There was also a manuscript opera in his name at Breitkopf's, in Leipsic.

MEDERITSCH, or MEDRITSCH, JOHANN called GALLUS, was, in 1794, engaged as conductor of the orchestra at the theatre at Ofen, in Hungary. He seems to have resided there only a short time; for in 1796 he was at Vienna, where he wrote the first act of his "*Pyramiden von Babylon*." Of his operettas and other works, all of which met with a favorable reception at Vienna, we can mention the following: "*Der Seefahrer*," operetta; "*Die Rekruten*," operetta, 1794; "*Der letzte Rausch*," operetta, in two acts; "*Makbeth, mit Gesang*," "*Chor der Banditen, à 4 voci*," "*Chor der Tempelherren, à 4 voci, 2 Fl., 2 Clar., Fag., 2 Tromboni, et Organi*," the first act of "*Pyramiden von Babylon*," being the second part to the "*Zauberflöte*," also the second act of Winter's composition, arranged for the pianoforte, Vienna, Offenbach, and Leipsic, 1798. This piece was performed for the first time at Schikaneder's Theatre at Vienna, in 1797. The following instrumental music is also his: "*2 Son. pour le Clav., Nos. 1 et 2*," Vienna, 1791; "*2 Quintetti pour le Clav., Fl., V., A., e Vc.*," Vienna, 1793; "*24 Vars. auf den Barentanz, fürs Klav.*," Vienna, 1792; "*3 Son. pour le Clav., avec V.*," Vienna, 1797; "*6 Vars. pour le Clav.*," Vienna, 1797; "*6 Vars. sur le Thème de l'Introduction de l'Overture de l'Opéra, Babyloni's Pyramiden*," Vienna, 1798; "*9 Vars. sur l'Air: Ein gutes Kind*," Vienna, 1798; "*3 Sons. dialog. pour le Clav. et V., Liv. 1*," Op. 1, Vienna, 1799; "*4 Concerti à Cembalo*," (manuscript;)" "*4 Son. à 4 mani.*" (manuscript;)" "*6 leichte Klavier Sonaten*," (manuscript;)" "*3 Trios pour 2 Violons et Vc.*," Op. 12, Vienna, 1800; "*3 Caprices facil. pour le Clav., avec V. obl.*," Vienna, 1802. Gerber also saw the following church compositions by this master: "*Stabat Mater, à 4 voci con Stromenti*," (manuscript;)" "*Missa solennis in D, à 4 voci conc. con Stromenti*," (manuscript;) and "*Missa in C, Kyrie, e Gloria*."

MEDESSIMO. (I.) The same; as, *medesimo tempo*, in the same time.

MEDIANT, or MEDIANTE. (F.) The appellation given to the *third* above the key note, because it divides the interval between the *tonic* and the *dominant* into two intervals called *thirds*. When the lower of these thirds is minor and the upper major, the key is *minor*; and when the lower third is major and the upper minor, the key is *major*.

MEDITATIO. (L.) A word formerly used to signify the middle of a chant, or the sound which terminates the first part of the verse in the Psalms. The *colon*, constantly placed in the middle of each verse, in the Psalms, expresses this pause, or *meditatio*, and is placed there for the use of those who chant the Psalms in the cathedral service.

MEDIUS HARMONICUS. (L.) The *third*, or middle note of the fundamental common chord.

MEDLEY. That part of the ancient melopœia which consisted of the proper intermixture of the modes and genera, called by the Greeks *agoge*. With the moderns, a medley is a humorous, hotch-potch assemblage of the detached parts or passages of different well-known songs, so arranged that the latter words of the sentence, or line, of one song connects with the beginning of another

MEGELIN, HEINRICH. Violoncellist in the chapel of the Elector of Saxony, at Dresden, subsequently to the year 1774. He was an excellent performer, and composed much music for his instrument.

MEHRSCHIEDT. A German musician resident at Paris. His work, under the following title, met with a good reception: "*Table raisonnée des Principes de Musique et de l'Harmonie; contenant ce qui est le plus essentiel à observer dans la Musique pour ceux qui veulent travailler à la Composition, arrangée d'une manière aisée pour que chaque musicien puisse voir d'un seul coup-d'œil tout ce qu'il peut et doit faire concernant l'Harmonie.*" Paris, 1780.

MEHUL, ETIENNE HENRI, member of the Institute, also one of the three inspectors of instruction, and professor of composition, at the Paris Conservatory, was born at Givet, June 24, 1763, and was the son of a cook. At ten years of age, he had improved so much in organ playing, under the tuition of the blind organist of his native town, that he was nominated organist of the *Récolets*, and at twelve was chosen adjunct to the organist of the celebrated abbey of Valledieu. It was in this abbey that he learned composition under a very able German contrapuntist, named Hanser. Méhul first went to Paris when sixteen years of age, and took lessons on the piano of Edelman. At eighteen, he was presented to Ghuck, who initiated him in the philosophical and poetical departments of the musical art. About the same time, he set to music a sacred ode of J. B. Rousseau, which was sung with success at the *Concert Spirituel*. Under the direction of Gluck, Méhul next composed three operas, solely for improvement in his art. These were "*La Psyche*," words by Voisenon; "*L'Anacréon*," of Gentil Bernard; and "*Lausus et Lydie*," of Valadier. At the age of twenty, he presented to the Royal Academy of Music an opera in four acts, "*Cora et Alonzo*," which, however, was not performed till six years afterwards. Fatigued and restless at this long delay, he composed another opera, "*Euphrosine*," which was performed a year before "*Cora et Alonzo*." His third work was "*Sratonice*," and the fourth, "*Adrien*." The following methodical list contains the principal compositions of this celebrated musician.

For the Royal Academy of Music: "*Cora et Alonzo*," 1791; "*Horatius Cocles*," 1793; "*Adrien*," 1793; "*Le Jugement de Paris*," 1793; "*La Dansomanie*," 1800; "*Persée et Andromède*," 1810; and "*Amphion*," 1811.

For the Opéra Comique: "*Euphrosine*," 1790; "*Sratonice*," 1792; "*Le jeune sage et le vieux fou*," 1793; "*Phrosine et Melodre*," 1794; "*La Caverne*," 1795; "*Doria*," 1799; "*Le jeune Henri*," 1799; "*Ariodant*," 1799; "*Bion*," 1800; "*Epicure*," 1800, with Cherubini; "*L'Irato*," 1801; "*Une Folie*," 1802; "*Le Trésor supposé*," 1802; "*Joanna*," 1802; "*L'Heureux malgré lui*," 1802; "*Hélène*," 1803; "*Le Baiser et la Quitance*," 1803, with Kreutzer, Boieldieu, and Nicolo; "*Uthal*," 1806; "*Gabrielle d'Estrées*," 1806; "*Les deux Aveugles de Tolède*," 1806; "*Joseph*," 1807; and "*Valentini de Milan*," 1811.

For the Théâtre Français: the choruses in the tragedy of "*Timoléon*."

National music: "*Hymne patriotique, à l'usage des Fêtes Nationales*," 1795; "*Chant du Départ*,"

"*Chant des Victoires*," "*Hymne de Guerre*," 1796; "*Auguste Compagne du Sage*," &c., hymn, 1797; "*Le Pont de Lodi, hommage au Vainqueur de l'Italie*," 1798; "*Hymne à la Paix*," 1798.

Instrumental music: "*Ouvert. du jeune Henri pour P. F.*;" "*Trois Son. pour le Clav. avec V. op 1. Lic. 2.*" 1791; "*Trois Son. pour le Clav. V. ac lib.*," 1788; with various other overtures, symphonies, sonatas, &c.

Méhul also published two reports, which he read at the Institute; the one on the future state of music in France, the other on the labors of the pupils of the Conservatory, who are pensioners at the Academy des Beaux Arts at Rome. Méhul was a director of the Conservatory and professor of composition in the year 1810. Died October 18, 1817, aged fifty-three.

MEI, ORAZIO, chapel-master and organist of the cathedral church of Pisa, was a pupil of the celebrated Clari, and died at Leghorn in 1795. His "*Stabat Mater*" is so excellent that the late Chapel-master Kraus, when at Leghorn, declared it to be a masterpiece, and had it copied.

MEIBOM, HEINRICH, the elder, first published an improved edition of Luther's hymn book, in 1525.

MEIBOMIUS, MARCUS, a well-known philologist and critic, was a native of Tomingen, in Holstein. When advanced in years he settled at Stockholm, and became a favorite of Christina, Queen of Sweden. Having searched deeply into the writings of the Greeks, he contracted an enthusiastic partiality for the music of the ancients, and not only entertained an opinion of its superiority over that of the moderns, but also that he was able to restore and introduce it into practice. The queen, who, from frequent conversations with him, had been induced to entertain the same sentiments on the subject as himself, was prevailed on to listen to a proposal that he made. This was, to exhibit a musical performance that should be strictly conformable to the practice of the ancients; and, to crown all, he, who had but a bad voice, and never in his youth had been taught the exercise of it, engaged to sing the principal parts. Instruments of various kinds were prepared under the direction of Meibomius, at the expense of the queen, and a public notice was given of a musical exhibition that should astonish the world, and enchant all who should be happy enough to be present. On the appointed day Meibomius appeared, and, beginning to sing, was heard for a short time with patience, but his performance and that of his assistants soon became past enduring; neither the chromatic nor the enharmonic genus was suited to the ears of his illiterate audience, and the Lydian mode had lost its power; in short, his hearers, unable to resist the impulses of nature, at length expressed their opinions of the performance by a general and long-continued burst of laughter.

Whatever might be the feelings of the people Meibomius was but little disposed to sympathize with them. Their mirth was his disgrace, and he felt it but too sensibly. Seeing in the gallery M. Bourdelot, the younger, a physician, and his rival in the queen's favor, he imputed the behavior of the people to some insinuations of that person. He therefore immediately ran up to him, and struck him a violent blow on the neck. To

avoid the consequences of this rashness, he quitted the city before he could be called to account for it, and took up his residence at Copenhagen. In this place he was well received, and became a professor at Sorø, a college in Denmark for the instruction of the nobility. Here he was honored with the title of counsellor to the king, and was soon afterwards called to Elsinore, and advanced to the dignity of president of the board of maritime taxes or customs; but, neglecting his employment, he was dismissed from his office, and he soon afterwards quitted Denmark. He now settled at Amsterdam, and became professor of history in the college there; but, on refusing to give private instruction to the son of a burgo-master, alleging, as his excuse, that he was not accustomed to instruct boys, he was dismissed from that station. On this he quitted Amsterdam, and visited France and England; but afterwards returning, he died at Amsterdam about the year 1710.

The great work of Meibomius was his edition of the seven Greek musical writers, Aristoxenus, Euclid, Nichomachus, Alypius, Gaudentius, Bacchius, and Aristides Quintilianus. This was published at Amsterdam in the year 1652, and contains a general preface to the whole, and also a particular preface to each of the treatises as they occur, and a Latin translation of the Greek text, with copious notes, tending to reconcile various readings, and to explain the meaning of the several authors.

To this edition Meibomius has added a treatise, "*De Musica*," of Martianus Felix Capella; that is to say, the ninth book of the work of that author, "*De Nuptiis Philologie Mercurii*," which contains a kind of abridgment of Aristides Quintilianus.

Notwithstanding all the industry and abilities of Meibomius, his manner of introducing the Greek authors is extremely reprehensible. His general preface abounds with invectives against all who presumed to think less highly of the ancient music than himself, especially against Kircher. His abuse of the "*Musurgia*" of Kircher is, in a great measure, directed against its style and the want of accuracy in the language; yet, in spite of all his efforts to injure its reputation with the world, it will ever be considered as an original work that contains much information and much scientific disquisition. Mersennus, who possessed more musical erudition than any man of his time, has not escaped his censure. Indeed, little less than such behavior, to those who differed from his opinion, could be expected from a man so bigoted as Meibomius appears to have been, and whose irascible disposition seems often to have led him beyond the bounds of decency.

MEISSONIER, ANTOINE, born at Marseilles in 1783, was professor of an instrument he calls the lyre-guitar, and has published much music for it.

MEISTER, MICHAEL, a singer at Halle, in Saxony, in the beginning of the seventeenth century, collected light music by several composers, and published it, under the title "*Crepundia Musica*," 1621.

MEISTRE, or MAISTRE, MATTHIAS DE, a Flemish contrapuntist, born in the beginning of the sixteenth century, was chosen by the Elector

Maurice, of Saxony, in the place of Johann Walther, after the latter's decease; and although he did not arrive at Dresden before 1553, (after the death of the elector,) his successor, Augustus, confirmed Meistre in his appointment. He published at Dresden "*Magnificat 8 Tonorum*," Dresden, 1557; "*Motetti à 5 voc. Lib. 1*," Dresden, 1570; "*Officium de Nativitate et Ascensione Christi à 5 voc.*," Dresden, 1574; "*Deutsche und lateinische Lieder von 3 Stimmen*," Dresden, 1577. In foreign countries he was called merely Matthias, under which name a work appeared, printed at Dresden, under the following title, "*La Bataglia Italiana composta da M. Matthias, Fiamengo, Maestro di Capella del Domo di Milano, con alcune V. piacevole*," Venice, 1552; by which it seems that he had previously been chapel-master at Milan. Of his works there are, in the Munich library, "*Catechesis 3 voc. composita*," Norib., 1563; "*Geistliche und weltliche Gesänge mit 4 und 5 Stimmen*," Wittenburg, 1566; and "*Officia dierum quadragesimalium*," &c.

MEL, RINALDO DEL, a Flemish contrapuntist, flourished in 1538. He is said by Hawkins to have been master of the celebrated Palestrina. We can mention the following of his works: "*Cantiones Sacre 5, 6-12 voc. nebst einer Litania de B. M. V. à 5 voc.*," Antwerp, 1589, and, in the Munich library, "*Madrigali à 6 voc.*," Anvers, 1588.

MELANGE. (F.) A composition founded on several favorite airs; a medley.

MELANI, ALESSANDRO. A dramatic composer at Rome towards the end of the seventeenth century.

MELANI, ANTONIO. Chamber musician to an Austrian archduke at Inspruck, in 1659. He published some violin music.

MELGAZ, or MELGAÇO, DIOGO DIAS, a Portuguese church composer, born at Cuba in 1638, became chapel-master at Evora, where he died in 1700. He left a number of church compositions, among which are particularly distinguished the following works in two books, written on imperial paper, and dedicated to the Archbishop of Evora, D. F. Luiz da Salva, in the year 1694: "*Motetes da Quaresma*," "*Missa ferial à 4*," "*Motete de Defuntos, à 4*," and "*Gloria, laus et honor, à 8 voces*." The rest of his works consist of masses, lamentations, misereres, psalms, responsories, hymns, &c.

MELISSA, MATTEO, flourished as organist and composer, in the Jesuits' Church at Goritz, in Friaul, about the middle of the seventeenth century. He published "*Salmi Concertati à 2, 3, 4, e 5 voci*," Venice, 1652.

MELODIES OF IRELAND. In 1852 a society was formed in Dublin for the preservation and publication of the "*Melodies of Ireland*." The collectors appointed for the purpose, in a very short time gathered many hundred pieces of the national music, both vocal and instrumental. The society was to exist five years.

MELODIOUS. A term applied to any pleasing succession of sounds given in time and measure; also to the tones of clear and mellifluous voices.

MELODIST. A composer or singer of melodies.

MELODIZE. To melodize is to form such a succession of sounds as, by its due execution, shall produce a consistent and agreeable effect.

MELODRAMA, or MELODRAME. A modern species of drama, in which the powers of instrumental music are employed to elucidate the action and heighten the passion of the piece. The first essay in this kind of composition was successfully made in Paris, soon after the revolution; and subsequently, in London, in a piece called "A Tale of Mystery," the music of which was furnished by Dr. Thomas Busby.

MELODY, MELODIA, (L.) MELODIE, (F.) A succession of simple sounds so regulated as to produce a pleasing effect upon the ear; distinguished from *harmony* by not necessarily including a combination of *parts*. Among the records of the sixteenth and seventeenth centuries, we find scarcely any thing that will bear the name of melody. Even the best-regulated strains are constructed with so little reference to harmony, that the intervals seem to follow one another more by chance than by design. Every one knows that music formed a part of the sacred worship of the Jews and Gentiles; and it probably shared the fate of the other arts. The arrangement of it on scientific principles may be said, with more propriety, to have been received than invented by moderns. Dr. Burney has tried to prove that the Greeks were acquainted with melody only.

Melody, according to a learned musical historian, is a series of sounds more fixed and generally more lengthened than those of common speech, arranged with grace, and of proportionable lengths, such as the mind can easily measure and the voice express.

Melody is the current of musical ideas, the rhythmical flowing of symmetrical, related forms, which speak, in a language peculiar to themselves, to the imagination. Sometimes these ideas are so expressed that they stand out in clear light in one thread, and need no coloring to make them wholly apparent. They then form airs, which may be sung by single voices, or played upon instruments that make only one sound at a time. This is what is ordinarily meant by melody, and is the kind of it most easily understood. Musical ideas may be expressed in one thread in such a manner as to render an accompaniment of other sounds necessary to set them off, and bring out their full meaning; and this makes a second kind of melody.

If we consider with attention the melody of any tune, we shall soon discover that in music, as in discourse, certain points of repose are absolutely necessary to render an air pleasing and intelligible to the ear. These points of repose are not, however, all equally important; by the most satisfactory and obvious of them, the melody is resolved into periods, or complete and independent sentences; and by those which are less conclusive, into members of sentences, more or less complete.

Melody, properly understood, answers to the single-figure principle in the sister art, in regard to which Sir Joshua Reynolds has left us the following precepts: "When the picture consists of a single figure only, that figure must be contrasted in its limbs and drapery with a great vari-

ety of lines. It should be as much as possible a *composition in itself*. It may be remarked that such a complete figure will never unite and make part of a group; as, on the other hand, no figure of a well-conducted group will stand by itself."

These principles, applied to music, will furnish us with a complete definition of melody. A strongly-marked musical figure will no more admit of great variety in the accompanying parts, redundancy of accessory ideas, or contrapuntal development, than will the single figure in a drawing of complicated grouping, or undue prominence of the component parts. The principles of fine melody are as fixed and invariable as those which regulate the wazy convolutions of counterpoint and fugue, or the progressions and modulations of harmony. It is not to be produced by chance. It is the result of knowledge, as distinguished from mere intuition. Its fundamental laws are rhythmical symmetry, a natural succession of intervals and tonal consistency. Harsh and extreme distances are as contrary to its nature as is a vague and difform style of rhythm. The excellent precepts transmitted to us from the ancient contrapuntists, for the carriage of voices, form the basis of our laws respecting the production of pure melody. Diatonic intervals should ever be preferred to chromatic, monotony avoided, and "variety in unity" never lost sight of.

The principle laid down by Sir Joshua Reynolds, that the single figure should form a *composition in itself*, means, when applied to music, that a well-constructed melody should, even without the accompanying parts, be gratifying and satisfactory to the ear. If this condition be fulfilled, its general popularity will be inevitable. General popularity, however, must be understood to convey a much more extended meaning than a mere barrel-organ circulation. The indiscriminate zeal with which the unlettered crowd occasionally adopts a vulgar tune, cannot be admitted as a proof of its excellence. The ascendancy of such productions over the public mind is invariably of short duration, and generally to be ascribed to local influence, or their popular association with some passing event, and *always* to the absence of something better. The truly popular airs are those which have stood the test of ages; the compositions of those inspired writers, who, like all true poets, are the exponents of those eternal ideas of the true and beautiful implanted in the human breast, and who, as they tell of things already known and felt by all, though never so well expressed, have but to speak to be understood. The true poet, whether of words, tones, or colors, is an oracle in which the undying spirit of truth finds a voice. It is for him alone to "strike the electric chain with which we are darkly bound," causing it to vibrate through all time.

An idea prevails that the national airs of various countries are evidences that melody is the offspring rather of nature than art; but to establish this theory it will be necessary to prove that uncouth distances and rhythmical deformity are as agreeable as the opposite qualities; that a defective sense is equal to a perfect one; that monotony and mannerism are as admirable as variety in unity; in short, that melodies composed by a barbarous and ignorant people are as excellent as those invented by the great writers. The most

rabid admirer of those interesting old acquaintances will, we opine, scarcely go so far. Far be it from us to evince any lack of reverence for antique, time-honored melodies. They are entwined with our earliest recollections; they surprised us into admiration, before the reign of judgment commenced; they are associated in our minds with thoughts of home and dreams of happiness; some of our best poets have wedded to them their worthiest inspirations; they are endeared by a thousand ties to our memory; and we cannot listen unmoved to

"The melody of youthful days
Which steals the trembling tear of speechless praise."

These, however, are adventitious circumstances, to which we have alluded merely because we feel convinced that they have very much influenced the public mind. People love to hear that which reminds them of the time when "pale pain" was unknown to them; hence the erroneous conclusions they arrive at.

One peculiarity of melody is, that it more easily takes the stamp of individuality than the more complex branches of the art; and we shall hazard the reproach of having made a trite observation when we remark that the native airs of various countries are impressed with the general features of the national mind and character. The conception of melody, owing to the singleness of its nature, is more immediate, and emanates more directly from the feelings and emotions, than the complexities of harmony and counterpoint, which demand more consideration and calm reflection. The mind, always subject to local and physical influences, takes its color from surrounding objects; and its first musical impulse, which is melody, becomes naturally imbued with the circumambient spirit of the time and place. Hence the distinct character of national melodies. We must, however, warn the true student against giving undue importance to this fact, and urge him not to consider, because he may be an Englishman, that he is bound to imitate English composers. Let him rather reflect that great works are of no country, but are as universal as the immutable principles upon which they are constructed, and that it is better to strive to be great in art than merely national.

MELOPLASTE. M. Galen invented, in 1819, a new instrument, with this name, for teaching music. His method consisted in making the pupil sing from a staff, without either clefs or notes, according to the movements of a portable rod called the meloplaste.

MELOPŒIA. (G.) A term in the ancient music, signifying the art or rules of composition in melody. Aristides Quintilian divides the *melopœia* into three kinds: the *hypatoides*, so called from the gravity of the sounds to which it was confined; the *mesoides*, consisting of the middle sounds; and the *netoides*, formed of the acute sounds. These were again divisible into other kinds or distinctions; as the *erotic* or amorous, the comic, and the enomiastic; also into the *systematic*, or mournful, tender, and affecting strain; the *diastaltic*, or noble, bold, and exhilarating air; and the *euchastic*, which was between these, and calculated to calm and assuage the passions.

MELONE, ANNIBAL. A learned contra-

puntist at Bologna, about the year 1550. He published a work entitled "*Desiderio di Allemanno, Benelli*," (the name being an anagram of his own.) It is a work very useful, as respects the musical history of his time.

MELOS. (G.) A term applied by the ancients to the sweetness of any melody, or to that quality or character by which a melody was rendered agreeable.

MELVIO, FRANCESCO MARIA, *chef d'orchestre* at Castello, in Italy, about 1648. He published "*Galatea*," Venice, 1648, and "*Cantiones Sacre, 2-5 voc.*," Venice, 1650.

MEN. (I.) The abbreviation of *meno*, less; as *men allegro*, less quick; *men presto*, less rapid.

MENDELSSOHN, BARTHOLDY FELIX, was the son of a rich merchant and banker, at Hamburg, and was born in that city on the 3d of February, 1809. Besides being thus favorably placed, Felix Mendelssohn entered upon the breathing world encircled with the aureola of ancestral renown. He was the grandson of Moses Mendelssohn, a light of philosophy and science, as well as one of the most brilliant exponents of Jewish literature, whose name, moreover, is connected with music by more than one æsthetical disquisition in the course of his profound and varied works; among which, if we recollect, is to be found a treatise on "equal temperament."

The early development of the musical faculty in the young Felix Mendelssohn forces him into a comparison with the precocious Mozart; but his more fortunate position saved him from the many evils resulting from the premature drudgery of public display.

His earliest musical instructor was the natural guardian of his infancy — his mother; and on his father removing to Berlin, when Felix was but four years old, the child was placed under the musical tuition of another lady, Madame Bigot, to whose enlightened and affectionate care Mendelssohn was always proud to own his obligation. At this period, he was frequently accompanied by the witcheries of Baillot's violin. In tracing the progress of his perfect and well-conducted musical education, due weight should be allowed to these favoring circumstances, from which the future composer, no doubt, derived much of the faultless expression, the tenderness, and the playful gayety with which his works overflow.

At the age of eight years he was esteemed amongst his friends a minute prodigy — and not without reason. He could then play at sight the most intricate scores of Bach, and, without premeditation, transpose Cramer's exercises into all sorts of keys. He also evinced a wonderful faculty in extemporizing upon a given theme. At this period, he was put under the care of the severe and methodical Zelter, the contrapuntist, while his practice on the piano was directed by the romantic Louis Berger, whose enthusiastic nature set its stamp upon the susceptible heart of the incipient musician.

Zelter was not the man to give ready way to fervid impressions; yet the extent to which "his glorious boy," as he called him, had wound himself round his rigid affections, is manifest from the eagerness with which the professor desired to introduce his pupil to the "great man" of Ge-

many, Goethe. When Sir Walter Scott, in his latter days, met Goethe, the eyes of Europe were fixed with intense interest on their interview. But here we have to tell of the mighty German genius permitting the introduction of a child of twelve years. Zelter, writing to Goethe, in 1821, tells him, "I desire to show your face to my favorite pupil before I die." Upon the circle which surrounded Goethe as its centre, the young musician made a profound impression, winning, at the same time, the affection of all, by his boyish openness, mingled with those little *espilgleries* which belonged to the pupil of Madaue Bigot, and the spoiled child of his mamma. It was on one of these occasions that he stopped in the midst of the performance of a fugue of Bach. His quick and delicate ear was offended by an informality in the score. He insisted that there were consecutive fifths. Hummel was present, and was lost in astonishment upon discovering that the passage actually contained "covered fifths," which had hitherto escaped detection. Hummel's wonderful performance on the pianoforte made a deep impression upon young Mendelssohn, so much so, that he burst into tears when once asked to play after him.

Felix had composed several works for the piano; but it was not till in 1824 that he appeared as a writer before the public. In that year were published two quartets for violin, tenor, violoncello, and piano, (Op. 1,) the young author being then not fifteen years old. These were followed by a grand duo in F minor, for piano and violin; a quartet in B minor; and several other works; among others, the opera named "*Die Hochzeit des Camachos*." The last-named opera, in three acts, was performed in Berlin, but without any remarkable manifestation of public approval.

Before his father would allow him to devote himself to music as his profession, he took him to Paris to consult the then aged Cherubini. The ordeal proposed by that consummate musician to test the proficiency of the aspirant was the composition of a "*Kyrie*" for chorus and full orchestra, which was accomplished to the perfect satisfaction of the renowned judge. This decision it was which gave to the world its future Mendelssohn. Animated by this encouragement, he resumed his studies under his former esteemed masters, and successively produced the works from Op. 5 to Op. 12; besides several quartets, and an octet. About this period he made the acquaintance of Moscheles; and as early as 1827 was performed in public that charming production of his pen — "*The Midsummer Night's Dream*," (*Der Sommernachtstraum*.)

But it was in England that his most brilliant successes were to be won, and in the hearts of Englishmen that his talent was to be lastingly enshrined. Through the mediation of Ignace Moscheles, the banded artists of the Philharmonic Society extended to the talented stranger the right hand of friendship; and in the year 1829 Mendelssohn was in London, and at once understood and cordially responded to that applause sympathy which the performance of his works, by the Philharmonic Society, evoked, and which forever bound him to that hospitable soil. The

splendor of his reception in England gave him an extemporaneous fame throughout Europe. In 1831 we find him at Rome, where the "*Walpurgisnacht*" of his early friend Goethe occupied his eminently artistic pen. There also he pieced together the inspirations which he had previously conceived amongst the basaltic caverns of the Western Isles of Scotland, and the romantic "*Hall of Fingal*" was the result. This overture was performed in London, in 1832. While at Rome, also, he struck into a new line of composition, altogether his own, in those matchless "*Lieder ohne Worte*," which prove, beyond denial, that music has its poetry, as well as poetry its music. His agreeable exterior, his cultivated intelligence, and the independence of his position, made him every where received with distinction. And on his second visit to London, in 1832, he found himself quite identified with the artistic *monde* of that capital.

In the mean time he had travelled, in the combined quality of tourist and musician, through Scotland, France, Germany, and Italy; and after four years' improving and embellishing absence, he returned to Berlin; but not to make that home of his boyhood his exclusive residence. "In 1834," says M. Fétis, "I found him again at Aix-la-Chapelle, whither he had betaken himself on the occasion of the Musical Fête of the Pentecost. He was then twenty-five years of age; his former youthful timidity had given place to the assurance of the acknowledged artist, and even to a certain air of *hauteur*." Until 1836, he continued to direct the fêtes at Dusseldorf and Cologne, and then retired, in consequence of his finding it impossible to keep in accordance with the artists and amateurs of Dusseldorf, where he resided. During this year, he spent a considerable time at Frankfort; and while there he married.

Throughout the period of his celebrity, he was not only distinguished for his compositions, but universally run after as a performer. Language was exhausted of its tropes and figures in the fruitless attempt to describe his unsurpassed excellence as a pianist; and the churches were invaded by crowds, who thronged the aisles when he was expected to play on the organ. In a word, the only thing he could not do on the organ was to "play the congregation out." The more effectively he played, the more fixed the congregation remained — the more artistically persuasive his intimation to depart, the more determined were they not to go; and an instance is on record, how once, at St. Paul's Cathedral, the vergers, impatient to clear the church and get their supper, managed to give an effectual blow to the energy of the performer by surreptitiously stopping the bellows.

It was, possibly, his transcendent skill as an executant that led to the notion, about this time generally received, that Mendelssohn was deficient in genius — the possession of the lower faculty being taken as a negation of the higher. It is possible, moreover, that the strict and formal discipline of the erudite Zelter had swathed the infant mind of his pupil in bands of rigid form, which retarded its development; yet, perhaps, only to render its maturity more beautiful and perfect. However this may be, Mendelssohn was spoken of as a distinguished talent, rather than as possessing a name likely to rank with Beethoven, Haydn, and Mozart. In reference

* This must mean the overture, which he composed in 1825, at the age of sixteen. The other portions of that music were produced many years later.

to this opinion, M. Fétis has the following remarks:—

"The childhood of M. Mendelssohn gave birth to the hope that we should see another great musician in Germany; his earliest works gave indication of more talent than it is usual to find in youth, but did not seem to realize the qualities of genius which were supposed to be in him. There were, however, even in 1830, tendencies to originality in his productions, particularly in the overture of the "Midsummer Night's Dream," which I heard at Paris; but it was easy to see that they were rather the fruits of research and labor than of inspiration. Since then the artist has been continually growing; and his manner has developed every day more individual qualities. His concerto in G minor for the piano-forte, his octet, and, above all, his oratorio of 'St. Paul,' are works of *grande portée*. Among his most beautiful compositions are also mentioned the cantata which he wrote for the anniversary fête of Albert Durer; another composed for the fête given by M. Alexandre de Humboldt to the naturalists assembled at Berlin; and also his 'Walpurgis Night,' on the poem of Goethe; also a symphony for the fête of the reformation, which has been performed at many of the great musical reunions. M. Mendelssohn shows at once fecundity and much ease in the composition of his works. The 'St. Paul' seems to me to be that which affords most hope for his *avenir*. In that piece he has found means to unite the classical qualities of the best masters of the German school with a certain boldness of good augury. In fine, this young artist (M. Mendelssohn has not reached his thirty-first year) is incontestably, up to this day, the musician who affords most hope to Germany, and comprises in himself the future school of that country. Talent does not always manifest itself in the same way; and but few examples are known of that vigor of invention which burst forth with Rossini at the age of twenty; with others, and even with the impetuous Beethoven, originality was the force of meditation. The same phenomenon appeared in the talent of Gluck."

The prophetic spirit, gleaming through these judicious criticisms, was amply accredited by Mendelssohn's subsequent career, unhappily but too brief. In 1846 he completed, and, on the 26th of August, himself conducted, at the Birmingham Festival, the oratorio of "Elijah;" the reception of which left his warmest admirers nothing to desire.

But it was in the decrees of that unsearchable Providence which often only shows us the highly gifted,

"— To mock our fond pursuits,
And teach our humbled hopes that life is vain,"

that this star, the cynosure of all observers, should stoop to the horizon before it had reached its culminating point. During his last visit to England, the keen eye of anxious friendship might trace the secret ravages which the ethereal spirit within had made upon his delicately organized frame. He was for the most part invisible to the innumerable friendly inquirers whom his celebrity brought about him, at No. 4 Hobart Place, Eaton Square, where he had fixed his temporary residence. So numerous, indeed, were the calls made upon him, that his old and faithful servant, in answer to an inquiry, exclaimed,

"Ach! me almost run down—dere be so many visitors."

The honors which were accumulated upon him were oppressive to the constant sense of fatigue which possessed him. To a young friend, who begged him to play after the triumphant conclusion of the Birmingham Festival, he replied mournfully— even with tears—in expressive, but imperfect English, that he could not play—"write and practise too much," he continued, "no strength—cannot play; and placing his attenuated hand upon his pale forehead, exclaiming, "O, my head! my head!" he looked up to heaven, whither he was fast hastening. The abiding shadow of the unseen world was settling upon him.

In 1837 he had accepted the post of director of the concerts at Leipsic. In this city he continued to reside till his death, which happened on the 6th of November, 1847.

Thus, at the age of thirty-eight, died this great and accomplished man. In the early period of his decease, Mendelssohn strikingly resembles Mozart, who died in his thirty-sixth year. Of Mozart it cannot be said that he died prematurely. His faculty was developed with amazing rapidity; and, from the very early age at which he began to hold a place in public estimation, his artistic life was by no means short. Although a painful apprehension to the contrary embittered his last days, yet he lived long enough for fame. Not so with Mendelssohn. However extended his mortal span might have been, his fine talent would have continued, in all probability, to unfold and discover fresh beauties as long as his natural faculties were perfect. He died in the period of full promise, withered in the spring time of his genius.

MEN FORTE. (I.) Less loud.

MENDES, MANOEL, a Portuguese author and composer, born at Evora, was first chapel-master at Portalegre, and afterwards in his native place, where he died in 1605. His knowledge as a musician, by which he formed several eminent composers, and his practical works, have given him a distinguished place among the artists of his country. Among other works preserved in the royal musical library at Lisbon, he has left, in manuscript, "*Arte do Canto Chão*," "*Missa à 4 e 5 vozes*," and "*Magnificas à 4 e 5 vozes*," "*Varios Motetes à diversas vozes*."

MENEDEMUS, a musician of ancient Greece, was, according to Plutarch, a pupil of Aristotle.

MENEGHINI, GIULIO, chapel-master at Padua, in 1770, succeeded in that office his celebrated master Tartini, in honor of whom he composed a funeral service.

MENEIYOU, MICHAEL DE, master of the choristers in the church of St. Mauri at Paris, in the sixteenth century, published "*Instruction des Præceptes, ou Fondemens de Musique tant pleine que figurée*," Paris, 1571.

MENESTRAUDIE, or MINSTRELSY. (F.) The general name under which the successors of Philip Augustus, of France, recalled and established these minstrels of Paris who had formed themselves into a company, but whom, on account of their irregularity and licentiousness of conduct, that prince had banished from the kingdom in the first year of his reign. The *mene-*

traudie had a chief appointed over them, called the king of the minstrels.

MENESTRIER, CLAUDE FRANÇOIS, a French Jesuit, wrote, in 1681, a treatise, "*Des Représentations en Musique, anciennes et modernes.*" In this book, among a great variety of curious particulars, is contained a brief inquiry into the music of the Hebrews. The author states that dramatic music was first introduced into France by the pilgrims, who, returning from the holy land at the time of the crusades, formed themselves into parties, and exhibited spectacles of devotion, accompanied with music and songs. There are likewise many curious accounts of public amusements, and of dramatic and musical representations, in several of the courts of Europe.

In the year 1682, Menestrier published "*Des Ballets anciens et modernes, selon les Règles du Théâtre.*" He died in the year 1705.

MENGOLI, PIEDRO, was a native of Bologna, and born about the year 1626. In the early part of his life, he read public lectures on music in several of the schools of Bologna, for the purpose chiefly of explaining the doctrines of Zarlino and Galileo.

He published there, in the year 1670, a treatise entitled "*Speculationi di Musica.*" In that part of the work which he denominates the natural history of music, he treats of the anatomy of the ear, of its capability of receiving sounds, and of the power of the air in conveying them. He then speaks of the combination of sounds, in which he lays down some new principles, that are, in fact, the chief foundation of the whole work. After this he explains, at considerable length, the nature of the musical intervals, showing between what numbers the species of each interval are most perfect. He treats of the chords; then of singing and modulations of tune. The latter he distinguishes from singing in general, by observing that modulation is a succession of sounds so strongly impressed upon the senses, that we are not able to repeat them. The author next discourses fully on the subjects of consonance and harmonical proportions, and also on the passions of the soul, endeavoring to show how they are concerned in and affected by music. Towards the conclusion he gives a table of the several musical chords that are suited to the different affections.

Some of the speculations contained in this work are specious and ingenious; but the philosophy of sound has been so much more scientifically and clearly treated since the time of its publication, that the difficulty of obtaining the book, which is now become scarce, is no great impediment to the advancement of music.

MENGOZZI, BERNARDO, born at Florence in 1758, was a singer of taste and a good composer. He brought out several operas at the Théâtre Montansier at Paris, which had great success. These were "*Les deux Visirs,*" "*Isabelle de Saltsburg,*" "*Pourceaugnac,*" "*Les Habitans de Vaucluse,*" and "*Brunet et Caroline.*" Placed at the head of one of the classes of the Conservatory, Mengozzi formed many excellent singers; amongst whom may be named Baptiste, of the Théâtre Feydeau. For this latter theatre, Mengozzi has only written two operas, "*Une Faute par Amour,*" and "*La Dame voilée,*" the music of both of which

was considered novel and brilliant. He died at Paris in the year 1800.

MENO VIVO. (I.) With less spirit.

MEN PIANO. (I.) Less soft.

MENUET. (F.) A minuet.

MENTE, JOHANN FRIEDRICH, was born at Rotenburg on the Oder, in 1698. He received his earliest instructions in music from his father, (Samuel Mente,) who was a celebrated organist. He then went to Frankfort on the Oder, where he studied during three years under Simon, musician to the university. In 1718 he visited Dresden and Leipsic, and thence proceeded to Glaucha, where he took lessons in counterpoint from Meischner. In 1727 he was nominated organist at Liegnitz, in Silesia. Mente published much church and chamber music, and in his biography, written by himself, he states, that he had taught music to five princes, more than twenty counts, three countesses, nine barons, three baronesses, and above twenty others of the nobility. He died about the year 1760.

MENZEL. A violinist in the Imperial Chapel at Vienna in 1796.

MERANGE. A composer at Paris, of whose works has been printed "*Frédérilde, ou le Démon familier, Drame à gr. spectacle,*" Paris, 1799.

MERCADANTE, SAVERIO. This dramatic composer, who is considered inferior only to Rossini, Paer, and perhaps Generali, was born in Naples in 1798. He studied music under Zingarelli, in the *Conservatorio San Sebastiano*. In the beginning, he devoted himself to instrumental music for the space of six years, during which time he composed several overtures, some ballet music, military airs, &c. It was at the earnest recommendation of Zingarelli, that he at last turned his attention to vocal composition. Incited by such high encouragement, he produced first, in 1818, a grand cantata, entitled "*L'Unione delle Belli Arte,*" for the Teatro Fondo, which met with a very favorable reception. After this he obtained an engagement at the Teatro San Carlo, when his first opera, entitled "*L'Apoteosi d'Ercolo,*" obtained considerable applause, and was said to augur well of his future success as a composer. It was on the first representation of this opera that the young composer was called for by the public at the conclusion of a terzetto, which was enthusiastically enoored. In the same year, 1819, he composed for the Teatro Nuovo the opera buffa "*Violenza e Costanza,*" which also met with a very flattering reception. In 1820, another opera was given by him in San Carlo, entitled "*Anacreonte in Samo.*" After this he went to Rome, and composed for the Teatro Valle an opera buffa, called "*Il Geloso ravveduto,*" and in the carnival of 1821, the opera seria, "*Scipione in Cartagina,*" for the Teatro Argentino. In the same year he produced, in Bologna, the opera seria "*Maria Stuart,*" as also the opera called "*Elisa e Claudio,*" for the same theatre. In the carnival of 1822, he composed the opera seria "*Andronico,*" for the Teatro Fenice at Venice.

MERCADIER, M., of Belesta, published at Paris, in 1776, "*Nouveau Système de Musique théorique et pratique,*" one volume, octavo.

MERCHI, an Italian guitarist, flourished about the year 1760. He resided for several years at Paris, and in 1777 published a small tract entitled "*Guide des Écoliers de Guitare.*" He also edited an annual, "*Recueil d'Ariettes, Préludes et autres Pièces légères,*" for his instrument.

MERCIER, a French musician at Paris. Among his published works is, "*Méthode pour apprendre à lire sur toutes les Clefs,*" Paris, 1788.

MERCY, LEWIS, an Englishman by birth, though the descendant of a French family, was a celebrated performer on the flute-à-bec, or English flute, and an excellent composer for that instrument. He published six solos, with a preface containing a brief history of the scale, and of Guido's reformation of it, taken from a French work of Sebastian de Brossard. Soon afterwards appeared his Opera Secunda, containing six more solos for the same instrument.

Mercy lived at a time when this flute was becoming unfashionable, and when the German flute was beginning to get into favor. In consequence of this, he formed (in conjunction with the younger Stanesby, the wind instrument maker) the scheme of a new system, intending to make the flute-à-bec a concert instrument, without an actual transposition, by changing the denomination of the lower note from F to C. By this contrivance, a flute of the fifth size was precisely an octave above the other treble instruments. He published twelve solos, the first six of which were written for the traverse flute, violin, or English flute, according to the new plan, accompanied by a preface in recommendation of it, in which he asserts that his system was in truth the ancient system of the flute. In this preface he also makes a comparison between the flute-à-bec and the German flute, and asserts not only that the former is always best in tune, but that, in many other respects, it deserved to have the preference. All the endeavors of Stanesby and Mercy to restore their favorite instrument, seem, however, to have proved unavailing. Mercy's solos for the flute are usually ranked among the best compositions for that instrument that are extant.

MEREAUX, NICOLAS JEAN, was born at Paris in 1745. He studied music under different Italian and French masters, and when still very young displayed distinguished talents on the organ, so much so as to attract the attention of the celebrated organists Calvière, Daquin, and Couperin. He composed several motets and oratorios, amongst which latter, his "*Esther,*" for three voices, is much admired. His first published work was "*Aline, Reine de Golconde,*" a cantata, 1767. He brought out three operas for the Théâtre Italien, namely, "*Le Retour de la Tendresse,*" 1780; "*La Ressource Comique,*" 1782; and "*Laurette,*" 1782. For the Royal Academy of Music he composed "*Alexandre aux Indes,*" 1785; "*Edipe,*" 1791; and "*Jocaste,*" 1791. Mereaux died in 1797.

MEREDITH, WILLIAM, died at Oxford in 1637. He was organist to New College Chapel. He is called, on his epitaph, *cir facultate sua peritissimus.*

MERK, DANIEL, was a singer at Augsburg, about the year 1692, but not otherwise distin-

guished than by the following work, which is mentioned in Von Stetten's "History of the Arts," "*Anweisung zur Instrumentalmusik,*" Augsburg, 1695. He died in the year 1713.

MERKEN, S., a musician at Paris, probably a German, published there "*Six Romances, avec Acc. de Piano,*" 1798.

MERMET, BOLLOUO DE, published, in 1746, his treatise "*De la Corruption du Goût dans la Musique Française;*" "*Eh, bon Dieu,*" says La Bordeaus, "*qu'eût-il dit, s'il eût écrit de notre tems!*"

MERSENNE, MARTIN, or, as his name is written in Latin, MARTINUS MERSENNUS, was born in 1588 at Oyse, in the province of Maine. His first instructions were received in the college of Flèche. On quitting that seminary, he studied divinity for some time in the college of Sorbonne. He afterwards entered himself amongst, and in 1611 received his habit of, the *Minims*. He applied himself diligently to the study of the Hebrew language, and was appointed a teacher of philosophy and theology in the convent of Nivers. This station he held till the year 1619, when, in order to prosecute his studies, and enjoy the conversation of the learned, he returned to Paris. During his abode at La Flèche, he contracted a friendship with Des Cartes. The residence of Mersennus at Paris did not prevent his making several journeys into foreign countries. He visited Holland, and went four times into Italy. During the hot weather of July, 1648, having been upon a visit to Des Cartes, he returned to his convent excessively heated, and, in order to allay his thirst, drank some cold water. The consequence of this was, his being seized with an illness which produced an abscess in his right side. The physicians, supposing his disorder a pleurisy, bled him several times to no purpose. At length they determined to open his side. The operation was begun, but he expired under it in 1648. He had directed that, if the operation should not succeed, they should open his body. This they did, and found that they had made the incision two inches below the abscess.

Mersennus was a man of great learning and deep research. He had also a correct and judicious ear, and was a passionate admirer of music. These gave a direction to his pursuits, and were productive of numerous experiments and calculations, tending to demonstrate the principles of harmony, and to prove that they had their foundation in nature, and in the original constitution of the universe.

In the year 1636, Mersennus published at Paris, in a large folio volume, a work entitled "*Harmonie Universelle,*" in which he treats of the nature and properties of sound, of instruments of various kinds, of consonances and dissonances, of composition, of the human voice, of the practice of singing, and a variety of other particulars on the subject of music.

The doctrines delivered by Mersennus are founded on a variety of well-tried experiments, and his reasoning upon these is generally very close and satisfactory.

MERTEL, or MERTOL, ELIAS, a performer on the lute, flourished in the beginning of the

seventeenth century at Strasburg. He published "*Hortus Musicalis*," &c., Strasburg, 1615.

MERULA, TARQUINIO. A celebrated church composer and madrigalist at Venice, between the years 1628 and 1640. His secular compositions are almost all so tinctured with caprice and buffoonery, as to render them more singular and original than those of any of his contemporaries. He published, among many other singular productions, a sort of lullaby, with a bass, consisting only of the upper A and B flat. He also composed a fugue, representing some schoolboys reciting before their master the Latin pronoun *qui, que, quod*, which they had not well learned. The confusion, the perplexity, the barbarisms of the scholars, mingled with the exclamations of their enraged master, who exercises the ferule among them, had the happiest effect.

MERULO, CLAUDIO, organist to the Duke of Parma, and born at Correggio, published some organ and church music at Venice, between the years 1578 and 1604.

MESANGEAU. A celebrated lutist at Paris, in the reign of Louis XIII., (that is, about 1620.) Gautier, his friend and pupil, wrote on Mesangeau's death a very beautiful piece of music for the lute, and named it *Le Tombeau de Mesangeau*.

MESCOLOMENTO, or MISTIO. A term used by the ancient Greeks, signifying that branch of the *melopœia*, which gave the rules for so arranging the sounds of melody, that the voice, or instrument, might be kept within a certain compass; and that the three genera might be so disposed, that the air should never move out of the system in which it began, unless with some particular design.

MESE. A term applied by the ancient Greeks to the sound that completed their second tetrachord, and which was the centre of their whole system. The *mesè* was an octave above the *proslambanomenos*, or lowest sound, and answered in some respects to the key note in modern music. It was also the name given to the central string of the lyre.

MESOCIORI. (Gr. pl.) Certain musicians among the ancients, who presided at public performances, and by beating a desk in a regular manner with their feet, directed the time of the music. That they might be the better heard, they wore wooden clogs, called *crupezia*.

MESOIDES. (Gr.) The name by which the ancients distinguished a kind of *melopœia*, the sounds of which were chiefly confined to the middle chords; which chords were also called the *mesoides* of the *mesis*, or tetrachord *meson*.

MESOLABE. (Gr.) An instrument of the ancients, the use of which was to halve an interval. The honor of its invention is, by some writers, given to Archytas, by others to Eratosthenes.

MESOMEDES, a renowned musician of ancient Greece, lived at Rome in the reign of Antoninus, (about the year 145 after Christ,) and was the first who gave rules to the performers on

the lute. Nevertheless, the emperor withdrew his salary, saying to him, "It was shameful that people should receive benefits from the republic who were of no use to it." With all deference to his majesty's opinion, says Gerber, our rulers now know better. Perhaps this conduct was a low revenge of Antoninus towards his predecessor Adrianus, whose manumissus and favorite Mesomedes had been.

MESONYCTICON. (Gr.) A term applied by the Christian fathers to their midnight services.

MESON. The genitive plural of *mesis*, the middle. A term applied by the ancient Greeks to the second of their tetrachords, (reckoning from the gravest,) because it is placed between the first and third tetrachords, i. e., the *hypaton* and *synemmenon*.

MESOPYCNI. (Gr.) A term in the ancient music, signifying the second sound in each tetrachord. The *mesopycni* were five in number.

MESAULICI. (Gr.) *Inter-pipings.* The name applied by the ancients, as supposed by Meibomius, to the inner acts, or pieces performed between the divisions of their drama.

MESSE. (I.) A mass, or Catholic musical service.

MESSA DI VOCE. An expression applied by the Italians to a swell of the voice upon a holding note.

MESSE CONCERTATI. (I.) Masses in which the recitation is intermixed with choruses.

MESSE DI CAPELLA. An expression applied by the Italians to masses sung by their grand chorus. In these compositions various fugues, double counterpoints, and other elaborate constructions are always required.

MESSIAH. Handel's "Messiah" was first performed at the Music Hall in Fishamble Street, Dublin, on Monday, the 12th of April, 1742. Notice of this performance was given in the Dublin Journal, (Faulkner's,) March 23, 1742, as follows: "For Relief of the Prisoners in the several Gaols, and for the Support of Mercer's Hospital in Stephen's Street, and of the Charitable Infirmary on the Inn's Quay, on Monday, the 12th of April, will be performed at the Musick Hall in Fishamble Street, Mr. Handel's new Grand Oratorio called the *Messiah*, in which the Gentlemen of the Choirs of both Cathedrals will assist, with some Concertos on the Organ, by Mr. Handel. Tickets to be had at the Musick Hall, and at Mr. Neal's in Christ Churchyard, at half a Guinea each. N. B. No Person will be admitted to the Rehearsal without a Rehearsal Ticket, which will be given gratis with the Ticket for the Performance when paid for." This was the first occasion in which the words "Handel's Oratorio the Messiah" ever appeared in print, or met the public eye. The composition of the Messiah was concluded on the 12th of September, 1741, and some writers have asserted that it was performed in London; but as Handel left London on the 4th of November, and as none of the London papers of that date contain any notice of its per-

formance there, it is probable that it was brought out first at Dublin, as here stated. The Messiah was performed in King's Chapel, Boston, in 1796; and the Messiah and the Creation were first performed by the Handel and Haydn Society, Boston, in 1817.

MESSING, FRED. JACOB, called the *mad fiddler*, was for some time a member of the orchestra in Covent Garden Theatre. He called himself Handel's son, whose monument he visited daily, went with his head shaved, and dressed in black, with a star. He died in London in 1797, at the age of forty-three. His children were educated at the expense of the Musical Fund. During his insanity he frequently played Handel's music in places of public resort.

MESTO, or MESTOSO. (L.) A term significant of a pathetic and melancholy style of performance.

MESTRINO, NICOLO, born at Mestri in 1750, was of low origin, and studied music with little assistance from masters. When thirty-two years of age, he first went to Paris, where he made his *début* at the *Concert Spirituel* in 1786. The graceful composition of his concerto, and sweet expression in his style of playing, were at once highly applauded. Mestrino had a great talent for *extempore* playing. In 1789, he was nominated *chef d'orchestre* of the Théâtre Monsieur; but he did not enjoy this office long, the abuse of pleasure shortening his days. He died at Paris in 1790, aged forty-nine. Twelve of his concertos were published at Paris in his lifetime, and since his decease a collection has been republished of twelve solos, taken from his concertos, with an accompaniment for the violoncello.

MESURE. (F.) The bar or measure.

METALLO, a church composer, lived in the middle of the seventeenth century, as the following of his printed works proves: "*Motetto Sanctus Dominus, &c., à 4 Soprano, A. in Canone, B. 1 in Canone, e B. 2.*"

METASTASIO. Born at Rome in 1698. He was distinguished, at the early age of ten years, by his talents as an *improvisatore*. A rich lawyer, named Gravina, who amused himself with writing bad tragedies, was walking near the Campus Martius one summer's evening, in company with the Abbé Lorenzini, when they heard, at no great distance, a sweet and powerful voice, modulating verses with the greatest fluency to the measure of the canto *improviso*. On approaching the shop of Trapassi, whence the grateful melody proceeded, they were surprised to see a lovely boy pouring forth elegant verses on the persons and objects which surrounded him; and their admiration was increased by the graceful compliments which he took an opportunity of addressing to themselves. When the youthful poet had concluded, Gravina called him to him, and, with many endearments and caresses, offered him a piece of money, which the boy politely declined. He then inquired into his situation and employment, and being struck with the intelligence of his replies, proposed to his parents to educate him as his own child. Convinced of the sincerity of the offer, and flattered by the brilliant prospects which it opened

for their son, they consented. He began with changing his name from Trapassi to Metastasio, *for the love of Greek*. He adopted him, gave him a careful, and as it happened, an excellent, education, and finally left him a part of his property. Metastasio was twenty-six years old when his first opera, the "*Didone*," was performed at Naples, in 1724. In the composition of it he was guided by the advice of the fair Marianna Romanina, who executed the part of Dido in a superior style, because she passionately loved the poet. This attachment appears to have been durable. Metastasio was an intimate friend of Marianna's husband, and lived many years in the family, recreating himself with fine music, and studying unremittingly the Greek poets. In 1729, the Emperor Charles VI., that great and grave musician, who, in his youth, had played so miserably a part in Spain, proposed to him to be the poet of the opera at Vienna. He hesitated a little, but at length accepted the offer. He never afterwards left that city, where he lived to an extreme old age, in the midst of dignified voluptuousness, with no other occupation than that of expressing, in beautiful verses, the fine sentiments by which he was animated. Dr. Burney, who saw him in his seventy-second year, thought him, even then, the gayest and handsomest man of his time. He always declined accepting any titles or honors, and lived happy in retirement. No tender sentiment was wanting to his sensibility. This great and happy man died in 1782, having been acquainted, in the course of his long career, with all the eminent musicians who have delighted the world.

METIFESSEL, FRIEDRICH, (the elder.) A theologian, and at the same time a vocal composer of talent and feeling. He was born at Stadtilm in 1771. His father, who was himself a singer, soon observed his son's warm attachment to music, and developed his talents by frequent and diligent practice. This had so quick and powerful an effect, that the boy, who was destined for the church, employing all his spare time from the study of languages and sciences in cultivating music, soon distinguished himself as an able performer on the piano-forte and violin, whilst at the same time he became an excellent tenor singer. Through this rare musical talent, united to his constant hilarity, wit, and humor, it became an easy matter with him to establish a circle of friends in his school at the university, and in all his subsequent situations of life, and by this circle he was both loved and esteemed. In 1796, having completed his theological studies, he found himself compelled to undertake the situation of a private tutor. His restless spirit, as well as the feeling of not being in his sphere, drove him, in this fatiguingly uniform employment, from place to place, without his ever being contented and happy. Thus he lived like a true minstrel, traversing from one German town to another; still, wherever destiny led him, his music was ever his dearest and most diligent conductress. This is proved by the collections of songs which he published from the year 1798; some of them are dated from nearly every place at which he temporarily resided. The critics praised his songs on account of their interesting melodies, and the public also found pleasure in them.

Lastly, he undertook the composition of the opera "*Dr. Faustus*," but could not, through the visible decline of his strength, finish it. Just before his death, however, he published a successful sketch of it. If he could have entirely devoted himself to music, F. Methfessel might certainly have reached a high degree of perfection. He died of consumption in his native town, in 1807, in the thirty-eighth year of his age. Of his works we can mention the following: "12 *Klavierlieder*," Offenbach, 1798. "12 *Lieder mit Begl. der Guitarre*," Leipsic. "*Des Sängers Liebe, ein kleiner Roman in Liedern von Rochliss mit Guitarre*," Op. 12, Leipsic. "*Kleine Balladen u. Lieder, mit Guitarre, nebst einem komischen Anhang*," Leipsic. "12 *Dreystimmige Lieder beim Klaviere*," Rudolstadt, 1800. "3 *Gesänge aus der Oper Faust für Klav.*," Rudolstadt, 1801. "12 *Lieder mit Klavier oder Guitarre*," Bonn, 1803. "*Kleine Romanzen und Lieder, m. Guit.*"

METHFESSEL, ALBERT GOTTLIEB, younger brother of the preceding, singer to the court at Rudolstadt, and composer of several songs and some music for the piano, was born at Stadtilm, in Schwartzburg, in 1786. He applied himself early to music under the direction of his father, so much so that, in his twelfth year, he wrote two church pieces, which his father executed. In his fifteenth year he went to the academy at Rudolstadt, remained three years as prefect of the choir there, and wrote for it several motets and cantatas. At length, in 1807, he went to Leipsic, from whence the Princess of Rudolstadt sent him to Dresden for further improvement. Here, through his distinguished talents, he made himself so many friends, that when he gave a farewell concert, in 1810, previously to commencing his employment of singer at Rudolstadt, his loss was much bewailed by the public. A. Methfessel was a very feeling and excellent tenor singer. He extemporized well on the piano, to which he occasionally united his voice. He also accompanied himself beautifully on the guitar. "The musical world," says Gerber, writing in 1812, "may expect very much from this able young man. I write this with the greater confidence, because I have enjoyed the pleasure of hearing him publicly, as well as in private circles." The following list contains his principal works up to the year 1809: "*Lieder mit Begleit, des Klaviers*." "*Grande Sonate à 4 mains*." "*Sonatine à 4 mains*." "*Six Var. sur un Thème*," Leipsic. "*Sept Var. sur le Men. de l'Op. Don Giovanni de Mozart*," Op. 9, Leipsic. "6 *Son. facil. pour le P. F., Op. 13, Liv. 1 et 2*," Leipsic. "*Schnecht von Schiller*." "*Arminia, von Tiedge beim Klav.*" "*Gesänge, 6 dreystimmige, mit willkührlicher Begl. des P. F.*," Op. 11. "*Journal für die Guitarre, 1s. und 2s. Heft*," Leipsic. "*Grand Duo pour 2 Guit.*," Op. 26. "*Der Tronbadour und 5 Gedichte, mit P. F. oder Guit.*," Op. 27, Leipsic.

METHODE. (F.) A treatise or book of instructions.

METKE, A. F., chapel-master to the Duke of Brunswick-Oels at Oels, in the year 1798, was a good violoncellist, and composed for the theatre in that town the operetta "*Der Teufel ein Hydrau-*

likus," 1796. He also published "2 *Prologe*," 1798, and "3 *Concert. pour le Vc.*," Op. 3, 1803

METRE. That part of the ancient music which consulted the measure of the verses. See **METRIC.**

METRIC. An epithet applied by the ancient Greeks to that part of their music which had for its object the letters, syllables, feet, and verses of the poem. The metric differed from the rhythmic in that the former was only used in the form of the verses, while the second was confined to the feet of which they were composed.

METRONOME. Invented by John Maelzel, musical mechanician of the Emperor of Austria. The metronome consists of a portable little obelisk or pyramid, scarcely a foot high, so decorated on the outside as to form a very pretty piece of furniture, and containing within a simple mechanical apparatus, with a scale resembling that of a thermometer. According to the number on this scale to which the index is set, the audible beats produced will be found to embrace the whole gradation of musical time, from the slowest to the quickest. The scale of the metronome is not borrowed from the measures of length peculiar to any one country, but is founded on the division of time into minutes. The minute being thus, as it were, the element of the metronomic scale, its divisions are thereby rendered intelligible and applicable in every country. A universal standard measure for musical time is thus obtained, and its correctness may be proved at all times by comparison with a stop watch. At the top of the obelisk is a small lid, with a hinge to its back. On lifting this lid, the upper part of the front of the obelisk is pushed forward with a spring, so as to permit of its being taken out and put aside; and at the same time the steel pendulum, together with the scale behind it, will likewise fly forward into a perpendicular direction, and a small key be found under the upper lid. This key fits a hole contrived about the middle of one of the sides of the obelisk, and with it the clockwork is wound up, and the pendulum made to move. Its motion may be stopped at pleasure by a small brass bolt fixed to the top.

Maelzel's metronome determines the movement of a piece of music with a degree of precision which no word or combination of words, however well chosen, can pretend to do. We will give an example or two in illustration of this way of indicating the degree of movement.

♩ = 132 implies that when the movable nut is set to 132 on the graduated scale, the pendulum will vibrate *once to each crotchet* in the bar.

Similarly, ♩ = 80 implies that the *measure note* in each bar is a minim, and that when the nut is set to 80, the pendulum will vibrate *once to each minim*.

Within the last few years, a small bell has been added to the best kind of metronomes, which can be made to strike at the commencement of each bar, by drawing a short rectangular brass rod inserted into one of the sides of the machine. One of the faces of this rod is graduated by lines drawn across it, and inscribed with the figures 2, 3, 4, 6. In order, therefore, to cause the bell to strike correctly, the rod must be set according to

the number of times that the measure note occurs in each bar.

Persons who do not possess Maelzel's metronome may readily ascertain the corresponding time, by forming a pendulum of a length of thread, with a leaden bullet at the end of it. The measure is to be taken from the point of suspension to the centre of the bullet. The time occupied in the swinging of the bullet from one side to the other, which is called "one vibration," is that intended to be shown. It would, perhaps, be well, when it is required to act with a low metronomic number, — for which, it would appear, an inconvenient length of thread must be used, — to look for double such number, take the length of thread standing against it, and reckon the time of two vibrations instead of one. This plan of proceeding will render it unnecessary to use thread longer than twenty inches. The plan is not new, as several of Dr. Crotch's pieces are so marked; but it will probably be so to many readers, and the scale is useful.

Metronome.	Thread.	Metronome.	Thread.
No.	Inches long.	No.	Inches long.
42	73 3-4	96	15 1-4
44	72 5-8	100	14
46	66 1-2	104	13
48	61	108	12
50	56 1-4	112	11 1-4
52	52	116	10 1-2
54	48 1-4	120	9 3-4
56	44 7-8	126	8 7-8
58	41 3-4	132	8
60	39 1-8	138	7 3-8
63	35 1-2	144	6 3-4
66	32 1-4	152	6 1-8
69	29 1-2	160	5 1-2
72	27 1-8	168	5
76	24 3-8	176	4 1-2
80	22	184	4 1-8
84	19 7-8	192	3 7-8
88	18 1-8	200	3 1-2
92	16 5-8		

A *Patent Portable Metronome*, invented in 1850, has come into use, which is a very complete and perfect instrument for measuring time in music. It is the size and form of a small watch, and may be carried in the waistcoat pocket, being similar to a spring measuring tape, on one side of which are marked the numbers of vibrations in one minute, (as in Maelzel's metronome), and on the other the Italian musical terms in general use. From its moderate price, small dimensions, and practical usefulness, it is adapted for all classes of musicians and singers.

METRICAL. That music is metrical the phrases of which are directly, or alternately, regular and equal in their temporal lengths.

METRUM. (G.) The measure or time.

METRU. A singing-master at Paris about the year 1676. The Abbé de la Louette says, that this musician either invented the seventh syllable, *si*, or brought it into use in solmization. Laborde makes him a celebrated chapel-master, about 1620; perhaps they were two persons, father and son.

METZELIAS, HIERONYMUS, was a singer at Stade, about the middle of the seventeenth century, and also at Ilmenau, in Thuringia. He was born in the principality of Schwartzburg. His principal publication is, "*Compendium Musicæ, tam choralis quam figuralis, certis quibusdam observationibus, iisque rarioribus exornatum, in studiose iuventutis, præprimis Athenæi Stadensis, sed et plerumque omnium Artium hæc clangentem atque tinnientem sitientium et amantium, gratiam et honorem luci publicæ adstitutum.*" Hamburg, 1660.

The work is in question and answer, and in two languages, German and Latin.

METZGER, MAG. AMBROSIVS, born at Nuremberg in 1603, was rector of the college of St. Egidia there in 1 32. He was a good musician and composer, as he under-mentioned works evince. Of these, he published the psalms in an advanced age, and with his sight impaired. Wagenseil, in his "*Traktate von Meistersängern,*" mentions several melodies with the name of Metzger, which probably the "*Meistersänger*" had taken out of his "*Flowerets of Venus,*" and put words to. His works are "*Venus-blumlein, 1ster Theil, neuer lustiger, weltlicher Liedlein mit 4 Stimmen componirt,*" Nuremberg, 1611. "*Derseiben 2ter Theil mit 5 Stimmen,*" Nuremberg, 1612. "*Der Psalter Davids, in die gebräuchlichsten Kirchentöne gebracht und mit 100 neuen Melodien geziert,*" Nuremberg, 1630.

METZGER, F., Jr., probably son of the preceding, was also a flutist and member of the electoral chapel at Munich; at the same time he appears to have been a clever composer for the piano-forte. Some of his works have been republished at Paris, Offenbach, and other places. There seem to have been two composers of this name living in 1810. In the "*Calendrier Musical Univers.*" of 1787, only one F. Metzger is mentioned as a living piano-forte composer at Paris. There is no doubt that this is again a different person from the two Metzgers of Munich, the more so as the name of the flutist is Charles. The Parisian Metzger published "*Préludes pour le Forté-piano, dans tous les tons usités majeurs et mineurs, divisés progressivement en deux parties, composés par F. Metzger, Œuvr. 16.*" Paris, 1800, and, "*Le Radeau, ou la première Entrevue des Empereurs Napoleon et Alexandre, Pièce histor., pour le P. F.*"

METZGER, GEORG, flutist to the Bavarian court, died at Munich in 1794.

MEUNIER. A violinist of this name is found, in 1798, in the orchestra of the Grand Opera at Paris. He was probably a composer of some violin quartets published under the same name at Paris, about the year 1783.

MEURSIUS, JOANNES, royal historiographer and professor of politics and history at Sora, was born at Losdun, near the Hague, in 1579. He was tutor to the Duke of Berneveld's sons during ten years, and visited with them the principal courts and libraries of Europe. He received the degree of doctor of laws at Orleans. On his return from his travels he became professor of history and of the Greek language; after which he was invited by the King of Denmark, Christian IV., to the above-mentioned situation at Sora, where he died in 1639 or 1641 of the stone. His writings which relate to music are as follows: "*Aristoxeni Elementa Harmonica, Græce,*" Leyden, 1616. "*Nicomachi Enchiridion Harmonicæ, Græce,*" Leyden, 1616. "*Alypii Isopyge Musica, Græce,*" Leyden, 1616. "*Orchestra, sive de Saltationibus Veterum,*" Leyden, 1618, "*Porphyrii Philosophi opera omnia, Græce.*"

MEYERBEER. This celebrated composer was born at Berlin, the 5th September, 1794. His father, John Beer, a rich landholder, had several children, one of whom afterwards became a dramatic poet of much merit, and the author of a

celebrated tragedy entitled "The Pariah." His brother, Jacques Meyerbeer, also gave early indications of that dramatic genius which, united with his musical talent, made him one of the most effective composers of the day. He enjoyed, through his father's affection and foresight, the advantages of an extensive and liberal education, and soon became remarkable above all for his musical taste. At seven years of age he already performed on the piano at public concerts; but it was not until he had reached the age of fifteen that he commenced his deeper and more scientific musical studies. He was fortunate in his choice of a master. The Abbé Vogler, who was one of the greatest theorists, and certainly the first organist in Germany, had opened a school, which was numerously attended, and amongst the fellow-pupils of Meyerbeer were young men whose names are never spoken of but with the deepest admiration; such as Weber, Winter, Knecht, Ritter, Gaensbacher, &c., and the first of these was Meyerbeer's bosom friend. With such worthy subjects for emulation, it is not wonderful that the young musician's genius daily expanded. At eighteen years of age he produced his first opera, "*La Fille de Jephthé*." In this production all the ancient scholastic rules were strictly observed. It obtained a fair portion of success, and the Abbé Vogler, in his enthusiasm, signed the *brevet* of a *maestro* for the young composer, adding his blessing, and giving up his tutelage.

At Vienna, Meyerbeer appeared as a pianist; he acquired, however, such a reputation, that he was intrusted with the composition of an opera for the court, entitled "The Two Caliphs." This, however, was a complete failure. Italian music was at that period in the highest vogue, and Salieri, the author, a great friend of young Meyerbeer, advised his travelling in Italy, to acquire a style of composition more in unison with the prevailing taste. Once arrived there, the Italian music fascinated his imagination. Delighted with the sweet and flowing melodies and varied manner of Rossini's "*Tancredi*," he immediately adopted this style, and wrote an opera for the famous Pisaroni, entitled, "*Romilda e Costanza*," which he brought out in Padua, 1817, and which was very successful. In 1819 he wrote the music for Metastasio's "*Semiramide Riconosciuta*," and brought it out at the Grand Theatre of Turin; the same year, at Venice, he produced "*Emma di Resburgo*;" and both were extremely well received. In 1821 Meyerbeer, not unmindful of his native city, and anxious to redeem his fame, wrote, in the Italian style, "*La Porte de Brandebourg*," to be performed at Berlin; but he could not succeed in getting it produced there. He was more fortunate in his "*Emma di Resburgo*:" it was translated, and performed at all the German theatres, in spite of the violent opposition of that school of composers to which he had a short time before belonged. Even Weber deplored the change of style of his friend, and, while "*Emma*" was performed at the Italian Opera House, brought forth again "The Two Caliphs" at the German Theatre, hoping to throw the balance in favor of Meyerbeer's earliest production. Meanwhile this composer produced another opera, "*Margherita d'Anjou*," at the Scala at Milan; and in this, Levasseur, a distinguished artist of the Grand Opera at Paris, made his

début. "*L'Esule di Granata*" followed; the first act was hissed, on the first performance, by a cabal formed against the composer; a fine duet between Lablache and Pisaroni, however, carried the audience by storm, and on the subsequent nights its success was undoubted. One of Meyerbeer's best compositions, "*Il Crociato in Egitto*," sustained by the united talent of Madame Meric-Lalande, Velluti, and Crivelli, obtained a more brilliant success than any of his preceding works, and the composer was crowned by the audience. This opera, after making the tour of the Italian theatres was performed at Paris, whither Meyerbeer himself, at the invitation of M. de la Rochefoucauld, repaired.

Meyerbeer married in 1827, but the death of his two children threw a gloom over this part of his life; he passed two years in retirement, and it was, doubtless, during this time that he brought forth those compositions of a more serious cast, which have so highly distinguished him as a composer of sacred music. Amongst them we may remark the "*Stabat Mater*," "*Miserere*," "*Te Deum*," and an oratorio, entitled "*Dieu et la Nature*." But the effect of all these compositions was only a shadowing forth of the brilliant success of "*Robert le Diable*," brought out in Paris in 1831. This splendid music did more towards raising the reputation of the composer than all his previous works. Admirably adapted for popularity by its stirring melodies, and, above all, its strongly-marked contrasts and dramatic effects, it seized immediate hold of the imagination. Repetition and study were not needed to advance its claims, for it addressed itself to the sight, to the fancy, and the heart as much as to the ear, and though a marvel of science and labor, it had every quality for attracting the vulgar mind.

The composition of the "*Huguenots*," brought out five years later, must have been a work of considerable difficulty, for an enormous reputation was to be sustained in a production of the same calibre and pretensions. The success of the "*Huguenots*" did not, perhaps, equal that of "*Robert le Diable*," but it was felt and understood as a work of genius. His "*Prophète*" maintained the reputation of those two operas, and all three are reigning favorites on the French and English operatic stage.

Certainly the best operas of Meyerbeer are those he had written for the French stage. In his native country he was unfortunate; having returned there after a great lapse of years, his most ambitious production was the "Camp of Silesia," of which so many different opinions have been given. But it is beyond a doubt that this opera is inferior in genius to the great productions we have mentioned; and this is testified by the infrequency of its performance at Berlin; the reason given by the King of Prussia — that of wishing to reserve it for state occasions alone — appearing to be merely as a feint to conceal the comparative failure of a composer so highly esteemed.

Meyerbeer, though enormously rich, lives in a most unpretending style, and is not very partial to society. He carries his love for his art to an extraordinary degree. In other things, he is quiet and simple in his manners, but possesses a fund of good sense and general information. He is small of stature, his hair is black, and his face bears the type of his Hebrew origin.

Much of the peculiarity of this composer

productions may be explained by referring to the history of his life, his early studies, and predilections. In his works may be traced the deep science and thorough musical knowledge which he acquired in the outset of his career — the sentimental sweetness of the Italian school, and the profusion of embroidery, the employment of dramatic effects, characteristic of the musical taste of the French nation, amongst whom he produced his later compositions. At the head of his style of musical art, he may be said to have founded the school to which he belongs. But greatly as the productions of this composer must be admired, his followers, not possessing his genius, will, it is to be feared, rather injure than forward the advancement of pure musical taste. The peculiarities of his style, indeed, are such as will be readily resorted to, for reasons far different from those by which he was actuated; for in finding the possibility of substituting noise for melody, and startling contrast and effect for truly scientific combinations, many a composer, who would otherwise have lived unsung, may be induced to offer his meagre and trashy productions to the world.

MEYER, JOACHIM, was a doctor of laws and professor in the university of Gottingen, where, in 1686, he was also appointed professor of music and cantor figuralis. He held these places for about ten years, when, retaining only the title of professor of music, he relinquished the practice of it, and gave public lectures on history and law. He afterwards became rector of the college, but at the end of three years quitted that honorable station, on account of his age and infirmities, when, as a reward for his merit, he was still permitted to enjoy all his salaries, with the addition of a pension.

In the year 1726, he published a tract, entitled "*Unvorgreifliche Gedanken über die Neuliche eingerissene Theatralische Kirchen-Music*," in which he severely censures many of his contemporaries, who, by the levity of their compositions, had confounded the ecclesiastic with the theatrical style.

MEYER, JOHANN FRIEDRICH, bass singer and composer in the chapel at Anspach, in 1730, was born about the year 1704: he was pupil of the chapel-master Bumler. He was also, for some time, in Italy, and obtained, on his return, the above-named situation. He was not only a good harpsichord player, but also understood composition well.

MEYER, JOHANN HEINRICH CHRISTIAN, lieutenant in the Hanoverian regiment of Saxe-Gotha, was born at Hanover in 1741. He wrote, besides other works, "*Brief über Russland*," Gottingen, 1779, in which he treats much on music. He died in 1783.

MEYER, PHIL., Sen., was born at Strasburg, in Alsatia, in the year 1737. At an early age he was sent to the college, destined to study divinity for the Protestant church establishment; there he soon joined more students, who, from a predilection to music, were accepted to assist in the vocal department of the church service, and, by degrees, was more successful than others in getting instructions on the organ from the organist. He thus acquired the foundation of his musical knowledge of the German school, and

cultivated it as much as opportunity was allowed him, consistent with college duties, till about twenty years of age, when, meeting by accident with an old German harp without pedals, he took so much pleasure in playing on it, as to confirm his strong musical inclination so decidedly, that he left college with a resolution to devote himself to the musical profession, and for that purpose went to Paris, as the seat of the arts. He there met with early encouragement, but found the harp very little known, and very incomplete: the occasional semitones were then produced by means of hooks turned with the left hand, which operation, during the continuance of performance, rendered the resources of modulation extremely confined. Meyer now applied himself, with the assistance of an instrument maker, to improve the harp. Two and three pedals were at first added, and after progressive additions, Naderman, father to the esteemed professor of that name at Paris, brought the seven pedals to perfection. By this time the harp was very much cultivated at Paris; several other makers succeeded, and Meyer published the first principles of the instrument, entitled "*Méthode de la Harpe*," which was long esteemed by the first professors as a sure guide to that instrument. Some sonatas also established his claim as a composer. About this time he took the opportunity of studying with Mûthel, an esteemed pupil of S. Bach's, who visited Paris on a musical tour. He then went to Strasburg, married, and returned to Paris, where, after a few years, he was tempted by an English family to visit London. He there found the pedal harp hardly known; and soon met with so much encouragement among the first nobility, that he made London his principal abode for several years, till, (while on a visit to Strasburg,) the American war breaking out, he was induced to remain in France, and again to go to Paris. Finding, however, that during his absence Krumpholz and several other professors had taken possession of the field of his former exertions, and being encouraged by his professional friends to write for the opera, he then followed his favorite propensity for composition by setting to music a poem of one act, by Mr. Pitra, entitled "*Apollon et Daphne*." This first attempt succeeded sufficiently to procure him, from his style, the appellation of *Young Gluck*, and an introduction to Voltaire, for the purpose of composing the music to a serious opera, entitled "*Samson*." This was to decide his fame, but unfortunately, when on the point of its being finished, Voltaire died; in consequence of which, the offence which that writer had given to the clergy manifested itself against the performance of this opera, on account of the subject being taken from Scripture, and it was interdicted. This proved so serious a check to P. Meyer's musical ambition, that he resolved to return to London with his family about the year 1784. Here also he found his principal former connections provided with other masters; and as he had neglected a talent, which, at the best of times, through his insurmountable timidity, proved ungrateful to him, he gave up all pretensions as a performer, and trusting entirely to the reputation of his works, always met with distinguished patronage as a teacher, until his two sons followed his steps. He died in 1819, aged 82. P. Meyer was a stanch enthusiast of the German school

and in his compositions, which particularly claim originality, he obstinately avoided the florid changes of the modern style and taste, and the continued esteem of his music at the present time is a fair test of their intrinsic value. His principal works are "Six Canzonettas, with Accompaniment of the small Harp," the words chosen by Mr. Fox. In this set, "Thy fatal shafts" was very popular for some time. A set of sonatas, entitled "Original Sonatas." "Ditto," dedicated to the Countess of Oxford. "Ditto," dedicated to Lady Whitbread. "La Chasse." "Two Grand Sonatas, with Accompaniment," dedicated to Miss Staples. "A Collection of Hymns for Harp and Piano-forte," dedicated to Princess Charlotte. Several fugues, which are, perhaps, the only music of that description published for the harp. "Two Duets," dedicated to Mrs. Walker, &c.

MEYER, P., Jr., son of the preceding, was an excellent harpist in the style of Madame Krumpholz. He has published some music for his instrument.

MEYER, FRIEDRICH CHARLES, younger brother of the preceding, was also a professor of the harp, and has published some very pleasing sonatas for that instrument.

MEZZA BRAVURA. An expression used by the Italians to signify an air of moderate passion and execution.

MEZZA VOCE. (I.) An expression signifying that the movement before which it is written is to be sung, or played, with a moderate strength of tone, and in a delicate, pleasing manner.

MEZZO. (I.) Half, middle, mean. This word is generally used in conjunction with some other; as, *mezzo forte*, moderately loud; *mezzo piano*, rather soft. When written alone, and applied to the grand piano-forte, it denotes that the pedal is to be used, avoiding one of the sets of strings.

MEZZO CARATTERE. (I.) An expression applied to airs of a moderate cast in point of execution. To excel in the *mezzo carattere*, it is necessary to have a tolerable acquaintance with the *cantabile* and the *bravura* styles; to be able to swell and diminish a note, and to run easy divisions with neatness and precision.

MEZZO SOPRANO. (I.) The middle species of the female voice. Below the soprano or treble.

MEZZO SOPRANO CLEF. The name given to the C clef when placed on the second line of the staff, in order to accommodate the *mezzo soprano* voice, which is a treble voice of a moderate or somewhat low scale.

MI. The syllable applied by Guido to the third note of his hexachords. In the natural hexachord it is expressed by the letter E, and is the third note of the major scale.

MI CONTRA FA. (L.) Terms applied by ancient theorists to all false relations between the notes of one chord as compared with the notes of that which immediately preceded or followed it.

MICHAEL, SAMUEL, organist, about the year 1630, in St. Nicolas Church, at Leipsic, was born at Dresden. Of his works are known "Psalmodia Regia, oder auserlesene Sprüche aus

den 25 Psalmen Davids, mit 2, 3, 4 und 5 Stimmen, beydes vocaliter und auch instrumentaliter zu gebrauchen," Leipsic, 1632; and "Paduanen und Galltarden," &c.

MICHAELIS, CHRISTIAN FRIEDRICH, son of a physician at Leipsic, professor of philosophy, and, in the year 1801, private tutor to a nobleman near Potsdam, was born at Leipsic in 1770. He received his general musical education under Weidenhammer, Burgmüller, and Goerner, learning the violin of Rütke. Michaelis has given lectures on music in Leipsic; he has also published many scientific works relative to music, and some instrumental compositions.

MICHAULT, or MICHAUD, a French violinist, published, in 1780, his Op. 2, comprising six duos for the violin. Another musician of the same name distinguished himself on the horn about the year 1788.

MICHEL, YOST, a celebrated performer on the clarinet, died at Paris in 1786. He wrote many operas for his instrument, amongst which can be named, "Quatorze Concerti pour la Clarinette;" "Cinquante-quatre Duos pour deux Clarinettes," Ops. 1, 2, 3, 4, 5, 6, 7, 8, 9; "Petits Airs variés pour deux Clar."; all printed at Paris. In 1801 a selection from the compositions of this master were published under the title "Douze Grands Solos, ou Etudes pour la Clarinette, choisis dans les Ouvrages du célèbre Michel, pour servir à ceux qui veulent parvenir toutes les difficultés de cet instrument," Paris.

MICHEL, FRANZ LOUIS. A flutist, in the year 1774, in the Imperial Chapel at St. Petersburg. He belonged, also, in 1788, to the chapel of Count Potemkin at Benda, previously to which he was second to his elder brothers in the chapel at Cassel.

MICHEL, GEORGE, the youngest of the celebrated musical family of this name, from Cassel, was born in 1775. He was considered by Gerber as one of the first flutists he ever heard. He was invested with the title and rank of captain of the Imperial Chapel at St. Petersburg. G. Michel was in London about the same time that Haydn resided there. In the year 1800, he undertook a second journey from St. Petersburg to London, in the course of which Gerber became acquainted with him at Sondershausen. His flute was one of the most costly description, of ebony, mounted with ivory, and furnished with eight silver keys; it was made in London, after the style of Tacets and the elder Florio. It had a compass from C up to the highest notes of the third octave, with which, as occasion required, he could produce the effect of a trumpet, or the soft tone of the harmonica. G. Michel's performance was greatly admired in England.

MICHEL, VIRGIL, violoncellist in the Electoral Chapel at Munich, about the year 1788, composed for the theatre of that place, a serious German opera, entitled "Marzio Coriolano," 1786.

MICHELET, F. G., a musician at Franeker in Friesland, was born in 1730. He published much harpsichord music at Amsterdam, about the year 1760.

MICHELLI, or MICHELI, DOM. ROMANO chapel-master of the cathedral church Di Con

cordia, at Rome, was born in that city. He was a pupil of Soriano, and flourished in the first half of the seventeenth century, as one of the most accomplished canonists. The best proof of this is given in his "*Musica vaga et artificiosa*," the complete contents of which have been communicated by Burney, in the third volume of his history, p. 520. This work likewise contains a copious preface, in which the author relates the history of his musical life, and the names of all the great men from whom he derived advantage in his science. As these names include the first contrapuntists and canonists of Italy at that period, they well merit a place here. Micheli relates as follows: At Venice he made acquaintance with Gio. Gabrielli, Gio. Croce, and other celebrated men. At Naples, where he resided with the Prince of Venosa, he became acquainted with Scipione Stella, Gio. Battista Paulo, Muzio Effrem, and Pomponio Nenna; at the same time Bartolomeo Roi was chapel-master, and Gio. Maque organist to the vice queen. Rocco Rodio, Scipione Cerreto, Giustiniano Corcella, and Domenico Montella flourished also at that time as profound musicians. In Ferrara, he was acquainted with Luzzasco Luzzasci, Fierone Fioron, Gio. Mazzino, the chapel-master of the Dome at Lodi; also with Pietro Morsolo, and other learned artists. At Milan, where he resided a year, he found D. Fulgeutio Valesi Parnegiano very observant in the composition of canons, also Guglielmo Arnone and Cesare Borgo, at that time organists to the metropolitan church. At Rome, he became acquainted with the Spanish musician Sebastian Raval. When Raval went to Rome, says Micheli, as he had not yet met with his equal in Italy, he considered himself to be the first master in the world, and therefore challenged Francesco Soriano and Gio. Maria Nanino to a competition of knowledge in the science. But he was overcome in the first attempt; so that Raval was afterwards compelled to acknowledge Soriano and Nanino to be great *maestri*. Micheli enriched canonical music with various new inventions, and brought it to the highest perfection, as his works fully prove; from amongst which the following may be named: "*Musica vaga et artificiosa, continente Motetti con obblighi, e Canonî diversi, tanto per quelli, che si dilettauo sentire varie curiosità, quanto per quelli, que vorranno professare d'intendere diversi studii della Musica*," Venice, 1615; "*Compieta à 6 voci*," Venice, 1616; "*Kanon fur 9 Chöre mit 36 Stimmen*;" "*Motetto in Canone, Amo Christum, &c.*" à 3 voci, 2 Sopr. e Basso, con Continuo;" "*Motetto in 2 Canonî infiniti, Sancte Cherubine, &c.*" à 4 Soprani;" "*Motetto, Veni sponsa Christi, &c.*" à 5 voci, Soprano con l'obbligo Sopr. A., Ten., B., ed Organo;" "*Motetto, O quam pulcher, &c.*" à 5 voci, 3 Sopr. A. Ten.;" "*Madrigali à 6 voci*," Venice, 1567; "*Madrigali à 5 voci*," Venice, 1531.

MICHELI, BENEDETTO, of Rome, composed and brought out at Venice, in 1746, the opera of "*Zenobia*," the words by Metastasio.

MICIL, JOSEPH. A dramatic and church composer at Prague, about the year 1760.

MIGNAUX, or DEMIGNAUX, a musician at Paris, published, in 1774 and 1775, much music for the harpsichord, harp, and violin.

MIGNON, JEAN, chapel-master in the church

of Notre Dame, at Paris, about the year 1679 wrote several motets, which at that time were considered exquisite.

MIGNOT, DE LA VOYE, a French geometer, wrote, about the middle of the seventeenth century, "*Traité de la Musique, pour apprendre à composer à plusieurs parties*," Paris, 1659. A second and enlarged edition, with a fourth volume, was published at the same place in 1666.

MIKSCHE, a singer at Dresden, about the year 1799, published the rondo "*Endlich hab ich sie gefunden, an Klavier zu singen*," i. e., At last I have found it, &c., published at Leipsic, by Breitkopf, in 1797.

MILAN, DON LUDOVICUS, a Spanish nobleman and musical amateur at Valencia, in the first half of the sixteenth century, published "*Et Maestro, o Musica de Vignela de Mano*," Venice, 1534.

MILANI, FRANCESCO, a composer of the seventeenth century, published "*Litanie e Motetti à 8 voci con B. C.*"

MILANOLLO, TERESA and MARIA. These two wonderful sister violinists were born in Milan. An interesting anecdote has been told in relation to the circumstances which first induced Teresa Milanollo to study the violin. When attending a musical mass at Savigliano, in Piedmont, (her native country,) being at that time about four years old, she was much struck by a solo on the violin. No sooner was the service over than she expressed to her father her desire to learn this instrument. Her father explained to her that the piano and harp were more suitable to a female; when she exclaimed, "O, it is the violin that I love!" This extraordinary predilection induced her father to engage a master, under whose instruction she made great progress; and at the age of six she gave a concert in her own country. She then gave concerts at Marseilles, Paris, and in Holland, with immense success, and went to London when scarcely eight years old. At Lille, where a medal was struck to her honor, her sister Maria, then aged six years, was heard for the first time. They played together in the north of France, and at Paris, and visited Germany and part of Italy. In Germany they gave two hundred and fifty concerts. After their arrival in London, both were elected honorary members of the Beethoven Quartet Society; a distinction only conferred upon foreign performers on the violin of first-rate talent. The younger sister died in Paris in 1848, at the age of sixteen. Teresa was still giving concerts in Geruany, Hungary, Switzerland, &c., with great success, in 1853.

MILANTA, GIO. FRANCESCO, a composer of the seventeenth century, published "*Missa, Salmi, e Motetti con Sinfonie, à 1, 2, 3, 4, 5, e 8 voci concert.*," Op. 1.

MILANUZIO, CARLO, a monk of Santa Natoglia, was originally, about 1628, organist of St. Stefano's, at Venice, but afterwards became chapel-master of St. Euphemia's, at Verona. He proved himself an industrious church composer, as the following, among his works, will evince. "*Armonia Sacra à 5 voci, con Messa e Canzoni*," Venice, 1622. "*Litanie della Madonna, à 4-5 voci.*" "*Compieta Concertata con le Antifone e Lita*

nie, à 1, 2, 3, e 4 voci." "Balletti, Saltarelli, e Correntine alla Francese à 1 V. Lib. 1." "Ariose Vaghezze," Venice, 1628. "Messe à 3, 7, e 11 voci, con Instrumenti," Venice, 1629. "Concerto Sacro di Salmi à 2 e 3 voci, con B. Lib. 1." "Salmi, à 2 voci, con B." "Concerto Sacro di Salmi à 2 e 3 voci, con 2 V. Lib. 2." "Hortus Sacer deliciarum seu Motetti, Litanie et Missa, 1, 2, et 3 vocum."

MILCHMAYER, JOH. PETER. In his last works he names himself court musician to the Elector of Bavaria, and professor of the harp. He lived at Dresden in 1799. He appears to have been born about the year 1750, as in 1797 he declares he had been giving instructions twenty years on the harpsichord.

MILES, MRS., formerly MISS GUEST. This celebrated professor of the piano-forte was a native of Bath. She began her musical career at the age of five years and a half, with progressive talent and success. At the age of fourteen she visited London to take her finishing instruction from that highly-gifted master, John Christian Bach. The talent of this lady was universally acknowledged and confirmed by the approbation of their majesties, to whom she was introduced at an early period, and subsequently attended the princesses regularly at Weymouth. In the year 1806, Mrs. Miles was honored with the high and flattering appointment of instructress to her royal highness Princess Charlotte, in consequence of which she removed from Bath. The publications of this lady are not numerous, but her sonatas, dedicated to her illustrious scholar, have been handsomely reviewed in the journals of the time. Her manuscript concertos, which she reserved for her own performance exclusively at the Bath concerts, under the direction of Rauzzini, have given proof of genius in composition.

MILHEIRO, ANTONIO, a Portuguese composer, born in Braja, flourished in the beginning of the seventeenth century. He was first chapel-master to the cathedral church at Coimbra, and afterwards at Lisbon, but at length became canon. He published the following works: "Rituale Romanam, Pauli V. jussu editum, subjuncta Missa pro defunctis à se musicis numeris adaptata cantuque ad generalem regni consuetudinem redacta," Coimbra, 1618. The rest of his musical works are partly to be found in the library of Francisco de Valladolid, and partly in the royal musical library at Lisbon.

MILITARY MUSIC. The origin of military music takes us back to the most remote antiquity. Every nation in ancient times had its peculiar instruments of music, and its national songs. These songs invariably refer to the splendid victories gained, memorable battles fought, celebrated sieges carried on, or the eminent services of some individual hero. The name of the soldier and the officer who effected a deed of renown, stood in glory's celebration beside that of the general who commanded. With the Spartans, the song of Castor was the signal for combat; the Romans took cities to the sound of the trumpet and the horn; the Egyptians, Arabians, and ancient Germans combated to the noise of drums, the sound of the flute, the cymbal, and the clarion. The Greeks borrowed the four principal tones of their music from the Phrygians and Lydians. The first of these tones or notes was

very grave; it was that which was used in war and in all public ceremonies. In the ancient times, and among different people, each instrument had its peculiar destination or intention. The Chinese, in their war music, employed bells and triangles. With the Romans, the *cornet* called the time of decampment; the *bagle* announced the coming of the general; the *trumpet* indicated the assembling of the troops; and the *horn* the signal of retreat. It was to the noise of these instruments combined, discordant, shrill, deafening, that they threw themselves into the ranks of the enemy. Among the Egyptians, bells, in conjunction with timbrels, served to form a species of military harmony. The Hebrew soldiery employed the horn, the trumpet, the timbrel, the *lympanum*, and the sackbut, an instrument somewhat resembling the trombone. The music attached to the Roman legions had made much progress at the time of the conquest of the Gauls; but to date from this epoch, we find it becoming more and more feeble. The soldiery of France received and preserved the clarion and trumpet of Caesar's armies; but the custom of making use of music was insensibly lost. At the commencement of the middle ages, the instruments handed down and preserved were useful merely in rallying the soldiers, calling them to battle, and making them endure with gayety the fatigues of a march. At this time the method of the Romans had entirely disappeared. About this period the French minstrels began occasionally to accompany the troops to battle. Their instruments were the *rebec*, a little three-stringed violin, *bagpipe*, and *flute*, or pipe. About the year 1330, they began to use the *clarion*, an instrument derived from the Moors, who transmitted it into Portugal from Africa. The *cornet*, another war instrument of the ancients, made its reappearance about the same time. It was about this time, also, that the adventurous Italian bands recovered the usage of military music, which soon expanded itself among the other nations of Europe. To the drums and trumpets they joined the flute, fife, and pandean pipe. The drum was played with a single stick. At the end of the fifteenth century they began using regular bands of music in the army. The *bagpipe*, invented in the thirteenth century, and the *violin*, were added about the commencement of the sixteenth. The invention of this first instrument belongs to the Alps or Piedmontese inhabitants. In 1535 the Swiss introduced into France the fife, which served to accompany the drums, and the usage of which is preserved to this day among the armies of many nations. In the seventeenth century we meet with the *hautboy*, an instrument of German origin, given to the dragoons and musketeers of the guard. We are indebted to the Hungarians, and through them to the eastern nations, for the *kettledrum*, the *bassoon*, the true *flute*; for the *tambourine*, to the Italians; the modern *horn*, to the Hanoverians; for the *cymbals* and big drum, to the Turks. The adoption of these last two instruments and the kettledrums, gave the name of Turkish music to our military music. The combination of their instruments with the cavalry trumpet constituted, at the beginning of the eighteenth century, the entire musical scheme of our troops. Then each battalion, each company, had its particular and distinctive music. The drum, the fife, the horn, the bas-

soon, the big drum, the cymbals, belonged particularly to the infantry; the trumpet, the hautboy, the bagpipe, the kettledrum, to the cavalry. The bassoon, the hautboy, the horn, and the trumpet were indifferently employed by either troops.

An ordinance in France, of the 19th of April, 1766, appointed a band of music to each regiment. It was composed of all the instruments which just then belonged to the companies or sections of the corps. The clarinet, invented in the commencement of the last century, the eighteenth, by an inhabitant of Nuremberg, was not received into the military band of France before the year 1755. The *serpent*, invented in 1590, the *triangle*, which was the cymbal of the middle ages, and the *trombone* entered successively into the different corps of the army. But it is only since 1792 that military music has been truly developed. The recent introduction of many improvements has made a revolution in military harmony, by augmenting the resources and adding power of effect to our brass instruments. The utility of military music has been a frequent theme of discussion. We may refer to its employment by the Greeks and Romans; more recent examples will serve to prove its importance. Who does not know the prodigious effect of a national air played by a military band previous to or pending an engagement? The very coward is fired into enthusiasm by the dulcet strains of some homely or national melody. There is no feeling implanted in man's nature, and which so veritably deserves the name of instinct, as a love of music. To the soldier, especially in time of war, it is grateful beyond measure. On his weary march it takes from his fatigue; in distant climes it snatches him back to his home; and in the hour of battle it incites him to courage and ambition. In point of utility, music is one of the most beneficial addenda to military improvement.

MILLER, DR. EDWARD, was for fifty years organist at Doncaster. He composed new tunes for the Psalms of David, which were patronized by the king and a list of near five thousand subscribers. His principal work, however, was "The Elements of Thorough Bass and Composition," a book highly esteemed. Dr. Miller played the flute in Handel's first oratorios. He died at Doncaster, in 1807, aged seventy-six.

MILLER, JULIUS, born at Dresden in 1782, discovered, at an early age, an ardent inclination to music, and made such rapid progress in singing, that, in 1790, he was heard with great applause at the coronation of the Emperor Leopold, in Prague. In the year 1799, he appeared as Tamino, for the first time, at the theatre in Amsterdam. His voice had an uncommon compass, so that he could undertake bass as well as tenor parts. After this he was first tenor singer to the second Joseph Society, and likewise at the great concerts at Leipsic, where he acquitted himself with much satisfaction. Of his compositions, which are distinguished for agreeable melody and tasteful instrumental accompaniments, the following will convey some idea: "Der Freybrief," "Die Verwandlungen," "Der Rosakenoffizier," "Julie oder der Blumentopf," "Michel und Uannchen;" all operettas. He also published "Favoritgestänge aus den Verwandlungen," Breslau;

"Klavierauszug aus dem Rosakenoffizier," Dresden; "Vierstimmige Gestänge," "Sechs Kanons," and "6 Dreystimmige Gestänge."

MILLER, called KRASINSKY, father of Madame Gardel, the celebrated dancer at the opera at Paris, arranged, and in part composed, the music of the two ballets of "Télémaque" and "Psyche." He also published in Germany some popular music for the flute.

MILLER, M. Of this musician, the following work was announced in Traeg's Musical Catalogue for 1799, from which it appears he was a composer at Vienna: "Offertorium à 4 voci, 2 V., 2 Clar., Tympan., Viola concert., con Organo."

MILLEVILLE, ALESSANDRO, born at Ferrara, was an excellent organist. About the year 1629 he was chapel-master to the Duomo at Volterra. He served, in his youth, as organist to several princes, and, lastly, to the Duke of Ferrara, where, about 1622, he was chapel-master, and from thence removed to his situation at Volterra. He died at Ferrara, in his sixty-eighth year. Besides various operas, written by him in the infancy of that art, he composed the following printed works: "Messe e Salmi à 3 voci." "Concerti à 1, 2, 3, e 4 voci, Lib. 1." "Motetti, à 2, 3, 4, 5, e 6 voci, Lib. 5." "Mazzo di Harmonici Fiori, à 2 e 3 voci, Lib. 6." "Motetti à 2, 3, e 4 voci, Lib. 7." "Novelli Fiori, à 2, 3, e 4 voci." "Litanie de B. V. à 3 voci." "Gemme Sacre," Venice, 1622. "Motetti," Venice, 1629. "Madrigals à 5 voci," Venice, 1675.

MILICO, GIUSEPPE, a soprano, and chamber musician to the King of Naples, in 1790, was born in that town, about the year 1730. He was considered one of the best singers of his time, and was remarkable for the dignity and sensibility of his style. So highly was his method approved by Gluck, that when that celebrated musician resided at Vienna, in 1772, he selected Milico to teach his niece the art of singing, who profited so much by her master's instructions, as soon to become an object of admiration in that city, for her vocal powers and taste. From Vienna, Milico went to London, in 1772, and after some ebal his singing was highly approved in England. He subsequently returned to Naples.

MILRITZ, HENRICH VON, a German writer, about the year 1536, was descended from a noble family, and was in the suite of the Margrave Albrecht, of Prussia, in 1519. He went also a journey with him through different parts of Germany, and formed acquaintance with Luther, from which circumstance he imbibed a taste for the Protestant religion, in which he afterwards received more accurate instruction from Paul Sperat.

After the altered government of the country, he continued in the service of the duke, and succeeded, in the years 1533 and 1536, to the situation of chief officer at Barton.

Of his works, there is a manuscript in folio, in the court library at Königsberg, in Prussia, which contains one hundred and sixteen of his spiritual hymns for fast days, Passion week, &c. At the beginning of each hymn the music is placed. In the prefatory epistle and dedication to the duke, as a connoisseur and amateur, he says, that in these hymns, he wished to express his gratitude to God for the experience he has received c the

truths of the evangelical religion, and to the duke, who has been a blessed instrument therein; but begs to be forgiven, if the verses are not, in all respects, worthy of his theme.

MILTON, JOHN, the father of the great epic poet of England, was a native of Milton, near Halton and Thame, in Oxfordshire. He was educated for the law, and practised as a scrivener in Bread Street, London; but he acquired considerable celebrity as a musical composer. Among the psalm tunes published by Ravenscroft, in 1633, there are many with the name John Milton to them. One of these, called the *York tune*, is well known at this day in almost every parish church. In the "*Triumphs of Oriana*," there is a madrigal of his composition for five voices; and in the collection entitled "*The Tears or Lamentations of a sorrowful Soule*," composed by various authors, and published by Sir William Leighton, Kut., one of the gentlemen pensioners, in 1614, there are several of his songs for five voices. It is said, in Phillips' life of his son, that Milton composed a fugue, "*In nomine*," of no fewer than forty parts, for which he was rewarded by a Polish prince, to whom he presented it, with a gold medal and chain.

John Milton's father, as a musician, must have been somewhat celebrated in his own time, and his family was noted for genius, yet their history may be mapped out in a few lines. The Catholic grandfather disinherits his son for changing his religion; the son, with his taste for music and literature, finds many friends, and makes a fortune as a scrivener; and his son, in due time, comes out like his father. The decline of the patrician family of Milton, one of whose remote ancestors had forfeited an estate in the wars of the Roses, is a subject at once painful and ludicrous. Johnson relates that Mrs. Foster, the poet's granddaughter, "kept a petty grocer's or chandler's shop, first at Halloway and afterwards in Cock Lane, near Shoreditch Church." She did not know what a *benefit* at the theatre meant; but understood it better when the profits of the representation of "*Comus*," £130, were paid to her by Dr. Newton. She and her husband died at Islington, illustrating, in Hamlet's phrase, "the noble dust of Alexander stopping a bung hole." Such is usually the way in which public services and desert are repaid to a man's descendants.

MIMES. A kind of vocal, mimic actors, formerly very numerous in France, and much encouraged in Italy, England, and other countries of Europe.

MIMNERMUS. About the beginning of the sixth century before the Christian era, Mimnermus, according to Plutarch, had rendered himself remarkable by playing upon the flute a nome called "*Cradias*," which, Hesychius tells us, was an air for that instrument, usually performed at Athens during the march or procession of the victims of expiation. Mimnermus was a lyric poet, and consequently a musician, of Smyrna, contemporary with Solon. Athenæus gives to him the invention of pentameter verse. His elegies, of which only a few fragments are preserved, were so much admired in antiquity, that Horace preferred them to those of Callimachus.

MINACCIOSO. (I.) In a threatening style.

MINAGNGHINIM. A pulsatile instrument used by the Hebrews, consisting of a square table of wood furnished with a handle: over this table was stretched an iron chain, and a hempen cord, which, passed through balls of wood or brass, and striking against the table when the instrument was put in motion, produced a sound both clear and pleasing, as well as audible, at a great distance.

MINELLI, G. B., an Italian counter tenor singer, native of Bologna, and of the school of the celebrated Pistocchi, sang very successfully at Rome, about the year 1715.

MINERVA, PAULUS, a learned Dominican, who is mentioned by Jocher as having been, besides his proficiency in other sciences, an excellent musician, flourished in 1582 at Milan, as chancellor of the holy office. He died, after he had published many learned works, at Naples, in 1645.

MINEUR. (F.) Minor, in speaking of keys and intervals.

MINGOTTI, CATARINA. This celebrated singer was born at Naples, about the year 1726. Her parents were of German origin. Her father, an officer in the service of Austria, having received orders to go to Gratz, in Silesia, took his daughter with him, before she was a year old. At his death, a few years afterwards, her uncle placed her in the convent of the Ursulines. Here the music which she heard in the church made such an impression on her, that, with tears in her eyes, she begged the abbess to give her some lessons, that she might be able to join in the choir; this was accordingly done. When she attained her fourteenth year, her uncle, who had intended her to take the veil, died; in consequence of which she returned to her mother and two sisters. Shortly after, she married M. Mingotti, a Venetian, very much older than herself, and who was manager of the opera at Dresden. On her arrival at that town, she made a great sensation. Porpora, who was then in the service of the court, recommended her, without delay, as a young singer of great promise, and soon procured her an engagement at the theatre. The celebrated Faustina and Hasse were also at this time in the royal service at Dresden, but shortly after hearing Mingotti sing, they left that city for Italy, being envious, as was said by some, of the favor with which Mingotti was received. After remaining a short time at Dresden, the fame of Mingotti's singing reached Naples, and she was invited to sing there at the Grand Opera. She accordingly went to Italy, having previously applied herself so closely to the study of the Italian language, that when she appeared at Naples for the first time, in the character of Aristeia, in the "*Olimpiade*" of Galuppi, she surprised the Italians, as much by the purity of her pronunciation, as by her melodious voice, and expressive and natural manner of acting. This first *début* having decided the superiority of her talents, she received proposals on all sides for theatrical engagements, at a high salary; she had, however, the delicacy to refuse them all, being still in the service of the court at Dresden, where her salary had been considerably raised

On her return to Dresden from Italy, she repeated her character in the "*Olimpiade*," with prodigious success. Hasse, who was just then engaged in the composition of his "*Demofonte*," (having also returned to Dresden on receiving the appointment of chapel-master,) now offered to compose expressly for Mingotti the adagio "*Se tutti i mali miei*," with only a pizzicato violin accompaniment. This, it was said, he did that any faults she committed in singing it might be more clearly heard. Although she was much pleased with the air on first trying it, she soon perceived the sure that was laid for her; which only redoubled her zeal and caution, so that she sang it the first night of performance in so exquisite and correct a manner as to force all her antagonists, and even Faustina herself, to silence. In 1751 she again quitted Dresden for Spain, and sang there with Gizziello, under the direction of the celebrated Farinelli. The latter was so strict with her during her engagement, that he not only would not permit her singing any where but at the court theatre, but even forbade her practising in a room which looked towards the street. After a residence of two years in Spain, where, amongst many other presents, she received from the queen a very valuable diamond necklace, she proceeded to Paris, and thence to London, where she arrived in 1754. "*Ipermestra*," an opera composed by Hasse and Lampugnani, was the drama in which she made her first appearance before a British audience, with great success; though Dr. Burney says the audience never fully felt her powers of expression, till she, some time afterwards, introduced, in "*Demofonte*," Hasse's adagio of "*Se tutti i mali miei*," which was in the highest degree pathetic. "Her style of singing," continues Dr. Burney, "was always grand, and such as discovered her to be a perfect mistress of her art. She was a most judicious and complete actress, extending her intelligence to the poetry and every part of the drama; yet her greatest admirers acknowledged that her voice and manner would have been still more irresistible if she had possessed a little more female grace and softness. The performance in men's parts, however, obviated every objection that her greatest enemy could make to her abilities, either as an actress or singer." In 1758 Mingotti quitted England, and afterwards sang at most of the principal cities of Italy. She did not, however, cease to consider Dresden as her home as long as the King (Augustus) lived. After his death, which took place in 1763, she established herself at Munich, where she enjoyed the general esteem of both the court and town. In 1772 she had still preserved much of the beauty of her voice; and at this time she could converse on music with as much science and judgment as the most eminent of the chapel-masters. Her conversation was animated, and she spoke in such perfection the French, Italian, and German, that it was difficult to distinguish which was her native language. She also knew enough of English and Spanish to support a conversation; nor was she ignorant of Latin. We are not acquainted with the period or place of her decease.

MINGUET, PABLO. A Spanish musician at Madrid, in the last half of the eighteenth century, published there "*Quadernillo nueco, que en ocho Laminas finas demuestran y explican el Arte de*

la Musica, con todos sus rudimentos para saber solfejar, modular, transportar, y otras curiosidades muy utiles. Se hallara en su casa, frente la Carcel de corte, encima de la Botica; y en la libreria de Manuel Martin, calle de la Cruz. Su precio es 6 reales." Forkel supposes this work must have been printed about the year 1774.

MINIM. A character, or note, equal in duration to a sixteenth part of a *large*, one eighth of a long, one fourth of a breve, and one half of a semibreve.

MINISCALCHI, GULIELMO, a composer in the beginning of the seventeenth century, published "*Miserere mei, Deus, à 3 voci*," and "*Arie*," Venice, 1627.

MINNESINGERS were love singers. The Troubadours were minstrels, more peculiar to Italy, Spain, and the south of Europe, while the Minnesingers were confined to Germany, and differed from their contemporaries, the Troubadours, in some essential particulars. These minstrels appeared in Germany as early as the year 1100, and flourished about two centuries. They were held in so high estimation, that even emperors sometimes belonged to their number. The Troubadours always used the same metre, while the Minnesingers employed a most charming variety, which, of course, obliged them to use an almost endless variety of tunes and melodies. The former dwelt much upon the pathetic and mournful, while the latter always breathed the spirit of cheerfulness. The former were more cold and intellectual, while the latter always aimed to touch the heart, and rarely failed to do it. It was the custom of these bards to travel about from place to place, like the bards and songsters in the early ages of Greece, or the minstrels of the early Saxons, and the Scots, who often united the harp and the lyre with the musical tones of the voice. In the early part of the fourteenth century, the Minnesingers became extinct. A book of their poetry was collected in the fourteenth century, which contained the best poems of the most celebrated, some of which would do honor to any age.

MINNIM. (II.) The strings of an instrument.

MINOJA, AMBROGIO, chapel-master and honorary member of the Conservatory at Milan, was born in 1752. He studied music at Naples under Nicolo Sala, and, on returning to his country, succeeded Lampugnani as first pianist at the Theatre Della Scala, at Milan. It was about this time that he composed some operas of instrumental music, amongst which were six quartets, entitled "*I Divertimenti della Campagna*." He also brought out two serious operas, the one for the Theatre Della Scala, and the other for the Theatre Argentina, at Rome, in which town he was staying for a short period. On his returning again to Milan, he was nominated chapel-master to the holy brotherhood Della Scala; upon which he devoted his talents almost entirely to church music. Shortly after this time, however, he composed a march and a funeral symphony, in honor of General Hoche, and obtained from General Bonaparte the prize of a gold medal, value one hundred sequins, which he had offered for the best composition on that occasion. He then wrote two masses des morts, which are preserved

amongst the archives of the government at Milan. At the epoch of the coronation of Napoleon, as King of Italy, Minoja composed a "*Vem Creator*," and a "*To Deum*," which were performed in the cathedral at Milan by an orchestra of two hundred and fifty musicians. Finally, on the occasion of the marriage of the Viceroy of Italy, (Prince Eugene,) he composed a cantata for the Teatro Della Scala.

MINOR, or MINORE. (I.) Less in regard to intervals; minor as to notes and keys. The only form of the minor scale which is recognized in the strict rules of harmony is, —

MINOR SCALES AND THEIR SIGNATURES.

A sharp, (relative minor of C sharp.)	D sharp, (of F sharp.)	G sharp, (of B.)
C sharp, (of E.)	F sharp, (of A.)	B, (of D.)
E, (of G)	A, (of C.)	D, (of F.)
G, (of B flat.)	C, (of E flat.)	F, (of A flat.)
B flat, (of D flat.)	E flat, (of G flat.)	A flat, (of C flat.)

MINOR CANONS. Those clergymen of a cathedral, or chapel, who occasionally assist in the performance of the *service* and *anthem*.

MINOR MODE. That of the only two modes recognized in modern music in which the third degree of the scale from the tonic forms the interval of a minor third.

MINORET, GUILLAUME, was one of the four masters of, or composers to, the chapel of Louis XIV. He composed many motets, which, though greatly admired, have never yet been printed.

MINOZZI, MARCELLO, chapel-master to the Duomo at Carpi, published, in the first half of the seventeenth century, "*Salmi, Sinfonie e Litani à 3, 4, e 5 voci, con F.*," Venice, 1638.

MINSTRELS. Certain poet-musicians of former times, whose profession it was to wander about the countries they inhabited, singing panegyric songs and verses on their occasional benefactors, accompanying themselves on the harp, violin, or some other instrument. A minstrel is a professed musician, or singer. Elisha, of old, had one to soothe his troubled mind.

MINSTRELSY. The art, or profession, of a minstrel.

MINUET. A movement of three crotchets or

three quavers in a bar, of a slow and graceful motion, and always beginning with the beating note. This is the dancing minuet, and is said to have been invented at *Poitou*; but there are other minuets, of a time somewhat quicker, and which were formerly much used as concluding movements of overtures, sonatas, &c.

MINUETTO. (I.) A minuet; a slow dance in triple time.

MION, music master to the royal family of France, brought out the following operas at the Royal Academy of Music in Paris: "*Nitétis*," 1741; "*L'Année galante, à la Cour*," 1747; and "*L'Année galante, à Paris*," 1748.

MIRECKI (pronounced Miretzky) was a member of the Conservatory at Paris; he has composed some excellent music, was a distinguished performer on the piano-forte, and every way considered as a rising genius. He was by birth a Pole, and when apparently not more than twenty-six or twenty-seven years old, produced works that would have done credit to a long and studious life. His edition of the whole of Marcello's celebrated psalms is beautifully arranged, with an appropriate accompaniment for the piano-forte. In this work he received some assistance from Cherubini. In the latter part of 1823, he published an edition of Clari's *duetti e terzetti* with a similar accompaniment. These compositions were originally published in 1730, and are distinguished by grandeur of subject and elegance in their melodic phrases. The original plates, engraved on copper, were deposited in the Teatro San Carlo, at Naples, and destroyed in the conflagration of that edifice. It is to the talent and perseverance of the young and spirited Mirecki, backed by an enterprising publisher, Carli, of Paris, that the musical world is indebted for the above invaluable treasure, which would otherwise, probably, have been buried in oblivion. Mirecki, in his piano-forte playing, exhibits all the tact of genius, and is highly celebrated as an extemporary performer.

MISERERE. (L.) *Have mercy.* A hymn of supplication, so called because the word *miserere* is the first in the Latin transcript of that hymn.

MISEROCCA, BASTIANO, chapel-master and organist to the collegiate church of St. Paul at Massa, in the beginning of the seventeenth century, was born in Ravenna. He published at Venice, in the years 1609 and 1611, several masses, vespers, and motets.

MISHROKITHA. The Chaldean name for the flute and the pipe.

MISLWECZEK, JOSEPH, called in Italy IL BOEMO, or VENATORINI. He was the son of a miller at a village near Prague, where he was born in 1737, with a twin brother, who so strongly resembled him that their parents could scarcely distinguish the two infants. Joseph received a good education at his village school, and probably there received his first lessons in music. After the death of his father, he went to Prague, to obtain further instructions in his favorite art from the celebrated organist Segert; and he then applied himself to the study of counterpoint with so much success that he shortly afterwards composed six symphonies, that were much applauded, and which he called "*Jan-*

uary, February, March," &c. Encouraged by this first success, he proceeded to Venice, and placed himself under Pescetti. From thence he went to Parma, where he composed his first opera, which pleased so much that he was invited to Naples. Here the opera of "*Bellerofonte*," which he produced on the king's birthday, rendered him so celebrated, that, within the next ten years, he brought out nine more operas in that city. Amongst these the "*Olimpiade*," 1778, was a great favorite, principally on account of the ariette, "*Se cerca, se dice*," &c., which was universally considered as a *chef d'œuvre*. Not long after the representation of "*Bellerofonte*," he revisited Venice, where he was loaded with honors. He met with an equally flattering reception at Pavia, and in 1777, or according to others, 1773, at Munich. In 1780 his fortune began to change. In this year he gave, at Milan, his opera "*Armida*," which was quite unsuccessful; he also failed in an opera at Rome. He died in wretched circumstances, in 1781, or according to others, 1782.

MISSA. (L.) A mass. The mass usually consists of five principal movements — the *Kyrie*, *Gloria*, *Credo*, *Sanctus*, and *Agnus Dei*.

MISURATO. (I.) In measured or strict time.

MIT. (G.) With; as, *mit Begleitung*, with an accompaniment.

MITFORD, JOHN, an English author, published "Essay on the Harmony of Language, &c.," London, 1774.

MITSCHA, or MICRA, FRANZ ADAM. Secretary to the governor at Gratz, in Steyermark. Nothing is recorded of him in print, yet too much is known not to give him a place here. We have, of his composition, the opera "*Adrast und Isidore*," 1790; "12 Stark-besetzte Sinfonien;" "11 Notturmi für 7 und mehrere Instrumente;" "6 Violinquartetten;" "1 Terzetto à 2 V. e Ve.;" and several part songs for eight voices: the greater number were at Traeg's in Vienna, in manuscript.

MITZLER VON KOLOF, LORENZ CHRISTOPH, born at Vettelsheim in 1711, was educated at the gymnasium at Anspach. He learned the principles of music from infancy, also singing from Ehrman, and the violin from Carby. In 1731 he went to the university at Leipsic, where he studied theology and the sciences in general, till at length, in 1763, he gave public lectures at Leipsic, on mathematics, philosophy, and music. It was the perusal of the writings of Mattheson, and the frequenting of the Leipsic concerts, but principally the conversation of the great Bach, that formed the taste of Mitzler, and made him soon desirous of elevating his favorite art to the dignity of a mathematical science. To this effect he published, in 1736, a dissertation entitled "*Quod Musica Scientia sit*." In 1738, he established, with the assistance of Count Lucchesini, and Chapel-master Bümler, a corresponding society for the sciences connected with music; of this society he was named secretary. Its principal object was the improvement of the theory of music. Metzler afterwards went to Poland, as teacher of the mathematics in a nobleman's family, and finally settled at Warsaw, where the

King of Poland granted him letters of nobility. He died in 1778. His principal works are as follows. Theoretical: "*Dissertatio quod Musica Scientia sit et pars eruditionis philosophica*," Leipsic, 1734; "*Lusus ingenii de presenti bello augustiss. atque invictiss. imperatoris Caroli VI. cum fœderatis hostibus, ope tmorum musicorum illustrato*," Wittenberg, 1753; "*Musikalische Bibliothek*," &c.; i. e., Musical Library, or extract Notices and impartial Analyses of Books and Writings on Music, three volumes, Leipsic, 1738 to 1754; "*Die Anfangsgründe der Generalbasse, nach Mathematischer Lehrart abgehandelt*," &c., i. e., The Elements of Thorough Bass treated according to Mathematical Rules, and explained by means of a Machine invented for the purpose. Leipsic, 1739; "*Musikalischer Staarstecher*," &c., i. e., The Oculist in Music, who amicably discovers the faults of reasonable Musicians, and ridicules the follies of soi-disant Composers, 1740; and lastly, "*J. J. Fux's Gradus ad Parnassum*," translated from the Latin into German, with notes, Leipsic, 1742. Practical works: these consist of "Three Collections of Moral Odes, with Harpsichord Accompaniment," Leipsic, 1740, &c.; and "Four Cantatas for the Flute," &c., Leipsic.

MIXO-LYDIAN. (Gr.) The name of one of the modes in the ancient music; called, also, Hyper-Dorian. The *Mixo-Lydian* mode was the most acute of the seven to which Ptolemy reduced the Greek music.

MOBILE. The name given by the Greeks to the two middle chords of each tetra-chord, because they varied with the genera, while the two extreme chords, which were called *stabe*, never changed their tone, or pitch.

MOCIGANGA. (Sp.) A musical interlude much used in Spain, and of the same species with the *entremes*; the only difference between them being, that the *mociganga* is more fully furnished with music and dancing.

MOCKING BIRD. The power of imitation of these birds has not certainly been overrated. When in the right *humor* they will imitate all sorts of sounds, even to the crowing of a cock. If they do not succeed well the first time, they will repeat the effort, always gaining in correctness, until they master the subject — sometimes with exact truth, sometimes failing to render the notes perfectly.

But it is as *composers*, not as *imitators*, that the mocking birds most command our admiration. There appears to be no end to their powers of combination. There is a variety and strange contrast in their song, that would be sought for in vain in any of the sounds presented for their imitation. Sometimes they will begin low down on the scale, working up the gamut, stopping here and there to throw off ad libitum variations, then starting again, always ascending and repeating the same process. Sometimes they begin at the top of their scale, and descend in a like manner. At one moment they will touch a note, repeat it several times with a greater or less degree of emphasis, and then they will flat or sharp the same note after the same manner. It would require the pen of a good musical composer to trace out in a faithful description all the phases of their song. We have often followed out forty or fifty different arrangements. Within this limit, (that of our memory,) we could pronounce with certainty that the same

song had not been repeated. We are persuaded that there is scarcely any limit to their combinations. The lark, doubtless, surpasses them in the gushing joyousness of his note — the thrush, nightingale, and perhaps other birds, in liquid sweetness. But in the variety and combination of notes, in compass and flexibility, and in the marvellous facility of execution, the mocking bird bears away the palm. Nature furnishes in the feathered tribes voices of all descriptions, that

Warble their wood notes wild,

and, by way of an excusable simile, they may be resembled in their peculiar characters to those of certain *prima donnas*. The mocking bird, like the matchless Catalani, unites all styles with a compass that comprehends every note, from the purest soprano down to the deepest contralto. The bird is aptly named, and its voice is wisely adjusted to its task. With sweetness alone, it would be unable to render its great variety of intonations.

The American mocking bird is the prince of all song birds, being altogether unrivalled in the extent and variety of his vocal powers; and, besides the fulness and melody of his original notes, he has the faculty of imitating the notes of all other birds, from the humming bird to the eagle. Pennant states that he heard a caged one imitate the mewing of a cat, and the creaking of a sign in high winds. Barrington says, his pipe comes nearest to the nightingale of any bird he ever heard. The description, however, given by Wilson, in his own inimitable manner, as far excels Pennant and Barrington as the bird excels his fellow-songsters. Wilson tells us that the ease, elegance, and rapidity of his movements, the animation of his eye, and the intelligence he displays in listening and laying up lessons, mark the peculiarity of his genius. His voice is full, strong, and musical, and capable of almost every modulation, from the clear, mellow tones of the wood thrush to the savage scream of the bald eagle. In measure and accents he faithfully follows his originals, while in strength and sweetness of expression he greatly improves upon them. In his native woods upon a dewy morning, his song rises above every competitor; for the others appear merely as inferior accompaniments. His own notes are bold and full, and varied seemingly beyond all limits. They consist of short expressions of two, three, or at most five or six syllables, generally uttered with great emphasis and rapidity, and continued, with undiminished ardor, for half an hour or an hour at a time.

While singing, he expands his tail, glistening with white, keeping time to his own music; and the buoyant gaiety of his action is no less fascinating than his song. He sweeps round with enthusiastic ecstasy; he mounts and descends, as his song swells or dies away; he bounds aloft, as Bartram observes, with the celerity of an arrow, as if to recover or recall his very soul, expired in the last elevated strain. A bystander might suppose that the whole feathered tribe had assembled together on a trial of skill, — each striving to produce his utmost effort, — so perfect are his imitations. He often deceives the sportsman, and even birds themselves are sometimes imposed upon by this admirable mimic. In

confinement, he loses little of the power or energy of his song. He whistles for the dog; Caesar starts up, wags his tail, and runs to meet his master. He cries like a hurt chicken, and the hen hurries about, with feathers on end, to protect her injured brood. He repeats the tune taught him, though it be of considerable length, with perfect accuracy. He runs over the notes of the canary, and of the red bird, with such superior execution and effect that the mortified songsters confess his triumph by their immediate silence. His fondness for variety, some suppose, injures his song. His imitations of the brown thrush are often interrupted by the crowing of cocks; and his exquisite warblings after the blue bird are mingled with the screaming of swallows, or the cackling of hens.

During moonlight, both in the wild and tame state, he sings the whole night long. The hunters, in their nocturnal excursions, know that the moon is rising, the instant they hear his delightful solo. Aiter Shakspeare, Barrington attributes, in part, the exquisiteness of the nightingale's song to the silence of the night; but if so, what are we to think of the bird, which, in the open glare of day, overpowers and often silences all competition? The natural notes of the American mocking bird partake of a character similar to those of the brown thrush; but they are more sweet, more expressive, more various, and uttered with greater rapidity.

MODE. A particular system, or constitution of sounds, by which the octave is divided into certain intervals, according to the genus. The doctrine of the ancients respecting modes is rendered somewhat obscure by the difference among their authors as to the definitions, divisions, and names of their modes. Some place the specific variations of tones, or modes, in the manner of division, or order of the concinnous parts; and others merely in the different tension of the whole; i. e., as the whole series of notes are more acute, or grave, or, as they stand higher, or lower, in the great scale of sounds. While the ancient music was confined within the narrow bounds of the tetrachord, the heptachord, and the octachord, there were only three modes admitted, whose fundamentals were one tone distant from each other. The gravest of these was called the Dorian; the Phrygian was in the middle, and the acutest was the Lydian. In dividing each of these tones into two intervals, place was given to two other modes, the Ionian and the Æolian; the first of which was inserted between the Dorian and the Phrygian, and the second between the Phrygian and the Lydian. The system being, at length, extended both upward and downward, new modes were established, taking their denomination from the five first, by joining the preposition *hyper* (upon or above) for those added at the acute extremity, and the preposition *hypo* (under) for those below: thus the Lydian mode was followed by the Hyper-Dorian, the Hyper-Ionian, the Hyper-Phrygian, the Hyper-Æolian, and the Hyper-Lydian, in ascending; and the Dorian mode was succeeded by the Hypo-Lydian, Hypo-Æolian, Hypo-Phrygian, Hypo-Ionian, and the Hypo-Dorian, in descending. The moderns, however, only reckon two modes; the major and the minor. The major mode is that division

of the octave by which the intervals between the third and fourth, and seventh and eighth, become half tones, and all the other intervals whole tones. The minor mode is that division by which the intervals between the second and third, and fifth and sixth, become half tones, and all the others whole tones. Another distinction also exists between the major and minor modes: the major mode is the same both ascending and descending; but the minor mode, in ascending, sharpens the sixth and seventh, thereby removing the half tone from between the fifth and sixth to the seventh and eighth. *Mode* in ancient music was equivalent to a *key* in the modern. Anterior to Ptolemy, modes were placed, by all musical men, at the distance of half a tone from each other—and miraculous powers have been attributed to the modes in ancient music; this seems difficult for us to believe, when it was the mere transposition of the scale to a different pitch; for now a change of key, without a change of time, can neither much elevate nor depress the spirits.

The arrangements of the diatonic scales formerly used under the titles of *Greek modes*, and *ecclesiastical*, or *church tones*, are not employed in modern music. Many of the ancient modes were denominated from the different people who invented or adopted them; and the most important, together with some of their characteristics, will be found in this Encyclopædia under the different alphabetical heads. The *ancient Greek modes* were the Dorian, Phrygian, Lydian, Hyper-Dorian, and Hypo-Dorian; the *authentic modes* were the Dorian, Phrygian, and Lydian; the *plagal modes* were the Dorian, Phrygian, Lydian, and Heptachord. See *SCALES*, *KEYS*, and *SIGNATURES*.

MODERATO. (I.) A word used adjectively, to signify a time of a moderate degree of quickness.

MODERATO ASSAI CON MOLTO SENTIMENTO. (I.) A very moderate degree of movement, with much feeling.

MODERN MUSIC. An expression applied to music composed within the last half century.

MODESTO. (I.) Modestly, quietly.

MODIFICATION. A term applied to the temperament of the sounds of those instruments whose tones are fixed, which gives a greater degree of perfection to one key than another, and produces between them a characteristic difference; as in organs, piano-fortes, and the like.

MODULATION. The art of conducting harmony, in composition, or extemporary performance, through those keys and modes which have a due relation to the fundamental or original key. Though every piece, as is well known, has its principal or governing key, yet, for the sake of contrast and relief, it is not only allowable, but necessary, to pass from key to key, and from mode to mode; to assume different sharps or flats, and lead us through those transitions of tone and harmony which delight the ear and interest the feelings. But though, in grand compositions, there is no quality of greater importance than that of a masterly modulation, it is not easy to lay down rules for its accomplishment. Sometimes a gradual and almost insen-

sible evolution of harmony is requisite to the composer's object; at other times, a bold and sudden change can alone produce the necessary effect. *Modulation*, technically speaking, denotes a transition from one key to another; but, used *generally*, applies to the art of arranging melody and harmony with or without quitting the original diatonic.

In **MODULATION**, a change, or passage from one key to another, may be effected by passing at once to a new tonic or dominant; or, as is more satisfactory and usual, by first introducing some chord characteristic of the key into which we desire to pass; that is, some chord which contains the leading note and subdominant of the new scale. The chords employed for this purpose are chiefly the dominant seventh, the seventh on the leading note in major, the diminished seventh, or the inversions of these three chords; and, lastly, the superfluous sixth. The natural resolution of all these chords is either into the common chord of the tonic or the dominant, direct or inverted. All modulations may be distributed into three classes: *natural*, *abrupt*, and *enharmonic*. We shall treat of each class in a separate section.

In **NATURAL MODULATION** we only pass from any given key to another, which is closely related to it; that is, to one of which the signature differs by not more than one sharp or flat, more or less. Thus, if the original key is major, then its related keys are,—

First. The major of its dominant and subdominant;

Second. Its own relative minor; and

Third. The relative minors of its dominant and subdominant.

Thus the keys related to C major are G and F major, and A, E, and D minor.

But if the original key is minor, then its related keys are,—

First. The minor of its dominant and subdominant;

Second. Its own relative major;

Third. The relative major of its dominant and subdominant.

Thus the keys related to A minor are E and D minor, and C, G, and F major.

We may modulate from a given key into any related key, by only one *intermediate characteristic* chord. Examples:

MODULATIONS FROM C TO ITS RELATED KEYS.

No. 1, to G. No. 2, to F.

No. 3, to A minor. No. 4, to D minor.

No. 5, to E minor.

At *, a chord of the sixth is placed on C, in order to introduce a note in common with the next chord. This materially softens the transition from one chord to another.

MODULATIONS FROM A MINOR TO ITS RELATED KEYS.

No. 6, to E minor. No. 7, to D minor.

No. 8, to C. No. 9, to F.

No. 10, to G.

The modulations at Nos. 1, 2, 4, 5, 8, are effected by the dominant seventh and inversions; those at Nos. 3 and 6, by the diminished seventh and inversions; that at No. 7, by the superfluous sixth; that at No. 9, by the diminished seventh on the sharpened fourth of the new scale; and that at No. 10, by the first inversion of the imperfect common chord.

By modulating step by step in the manner explained above, we are enabled to connect the most distant keys.

ABRUPT MODULATION.

By abrupt modulation is to be understood all sudden modulations into keys which are not closely related to the original key.

This is done in various ways; as,

1. By abruptly changing the mode of the key which we are in from major to minor, or from minor to major. Example:

Major to minor. Minor to major.

When this change has been made, we may either remain in the key thus altered, or modulate from it according to its new relations. Example:

C major to E flat.

Mode changed.

2. By changing the mode or species of the consonant chord employed to resolve some characteristic harmony. Example:

C major to A major.

To F minor. C to D major.

3. By employing a succession of two or more characteristic chords belonging to differ at keys. Example:

C to F sharp major.

4. The following abrupt modulations, effected by consonant chords only, are occasionally met with:—

C to A flat. C to F minor

No. 1. No. 2.

C to D flat. C to B flat major or minor.

No. 3. No. 4.

At No. 1 there is to be understood an ellipsis of the key of C minor. At Nos. 2 and 3, the major common chord of C is supposed to be a dominant harmony; and at No. 4, the same supposition is made with regard to the chord of F.

5. Many abrupt modulations are effected by changing the quantity or magnitude of one or more of the intervals of which a dissonant chord is composed, and then resolving it according to the new functions which it has acquired by this alteration. Example:

C to E flat.

C to A flat minor.

6. A pause over a note, or a rest, or a single note several times repeated, a passage in unison, or a series of chromatic notes, will often suffice to connect very distant keys. Example:

Pause.

New key.

Passage in unisons.

ENHARMONIC MODULATION.

Enharmonic modulations are effected by altering the notation of one or more intervals belonging to some characteristic chord, and, by this means, changing the key and the harmony into which it would naturally have resolved. The chords which admit of these alterations are, first, the diminished seventh and its inversions; and, secondly, the dominant seventh not inverted, and the chord of the superfluous sixth and perfect fifth.

Any chord of the diminished seventh may be changed into a chord of the $\frac{6}{5}$, $\frac{4}{3}$, or $\frac{4}{2}$, by merely altering the notation of one or more of its intervals, without, in reality, changing the sounds of which the original chord was composed. Example:

Original chord. Root A sharp. Root F X. Root E natural.

The first of the above chords naturally belongs to the key of D; the second to B; the third to G #; and the fourth to F; and it is upon the common chords of these keys, either major, minor, or their inversions, that they resolve. As they all consist of the very same sounds, we may, for the purpose of modulating, substitute any one of these for any other, and thus obtain so many abrupt modulations from the key of D Examples:

Original progression. D to B.

D to G sharp.

D to F.

As the diminished seventh belongs equally to the major as to the minor mode, the last chords in the preceding examples might have been major.

As any diminished seventh may be written in four different ways, each representing a distinct chord of the seventh, and leading to a different key, and as there are but twelve semitones in the octave, it is evident that there are but $\frac{12}{4}$ or three chords of the diminished seventh, consisting of essentially different sounds. Now, we may proceed from any given tonic or dominant to any one of these three sevenths; and as each of them, by mere changes of notation, leads into four different keys, it is evident that, by a proper choice of only one intermediate chord, we may modulate from the given tonic to any other: for this purpose, it is only necessary to introduce that seventh, or its inversions, which contains the leading note of the scale into which we desire to pass.

Let, for example, A be the original key; then, by taking the diminished seventh, we are at once enabled to modulate into the keys of C, E \flat , G \flat , or F \sharp , to which keys the notes of the above chord are leading notes, either directly or by a mere change in the notation.

Similarly, by taking, after the chord of A, the diminished seventh, we may directly modulate into the keys B \flat , D \flat , or C \sharp , E, and G.

Lastly, by taking the diminished seventh, we may proceed to any of the keys B, D, F, A \flat , or G \sharp .

We shall conclude with one or two examples of the application of these principles.

C to E flat minor. A to G minor.

A to F minor.

Detailed description: This block contains three musical examples of modulation. The first example shows a progression from C major to E-flat minor, with chords labeled 9, 6 \flat , 7 \flat , and b. The second example shows a progression from A major to G minor, with chords labeled 7 and b. The third example shows a progression from A major to F minor, with chords labeled 4 \sharp and 6.

Another species of enharmonic modulation is obtained by changing the dominant seventh into the superfluous sixth, or the superfluous sixth into the dominant seventh. Example:

Dominant 7th. Superfluous 6th.

Detailed description: This block shows two chords side-by-side. The first is a Dominant 7th chord (G7) and the second is a Superfluous 6th chord (G6). Both are shown in treble clef with their constituent notes and figured bass notation below.

As these two chords consist of the very same sounds, one may be substituted for the other, and by this means very distant keys may be connected with each other. Example:

C to B. Enharmonic change expressed.

B to C. Enharmonic change implied.

Detailed description: This block contains two musical examples of modulation. The first shows a modulation from C major to B major, with the change expressed by a chromatic alteration of the leading note. The second shows a modulation from B major to C major, with the change implied by the naturalness of the notes in the new key. Both examples are shown in treble and bass clefs with figured bass notation.

Many beautiful examples of enharmonic modulation may be seen in "Albrechtsberger's Theoretical Works." Examples illustrative of the theory of modulation may also be seen in "Bach's Scales and Modulations," and "Albrechtsberger's Table of Modulations;" also in an original and ingenious essay on the *determination* of the key in music, by W. Forde.

There is no branch of musical science more necessary to a composer than modulation. It may be said to be "the key which opens to the admiring ear all the treasures of harmony." As melody signifies a progression of single sounds, so in the science of harmony does modulation signify a progression of chords, or mixed sounds. To conduct the harmony with ease and grace is a distinguishing quality in a first-rate composer. When we modulate upon an organ or piano-forte, in passing from one chord to another, it may be laid down as a general rule, that one of the fingers should remain upon that key which is to form a part of the succeeding chord. This gives a smoothness to the transitions, readily perceived by the ear. For bold and sudden effects, these connecting "links of harmony" are dispensed with, and the changes are produced by dashing into chords at distances more remote.

As there are twelve semitones within the octave, and any one of these may be taken as the basis of a key, and as every key may be formed to be either major or minor, there are consequently not less than twenty-four keys into which, in modulating, we may occasionally move. Twelve of these transitions are adroitly performed by the agency of the diminished seventh.

The laws by which we pass from one accord to another form the rules of counterpoint, or the art of setting note against note; the principal of which is, that when music is written in parts, no two parts are to move in the same direction, at the distance of a fifth, producing *consecutive fifths*, the effect of which is intolerable to the ear. This may be tried upon the piano-forte, by striking them in succession. An offence of less magnitude are consecutive octaves, which, if introduced without the design of strengthening a part, are quite unpardonable. Piccini compares modulation to the turning off from a road on which we are travelling. The ear is willing to follow us — it even wishes to find a guide in us — but it expects that, when we have brought it to a halt, it should find something to repose upon as a recompense for the journey. If you disregard this reasonable demand, and yet expect that the ear should continue with you, ere long you will find yourself disappointed; it will leave you running on by yourself, and all your efforts to call it back again will be in vain. To devise a melody according to a natural order and unaffected plan of modulation, never to deviate but for a purpose, and to return to it with ease, are difficulties in the art. To abandon, on the other hand, a key which has scarcely been propounded; to wander at random, without reason or object, from one key to another; to skip to and fro, merely to leave a place in which you are incapable of maintaining a footing; in short, to modulate for the sake of modulation, — betrays an ignorance of the art, and a poverty of invention.

MIXED CADENCE. A name formerly ap-

plied to a cadence on the dominant when preceded by the harmony of the subdominant.

MIXTURE. An organ stop of a shrill and piercing quality, consisting of several ranks of pipes.

MODERNE, JACQUES, a composer to the Church of Notre Dame de Confort at Lyons, in the seventeenth century, published several works, of which, however, Gesner, in his "*Partition. Univers.*," lib. 2, tit. 7, gives only the following: "*Chansons à 4 Parties*," and "*Mortetti, 5 et 6 voc., lib. 3.*"

MOELLER, JOH. GOTTFR. This musician announced himself at Leipsic, in 1797, with the title of *Studiosus theologia et musicae*, as composer of a double sonata for the piano-forte, about to be published. Whether this really appeared is not known; but afterwards the following works were published by him: "*12 Var. pour le Clav.*," 1797; "*16 Var. pour le Clav.*," 1798; and "*4 Waltzer und 2 Englische*," 1798. We find his Christian name frequently printed J. C. Whether this is an error of the press, or whether the name is to be written J. C. Moeller, we have no certain account. He was, in the year 1800, resident at Leipsic, as professor of the piano. He was a pupil of the famous Kittel, of Erfurt. In the year 1805 appeared his "*Fantaisie et Fugue pour le Piano-forte*," Op. 4, Leipsic.

MOESER, CARL, violinist in the royal Prussian chapel at Berlin, where he was born about the year 1774, was universally allowed to possess the most distinguished talents. The readiness with which he read *d livre ouvert*, as also the clearness with which he executed at first sight, were truly astonishing. When only in his sixth year, he attracted notice at Berlin by his performance on the violin. His first teacher was Botlicher, who in a short time brought him so forward, that he was able to join in the most difficult violin concertos of Giornowich, Haack, &c. He then became first violinist in the chapel of the Margrave of Schwedt. Afterwards, however, on the death of the above nobleman, when his chapel was closed, the king patronized the young artist, supported him, and procured him instruction from concert master Haack, who then cultivated his talents to their subsequent extraordinary perfection. In 1792 he was still without any musical appointment, and practised the science only as an amateur, holding a situation in the civil department of government. Soon after that time, however, we find him belonging to the Royal Chapel; and in 1797, he was travelling with the title of *maitre de chapelle*.

MOITO, GIOV. BATTIST., a composer, flourished about the year 1600. Of his works have been printed "*Madrijali à 6 voci*," Antwerp, 1600.

MOLENDA, WENZEL., a delightful violinist and composer for his instrument, born at Pisek, in Bohemia, lived at first, for six years, at Böhmisch-Krumau, as musician in the Minorite church there. He then went to Linz, to study philosophy; but soon after proceeded to Vienna. There he continued but a short time, and went to Hungary, where he was in the service of a prince, as violinist. This situation he resigned, in order to visit Paris, where, by his ready and

pleasing mode of execution, he became greatly admired. At length he left France, and appears, about the year 1788, to have resided at Mentz, where he possessed an elegant house. He wrote many concertos and other music for his instrument, of which, however, it is probable that none has been printed.

MOLINO, LUDOVICO, *chef d'orchestre* at the theatre at Turin, in 1803, published "*Airs variés pour le Guitare avec Acc. de Violon*," Paris, 1803. He was a pupil of Pugnani, and composed much other instrumental music; he has also published at Paris several sets of Italian ariettes.

MOLIQUE, BERNHARD, a violin player, was born at Nuremberg, October 7, 1803. His father, who was the chapel-master of the town, gave him his first instructions in music, and taught him the management of nearly all the most accessible instruments. But Bernhard evinced, at a very early age, a decided preference for the violin, not only by devoting, with eagerness, a great portion of his time to the study of it, but especially by the delicacy and sweetness with which he handled the instrument—the more remarkable, as it was far beyond the age of the precocious boy. Connoisseurs already recognized in him a virtuoso, even before he had made any considerable progress in practical skill; and his father, consequently, spared nothing that could contribute to develop and promote his talent. He confined his practice principally to the violin, and the facile child followed with delight the parental lessons. At the age of fourteen, however, his talent, knowledge, and capabilities transcended the powers of instruction possessed by the happy father, who, in 1816, sent him for further accomplishment to Munich, where the King of Bavaria, having been informed of the promising talents of the youth, appointed the first violinist of the royal chapel, Pietro Novelli, to be young Molique's future instructor. After two years' application he left this school for Vienna, where he was immediately engaged in the orchestra of the *Theater an der Wien*. In 1820 he returned to Munich, and was appointed to the office of his instructor, Novelli. Up to this time he had often played in public, with the greatest success; but it was in 1822 that he first undertook a veritable artistic tour through Leipsic, Dresden, Berlin, Hanover, &c. Although he had not yet succeeded in fully accomplishing the object which every artist has in view, in gaining to himself the reputation which is his due, owing to the lustrous fame of Spohr, which eclipsed every rising genius, still the tour was powerfully influential upon his future artistic development. In September, 1826, he was appointed music director at Stuttgart, where he long was the pride of the Stuttgardt orchestra. Molique, in the course of his visits to Paris, Vienna, London, and St. Petersburg, obtained a European reputation, which his great qualities fully justify. He is a sterling, thorough artist, whose true and earnest nature despises, from the depths of his soul, those modern whims and meretricious ornaments, and all that *charlatanerie* with which most virtuosi of the present day enrapture the public. His playing, rounded into the classical form of art, swerves not from its aim to search for fancifully invented beauties, or to wander through brilliant passages, but rather to

put the richly ornamented principal part in an harmonic combination, in the necessary organical connection with the accompanying instruments. His violin concertos, therefore, are not to be considered, like those of the modern virtuosi, as mere solos, but are to be compared to completely written symphonies, in which his instrument shines forth as the poetical completion of the entire musical structure. It requires, then, an abundance of power, and an immense facility, to appreciate the position, so as to keep the principal part in a constant intimate alternation with the orchestra; now imperceptibly rising to a powerful energy, then again yielding to the opposing forces, and anon striking forth with the decision of the master hand. Never does he separate himself from this harmonically combined system, never allow himself to indulge in artificial bravura passages, but yields himself to the inexorable law by which the whole is held together, the uppermost link of the harmonic chain being his own artistically embellished solo part. When he has the bow in his hand, he is a musical totality; hence the extraordinary ease of his exterior bearing, which is the index of a total intellectual absorption in his art. From the early plenitude of his native resources, Molique has risen, by successive developments, to the height of artistical perfection, which has secured him the laurel amongst all the living violinists. To hear him play an adagio is the most perfect treat. There is no feigning of feeling, no exaggeration, no affectation; it is the pure fire of an artistic inspiration; no confusion of sentiments, but simple, self-conscious truth. Add to this his effective execution, his magnificent, full, and solid tone, in all its regions of the highest purity, its soft and harmonious fullness, combined with a marvellous rapidity. As a composer for his instrument, he is distinguished by a solid greatness of manner, modelled upon the style of Haydn, Bach, Mozart, Beethoven, and Spohr, and evidencing the purest taste and the most extended knowledge, united with an eminent talent apparently created for the beauties and charms of harmony. These remarks are equally applicable also to his other compositions, his string quartets, piano-forte sonatas, symphonies, and above all, his mass. As conductor of the orchestra, he combines, with the most refined ear, calm self-possession and an energetic precision. As a master, he is full of merit; and pupils, whose names are of great celebrity, and of whom he may well be as proud as they are worthy of him, contribute to augment the fame of the excellent master. Molique is evidently one of those happy beings whom Providence has endowed with an indescribable richness.

MOLITOR, INGENUIN, a Franciscan monk, and organist to the convent at Botzen, in Tyrol, born at Habach, flourished as a composer in the second half of the seventeenth century. He published "6 *Kanzonen für 2 V., 1 Viole, 1 Viola da Gamba, und B.*," and "19 *Motetti, à 2 Soprani, 2 V., e B.*," Augsburg, 1668.

MOLL. (G.) Minor in relation to modes and keys; as, *A moll*, A minor; *H moll*, B minor, &c.

MOLLE. (F.) Soft or sweet. A relative term used to signify a flat sound; that is, a sound

which is half a tone lower than the sound with which it is compared; as, B flat, or B *molle*, is a semitone beneath B natural, or B *durum*. This term, as its sense intimates, is applied to the flat sounds, on account of their supposed softness or sweetness, in comparison with the effect of the natural and sharp tones.

MOLLENHAUER, FRIEDRICIL, HEINRICH, and **EDUARD**, brothers, distinguished virtuosos, who have given concerts in Germany, were born in Erfurt, the first in 1818, the second in 1828, and the third in 1830. Friedrich and Eduard are violinists, and played in New York, in 1853, in Jullien's concerts. The other brother is a violoncellist.

MOLTNER, BALTHASAR, composer and member of the college at Schleusingen, in the beginning of the seventeenth century, published "*Motette für 6 Stimmen, auf dem Tod der Fr. Lattermannin zu Eisfeld*;" i. e., Motet for six voices on the Death of Fr. Lattermannin at Eisfeld, Cobourg, 1614.

MOLTO. (I.) Very, or much. A word used, in conjunction with some other, by way of augmentation; as, *Molto allegro*, very quick; *Molto adagio*, very slow.

MOMBELLI, DOMENICO. Chapel-master Reichardt, who, in 1790, undertook a journey to Italy for the express purpose of becoming acquainted with the powers of the different tenor and alto singers, gives the following very flattering description of Mombelli: "He pleased me above all others. He has a very agreeable and clear voice, particularly in the deeper tones, and sings with much feeling and expression. His appearance and action are prepossessing and expressive." In the winter of 1790 to 1791, he sang at the theatre at Leghorn and Padua. He is known as a composer by the following little works: "6 *Ariette Italiane con Acc. di Camb. o Arpa*," Vienna, 1791; "8 *Ariette Ital. con Acc. di Camb.*," Op. 2, Vienna, 1794; "6 *Duetini per 2 Soprani, con Acc. di Camb.*," Op. 3, Vienna, 1795.

MOMIGNY, JEROME JOSEPH, DE, was of Belgian origin, and was born at Phillippeville in 1776. His father, who had graduated at the University of Louvain, and had studied music at the court of Brussels, taught him the alphabet and the gamut at the same time. His father's fortune being impaired, he was sent to St. Omar's, where he had an uncle by the mother's side, who took the charge of his education. His progress in music was so rapid, that, when only nine years old, he extemporized. At twelve he was the organist of two parishes of St. Omar. Summoned to the royal abbey of St. Colombe, he there acquired a taste for retirement, study, and philosophy. It was in the groves that surrounded this religious asylum that he first composed, and gave himself up to reading. Unhappily he wanted models. He sought them at Paris. M. de Monteynard, one of the ministers of Louis XVI., being asked by his sister, the Abbess of St. Pierre de Lyons, to send her an organist, sent Momigny. In 1793 he became secretary of his section, and was appointed municipal officer at the time when the citizens of Lyons were striving to shake off the yoke of the reign of terror. Outlawed for having been unwilling to betray

the confidence of his fellow-citizens, he took refuge in Switzerland, after having wandered, without a home, through the south of France. He returned to Lyons, and afterwards established himself at Paris, in 1800. He had composed at Lyons twelve sonatas for the piano-forte, at Paris two quartets for two violins, tenor, and bass, sonatas for the piano, a trio, forming his twenty-second work, forty romances, and two operas, "*Le Baron de Felsheim*," the words by the Prince of Schakowsky, and "*La Nouvelle Laitière*," of which he wrote the words and the music. He also published, for the use of the family of Napoleon, solfeggi, with an accompaniment for the piano-forte, and in 1802 his first lessons for that instrument appeared. Momigny, independently of his musical abilities, was a very learned man, and has particularly distinguished himself by the publication of a work in three volumes 8vo., entitled "*Cours complet d'Harmonie et de Composition d'après une Théorie nouvelle et générale de la Musique basés sur des Principes incontestables, puisés dans la Nature, &c.*" This book may be considered as containing a new theory of music, though the whole idea of it is not original, being founded partly on the system of Bullière, which was expanded by Jamard, and partly on some of the views of the Abbé Feytou, which appear in the article "*Chromatique*," in the "*Encyclopédie Méthodique*." According to the theory of Momigny, the generator produces the following intervals: G, b, d, g, b, d, f, a, c, c, which the author calls "*l'unique type*" of the musical system, and compares the seven musical notes, a, b, e, d, e, f, g, proceeding from the generating string, to the phenomena of the decomposition of light, discovered by Newton by means of a prism. Momigny has distinguished himself also by a most remarkably well arranged edition of Durante's six duets, the subjects of which were taken from Scarlatti's cantatas. These duets are sung at all the *conservatoires* on the continent, and are renowned for the beauty of their melodies and harmonic treatment. Momigny, invited by the conductors of the *Encyclopédie Méthodique*, has a further title to respect, by having ably completed the musical part of that work, which was left unfinished by the horrors of the revolution, and the consequent unfortunate sacrifice of some of its most able original authors.

MONAULOS. (Gr.) A kind of single flute, of higher antiquity than even the lyre, and said, by some writers, to have been invented in Egypt. The Egyptians called it *Photinx*, or crooked flute: its shape was crooked, and something like that of a bull's horn.

MONDODONO, or MONDONDONO, GEROLAMO DA, a priest and composer in Italy, flourished about the year 1660, and published, among other works, "*Missa, Salmi, e Pulsi Borlomi à 5 voci*," 1653, and "*Salmi*," Venice, 1663.

MONDONVILLE, JEAN JOSEPH C., DE, born at Narbonne in 1715. After visiting the Netherlands, where several motets of his composition were much admired, he went to Paris in 1737, and procured three of his motets to be sung at the *Concert Spirituel*, when it was considered that they were nearly unrivalled. He was then appointed chamber musician to the king, and soon afterwards published some music for the harpsichord and violin, and some concertos

for the organ. He next produced an unsuccessful opera; but, in 1749, gave another opera, "*Le Carnaval du Farnasse*," which had thirty-five representations. In 1753 he finished the poem, and put music to the Abbé de la Marre's incomplete opera of "*Titon et Aurore*;" this was highly successful. In the following year appeared his "*Alcimadure*," of which he wrote both the poetry and music. His last dramatic works were "*Les Fêtes de Paphos*," in 1758, and an act of "*Psyche*," in 1762. On the death of Royer, in 1755, Mondonville obtained the direction of the *Concert Spirituel*. It was during the seven years that he held this situation, that, on the model of the oratorios of Italy, he brought out "*Les Israélites à la Montagne d'Oreb*," "*Les Titans*," and "*Les Fureurs de Saul*." The last hours of his life were occupied in translating the "*Themistocles*" of Metastasio, which he wished to set to music. He died in 1772.

MONDONVILLE, LE JEUNE, son of the preceding, and a good violinist and performer on the hautboy, was born at Paris about the year 1740. He published some sonatas and other music for the violin. He died about the year 1807.

MONETA, GIUSEPPE. A musical amateur at Florence. He competed with the dramatic composers of his time, by several pieces which were performed at the principal theatres in Italy. The following of them may be mentioned: "*Il Capitano Tenaglia*," opera buffa, 1784; "*La Muta per Amore*," opera buffa, 1785; "*Amor vuol Gioventù*," interm. 1786; "*L'Equivoco del Nastro*," 1786; "*I due Tutori*," opera buffa, 1791.

MONFERINA. (I.) The name of an Italian dance tune, of a very lively cast, in six eight time.

MONFERRATO. See **MONFERRATO.**

MONGEZ, a French savant at Paris, presented to the National Institute, in the year 1800, "*Mémoire sur les Harangues rapportées par les Historiens, et sur les Moyens qu'on croit avoir été employés par les Anciens pour augmenter les Effets de la Voix dans les Théâtres.*"

MONIGLIA, or MONEGLIA, GIOV. ANDREA. A composer of Florence, known by the two following works: on the first the name is printed "*Moueglia*," and on the second "*Moniglia*." He flourished in the second half of the seventeenth century, and appears to have resided in Germany, where both works were published. "*Il Tesco*," drama, Dresden, 1667, and "*Dramma Musicale Giocasta*," Dusseldorf, 1696.

MONN, MATTH. GIOV. A very industrious and fertile vocal and instrumental composer, probably resident at Vienna about the year 1795. Gerber cannot impart to the reader any further information of this musician than what is to be found in Traeg's "*Catalogue*," Vienna, 1799, and this consists only in a dry mercantile list of his works, all in manuscript. To increase the obscurity, there is another G. T. II. Monn introduced, whose name stands in the "*Catalogue*" at the head of six sonatas. Whether several of the following works, which are without Christian names, belong to the last-mentioned Monn, Gerber cannot decide. Most of the following, however, are signed by Matthias: "*Eine Anweisung zum Generalbass*," in manuscript. Sacred music

1. "Quatorium Heilsame Unterredungen." 2. "Oratorium." 3. "5 Bitten." 4. "Requiem à 4 voci, 2 V., con Org." 5. "Missa Grat. d 4 voci e 4 Str." 6. "Missa d 4 voci, con 12 Strom." 7. "Chorus ex hortulanis, &c." Violin music: 1. "6 Sinfon. für volle Orchester." 2. "2 Concerte, eins für V. und eins fürs Ve." 3. "18 Sinfonien für 2 V., A., und B." 4. "15 Divertimentos à 2 V., A., e B." 5. "4 Trios à 2 Viòle e B." 6. "3 Partit. d Fl., V., e B." 7. "2 Trios d Fl., Viola, e B." 8. "Sonata à V. solo con B." 9. "12 Minueti à 7 und 10 Stimmen." 10. "Musica Turchese d 10." Harpsichord music: 1. "12 Concerti per il Cemb. con Acc." 2. "30 Divertimenti per il Cemb. solo." 3. "6 Son. p. il Cemb. solo." Theatrical music: "Diana e Amore," opera.

MONOCHORD. An ancient instrument, or machine so called, because it is furnished with only one string. Its use is, to measure and adjust the ratios of the intervals, which it effects by means of movable bridges, calculated to divide the chord at the pleasure of the speculatist. The *monochord* appears to have been in constant use with the ancients, as the only means of forming the ear to the accurate perception, and the voice to the true intonation, of those minute and difficult intervals which were then practised in melody.

MONODIE. (F.) A composition for a single voice. The term originally applied to church solos.

MONOLOGUE. A poem, song, or scene, written and composed for a single performer.

MONOTONOUS. An epithet applied to any instrument which produces but one tone, or note; as the drum, the tambourine, &c.

MONRO, GEORGE. An English organist. He played the harpsichord at Goodman's Fields Theatre, from the time when it was opened, in 1729, till his death, which happened a year or two afterwards. Monro had a happy talent in composing song tunes, of which many were greatly admired. Several of them were printed in the "Musical Miscellany," an elegant collection of songs, with the music, in six volumes, printed and published by Watts in the year 1781.

MONRO, HENRY. Professor of music at Newcastle upon Tyne. His father was a musician in Lincoln, who, discovering the great delight his son took in music, at a very early age placed him in the cathedral church of that city as a chorister. After the breaking of his voice Monro left the choir, and became a pupil of John James Ashley, of Belgrave Place, Pimlico, by whom he was taught the principles of music, and the practice of the piano-forte and organ; he also, during his residence in London, received lessons from other celebrated masters, namely, Dussek, Dittenhofer, and D. Corri. In the year 1796 he left London to commence his musical career at Newcastle upon Tyne, and was appointed organist of St. Andrew's Church there, in the same year; he continued to reside in that town, and was considered by competent judges as a very able musician and brilliant pianist. His works are not numerous; among them are, "A Sonata for the Piano-forte and Violin," dedicated to Miss Bell, Op. 2; "An Air and Rondo," dedicated to Miss Jones; also other rondos and songs. Monro was uncle to Mrs. Bedford, who received instruction

from him on the piano-forte, pedal harp, and singing, before she was articulated to Bishop the composer, to qualify her as a public singer.

MONSIGNY, PIERRE ALEXANDRE, who has been called the French Sacchini, was born in 1729, in the province of Artois. He went, when very young, to Paris, where his parents, destining him for finance business, got him a situation, at the age of nineteen, in the chamber of accounts of the clergy of France. Like La Fontaine, who, on hearing an ode of Malherbe, felt his genius for poetry aroused within him, so Monsigny, at a representation of the "Servant Mistress" of Pergolesi, felt his talent for music first disclose itself; for soon after this time he began seriously to study composition under Giannotti, when, after five months' lessons, his master told him that he could be of no further use. What was the astonishment of Giannotti, when, upon this, young Monsigny showed him the opera of "*Les Aveux Indiscrets*," which he had composed without saying any thing to his master. The professor then begged him to leave this work for his examination; and after looking through it with care, and finding even the errors in composition to bespeak genius, begged of the author to give him the opera, adding, that it would one day prove the foundation of his fortune and reputation. Monsigny would not consent to this, and three years afterwards (in 1759) he brought out "*Les Aveux Indiscrets*," in one act, at the *Théâtre de la Foire*. It was successful. Accordingly, in 1760, he produced, at the same theatre, "*Le Maître en Droit*," and "*Le Cadi dupé*." Sedaine, being present at the representation of the latter opera, was so astonished at the effect of the duo between the eadi and the dyer, that he exclaimed, "*Violé mon homme!*" and the same evening introduced himself to Monsigny. The pleasing opera "*On ne s'arise jamais de tout*," given by Monsigny in 1761, completed a musical revolution at the *Théâtre de la Foire*, which, from that time, took the name of *Comédie Italienne*. He next wrote, in conjunction with Sedaine, the following works, all of which were brilliantly successful: "*Le Roi et le Fermier*," in three acts, 1762; "*Rise et Colas*," in one act, 1764; "*Aline, Reine de Golconde*," in three acts, 1766; "*L'Isle Sonnante*," in three acts, 1768; "*Le Déserteur*," in three acts, 1769; "*Le Faucon*," in one act, 1772; "*Félix, ou l'Enfant trouvé*," in three acts, 1777; he also gave, with Favard, in 1775, "*La belle Arsène*," in four acts. Monsigny was director of the Conservatory, and pensioned as composer of the *Feydeau*, in the year 1802. We know not the exact period of his decease.

MONTANARI, ANTONIO, a celebrated violinist and pupil of Corelli at Rome, flourished, according to Sir J. Hawkins, at Rome, in 1700. Dr. Burney says of Montanari, that he died broken hearted, when Bini, in 1730, came to Rome, and there excelled, on the violin, all living musicians, among whom Montanari was previously considered the first violinist. It cannot be ascertained, however, whether this anecdote relates to Antonio or to Francesco Montanari, or whether he is improperly called Antonio by Hawkins, or lastly, whether there lived only one violinist of the name of Francesco Montanari; the latter however, is the most probable, because his work and his portrait are in existence.

MONTANOS, or **MONTANNES**, FRANCISCO. Portionarius, in a church at Valladolid, in Spain, in 1600, published "*Arte de Musica theorica y practica*," 1592; "*Arte de Canto Llano*," Salamanca, 1610.

MONTANI. (F.) Ascending.

MONTARIN, a fertile composer of French popular songs, probably resided at Paris about the year 1710. Of his numerous compositions, some airs in Lulli's style are inserted in the *Recueil d'Airs sérieux et à boire pour l'année 1710*.

MONTE, PHILIP DE, a native of Mous, in Hainault, born in the year 1521, was master of the chapel to the Emperor Maximilian II.; he was also a canon and treasurer of the cathedral church of Cambrai. Besides several masses, this writer composed four books of madrigals.

MONTECLAIR, MICHAEL, was born in the year 1666, at Andelot, a town of Bassigny, about ten miles from Chaumont. He was originally a teacher of music in Paris, but was afterwards taken into the Royal Academy. Montclair is said to have been the first person who introduced the violone or double bass into the orchestra of the opera. He died near St. Denis, in the year 1737. There are extant of his works "*Méthode pour apprendre la Musique*," "*Principes pour le Violon*," "*Trios de Violons*," cantatas, motets, and one messe de requiem. He composed the music to an entertainment entitled "*Des Fêtes de l'Été*," and to the celebrated opera of "*Jephte*," written by Pellegrini, and represented at Paris in the year 1732.

MONTELLA, DOMENICO, a learned musician, flourished at Naples about the year 1500.

MONTEMAYOR, GREGORIUS, a celebrated musician in the chapel of King Philip II. of Spain, at Madrid, died in 1560, and left several works. He was born at Montemor, not far from Coimbra, in Portugal, and died in the flower of his youth.

MONTESARDO, GIROLAMO, a composer in the first half of the seventeenth century, published, about 1653, "*Messa, Salmi e Litanie à 4 voci*."

MONTEVERDE, CLAUDIO, of Cremona, chapel-master of the church of St. Mark at Venice, was a celebrated composer of motets and madrigals, who flourished about the beginning of the seventeenth century. He was also well known for his skill in recitative, a style of which, indeed, he may be said to have been one of the inventors; at least there are no examples of recitative extant more ancient than those in his opera of "*Orfeo*." There are several of his madrigals inserted in the collections published by Pietro Phalesio and others, about the year 1600. He was the first who used double discords, such as $\frac{3}{4}$, $\frac{9}{7}$, and $\frac{7}{5}$, as well as the flat fifth and the seventh unprepared. In his secular productions, by quitting ecclesiastical modulation, he determined the key of each movement, smoothed and phrased the melody, and made all his parts sing in a more natural and flowing manner than had been done by any of his predecessors. In his fifth and last book of madrigals, almost every species of discord and modulation is hazarded, for the use of which the boldest composers of modern times have been often thought licentious.

MONTFERRATE, NATAL, sub-chapel-master at St. Mark's Church in Venice, flourished in 1660. We can mention the following of his works: "*Salmi concertati à 5, 6, e 8 voci, con V.*," 1650; "*Motetti*," Venice, 1655; "*Motetti concertati*," Venice, 1660; "*Motetti à voce sola*," Venice, 1666; "*Motetti à voce sola*," Venice, 1673. Burney observes that he was the first who used the *da capo*, which, about 1680, became common.

MONTGERAULT, MADAME, a female musical amateur at Paris, published there, previously to the year 1796, "*Trois Sonates pour le Clav. seul*." This lady is said to have been possessed of extensive musical knowledge. She was appointed assistant professor at the Conservatory in Paris.

MONTE, GAETANO, a composer, born at Naples, was reckoned among the dramatic composers of Italy, between the years 1783 and 1791. Some of his works are "*Lo Studente*," opera buffa, Naples, 1784; "*Le Donne vendicate*," opera buffa, Palermo, 1784; "*La Contadina accorta*," opera buffa, Dresden, 1782.

MONTICELLI, ANGELO MARIA, of Milan, born about the year 1715, sang in Naples, in 1746, with Mingotti; he afterwards went to London. Monticelli died at Dresden about the year 1764.

MONTVALLON, DE, published at Paris, in 1742, a work entitled "*Nouveau Système de Musique sur les intervalles des tons et sur les proportions des accords, où l'on examine les systèmes proposés par divers auteurs*."

MONZA, ALBERTO. A celebrated singer, about the year 1700.

MONZA, CARLO, chevalier and chapel-master at the theatre of La Scala at Milan, was a native of that town, and occupied the above situation about the year 1766. He was then in high repute, as one of the best composers for the church and the opera. He produced in the above year his opera of "*Temistocle*." Dr. Burney heard one of Monza's masses in the church of Santa Maria, and found it a fine composition and full of genius. He wrote some other operas, and also some music for the harpsichord.

MONZANI. This eminent performer on the flute was born in Italy, but resided many years in England, in the early part of this century. He was formerly first flute at the King's Theatre, and performed at most of the principal concerts and music meetings; after which time he was largely engaged in the music trade, and in the manufacturing of flutes.

MOORE, THOMAS, ESQ. This celebrated poet and musical amateur was a native of Ireland. After having been under the tuition of Mr. Whyte, a man of taste and talent, he completed his education at Trinity College, Dublin. His classical studies being finished, he went to London, entered himself of the Temple, with a view to make the law his profession, and was called to the bar. In those moments when he was not occupied with the dry technicalities, the trifling quibbles, and the endless prosing of legal writers, he amused himself with translating the Odes of Anacreon; these he published, with copious notes, in 1800. This version, one of the most elegant that has ever appeared, met with so

favorable a reception from all who possessed a classical and poetical taste, that he seems to have been induced to abandon the law, and devote himself to literature. In 1801 he gave to the press a volume of poems, under the assumed name of Thomas Little, which went through thirteen or fourteen editions. In 1803 he published "A candid Appeal to public Confidence, or Considerations on the actual and imaginary Dangers of the present Crisis." About this time he went to the Bermuda Islands, of which, through the interest of Lord Moira, he was appointed registrar; and he also visited the United States. Of the American character he formed a very unfavorable opinion, and that opinion he did not hesitate to express freely in a volume which came out upon his return to England, in 1806. This volume bore the title of "Epistles, Odes, and other Poems." In 1808 he sent to the press "Corruption and Intolerance," two poems, with notes, addressed to an Englishman by an Irishman; and in 1809, "The Sceptic," a philosophical satire. These works, of which the first is pungently satirical, are little known; but they are worthy of their author. They were succeeded, in 1810, by "A Letter to the Roman Catholics of Dublin." His next production, "Intercepted Letters, or the Two-penny Post-bag," by Thomas Brown, the younger, 1812, was eagerly perused, and fourteen editions of it were printed. It lashes severely one elevated personage, and several of the most eminent of the Tory party. In sparkling wit, keen sarcasm, and humorous pleasantry, it is rivalled only by another volume, entitled "The Fudge Family in Paris," which issued from the press in 1818, and the hero of which is a poet, who has apostatized from the principles of liberty, and become the virulent supporter of court measures. In 1813 the fame of Mr. Moore was increased by the appearance of his exquisite songs to Sir John Stevenson's collection of Irish melodies. Some of these songs are among the finest specimens of poetry, and the morality of the whole of them is unexceptionable. They have since been collected into one volume. In 1816 he published a series of sacred songs, duets, and trios, the music to which was composed and selected by himself and Sir John Stevenson. This series forms, in every respect, a suitable companion to the Irish melodies. In the following year, 1817, came forth his great work, on which he was known to have been long engaged, and which the reading world had awaited with eager expectation. On this occasion, all the hopes which had been excited were fully realized. By the publication of "Lalla Rookh," he placed beyond the possibility of dispute his claim to be ranked among the first of British poets. "Thoughts that breathe and words that burn," would not be an unapplicable motto for this Oriental romance, which unites the purest and softest tenderness with the loftiest dignity, and glows in every page with all the fervor of poetry. For this poem he is said to have received the sum of three thousand guineas. After this Mr. Moore published his poem of "The Loves of the Angels," and also a small spirited work entitled "Memoirs of Captain Rock." We have also omitted to mention that he completed Murphy's unfinished translation of Sallust, also edited an edition of the works of Brinsley Sheridan, and published a biography of him. Moore died in 1852.

MOOREHEAD, JOHN, was well known as the composer of several English operas, which have attained great popularity. He was an Irishman by birth, and received his first instructions in music in that country. For several years of the early part of his life he was employed as a performer in the orchestras of different provincial theatres, where, as far as so confined a sphere would admit of, he obtained considerable celebrity. In 1798, a situation in the orchestra of Covent Garden Theatre having been offered to him, he was induced to accept it, in the hope that he might thus have an opportunity of advancing himself into the higher departments of his profession. This opportunity was, not long afterwards, afforded him by an engagement with the managers to compose the music to the pantomime of "The Volcano, or the Rival Harlequins," and to the entertainment of "The Naval Pillar." These were so well received by the public, that, in 1801, he was employed, conjointly with Davy, in the ballet pantomime of "Perouse," which had an almost unprecedented degree of success. In 1802 he composed the overture and other music in the pantomime of "Harlequin's Habeas," and was likewise engaged in the opera of "The Cabinet," with Messrs. Reeve, Davy, Corri, and Braham. Moorehead died in the year 1804.

MORALES, CHRISTOPHER, the earliest Spanish musician of any eminence whose name we have been able to meet with, was a native of Seville. He held the situation of a singer in the Pontifical Chapel, under Paul III., about the year 1544, and was the author of two collections of masses, the one for five, and the other for four voices, and also of a well-known Magnificat. Mention has also been made of a fine motet by him, "*Lamentabatur Jacob*," which for many years continued to be sung in the Pope's Chapel on the fourth Sunday in Lent. Morales likewise composed the "Lamentations of Jeremiah," for four, five, and six voices. These works have been printed; and a "*Gloria Patri*," composed by him, is preserved in Kircher's "*Musurgia*." As a specimen of his compositions, one of the madrigals, "*Ditti mi c si*," taken from his fourth book, published at Venice in 1541, is inserted in Smith's "*Musica Antiqua*." The style of Morales, though learned for the time in which he wrote, is somewhat dry, and the harmony, by his frequent use of unaccompanied fourths and ninths, is uncouth and insipid.

MORALIZATIONS. The name given to certain old Scotch puritanical songs.

MORAND, PIERRE. Under this name was published, at Paris, "*Justification de la Musique Françoise*," &c., 1754.

MORANDI, PIETRO, an Italian composer, belonged, in 1783, to the orchestra of the theatre of Sinigaglia. He was born in that town, and was living in 1791. He composed "*Gli Usurpatori delusi*," opera buffa, 1791.

MORARI, ANTOINE. A contrapuntist of the sixteenth century. Among the motets published by Lechner, in 1575, are many by Morari.

MORATO, JOA. VAZ BARRADAS MUITO PAME, a celebrated Portuguese professor and composer, born in Portugal in 1689, left at his decease the following works, partly in manu-

script, partly printed: "*Preceitos Eclesiasticos do Can'o Firmo, para benefico e uso commun de todos,*" Lisbon, 1733; "*Domingas da Madre de Deos, e exereicio quotidiano revelado pela mesma Senhora,*" Lisbon, 1733; "*Flores Musicas colhidas no jardim da millhor licaõ de varios aucthores. Arte practica de Canto ed Orgao. Indice de Cantoria para principiantes com hum breve resumo das regras mais principais do Canto Chaõ, e regimen do Coro eo uso Romano para os Subchantres e Organistas,*" Lisbon, 1735; "*Flores Musicas colhidas no jardim da millhor licaõ de varios aucthores. Arte practica de Canto de Orgao. Indice de cerimonia para principiantes com hum breve resumo das regras mais principais de acompanhar com instrumentos as vozes, e o conhecimento dos tons assim naturaes, como accidentaes,*" Lisbon, 1738; "*Breve resumo de Canto Chaõ com as regras mais principais, e a forma, que deve guardar o Director do Coro para o sustantar firme na corda chamada Coral, e o organista quando o a companhia,*" Lisbon, 1738; and "*Breve resumo do Canto Chaõ dedicada à Magestade de D. Joã V.,*" 1739.

MORAVIAN CUSTOM. The Moravians have a custom, which, we believe, is peculiar to them, of performing a certain kind of music for the dead, or solemnizing the departure of the soul into eternity. This music is performed on four brass horns, in harmony, upon a platform, or open apartment, high up in the steeple of their church, which generally has a commanding elevation above the surrounding buildings. Just as the glowing rays of day are dissolving in the sky, the soft, dirge-like choral floats on the evening air, filling it with solemn sweetness. It seems as a voice from the unknown world, summoning the spirit of the dead to its eternal home. The sacred harmony penetrates and hallows every bosom. It speaks directly to the heart; nor does it grow tame by repetition. Who will affirm that such a custom does not soften, humanize, and refine the heart? It must powerfully draw the minds of those within its influence to reflect upon the great change which awaits all flesh, and to prepare and to familiarize the soul with death, and with thoughts concerning its future and everlasting abode.

MORAWETZ, GIOVAN. A musician, resident, about the year 1799, at Vienna. Of his works the following were in Traeg's "Catalogue," Vienna, 1799: "3 *Sinfonie à 11 e 12 Stromenti.*" "*Concertino à 9 Strom.*" "8 *Notturni, à Fl. d'Amore, Fl. trav., 2 Viole, 2 Corni, e Vc.*" "*Sestetto, à 2 V., Ob., Fl., A., e Vc.*" "*Harmonie-Partien d 8.*" He was in 1809 at Pesth, in Hungary, as *chef-d'orchestre* of the theatre there.

MORCEAU. (F.) A piece or musical composition of any kind.

MORDENTE, sometimes written **MORDANTE**. (I.) This consists of three successive tones, the middle of which is the tone over which the sign is placed, and sometimes begins with the upper, sometimes with the lower note. Latterly, composers have begun to show by the sign the particular movement which is intended to be applied; that sign, therefore, which has the first hook or notch bent downwards, thus, , shows that the double turn is to begin with the lower note; that bent the contrary way, shows that it is to begin with the upper note. If the mordente does not stand over, but after the note, to serve

as a link to connect with the following notes, then the principal note is again added as a fourth note, and executed only just before entering on the following tone. If the mordente is placed over a dot, then the fourth note stands in place of the dot. The mordente is always to be played rapidly, whether in quick or slow time, and very distinct, and perfectly equal in its third and fourth notes, both as regards quickness and power. The *mordente* is a species of trill or shake. Its definition varies, however, with different masters, in different passages. Dr. Arnold gives the following example:—

The Italians use it differently in the same passage.

MOREAU, JEAN BAPTISTE, a musician, born at Angers, in 1656, was led by the consciousness of his musical talents to try his fortune at Paris. Having succeeded in a bold attempt to get unperceived into the closet of madame the dauphiness, Vietoire de Raviere, who was fond of music, he had the assurance to pull her by the sleeve, and ask permission to sing a little air of his own composing. The dauphiness, laughing at the singularity of the incident, allowed him to do so. He sang without being disconcerted, and the princess was pleased. The story came to the ears of the king, and he desired to see him. Moreau was introduced to his majesty in the apartment of Madame Maintenon, and sang several airs, with which the king was so much delighted that he ordered him to compose a musical entertainment, which was performed at Marli two months afterwards, and applauded by the whole court. He was also engaged to compose the interludes for the tragedies of "*Esther,*" "*Athalie,*" "*Jonathas,*" and several other pieces for the house of St. Cyr. He died at Paris in 1734. His chief excellence consisted in giving the full force of expression to all kinds of words, and also to subjects. The poet Lainez, with whom he was intimate, furnished him with several songs and little cantatas, which he set to music, but none of them have been published.

MOREAU, JEAN ANDRÉ, born at Paris in 1768, was the son of the celebrated surgeon of that name. Having in early age lost his father, and announcing a decided talent for music, his mother determined, by the instigation of her friends, to bring up her son to the musical profession. He was accordingly sent, in 1774, as a chorister of the cathedral at Amiens, where he studied under Dominique Leuder, who was then considered one of the first chapel-masters of France. At eighteen years of age, he obtained the situation of chapel-master of the collegiate church of Bethune, and two years afterwards obtained the same situation at Peronne. He has published much vocal and instrumental music.

MOREL, a French composer in 1720, published

"*Les Thuilleries*," a work containing a collection of cantatas, and a "*Te Deum laudamus*." In the "*Recueil d'Airs sérieux et à boire pour l'an 1710*," Paris, are also inserted several of his airs.

MOREL, a canon at Montpellier in 1740, published "*Nouvelle Théorie physique de la Voix*," Paris, 1746.

MORELLI, GIUSEPPE, an Italian singer at Cassel, was, in his eighteenth year, court singer at Lisbon, where he witnessed the dreadful earthquake. According to his own assurance, his hair turned at once quite gray in consequence of his fright. In 1806, he was living in the small Hessian town of Spangenberg, and was then in his seventieth year.

MORENDO. (I.) A term indicating a style of performance in which the tones of the voice, or instruments, are to be gradually softened, or made to die away.

MORI, PIETRO, chapel-master in the collegiate church of St. Geminiano, in Tuscany, flourished about the middle of the seventeenth century. In Parstorffer's Cat. are found the following of his works: "*Salmi à 5 voci*," Venice, 1647; "*Misse à 4 e 5 voci*," Venice, 1651; "*Salmi à 4 voci*;" and "*Compieta e Litanìa à 4 voci*."

MORI. This celebrated violinist, who was born in England, was one of the most shining ornaments of the great school of Viotti. His natural intellectual endowments were strong, and at the same time delicate. A lively temperament, keen sense of, and just reliance on his powers, and last, not least, an ardent love of his art, and an unrelaxing enthusiasm, whetted by a desire to reach and maintain, and, indeed, to be satisfied only with, the highest rank — all these qualities, backed by industry and perseverance, are the attributes and characteristics of his mind. He brought to the technical part of his profession also great requisites. His attitude had the grace of manly confidence; his bow-arm was bold, free, and commanding; and he produced an eminently firm, full, and impressive tone. His execution was marked alike by abundant force and fire, by extraordinary precision and prodigious facility. Mori is well known to be one of the principal orchestral leaders. He has led at the oratorios, the great provincial meetings, and occasionally at the Philharmonic concerts. He has published but few of his compositions, though several of his concertos, played in public by himself, are considered to have great merit.

MORIGI, ANGELO, of Rimini, first violinist of the theatre at Parma, died there about the year 1790. He was a pupil of Tartini, and master of B. Asioli. He published much music for the violin.

MORISCO. (I.) In the Moorish style.

MORLACCHI, FRANCESCO, was born in Perugia in 1784. In his seventh year he began the violin; at twelve, solfaing and the piano-forte, under Caruso. Without any previous study of counterpoint, he composed songs, sonatas, masses, and even a little oratorio; at fifteen he studied thorough bass; and at eighteen counterpoint, under Zingarelli, at Loretto. At twenty he went through a regular course of all the different species of composition, but particularly of church

music, under Padre Mattei, of Bologna; and, at the same time, studied the clarinet, to acquire a familiar acquaintance with the different characters of these instruments. In 1805, after a regular probation, he was admitted a member of the Philharmonic Academy at Bologna. About this period he composed, on various occasions, three hymns, a Pater-noster, a Te Deum, at different theatres. His cantata in praise of music was given in the Lyceum of Bologna. In the year 1807, he composed his first intermezzo, "*Il Poeta in Campagna*," for the Florentine Theatre Locommere; afterwards his first opera buffa, "*Il Ritralto*," for the Philharmonic Theatre at Verona. In addition to these, he composed the thirty-third canto of Dante's "*Inferno*," various pieces of church music, and a Miserere in sixteen parts: in 1808, "*Il Corradino*," and "*Oreste*," for the theatre of Parma; "*Enone e Paride*," a serious opera, for Leghorn; the greater part of which was composed on board a man-of-war that lay off the port, in order to escape from the altercations of the singers; and a mass and vespers for the Church of St. Cecilia, in Parma: in 1809, "*Rinaldo d'Aste*," an intermezzo, for Parma; "*La Principessa per ripiego*," an opera buffa, for Rome; "*Il Simoncino*," an intermezzo, for the same city; "*Le Aventure d'une Giornata*," a drama for Milan; "*Saffo*," a lyric scene, composed for the Donna Marcolini; and a concerto of considerable length: in 1810, "*Le Danaïde*," a serious opera, for Rome. That year he composed his first mass for the Royal Chapel of Saxony, to which he was appointed as composer: in 1811, "*Raoul di Crequi*," an opera for the Royal Theatre at Dresden: in 1812, the oratorio of "*La Passione*," for the same city: in 1813, "*La Capricciosa pentita*," an opera buffa, for the same; in 1814, "*Il Barbiere di Siviglia*," an opera, for the same; in 1816, "*La Villanella rapita di Pirna*," an opera for the theatre of Pilitz: in 1817, "*Isacco*," an oratorio, with rhythmical declamation, instead of recitative, for Dresden; afterwards "*Lodicea*," a serious opera, for the theatre of San Carlos at Naples, and "*Gianni di Parigi*," for the Scala at Milan: in 1818, the "*Carmen Seculare*" of Horace, composed on occasion of the jubilee for the King of Saxony: in 1821, "*La Morte d'Abele*," an oratorio, for the Royal Chapel of Dresden, also composed with rhythmical declamation; afterwards "*Donna Aurora*," an opera buffa, for the Scala in Milan: in 1822, he composed the serious opera of "*Teobaldo e Isolina*," for the Theatre Fenice, in Venice. Besides these numerous compositions, he has also produced, for the Royal Chapel of Saxony, six masses, thirty-three psalms, twelve antiphonies, ten offertories, and a Miserere in three parts. In addition to these, he is the author of twenty cantatas, which were performed on various occasions, six sonatas for the organ, six ariettes, with piano-forte accompaniments, six songs, and six anacronics.

MORLEY, THOMAS, a pupil of Bird, bachelor of music, and one of the gentlemen of Queen Elizabeth's chapel, acquired more celebrity by his treatise entitled "*A plaine and easie Introduction to Practicall Musicke*," than by his performance or compositions, though eminent for both. As a practical musician, in comparing Morley's productions with those of his predecessors, we cannot acquit him of the charge of

plagiarism. His melodies, however, are rather more flowing and polished than those of the old authors, on whose property his memory, perhaps imperceptibly, had fastened; but, besides these, it is evident that he sometimes condescended to use the same materials as his contemporaries, and to interweave the favorite passages of the times into his works, of which the following is a chronological list: "Canzonets, or little short Songs, for three voices," 1593; "Madrigals for four voices," 1594; "Ballets, or Fa-las, for five voices," 1595; "Madrigals for five voices," 1595; "Canzonets, or short Airs, for five and six voices," 1595. Of the following publications he was little more than the editor: "Madrigals for five voices, collected out of the best Italian Authors," 1598; "The Triumphs of Oriana, to five and six voices, composed by divers several Authors. Newly published by Thomas Morley, Bachelor of Musicke, and Gentleman of her Majesty's honourable Chapell, 1601." These madrigals, in number twenty-four, of which the music of the thirteenth and twenty-fourth was composed by Morley, were written, set, and published in honor of Queen Elizabeth, who is figured under the name of Oriana. The composers of the rest were Daniel Norcome, Michael Este, John Mundy, bachelor of music, Ellis Gibbons, John Benet, John Hilton, bachelor of music, George Marson, bachelor of music, Richard Carlton, John Holmes, Richard Nicholson, Thomas Tomkins, Michael Cavendish, William Cobbold, John Farmer, John Wilby, Thomas Hunt, bachelor of music, Thomas Weilkes, John Milton, father of the poet, George Kirbye, Robert Jones, John Lesley, and Edward Johnson, bachelor of music.

As Italy gave the *ton* to the rest of Europe, and particularly to England, in all the fine arts, during the reign of Elizabeth, it is probable that the idea of employing all the best composers in the kingdom to set the songs in the "Triumphs of Oriana," in honor of the queen, had been suggested to Morley and his patron the Earl of Nottingham by Padre Giovenale, afterwards Bishop of Saluzzo, who employed thirty-seven of the most renowned Italian composers to set canzonetti and madrigals in honor of the Virgin Mary, under the following title: "*Tempio Armonico della beatissima Virgine nostra Signora, fabbricatoli per opera del Reverendo P. Giovenale, A. P. della Congregazione dell' Oratorio,*" stampata in Roma, da Nicolo Muteo, 1599, in quarto.

It does not appear that any of Morley's church music was printed during his life. Dr. Tudway, however, has inserted several of his valuable choral compositions in the collection made for Lord Harley in 1715, among which are his "Funeral or Dirge Anthems, as performed at Westminster Abbey at royal and noble Funerals," and printed by Dr. Boyce, in his first volume of "Cathedral Services," and an evening verse service, in five parts, in D minor, which has never been printed. There are likewise five different sets of lessons, composed by Morley for the vidual, in Queen Elizabeth's music book. The burial service set by Morley, which is supposed to be the first that was composed after the reformation, continues to be used in Westminster Abbey on great and solemn occasions. This service was admirably performed in the year 1760, by the united chirs of Westminster, St.

Paul's, and the Chapel Royal, at the funeral of George II. Nothing can be more happily adapted to so awful an occasion than this music, in a minor key, and chiefly in simple counterpoint, but with a grave and now uncommon modulation, which adds to the grandeur of the general effect. The few short points of fugue and imitation introduced in this composition are such as were not common when the service was produced, nor have any of them been since debased by vulgar use. For the peculiar beauties of this work, the reader is referred to "Dr. Boyce's Collection of Cathedral Music," in which the whole service is admirably printed. Morley is supposed to have died about the year 1604.

MORMORANDO. (I.) With a gentle, murmuring sound.

MORNABLE, ANTOINE DE. A French contrapuntist of the sixteenth century, of whose works there are still extant, in the Munich library, "*Motette Musicales,*" Paris.

MORNINGTON, the Earl of, father to the Duke of Wellington, furnishes an instance of earlier attention to musical instruments than was evinced even by Dr. Crotch. The following account is from the pen of Daines Barrington:—

"Lord Mornington's father played well (for a gentleman) on the violin, which always delighted the child, whilst in his nurse's arms, and long before he could speak. Nor did this proceed merely from a love, common to other children, of a sprightly noise, as may appear by the following anecdote. Dubourg, who was fifty years ago a distinguished violinist, happened to be at the family seat; but the child would not permit him to take the violin from his father till his little hands were held; after having heard Dubourg, however, the case was altered, and there was then much more difficulty to persuade him to let Dubourg give the instrument back to his father. Nor would the infant ever afterwards permit the father to play, whilst Dubourg was in the house. At the same period he beat time to all measures of music, however difficult, nor was it possible to force him to do otherwise, the most rapid changes producing as rapid an alteration in the child's hands. Though passionately fond of music, from indolence he never attempted to play on any instrument till he was nine years old. At that time, an old portrait painter came to the family seat, who was a very indifferent performer on the violin, but persuaded the child that if he tried to play on that instrument, he would soon be able to bear a part in a concert. With this inducement, he soon learned the two old catches of the 'Christchurch Bells,' and 'Sing one, two, three, come follow me;' after which his father and the painter accompanying him with the two other parts, he experienced the pleasing effects of a harmony to which he himself contributed. Soon after this he was able to play the second violin in Corelli's sonatas, which gave him a steadiness in time that never deserted him. For the next musical stage, he commenced composer, from emulation of the applause given to a country dance made by a neighboring elergyman. He accordingly set to work, and by playing the treble on the violin, whilst he sang a

bass to it, he formed a minuet, the bass of which he wrote in the treble clef, (having only played in this clef on the violin,) and was very profuse of his fifths and octaves, being totally ignorant of the established rules of composition. This minuet was followed by a duet on two French horns, whilst the piece concluded by an andante movement; thus consisting of three parts, all of which, being tacked together, he styled a serenata. At this time he had never heard any music, but from his father, his sisters, and the old painter. He adhered to the violin till he was fourteen, but had always a strong inclination to the harpsichord, from which his sisters drove him constantly, saying that he spoiled the instrument; notwithstanding which he sometimes stole intervals of practice.

"About this time his father declared his intention of having an organ for his chapel, telling his son that he should have been the organist, had he been able to play on the instrument. On this the son undertook to be ready as soon as the organ could be finished; which being accomplished in less than a year and a half, he sat down at the maker's, played an extempore fugue, to the astonishment of the father, as well as others, who did not conceive that he could have executed a single bar of any tune. It is well known that this instrument is more likely to form a composer than any other; and his lordship, in process of time, both read and studied music, whilst he at the same time committed his ideas to writing. As he had, however, never received the least instruction in this abstruse though pleasing science, he wished to consult both Rosengrave and Geniniani, who, on examining his compositions, told him they could not be of the least service to him, as he had himself investigated all the established rules, with their proper exceptions. Though simple melodies commonly please most in the earlier stages of life, he had always a strong predilection for church music and full harmony, as also for the minor third, in which, for that reason, he made his first composition. In process of time his lordship was so distinguished for his musical abilities, that the university of Dublin conferred upon him the degree of doctor and professor of music."

The following are among the more admired vocal compositions of the Earl of Mornington: "Hero in cool grot," glee, 4 voc.; "When for the world's repose," glee, 4 voc.; an excellent copy of this glee, with separate piano-forte accompaniment, is given in the Vocal Anthology. "'Twas you, sir," catch, 3 voc.; "Gently hear me, charming maid," glee, 3 voc.; "Come, fairest nymp'h," glee, 3 voc.; and "By Greenwood tree," glee, 4 voc.

MORRIS, or MORRICE DANCE. A peculiar kind of dance practised in the middle ages. It is supposed to have been first introduced into England from Spain by Edward III., when John of Gaunt returned from that country; but few traces of it are found earlier than the times of Henry VIII.; and it is more probable that it was borrowed either from the French or the Flemings. In the morris dance bells were fixed to the feet of the performer, and the great art consisted in so moving the feet as to produce some-thing like concord from the various bells.

MORTARO, ANTONIO, a Franciscan friar and organist in the cathedral churches of Ossaro and Novara, was born at Brescia. He flourished as a composer about the year 1600, and died in a Franciscan convent in 1619, after having published several works. Cozzando had seen the following of them, which he mentions in his "*Librar. Bresco*," p. 46: "*Fiammelle Amoroze a 3 voci*," Venice, 1599; "*Messe, Salmi, Magnificat, Canzoni da suonare, e Falsi Bordonni, à 13 voci, con la Partitura*," Milan, 1610; "*Canzoni à 4 voci, Lib. 1 e 2*," Venice, 1623; and "*Litanie à 4 voci, con B. cont.*," Venice, 1623.

MORTELLARI, MICHELE, a pupil of Nic. Piccini, was a celebrated Italian composer, born at Palermo in 1750. He brought out the following operas at Rome, Milan, Venice, and Modena, which were eminently successful: "*Le Astuzie Amoroze*," 1775; "*Ezio*," of Metastasio; "*D. Gualterio Civetta*," 1776; "*Antigono*," 1778; "*Il Baron di Lago Nero*," 1778; "*Alessandro nell' Indie*," 1778; "*Troja distrutta*," 1780; and "*Didone abbandonata*," 1780. Dr. Burney also speaks of the "*Armida*" of Mortellari, which he heard in 1786, at the King's Theatre, when Mortellari was in London. The doctor says, "The taste of this composer is of the most refined and exquisite kind. Though of the Neapolitan school, his compositions are, however, less bold, nervous, and spirited, than elegant, graceful, and pleasing. Being a Palermitan by birth, his strains may be rather called Sicilian than Neapolitan."

MOSCA, N., an Italian composer, was pianist at the Opera Buffa at Paris, before Spontini held that situation. Besides some vocal pieces which he has added to several operas performed at that theatre, he brought out, in 1805, "*La Ginoveria di Scozia*," and in 1806, "*La Vendetta Femmina*." N. Mosca is brother to the Neapolitan composer of the same name.

MOSCA, LUIGI. It is doubtful whether this composer is not the same person mentioned in the preceding article, since, though the authors of the French "Dictionary of Musicians" give to the other the initial N., Gerber has given the pianist at the Opera Buffa in Paris under the Christian name of *Luigi*. At all events the Neapolitan composer is a musician of considerable eminence, and has especially made himself known by the following operas: "*L'Amore per Inganno*," opera buffa, 1803; this was highly successful at Naples; "*Il Ritorno inaspettato*," Naples, 1808; "*L'Inpostura*," Naples, 1804; "*I Prudenti delusi*," this opera is also highly spoken of.

MOSCHELES, IGNAZ. This celebrated pianist and composer was born at Prag, in the year 1794. He studied composition under Albrechtsberger, and the piano under Streicher, and first appeared in public at Vienna, about the age of fifteen. After remaining in that city about ten years, he commenced his travels, passing through Holland to Paris, and from thence to London, where he arrived in 1821, making his *début* at the Philharmonic Concerts of that year. The "Quarterly Musical Review" makes the following observations on the first appearance of Moscheles. "Some of Moscheles' compositions had been known in England, and had prepared the

critical class of musicians at least, together with his fame, for his reception, which, both privately amongst the eminent of the profession, and publicly when he entered the orchestra of the Philharmonic, was marked with the most decided tokens of respect, distinction, and applause; the most expressive of which, perhaps, was the silence, unbroken even by a breath, that waited upon his performance. He played a concerto of his own composition; during the performance of which the audience seized every opportunity of manifesting the delight they felt by repeated bravos, and by every other means which could convey the distinguished approbation to which they felt Moscheles to be justly entitled. Moscheles' command of the instrument was truly astonishing, whether considered in relation to force, delicacy, or rapidity. As Catalani in vocal art bursts through all the fetters commonly imposed, so Moscheles appears to disdain, because he is thoroughly acquainted with, technical rules. His wrist, his hand, and the joints of his fingers, exhibit a variety of position and a pliability truly wonderful; yet so nicely does he control his touch, that when, from the elevation of his hand, the spectator might expect its descent in thunder, as it were, the ear is never shocked by the slightest harshness; there is, too, a spring and elasticity in his fingers, when applied to quick arpeggio passages, that bring out the most brilliant tone, while in those touching movements that constitute generally what is termed expression, his manner is not less affecting. But the most extraordinary part of Moscheles' playing is perhaps the velocity and certainty with which he passes from one distant interval to another. His thumbs seem to act as intermediate points, from which his fingers are directed almost to the remote parts of the instrument, over which they fly with a rapidity wholly inconceivable; yet the uniformity of touch and tone are so strictly preserved, that an imperfect note is never, and an unfinished note seldom, heard. Every great player has his forte; and in this species of execution Moscheles is unrivalled. We think, too, that in genuine force he has never been equalled. Concerning his expression, Mr. J. Cramer, we are told, publicly paid him the highest compliments; yet we know persons of great judgment who estimate his powers in this branch of art at a lower rate. But we are disposed to think this arises rather from the great superiority of his other claims to preëminence, from a comparison of the one part with the other, than from any positive falling off. In such a man the very grandeur of one faculty is sometimes the cause of the disparagement of another. As a whole, however, Moscheles is universally allowed the supremacy, and it is also as universally admitted, that his talents are accompanied by a most engaging modesty."

His brilliant and elegant improvisation, too, was the theme of general admiration. His compositions up to that time, both his bravura and his concerted pieces, indicated a noble tendency. In London Moscheles had acquired an established position, and it was not until 1823 that he revisited his country. There he appeared in Munich and Vienna, and in the following year, on his way back to London, in Dresden, Leipsic, Berlin, Hamburg, and Paris. In Vienna he had to compete at once with Kalkbrenner. A great

er depth, and individuality, and grandeur, was recognized in his music, and his playing, (even in his touch,) than in the smooth and polished manner of his rival, which often leaned to sentimentality. But Moscheles was of too deep and earnest a nature to remain a mere virtuoso; at the very height of his prosperity in that character, he returned, with real partiality, to the interpreting of the lesser difficulties of the works of Mozart and Beethoven. As professor in the Royal Academy of Music in London, he was long employed in the tuition of the most advanced scholars; he also distinguished himself as an associate director of the famous Philharmonic Concerts, and by his series of historical classic *soirées*, in which he performed specimens of the piano-forte works of Beethoven, Mozart, Bach, and other writers, in chronological succession. By this means he created quite a Bach enthusiast in 1836. To his connection with the Philharmonic Society we owe his symphony and his overture to Schiller's "Maid of Orleans," which was produced there in 1835. At present, Moscheles is professor at the Conservatory in Leipsic, where he has the finest field for the exercise of his sound influence in art.

Among others, the following of Moscheles' works are found in Wessel's Catalogue: "Grand Sextuor, for Piano-forte, Violin, Tenor, Two Horns, and Violoncello," Op. 35; "Variations to a National Austrian Air, with Accompaniment of Two Violins, Tenor, Violoncello, and Contra Bass, ad lib.," Op. 42; "Grand Bondeau Brilliant, with Accompaniment of Two Violins, Tenor, Violoncello, and Contra Bass," Op. 45; "Concert de Société, with Accompaniment of small Orchestra, or with Accompaniment of the String Instruments only," dedicated to the Count d'Apony; "Fantaisie and Variations to the favorite Air, 'Au clair de la lune,' with Accompaniment of Orchestra, or as Quintet," Op. 50. Quintettos: "Grand Variations, with two Violins, Tenor, and Violoncello," Op. 32; "Fantaisie and Variations to the favorite Air, 'Au clair de la lune,' with two Violins, Tenor, and Violoncello, or with Orchestra," Op. 50. Quatuors: "Fantaisie, Variations, and Finale to a Bohemian Air, for Piano-forte, Violin, Clarinet, and Violoncello Concertante," Op. 46. Trios: "Introduction and Variations in C, Concertante," dedicated to Mr. Rau. For two piano-fortes: "Grand Duet Concertante." Marches and waltzes for piano-fortes: "Three Heroic Marches," Op. 31; "Six Waltzes with Trios," dedicated to the Countess de Wallis; and "Marche Triomphale, and two Trios." Rondos, sonatas, &c.: "Brilliant Rondo in A," Op. 30; and "Grand Sonata in E flat," dedicated to the Archduke Rudolph, of Austria; "Grand Caprice and Potpourri, with Violin or Violoncello Concertante," dedicated to J. Berger, Op. 37; "French Rondo Concertante, for Piano-forte and Violin;" "Grand Sonata Concertante in A," dedicated to C. Keller, Op. 44; "Duet Concertante, in B flat, with Violoncello or Bassoon," Op. 34; "Grand Caprice for Piano-forte and Violoncello, or Violin Concertante." Solos: "Fantaisie Heroïque," dedicated to A. Salieri, "Brilliant Rondo in D," Op. 14; "Three Rondos," Op. 18; "Sonata in D," Op. 22; "Spanish Rondo in G;" "Parody on Rossini's Cavatina 'Di tanti palpiti';" "Divertissement," Op. 23; "Fantaisie in the Italian Style, with a Grand

Rondo," No. 2, of the *Musée Musicale*; "Grand Sonata," dedicated to Beethoven, Op. 41; "Sonate Mélancolique," Op. 49; "Fantaisie," Op. 50.

MOSSI, GIOVANNI, a violinist and composer for his instrument, was a pupil of the celebrated Corelli, and flourished at Rome about the year 1720, about which time he published the following works: "Sonate à V. solo e Cont.," Op. 1; "8 Concerti à 3 e 5 Stromenti," Op. 2; "Concerti à 4 V., A., e B.," Op. 3; "12 Concerti à 3 e 8 V., Vc., e Cont.," Op. 4; "Sonate à V. solo e Vc.," Op. 6, Amsterdam.

MOSSO. An Italian participle, which means moved; as, *piu mosso*, with more movement, quicker; *meno mosso*, slower.

MOSTO, BERNARDINO. A contrapuntist of the sixteenth century, of whose works there is in the Munich library, and printed, "*Madrigali à 5 Voci*," Antwerp, 1588.

MOSTO, GIOV. BATTISTA, chapel-master of the Episcopal church in Padua, flourished in the fourteenth century. We can mention of his works "*Madrigali à 5 Voci*," Venice, 1584.

MOSTRA. (L.) An index, or direct.

MOTELLO, DOMENICO, a learned musician, was living at Naples in the year 1600.

MOTIVO. (L.) The leading subject, or characteristic and predominant passage, of an air.

MOTO, or CON MOTO. (L.) Literally, with movement. This phrase indicates a somewhat increased rate of movement: thus *andante con moto* means a little faster than *andante*, or an *andante* movement, that must not be allowed to drag.

MOTO CONTRARIO. (L.) An expression indicative of that progression of the different harmonic parts of a composition, by which they move in opposite directions.

MOTET, or MOTETTO. (L.) The name formerly given to certain elaborate vocal compositions, consisting of several parts, and the subjects of which were generally sacred. The Latin psalms and hymns of the Romish church are frequently called *motets*. *Motetus* is used also to signify a *motet*. The term *motet* may be applied to any sacred composition of a certain extent, which does not come under the character of a mass or anthem. It is often used to describe sacred composition when intended for festival or secular occasions.

MOTTA, D. ARTEMIO, a composer of instrumental music, born at Parma, flourished about 1710, and published "10 Concerti à 2 V., A., Tenore Viola, e B. C.," Op. 1, Amsterdam.

MOTTEGLANDO. (L.) Jeeringly, jocosely.

MOTUS. (L.) Movement; as, *motus contrarius*, contrary movement; *motus obliquus*, oblique movement; *motus rectus*, similar movement.

MOUCHE and MOUCHY. Both names belong probably to one musician at Paris, who published "Trois Sonates pour le Clav.," Op. 1, Paris, 1796, and "*Le Flageolet d'Amour, avec Acc. de P. F.*," Paris, 1798.

MOULET, JOSEPH AGRICOLE, professor of the harp at Paris, was born at Avignon in

1766. He has published much music for his instrument, and several romances.

MOURA, PEDRO ALVARES DE. A canon and composer of the sixteenth century, born at Lisbon. He resided at Coimbra, whence he published "*Livro de Motettes à 4, 5, 6, e 7 Vozes*," Rome, 1594. His "*Livro de Missas a diversas Vozes*," manuscript, is yet in the royal musical library at Lisbon.

MOURET. A French dramatic composer. He died near Paris in 1738.

MOUTHPIECE. A little silver or brass appendage, inserted at the end of the tube of a French horn, or trumpet, to receive the pressure of the lips in performance.

MOUTON, JEAN, master and conductor of the choir in the chapel of Francis I., was a pupil of Josquin de Pres. If we were allowed to credit the testimony of his contemporaries, he was one of the most celebrated musicians of the age in which he lived. "But notwithstanding the rapture," says Dr. Burney, "with which his masses have been spoken of, they appear greatly inferior in melody, rhythm, and design, to those of Josquin, De la Rue, and Févin. His motets, however, if not more nervous and elaborate than those of his contemporaries, are more smooth and polished."

MOUVIUS, CASPAR, sub-rector in the school at Stralsund about the middle of the seventeenth century, was also a composer, and published "*Triumphus Musicus Spiritualis*," Rostock, 1640; "*Cithara Davidica*," and "*Hymnodia Sacra*." Schacht ranks him among the distinguished composers of his time.

MOVEMENT. The name given to any single strain, or to any part of a composition comprehended under the same measure, or time. When an overture, concerto, song, or any other piece changes its time and measure, either from one species to another, as from common time to triple, or *vice versa*, — or in the same species, as from triple time *adagio*, to triple time *allegro*, or the contrary, — it is then said to change its movement; so that every composition consists of as many movements as there are positive changes in the time or measure.

MOVIMENTO. (L.) Time, movement.

MOXLEY, for thirty years organist of the parish church of St. Paul's, Covent Garden, England, and a thoroughly educated musician, and performer of first-rate ability, died at his residence in London, December, 1852.

MOZART, LEOPOLD, the father, was the son of a bookbinder at Augsburg. He studied music at Salzburg, was entered as a chorister in the chapel there in 1743, and in 1762 obtained the situation of second chapel-master. He was living in 1785, in which year he visited his son in Vienna for the last time. This is the latest information that we have of him. Of his works the following deserve to be mentioned: "*Der Violinischeule, 2te und vermehrte Auflage*," Augsburg, 1770; "*Bastier und Bastienne*," operetta; "*La Cantatrice ed il Poeta, Intermezzo à 2 Personne*;" and "*Musikalische Schilttenfahrt, arrangirt für P. F.*," Leipsic.

MOZART, JOHANN CHRYSOSTOMUS

WOLFGANG GOTTLIEB, was born at Salzburg, on the 27th of January, 1756. His father having in an unusual manner influenced the destiny of his son, and both unfolded and modified his genius, we think it necessary, in the first place, to give a short account of his career. Leopold Mozart was the son of a bookbinder at Augsburg; he studied at Salzburg, and, in 1762, was admitted as one of the musicians of the Prince-Archbishop of Salzburg, and was also nominated sub-director of the chapel of that prince. The duties of his station leaving him much leisure, he gave lessons on the violin and in musical composition; he also published an instruction book for the violin, which met with great success. He married Anna Maria Pertl; and it has been remarked by many as a singular circumstance, that this couple, who gave birth to an artist so happily endowed with the genius of harmony, were universally remarked in Salzburg on account of their extreme beauty. Of seven children, the fruits of this union, two only survived, a girl, named Mary Anne, and a son, the subject of our present memoir.

This son had scarcely attained the age of three years when his father began to instruct his sister, then about seven years of age, on the harpsichord. From that period young Mozart began to display his astonishing abilities for music. His greatest delight was to endeavor to find out thirds on the harpsichord, and nothing could equal his pleasure when he discovered that harmonious concord. Arrived at the age of four, he had learned, almost voluntarily, to play several minuets and other pieces of music on the harpsichord. To learn a minuet he required rather more than half an hour, and scarcely double that time for a much longer piece; after which he would perform them with the greatest accuracy, and perfectly in time. And at the age of five years, so rapid was his progress that he already composed some trifling pieces of music, which he performed to his father, who carefully preserved them, to encourage his rising talent. Previous to this period, and ere the little Mozart had discovered any predilection for music, his greatest delight was in the games which usually interest children of that age, and for them he would even sacrifice his meals. He ever displayed proofs of the greatest sensibility and affection, and would frequently ask, perhaps ten times a day, of those around him, "Do you love me very much?" and when in joke they would reply no, tears would immediately escape from his eyes. As soon as he had the slightest notion of music, his love for the gambols of his age entirely vanished; and, for any amusement to please him, it became necessary, in some way, to introduce music with it. A friend of his parents frequently amused himself by playing with this intelligent child; sometimes by conveying toys in procession from one room to the other, whilst he, who had nothing to carry, sang a march or played it on the violin.

During a few months Mozart attached himself, with great avidity, to the ordinary studies of youth, and during that period even sacrificed to them his love for music. Whilst learning arithmetic, the tables, chairs, walls, and even the floors, were scrawled with figures. The energy of his mind enabled him easily to fix his attention on any new object that presented itself. Music, however, soon became again his favorite pursuit;

and his taste for it soon gained such an ascendancy over him, that he gave himself up, without reserve, to the occupation nature had apparently prescribed for him. His progress never slackened. Mozart, the father, upon returning one day from church with a friend, found his son occupied in writing. "What are you about there, my dear?" he demanded. "I am composing a concerto for the harpsichord; I have almost finished the first part." "Let us see this scrawl." "No, if you please, I have not yet finished it." His father, however, took the paper, and showed it to his friend; it was a perfect scrawl of notes, hardly legible from the blots of ink. The two friends began to laugh heartily at this scribbling; but Mozart, the father, having considered it attentively, "See, my friend," said he, "how exactly it is composed by rule; 'tis a pity we cannot make out something of this piece; but it is too difficult; nobody could play it." "It is a concerto," replied the young Mozart, "and should be well studied before being performed. See, this is the way you should begin." He then commenced playing it; but only succeeded in the performance sufficiently to discover his idea. Indeed, the composition was a multitude of notes placed exactly according to rule, but which presented such amazing difficulties, that the most able musician would have found it impossible to execute them.

When he had attained the age of six years, all Mozart's family, consisting of his father, mother, sister, and himself, removed to Munich. Here the elector heard the two children perform, who received unbounded applause. In the autumn of this year, (1762,) the two young virtuosos were presented at the imperial court. The famous Wagenseil happened to be in Munich. Young Mozart, who already preferred the approbation of a good master to that of any other, begged the emperor to allow Wagenseil to be present at his performance. "Send for him," said the child; "he understands the thing." Francis I. desired Wagenseil might be called, and resigned to him his place at the harpsichord. "Sir," said the young virtuoso, then six years old, "I am going to play one of your concertos; you must turn over the leaves for me."

One day performing again at court, the Emperor Francis I. said in joke to the young performer, "It is not very difficult to play with all the fingers; but to play with one finger, and with the notes hid, would indeed excite admiration." Without the least appearance of surprise at this strange proposal, the child immediately began to play with one finger, and with all the precision and neatness imaginable. He then begged to have a veil, that he might hide the notes of the instrument; and thus he continued to play equally as well as if he had long been accustomed to this style of performance.

Hitherto our young musician had merely performed on the harpsichord; but his great genius outstripped all instruction. He had brought with him from Vienna to Salzburg a small violin, and he was in the habit of amusing himself with this instrument. Wenzl, an able violinist, presented himself one day to Mozart, the father, to ask his opinion of six trios he had just composed. It was agreed that they should be tried, and that Mozart, the father, should play the bass, Wenzl

the first violin, and Schachtner, trumpeter to the Archbishop of Salzburg, who happened to be with Mozart at that moment, the second; but the young Mozart entreated so earnestly to be permitted to take this last part, that his father, though at first much offended by his importunity, at the intercession of Schachtner, at length consented to let him perform on his little violin, assisted by his friend Schachtner. The father had never before heard his son's performance on this instrument; but his admiration was scarcely exceeded by his astonishment, when Schachtner, laying aside his violin, declared he was entirely useless. The child executed with equal success all the six trios.

Each succeeding day discovered fresh proofs of the talents of this extraordinary child. He could distinguish and point out the slightest variation of sound; and every false, or even harsh tone, not softened by some harmony, was torture to him. Thus during his infancy, and till he had attained the age of ten years, he had an invincible horror at the sound of a trumpet, when not used in concert with other instruments; when any one showed him a trumpet, it made nearly the same impression upon him that a pistol would on other children if turned towards them in joke. His father imagined he might cure this dislike by sounding a trumpet in his presence, and tried the experiment, notwithstanding the entreaties of the young Mozart that he would spare him this torment; but at the first blast he became quite pale, fell on the floor, and convulsions would to all appearance have ensued, had he not immediately ceased to play. Since his first trial on the violin, he frequently made use of that of Schachtner, which he admired much for the softness of its tone. One day Schachtner came to visit Mozart, the father, and found young Wolfgang performing on his own little violin. "What is your violin about?" was the first remark of the child to Schachtner, and he then continued to play some trifling airs. At length, having reflected some moments, he said to Schachtner, "Why did not you leave me your violin tuned to the same pitch as it was the last time I used it? It is half a quarter of a tone lower than this one of mine." They at first laughed at this extreme exactness; but Mozart, the father, who had frequently occasion to observe his son's singular memory for retaining sounds, desired Schachtner's violin might be brought, and to the astonishment of all present, it actually proved to be half a quarter of a tone below that of the child's.

Though this wonderful boy could not fail to observe the astonishment and admiration which his talents excited, he became neither forward nor vain; a man in talent, he ever remained in all other respects the sweetest tempered and most submissive of children. He never appeared the least out of humor with the commands of his parents, of whatever nature they might be. Even when he had practised music nearly the whole day, he would continue to do so without the slightest impatience, if such were his father's wishes. He understood and complied with their most trivial signs, and would not even accept a sugarplum without the previous permission of his parents.

In July, 1763, when Mozart had just attained his seventh year, his whole family left Germany. The fame of the young musician had then spread

through Europe. He had already excited the greatest admiration at Munich, and successively at all the electoral courts. In the month of November he arrived in Paris, and was introduced to play the organ at Versailles, in the King's Chapel, and in the presence of the whole court. His success in France, as well as that of his sister, almost amounted to enthusiasm. A portrait of his father, standing between himself and sister, was engraved after a design of Carnotel. It was at Paris that Mozart, then seven years of age, composed and published his two first works. They were extremely good; but, it is universally allowed, were retouched by his father. In 1764 he left Paris for England, where he was received with equal approbation, both at court and in the city. The two children then began to perform concertos, written in dialogue, on separate harpsichords. Some of the most difficult pieces of Bach, Handel, and other masters, were also presented to the young Mozart, who performed them all at first sight with the greatest possible accuracy, and in the strictest time. One day, in the presence of the king, he executed, from a written bass alone, a piece which formed the most enchanting harmony. At another time Christian Bach, music master to the queen, took the little Mozart on his knees, and played a few bars. Mozart then continued the air, and they thus performed an entire sonata with such precision, that those who were present imagined it was played by the same person. (For further interesting particulars of Mozart's performances in England, see the Hon. Daines Barrington's *Miscellanies*, and the *Philosoph. Transac.*)

During his residence in England, that is to say, at the age of eight years, he composed six sonatas, which he dedicated to the queen, and printed in London.

He returned to France in 1765, and in passing through that country he performed on the organ at most of the churches and monasteries, and from thence continued his journey into Holland, and at the Hague composed a symphony for a full orchestra, on occasion of the installation of the Prince of Orange. Here the two children had a serious illness, which nearly proved fatal to them both.

The Mozart family then returned to Paris for two months, after which they bent their steps towards their native country. Soon after their return to Munich, the elector proposed to the young Mozart a musical theme to develop. He immediately obeyed, in presence of the elector, and, without the assistance of any instrument, wrote out the music, and afterwards performed it, to the great admiration of the court and all present.

Having returned to Salzburg towards the close of the year 1766, Wolfgang abandoned himself with renewed ardor to the study of composition, Emmanuel Bach, Hasse, and Handel being his guides and models, though he by no means neglected the study of the ancient Italian masters.

In 1768, the children performed at Vienna in presence of the Emperor Joseph II., who ordered young Mozart to compose the music to the opera huffa entitled "*La Finta Semplice*." It was approved both by Hasse and Metastasio, but was never performed. At this time it not unfrequently occurred, that at the houses of the chapel-masters Bono and Hasse, Metastasio, the

Duke of Braganza, the Prince de Kaunitz, &c., the father would beg that an Italian or any other melody might be given to his son, when Wolfgang would immediately subjoin all the instrumental parts in presence of the whole assembly.

At the consecration of the church belonging to the Orphans' House, he composed the music of the mass, and of a motet, and though then only twelve years of age, conducted this musical solemnity in presence of all the imperial court.

In December, 1769, he went with his father into Italy, having some months previously to his departure been nominated concert master to the Archbishop of Salzburg. It may easily be conceived that our young virtuoso was received in the most flattering manner in a country where music and the arts are so highly cultivated.

He first exhibited his talents at Milan, principally at the house of Count Firmian, governor general. Nor was he permitted to leave Milan till after he had engaged to return and compose the first opera for the carnival of 1771. At Bologna, the celebrated P. Martini and other musical directors were transported with delight and admiration on hearing the boy execute the most difficult fugues on the harpsichord without hesitation, and with the greatest possible precision.

He likewise excited equal admiration at Florence, in which city he became acquainted with Thomas Linley, who was then about his own age. Linley was a pupil of Martini, the celebrated violinist, and performed on that instrument with equal grace and skill. The friendship of these two boys soon became excessive. The day of their separation Linley gave his friend Mozart a copy of verses which he had requested of the celebrated Corinna on that occasion; he accompanied the carriage of Wolfgang to the gate of the town, where they parted, both bathed in tears. He arrived at Rome in the Passion week, and on the Wednesday evening went with his father to the Sistine Chapel to hear the celebrated *Miserere*; a composition of which it had been prohibited either to give or take a copy, on pain of excommunication. Aware of this prohibition, the boy listened so attentively, that on his return home he noted down the whole piece. On Good Friday the same *Miserere* was again executed. Mozart was again present, and, during the performance, held his musical manuscript in his hat, by which means he was enabled to make the necessary corrections. This anecdote created a great sensation in Rome. Soon afterwards, Wolfgang was requested to sing this *Miserere* at a concert, accompanying himself on the harpsichord. The first soprano, (Cristofori,) who had sung it at the chapel, was present, and acknowledged with surprise, that Mozart's copy was both complete and correct. The difficulty of this undertaking was much greater than may be imagined. But we beg to be allowed to digress a little here, for the purpose of introducing some details concerning the Sistine Chapel and this remarkable *Miserere*.

There are generally thirty-two voices employed in this chapel, without any kind of instrument, not even an organ, to sustain them. This establishment had attained its highest de-

gree of perfection towards the commencement of the eighteenth century; since which time, owing to the salaries of its singers having remained nominally the same, and therefore being in fact greatly diminished, whilst the opera has continued to flourish more and more, and the salaries of good theatrical singers have risen to an amount formerly unknown, the Sistine Chapel has gradually lost its best performers.

The *Miserere*, which is sung twice during the Passion week, and produces such an effect on strangers, was composed over two hundred years ago, by Gregorio Allegri, one of the descendants of Antonio Allegri, well known by the name of Correggio. When the *Miserere* begins, the pope and cardinals prostrate themselves on their knees. The Last Judgment by Michael Angelo, painted above the altar of the chapel, is then discovered brilliantly illumined by tapers. As the service advances, these tapers are gradually extinguished. The forms of so many miserable creatures, painted with such terrible energy by Michael Angelo, now become more and more imposing, from being scarcely perceptible by the pale light of the remaining tapers. When the *Miserere* is just about to conclude, the chapel-master, who beats time, insensibly gets slower, the singers diminish the strength of their voices, the harmony vanishes by degrees, and the sinner, confounded before the majesty of his God, and prostrate before his throne, appears to await in silence the voice which is to pronounce his doom. This piece owes its sublimity more to the manner in which it is sung, and the place in which it is executed, than to any individual merit of its own. It was composed with the intention of being sung in a peculiar manner, so as to produce the most sublime effect, and which it would have been impossible to express by precision of notes. The singing is certainly, within the chapel, of the most affecting character. The same melody is repeated to every verse in the psalm; but this music, though precisely the same taken *en masse*, is not so in the detail. Thus it is easily understood, but yet never becomes tedious. It is the custom at the Sistine Chapel to accelerate or retard the time on certain notes, to swell or diminish the voices according to the sense of the words, and even to sing some of the verses quicker than others. The following anecdote will prove the extreme difficulty of young Mozart's undertaking, in singing the *Miserere*. It is related, that the Emperor Leopold I., who was a great amateur in music, and likewise a good composer, sent an ambassador, requesting the pope to allow him to have a copy of the *Miserere* of Allegri, that he might use it in the Imperial Chapel at Vienna. This was accorded. The chapel-master of the Sistine desired that a copy might be taken, which was immediately sent to the emperor, who had at that time the best singers of the age. Notwithstanding all their talents, the *Miserere* of Allegri produced no other effect at the court of Vienna than that of being considered as a most ordinary and dull chant. The emperor and all his court imagined that the chapel-master of the pope, wishing to keep the *Miserere* exclusively in the Sistine Chapel, had eluded the order of his master, and sent him some common and vulgar composition. The emperor immediately sent a courier to

the pope, to complain of this want of respect. The pope was so indignant at this disobedience of the chapel-master, that he immediately dismissed him from the situation he held, without even permitting him to vindicate his conduct. The poor man prevailed, however, on one of the cardinals to undertake to plead his cause, and explain, that the peculiar manner of executing this *Miserere* could not be expressed by notes, nor could any one sing it till after repeated lessons from the chapel singers, who possessed the tradition. His holiness, who did not understand music in the least, could hardly comprehend how the same notes could produce a different effect at Vienna and at Rome. He, however, permitted the poor chapel-master to write his own defence, to send to Vienna, and in time he was received again into favor.

It was the remembrance of this well-known anecdote that occasioned such surprise among the Romans, when they heard a child sing this *Miserere* perfectly in its true style, after only two lessons; and nothing indeed is more difficult than to excite the astonishment of the Romans, as all merit diminishes greatly on entering this celebrated town, where all the fine arts, in the highest perfection, are constantly displayed.

It is, perhaps, the great success Mozart met with in singing this *Miserere*, or the effect that it produced on his own mind, that inclined him ever after to a solemn style of music, particularly to that of Handel and of the tender Boccherini.

From Rome the Mozarts continued their journey to Naples, where, performing on the piano one day at the *Conservatorio della Pietà*, the audience suddenly took it into their heads that a ring which he wore on his finger contained a charm; and at length, to pacify their doubts, he was obliged to take off the ring. The effect on this superstitious people may be imagined, when, having parted with the talisman, Mozart's music continued to be equally imposing. Wolfgang gave a grand concert at Count Kaunitz's, ambassador from the emperor, and then returned to Rome. The pope, who had wished much to see him, now created him knight of the golden spur. In repassing through Bologna, he received a still more flattering distinction. After the requisite proofs of his talent, which he afforded to all with unusual promptitude, he was named, by universal consent, a member of the Philharmonic Academy. An anthem for four voices was then given him to compose, according to the idea formed of his talents: as was customary on such occasions, he was shut into a room alone, where he concluded his task in half an hour. His previous engagement now recalled him to Milan; otherwise he would have obtained what was then considered the greatest honor to musicians that could be conferred in Italy, namely, that of composing the first *opera seria* for the theatre at Rome.

On the 26th December, 1770, two months after his arrival at Milan, having at that time not quite accomplished his fifteenth year, he produced his "*Mithridate*," a serious opera, which had a run of twenty representations. To judge of its success, it will be sufficient to state that the manager immediately made a written engagement with him for the composition of the first opera for the year 1773. This opera was called "*Lucio Silla*," which was equally successful with that of "*Mith-*

ridate," and was performed twenty-six times in succession. During the period which elapsed between these two representations, he first quitted Milan, to pass the few last days of the carnival at Venice; and at Verona, which he only passed through, they presented him with a patent, as member of the Philharmonic Society of that town. He also couposed, in 1771, at Milan, "*Ascanio in Alba*;" and, in 1772, at Salzburg, "*Il Sogno di Scipione*," for the election of the new Archbishop of Salzburg. Being invited subsequently to Vienna, Munich, and Salzburg, he composed, among other works, "*La Fiata Giardiniera*," opera buffa, two grand masses for the chapel of the Elector of Bavaria, and one for the Archduke Ferdinand at Salzburg; and, on the occasion of the Archduke Maximilian remaining for a few days at Salzburg, the cantata "*Il Re Pastore*." This was in 1775. He had now, it may be said, attained the highest perfection of his art, as his fame had spread from one end of Europe to the other; and though only nineteen years of age, he could now make choice of any capital in Europe to establish himself. His father conceiving that Paris would be most suitable for him, in 1777 he commenced his second journey into France, accompanied by his mother. Here he had the misfortune to lose her, which rendered his residence in Paris insupportable; added likewise to the state of vocal music in that capital, which did not suit his taste, and thus obliged him to compose entirely for instruments. Having, therefore, produced a symphony at the Spiritual Concerts, and a few other instrumental pieces, he returned to his father at the commencement of the year 1779.

He next composed the opera of "*Idomeneo*," under the most favorable auspices, having been called to Vienna by the commands of his sovereign, the Archbishop of Salzburg. Whilst there, the Elector of Bavaria requested an opera for the theatre of Munich. Mozart was then five and twenty, and being deeply in love with a young lady to whom he was afterwards united, love and ambition combined to exalt his genius to the highest degree, and he produced this opera of "*Idomeneo*," which he always considered as among his best, and from which he even borrowed many ideas for subsequent composition.

From Munich, Mozart went to Vienna, where he entered the service of the emperor, to whom he remained attached the rest of his life; and, though he was but indifferently treated, persisted in refusing many more advantageous offers which were made to him on the part of other sovereigns, and particularly by the King of Prussia.

The following anecdote will prove the truth of this assertion. In one of his journeys to Berlin, the king, Frederic William II., offered him three thousand crowns per annum if he would remain at his court, and superintend his orchestra. Mozart only replied, "Ought I to quit my good emperor?" notwithstanding, at this period, he had no fixed salary at Vienna. One of his friends reproaching him with the imprudence and folly of not accepting the advantageous proposition of the King of Prussia, "I like to live at Vienna," replied Mozart; "the emperor is fond of me, and I don't value money."

Some vexatious occurrences at court excited him, however, to demand his dismissal of Joseph; but one word from the prince, who really loved his composer, and more particularly his music,

made him instantly change his mind. He was not sufficiently cunning to take advantage of this favorable opportunity to demand a fixed salary; but the emperor at length decided this himself. Unfortunately, however, he consulted some enemies of Mozart as to what would be right to give him, and they proposed the small sum of eight hundred florins. This was never augmented. He received it as chamber composer, but in that capacity he never did any thing. At one time he was legally asked, in consequence of one of those general orders of government so frequent at Vienna, what pension he received from the court. He wrote back word in a sealed note, "Too much for what I have done; too little for what I might have done."

"*L'Enlèvement du Sérail*" was performed in 1782. Joseph II. remarked to Mozart, "It is too grand for our ears; there are a prodigious quantity of notes." "That is precisely the thing," replied the young artist. It was during the composition of this opera that he married Constanze Weber, a musical amateur of the first merit. He had two children by this marriage.

It was Joseph II. who desired Mozart to set to music the "Marriage of Figaro," a piece then much in vogue at all the theatres. He obeyed, and this opera was performed at Prague the whole of the winter of 1787. Mozart went that winter himself to Prague, and there composed for the Bohemians his opera of "*Don Giovanni*," which met with still more brilliant success than even the "Marriage of Figaro." The first representations of "*Don Giovanni*" were not very well received at Vienna. Its merits were one day discussed at a large assembly, where most of the connoisseurs of the capital were assembled, and amongst others, Haydn; Mozart not being himself present. Every body agreed in considering it a work of great merit, brilliancy, and richness of imagination; but each found something to blame. All had given their opinion, with the exception of Haydn. At length they begged he would do so likewise. "I am not capable of judging in this dispute," he replied with his usual modesty; "all that I know is, that Mozart is certainly the greatest composer now in existence." Mozart acted at all times with the same generosity towards Haydn. A composer of Vienna of some merit, but who could not in any way perceive or appreciate the beauties of Haydn, enjoyed a spiteful pleasure in discovering every trifling incorrectness which crept into the compositions of that great master. He perpetually came to Mozart, with the greatest glee, to display any symphony or quartet of Haydn, in which, after having put it into score, he had discovered some little negligence of style. Mozart always endeavored to change the subject of conversation; his patience at length being totally exhausted, "Sir," he replied one day in rather an abrupt manner, "if you and I were melted down together, we should not even then make one Haydn." Mozart also dedicated a work of quatuors to Haydn, which may be looked upon as the best he ever produced in this style. He observed that this dedication was due to him, as it was from Haydn he first learned this species of composition.

The death of this great genius took place on the 5th of December, 1791, when he had not attained his thirty-sixth year. Indefatigable to the last, he produced in the concluding few months of

his life, his three *chefs-d'œuvre*, "*Die Zauberflöte*," or "Magic Flute," "*Clemenza di Tito*," and a "*Requiem*," which he had scarcely time to finish.

It was during the composition of the first of these operas that he began to be subject to fainting fits. He was particularly partial to his opera of "*The Magic Flute*," though he was not very fond of some particular morceaux in it, which had been the most admired by the public. The state of debility in which he was, precluded the possibility of his leading the orchestra more than the nine or ten first representations. When he was no longer able to attend the theatre, he would place his watch by his side, and appeared to follow the orchestra in idea: "There is the first act over," he would say; "now they are singing such or such an air," &c.; and then a fit of melancholy would seize him, and he fancied that he should not long enjoy life.

A singular incident accelerated the effect of this fatal pre-entiment, and as this incident was the occasion of his composing his famous "*Requiem*," one of his *chefs-d'œuvre*, we shall enter into minute details concerning it.

One day when Mozart was plunged into a profound reverie, he heard a carriage stop at his door. A stranger was announced, who begged to speak to him; a middle-aged man, well dressed, and of a noble and imposing appearance, was then shown in. "I am commissioned, sir," said he, addressing Mozart, "by a person of rank, to call on you." "Who is that person?" interrupted Mozart. "He does not choose to be known," replied the stranger. "Very well; what does he wish?" "He has just lost a friend who was very dear to him, and whose memory he must eternally cherish; and intending to celebrate her death by a solemn service every year, wishes you to compose a *Requiem* for the occasion." Mozart was much struck at the grave manner and tone of voice in which this address was pronounced, and with the mystery which appeared to envelop this adventure. He promised to compose the *Requiem*. The unknown continued: "Exert all your genius in this work; you will labor for a connoisseur in music." "So much the better." "How long will you require to do it?" "A month." "Very well; I will return in a month. How much will you charge for the work?" "A hundred ducats." The unknown counted them immediately on the table, and disappeared.

Mozart remained plunged for some moments in profound reflection; then suddenly demanded a pen, ink, and paper, and, notwithstanding the remonstrances of his wife, began to write. This rage for composing continued several days; he wrote almost the whole day and night, with increasing ardor as he advanced; but his health, already feeble, could not long support this enthusiasm, and one morning he fell senseless on the floor, which obliged him for a time to suspend his labors. Two or three days after, his wife endeavoring to divert his attention from the melancholy ideas which possessed it, he replied quickly, "I am persuaded that I am composing this *Requiem* for myself; it will do for my funeral service." Nothing could dispel this idea from his mind.

As he continued his work, he felt his strength diminishing from day to day, whilst his score advanced slowly. The month he had requested having expired, the stranger one day suddenly

reappeared. "I have found it impossible," said Mozart, "to keep my word." "It is of no consequence," replied the stranger. "How much more time do you require?" "A month. The work has become more interesting than I imagined, and I have extended it to a much greater length than I had at first intended." "In that case it is right to augment the price; here are fifty ducats more." "Sir," said Mozart, more astonished than ever, "who are you, then?" "That has nothing to do with the subject; I shall return within the month." Mozart immediately called one of his servants, and desired him to follow this extraordinary man, and find out who he was; but the awkward servant returned, saying he could not trace his steps.

Poor Mozart now took it into his head that the unknown was not a being of this world, and that he had been sent to warn him of his approaching end. He applied with greater diligence than ever to his *Requiem*, which he looked upon as the most lasting monument of his genius. During this labor, he frequently fell into alarming fainting fits. At length the work was finished before the month was quite expired. The unknown returned at the stated time, and claimed the *Requiem*. *Mozart was no more!*

The day of his death he desired the *Requiem* might be brought to him. "Was I not right," he said, "when I assured you I was composing this *Requiem* for myself?" and tears escaped from his eyes. It was his last farewell to his art: his widow preserved the score.

"*Idomeneo*" and "*Don Giovanni*" were his favorite operas. He did not like to speak of his own works, and if he did, it was in as few words as possible. With regard to "*Don Giovanni*," he said one day, "That opera was not composed for the public of Vienna; it suited better the audience at Prague; but to say the truth, I composed it solely for myself and friends."

When an idea struck him, nothing could divert him from his occupation. He would compose in the midst of his friends, and passed whole nights in the study of his art. Sometimes he only just finished a piece in time for its execution; this occurred in the case of his overture to "*Don Giovanni*," which he composed the night preceding the first representation, and after the last general rehearsal of the opera had taken place. Some people have imagined they have perceived in this overture the passages where Mozart was overcome by sleep, and those where he suddenly awoke.

Mozart judged his own works with severity. One day, when performing one of the most admired airs of the "*Enlèvement du Sérail*," "That is good in a room," he observed; "but for the theatre it is too insignificant. When composing it I felt much delight in it, and thought nothing too long."

No musician ever embraced the art so extensively. He excelled in all styles, from the symphony to the dance; from operas to the most simple ballads. As a virtuoso, Mozart was one of the first pianists in Europe. He played with the most rapid execution, and his left hand was particularly correct and excellent.

But his most brilliant and solid glory is founded upon his talents as a composer. His compositions are principally admired for the amazing fertility of the ideas, the clear and happy designs, and

systems followed up with much dexterity, but in which the most profound science is never destructive of grace; his works are also remarkable for a new and ingenious arrangement of the orchestra and wind instruments. Lastly, he had an extraordinary talent for introducing into his accompaniments the richness of symphony combined with unrivalled expression, energy, and fancy.

A genius so brilliant could not fail to excite the most lively enthusiasm. Numbers of servile imitators endeavored to follow his footsteps; but, as is generally the case, the beauties of the model degenerated into errors in their hands. They have only succeeded in patching up heavy and common designs with endless trouble and pedantic affectation. They have, it is true, like Mozart, loaded their full pieces with the whole mass of instruments, but they have been unable to produce any great effect; and the vocal parts, equally dull and insignificant, are lost in the noise of the orchestra. They have forgotten that two things are essentially requisite to form a good composer—innate genius, and a style, resulting from well-directed study. Gifted with every natural talent, Mozart and Gluck studied the best Italian masters in the very bosom of that country, and on the Italian language which inspired them they composed their principal *chef-d'œuvre*.

Mozart has been accused of interesting himself in his own music alone, and of being acquainted with no other compositions. There is a little exaggeration in this reproach. His whole life was thoroughly occupied either in composing or travelling, so that he had little time to attend to the compositions of others; but he approved with the greatest candor every thing that was really good; he was the enemy only of mediocrity in talent. He did justice to the most simple music, as long as there were some traits of originality or genius in it.

Extreme disinterestedness united with benevolence, was the principal trait in the character of this great man; he gave without discrimination, and expended his money without any prudence.

Music sellers, managers, and other avaricious people, greatly abused his known disinterestedness. For this reason few of his compositions for the piano were of the slightest profit to himself. He wrote them generally out of good nature for his friends, who expressed a wish to possess some piece from his hand for their own particular use; in such cases, he was obliged to conform to the degree of talent which each person possessed, which accounts for the many compositions for the harpsichord that appear so little worthy of him. Artaria, a music seller at Vienna, and some others in his line, found means to procure copies of these pieces, and published them without the permission of the author, and without offering any remuneration.

One day the manager of a theatre whose affairs were in a very desperate state, presented himself to Mozart, stating his embarrassments, and adding, "You are the only man in the world who can relieve me from my difficulties." "I?" replied Mozart; "how so?" "By composing for me an opera entirely adapted to the taste of those who frequent my theatre; it may to a certain degree, be a work both to please connoisseurs and to your own glory; but above all, remember

it is to please a class of people who do not understand fine music. I will take care to let you have the poem directly, and that the scenery shall be beautiful; in a word, let it be entirely conformable to the present taste." Mozart, softened by the entreaties of the poor man, promised to undertake the matter. "How much do you ask for this?" replied the manager. "Why, you have nothing to give," said Mozart; "listen, however; we can arrange it in the way that your mind may be at ease, and that I may not entirely lose the fruits of my time and trouble. I will give the score to you alone; you may pay me what you choose, but on this express condition, that you upon no account let any one have a copy; if the opera gets about, I will sell it to some other manager." The director, charmed with the generosity of Mozart, exhausted himself in promises. Mozart immediately set about the music, and composed it exactly in the style directed. The opera came out, the theatre was filled, and its beauties were extolled throughout Germany; some weeks after, it appeared at five or six different theatres, but without any one having received their copies with the cognizance of the distressed manager. Mozart was very prompt in acquiring new habits. The health of his wife was very precarious; he was passionately fond of her; and in a long illness she had, he always advanced to meet those who came to see her, with his finger to his lips, as a sign they should not make a noise. His wife got well, but long after he always met his friends when they came to see him with his finger to his mouth, and speaking in a whisper.

During her illness he would sometimes ride out very early alone, but always, before going, left a small note for his wife by her bedside, in the form of a prescription from a physician. The following is a copy of one of them: "Good day, my dear love; I hope you have slept well, and that nothing has disturbed you; be careful you do not take cold, and that you do not hurt yourself in stooping; do not vex yourself with the servants; avoid all uneasiness till my return; take great care of yourself; I shall be home at nine o'clock."

Constance Weber was an excellent companion for Mozart, and frequently gave him very prudent advice. Mozart's income was considerable; but owing to his love of pleasure, and the embarrassment of his domestic affairs, he left his family but the glory of his name, and the protection of the public of Vienna. After his death the inhabitants of Vienna testified their gratitude for the pleasures he had afforded them by their kindness to his family.

In the latter years of Mozart's life, his health, which had always been delicate, rapidly declined. Like all people of strong imagination, he was ever anticipating future evil, and the idea that he should live but a short time continually haunted his mind; at those periods, he would labor with such energy, rapidity, and force of attention, that he frequently became totally indifferent to all that did not concern his art. Every body perceived he was ruining his health by this excessive study. His wife and friends did all they could to draw off his attention; and for their gratification he would frequently accompany them in their walks and visits, and would quietly allow himself to be conducted any where by them; but

his mind was always wandering. He seldom overcame this habitual and silent melancholy, but when the idea of his approaching dissolution awakened him to new terrors. His wife, distracted with fear at his singular habits, endeavored to draw around him all those friends in whose society he most delighted, and took care they should arrive about the time when, after many hours of labor, he naturally required recreation and repose. These visits pleased him, but never made him desist from pursuing his studies; they talked, they endeavored to engage him in conversation, but all to no purpose; and if they actually addressed him, he would make some reply totally unconnected with the subject or else answering in monosyllables, and would immediately continue to write.

Mozart labored under a weak state of health during his whole life; he was thin and pale, and though the shape of his face was singular, his physiognomy had no striking character in it but that of extreme irritability. His countenance varied every instant, but indicated nothing further than the pain or pleasure of the moment. He had a habit which is generally supposed to denote stupidity; namely, perpetual motion of the body, and was continually either twirling his hands or striking his feet upon the ground. There was no other peculiarity in his habits, further than his passionate fondness for billiards. He had a billiard table at his own house, on which he played every day, sometimes even alone. His hands were so decidedly formed for the harpsichord, that he was extremely unskilful at any thing else. At dinner his wife almost always carved his food; and if he happened to be obliged to do so himself, he performed it with the greatest difficulty and awkwardness.

This same man, who, as an artist, had attained the highest degree of excellence from his earliest youth, ever remained a child in all the other relations of life. He had no self-command; order in his domestic affairs, a right employment of his money, temperance, or a reasonable choice in his pleasures, were not amongst the virtues he practised; indeed, he was ever led astray by the pleasures of the moment. His mind was constantly absorbed in a mass of ideas which rendered him totally incapable of reflection on what we call serious subjects, so that, during his whole life, he was in want of a guide to direct him in the passing business of the day. His father was fully sensible of his weakness, which made him request his wife to accompany their son in his journey to Paris in 1777, his own engagements at Salzburg precluding the possibility of his absence from that town. With all these eccentricities, Mozart became a being of a superior order, directly he placed himself before the piano. His soul then rose above all the weaknesses of his nature, and his whole attention seemed rapt in the sole object for which he was born, *the harmony of sounds*. The fullest orchestra did not prevent his observing the slightest false note, and he would point out with the most astonishing precision the exact instrument on which the error had been committed. Mozart, when he went to Berlin, did not arrive there till late in the evening. He had scarcely stepped from the carriage, when he asked the waiter of the inn what opera was to be performed that night. "*L'Enlevement du Serail*," was the answer. "Tha'

is delightful," he hastily replied, and immediately was on his road to the theatre. He placed himself at the entrance of the pit, to hear without being seen; but he soon found himself close to the orchestra, at one moment praising the performance of particular airs, and at another exclaiming against the manner in which certain parts were performed. The director had allowed himself slightly to vary one of the airs: when they came to it, Mozart, unable any longer to contain himself, in a loud voice corrected the orchestra, and told them the manner in which they should play the movement. All eyes were fixed on the man in a greatcoat who occasioned such confusion. Some persons immediately recognized Mozart, and in a minute the musicians and actors learned that he was amongst the spectators. Several of the performers, amongst others a very good singer, were so much struck with this information, that they refused to appear on the stage. The director complained to Mozart of the dilemma in which he found himself placed: the great composer instantly repaired behind the scenes, and succeeded, by the praises he bestowed on the general performance, in making them continue the opera.

Music was, in fine, the great occupation of Mozart's life, and at the same time his most pleasing recreation. From his earliest infancy, persuasion was never necessary to place him at the piano. On the contrary, it required care to prevent him from over-fatiguing himself and injuring his health. He had always a marked predilection for performing at night. When he placed himself at the harpsichord at nine o'clock, he never quitted it till midnight; and indeed, at times, he was almost obliged to be forced from the instrument, or he would have continued preluding and trifling away the whole night. In the usual routine of life, he was the mildest of human beings, but the least noise during music would cause in him the most violent indignation. He was far above that affected and misplaced modesty which requires so many professors of the art to be continually solicited before they will gratify the audience. Frequently some of the great lords of Vienna reproached him for performing indifferently to all who requested him. An amateur of that city, hearing that Mozart was to pass through on one of his expeditions, engaged him to pass an evening at his house, and, on his accepting the invitation, assembled a numerous society, that they might have the satisfaction of hearing his wonderful performance. Mozart arrived, said little, and soon placed himself at the piano. Thinking that he was surrounded by connoisseurs, he commenced, in slow time, to execute some music replete with the softest harmony, wishing to prepare his auditors for the development of the piece he intended to perform. The society found this very dull. Soon his air became more lively; this they thought rather pretty. He now changed the character of the music into a studied, solemn, elevated, and striking style of harmony, and at the same time far more difficult; some ladies in the assembly began to think it decidedly tiresome, and whispered to each other a few satirical words; soon half the company began to talk. The master of the house was on thorns, and at length Mozart discovered the impression his music made on the audience. He, however, did not quit his first idea, but developed it with all the

impetuosity of which he was capable. Still no attention was paid. He then began to remonstrate with his audience in rather an abrupt manner, though still continuing to play: fortunately his rebukes were in Italian; therefore few people understood him. Silence, however, was again in a degree restored. When his anger was a little appeased, he could not help laughing himself at his own impetuosity: he then tried a more popular style, and concluded by playing a well-known air, upon which he extemporized variations, and enraptured the whole assembly. Mozart soon after this left the room, having previously invited the master of the house and a few other select connoisseurs to join him at the inn, where he kept them to supper; and upon their begging him again to perform, he immediately complied, becoming once more so rapt in his subject that he forgot himself till midnight.

The following anecdote is also related of Mozart. An old tuner having put some strings to Mozart's harpsichord. "My good friend," said Mozart, "how much do I owe you? I leave this place to-morrow." The poor man, regarding him rather as a god than a human being, replied, totally disconcerted, humbled, and stammering, "Imperial majesty . . . Monsieur le Maitre de Chapelle de sa majesté impériale . . . I can not . . . It is true I have frequently been here . . . Well, give me a crown." "A crown!" said Mozart; "a good fellow like yourself deserves more than a crown," and he gave him several ducats. The good man retired, repeating still, with a very low bow, "Ah! imperial majesty!"

It is well known that the Baron Van Swieten, a great friend of Haydn's, said "that if Mozart had lived, he would have plucked from Haydn the sceptre of instrumental music." In the opera buffa, however, he wanted gayety, and in this respect he was inferior to Galuppi, Guglielmi, and Sarti.

Porpora, Durante, Leo, and Alexander Scarlatti were amongst his most favorite composers; but he esteemed Handel more than any of them. He knew by heart most of the works of this great master. "Of all of us," he would say, "Handel understands best how to produce a grand effect; when he chooses it, he can strike like a thunderbolt." Of Jomelli he said, "That artist has some points in which he shines, and will ever shine; but he should not have left those points to endeavor to compose in the ancient church style." He did not admire Vincenzo Martini, whose "*Cosa rara*" was then meeting with great applause. "There are a few pretty things," he would say, "in it, but twenty years hence no one will listen to them."

With regard to Mozart's opera of "*Figaro*," the first reflection that occurs is, that the musician, governed by his natural sensibility, has changed into real passion the trifling incidents which, in Beaumarchais, amused the amiable inhabitants of the castle of Aquas Frescas. It is, however, a *chef-d'œuvre* of tenderness and melancholy, and absolutely exempt from all impertunate mixture of majesty and tragedy; no piece in the world can be compared to the "*Nozze de Figaro*."

As to the opera of "*Idomeneo*," it may be safely affirmed to be unrivalled, as well amongst his own operas as amongst those of the finest composers. For the "*Flauto Magico*," it should be seen, to form a correct idea of its beauties. It ap-

pears to be the sportive effort of a tender imagination, and does honor to Mozart's great talents.

The air-romantic imagination of Mozart appears at its zenith in "*Don Juan*," this faithful delineation of so many interesting situations, and all of which are wonderfully portrayed by the rich talents of the composer. He has triumphed most completely in the discordant grandeur of the music, in the terrible reply of the statue; it conveys to the ear a horror equal to that of Shakspeare's most terrific passages. The fear of Leporello, when he decides not to speak to the commander, is displayed in a truly comic style — a circumstance unusual in Mozart's music. When "*Don Juan*" first appeared at Rome it did not fully succeed; the music perhaps was too difficult for the orchestra.

The piece of "*Così fan tutte*" would have flourished better in the hands of Cimarosa. Mozart never succeeded when the triflings of love were to be depicted, that passion having been with him, throughout his life, either a blessing or misfortune. He succeeded therefore best in those characters where tenderness was to be developed, and not at all in such parts as the humorous old naval captain. It must be owned that, in the course of this piece, he has frequently taken shelter in his sublime harmony, as, for instance, in the trio "*Tutte fan così*."

MUFFATT, GEORG, was an eminent organist, composer, and fuguist, and one of the great harmonists of Germany at the latter end of the seventeenth century. After having been for some time organist of the cathedral church of Strasburg, he went to Vienna, Rome, and Paris. At the latter place he continued six years, during which time he made himself, in a particular manner, acquainted with Lulli's style of composition. In 1690, he published his "*Apparatus Musico-Organistus*," a work consisting of twelve toccate, which he performed at Augsburg on the day that the consort of the Emperor Leopold was crowned emperor, and his son Joseph King of the Romans.

MUFFATT, GOTTLIEB, son of the preceding, was organist to the court of the Emperor Charles VI. He was a pupil of Joseph Fux. He published "*Compointenti Musicali per il Cembalo*;" besides which there are still in manuscript, "*6 Klavier-Partien und 8 Partien Toccate und Fugen*."

MÜHLE, NICOLAUS, by birth a Silesian, was born about the year 1750. He was in early life engaged in the orchestras of the theatres at Dantzic and Königsberg. By long perseverance in practice he at length made himself so well qualified for the situation of *chef d'orchestre*, to which he was appointed, that no mistake in time or false note ever escaped him. His compositions certainly evince talent, but frequently also haste and negligence. We can mention the following of them: "*Die Wüddiebe*," operetta; "*Das Opfer der Treue*," interlude; "*Mit dem Glockenschlag Zwölf*," operetta; "*Die Singschule*," operetta, 1792; "*Der Eremit von Formentera*," operetta, 1793.

MÜHLMANN lived in 1600, at which time he published "*Musica Antimelancholica*," Leipsic. This was perhaps the same musician who died

in 1613 at Leipsic, as professor of divinity and archdeacon of the church of St. Nicholas.

MÜHLING, AUG., born in 1780 at Rauguhne, received his musical education in St. Thomas's school at Leipsic under Hiller and A. E. Möller. He distinguished himself under the former as an excellent soprano singer, as also afterwards by his talents in composition, both for the voice and orchestra; at the same time he was an able pianist and violinist. In the latter capacity he appeared at the concerts in Leipsic, where he gave great satisfaction. In 1809, he was invested with the offices of professor of vocal music and director of the *Gymnasium* and *Töchterschule* at Nordhausen, where he was at the same time organist. The following of his compositions have been published: "*Sechs Lieder mit Bechl. des P. F., 1tes W.*," Leipsic. "*Sammlung zwey und dreystimmiger Gesänge für weibliche Stimmen mit willkührl. Begleitung des Klaviers*," Nordhausen, 1812. He also composed overtures, symphonies, and an oratorio called "*Die Leidensfeier Jesu*."

MÜLLER, ANDREAS, city musician at Frankfort on the Maine, in 1600, was born in Hammelburg. He published "*Teutsche Balleten und Canzonetten zu singen und auf Instrumenten zu brauchen, mit 4 Stimmen*," Frankfort, 1600. "*Teutsche weltliche Canzonetten zu singen und auf Instrumenten zu brauchen, mit 4 bis 8 Stimmen*," Frankfort, 1603. "*Neuwe Canzonetten mit 3 Stimmen, hievor von den Italis componirt, und mit Teutscher Sprach unterlegt*," Frankfort, 1608.

MÜLLER, AUGUST EBERTHARD, singer in St. Thomas's school, and chapel-master of both the principal churches of Leipsic, was celebrated as a composer, organist, pianist, and flutist. He was born at Northeim, in Hanover, in 1767, where his father, Mathias Müller, was then organist; but the latter subsequently went to Rinteln in the same capacity, by which means his son was separated from his birthplace at the most tender age. At Rinteln he received his first instruction in music, and made such considerable progress, that by the age of eight he had appeared in public in several towns. In 1785 he left school for the University of Leipsic, and proposed to study the law, but went in the following year to Gottingen. Here he was admitted a member of some amateur concerts, and also played his first public concerto on the flute. Having failed in obtaining the place of organist at the university, which had been always occupied by a student, he was compelled to leave that town very soon, for want of support, and returned to his parents. He did not, however, stay very long with them, for, in order to hear and learn all within his power, he undertook several short musical journeys. In Brunswick he was so fortunate as to find protection from a relation, and remained there for several years. At last, in 1789, he went to Magdeburg, where he not only obtained the permanent situation of organist in the Church of St. Ulrich, but also was married. His talents were here so well appreciated, that, in 1792, the direction of the grand city concerts was offered to him, and also that of a private concert, whose members were elected noblemen. Both these offices he filled to the utmost satisfaction of the proprietors. He was

not, however, so completely engaged as to be unable to undertake short tours from time to time; the most productive of which to him, in point of improvement, was that which he made to Berlin in 1792, where he remained a whole winter, and not only formed an acquaintance with Marpurg, Fasch, Reichardt, and other celebrated men, but by his able, expressive, and sweet style of performance on the piano-forte, his uncommon abilities on the flute, and his powerful and harmonious performance on the organ, he created a universal sensation. At the same time appeared, partly in Berlin, partly in Offenbach, his first compositions for the piano-forte, after which he continued to publish several other works.

This unexpected and brilliant *dénoûment*, as composer and virtuoso on various instruments, probably gave occasion to Müller's being invited to the situation of organist of St. Nicholas's Church at Leipzig. It was in this town that his various talents seemed to find full scope, as the grand concerts gained unanimously in the public opinion by his appearance and that of his wife; his execution of Mozart's piano-forte concertos, and also his excellent performance on the flute, were greatly admired. Nor was the public ungrateful towards him for his exertions; for when chapel-master Hiller wanted official help, in 1800, on account of his advanced age, Müller was unanimously appointed his substitute. How happy this choice proved may be ascertained by the uncommonly flourishing state of church music in Leipzig in 1802. Müller indeed not only preserved the good arrangements which his predecessors had made, but added many others to them. He was no less active at the same time as a composer, notwithstanding his numerous occupations, which is proved by the following catalogue of his works:—

Rudimental: "Anleitung zum genauen und richtigen Vortrage der Mozart'schen Klavierkonzerte in Absicht richtiger Applikatur," Leipzig, 1797; "Ueber die Flöte und Flötenspiel;" "Klavier oder Fortepianoschule, oder Anweisung zur richtigen Spielart," Jena, 1805; "Kleines Elementarbuch für Klavierspieler," Leipzig; "Instruktive Übungsstücke (Pièces instructives) für das P. F. für die ersten Anfänger, 1tes, 2tes u. 3tes Supplement zum Elementarbuch," Leipzig; and "Tabellen für Flöten mit 1 und mit 4 Klappen," Leipzig. Vocal: "11 Grosse Kirchenkantaten," manuscript; "1 Gelegenheitskantate, bloss mit 8 Blasinstrumenten begleitet," manuscript; "Mehrere Motetten," manuscript; "6 Deutsche Lieder mit Klav.," Hamburg, 1796; "6 Dergl. 2te Sammlung," Leipzig; "Venus und Amor oder die Reitze der Liebe, in 2 Liedern mit Klav.," Leipzig; "Trinklied mit Klar. oder auch blas.-Inst.," Leipzig; and "Der Sachsen Freude, als Friedrich August die Königswürde annahm," Leipzig. Organ and piano-forte: "Concerto pour le Clav.," Op. 1, Berlin, 1793; "Trois Sonates pour le Clav.," Op. 3, Offenbach, 1793; "Caprice pour le Clav.," Op. 4, Offenbach, 1793; "Trois Sonates pour le Clav.," Op. 5, Offenbach, 1794; "3 Dergl.," Op. 7, Leipzig, 1795; "Andante avec 9 Variat. pour le Clav.," Op. 8, Leipzig, 1795; "Huit Var. pour le Clav. sur 'Freut euch des Lebens,'" Op. 9, Hamburg, 1796; "Trois Sonates pour le Clav.," Op. 14, Leipzig; "Marche de Buonaparte, avec Var. pour le Clav.," Op. 15, Leipzig, 1798; "Trois Sonates pour le Clav.," Op. 16; "Grande Sonate pour le Clav. avec V et C.," Op. 17, Leipzig, 1793; "Trois Sonates

progressives pour le Clav.," Op. 18, Leipzig, 1793; "Six Var. pour le Clav.," Op. 12, Leipzig, 1793; "Sammlung von Orgelstücken, enthaltend 12 leichte und 6 schwere Sitze, 1ster Heft," Leipzig, 1797; and "Conc. pour le Clav. in Es.," Op. 21, Leipzig, 1800. Flute: "Deux Concertos pour la Flûte," Ops. 6 and 7, Berlin, 1795; "Concert. pour la Flûte," Op. 10, Offenbach; "Trois Duos pour 2 Flûtes," Op. 11, Hamburg; "3 Dergl.," Op. 13, Leipzig, 1797; "Grand Concert. pour la Flûte, Op. 16, in D," Leipzig, 1793; "Journal pour la Flûte, conten. plus. Pièces d'une difficulté progress. Cah. 1, 2, 3, 4," Hamburg, 1799; "Concert. pour la Flûte, in E min.," Op. 19, Leipzig; "Concert. pour la Flûte, in D dur.," Op. 20, Leipzig; "Ein Flötenkonzert im strengen Styl, noch in Mst.," and "Thème fav. de Mozart varié pour Flûte, avec Flûte ou Violon," Leipzig.

He has also published, for various instruments, "Grand Sonate pour P. F.," Op. 25, Leipzig. This sonata has had the peculiar fate of being in many places copied with Mozart's name, and is still considered by many as belonging to that author. "Grand Conc. pour Fl., Oe. 27, in C.," Leipzig; "Trois Duos Conc. pour 2 Fl., Oe. 28," Leipzig; "Six Grands Caprices pour P. F., Oe. 29, Liv. 1 et 2," Leipzig; "Grand Conc. pour Fl., Oe. 30, in G.," Leipzig; "Trois Grands Caprices pour P. F., Oe. 31," Leipzig; "Thème de Mozart, 'Ein Mädchen oder Weibchen,' varié pour P. F., Oe. 32," Leipzig; "Wäcker in 12 Durtönen, vorzüglich für den Unterrichts, mit Applikatur 33 W.," Leipzig; "Trois Grands Caprices pour P. F., Oe. 34, Liv. 4," Leipzig; "Fantasia p. P. F. per servire d'Introduzioni à un Tema di Mozart, con Variat.," Op. 35, Leipzig. After having, in 1807 and 1809, had the honor of giving lessons on the piano-forte to the hereditary Princess of Saxe-Weimar, for which especial purpose he wrote in the same year his great capriccios for the piano-forte, printed at Leipzig, he was appointed chapel-master to that court, under the most honorable and advantageous conditions. This situation he held in 1810.

MÜLLER, MAD., wife of the preceding, and the great ornament of the Leipzig concerts, was distinguished as a very able pianist.

MÜLLER, CARL, *Chef-d'orchestre* at the German theatre in Amsterdam. A friend of Gerber's knew Müller in that city in 1804, when he was yet a young man, but an able violinist. He had then only written the solo parts to two concertos for the violin, and two works of variations.

MÜLLER, CARL W., court musician to the Duke of Brunswick, published, "Ariette de l'Op. Les nouv. Aread. avec 12 Var. p. le Clav.," No. 1, Brunswick; "Andante avec Var. p. le Clav.," Berlin, 1795; "Ariette avec 10 Var. p. le Clav. du Cosa rara," Op. 6, Berlin, 1800; "10 Var. pour le Clav. sur Nun bent die Flar.," Sc., 1800; "9 Var. pour le Clav. sur Schon eilet früh der Ackersmann," 1802; "3 Sonates faciles pour P. F.," Op. 7, Leipzig; "3 Polonoises pour P. F.," Op. 18, Leipzig; and "3 Sonates faciles pour P. F.," Op. 19, Leipzig.

MÜLLER, CH. P., published "Lieder auf alle Sonn. und Festage des Herrn, zum Gottesdienst in der Römisch-Katholischen Kirche für die Orgel und 2 Singstimmen," i. e., Songs for the Service of all the Sundays and Holydays of the Lord in the Roman Catholic Church, for the Organ and two Voices, Landshut, 1793.

MÜLLER, F. A. Probably a Berlin musician. Of his works were published, between 1796 and 1800, "Brunnenlied mit 2 Melodien," "3 Sonatine p. il P. F. o Arpa, acc. da 2 Corni e F.," "3 Sonatines pour la Harpe ou P. F.," and "Sonate et Rondo en Caprice pour le Clar.," 1800.

MÜLLER, HEINRICH, doctor and professor of theology, also pastor and superintendent at Rostock, was born at Lubeck in 1631. He held from 1653 his different clerical situations at Rostock, where he died in 1675. He published "Geistliche Seelen-Musik," 1659 and 1668, in which he introduces several observations respecting church singing.

MÜLLER, JOHANN, composer and organist to the Elector of Saxony, and born at Dresden, was a pupil of Perandi. He flourished about the year 1640, and died towards 1670. The following works are ascribed to him: "Neue Teutsche Motetten mit 5 und 8 Stimmen componirt," Darmstadt, 1611, and "Jubiläum Sionis," Jena, 1649.

MÜLLER, JOHANN, of Ferndorf, probably a singer, published "Kurze und leichte Anweisung zum Singen der Choralmelodien," &c., i. e., A short and easy Introduction to the singing of Choral Melodies, written for his Pupils, Frankfort, 1793.

MÜLLER, JOHANN CHRISTIAN, a musician, resident at Leipsic, was born at Langensohland, near Bautzen. He belonged to the academics at Bautzen, Zittau, and Lauban, at which latter place he did much good, in the capacity of prefect to the choristers. He went afterwards, in 1778, to Leipsic, and was appointed violinist to the concert and theatre there, through the interest of chapel-master Hiller. He died at Leipsic in 1796, in the flower of his age. Besides his "Self-Instruction Book for the Harmonica," he published "Schiller's Ode an die Freude in Musik," Leipsic, 1786, and "Waldungen's Jägerlieder," Leipsic, 1790.

MÜLLER, JOHANN CONRAD. Professor of the piano-forte at Frankfort on the Maine, about the year 1800. He published "12 Walzer fürs Klav.," Offenbach, 1800, and "Gesänge am Klav. nebst einem Anhang von 8 Walzern," Neustrelitz, 1802.

MÜLLER, JOHANN DANIEL, concert master at Frankfort, published "Vollständiges Hessenhanausches Choralbuch," Frankfort, 1754.

MÜLLER, JOHANN IMMANUEL, singer, organist, and composer at Kersleben, near Erfurt, was born in 1774, at Schloss-Vippach, near Erfurt. He received from his father his first instructions on the violin, and began his studies on the piano about the same time, under the schoolmaster of his native village. Soon afterwards his godfather, the curate of the village, undertook his further instruction, and brought him so forward on the organ, when only in his ninth year, that he was heard with pleasure in one of the neighboring churches. Upon this his father sent him, in 1785, to Erfurt, where he was received in the choir, and at the same time enjoyed the instruction of chapel-master Weimar: he next continued to study the piano and organ under the directions of Kluge, and also studied thorough bass and composition under Kittel. In 1795 he obtained the situation of organist in the Regler church at Erfurt, but was afterwards invited by the community at Kersleben to his first-

mentioned situation, in the enjoyment of which he still continued in 1799. The following of his compositions have become known: "Sinfonie in Es, d 16," in manuscript, and "4 Deutsche Missen," also in manuscript.

MÜLLER, JOHANN MICHEL, was organist to the gymnasium at Hanau. Of his works we can mention "12 Sonate à Hautbois concert. 2 Hautbois ou Violons, Taille, Fagot et B. C.," Amsterdam, 1730; "Neuangesetztes Vollständiges Psalm und Choralbuch," &c., i. e., New, complete, and newly arranged Psalm and Choral Book, in which are set to Music, with new Melodies, not only the one hundred and fifty Psalms of David, but also two sets of Evangelical Church Hymns, and other Sacred Music.

MÜLLER, JOHANN NICOL, was, in 1758, actuarius at Wurenbach. Adlung mentions the following of his compositions: "Harmonische Kirchenlust aus 12 Arien, 12 Präludien, und 12 Leichten Fugen vor die Orgel und Clavier.," Nuremberg.

MÜLLER, JOSEPH, a copyist in the imperial royal library at Vienna, in 1796, was, at that time, considered among the best artists on the harmonica.

MÜLLER, WENZEL, was, in 1791, *chef d'orchestre* at the theatre Marinelli, in Leopoldstadt, at Vienna. He was commonly called, at Vienna, the *people's composer*, on account of his talent for introducing in his operas, in a clever and easy manner, the themes of national melodies and dances. This is not to be ascribed to poverty of imagination, but to his paying homage to the taste of the public, and to his attending to the burlesque and low comic words which he is obliged to set to music. Samples of this style, peculiarly his own, are found in his "Sonntagskinder," and in the "Feste der Braminen." That it is not only the inhabitants of Vienna who find pleasure in this species of lively potpourri and dancing music, is evinced by the numerous audiences which were attracted to all the theatres in Germany, where Müller's operettas were performed; so that, with justice, he may be ranked with Von Dittersdorf, at the head of the most popular German composers of his age. Perhaps it is also to be ascribed to the familiar style of his compositions, that, in little more than six years, he was able to compose the music to twenty-nine operettas, all written for Marinelli's theatre. They have been printed in various forms, throughout the whole of Germany.

MÜLLER. The four brothers, celebrated for their admirable string quartet playing; said to be the most perfect ever known. They are the sons of Heinrich Friedrich Müller, court musician to the Duke of Brunswick, and composer of many excellent songs. He died at Brunswick, at an advanced age, in 1818. All four brothers were most thoroughly educated in music, and each has become a brilliant virtuoso. CARL FRIEDRICH, the eldest, was born at Brunswick, on the 11th of November, 1797. In the quartet with his brothers he takes the first violin. The tenor is admirably held by the second brother, THEODOR HEINRICH GUSTAV, who was born on the 3d of December, 1800. The violoncello is played, and in a masterly manner, by the third brother, AUGUST THEODOR, born August 27, 1803; and the second violin by the youngest, FRANZ FER-

DINAND GEORG, born July 29, 1809. The quartet of the brothers Möller is famous throughout Europe; they have given the musical world a new conception of this class of instrumental performances, so that all other quartet playing, when compared to theirs, seems but an incomplete attempt.

MÜNCHHAUSEN, BARON ADOLPH VON, chamberlain at the court of Prince Henry of Prussia about the year 1793, was a very accomplished musical amateur. He not only excelled on the piano and harmonica, but also published the following works of his composition, which do credit to his talents: "*Trois Sinfon. pour l'Orchest.*," Op. 1; "*Deux Sonat. à quatre Mains p. le Clav.*," Op. 2, Paris, 1793; "*Sonat. à quatre Mains pour le Clav.*," Op. 2, 1793; "*Une Sonat. à quatre Mains pour le Clav.*," Op. 3, 1793; "*Dix Aïrs, avec Acc. de Clav.*," Op. 4, Berlin, 1793; "*Deux Sinfon. d'éd. à S. M. le Roi de Prusse*," Op. 5, 1790; "*Trois Duos pour F. et A.*," Op. 8, Berlin, 1797; and "*Sinfon. Périod.*," Mentz, 1800.

MUNDANE MUSIC. The music of the spheres.

MUNDY, JOHN, was organist, first of Eton College, and afterwards of the free chapel of Windsor, in the reign of Queen Elizabeth. In the year 1536, at the same time with Bull, he was admitted to the degree of bachelor of music at Oxford, and, about forty years afterwards, to that of doctor. He died in 1630. Mundy was an able performer on the organ and virginal, as is manifested by several of his compositions for those instruments, preserved in Queen Elizabeth's virginal book; and among the rest, by a fantasia, by which he endeavors to convey an idea of fair weather, lightning, thunder, calm weather, and a fair day. In this attempt he has failed; it was not for want of hand, as the passages are such as seem to imply great command of the instrument. He composed several madrigals for five voices, which were printed in the "*Triumphs of Oriana*." He was likewise author of a work, published in 1594, entitled "*Songs and Psalmes, composed into three, four, and five Parts, for the use and delight of all such as either love or learne Musicke*." "Some of these," says Dr. Burney, "are considerably above mediocrity in harmony and design. Indeed, I think I can discover more air in some of his movements than is to be found in those of any of his contemporary musicians of the second class."

MUNDY, WILLIAM, was a composer of several church services and anthems, the words of which are to be seen in Clifford's "*Collection of Divine Services and Anthems, usually sung in Cathedrals*." He was the son of John Mundy, though a composer so early as the year 1591. According to Wood, he was not a graduate of either of the universities. His name appeared to several of the anthems in Barnard's collection; but it has been placed by mistake to one, as Dr. Alrich has taken the pains to detect, "O God, the Maker of all things," which is, in fact, the composition of King Henry VIII.

MÜNTZBERGER, J., a violoncellist, resident at Paris, has made himself known by the following published works: "*Premier Concerto à Vc. Princip.*," &c., Paris, 1800; "*Trois Sonat. pour Vc. et B.*," Op. 2; "*Trois Duos pour deux Vc.*,"

Op. 5; "*3 Dergl.*," Op. 6, 1802; "*Second Concert. pour Vc.*," Op. 34, 1803; "*Gr. Trio p. Vc., Violon, et B. und Gr. Sonate p. le Vc. et B.*," Op. 38, Paris, 1804.

MUSÆUS, according to Plato and Diodorus Siculus, was an Athenian, the son of Orpheus, and chief of the Eleusinian mysteries, instituted in Greece in honor of Ceres; or, according to others, he was only the disciple of Orpheus; but from the great resemblance which there was between his character and talents and those of his master, by giving a stronger outline to the figure, he was called his son, as those were styled the children of Apollo who cultivated the arts of which he was the titular god. Musæus is allowed to have been one of the first poets who versified the oracles. He is placed in the Arundelian marbles, epoch fifteen, one thousand four hundred and twenty-six years before Christ, at which time his hymns are there said to have been received in the celebration of the Eleusinian mysteries.

MUSARS. The name given to certain itinerant musicians who performed on the *musette*, and were formerly very numerous in most countries in Europe.

MUSARD, FRANÇOIS HENRI, a celebrated composer of dance music, has been styled the French Strauss and Lanner. He lives at Paris, where he has a large orchestra of his own, with which he gives "promenade concerts," being the predecessor of Jullien in that kind of business. He also receives incredibly large sums for playing at balls.

MUS. BAC. (L.) The abbreviation of *bachelor in music*. (See that term.) At Oxford, the applicant for this degree must compose a piece for voices in five parts at least, with instrumental accompaniments for a small band. The professor's fee for examining the composition is one guinea; and to insure that the composition is really the production of the candidate for the bachelor's degree, a certificate, signed by three or more persons of repute, is required, that the candidate has studied both the theory and practice of music for a period of at least seven years. At Cambridge, for the doctor's degree, the composition must be for eight voices, or in eight parts, with accompaniment for an orchestra.

MUSCHIETTI. A sopranoist at the grand Italian opera in Berlin, in the years 1792 and 1793. Having rendered himself suspected of French revolutionary intentions, he suddenly received his dismissal, so that he was obliged to leave Berlin in 1793; but he received from the royal clemency his salary up to the end of his engagement.

MUS. DOC. (L.) The abbreviation of *doctor in music*.

MUSE. (L. *musa*.) The name originally given to the muzzle or tube of the bagpipe.

MUSETTE. The name of an air generally written in common time, and the character of which is always soft and sweet. From the style of this air, dances were formerly invented of a similar cast, and which were also called *musettes*. *Musette* was also the name formerly given to a

small kind of bagpipe much used in most countries of Europe, the performers on which were called musars. See MUSARS.

MUSIC. One of the seven liberal arts. A science which teaches the properties, dependences, and relations of melodious sounds; or the art of producing harmony and melody by the due combination and arrangement of those sounds. This science, when employed in searching the principles of this combination and succession, and the causes of the pleasure we receive from them, becomes very profound, and demands much patience, sagacity, and depth of thinking. It is generally supposed that the word *music* is derived from *musa*, because it is believed that the invention of this art is to be attributed to the Muses; but Diodorus derives it from an Egyptian name, intimating that music was first established as a science in Egypt, after the deluge, and that the first idea of musical sound was received from that produced by the reeds growing on the banks of the Nile, by the wind blowing into them. Others again imagine that the first ideas of music were received from the warbling of birds. However this may really have been, it appears at least equally rational to attribute its origin to mankind, since musical intonation, in the infancy of language, must often have been the natural result of passionate feeling; and since, also, we find, that wherever there is speech, there is song. Of all arts, music is the most natural to man; and it is fair to infer that each nation, even at an early period of its history, must have possessed it to a certain extent, differing only from that of other lands, according to climate and other circumstances. Man is an instrument of music; his every thought is expressed by tones. Fear, anger, joy, desire, have each a peculiar tone, understood by all human beings, and comprehended by the brute. Man exercises this power in the various avocations of life; he uses it to heighten a certain feeling of excitement, or to allay the fury of his antagonist. Before the introduction of letters music was; indeed, it came forth from chaos with the spirit of God, and moved upon the face of the waters; the very motion of the earth, while it was "without form and void," was musical; and as darkness rested upon it, the voice of Jehovah broke the awful stillness, and made the earth musical with created light. All nature then, as now and forever, was full of music. There is music in the hum of the industrious bee, as it wanders from flower to flower—music so sweet and harmonious, that it seems, as it were, the lullaby to the thousand meaner insects whose couches are made among the roses over which the bee rules with unbounded sway. There is music in the grove—strains of sweetest melody from a thousand tuneful throats. There is music in the breeze at eventide, as it passes, Æolian-like, over the face of the earth—in the bud roar of the storm, as it swells up and mingles with the louder notes of the sky breathed forth in thunder—in the ocean's moan—fearful music. It comes upon the soul like a ripple of evil on the lake of mind, stirring up fear which, while it frights and appalls, subdues and conquers. The music of the mighty deep is the mysterious workings of Deity; like the harp touched by fairy fingers, we listen and gaze on

the mighty instrument, breathing its wild melody, while no visible hand calls it forth.

There is music in the gentle stream, as it meanders, murmuring, along through wood and wild. There is music in the mountain torrent, as it rushes down the steep; harsh and unharmonious as it is, there are inducements to linger near and revel in its sounds, and as they die away, and melt, as it were, in the distance, leave a delicious feeling on the soul, which accompanies the recollection to render it ever more pleasing. There is music in the air! myriads of unseen minstrels tune their varied instruments, and fill all space with heavenly sounds. Romance, in its wildest dreams, never conceived any thing half so mysterious as this—the reality surpasses the imagery. The tongue cannot express the music of the air—man is lost in the bare contemplation of it. Who can write the language of Deity? who paint his glory? who criticize his poetry? Earth his music-stand! the elements and their creatures his instruments!

The word *music* was not always confined to the very limited signification which it now possesses. It originally embraced the entire circle of sciences, as well as elegant arts, comprehending every thing which was poetically considered to emanate from the influence of the Nine Muses, and ranging from the language and accomplishments of Parnassus, through all the varieties and departments of Hellenic learning. The ancient writers on this science differ greatly as to its object and extent. In general, they gave it a much wider latitude than it has since obtained. Under the name of music the ancients comprehended the melodious union of voices and instruments, as we do, and they also included the dance, the arts of gesture, poetry, and all sciences. Hermes defines music to be the general knowledge of order; which was also the doctrine of Plato, who taught that every thing in the universe was music.

Music, however, properly so called, only concerns the due regulation and proportion of sounds; and is divided into two parts—the theoretical and the practical. Theoretical music comprehends the knowledge of harmony and modulation; and the laws of that successive arrangement of sounds by which air, or melody, is produced. Practical music is the art of bringing this knowledge, and those laws, into operation, by actually disposing of the sounds, both in combination and succession, so as to produce the desired effect; and this is the art of composition; but practical music may, in fact, be said to extend still farther, and to include, not only the production of melodious and harmonious composition, but also its performance; and to such a facility in execution, and nicety of expression, has this department of practical music arrived at the present day, that its professors, speaking in the aggregate, hold a respectable rank in the general list of artists, and are highly, as well as deservedly, esteemed by all lovers and patrons of musical taste and ingenuity. At the present day we usually speak of music with reference to its mechanical character, in which sense it consists of melody, or the proper succession of single sounds, and harmony, or the proper combination of simultaneous sounds.

The first instruments of music were of the

stringed order, undoubtedly, and such are spoken of before the deluge. About 550 years after the deluge, or 1800 before Christ, both vocal and instrumental music are spoken of as things in common use. It is not denied that the earlier attempts at song were so limited in design and so feeble in imagination as to excuse the application in our time of the term *barbarous* to the music of the days of Moses and Miriam, and even to the sounds which accompanied the inspired language of the poet king. Music was then in its infancy. The rude instruments which Tubal Cain invented, and which in after ages were improved, but still left rude, were circumscribed in their compass, and harsh in their tones, although reason teaches that they must have been what is technically termed *true* in their mechanical formation. According to the compass of these rough productions, the multitude restrained their compositions. Instruments were considered necessary to give effect to song; but as these auxiliaries could not express all the sounds of which the voice was capable, it was thought requisite that the voice should be made subservient to the instruments. The more extensive compass of the voice excited admiration, and stimulated the desire for imitation. Thus the voice was the means of improving the mechanical expression of sound; and as instrumental mechanism progressed, the human voice became liberated from the restrictions which former ignorance had imposed upon it, and a freer course was afforded to its capabilities in obedience to the eccentricities of the imagination.

Every nation has always had, as it now has, its own peculiar and distinctive style of expressing emotion through the agency of the voice. Barbarous as the first developments of musical ability may have been, they nevertheless expressed the peculiar and characteristic feeling of the people who employed them. With one nation the style was melancholy, with another pensive, with another light, and with a fourth lively. Some delighted to denote their ideas in the junction of lengthened and monotonous sounds, expressive of grief; others in short changing accents of carelessness or indifference; and others in the deep, measured sounds of martial melody. These distinctions still exist in so marked a degree among different people as to entitle them to the appellation of national musical characteristics.

The first traces of music are to be found in Egypt, where musical instruments capable of much variety and expression existed at a time when other nations were in an uncivilized state. A positive proof of this is drawn from the figure of an instrument represented on an obelisk, erected by Sesostris, at Iliopolis. This instrument, by means of its neck, was capable, with only two strings, if tuned fourths, of furnishing that series of sounds called by the ancients a heptachord; and if tuned fifths, of producing an octave. Now, as Moses was skilled in all the learning of the Egyptians, it is probable that the Israelites, who interwove music in all their religious ceremonies, borrowed much from that people. Transferring mere sound from the mind to paper, without the assistance of any intermediate articulation, is a wonder only equalled by the act of writing words. The master mind

which first conceived the possibility of recording his thoughts on and in a few parallel lines, by means of dots and scratches, was one who will have as great fame as Cadmus.

The following paragraphs are from an address by S. Jennison, Jr., which appeared in Dwight's "Journal of Music," vol. i. for 1852:—

"He who investigates the history of music cannot fail to be struck with the fact that it is, or at least has hitherto been, an eminently progressive art, and that its greatest developments have been of comparatively very recent date. That which we now denominate music is the result of the successive labors of several generations. Every period of ten years introduces some forms or tunes of melody peculiar to itself, and which generally grow out of date before that period expires. Sufficient, however, has been to each generation, and to each people, its own music, however rude the same may be deemed by us. Every individual becomes conscious, from time to time, of progress made in the capacity to appreciate music. Do we not, perhaps, each remember a time when the various means which science employs to give a zest to the combinations of harmony, when suspensions, syncopations, and unresolved dissonances were an abomination, were what the Italians were wont to call *seelerata* — *accursed* — to the, as yet, uncultivated ear?

"As the individual, so the world has passed through many rude, unfashioned days; and the history of music, while it abounds with examples of wholly or partially barbarous practices and modes of composition and execution, in which men have at some time found satisfaction and taken delight, is not deficient in anecdotes corroborating the suggestions of each one's experience, that, to the untrained ear, the sweetest harmony, whose touches now (to reverse the exquisite words of Lorenzo) become soft stillness and the night, may be intolerable jargon. The terror and affright with which the fierce Algerine recoiled, when he beheld pointed at him the awful bell of a huge bass horn in the hands of the French musician whom he was on the point of running through with his lance, may serve to symbolize, though somewhat extravagantly, the shudder and dislike (and it is a curious psychological fact) which the Arab is said to have experienced upon listening to the rich and copious harmonies of one of the French regimental bands which accompanied Napoleon's expedition into Egypt.

"Until five hundred years ago, no compositions for four parts had ever appeared. Counterpoint did not exist. The makers of melody, the *trouvères*, or finders, were a distinct class from the harmonists. The barbarism of successive fifths was of frequent occurrence.

"In another century, counterpoint having arisen, harmony has made surprising progress. In that period was invented the canon, the first form of the round and fugue; and rests were first introduced, particularly in the tenor, which was so called from its *holding*, or sustaining, the melody; female or soprano voice being then wholly unknown.

"The invention of printing music with movable types did not occur until the beginning of the succeeding, the sixteenth century. In this period arose those celebrated discussions and controversies concerning the fundamental principles of

music. Disputes ran high about the diatonic division of the scale, and the mathematical relations of sounds were widely explored. 'Every mathematician,' says M. Fétis, 'thought himself born to be a musician.' The happy result of all this was the discovery, by Zarlino, of *temperament*, the proper method of tuning the clavichord. Towards the close of that century, music was written to be sung by as many even as nine choirs at once. In the mean time, melody was lost sight of. No attention was paid to the sense of words; every thing was written in fugue; and the absurdity and pedantry which prevailed in the scholastic disputations were scarcely less conspicuous in the composer's counterpoint.

"Between 1550 and 1600, instruments were first introduced into the church to play the part sung by the voice. Just before the close of that century, in 1594, occurred that memorable event which infused into music a new life, when was brought upon the stage the precursor of the long line of musical drama, 'The Death of Eurydice!'

"About this period, too, creeps in the 'audacious innovation,' as it was esteemed, 'of the use of the *sensible note*,' so called. Monteverde dares to place together the fourth, fifth, and seventh; a collocation which leads the mind to the ensuing chord, and which at once gave rise to genuine and regular modulation. The distinction between the major and minor modes was then also marked out.

"Arriving at the commencement of the seventeenth century, we find music beginning to acquire more lightness and buoyancy, and new combinations and varieties of measure produced. Then it was that the Neapolitan school became celebrated under Leo, Durante, Porpora, Scarlatti, by whom and their successors were originated nearly all the ordinary forms of music, airs with variations, rondeaux, the aria with chorus, scenas, trios, quartets, and finales. It was not until this so late period that thorough or continued bass, signifying a bass running *throughout* the music, began to be used, becoming the peculiar labor of the organist's left hand. At this period, we should not omit to mention, were produced those difficult organ compositions which, even now, challenge the skill of the most expert performers on that instrument. Down to this period, the gamut, notwithstanding Monteverde's discovery, was still limited to six notes. No writer treated of the gamut of seven notes until one Laubert, in 1680.

"At the close of the seventeenth and beginning of the eighteenth centuries, oratorios had begun to acquire importance; and about the same time, Gasparini, the predecessor of Scarlatti, Corelli, and Clementi, first formed the principles of fingering the harpsichord.

"Towards the middle of the last century, the trio and quartet have received great improvement, and the symphony takes its origin: at first composed for four violin parts, viola, and bass; afterwards extended to admit the wind instruments, and now brought to the highest perfection by the successive labors of Martini, Haydn, Mozart, and Beethoven, who are thought by some to have occupied the ground so completely as to render it not merely hazardous, but presumptuous, for any to attempt to follow them into this, their peculiar territory; a criticism, however, of which, vast as their works are, another

fifty years may, perhaps, have developed the mistake.

"Only a hundred years have elapsed, since, in France, a hitherto unregarded country, the Italian composers, Leo and Durante, found admirers. The struggle of their successor, Lulli, with the old French composer Rameau, which ended in the Italian being compelled to quit the field, was followed by the entire reform of the grand opera by Gluck; the history of whose yet more violent struggles for superiority with Piccini, forms one of the most curious chapters in the annals of the art.

"In speaking of music we are constantly reminded that we can say but little of American music, for hitherto we have had no music. It shall not ever be so, however! I cannot and will not believe but that, from beneath this thrist, this utilitarianism, this cunning, there will yet force its way to the light this flower, — Art, in all its varieties; that Germany, and France, and Italy, all resplendent as *she* is, shall not be forever monopolists of all that is glorious and divine, and America be repellent forever: I cannot bring myself to believe that a land so fruitful of statesmen, orators, and men of science, and no longer deficient in historian, poet, painter, and sculptor, shall be forever destitute of the great musician. Only he will not derive his inspiration and nurture from the unmeaning publications of which our day and our country are so prolific; with which the love of pecuniary profit, or the desire to gratify a fleeting fashion, have inundated us.

"America can already boast of her manufacturers of instruments, if not of her instrumental performers; and if within the past fifty years no fundamentally new modes of producing sound have been discovered, there have appeared such multitudes of new combinations of the old, in a variety of instruments, for which names must be obtained, that the inventors have been put to all imaginable shifts to find suitable appellatives.

"What numberless compounds of classic words that could be pressed into the service of music! With Melodeon, Harmonica, and Seraphina, all are familiar. But how shall one venture to enumerate *Harmonium, Orchestrion, Celestina, Baruchordon, Euphon, Plectro-euphon, and Polyplectron, Edophone, Concertina, Glycibariton, Eumelia, Eol-harmonica, Eoline, and Eolodion; Acrophone, Terpodion, Kaliphongon,* and the like, which by no means complete the list of those produced within, or nearly within, the half century?

"What may be the final result of the tendency to combine the properties of various instruments, a tendency more familiarly illustrated in the 'attachments,' so called, to the piano-forte, æolian, dolce campana, &c., we cannot pretend to foresee. Questionable as the success of these experiments may still be deemed, it is probable that, after the prejudices which usually attend upon the introduction of novelties are laid aside, large additions to the resources of harmony may be eventually acknowledged."

MUSIC, AERIAL. Music supposed to be produced by aerial beings, or by the power of enchantment.

MUSIC MASTER. A musician who teaches the principles of the harmonic science, or the art of musical performance.

MUSIC ROOM. A room appropriated to, and

reserved for, the rehearsal and performance of music.

MUSICA MENSURABILIS. (L.) Measured music. Music in *parts* of dissimilar motion.

MUSICAL CONVENTIONS. These annual gatherings of choristers and music teachers, of late so common in New England and other parts of the United States, originated in New Hampshire. In 1829, the idea of holding musical conventions was suggested to the members of the New Hampshire Central Musical Society, at Goffstown, and the first was appointed to be holden at Concord in September. It was a two days meeting, and was conducted by Henry Eaton Moore. In 1830 a similar meeting was held at Pembroke, closing with a concert; and in 1831 the third musical convention was held at Goffstown. These were all under the lead of Mr. Moore. Soon after a three days' convention was called and holden at Haverhill. In 1836 a convention was holden in Boston, by the Boston Academy of Music, under the direction of Messrs. Lowell Mason and George James Webb. The first class afforded such encouragement as to lead to the appointment of another the following year, which was attended by a much larger number of teachers. This class gave increasing proof of the utility of the plan, and led to the appointment of a third. The attendance at the third class was so much increased, that a fourth was appointed, and the thing began to assume the appearance of an annual festival, which was looked for with increasing interest. After a few years the interest thus awakened gave rise to other conventions, held at the same time, and in the same city, under other auspices. The *original* class, however, suffering neither in numbers nor interest on account of the other conventions, annually increased, and the fourteenth annual meeting of the regular American Convention and Teachers' Class, held by Messrs. Mason and Webb, at Boston, in October, 1849, was more numerously attended than any of its predecessors, more than one thousand persons being in attendance.

In August, 1847, the first *convention of composers and teachers* was held at Leipsic. It had its rise in the mind of Franz Brendel, editor of a musical paper there, who tried to bring about a meeting of music teachers, for discussion and action with respect to various abuses of the day. Through his exertions a committee was formed, and an invitation was extended, not only to teachers, but to composers, organists, and strong friends of the cause. In consequence of this call, about one hundred and twenty persons, either professors in music seminaries, music directors, organists, members of orchestras, teachers of singing, piano, &c., or amateurs of high standing, came together, among whom were Moscheles, Fr. Schneider, and many others of the first rank in their country and the world. Thus originated teachers' conventions.

MUSICAL DICTIONARY. A book containing explanations of musical terms, and words relating to music, arranged in alphabetical order.

MUSICA FICTA, or MUSICA COLORATA. (L.) The name given by Francinus and other

musical writers to the first deviations from the old ecclesiastical modes; which were so rigidly confined to the diatonic scale as to admit of no other semitones than those from E to F, A to B flat, and B natural to C. These three semitones continued to be so scrupulously adhered to, that it was not till the beginning of the eighteenth century that *musica ficta*, or music in the *transposed keys*, as they are still frequently called, received a general adoption.

MUSICAL GLASSES. Drinking glasses so tuned in regard to each other, that a wet finger being passed round their brims, they produce the notes of the diatonic scale, and are capable of yielding the successive sounds of regular tunes or melodies. See articles GLASSES, MUSICAL; and FRANKLIN, BENJAMIN.

MUSICAL SCIENCE. Musical knowledge; an acquaintance with the laws of harmonical relations.

MUSICAL SOUNDS. It is a curious fact in the history of sound, that the loudest noises always perish on the spot where they are produced, whereas musical notes will be heard at a great distance. Thus, if we approach within a mile or two of a town or village in which a fair is held, we may hear very faintly the clamor of the multitude, but more distinctly the drums and other musical instruments which are played for their amusement. If a Cremona violin, a real Amati, be played by the side of a common fiddle, the latter will sound much the louder of the two; but the sweet, brilliant tone of the Amati will be heard at a distance the other cannot reach. Dr. Young, on the authority of Derham, states that at Gibraltar the human voice may be heard at the distance of ten miles. It is a well-known fact that the human voice can be heard at a greater distance than that of any other animal. Thus, when the cottager in the woods, or in the open plain, wishes to call her husband, who is working at a distance, she does not shout, but pitches her voice to a musical key, and by that means reaches the ear. The roar of the largest lion could not penetrate so far. "This property of music in the human voice," says the author, "is strikingly shown in the cathedrals abroad. Here the mass is performed entirely by musical sounds, and becomes audible to every devotee, however placed in the remotest part of the church; whereas, if the sound had been read, it would not have travelled beyond the precincts of the choir." Those orators who are heard in large assemblies most distinctly, and at the greatest distance, are those who, by moulding the voice, can render it more musical. Loud speakers are seldom heard to advantage.

Burke's voice is said to have been a lofty cry, which tended as much as the formality of his discourse, in the House of Commons, to send the members to their dinner. Chatham's lowest whisper was distinctly heard. His middle tones were sweet, rich, and beautifully varied, says a writer describing the orator: "when he raised his voice to a high pitch, the house was filled and the effect was awful, except when he wished to cheer or animate—and then he had spirit-stirring notes, which were perfectly irresistible." The terrible, however, was his peculiar power. Then the house sank before him: still he was

dignified, and wonderful as was his eloquence, it was attended with this important effect, that it possessed every one with the conviction that there was something in him that was finer than his words; that the man was greater than the orator.

MUSICAL FESTIVALS. Within a few years, or since 1816, *musical festivals* have spread over the world. In the year 1785 a great musical jubilee was celebrated in London, in commemoration of the illustrious Handel. The number of instrumental performers who assisted on the occasion was greater than had ever been known on a similar occasion, the whole number of performers being *six hundred and seven*, viz. :—

106 Violins,	18 Double Basses,	
28 Violas,	12 Trumpets,	
26 Oboes,	12 Horns,	
6 Flutes,	6 Trombones,	
28 Violoncellos,	4 Drums,	
2 Bassoons,	68 Cantos,	} Chorus.
1 Double Bassoon,	60 Altos,	
2 Serpents,	100 Tenors,	
	102 Basses.	
Total,		607

The grandeur and sublimity of the music, it is said, was never before equalled in Great Britain. The example of England was early followed, first by Switzerland, next by Germany in 1804, and again, after an interval of six years, on a larger scale, in 1810. The wars of Napoleon put an end to them on the continent until the year 1816; at which time in Hamburg the custom was revived, rapidly becoming general throughout Germany, where the festivals were held often under the auspices of the celebrated academies, as the St. Thomas School, the seminary of Bach. One of these great gatherings was held at the Hague in 1834, in 1836 at Amsterdam. The first in Italy took place at Bergamo in 1835; in France at Strasburg in 1836; in Russia in the same year at Riga. Those of England have been perhaps most conspicuous, where the cities of York, Birmingham, Manchester, Worcester, &c., have frequently witnessed immense concourses of the lovers of thousand-voiced harmony. The Germans of New York, Philadelphia, and Baltimore, do not suffer to die in this country, and in our day, the recollection of the *réunions* of the "*Liederkränze*," "*Liederbunde*," and other "*Musikalische Gesellschafte*" of the fatherland.

MUSICIAN. One who understands the science of music, or who sings, or performs some instrument, according to the rules of art. There are three kinds of musicians: the *speculative musician*, or musical *author*, strictly so called, who contemplates, and writes on the laws of sound and harmony; the *practical theorist*, or composer, who produces music written agreeably to those laws; and the *performer*, who, with his voice, or instrument, executes the music when written. Distinct as are these provinces, they are, sometimes, all embraced by the same individual, and with a success which evinces the affinity between speculative knowledge, practical invention, and vocal or manual execution.

MUSIC OF THE SPHERES. That harmony

supposed by the ancients to result from the orderly motion of the heavenly bodies.

MUSIGNY, MADAME DE, a pupil of the celebrated Krumpholz on the harp, lived about the year 1783, at Paris, and published there, "*6 Romances d'Estelle, avec Acc. de Harpe ou Piano*," Paris.

MUSSINI, NICOLO, a tenor singer, violinist, guitarist, and vocal and instrumental composer, was born in Italy. He was in England about the year 1792, after which he proceeded to Hanover, and finally, we believe, settled at Berlin, where he was appointed tenor singer at the Grand Opera. His wife was also a good singer.

MUSURGUS. (L.) The Greeks called every musician, whether singer, player, or composer, *musurgos*.

MUTATION. A term in the ancient Greek music, the definitions of which, as given by Bæchius, Aristides, Quintilian, and Martianus, are somewhat obscure; but from which, however, we may collect, that the mutations of the Greeks were reducible to five principal kinds: First, a mutation, in the genus; as when the air passed from the diatonic to the chromatic, or to the enharmonic, and reciprocally. Secondly, in the *system*; as when the modulation united two disjoint tetrachords, or separated two conjoint. Thirdly, in the *mode*; as in passing from the Dorian to the Phrygian, or to the Lydian, &c., and reciprocally. Fourthly, in the *rhythmus*; as in passing from quick to slow, or from one measure to another. Fifthly, and lastly, in the *melopœia*; as in breaking from a solemn, serious, or magnificent strain, into a lively, gay, and animating air.

MUTE. A little utensil made of brass, box, or ivory, and so formed that it can be fixed in an erect position on the bridge of a violin, the tone of which it so deadens, or softens, that it can scarcely be heard in an adjoining room. *Mutes*, in language, are opposed to vocal or vowel sounds. They have no vocal tone, and their office is merely to act as stops or joints in the structure of language; similar to the tongue in flute playing, marking and dividing the notes. They consist of the following letters: C, F, H, R, Q, P, S, T, Th, and Sh, and the double mute X. The Scotch have another mute, *eh*, executed by forcing the breath through a narrow chink, formed by the root of the tongue and the back part of the palate.

MYLIUS, ANDREAS, a celebrated singer at Schwerin, flourished there in the beginning of the sixteenth century. His brother Nicol Mylius, died in 1653 at Meissen.

MYLIUS, WOLFGANG MICHAEL, chapel-master to the Duke of Saxe-Gotha, owed his musical attainments to the rudimental instruction of Christoph Bernhardi. About the year 1700, he was invited to the situation of singer at Richberg. He died in 1712, or 1713, at Gotha, and left, for those times, a very good musical school book, entitled "*Rudimenta Musices*;" the date of it is 1685.

MYSLIWEZCEK, JOSEPH. See MISLIWEZCEK.

N.

NACAIRE. A kind of brazen drum formerly much used in France and Italy. It is called, by the Italians, *nacara* and *nacarre*, to imply the castanets, or hollow shells, sometimes used in accompanying dances.

NACHDRUCK. (G.) Emphasis, accent.

NACHSPIEL. (G.) A postlude, or piece played after some other.

NACHTENHOEFER, GASPARD FRIEDRICH, born at Halle in 1624, was graduated doctor at Leipsic in 1647, and was afterwards sub-censor at Coburg, where he died in 1686. He was the author and composer of many German Protestant canticles.

NÄCHSTVERWANDTE TÖNE. (G.) Nearest relative keys.

NADERMAN, F. J. A celebrated harpist, and composer for his instrument, born at Paris in the year 1779. He has published many sonatas, duos, concertos, and capricci for the harp. Amongst these we can name "*Fantaisie*," Op. 52, Paris; "*Fantaisie*," Op. 55, Paris; "*Fantaisie*," Op. 58, Paris; "*Duets for Harp and Piano*," Op. 41, Paris; "*Trio for Harp, Horn, and Violoncello, or Violin, or Tenor, or as a Duet for Piano-forte and Harp*;" "*Three Duets for Harp and Piano*," Op. 51; and "*Trio for Three Harps, or Two Harps and Piano*," Op. 57.

NADERMAN, HENRI, brother to the preceding, was also a performer on the harp. He published at Paris, in the year 1807, the air "*Il est trop tard*," with variations for the harp.

NAGEL, JOHANN. Clerk at the cathedral, and fourth master at the gymnasium at Halle. Born in 1759. He entered on the above offices in 1783, and in 1790 edited, at Halle, a periodical work entitled "*Musikalische Monatschrift. Erstes Quartal*," Halle, 1790. One page of the single sheet forming this periodical contained easy and familiar instructions for playing the piano-forte, and the remaining three pages were filled up with light and pleasant tunes for that instrument. The instructions were from his own pen; but having been afflicted, during the publication, with a severe and tedious illness, (which at length terminated in his death in 1791,) the publisher so altered the plan of the work, that, instead of giving the instructions, as before, in single sheets, he printed them separate, with the author's name, under the title of "*Kurze Anweisung zum Klavierspielen, für Lehrer und Lernende*," Halle, 1791.

NÄGELI, HANS GEORG, a composer and music publisher at Zurich, was by birth a Swiss. He opened, in 1792, a music warehouse and musical library in the above town, but the war that soon followed ruined his business; which, however, he recommenced about the year 1800, when he began to publish, in parts, a choice collection of the music of Sebastian Bach, Handel, Frescobaldi, and other classical masters. In 1803 he also embarked in

the periodical publication of another work, under the title of "*Repertoire des Clavécinistes*," which contained the choicest productions of science for the harpsichord, chiefly in the Clementi school. Of this publication three numbers, consisting of from ten to twelve folio sheets each, appeared the same year. He first gave Clementi's solos, and then commenced on those by his successors, Cramer, Dussek, Steibelt, Beethoven, Asioli, Haack, Reicha, Weisse, and others. "Whether," says Gerber, "Nägeli be the man from whom the public may expect such a selection, in these two important and difficult branches of the science, as will completely answer the purpose, is a question best to be decided by an article of his in the fifth year of the Leipsic 'Musical Gazette,' where he inserted (pp. 225 and 265) a profound critique, headed 'Essay to form Rules for musical Reviewers.' Notwithstanding the decided predilection he therein evinces for the solemn and elaborate, his popular muse, or happy talent for ballad composition, is otherwise well known. Indeed, who can doubt it that recollects his "Life let us cherish," so much sung, played, and danced all over Germany. How happy must such a composer feel, could he enjoy, through the remainder of his life, but a thousandth part of the harmless pleasure he has diffused by this one song amongst his fellow-creatures! Of his compositions we can name "Life let us cherish," a convivial song, with accompaniments of harp and harpsichord, Zurich, 1794; "Songs, with Accompaniments on the Piano-forte, First Collection," Zurich, 1795; "Second Collection," Zurich, 1795; "Third Collection," Zurich, 1799; "*Teutonia*," consisting of roundelays and choruses, in six numbers folio, Zurich, 1808, arranged for the piano-forte, and the vocal parts printed separately. "In the composition of these lively and pleasing roundelays," continues Gerber, "science, taste, and fancy are so joined to familiar harmony, as to prove the most charitable boon that could be bestowed on suffering Germany. O that there were but in every town three or four amateurs of both sexes sufficiently clever to execute them correctly! How many a happy hour, how many a delightful evening, would thus be passed! and from how many a gloomy thought would the singers relieve both themselves and surrounding friends!" "Twelve Toccatas for the Harpsichord," Zurich, 1807. Nägeli's songs have been translated, and made widely popular in France, Italy, England, Sweden, and Denmark, indeed wherever European culture has penetrated. Many of them have been introduced, by Mr. Lowell Mason, into the school song books in New England. Nägeli founded a great singing school in Zurich, which spread the blessing of a richer musical culture throughout Switzerland. After this he wrote several vocal schools for all sorts of choirs, and in 1812, an elementary work on singing on the Pestalozzian system. He was one of the principal founders of the Swiss musical league or union, which set the first example on the con-

ment of great musical festivals. He died at Zurich on the 26th of December, 1836.

NAINVILLE. A French singer of eminence at the Comic Opera in Paris, between the years 1768 and 1790.

NAKED. A term significantly applied, by modern theorists, to *fourths*, *fifths*, and other chords, when unaccompanied.

NAKOKUS. The name of an instrument much used by the Egyptians in their Coptic churches, and in their religious processions, and consisting of two brass plates suspended by strings, and struck together, by way of beating time.

NALDI, SEBASTIANO, a celebrated Italian buffo singer, performed during many seasons at the King's Theatre, in the early part of the eighteenth century. He was considered the best *buffo caricato* that ever appeared in London. His most celebrated character was the Fanatic in the opera of "*Il Fanatico per la Musica*." He quitted England for Paris about the year 1819; shortly after which he met with his death in that metropolis, by the bursting in his chamber of a portable steam apparatus for cooking.

NALDI, MILE, daughter of the preceding, was an excellent singer, and was engaged, in the seasons of 1822 and 1823, at the Italian opera at Paris.

NALDINO, SANTI, a Roman monk, was a singer in the Pontifical Chapel there, about the year 1617. He published many motets. His death took place in 1666.

NANINI, GIOVANNI MARIA, a fellow-student, under Rinaldo del Mell, with Palestrina, was a native of Vallevano, and, in 1577, was appointed a tenor singer in the Pontifical Chapel, where many of his compositions were preserved. He afterwards became chapel-master of the Church of St. Maria Maggiore, in which office he probably succeeded Palestrina. There are extant some fine madrigals of his composition, and two manuscript treatises of music; the one entitled "*Centocinquanta Sette Contrapunti e Canoni à 2, 3, 4, 5, 6, 7, 8, 11 voci sopra del Canto Fermo intitolato la Base di Costanzo Festa*;" and the other, "*Trattato di Contrapunto con la Regola per far Contrapunto*." This latter treatise is the joint work of G. M. Nanini and his younger brother, Bernardino. He died in 1607.

NANINI, BERNARDINO, a younger brother of the preceding, was distinguished as a surprising genius, and as having improved the practice of music by the introduction of a new and original style. There is, however, nothing extant of his composition, except a work, printed at Rome in 1620, entitled "*Salmi à 4 voci per le Domeniche, Solennità della Madonna et Apostoli con doi Magnificat, uno à 4 e l' altro à 8 voci*."

NANNINI, LIVIA, called LA POLACCHINA. A very celebrated singer about the year 1700, in the service of the court of Mantua.

NANNO. An ancient Greek flutist and poet, especially known by the poem that Mimnermus wrote in his honor, B. C. 600.

NANTERNI, ORATIO, was born at Milan, where he held for many years, towards the close

of the sixteenth century, the office of leader of the band at the Church of St. Celso. Picinelli, in his "*Ateneo dei Letterati Milanensi*," says, "Milan may be proud of having produced, amongst its curiosities and objects of admiration in music, Oratio Nanterni. His compositions are characterized by great depth of science. His music was said to be meat and drink to those who heard it, (*paceva gli uditori*.) He played, also, with infinite sweetness, so that there was not one who did not join in his praise." Moringa, in his "*Nobiltà di Milano*," 1595, also calls him a delicate and intelligent musician, and highly spoken of. He published several of his works. Some particular specimens occur in "*Bergameno Parnassus Mucicus Ferdinand. 1, 2, 3, 4, e 5 voc.*," Venice, 1615.

NAPOLEON, ARTIUR, is a native of Oporto, in which city he was born on the 6th of September, 1844. He is the second of a family of six children, and in 1851 lost a younger sister, who was almost his equal in musical talent. At the age of three years he evinced a strong passion for music. His father taught him his notes, the treble and bass clefs; and he rapidly imbibed the rudiments of the art. Before he had reached the age of five years he had appeared in public at the Philharmonic Society of Oporto. At the age of six years his father took him to Lisbon, where he played before the court; soon after which he was made an honorary member of the Philharmonic Societies of Lisbon and Oporto. In 1852 he was taken to Paris, where he played before the court, and was honored with the notice of their imperial majesties; and the little Arthur's success is recorded in the most eulogistic terms, by Hector Berlioz, in the "*Journal des Débats*." Arthur Napoleon is of a slight, slender frame; but he has a fine, intelligent countenance. His taste and facility in musical composition are highly promising of future excellence. At his piano he is a maestro—away from it, a playful, happy child. He possesses great animal spirits, but can easily be brought to concentrate his ideas on any given subject. He will amuse himself for hours, when left alone, in composing imaginary operas, with chairs and sofa pillows for his company, and himself the conductor and orchestra. He does not study, he only plays at music. It has been said, by a French critic, that "he must have brought from heaven the secrets of musical science, for he has not lived long enough to learn them." In truth, no teaching could give the taste, feeling, and expression which he imparts to Thalberg, Prudent, Herz, and a crowd of other composers, who may come under the magic touch of his little fingers. His execution is natural and artistic. The instrument obeys him. He passes over the most difficult passages gracefully, and he interprets the great masters not only with unerring precision, but with wonderful richness of tone, charm of expression, and warmth of sentiment.

NARDINI, PIETRO, first violinist to the Grand Duke of Tuscany, at Florence, was born at Leghorn in 1725. He was considered as the best pupil of the great Tartini, with whom he long resided at Padua. In 1762 he was engaged, together with several other distinguished musicians, in the service of the Duke of Wurtemberg, and the following year rendered himself very conspicuous among his colleagues by his

superior performance at the birthday concert of the duke, his master. In 1767 the duke's chapel establishment was considerably reduced, when Nardini returned to Leghorn; and it is from this period he composed most of his works. In 1769 he went to Padua, to revisit Tartini, whom he attended in his last illness with affection truly filial. On his return to Leghorn, the generous offers of the Grand Duke of Tuscany determined him to quit that town and enter the duke's service. Shortly after this, the emperor, Joseph II., was travelling in Italy, and Nardini had the honor of several times performing before him; when the king testified his satisfaction by presenting the musician with a richly-enamelled gold snuff-box. In 1783 the President Dupaty was in Italy, and in the twenty-ninth letter of his published tour he thus speaks of the talents of Nardini: "*Ce violon est une voix ou en a une. Il a touché les fibres de mon oreille qui n'avaient jamais frémi. Avec quelle tendresse Nardini divise l'air! avec quelle adresse il exprime le son de toutes les cordes de son instrument! avec quel art, en un mot, il travaille et épure le son!*"

Nardini especially shone in the performance of adagios; and it is said that, on hearing him without seeing the performer, the magic of his bow was such that it sounded to the hearer rather like a human voice than a violin. The style of his sonatas is ably sustained, the ideas are clear, the motive well treated, and the expression natural, though of a serious cast, as was the character of the composer. (See the "Essay on Musical Taste," by J. B. Rongoni, Leghorn, 1790.) Nardini died at Florence in 1796; according to others, in 1793. Among his works we can mention "Six Concertos for the Violin," Op. 1., Amsterdam; "Six Solos for the Violin," Op. 2; "Six Trios for the Flute," London; "Six Solos for the Violin," London; "Six Quatuors for the Violin," Florence, 1782; and "Six Duos."

NARES, JAMES, doctor of music in England, was the brother of Sir James Nares, knight, one of the justices of the court of common pleas. For some time he was organist of the cathedral church of York, where he composed several services and anthems. From hence, on the death of Travers, in 1758, he was promoted to the situation of organist and composer to the Chapel Royal, and succeeded Bernard Gates as the master of the children there. The latter of these situations he resigned about two years previously to his death. The compositions of Dr. Nares were not numerous, and were principally for the church. Two of his anthems, "Behold how good and joyful," and "O Lord my God," are inserted in the second volume of Stevens's "Sacred Music." Dr. Nares was a studious and sound musician, and his writings show him to have been endowed with a very considerable share both of genius and learning in his profession. He died in 1783. As organist of the Chapel Royal, he was succeeded by Dr. Arnold, and as master of the children, by Dr. Ayrton.

NARYSCHIKIN, SEMEN KIRILOVICZ, master of the hunting to the Emperor of Russia from the year 1751, first conceived the idea of the hunting music in Russia, which he put in execution with the assistance of Maresch.

NASAL TONE. That tone which is produced

when the voice issues, in too great a degree, from the cavities of the nose. In singing, this tone, or *teang*, must be avoided, as the voice is deteriorated by passing through the nostrils.

NASARD, or NASUTUS. A wind instrument formerly in use, so called on account of its thick, reedy, or nasal tone. The French apply this term to an antiquated organ stop, which was tuned a twelfth above the diapasons.

NASCIMBENI, STEFFANO, leader of the church at St. Barbara, at Mantua, flourished at the beginning of the seventeenth century. Of his printed works we can mention "*Concerti Ecclesiastici 12 voc.*," Venice, 1610; and "*Motetti 5 et 6 voc.*," Venice, 1616.

NASCO, GIOVANNI, an Italian composer of the sixteenth century, published "*Lamentationes Jeremie*," and a "*Passion*," and "*Benedictus d 4 voci*," Venice, 1565. There are still "*Canzoni e Madrigali d 6 voci*," Venice, 1562, of his composition, extant in the library at Munich.

NASELLI, DOM. DIEGO, a pupil of Perez, composed several operas for the theatres in Italy; not wishing, however, as he belonged to the noble house of Arragon, to be considered the composer of these works, he assumed the name of Egedio Lasnel, which is the anagram of his right name. Of these operas we can only mention "*Attilio Regolo*," given at Palermo in 1748, and "*Demetrio*," represented at Naples, in 1749.

NASI, violinist, and composer for his instrument, flourished about the year 1770, as leader at the theatre Di Fiorentine at Naples. Dr. Burney heard him the same year play some beautiful trios of his own composition.

NASOLINI, SEBASTIANO, a native of Venice, was born about the year 1707. In 1790 he was in London, and brought out the operas of "*Andromaca*," "*La Morte di Cleopatra*," "*Merope*," and "*Mitridate*." The following year he went to Vienna, and produced at the theatre there his "*Teseo*." It would seem that his works met with more encouragement in Germany than in England, and several of his songs became popular at Vienna. He, nevertheless, made but a short stay in that city; for in the *Indice do Spettac. Teatr.* of Milan for the same year, he is mentioned as again composing for the theatres at Trieste and Padua. About the year 1800, being engaged to write for the carnival of Venice, instead of attending to composition, he gave himself up so entirely to debauchery, that he became its victim, and died before the completion of his engagement. Of his works we can further enumerate "*La Nitetti*," op. ser., Trieste, 1788; "*Semiramide*," Padua, 1791; "*L'Ercole al Termidonte, ossia Ippolita Regina delle Amazoni*," Trieste, 1791; "*Eugenia*," Dresden, 1794; "*Il Trionfo di Clelia*," Venice; "*Il Torto Imaginario*," op. buffa, Venice, 1800; and "*L'Incantesimo senza magia*," op. buffa, Venice, 1800.

NATHAN, ISAAC, was born at Canterbury in the year 1792, and being intended by his parents for the Hebrew church, was, at the age of thirteen, placed at Cambridge, under the care of Mr. Lyon, the Hebrew teacher to the university, where he made considerable progress in that

language, as also in the German and Chaldean. It was only as a relaxation from his severer studies that he was permitted to learn the violin—a circumstance which led to an early display of his innate love for music, and eventually brought about an entire change in the views of his parents. His frankness of disposition and sweetness of voice made him a favorite with his masters and schoolfellows; and so encouraged was he by the praises he received, and the pleasure he felt in the cultivation of his taste for the science, that crotchets and quavers usurped their dominion over his then more legitimate pursuits, and lost in the pleasing mazes of harmony, all his pocket money was laid out in the purchase of music paper, on which he felt anxious to try his talent at composition. Ignorant of the theory, his effusions of fancy were unintelligible to all but himself; and it was not a little singular to see him playing from a group of notes, without any guide as to time, &c., but such as his own ingenuity had furnished him with.

On his return home, his passion for music was so apparent that his relations determined on articling him to Dominico Corri, whose name inspired him with such awe, that his natural diffidence for a short time operated against his pursuits. His timidity, however, wore off, and the embarrassments of Corri, which kept him sometimes long without a lesson, acted as an additional stimulus to his own exertions. In the attic of his father's house was an old harpsichord, considered as useless; and this the young student made the seat of his indefatigable efforts. At this instrument did he regularly place himself by four o'clock in the morning, and so intent was he on application that no inducement would tempt him from it, his provisions often remaining untouched the whole day. Eight months after his apprenticeship commenced with Corri, he composed his first song, called "Infant Love," which was quickly followed by "O, come, Maria," and "The Illiterate Boy." His next production was "The Sorrows of Absence;" from which a trifling dispute arose between him and his master, that, more than any other circumstance, tended to confirm him in his pursuits. Corri had pointed out a passage in the last-named song which he considered a breach of theory, and was so severe on his pupil, that young Nathan was roused to a pitch of confidence which made him contend for the accuracy of the passage objected to; a little argument followed, and the pupil having brought to the recollection of his master certain allowances granted to genius which he had overlooked, he came off victorious—a triumph which has often been mentioned by Nathan as having mainly contributed to the success of his future exertions.

From time to time he produced compositions which would have done credit to more established authors; and as "music is the food of love," it is not very singular that he should at an early age have felt a passion so general in its attack on mortals. He married a young lady of highly respectable connections, and whose literary talent has sent into the world works of no inconsiderable merit.

Possessing the natural feeling for music which we have described, it was not extraordinary that his compositions should keep pace in beauty with the subjects for which he wrote; and the

poetry of Lord Byron presenting a field best calculated for the display of his genius, his acquaintance with his lordship's works brought with it the commencement of his acknowledged merit as a musician. His first selection from Lord Byron was those beautiful lines from the "Bride of Abydos," beginning "This rose to calm my brother's cares," which in a few hours was composed and placed in the hands of the engraver. He has since published, from the same poem, "Think not thou'rt what thou appearest," "Ah, were I severed from thy side," and "Bound where thou wilt, my barb." His song from the *Giaour*, "Yes, love indeed is light from heaven," is one of his happiest efforts; and the "Fair Haide," "My life, I love you," with a variety of other selections from his lordship's poetry, are works of merit. Shortly after his composition of "Night wanes" appeared, Nathan was introduced to Lord Byron, and ever after experienced proofs of his condescending kindness. To dwell on the merit of the Hebrew melodies is unnecessary, as their excellence has been so universally acknowledged.

A circumstance connected with the composition of these melodies deserves mention. Nathan was so totally absorbed in the poetry which relates to the raising of Samuel by the witch of Endor, that, in setting it to music at the house of Mr. Basil Montague, (the chancellor counselor,) the son of this gentleman, on wishing Nathan good night, said, "I really think it better to depart, Nathan; for you look so wild, that I should soon imagine you Samuel himself." That the subject had entirely chained his mind to a corresponding feeling, appeared the next morning, when Nathan was seized with an alarming aberration of memory, which continued several hours. The subject forms a glee, and must be heard to be properly appreciated. His first theatrical composition was for Kean, "Scarce had the purple gleam of day," which met with enthusiastic applause.

Had Nathan been as great in worldly as in musical science, he must have enjoyed an early and abundant harvest; this, however, was not the case; for naturally benevolent, the treachery of others involved him in embarrassments from which he found it difficult to extricate himself. He was at length compelled to be absent from London, and during a temporary sojournment in the west of England and Wales, made every exertion, though unsuccessfully, to retrieve the losses he had sustained. On his return to London, however, his creditors beset him, and hinting that he ought to make his voice available to their demands, he, solely to convince them of his integrity, consented to make a public trial; at the same time, with a feeling which redounded to his honor, offering to secure them a claim on the fruits of his industry should he be successful. He appeared at Covent Garden as Henry Bertram, in "Guy Mannering," and, in the unaccompanied duet, elicited enthusiastic applause; but when accompanied by the band, his want of sufficient power totally deprived him of the advantage which his acknowledged science would otherwise have given him, and a failure was the consequence. Though nothing would be more illiberal and ignorant than to require professors of music to abide a similar trial of their vocal capabilities, yet, as this circumstance has been

sometimes unjustly urged against the vocal talent of Nathan, we subjoin part of a private letter (with which we have been favored) from that gentleman to a friend, in which he adverts to his appearance. "Of all risings and fallings in life," says Nathan, "the falling of the pocket is the most annoying, owing to certain little accompaniments in the form of angry creditors, who set a man thinking. Of two evils, according to custom, I chose the least, not considering 'durance vile,' under the best auspices, as a bed of roses, more particularly when upwards of two hundred miles from those whose tender age and necessities required my exertions; and as desperate cases require desperate remedies, I deemed it prudent to purchase my liberty, by convincing those who had claims on my personal property, that I really did not possess a stentorian power of lungs sufficient to fill Covent Garden Theatre. As a proof that vanity had no hand in the business, I sent Mr. Harris a critique from Canterbury, (*where I had tried the character proposed for me,*) not the most flattering to my feeble voice.

"For the Adonis-like state of my appearance I cannot, in honest truth, say much; but I query, with a plaster on his breast, and an unhealed blister on his back, whether even the *Apollo Belvidere* (to whom, I beg it to be understood, I bear not the slightest resemblance) would have looked so attractive as in a whole skin. Dressed and patched for the occasion by my much esteemed medical friend, Mr. Hare, of Argyle Street, I dared my fate, and while I strutted 'my hour on the stage,'—pardon me for most profanely altering the text of Skakspeare,—'the curs snarled at me as I walked along.' Let me disclaim any allusion to those whose condemnation proceeded from an honest expression of opinion; ignorant as they were of the disadvantages under which I labored, I could but anticipate their sentence. I allude only to such who, to serve party or private purposes, came with a premeditated design to crush me."

The popular music in "Sweethearts and Wives," by Nathan, though composed at a few hours' notice, powerfully exhibits the versatility of his talent: "Billy Lackaday's Lament," "Why are you wandering," "The Secret," and "I'll not be a maiden forsaken," are productions that must establish his talent as a theatrical composer; indeed, the latter song is so original, and the connection of the poetry and music so intimate, that it would alone be sufficient to stamp his reputation. In his orchestral arrangements he is equally happy, and his accompaniments possess a richness of harmony that reach beyond the ear of the auditor.

As a singing master, Nathan had few superiors; for, while his voice afforded an example of science in a high degree of cultivation, his "Essay on the History and Theory of Music, and on the Qualities, Capabilities, and Management of the Human Voice," evinces a research and comprehensive knowledge of that subject. The work here alluded to is dedicated to the king, and is valuable to the musical student.

NATIONAL MUSIC. The Russians and Danes are rich in the possession of an original and most touching national music; Scotland, Ireland, and Wales are alike favored with the

most exquisite native melodies, probably, in the world. France, though more barren in the wealth of sweet sounds, has a few fine old airs that redeem her from the charge of utter sterility. Austria, Bohemia, and Switzerland, each claim a thousand beautiful and characteristic mountain songs. Italy is the very palace of music; Germany its temple. Spain resounds with wild and martial strains; and the thick groves of Portugal, with native music of a softer and sadder kind. All the nations of Europe, probably those of all the world, possess some kind of national music, and are blessed by Heaven with some measure of perception as to the loveliness of harmonious sounds.

It is a generally received opinion, that most countries have a music of their own, the character of which may be called national. Probably this is true as it regards the music of instruments, but not with that which emanates from the voice. The strains of the Irish and Welsh may be referred to the harp; the dance tunes of Spain, to the guitar; the mountain airs of the Swiss, to the hunting horn; and the music of the Turks, to the rhythmical clangor of the ancient Greeks. The primitive tones of the human voice are much the same in all countries, and Scotland, perhaps, is the only district in the world that retains an artless melody. The Scotch, not having mingled with the musicians of the continent, have preserved the ancient character of their music more entire than any other country: the pathetic effect of it may be ascribed to the use of the minor key, the only key known to the Greeks and Romans, from whom these primitive airs have no doubt descended. On the introduction of accompaniment, the voice surrendered its predilection for the minor key; and the major, so natural to the joyous instruments, disputed its ascendancy. Melody, however, has been much improved by the alternate use of these keys, and none more so than that of the Scotch.

It has been often said that we have no national music. We cannot deny the assertion. While we have severed ourselves from all foreign authority in government, and it is our well considered and established policy to reject all foreign alliances, should we not be ever aiming to obtain a distinct nationality? Should we not, whenever we can, decline being tributaries to a foreign power? Music is one of the most distinguishing badges of nationality. But we must confess that we have no national music. It is, then, a consideration of great importance that the growth of a national music, if we are ever to have it, is undoubtedly to be fostered and promoted chiefly by amateurs. Their first step in the accomplishment of this great work should be the diffusion of musical taste among the people; and this is to be done not by exhibiting to them brilliant models of performances. The great performers on instruments, and the great singers who have visited us from Europe, have done little or nothing for the formation of a popular taste. They may have raised the standard of criticism among the more wealthy and educated classes; but even if it be confessed that they have improved the general taste, they have done nothing towards establishing a distinctive national music in our country; nay, rather have put back this great object by filling our ears and our imagination with the beautiful productions of a modern school

The only way in which there is the least hope of inspiring a true taste for music amongst us, is to instruct the people to make performers of our poorest children. To use the striking figure of a writer upon this subject, we might as well hope to raise fruit by tearing a branch from the tree and fixing it in the ground, as to create a popular taste for music by importing artists to give concerts or perform operas; the good seed must be planted before the tree can grow; the people must grow up musical, and time and practice are requisite for the work. It is said that we are naturally an unmusical people. This we do not believe. The mass of the people are only unmusical because they want instruction. We are convinced that beneath the noisy, dusty, rattling shell of Yankee life, with all its hurry and all its money getting, there is a sense of art, which will one day be displayed with a keenness and insatiable desire, that will rival the energies of the gifted nations in the south of Europe. A people so intensely charmed by eloquence, so passionate in their longing for speeches and orations, as we have already showed ourselves to be, cannot be insensible to the power of music, when it shall once have penetrated to the soul.

NATURAL. A word of various significations, sometimes applied to those airs and modulations of harmony which move by smooth and easy transitions, digressing but little, or gradually, from the original key; sometimes to the two keys, C major and A minor, because they do not require either sharp or flat in the formation of their proper intervals. This word is also used to signify that music, or those musical sounds, produced by natural organs, as the human voice or the throats of birds, in contradistinction to artificial music, or that performed on instruments. *Natural* is likewise the name of a certain character used to contradict some sharp or flat previously expressed or understood; to restore a note made flat or sharp to its primitive sound, thus:—

The *natural*, although a very ancient character, was not used by Morley, Simpson, or Playford. They always employed the *flat* to take away the *sharp*, and the *sharp* to take away the *flat*, in the same manner as we now use the *natural*. Hence are found, in old music, the sharp before B, and the flat before F; not, as now, to represent B sharp and F flat, but merely to take away a preceding flat or sharp. The *natural*, although evidently an *accidental* character, and a more general expression for the two others, the sharp and the flat, is sometimes placed *essentially* at the beginning of a strain, when a former part of the same movement has had a sharp or flat in its signature. According to its power, therefore, of raising or lowering any note of the scale, the *natural* must be always considered as representing a sharp or a flat. In Handel's song of "Pious Orgies," (Judas Maccabæus, No. 1,) the *natural* is frequently employed, and, in one particular measure, sharpens the *treble* and flattens the *bass*.

NATURAL HARMONY. The harmony of the *triad*, or common chord. An expression used

in contradistinction to discordant commixture. See **ARTIFICIAL HARMONY**.

NATURAL KEY. That key which has neither a flat nor a sharp for its signature, is said to be the *natural key*, as the key of C.

NATURAL MODULATION. Such modulations as proceed from the principal key of composition into only the relative keys, are termed *natural*.

NAUMANN, JOHANN GOTTLIEB, master of the Electoral Chapel at Dresden, and one of the first composers in Germany, was born in 1741, in a small village near Dresden, of very poor parents, and was carried to Italy by a Swedish virtuoso, who discovered and wished to encourage his talents for music. He had to struggle a long time with bad fortune, but his ardor was never relaxed. After seven years' study, during which he formed himself under the great Tartini at Padua, under Martini at Bologna, and in the Neapolitan school, he returned to Germany, when the King of Prussia appointed him master of one of his chapels. He afterwards made two journeys to Italy, where he composed several operas, which had the most distinguished success in all the theatres of that country. The different courts of the north endeavored to attract him by the most brilliant and flattering offers; but he always preferred a residence in his own country, where he spent every summer in his native village, on the banks of the Elbe. For some time before his death he had devoted himself almost exclusively to sacred music, and he has left some very valuable compositions of that kind in the archives of the chapel at Dresden. In the year 1801 he died of apoplexy, with which he was struck while walking in the electoral park.

We cannot refrain from adding to the foregoing account of the celebrated Naumann, the following article, extracted from Gerber: "Naumann did not get quite so readily to Italy as has been usually said; on the contrary, he had previously to undergo at Hamburg, where he arrived in 1757, many trials of his patience, through the conduct of his master, Von Weestrom, a Swedish amateur, who had become very tyrannical and parsimonious towards him. Indeed, little time was left him for studying the science of music, and, except now and then playing on the tenor, he was obliged to submit to the meanest and most painful offices. In this condition he spent ten weeks at Hamburg; during a part of which Weestrom had a severe and dangerous illness, and also, it is believed, sustained a considerable reduction in his finances. Nevertheless, they set out in the spring of 1758 on their journey to Italy; no small part of which the poor and patient Naumann had to perform on foot, through rain and snow, indifferently clothed, and with very meagre diet. At Venice, and afterwards at Padua, to which latter town his master went to pursue his studies under Tartini, Naumann had even to earn his daily subsistence by writing music; and he declares that he had copied, in six or seven months, besides an immense number of minor pieces, upwards of seventy *concerti*, all of which Von Weestrom sold for his own benefit. He was indeed reduced so low as even to be obliged to cook for his master. What still, however, most grieved the unfortunate youth was,

that he now had not a moment to spare for practising his favorite science, much less was there a chance of his obtaining regular instruction from a professor. One day, however, having to carry, as usual, the violins of Messrs. Eyselt, Hunt, and his master, to Tartini's, he mustered up courage to petition the professor to be allowed the favor of now and then staying at the door of the room, when his master or one of his countrymen were receiving instruction, so that he might just catch a little information at a distance. Tartini, who was of the kindest disposition, pleased with the humility of the request, immediately offered to receive him as a regular pupil. Accordingly he now enjoyed the benefit of attending, twice a week, a gratuitous course of instruction from this great master; at one lesson accompanying Eyselt, and at another Hunt. He had, moreover, the good fortune of passing, about this time, from the service of his despotic master to that of Hunt, who was of a very opposite character. Having thus spent three years and two months at Padua, and having acquired, besides a great proficiency on the violin, no ordinary skill on the harpsichord, he was introduced to Mr. Pitscher, who was travelling through Italy at the expense of Prince Henry, and who, failing in his design of obtaining instruction from Tartini, applied to take lessons of Naumann, then considered his best pupil, and also made him the offer of accompanying him, free of expense, on his tour through Italy. This was too delightful a proposal not to be accepted by Naumann with alacrity. Tartini himself, indeed, unwilling as he was to part with his favorite, deemed his removal almost indispensable to his becoming great in his profession. Accordingly he left Padua with Mr. Pitscher in 1761, proceeded to Rome, and thence, in a few weeks, to Naples; the charms of which city, together with the delightful climate, and, above all, the splendid theatres, detained them six months. It seems that Naumann there devoted himself exclusively to theatrical composition, and tried his strength in that style on several detached pieces of Metastasio's poetry, which he meant for the stage. At length they quitted Naples, spent the Easter holidays at Rome, and then proceeded to Bologna, where, on presenting Tartini's letters of recommendation, Naumann was immediately admitted by the celebrated Padre Martini to his academy, on the footing of an old acquaintance, and failed not to dip freely in the treasures which he discovered in this master's library. Meanwhile the time allowed to Pitscher for his residence in Italy had expired; but, as war still continued to rage throughout Saxony, Naumann thought best to let Pitscher return alone to Germany, remaining himself at Venice until a more auspicious period. In that city he soon got a sufficient number of pupils to supersede all cares about his immediate wants; and, indeed, before two months had elapsed, his greatest wish, up to that period, was accomplished by his being engaged to compose an opera buffa for the Theatre of St. Samuel. Though no longer than a month was allowed him to finish this opera, it still met with universal applause, and for at least twenty nights never failed to attract an overflowing audience to both pit and boxes. On account of the shortness of the intervening time, he undertook for the next carnival only part of an opera, which, however, was not less successful; the act which

he composed being universally preferred to the remainder, set by two other masters." (The titles of those two pieces are not known to Gerber.)

"Having now resided eighteen months at Venice, and, in all, seven years in Italy, the treaty of Hubertsburg at length restored peace and tranquillity to his native country. His insuperable longing for home then increasing every day, a thought occurred to him of sending his parents the score of one of his operas, as a specimen of his abilities, and requesting them to get the work shown to persons about the court. To effect this, his mother went to Dresden, and was so fortunate as to be enabled to place the manuscript in the hands of the dowager electress, Marie Antoinette. This princess, who was an excellent musician, immediately looked into the score, in the presence of Naumann's mother, and dismissed her with the remark, that she must be allowed to doubt whether the music she saw was really the composition of the young man, but that she would inquire into the subject. She then wrote to several of the professors of Italy, and receiving answers from them unanimously filled with eulogiums on the talent of young Naumann, she gave him a nomination in her chapel, accompanying it with a sufficient pecuniary remittance for his journey to Dresden. Naumann did not lose a day in quitting Italy, and arrived at Dresden in 1765. He then directly wrote a mass, and performed it himself before the electress mother; upon which he was immediately raised to the rank of composer of sacred music to the elector, with an appointment of two hundred and twenty dollars, and his leave for a second journey to Italy to fulfil his remaining engagements there; and was not only accompanied by the diploma of composer to the elector, but also the two young students, Seluster and Seydelmann, were consigned to his superintendance while abroad. He now again visited the greatest part of Italy with his companions, making the longest stay at Naples. Being then engaged to compose the opera of *'Achille in Sciro,'* for Palermo, an opportunity was afforded him of seeing Sicily. From thence they proceeded, by the way of Naples, Rome, &c., to Venice, where, being occupied with the opera of *'Alessandro'* for the theatre, he unexpectedly received the commands of his court to return to Dresden, for the purpose of setting to music the opera of *'La Clemenza di Tito,'* for the elector's nuptials. This was the only opera which he composed for the grand theatre there. In 1772 he undertook a third journey to Italy, at his own expense. He then composed there, in eighteen months, the operas *'Solimanno,' 'Le Nozze disturbate,'* and *'L'Isola disabitata,'* for Venice, and the *'Armida,'* for Padua, with such success that more of his works were bespoken from all parts of Italy. Soon after his return to Saxony, the situation of chapel-master of Berlin was offered him by Frederic the Great, on favorable terms; but Naumann remained faithful to his sovereign, although at a much inferior salary. This sacrifice at the shrine of patriotism, perhaps, contributed to his being, shortly afterwards, appointed chapel-master by his own court, with a salary of one thousand two hundred dollars per annum. It was in the course of his third journey to Italy that Naumann wrote the opera of *'Amphion,'* for the celebration of the birthday of the King of Swe-

den. This piece had the greatest success, and was the occasion of his being invited afterwards to Stockholm, where, in 1780, the new theatre was opened with his opera of '*Cora*,' when he himself presided at the orchestra. After this performance the King of Sweden testified his satisfaction in the most gracious terms, and presented the composer with a medal, worth fifty ducats, together with his portrait and that of the queen. These favors were exclusive of the pecuniary remuneration which had been agreed on for his labor. In the following year he composed, for the same theatre, the opera of '*Gustavus Vasa*,' which was also successful. In 1785 he was charged with the composition of a new Danish opera, '*Orpheus*,' for the theatre at Copenhagen. How honorably he acquitted himself of this commission, Professor Cramer has given the musical public an opportunity of judging, by arranging and publishing that opera for the piano-forte, with a German translation. This piece had such success at Copenhagen, that the Danish court offered him the place of royal chapel-master, upon very flattering conditions, and with a brilliant salary. These tokens of esteem and admiration from the Kings of Sweden and Denmark, though great, were, however, of no consideration with Naumann, when compared with the many instances of royal regard he experienced from William II. That prince was indeed ranked amongst the consummate judges of music; and it is difficult to say whether his predilection for Naumann's chaste and exquisite muse did not as much honor his own taste as it redounded to the composer's glory. In 1789 Naumann wrote, at Berlin, the first act of his '*Médée*,' the composition of which fell to him by lot. This was to have been performed at the carnival, but was not ready in time. Having, in 1793, composed the second act, he went again to Berlin, at the king's request, on purpose to bring this opera out on his majesty's birthday, when he received a royal gratuity of two thousand dollars. It was then that the king also committed to him the perfecting of the rising talents of Himmel and Miss Schmalz; and it is well known how well he acquitted himself of this task. Having declined many invitations and orders from Paris, he, in 1795, re-introduced his two pupils to the King of Prussia; and on that occasion they performed before his majesty at Potsdam, besides other works of their master, the oratorio of '*Davidde in Terebinto*,' written in 1794 for Dresden. So highly was the monarch pleased both with the composition and the skill of the two pupils, that he presented Naumann with a snuff-box richly set with brilliants, and decorated with the royal cipher. In the spring of 1797, he again received a most gracious royal invitation to go to Berlin, and hear his pupils sing at the nuptial *fêtes*; one thousand dollars for travelling expenses, and a snuff-box, carried by the late King Frederic II., were adjoined to this request, to render it the more acceptable. It was then," continues Gerber, "that I, too, had the pleasure of witnessing the triumph enjoyed by Naumann, when his pupil Himmel made his first appearance before the courts of Berlin and Cassel, presiding at the piano-forte in his '*Semiramide*,' in his grand cantata, and in his two cantatas, '*The Ilesian Sons*' and '*The Prussian Daughters*,' and when Miss Schmalz contributed so much, by her exquisite singing, to give ad-

ditional force to the above masterpieces. I was present, also, when Fasch's excellent Conservatorio held an extraordinary sitting in honor of Naumann, to entertain him with the one hundred and eleventh psalm in Latin, for four voices which he had sent them the year before, to which were added some divinely beautiful lines from Fasch's celebrated '*Miserere*' for sixteen voices.

"Many a festive scene had Naumann now embellished at Berlin with his talents; nor was he less zealous in his devotions to the science at Dresden, though his career was there more private and regular. At length the Dresden public, too, appeared determined to honor this skillful artist in a distinguished manner; and his composition of Klopstock's '*Lord's Prayer*,' then just finished, afforded them an excellent opportunity. According to an account from Dresden of this masterpiece, (in the first year of the *Leipsic Musical Gazette*, p. 883,) a single hour, favored by the Muses, was sufficient for Naumann to mature the plan of it. To finish it, however, took him, with the utmost industry, no less than a year and a quarter. The score from which he himself led at the performance was the third revision. Baron Rackwitz caused an orchestra to be erected for the purpose in the new town church, where eighty singers and one hundred instrumentalists performed the '*Lord's Prayer*' and the one hundred and third psalm, on the 21st of June in the afternoon, and a second time on the 21st of October in the evening, the church then being illuminated with great effect, and the audience a crowded one. The Psalmist's text was wrapped in soft solos, whilst the prayer, on the contrary, was given in full choruses. On this occasion there was published a poem of twelve pages octavo, entitled '*On Naumann's Oratorio*,' performed on the 21st of June, 1799, in the Church of the New Town, for the Benefit of the Sufferers by the Floods, and on the 21st of October for the Benefit of the City Infirmary, Dresden, 1799, in which the poet expresses his feelings on hearing this masterpiece. The first performance produced one thousand dollars, after all charges were deducted. Finally, his last opera, '*Acis e Galatea*,' was performed at Dresden in 1801, with unqualified applause. Already, while he was composing it, there was a report that with this piece he intended to take leave of the theatre. Alas! this was too true! inasmuch as, shortly after this composition, he took leave of society altogether; however, with the exception of some defect in his hearing, he found himself yet tolerably well. With what cheerfulness he must then have contemplated his past life! How he must have blessed his ultimate fate, on the retrospect of the first four hopeless and sorrowful years of his journeyings in Germany and Italy! He now not only felt himself respected as a professional man, but beloved in his own circle as a husband and father. Indeed, it ought to have been mentioned before, that during his residence at Copenhagen, in the year 1792, he married the daughter of the late Danish Admiral Grodbschilling, a lady who, at first sight, inspired all beholders with esteem and affection. He likewise built himself at Blaszewitz, his native village, a pleasant country house, where he could devote himself undisturbed to the Muses.

"He was just about, it is said, to buy many young trees for this his *Tusculanum*, and, with that object in view, was strolling quite by himself, on the 21st of October, towards evening, through some extensive grounds, when he was seized in a retired spot with an apoplectic fit. Stunned and speechless, he was just able to crawl a few paces sidewise; but there he remained lying, benumbed and senseless, in very raw night air; those who passed by, taking him to be some person overcome with liquor, and his wife's messengers having searched the town for him in vain. At length he was found in the morning, in that situation, by some huntsmen; they took him immediately to the nearest house, where all possible means were used to save him, but without success; he continued senseless until four o'clock in the morning of the 23d of October, when he expired. After his funeral, the grand chamberlain, Von Raehnitz, caused his death to be commemorated in the Stessian Hall, by the performance of several of his compositions by the electoral band, in full mourning, led by the chapel-master, Schuster. On that occasion Naumann's name, in conspicuous characters, surmounted by a lyre within a wreath of laurels, appeared over the orchestra. His pupil Miss Schmalz embellished the whole by the execution of her solos. Subsequently, also, the concert of amateurs paid a tribute to his memory, in 1802, by an epicedium, prepared for the occasion, to which a young artist and pupil of the deceased, named Berner, from Berlin, composed the music. The music director, Tag, of Hohenstein, also had a dirge, with accompaniment on the piano, printed in honor of the deceased.

"Thus died Naumann, in his sixtieth year; prematurely indeed for his family, and no less so for the science of music, but, as regarded himself, in unalloyed prosperity, without having missed any of the comforts of life, and without feeling the approach of his dissolution; in one word, surprised by death in the very lap of felicity. In writing this dictionary," concludes Gerber, "my task has not very often been cheered by being able to finish, as I do here, the biography of an eminent professor with a result adequate to his merits and devotion to the pleasure and happiness of his fellow-creatures! A very transient retrospect of our departed musical favorites will but too well corroborate this melancholy remark. What a splendid career Handel ran through for about fifteen years! but how was his horizon overcast towards the close of his life! and the great Hesse, was he more fortunate, wandering in his old age about Vienna and through Italy? Graun, gentle Graun, perhaps, breathed his last more placidly on his well-earned laurels; but whoever recollects, from the life of Fasch, how the gentlemen of the Royal Prussian Chapel were obliged, during the seven years' war, to subsist many years without salary, will find his situation in his latter days to have been any thing but enviable. The extreme poverty and distress amidst which Dittersdorf and Piccini also awaited their dissolution, are but too notorious. Such a melancholy fate could not indeed befall the frugal Sebastian Bach, who never aspired at a splendid fortune; but then fate visited him, in his old age, with blindness. Jomelli died, by all accounts, of a

broken heart at the ingratitude of the public. Similar disheartening feelings seem also to have driven the unfortunate but able George Benda to a seclusion from all human intercourse; and to say all in all, what was the far-revered Mozart's fate?"

We now subjoin a catalogue of the principal works of this eminent composer. For the church: "*La Passione di Giesu Cristo*," oratorio, words by Metastasio, Padua; "*Isacco figura del Redentore*," of Metastasio, Padua and Dresden; "*Giuseppe riconosciuto*," of Metastasio, Padua and Dresden; "*Zeit und Enighkeit*," Padua and Mecklenburg-Schwerin; "*Santa Elena*," of Metastasio, Padua and Dresden; "Joseph recognized by his Brethren," of Metastasio, Paris; "*Unsere Bruder*," Paris and Mecklenburg-Schwerin; "*Il Figlio Prodigo*," Paris and Dresden; a second composition of the "*Passione di Giesu Cristo*," Dresden; "*Te Deum*," Dresden; "2d Psalm," manuscript; "96th Psalm," printed; "103d Psalm," printed, "111th Psalm," in Latin, for four voices; "*Davidde in Terebinto*," oratorio, Dresden, 1794; "*Canto de Pellegrini dell' Istesso*," oratorio; "*Aggiustato per Arpa o Cembalo*," 1798; "Klopstock's Lord's Prayer," 1799; "*Messa Solenne*," op. posthume, Vienna, 1804; "*Offertorium Solenne, Lauda Sion Salvatorem, in Circumcis. Domini*," op. posthume, Vienna, 1804 "3d Psalm, for 4 voe.," Vienna, 1804; "Seven e-seven Masses," written since the year 1766, chiefly for the Royal Chapel at Dresden: these are all in manuscript: "*Betulia Liberata*," oratorio, manuscript; "*La Morte d'Abelle*," oratorio, manuscript; "The 95th Psalm, with a *Sanctus*, &c., in double chorus," and "The 149th Psalm;" these two last were composed for the Brethren at Herrnhut. For the theatre, the following operas: "*Achille in Sciro*," Palermo, 1768; "*La Clemenza di Tito*," Dresden; "*Le Nozze disturbate*," comic op., Venice; "*Isola disabitata*," Venice, 1773; "*Il Solimano*," Venice; "*Ipermestra*," Venice; "*Il Villano geloso*," comic opera, Dresden; "*L'Ipocondriaco*," comic opera, Dresden; "*Elisa*," opera ser.-com., Dresden; "*Osiride*," op. ser.; "*Tutto per Amore*," op. ser.-com. Dresden; "*Amphion*," Stockholm; "*Corra*," "*Gustavus Vasa*," "*La Reggia d'Imeneo*," Dresden; "*Orfeo*," Copenhagen; "*Médée*," Berlin, 1788; "*Protesilao*," 1793; "*L'Andromeda*," "*La Dama Soldato*," opera buffa, Dresden, 1791; in this opera is the song of "*Vino vecchio*," so well known in London; "*Anore giustificato*," opera buffa, Dresden, 1792; "*Aci e Galatea, ossia i Ciclopi amanti*," Dresden, 1801. For the chamber; vocal: "*Ecco quel fiero istante*," a canzonet, for soprano and violin, 1778; "Freemasons' Songs," Leipsic, 1778; "Airs from Robert and Caliste," written for Mme. Helmuth; "A Collection of thirty-six German, French, and Italian Songs, with Accompaniment for the Piano-forte;" "*Die Lehrstunde*," of Klopstock, 1786; "Six Italian Ariettes, with Accompaniment for the Piano-forte," 1790; "Six French Ariettes," 1790; "Ode on May, the Words by Clodius," Berlin; "Elegy, by Hartmann, 'An die Völker, von Wiesinger,'" Dresden, 1794; "*Blumenstrauß für Lina*," Leipsic, 1794; "12 von Elisons geistlichen Liedern beyrn Klavier;" "Six Airs, avec Accompaniment du Piano-forte par M. le Comte de Hartig;" "*Die Ideale von Schiller*," Dresden, 1796. "Airs Français pour Piano-forte et Guitare"

Hamburg, 1797; "25 neue Lieder verschiedenen Inhalts von der Frau von Reck," Dresden, 1799; and "Cantatina an die Tonkunst." Instrumental: "Six Quatuors for Piano-forte, Flute, Violin, and Bass," Op. 1, Berlin; "Six Trios for the Harpsichord and Violin," Op. 2, Berlin; "Two Symphonies for a full Orchestra, from the Operas of Cora and Elisa," Op. 3; "Six Sonatas for the Harmonica or Piano-forte," 1786; "Ditto, Second Part," Dresden, 1792; "Overture to *Mélie*, for the Piano-forte and Violin;" "Concerto for the Harpsichord, in B," Darmstadt, 1794; "Three Sonatas for the Harpsichord, with Violin and Bass," Paris; "Six Duos faciles pour 2 V., d'usage de Commencans," Leipsic.

NAUSS, JOHANN X. Organist at Augsburg about the middle of the eighteenth century. He published, in 1751, a work on thorough-bass; he also published two volumes of preludes, fugues, airs, and pastorals, under the title of "Die spielende Muse," and afterwards five volumes of short pieces for the harpsichord. The whole were printed at Augsburg.

NAUZE, LOUIS DE LA, member of the Academy of Inscriptions and Belles-lettres, inserted in the thirteenth volume of the memoirs of that society a dissertation on the songs of Ancient Greece.

NAVARA, FRANCESCO, of Rome, flourished towards the end of the seventeenth century. In 1696, he brought out at Venice, the opera "*Basilio Re d'Oriente*."

NAVARRA, VINCENZO, a priest at Palermo, in Sicily, was born there in 1666. He published, in 1702, a work entitled "*Brevis et accurata totius Musice Notitia*." He also wrote a book called "*Le Tavole della legge numerica ed armonica, nelle quali si discovelano gli arcani più reconditi del numero e della musica*." This work was about to be published when the author's house was consumed by fire, in 1710.

NAVARRO, FRANCESCO, a monk at Alvaro, in Old Castile, about the year 1620, wrote a work entitled "*Manuale ad usum chori juxta ritum fratrum minorum*," and another called "*De orat. et por. canon*."

NAVOIGILLE, GUILLAUME, a French musician, was, in the year 1798, first violin at the *Pantomime Nationale* at Paris. He published some quartets for the violin, and also wrote the music of the following pieces for his own theatre: "*La Naissance de la Pantomime*," Paris, 1798, and "*L'Héroïne Suisse, ou Amour et Courage*," Paris, 1798. There was also a musician of this name at Paris, probably a son of the preceding.

NAZZARI, a pupil of Carmanati, and violinist at Venice in 1770, was then considered as one of the first solo players in Italy.

NEANDER, ALEXIUS, director of the music at the Church of St. Kilian, at Wurtzburg, in the year 1600, published "*Motetti à 4, 5, 6-24 voci*," first, second, and third parts, Frankfort on the Maine, 1605-1606.

NEANES. One of the eight barbarous terms used by the modern Greeks in their ecclesiastical music. The intonations of the eight church

modes are sung to this and the other seven words.

NEAPOLITAN SIXTH. A chord of the sixth, in which both the third and sixth are minor. This chord is situated on the fourth of the ascending scale; thus in the key of A minor, the *Neapolitan Sixth* will be

NEATE, CHARLES, was born in London in the year 1784. His early indications of a capacity and taste for music were noticed by some friends of his family, who strongly advised his being brought up to the musical profession. He was under great obligations to these friends, but particularly to William Sharp, for directing his musical studies, and superintending his steady practice on the piano-forte, until the period when he formed a very intimate acquaintance with John Field, who had then just begun to distinguish himself as a piano-forte performer. Neate received the benefit of his friend's instructions, and had also the advantage of hearing his incomparable performances, until Field's departure for St. Petersburg. Neate and his friend Field, being both great admirers of the violoncello, were kindly instructed on that instrument by their mutual friend, W. Sharp. His first public performance was at the oratorios under the Ashleys, who had invited him the previous season to hear Dussek, and also granted him the privilege of turning over the leaves for him. The great performances of this celebrated master animated Neate, then a boy, with an increased zeal for his art, and with the ambition of occupying a similar post of honor before the public, when Dussek should quit England. Just at that period Neate was indeed selected to supply the vacancy, and continued to fill that department for several successive years. He was one of the first members of the Philharmonic Concerts, and was chosen a director for the second season; to which situation he was reelected, year after year, with the exception of the two years that he was on the continent. Being a very ardent admirer of Beethoven's music, he had fully determined to become personally acquainted with that great artist, should circumstances ever afford him an opportunity of so doing; accordingly, as soon as the peace was proclaimed, he gave up a very considerable connection, in order to visit Vienna. So gratified was he with the reception he met with in that capital, that he was induced to remain eight months: during the whole of which time he enjoyed Beethoven's friendship and professional advice. He also passed five months at Munich, when he studied composition under Winter. He also took a few lessons in composition of Woelfl, who strongly counselled him to publish, and selected from among his manuscripts a sonata, which he desired should be inscribed to him; accordingly Neate published his Op. 1 in the year 1808. He did not then continue to publish, as he felt that the time devoted to keeping up his practice on the piano-forte, added to those hours he was engaged in teaching, and his occasional violoncello playing, left him far too little leisure to admit of a hope that he would arrive at that eminence, as a composer, which

would satisfy his ambition; he therefore made up his mind to be no composer, rather than one under such unfavorable circumstances. But on hearing it insinuated that the reason assigned for his not continuing to publish was, that he did not compose his *Op. 1*, he was again induced to take up his pen and intrude himself upon the public as an author, which, but for these unfounded suspicions, he would certainly not have contemplated. He published his *Op. 2* in the year 1822, and has since that time continued to compose and publish.

NEBEL, or **NEBEL NASSOR**. (II.) The name given by the ancient Jews to their ten-stringed harp; as that of which David speaks in the *Psalms*. This instrument was used when Jehoshaphat obtained his great victory over the Moabites. It perhaps obtained its name from its resemblance to a bottle or flagon; it is first mentioned in the *Psalms* of David, and the invention of it is ascribed to the Phenicians. It was called a ten-stringed instrument. Josephus says that it had twelve sounds, (or strings,) and was struck or played upon by the fingers. He-sychius says it was "a harsh-sounding instrument;" but others highly commend it. Bochart says, "Not know the *nablat* then thou knowest nothing that is good." Ovid says that in playing it was turned about with both the hands—a circumstance which will be fully explained by the following short account of the *modern psaltery*. It is in the form of a triangle, truncated at top, strung with thirteen wire chords set to unison or octave, and mounted in two bridges on the two sides. It is struck, not with the fingers, as of old, but with a plectrum, or little iron rod, and sometimes with a crooked stick.

NEBENGEDANKEN. (G. pl.) Accessory and subordinate ideas.

NECELLINI, DOM. MARCO, chapel-master to the Duke of Parma about the year 1670, was in high repute as a composer.

NEEFE, CHRISTIAN GOTTLOB, chapel-master and court organist to the Elector of Cologne, at Bonn, was born in 1748 at a village in Saxony. He first studied the law at Leipsic, and at the same time received instructions in music from chapel-master Miller, under whom he made such progress, that he at length decided on following the musical profession, for which an opportunity presented itself, by some of his compositions for the German comic opera at Leipsic being performed and so much applauded, that the situation of conductor of the orchestra at one of the theatres of that town was soon after offered to him. After holding this place several years, he accepted the offices of court organist at Bonn, and conductor of the orchestra at the Theatre Grossman in that town. In 1785, the old Elector of Bonn, who had always paid the theatrical company out of his privy purse, died; in consequence of which Neefe lost his salary, and was obliged to supply by other means this diminution of income. He therefore quitted the theatre altogether, and commenced business as private teacher of music; in which occupation he soon met with a wide scope amongst the first families at Bonn. He now appeared for some years to be tolerably well off, when the new elect-

or again established a court theatre, at which Neefe regained his former situation of conductor, and his wife hers, as an actress. This obliged him to give up teaching, and again devote all his time and exertions to the theatre. Meanwhile the French war broke out. The enemy approached nearer every day, the theatre was shut up, and his salary lost a second time. About this time he took his eldest daughter to Amsterdam, as a singer in Humnius's company, there being no prospect left for her at Bonn; and he himself wished to have accepted a temporary engagement with that company as leader, could he have obtained the necessary leave from the elector. However, he was obliged by the court to remain at Bonn, to see it occupied by the French, who first appointed him a magistrate, and afterwards, on his request, actuary, in which capacity he, at least, received coin instead of paper money. Yet this resource, too, lasted but a little while, for himself, administration and all, were cashiered at a moment's notice. The disbanding of Humnius's company, about this time, compelled his daughter to quit Amsterdam and engage with Bessau, of the Dessau court theatre, who, having lost the leader of his band in 1796, gladly accepted the offer of Neefe's services in this situation. He accordingly set off with his family for Leipsic, where he obtained a regular discharge from the elector, who happened at the time to be there, and proceeded to join the company at Dessau. There he had just begun to look for the enjoyment of better times, having been appointed in 1797, besides *chef d'orchestre* at the theatre, conductor in the prince's chapel at the court, when a cough of a few days' duration suddenly put an end to his life in 1798. Of his works we can mention "Musical Intelligence from Munster and from Bonn," (in the thirty-eighth number of the Berlin Musical Gazette.) This article, as well as that in Cramer's Magazine, may serve the contributors to periodical publications as models in musical criticism. "Thirteen Variations of *Das Frühstück schmeckt viel besser*, &c., (Breakfast tastes better, &c.,) for the Harpsichord," Bonn, 1793; "Six Variations of the March in the *Zauberflöte*, for the Harpsichord," Bonn, 1793; "*Fantasia per il Cembalo*," Bonn, 1798; "Allegories and Visions of Herder harmonized," Leipsic, 1798. This was his last composition. Amongst the operas which he arranged for the harpsichord, there are, besides several of Mozart's, the "Two Anthonys," and "*Klementin*."

NECK. That part of a violin, guitar, &c., extending from the head to the body, and on which the finger-board is fixed.

NEGINOTH. A word fixed at the head of certain of the psalms, and supposed to announce the particular tune to which they were to be sung. Answering to the modern *giving out*. See that expression. Neginoth was also the name given to ancient stringed instruments.

NEGRI, GIUSEPPE, musician in ordinary to the Elector of Cologne, at the beginning of the seventeenth century, was born at Verona. He published "*Madrigali e Arie*," Venice, 1622.

NEGRI, MARCO ANTONIO, a composer, born at Verona, also flourished about the begin-

ning of the seventeenth century, and published "*Salmi à 7 voci*," Venice, 1613.

NEGRI, MARIA CATARIÑA. An Italian singer, born at Bologna. She sang at the opera in London, under the direction of Handel.

NEGRI, DOM. FRANCESCO, an ecclesiastic and pupil of Antonio Lotti at Venice, about the year 1740, was eminent in his time as a performer on the harpsichord and violin. At his death he left several motets, cantatas, and instrumental pieces of his composition.

NEHILOTH. Ancient wind instruments.

NEHRLICII, JOHANN PETER THEODOR, professor of the harpsichord at Moscow, in 1798, was born at Erfurt in 1770. Endowed with a flexible tenor, he manifested, at a very early age, an extraordinary genius for music, on account of which he was, as he went to the grammar school in the above town, at the same time placed under the direction of the music director Weimar. That gentleman soon advanced him so far in singing, that already, at the age of eleven, he handed him over to Chapel-master Bach at Hamburg, as a treble singer. It was there that he formed himself, in the strictest sense of the word, on the harpsichord; for, after an interval of twenty years, his manner, even in his own compositions, still partook remarkably of the Bach school. However, both he and his master were but too soon disappointed by the loss of his treble voice, when he was obliged to return to Erfurt. He then took pains, by a social intercourse with the two eminent organists, Kittel and Haesler, to extend the solid information he had already acquired, whilst at the same time he began to feel the necessity of a more competent knowledge of several instruments. His great love for the science suggested to him, indeed, the shortest, but at the same time the roughest and most laborious way of acquiring this additional knowledge, namely, to articulate himself for five years to the town musician of Gottingen. It truly required all the enthusiasm with which Nehrlich was inspired, to persevere in the science under such depressing circumstances. Yet he not only persevered, but also availed himself of every leisure moment to study and practise in his garret the most abstruse rules of counterpoint. "As an admirable proof of this," says Gerber, "I have now before me a printed Gottingen concert bill of the 26th of January, 1793, which mentions a concerto for the harpsichord of Nehrlich's composing, to be executed by himself; and in a note of Dr. Forkel's he says, among other things very much to the purpose, and in Nehrlich's praise, 'Here the composer has not only developed the whole range of his ideas, out of the theme chosen for each division, without the least falling off either of melody or modulation, but like a true musical desperado he even overleaps these boundaries, by retaining the same theme through all the three divisions of his concerto, still modifying it, with peculiar scientific dexterity, and in a most interesting manner—a feat of skill which probably many esteemed composers would find it difficult to imitate;' the more so, as it appears that, on this occasion, the theme was not selected by himself, but given him, at his par-

ticular request, by Dr. Forkel. If this attempt should savor a little of school pedantry, let it be remembered, it is by a professor who has to reproach himself with such subtleties only in his youth; though, if such a one possess genius, the public need not fear any thing that is dull from him." After Nehrlich had faithfully served his apprenticeship at Gottingen, he got by Haesler's recommendation, the situation of music master in a gentleman's family at Dorpat, in Esthonia: here, being comfortably settled, he followed his scientific pursuits with great spirit, writing, chiefly for practice, a number of variations on Russian and French songs, some of which he occasionally sent for revival to his friend Haesler, who was then at St. Petersburg. Thence arose the circumstance of one set of these pieces being most unexpectedly returned to him in print. It was his "*Airs Russes var. pour le Clav.*," Op. 1, which had been published by Gerstenberg, at St. Petersburg, according to the directions of Haesler. In this way his friend certainly afforded him an agreeable surprise, though, had it been in his power, he would have made the work undergo many alterations and improvements previous to publication. This first essay was, however, well received; so much so, indeed, that the publisher desired the author to send him more pieces of a similar kind, which he accordingly did. Some years after this, Nehrlich yielded to Haesler's request, and joined him at Moscow, in which city he soon got a sufficiency of teaching in the first families. Of his even then greatly accumulated stock of manuscripts, only the following were in print in 1793: "*Airs Russes*," Op. 1, Petersburg, 1795; "*Airs Russes avec Vars. pour le Clav.*," Op. 2; "*Fantaisie et Chanson Russe avec Var. pour le Clav.*," Op. 3, Moscow; "*Six Leçons pour le Clav.*," Op. 4, Moscow; "Twenty-four short Preludes in all sharp and flat Keys," Op. 5, 1793; "*Fantaisie et Chanson Russe avec Var.*," Op. 6, St. Petersburg, 1802; and "Twenty-five Spiritual Odes and Hymns from Gellert, with Accompaniments for Piano-forte," Op. 7, Leipzig; "Variations to the Air '*Die Katze lasst die Mauseu nicht*,'" "Variations to the Air '*God save the King*.'"

NEIDHARDT, JOHANN GEORG, was born at Bernstadt, in Silesia, and resided, in 1706, at Jena, as a student of divinity. It was at that period that he first made himself known as an author of music. He subsequently became chapel-master at Königsberg. His principal works are entitled, "The best and easiest Temperature of the Monochord," Jena, 1706; "*Sectio Canonis Armonici*," Königsberg, 1724; and "The seven Penitential Psalms."

NEILSON, LAURENCE CORNELIUS, was born in London, and at the age of seven accompanied his father and mother to the West Indies, where he buried the former, who was born at Copenhagen, and with the latter returned to his native land, after the family had suffered severe losses in a turtle fishery concern. His musical career began in 1785. Valentine Nicolai (whose piano-forte music previously, and at that day, was much esteemed) was the only master he ever studied under; after which he attended professional schools and private families in Nottingham and Derby, and was organist for two years

at Dudley, in Worcestershire. That situation not answering his wishes, he left at the earnest entreaty of friends, and returned to Nottingham. During his residence there he weekly visited Derby, and, for twelve years, the celebrated seminary conducted by the Misses Parker, at Ashbourne; when, on the death of Samuel Bower, (a worthy man and eminent musician,) organist of Chesterfield, he succeeded to his engagements in that town and neighborhood; but, through the interested motives of Mr. Bower's daughter, was deprived of the organ, although her father had made her a liberal settlement, accompanied by a command, "that she should have nothing to do with the organ or teaching, as it would be an object of consideration to his successor." He dying in 1808, Neilson gave up the former place, and, though greatly disappointed, continued at Chesterfield. One of Neilson's sons was a pupil at the Royal Academy of Music, Hanover Square, being one of the ten elected on the commencement of that establishment; which, from the assistance of most able masters, together with the excellent order and regularity with which it was attended and conducted, gave reason for a favorable anticipation of its results. The following publications are by L. C. Neilson: "Three Sonatas for the Piano-forte," dedicated to Miss Emes, (Preston.) "A Sonata for the Piano-forte," dedicated to Mrs. Smith, (Preston.) "Twelve Divertimentos for the Piano-forte," (Preston.) "Three Original Duets, Flutes," (Preston.) "Three Sets, twelve each, from favorite Airs, ditto," (Preston.) "Six Numbers Flutist's Journal," (Preston.) Song, "When fortune reigns," sung by Mrs. Harrison, (Preston.) "Several single Pieces and Songs," (Preston.) "A Set of Marches, Waltzes, and Dances, for the Harp or Piano-forte," dedicated to Mrs. Musters, (Clementi.) "Twelve Duets for Flutes," arranged from several airs, (Clementi.) "A Book of Psalms and Hymns," selected, composed, and dedicated to the Reverend G. Bosley, (Goulding.) "Single Pieces and Songs," (Goulding.) Song, "What has art with love to do?" sung by Mrs. Hliff, (Relffe.) "O, give thanks," part of the 107th psalm, composed as a duet and also as a trio, for voices; marches, rondos, songs, and glees, out of print, (Preston.)

NEKEB, or CHALIL, which has been considered to be pipes by most translators, is supposed to have been the flute and hautboy.

NEK. (L.) In the.

NELVI, GIUSEPPE MARIA, of Bologna, published in 1723, conjointly with Caroli, the music of the drama "*Amor nato tra l' ombra*," also, the following year, the opera of "*L' Odio Redirico*."

NENNA, POMPONIO, an Italian contrapuntist at the beginning of the seventeenth century, rendered himself celebrated by his madrigals. Padre Martini, in the second volume of his history, cites the works of Nenna, of whose madrigals for five voices, eight books were published between the years 1609 and 1631.

NERI, or NEGRI, MASSIMILIANO, flourished as organist and composer to the Church of St. Mark, at Venice, about the year 1671. He published, in that city, "*Sonate e Canzoni à 4 Stromenti da Chiesa e da Camera con alcune corren-*

ti," Op. 1. His second opera consisted of sonatas for from three to twelve voices.

NERI, SAN FILIPPO DI, an ecclesiastic, founder of the order of the Oratory at Rome, was born at Florence in 1515, and died at Rome in 1595. In his chapel he first introduced a more artificial kind of music than the plain *canto fermo*, or choral, which had been customary in the mass. This was called, after the chapel and order of its founder, *oratorium*; and so San Filippo Neri has been commonly, though improperly, considered the inventor of that form of sacred musical drama called oratorio.

NERUDA, JOHANN GEORG. Chamber musician and violinist in the chapel at Dresden, where he was employed more than thirty years. He was an excellent performer and a good composer. Of his numerous compositions there have only been printed "Six Trios for the Violin," 1763.

NERUDA, JOHANN CHRYSOSTOMUS, brother to the preceding, was born in Bohemia, in 1705. He was an excellent violinist, and first resided in Prague, but afterwards retired to a monastery, where he died in 1763.

NERVIUS, LEONARDUS, a Capuchin monk and composer, flourished in the beginning of the seventeenth century, and published at Antwerp "Ten Masses for 4, 5, 6, and 7 voices," 1610, and "*Cantiones Sacre*," for eight voices, 1623.

NESER, JOHANN. Born at Wiesbach, in Germany, 1570. He published in 1619 a work for the music schools of his country, entitled "*Hymni Sacri*."

NETE. The name given by the ancient Greeks to the fourth, or most acute chord, of each of the three tetrachords which followed the first two, or the deepest two.

NETE DIEZEGUMENON. In the ancient music, the final or highest sound of the fourth tetrachord, and the first or gravest of the 5th.

NETE HYPERBOLAEON. The last sound of the *hyperbolaeon*, or highest tetrachord, and of the great system, or diatrem, of the Greeks.

NETE SYNEMMENON. The name by which the ancients distinguished the fourth or most acute sound of the third tetrachord, when conjoint with the second.

NETH, JOHANN MARTIN, organist in Holstein, was born there in 1683. He was pupil of a celebrated organist named Kosenbusch, to whose situation he afterwards succeeded. He died in 1736.

NETOIDES. The name given by the ancients to the sounds forming the higher portion of their scale, or system.

NEUBAUER, FRANZ CHRISTIAN, concert master to the Princess of Schaumburg, at Bückeburg. Some fragments of the short and unsettled life of this professor are all that can be met with. He was a Bohemian, and low born, but had the good fortune, early in life, to fall into the hands of a worthy master of a grammar school, who discovered his talents, and knew how to cultivate them; so much so, that, when he left the seminary for Prague, he possessed, besides his particular skill in music, a tolerable faculty of expressing himself in the Latin tongue. He got from thence to Vienna, where he assiduously strove to perfect himself as a composer, by means of his acquaintance with Haydn, Mozart, and Wranitzky. When still a youth, he entered the lists as a composer, and did so with such ease

and facility, that he would frequently sit down at his desk in the public parlor of the inn where he happened to lodge, and write away, amidst the deafening noise of a numerous company. When not quite thirty, he entered, in 1790, into the Prince of Weilburg's service, as chapel-master; but when that chapel was broken up, on account of the French revolutionary war, he emigrated to Minden, in Prussia, where he staid till he got acquainted with the Princess of Schaumburg, who not only gave him a gracious reception at Bückeberg, but also granted him leave to perform his compositions in the chapel there. Bach, who was then still at the head of the chapel, soon perceived how greatly superior the lively youth was to himself in the management of instrumental composition, although his frequent violation of the rules of the science did not escape the old professor's observation. Of course, the old man, seeing himself thrown into the background, with all his good nature, could not refrain from some confidential censure of Neubauer's composition. Neubauer soon heard of this, and as all his fortune depended on his maintaining his credit with the public as a composer, his feelings were naturally much hurt at Bach's criticism. His giving vent, however, to his feelings in violent invectives, and by challenging the old man to a duel about a question of crotchets and quavers, only shows his low education.

On Bach's death, Neubauer got in full possession of his place, and was appointed by the princess conductor of her concerts. He then married a young lady of Bückeberg; but he had scarcely enjoyed this happiness six months, when he, too, was carried off to the grave. His death took place in 1795. Most probably he accelerated it by the intemperate use of strong liquors; for as he was wont, when in the neighborhood of the Rhine, to excite his imagination with the juice of the grape, the want of it afterwards compelled him to have recourse, for that purpose, to brandy. Neubauer was interred by the side of his rival. It is impossible to deny genius, fire, and invention to his works. But as to the opinion maintained by some, that his greatest forte lay in his symphonies, they whose ears have been regaled with Haydn's sublime masterpieces, will hardly subscribe this eulogium, since Neubauer's symphonies, compared to Haydn's, appear more to be written in the quartetto and divertimento style, and may be called rather pretty than beautiful. In vain we seek in them that matchless, sublime, unabating effect which captivates the hearer in Haydn. Neubauer's style of symphony rather partakes of the trifling and the playful. Probably he succeeded better in quartets, and other sonata-like compositions. Those of his works which are held in the greatest estimation are, "*La Bataille*," his principal symphony; the great effect of which, however, must be attributed to every thing rather than the correctness of its composition. His "*Cantata on the Taking of Mayence*," to which, notwithstanding his incompetent knowledge of the language, he wrote German words, and that in so superior a manner, that no poet could venture to alter any of them. His "*Harmony for Wind Instruments only, accompanied by a Violin and a Bass*," in which all the intricacies of wind instruments, calculated

for the utmost effect, are intended to be concentrated in one piece. His remaining works consist of symphonies for orchestra, violin quartets, duos and trios for violins and flutes, concertos for violin and for flute, sonatas, songs, cantatas, &c.

NEUBAUER, JOHANN. Of this composer, residing at Vienna, the following manuscript works are mentioned in Traeg's Catalogue, Vienna, 1799: "*Concerto à 2 Clar. Principali con Acc.*," "*Il Notturmo à Fl. Trav., Fl. d'Amore, 2 Violo, 2 Cor., e Ve.*," and "*Duetto à Corno e Viola.*"

NEUKOMM, SIGISMUND, born at Salzburg, in 1778, commenced his musical education when six years of age. His first master was an excellent organist in Salzburg, named Weissauer, who, having to attend to several churches, soon employed his pupil as an occasional substitute. At the age of fifteen, Neukomm was nominated organist to the University of Salzburg, where he also studied the sciences, &c., his education being carefully attended to by his father, who was a writing master in the university. His mother being related to the wife of Michael Haydn, this professor, with a kindness characteristic of his disposition, offered to give Neukomm lessons in composition without accepting any remuneration from his pupil beyond his occasional assistance in the performance of his duties as court organist. At the age of eighteen he was engaged at the court theatre as chorus master of the opera; and it was only during his fulfilment of this occupation that he took the resolution to devote himself exclusively to music. In 1798 he quitted Salzburg, and went to Vienna, where the celebrated Joseph Haydn received him as a pupil, on the recommendation of his brother Michael. He profited by this inestimable good fortune during seven years, always endeavoring in some degree to merit the kindness of his master, who treated him like a son. In 1805, he undertook a journey to St. Petersburg, where he was soon engaged as chapel-master and conductor of the orchestra at the German theatre. A serious illness, however, obliged him to leave Russia.

In 1807 he became a member of the Academy of Music at Stockholm, and, in 1808, of the Philharmonic Society at St. Petersburg. During his residence in the latter city and in Moscow, he brought out many works of his own composition with great acceptance; but it was not until 1803 that he was induced, by the advice of the connoisseurs, and especially of his master, Joseph Haydn, to publish anything. In 1809 he went to Paris, where he became intimate with men like Cherubini, Gretry, and Cuvier, and lived entirely devoted to the arts and sciences. His patroness and motherly friend, the Princess of Lorraine-Vaudémont, had introduced him to Prince Talleyrand, who soon after not only gave him an apartment in his hotel and a place at his table, but treated him, in all respects, as a member of his own family. In 1814 he accompanied this prince to the congress at Vienna, where, at the funeral ceremonies in memory of Louis XVI., his vocal requiem was performed by a choir of three hundred singers, in the St. Stephen's Church, before all the emperors and kings. In 1815 he was named Chevalier of the Legion of Honor, and ennobled by Louis XVIII., and, after the congress was over, returned with Talleyrand to Paris

In 1816 he accompanied the Duke of Luxembourg, who went out as envoy extraordinary to Rio Janeiro. There he was warmly received by the directing minister, Count da Barca, and presented to the king, who settled on him a rich pension, which Neukomm, on the breaking out of the revolution in 1821, voluntarily renounced, and followed the king to Lisbon, where he was made knight of several orders. In October of the same year he returned to Paris, and resumed his residence with Prince Talleyrand. In 1826 he spent eight months in travelling through Italy, and again returned to Paris. In 1827 he made a tour through Belgium and Holland, and, in 1829, through England and Scotland, where he was most warmly received by Sir Walter Scott and other distinguished men. Returning to Paris, he accompanied Prince Talleyrand, in 1830, on his embassy to England; and there he, for the most part, since remained, finding an agreeable and honorable sphere of action. He usually spent the unemployed autumn and winter months in visiting his friends upon the continent. In 1832 he went to Berlin, where one of his oratorios, "The Law of the Old Covenant," and several others of his compositions, were performed; from there he visited his friends in Leipsic and Dresden, and returned to London. In 1833-4 he made a second journey to Italy. The winter of 1834-5 he passed in Southern France, and made an excursion from Toulon to Algiers, to Bona, (the ancient Hippona where St. Augustine resided as bishop,) and to Bugia, on the north-west coast of Africa, whence he returned, by way of Paris, to London. In the year 1836 he had resolved to visit America, and pass about a year here. He had already taken a berth in a Liverpool packet, when an attack of fever compelled him to renounce the project. In Manchester, where he lived in an amiable and very friendly family, he soon recovered his full health and strength. His active nature would not rest; he made a journey to the southern part of Germany, and then to Frankfort on the Maine, where he remained several weeks. Then he travelled through Darmstadt, Heidelberg, Mannheim, Carlsruhe, &c., to Paris, to his old friend Talleyrand. In 1847 he was again in England. In spite of so much travelling and various experience of life, Neukomm composed an incredible number of works. Since his twenty-fifth year he has kept a thematic catalogue of his works, which contains the titles and themes, or first notes, of five hundred and twenty-four vocal compositions, (among which are sixty-seven psalms in various languages,) and two hundred and nineteen instrumental works; in all, seven hundred and forty-three works; and yet he composed many others which, in his travels, he forgot to set down. He is chiefly known, in this country, by his popular dramatic oratorio of "David," and by some of the songs which he has composed to words by Barry Cornwall.

NEUME. A term applied, by the old musicians, to *divisions* upon a single vowel at the end of a psalm or anthem, as a recapitulation of the whole melody. Sir Henry Spelman, however, says that the name *neume* was synonymous with the noun *note*, and that it simply implies an aggregation of as many sounds as may be conveniently uttered in one single respiration.

NEUMARCK, GEORGES, secretary of the

archives, librarian, &c., at Weimar, was born at Muhlhausen in 1621. He was a member of the *Fruchtbringenden Gesellschaft*, (Productive Society.) He published a didactic work on euposition, and also composed some songs. He is likewise said to have written the psalm, "*Wer nur den lieben Gott,*" &c. He died at Weimar in 1681.

NEUSCHIL, or NEYSCHIEL, JOHANN, court musician to the Emperor Maximilian II., was a celebrated performer on the trumpet, so much so that the emperor ordered Albert Durer, the painter, to introduce his portrait in the picture he was about to paint of a triumphal entry of the emperor.

NEUSZ, HEINRICH GEORG, born at Elbin Gerorda in 1654, was an ecclesiastic. It was not till the fiftieth year of his age that he began to study music, and then only with a design of ornamenting the simple psalmody used in divine service with occasional discords and chromatic intervals. He first took lessons in composition from the singer Bokemeyer, at Wolfenbittel; and what is remarkable, he received these instructions only by means of a correspondence carried on between himself and his master. Having made some progress, he arranged many psalms for four voices, and sent them to Bokemeyer for correction. On their being returned, he introduced them in his church, when they proved so effective as to render the singing of his congregation much more attractive than that of the surrounding churches. He next hazarded, in 1712, the composition of a piece of music on the marriage of a nobleman, in which he sang himself. This was also successful. He wrote, also, the following works: "Of the Use and Abuse of Music," 1691; "*Musica Parabolica*," a tract; and "A Treatise on Music." The two latter were left in manuscript at his death.

NEVEU, JOSEPH, BARON DE. A pupil and friend of N. Piccini, who died, as is well known, in indigent circumstances, and on whose grave, at Passy, Neveu caused a monument of black marble to be erected in 1800. Professional musician, as the French dictionary calls him, he was none, but what Ginguéné terms *un amateur instruit*. This mistake is the more excusable, as there was, about the same time, (1788,) another Neveu, pianist to the Count d'Artois, at Paris, who is most likely the author of the works published in that name. Whether this be the same Neveu who was appointed, in 1792, professor of the *belles lettres* at the *Lyceé des Arts* at Paris, and who there gave public lectures on drawing, painting, sculpture, engraving, music, dancing, and the drama, is again doubtful. Gerber rather thinks that this last professor was the above-named Baron de Neveu, the amateur. The following works may be met with in the name of Neveu: "*Trois Potpourris d'Airs connus pour le Clav.*," Paris, 1788, and "*Ariette var. pour le P. F.*," Augsburg, 1799.

NEWBOLD. An able professor of the violin, resident at Manchester. He performed at the York Festival in 1823.

NEWTON, JOHN, doctor of divinity, and rector of Ross, in Herefordshire, a person of great learning and skill in the mathematics, was the author of the "English Academy, or a brief Introduction to the seven Liberal Arts," in which

music, as one of them, is largely treated of. It was published in octavo, in the year 1667.

NEW TREMONT TEMPLE. The old Tremont Temple, Boston, was burned down on the night of March 31, 1852; and immediately preparations were made for building a new one. The new Temple is immense; it covers an area of ninety four feet front by one hundred and thirty-six feet deep, and is seventy-five feet high in front. The walls are of ample thickness and strength, varying in thickness from thirty-six inches to sixteen inches, and, in accordance with the most approved method of building, hollow. This insures greater proportional strength, dry inside walls, a saving in furring and lathing — by admitting of plastering upon the bricks — and greater resonance and adaptation to music in the walls of the large halls. This method obviates, also, to a very considerable extent, all danger of fire spreading, as it often does, and did to the destruction of the old Temple, between the plastering and the wall. Wherever in this new building it has been found necessary to use furring and plastering, layers of brick have been placed to cut off all chance of fire spreading between the plastering from one story to another. The floors, too, have a thick coating of mortar between the under and upper courses of boards, as a protection against the spread of fire, and to prevent the transmission of sound. The main Hall is one hundred and twenty-four feet long, seventy-two wide, and fifty feet high. Back of the stage, in a recess, is the organ, one of the largest ever built in the United States, placed there by the builders, Messrs. Hook.

NEYDING, a musician at Erfurt, was born in 1722. He was a good violinist and harpist, and left many vocal and instrumental compositions in manuscript. He died in 1788.

NICAISE, ABBÉ CLAUDE, a native of Dijon, who died in 1702, wrote "*Dissertation de Veterum Musica.*" It was not printed.

NICETIUS, or **NICETAS, ST.** Dr. Forkel observes, in the second volume of his history, p. 197, that this Nicetius is said to be the real author of the hymn "*Te Deum laudamus,*" commonly ascribed to Ambrosius.

NICHELMANN, CHRISTOPH, chamber musician and professor of the harpsichord to the King of Prussia, was born at Treuenbriezen in 1717. His first masters were Bubel, Schweinitz, and Jappe. In 1730 his father sent him to St. Thomas's school at Leipsic, where he continued the study of music under the great Sebastian Bach, then director in that school. The eldest son of Bach was at the same time his principal teacher on the harpsichord, and directed his first essays in composition. Being desirous, three years after this, to familiarize himself with the dramatic style of music, by hearing the compositions of the best writers for the theatre, and not being able to satisfy this desire at Leipsic, where there was not then any opera, he resolved on a journey to Hamburg, in which one of his school-fellows, by the name of Boehmen, agreed to accompany him. Though the opera of this city was on its decline, it was still supported by the chapel-masters Keiser, Telemann, and Mattheson, and several distinguished singers were attached to it. At Hamburg, Nichelmann became inti-

mately acquainted with Keiser, who, with the other two chapel-masters above mentioned, gave him all the information he required on the subject of dramatic music, till the year 1738, when, after a short visit to his native place, he proceeded to Berlin. The organization of the Chapel Royal at Berlin, and the establishment of the opera in 1740, furnished him with a new opportunity of increasing his musical knowledge. He also, at this time, profited by the lessons of Quantz in counterpoint, and Graun in vocal composition. It was now that he wrote his sonatas for the harpsichord, which were afterwards published in two volumes. The death of his father having deprived him of the pecuniary assistance which he had previously obtained from home, obliged him to turn his mind seriously to his establishment in life. The appointments at the Royal Chapel in Berlin being all filled up, he decided on a journey to England and France. Scarcely, however, had he reached Hamburg, when he received orders from the King of Prussia to return to Berlin, and the promise of a place in the chapel. Having immediately obeyed this mandate, he was nominated second performer on the harpsichord in the Chapel Royal. Amongst the compositions which he wrote during the time he filled this situation, we can mention only the pastoral, of which the king himself composed the symphony and two ariettes, dividing the composition of the remaining ariettes between Nichelmann and Quantz. In 1749 he wrote his work "*Die Melodie.*" This was published at the time of the controversy respecting the comparative merit of French and Italian music, and called forth several virulent replies, which, in their turn, were again answered. In 1756 Nichelmann obtained his discharge from the Chapel Royal, which he had solicited from the king, and after that period resided privately at Berlin till his death, which took place in 1761.

NICHOLSON, RICHARD, organist of Magdalen Church, Oxford, was admitted to the degree of music in that university in 1595. He was the first professor of music at Oxford under Dr. Heyther's endowment, and was the composer of many madrigals. He died in the year 1639.

NICHOLSON, CHARLES. The father of this eminent flutist, who died 1737, was also an admirable performer on that instrument, and dedicated much time to its improvement. In this he was eminently successful; and, at his death, left his son in possession of a knowledge of the principles on which he proceeded, and a genius highly capable of carrying those principles into execution. The rich, mellow, and finely-graduated quality of tone which he produced throughout the whole compass of the instrument, sufficiently evinces the success which has attended his exertions. Nothing could more clearly show the mastery this artist obtained over the grand impediments of the instrument than his performance, in 1822, at Covent Garden Theatre, where he executed an adagio without the accompaniment of a single instrument; and such was his complete success, that an encore was demanded by the whole house with acclamation. In pathetic movements, indeed, he had no rival. Nicholson has published numerous works for his instrument, amongst which are "*Preceptive Lessons for the Flute;*" "*A Volume of Studies, con-*

isting of Passages selected from the Works of the most eminent Flute Composers, and thrown into the form of Preludes, with occasional Fingerings, and a Set of original Exercises;" "Twelve select Melodies, with Variations for the Flute and Piano-forte," in conjunction with Burrowes; "O dolce concerto, with Variations for Flute and PIANO-forte," also with Burrowes; "Four Volumes of Flute Beauties, consisting of forty-eight Numbers;" "Twelve select Airs, with Variations as Flute Solos, with P. F. Accompaniment;" "Le Bouquet, or Flowers of Melody;" "Potpourri for Flute and P. F., introducing 'Life let us cherish,' 'Auld Robin Gray,' and favorite Quadrille, 'La Matilda,' as a Rondo;" "Six Fantasias;" "Mayseder's Polonaise, for Flute and P. F.," and "Introduction and six Variations to 'The Fall of Paris,' with an ad libitum for the P. F."

NICLAS, J. A. This musician, who was born in Suabia, published "*Choix d'Airs de plusieurs Opéras*," Leipsic, 1790. One half of the French opera songs arranged in this work for the harpsichord, and sixteen in number, are of the private secretary Hrinzky's composition. The remainder are by Paesicello, Salomon, Grétry, and Gluck. Amongst them is also a chanson by Madame Aurora, first singer at Rheinsburg. The publisher of this collection was at that time musician in ordinary to Prince Henry of Prussia at Rheinsburg.

NICOLAI, DAVID TRAUOGOTT, court organist of St. Peter's Church at Gorlitz, was born in that town in 1733. He was one of the most celebrated performers on the organ in Germany, in the latter half of the last century, especially as an extempore player, and owed his great proficiency chiefly to the instructions of his father, B. T. Nicolai, who was also celebrated on the same instrument. At the early age of nine, young Nicolai was able to perform with *éclat* Sebastian Bach's most difficult compositions. His skill in mechanics was also so great, and especially his knowledge of organ building, that he was sent for from all parts of the surrounding country to inspect newly-built or repaired organs. The love of his native place, and above all his great attachment to his organ, rendered all calls to more lucrative situations fruitless. As a reward for this attachment and loyalty, he obtained of the court, in 1755, the appointment of electoral court organist, and of the town of Gorlitz an annual increase of salary of twenty-five dollars for life. His activity never relaxed until his death, at the age of sixty-eight. His son Carl Samuel Traugott, bachelor of law, was permitted, in 1795, to act as his adjunct; so that the third generation of that celebrated family of organists was, in 1812, serving the same organ.

NICOLAI, DR. ERNEST ANTON, a doctor of medicine and philosophy, born at Sondershausen in 1722, published, in 1745, a dissertation entitled "The Union of Music and Medicine." He died at Jena, in 1802.

NICOLAI, FRIEDRICH, a bookseller at Berlin, was born in that town in 1733. He wrote a tour, in which he made many observations on music, proving himself to possess an extensive knowledge of the art. The account which he gives of the state of music at Vienna about the year 1770, but especially his remarks on Gluck,

still deserve to be read. There are also in his work some interesting anecdotes of the Berlin musicians. In 1799, Nicolai was elected a member of the Royal Academy of Sciences at Berlin. This author, says Gerber, evinced clearly by a jest, that he might also have been a composer; the proof of which is found in two small pamphlets of ballads, which he published under the following quaint title, in obsolete German: "A nice little Almanack, full of pretty, genuine, and pleasant Ballads, merry Carols, and plaintive Ditties of Murders, chanted by Gabriel Oddfish, whilom Ballad Singer at Dessau, and edited by Daniel Cleverly, Shoemaker, at Ritznueck on the Elbe, 1st year," Berlin and Stettin, published by Friedrich Nicolai, 1777. "Second Year, ditto," 1778. The following tunes, and droll enough they are, Nicolai composed himself. In the first year of the above work, the songs numbered 16, 18, 21, 22, 23, and 28, also the chimney sweeper's song, No. 29, which is one of the best in the collection; and in the second year, Nos. 16, 17, 29, 30, and 31. The remainder are partly old tunes, adapted to these songs, and partly the compositions of Chapel-master Reichardt. "To observe Nicolai at his own house," continues Gerber, "where you meet every where with traces as well of the owner's refined taste as of his opulence, is exceedingly gratifying. On one side you pass through a concert room into his study, the walls of which are covered with portraits of all the celebrated authors, amongst which those of first-rate composers are not omitted. On the other hand, you behold a piano, and opposite to that a museum of engravings in huge portfolios, comprising also a collection of portraits of eminent musicians, not very numerous indeed, but no less interesting on that account. The most valuable object, however, to be met with there, is himself: his excellent judgment, and agreeable conversation concerning the sciences in general, scientific men, and their works, which one may look for in vain amongst a thousand professors, appears to him quite natural. Greatly as his writings abound with useful matter on those subjects, it is in conversation only that his vast erudition, and nice discrimination in every art and science, can be duly appreciated. The nobility, and even princes, are entertained at his hospitable board; when they are sure to find, besides the profusion of luxuries they are used to, something much more rare, namely, a society more remarkable for the capacity of their brains than for that of their stomachs. F. Nicolai, moreover, enjoyed the gratification of seeing his youngest daughter make such progress in singing, that, in 1797, when about fifteen years old, she ranked amongst the most distinguished members of Pasch's excellent Conservatory." This superior man died at Berlin in 1811, aged seventy-eight.

NICOLAI, JOHANN GEORG, organist at Rudolstadt, published some organ and church music. He died there in 1790.

NICOLAI, JOSEPH GOTTFRIED, son of the preceding, was born at Rudolstadt. He studied divinity at the University of Jena in 1794, and returned in 1797 to his native place. Being a clever performer on the harpsichord, and a great amateur of fugues, he removed to Offenbach on the Maine, where he resided, about 1799, as

teacher of the harpsichord, and published the under-mentioned works for that instrument. At length he engaged, towards 1802, as tutor to the family of Mr. Von Stockum, privy councillor to the King of Prussia, at Nuremberg, where he performed at a concert, in the same year, a grand concerto of Dussek's, and a sonata and fantasia of his own composition, on the piano-forte. His published works are "*Sonate pour le Clav. avec F.*," Op. 1, Offenbach, 1797, and "*Trois Sonates pour le Clav. avec oblig.*," Op. 2, Offenbach, 1799.

NICOLAI, JOHANN MARTIN, brother of Johann Georg Nicolai, was chamber musician at Meiningen about the year 1755. He published at Nuremberg a work entitled "Exercises for the Harpsichord."

NICOLAI, JOHANN GOTTLIEB, son of the preceding, was director of the concerts and organist at Zwoll. He composed the operetta called "*Der Geburtstag*;" also several other operettas and practical works for the harpsichord and other instruments. In the year 1799 he advertised at Zwoll "Six additional Sonatas for the P. F., with Accompaniment of a Violin and Bass," Op. 12. He died at Zwoll in the beginning of 1801. Amongst his earlier productions the following deserve to be noticed: "*A, B, C, pour le Clav.*," ninety pages, and "*Vingt-quatre Sonates pour le Clav. sur les Tons de la Musique, Seconde Partie*," seventy-six pages, both for the use of students.

NICOLAI, JOHANN MICHEL, musician to the court and composer at Stuttgart, flourished in the seventeenth century, and published the following works: "Spiritual Harmonies for three Voices and two Violins," Frankfort, 1669; "Twelve Sonatas for two Violins and Viol da Gamba or Bassoon," Augsburg; "24 *Capricci à 4 F. e B. C.*," Augsburg, 1675; and "A Third Volume ditto," 1682.

NICOLAI, or NICOLAY, VALENTINE. A popular composer for the piano-forte, who resided many years at Paris. His writings were once in great request. "This, however," observes Dr. Burney, "may probably have been more owing to the sprightliness and pleasantry of his style, than to the depth or orthodoxy of his knowledge. Nearly all his works, but particularly his third opera of sonatas for the piano-forte, the first sonata of which was for many years taught in almost every school in the kingdom, had a very extensive sale. His piano-forte duets are considered to rank amongst the best of his works. In some of these he has displayed a very considerable share of good taste, ingenuity, and fancy." He died about the year 1799.

NICOLETTI, FILIPPO, an ecclesiastic and composer at Ferrara, flourished at Rome in 1620, as chapel-master. He published many madrigals and sacred compositions.

NICOLINI, GIUSEPPE, an Italian dramatic composer, produced in 1800, for the theatre at Milan, the opera buffa "*I Baccanali di Roma*," which has been successful in many towns in Italy. He has also written several other pleasing operas.

NICOLINI, FRANCESCO. Born at Venice about the middle of the seventeenth century. He wrote the words and music of the operas "*Ar-*

gia," "*Generico*," "*Eraclio*," and "*Penelope*" the success of which was the recompense of his double talent.

NICOLINI DI NAPOLI, or NICOLINI GRIMALDI. A fine contralto singer and excellent actor. He went to England in the year 1708, having been previously celebrated in Italy for about ten years. Sir Richard Steele, in No. 115 of the "*Tatler*," speaks highly of Nicolini's acting; and so much was his performance thought of, that the opera prices were raised on his arrival, he being considered the first truly great Italian singer who had performed in England. He sang in Handel's first opera of "*Rinaldo*." In the year 1712 he left England for Italy, as it was supposed, not to return. In 1715, however, he was again in England, and sang in "*Rinaldo*," when the opera had as great a run as at its first representation. Quanz, in his biography, says that he met with Nicolini at Venice, in 1726, when his singing was on the decline. We do not know the period of his death.

NIEDT, FRIEDRICH ERHARDT. A musical theorist and composer, who lived about the beginning of the last century. The accounts of him are but meagre and contradictory. For instance, Walther insists he was born in Thuringia, and Dr. Forkel at Jena; neither of them, however, is able to state the precise year of his birth; while Mattheson, who might have learned it of Niédtt himself, having had so much concern with his works, refers, in his "*Ehrenpforte*," (Triumphal Arch,) to Walther's "*Lexicon*." However, from all this the following may be elicited. About the year 1700, Niédtt practised as notary at Jena, but went soon after to Copenhagen, where his compositions gained the applause of the court; partly for which reason, and partly on account of his unguarded conversation, he was frequently exposed to the shafts of envy, until he died, towards 1717. Of his numerous, and some of them truly grand, compositions for the court of Copenhagen, nothing further has transpired. The publication of the following works he promoted himself: "Musical Guide, or Methodical Instructions, by means of which a Tyro in the noble Science of Music may so perfect himself in a short time, as to be able not only readily to play Thorough Bass, after a few plain rules, but likewise be able to compose various pieces, and be what is called a respectable Organist and Musician." Volume the first treats of thorough bass, and sight playing of the same, Hamburg, 1700. "Guide to Variations, or a Method of varying the Thorough Bass and the Numbers placed on the Notes, so as to form pleasing Variations, and to convert with ease a Thorough Bass Prelude into Ciacons, Allemandes, Courantes, Sarabandes, Minuets, Jigs, &c., with other useful Instructions," second volume, Hamburg, 1705. "A second improved Edition of the same Work, with Notes, and a Supplement of upwards of sixty Pieces for the Organ, by Mattheson," Hamburg, 1721. "Musical Guide," the third and last volume: this treats of counterpoint, fugues, motets, choruses, recitatives, and cavatius. "*Opus Posthumum*;" to this is added plain arguments, on which the right use of music, both in churches and elsewhere, is founded; it was edited by Mattheson, Hamburg, 1717. This third volume the author did not complete, nor did he

intend it, according to his plan, to be the last volume of the work. "Musical A, B, C, for the Use of Students and Teachers," Hamburg, 1708. "The German Frenchman, consisting of six Suites of Airs, namely, for three Hautboys or Violins, and a Bassoon or Violin, composed for the Amusement and Pastime of intelligent Lovers of the noble Science of Music," Copenhagen, 1708.

NIEDT, NICOL, clerk in a government office, and town organist at Sondershausen, about the end of the seventeenth century, may be ranked among the able sacred composers of that time. He died in 1700. Mattheson tells us, p. 112 of the "*Ehrenforte*," that his church music was in request as far as Silesia, but, on the other hand, informs us that he was so poor, that, according to a note in the Sondershausen church register, there was not enough money, after his death, to defray the expenses of his funeral. As he left neither wife nor child, and probably came to Sondershausen a stranger, his name has been long forgotten there. His work, perhaps the only good musical one ever printed there, bears the title of "Musical Relaxation for Sundays and grand Festivals, composed for five Voices and five Instruments," Sondershausen, 1698. This course contains a scriptural text for every Sunday and festival of the church, composed as a concerto, followed by an air for two sopranos and a bass, and concluded by a chorus.

NIEL, a composer at Paris, brought out at the Academy of Music, in 1736 and 1737, the two operas of "*Les Voyages de l'Amour*," and "*Les Romains*." This latter opera has been reset by Cambini, and was performed in 1776. Niel also brought out, in 1744, "*L'Ecole des Anans*."

NIELD. A celebrated tenor singer at the principal concerts and music meetings in England, since the commencement of the present century, and a very able professor of singing. He was long one of the greatest vocal ornaments of the Chapel Royal in St. James. Nield was generally considered as one of the most chaste and correct singers of that peculiar style of English national music called glees.

NIEMEYER, AUGUST HERMANN. Professor of theology at Halle, and born there in 1752. He wrote the words of several religious dramas, which were set to music by Rolle. His "Thoughts on Religion, Poetry, and Music" are to be found at the beginning of his drama entitled "Abraham," which appeared at Leipsic in 1777.

NIEMEZECK, C. T. By birth a Bohemian, professor of the harp, and musician in ordinary to the Emperor of Russia. When on his travels, he played at several concerts at Berlin, with applause; since which time his sphere of action remains unknown. Not so the following works by him: "*Thema, avec 3 var. pour la Harpe*," Op. 1, Leipsic, 1795; "*Thema, avec 7 var. pour la Harpe*," Op. 2, Leipsic, 1795; "*Sonate pour la Harpe*," Op. 3, Leipsic, 1795; and "*Sonate pour 2 Harpes*," Op. 4, Leipsic, 1795. In 1803 he again performed at Leipsic.

NIESER. A good German tenor singer. He performed at Frankfort in the year 1823. His graceful manner and general appearance were said

to be particularly adapted to the performance of Italian music.

NIKEEF, a native of Russia, distinguished himself, about 1801, in his country, (where all the psalms and choruses are sung without instrumental accompaniments,) as a superior composer of church music.

NINETEENTH. An interval consisting of two octaves and a fifth; the replicate of the twelfth.

NINTH. An interval containing an octave and a tone. Also, the name given to the chord consisting of the common chord with the eighth advanced one note.

NINI, GIOV. BATT. An excellent singer at Urbino, about the year 1700.

NISLE, JOHANN FRIEDRICH, born about the year 1780, was on his travels in 1805, and devoted himself entirely to composition, having no ambition to shine as a performer, although he was an excellent hornist, and his compositions evince him to have been no less at home on the harpsichord. The first little work by which he appeared before the public was entitled "Songs at the Piano-forte," Leipsic, 1798. These have since been followed up by several other works for the piano and for the French horn. In 1809, Nisle, with one of his brothers, also a musician, resided at Veret, in Ilungary.

NITSCH, PETER, a composer of the sixteenth century, published "German Hymns for Morning and Evening, likewise to be sung before and after Meals," Leipsic, 1643, and "German and Latin Hymns for four Voices," Leipsic, 1573.

NITSCH, IGNAZ, organist at Vienna in 1795, must be ranked amongst the able sacred composers; witness several of his choral masses and vespers.

NIVERS, GABRIEL, was one of the four organists of the chapel of Louis XIV., and also organist of the Church of St. Sulpice, at Paris. He published, in 1683, a tract, entitled "*Dissertation sur le Chant Grégorien*," written for the purpose of restoring the *cantus Gregorianus* to its primitive purity. This work had so much influence, that the Antiphony of the French church was republished according to his corrections, at the express command of the king. At the end of the dissertation are contained the forms of the offices, with the musical notes adjusted to rules laid down by the author. These are followed by a short treatise on the mode of singing according to the eight tones of the *cantus Gregorianus*, and the book is concluded with some select church services. The author appears to have been well skilled in ecclesiastical history, and the above work contains one of the best histories of church music that is extant. In the year 1697, Nivers published, at Amsterdam, "*Traité de la Composition de Musique*," and the two following works have been ascribed to him: "*Le premier Livre des Motets*," and "*Le premier Livre des Pièces d'Orgue*."

NOBLET. A professor of the harpsichord and organ, and member of the orchestra of the opera at Paris, between the years 1759 and 1760. There are of his composition a *Te Deum*, several cantatas, and other vocal pieces, as well for the

church as chamber; also some harpsichord music, which latter he published in 1756.

NOCETTI, FLAMINIO. A celebrated Italian contrapuntist of the sixteenth century, of whom Cerreto in his treatise, written in 1600, speaks highly, calling him, however, Nucetus. He probably published several works, though his "*Misse à 8 voc.*" is the only one known.

NOCHEZ. A pupil of the celebrated violoncellists Cervetto and Abaco. After having travelled in several foreign countries, and especially in Italy, he returned to France, was engaged at the comic opera, then at the grand opera, and at length, in 1763, was nominated chamber musician to the king. It is Nochez who compiled the article Violoncello, which is found in the second book of Laborde's essay. He died about the year 1800, having been previously pensioned, after a service of more than fifty years in the opera orchestra.

NODARI, GIOV. PAOLO, an Italian contrapuntist of the sixteenth century, is ranked by Cerreto, in the same honorable manner as the preceding Nocetti, amongst the most celebrated professors of his time.

NOELLI, GEORG, chamber musician, and professor of a musical instrument called the Pantaleon, to the Duke of Meeklenburg-Schwerin, about the year 1780, was nearly the sole person who arrived at eminence on that instrument, having been taught it by the inventor, the celebrated Pantaleon Hebenstreit. Noelli first studied counterpoint under Geminiani, and then at Dresden, during six years, under Hasse, and at Bologna under Padre Martini. He travelled through nearly all Europe, and was in London at the time that Handel was there. He was intimately acquainted with Emmanuel Bach, and some of his compositions are said much to resemble the style of that great master. He died at Ludwigs-lust in 1789. None of his compositions have been printed; but several of his symphonies, also some quatuors and trios for violin and flute, were left in manuscript in the music warehouse of Westphal, at Hamburg.

NOELS. Certain anticles, or songs of joy, formerly sung at Christmas, in the country churches in France. The name is derived from the Latin word *natalis*, and alludes to the nativity.

NOFERE, GIOV. BATTISTA, an Italian violinist, published, subsequently to the year 1763, as well at Amsterdam as at Berlin and in London, fourteen operas, consisting of trios, duos, and solos for the violin, and solos for the guitar.

NOINVILLE, BERNARD DE, published at Paris, in 1749, *L'Histoire du Théâtre de l'Opera*, in one volume octavo. This work went through two other editions in 1753 and 1757.

NOIRE. (F.) A crotchet. Called *noire*, from its black head; the crotchet being originally the minim with its head filled up. See **СРОТЧЕТ**.

NOLA, GIOV. DOM. DA. A contrapuntist of the sixteenth century, of whose works the following were preserved in the elector's library at Munich: "*Canzoni Villanesche à 3 voci*," Venice, 1545, and "*Villanelle alla Napchitana à 3 e 4 voci*," Venice, 1750.

NOMES. (G.) Certain airs in the ancient music sung to Cybele, the mother of the gods, to Bacchus, to Pan, and other divinities. The name of *nome* was also given to every air, the composition of which was regulated by certain determined and inviolable rules. There were two part nomes, which were sung in two modes; also nomes in three parts, sung in three modes, viz., the Doric, Phrygian, and Lydian.

NOMENCLATURES. In English, it requires 123 syllables to pronounce the 12 sounds, as applied to A, B, C, D, E, F, G, A, B, C, D, E, F, G. In German, the same number of syllables is required. In French, 143 syllables are necessary, and in Italian, only 36 syllables are used.

NOMION. The appellation by which the Greeks distinguished a kind of love song.

NOMODICTAL. (L.) The appellation given by the ancient Romans to the umpires at their sacred games and musical contests.

NON. An Italian negative, generally joined with the word *troppo*, very, or much; as, *non troppo allegro*, not too quick, not very quick.

NON, ABBE DE ST., a celebrated French mau of letters, was born in 1728. He was originally a member of the parliament of Paris; which place, however, his ardent love of the arts and sciences, as well as of liberty and independence, induced him to sell, and to travel with the money he received for it to Italy, where he occupied himself for some years, not only in studying, but also in drawing, jointly with the two painters Iragonard and Robert, every object that came in their way which concerned the arts of antiquity. At length he returned to Paris, and there, assisted by several literati, published, partly by subscription, and partly at his own and brother's expense, the under-mentioned splendid work. He died at Paris in 1791. The work alluded to bears the title of "*Voyage Pittoresque de Naples et de Sicile*." A copious abridgment of it was published at Gotha, and entitled "*Naples and Sicily, an Abridgment of the expensive Work called Voyage Pittoresque, &c.*" The second volume followed in 1790. This contains, amongst other things, notices of the most celebrated Neapolitan poets and composers; and what renders it the more valuable to the lovers of music is, that the biographies of the musicians are derived from the celebrated Nic. Piccini. They refer to Pergolese, Jomelli, Majo, Duni, Porpora, Vinci, both Searlattis, Leo, Durante, and Farinelli.

NONETTO. (I.) A composition in nine parts.

NON MOLTO. (I.) Not much.

NON NOBIS DOMINE. In 1848, R. Schumann published a letter in which he cast a doubt on the authorship of the canon, "*Non Nobis Domine*," from the fact of having found a copy in Breitkopf's old edition of Mozart's works, purporting to be his composition. In Boyce's "*Cathedral Music*," the old edition, there is a short biography of Byrde, in which mention is made of this composition. The writer says, "*Byrde's celebrated 'Non Nobis Domine' will, in particular, remain a perpetual monument to his memory.*" This shows it to have been written pre-

vious to 1768. In Burgh's "Anecdotes of Music" is this passage: "The celebrated canon, '*Non Nobis Domine*,' was without doubt written by our countryman Bird." John Parry, in a letter dated December 19, 1848, says, "That Mozart did not write it is made manifest by Hilton having inscribed it, in a printed collection, with the name of W. Byrd affixed to it, as far back as 1652, above a century before Mozart was born. But whether Byrd was the author has never been satisfactorily proved, although it has been attributed to him for nearly two centuries. Some writers have named Palestrina as the composer; but it is universally admitted in England to be the undoubted composition of Byrd. See BIRD, WILLIAM.

NONOT, JOSEPH WAAST AUBERT, was born at Arras about the year 1755. He was scarcely six years of age when he heard, for the first time, a regular orchestra at the college of that town; and is said to have experienced so much pleasure on the occasion, that, from that moment, his taste for the art became so apparent, that his father was unwilling to oppose his inclinations. His sister at this time took lessons on the harpsichord; when the child used to place himself near, and would repeat many of the passages that had been played, after the master had left the room. Some time after this, at the *fête* of his parish, he begged of the organist, who was an old man aged eighty-four, to let him play the offertory in the church. The old organist laughed at his request, but good humoredly granted him permission, when he immediately sat down and extemporized a movement of his own composition. The congregation were astonished, and could not comprehend the renovation of talent, as they supposed, in their old performer. The boy, having finished the movement, quietly left the organ loft. Soon afterwards, his father having a party, much was said on the subject of the organ performance at the past *fête*, when young Nonot ran to the harpsichord, and repeated the whole piece, with considerable improvements. Even this, however, could not bring his father to decide on letting the boy have a master; but he soon took him to Paris on a visit to a friend, who happened to be very intimate with Leclerc, a celebrated organist in that city. This friend took young Nonot to the church of St. Germain des Pres, to hear Leclerc, when the boy again asked the favor of being allowed to play, and so astounded Leclerc as to lead him to doubt the possibility of the music being composed extemporaneously. He was soon, however, convinced of this fact, by giving the child a theme, which he followed with equal skill. His enthusiasm was then such, that, seizing the child in his arms, he exclaimed, "*Tu resteras à Paris!*" and soon prevailed on the father, by his earnest entreaties, to leave his son with him to be educated for the musical profession. He afterwards became very eminent, and composed much instrumental music, which was highly esteemed by Christian Bach and other able judges. He was remarkable also for his ability in playing from a choral score; and even Piccini, Sacchini, Vogel, and Salieri were anxious to procure his performance of their scores, by hearing which they gained a perfect idea of the effect of their works. Nonot emigrated in the

beginning of the French revolution, and was for some time in England.

NON TANTO. (L.) An expression of moderation; as, *allegro non tanto*, not too quick.

NONUPLA. (L.) The appellation proper to a quick species of time, consisting of nine crotchets, or nine quavers in a bar, and the beating of which is performed by two falls, and one elevation of the hand.

NOORT, SYBRAND VAN, organist of the old church at Amsterdam, about the year 1700, was one of the best performers of his time on that instrument. He published an instrumental work called "*Mélange Italien*."

NOPIESCH, CHRISTOPH FRIEDRICH WILHELM, a musician at Nordlingen, was born near Nuremberg in 1758. He excelled on the organ, and was also a good performer on several other instruments. Siebenfels, of Nuremberg, was his first master for the organ, and he studied composition under Riepel, of Ratisbon, and Beck, of Passau. He published "*Versuch eines Elementarbuches der Singkunst*," Nuremberg, 1784; also some "Songs with the Poetry of Berger, Rauler, and Stollberg," Dessau, 1784, and several sonatas for the harpsichord. In 1787 he wrote a grand oratorio at Nuremberg. In 1800 he procured his above-mentioned situation at Nordlingen.

NORDWALL, ANDREAS O., a Swedish writer on acoustics, wrote "*Dissertatio de Sono simplicis directo*," Upsal, 1779.

NORMAN, JOHN. An English contrapuntist, of whose composition some masses were in the music school at Oxford. He flourished about 1490.

NORRIS, CHARLES, bachelor of music, was originally educated as a chorister in the cathedral church of Salisbury. In this situation his abilities attracted the notice of the celebrated author of "*Hermes*," who, for the purpose of introducing him into public notice, wrote a little interpiece in the style of a pastoral opera, the songs of which were adapted to several of the most favorite Italian airs of the time. Norris's voice was at this time a soprano. He was not received with so much applause as there had been reason to expect. Having thus failed in his wish to fix him on the stage, Mr. Harris recommended that he should confine himself to private concerts, oratorios, and provincial music meetings; and, in this intention, advised him to settle at Oxford, where he received all the encouragement which so distinguished a friend, and his own merit, gave him reason to expect. Norris was soon afterwards admitted to the degree of bachelor of music in that university, and elected organist of St. John's College. In this situation he had many pupils amongst the students, and was a favorite singer at the weekly concerts in the music room. In the oratorio performed in London, he was also, for many years, a principal tenor singer. In early life he had the misfortune to entertain an attachment for a lady distinguished for her personal attractions and great musical acquirements, who was afterwards married to another gentleman. The ill success of his suit, it is said, drove him to

co vivial consolations, in which he indulged to a degree that not only impaired his health, but after a while injured his voice, and was greatly detrimental to his fortune. He was an excellent musician, and a skilful performer on several instruments. The principal of his compositions consist of a few concertos and some glees. For some years previously to his decease, Norris's health had been gradually breaking up, and at the abbey commemoration in the year 1789, he was injudiciously brought forward to produce those feelings of rapture which in his better days he had inspired. Such, however, was his feeble state, that he could not even hold the book from which he sang. His whole frame was agitated by a nervous tremor, and that voice which had formerly been heard with rapture now excited the deepest emotions of pity. After this he engaged himself at the music meetings at Biruingham, where his exertions proved fatal, as he expired at Imley Hall, near Stourbridge, in Worcestershire, the seat of Lord Dudley and Ward, ten days after the meeting, namely, on the 5th of September, 1790, at the age of about fifty years.

NORTH, FRANCIS, lord chief justice of the Court of Common Pleas, and afterwards lord chamberlain, about the end of the seventeenth century, ranked with the most discriminating musical amateurs of England. He not only played well on both the lyra viol and bass viol, but also sang better at sight than many professors of his time. He also attempted the composition of several sonatas for two and three parts, and amongst others arranged Guarini's canzonet, "*Cor mio del*," &c., as a fugue for three voices. At length he published, but anonymously, "A Philosophical Essay on Music," in which are introduced many sensible remarks, for those times, on the generation of sound, which caused the book to be soon out of print. The lyra viol mentioned above was nothing but a viol da gamba, but with more, and more difficultly tuned, strings than the six which commonly belonged to the former instrument. The music for it was written in notes like lute music.

NORTH, ROGER, of Rougham, in Norfolk, and brother of the preceding nobleman, was born in 1650, and was one of the most remarkable contributors to musical history, inasmuch as he left behind him, in his own handwriting, "Memoirs of Music;" which manuscript contains accounts of all the celebrated British amateurs and composers from 1650 to 1680. When Hawkins and Burney were writing their works, Dr. Montague North, canon of Windsor, had the above manuscript, and allowed these authors the use of it. Roger North was also a practical musician, both in singing and on the organ; for which purpose he had one built at his seat in Norfolk, by old Schmidt, which is said to have surpassed in quality all the other instruments made by that celebrated mechanic. Amidst his musical pursuits, this gentleman arrived at the age of ninety, and died in 1734.

NOSCEMBENI, STEFFANO, born in Lombardy, towards the end of the sixteenth century, was a composer who exclusively devoted his talents to church music. He was chapel-master of the ducal church at Mantua, and composed "*Con-*

certi Ecclesiastici," for twelve voices, and "*Motetti*," for five and six voices.

NOTA. (I.) A note; as, *nota buona*, a strong or accented note; *nota cambiata*, a changed or irregular transient note; *nota cattiva*, a weak or unaccented note; *nota caratteristica*, a characteristic or leading note.

NOTATION. The manner of expressing, or representing by characters, all the different sounds used in music. The ancient notation was very different from that of the moderns. The Greeks employed for this purpose the letters of their alphabet, sometimes placing them erect, and sometimes inverting, mutilating, and compounding them in various manners, so as to represent by them all the different tones or chords used in their system. By a treatise of Alypius, professedly written to explain the Greek characters, we find that they amounted to no less a number than one thousand two hundred and forty. These, however, were afterwards rejected by the Latins, who introduced letters from their own alphabet, A, B, C, D, E, F, G, H, I, K, L, M, N, O, P, (fifteen in number,) by which they expressed the sounds contained in the bisdiapason. For the great improvement upon this notation, which at length took place, and which is, in part, adopted at the present day, we are indebted to St. Gregory, the first pope of that name, who, reflecting that, in the bisdiapason, the sounds after Lichanos Meson, or the middle tone, were but a repetition of those which preceded, and that every septenary in progression was precisely the same, reduced the number of letters to seven, viz., A, B, C, D, E, F, G: but to distinguish the second septenary from the first, the second was denoted by the small, and not the capital, Roman letters; and when it became necessary to extend the system farther, the small letters were doubled, thus, aa, bb, cc, dd, ee, ff, gg. The staff, consisting of a variable number of parallel lines, the application of which some attribute to Guido, was afterwards introduced; and this was again meant to be improved upon by the adoption of small points, commas, accents, and certain little oblique strokes, occasionally interspersed in the staff, while also two colors, *yellow* and *red*, were used; a yellow line signifying the letter, or note, C, and a red line denoting that of F. Two methods of notation were long after employed for the viol and other stringed instruments, which were distinguished by the terms *lyra way* and *gamut way*, with this exception, that the literal notation for the lute was constantly called the *tablature*; concerning which, and the notation by letters in general, it may be observed that they are a very artificial practice, as was also the old method of notation for the flute and flageolet by dots.

NOTE OF PROLONGATION. A note, the original and nominal duration of which is extended by the addition of a dot or hold.

NOTENPLAN. (G.) The staff.

NOTES. Characters which, by their various forms and situations on the staves, indicate the duration, as well as the gravity and acuteness, of the several sounds of a composition. There are six principal notes used in music; the semibreve, minium, crotchet, quaver, semiquaver, and demi-

semiquaver. They are distinguished by their different forms and characters, thus : —

Sembreve. Minim. Crotchet. Quaver. Semiqua. Demisemiq.

It is highly necessary that the learner understand perfectly the time and character of each note. (See tables under DIVISION OF TIME.)

It will be seen that one semibreve is equal to two minims, or four crotchets, or eight quavers, or sixteen semiquavers, or thirty-two demisemi-quavers. One minim is equal to two crotchets, or four quavers, or eight semiquavers, or sixteen demisemi-quavers. One crotchet is equal to two quavers, or four semiquavers, or eight demisemi-quavers. One quaver is equal to two semiquavers, or four demisemi-quavers. One semiquaver is equal to two demisemi-quavers.

To the above may be added the ancient *breve*, which is twice as long as the semibreve, and the

modern *demi-quaver*, which is half as long as the demisemi-quaver; thus : —

All musical ideas are expressed by means of notes on a staff; that is, five equidistant horizontal lines, on or between which the notes are placed. The gamut is a table whereon these notes are placed; and their relative situations as to acuteness or gravity of tone are ascertained by *clefs*. The names of the notes, which were six in number, are *ut, re, mi, fa, sol, la*, the lowest of these being the *gamma* of the scale. Modern musicians have used as equivalents the first seven letters of the alphabet. The arrangement in question is exhibited in the diagram following, *re* note having been added by the moderns to complete the octave.

		CLEF.							
Treble, or highest	E	la	sol
	D	sol	fa
	C	fa	mi
Tenor, or mean.	G	la	mi
	F	sol	re
	E	re	ut
Bass, or lowest.	D	fa	mi
	C	mi	re
	B	re	ut
Gamma.		ut	

OR

From the foregoing diagram it will be seen that the bass clef, also called the F fa ut clef, on whatever lines placed, makes the notes on the line between the dots; *F* or fa ut, whence reckoning is made upwards or downwards; that the tenor, or C sol fa ut clef makes all the notes on the line between the cross or horizontal bars *C* or sol fa ut; and that the treble, or G sol re ut clef makes all the notes on the line round

which the character turns *G* sol re ut;

and it is to be observed that these several clefs may be put on any lines of the staff notes, which then take the names F, C, or G, as the case may be; thus : —

One of the most important ends to be gained by the use of these clefs is the avoidance of notes running off the staff, which they otherwise would do, and what are called *leger* lines would be wanted; thus : —

Where the leger lines are those upon which the notes out of the staff are placed, the lines of the staff are reckoned upwards; thus, the lowest line is called the first, the lowest but one the second, and so on. When the F clef is placed on the third line, it is called the *barytone* clef; when on the fourth, the bass clef. When the C clef is placed on the first line, it takes the name of *soprano* clef; when on the second, the *mezzo soprano*; when on the third, the *alto* or *counter tenor* clef; and when on the fourth, the *tenor* clef. In keyed instruments, the C nearest the middle of the instrument is the note of the tenor or C clef; the G above it to the right is the treble or G clef; and the F below, to the left, is the F or bass clef note. When to the seven primary notes another is added above, the arrangement is called an octave; thus : —

After which, if more be added, either upwards or downwards, it will be but a return to similar notes either more acute or more grave in pitch; that is, an octave above or below them respectively. This, which is called the scale, has between its notes seven intervals, of which those between c and d, d and e, f and g, g and a, and a and b, are equal, and are called *tones*, or whole tones; while those between e and f and b and c are semitones. Nature has implanted in the ear dissatisfaction from any other position of these semitones in the scale of the octave: this is certain, and the most uneducated whistler could not avoid it without exertion. The scale is also divided into two *tetrachords*, from c to f and from g to c; each of these consists of two tones and a semitone. There is not a strict mathematical equality between these fourths, but for our purpose here — and the difference, indeed, is imperceptible, except to the finest ear — that equality may be assumed. As all *melody* or *air*, which is an artful succession of tones, depends on a right perception of the places of the semitones, the above preliminaries must be well understood by the student.

NOTE SENSIBLE. (F.) The leading note of the scale, or that note of the scale which is situated a semitone below the key note. The seventh of the scale.

NOTGER, or NOTKER, BALBULUS. This musician, with Ratper and Tutillon, who studied at St. Gall, under Mareell and Ison, applied himself particularly to the liberal arts and sciences. They formed a small literary society, making music a principal subject of their lucubrations. Specimens of Notker's composition, of about the year 850, are still existing, as we learn from F. Nicolai in his travels, where he tells us that he had found, in the library of the abbey of St. Emmeran, at Ratisbon, a manuscript collection of hymns of Notger's, with the melodies noted. Padre Coelisten, who had deciphered one of those hymns, assured Nicolai that it is for four voices, but of a very singular melody, consisting of a progression of fourths and fifths. Notger died in 912.

NOTIUS. An epithet applied by the ancient Greeks to the Hyper-Æolian and Hyper-Phrygian modes.

NOTTURNO. (I.) An appellation arbitrarily applied to certain instrumental or vocal pieces supposed to be particularly calculated for evening recreation, from their elegance and lightness of character.

NOUGARET, PIERRE J. B., a French man of letters, born in Rochelle, in 1742, published "*De l'Art du Théâtre, où il est parlé des différents Genres de Spectacles et de la Musique adoptés au Théâtre.*" tom. i. Paris, 1769. In the second volume of this work is a "*Histoire Philosophique de la Musique, et des Observations sur les différents Genres recus au Théâtre.*" There is also a dissertation on the opera seria.

NOVACK, JOHANN, chapel-master at Prague

in 1756, was celebrated for his sacred compositions.

NOVATI, GIOV. CARLO, of Placenza, was celebrated as a singer about the year 1710.

NOVEL, or NOVELLI, FELICE, of Venice. A celebrated singer towards the end of the eighteenth century.

NOVELLO, VINCENT. This very able organist and composer was of an Italian family, but was born in London in 1781. He held, in 1825, the situation of organist to the chapel of the Portuguese embassy, in South Street, Park Lane, where his masterly performance on his instrument was a subject of curiosity and admiration to all admirers of sacred music. In 1811 he published a "Selection of Sacred Music," in two volumes. In this work he displayed so much judgment, taste, learning, and industry, as to fix the attention of the musical public, with great interest, on his subsequent productions. His second publication was "A Collection of Motets for the Offertory, and other Pieces, principally adapted for the Morning Service," in twelve books, sold separately. In this collection are several compositions by the selector himself, in speaking of which an eminent modern critic observes, "The general characteristics of Novello's style appear to us to be suavity, elegance, and bold and varied modulation. His melodies do not rise into extraordinary felicity or originality, yet they are ever flowing and agreeable, mixing much of the sober dignity of the church style with a lighter manner, that gives relief while it assorts well with the graver foundation and more solid materials of the work. We should be induced to hazard an opinion, that Haydn is a favorite with Novello, and that he often finds himself drawn by an irresistible impulse to the study, and to an indirect imitation of Haydn's writings. Our notion is formed from that leading and general assimilation which attracts men of common feelings by a common sympathy, of which we not only imagine we perceive considerable traits in the motets of Novello, but that they prevail in other things we have seen from his hand. It would, indeed, be matter of surprise if he had escaped the universal fascination. We must do Novello the justice to say, that we consider him to be of the school of Haydn; for we do not find a single passage that leads us to think of Haydn otherwise, than through the resemblance which, only by a large and broad acceptance, impels us to the principle that they hold in common, namely, sweet, flowing, and ornate melody, supported and diversified by frequent and often curious and unexpected changes in the harmony. Novello, then, is Haydn's scholar, not a plagiarist or direct imitator." His next publications were, "Twelve easy Masses for small Choirs," three volumes; "Gregorian Hymns for the Evening Service," twelve books, sold separately. The only portions of the Gregorian Chant now generally retained in the morning service, are the parts sung by the priest at the altar, and the responsories. These Novello has endeavored to preserve as long as possible, by arranging them for six voices, and giving them the rich and harmonious effect required by the admirers of the modern school. He has published them among his motets.

In the evening service, the chants for the psalms and the Gregorian hymns have stood their ground against all attempts to supersede them. How long this may be the case, it is not easy to calculate; but Novello has done all in his power, in the last-named work, to preserve them for the admirers of these old melodies, by forming them into a complete collection. That he does this in a most masterly style the slightest inspection will convince the musician. Novello has edited eighteen books of "Mozart's Masses," and eighteen books of "Haydn's Masses," both works with very judicious accompaniments, for the organ or piano-forte. He has also written various original songs, canzonets, &c.

NOVI, FRANCESCO, born at the commencement of the eighteenth century, was remarkable both as a composer and a poet, and set his own verses to music. On quitting the conservatory, his works were sufficiently well received by his fellow-citizens; but being unable to struggle with the reputation of the existing composers, he quitted Naples for Milan, and gave his opera "*Giulio Cesare*," which succeeded as well as he could desire. From Milan he went to Pavia, where he wrote "*Pompeo*," and which, being performed before a less severe audience than that of Milan, met with a still more gratifying reception. Novi composed several other operas in the serious style.

NOVITIATE. A beginner.

NOZEMANN, JACOB, was born at Hamburg in 1693, and in 1724 was celebrated in his native town as a violinist. He afterwards was appointed to the situation of organist of the Remonstrants' Church, at Amsterdam, where he died in 1745. He published a collection of music for the harpsichord, entitled "*La bella Tedesca, oder 24 Pastorellen, Musellen, und Pagsanen*;" also some solos for the violin.

NOZZARI, N., a tenor singer, born at Bergamo about the year 1775, was a pupil of the celebrated David. He sang at the Opera Buffa, at Paris, between the years 1802 and 1807, and in 1813 was performing at Vienna.

NUCCI, GIUSEPPE, an Italian professor, was, in 1770, employed as composer of ballets at the Grand Theatre at Turin, where he brought out the following pieces of his composition: "*Angelica e Wilton*," "*I due Cacciatori, e la Venditrice di Latte*," "*L'Americana in Europa*," "*Orfeo ed Euridice*," and "*Gli Schiavi Turchi*," all performed for the first time on the Turin stage in 1791.

NUCHTER, JOHANN PHILIP, a musician at Erbach, in Suabia, was born at Augsburg. He published at Ulm, in 1695, a work entitled "*Ovum paschale novum*," containing "*Missæ dominicales à 4 Voci concert., et 4 Instrum. concert.*"

NUCIUS, JOHANN, born at Gorkitz, wrote one of the best and most important works of his age, (the beginning of the seventeenth century.) It seems that Dr. Forkel was in possession of a copy. The title of it is "*Musices Poeticæ, sive de Compositione Cantus Præceptiones absolutissimæ, nunc primum in lucem editæ*," Neisse, 1613. A table of the contents of its nine chapters is found in Forkel's "Literature."

NUDERA, ADALBERT, violinist in the cathedral at Prague, about the year 1796, may not only be numbered amongst the able players on his instrument, but was also the composer of several successful instrumental pieces; among which the following has been engraved: "*Andantino avec huit Variations pour la Clarinette et Fugotte, avec Accomp. de deux Violons, deux Cors et P.*," Op. 1, Gotha and Petersburg, 1796.

NUMERAL NOTATION was first introduced by Rousseau; in the year 1742 he presented his project to the Parisian Academy of Sciences. He substituted for the eight notes the first eight numerals, and for such other characters as represent pauses, time, &c., he used points, ciphers, &c. This system, said he, comprises important advantages, far superior to any that have gone before. Music will be twice, yes, thrice as easy to learn; and this because, 1st, it will contain much fewer characters; 2d, because these characters will be simpler; 3d, because these characters will indicate at once the intervals, and further hard study, as by the old system, will be spared; 4th, because the characters are always the same, and the confusion of clefs is remedied; 5th, because the time, pauses, &c., are indicated by much simpler and more universal signs; 6th, because the difficulty of the various keys is avoided. Further, also, music is more conveniently and easily written — it occupies less space — every kind of paper, and the materials of every printing office are available — music will become much cheaper, &c., &c.

There are many considerations which militate directly against the substitution of figures for notes: of these we will now name but a few.

1st. Figures are not ideal characters; they have nothing poetically symbolical about them; nothing artistic; they belong altogether to prose; they do not by a visible rising and falling of the melody animate one to singing, but only call to a calculation of the distance of tones. Now, every correct and felicitous reproduction in musical art presupposes a spiritual mastery and oversight of what is to be performed, which is communicated with lightning rapidity to the organs of execution. Hence it comes that children (in our every-day experience) who have learned well a melody by figures, as soon as a text is added, find it impossible to sing without renewing again their practice.

2d. Numerals are a superficial medium of instruction, because that acquaintance with the distinctive peculiarities of different keys, so important and indispensable in vocal culture, cannot be attained.

3d. Inasmuch as numerals are only partially applicable, no free and unimpeded progress in art is, by numerals, possible.

4th. The old church modes cannot at all be presented by numerals. The minor scale, also, which underlies the national music of every people, can only with the greatest difficulty be managed. For those numeralists, who base the fundamental tone of the minor scale on 1, confound their own system, and those who base it upon 6, annihilate the minor scale.

5th. Numerals, according to the candid confession of their most enthusiastic advocates, are entirely useless in instrumental music. Therefore, scholars who are taught by numerals, are

entirely cut off from general musical culture. Can this be excused, and can such superficiality be reconciled with a thorough system of school education?

6th. The numeralists are not agreed among themselves as to a system of figures; and cannot become agreed, because the right system has not yet been discovered, (as it probably never will be,) and because, naturally enough, no one of them likes to exchange the imperfections of his own system, to which he has become accustomed, for the defects of another system to which he is not accustomed.

7th. Vocal music is regularly taught in many countries in the public schools. But what can result from all the quarrelling, which, by this *numeral* question, has been associated with this task? For, in consequence of the frequent change of teachers, now a numeralist of this method, and now a numeralist of another method, then again a *note*-ist, together drive the unfortunate scholars into the utmost perplexity and despair.

But, in conclusion, let us hear what the admirable pedagogue, Diesterweg, says about numerals:—

“Notes are every where preferable to numerals. Without enumerating here all the arguments which have been brought forward for and against numerals, I will only give the following statement. Children of more than ordinary capacity, some of whom are to be found in every school, sing with equal ease from notes and from figures. Quite different is the case with others of less talent, for whom notes (whatever may be said to

the contrary) have very great advantages; particularly when, instead of mere vocal exercises, genuine songs, with a variety of intervals and rhythm, are put before them. Indeed, in all cases notes are much preferable to numerals. For so long as a pupil has not the power to imagine a tone in connection with every written character of a melody, so that he knows exactly how the music will sound, numerals express nothing at all to him; he loses himself in an indefinite guessing. Notes, on the other hand, offer yet one additional assistance to him; they *picture* to him the relations of tone; he has only to open his eyes, and he immediately recognizes the *outlines* of a melody. And what an assistance such a pictorial presentation of a melody renders to one endeavoring to retain the same! As soon as the eye has scanned the various groups of notes, the musical memory immediately associates with them the tones appertaining; and a single glance at these groups is often alone necessary to recall entire strains which had escaped the memory.

“Numerals, on the other hand, afford no such assistance. One row of figures looks like another; and the scholar must over and over again spell along from figure to figure, and tediously delve out every individual tone before he can determine what it is these figures have to say to him. Therefore—NO NUMERALS!”—*From the German of C. KOCHER.*

NUNNIA. The name given by the *Greeks* to a song peculiar to the nurses.

NUOVO. (I.) *New.*

O.

O. This capital letter, forming a circle or double C, was used by the ancients as the sign of triple time, from the idea that the *ternary* or number *three*, being the most perfect of all numbers, would be best expressed by a circle, the most perfect of all figures. The imperfect or common time was designated by a C, or semicircle. — *O*, (before a vowel *od*.) is also used by the Italians for *or*, as *flauto o violino*, flute or violin.

OBERMAYER, JOSEPH, an excellent violinist, flourished towards the end of the eighteenth century. He was a native of Bohemia, and pupil of the celebrated Kaunel. When the latter left Bohemia, Obermayer's master, Count Vincenz Waldstein, sent him for further accomplishment to Italy, where he had an opportunity of receiving instruction from the great Tartini. Here he completely acquired that master's style of playing the *adagio*; without, however, losing his own peculiar spirit in the *allegro*. On his return, he resumed his former situation of valet de chambre to the count; though by no means to the prejudice of his art, as, by often accompanying his master on his travels, he had the more opportunity of forming the acquaintance of first-rate professors. The most flourishing period of his playing was about the year 1788; after which he relinquished both his situation with the count and musical science, betaking himself, in 1800, to farming, to the no small regret of the musical amateurs of Prague.

OBERNDORFFER, DAVID. A composer, about the middle of the seventeenth century. He printed of his works, "*Allegrezza Musicale*," or select paduanas, galliards, intrades, canzonetas, ricercatas, &c., with four, five, and six parts, applicable to all instruments.

OBIZZI, DOMENICO, an Italian composer, flourished at the beginning of the seventeenth century, and published "*Madrigali Concertati*," Venice, 1627.

OBLIGATO. (I.) Required. This term is used in speaking of those voices or instruments which are indispensable to the just performance of a piece. An instrument may be *obligato* throughout a piece, when it is called a *concerto* for such an instrument; or an instrument may become now and then *obligato*, when these passages are called *obligato* or *solo* passages. All instruments can be used *obligato*, except, perhaps, the double bass. This is excepted partly because solo players are very rare on this instrument, partly because the solo voice would be too deep for being duly supported by other instruments; it is therefore used more properly for the basis of harmony. There are some musicians, however, who play solos on the double bass. *Obligato*, as generally used, has reference to those auxiliary parts or accompaniments which cannot properly be omitted.

OBLIQUE MOTION. That motion of the

parts of a composition in which one voice or instrument repeats the same note, while another, by ascending or descending, recedes from or approaches it.

OBOE, (I.), or **HAUTOBOIS**, (F.) The hautboy. (See that term.) The ancient name of the *oboe* was *wayght*, and in this form the *oboe* was in use as far back as the reign of Edward III. It is only since the beginning of the eighteenth century that the present Italian form of this word came into general use. Previous to that period the French name *hautbois* was universally current. This instrument no longer retains the eminence it once enjoyed as the *haut bois*, or *high wood*, in the band, having yielded to the flute and piccolo.

OBOIST, or **HAUTOBOYIST**. A performer or professor of the oboe or hautboy.

OCCA, VITTORIA DALL', a female virtuoso on the violin, from Bologna, gave a concert at Milan in the year 1788, when she played two concertos on the violin with great applause.

OCCHA, ALBERTO DALL', a composer at Ferrara, lived probably in the sixteenth century, and is said to have written and published many madrigals, &c.

OCHI, ANDRÉ, published at Paris, in 1769, "*Sei Sinfonie à tré, 2 Violine e Basso*," Op. 1.

OCHERNAL, T. L., published at Leipsic, about the year 1780, "Twenty-four Canticles for three Voices."

OCHSENKUN, SEBASTIAN, lutist at the court of Othon Henry, elector palatine, in 1558. He published some music for that instrument, and was considered one of the best performers on it of his time. He died in 1573.

OCKENHEIM, or OKENHEIM, JOHN, as he is called by some writers, was a native of the Low Countries, and the master of Josquin de Prez. He flourished between the years 1440 and 1460. Glareanus speaks of a composition by Ockenheim for six voices, which, he asserts, was much admired for its contrivance; he does not, however, state in what the parts consisted, nor how they were disposed. It was in the composition of fugue that this writer is said to have chiefly excelled. A canon, four in two, by him, beginning "*Sanctus Dominus Deus Sabaoth*," is inserted in Smith's "*Musica Antiqua*."

OCTACHORD. An instrument or system comprising eight sounds or seven degrees. The *octachord* or lyre of Pythagoras comprehended the two disjunct tetrachords expressed by the letters E, F, G, A, B, C, D, E.

OCTAVE, or *8va*. An interval containing seven degrees, or twelve semitones, and which is the first of the consonances in the order of generation. The most simple perception that we can have of two sounds, is that of unisons, which,

resulting from equal vibrations, are as one to one. The next to this in simplicity is the *octave*, which is in double computation, as one to two. The harmonies of these sounds have a perfect agreement, which distinguishes them from any other interval, and contributes to give them that unisonous effect which induces the common ear to confound them, and take them indifferently one for the other. This interval is called an *octave*; because, moving diatonically from one term to the other, we produce eight different sounds. The *octave* comprehends all the primitive and original sounds; so that having established a system or series of sounds, in the extent of an *octave*, we can only prolong that series by repeating the same order in a second *octave*, and again in a third, and so on, in all which we shall not find any sound that is not the replicate of some sound in the adjoining *octave*.

The complete and rigorous system of the *octave* requires three major tones, two minor, and two major semitones. The tempered system is of five equal tones, and two semitones, forming together seven diatonic degrees.

The upper *octave*, that is, the one which is eight notes above the fundamental, is obtained when the string which sounds it is only half as long, and the lower *octave* when the string is twice as long, as that of the fundamental. The string which sounds the upper octave in each makes two vibrations, while the string of the fundamental makes one; therefore, on the eighth diatonic string the tone of the first, or lowest, recurs. The ninth string repeats the second tone, called the *second*, the tenth string the third tone, or the *third*, &c. The number of upper and lower octaves, or the manner in which several octaves of different heights are to be chiefly distinguished, is not absolutely determined, on account of the continually increasing compass of instruments. The octave, considered as an interval, has, of all intervals, the least harmonic effect. On this account, composers, when there is only one principal voice, forbid rising to the octave except at the beginning or close. But a succession of octaves following each other, when a melody is to be raised in that manner, has a very good effect. False or disallowed octaves are, in musical compositions for many voices, progressions of two voices in exact movement by octaves, which offend the ear. The reason why such progressions by octaves are disallowed in a musical piece for many voices is evident, because, when two voices proceed by octaves, no difference can be perceived between these two; and, for example, a piece for four voices becomes one for two. There are also those which are called *covered octaves*; that is, such as become for the first time distinguishable when the interval of the two voices, proceeding in an exact movement by octaves, is filled up with unimportant notes. Of the compositions for two voices, or in the two upper parts of composition for three or four voices, those alone are free from fault in which the upper part rises or falls a second, but the fundamental a fourth or fifth. The use of the others is only allowed under the middle part, or between an upper and a middle part. *Octave*, in an organ, signifies the open flute stop, which is one or two octaves higher than the principal. The *octavo* in our musical scale must be perfect; but the other intervals may be tuned somewhat higher or lower

than their true pitch. All tones without the limit of the octave are only repetitions, in an augmented or diminished degree of the tones contained in the compass of the octave. For this reason we call the octave the whole extent of the tones of the diatonic system.

OCTAVE FLUTE, or FLAUTINO. A flute, the notes of which range an octave higher than those of the German flute.

OCTAVE STAFF. A system of notation, invented by Mr. — Adams, of New Jersey, which consists of three groups of lines combined, comprising just three octaves of ordinary vocal music; that is, from low G in the bass to high G in the treble; and when a higher range is required, introducing ledger lines, as in the notation. The inventor thus describes its advantages: "It shows to the eye at once the exact interval between any two notes, while the present notation is indefinite in this particular; for two notes, without changing their position on the staff, may denote an interval of a large third or a small third, and so on in all intervals. In the present notation, if a note stand on the first line of the staff, it may signify the tone G, or G sharp, or G flat; or it may signify neither of these. To determine this last point, the reader must refer to the clef at the beginning of the staff, and when this is settled, to determine the other point, he must refer to the signature. Further, if you wish to find this same letter denoting a tone one or two octaves higher, you will not find it on the same line of another staff, but must look elsewhere for it. Now, does any person fail to see that here is a complex and confused, and not a simple mode of notation, and that the learner of it is subjected to great loss of time and pains? I do not speak of the artist or the author, for he has passed through these difficulties, and does not think of them. But all will admit that if we could get rid of the flats and sharps, it would be an immense gain. The octave staff dispenses entirely with flats and sharps, and gives to each tune its own place, where no other can ever stand, and this, too, without introducing any new mark or character whatever."

OCTAVINA. The name of an old stringed instrument resembling a spinet, comprehending about three octaves in compass, and tuned an octave higher than the spinet and harpsichord.

OCTUOR. A piece in eight parts.

ODE. A Greek word signifying an air or song. The *ode* is of ancient invention, and consists of unequal verses, distinguished into stanzas or strophes. The *odes* of the ancient Greeks preserved a regular return of the same kind of verse, and a similar quantity of syllables in the corresponding parts of the verses — a uniformity not observed by modern poets, and which, to use the words of a learned writer, "makes every stanza a different song."

The ancient *odes* were generally in honor of the gods, as are many of those of Pindar and Horace. Originally, the *ode* had but one stanza or strophe; but it was afterwards divided into three parts — strophe, antistrophe, and epode. This kind of lyric poetry, as now written and generally set to music, forms an exalted species of song, and seems to rank between the sublime

solemnity of the oratorio and the florid delicacy of the serious opera.

ODEON, or ODEUM. The name given by the Greeks to the hall or edifice in which they rehearsed their music previous to its public performance. Ecclesiastical writers sometimes call also the choir of a church the *odeum*. History informs us that "the *Odeon* or *Musical Theatre*, which had a great number of seats and columns in it, and whose roof grew narrower by degrees, and terminated in a point," was instituted by Pericles, and built after the manner of Xerxes' tent. He proposed a decree, by which it was ordained that musical games should be celebrated; and, having been appointed judge and distributor of prizes, "he regulated the manner in which musicians should play on the flute and lyre, as well as sing." This *Odeon*, built at Athens by Pericles, was afterwards used for popular meetings and the holding of courts. The first *Odeon* built at Rome was built in the time of the emperors. Domitian erected one, and Trajan another. The name *Odeon* was given to one of the theatres in Paris, rebuilt after having been destroyed by fire in 1818.

ODICUM. The name given by the ancient Greeks to that part of practical music which concerned vocal performance. Of this they had three kinds—that sung by a single voice, that performed by a number of voices in unison, and that sung in octaves.

ODOARDI, STEFFANO, a celebrated singer of Florence, flourished about the year 1760.

ODONTIUS, MATTHEW, a composer at the beginning of the seventeenth century, published "*Musicalisches Rosenbürtlein neuer deutscher weltlicher Liedlein auf 4 Stimmen*," Frankfurt, 1605.

ODOUX, an ecclesiastic and musician at Nonjon, wrote a work entitled "*Méthode nouvelle pour apprendre facilement le Plainchant, avec quelques Exemples d'Hymnes et des Proses*," &c., a second edition of which appeared in 1775.

ODEMAN, JONAS, a Swedish author, published, in 1745, "*Dissertatio Historica de Musica Sacra generatim, et Ecclesie Gothicae speciatim*."

OEDER, JOHANN LOUIS, counsellor of finance to the Duke of Brunswick, died there in 1776. He wrote, among other works, "*De Vibratione Chordarum*," Brunswick, 1746.

OEHLE, JACOB FRIEDRICH, pupil of the Abbe Vogler, for the harpsichord and composition, was born at Kannstadt, near Stuttgart. In 1784 he resided at Paris, where he published "*Trois Sonates pour le Clav.*," Op. 1. He also composed a cantata for the birthday of the Duke of Wurtemberg.

OELRICHS, JOHANN C. C., doctor of laws, &c., was born at Berlin in 1722, and was celebrated in Germany by his numerous works on diplomacy, literature, and jurisprudence. In his youth he had proposed writing a general history of music, and had already collected numerous and curious works for that purpose, when his intention was frustrated by other occupations, and all that resulted was a tract entitled "An Historical Notice respecting the Academical Honors in Music, both of Universities and Musical Societies," Berlin, 1752. He died at Berlin in 1798.

OELSCHLEGEL, JOHANN LOHELIUS, studied first at Mariaschein, where he was appointed organist by the Jesuits. He subsequently removed to Prague, where he obtained the situations of organist at the Dominican and the Maltese churches. At length he entered, in the year 1747, into the order of Premonstrants, where the direction of the figurate church music was assigned to him, in the year 1756. This situation, which he filled to his death, contributed to animate his industry in the science. It induced him to take a new series of lessons—first of Sehling, in music in general, and then of J. F. Habermann, in counterpoint. He continued to study in this manner during several years with indefatigable application, until he had written a number of musical pieces, several of which were received with applause by the court of Dresden. Not satisfied with this application of his talents, he now aspired to learn the art of organ building. What induced him to this arduous and laborious undertaking, was the wretched state of the collegiate organ, though it had been constructed no farther back than 1746. Be this as it may, without having any teacher, but, perhaps, a book to refer to occasionally, he persevered in his labor for nearly thirteen years, and actually accomplished his design of building an organ. Amongst its tones was particularly distinguished a bugle horn, which came as near to the original instrument as possible. Nothing was, indeed, wanting to his organ but a *vox humana* stop, which he had also intended to execute, when he was afflicted by a protracted illness, which brought on an induration of the liver and jaundice, and finished his meritorious and active career in 1783, in the sixty-third year of his age. He left an unprinted work on organ building, and also "*2 Salve Regina à 4 voci, con Organo*," 1786 and 1787, which are highly valued for accuracy of composition.

OESTERLEIN, GOTTFRIED CHRISTOPH, a celebrated lutist, was a pupil of Weiss. He flourished about the middle of the last century.

OESTERREICH, GEORG, chapel-master to the Duke of Schleswig-Holstein-Gottorp. He was born at Magdeburg in 1664, where he went to the free school, and enjoyed the benefit of Scheffler's instruction in singing. In his fourteenth year he was removed to St. Thomas's school at Leipsic, where he made, in a short time, under the guidance of the celebrated Joh. Schelle, such rapid progress in sight singing, that he would turn any given piece of music upside down, and sing it with the greatest fluency. This procured him, in 1680, an invitation to Hamburg, as tenor singer at the senate chapel there; his acceptance of which was accelerated by the plague, which then began to show itself at Leipsic, where they would not have parted with him, previously, on any account. His agreeable tenor voice was the cause of his meeting at Hamburg with a very kind reception, and of his receiving frequent presents from the opulent merchants there. At the same time he attended at the Johanniun, till he removed to the University of Leipsic, from whence he was subsequently again invited to Hamburg. This last time he remained only three years there; and although he was invited to fill the vacant precentorship in his native city, he declined it on account of his

youth, and began to attend more to instrumental music. This new study, however, was interrupted by the unexpected arrival of Chapel-master Theile, who, by the desire of his prince, prevailed upon Oesterreich to join, in 1686, the Duke of Wolfenbittel's chapel, where he was soon after appointed page to the duke. It was whilst he was at Wolfenbittel that the principal period of his musical fame was fixed. Here he not only enjoyed, as the chapel-master's inmate, his constant zealous instruction in composition, but also the friendship and assistance of the two excellent *castrati* singers, Giuliano Giuliani, from Venice, and Vincentino Antonini, from Rome, who both afforded him daily opportunity of improving in his singing. This period, so auspicious for his talents, lasted till the year 1690, when he twice declined offers of the situation of chapel-master at Holstein-Gottorp; but on their being made a third time, accompanied with a letter to his prince for his consent, he was at length obliged to obey the call. The Gottorp chapel now improved visibly under his superintendance, particularly as it received, from time to time, no small accession of able artists from those of Dresden and Wolfenbittel. Though the chapel was reduced in number on the death of his master, yet he remained there till his new master also fell in a battle in Poland, in 1702, where he commanded the Swedish army. The hereditary prince being now only two years old, the chapel choir, with the exception of himself, was entirely dismissed; by which means finding himself absolutely deprived of opportunity to practise his art, he solicited leave to reside at Brunswick, till his services should again be wanted. This he obtained; but when, in the sequel, war and pestilence began to rage in Schleswig, and his salary continued in arrear, he was compelled to engage himself member of the choir and precentor at the Palau church at Wolfenbittel, where he had, at the same time, several young female singers given him to teach, and had commonly to officiate for the chapel-master in his absence. Though, in 1719, he was reinstated by the young Duke of Holstein in his former rank of chapel-master, it does not appear that he left Wolfenbittel again, as he died in that town in 1735.

OESTERREICHER, GEORG, precentor of Windsheim, was born in 1576. His musical talents rendered him a favorite with the Margrave of Anspach, who well provided for him. In 1621, he accepted the place of precentor at Windsheim, where he remained till his death, in 1633. He published a book of hymns under the title "*Oesterreicher's Cantor-Buchlein*," Rotenburg, 1615.

GETTINGER, FRIEDRICH CHRISTOPH, counsellor to the Duke of Wurtemberg, and abbot of a convent, was born in 1702. He wrote a work entitled "*The Philosophy of Euler and Frick, as it respects Music*," Neuwied, 1761.

OEUVRE. (F.; in Latin *opus*, in Italian *opera*, a work.) Generally used in numbering a composer's published works, in the order of time; as, *œuvre premier*, the first work, (*œuv. 1.* or *op. 1.*)

OFFERTORIUM, (L.) OFFERTORIO, (I.) OFFERTOIRE, (F.) The *offertorium*, or *offertory*, is the anthem sung while the people are making their offering. Some writers assert that

anciently the *offertory* consisted of an entire psalm; others say that the singers, watching the pope, or presiding priest, took from him the sign for concluding their vociferation. It is one of the chief parts of the mass.

OFFICIUM. (L.) The mass, or Catholic service. *Officium defunctorum*, the mass for the dead. *Officium diurnum*, the *hora*, which is sung at stated hours in the day. *Officium diuinum*, high mass. *Officium matulinum*, early morning mass. *Officium nocturnum*, the *hora* at night. *Officium vespertinum*, vespers.

OGGEDA, CIIKISTOPI D', a Spanish musician, was celebrated in Italy, where he resided in the sixteenth century.

OGINSKI, hetman of Lithuania, was a very celebrated amateur performer on the clarinet. In 1764 he was at St. Petersburg, where he performed in musical parties the most difficult solos on his instrument: he was also a good violinist and pianist, and wrote the article *Harpe*, in the first French Encyclopædia. A remarkable circumstance in the life of this illustrious amateur is, that it was he who conceived the idea of an oratorio on the subject of the creation, and communicated the same to Haydn. Oginski died at St. Petersburg, about the year 1789.

OGINSKI, COUNT MICHAEL CLEOPIIAS, probably son of the preceding, born in 1765, was a good pianist and violinist. He composed some very beautiful Polonaises for the piano-forte, and some romances. A part of these works were published at St. Petersburg in 1807 and 1809, and others at Paris in 1811. He died at Florence in 1835.

OHLHORST, JOHANN CHRISTIAN, born at Brunswick in 1753, was, after the year 1775, an actor in a theatrical company at Mecklenburg. He composed the music of the German operas "*Adelstan and Rosetta*," "*The Anniversary*," and "*The Gypsies*."

OIINE. (G.) Without; as, *ohne Begleitungen*, without accompaniments.

OKENHEIM. See OCKENHEIM.

OLBAC, LE BARON D', residing, about the year 1750, at Paris, wrote the following pamphlets on the occasion of the then prevailing controversy respecting the opera: "*Lettre à une Dame d'un certain Age sur l'Etat présent de l'Opéra*," Paris, 1752, and without prefixing his name, "*Arrêt rendu à l'Anphithéâtre de l'Opéra, sur la Plainte au Milieu du Parterre, intervenant dans la Guerre des deux Coins*."

OLBERS, J. H., organist at Stade, published "*Eighteen easy Preludes for the Organ or P. F.*," Op. 1, Hamburg, 1799. He also advertised, in the same year, "*A Collection of Piano-forte Music by different composers, among others, Bach, Clementi, Ferrari, Gyrowetz, Grill, Haydn, Haigh, Hoffmeister, Mezger, Mozart, Pleyel, &c.*" Four numbers of this work had appeared up to the year 1800.

OLEARIUS, JOHANN GOTTFREID, arch-deacon, &c., at Ariusstadt, was born there in 1668. He published at Jena, in 1707, a work entitled "*Evangelischer Liederschatz*," in four volumes. In this book is to be found some interesting informa-

tion respecting Luther and other old composers of hymns for the Protestant church.

OLE BULL, BORNEMANN, the celebrated violinist, was born in Bergen, Norway, in 1810, and spent a portion of his youth in the mountains of his country, where he learned the wild mountain music, and during the war between Norway and Sweden, became familiar with guerilla warfare. His uncle, who was then the only editor in Bergen, was a great musical amateur, and soon discovered Ole Bull's musical talent. After studying at the academy at Bergen, he was sent to the University of Christiania, where he received a classical education, and prepared himself for the legal profession. His musical talent was already wide-spread at the university, and, being persuaded to play at a charitable concert, on one occasion, he made his first *début* before a public audience, and was triumphant. For this, his professors set him back in his examination, and just before his second turn came to graduate, the leader of an orchestra and manager of a theatre, who was very ill, sent for Ole Bull, and told him that if he could not procure him to lead the orchestra the coming night, he was a ruined man. The appeal was not in vain; his sympathy and enthusiasm carried him away; he left the university to lead the orchestra, and never returned. His father was a celebrated chemist, and a pupil of the distinguished Professor Trousdorf. He has also a brother, a celebrated chemist, who graduated at Bergen, and a younger brother who graduated with distinguished honors at the Polytechnic School at Hanover, Germany, receiving the highest diploma over eight hundred students.

Before he was twenty, he quitted his home for Paris, where he became very poor. While thus situated, he lost his trunk, his violin, his all. This was more than the young enthusiast could bear; and after wandering for three days in the streets of Paris, a prey to want and despair, he threw himself into the Seine! He was rescued and adopted by a mother who had just lost her only son by the cholera. Thus he was again enabled to gratify his devotion to music, and his performances now beginning to attract attention, he was handsomely rewarded. At his first public concert he gained twelve hundred francs. Ole Bull participated in the revolution in Paris, in June, 1832, and was badly wounded. From there, he travelled through France, Italy, Switzerland, and England, and in 1839 he went to Germany, since which time he has acquired considerable fame as well as money in this country. He had, when in New York, in 1844, two violins of great value. The one on which he plays most frequently has a beautiful, clear, brilliant, and silvery tone. The maker's label on the inner side is as follows:—

"JOSEPH GUARNERUS fecit, †
Cremonæ, Anno 1742. I. H. S."

The other, it is said, which is more sonorous, perhaps, is the handiwork of Gaspar da Salo in Brescia, and is beautifully enriched with arabesques, carved by the famous Benvenuto Cellini, who was born in Florence in 1500, and died in 1570.

Since the death of the *veird* Paganini, Ole Bull has by many been esteemed without a rival in Europe. His power, however, is that of wild,

fantastic genius and strong individuality, apparent in all the ways and movements of the man, rather than in that sort of musicianship which is most esteemed among musicians and lovers of what is classical in art. The magnetism of the man, the romantic imagination, and impatient air of genius displayed in his loose, and fragmentary, and fantastic compositions, (which are mostly of the brilliant *virtuoso* order, calculated for effect, and by classical musicians, therefore, hardly esteemed compositions,) his romantic history, also, and his noble, strong, and healthful *physique*, giving him the air of a true heroic son of Nature and the North, insured for some time the greatest enthusiasm at his concerts wherever he went; though he always passed for an exceptional artist—a sort of musical meteor, rather than a fixed star, in the musical centres of Germany. The excitement which he created in 1844–45 in this country is fresh in the general remembrance; though the spell of such brilliant *virtuosity* was manifestly growing weaker when he returned to Europe in 1845. Of this seven years' absence before his return to America, we find the following sketch in the New York "Musical Times," May 29, 1852:—

"Ole Bull went to Paris, gave concerts there, went through the northern provinces, and gave concerts in Lyons, Bayonne, Bourdeaux, and Marseilles, thence to Algiers, to study military tactics as applied to mountain warfare; accompanied his friend General Yusuf in an important expedition in the mountains of Africa against the Kabylles; back to the south of France; thence to Spain; gave concerts in Madrid at the celebration of the double marriage of Isabella II. with Francisco de Assiz, and Donna Fernanda with the Duke of Montpensier; composed '*La Verbena de San Juan*'; was offered a general's commission by the queen, but declined the honor; received from the queen a verberna flower, formed of diamonds and other precious stones; went to the Island of Majorca, and gave concerts in France until interrupted by the revolution of February, 1848; collected the Norwegians in Paris, and addressed Lamartine at his head-quarters, (Lamartine's reply is found in his '*Trois Mois de Pouvoir*;') was present at the revolution in Holland; gave concerts at Amsterdam, and returned to Paris, and was present at the June revolution; made improvement, after many years' experiments, in stringed instruments; manufactured contrabassi of four strings, going down to C, two notes below the ordinary compass, and increased their strength of tone and facility for execution; made violoncellos, tenors, and violins on new principles; (he has, by the way, a splendid collection of curious instruments of all ages on his own Island of Andoe, in the south of Norway;) built a theatre in Bergen; brought dancers (peasants) from the interior to represent national dances; brought an old Norwegian violinist to Bergen to give concerts, named Andusson, who played an instrument of peculiar and beautiful workmanship, having eight strings, and who was remarkable for rapid execution and warm feeling; established schools of art, and formed clubs of artists for the purpose of raising the standard of native art, which was nearly destroyed by the monopoly (by the Danes) of all places under the government. The Danes performed dramas in the Danish language; but Bull procured dramas written by a Norwegian poet named Henrik Wer-

related in Norwegian dialect, who died broken-hearted from neglect and abuse. Bull introduced political opinions into the drama, and was persecuted and annoyed by the government, who demanded places in the theatre for the police. He reserves a number of seats, and designates them by a large placard. These seats are reserved for the police — the audience are amused, and deride the police — Ole Bull is arrested on his birthday — thousands of people from the mountains come to congratulate him, according to a beautiful Norwegian custom on a birthday — attend him to the court, which is alarmed, and hesitates to imprison him — lawyers commented against him — carried from court to court with immense expenses and losses — dissipates the greater part of his income collected from his artistic labors throughout the world — he is disheartened and feels sad — his countrymen send him 1000 rix-dollars to purchase lands for them to establish a colony — he purchases for himself in Virginia — succeeds in buying lands in Wisconsin — plays the violin for his friend Henry Clay — is invited by senators, members of Congress, *Carus Politanicus*, president, and illustrious senators in Washington to give a concert — also in Baltimore — engages the Germania Musical Society — has an enthusiastic reception in Philadelphia and in New York.

Ole Bull has always been distinguished for his interest in free institutions, and his desire to surround the victims of oppression in his own country with the influences of free and democratic government. On his return to the United States in the spring of 1841, one of his first objects was to select and purchase a location for an agricultural and industrial colony of Norwegians. He purchased a tract of land in Pomeroy, Pa., embracing one hundred and sixty thousand acres. Here he founded a town by the name of Oleana, and built himself a beautiful Norwegian cottage for his summer residence. Here a large number of his countrymen were induced to settle, and Ole Bull, with characteristic energy, had organized plans for the most liberal and practical education of the people, and for the building up of all industrial and social advantages, when it was discovered that there was a flaw in the title deeds to the best portions of the land, which had been fraudulently sold to him, and he was involved in such pecuniary loss, as well as the poor contacts in such misery, as to oblige him to resume concert-giving. In the summer of 1843, he gave several concerts in New York, Boston, Philadelphia, and smaller places, with considerable success. But in the increasing taste of the American people for music in such larger forms, as oratorios, operas, symphonies, &c., the day for any great success of solo-playing virtuoso concerts had already passed by. Personally, Ole Bull is a man of very interesting qualities, and has attracted many friends most deeply to him wherever he is known.

OLEY, JOHANN CHRISTOPH, organist at Aulendorf, was born at Bernburg. He was celebrated as a performer on the organ and harpsichord, and especially for his manner of playing fugues and fantasias. We can mention of his compositions, "Variations for the Harpsichord," two volumes; "Three Sonatas for the Harpsichord," — "Sing's Muzik," two volumes; and

"Choral Variations for the Organ." The latter work contains a preface by J. A. Hiller. Oley died in 1789.

OLIFANTE, D. GIOV., an Italian musician of the seventeenth century, published a treatise entitled — "*Regole et Maniere di Basso continuo organizzato*," was translated *in progressum*, Naples, 1686.

OLIVEIRA, ANTONIO, a monk, distinguished as composer and master of the choir of a church in Lisbon, about the year 1600. He afterwards removed to Rome, where he died. Oliveira wrote a great number of masses, psalms, motets, &c., most of which are preserved in the Royal Musical Library at Lisbon.

OLIVIER, a French amber, and probably an organist, pronounced in 1796, in a sitting of the Royal Academy at Lyons, a discourse on the advantages derivable from music in the cure of diseases. Hippocrates mentions the immediate effect of music on the human body. Olivier, however, proceeds much farther than the ancient physician. He says, that the atmosphere externally surrounding and the air within the human body, have a certain harmony together; that the vibrations of the external air are communicated to the internal, and thus accelerate or retard the circulation of the blood, stimulate the nerves and vital spirits, enfeeble or fortify the organs, and retard or hasten or prolong life by maintaining the equilibrium between the different fluids of the human system. He maintains that these vibrations of the air produce a sort of electricity much more advantageous, in a medical point of view, than the usual application of the electric fluid. To prove this hypothesis, he made the following experiment. He bound a cloth round the eyes of a perfectly deaf man, and effectually stopped the ears of a blind person, and placed them both close to a loud orchestra. The one, it is said, immediately felt a most unusual sensation, and the other was smacked with convulsive motions which lasted two hours. It is probably this same Olivier who wrote the following work, published at Paris in 1798: — "*L'Esprit d'Orgueil, ou de l'Influence de la Musique par le C. Olivier*."

OLIVIERI, M., pupil of Paganini, was born at Turin, about the year 1787. He remained during several years attached to the theatre of that city, but was at length obliged to quit it, to avoid the resentment of a nobleman, which was occasioned by the following circumstance. Olivier, arriving too late at a concert, was severely reprimanded by this nobleman. He was tuning his violin at the time, and listened for several minutes to the nobleman's severe reproach, when at length, being irritated beyond endurance by their severity, he violently struck his reposer on the head with his bow, and rushed out of the concert room. He immediately set out for Naples, after a residence in which city for several years, he went to Marselles, where he remained during three years. He afterwards proceeded to Lisbon. He published some few pieces of music for his instrument.

OLIVO, SIMPLICIANO, of Mantua, flourished in the seventeenth century. He was chapel-master of the ducal church at Parma. There were published of his composition, "*Salmi di completi, un Libro in un volume concertati* 6 8 *Don*

e 2 Violini, con una Violetta e Violoncello," Bologna, 1674, and "Carcerato ninfa," Venice, 1681.

OLTOLINA published at Amsterdam, about the year 1780, three symphonies and three quartets for the violin.
